## Entire Document

PREFACE In the curricular structure introduced by this University for students of Post- Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

10 NSOU • PGC0-I 1.1 Objectives Objectives of this unit are to give idea on— • Some conceptual issues about organisation • Organisational structure • Modern theories of organisation • Challenges that managers are facing now • Meaning and importance of organisational Behaviour (OB) • Disciplines that contribute towards development of OB • The Global interpretation of OB 1.2 Introduction Human being can never stand alone. Human civilisation has taken the modern shape out of mainly the group activity of human beings. Different ancient civilisations, construction of huge pyramids are the glaring examples of such group activity. Organisations are nothing but the systematic and scientific forms of such group lives of human race. When people come together to help each other in a systematic way, it becomes an organisation.

According to Barnard, organisation is a consciously created activities of two or more persons,

who are able to communicate with each other and are willing to contribute to a common purpose. So, the components of organisation are very clear. • Two or more persons • Common purpose • Conscious activities • Communication, and • Joint contribution Family, community and society—all are in one way the forms of organisations. Our natural urge to live in associations, not in isolation, has given birth to all the aforesaid groups. As the days are progressing, the organisations are increasingly dominating almost all the aspects of human activity. Our quality of life depends on NSOU • PGC0-I 11 how the organisations work. So the efforts are also everywhere so that organisations can work well. Different structures of organisations have been developed in the mean time. Outlines have been drawn up as to their process of functioning. Functioning of organisations is not just an art today, this is considered now-a-days as a science. Hence, some principles have also been deduced to provide foundations to organisational processes, which are commonly known as organisation theory. In the following sections, we will discuss on such structure and theory of organisations. 1.3 Structure of Organisation Organisation structure is not visible, so it is abstract. Still, it is real and affects every component of organisation. Very simply, organisation structure is a pattern in which different components of organisations are interrelated. It is the relationship among people and policies in the organisations. The chain of command among different organs refers to the structure of organisations. The basic structure of organisations is pyramidal, top being narrower and bottom broader. Then, it differs depending on its objective, size, system and process of operations. Broadly, the structure can be of two types— (a) Mechanistic structure, and (b) Organic structure. Mechanistic structure is a rigid and highly formal structure, which is not easily changeable, and hence is not suitable to ever changing dynamic world. Organic structure, on the other hand, is flexible and informal. It can be re- designed easily to cope with the changed situation. However, neither completely mechanistic nor fully organic structure does exist in modern world. Rather, a mix structure is seen in almost all cases, the inclination of which to either mechanistic or organic form depends usually on following factors. 1.3.1 Factors Influencing Structure Strategy : Any structure is built up to achieve some objective and to help materialise overall strategy. But as this strategy varies from organisation to organisation, the structure also varies. A.D. chandel is 1960's conducted a study on strategy- structure relationship. A few recent researches also confirm this relationship. Strategies broadly can be following types—

12 NSOU • PGCO-I • Innovation strategy • Cost-minimization strategy, and • Imitation strategy Innovation needs organic structure. For cost minimization, mechanistic structure is appropriate. In case of imitation strategy, however, a mixture of both mechanistic and organic structures is needed. Size : Size influences structure. More employees you hire, more will be the scope for specialisation requiring horizontal differentiation. Vertical differentiation will also be needed to co-ordinate different departments. Formalisation will be required to control everything. Thus, size is a notable contributor to structure. Technology : Technology is a major determinant of an organisation's structure. Specific structures are associated with specific type of technology and the effectiveness of organisations is related to the "fit" between this technology and structure. Firms use broadly the following three types of technology— (a) Unit Production Technology (b) Mass Production Technology, and (c) Process Production Technology According to Jahn Woodward (1965, London), for the first and third organic structure is the best-suited structure, and for the second we need the mechanistic structure. Charles Perrow (1967, USA) divided technology into two types-routine and non-routine. Routine technology matches with mechanistic, and non-routine with organic structure. Today's information technology, on the other hand, will match with modern virtual organisations. Environment : Nature has neatly packaged people into skins, animals into hides and trees into barks. But organisations are never in that way "packaged". Rather, they are open to the ups and downs of the environment. So, what will be structure of an organisation, mostly depends on the environment it comes across. Environment may be placid, that is, relatively unchanging. It may be disturbed, that means, more complex. It may also be turbulent, which is the most dynamic and has the highest degree of uncertainty. Mechanistic structure can work within placid environment. But in turbulent environment, organic structure is a must, whereas for disturbed environment, a mixture of aforesaid two structures can be more suitable.

NSOU • PGCO-I 13 1.3.2 Features of Good Organisation Structure Like the engineer who designs a building or a fly-over, an organiser while designing organisation structure, must also apply some principles to meet the objectives of organisation. Otherwise, organisational efficiency can never be achieved. The factors that are to be considered in this respect are known as the features of a good organisation structure. Those are narrated below. Clear lines of Authority and Responsibility : What anyone can do, is his/her authority. What anyone is to do, is his/her responsibility. Both of them must be very much clear, not confusing. A proper chain of Command from the top to bottom of the organisation structure only can provide this clarity, lack of which is a failure on the part of organisation structure. Delegation of Authority : You may have the authority to do many things. But if you alone do everything, you will not do justice to more important things. Cost effectiveness will also be affected by doing the work that can be got done by low- paid lower level managers/workers. So, do yourself the more important jobs, and delegate others to lower levels. A good structure will provide scope for that. Ultimate Responsibility : By delegation, authority flows from superiors to subordinates. Accordingly, subordinates will do their duties and remain accountable to the superiors. But ultimately the superiors are to take the responsibility for the tasks to be performed by subordinates as well. This is known as the concept of "ultimate responsibility". So, it is said that one can delegate authority, but not the responsibility. Span of Control : The number of subordinates to whom one superior will delegate authority to do some duties, is known as his/her span of control/management. In other words, span of control means the numbers of workers that a manager can control or manage properly. You can manage few people, but you are managing five. Then, it will be under-utilisation of your capacity and it is not cost-effective as well. You can manage five people, but you are managing ten. Then, you will be over- burdened, and supervision will be ineffective. So, span must have a standard size. The size, however, depends on the following factors— (a) Efficiency of superior (b) Quality of subordinates (c) Nature of work—routine or complicated (d) Communication Techniques—modern or traditional

14 NSOU • PGCO-I (e) Degree of centralisation (f) Staff assistance—superior gets or not (g) Clarity of objective, etc. Levels of Management : More the number of levels in the structure, more time it will take to communicate from top to bottom. More the levels an information passes through, higher is the possibility that it will be distorted. More the number of levels, more managers will be required and overhead expenses will be huge. So, the levels should be kept minimum. The structure should be flat and look like figure 1, not tall like figure 2. In figure 2, levels are more. In each level, there must be one manager, one office, some assistants and equipments. So, the cost is higher in second case. Of course, span of management has a relation with the levels of management. When span is larger, levels will be less, because one manager there will manage maximum number of subordinates. Division of work/Departmentation : Works need breaking up into parts. This helps having benefits of specialisation. Long back, Adam Smith advocated this concept of division of work and the resultant specialisation. By this, fixation of responsibility and appraisal of individual work became easy and effective. After the dividing the work for the aforesaid purpose, similar tasks again are to be grouped together to facilitate supervision and co-ordination. This is known as 'departmentation'. This grouping of activities can be done, based on any or more of the followings. (a) Functions : Leading to Functional Departmentation like production, marketing, finance etc. (b) Product : Leading to Product Departmentation like car Division, Truck Division, Bus Division etc. Fig. 1 Fig. 2 NSOU • PGCO-I 15 (c) Geography : Division like Kolkata Division, Southern Division etc. (d) Customers : Division like wholesale—retail or Male, Female, children. (e) Process : Leading to departmentation like Spinning, Dyeing and Weaving. (f) Time : For example—Day shift, Night shift. 1.4 Modern Theories of Organisation The classical theory of organisation had three pillars, e.g. Division of Labour, Departmentation and Co-ordination. Human beings were considered as inert instruments. Neo-classical theory stressed on flat structure, decentralisation and informal organisation. Whereas the modern theory, developed in early 1960s, feels that organisation is an open system and cannot have a rule of thumb principle. Approaches under modern theory of organisation are narrated below. 1.4.1 Behavioural Approach The approach draws heavily from psychology and sociology to learn the influence of individual and group behaviour respectively on organisation. Emphasis is placed here on motivation and good human relations. Hawthorne study of Elton Mayo revealed the need of human relations for greater productivity. Thereafter, Maslow, Herzberg, McGragor and many other psychologists and sociologists contributed a lot towards the development of this approach. Based on this approach, we have understood now the need and importance of human resource management and organisational behaviour. Before it, men were considered as the adage to the machines. Man can sometimes works below their capacity, if they are not satisfied. For desired outcome, workers willingness must be aroused. This approach believes on this premise. 1.4.2 Mathematical/Quantitative Approach This school treats management as a logical entity, the action of which can be analysed logically in terms of quantitative symbols or mathematical relationship. The main characteristics of this approach are as follows. (i) Organisation is a problem-solving mechanism that works with the help of some scientific techniques. (ii) The variables, both dependent and independent, can be quantified and related in the form of equations. 16 NSOU • PGCO-I (iii) The findings can also be expressed in quantitative symbols, pinpointing the areas of problems. (iv) Operations research, simulation, model developments, econometrics are the basic methodologies of this approach. The contributors of this approach are Newman, Hitch, Russell Ackoff etc. They want to quantify the behaviour of workers as well. But this is always not possible. Inanimate things follow the law of nature. But human beings are most complicated ones. This approach may not work on this. 1.4.3 Systems Approach A system is defined as an assembly of a number of things connected and inter dependent. So, a system can never work in isolation. It is to vary if the inter-related things vary. According to this approach, an organisation is a system. So the characteristics of a system an organisation does also possess. The important features of a system can be stated as below. (i) A system is the sub-system of a bigger system. For example, West Bengal is sub-system of India. (ii) A system has again a number of sub-systems, as the system of West Bengal has a number of districts. (iii) System is related with and dependent on sub-systems. (iv) Sub-systems are also inter-related. (v) A system is not only the aggregate of its sub-systems, it is more than that. (vi) Without analysing the larger system and the sub-systems, the behaviour of no system can be known. When we consider organisation as a system, then organisation will be of following nature. (i) It is dynamic. (ii) It is multi-disciplinary and multi-dimensional. (iii) It will have multi-variables. (iv) It is probabilistic and adaptive. (v) It is open in all ends, not a closed system. 1.4.4 Contingency/Situational Approach Contingency approach has emerged out of the system approach. Because, when

NSOU • PGCO-I 17 a sub-system behaves in response to another system or sub-system, we say that the response of the sub-systems is contingent on environment, i.e. on system. However, the basic idea of contingency approach is that there cannot be a specific solution for all kinds of organisations or no method can suit all situations. It varies from organisation to organisation, from situation to situation. Firstly, this approach accepts the system approach about interdependent and organic nature of organisation. It accepts also the open and adaptive character of system approach. Thereafter, it adds, always the same nature of a system may not lead to the similar type of sub-system or vice-versa. One plus one may sometime become two, but sometimes it may become eleven. According to this approach, the characteristics of organisation can be as follows. (i) Its function is entirely situational. (ii) No organisational design is suitable for all situations (iii) No organisation can take absolute decisions (iv) All organisational actions are relative to different social, legal, political and economic factors.

### 1.5 Challenges of Managers

If you ask one manager to describe his/her most frequent and most trouble some problem, the manager most often will describe "people problems". They will talk about poor managing skill of boss, lack of motivation in sub-ordinates, conflict among co-workers, resistance of employees, so on and so for. That means problem always is with people. Human beings are problematic, again human resource is the most important among all resources, e.g., physical, financial and human. Because, only the human resource can— (i) activate other resources (ii) sustain competitive advantages, and (iii) create value. So, managing human resource is the biggest challenge of the manager. Among three types of skills, i.e., technical skill, conceptual skill and human skill, the human skill of manager therefore, is considered as the most important one. Managers of top-

### 18 NSOU • PGCO-I level needs mostly the conceptual skill, lower level manager needs technical skill more. But the managers of all three levels, i.e., top, middle, and lower, need equality the human skill for their performance. Human skill is very important. But for this, the pre-condition is to understand the human being. No two human beings are identical. The same human being behaves differently at different times. So, to understand them is not so easy. It is not easy, but at the same time it is not impossible. Because no human behaviour is without any purpose or cause. When a little baby cries, that is also to draw attention of others. If that cause can be found out and the cause-and-effect relationship is formed, human behaviour can be predictable. A scientific body of knowledge has been developed for the purpose. This is organisational behaviour (OB). OB helps managers in solving people problems. So, challenges of managers are in one way the challenges to OB.

#### 1.5.1 Recent Challenges of Managers

Of late, the socio-economic environment has been radically changed. Thus, the problems as to people has become more acute, and the people's response (behaviour) to those problems have been much more complicated and unpredictable. The challenges as such are briefly discussed below.

1. Globalisation : Due to globalisation there has been free flow of labour and capital from one country to another. National companies have been transformed into multinational companies (MNCs). As a result of this a manager today— (i) is to accept off and on the foreign assignments (ii) is to deal with boss, peers and subordinates who may belong to some other countries. All these make understanding the human being more complicated. To know the people of one's own family is too difficult. So, the difficulty of understanding the people of different countries, culture, creed, colour and caste—can be easily imagined.
2. Workforce Diversity : Due to globalisation, workforce today is consisted of the people of different countries, leading to culture diversity. Beyond that, the present-day workforce experiences. (a) Age Diversity (b) Gender Diversity (c) Caste Diversity etc.

NSOU • PGC0-I 19 Retirement age in private sector is no longer in vogue. So, eighty-year old workers can be there. Newly recruited workers can be, again, eighteen years old. Likings, dislikings, productivity, needs of these workers of huge age gap can never be the same. Due to this age diversity managers thus face the problems. Earlier, number of female workers was too minimum. That is again in some selected professions like teaching, reception etc. But now in developed countries 45% workers are female. In the developing countries like ours also females are now equally competing with males, leading to gender diversity. Needs likings of males and females are not same. So again the managers are now in a problem. Alike, caste diversity is also increasing due to reservation policy of governments. Earlier, so-called upper caste people used to hold the managerial positions. Now, SC/ ST, OBC etc are getting those positions creating diversity. 3. Temporariness : Everything today is temporary. Earlier, rate of companies winding up was 1%, now it is 10%. Earlier, a product could remain in the market for 50 years. Now, no product has market beating capacity for more than five years. All the workers earlier were full time workers. Today maximum are part-time, casual workers. So, a manager cannot spend maximum time with one worker. Then, how will he/she understand the worker? Work-design is also temporary. Today workers work with pen and paper. Tomorrow they may be asked to work with cartidge and computer. So, today's skilled worker can be unskilled tomorrow. Thus, unpredictability increases throwing challenges to the managers or OB. 4. Change and Innovation : Since everything is temporary, one must not stick to old things, old product or design. Continuously one is to change, if it is to survive. Change again, cannot be done in isolation. Innovation is the pre-condition to that. Until you get something new by innovation or creativity, how you can replace the old. Innovation is broadly of three types. (a) Incremental : Just you are new feature to the old product, e.g., change in package. (b) Substantial : Maximum change e.g., change in packing and quality of product. (c) Transformational : Replace the old product by completely a new product. To change means to accept new environment which is always unknown and so, uncertain. Managers thus are in problems. 5. Increasing Customer's Service : Service sector now is the most important

20 NSOU • PGC0-I sector. More than 60% workers or managers are working there. In service sector, you are to deal directly with customers, unlike workers who work in factories, i.e. with machines. Customer's behaviour is more unpredictable than machines and customers' problems refer to people problem. Managers were so long worried with one kind of people, i.e., workers. Now, if customers and added to that, we can easily change how problematic will be the lives of managers. 6. Technology : Technology today is everywhere. Man created it to help him in enhancing his capacity. But, now it is throwing man, its creator, out of the scene. Due to introduction of technology, workers are losing jobs. So, they are always afraid and tensed as any moment they may be given golden handshake. So, their job satisfaction is low and to motivate them is a challenge. Moreover, along with white colour and blue colour, employees, we have come by the golden colour employees (knowledge workers) also. The need, demand, culture of this new type of workers are largely different from those of others, posing thus problems to managers. 7. Ethical Dilemma : Ethics, values are always controversial. But never earlier we were is such a dilemma on ethical issues. If you do not give bribe to hospital staff, your relatives will not get admission and may die. What should you do then? If you blow whistle, dignity of your company may be affected. If you don't, corruption may continue. If you evaluate properly your subordinate's performance, he/she may be denoted or dismissed. If not, you are compromising with your duty. Due to these role conflicts, managers/workers now are always tensed/stressed. Their productivity is less. Sometimes, they suffer from burn out. Resolution of this stress is a headache to modern managers. 8. Life-work Imbalance : 30 to 40 years back, there was a clear demarcating line between our personal life and working time. But day by day, this is gradually disappearing. We do not exactly know today which time is completely our own. Livelihood is encroaching every sphere of our life. The reasons thereto are as follows. (a) Managers now are the managers of MNCs. So, in his/her night time also some of his/her workers may be in work in other parts of the globe. Thus, he/she will never have a free sleeping time. He/she may be always on phone call thereby, and personal time is curtailed. (b) Due to technological development, net connectivity, when one worker is spending vacation, his/her may get him/her connected, assign duty

NSOU • PGCO-I 21 and sitting on a sea beach the worker is required to complete the assignment. Personal life is encroached there by. (c) Working hours today have also been increased, leaving minimum time for personal enjoyment. (d) Due to dual career families now-a-days, house hold responsibilities are grossly neglected. If at home, you are failure, working life will also be affected. Everything thereby is becoming imbalanced. Managers are getting much trouble in addressing the stress of workers created out of that. 1.6 Organisational Behaviour (OB) Organisational behaviour as a new discipline has emerged to assist the managers in understanding workers behaviour that is being complicated day by day due to radical socio-economic changes. Human nature always is to give judgement about others. Always we try to understand why people do what they do. But in most cases, we do it by intuition or get feelings. So, our judgements about others become incorrect. OB rather has come up with a scientific approach to replace that intuition or to supplement that, so that understanding the behaviour of people becomes accurate. How it proceeds to that end, is discussed one by one in following sections. 1.6.1 Organisational Behaviour—Meaning Organisational behaviour means behaviour within the four walls of organisation. So, as a discipline, it studies the actions and attitude of the human beings at their work place. At the workplace, not only individual human beings but hundred of their groups and millions of relationships exist. The relationship as such actually the organisation of different nature. So, in any organisation broadly there are three components— (a) Individuals (b) Groups, and (c) Structures And, behaviour within the organisation means the interface and interactions of these three. So, S. P. Robbins defined OB

**71%**

**MATCHING BLOCK 3/37**

**SA**

Organizational Behaviour.pdf (D142229754)

as follows. "OB is a discipline that investigates the impact that individuals, groups and 22

NSOU • PGCO-I structures have in the organisations for the purpose of applying the knowledge for enhancing the organisational efficiency." So, What are under consideration are firstly, the behaviour within the organisations and secondly, the organisational efficiency. That means, all types of behaviour are not the subject of OB. Rather the subject of OB is only the work-relates behaviour. Broadly, the work-related behaviours are— (a) Productivity i.e., degree of worker's efficiency. (b) Absentacism i.e., how many days workers are absent. (c) Worker's turnover i.e., rate of employee resignation. (d) Job Satisfaction i.e., extent of positive feeling to job. (e) Organisational citizenship i.e., favourable behaviour. (f) Deviant workplace Behaviour i.e., Unfavourable behaviour. So finally OB means the study of Individuals, groups and structure to know their impact on the aforesaid six outcomes. The study as such includes the following. 1.6.2 OB-its Activities/Functions OB is a social science. Like every science, it also wants to establish a cause and effect relationship among related variables. Behaviour here is the effect. So its first function is to find out the cause behind each behaviour. Then it tries to see the degree of association between the cause and effect, that is to what extent the same cause leads to similar behaviour. The causes here, in other words, are independent variables and outcomes are dependent variables. To build up an equation of relationship between the two is the primary activity of OB. Outcomes on dependent variables actually are the work related behaviours as mentioned in secetion 1.6.1 and, the variables on which they depend are— (i) What types individuals are there in the organisation. (ii) How strong is the group relationship, and (iii) What structure or style of management is there in the organisation ? Different characteristics of individuals are—age, gender, religion, physique, intelligence, values, personality, perception and attitude and all these have their impact on productivity like work-related behaviours. Group dynamics depend on the issues like conflict, negotiation, power, politics, communications, group decitions, group norms, cohesiveness and so on. On these dynamics depend the productivity, job satisfaction or absenteeism of workers.

NSOU • PGCO-I 23 Structure of organisation refers to degree of centralisation, Line and staff Matrix, flexibility of structure, extent of participation in decision making, human resource policies, organisational culture etc. OB, as a subject, deals with all the facets of these three independent variables, i.e., individuals groups and structures. Then it establishes relationship of them with productivity-like different dependent variables. However, the pure sciences like physics/chemistry can universally state that  $x$  always leads to  $y$ . For social sciences like OB this is not possible. Here, we need the function of one contingent variable,  $z$ . And, our equation normally stands as— “ $x$  leads to  $y$  subject to the condition of  $z$ .” So, the functions of social sciences are more difficult, more complicated than those of pure sciences. Pure sciences deal with inanimate things like sun, moon etc. Everyday the sun rises in the east. If you throw something upward, it will surely come down to earth. Thus, their behaviour is predictable. But human beings are unpredictable, making the activity of OB difficult to a large extent.

### 1.6.3 Importance of OB

OB is of very recent origin still, it performs a very important role in understanding the human beings and analysing the societal dynamics. Human resource is the most important of all resources. So, human resource management has got now the maximum prominence. But human resource management (HRM) is handicapped in absence of OB. OB helps HRM in following ways. (i) OB explains human behaviour by asking why people do what they do. If a number of workers resign, OB attempts to know “why” they resign. A number of causes can be there. But what is the exact cause? By explanation we know that fire causes smoke. Hydrogen and oxygen cause water, Similarly OB tries to know what is the cause leading to a specific behaviour. (ii) OB predicts human behaviour by using the knowledge from explanation. By explanation we know that fire causes smoke. So, from a distance when we see some smoke we can rightly predict that there is fire. Accurate prediction of human behaviour is crucial to any kind of managerial decision or action. Before modernisation or computerisation, managers must predict the reaction of workers. If he/she predicts that even if there is reaction, it will be mild and manageable, he/she can proceed to modernisation. But if he/she predicts acute agitation or revolt against this move, he/she should not proceed.

24 NSOU • PGCO-I (iii) OB also controls/manages human behaviour. That means it can change human behaviour according to the need of the organisation. By explanation, it comes to know the reason behind workers unfavourable reactions. Then, by adopting remedial measures it prevents the recurrence of such unfavourable reactions. Knowing the environment that creates positive actions, it builds up the same environment enabling the repetition of positive behaviour. Workers themselves may not know that their behaviour is being controlled. Because OB does it very tactfully whereby favourable behaviour of workers are repeated and unfavourable ones are prevented. With the help of these three roles, OB in fact performs the most important part of managerial functions. HRM also is inactive in absence of such help of OB.

### 1.7 Contributing Disciplines of OB

OB is still in its childhood. Still, it is to perform a very complicated role. So, it cannot but take help of one and all, and has built up itself as a multi-disciplinary subject. The disciplines from which it has borrowed the concepts to enrich itself are known as the contributing disciplines. Contributing disciplines along with their contributions towards the development of OB as a separate field of study are narrated below.

**Psychology :** Psychology is an age-old social science that deals with the mental state of all human beings and even the animals. OB deals with only the work-related behaviour. But the focus of psychology is on every walk of human beings as well as animals. Different dimensions of individual behaviour have been borrowed by OB from psychology. These dimensions are— (i) Value system (ii) Personality (iii) Attitude (iv) Perception (v) Learning Process (vi) Job satisfaction (vii) Job stress etc.

NSOU • PGCO-I 25 Sociology : While psychology helps OB in relation to individual behaviour, sociology helps it in understanding group behaviour. Sociology deals with society. Group is a sub-set of society. So, social dynamics equally hold good in group activity. The issues on group behaviour for which OB has borrowed concepts from sociology are— (i) Group formation (ii) Group Properties (iii) Group Decision-making (iv) Communication (v) Conflict and its resolution (vi) Power and Politics etc. Anthropology : Anthropology is the science of human race. It deals with the evolution of human civilisation and its culture. From civilisation to civilisation the behaviour of human beings varies because the culture of each civilisation is different. So, to know the followings, the OB has to depend on anthropology. (i) Organisational culture and its impact (ii) Organisational development (iii) Organisational change (iv) Organisational values vs personal values. Social Psychology : This discipline is the blending of sociology and psychology. So, it's natural that it will help both individual and group behaviour. In fact group is consisted of individuals. Still, group behaviour is different from individual behaviour. How this change or difference takes place in the area of social psychology. For knowing individual and group behaviour, it is very important. Thus, social psychology helps us in understanding— (i) change from individualism to collectivism (ii) the upholding of individuality amidst group pressure. (iii) reconciliation of individual aspiration with group goal. Initially, OB was built up with the contributions from aforesaid social sciences. But as the days are passing, organisations and their components are confronting with newer and newer problems. As a result of that, OB is now depending on some other disciplines also. These disciplines are mentioned below.

26 NSOU • PGCO-I (a) Economics for tackling the critical issues like job evaluation, wage determination, time study, motion study etc. (b) Political Science for combating the emerging politicking and power play at workplace. (c) Medical Science for resolving the issues like workers depression, job stress, counselling. etc. (d) Semantics for enabling the organisations to have an effective communication network as this network is considered to be the nervous system of all organisations, and the success or failure of group decision making mostly depends on it. One of the reasons of conflict is also poor communication. So, semantics, the science of communication is truly of much of OB. 1.8 OB in Global Context We live today in global village. Supersonic jets, world wide web, MNCs, easy flow of labour and capital from one country to another—all have given us scope of and necessity for continuous interactions with people of other countries of the globe. But the fact is—the way of response to same stimulus may not be the same in all countries. Response varies depending on the culture of a place. Americans, for examples, unlike europeans, always suffer from parochialism. They always believe that their customs, values, even the language are superior to all others. So, we can imagine how they would response to a call from other countries like Mexico, India, Brazil etc. Some of the differences from country to country we may cite below. (a) Americans like theme park, but French do not like it. (b) While speaking together, people of Peru like to come closer to each other, whereas US the people keep backing up. (c) Managers in USA always have separate luxurious private chambers, but Japanese executives do not have that. (d) American students from childhood are taught to be individualistic whereas Japanese from childhood learn to be the teamplayers. (e) In America, ends justify the means, whereas in India means justify the ends. 1.8.1 Difficulty is knowing Culture Culture of different nations varies, so varies the behaviour. But assessing culture

NSOU • PGCO-I 27 of different countries is not at all an easy task. You may know the accounting system, economic condition on political system of different countries, as in written form all of them are available. But books on culture are not in that way available for all countries. People of a nation can also not describe you about the culture of that nation. Because, culture to us is just like the water to fishes. As the fishes live in water, we live within the culture. Fishes do not know what is water. We also do not know what our culture is. Culture of one nation can be known by regorous research only. But due to difficulty in such kind of research, only a few studies are there as yet on varying culture of different nations. Two significant studies among them we narrate in following sections.

### 1.8.2 Study of Kluckhohn and Strodtback

These two researchers by their study has developed a framework in understanding the culture of different countries. This framework has identified six basic cultural dimentions on which differences are prominent from country to country.

**Relationship to Environment :** Researchers have found broadly three types of relationship to environment in different nations. They are— (a) Subjugation (b) Domination, and (c) Harmony In some nations, people feel that they are subjugated, i.e., completely under control of nature or under "god's will". So, they themselves have no power to go beyond that whereas, some other countries beleive that they are the architect of their own fate. They can do everything and "dominate". Some are again in-between these two extremes. They are in harmony with nature. Middle-east nations are subjugated and western dominated. Dominating societies fix target and try their best to achieve that. Subjugated societies feel "What will be, will be" and leave everything to fate.

**Time Orientation :** Societies differ in placing value on time. Western cultures are present oriented and have short-time orientation. Japanese, whereas, look to future and so give long-time to prove one's effeciency. Some cultures, like Italians, again, emphasize of past, tradition and preserving convention.

**Activity Orientation :** Orientation as to activity is also of three types. They are— (a) Doing or Action

28 NSOU • PGCO-I (b) Being or Living (c) Controlling or Restraining. Doing people work hard and expect reward like salary raise or promotion. People of North America are of this type. Mexican on the other hand, are "being" people who work at slower pace and prefer enjoying the moment. French people are controlling-oriented who can restrain their desires either for reward or for enjoyment and work logically or rationally.

**Nature of People :** Third-world countries view people as "good", so regulations to control them are less stringent there. Soviet Union thinks that people are generally "evil". So, stick policy is headed to make them work. North Americans are somewhere in between. They treat people as good, but still stay on guard.

**Focus of Responsibility :** Researchers have classified culture as follows according to the focus of responsibility of the people. (a) Individualistic (b) Group-oriented, and (c) Hierarchical Individualistic people, mostly the Americans, think themselves responsibe to self only. People of Israel/Malaysia are but group-oriented who share chores and rewards with other people. The British and French are not so self-focused. They are not concerned again about all people of the society. But they focus on the people who belong to their own hierarchy, level, class or caste.

**Conception of Space :** Some cultures, like Japanese culture, is very open, i.e., they prefer conducting business in public. Americans again prefer private space. So executives there do not work in the same room with their subordinates. They need private chambers, as secrecy is given there the weightage. Some societies have again the mixed orientation, who create and maintain therefore the "limited privacy".

### 1.8.3 Hofstede Framework

The framework built up by G. Hofstede is much more comprehensive because

NSOU • PGC0-I 29 the researcher here surveyed as many as 1,16,000 employees of sixty different countries. All employees worked however in same MNC, IBM. If workers from different companies were chosen, their difference in behaviour partly could be due to different working conditions. So, intentionally the researcher selected the employees of same MNC, so that all the differences in behaviour can be attributed to cultural differences. By his study, Hofstede found that workers vary in four dimensions of national cultures. Under each dimension, societies have divided here into two groups, unlike three in Kluckhohn-Strodback framework. Individualism Vs Collectivism : People of the world are either individualistic or collectivist. People of rich countries like USA, UK are individualistics who look after their own interests, personal achievements. People of poor countries like Pakistan, Taiwan are mostly collectivists who like always to co-operate others and expect also the co-operation from others. Power Distance : In every society some people are more powerful and some are less powerful. But the question here is how the societies treat these differences. Societies that do not give importance to the position, title or rank of people and socially everyone can have the relationships, are less power distance societies. But where there are separate canteens for executives and for workers, people of positions do not enter into social relationships with people without positions, the societies are known as the high power-distance countries. India, Venezuela are high and Denmark, Austria are low in power distance. Uncertainty Avoidance : People of some countries work comfortably with risks, i.e., they do not try to avoid uncertainty. In routine or stereotyped jobs rather they do not find any interest. People of Singapore, Hong Kong fall into this category. People of Greece, Portugal, on the other hand, feel nervous, stressed, depressed if risky or uncertain jobs are given to them. They prefer to be employees, never the entrepreneur. Their target is usually low, job mobility is also low. No risk means no gain. Thus, their gain is not so high. Masculinity Vs Femininity : People of some societies, even the females, possess mostly the masculine characteristics. That is, they are aggressive, assertive and dominant who run after mainly the quantity of achievement. In some other societies even the males possess the feminine characteristics like caring for others, quality of life, preference to relationships and so on. Such masculinity prevails in the countries like Japan and the femininity in Netherlands and Nordic countries.

30 NSOU • PGC0-I Later, a few more dimensions have been identified and added to his framework by Hofstede, they are— (i) Short-term VS long-term orientation (ii) Qualitative VS Quantitative Approach, and (iii) Indulgence VS restraint. In long-term oriented countries plans are usually long-term and performance evaluation is also done on long-term basis unlike the countries with short-term orientation. Quality is emphasized in some cultures, quantity is some other countries. Indulgent countries tolerate enjoyment of life, fulfillment of human desires. Resistant countries, on the other hand, form norms restricting gratification of human desires and enjoyment. 1.8.4 GLOBE Framework In 1993, a research programme named Global leadership and Organisational Behaviour Effectiveness (GLOBE) began to identify the cross-cultural differences. Using data from 825 organisations in 62 countries it identified nine dimensions on which national cultures differ. However, most of them resemble the Hofstede dimensions. Additional two, that GLOBE added are— (a) Humane orientation, and (b) Performance orientation. Humane orientation reflects the degree to which people of the society are generous and kind to others. Performance orientation measures the extent to which the society encourages the performance improvement and excellence. 1.9 Summary From the above discussion, we could understand the conceptual issues of organization, organizational structure, modern theories of organization, challenges faced by the managers. In addition, we could also understand meaning and importance of organizational behaviour, disciplines that contribute towards development of organizational behaviour and the global interpretation of operational behaviour.

NSOU • PGC0-I 31 1.10 Questions A. Objective Type : 1. Name two characteristics of organisation. 2. What are the types of organisation structure ? 3. State the relationship between span of control and levels of structure. 4. Give an example of Functional Departmentation. 5. Which of the resources is the important ? 6. Name two work-related behaviour. 7. Name the contributing discipline that contributed the concept of personality to OB. 8. In how many groups the countries were divided under each dimension of Kluckhohn-Strodback framework ? B. Short answer Type : 9. What are the skills that a manager should possess ? 10. How does size influence structure of organisations ? 11. Define the concept of ultimate responsibility. 12. What are the main characteristics of system approach ? 13. How does globalisation pose problems to modern managers ? 14. What you mean by "gender diversity" in workforce ? 15. According to Hofstede, narrate the culture of power distance. C. Long answer Type : 16. Give a brief discussion on the factors that influence the structure of organisation. 17. State how systems approach and contingency approach are related to each other. 18. What are the recent challenges to OB ? 19. Briefly discuss the disciplines that have contributed to the development of OB. 20. Discuss varying national cultures as identified by Hofstede.

32 NSOU • PGCO-I Unit - 2 □ Individual Behaviour in Organisation Structure 2.1 Objectives 2.2 Individual Behaviour– Definition 2.3 Learning Process 2.3.1 Learning Theories 2.3.2 Reinforcement—Why and How ? 2.3.3 Reinforcement Schedules 2.4 Personality : Meaning 2.4.1 Personality Measurements 2.4.2 Determinants of Personality 2.4.3 Personality Development 2.4.4 Personality Theories 2.4.5 Myers & Briggs Type Indicators 2.4.6 The Big Five Personality Model 2.4.7 Other Relevant Personality Traits 2.4.8 Personality Job Match 2.5 Perception 2.5.1 Importance of Perception 2.5.2 Perception-Influencing Factors 2.5.3 Making Judgement about other Persons 2.5.4 Short-cut Judgements about Others 2.6 Attitude 2.6.1 Cognitive Dissonance Theory 2.6.2 Attitude Development 32

NSOU • PGCO-I 33 2.7 Job Satisfaction 2.7.1 Factors Influencing job Satisfaction 2.7.2 Impact of Job Dissatisfaction 2.8 Summary 2.9 Questions 2.1 Objectives Objectives of this unit are to highlight the impact of learned characteristics like—  
 • Personality • Perception • Attitude, and • Learning Process 2.2 Individual Behaviour–Definition Individual behaviour depends on a large number of factors—Inherited and Learned. Individual behaviour is the combination of his/her responses to external and internal stimuli. Individual behaviour is a system by which an individual senses the events, interpretes the same and responds to them. So, behaviour means response. Every moment we face a number of persons, objects and events. How we react to them, how we respond to their actions—is our behaviour. Behaviour varies from individual to individual. Facing same stimuli, two individuals respond always differently. This is because we possess two varying characteristics. Those are— (a) Inherited characteristics that we inherit from our parents, and (b) Learned characteristics that we learn from environment. Our physique, intelligence, age, gender, religion—all are inherited characteristics, and they have their influence on our behaviour as well. But as these factors are unchangeable, managers have nothing to do on workers inherited characteristics of personal factors.

34 NSOU • PGCO-I Learned or environmental factors can be changed according to the need of the organisations by creating desired environment. So, to a student of OB, the would-be manager, the learned characteristics are more important. These learned characteristics or environmental factors are discussed below, along with the process by which we learn. 2.3 Learning Process Last month Mr. X behaved cordially with Mr. Y. But this month Mr. X is avoiding Mr. Y. Surely, Mr. X has learnt something about Mr. Y. So, is the change is behaviour. So, learning means change in behaviour. Learning itself is invisible. From outside we cannot know whether one person is learned or not. Learning rather is reflected in behaviour. If there is change in your behaviour, surely you have learnt something, good or bad. But if the change is just temporary, it is not out of learning. Sudden shock may make you depressed for a while, and again you come round. This is not learning. Beside, learning must be as a result of some experience, not out of maturity. A child can walk out of maturity. This is also not learning. So,

**100%**

**MATCHING BLOCK 4/37**

**SA**

118E2430-Organisational Behaviour.pdf (D165201925)

learning is a relatively permanent change in behaviour that occurs

out of experience. And, the critical test of learning is “change is behaviour.” 2.3.1 Learning Theories A number of theories have been developed by the experts to explain the learning process. None can fully cover the whole learning process of an individual. Having some idea about all the theories, the process of learning may be adequately known. Classical Conditioning : The most well-known theory of learning is classical conditioning theory as was developed by I. Pavlov with the help of a dog and its salivation. Dog was kept in a cage. As first step of experiment, the researcher rang a bell. This ringing of bell is not a stimulus to salivation. So the dog did not salivate. In second step, Pavlov placed some meat outside the cage. Seeing the meat, the dog salivated as meat is a natural stimulus for dog’s salivation. In third step, Pavlov linked two actions together. He rang the bell and simultaneously placed the meat, and the dog salivated. This third step was repeated throughout the day at a fix interval. As fourth step at the end of the day, he again only rang the bell. Then also the dog salivated, though no meat was placed together.

NSOU • PGCO-I 35 Bell was not natural stimulus. But at the end it became the stimulus to salivation the dog also learnt to salivate listening to the bell. Meat here is natural stimulus, bell earlier was no stimulus, later it became "Conditioned stimulus". And salivation by bell is known as "conditioned response", the response that you have learnt. In work set-up or in our daily life also, the same may happen. A wrong statement, if stated repeatedly to you, you may assume it to be correct. As slowly and on trial and error method, it is learnt, the process is known also as "shaping". It takes time, but once you learn by this method, you will never forget, as happens in case of riding by-cycle. Operant Conditioning : B. F. Skinner was the advocate of this theory who believed that behaviour is a function of its consequence. This theory is mostly in operation, and the managers by manipulating the consequence try to control worker's behaviour. If the workers feel that the consequence or effect of one kind of behaviour is good, e.g. he may get the promotion; he will always try to repeat the behaviour. So, one's expectation about the outcome or effect actually is the cause of your behaviour in future. In classical conditions, one will change his/her behaviour unknowingly. In operant conditioning, an individual changes/repeats his/her behaviour out of some inference or expectation that may be correct or not. This is known as Law of Effect also. Cognitive Learning : Classical conditioning refers to involuntary change in behaviour. You yourself do not know that you are taught something. Effect of operant conditioning is also not known in that way, It is based on expectation, that may or may not happen. Here, learning is considered as the outcome based on known facts being organised in an objective and goal-oriented manner. Cognition is the act of knowing something. So, knowing completely the concerned items of information, you change your behaviour here. Training is an example of cognitive learning that we undergo willfully and with an intention. Tolman was the advocate of this theory. Social Learning : Learning always does not take place in training centres, classrooms or laboratories. From society also we are continuously learning. Social learning means the learning that takes place by observing or imitating some one of the society. We follow our parents, teachers, leaders, social workers, movie stars and give shape to our behaviour accordingly. This is social learning. We accept someone as our model and following his/her behaviour, we change our hair style, food habits, life style etc. As we take help of a model here, this is known as learning by modeling also. To social learning effective, the required conditions are—

36 NSOU • PGCO-I (a) Attention : Model must draw your attention. (b) Retention : You must remember him/her or keep his/her behaviour in mind. (c) Reproduction : You must have the capacity to behave like him/her. (d) Re-inforcement : You must get positive feedback to what you have learnt. 2.3.2 Reinforcement—Why and How ? On whatever way, you learn, if this is not re-inforced, you may forget it. So, learning must be motivated and nurtured, sometimes to strengthen the desired behaviour, sometimes to prevent the undesirable one. That you will get reward or punishment if you behave this way or that way, one must remind you the same. Otherwise, you may forget to repeat the favourable behaviour or refrain from the undesirable behaviour. This process is known as re-inforcement, and it is a very important step in one's learning process. Reinforcement is usually done in following four ways. (a) Positive reinforcement (b) Negative reinforcement (c) Punishment, and (d) Extinction Positive reinforcement aims at repetition of desired behaviour by providing the learners with something that he/she likes. He/she may need primary re-inforcers like food, water or other biological things. He/she may need status, praise, recognition (secondary reinforcers). If one is given, what he/she needs, he/she will be motivated to repeat the desired behaviour. Negative reinforcement also wants to elicit desired behaviour, but the process here is different. Here, the things that the learner dislikes are withdrawn. Suppose, one was transferred earlier to a remote place, and he disliked that place of work. Now he is brought back to Kolkata office. This is an example of negative reinforcement, and by it the learner will be inspired to repeat desired behaviour. Punishment means providing something unpleasant to the learner. Here, the objective is to prevent one's undesirable behaviour. Once he had done it, so he is

NSOU • PGCO-I 37 given now something that he dislikes. So, before repeating it, he will think twice. Demotion, punishment transfer are the examples. Extinction This is also one kind of punishment. Instead of providing something unpleasant, here something pleasant is withdrawn. You were so long given a perquisite, for examples free use of a car. But now this benefit is withdrawn to give you a lesson for your undesirable behaviour. If you learn correctly, you will not repeat it. 2.3.3 Reinforcement Schedules Reinforcement, positive or must be scheduled properly. Scheduling means timing of reinforcement. If huge time gap is there after one reinforcement, the learner may forget it, again continuously it is done, it may be too costly. So, different researchers have suggested different schedules of reinforcement. They are as follows. (a) Continuous reinforcement, that is done without break. (b) Partial or intermittent reinforcement, where gaps are given between two reinforcements. Continuous reinforcement is not generally used at work place. Partial reinforcement rather is used in different forms like— (a) Fixed Interval schedule, where between two reinforcements time interval is fixed, suppose, six months. (b) Variable interval schedule, where time gap will vary. Variable interval, again, is provided following two methods, e.g., (a) Fixed Ratio schedule, and (b) Variable Ratio schedule Reinforcement is done each time when sales fall by 10%. This is Fixed Ratio Schedule. In the second case, no fixed ratio is maintained. So, workers do not know exactly when or how reinforcement is being done. As a result of that it is said that the variable Ratio schedule is the most effective and most powerful way of reinforcement scheduling.

38 NSOU • PGCO-I 2.4 Personality : Meaning Every person has some uniqueness. So he/she is different from other. This uniqueness in persons is their personality. Why do we adjust with our environment in different ways ? This is because of the unique organisation of our psychological system. This unique organisation of our psychological system is known as presonality. Personality is formed not by a single quality of individual. Rather, it is the sum total of qualities that differentiate one form another. It is the aggregate of ways in which we react to and interact with other. 2.4.1 Personality Measurements While recruiting or hiring an employee, the personality test is a must. In written test, some questions are set. Reply to the questions indicates the personality of the applicant. So, self-report is here is the basis by which one’s personality is measured. Again, interviewers while asking question to the applicants observe the systems, manners, smartness, wit, openness etc and combining all of them, they rate the personality. Thus, the personality measurement is done in these two ways— (i) Self-report, and (ii) Observers’ rating 2.4.2 Determinants of Personality This issue is still a very debatable issue. Because, experts and researchers are divided on whether personality is determined by our heredity or by the environment of our surroundings. Personality usually is discussed under learned characteristics or environmental factors. But what surprises us is, research tends to support the importance of heredity over environment.

**97% MATCHING BLOCK 5/37**

**W**

The heredity approach argues that the ultimate explanation of individual’s personality is the molecular structure of the genes, located in the chromosomes,

and these we indirect from our parents. To prove it, the researchers of this line conducted research one thousand sets of identical twins from different countries. That the personality is mostly hereditary is the out come of these studies. Extreme example to this conclusion is

**84% MATCHING BLOCK 6/37**

**SA**

ORGANISATIONAL BEHAVIOUR - consolidated.docx (D113801548)

one set of twins who were separated for 39 years and raised 45 miles apart.

Surprisingly it was found that, though there was no communication in them for so many years, they both— (i) used to drive the cars of same model and colour

NSOU • PGCO-I 39 (ii) chain-smoked the cigarettes of same brand (iii) owned dogs with the same name, and (iv) regularly vacationed in sea-beach. This is not to suggest that the personality never changes. Over time and in different cultures, personality does change. So, perhaps we talk about personality development. Had the personality been determined only at conception, all efforts toward personality development would have failed. But this does not happen. So, environment has also an impact as determinants of personality. Actually, whatever is revealed in the study of twins, genetics accounts for not more than 50% of the similarities, and the balance is explained, partly by family, partly by society and partly by occupational environment.

2.4.3 Personality Development Personality develops from its infant to grown up stage. Psychologists broadly accept this view. Most important few studies are explained below in brief.

Study of S. Freud : Freud was a pioneering theorist on personality development (PD). He stated that there are four universal stages of psychological development that are decisive in the formation of personality.

(a) The Oral Stage : This stage remains in first year of life. Mouth here is the significant body zone through which the baby tries to satisfy its biological drives. (b) The

**78%**

**MATCHING BLOCK 7/37**

**SA**

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

Anal Stage : During second to third year of life focus shifts from mouth to anal region. So, toilet training given to the child by parents

is too important during period, as it may have its influence on adulthood. (c) The Phallic Stage : At about four or five years of age, focus shifts to sex organs. Being unable to understand it properly, the child sometimes suffer from severe anxiety that may affect normal personality development. (d) The Latency Period : This period occurred between six to eight years of age, when the child loses interest in sex temporarily and gets interest in external world. (e) The Genital Stage : This stage occurs between adolescence and adulthood. Interest towards opposite sex comes in. The youth begins to love others rather than self. Learning about this stage is very vital, as major part of our personality develops at this stage.

40 NSOU • PGCO-I Freud has given thus on valuable insight into the theories on personality development. But his high reliance on sex and use of terms like 'anal' rather than 'impulsive', 'genital', rather than, 'mature' have been strongly criticised. Study of E. Erikson : Erikson gave a new dimension to PD. According to him, PD is not only a psycho-sexual development, rather the person and society has equal roles in PD. He stated that in each stage of our life we suffer from a unique set of dilemma, and solution to that we get from the environment of that time. Specific stages of life and related dilemma, as stated by Erikson are given below.

First year → Trust Vs Mistrust 2 – 3 years → Autonomy Vs Doubt 3 – 5 years → Initiative Vs Guilt 6 – 8 years → Superiority Vs Inferiority Adolescence → Identity Vs Role conflict Adulthood → Intimacy Vs Isolation Middle Age → Activity Vs Absorption Late Adulthood → Integrity Vs Despair

Theory of C. Argyris : Argyris believed that PD cannot have distinct or separate stages as stated by earlier two experts. Rather, it progresses along a continuum from immaturity to maturity. More you are in the side of maturity, more you are a man with personality. Based on this study, Argyris identifies the features of both immaturity and maturity. To which of them, one is prone determines his/her

**65%**

**MATCHING BLOCK 8/37**

**SA**

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

personality. The characteristics as such are given below. Immaturity Maturity Passivity → Activity Dependence → Independence Limited behaviour → Diverse behaviour Shallow interest → Deep interest

Subordinate position → Superordinate position Low self awareness → High-self awareness

NSOU • PGCO-I 41 2.4.4 Personality Theories The prominent theories on personality can be grouped as under. (a) Type theory (b) Trait theory (c) Psychoanalytic theory (d) Social learning theory, and (e) Humanistic theory Type theory groups the people into some categories, and believes that personality of people belonging to each category is same. Sometime grouping is done physically and sometimes psychologically. According to physical classification, fat persons are sociable, relaxed and even-tempered and thin ones are restrained and fond of solitude. According to psychological grouping, on the other hand, extroverts are sociable and introverts like solitude. Trait Theory classifies people not into types but as per the traits or attributes of people. Trait that is exposed more often is more associated with personality. Psychologists who work with trait

**92%****MATCHING BLOCK 9/37****SA**

Organizational Behaviour.pdf (D142229754)

theory are concerned with— (i) determining the traits that provide a meaningful description of

the man, and (ii) finding some way to measure it. The enduring or consistent trait is called the personality trait that appears frequently in a variety of situations. Psychoanalytic theory has its origin in the theory of S. Freud which is composed of broadly three elements, e.g., (i) id, i.e. raw and animalistic component following pleasure principle. (ii) ego that follows reality principle (iii) super ego that strives for perfection Here, mind is compared with iceberg, maximum of which is under water. Small portion of mind possesses in the same way the consciousness and the large part of it is unconscious, a store house of impulses. Movement from unconscious to conscious segment is the development of personality (from id to superego).

42 NSOU • PGC0-I Social Learning Theory accepts the influence of society or environment on the development of personality. When you learn something i.e. develop yourself by observing others in the society, it is known as social learning or vicarious learning. Social learning theorists deny the influence unconscious component, reversely they focus on cognitive activities that evoke, maintain and modify men. The Humanistic approach emphasizes

**100%****MATCHING BLOCK 10/37****SA**

Organizational Behaviour.pdf (D142229754)

on man's potential for self-direction and freedom of choice.

Man here, however, is not solely a biological but a social construct. That means, this theory combines psychoanalytic theory and the social learning theory. Roger's Self Theory and Maslow's Self actualisation Theory are the theories under this approach. Roger believed that one's personality depends on how he/she perceives self and the world around. Maslow again believed that man himself/herself is self-actualiser, and the drive towards it is inherent in human being. So, he/she is responsible for his/her existence and becoming always something different. 2.4.5 Myers & Briggs Type Indicators Based on Type Theory, two researchers, Myers and Briggs, jointly developed personality assessment indicators with the help of a questionnaire containing 100 questions. Analysing the responses, the researchers identified eight personality traits and combined some of them together to give some personality types. Firstly they classified the traits as below. Extraverted Vs Introverted (E Vs I) : Former being out-going and assertive, while latter very quiet and shy. Sensing Vs Intuitive (S Vs N) : Former having power of observation and latter looking at "big pictures". Thinking Vs Feeling (T Vs F) : First type works with head (brain) and the second with heart. Judging Vs Perceiving (J Vs P) : First type prefer giving judgement about others but the second gives his/her opinion. Having combined the above traits, the researchers developed 16 personality types for example— INTJ (introvert, Intuitive, Thinking and Judging) types who are according to researchers, visionaries.

NSOU • PGCO-I 43 ESTJ types who can be good organisers. ENTP types are innovative and can be an entrepreneur. Eight traits as above are Myers-Briggs Type Indicators (MBTI) as they indicate personality types.

### 2.4.6 The Big Five Personality Models

Some modern researchers have identified five personality traits and they call them Big Five Personality Traits as, according to them, they encompass most of the significant variation in human personality. Those are as below. Extraversion refers to the extent of assertiveness and sociability among human beings. Agreeableness means the propensity to agree with others. Conscientiousness is a measure of reliability and dependability. Emotional Stability denotes the ability to avoid and withstand stress and makes people calm and secure. Openness to Experience helps people listen to others' opinion, makes them curious, creative and flexible. These five dimensions of personality traits are closely related to the work-related behaviours of the workers. Extraversion makes people the good leaders having both assertiveness and sociability. Agreeable people are liked by all. So, interpersonal relationship can be very good if they are more in number. Conscientious people are highly productive and their absenteeism and turnover rate are low, as everything they do rationally. Emotionally stable people are highly satisfied people. As they can restrain their emotions they are rational as well. Open people on the other hand can cope better with change and also act as change-agents. Change being the rule of the day, open people make sense.

### 2.4.7 Other Relevant Personality Traits

Some other traits have come up at present which are considered by most of the business heads very relevant in the context of workplace behaviour. Those are summarised below.

**Core Self-evaluation :** Some people evaluate themselves positively; i.e. they believe "we are the architect of our own fate." They are confident about themselves and so their locus of control is internal.

44 NSOU • PGCO-I As the same time, there are people who have negative valuations about themselves and believe "we are the puppets in the hands of God." These people are said to have external locus of control who usually do not fix target, and even if it is fixed they do not have any urge to achieve it, as they are the believer of "what will be, will be." Self-Monitoring people can adjust with every situation. They can change themselves, as the lizards do, suit the changed situations. They are good politicians having striking difference between public person and private self. They are successful but not in that way satisfied.

**Machiavellianism :** The philosophy of Machiavelli, a most practical US philosopher, is known as such, and the followers of him are known as much people. They are so practical that ethics, morality are meaningless to them. If any one is to achieve something, he/she can do it by hook or by crook. They believe in "ends justify means." So, one must not be judgemental about whether this is good or bad. Mach people therefore manipulate more and succeed more. In the long run, however, they are supposed to be the failures.

**Narcissism :** Narcissus was a Greek mythological character and after his name this "ism" has come. Narcissus believed that he was the superior to all. So, he could not like or love other one. He stood before the mirror and looked off and on his own image. Ultimately he built a statue of himself and fell in love with that. The people who are over-confident about themselves and treat others as inferiors are known as narcissus people. The boss of this kind of people, however, give them very low score in their performance evaluation.

**A and B Type :** A type people always run after time. They eat quickly, walk quickly and also work very fast. They start at the same time a number of jobs and can complete none of them satisfactorily. Quantity may be achieved by them, but never the quality. They always suffer from stress also. B type people are always "happy-go-lucky." They play, but not to win but to make fun. They enjoy their leisure time, never suffer from urgency of time. So, their stress level is very low.

### 2.4.8 Personality Job Match

Why do we want to know personality or other characteristics of human beings? Our objective is to know their impact on human behaviour, particularly on work-related behaviour like productivity. In fact, productivity can be up to the mark if one's

NSOU • PGCO-I 45 personality fits the job requirements. All personality traits are not suitable to each type of jobs. John Holland, working on this issue, identified the following personality traits along with the jobs to which they are suitable.

**Personality traits Suitable jobs**

(a) Realistic : Simple Aggressive, Farming, Garage mechanic, Manually skilled welding

(b) Conventional : Routine worker, Accounting, Finance, Conforming, Traditional Corporate management

(c) Investigative : Thinker, Organiser, Biology, Mathematics

Curious, Analytical Market Research

(d) Enterprising : Dominating, Law, Public relation, Assertive, Politicking

Enterpreneurship

(e) Social : Polite, Cordial

Social work, Teaching, Helping, Dependable

Consoling

(f) Artistic : Emotional, Creative, Art, Music, Painting, Imaginative

Interior decoration

Then, he stated that productivity can be high if job can be matched with personality in the above-shown way. If this is not matched, the workers may also be dissatisfied and their absenteeism and turnover rates will be high. However, with the help of a hexagon Holland tried to show the personality traits that are closer to each other and the traits which are diagonally opposite. When the traits are closer, job suitable to one trait may also match the adjacent traits, but never this is true in Fig. 3

Artistic Social Enterprising Conventional Investigative Realistic

46 NSOU • PGCO-I case of diagonally placed traits. As is shown in Figure 3, the realistic people can somehow do the jobs earmarked for conventional or investigative people, as these traits are closer in the hexagon. But realistic people can never be social, conventional can never be artistic, as they are diagonally positioned. 2.5 Perception We see or hear the something through our sensory organs eyes or ears, but we interpret them differently "For many a reason, none of us can see the reality. We see something, give it a meaning and call it the reality. The process of interpreting the world as such is called perception. Perception is different from sensation. Sensation means what we do with our sensory organs like eyes, ears, nose, tongue and skin. But perception means sensation plus its interpretation. When a fly sits the skin, a baby will feel it as one adult will do. But the baby will understand that it is a fly and the adult will understand it and use his hand to remove it. The second case is perception. Sensation is same for all individuals, but the perception varies, as the latter depends on our understanding and the understanding again, depends on our learning and related many other things.

2.5.1 Importance of Perception Perception varies from person to person. That means it is not universal. Perception in most cases is not the reality. In spite of that perception exerts significant influence in our decision making. Mr. A may be actually a good person. But if you perceive him as bad, your behaviour to that person will never be cordial. If one manager perceives his/her workers as lazy or deviant, he/she will impose stringent rules to control them, even if actually they are not of that type. We have the general perception that government employees are not dutiful. Mr. Z, a government employee, is truly a dutiful person. Still, our behaviour with him may be suspicious. 2.5.2 Perception-Influencing Factors Why does perception vary? The answer to this question lies in the factors influencing perception. Perception has three components— (a) Perceiver (b) Perceived or Target, and (c) Situation

NSOU • PGCO-I 47 We all know two perceivers can never be identical. The perceived also varies in its features. Change in situation always makes the difference. So, these three factors are singly or jointly responsible for varying perception. Different characteristics of these three factors that make us perceive the same thing differently are outlined below. (a) Characteristics of Perceiver Learning : To an illiterate person, number 8 is just a mark. To a person who has learnt only the English number, it is eight. Again, to a person who knows only the Bengali number, it is four. So, learning makes difference. Attitude : There is a glass, half of which is filled with water. If you possess negative attitude. You will see the empty portion. Whereas the person having positive attitude will see the portion filled with water. Needs : If you are thirsty, the sand of desert may appear before you as water. A hungry man will get the smell of different food items from the roadside restaurants while going to Sealdah Station. But the person who is to avail the train, will listen the whistle of the trains. Interest : In the same page of the newspaper, your father seeks the information as to share price, whereas your mother will search for the price of the gold. Personality : If you are A type, you will dislike the people who enjoy in leisure time. If you are B type, you will rather like them. Experience : Mothers are afraid of snake as they have experience about its nature. Babies, on the other hand, may try to play with snake, as to them it is just like a doll. (b) Characteristics of Perceived Novelty : If you see something novel, for example, an elephant on city- street, it will attract your vision more in comparison to buses or cars. Size : A six-foot tall basket ball player will attract your vision and others you will ignore. Contrast : Among a number of white balls, there is only one black ball, it will attract your vision. Movement : Moving advertisement through flashing light is used by the advertiser because it draws our attention.

48 NSOU • PGCO-I Background : Black letters in white background are more easily visible than the same in yellow background. Position : You can see easily the people who are in front of the procession, and others you may not notice in that way. Similarity : In a large gathering, only ten persons were wearing the similar dress, and all others were in different dresses. Those ten persons will be prominent to you amidst that large gathering. (c) Situational Characteristics : Perception varies from perceiver to perceiver and also from perceived to perceived. But even if both perceiver and the perceived are same, the perception may vary due to situational differences. You did not know earlier Mr. X, when you first met Mr. X, he was with Mr. Y whom you know as a good man. Then, you will perceive that Mr. X is also a good man. But if the situation was different, i.e. suppose when you first met Mr. X, he was with Mr. Z and Mr. Z is not at all a good man. Then, your perception about Mr. X would have been completely opposite. Everyday you, the perceiver, see the rising sun, the perceived, through the window of your bed room. But one day you, the same perceiver, see the same rising sun from Tiger Hill at Darjeeling. Surely, your perception about the rising sun at two situations will be different. 2.5.3 Making Judgement about other Persons So long we give some examples of perception about inanimate things. More complicated is the perception or giving judgement about others. This is known as person perception and it is more difficult than the perception about impersonal things. Different studies are there on person perception. But the most relevant and significant study is as follows. Attribution Theory : Heider and Kelly are the known contributors to this theory that has explained in detail the complexity of person perception. While perceiving one person, i.e., giving judgement about that person, not only the external state, but also his internal state we need consider. First step is to question why he does that he does. Then, the perceiver himself will seek the answer. Usually, the perceiver wants to know whether the behaviour of the target is internally caused or externally caused. If it is internally caused then the perceived or the target is responsible for the behaviour concerned. But if it is externally caused that the perceived is not responsible personally, rather the situation has forced him/her to behave in this way. While fixing up the cause—internal or external, the perceiver depends on broadly following three factors.

NSOU • PGCO-I 49 1. Consensus : The behaviour of the target gets consensus when some other persons also behave in the same way. If not only Mr. X today is late, but other workers who follow the same route to come to office, are also late; then the perceiver may think that there was perhaps the traffic jam or train was late and hence, so many workers are late. That means target's behaviour in coming late is externally caused and the target is not personally responsible. 2. Distinctiveness : If the present behaviour of the target is distinct, i.e., clearly different from his/her other behaviours, then the behaviour is not internally caused, and so the concerned person is not also responsible for this. One student is very regular in class, attentive to lectures, well behaved also. Still, if his/her present behaviour, i.e., performance in class test is poor, it is no doubt different from other behaviour, so it is externally caused. 3. Consistency : When the target exhibits same behaviour consistently over time, then surely he/she is personally responsible for this. For example. Mr. X is late today, and during last three months, sixty days he was late. Then, it is internally caused and the target is responsible.

Consensus	Distinctiveness	Consistency	External	External	External	Internal	Internal	Internal	High	High	Low	High	Low	Low
High	High	High	External	External	External	Internal	Internal	Internal	High	High	Low	High	Low	Low

Fig. 4 Figure 4 summarises the above discussion and depicts at a glance when one's behaviour is externally caused and when internally. 2.5.4 Short-cut Judgements about Others To give judgement about others is not an easy task. Huge information needs to

50 NSOU • PGCO-I be collected before giving such judgements. But in most cases, the perceiver either does not get time or is not willing to collect so much information. So, he/she adopts some short-cut techniques while judging others. Quick decisions may be taken thereby, but in most cases they are not correct. The methods that are used usually for this purpose are narrated below. Halo/Horn Effect : Sometimes the perceiver gives judgement about the perceived considering just one quality or one disqualification of the perceived. Such process is known respectively as halo or horn effect. Example : Halo Effect : The lady is too charming, and so she is selected without considering her quality. Horn Effect : The candidate is poorly dressed, so he is not selected though his quality may be superb. Stereotyping : When someone is judged considering not his/her attributes but by considering the attributes of group he/she belongs to, is known as stereotyping. Only a few muslims may be the terrorists. But if we conclude that all muslims are terrorists, and so we reject one muslim candidate, then we are stereotyping. Projection : When we impose our own attributes on the person we judge, the process is known as projection. An honest man views other persons as honest. A guilty mind is always suspicious and thinks others guilty, and accordingly give judgement about others. Selective Perception : Our perception in most cases is selective. We select those qualities or disqualifications of a man that we want to see in him. So, the same person is good to one perceiver, and bad to other. Because the former selects only the virtues of the perceived but latter selects the vices. Contrast Effect : You are a mediocre student. If you are tested along with a group of very good students, then you may be labelled as very bad. But if, you the same, are tested with a group of very bad candidates, you may be graded as "very good". Thus, your actual calibre is never revealed. 2.6 Attitude What we want to do is our attitude, and what we actually do is our behaviour. So, behaviour and attitude are very closely related. This relationship is known as Attitude—Behaviour relationship or A-B relationship.

NSOU • PGCO-I 51 Attitude means one's mental make-up or mental pre-disposition or mental readiness that influences his or her response to some events, objects or persons. 2.6.1 Cognitive Dissonance Theory That A-B relationship is direct and very close has been shown in different studies. But the most important study in this respect is the study of Leon Festinger who is the advocate of Cognitive Dissonance Theory. 'Cognitive' means knowledge based and "Dissonance" means discomfort or dissatisfaction. This theory of Festinger asserts that Attitude and Behaviour always are co-related. If, for any reason, behaviour is not consistent with attitude, everyone feels dissonance, i.e., discomfort. Again, no one can carry discomfort in mind for long time. Once he/she feels discomfort, he/she tries to reduce it. In an attempt to reduce discomfort, every one hence tries to make attitude and behaviour consistent either by changing attitude or by changing behaviour. As they are made consistent in this way, the dissonance is reduced. So the theory attempts to show that attitude and behaviour can never remain unrelated for long time. If somehow it becomes so, the perceiver very soon will make them related by changing attitude or by changing behaviour. However, every rule has some exceptions. Here also Festinger identified the following exceptions or moderating variables to his theory. Moderating Variables as such are as follows : (a) Unimportance : If the attitude and behaviour are in respect of some unimportant issues, then dissonance is not so acute. So, no person wants to reduce that dissonance and attitude and behaviour may remain inconsistent. Example : Parents always advise the children to brush the teeth after every meal (attitude), but they themselves do not do the same (behaviour). (b) Uncontrollability : If your behaviour is not controllable by you, i.e., if you are compelled to behave in a way that you do not want, then attitude and behaviour may be different. Even if you feel dissonance, you will not try to reduce it. Because you know that you have no influence on your own behaviour. (c) Reward : If one gets sufficient reward to behave in a way, then he/she may do it even it is not liked by him/her. The discomfort that is created by this inconsistency is redressed by the reward he/she gets. As the dissonance is balanced by reward, there is no question of changing either the attitude or the behaviour. So, they two may remain inconsistent.

52 NSOU • PGCO-I 2.6.2 Attitude Development Attitude is developed out of experience or prior knowledge on the subject. If it is developed sans experience, it will surely when the holder will be exposed to experience. If still the attitude is not changed, the behaviour may fail to be in line of the attitude. Thus, A-B relationship will be affected. Attitude therefore is usually developed and should be developed having followed the CAB Model. CAB Model : Three letters of CAB stand for three steps or stages of attitude development. They are as follows. Cognition (C) : Cognition means knowledge of something. For example, Mr. X has come to know that his wages are low. Affective (A) : The above knowledge affects the feeling of Mr. X and he becomes angry or disappointed on his low salary. Behaviour (B) : So, in the third stage, he will want to leave the job and seek a better job. This is attitude and it is developed in this way having followed a three- step CAB Model. 2.7 Job Satisfaction Job satisfaction means positive feeling to job. This job satisfaction is the only work-related attitude, and like other attitudes, it has also the relationship with work- related behaviours e.g., productivity, absenteeism and workers' turnover. Some experts have identified other two work-related attitudes like job involvement and organisational commitment. But these two are just the extensions of job satisfaction. More satisfaction means involvement to job and more one's involvement at workplace means organisational commitment. 2.7.1 Factors Influencing job Satisfaction Factors that are responsible for job satisfaction or dissatisfaction are— • Job itself • Supervision/Supervisor • Management Style (centralisation or decentralisation) • Working condition • Promotional opportunities • Performance evaluation technique • Pay and remuneration etc.

NSOU • PGCO-I 53 Of these different factors, promotion and pay are considered as most significant factors in different empirical studies. Conversely, it is again said that job is the real satisfier. Stimulating and interesting job can satisfy the workers for long term. Money, on the other hand, can satisfy only those workers whose wages are very low or who belong to the lowest level of Maslow's Need Hierachy. In a comparative study between the richest persons listed in Forbes 500 and the poorest cowboys of East Africa, it was noticed that poor cowboys are more satisfied than the richest ones. 2.7.2 Impact of Job Dissatisfaction Job satisfaction is an attitude. Productivity—absenteeism-turnover are the behaviours. So, Is workers are dis-satisfied, it will necessarily affect the productivity etc. The impact of such dissatisfaction may be narrated as below. Productivity-Job dissatisfaction : The relationship between the two are inverse. Productivity decreases when dissatisfaction increases. Absenteeism-Job dissatisfaction : Job dissatisfaction leads to higher absenteeism. Thus, their relationship is direct. Higher absenteeism in turn heads to lower productivity. Employee turnover-Job dissatisfaction : Here also the relationship is direct and positive. Higher the dissatisfaction, higher is possibility of resignation, i.e., turnover. Higher turnover requires again higher and continuous recruitment. Cost of recruitment means cost of production. Higher cost of production means lower productivity, as productivity means production divided by cost. Theoreticians, however, have built up a model to explain the possible behaviour or responses of workers when they are dissatisfied. Sometimes, their responses are Fig. 5 Constructive Destructive Active Passive Voice Exit Neglect Loyalty

54 NSOU • PGCO-I active, sometimes passive. Sometimes they respond constructively, sometimes destructively. The following figure explain such different responses of dissatisfied workers. Usual four responses as shown in the figure are— Exit — Leaving the organisation. Voice — Raising voice against the causes of dissatisfaction. Loyalty — Hoping still for the best and waiting for better days Neglect —Silently doing harm to the organisation by coming late, remaining absent or making mistakes. Of these four, first two are above the horizontal line and other two are below that. First two are active responses and rest two are passive. First and fourth again are destructive responses, both of them being at the left hand side of the vertical line. Second and third, lying at the right-hand side are, again, constructive, as these responses may help the management to take some positive steps. 2.8 Summary From the above discussion, we could understand the fundamentals of individual behaviour where impact of learned characterises like personality, perception, atti- tude, learning process, etc. have been discussed in detail. 2.9 Questions A. Objective Type : 1. Name two inherited characteristics of individuals. 2. What is the critical test of learning ? 3. In how many ways reinforcement is done ? 4. Who is the pioneer of personality development ? 5. What does MBTI stand for ? 6. Name two characteristics of perceiver that influence perception. 7. Name of moderating variable to cognitive Dissonance Theory.

NSOU • PGCO-I 55 B. Short answer Type : 8. What does 'voice' mean in the context of job satisfaction ? 9. State the factors that influence job satisfaction. 10. What do you mean "halo" effect ? 11. How does situation affect perception ? 12. Distinguish between A and B type persons. 13. Explain ENTP type of person. 14. What do you mean by negative reinforcement ? C. Long answer Type : 15. How is learning reinforced ? Give a brief note on reinforcement schedule. 16. Explain the impact of Big Five Personality traits on work-related behaviour. 17. What do you mean by personality job match ? How did John Holland explain it ? 18. State the usual techniques of speed-reading the other persons. 19. Discuss the theory in relation to attributing causes to one's behaviour. 20. What is the impact of job dissatisfaction ?

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

Objectives After studying this unit you will be able to : • know the concept

and foundation of group behaviour • identity the group dynamical • form an idea about its creativity • assess the role of powerplay and politicking in organisations • understand the conflict process and the ways for its resolution

3.2 Concept of Group Concept of group is as old as the human civilisation itself. When the human beings used to live in forest and caves, they were to go out for collection of fruits and hunting of animals. But when they did so, they did it in group. Otherwise ferocious animals could easily kill them. Forming groups, those human beings, our predecessors, were capable to overpower the dangerous animals. Since then, more we are becoming civilised day by day, more we are depending on the power of groups. Concept of group has come up out of the necessity for co-operation. Benefit of division of work and the belief that two brains are better than one brain are the key drivers to the concept of group. At present, need of group is everywhere. In some activities, group activity is indispensable (for examples, football game, or chestra etc), in other cases individuals singly can do the whole job, but this is neither desirable, nor economically viable. Adam Smith proved long ago that instead of doing the whole job alone, if the job is divided into several tasks and each task is allotted to separate person, productivity will go up substantially.

3.3 Definition of Group Group is a collection of people who are interdependent and interacting, and who have a common goal to achieve. Group therefore is different from crowd. A gathering at railway station, bus stop is a crowd, as people there are not interdependent and they do not have a common goal to reach.

58 NSOU • PGCO-I 3.4 Classification of Group Figure 6 depicts clearly how group is classified. Firstly, group can be divided into formal and informal groups. Formal groups are organisationally structured that have some specific jobs to perform. Informal groups are spontaneously developed out of some social needs. It is obligatory on the part of the workers to join the formal group, whereas joining an informal group is voluntary. Informal groups, are known as "grapevines" and sometimes create obstacles to smooth sailing of organisations. But there are also example when informal groups help a lot to the performance of formal groups.

Group Formal Informal Command Task Interest Friendship Fig. 6 Command group is a formal group where some members give command and others are to obey that command. Working group between boss and subordinates is command group. Its structure is usually vertical having a chain of command. Task group is also a formal group that is to accomplish jointly an assigned task. Group among departmental managers is task group and so it is horizontal. Interest group is an informal group that is formed by members with some motive or interest. Workers form trade unions to fight against management. Students form group to get concessions of tuition fees. Friendship group is another informal group where the people of same characteristics come together. Birds of same feather flock together. In the same way, the people with similar likings, dislikings, hobbies form group for social interaction or the fulfilment of psychological needs. Opposite poles also pull each other. Thus, friendship is also possible between two different types of people.

3.4.1 Why do people join informal groups ? In case of formal groups, one has no option. One must join the group. But in case of informal group it is optional. Still people join such groups for usually the following purposes.

NSOU • PGCO-I 59 (a) Security : If you are alone, you are insecure. So people join groups and then he needs not stand alone. (b) Status : Joining the groups like LIONS club, people want to look important in the eyes of others. (c) Self-esteem : To be important is one's own eye is more difficult. Joining the groups like Ramkrishna Mission, we may enhance our self-worth and get a meaning of our lives. (d) Affiliation : Everyone is to have a friend circle. Interaction with friends is needed to meet mental appetite. We need always a shoulder to cry on, hence we need group. (e) Power : United we stand, divided we fall. Unity is strength. What goal you alone cannot achieve, in a group you try. Your goal achievement will be easier. So, to win over we need groups.

3.5 Group Formation / Group Development Groups are formed at different places. Members of different groups are also of different culture, creed and colour. So, the formation of groups can never have a universal pattern. Rather, it will vary from situation to situation. In spite of that in most cases usually we notice the following stages of group development.

Forming : In this stage, members are not yet ready to join the group. They try to taste the water in this stage. They try to know each other and to assess whether it will be justified to come into a group with these people. Once, they take decision that "yes, we will come together, more together", the forming stage is over.

Storming : Once it is decided that a group will be formed, a number of question/self-doubts may start surfacing. Questions are—who will be leader ? What will be the norms ? To what extent the personal goal is to be sacrificed for the sake of the group ? Answers to these question will resolve the storm that so long was disturbing the members.

Norming : Here, we reach normally. Norms for running the group are decided upon. The leader is selected. Everyone is ready to follow the norms and perform group activity.

60 NSOU • PGCO-I Performing : Now, the group start working for which it is formed. A harmonious relationship and a chain of command prevails in the group. Synergy is achieved in the performance wherein the group activity is greater than the sum total of individual activities.

Adjourning : In case of temporary groups, the group is dis-banded when the goal is reached. Wrapping up activities are seen this stage. Even if the group is a permanent one, some kind of re-structuring may be felt necessary. Old relationships are broken and new ones are formed, starting again cycle from the forming stage.

3.6 Foundation / Properties of Group Behaviour Group activity has the synergic effect. That means, group activity is greater than the sum total of the individual activities. But this is possible if and only if the required properties of group are present or the foundation of group behaviour is properly built. The properties as such one discussed in the following sections.

3.6.1 Size of the Group The size of the group must be proper. That is, there must be a limit on the number of members in a group. In decision-making group, the number may be ten to twelve. But in performance group this must not be more than five to six. If the size is too large, the individual contribution to the group cannot be overseen or measured properly. Then, the members may get the chance of suppressing their capacities. As a result, instead of being greater, the group performance may be less than the sum total of individual activities. Such a situation is known as social loafing. Since Ringelmann, a psychologist, identified this effect by his experiment, such situation is known as Ringelmann Effect as well. Ringelmann at first asked one person to pull a rope and he measured that the total force exerted by the person was 63 kgs. Then, he asked three persons to pull the rope together and surprisingly this time the average force came down to 53 kgs. When he asked eight persons to jointly pull the rope, the average force came down to as low as 31 kgs. So, larger the group lower is the performance, mainly due to the social loafing.

3.6.2 Role of Group Members Each and every person has one or more roles to play. So, Shakespeare once told

NSOU • PGC0-I 61 that the world is a stage and we all there are actors. Thus, the group members also play some roles, and their way playing such roles the group efficiency depends. Group members have two types of roles, e.g., Formal Role : that role is assigned to members (chairman, secretary etc.) Informal Role : not assigned by group, still influence group activity. Roles again are divided as follows : 1. Task-oriented Role : Initiator, opinion givers, enterprisers 2. Relation-oriented Role : Harmonisers, Compromisers, Encouragers 3. Self-oriented Role : Blockers, Dominators, Avoiders Task oriented role usually is formal and other two are informal. Whatever role is assigned or played by the members, that should be clear both to assignor and assignee. But in most cases this is not so. As a result, we notice usually a gap between role expectation and role perception. Role expectation means what is expected by other persons about one's role. Role perception means we ourselves think about our role. If the role is clearly understood by all concerned, then the aforesaid two will be the same. Otherwise, the situation i.e. the gap can be termed as Role Ambiguity. My own role preception, again, may not be congruent with role enactment, i.e. actually what I do. Thus, my thinking and doing are different. In such a case, we suffer from what is known as role conflict. Role Expectation Role Perception Role Enactment → Role Ambiguity ← → Role conflict ← Fig. 7

3.6.3 Status Status is the position, grading, title, ranking given to or enjoyed by members. This is determined considering the age, qualification, gender, social position, wealth possession of the members. This status is important in every group because it determines the chain of command and ensures thereby the group performance. However, status and role are co-related. A man with rank must be given the higher role. Otherwise, status equity will be affected, the performance will not also be upto the mark.

W. Whyte, conducting an experiment on the performance of a restaurant noticed that work there was initiated by waiter, a low status employee, and the cook or chef, a relatively high status employee, was to prepare items of food as the waiter instructed. Hence, there was off and on the problem between cook and waiter. For smooth functioning, he suggested for a hook that was to kept has cook and the waiter just would keep the orders there serially. Then, the cook, as if, would initiate the work, status equity will be followed and ultimately the performance will be better.

3.6.4 Norms Norms are standard behaviour or code of conduct that is accepted and shared by the member of the group. Norms are fixed up so that control of members becomes easy and the members themselves know what they ought and ought not to do. Every group may have different norms and in the same group the norms may be different for different situations. On official meet, the norms may be to exchange hand shakes while at dinner party of the same group, hugging each other may be the usual norms. Dress code in an example of norms. For resource allocation also there can be some norms is every group. But the most significant norms perhaps are the performance norms, where the group dictates the members as to what will be there actual performance at different situations. The performance norms of the workers have a tremendous impact on organisational productivity. This was identified first is the Hawthorne Study of Elton Mayo. The study was an eight-year (1924–32) long study at Hawthorne Electrical Plant to identify the reason behind production reduction year after year. Elton Mayo and his team conducted a number of experiments to identify the reasons, and finally came to the conclusion that the performance norms of workers were responsible for low production. As found out by Elton Mayo, the production norms in the plant were— 1. Don't be rate buster, i.e. don't produce too much. 2. Don't be chiseler, i.e. don't produce too less. 3. Don't be sqcator, i.e. don't betray the workers by leaking this information to the management.

NSOU • PGC0-I 63 As a result of this, the production in the plant could never reach the target. Mayo suggested that the Human Relations Approach to management can be a solution of the problem. 3.6.5 Conformity/Group think The Hawthorne Study made it clear how conforming the workers were to the performance norms dictated by their group. Different incentives were provided by Elton Mayo, still they did not produce upto their full capacity. This conformity arises either out of close attachment to the group or out of fear of harassment or punishment that one was to face if he/she did not comply the norms. Such a situation where individual member of the group refrains from giving his/ her own opinion and abides by the opinion of majority of the group, is known as group think, the group is needed to have diversified opinion from different members. But this objective is largely affected by this group think. Solomon Asch, a researcher, conducted a very interesting experiment to prove this group think. He asked his ten assistants to take part in the experiments. He took nine of them into confidence and made them clear before them what he actually wanted to do. But one of them was completely in dark and Asch did not disclose anything to him. Then he took two cards, one card having three lines on it, and the other containing only one line (Fig. 8). Then, he asked one by one the first nine Fig. 8 A B C assistants, "which line of the first card is equal to the line of the second card ?" Everyone of those nine persons answered that 'C' of the first card was equal to the line of the second card. The last person, who was quite in dark of everything, was surprised, because clearly it was seen that 'B' was equal to the line of second card. Actually, Asch told his nine assistants to give such wrong answers. Now, when the

64 NSOU • PGC0-I same question was asked to the tenth assistant, he hesitated for sometime, but finally went by the opinion of other nine assistants, though he could clearly see that 'C' was not the right answer. This is group think where one's own opinion is suppressed in favour of the group decisions. 3.6.6 Cohesiveness of the Group Cohesiveness means degree of attachment among the group members. It is the extent to which the members of the group are attracted to each other. This cohesiveness is essential, otherwise group performance can never be upto the mark. ●●●●● Factors influencing Cohesiveness : Cohesiveness of a group depends on the following factors. (a) Goal Alignment : More the personal goals of the members are aligned with each other and more the personal goals are consistent with common goal of the group, more the group is cohesive. (b) Time spent together : If the members can spend maximum time with each other, the group will be cohesive. (c) Size of the group : If the size is large, firstly some sub-groups may crop up within the group affecting the group cohesiveness; secondly members will then have little chance to spend time together or interact with each other, making the group thus less cohesive. (d) Difficulty in entry : The group where the entry is very difficult, once entered members try to build and maintain good relations with each other. Because once one member is in bad book and is to leave the group it will not be easy to enter again into the group. (f) Success of group : We all want to continue the membership and so good relationship in the group, if the group is successful. So, success brings cohesiveness of the group. (f) External threat : When we face some threat from outside, we forget all our internal conflicts and jointly try to fight against that. Thereby, at least for the time being, all conflicts are resolved and the group becomes cohesive. ●●●●● Cohesiveness and Productivity : Generally we believe that cohesive group is productive group. If the relationship among group members is good, group performance will have the synergic effect. Thus, the group productivity will be greater than the sum-total of the individual productivity. But always this good effect

NSOU • PGC0-I 65 of cohesiveness may not be available. In fact, there is one moderating variable here, that should be considered along with cohesiveness while assessing its impact on productivity. That variable is performance norms. In Hawthorne Study, we have seen how performance norms of "Don't produce too much", affected the productivity. The group there was very cohesive. So, inspite of proposed incentives for higher productivity, the workers complied the group norms of average production. So, when performance norms are low, cohesiveness may have negative impact. Fig. 9 Figure 9 has shown it clearly that high productivity is possible when not only cohesiveness but performance norms must also be high [Quadrant 3]. High cohesiveness may have low productivity if performance norms is low [Quadrant 4]. Where cohesiveness is low, performance norms will be complied by average number of employees not by all. So, performance norms may be high or low, but the productivity will be moderate. 3.7 Group Dynamics A group is consisted of a number of people. Hundreds of relationships are again there among those people of a group. Group performance depends on continuous interface and interaction within those relationship. This interface or interaction within the group is known as group dynamics that sometimes add to organisational efficiency, again sometimes go against it. When relationship is good but stagnant, the organisation will have just the status quo. When that is good and vibrant, open to experience, the organisation will be creative and innovative. Harsh relationship will High Productivity Low Productivity Moderate Productivity Moderate Productivity 1 4 2 3 Cohesiveness → Performance Norms →

66 NSOU • PGCO-I lead to conflict with necessity for negotiation. When some went to manipulate others, gain at the cost of others, powerplay or politicking prevails. Such different dynamics are discussed below.

### 3.7.1 Creativity

The essence of creativity is originality novelty. The process that gives us something novel is creativity. A novel or original idea means the idea that had never occurred before. Creativity always is an essential ingredient for business growth. Without creativity one can survive for sometime, but not for long. Particularly in this age of dynamics everyday we are to change. Amidst the harsh competition of modern time, even a reputed brand of a renowned company cannot beat the market for more than four to five years. So, if one is to survive in the market continuously it is to change its product, process of production, target market etc. But the change can never be in vacuum. Change must follow creativity. Otherwise, the organisations will be stale, stagnant and deadly before it actually extinguished from the market.

●●●●● Organizational Role : Every organisation should create an environment in which creativity is enhanced. The “labour of love” aspect is very important here. If such a culture can be induced in an organisation, creativity can be motivated. The factors that induce creativity are as follows.

- Creative People
- Organisational Support
- Organisational Culture
- Divergent Thinking
- Freedom to employees
- Openness to fresh ideas
- Sufficient Resources
- Long-term Planning

Creative people have some characteristics. While recruiting human resources, the organisation must see whether the people possess the following traits or not.

- Apathy to immediate gain
- A great amount of energy
- Irritation to status quo

NSOU • PGCO-I 67

- Perseverance
- Liking day dream
- High intelligence
- Creative mind

Organisations can support creativity— (i) by setting aside certain percentage of money for research (ii) by setting the goal that a certain percentage of revenue must come from new product (iii) by encouraging the employees to take risks (iv) by allowing them to make mistakes (v) by making job intrinsically motivating

Organisational culture must have openness, friendly supervision, team building trend, participative decision making and an atmosphere of trust. Diversity can be ensured if the workforce is staffed with people from diverse age, gender, ethnic and cultural groups. Employees must be free to think unusual. They must be allowed to recommend fresh ideas. Required resources are to be provided to them. Short-term orientation is to be avoided, be it as to planning, performance evaluation or profit of the firm.

Creativity Process : It is very difficult to describe how and when people may come out with creative ideas. In fact, the creative people themselves do not know when exactly and by which process they can develop something unfamiliar. Still, the researchers have identified a model to describe the creativity process. The same sequence may not hold good in all cases. Some of the steps may not all arise in some situations. Nevertheless, usually the following steps in creativity process is noticed.

(a) Preparation : Scientists work in laboratory sometimes for many years before they get a creative idea. Tentative solutions become available at first. Then, experiments are conducted on them. Some are passed, some rejected after the experiments. This is preparation for creativity that involves hard work and concentrated attention to the problem.

(b) Incubation : Concentrated attention is a part of preparation, whereby

68 NSOU • PGCO-I tentative solutions may come up. Whereas in case of incubation the conscious attention is turned away from the problems. It becomes something like “sleeping over” the problem and not thinking about it. Now idea here is the result of completely the “unconscious mind”, and the idea here is truly novel. Conscious mind always moves around the familiar things. So, even if some new ideas come up therefrom that will be just an extension or refinement of old idea, which technically is known as “incremental creativity”. Transformational innovation, i.e. completely new something, is possible only during incubation period which just flashes in mind like lightning. Scientists leave their familiar jobs and go for finding, reading, gardening or taking a nap so that this incubation is facilitated. (c) Persistence : We all know the story of Robert Bruce. Incubation is one way of creativity no doubt, but very rarely we come across such situation. So, persistent effort is perhaps the more viable way where the method adopted is “trial and error”. Go on adding more and more information, observe the problem from different angles. A unique solution will surely be available. This persistence means total involvement in the issue and also the courage to accept repeated failures. Most of the creative ideas are the out comes of such persistence. (d) Insight : It is a kind of “eureka” state, the state of becoming aware of a unique idea. This flash of does not follow any particular schedule. It may come up anytime of the day or night. It can also be lost quickly if not documented then and there. For this, many researchers carry small voice recorders to capture the ideas before they are lost. Diarise, sketch pads are also kept for the purpose. (e) Verification : Idea is abstract. Until it is seen that the idea has an use in practical field, the idea is not viable or feasible. Idea in scientific term is a hypothesis. To varify means to test the usefulness of the idea. Is the hypothesis cannot be proved, idea is not converted into product or the product is not put to market. The proless so far discussed is the process mainly for individual creativity. For group creativity also, more or less the same process is followed. Following two techniques, in addition, may be useful for group creativity. 1. Brainstorming : Here five to ten members of the group sit together in a classroom setting. The chairman clarify the problem and the members are

NSOU • PGCO-I 69 asked to “free wheel” as many options as possible. “Think unusual” is the theme of brainstorming whereby unique idea may come up out of the group discussion. 2. Synectics : This is a process of developing variety of alternatives by way of opposition or cross-arguments to one’s opinion. Synectics depends mainly on two mechanisms—(i) making the familiar things strange and (ii) making the strange things familiar. When one claims that his opinion is a strange one, others will try to establish that it is an old one and vice versa. Ultimately a unique vision comes out, cultivating rigorously its flip as well as the flop side. 3.7.2 Power and Politics These two terms, power and politics are considered as the dirtiest words. We all know the proveb about power. Power corrups, absolute power corrups absolutely. So, we cannot tolerate powerful persons and the persons who work to gain power, do it secretly. Politics is nothing but a powerplay. As such, politics also get hatret from common persons. However, as students of OB, we should not look to the words with the same eye. Nothing in this world is unmixed blessing or curse. Everything has its flip side as well as the flop side. So, how we use it is most important. If you use excessive dose of even a life saving drug, it may be fatal to us. The speed of flood water is dangerous for crop or human life. But if hydroelectricity is produced therefrom, that may save both crop and human life. In the same way, we must know how to use power and politics. Then, desired result may also come therefrom. Definition of Power : Power is the capacity of influence the behaviour of others. When one can make other person do something that otherwise he/she will not do, or refrain some persons from doing something that otherwise he/she will do, then the power is exercited. Dependency Postulate of Power : One person can exert power on others, if those other persons are dependent on the first party for some reason. So, dependency are power are inter-related. If no longer you are dependent on your parents for finance, they will not be so powerful to you. Power depends on dependency again dependency depends the following factors. Importance : If Mr. A can control the supply of something that is important to you, then A is powerful to you, as you are dependent on Mr. A. Suppose Mr. A can control the supply of meat but you are vegetarian, so meat is not important to you. In that case, you are not dependent on A and A cannot be able to exert power on you.

70 NSOU • PGCO-I Scarcity : Something is important to you, and Mr. A can control it. But that thing is not scarce, so from other sources also, you may get that thing. Then, you will not be dependent on Mr. A and A will not be powerful to you. Non-substitutability : Suppose, the thing that is important to you is scarce and only Mr. A control its supply. But that goods has some substitutes. That means, even if you do not get the goods under consideration, you may manage with the substitute goods. Then also, you will not be dependent on Mr. A and hence, Mr. A will not be powerful to you.

Bases/Sources of Power : Figure 10 depicts different sources or bases of power. Formal power means the official power or the power of the position, power of chair. If chair is taken away, you are powerless. This power of position or formal power is also known as authority. Sometimes we try to draw a difference between power and authority. Here, power is a broader term and authority is just one of the bases of power. Personal power on the other hand, power embedded in the person concerned. Personal characteristics give birth to this type of power. One may or may not have the chair or position, still he/she may be personally powerful.

Power Sources || Formal Personal || || || Coercive Reward Legitimate Expert Referent Fig. 10

Coercive Power is an official power which means the power of giving punishment or making others afraid of punishment. If one can dismiss, suspend or demote other persons, then he/she possesses the coercive power. Bosses sometimes use this power to prevent the recurrence of undesirable behaviour on the part of the subordinates. This policy is known as the "stick" policy of management. Reward Power is another formal power which means the ability to provide something to others that they like. If someone can raise the salary, give promotion to some workers, then he/she is said to possess the reward power. Coercive power make others afraid, whereas reward power makes others tempted for getting something. This is just like the "carrot" policy of management. Legitimate Power is the power that one can legitimately exert on others.

NSOU • PGCO-I 71 Parents command respect from their children, teachers want that the student will show respect to them, members will listen attentively when the chairman will speak. These are the examples of legitimate power, the power that is socially given to some persons. Expert Power is one personal power that arises out of one's expertise in a particular field. Dhoni is no longer the captain of Indian cricket team. Still, Kohli obeys his opinion and hence Dhoni is powerful. The office boss sometimes accepts the opinion of his subordinate, because the subordinate has specialised knowledge on his own work. This is expert power and this power is gradually becoming important as the knowledge workers are entering into the workforce. Referent Power arises not out of expertise but out of charisma. Amitav Bachchan is appointed to give advertisement of something, not because others cannot do the same but because he possesses some charismatic appeal to the prospective customers. The customers want to be associated with him and so, it is believed, he will be able to influence customers' buying behaviour. The Best Power : The most effective power among all is the expert power. One possesses it for long time and its influence on others is also long lasting. Coercive power sometimes may backfire, the workers may revolt. Reward power does not last long, because workers want to get more and more reward. Emergence of a new star may reduce the chairman of elder stars. Legitimate power also changes from generation to generation. Expertise, on the other hand, is valued by all in all times.

Definition of Politics : Politics means power in action. When someone use power to gain something, he is doing nothing but politics. Power is the stock and the politics is the flow. Power is a potential and politics is its application. Politics refers to those activities which are not organisationally required, but still

**100%**

**MATCHING BLOCK 12/37**

**SA**

04646-2-SS.doc (D28290207)

influence the distribution of advantages and disadvantages within the organisation.

That means, in practice, the politics determines who will get promotion, reward transfer or who will get demotion or punishment. Factors influencing Politics : Both the personal factors of workers and the organisational factors are responsible for organisational politics. Personal factors refer to the personality, value system or attitudes of the workers. Self-monitoring people usually are the political people. Mach type personalities lead to manipulation or gaining at the cost of other, which is also an

72 NSOU • PGCO-I example of politicking. Persons having no values or morality want to gain power by hook or by crook. If one's attitude is to care for his/her own interest, then also the politics will surface. High expectation also leads to politics. Organisational Factors that are responsible for politics are as follows. Low Trust : If workers do not believe each other, politicking starts. Role Ambiguity : When one's role is not clear, there is scope for politics. Subjective Evaluation : If performance evaluation system is not objective. i.e. performance is not clearly measurable, the bosses may play politics. Promotion opportunities are there but everyone will not be promoted. Then the workers will play politics to get promotion. Zero-sum reward system : When reward is given to someone depriving others of such benefits, politics must prevail. Zero sum system always pays one taking the money from others pocket. Democracy means politics. Most of the organisation today is democratically managed. As a result lobbying takes place leading to politics. Political Activities : Following are the usual political activities, some of which are considered legitimate, some illegitimate. • Blaming or attaching others • Selective distribution of information • Leaking confidential information • Blocking the sources of information • Associating with powerful lobby • Forming coalition • Spreading rumours • Whistle blowing • Filing grievances • By passing chain of command • Complaining to supervisors • Developing contacts outside organisation • Impression management

NSOU • PGCO-I 73 Last six political activities are known as legitimate activities, others are illegitimate where the individuals "play hard balls". Impression Management : Impression management (IM) is believed to be a legitimate political behaviour. This is legitimate because it does not directly attack or do harm to others. This is political behaviour because here one tries to remake himself/herself to convince others that he/she is good. Dating, healthclub membership, use of cosmetics, plastic surgery—all we do to get favourable evaluations from others. This is impression management. At workplace also, individuals attempt to control the impression that others form of them with some specific purposes. Sometimes the purpose is to get the jobs, sometimes to promotions or favourable performance evaluations. However, it has been seen that getting jobs may be possible by befooling the interviewers with IM, but favourable performance evaluation is not possible, because in the mean time many things about the workers will be known by the evaluators. Techniques by which impression of others is usually managed at the workplace are as follows. 1. Creating Sympathy : "My mother died in my childhood, so my life is full of hardships". 2. Conformity : "What you have decided, Sir, I fully agree with that". 3. Excuses : "This year the sale is low, but this is because we failed to give ads in the paper on time". 4. Apologies : "I am sorry sir, never again this will happen". 5. Acclaiming : "Since I joined as sales manager, the sales volume has been doubled." 6. Flattery : "Sir, the way you handled the problem, no other could have done it". 7. Favour : "I had two tickets for IPL match sir, I will be obliged if you take it." 3.7.3 Conflict Where there is group activity, there is conflict, because mild disagreement is also an example of conflict which is inevitable in every group activity. Its scope, however, is very broad. It starts with mild difference of opinion and goes upto the

74 NSOU • PGCO-I battle between two or more countries. However, conflict is a perceptual issue. Conflict arises when one person perceives that other persons are affecting negatively something which he/she cares about. Mr. A wants promotion. Mr. B tries so that A does not get promotion. When Mr. A understands what Mr. B is doing, conflict arises. Conflict Process : Conflict surfaces step by step. Before it is culminated, it may recede with the help of some favourable inputs. If unfavourable inputs persist, it may reach to the highest level. Figure 11 shows different stages of such conflict process. Let us discuss the stages one by one. Fig. 11 1. Opposition : The starting point of or pre-condition to conflict is opposition. One must oppose other's opinion or effort, and this opposition is considered as the seeds, if conflict is a plant. Without seeds, no plant can grow. Accordingly, without opposition no conflict will come up. But only seeds are not sufficient for the growing of a plant. Sufficient water and light are also required. In the same way other steps are also necessary for the surfacing of conflict. Opposition usually come up from following three sources. Personal factors : There are some personal characteristics like dogmatism, ever critic type, domination, high expectation, manipulation that automatically lead to conflict. Communication : Majority of conflicts arise due to wrong information or mis-communication. The boss says something but the subordinate does not understand it. So, his performance will not satisfy the boss, and the conflict will come up. Structure : Sometimes structural reasons may lead to conflict. Mr. A is a sales manager. Mr. B is the credit manager. Their personal relationship is very good. But still conflict may arise between them due to their structural positions. Mr. A quite naturally will promise the potential customers that he will try to allow them few month's credit. Otherwise, he will not be able to increase sales volume. But the Stage I Opposition Stage II Cognition Stage III Personalisation Stage IV Intentions Stage V Behaviour Stage VI Outcomes

NSOU • PGCO-I 75 objective of Mr. B, the credit manager, is to reduce the volume of credit. So, he may not agree with Mr. A, and thus the conflict will come up. 2. Cognition/Perception : Cognition means knowledge, knowing or perceiving something. Mr. A may oppose any action of Mr. B. But if Mr. B does not know that Mr. A is opposing him, his behaviour to Mr. A will remain unchanged. So, conflict still is not there. As and when the cognition about Mr. A's opposition takes place in B or B perceives the fact, the conflict arises. However, the conflict still is known as perceived conflict. 3.

Personalisation/Feeling : The conflict may be perceived, that is the affected party may have come to know that other party is opposing him, but until he personalises it, there will be no feeling in his mind about the conflict. That means, the party will be aware of the conflict, but he will not be at all worried or anxious about it. If he is not worried, he will not react or involve himself in the process. For conflict, involvement of two parties is essential. Since one party here is still not involved, this may be perceived conflict, but not the felt conflict. Felt conflict arises when the affected party feels anxiety due to conflict. This felt conflict can make the affected party react. 4. Intentions : The felt conflict leads the affected party to reaction, but before reacting the party will think sometimes as to how he will react. A number of ways may come up to his mind. These possible ways of reactions are known as intentions. He may think that he will co-operate the party so that the conflict is resolved. He may also think that he will assert to his stand and for this, he will go on fighting back. The extent of this co-operativeness or assertiveness that the party wants to exert, gives rise to different types of intentions on his part. The intentions as such are shown in Figure 12. The brief discussion on them is given below. Competing Collaborating Avoiding Accommodating Compromising High High Low Assertiveness Fig. 12 Co-operativeness

76 NSOU • PGCO-I Accommodating : When co-operativeness is very high, but assertiveness is low, the affected party wants to co-operate/accommodate the other party. The intention of affected party here is, "I may lose, still I will let him win." Competing : The intention is opposite to accommodating. Affected party here wants to assert his/her own stand. His/her attitude in this case is, "I will fight back and make him/her lose." Collaborating : Assertiveness and co-operativeness—both are high here. Both the parties work in this case to reach a win-win situation. They try to build up partnership where both will be gainer. To achieve this, is very difficult, but possible. Compromising : Usually, the labour management conflict ends up by compromising. Where both parties are to deviate to some extent from their own stand. Both are to accept some sacrifice. One party claimed Rs 100, other was ready to pay just Rs. 50. So, the conflict is. If first one reduces his/her claim by Rs. 25 and other party becomes ready to give Rs. 25 more, the dispute will be settled at Rs. 75/-. This is compromising. Avoiding : Here, no one wants to assert, no one to co-operate. Both are low. Conflict will go on, but it will never be aggravated, as both will try to avoid each other. 5. Behaviour : So long the affected party was just thinking as to what he/she will do in return. Now, the reaction starts. That means the conflict in true sense begins at this moment. However, no behaviour or reaction reaches its climax at the beginning. Initial does is usually very low and gradually the does is increased. The following continuum scale (from bottom to up) reflects this gradual increase in conflict. Attempt to destroy Physical attack Verbal attack Counter-argument Disagreement Fig. 13

NSOU • PGCO-I 77 6. Outcomes : The last stage in conflict process is "outcomes", or the impact of such conflict. In fact, there are two opposite views on the impact of conflict. Traditional view believes that conflict is always bad. Wrong decisions or mismanagements are responsible for this. So, the management must try to avoid or resolve it. Unless it is done, productivity of the organisation will be gradually lower, and the conflict will have many other negative impacts on the running of the organisation. Interactionists' view, on the other hand, argues that conflict is not only unavoidable, but is desirable. If there is no conflict or interaction in the operation of a business, no new or fresh idea will come up, always the status quo will prevail, change through innovation will be lacking, stagnancy or deadly environment will persist. As such, conflict is good. Two views are opposite, but in one sense both arguments have some truth in them. Actually, conflict is neither completely good nor always bad; rather it is both functional as well as dysfunctional. Functional (good) conflicts include process conflict, task conflict and optimal conflict. Dysfunctional (bad) conflicts, on the other hand, are interpersonal conflict and acute conflict. When the conflict is as to what is to be done (task) or how it is to be done (process), this may lead to diversified opinions and thus the better solution. But interpersonal conflict is personality clash or difference of mind, which is always bad and even suicidal. How mild or low conflict and acute or high conflict work on Level of conflict Low Mild Optimum High/Acute Characteristics No change, status quo, stagnant, stalemate, deadly Fresh idea, change creativity, vibrant Chaos, confusion, disruption, disturbance, sabotage Nature of Conflict Dysfunctional Functional Dysfunctional Performance Low High Low Fig. 14

78 NSOU • PGC0-I performance is shown in Figures 14 and 15. Characteristics of low, optimal and acute conflicts and their impact on performance are clearly shown in Figure 14. Figure 15 shows more or less the same by way of a graph. When conflict is too low Dysfunctional High Conflict Functional Performance High Low Optimal Fig. 15 performance is also low. As conflict increases, performance does also increase. So, here the conflict is functional. At a particular level of conflict, the performance is optimal. If still conflict increases, the performance will come down, because conflict here is dysfunctional. So, conflict is needed, but this is upto a certain level. Beyond it, if conflict is allowed to grow, chaos sabotage etc will bring down the performance. 3.7.4 Negotiation Upto certain level conflict may be allowed to grow, but thereafter attempt is a must to resolve the conflict. The way by which the conflict is resolved is called negotiation or bargaining. Labour management negotiation is a common example in this respect. Negotiation is broadly of two types— (i) Distributive bargaining, and (ii) Integrative bargaining Distributive bargaining believes that the problem is in distribution of advantages. One party is aggrieved because he/she thinks that he/she is deprived and others are getting more advantages. So, here the attempt is how to redistribute the advantages taking them from one's pocket and giving them to others. Nothing additional the

NSOU • PGC0-I 79 parties as a whole will get. So, the negotiation is also known as zero-sum negotiation. Total advantages of the parties will not increase. So, this agreement is called sometimes as Fixed pie agreement. Pie is fixed, only problem is who will get the larger slice. The bargaining by which this is decided is known as distributive bargaining where one's gain is always at the cost of other. That means if one becomes gainer, other must be the loser. Loser cannot be satisfied by this. So, for the time being he/she may accept the bargaining, but very soon again in conflict may surface. Integrative bargaining is one win-win game. Here, the aim is to make both the parties of conflict fully satisfied. Instead of sharing the fixed pie, the attempt is to increase the size of the pie, so that both the slices of the pie can be larger, and both the parties become gainers. The process in this case is known as collaborative process. That means, both will try to accommodate each other. This is very rare no doubt, but in most cases this is possible. We do conflict several times, though we do not exactly what actually we are conflicting for. As we are in conflict we do not listen properly what other is saying, or what his/her actual need is. So, open heart discussion is the precondition for integrative bargaining, by which the parties can know each other correctly. This may lead to a solution where none will feel as deprived. Steps in Negotiation : Whatever type of negotiation, we want to undergo, we are to do it very carefully. Otherwise the success rate of negotiation will be very low. The steps that the parties need follow for the purpose are narrated below.

Preparation : If one goes for negotiation without preparation, he/she must be a failure. The preparation here means asking some questions to himself or herself like— • What do we want from the negotiation ? • What are our goals ? • What can be the possible out comes from negotiations ? • Which of those out comes one will accept ? • What are "most hopeful" outcomes ? • What is minimally acceptable ? • What is other sides BATNA i.e. best alternative to negotiated agreement ?

80 NSOU • PGC0-I More these alternatives options are from both the ends, more is the possibility for successful negotiation. 2. Ground Rules : Some rules are to be decided upon prior to sitting for negotiation. The rules are like— • Which points must not be raised in the meeting ? • Who will do the negotiation ? • Will it be a bi-party or third-party negotiation ? • To what issues, the negotiation will be limited ? • At which place, the meeting will take place ? • What is time frame ? etc. 3. Discussion in the meeting : When both the parties are in front of each other over the table, each party is to explain, amplify and justify his/her original demand. 4. Bargaining : After threadbare discussion, if the parties feel that they may revise their demand for the sake of solution, they may start bargaining. While bargaining, both will have their target points i.e. their goals. But at the same time they will have the resistance points, i.e. beyond which never they are ready to go or to come down. So, the bargaining mainly may be for any place between two resistance points. 5. Problem-solving/Closure : If the bargaining leads to a solution, then okay. Now they are to do some formalities in this regard. But, if there is no solution, discussion is closed amicably, keeping scope for discussion again. Third Party Negotiations : Sometimes one third person is taken help of to initiate the negotiation. Depending upon the role which this third party plays he/she is known as under. Conciliator is a common third party who just provides a communication link between two conflicting parties. Conciliator acts just like a connecting bridge and the conflicting parties communicate between them via him/her. He/she will just stand between two parties and neither he/she convinces the opposing parties nor he/she urges for any solutions. He/she helps in breaking ice, and all other things are to be done by the parties themselves.

NSOU • PGCO-I 81 Mediator is a person trusted by both the conflicting parties, who facilitates by directly taking part in the process. He uses reasoning, suggests solutions and persuades the parties to resolve the conflict. In 60% cases the settlement is done in the process. Arbitrator is an official third party who can dictate an agreement. Firstly, he may allow the conflicting parties to come to an agreement. But if they fail, arbitrator has the authority to impose his opinion on the parties. So, success rate of settlement here is too high. But one party feels that he has been deprived by such dictation, he is to accept it for the time being, but again the conflict may come up.

3.8 Summary From the above discussion, we could understand the concept and fundamentals of foundation group behaviour. We could also identify the group dynamical, form an idea about its creativity, assess the role of power play and politicking in organizations, understand the conflict process and the ways for its resolution, etc.

3.9 Questions A. Objective Type : 1. Is command group a formal group ? 2. Who conducted the experiment on social loafing ? 3. Who was the head of the Hawthorne Study ? 4. State two characteristics of a creative man. 5. Which source of power is considered as the best ? B. Short answer Type : 6. What is role ambiguity ? 7. What do you mean by Perceived conflict ? 8. Define coercive power. 9. State the factors on which dependency depends. 10. What do you mean by groupthink ? 11. How does accommodating differ from competing ?

82 NSOU • PGCO-I 12. What zero-sum agreement ? C. Long answer Type : 13. Why do people join group ? 14. How is group developed ? 15. State the relationship between cohesiveness of group and organisational productivity? 16. Give a brief note on the process of creativity. 17. Narrate the factors that induce politics in organisations. 18. What are the outcomes of conflict ?

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

Objectives After studying this unit you will be able to : • Know

what is group decision. • Explain why we need group decision. • Identify the advantages and disadvantages group decisions over individual decisions. • Recollect different techniques of group decisions. • Know about the need of communication. • Examine effectiveness of communication.

4.2 Nature of Group Decisions As the days are advancing. We are depending more and more on group decisions. Decisions becoming too technical and complicated, sometimes the head of department cannot take the decision alone. And sometimes, to be in safe side or to avoid unnecessary blame from different corners, no one tries today to take decisions singly. Every manager is bounded by certain limitations like limitations to collect or interpret information. These limitations constrain managers to determine the optimum decision, and the decisions taken suffer from what is known as bounded rationality. In most cases, instead of optimal decisions, they are to accept "satisfying" decisions. Group decisions are taken help of to overcome such limitations of collecting information and unbiased interpretation. More people involved in group decision making will be able to collect more information and to view the problem from different angles. In view of this, even if he/she can do so alone, the vice-chancellor depends on senate/syndicate decisions, physician depends on different diagnostic centres before prescribing medicines. Office heads also form different committees/ teams for the purpose, which are nothing but the example of group decisions.

4.3 Concept of Group Decisions Decisions refer to making choice among available alternatives. More are the alternatives, more is the possibility of getting the best alternative. More alternatives,

NSOU • PGCO-I 85 again are available when more people are involved in the process. Here is the basis or need for group decisions. There are basically two major criteria that need consideration at the time of decision making. One is quality or suitability of decisions, and other is acceptability. When ten members jointly agree upon a decision, at least the decision is acceptable to these ten persons. In case of individual decision making, that is acceptable initially to one person only. Here lies the importance of group decisions. However, the concept of group decisions needs answer to following few questions. • Whether a single person possesses required expertise to make decision or not? • Whether he/she possesses necessary information or not? • Whether some others possess such quality or information? • Whether the problem is structured? • Whether individual decision is acceptable or not? • Whether the acceptance by others is critical or not? In view of all these questions, Vroom and Yetton have suggested different decision making styles ranging from purely individual decisions to completely group decisions. These styles are as follows. AI — Here single person takes unilateral decisions. All — Individual takes the decision alone, but collect information from others. CI — Here the individual decision maker not only collects information from others, but also consult with them. Though finally he/she alone takes the decision. CII — Here group meeting is convened, still the final decision is taken singly. GII — This is a participative style of decision making.

#### 4.4 Advantages and Disadvantages of Group Decisions

Individual and group decisions, each has its own set of strengths and weaknesses. Neither, is ideal for all situations. However, the following list identifies the major advantages and disadvantages of group decisions over individual ones.

Advantages :

1. More information : Two brains are better than one brain. One of the reasons

86 NSOU • PGCO-I for not having rational decisions is the limitation of human brains to collect and assimilate late complete information. Limitation of one brain can be overcome by clubbing together a number of brains. Group decisions pave the ways in this respect. Thus, better decisions are possible.- 2. More diverse inputs : As different men will supply information for decisions, inputs here will be of different nature. Each one will view the problem from different angles. Thus, a large number of alternative inputs or options can be available. More the options, more is the possibility for selecting the best one therefrom.
- 3. Larger acceptance : When a single individual takes the decisions, others may or may not accept it. If ten persons together take the decisions, at least those ten persons will accept it. Thus, acceptability of the decision will increase. Examples are not few and far between where even the good decisions fail, just due to lack of acceptance. Here, the decisions being their own decisions, motivation and commitment in implementing the decisions also increases.
- 4. Legitimacy : Our society prefers democracy. So, always we blame autocratic or arbitrary decisions, even if they are very good decisions. We always think that decision maker must consult others before taking the decisions and it is legitimate. Thus, group decisions increase legitimacy and society thinks it as ideal.

Disadvantages :

Group decisions have a number of advantages. Still, they are not free from drawbacks. Such drawbacks of group decisions are as follows.

1. Time consuming : Group decisions are time consuming because— • it takes time to assemble. • one's opinion usually is opposed by others, • decision process is characterised by give and take, • the interaction consumes time, and • one meeting may fail to reach solution. So, the speed in decision making is affected and cost becomes also high.
2. Pressure to conform/group think : Theoretically it is believed that all members of the group are free to give their opinion. But practically, the opinion of powerful lobby prevails. Minorities are pressurized to go along that opinion. So, most members either remain silent or accept the majority view, though they may

NSOU • PGCO-I 87 have some different opinion. This kind of forced conformity is termed as groupthink, which is actually a barrier to effective group decision making.

3. Splintered Responsibility/group shift : Here, everyone's responsibility is no one's responsibility. Members, individually need not shoulder the responsibility if and when the decision fails. Group as a whole is responsible and thus the responsibility is splintered. As the members have the scope to buckpass, they easily favour aggressive decisions to make themselves popular. This tendency to shift the decisions towards extreme positions is known as group shift. This is also a disease of group decisions. Due to aforesaid advantages group decisions are said to be effective in terms of accuracy, creativity and acceptability. But they are not efficient due to the disadvantages stated above. In deciding whether to use group for decision making, the primary consideration therefore is to see whether the increase in effectiveness can offset the losses in efficiency.

#### 4.5 Techniques of Group Decision Making

When members of a group confront with each other, they can censor themselves and pressure individuals towards conformity. Thus, both effectiveness and efficiency of decisions are affected. Certain group methods have, however, proven successful in increasing effectiveness and efficiency of group decisions. Those techniques are discussed below.

##### 4.5.1 Brain storming

This technique generally involves

87%

**MATCHING BLOCK 14/37**

**W**

a half dozen to a dozen people who sit around a table

in a class room setting. The primary focus of this technique is to generate more and more ideas enhancing the scope for finding the unique and best solution. Members here are allowed to “free wheel” as many alternatives as they can, and for thus, they are encouraged to even “think the unusual.” No criticism is allowed. Wild ideas also are welcome. Firstly, quantity is emphasized, not the quality. Finally, quality solution is accepted, incorporating members suggestions for modifications and improvements. Opinion thus becomes the opinion of many people and group think is to some extent avoided.

4.5.2 Delphi Technique This technique is an extension to brainstorming and involves obtaining opinion of persons who are even physically separated. The steps that are followed here are shown diagrammatically in the following figure. The problem is defined by the leader A Sample of experts is selected Questionnaire is developed Modified questionnaire is prepared and sent again Responses are compiled Questionnaire is sent to experts Cycle stops when consensus is reached Solution is developed Here, members work independently at their own place. So one’s opinion is not influenced by other’s. But since the cycle continues for long time and members may also take time to respond, the technique is very much time consuming.

4.5.3 Nominal Group Technique Here, members assemble together as in brainstorming, but still they can work independently as in the case of Delphi technique. The main characteristics of this technique are as follows. Small group sits at table The leader explains the problem Members write down solutions on sheets of papers The leader collects the ranks and records Ideas are given ranks by members Solutions explained by movers independently Solution getting highest number of Rank I is accepted as decision

So, opinions are given in writing. One’s opinion thus is not influenced by other’s. Ranking is also done secretly. Groupthink as a result is avoided. As such, the method is very effective. Still, it is called “nominal”, because normal feature of group is absent here. Discussion and interaction, the usual function of group, is not allowed. So, it is group not by nature, only by name. It view of this, it is called nominal group.

4.5.4 Electronic Meeting/Video conferencing This age is the digital age. Quite naturally, the pen and paper of nominal group technique has been replaced now by mouse and computer. Electronic meeting does not require the presence of members at a single place. Even if they are present, they all will work secretly and independently as in nominal group technique. More effectively the process is done here, because instead of pen and paper, technology is taken help of. When, members conduct the meeting, sitting in their own places, i.e. from long distances, the technique is known as video conferencing. The only limitation of the technique is—the warmth of group interaction and face-to-face discussion lacks here.

4.6 Communication : Concept No group can exist without communication. Group activity needs co-ordination, and co-ordination depends on communication. Probably the most frequently cited source of interpersonal conflict is poor communication. In fact, we spend more than 70% of our working hours in communicating. Still, communication is not effective in most cases. This is because communication is not just the “transference of information”, but it should be the “transmission of meaning”. You may say “go”, but other may listen or understand “no”. Examples of such miscommunication is not few and far between. So, what the sender means, the receiver must understand exactly the same. The best business plan is meaningless unless the executors are aware of it. The best employee welfare scheme is ineffective, if employees do not get the meaning thereof. In Henry Fayol’s concept of Management, the communication was not given so much importance. But Peter Drucker believed that the effectiveness of manager depends upon his or her ability to communicate well with the employees. According to him, good communication is the foundation of good and sound management. It is a basic tool for motivation. Supervision and leadership are impossible without it.

90 NSOU • PGCO-I In late 1960's, C. Barnard highlighted communication as a dynamic force in shaping organisational behaviour. The behaviour of workers depends on the communication skill of supervisor. Actually, the authority of supervisor can lose its meaning, if his or her communication is improper or misunderstood. So, according to Barnard—

1. The line of communication be direct and without blockage.
2. The communication should be highly skilled.
3. The line of communication should be kept open.
4. Proper feedback must be there to know what actually the receiver has understood.
5. The communication should be authenticated.

4.7 Communication Process / Model Communication passes between sender and receiver. This passing of information involves some logical steps so that the sender can send the message what he/she exactly wants to send, and the receiver clearly understands the meaning thereof. The steps as such together is known as communication process which can be depicted by following Model of communication.

1. Source initiates the message by encoding a thought. Encoding means expressing the thought in a particular way. Encoding may be done with the help of some symbols, write up, gestures or some other format, of expression. What way the source will follow for encoding depends mainly on four conditions, e.g., skills, attitude, knowledge and culture. Skills of speaking, reasoning and persuasion are needed for oral communication. If the source does not possess writing skill, written communication will not be effective. Attitude means pre-disposition about something or some person. Thus, the Source Encoding Channel Receiver Decoding Feedback Action

NSOU • PGCO-I 91 attitude of source/sender about receiver and also the subject must affect his/her encoding. We must know first that we want to make other known by communication. So, if the knowledge about the subject of communication is extensive in the source, the receiver may not get the required information and his/her action can be wrong. Culture actually guides our attitude and value system. Our emphasis on a particular portion of the message depends on our value system, our priority. Accordingly, the receiver will get the signal.

2. Receiver receives the message through the channel selected by the source considering its suitability to receiver. Channel may be formal or informal. Formal channels are established by the organisation. Informal channels are personal. Receiver is the object or person to whom the message is directed. Message is received, but it may not be understood. The next step, decoding becomes necessary for the purpose. Symbol or language used by the source needs translation to make it suitable for understanding. This is decoding. Just like encoding by source, decoding also depends on receiver's skill, attitude, knowledge and cultural predispositions. Many a communication fails, just due to failure in proper decoding. More the encoding and decoding match with each other, more effective the communication. Understanding or misunderstanding of message is reflected in action. If the source comes to know by feedback that the receiver has not acted as per his/her intention/message, the source again is to repeat the communication process.

4.8 Nature of Communication Nature of communication can be understood under three dimension as follows.

1. Ways or Means of Communication.
2. Communication Networks, and
3. Direction of Communication.

4.8.1 Means of Communication Broadly, there are three ways or means of communication, such as

- Oral Communication
- Written Communication, and

92 NSOU • PGCO-I • Non-Verbal Communication. The choice of means while communicating depends on—

- (a) Physical presence of receiver
- (b) Urgency of message
- (c) Secrecy to be maintained, and
- (d) Cost involved.

Very often, however, some of the above three means are combined to increase the clarity of effectiveness of communication. These various means of communication and explained below.

Oral Communication : Oral Communication is still the chief and most prevalent form of communication. Group discussion, one-on-one conversation, run our/grapevine etc are mainly done orally. The discovery of telephone, intercom system has extended the scope for oral communication. Earlier, oral communication could be done only with the people who were located side by side. But now oral communication is possible between people of two or more different countries, where earlier written communication was the only way of communication.

Advantages :

1. It is direct communication.
2. It is simple.
3. It avoids delay.
4. It conveys personal warmth.
5. It allows instant feedback.
6. It is convincing as physical gestures accompany it.

Disadvantages :

1. No formal record is maintained, so it is difficult to prove later or store property.
2. Lengthy message cannot be conveyed orally.
3. Noise in channel may distort it.
4. When it passes through different levels, meaning may alter.

NSOU • PGCO-I 95 process, Steps are needed therefore so that rumours are not generated. Rumours are created out of ambiguity. So, every party should be very clear to every person concerned.

#### 4.8.3 Downward, Upward and Horizontal Communication

In view of the direction or movement of communication, it can be divided into following two types— (a) Vertical Communication, and (b) Horizontal Communication. Vertical communication may again be sub-divided as— (a) Downward Communication and (b) Upward Communication. Communication between superiors and subordinates is termed as vertical communication. When such communication is initiated by superiors (source) and aimed at subordinates (target), it is known as “Downward” Communication. Operational instructions by supervisors are given by this and operational feedback given by subordinates (source) to supervisors (target now) is known as “upward” communication. These upward and downward communication follow organisational chain of command. So, it is usually the example of formal communication. Horizontal communication on the other hand, is mostly the informal communication. Horizontal communication is the communication among equals, co-workers or the managers of same level. Co-ordination among different departmental heads is usually done by horizontal/lateral communication. This is informal communication, but is highly necessary in promoting a supportive organisational climate. So, sometimes formally also this type of communication is arranged by the organisations.

#### 4.9 Communication Effectiveness

Effective communication is essential but very difficult to ensure. As two persons between whom the communication takes place are different, their understanding, language, attitude, verbal perception level—all may be different. So, the source may say “no”, but the target may understand “go”. This miscommunication, misunderstanding is actually at the root of most of industrial dispute, conflict and work stress. So, all organisations want to have an effective communication. But due to a number of barriers they cannot do that. First, we are to diagnose that disease, otherwise we can never prescribe for effective communication.

#### 4.9.1 Barriers to Effective Communication

The communication must be understood and interpreted in the same manner as it was meant by the senders. But there are some external road blocks as well as some personal factors of both the sender and the target, due to which the communication does not reach or is understood in the same manner as was intended by the sender. These external and interpersonal factor, act as the barriers to effective communication.

A. External or Noise or Organisational Barriers :

- Poor Timing : When to communicate is an important. If communication is done long before the required action, the target may forget about it. Again, last minute communication poses difficulty for desired action. Message should not also be sent when the target is supposed to remain busy or is psychologically or physically tired. In such a case, the target may misinterpret the sender’s information.
- Improper Channel : The channel to be used for communication should also be appropriate. If the target is not net-literate, message should not be sent via E-mail. If the message is too lengthy, oral communication is not appropriate.
- Physical Distractions : Telephone interruptions, walk-in visitors, attending to other matters simultaneously, etc are the examples of physical distractions that may interfere to effective communication.
- Information Overload : No brain can receive, store or analyse unlimited volume of information. If one’s work design compels him to receive huge information, he/she will suffer from information overload, and some of the information may go out of his/her memory or may not be properly addressed.
- Structure of organisation : Sometimes the structure of organisation itself is responsible for ineffective communication. If the chain of command is not clearly established, communication may be unnecessarily delayed, blocked and sometimes distorted.
- Network breakdown : In this age of on-line communication, most often network breakdown occurs. It may be due to time pressure or information overload, again sometimes it may be intentional. In between source and destination following four types of disturbances may be intentionally created.

NSOU • PGCO-I 97 Source → Interception → Destination Source → Interruption → Destination Source → Fabrication → Destination Source → Modification → Destination Interception refers to picking up all information intended for the destination. Interruption means preventing the sent information from reaching the destination.

Fabrication is done by adding source by adding some new information or deleting a portion of information. Thus, the target get wrong information. Modification is the situation where the attacker can adopt any or a combination of aforesaid three disruptions. B. Inter personal Barriers : Sometimes, more often than external barriers, the personal characteristics of either the sender or the receiver or the both, may stand on the way of effective communication. Some of these characteristics are as below. Filtering refers to purposefully withholding or manipulating the information with the belief that the receiver need not know the full context or the actual information. When the information is not end-to-end information, rather it passes through a number of levels, the chance of filtering becomes wider. Fear of giving bad news or the desire to please the receiver sometimes is responsible for filtering. Fabrication of reports to superior is an example of filtering. Perception is the problem in interpretation. Due to following characteristics of receiver/sender such problems occur. (a) Halo effect : When one person is judged by his/her just one trait. (b) Stereotyping : When group characteries are imposed on individual. (c) Projection : When sender believes that the receiver is just like him/her. Semantic Barriers refer to differences in individual interpretation of words, symbols or language. • The word 'Dr' may be understood at first instance by a physician as "doctor", by an academics as "doctorate" and by an accountant as "debit or debtor".

98 NSOU • PGCO-I • The symbol '8' may be understood by a person knowing only bengali number as 'four', whereas by a person knowing only english number as "eight". So, in most cases we listen the remarks like "you misunderstand my message" or "It was not what I meant". Intonation problems : The same sentence may be meant differently if the tone of sender changes. Following example may explain the point better. "I do not take you to dinner to night". In this sentence if emphasis is given on "you", it will mean either "I will go alone or take someone else, not you". If emphasis is on 'dinner', it may mean "in stead, I will take you to lunch". If emphasis on "to night", the meaning will be that "I will take you to dinner on some other night". Sender Credibility : When in the eyes of reciver, sender has high credibility, the receiver accepts the message at face value, otherwise he filters the same according to his/her own belief. Cultural Differences can and usually do adversely affect the communication effectiveness. In this age of globalisation, such problem has been acute, as communication between the people of different cultures has been now a rule of the day. Some examples in this respect are given below. • People of some cultures show their disagreement by coming late to the meeting. People of other cultures may consider it as lack of puncuality. • Some people prefer to come closer physically to the person they want to communicate. But someone may treat it as bad manner. • People of some countries start watching the wrist watch repeatedly to convince other person that they no longer want to speak. But the concerned people of some other culture may not understand it. • To show two fingers is considered in some cultures as the sign of victory, whereas in some other cultures it is understood as the sign for proposing love. 4.9.2 Guidelines for Overcoming Communication Barriers It is very very important for the management to recognize and overcome the

NSOU • PGCO-I 99 barriers to effective communication. Otherwise, the decisions that depend mostly on effective communication will be ineffective. Some of the guidelines in this respect may be narrated as below. A. Improve Feedback Skills : Feedback helps in reducing misunderstanding. Two-way communication should be ensured, though it is time consuming. Focus must be given on behaviour, not on personal charactristics. Feedback must be impersonal and goal oriented. Feedback should also be well timed. B. Improve listening skills : For this, • Make eye contact • Exhibit affirmative not • Avoid interrupting the speaker • Don't overtalk • Avoid distracting gestures. This is necessary because listening does search meaning. Mere hearing rather is passive, and proper understanding may not be possible thereby. C. Simplify Language : Words should be chosen very carefully, so that the message is easily understood by the receiver. Language that is suitable or understandable by teachers, that may not be understandable by the non-teaching staff. So, always the language should be used considering the audience to whom the message is directed. D. Constrain Emotions : The sender may fail to express and receiver may mis construe the incoming message if they are emotionally upset. So, emotions at both the end should be constrained. E. Watch Non-verbal Cues : Actions speak louder than words. Oral communication may be misunderstood, if associated non-verbal cues are not properly understood. So, one always should make sure that actions, i.e. non-verbval cues align with words, i.e. verbal cues. F. Improve cross-cultural Communication : Communicating with people of different cultures may often lead to mispercptions, misinterpretations or misevaluations. In order to guard against that one should— • Assume differences until similarity is proved. • Treat your interpretations as just a hypothesis.

100 NSOU • PGCO-I • Put yourself in receiver's shoes. • Delay the judgement. 4.9.3 Johari Window The Johari window is a modern technique of communication that helps people to better understand the communication or enhance individual's perception on others. American psychologist Joseph Luft and Harry Ingham developed this model in 1955. The name "Johari" came from joining their first two name. This model is also known as feedback model or model of self-awareness. Each person is represented by the Johari Model through its four quadrants or window pane. Each of four panes signifies personal information, feelings etc, and whether that information is known or unknown to oneself or others in four viewpoints as given below. Hidden area Open area Unknown Blind spot Unknown

**87%**

**MATCHING BLOCK 15/37**

**SA**

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

to self Known to self Known to others Unknown to others The

Johari Window Model Open area : Here, information is known to both self and others. So, larger this quadrant, more effective is the communication. Blind spot : Information about someone is not known to himself/herself, but it is known to others. So, feedback from others is very important here to have effective communication. Hidden Area : Information is known to self, but it is unknown to others. Sender here does want to reveal something others. Communication thereby is affected. Unknown Area : When information is neither known by self nor by other, the area is said to be "unknown". Attempt must be there to reduce this area as far as possible.

NSOU • PGCO-I 101 This window is helpful for – • Self-awareness • Personal Development • Improving Communications • Interpersonal Relationship • Group Dynamics • Team Development • Inter group relationship. So, for different purpose, one can use this model. However, for effective communication it is how being used by different organisations. 4.10 Summary From the above discussion, we could understand the concept and fundamentals of group decision process. We could also understand the needs of group decision, identify the advantages and disadvantages of group decisions over individual decisions, recollect different techniques of group decisions. At the end we also understand the needs and effectiveness of communication. 4.11 Questions A. Objective Type : 1. State any two advantages of group decision making. 2. Is group decision efficient ? 3. Name two techniques of group decision making. 4. Name two types of communication networks. 5. Who developed the Johari Window Model ? 6. In which year Johari Window Model was developed ? B. Short answer Type : 7. Write a note on Johari Window.

102 NSOU • PGCO-I 8. What do you mean by 'filtering' in the context of communication ? 9. Define 'grapevine'. 10. Write a short note on "non-verbal communication". 11. Define "Nominal Group Technique" of group decision. 12. Why is "Nominal Group" called as nominal ? 13. What do you mean by All style of decision making ? 14. Define "groupthink". C. Long answer Type : 15. What are the advantages and disadvantages of group decisions ? 16. Discuss the techniques of group decision making. 17. Narrate the communication process. 18. What are the advantages and disadvantages of oral communication ? 19. Critically examine the barriers to effective communication.

After going through this unit, you will be able to : • Realise the importance of

motivation • Make managers aware of how they should proceed to motivate workers • Be acquainted with different theories of motivation • Understand how behaviour can be modified by motivation • See how motivation helps organisational effectiveness 5.2 What is Motivation ? Motivation is the willingness to do something on the belief that this action would satisfy some needs. A need means a physiological and/or psychological deficiency that creates tension and stimulates drives within the individual. These 105

106 NSOU • PGCO-I drives generate a search for a particular goal that, if achieved, will reduce the tension and bring satisfaction for the individual concerned. Such motivation may come from within. Then, it is known as self-motivation. For owner/entrepreneur, such self-motivation is important. But the individuals who usually work for others need to be motivated by others. One worker may have the ability, but he/she will not apply it satisfactorily without motivation. Hawthorne study by Elton Mayo and others has shown it very clearly. Thus, to motivate subordinates has been now a big challenge for the managers. Needs of all individuals are not the same. Satisfied needs, again, fail to motivate any more. Newer and newer needs crop up at every moment. Thus, motivation is a must, but it represents a highly complex phenomenon. An understanding of the topic of motivation is therefore essential to be an efficient manager or to get properly the work done by others.

### 5.3 Importance of Motivation

You can drag an unwilling horse to the river side, but you can never compel it to drink water. In the same way, a manager may confine the workers within the factory for eight hours, but desired productivity he/she will not be able to ensure, until or unless the workers are willing to do so. Every organisation requires human resource. In fact, the human resource is the most important of all other resources. But unlike other resources, human resource can suppress its capacity to produce, and sometimes it may go beyond its normal capacity. This depends on whether it is motivated or not. Motivated workers are the productive workers. If motivated, workers may also work with less compensation. Motivated workers are, again, satisfied workers. Satisfaction level being high, there will be a harmonious relationship in the workforce and this will lead the organisation to be a good place to work. Once an organisation becomes a good place to work, it will be easier and less costly to hire and maintain the quality workers. Absenteeism, employee unrest, tardiness, employee turnover, union activity—all can be reduced by motivating the workers. Hence, motivation today has been an important function of the manager. Japanese workers are highly productive. The main reason behind this is that managers there know how to motivate. The secret behind the success of ISRO has also been its employees who are not only capable but also willing to use advanced technology to reach the goal. To state algebraically the principle is—

NSOU • PGCO-I 107 Performance = f (ability × motivation) Einstein once stated, however the genius is 10% inspiration and 90% perspiration. But this volume of perspiration wholly depends on that 10% inspiration.

### 5.4 Approaches to Motivation

Motivation is essential. But how to motivate is still not fully known. The same person is motivated differently at different points of time. Different persons never can be motivated with same kind of incentives. Thus, the approaches to motivation have been different. Broadly, they can be discussed in the following ways.

1. **Need-based Approach** aims at the fulfilment of the needs of persons, workers or the human resources. It is believed here that needs arise out of some deficiency in the human beings. The reaction to that deficiency is known as “drives” of the human beings. This ‘drive’ leads to some kind of dissatisfaction, which can be resolved by providing some “incentives” to the persons concerned. Workers thus will be satisfied and motivated to do the work. In this approach, that need is first identified and attempt is made to cater that need. Need, again, can be internal/ intrinsic or external/extrinsic. So need based approach may also be of following two types. **Intrinsic Approach** tries to take care of internally generated needs or motives. These include feeling of responsibility, achievement, accomplishment, self-esteem etc. Most of us yearn for purpose or meaning. Performing meaningful work is itself a motivator. Winning a competitive situation, completing a challenging job make us internally satisfied. We then become involved or committed to the job. So, here the motive is how to make the job challenging or meaningful so that the worker can find some worthiness in performing that job. **Extrinsic Approach** refers to giving cognizance to pay, benefits or promotions. Removing punishment, providing rewards are the examples of external motivators. This kind of motivators attract people and keep them on the job. They are also often used to inspire the workers to reach a new goal.
2. **Job-based Approach** : Workers want the meaningful work, motivating job. So, Job is to be redesigned at regular intervals so that it does not appear monotonous or boring to the workers. Following are some of the ways in which work redesigning can be done.

108 NSOU • PGCO-I • Job Rotation • Job Enlargement • Job Enrichment • Flexitime • Job Sharing • Autonomous work Teams • Quality Circles etc. Job rotation allows workers to diversify their activities to offset boredom. Horizontal transfers are the ways to achieve it. Job enlargement expands job horizontally, i.e. some extra work is given to concerned worker, work being of same level. Job enrichment expands job vertically, i.e., some work of higher position can be given to the worker. Flexitime allows worker to select a suitable time for him. Job sharing means sharing one job between two or more workers. Autonomous work teams represent job enrichment at group level where the teams are free to take their decisions. Quality circles are recent additions to group redesign where the circles

**96% MATCHING BLOCK 17/37**

**SA** mangal 3.docx (D15922640)

meet regularly to discuss quality problems, investigate causes, recommend solutions and take corrective actions.

In addition to above, a Job Characteristics Model (JCM) has been developed where the following dimensions of jobs are taken care of. • Skill Variety—Whether job requires different skills or not. • Task Identity—To what extent workers do an identifiable piece of work • Task significance—The impact of job on workers lives. • Autonomy—The degree to which workers enjoy freedom for work. • Feedback—The extent to which the workers get back information about the quality of their work.

NSOU • PGCO-I 109 Combining all the above, an index called Motivating Potential Score (MPS) has also been developed as follows.  $MPS = SkillVariety \times TaskVariety \times TaskSignificance \times 3 \times Autonomy \times Feedback$  More is the score, more motivating is the job. This kind of motivation is also long lasting one, as it fulfils the intrinsic need of the workers. 5.5 Theories of Motivation Keeping in view the aforesaid approaches to motivation, several researchers have developed different theories on motivation. Four theories among them are considered to be the foundation to managerial practices in respect of motivating their workers. They have now fallen to some extent out of favour in the face of some contemporary theories of motivation. But a good number of practising managers still use them. So, briefly we discuss first those early theories.

5.5.1 Early Theories 1. Hierarchy of Needs Theory (A. Maslow) : According to Maslow, needs of different persons are different. First we are to know the immediate needs of workers, and those need to be satisfied first. One needs esteem, but manager increases his salary. This never will motivate the concerned worker. According to Maslow, following five constitute the hierarchy of needs— • Physiological—hunger, shelter etc • Safety—Protection for physical harm • Affiliation—Affection, friendship, recognition • Esteem—Self-respect, autonomy • Self-actualisation—Happiness, peace, self-fulfilment. 2. Theory X and Theory Y (D. McGregor) : McGregor assumed two different views of human beings. One basically negative, who does not want to work, other positive who gladly accepts, even seeks responsibility. According to McGregor, first type of people needs coercion, punishment, otherwise they will not work. This theory of motivation is X theory. For second type

110 NSOU • PGCO-I of people, Y theory is applicable, who needs praise, recognition etc. McGregor's carrot and stick policy is in the line of X and Y theories. Y people can be motivated by carrot i.e. reward, whereas the X people can be motivated by stick, i.e. the fear of punishment. 3. Two Factor Theory (

**90% MATCHING BLOCK 18/37**

**SA** Organizational Behaviour.pdf (D142229754)

Herzberg) : Two factor theory is also known as 'motivation-hygiene theory'.

According to Herzberg, there are some needs which, if not provided, will lead to dissatisfaction, but even if provided, may not lead to motivation. These are hygiene factors, e.g., pay, promotion, working condition etc. If we want to motivate, some other factors need to be fulfilled. These are actually motivating factors, e.g., recognition, autonomy, responsibility achievement etc. Thus, according to Herzberg, removing dissatisfaction is not sufficient to bring satisfaction or motivation. 4. Needs Theory (McClelland) : McClelland's Need Theory has some similarities with the theory of A. Maslow. Maslow identified five needs whereas McClelland proposed three needs as below. • Need for Achievement (nAch) • Need for Affiliation (nAff) and • Need for Power (nPow) However, the researcher focused most of the attention on nAch. Because he believed that high achievers are strongly motivated. Once the first need is fulfilled, concerned worker gradually feels other two needs. nAff refers to the desire for friendship or social recognition. nPow is the need to make others obey his/her orders. 5.5.2 Contemporary Theories of Motivation 1. ERG Theory (C. Alderfer) : This theory is a refinement of Maslow's needs hierarchy. Maslow identified five needs, whereas Alderfer, having based on the results of his questionnaire served to over 100 employees, proposed three needs as follows. • Existence—It combined physiological and safety needs of Maslow. • Relatedness—It refers to affiliation needs of Maslow. • Growth—It resembles the upper two needs of Maslow.

NSOU • PGCO-I 111 Thus, ERG here means Existence, Relatedness and growth where the concept of hierarchy is retained by the researcher. However, while Maslow proposed a “satisfaction-progression” model, Alderfer came out here with a “frustration regression” hypothesis. In Maslow’s theory, satisfaction of lower needs makes individual progress to upper needs. Alderfer, on the other hand, argued that individual will always try for highest need. If for any reason that need is not fulfilled, out of frustration, individual regress to lower-level needs. This theory is considered as more consistent, as in practical life the driving force is seen to change in the way as is suggested in ERG theory. In some countries, social needs come before physiological needs. From this stand point also the ERG theory is relevant. Most contemporary analysis of motivation tends to support ERG theory over those of Maslow and Herzberg. So, it has got place under the head of contemporary theories. However, in some corners the theory is criticised as paradoxical. As the individual is supposed move downward also, it is not clear in this theory which need is more important than other. Besides, there is no clear cut guideline in this theory for the assessment of a particular individual to know his preference to a particular need.

2. Cognitive Evaluation/Self Determination Theory : Cognitive evaluation theory hypothesises that extrinsic rewards may sometimes reduce intrinsic interest in work. When a worker comes to know (cognition) that he is paid for superior performance, he feels he is doing a good job not because he desires it but because the organisation wants it. If you read a novel because your teacher asked you to read, you will attribute your reading to an external source. This reading will not give you enjoyment or motivation. Rather, if you read it out of your internal urge, this will give you delight. So, how one evaluates extrinsic rewards determines the motivating power of the rewards. Thus, the theory proposes that people prefer to feel they have control over their actions, autonomy in work, and positive connections to others. A large number of studies support this theory as they find that the people who pursue work for intrinsic reasons are more satisfaction, feel they fit better into their organisations, and they perform better. In contrast, people who pursue work for money, status or other benefits are less likely to attain their goal and less happy even when they attain the same.

112 NSOU • PGCO-I Then, are extrinsic rewards always useless or unrelated to motivation ? No, this is not again true. Extrinsic rewards can also improve internal motivation, if those rewards are consistent with worker’s interest and core values. For organisations it means that managers should provide intrinsic and consistent extrinsic rewards. They need to make the work interesting, provide recognition, and support employee growth and development. The authors of cognitive evaluation theory acknowledge that extrinsic rewards such as verbal praise, feedback about competence, “you can” approach of supervisors. So, it is not strange, but fact that you get much fun when you work as a volunteer than when you are hired to do the same work at Rs. 100 per hour.

3. Goal Setting Theory : Edwin Locke is the advocate of this theory that studies the processes by which people set goals and put the efforts to achieve them. According to the theory, the quality of performance depends on how challenging the goal is and how specifically it is defined. General goals such as, “do your best”, “produce as much as possible” do not lead to desired performance, as neither accurate performance appraisals nor suitable rewards are possible in such cases. Clear goal gives clear direction to the performers, they themselves can also know what has been their exact performance or rewards are proportionate to performance or not. So, they cannot be dissatisfied with the rewards that they get. Following figure is thus the essence of goal setting theory.

Goal Specificity Goal Difficulty Performance Satisfaction

Goal Specificity identifies the target in specific terms. For example, the goal of each worker is to produce 60 units per week. This kind of goal allows the workers to know clearly to what extent they have been able to fulfil their target and hence, how much remuneration they can legitimately claim. As the worker can see his/her achievement clearly, a sense of achievement, pride or self satisfaction will automatically generate. Specific goals reduce ambiguity and the worker

**95% MATCHING BLOCK 19/37**

**SA** 118E2430-Organisational Behaviour.pdf (D165201925)

gets a clear idea as to what is expected of him.

Goal difficulty provides more challenge and hence the goals become competitive and highly exciting. Reaching on easy target cannot give so much satisfaction as a difficult goal can do.

NSOU • PGCO-I 113 Management by objectives (MBO) : A logical extension of goal setting theory is Management by objectives which requires a systematic and programmatic goal setting throughout the organisation. Here, the managers and workers work together to identify goals and to make policies in order to achieve those goals. MBO is based on belief that involvement leads to commitment, and when employees take part in goal setting, they are automatically motivated to perform better. When implemented properly, MBO can give therefore a number of benefits as are stated below. • Since MBO is a result-oriented process, better results are easily achieved. • Measurable standards are set here that leads to effective control of performance. • Goals are tailored under this system to the specific abilities of workers leading to matching of job assignment and workers abilities. • Since the goals are set by workers themselves, they accept the goals as their own, not imposed by superiors. • Workers clearly understand what is expected of them, and hence, there is no scope for ambiguity. • Periodic evaluation explores the limitation of the workers and identifies the areas where training is required. • This is an on-the-process control mechanism where the deviations are regularly identified and timely corrected. • Performance evaluation is done objectively and no question on bias or nepotism arises. • Finally, MBO improves the morale and commitment of workers, because they clearly understand here their contributions to the organisational goal and hence they feel proud and highly satisfied. However, nothing in this world is unmixed blessing. It has therefore also some problems or limitations. Those are narrated below : • Top management whole heartedly does not support MBO, as its exclusive right of decision making is curved to some extent. Hence, the performance of MBO is not upto mark.

114 NSOU • PGCO-I • Most of the subordinates also cannot accept MBO completely, as they are still suspicious about the intention of top management. They seriously believed that MBO is just a new tact or ploy in the hands of management. • MBO emphasizes quantity and this may affect quality. • The emphasis also is on short-term goal, and this usually stands on the way of long-range planning. • Decision making here is highly time consuming. • Continuous follow up is needed in MBO, which is mostly lacking in practice. • Integration of MBO system with departmental goals is a difficult task, but without it never MBO can succeed. 4. Equity Theory : One of the most widely assumed source of job dissatisfaction is the feeling of the employees that they are treated fairly, equally or equitably. Thus, equity theory believes that, if equity is ensured, the workers will be motivated to do the work. However, it must be noted that inequity may or may not be real, rather it mostly exists in workers perception. So, the main objective of the management should be to make workers perceive that they are fairly treated, that is the equal or fair approach of the management must be clearly visible and understandable by the workers. Otherwise they cannot be motivated. As Adams advocated— • Perceived inequity creates a feeling of resentment. • Then, the workers take steps to reduce it. • Greater the extent of perceived inequity, greater is the magnitude of tension and higher is the urge to reduce it. The steps that are usually taken by the workers to reduce the tension generated by perceived inequity are as follows. • The workers may reduce their efforts to make it equitable to the compensation they get. • They may alter their outcome to restore equity. • They may demand better pay or better working conditions to satisfy their perceived inequity.

NSOU • PGCO-I 115 • They may change effort-productivity ratio to more favourable levels. • They may resign from their jobs. • On the other hand, some may change their perception and start to believe that inequity does not exist. Other people get better pay because they work harder or belong to some other category. While equity theory mainly focuses on pay inequity, some employees look for equity in the distribution of other organisational rewards also. For this, they compare themselves with others mainly on following four ways. 1. Self-inside : comparison with inside co-workers 2. Self-outside : comparison with outside co-workers 3. Other inside : comparison with inside other gorup 4. Other outside : comparison with outside other group Recent research on equity theory has, however been expanded to organisational justice, where the workers can feel that their organisation is a good place to work in. Organisational justice has, again broadly three componants as follows. 1. Distributive Justice : Where workers feel that they are getting the reward that they deserve. 2. Procedural Justice : Here workers feel that they are getting higher reward as their procedure of work is better. 3. Interactional Justice : While interacting with supervisors, the workers feel that they are given proper respect and dignity. 5. Expectancy Model of Motivation : The expectancy model is based on the belief that

68%

MATCHING BLOCK 20/37

SA

ORGANISATIONAL BEHAVIOUR - consolidated.docx  
(D113801548)

motivation is determined by the reward the people expect to get out of their job performance.

This theory argues that the strength of one's tendency to work depends on the strength of his/her expectation of an outcome. In simple words, employees will be motivated to exert high effort when they believe it will lead to a worthy performance and that performance in turn will lead to rewards as they desire. The theory therefore focuses on three important elements of the model. These are as follows. • Expectancy—likelihood that a particular outcome will result from particular effort.

116 NSOU • PGCO-I • Instrumentality—likelihood that the said outcome will bring a particular reward. • Valence—Value that the workers assign to such reward. Thus, a worker must be confident that his/her efforts will result in better productivity. He/she must also be confident that such better productivity will be instrumental in getting the rewards that he/she values most. Motivation as such can be explained by following equation—  $M = E \times I \times V$ , where M is motivational force, E stands for expectancy, I for instrumentality and V for Valence. Three kinds of relationship that are significant therefore are as follows. 1. Effort—Performance relationship. 2. Performance—reward relationship. 3. Reward—Personal goal relationship. Before exerting maximum effort for a work, workers generally ask as such three questions that themselves as follows — 1. If we give maximum effort, shall our performance get good appraisal ? 2. If we get good appraisal, shall we get rewards ? 3. If we are rewarded, are the rewards attractive or valuable to us ? Answer 'yes' to the questions will motivate the workers, otherwise there will be no motivation for the work. 6. Behaviour Modification (Reinforcement Theory) : Workers behaviour may not be always as the manager wants it to be. So, their behaviour needs to be modified and channelised to desired goal. This modification refers to the set of techniques that are prescribed in reinforcement theory. So, reinforcement through proper use of immediate rewards and/or punishment is the only way, to modify the behaviour of workers. Other motivation theories assert that workers purposes direct their actions/behaviour. In contrast, reinforcement theory proposes that the consequences or outcomes one's behaviour. It ignores the inner state of individuals and concentrates solely on what happens after the action or behaviour.

NSOU • PGCO-I 117 Operant Conditioning Theory of B. F. Skinner thus is the most relevant component reinforcement theory. Unlike reflexive or unlearned behaviour, operant behaviour is influenced by the consequences and the reinforcement of those consequences. If we get favourable reinforcement to one behaviour, we will try to repeat it and vice versa. The reinforcement again is of our types as follows. 1. Positive Reinforcement 2. Negative Reinforcement 3. Punishment 4. Extinction First two are favourable and last two are unfavourable reinforcement. Positive reinforcement provides something that the workers like. Negative reinforcement withdraws or stops something that workers dislike. Punishment refers to the provision of something that workers do not like. Extinction, on the other hand, means withdrawing some benefits that so long the workers were enjoying. So, this is in one way the carrot and stick policy, where workers are either tempted to repeat desired behaviour on expectation of carrot (reward) or refrain from repeating unfavourable behaviour being afraid of stick (punishment). Individuals can learn about this reward or punishment by observation or direct experience and accordingly repeat or stop certain type behaviour. Learning by observation or direct experience is known again as Social Learning Theory. So, reinforcement theory to an extent is indebted to this social learning theory as well. Social learning is done by watching directly the behaviour of parents, teachers, peers, film/television stars. In case of work-related behaviour, experience is drawn observing other workers, bosses or the subordinates. This learning process passes through following four stages. • Attention : one must be attentive. • Retention : One must remember or retain in memory what one wants to learn. • Reproduction : One must possess the capacity of reproducing others behaviour. • Reinforcement : Positive incentives or rewards are needed if you expect that behaviour.

118 NSOU • PGC0-I Illustrations of the impact reinforcement and consequent modification of behaviour are everywhere. Workers expect bonus, so they produce more than their target. A commissioned salesperson work hard in the expectation of more earning as commission. One boss promises higher pay for overtime work, but does not keep his promise at the end of work. Then, the workers will not do the overtime next time. So the most practical theory of motivation is this reinforcement theory no doubt. But the theory has some limitations as well. In its pure form, this theory ignores feelings, attitudes and other variables of the workers. Same reinforcement may not motivate each worker in the same degree. Some reinforcement may also be counter productive.

5.6 Motivation and Organisational Effectiveness It is often said that happy workers are productive workers. So, if we want organisational effectiveness, the employees must be made satisfied with the work and the work place. Unlike, machines, men at work possess willingness or unwillingness to work. If they are unwilling, they may suppress their productive capacity, neglect their duties by coming late or remaining absent. Percentage of errors in the work will also be high. Thus, the organisational effectiveness will be largely affected. Hawthorne study by Elton Mayo was an eye-opener in this respect. In this age of harsh competition the only way to have long term competitive advantage is to have a motivated workforce. New generation machines or technology can give one the competitive advantage. But this is only for short-term. Competitors may also acquire the same technology and no longer you will enjoy any advantage. But the commitment, loyalty or motivation that your workers possess can never be easily copied by your competitors. So, is motivation important? Lack of motivation will make the workers dissatisfied, monotonous and fatigued. Their morale to work will also come down resulting in the following consequences. 1. Employee unrest 2. Absenteeism 3. Tardiness 4. Employee turnover 5. Union activity etc.

NSOU • PGC0-I 119 So, motivation is a must to accomplish task, to produce quality goods and for other related purposes. Motivation refers to a set of forces that energise people to behave in certain ways. For an organisation to be effective, it must make people go beyond the normal

**90%**

**MATCHING BLOCK 21/37**

**SA**

Organizational Behaviour.pdf (D142229754)

role performance and engage in some form of creative, spontaneous and innovative behaviour at work.

A motivated employee generally possesses that quality. Besides, once the workers are motivated, committed to the organisation they make the organisation a good place to work in. Then, to hire the quality workers and to keep them in the organisation will also be easier and less costly. However, all the motivation theories are not applicable in all cases. Before implementing a motivation process, the following factors should be taken into consideration. • Work environmental factors • Factors related to work itself, and • Personal factors of the workers Where the work itself is structured or quantifiable, goal setting theory of motivation can be easily applicable. When the needs are different from worker to worker, Maslow's theory is appropriate. If this is not done, motivation will not be effective and organisational efficiency may not be achieved.

5.7 Summary From the above discussion, we could understand the concept and fundamentals of motivation. We also understand the importance of motivation. How manager should proceed to motivate workers, different theories of motivation, how behaviour can be modified by motivation, how motivation helps organizational effectiveness, etc. have also been discussed here in detail.

5.8 Questions A. Objective Type : 1. What are two factors under Herzberg's theory of motivation? 2. State the topmost need of the need-hierarchy of A. Maslow. 120 NSOU • PGC0-I 3. Give the equation for Motivation Potential Force. 4. What does 'E' stand for in ERG theory? 5. Who is the advocate of Theory X & Y? B. Short answer Type : 6. Define "goal specificity". 7. What does cognitive evaluation hypothesize? 8. How is ERG theory different from Need theory? 9. What does 'valence' indicate? C. Long answer Type : 10. State the advantages and disadvantages of MBO. 11. Critically examine the Equity theory of Motivation. 12. Discuss how the behaviour of workers can be modified?

After going through this unit, you will be able to : • Know the

concept

and different theories of leadership • Examine various styles of leadership 121

122 NSOU • PGCO-I • Recommend how leadership can be effective • Highlight contemporary issues in leadership 6.2

Leadership Concept Leadership is a very important part of management and plays a very vital role in managerial functions. Whether one organisation is successful or not, depends largely on how dynamic and effective is the leadership there. In fact, if a single factor is to be blamed for business failures, this is undoubtedly the ineffective leadership. In the governments, in universities, in hospitals or in business houses, where ever people work in groups, there must be somebody to guide the group. He or she is the leader. Leadership is the art of influencing and inspiring the subordinates to perform their duties willingly, enthusiastically and competently. Leadership is that translates vision into reality. Leadership is both a process and a property. As a process, it uses non-coercive influence to direct and co-ordinate activities of a group towards the achievement of group goal. As a property, it is a set of qualities of those persons who are perceived to employ their influence on others. Management and leadership, these two terms are very closely related, but they are not synonymous. Their functions are more or less same. But leadership is something more than the management. Management is a position. It may or may not possess the quality of leadership. Management is an authority, whereas leadership is an interpersonal influence. Managers plan, leaders set direction. Managers do staffing, leaders align people to the vision of the organisation. Managers control, whereas leaders motivate the workers. Manager exercise positional power, leaders have emotional appeal. Leaders can do the functions of managers, but the managers may not be able to that. So, all leaders are managers, but all managers are not leaders. Based on the discussion above, leadership may be defined as—  $(L = F(f, g, w, s))$ , where L = Leadership, F = function, f = followers, g = goal, w = willingness of followers, S = a given situation. Followers and their willingness to follow are the basic differences of leaders NSOU • PGCO-I 123 from managers. Subordinates are compelled to obey managers, whereas followers willingly follow the leaders. In leadership, the influence is also mutual. Leaders influence followers, followers do also influence the leaders. So, organisation without a leader is just like a herd of cattle without a keeper, a country without a king. 6.3 Theories of Leadership From the beginning of 20 th century, many distinguished researchers have contributed a lot to the knowledge on leadership. While examining the earlier contributions is not altogether unnecessary, we will mainly focus on more relevant ones. Earlier it was believed that leadership is a personality trait, that means it is in born. But as the years went by the focus shifted from the personal characteristics of leader to his/her behaviour in communicating and dealing with the followers. More recently the researchers have started to believe that the leadership is also a contingent variable that depends on situational factors. Thus, we have now a number of different theories on motivation. We discuss them one by one in following sections. 6.3.1 Trait Theory The trait theory of leadership focuses on the personal characteristics of leaders which make them distinct from the non-leaders. A number of early researchers have attempted such traits that can be termed as leadership traits. For example R. Stogdill conducted a survey on more than 5000 studies. But still he failed to give an exhaustive list of leadership traits. However, he identified the following traits which are common almost in all studies. • Desire for accomplishment • Persistent pursuit of goal • Creativity • Initiative • Courage to accept consequences • Emotional intelligence • Tolerance of ambiguity • Ability to influence

124 NSOU • PGCO-I • Charismatic approach However, when the researchers began organising leadership traits around Big Five Personality Model, a break through on trait theory has started to emerge. While associating Big Five traits to leadership it was found that almost all of Big Five can be considered effectively as the required traits for leadership. Extraversion was such to be strongly related to leadership quality. Conscientiousness and openness to experience also showed strong relationship though not quite as strong as extraversion. But being able to assert the people (extravert), being disciplined in every activity (conscientious) or being creative (open). One person can have apparent advantages while performing the role of leadership. Emotional intelligence has also a very significant impact on leadership effectiveness. Empathy is a core component of emotional intelligence, and it is believed that empathetic leaders only can sense others' needs, listen to others (not just say) and read the reactions of followers. A leader who effectively displays and manages emotions can move up in an organisation. Thus, before such attempt to recognise Big Five, trait theory to an extent was directionless. Now, thanks to Big Five, traits can now predict leadership to a large extent. Still, the trait theory suffers from some limitations. They are as follows. Limitations : 1. The list of assumed leadership traits is too long. Although hundreds of traits have been identified, no consistent pattern has yet emerged. 2. The contemporary tinkers do not accept that leaders are born, not made. 3. This theory does not take into account other variables that may have their impact on leadership efficiency. 4. Same traits can be possessed by successful as well as unsuccessful leaders. 5. One useful trait to leadership may appear to be detrimental in some different situation.

**100%**

**MATCHING BLOCK 24/37**

**SA**

Organizational Behaviour.pdf (D142229754)

With all its limitations the theory is still relevant because of certain merits.

Those are as below. Merits : 1. Environment changes person. The person also changes environment. So, it cannot be denied that some persons possess some qualities that make him/ her the leader by birth. NSOU • PGCO-I 125 2. That heredity has its influence on personality development is well accepted. So, it born qualities can never be ignored. 3. Traits are inner philosophy. Behaviour is what surfaces. Only 1 / 8 th of iceberg surfaces, we know. So, traits perhaps are more pervasive than behaviour. 6.3.2 Behavioural Theories Trait theory provides a basis for selecting the right people for leadership, whereas behavioral theories emphasize on right behaviour of leadership. When the trait theory failed to explain fully the leadership, the researchers during 1940s to 1960s moved towards required behaviour of leaders. The most comprehensive theory among them resulted from the Ohio State Studies in the late 1940s, which sought to identify the desired dimensions of leaders behaviour. The studies began with more than thousand dimensions, but finally narrowed the list to just two as follows. (i) Initiating structure, and (ii) Consideration Initiating structure refers to leader behaviour that attempts to organise work, work relationships, group tasks, assignment of duties and

**89%**

**MATCHING BLOCK 23/37**

**W**

expects workers to maintain definite standards of performance and emphasizes the meeting of deadlines

for the achievement of goals. Consideration on the other hand, refers to the leadership that is characterised by friendliness, mutual trust, respect to followers ideas, regard for their feelings, trust and concern for the welfare of employees, and appreciation of their performance. In a recent survey, 66% of employees mentioned that appreciation makes them motivated at work. While identifying these two dimensions, the researchers, however, did not like to say that being high in one dimension the leader is to be low in other dimension, Rather, the fact is that the leader can be high in both dimensions, low in both, high in one and low in other. This can be shown as in the following figure. Democratic Autocratic Human Relations Laissez faire High Low Initiating structure High Consideration

126 NSOU • PGCO-I Consideration and initiating structures-both are high in Democratic quadrant. Here, the performance and satisfaction both are upto mark. When both are low, the workers are in "Go-as-you-like" situation (Laissez faire). High consideration—Low initiating structure is an example of charitable institutions, the firm cannot run at profit. Opposite is known as autocratic, where only performance is emphasized, where satisfaction is all time low. The University of Michigan Studies resulted in more or less the identical conclusions. Here, the leadership has been divided into following two categories. (i) Production-centred, and (ii) Employee-centred The production-oriented leadership refers to the initiating structure leadership of Ohio State University studies. The Employees-centred one resembles the consideration dimension of those studies. So, in both these studies the leadership is two dimensional—Production or Employee. Blake and Mouton have given a graphic depiction of possible alternatives within this two dimensional leadership, which is known popularly as Managerial Grid. The same as shown below.

5-5	1-9	9-9	1-1	9-1
Concern for Production	High	Low	High	Low
Concern for People	High	Low	High	Low

The grid identifies five basic styles of leadership. The 9.1 leader is concerned with production and not at all careful for employee welfare. The 1.9 leadership, known as club management, again, careful basically for employee well being, with least interest to task management. 1.1 leaders are wothless leader, where the management is called as impoverished management. On the other hand, 9.9 leadership NSOU • PGCO-I 127 looks towards highly both of production and people, though in most cases it is not possible. The 5.5 is the middle of the road management where leaders are moderately concerned to both.

### 6.3.3 Situational/Contingency Theories of Leadership

Behavioural theories came up out of the limitations of trait theory of leadership. In behavioural theory also it has been seen that a universal theory can never be developed to identify the preferable behaviour. Every theory speaks of more than one kind of behaviour, and none is claimed to be preferred universally. Here arises the need of situational or contingency theories of leadership, that propose that effective behaviour of leaders is contingent on some conditions and it varies from situation to situation. A number of researchers have worked on this situational theory and they have developed different contingency models. We discuss them below one by one.

#### ●●●●● Fiedler's Theory

Fiedler advocated that different leaders possess different motivational traits. Some leaders are originally task-oriented, some are again relation-oriented. According to Fiedler, the relation-oriented leaders want to have warm personal relations with their co-workers and followers. What the leader actually will do, it depends on the situational factors. According to Fiedler, the situation is favourable to the leader when he/she has control over his/her subordinates performance. Three factors are taken into consideration to determine whether the situation is favourable or not. These factors are as follows.

**Leader-Member Relations :** When relationship is good, the leader can count on the loyalty of the subordinates, while the poor relation will naturally affect his/ her influence.

**Task Structure :** Where the task of the subordinates is structured, i.e., well- defined, it contributes to a favourable situation for leader to exert his/her influence on the subordinates.

**Position Power :** Greater the power of the leader to reward or punish his/her subordinates, more favourable the situation is to the leader. However, overall situational favourableness depends on the combination of the aforesaid three factors. When all the three are favourable, the situation is called as High-Control Situation. When all the three are unfavourable, the situation is known as Low-Control Situation. Moderate Control Situation prevails when one or two is/are favourable, but others is/are not.

128 NSOU • PGCO-I Both in High-Control and Low-Control situations, task-oriented leadership works well, whereas in case of Moderate-Control Situation relation-oriented leadership performs the best. The main advantage of contingency model is that it takes into account all the three components : the leader, the situation and the followers. In trait theory only the leader is given importance. As demerits of contingency model, some however argue that the acceptance of situational theory negates the universality of leadership theory. It suggests that there cannot be a theory at all to explain leadership. Leaders can do whatever they think fit to address the need of the situation. ●●●● Path Goal Theory Robert House advocated this theory. The term "Path-Goal" of this theory implies that the leaders are to clarify the desired path of followers to achieve the pre- fixed goal and their journey easier by reducing the road-blocks. That means, the leaders job is to provide the followers with information support and other-resource necessary to reach their target. The path-goal theory is to some extent similar to the expectancy theory of motivation. As in expectancy theory, here also the leaders will strengthen the expectations of subordinates by increasing the availability and attractiveness of rewards or outcomes. However, the path-goal theory as a sub-set of contingency model, asserts that the leaders are to provide the rewards depending on the situational characteristics and the characteristics of the subordinates. This situational consideration will influence the leader behaviour, which according to situation, may be directive, supportive, task-oriented or participative. Directive leadership gives greater satisfaction when tasks are unclear and stressful, whereas supportive leadership gives better result when the tasks are stereotype or routine-type. Task-oriented or participative leadership, on the other hand, depends on the willingness or otherwise of the subordinates to do the work. ●●●● Situational Leader Model This theory requires that successful leadership depends on the selection of proper style contingent on the rediness of the subordinates. The readiness of the followers can be of the following types :  
NSOU • PGCO-I 129 ● Unable and unwilling ● Able but unwilling ● Unable but willing, and ● Able and willing  
Unable and unwilling followers need specific directions. Unable but willing needs task orientation. Able but unwilling workers needs supportive leadership in order to effective workers. For able and willing workers, leaders need not do much. Hersey and Blanchard added "maturity" of followers as a contingent variable. They believed the subordinates have also a life-cycle. When the workers enter into an organisation, the need specific directions from leaders. So, the required style here is directing or telling approach. Gradually, when the workers learn about their tasks, the leaders then are to create willingness among them. So, "selling" or "coaching" approach then is essential. As the willingness of workers increases, the leaders needs to be participative or supportive. The final stage of the life cycle come when the workers can work "on their own". Now, the leader can easily follow the "delegating" style and spend his valuable time for again the new-comers. ●●●● Leader participation Model (Vroom-Yetton) This model emphasizes on decision making process of the leader and how far he/she allows participation of subordinates in the decision-making process. According to Vroom-Yetton, this role or behaviour of leader is very significant, because on it depends the job satisfaction of workers which ultimately can influence their task performance. If the leader does not allow the subordinates in decision-making process, it may have negative impact on productivity and lead to turnover or stress. Vroom-Yetton suggessted that there can be five decision-making styles, ranging from highly autocratic to highly participative one. The styles as such are as follows. ● Autocratic I (AI) — Leader solely takes decision ● Autocratic II (AII) — Leader seeks information from subordinates, but takes decision alone. ● Consultative I (CI) — Leader consults the subordinates individually about the problem, but takes decision singly. ● Consultative II (CII) — Leader consults the subordinates in a group but his/ her opinion is final.

130 NSOU • PGCO-I • Group (G) — Subordinates participation is allowed. Different styles are suitable in different situations and are contingent on different factors. So, this is also a part of contingency theory. Leader will be effective if he/ she can choose the appropriate style suitable to particular situation. ●●●● Theory X and Theory Y (McGregor) This theory has already been discussed under head "motivation". We again just mention the theory here, as it is equally relevant to the leadership theory. McGregor argued that the behaviour of leader or manager to subordinates should not be same for all employees. Like different situations, employees are also different types. So, leadership style is to be based on the type of employees, which actually here is the contingent variable. McGregor classified the employees broadly in two categories—X and Y. X employees are inherently lazy and they always try to avoid work. Y employees, on the other hand, seek responsibility and find the work as natural. Accordingly, the treatment of these two types of workers must be different. The former needs "stick" and the latter are motivated by "carrot". Leaders will be effective if they can identify the nature of employees properly and can treat them accordingly.

6.3.4 System Approach to Leadership System approach and contingency approach are two inter-related approaches. Contingency theory is based on the situational variables. System actually is one of such situations. A system is defined as the assemblage of things connected or inter- dependent, so as to form a complex unity. Every system has a number of sub- systems, and the system is not only the sum-totoal of sub-system, but something more than that. Under system approach to leadership, leadership is considered as a system that depends on the broader system on the one hand, and on a number of sub-systems on the other. So, how the leaders will work depends on the characteristics of the system or sub-systems, and as a result their style will vary from system to system. System approach in one way an eclectic approach as well, which is a combination of traits of leaders and the situational factors. Different combinations of trait and situation result in different systems. Leadership is therefore multi-dimensional, multi-variable, adaptive and dynamic. Leadership system is also an open system, which means that leadership always interacts with its environment and accordingly it gets its shape.

NSOU • PGCO-I 131 6.4 Leadership Style Leadership styles are different under different theories of leadership. Discussion on styles have already been made along with the theories concerned. However, at a glance they can be shown as below. As per behavioural theories, leaders may adopt any of the following styles. 1. High consideration — Low structure (Human Relation) 2. High structure — Low consideration (Autocratic) 3. High structure — High consideration (Democratic) 4. Low structure — Low consideration (Laissez faire) The Managerial Grid advocated by Blake and Mouton suggested the following five styles. 1. Country club (People-oriented) 2. Team (High concern for both people and production) 3. Task (Production oriented) 4. Impoverished (Low concern for both) As per Situation Theories, leadership styles can be of following types. Fiedler stated that the leadership can be task-oriented or relation-oriented. As per Path-goal theory leaders may have the styles like directive, supportive, task-oriented and participative. Vroom-Yetton, again, recommended five styles as below. 1. Autocratic I 2. Autocratic II 3. Consultative I 4. Consultative II 5. Group As all have been discussed earlier, we do not repeat them.

132 NSOU • PGCO-I 6.5 Leadership Effectiveness It is now accepted that there is no best leadership style for all situation. Rather, the leadership effectiveness depends on the use of a style appropriate to the situation. So, this situation-style match is actually key to the leadership effectiveness. Along with this matching, the leader must work as follows to develop his/her effectiveness.

- Raising Competence of the group : Competence includes the understanding, based on knowledge and skills, required to perform a job. If the leader cannot raise this competence of his/her team, effectiveness can never be achieved which style he/ she will adopt for this competence building, he/she is to understand it, plan the strategy and implement it effectively.
- Raising Commitment Level of the members : Competence is needed, but if the members are not committed/motivated to do the job, they may not exert their full competence. They may suppress some of their capacity. What are needed therefore are willingness, eagerness and the involvement of the members. This is the big challenge to the leaders of modern times. In most cases, the workers can do, but they do not do. In Hawthorne study also it was found. So, raising commitment level is an important pre-condition to effective leadership.
- Raising Teamwork Level : To work alone and to work in a team are not the same things. Team work today is a must, but to be a team worker is not an easy task. Present-day work environment therefore requires cohesion and collaboration along with competence and commitment. If instead, there is confrontation and conflict among the team members, due to anti-synergic effect, the group productivity will be less than proportionate to individual competence level. Thus, raising team spirit is the first step to leadership effectiveness. This can be done by— 1. recognising the importance of team. 2. making workers aware of the benefits of team. 3. allocating resources to team, not to individual. 4. making performance appraisal objective and unbiased. 5. arranging programmes/for reducing conflicts or increasing collaborations.
- Raising Development Level : Ultimate objective of leaders or the measure of leadership effectiveness is “development”. Competence, commitment, team spirit—

NSOU • PGCO-I 133 all are to be channelised towards the development of organisation. Development is possible when all the relevant factors are compatible with each other, and a leader is called successful when he/she achieves desired development. Leadership style may be good, then the leader is effective or efficient. But until and unless that style gets compatible response from his/her followers, desired development is not possible, and leader is not a successful leader. Thus, there is difference between effective leadership and successful leadership. Effective leadership is measured by the adopted process or style, whereas successful leadership is measured by the result.

### 6.6 Contemporary Theories/Issues in Leadership

Recently, some other theories of leadership we have come across. In an attempt to address the contemporary issues in leadership, these theories have been developed. We discuss a few of such theories below.

#### 6.6.1 Leader Member Exchange (LMX) Theory

This theory was advocated by G. Graen and his associates, which emphasizes the social exchange taking place between the leader and his/her followers. The leadership style will depend on the nature of such exchange. When the exchange is perceived by the leader as favourable, the followers become close to leader, and where it unfavourable the leader does not trust the followers. Thus, leader, as per this theory, implicitly classifies the followers into two groups—in group and out-group. In group followers get greater responsibilities, more attention and more rewards, whereas the out group members are usually neglected and get maximum punishment or unfavourable performance appraisal. So, according to this theory, leadership style is never the ‘average’ or “common” for all followers. However, how the leader chooses the “ins” or “outs” out of his/her followers, is not clear. But there are some evidences which show that in-group members usually belong to the demographic, attitudinal and personality characteristics similar to the leader, though in some cases it has been seen that leader-follower relation has been closer when they are of different genders or personality characteristics. If personality of both are strong, usually bonding does not build up. Two lions can never stay in the same forest. So, still there is no logical explanation to how in-groups and out-groups are classified. However, different studies have shown that, when leaders differentiated strongly among their followers, employees responded with more negative work attitudes and higher levels of withdrawal

134 NSOU • PGCO-I behaviour. So, in short run the leader can have some benefits if he/she follows this theory, but ultimately the categorisation among followers fires back. 6.6.2 Charismatic Leadership Charismatic leadership is such a quality or combination of qualities by which one person may be viewed as supernatural, superhuman or at least an exceptional one. Ordinary persons can never dream of such quality which is regarded as "divine origin" or as an exemplary. Robert House was the first researcher on charismatic leadership. According to him, followers attribute someone this kind of leadership when they observe certain behaviours of the leader. Such key characteristics of a charismatic leader are as follows. 1. Vision 2. Personal Risk 3. Sensitivity to followers needs 4. Unconventional behaviour Most experts believe that individuals can be trained to be charismatic leaders. According to some, a three-step process can be followed for the purpose. First, develop charisma using passion and body language along with optimistic view. Second draw others in inspiring them to follow. Third, bring out the inner potential in followers. Business students are asked to play charismatic having followed the aforesaid process. However, charisma can never be fully learned. This is to a large extent hereditary as well. So, there can never be straight way answer to the charismatic leaders are born or made. Actually, favourable inputs of both can make an individual a charismatic leader. Positive Impact of charismatic leadership is no doubt there. High satisfaction and performance of followers are usually seen in charismatic leadership. People working under such leaders are motivated to work extra and to work with enthusiasm. One study in Israel showed that charismatic leaders were more effective because their employees personally identified with them. A study of 115 government

NSOU • PGCO-I 135 employees also found that they had a stronger sense of personal belonging at work when they had charismatic leaders. However, the dark side of charismatic leadership is not completely absent. Firstly, charismatic leaders who are larger than life, don't necessarily act in the best interest of their organisations. In most cases, they allow their personal goals to override the goals of the organisations, use organisational resources for their personal benefits. Some charismatic leaders, like Hitler, are too successful at convincing their followers to pursue something which is but disastrous. Secondly, charismatic leadership usually surfaces to face a war-like crisis, be it in politics, religion or in a business firm. But when the crisis subsides, the charismatic leadership may become a liability. P. F. Drucker observed that charisma makes a leader inflexible, as he/she strongly believes in his/her infallibility. Stalin, Hitler, Mao—all were the victims of such belief. So, they rather inflicted as much evil and suffering on humanity as have never been done again. Leaders like J. F. Kennedy, Martin Luther, Mahatma Gandhi, were also there who could use their charisma in positive way. 6.6.3 Transformational Leadership Transformational leaders are those who can change followers' awareness, their ways of thinking by helping them look at the old problems in new ways. On the contrary, the leaders who just guide the followers toward established goal, try to analyse what are already existing are called as transactional leaders. The characteristics of these two types of leaders can be given as below. However, these two styles of leadership are never the opposing approaches, rather they are complementary to each other. Actually, the transformational leadership is built on transactional leadership. One is to start as a transactional and slowly proceed to the transformational leadership. ●●●●● Effectiveness of Transformational Leadership Transformational leaders are more effective, because they are creative and try to make their followers innovative. They increase followers' self efficacy, by giving them a "can do" spirit. They can also engender commitment on the part of followers and instill greater trust in leaders. Unlike charismatic leaders, they can ensure longterm results ensuring sustainable performance of the organisations. They have inclination to greater decentralisation and strong feeling for positive personal control among workers. They usually exert their leadership with following four "I"—

136 NSOU • PGCO-I • Idealised influence • Inspirational motivation • Intellectual stimulation, and • Individualized consideration. All these actually facilitate corporate entrepreneurship, that consequently help the corporates to grow, not only to survive. Empirically it has also been seen that transformation leadership is strongly correlated with lower turnover rates, higher productivity, lower employee stress and higher job satisfaction. Still, the transformation leadership theory cannot be termed as perfect. Rather, it is also situational. It has been seen in studies that transformational leadership is effective in small and private firms only where the leaders can directly interact with the followers. In the countries where collectivism is higher, this kind of leadership is such to be more effective. Effect of this leadership on team performance and individual performance again is different. Thus, all elements of transformational leadership are not universal and in some cases transactional leadership may work better than transformational ones.

#### 6.6.4 Authentic Leadership

Leadership is usually discussed to see its effectiveness. Role of ethics or trust or values is not so important there. But very recently it is felt that the values or ethics that the leaders possess are also important to judge their performance. Authentic leadership is one which is true to itself and also to its followers. When the followers consider some leader as a person of values and ethics, then the leader is an authentic leader. An authentic leader is a man of integrity, honesty, selflessness and humbleness. Always such leader sticks to him/her ideals, and as a result his/her followers easily Group Productivity & Effectiveness Leader's Integrity, Benevolence, ability Trust can have faith or trust in his/her. Trust development is a process as is shown in the figure. The effect of trust has also been given in the last column. This leadership is considered today essential as otherwise the effective leaders may do more harm than good for the people or the society.

#### 6.6.5 Servant Leadership

When the leaders behave like a servant, servant to the organisation or servant to the followers, the leadership is called as servant leadership. This is actually an extension to authentic or ethical leadership. Leaders here go beyond their self-interest and help the followers to grow and develop. They prefer persuasion to power, listening to directing and accepting to imposing. As they focus on serving the needs of others, higher level of commitment on the part of followers is ensured. Secondly, the servant leadership increases team potential showing faith to its abilities, which in turn leads to higher level of group performance. Servant leadership, however is not prevalent in all types of cultures. In US for example, leaders are more comfortable in giving orders, i.e., they behave mostly as masters, not the servants. In Singapore again the scenario is different. Leaders there gather the opinion of the followers and then unify them from the back. They do not go ahead of followers, rather go with and sometimes follow the followers.

#### 6.6.6 Some other Theories

- Level 5 Leadership :** Collins proposed this theory who believed gradually the leadership attains its abilities. Ultimate aim is to reach Level 5 which according to Collins, is a combination of professional will and personal humility. Five levels of this leadership are as follows. Level 1 — The leader here is just a capable person. Level 2 — The leader can contribute to team members. Level 3 — The leader is competent. Level 4 — The leader is effective. Level 5 — He is an executive.
- Era Theory :** Bennis and Thomas, proposers of this theory, stated that leadership is the product of a particular era or age. For their study, they identified two contrasting eras and showed how these varying cultures of different eras create different types of leaders. For example 1945-54 : The era of limits, i.e., the era for organisational hierarchy and chain of command. 1991–2000 : The era of options where the style is now-linear, completely flexible.

138 NSOU • PGCO-I 3. Financial Theory : Two financial points, according to this theory, are value addition and reserve allocation. Leadership styles depend on the emphasis of leaders on these points. Emphasis on value addition creates the leadership known as “buccaneer”. Emphasis on allocation gives birth to “mercantilist” leadership. Leaders who can emphasize both are called “venture capitalist” and leaders who cannot look after any of the two are known as “discounters”. 4. Nurturant Task Theory requires attention to both of the task and nurturing/ well being of the subordinates. Here, leader needs play a paternal role that accepts authority and simultaneously shows cares and affection toward the followers. Advocates of this theory believe that our society is not yet ready for participative leadership. Rather, this mid-way style is both possible and acceptable. 5. B–C–D Theory has classified the leadership into three different styles, e.g., Benevolent (B), Critical (C) and Development (D). Benevolent style believed that employees always should be treated with affection as parents do for their children. Leaders here are constantly guide and protect their subordinates. Leaders may impose some code of conduct on the followers, but usually will not punish them even if the followers fail to follow them. Critical Style is closer to Theory X where leaders are to be dominating, critical of performance of the subordinates. Workers are not doing persons, as is believed here, so, they are to be controlled by strict rules and regulations. Development Style believes in empowering and thereby developing the inner potential of the subordinates. So, delegation or decentralisation is the basic component of this style. This style is very difficult to implement, but once this is achieved, this becomes the best style. 6. Performance–Maintenance Theory (PM) resembles the nurturant–task theory where task accomplishment is given equal importance with the maintenance of good working relations. According to Misumi, the advocate of this theory, emphasis on P or M may vary from situation to situation, but both are essential each time, P and M are not contradictory to each other but one always complements the other. 7. Role Theory of leadership asserts that almost every employee is a potential leader. If he or she is given the leadership role, he/she is likely to become a leader soon. The theory states that the era of “great leaders” is over. Only in extreme NSOU • PGCO-I 139 distressed situation the great leaders again may come up. So, role first is to be assigned, then by “trial and error” one will be a good and experienced leader. Of course, the condition is that the person who is given the role must also accept it sincerely. Role giver has also some responsibility to elicit desired performance from the leader so made. What are needed for the purpose are—positive pressure, Value orientation, support, appreciation and trust. 6.7 Summary From the above discussion, we could understand the concept and fundamentals of leadership. In addition, we could understand different theories and various styles of leadership. Finally, we could understand how leadership can be effective and the contemporary issues faced by the managers in taking leadership. 6.8 Questions A. Objective Type : 1. Are leaders born or made ? 2. Name the leadership theory that came out from Ohio state studies. 3. Who are the contributors to the concept of Managerial Grid ? 4. Who is the principal advocate of Path-Goal Theory ? 5. What does AI style of leadership stand for ? 6. Give the full form of LMX Theory. 7. What do you mean by “B” of B–C–D Theory of Leadership ? B. Short answer Type : 8. Define Servant Leadership. 9. Mention the characteristics of Authentic Leadership. 10. Distinguish between Transactional and Transformational Leadership. 11. What do you mean by “Country Club” management style ? 12. What does high control situation indicate in Situational Theory of Leadership? 140 NSOU • PGCO-I 13. Which theory of leadership assume that leaders are born ? 14. How do we differentiate between leadership and management ? C. Long answer Type : 15. Critically examine the Trait Theory of Leadership. 16. How can we enhance the leadership effectiveness ? 17. Is charismatic leadership universally effective ? 18. State the bright side as well as the dark side of Fiedler’s Theory of Leadership. After going through this unit, you will be able to : ●

Form an idea as to the concept of culture • Know the determinants of organisational culture • Highlight on the pros and cons of organisational culture • Take stock of job stress • Identify the causes and impact of stress • Know how the stress can be managed

7.2 Meaning and Concept of Culture Culture to individuals is just like the water to fish. The fish always live within water but does not know exactly what is water. Individuals are also always surrounded by culture, but it is very difficult for them to define what is culture. The relationship between workers and the organisational culture is the same, as culture everywhere is actually a descriptive term. It is quite complex too. Thus, conceptualisation of the term “organisational culture” is no doubt difficult, and a number of disagreements prevail as to its characteristics. However, all recognise the importance of shared norms and values that display to an extent the essence of culture. That is why organisational culture is usually defined as— “

**89% MATCHING BLOCK 25/37**

**W**

a system of shared meaning held by members that distinguishes the organisation from other

organisations”. Edgar Schein, who was closely associated with the study of organisational culture,

**90% MATCHING BLOCK 27/37**

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

that has worked well enough to be considered valuable and, therefore to be taught to new members as the correct way to perceive, think and feel”.

NSOU • PGCO-I 143 More recently, J. Martin emphasized the differing perspectives of cultures and she noted— “As individuals come into contact with organisations, they come into contact with dress norms, stories people tell, formal rules and procedures, codes of behaviour, rituals, tasks, pay systems, jargon and jokes as understood by insiders, and so on. These elements are the manifestations of organisational culture. When members interpret these manifestations, their perceptions, memories, beliefs, experiences and values will vary, so interpretations will differ—even of the same phenomenon. The pattern of configurations of these interpretation and the ways they are enacted, constitute culture”.

Uniformity of Cultures : What comes out from Martin’s observation is that an organisational culture is a common perception held by organisation’s members. But all may not have so to the same degree. Thus, to expect a uniform culture throughout the organisation is rather a common misconception. There can be a dominant culture, no doubt but simultaneously there will be a number of sub-cultures. Dominant Culture is a set of core values shared by a majority of the members and it can have a positive impact on desirable outcomes of the organisations. Important, but often overlooked, are the sub-cultures, that are usually shared by small minority or small groups at different corners of the organisations. These sub- cultures are also very important because they can weaken or undermine an organisation if they are in conflict with the dominant culture of the organisation. So, the big challenge is how to bring in that unity in diversity. Departmental cultures, for example, are the sub-cultures. If they are not in line with the culture or values of the organisation as a whole, there will be chaos. In this context, reference can be given of strong versus weak cultures. When most of the employees agree with a culture, this is strong; if the opinions vary widely, the culture is weak. Tata steel has a strong ethical culture. So, most of the other sub-cultures are sub dued to it. If dominant culture of the organisation is weak, the sub-cultures will surface more and the uniformity of culture will be affected thereby. So, the core values are to be widely shared and intensely held, that in turn may create a climate of high behavioural control. Make the dominant culture strong, then the sub-cultures will be channelised toward dominant one, and the uniformity of culture can be ensured. Cohesiveness, loyalty, commitment—all are the result of

144 NSOU • PGC0-I this strong dominant culture. Weak culture leads to disagreement among the members of the group, and as a result, the group performance becomes lower. Higher the agreement or unanimity in the purpose or mission, higher is the productivity. High agreement creates also a harmony leading to reduced employee turnover or withdrawal behaviour.

### 7.3 Important Characteristics of Culture

Organisational culture has different types of characteristics or components. Different researchers also vary widely in identifying the characteristics of culture. The important among them are mentioned below, though in no way they are all inclusive or exhaustive.

1. Behavioural Regularities which can be ensured if the members use common language, terminology or rituals.
2. Norms : Norms refer to standard to desired behaviour, a guideline or code of conduct for the members.
3. Dominant Values : These are the stable belief as to what the members think as important.
4. Philosophy, the psychological structure of the members that governs the concept as to what should and what should not be done.
5. Rules, strict and expressed guidelines as to how one will work.
6. Climate : the overall environment in the organisation which actually is the foundation of organisational culture. Some researchers, however, have identified the characteristics in some different way as follows.

1. Innovation : attempt to bring in something new
2. Risk taking : the organisation is venture some
3. Attention to detail : employees are careful to everything
4. Outcome orientation : focuses on results
5. People orientation : focuses on workers
6. Team orientation : prefers team work
7. Aggressiveness : refers to competitiveness
8. Stability : maintains status quo.

One organisation differs from others because its orientation and focus as mentioned above vary from other organisations. Culture, therefore, is said to be a distinguishing mark by which one can separately recognise a particular organisation.

### 7.4 Creating and Maintaining Culture

#### Creating Culture

Creation or development of culture is done in different ways in different organisations. However, generally the steps for culture development are as follows.

1. The founder's idea that he/she brought in for the enterprise.
2. The founder brought in some key persons creating a core group.
3. The group acted in a concert
4. The group hired some employees
5. The group's way of thinking is disseminated among the employees, leading to an organisation wide culture.

Most of the successful corporates followed the aforesaid steps while developing or creating their cultures. However, the importance of the steps varies from organisation to organisation. In some cases, the founders just created a weak culture, and the core group there played the dominant role in this respect. In some organisations again, core group also failed to develop the acceptable culture and the top manager there played the vital role. Besides, one type of culture that was developed by the founder or the core group may not be suitable later due to change of socio-economic environment. In that case, the men in the top management then is to revise the culture and the new culture becomes the culture of the organisation henceforth.

#### Maintaining the culture

Once a culture is in place, then it is to be kept alive. Actually, whether the existing culture, the custom, general way doing things will sustain or not that depends on how successful it is for which it is meant. If one fails other types of cultures are developed. So maintaining culture is a "trial and error"

146 NSOU • PGC0-I process. However, the forces that play a significant role in sustaining existing culture may be discussed as below.

1. Selection of employees : Ability to perform is one significant criterion for selection no doubt but what is more important is to see how well the candidates will fit into the organisation and whether their personal values are consistent with those of organisation or not. Knowing the way of working of the organisation candidates also choose where to apply. Selection thus a two-way traffic, allowing employer and the candidates to avoid mismatch, and this ultimately, if properly followed can help in sustaining organisational culture. The process therefore should have following steps.

- Draw up a clear Vision and Mission for the organisation.
- Prepare a Realistic Job Preview (RJP) indicating organisation's commitment and expectations from employees.
- Select as far as possible, the local people as they are supposed to know the organisation's policies better and their values usually match with organisation's.

2. Placement and performance Appraisal : Next important step for maintaining existing culture is ensuring job-person fit by placing right persons to right job. Commitment to the organisation, loyalty to employer can be fostered thereby, and employees then on their own will try to uphold organisation's culture. Otherwise, there will be deviant workplace behaviour which will stand on way of sustainable organisational culture. The placement must fulfill one more objective as well. The new-entrants are to be placed in such way that they can easily go closer to the experienced colleagues where they can easily learn about existing culture of the organisation. Objective performance appraisal, unbiased promotion policy or merit pay are considered to be the other milestones toward sustenance of organisational culture. Employees will know then clearly the effect of violating cultural norms and will usually refrain from doing so. By promoting right persons, management develop some role models for the new workers, and if the new comers follow suit, automatically the culture is maintained.

3. Role of Top Management : We know all the proverb "examples are better than precept", and such examples can be set by the top management. If the new

NSOU • PGCO-I 147 comers observe that top-level managers strictly adhere to the existing culture, they will never dare to deviate. If the top management engages itself around the corner- stones of trust, transparency and transformation, the new entrants will behave accordingly. Besides, it should initiate different strategies to instil organisational culture among new recruits. 24 x 7 counseling programs, Employees First initiative, Women First Council are some of the examples of the line. 4. Socialisation : Recruitment of fit-candidates is precondition, it is fact, but this is not all. At the beginning and throughout the working life, the workers are to be kept updated to the prevailing organisational culture. The process for doing so is known as "socialisation". Orientation and training programmes are arranged for the purpose of this socialisation, i.e. to make new entrants acquainted and to help them remember always the culture of the organisation. In this age of Web-Net, different organisations provide for Web Portals to help the workers learn the culture. New workers are being linked with experienced members so that the culture is transmitted to the new ones from the established workers. In fact, the socialisation takes place in broadly three stages— (i) Pre-arrival Stage (ii) Encounter Stage, and (iii) Metamorphosis Stage

Pre-arrival Stage : When the new recruits join or are to join an organisation, they bring with them a lot of expectations, their own personality, values and attitude. If their personal values etc widely vary from those of the organisation, a very careful socialisation process is to be initiated. Business schools to some extent socialise their students and teach not to have high expectation about any organisation. Side by side, the selection process must give proper information to the prospective employees about the organisation as a whole. Instead of window dressing, the organisation rather should follow the conservative policy while showing the scope and prospects of the employees in the organisation. Actually, the performance of employees depends largely to the degree to which the aspiring members correctly anticipate the expectations. At pre-arrival stage, workers are to be socialised in this line.

Encounter Stage : Within few days after entry, the new workers enter into the encounter stage where the encounter takes place about the job, with the co-workers, the boss and more frequently within themselves as the expectation differs from reality. Sometimes, the workers become so disillusioned that they cannot but resign.

148 NSOU • PGCO-I Proper recruiting may reduce this outcome to an extent no doubt, but most often nobody can "learn the ropes" until he/she enters and personally experiences everything. People very strong in their personal values/culture are largely affected by varying organisational culture. Encouraging friendship ties only can make the new comers adopt with the organisational culture. That means if the scope for socialisation is properly built up, the problem to an extent can be resolved.

Metamorphosis Stage : Some entrants cannot sacrifice their personal culture in favour of the organisational one. Either they resign or become the deviant workers. Majority, however, go through the metamorphosis stage i.e., change themselves and accept the organisational culture. This stage thus is the main stage of socialisation process where the changes take place either very slowly or very abruptly. Both of the practices that play dominant role in this metamorphosis process are as follows : • Institutional Practices, and • Individual Practices

The institutional practices rely on formal, collective, fixed and sequential programmes that aim at "iron out" the newcomers' differences by standardised predictive behaviour. Individual practices, on the other hand, are mostly informal flexible and sometimes disturbing with which they try to come out of the "honeymoon" or "hang over" phase and accept a mid-point between their expectation and the real phenomenon. Their job satisfaction sometime decreases, again increases and the process becomes complete when the members can fully internalise the norms of the organisation. Now they understand the system and accept it. They know what is expected of them and what best they can expect from the organisation. The following diagram may explain the whole process better.

Turnover Commitment Productivity Metamorphosis No change  
Encounter Pre-arrival Socialisation Process

7.4.1 Creating Ethical Culture If the culture is strong and supports high ethical standards, it would have very powerful and positive influence on employee behaviour. In absence of ethical culture, some may deceive customers, some produce harmful products, management

NSOU • PGCO-I 149 can discriminate employees. The impact of all these can be severe in the long run. So, every organisation should thrive towards ethical culture. Steps to create such culture are as follows. • Be or develop a visible role model • Communicate ethical expectation • Provide ethical training • Reward ethical acts • Punish unethical behaviour

7.4.2 Creating Spiritual Culture Workplace spirituality does not refer to God or theology. Rather, it asserts that people have an inner life and this inner life should be understood and nourished if positive behaviour from employees is to be ensured. If you are not aware of this spirituality of employees, you can never understand their behaviour. An organisation can be termed spiritual, if it possesses the following characteristics. • Benevolence • Trust and respect • Strong sense of values • Open-mindedness

7.4.3 Creating Positive Culture Ethical or spiritual culture leads to positive culture. So they are in one way the components of positive culture. Over and above them, the managers must practise and inculcate the positive attitude to everyone or everything. This will lead to positive culture in the organisation, that means the culture that will have positive impact on organisational performance. What the top management is to do for the purpose are as follows. • Building on employee strength : From Vivekanda to Peter Drucker—all revered personalities believe that people themselves do not know their own strength. So, help them to discover their strength, then they can do the miracles. The same is true to employees as well. By relying on employee strength, managers can help employees to arouse their strength. • Praising employees doing something right : Praising has no cost, but the

150 NSOU • PGCO-I benefit is immense. But many managers withhold praise for many a reason. Managers must understand that failing to praise rather is very costly and praise like intrinsic reward pays much more than extrinsic one. • Emphasizing Growth : Emphasize on growth, not just survival. So, always try to make the employees more and more effective. Providing scope for fresh ideas, innovation or creativity is necessary for this.

7.5 Changing Organisational Culture Sometimes an organisation may feel it necessary to change the existing culture. Such a necessity arises when the related environment is changed drastically. Need for new product development, advanced information technology, changed socio-economic conditions are some of the reasons for which change in organisational culture may be warranted. But moving from an old culture and replacing it by a new culture is not at all an easy task. Obstacles that may stand on the way of such changing are as follows. • Resistance to change or craze for status quo • Mental set up of existing staff • Existing formal and informal relationship • Members' Roles • Organisational structure Everywhere the management is to face the aforesaid "rough necks" while adopting some programme to change. Some powerful stakeholders like unions, management itself at any level, the customers may impede the change. The problems are more acute in case of following situations. • Mergers & Acquisitions • Emerging Relationship Enterprises • Economic crisis etc. In these case organisational culture has no alternative but to change. On the other hand, the culture clash is the rule rather than the exception in such cases. Despite the complexity and significant barriers, the organisational culture can be managed and changed over time. However, the persons favouring change shall have

NSOU • PGCO-I 151 to take very cautions and careful steps. The suggested steps or guidelines are as follows. 1. Assess the current culture 2. Set clear objectives for change 3. Bring change at the top first 4. Slowly inculcate the change downward 5. Get employees involved in the process 6. Take the employees into confidence 7. Be prepared to tackle the problems sympathetically 8. Set out the course with persistence 9. Wipe out all messages that may remind old culture 10. Recruit some new personnel who easily will accept the suggested culture 11. Move quickly and decisively to build momentum 12. Difuse resistance at the beginning

7.6 Learning Culture Employees learn the culture from different sources. The most significant among those sources can be discussed as below. Stories : Even today, Tata employees are told often the story of J. N. Tata, the founder of the Tata group, and how he from a priest became a businessman. Thus, his priestly behaviour, the charity, benevolence, justice—all constitute the culture of Tata industries even today. Sometimes, stories can be created not by the founders, but by some senior managers, and sometimes even by an ordinary worker. These stories demonstrate the meritocracy. Commitment, rags-to-riches success of some persons of the organisation or other organisations that the future employees will go on repeating. The stories may also include the rule violation reactions to past mistakes and the after math thereof, so that the employees will refrain from that. Accordingly the employees form and learn about the culture of the organisation. Rituals : Rituals are the repetitive activities that reinforce the key values of the organisation. As practice is better than precept, the behaviour of old employees very

152 NSOU • PGCO-I successfully is instilled among the new ones and on a sequential basis the culture is transmitted, learnt and practised by the employees year after year. Material Symbols are the presence or absence of somethings that are important to the workers to influence their behaviour. Some examples of such symbols are size of the office, elegance of furnishing of executive offices, perks given to them, types of cars the executives are given etc. other workers will learn therefrom what are there the rewards for risk taking and commitment. Whether the organisation is conservative or proactive, authoritarian or participation—these can also be known from these symbols. Language : What kind of language the existing employees more particularly, the top executives use is also an indicator to the culture followed in the organisation. If the top executives use the language unfamiliar to general workers, this may pertain to their desire to keep reasonable distance from the common fellow. Thus, language is a common denominator to unite or otherwise the members of the organisation.

7.7 Job stress—The Concept Organisational life today is highly stressful. World-wide the job stress is now widespread as an epidemic. More than 80% workers now suffer from stress. Around 45% workers are the victims of acute stress or burn out. Workload, tight work schedule, unrealistic goal or target, unhelpful colleagues critical bosses, incompetent subordinates and a host of other factors have today an additive effective on making our life stressful. Stress, however, is a highly personal factor. What is stressful to Mr. X may not be so to Mr. Y. It is again the fact that almost all people now suffer now a certain degree of stress. Only the dead one is free from stress. Stress may be defined as a state of tension that an individual faces from some extraordinary demand, constraint or opportunity. When one feels some demand but cannot meet it, when one faces some constraints to his/her attempt to do something again when one comes accross some unexpected opportunity—he/she will be perturbed or feel disturbed or tensed. This is stress. As this impact is not always the same, it is said to be an unspecified response of human body and mind to any event, object or person. Stress is explained by some researchers (Karasek et.al) a consequence of unique relationship between one's psychological demand and the power of controlling the situation.

NSOU • PGCO-I 153 • If you demand that noise pollution should be stopped and you have power to control it, there will be no stress. • You have no power no control noise pollution and you have no demand also to control it, then also there will be no stress. • When you have demand to control noise pollution, but you have no capacity to control it, you will be stressed. Next theory as to stress explains it as a relationship between the person and the environment. When there is a match between one's personality and the environment, stress will not arise. If you fail to change yourself along with the change of environment, you will feel stress. Whatever may the explanation to stress, it is certainly wrong to conclude that stress is always bad. Rather, sometimes stress is viewed as a necessary part of life. So, in fact there two faces of stress or two different types of stressors. According to Robbins, some stressors are challenge stressors and some are hindrance stressors. The hindrance stressors are bad as they stand on the way of your achievement or performance. Challenge stressors, on the other hand, make a person more active, excited to move towards the goal. Moreover, as stress-free persons are deadly ones, mild stress is always essential that will force people to focus on the problem and get the solution, These two faces of stress can be depicted as below.

Destructive Distress Burnout Eustress Rustout Constructive  
Low stress Moderate stress High stress Good Bad  
When the stress is too low, the life will be dull, monotonous and spiritless. So, this is bad. So, stress upto a certain level is good that provides the spice in life, keeps the rust of the body and mind out, stimulates energy and creativity. This kind of stress is called so as constructive stress or eustress.

154 NSOU • PGCO-I But when the stress becomes excessive, it may come out as destructive and will cause distress to the people. Stress is just like the electricity. Without a certain level of electricity, you can never light up a bulb. Again, if the voltage becomes high, the bulb will burn out. Stress can equally break down a person's physical and mental system, when it crosses the limit. So, it is the duty of the person concerned and also the organisation to keep always the stress within the limit. To create and sustain this optimum level of stress among the subordinates is the key to the success of a manager.

7.7.1 General Adaptation Syndrome (GAS) Selye, a researcher on stress, stated that there are broadly three phases in the development process of stress as follows. • Alarm : the first sign of or warning against stress • Resistance : adaptation or balancing by immunity system • Exhaustion : high stress due to failure of adaptation. Alarm of stress is surfaced in different ways. Some of them can be mentioned as below. • The respiration rate increases • Blood pressure soars • Digestion ceases • Bowel loosens • Pupils dilate • Muscles become tensed • Saliva increases • Production hormones increases • Blood sugar increases At the resistance stage, the body is energized to resist the stress so that the psychological and physical equilibrium is maintained. The alarm responses as mentioned above actually are the reaction of the body so that the body gets extra strength to fight against the stress. The respiration rate increases to provide more oxygen. Red blood cells flood in order to carry more oxygen to the muscles. Bodily

NSOU • PGCO-I 155 sugar and fat are converted to glucose to generate quick energy. Blood clotting mechanisms are activated to guard against possible bleeding. The pupils dilate so that more light enters the eyes. All these in fact a “fight or flight” response. If these responses succeed, stress disappears; but if they fail, the exhaustion starts. At the exhaustion stage, the symptoms of alarm stage are aggravated. The person then becomes unable to cope with the stress and experiences a number of psychological and physical imbalances which present the greatest threat to the person’s life. So firstly everyone should try so that they do not face the stressors. If still they fall victim to stress, they must have the capacity or a strong immune system to nip the same in the bud.

### 7.7.2 Different Forms of Stress

Stress is a non-specific response to outside or inward stimuli. So, it can have different forms or shapes having different degrees of impact. Following are some of such responses or forms.

**Frustration** : It occurs when a person wishes to do or achieve something but is prevented to do or to achieve that. It refers to an obstruction or impediment which may be created by —

- Willful act against the person by someone else
- Ineffective system or working environment
- Lack of resources etc.

**Anxiety** is another form of stress which is a feeling of inability or helplessness in tackling some negative outcomes. Anxiety usually comes up due to following factors.

- Difference in power at workplace
- Frequent changes in organisations
- Job Ambiguity
- Job related or family/social pressure
- Unrealistic goals
- Physical illness
- Failure in controlling anything.

156 NSOU • PGCO-I

**Burn out** is the extreme form of stress that refers to the total depletion or exhaustion of physical or mental strength to bounce back. At this stage —

- One feels always too tired
- One gets down on himself/herself
- He/she often feels that he/she is going nowhere
- He/she feels it difficult to laugh even at a joke
- One withdraws himself/herself from everything
- Zeal for life is totally lost.

### 7.8 Source of Stress

There are broadly two major factors or sources for stress. One is work-related or organisational, other is personal or non-work factors. For the sake of discussion, this kind of classification may be necessary. But the fact is that there is no water tight compartment between these two sources. Rather, the personal or family stressors may have spill-over effect on work-place stress or vice-versa. And, the ultimate stress is a cumulative effect of all these stressful events.

#### 7.8.1 Organisational Sources/Factors

Almost every aspect of work is a stressor, though the effect of same stressor may not be same on each worker. Besides, in different types of jobs, degree and types of stressors are also different. One person may very comfortably tackle a problem, while other may feel highly stressed being confronted with the same problem. Jobs of police officers, firemen, nurses, entrepreneurs are more stressful, whereas those of a teacher, clerk, teller are not so stressful. However, the factors that usually lead to stress at workplace can be discussed as below.

- **Role Ambiguity** : Role ambiguity is the difference between role perception and role expectation. What one worker thinks about his/her job is role perception. What the organisation expects from him/her is role expectation. When the job is not clear to both worker and the boss, such a phenomenon takes place. According to Kahn, if the work is ill-defined, the worker will not behave as is expected by others. When others are not satisfied, the worker will not get the reward that he/she deserves. Ultimately, the stress occurs.

NSOU • PGCO-I 157

- **Role Conflict** : Role conflict is the gap between the perceived role and the enacted role. Workers sometimes have to do something that they do not like to do. This is stressful. Role conflict also occurs when two persons have opposing expectations from the person. One expects that you do the quality work, other expects you do it within a very short time. Automatically, you will be stressed. Sometimes one is to play more than one role at a time and involving in one role may result in ignoring the other role. But both the roles may be important to a person. Conflict then leads to stress.
- **Role Overload** : When the work requirements are excessive target is very difficult to achieve, deadline to complete the job is too short, a number of work one is to do at the same time, work overload prevails. In such situation, the worker cannot complete any work successfully. Failure to do the desired work, fear of punishment, disappointment, guilty-feeling etc then lead to stress.
- **Role Underload** : No work is equally stressful like excessive work. If one worker is given less work than what he/she can actually perform, the ability remains unutilised. Worker may feel that he/she is not given importance in organisation’s work. This sense of unwantedness makes him/her disappointed and stressed. Gradually, the person begins to show little interest in the work. Absentecism or other kind of withdrawal behaviour the person then starts to expose. Job satisfaction being slowly decreased, stress related problems the worker starts to experience.
- **Ineffective Communication** : If right information is not given in right time, misunderstanding prevails. Trust is lost and it breeds stress. Lack of proper communication provides scope for rumour, and rumour always creates uncertainty about what actually is going to happen. And, that uncertainty is strong stressor is wellknown. If communication fails to explain the job requirements properly, role ambiguity comes in and this is also a cause of stress.
- **Job Change** : Any kind of change is always stressful. So, generally we are resistant to change. But at present change has been the only constant thing. Type and design of product is changing. Technology is changing fast.

158 NSOU • PGCO-I Interpersonal relationship is also changing, as most of the workers today are casual workers. Most of the workers fail to cope with these changes and hence feel stressed. • Responsibility : Very few people feel comfortable to work with responsibility. To the majority, responsibility is a burden and so stressful. Responsibility of things however is manageable, but responsibility of people is full of troubles. In a study, it was seen that 80% of managerial problems are the people's problems—problems relating to boss, subordinates, co-workers or customers. Thus, the workers with responsibility are always more stressed than the ordinary workers. • Working Condition and Interpersonal Relationship : If working condition is not congenial or does not ensure harmonious relationship among workers, the organisation will never be a good place to work in. As a result, the job satisfaction will be reduced. Physical settings like safety hazards, air pollution, shift work, lighting and ventilation may be the cause of such dissatisfaction. Again, the unfriendly, hostile or indifferent attitude of workers at the work place may affect job satisfaction largely. More the satisfaction decreases more is the possibility of work stress. • Job Itself : Job itself sometimes is stressful. In this age of division of work and specialisation workers mainly do the repetitive jobs. Repetitive jobs are mostly boring, monotonous and uninteresting. Doing such jobs day after day is stressful. So, at present, managers are mainly concerned with job re-design, job enrichment etc. so that jobs become interesting to the workers.

### 7.8.2 Personal Factors

A worker spends at best forty hours per week at his/her workplace. Remaining 128 hours per week he/she is to lead his/her personal life with family members and social friends. So, if your family is a sweet home and the society is cohesive, most of your work stress can be automatically resolved. If instead your personal/family factors are also stressors, they will have a multiplier effect on your overall stress level. Personal/social factors that are responsible to generate stress can be outlined as below. • Life Events : Everyday every one experienced a number of life events, some of which are positive and some are negative. That negative events are

NSOU • PGCO-I 159 stressful, can be easily inferred. But the good events also demand some adjustments, some deviations from one's daily routine or habit. Sometimes, comprises are also to be done that a person cannot happily accept. Marriage is an example in this respect. Thus, it cannot be said with certainty that positive life events are not stressful. T. H. Holmes and R. H. Rahe of the University of Washington listed forty- three such life events and rated them for the volume of stress they typically create. For the purpose, they developed a scale called "The Social Readjustment Rating Scale", where scale value 100 denoted the maximum amount of stress. Few of such life events having maximum scale value, i.e., maximum stress potential are mentioned below. The Social Readjustment Rating Scale Life Event Scale Value Death of Spouse 100 Divorce 73 Material Separation 65 Jail Term 63 Death of close Family Member 63 Personal injury of illness 53 Marriage 50 Fired from work 47 Retirement 45 Sex difficulties 43 Taking leave from the work of Holmes and Rahe, Sam Batliwala, a consultant physician analysed the opinion of 330 senior executives of India. According to him, the most stressful family or social events in India are as follows. • Health of family members • Arguing with spouse • Noise pollution in the neighbourhood • Wife constantly comparing with others • Poor performance of children in examinations

160 NSOU • PGCO-I • Arranging dowry for daughter's marriage • Getting children admitted to schools • Personality Traits : Friedman and Roseman have identified several personality characteristics which are prone to stress. Some of such characteristics are stated below. 1. Type A Personality : That always feels impatient with the pace of things, feels guilty when relaxing, feels frustrated failing to complete the job satisfactorily, gets no time to enjoy life, and thus invites stress. 2. Internal locus of control : While self evaluating the persons possessing this trait believe that they are the architect of their fate, they are self-confident, they think no adverse force can undo them. Thus, they always are less stressed than the externals. 3. Extraversion : Extravert people jump into risky jobs, set unrealistic goal, are not at all disciplined. So, ultimately they suffer disappointment and stress.

### 7.9 Consequences of Stress

Behavioural scientists opine that stress has behavioural, cognitive and physiological consequences which in turn are negatively related to organisational performances. So, the impact of stress can be discussed under following two heads— • Impact on Individual • Impact on Organisation.

#### 7.9.1 Consequences of Stress on Individual

High degrees of stress are typically accompanied by severe anxiety, frustration, depression and sometimes burn out. All these are expressed in individuals behaviour mind and physique. • Physiological impact : As soon as stress appears, the brain reacts, biochemical changes take place, heart beat increases heightening practically all the senses. If the stress continued for long time, serious health problems occur as the immune system of the body breaks down. Some of such problems are insomnia, rapid breathing, high heart rate, skin problems, sex problems, ulcers, high blood pressure or heart attack.

NSOU • PGCO-I 161 • Psychological Impact : Stressed people become psychologically upset. They tend to be depressed and to have lack of confidence and self-esteem. They feel helplessness, hopelessness and worthlessness. They have increased sense of futility and guilt. They suffer from excessive tension and neurotic tendencies. • Behavioural Responses : According to Cohen, people under stress behave differently as compared to people who are well balanced. These different behaviours include excessive eating and /or smoking, increased use of alcohol, irritation, withdrawal from social situations, social isolation, change in appetite and/or weight, difficulty in concentrating, introversion, aggressiveness, and sometimes the suicidal thoughts.

### 7.9.2 Impact of Stress on Organisation

One of the major concerns of management is the negative impact that the stress has on job performance. Poor performance as such is due to number of stress-related reasons as below. • Antagonism at work and job dissatisfaction • Poor industrial relations • Absenteeism and Turnover • High rate of mistakes and accidents • Poor productivity • In extreme case, the sabotage

However all kinds of stress may not have the equal impact on job performance. Challenge stressor, unlike the hindrance stressors, may sometimes enhance productivity. It is also fact that mild stress works as inspiration to work. When the stress is nil, the life may be dull, stagnant, deadly and unworthy for living. Mild stress in such case provides some oxygen to move forward, to keep one's rust out or to sharpen one's zeal and skill to work. However, for this, one must keep his/her stress level within a limit. If the stress level goes beyond that level, the negative impact will surface.

### 7.10 Managing of Stress

We know about eustress or constructive stress. If stress can be managed

162 NSOU • PGCO-I properly to keep it at a certain level, it can be highly productive. Again, if it goes beyond that limit, it may be dysfunctional. So, it is necessary for individual as well as for the organisation to adopt strategies to control stress. The steps that the individuals and the organisational should take for the purpose can be discussed as below.

#### 7.10.1 Organisational Strategies

1. Selection and Placement : From the very beginning, the organisation should begin its strategies to guard against or prevent the undesirable stress. Some personal characteristics are very prove to stress. So, while selecting the employees, the management must see that the right persons are selected. Proper personality test is necessary for the purpose. Proper placement has also an important role to play in this respect. While placing the employees, care should be given so that personal skills and job requirements are properly matched. If the worker cannot do the work that is given to him, he will be stressed. So, right person at the right place must be made the aim of the personal department of any organisation.
2. Setting Realistic Target : If the target imposed is unrealistic or unachievable, it is not good either for the organisation or for the employees. Employees will try and fail. This failure may give rise to stress.
3. Role Clarity : Employees must know clearly what is expected of them. If they misunderstand, desired work is not possible. Boss at the end may be dissatisfied with their performance. Workers then will be disappointed or frustrated. So, objective and unambiguous role assignment is essential.
4. Job Enrichment : Job continuously is to be enriched, so that always it remains challenging and interesting to the workers. Redesigning the job every now and then, the management must see whether there is work overload or underload for any worker or not. With proper feedback, supervisors should see whether the workers are feeling monotony or boredom with any work or not. If in this way, the jobs can be enriched at regular intervals, the job will be motivating and meaningful to workers. Then, there will be delight with their duty, and the stress will not come up.
5. Participative Management : If workers are allowed to take part in decision making process, to fix up their own target, the workers will readily accept

NSOU • PGCO-I 163 to fulfil the target and treat the jobs as the jobs of their own. Thus, the job involvement or commitment will increase. The organisation will be benefited in terms of higher productivity. And, the job satisfaction on the part of workers being high, the work stress can be reduced.

6. Performance Appraisal and Reward System : In most cases, the workers feel that their performance is not rightly appraised and rewarding system is not fair. This feeling is a source of stress. So, the appraisal and reward system must be made visibly objective and unbiased. Otherwise, the perceived inequity may force the workers to withdraw themselves from the process. They will lose enthusiasm to work, and gradually push themselves towards stress. So, by equitable system, the management must instil a sense of belonging and the bonds of interpersonal relationship among the managers and managed. This in itself is a stress fighting phenomenon.

7. Workers Health Maintenance : Health means here both physical and psychological health of the workers. Week-end get together, yearly picnics, different cultural programmes the organisation should arrange, so that the workers can come closer to themselves psychologically. As a result, the organisation will be a good place to work in, and workers mental health will be automatically sound. This good mental health will in turn help the workers to have strong physical health. Additionally, the organisation must arrange for health club, gym, wellness programmes etc. so that the workers remain physically fit. Physical fitness will enhance the immunity power and thus, by adaptation workers will be able to address and redress this stress level.

7.10.2 Personal Strategies We are the best safeguard of ourselves. Others may help you. But what ultimately is your duty, you yourself is to do that. Either by avoiding stressors or by learning to manage them. One can keep the stress level under control. There are a number of ways by which an individual can manage the stress. Some of such stress managing strategies are stated in the following sections.

1. Time Management : Inability to keep pace with available time is a significant stressor at present. All running after more and more success. They start a number of work at a time and always suffer for urgency of time. So, time management is the first and foremost way of stress management. Some tips for time management are as follows.

164 NSOU • PGCO-I • Prepare and carry always a "to do" list • Delegate the "not to do" tasks or defer them • Ask yourself, "Is it important?" • Do it now. • Do the most difficult part first • Provide action plans • Learn to say "no" to somebody • Don't attempt too much • Set deadlines and review regularly • Do prioritising • Don't try to please everyone

2. Re-adjust Life Goals : Goals must be reachable. Vision without mission is dangerous. High aspiration leads to desperation. So, cut your coat according to your cloth. If your ability you yourself do not know, you are to suffer stress. The goal that fixed up yesterday, today it may come as unrealistic due to change of situation. So, always you re-adjust the goal according to your capacity in the present-day environment. Otherwise, you will be stressed.

3. Social Networking : Stress is aggravated if you suppress it or do not get any one to express your problem. Social networking helps ones to get sympathetic and supportive friends you can lend their shoulders to cry on or give patient hearing to your problems. Loneliness is a significant stressor. So, try to be always amidst friends or call them on phones. This will help you to gain back self-confidence or release your stress.

4. Plan for the Best and Prepare for the Worst : Always plan beforehand to avoid unexpected difficulties. Still, future is always uncertain. You may not get what you expected. So, you must prepare yourself to accept the worst. Failures are usual, success rather is rare. So, if we learn to accept failures, and try always to bounce back, stress will never defeat you.

5. Physical Fitness : If you are physically fit, you are less likely to be the victims of stress. So, proper and regular physical exercise is the must that will enhance your immunity system and adaptive capacity. Overweight and

NSOU • PGCO-I 165 unhealthy people usually do not have strong mental health, and thus may easily suffer from depression or frustration. 6. Concentration of Mind : Concentration of a particular thing can keep you away from disturbing thoughts and thus, from stress. So, during last few decades, there has been a growing interest in concentration of mind as a stress-reduction strategy. The ways by which one can keep himself/herself away from daily nitty-gritty are as follows. • Yoga • Meditation • Biofeedback Yoga means union with the ultimate thing where every desire comes to an end and thus, frustration or stress is non-existent. Yoga consists of some postural habits known as "Asanas" that emphasize controlled breathing that integrates body with mind, co-ordinates nervous with muscular system and thus, ensures physical as well as mental health. Meditation involves mainly the silent repetition of a single syllable, known as "mantras", that shuts out other distractions and results in a mental relaxation at its peak. The place of meditation should be calm and quiet, the person is to sit in a comfortable position with closed eyes. To counter life stresses, this meditation is considered to be a panacea, if this can be properly practised. Biofeedback is a methodology that alters undesirable physical responses through psychological strategics. Sophisticated instruments are taken help of here, by which human beings can bring some of the bodily functions under voluntary control. These functions include heart rates, brain waves, muscle tension, blood pressure and stomach acidity. Stress usually causes these bodily disorders. Thus, by controlling these functions one can effectively manage stress. A few more tips to manage stress individually may be mentioned as under. • Keep a pet to tackle your loneliness • Practice religious prayers to seek consolation • Sing aloud to express your mind singly • Burst into laughter as it is a good stress-releaser.

166 NSOU • PGCO-I • Have sound sleep as it can help you relax and refresh • Spend time with children to get happiness with their purity • Cultivate hobbies to get fresh energy • Dare to dream that will help you not to give up hope. 7.11

Summary From the above discussion, we could understand the concept and fundamentals of organizational culture. In addition, we could understand the determinants of organizational culture, the pros and cons of organizational culture. Finally, we could also understand the concept of job stress and how the stress can be managed. 7.12 Questions A. Objective Type : 1. Name two characteristics of culture. 2. What are the stages of socialisation ? 3. Mention one situation that forces to change culture. 4. Name two source of learning culture. 5. What are three stages of GAS in the context of stress ? 6. Name two stress including organisational factors. 7. Mention the most stressful life event as was stated by Holmes and Rahe. 8. Name one way of concentration of mind. B. Short answer Type : 9. Define organisational Culture. 10. How can you define stress ? 11. What do you mean by weak culture ? 12. Narrate briefly the metamorphosis stage of socialisation. 13. How does role conflict generate stress ?

NSOU • PGCO-I 167 14. What kinds of jobs are stressful ? 15. Write note on Social Readjustment Rating Scale. 16. How does stress influence one's behaviour ? C. Long answer Type : 17. Discuss the ways and means for creating and maintaining culture. 18. Why and how is the organisational culture changed ? 19. Can there be uniformity of culture throughout the organisation ? Give reasons to your answer. 20. "Stress is destructive"—critically examine the statement. 21. Discuss the organisational sources of stress. 22. How can one get the alarm of stress ? What are the ultimate impacts of stress ? 23. Explain the ways that an individual can adopt to control stress.

**100% MATCHING BLOCK 29/37**

**SA** mangal 3.docx (D15922640)

After going through this unit you will be able to

describe • Why we need develop the organisation ? • What is the concept of organisational development ? 194

NSOU • PGCO-I 169 • What kinds of internations are required ? • What kinds of challenges we are to face for this ? • What new can be thought about for development ?

8.2 Background of Organisational Development If an organisation is to survive, it must respond to changes in its environment when competitors introduce new products or services, governments enact new laws, important sources of supply dry out of similar other changes take place, the organisation needs to adopt. But to adapt to changes is not at all an easy task. The most documented finding from studies of individual and organisation is that the both the organisations and their members resist changes. This resistance to change provides stability and predictability to the organisation, it is fact, but simultaneously it can be source of functional conflict or chaotic randomness. It also hinders fresh ideas and progress. Resistance again may come from different corners and may take different forms. It may be overt, implicit, differred or immediate. Overt and immediate resistance is visible, predictable and thus easy to manage. But the greater challenge is to manage resistance that is implict or deferred. As this is invisible for the time being, no preventive or remedial measures will be adopted. Taking this opportunity, the reations to change will gradually build up which one fine morning may explode. Resistance again may come from individual level which is mainly due to security and economic factors. Organisation itself sometimes create resistance due to limited focus and structural inertia. For survival and growth, every organisation is to overcome such resistance to change. Proper education, facilitation, negotiation and sometimes coercion are needed to win over the resistance to change. Thereafter, what do you do to implement or materalise the change, is known as organisational development.

8.3 Concept of Organisational Development (OD) Change is essential. In this turbulent age it is a must. But never the change can 170 NSOU • PGCO-I be unplanned or chaotic. Then it may do more harm than good. OD means this planned change. According to H. Rush, OD is

<b>65%</b>	<b>MATCHING BLOCK 30/37</b>	<b>SA</b>	ORGANISATIONAL BEHAVIOUR - consolidated.docx (D113801548)
a planned, managed and systematic process to change in order to improve the organisation's effectiveness			

to survive and grow even in changed environment. In fact, every managerial process faces a basic dilemma. Dilemma is how to draw a balance between apparently confronting two horns of organisational activities—One, the concern for organisational growth by production, other, the concern for people along with their needs for satisfaction and self-worth. To fulfil this challenge, OD theorists prefer organic structure, of an organisation to mechanistic one. Because, they believe that mechanistic structure is suitable for stable and structured environment where change itself is meaningless. Development by change is warranted then only in turbulent situations. That we are passing through now a highly "white-water rapids" metaphor is well-known to all. So, organic structure, that is flexible in nature, is the precondition to successful organisational development. Richard Beckhard, therefore, has defined OD as an effort that is

<b>62%</b>	<b>MATCHING BLOCK 33/37</b>	<b>SA</b>	ORGANISATIONAL BEHAVIOUR - consolidated.docx (D113801548)
planned. Organisation wide and managed from the top, in order to increase orgaisational effectiveness and health through planned intervention in the organisation's processes.			

In the definition, effectiveness, means establishing and attaining realistic organisational goals. Health refers to the motivation, integration and utilisation of human resources within the organisation. Of these two, human element is considered to be the most important element in the success of the organisation. So, it is believed that the underlying values in the OD efforts are —

- Respect for people
- Trust and support
- Power equalisation de-emphasizing authority
- Open confrontation avoiding secrecy
- Participation and collaboration

8.3.1 Objectives of OD From the underlying values in OD, we can easily identify the objectives of OD as follows. 1. To build up interpersonal communication, support and trust at all levels of the organisation.

NSOU • PGCO-I 171 2. To develop team spirit, not the individual achievement. 3. To discuss everything in an open manner instead of “sweeping problems under the rug”. 4. To encourage participative management, where decision making will be left the persons closer to operations. 5. To foster organisational commitment, a love or passion or organisational activities. 6. To ensure personal accountability in group activity so that social loafing or buck passing cannot take place. 7. To help organisation to keep pace with outside environment. 8. To provide congenial environmental for creativity or innovation. 9. To help the organisation stand in front of harsh competition. 10. To achieve finally the sustainability of the organisations. 8.3.2 Pre-requisites for OD 1. Most individuals have drives towards personal development. 2. Individuals goals are well integrated with organisational goal. 3. Members prefer co-operation to conflict. 4. Mere agreement is not sufficient, commitment must be there. 5. Internal resources and skills are to be developed. 6. Members must be ready to accept change 7. Initially top level involvement is the must 8. Organisational problems must be pinpointed and the process must be directed to them 9. Whole the OD programme must be reinforced with organisations total human resource system 10. The existing process is to be monitored regularly and the results to be measured.

172 NSOU • PGCO-I 8.4 Interventions for OD Several OD interventions also called techniques, have evolved over time. The most of these techniques or interventions are human-resources or people-oriented. But the number and variety of such techniques have increased substantially over the past few decades. Those are discussed one by one in the following sections. 8.4.1 HR Management or People-focused Interventions Majority of OD interventions have been directed at changing the attitudes and behaviours of organisation members, i.e., at improving their interpersonal skills in the organisation. Since hiring of employees the action research starts to this end. Training of employees, appraisal system, reward system and workforce diversity programmes are some of the actions as such where the ultimate objective is to create and sustain the employee commitment, motivation and productivity. Actions that in particular are taken for the purpose are as follows. Sensitivity or T-group Training : In sensitivity training, which is also known as laboratory training ten-to-fifteen employees are brought together in a free and open environment, away from workplaces, in which the participants can discuss themselves freely with the guidance of a facilitator. No formal agenda is provided, an unstructured group inter-action is ensured where members are supposed to learn through observing and participating rather than being told. The objective of the T-group (Training group) is mainly to have greater sensitivity to others’ behaviour, and hence, the training is known as sensitivity training. The emphasis is put therefore on the improved listening skills, greater openness, increased tolerance, enhanced conflict-resolution skills and the empathy to others. Subjects are given in the training so that the workers can be aware of how others perceive them, of their own behaviour and of group processes. If the T-group succeeds in this way, it will effect reduction in dysfunctional interpersonal conflicts, and will ideally result in a better integration between the individual and the organisation. Survey Feedback : This is a tool for assessing members’ attitude and for identifying the discrepancies if any, between members’ and organisational attitude. A questionnaire is usually completed by all the members and data from questionnaire are tabulated.

**100%**

**MATCHING BLOCK 31/37**

**W**

These data then become the springboard for identifying problems and clarifying issues

that may be creating difficulties for people. In some cases, group  
NSOU • PGCO-I 173 discussion is arranged on

**66%**

**MATCHING BLOCK 32/37**

**W**

the survey feedback that usually results in members identifying possible implications of the questionnaires findings.

Some attitudinal change on the part of the members may also takes place as a result of this discussion some may suggest some guidelines also for the betterment in the approach. Process Consultation (PC) : PC is similar to sensitivity training, as here also the emphasis is on interpersonal relationship and involvement. An outside consultant however, is appointed here who works with the client jointly in diagnosing which process needs improvement. Consultants directly do not solve the problems, but acts as a guide or coach who advises on the organisational problems and helps the client solve his/her own problems. As guides, they are to give the clients insight into what is going on around them, within them, and between them and other people. If the specific problems uncovered requires technical knowledge that the clients do not possess, the consultants may also help that clients to locate and appoint an expert who will prescribe an appropriate remedy to the problems. The PC thus is more task oriented than sensitivity training, by which the manager develops necessary skills for analysing processes under his/her unit that can be continually called on long after the consultant is gone. Team Building : Organisations are made up of people working together in a group. So, considerable attention is needed in OD or team building. This team building is a must both at intra-group and inter-group level. Discussion on each of such team building is given in the following sections. 1. Intra-group : Intra-group team building is applied to command group, committees, project teams and task groups. Team building becomes important where group activity depends on interdependence. In football game such interdependence is the critical factor, whereas in relay-group this inter-dependence is not prominent, though results are subject to the individual performance of all. Intra-group team building is like football where the team members are to improve their co-ordinated efforts to increase

**47% MATCHING BLOCK 34/37**

**W**

the group's performance. The activities that form such team building include — • goal setting • interpersonal relations • role analysis 174 NSOU • PGCO-I • team process analysis •

trust and openness Role analysis, both individual and team, is the vital part of these activities, because

**89% MATCHING BLOCK 36/37**

**SA**

mangal 3.docx (D15922640)

for some individuals it may offer one of the few opportunities they have had to thank through what their

job and where actually they need put more emphasis. Training on grid concept as developed by Blake and Mouton, known as grid training is an extension to this goal setting or role analysis. Grid seminar can be arranged for the purpose, so that the members can analyse the existing management style with respect to the dimensions—concern for production and concern for people. The style 1.1 refers to impoverished management where the managers have neither any concern for people nor for production. The style 9.1 means task management where managers are worried about production only, and they do not care for the employee welfare. The 1.9 style is opposite, known as country club management, where people are at the priority. Knowing well as to where actually the style stands, training begins to reach 9.9 style which is considered to be the ideal state for

**89% MATCHING BLOCK 35/37**

**W**

the organisation. 2. Inter-group : A major area of concern in OD is the dysfunctional conflict that exists between groups.

So, change efforts need to be directed towards improving intergroup relations. Intra-group members are structurally cohesive, but inter group conflicts are embedded in the system itself. Engineering department cannot tolerate accounting department as the latter always opposes additional requirement of money by the former. Accounting department feels that personnel department members just sit around and plan for picnics. All these cannot but have an obvious negative impact on the co-ordinated efforts of all departments. For improving relations, the answers to the following questions need to be found out. ● Are the groups' goals at odds ? ● Are the perceptions about other departments distorted ? ● On what basis are the stereotyped belief about other department formulated ? ● Are the differences caused due to just misunderstandings ? ● Have the words or concepts used by one department mean differently to other departments ? Answers to these questions can clarify the exact nature of the conflict. Once the NSOU ● PGC0-I 175 causes of differences are identified, the groups can be channelised to the integration phase that will lead gradually to improve relations between the groups.

#### 8.4.2 Structural Interventions

Structural OD interventions emphasize making organisational more organic and egalitarian. Structure that was proper in the year 1982, can never put the organisation at a competitive advantage in 2022. The contemporary views on division of labour, authority and responsibility, span of control or departmentation are widely different from classical views on them. Re-organisation of structure is therefore the must. Besides, the needs for change today are more frequent, more abrupt and more intensive. Mechanistic structure of organisation is therefore almost useless or obsolete. Interventions that are needed as a result in the structure of the organisations are as follows.

1. Larger Span/Flatter Structure : Subordinates today are more expert and knowledgeable. So managers need not always hover over their heads. Subordinates, moreover, prefer autonomy today to control. So, there will be no problem if span of control is enlarged and thereby, the structure of organisation is made flatter. Rather, there can be the following benefits out of it. ● It would provide economic benefit by reducing the number of levels as well as the administrative overhead costs. ● Fewer vertical levels will improve communication and avoid distortion of information. ● As the bosses here do not have the scope to breathe always on the neck of the subordinates, job satisfaction of employees increases.
2. Decentralisation : Decentralised decision making is a popular intervention favoured by OD change agents. By decentralisation, authority is pushed downward, which in turn will create power equalisation. It allows employees to be more informative about the issue and to have greater control on their work. Employees thus feel themselves worthy in the organisation which leads to their organisational commitment.
3. Organic Structure : OD change agents always try to make organisation less bureaucratic so that they can respond more quickly to changes in the environment. For the purpose, the steps that the change agents should adopt are as follows.

176 NSOU ● PGC0-I ● Simple structure that is low in complexity, has little formalisation, has a loose body of employees with flat structure. The strength of simple structure is obvious. It is flexible, inexpensive and the accountability is clear. It has also some limitations no doubt, but in present-day situation, its benefits outweigh the limitations. ● Matrix Structure : The matrix structure combines functional and product departmentation in order to gain the advantages and minimize disadvantages of each. The matrix structure is created by superimposing products over functions. Functional units gain economics from specialisation, but face the problem of co-ordination. Product departmentation facilitates co-ordination, but due to duplication of office duties, costs increase. It is however, the matrix's ability that is adaptive and flexible that places the organisation in organic category. The matrix is a complex structure no doubt, but its benefits are immense. ● The Task-force Structure : It is actually an organic appendage added to a mechanistic structure to gain flexibility along with accountability. The task-force is a temporary structure created to accomplish a specific well defined task that involves personnel from various organisational sub-units. Members serve on the task until it is completed. They then disband to move on a new task-force or to return to their permanent functional department. Organisation's mechanistic structure is not disturbed to that extent, as the taskforce is temporary. Again here the force so formed cuts across the functional lines ensuring flexibility and efficiency. ● The Network Structure : The search by managers for high flexibility has resulted in the creation of a new organisational design called as network structure. It has been, possible as a result of recent advancement in communication technology, computers, internet and websites. The essence of network structure is a small central organisation that relies on other organisations to perform manufacturing, marketing or other ancillary activities on a contract basis. It is a viable option both for large and small organisations in which parts of the products can be manufactured in different parts of the globe by establishing just the organisational relationships, which at present is popularly known as "outstanding".

NSOU • PGCO-I 177 The network stands in sharp contrast to divisional structures, In divisional structures all the activities are done in houses by their own employees. So, the management has to employ a number of extra personnel creating problems as to cost and communication. In the network structures, on the other hand, most of those functions are bought from outside and co-ordinated through computer or web networks. This gives the management high degree of flexibility and allows it to concentrate on what it does best. Almost all the MNCs world-wide concentrate today on such network structure, because this has been actually the necessity to address continuous change and creativity. The control on operations and certainty of supply following deadline sometimes may be a problem, as we depend in this structure heavily on outsiders. The secrecy of innovation may not also be maintained under this structure. However, it is not impossible, though very difficult, to closely guard the innovations or keep track of supply with timely communication with the management of other organisations. As change is the only constant thing today, there is no alternative also today for the sake of required flexibility and organic nature of organisation structure.

4. New Reward System : OD change agents always endorse operant conditioning notion which states that behaviour is a function of its consequences. For employee behaviour, the consequence means the reward that the employees expect to get. Here, rewards do not refer to only the extrinsic reward like pay or the promotion. In classical management thought era also, the reward was linked with performance. But that time reward was only the extrinsic reward, and so the organisations could not do any better jobs. Change agents suggest therefore a new reward system where firstly the emphasis will be given on the intrinsic satisfaction of the employees, and secondly, on the team spirit and hermonious relationship of the workers. For the second purpose perticularly, a significant portion of employees reward is proposed to be calculated on the production of the team, not of the individual. The provision for year-end bonus on the overall productivity of the company, is an example to this end. Such a scientific and equitable reward system is the most significant part of structural intervention, as this can bring in a positive and effective change in the behaviour of the workers.

5. Changing Organisational Culture : Culture in fact, is the nervous system of one organisation that has the invisible but inseparable linkage throughout the body of the organisation. So, until and unless the culture supports the proposed change in

178 NSOU • PGCO-I any wing of your organisation, that change can never be effective. Historically, it has also been scen, the culture bring very strong and enduring, creates in most cases a serious impediments for responding to a changing environment. Therefore, the organisational culture is to be changed or it is to be made flexible, if one is to implement an effective OD programme. It is not at all an easy task. Culture, as is mentioned above, is usually stable and enduring and historically is resistant to change. So, to change a culture is a long-drawn process, on the one hand and a strenuous job on the other. From the selection of employees, the process must start and the effective socialisation is the end thereof. New stories, symbols or rituals are to be created so that the new culture can go down to the ground-level employees of the organisation. The basic theme of such change being making the culture more responsive and more focussed on customers needs, service and quality. What ever and whenever the change is required, is actually known as changing organisational culture.

8.4.3 Task-Technology Interventions Task technology intervention emphasizes changing the acutal jobs to make them challenging, stimulating and interesting; and also changing the processes and tools that the employees use to perform such jobs. Ultimate aim is towards quality of work life and included in this category are job analysis, job design and redesign, socio- technical system in the concerned organisation.

1. Job Redesing : No design today is permanent. Very effective design today may become obsolete tomorrow. Workers may also feel monotony doing same work day by day and as a result, their productivity will come down. So, redesigning of job is inevitable, and this is a continuous process. Pre-requisite of job redesign is job analysis. By job analysis we can come to know where the change is warranted, and how that can be brought in. Interventions that are needed as a part of job redesign are—

- Job Rotation
- Job Enlargement, and
- Job Enrichment

Job rotation refers to transfer of employees from one job to other. Job enlargement gives additional job of same level to the workers. Job enrichment means providing

NSOU • PGCO-I 179 jobs of higher level to the workers. The intervention will be successful if it follows the Job Characteristic Model, that means it supports employee autonomy and participation, or ensures low formalisation and flexibility. OD change agents always promote redesigning that follows the lines of such job characteristics model.

2. Socio-technical System : Matching technology adopted with the social system is the aim of change agents here. The technology consists of tools and devices and the social system comprises the people in the organisation and their inter-relationships. The proponents of this system argue that any successful intervention must optimise the social and the technological demands of the job. Technology usually constrains the social system of free interactions by shaping the behaviour as per its needs. High-tech in most cases ignores the importance of human touch. OD change agents take care of this dilemma and promote ultimately a suitable socio- technical system.

3. Quality of Work life : Quality of work life refers to enhancement of employees motivation, satisfaction and commitment. OD parctioners in the pursuit of this quality of work life create such a work situation that removes drudgery associated with the job and attempts to humanise the workplace. The quality of work life (QWL) Programmes involve mainly two approches. • Work Restructuring, and • Quality Circles (QCs)

Work re-structuring is a process of changing the way jobs are done, in order to make them interesting to the workers. Quality circles, on the other hand, are the small groups of employeess who meet regularly on a voluntary basis to identify and solve problems related to the quality of the work they perform. An organisation may have a number of QCs operating at the same time, each dealing with a particular work area. With these two approches, the QWL encompasses actually a large number of interventions, a comprehensive list of which can be given as below.

- Adequate and fair compensation
- A safe and healthy environment
- Jobs that develop human capacities
- A chance for personal growth and security

180 NSOU • PGCO-I • Provision for personal identity, freedom from prejudice, a sense of community, and upward mobility • Rights of personal privacy, dissent and due process • Work-life Balance • Socially responsible organisational actions. QWL programmes as such benefit organisations at least in three ways. The most direct benefit is increased job satisfaction leading to reduced absenteeism and turnover among workers. Secondly, it increases productivity. Finally, the organisations stand to gain sustainability. However, easily these benefits cannot be achieved. At least two hurdles are to be crossed for the purpose. Firstly, both management and labour must work in unison. Secondly, the plans so agreed to, must be implemented properly. OD change agents must not forget this amidst heatic daily activities.

4. Total Quality Management (TQM) : QWL aims at mainly the people, whereas TQM, as developed by Edward Demming, is a process that envisages continuous improvement of overall quality reducing waste and cost. This is a rational technique driven by statistical data on the need for change in four key components, e.g. • System • Process • People, and • Management System : By statistical process control the accurate and continuous measurement is done of the quality of system and the frequency of its failures. It identifies how often and where the failures are concentrated and what are the causes thereof. By benchmarking with the achievements of some successful organisations, necessary change is then suggested. After the change takes place in the system, TQM ensures quality of operations through quality assurance and control.

Process : TQM regards every activity as a point of process that is constantly reviewed through project by project improvement, waste elimination and process chain re-engineering. The statistical process control measures the defective products, number of customer complaints or other key constituents requiring improvement.

NSOU • PGCO-I 181 Remedial measures are implemented accordingly to combat the causes of substandard performance. People : People are the most significant component of TQM. TQM values the employees both as individuals and as members of work teams. Through QWL and QC, it always aims to impress upon workers to feel how important they are to the organisation. Then, by hiring best employees, enabling life-long learning to them and providing continuous feedback, it ensures quality and quantity of production. Emphasizing on diversification, instead of specialisation, it ensures motivation and job satisfaction as well. Management : TQM believes that bottleneck remains near the head of the bottle. So, it looks carefully to top management, and its vision and mission. OD change agents want to see how top management is committed to its vision or mission, and for this, it empowers employees, assists them who fail and appreciates the achievers. TQM wants the management to go with, not to go ahead of, the workers.

8.4.4 Strategic Interventions There have been constant additions to the basket of OD techniques. The latest addition is the strategic intervention. This approach consists of four steps as follows. • Analysing existing strategy and job design • Selecting desired strategy and design replacing the old ones • Designing a change plan that is strategic in nature • Implementing such change plan, keeping resistance to change under control. The intervention as such is known as "strategic", firstly because the proposed change plan is supposed have long term effect. Secondly, in this case the pros and cons of both the existing and proposed strategy are scientifically analysed with SOWT matrix. That no method is all good, is accepted here, and considering relatively higher strength and opportunity one is replaced by other.

8.5 Emerging Challenges to OD/OB Change through organisational development has become the norm in almost all organisations. Business failures, plant closure and obsolescence, mergers and

182 NSOU • PGCO-I acquisitions, downsizing, re-engineering, productivity improvement, changed outlook to workers are the common efforts to bring in such change. The need for these types of changes has been aggravated or has become inevitable due to a number of emerging challenges that the modern businesses are facing at present. These challenges to OD are in way the challenges to OB (Organisational Behaviour) as a whole. Because as a guide to the managers, OB itself is to deal with these issues to make the discipline more relevant.

8.5.1 Globalisation Globalisation has made organisations to re-think

**100%**

**MATCHING BLOCK 37/37**

**SA**

M.B.A. Organizational Behaviour all unit.pdf (D142212435)

the boundaries of their markets and to encourage their employees to think globally.

Globalising an organisation has been now a rule of the day. So, OD change agents have accepted it as a critical facts OD. Globalising an organisation means re-thinking the most effective ways to gather resources from global markets and to use them globally, resources here mean the monetary, physical as well as human resources. To develop human resources capable of responding to globalisation is the big challenge to the OD agents, as the world has become now a global village, and in the process, the managers' jobs have changed drastically. Changed expectations from the managers today, who are the managers of MNCs mainly, are as follows.

1. Increased Foreign Assignments : Where the manager is to manage a workforce very different in needs, aspirations and attitude from those whom he/she manages at home.
2. Working with people of different cultures : For which a managers needs know how the culture, geography and religion of those people have shaped them and how adopt management styles to those differences.
3. Identifying the countries having low-cost labour/capital : Courtesy to globalisation, the labour and capital now can easily move from one country to another. Managers need therefore in which countries labour and capital are less costly, and accordingly they need hire/borrow labour and/or capital, so that the cost reduction is ensured. Local labour sometimes can, however, resist hiring labour from other place or country. Managers are to be very careful in balancing the interest of the local people and that of the organisations where they work.
4. Managing Joint Ventures : Every company seeks entry in other countries mainly through the process of joint ventures. But the point to be noted is that the

NSOU • PGCO-I 183 joint venture ushers in several structural changes in the alliance partners that the OD change agents must look after. The two merged companies usually exhibit a considerable amount of sensitivity to cultural differences between them. OD change agents have a very important role to play here, failing which the productivity as well as the interpersonal relationship of the joint company may be badly affected. 8.5.2 Managing Diversity Related to globalisation is the resultant diversity which is a powerful external force invoking change. In national or small companies also diversity is gradually increasing, and it is the top priority of the managers to manage such diversity effectively. However, in MNCs the problem is more acute. Managing diversity is a philosophy about how differences among individuals are accepted and respected, and how they are made to work in cohesion. Firms are realising that utilising diversity in all aspects, makes not only a strong moral sense, but also a business sense. So, the diversity should be celebrated, rather than ignored.

Numerous empirical studies have demonstrated that heterogeneous teams outperform homogeneous ones. However, managing diversity is not an easy task. Managers or change agents have to confront a number of obstacles or barriers to do so. 1. Barriers to managing diversity : • Prejudice : Unjustified apathy to a person, race or gender • Ethnocentrism : a tendency to regard oneself, one's group. Culture, nation or language as superior to that of others. • Stereotypes : belief that the characteristics of a group as a whole are applicable to all members of the group. • Discrimination : belief that some jobs are suitable to certain group of people, and thus barring other people. • Harassment : Knowingly abusing an individual because of his/her one limitation, or belonging to a particular group. Sexual harassment is a glaring example to this effect. • Backlash : negative reaction to gaining power by some members, leading to fear, resentment and reverse discrimination. 2. How to manage diversity effectively ? Managing diversity involves the following actions by change agents.

184 NSOU • PGCO-I • Increasing awareness : means providing members with accurate information on diversity, uncovering personal biases and stereotypes, assessing personal beliefs, attitudes and values, learning about others point of view, removing inaccurate beliefs about different groups, developing an atmosphere in which people will freely share differing points of view, and understanding others. • Increasing diversity skills : Focusing or improving the skills of managers and subordinates so that they can work and interact easily with people of different kinds. Educating managers and subordinates about why and how people differ in their way of thinking, approach, communication etc so that the employees develop a healthy respect for diversity and at the same time facilitate mutual understanding. Showing films and/or printed materials supplemented by experiential exercise that will unravel hidden biases and stereotypes. If necessary, hiring consultants to provide diversity training or appointing in house experts for the purpose. • Managing Cultural Diversity : Individuals are to be strategically asked to— (i) live and work outside home country (ii) travel outside extensively (iii) adapt to the customs of foreign countries (iv) develop friendship with people of different nationalities (v) learn foreign languages (vi) subscribe newspapers/periodicals of other countries. Companies or organisations have also to— (i) offer language training (ii) encourage foreign assignments (iii) provide cross-cultural training (iv) give transition counselling

NSOU • PGCO-I 185 (v) ensure that they are not discriminating anyone due to his or her religion or ethnicity. • Utilising Gender Diversity : Gender diversity is a wealth to the organisation. The OD change agents therefore thrive for utilising this diversity towards enhancement of inter personal relationship and improvement of quality in production. The ways of managing gender diversity may be as follows. 1. One way is to recognise that there are strengths in both the genders. 2. It is equally important to learn and accept that there are perceived differences between male and female both at the society and at workplace. 3. It is also necessary to be aware that in way situations gender might play a role to know one's ability. 4. It is finally necessary to avoid actions including lawguages that perpetuate negative or hindering views. • Committing Top Management to Diversity : If the managers at the top can be made committed to diversity, the managers down the line will easily embrace the same. Otherwise, a reluctant, if not resisting, message will spread over the organisation, and diversity management efforts may backfire. managers must be very careful while dealing with the diversified groups. None is to be given an extra sympathy or apathy because of his/her belonging to a particular group. Managers need recognise and reward talents regardless of the group they belong to. This will help break down the barriers to managing diversity effectively. 8.5.3 Technology Transformation Technology is being developed and transformed at a dramatic way. OD change agents are truly in trouble to keep pace with that. Technology usually has two dimensions, e.g., automation and information technology. Automation works when a task performed by a worker is mechanised and the worker is replaced by machine. As a result, workers are always afraid of loosing the job. Thus, their job satisfaction comes down. While machine works, the men do not have the direct role in production. They will just get the switch on and off. The role being passive, a sense of alienation prevails with resultant decrease in effeciency. To compensate the same, further automation becomes necessary. Thus, instead of 186 NSOU • PGCO-I supplementing, it supplants employee skills. OD change agents need attention to the fact. Information Technology in the same way is shaking up organisations in the light of revolutionary changes in it. Thus, it has forced the OB scholars or OD change agents to re-examine the existing system and to bring in change in it to keep pace with changed technology. These days are the days of dot coms, internets, intranet, e-mail, mobile phones and the like. So, communication and surveillance have got a new dimension. Resultant effects of such transformation in technology are as follows. • Leaner organisation : Through automation and information technology, the organisations today are becoming leaner. Downsizing, also called as rightsizing, is enabling organisations to produce greater volumes by using just a Randful of employees. Outsourcing has added fuel to that flame. So, only the primary activities are done by own employees. All these mean lost jobs for many people. Those who are still in the organisation are always afraid of loosing the job on any day. Days were when at the blowing of a siren, thousands of employees gushed out of the factory gates. But those days are gone, and the situation is being aggarated day by day. So, the main challenge today is to keep the workers satisfied, and thus motivated. • Wired Organisations : Organisations are now totally wired. People need not come office. Still office work is done. Employees can get direction from the boss even when they are loitering on sea beach in a vacation. Web conferencing has replaced the need for face-to-face meeting, and the people across the globe can contact with others simultaneously. Groups being dispersed world-wide without any necessity or scope for personal contact, members remain unknown to each other. Structure of organisation and whom to report is not exactly clear in wired organisation. Privacy of employees in also lost, firstly due to wiring, and secondly due to close circuit TV and others. Leadership quality, motivation, effective control—all have thus got new dimensions. To accept them OD agents must bring in an unique change from top to the bottom. • Virtual Offices : Extension to wired organisation is virtual office, wherein the people can work anytime, any where and with anyone. Virtual offices have generated a new term "VIHAG" i.e., virtual human agents, who actually are the

NSOU • PGCO-I 187 online workers working in call centres or from homes. In such offices connectivity. Collaboration or communication—all are easy and just-in-time. Services requiring personal touch and care are, however, very difficult to be performed effectively in these offices. • Gold-Collar Employees : Until very recently, we had broadly two types of workers—white collar and blue collar. The technology transformation has added to the list a new type of worker, gold-collar workers. They are actually the knowledge workers possessing both business skills and technological expertise. They are quality workers no doubt, but as they feel themselves more qualified than the bosses, to control them is difficult. Some changed approach is needed to deal with them. • E-Business : e-business is doing business electronically or digitally. Every business is approaching to this by integrating information technology (IT) with business processes. Traditional business deals with — Physical product—physical agent and physical process. Step by step we are moving towards complete digitalisation. However, in this age of transition, the business are any where of following phases of business operation. Physical product — physical agent — digital process Physical product — digital agent — physical process Physical product — digital agent — digital process Digital product — physical agent — physical process Digital product — digital agent — physical process Digital product — physical agent — digital process Digital product — digital agent — digital process The e-everything is complete digitalisation. We are still far away from that. But what has been achieved in the mean time is praiseworthy on the one hand, and alarming on the other. Switching over to e-business is praiseworthy because of its following benefits. 1. Market place has no boundary 2. Transaction cost is low 188 NSOU • PGCO-I 3. Customer interaction is round the clock each day as indicated by  $24 \times 7 \times 365$  4. Quick delivery 5. Special kind of product 6. Extensive customisation etc. This is simultaneously alarming because of a number of reasons. 1. Customer-business relationship is lacking here. 2. High tech replaces human touch 3. Neither the customer nor seller is accustomed in that way with click and cursor system that replaces brick and mortar system. 4. Pre-requisites for e-business are the infrastructural changes at different field. This is still not there. 5. Digital literacy is mostly absent. 6. Different types of threats are linked with e-business e.g., espionage, piracy, viruses, hacking fabrication, interception etc. 7. Privacy is at stake In spite of all these, e-business today is the rule, not an exception. Few years back, e-business was just a trend like “nice to have”. But today the trend is “need to have”. From the stand point of nature of transaction, e-business has taken the following forms. C2A : Consumer to Administration B2B : Business to Business B2C : Business to Customers C2C : Customer to Customer C2B : Customer to Business B2G : Business to Government Models that the e-business is running through by different national and international business houses are as follows. NSOU • PGCO-I 189 1. e-shop : selling the goods through internet. 2. e-procurement : tender and procuring goods electronically 3. e-Auction : electronic mechanism for auction 4. e-Mall : collection of e-shops under single umbrella 5. Value chain Integrator : Integrating multiple steps in value chain electronically 6. Information Brokers : Selling business information through consultancy 7. e-Governance : Having public services digitally 8. e-Banking : Getting banking facilities 9. e-Share Trading : Selling and Buying of shares electronically If the firms are to get benefits of aforesaid different nature of e-transactions or e-business models, the change agents are to do a lot. Along with the legal, infrastructural or environmental change, structural and psychological change they must bring into. e-security is another vital issue which the change agents must ensure. It may take time to have a complete or pure e-business, but time is ripe now to begin with beginning. If one does not do that he/she will lag behind, others will easily throw him/her out. 8.5.4 Promoting Ethical Behaviour Ethics refers to a system of moral principles, a sense of right and wrong, fair and unfair, good or bad. Organisational ethics or business ethics does not differ from general ethics. If dishonestly is unethical in the society, then it is also same in the business. The fundamental values that form ethics are values of 1920 or 2019; these are values of New York as well as of New Market in Kolkata. So, the businessmen must not evolve their own principles to justify what is right or wrong. Values or ethics promoted to suit oneself is known as values of convenience or opportunists’ values. Employees or employers may apply such values for their own convenience, but the society will not condone such deviations. Ethics are important for many a reason. A few of them are mentioned below. • Ethics is inherent, unethical behaviour is artificial : Very easily one can be habituated with ethical behaviour, because this is ingrained in them. You ask anyone to speak the truth at a stretch for five minutes, he will easily do the same. But you ask the same person to continuously telling lie, he will fail.

190 NSOU • PGC0-I • Ethical behaviour increased the self-worth or self esteem : The employees in particular and the organisation as a whole will gain an extra power, the strength of honesty; whereas if you do something immoral, the guilty feeling will make you stressed and depressed. Thus, the organisational effectiveness will be affected if ethics does not prevail there. • Credibility to Public increases : The employees and the organisation will be honoured or respected by the government, suppliers, financiers or customers, if their behaviour is ethical. Unethical persons are viewed with suspicious eyes. • Credibility of management to workers increases : If the managers are men of values, employees will behave with them respectfully. The immoral managers can never command dignity from their subordinates, and hence their directions are not properly obeyed. • Ethics and Profit go together : Moral values have economic sense as well. An ethical organisation can easily hire the quality workers, creditors provide it with loan without hesitation, cost of capital in such organisation may be low, customers will not question while buying its goods. Ultimately, the profit becomes higher and sustains for long time. Ethical Dilemma : Ethical dilemma occurs when distinction cannot be made between what is ethical and what is unethical. Day by day this dilemma is growing in volume, particularly in case of managing people. A few examples of such dilemma may be outlined as below. • Monitoring of employees by close circuit TV : If it is not done surveillance may be lacking. But doing so means entering into the private zone of employees. • Drug testing conflicts the fundamental rights of employees, particularly when the employees suffer from the disease like HIV. Gender harassment is another controversial issue where doing something or not doing, both will invite problems. • Whistle-blowing is an equally important ethical dilemma, as on the one hand, the employees are not expected to speak against others; again on the other hand, it is necessary to disclose any illegal, unmoral or illegitimate practice, whoever is involved in such case company information is generally considered as private, and to make it public is not welcome. Particularly, to speak against bosses may lead to

NSOU • PGC0-I 191 insubordination, and resultant chaos. Again, as society's interest overrides that of organisation, whistle-blowing may be appreciated. • Performance appraisal leads itself to ethical issues. To keep eyes shut to poor performance of any employee is the suppression of fact, and not it is good for organisation. Again if proper reporting leads to firing of employees, it may be criticised on humanitarian ground. So, a clear viewpoint is highly essential in case of all the aforesaid cases. For greater cause unpopular stands should be given the justifications. If this is known clearly to all the employees, from CEO to ground-level workers dilemma may be reduced, if not removed as a whole.

Managing/Promoting Ethics 1. Role of Top Management : Top management should send right signals reiterating the need to observe ethical practices. It should avoid strategies that will create unbearable pressure on employees. Huge amount of fine or punishment is to be charged/given so that it can set an example. However, arbitrary use of such provision must be avoided so that it does not backfire. 2. Pre-employment Screening : If right persons can be selected, major part of the problem is over. So, along with personality test, the test of morale must be a component of selection process. 3. Whistle-blowing System : This system is now being successfully used by many companies like Enron, Kellogg India, LG India, Modern Food etc. It has some inherent problems. Rules should be framed to guard against that. 4. Code of Ethics : Nearly 95% of the Fortune 500 companies have their code of ethics, that describes the general value system of the organisation and provides specific guidelines for each and every area of action. Going beyond that will be treated as unethical. 5. Ethics Committee : Many companies have ethics committees comprising high-level executives. This helps the firms to establish code of ethics, examines the practices in the scale of that standard code and oversees the enforcement of the code. 6. Ethics Hot line : Sometimes the employees may feel it embarrassing to report face-to-face to a supervisor. Ethics Hot line can be an effective alternative in that case.

192 NSOU • PGCO-I 7. Ethics Training : Many companies provide training in ethics to their managers and other employees. In such training programmes, employees are made familiar with official policies on ethics. Sometimes, actual unethical events in the company are used to illustrate how it happens and what are its consequences. To make training effective, it must focus on specific cases, rather than on philosophical discussion. It is to be given by company managers, not by outside experts. 8.6 Summary From the above discussion, we could understand the concept and fundamentals of organizational Development. In addition, what kind of interventions are required; what kind of challenges faced by the managers and the thoughts for the organiza- tional development have also been discussed in detail. 8.7 Questions A. Objective Type : 1. What stands for T-group in OD intervention ? 2. How is 1.9 style of management known under grid concept ? 3. How is the combination of functional and product structure called ? 4. What does QWL stand for ? 5. Name any two key components of TQM. 6. Mention any two barriers to managing diversity. 7. Give full form of B2B. 8. Name two means of promoting ethics. B. Short answer Type : 9. Define OD. 10. What do you mean by organic structure ? 11. Distinguish between job enlargement and job enrichment. 12. Define "quality circle". 13. Who are gold-collar employees ?

NSOU • PGCO-I 193 14. Write a note on e-governance. 15. How does performance appraisal lead to ethical dilemma ? C. Long answer Type : 16. What are the objectives and requisites of OD ? 17. Give a brief discussion on OD interventions. 18. Discuss the Task-Technology interventions to OD. 19. Discuss the role of OD change agents in the context of technology transformation. 20. Narrate the ways and means of promoting ethical behaviour.

PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Objectives After studying this unit, you will be able to: ? understand the meaning and features of international business ?

know the composition and importance of international business ? analyze the

motives of international business ? assess the risk in international business ? distinguish between international business and domestic business ? comprehend the trends in international business

8 ?

NSOU ? PGCO-III 1.2 Introduction By the term, international business, we mean the cross border business activities of individual firms, while economists use international trade to refer to aggregate cross-border flows of products and services between nations. While international business describes an enterprise-level phenomenon, international trade describes the macro phenomenon of aggregate flows between nations. Now a days international business refers to the exchange not only of physical goods but also services, capital, technology and human resources. It covers a very broad spectrum of activities. Many aspects of domestic business are also found in international business, but they are treated differently because international business lays emphasis on cross-border aspects. Similarly, international business covers most, if not all, of the same topics of international management but it goes much further. Where international management focuses mainly on decisions made by individuals operating within a corporate setting, international business also incorporates the broader political, economic, social, technological, philosophical and environmental contexts within which firms operate. In this unit you will come across different facets of international business. 1.3 Cconcept of International Business The concept of international business is very simple and it is nothing but "cross-border economic activity" or cross-border business. Thus, international business refers to any business activity conducted in a foreign country by crossing of national boundary. Any business firm has to perform various activities such as marketing, sales, production, finance etc. When any one or more of such activities or the complete business is conducted in abroad, the business firm is said to have the characteristics of international business. Now a days, international business refers to the exchange not only of physical goods but also of services, knowledge, skills and information and it covers a very broad spectrum of activities. Thus, by international business we mean business activities that involve

**100%**

**MATCHING BLOCK 1/173**

**W**

the transfer of resources, goods, services, knowledge, skills or information across national boundaries.

The resources include raw materials, capital and people. Goods consist of semi finished and finished assemblies and products. Services may be accounting, legal counsel, banking, insurance, management consulting, trade service, education, healthcare, tourism etc. Knowledge and skill may include technology and innovation, organizational and managerial skill, intellectual property rights such as copyrights, trademarks and brand names. Information flows may be database and information networks.

NSOU ? PGCO-III ? 9 The different participants involved in the international business may be individuals (e.g., tourists and individual investors buying foreign stocks and bonds), companies (private or public), company clusters (e.g., alliances), government bodies (e.g., central banks), and international institutions (e.g., the World Bank, the International Monetary Fund). However, among these participants, companies are the dominant players. They are the primary economic agent facilitating and gaining (or suffering) from international business. Since the transactions of these companies arise from the foreign activities, these transactions are often called international transactions which are manifested mainly in international trade and international investment. International trade takes place when a company exports goods or services to buyers (importers) in another country. International investment takes place when the company invests resources in business activities outside its home country. Any firm, regardless of its size, engaged in international business, is known as an international firm. A firm that invests abroad and has at least one working affiliate in a foreign country (e.g., a factory, a branch office) over which it maintains effective control, is called multinational enterprise or MNE. Thus, multinational enterprises have regular dealings outside their home country and MNE is a more general term to describe the broad category of firms, ranging from huge firms to small and medium sized enterprises (SMEs) to micro firms, engaged in international business.

1.4 Salient Features of International Business The following are the salient features of international business: 1) Immobility of factors: Some degree of immobility of factors generally in terms of capital and labour is observed in international business. The international mobility of capital is restricted due to political uncertainty, legal requirement, instability of values foreign currencies etc. The reasons for international immobility of labour are differences in languages, custom, occupational skills, family ties, high travelling expenses to the foreign country etc. 2) Heterogeneous markets: The participants of international business have to consider the different heterogeneous markets across the world. It is so because international markets lack homogeneity due to differences in climate, language, preferences, habits, customs etc.

10 ? NSOU ? PGCO-III 3) Different currencies: Different types of currencies are involved in international business. So each country has its own policy with regard to exchange rates and foreign exchanges. 4) Geographical and climate differences: Every country cannot produce all commodities due to geographical and climatic conditions.

**67% MATCHING BLOCK 4/173 SA** 179E1150-International Economics.pdf (D165203112)

So countries having climatic and geographical advantages specialize in the international business and trade them with others. 5)

Natural resources: Natural resource also plays a vital role in international business.

**90% MATCHING BLOCK 5/173 SA** 179E1150-International Economics.pdf (D165203112)

Different countries are endowed with different types of natural resources. Hence they tend to specialize in

the international business for

**100% MATCHING BLOCK 6/173 SA** 179E1150-International Economics.pdf (D165203112)

those commodities in which they are richly endowed and trade them with others where such resources are scarce. 6)

**100% MATCHING BLOCK 10/173 SA** 179E1150-International Economics.pdf (D165203112)

Balance of payments: The problem of balance of payments is perpetual in international

business.

**100%**

**MATCHING BLOCK 13/173**

**SA**

179E1150-International Economics.pdf (D165203112)

The policies which a country chooses to correct its disequilibrium in the balance of payments may give rise to a number of other problems. 7)

Different national policies and government intervention: Economic and political policies are different from one country to another. Policies pertaining to international business differ widely among countries. Tariff policy, import quota system and other controls adopted by government interfere with the cause of international business. 1.5 Composition of International Business International business transactions are broadly composed of international trade and international investment. By international trade we mean exchange of products (merchandise) and services (intangibles) across national boundaries. Exchange can be done through exporting (an outbound activity) or importing (an inbound activity) or global sourcing ("The procurement of product or services from suppliers located abroad for consumption in the home country or a third country"). Both finished products and intermediate goods (e.g., raw materials, components etc.) are included in import and export activities. By international investment we mean the transfer of assets to another country, or the acquisition of assets in that country. These assets include capital, technology, managerial talent and manufacturing infrastructure. With trade, products and services cross national

boundaries; while in investment, the firm itself crosses border to secure ownership of assets located abroad. There are two types of international investment- foreign direct investment (FDI) and foreign portfolio investment (FPI). When the firm establishes a physical presence abroad through acquisition of productive asset such as capital, technology, labour, land, plant and equipment, it is known as foreign direct investment. It is an internationalization strategy that gives investors partial or full ownership of a productive enterprise which performs manufacturing, marketing or research and development activities. On the other hand, by foreign portfolio investment we mean the passive ownership of foreign securities such as stocks and bonds for the purpose of generating financial return and it does not entail active management or control over the assets. 1.6 Importance of International Business The importance of international business can be discussed from the perspectives of the global economy, the national economy, the firm, global corporate citizenship and career standpoint. These are also the reasons to study international business. 1) Facilitator of the global economy and interconnectedness: International business transforms the world into a global village. An unprecedented growth in international trade and investment is observed during the post decade of GATT. Emerging markets provide new impetus to worldwide economic interconnectedness since the 1980s. The fast growing emerging markets have also been experiencing substantial market liberalization, privatization and industrialization which are also fueling global economic transformation. Along with market globalization, the internet and e-commerce make international business increasingly essential for firms of all sizes and resource levels. Actually, the growth of international business activity coincides with the broader concept of globalization of markets which refers to the ongoing economic integration and growing interdependency of countries world-wide. Globalization allows many firms to internationalize and has substantially increased the

**88%**

**MATCHING BLOCK 7/173**

**W**

volume and variety of cross-border transactions in goods, services and capital flows. 2)

Contributor of national economic well being: International business contributes to economic prosperity and standard of living and helps countries to use their resources more efficiently. International trade and investment can also

12 ? NSOU ? PGC0-III help to reduce poor economic conditions in developing economies. The rapid economic growth of emerging countries is stimulating solid gains in living standards. International trade and investment help to promote freedom and democracy and may reduce the likelihood of cross border conflict and to limit international tension by reducing world poverty (World Bank, 2004). 3) A competitive advantage for the firms: Firm must participate in the international business and acquire the necessary skills, knowledge and competence to sustain a competitive advantage in the global economy. Foreign markets are likely to generate favourable outcomes for the firms in term of sales, profit margin, growth and new knowledge. Besides, firms can maximize the efficiency of their operations through international business. International business allows firms to access critical resources that may not be available in the home market. It broadens the options for dealing with competitors and offers opportunities to make global strategic moves and counter moves that help the firms to compete more effectively with domestic and foreign rivals. 4) An opportunity for global corporate citizenship: As firms venture into international market, they need to learn how to become global citizen. Beyond delivering value added products, technology and other benefits to their customer, they need to be responsive to the needs of other stakeholder groups, including the media, local communities, academics and the non-profit sector. In foreign markets, firms must try to meet local expectations with respect to labour and environment standards, accepted codes of conduct and the overall welfare of the society that hosts them. International firms must embed corporate citizenship into their strategic decisions as well as their ongoing processes and practices. 5) Career standpoint: Managers of the world's leading corporations honed their managerial skills in international business. Managers of these corporations are exposed to range of enlightening experiences, new knowledge, novel ways of seeing the world and various unusual challenges. Managers with international exposure are generally more confident, cosmopolitan and better suited to meet the variety of challenges they may encounter through their careers. Thus, acquiring knowledge and managerial skills in international business is not only exciting, challenging and fun, but it is also a unique professional development opportunity.

NSOU ? PGC0-III ? 13 1.7 Why Do Firms Expand Internationally? Or Why Do Firms Pursue Internationalization Strategies ? Or Why Do Companies Go Global? The motivations for conducting international business include a variety of reasons. Firms often have more than one motive for international expansion. The motives will vary from one business activity to another. Generally companies go "global" for the following reasons: (1) To seek opportunities for growth through market diversification: When the companies diversify into foreign markets, they can generate sales and profit opportunities that cannot be matched with the domestic markets. Besides, when a company has reached its maturity in the home country, growth opportunities are available better in foreign markets. Thus, many companies, namely, Coca- cola, McDonald's, Gillette, Sony, are aggressively expanding their businesses into overseas markets. (2) To earn higher margins and profits: Sluggish market growth is observed for many types of products and services in mature economies. As a result, firms operating in these economies are able to get slim profit margins. On the other hand, high-growth emerging foreign markets may be underserved or not served at all (developing economies). In these foreign markets companies can earn higher profit margins due to less intense competition, combined with strong market demands. For example, as compared to their respective home markets, bathroom fixture manufacturer's American Standard and Toto of Japan have found more favourable markets in Indonesia, Mexico and Vietnam. (3) To gain new ideas about products, services and business methods: Firms get new ideas for products, processes and business methods from foreign environments. The experience of doing business abroad helps firms to acquire new knowledge for improving organizational effectiveness and efficiency. For example, just-in-time inventory techniques were refined by Toyota and then adopted by other manufacturers all over the world. (4) To serve key customers that have relocated abroad: In a global economy, many firms go to international markets to serve clients over there. For example, when Toyota opened its first factory in the UK, many Japanese auto parts suppliers followed to establish their own operations there.

14 ? NSOU ? PGCO-III (5) To seek raw materials: Many companies in extractive industries have major subsidiaries around the world to ensure access to the basic resources needed to sustain the company's primary business line. (6) To get factors of production at lower costs: Internationalization enables the firms to access capital, technology, managerial talent, labour and land at lower costs, higher-quality at different locations worldwide. For example, the Japanese firm, Canon, relocated much of its production to China to profit from that country's inexpensive and productive work force. (7) To seek production efficiency: Companies in high-cost countries are shifting production to low-cost regions. For example, BMW, in response to high production costs in Germany, has built assembly plants in the United States of America. (8) To develop economies of scale: Economies of scale refer to the reduction of the per-unit cost of manufacturing and marketing due to operating at high volume. By expanding internationally, the firm increases the size of its customer base, thereby increasing the volume of products and lowering the total cost. (9) To confront international competitors more effectively: The firm can enhance its competitive positioning by confronting competitors in international markets or entering a competitor's home markets to destabilize and curb its growth. (10) To build rewarding relationship with a foreign partner: Firms often have long term strategic reasons for venturing abroad. Joint ventures or project-based alliances with key foreign players can lead to the development of new products, early positioning in future key markets on profit making opportunities. For example, Black and Decker entered a joint venture with Bajaj, an Indian retailer, to position itself for expected long-term sales in the huge Indian market. (11) To avoid political and regulatory hurdles: Companies go global in order to avoid political and regulatory hurdles in the home country. The primary reason that Japanese auto companies moved production to the United States, was to get US import quotas. (12) To diversify risk: Spreading risk is generally seen as a safe business principle because it helps to avoid over-dependence on a single location of the market. Thus, the multinational firms want to spread risk by working in more than one country at a time.

NSOU ? PGCO-III ? 15 1.8 Risks in International Business Broadly, international business faces four types of risks: cross-cultural risk, country risk, currency risk and commercial risk which are to be managed to avoid financial loss or product failure. These risks are discussed below:

Cross-cultural risk: Cross cultural risk is defined as "a situation or event where a culture miscommunication puts some human values at stake". It arises in international business because of the diverse cultural heritage of the participants. "Culture refers to the learned, shared and enduring orientation pattern in a society". People show their culture through values, ideas, attitudes, behaviours and symbols. Thus, in the context of international business, cross-cultural risk is composed of differences in language, lifestyle, mindsets, customs and / or religion. Values unique to a culture tend to be long-lasting and are transmitted from one generation to the next. These values influence the mindset and work style of employees and the shopping patterns of buyers. Language is also a critical dimension of culture. Miscommunication due to cultural differences gives rise to inappropriate business strategies and ineffective relations with customers.

Country risk: Country risk refers to the potentially adverse effects on company's operations and profitability due to political, legal and economic environment in a foreign country. It is also known as political risk. Country risk includes the possibility of foreign government intervention in firms' business activities, laws and regulation of foreign countries etc.

Currency risk: Currency risk refers to the risk of adverse fluctuation in exchange rates. Currency risk arises because of international transactions being after conducted in more than one national currency. Inflation and other harmful economic conditions experienced in one country may have immediate consequences for exchange rates due to growing interconnectedness of national economies.

Commercial risk: By commercial risk we mean the firm's potential loss or failure from poorly developed or executed business strategies, tactics or procedures. Managers may make poor choices in respect of selection of business partners, timing of market entry, pricing, creation of product failures and promotional themes. The consequences of such failure are usually most costly in international business as compound to domestic business. All the firms engaged in international business face these four types of international business risks. These risks cannot be avoided, but they can be anticipated and managed.

16 ? NSOU ? PGC0-III Experienced international firms conduct research to anticipate potential risks, understand their implications and take proactive action to reduce their effect. 1.9 International Versus Domestic Business International business is the outgrowth of domestic business. Most of the major firms that are actively participating in the international business at present, started their operation in the domestic business earlier. Leading Japanese automaker such as Toyota, Honda started their operations in their domestic market before exploring into foreign markets. As the magnitude of their operations grow, they found it profitable or otherwise necessary to build their plants and facilities in other foreign countries. Although international business is often considered as an extension of domestic business, it is significantly different from the latter due to the following reasons: 1) Different currency denomination: In case of domestic business, a single currency is used. For example, India has the rupee, USA has the dollar, Japan has the Yen etc. But in the case of international business, different currencies are involved. Cash flows of a multinational firm in various parts of the world are denominated in different currencies. Hence, an analysis of exchange rates must be considered in the international business transactions. Besides the possibility of variations in the exchange rates between different currencies increases the currency risk in the international business. The domestic business generally does not consider these factors. 2) Economic and legal ramifications: In case of domestic business, each country has its own unique economic and legal system. The firms engaged in the international business face different types of economic and legal system worldwide. These differences can cause significant problem to international entrepreneurs. For example, differences in tax laws among countries can cause different after tax consequences to the multinational enterprises. Similarly, differences in legal systems of host nations, such as the Common Law of Great Britain versus the French Civil Law, complicate the matter in the international business transactions. 3) Language differences: The ability to communicate is critical in all business transactions. In domestic business generally different regional and national languages are used along with international language, i.e., English. However, the managers of international firms need to know several international languages to operate their businesses abroad. For example, European and Japanese business- NSOU ? PGC0-III ? 17 people are usually fluent in several language, including English. Thus, they can invade different international market more easily than the US citizens. 4) Culture differences: In domestic business, every country has unique cultural heritages that shape values and influence the conduct of business. However, culture differences exist in international business. Multinational firms vary dramatically from one country to other with respect to dealing with employees, attitudes towards risk, the ability to curtail unprofitable operations etc. 5) Role of government: The role of government is generally minimal in the domestic business of United States and Western Europe, but it is not the situation in most of the world. In international business, the different terms under which companies compete, the actions that must be taken or avoided and the terms of trade on various transactions, are determined not in the market place but by direct negotiation between the host government and the multinational firms. 6) Risk: International business firms generally encounter four types of risks; namely cross-cultural risk, political risk, currency risk and commercial risk. These risks cannot be avoided but they can be anticipated and managed by the experienced international firms. However, the domestic business firms generally do not come across these types of risks in conducting their business operations. 1.10 Trends in International Business In this section, the present trends and the probable future trends in international business have been discussed: 1.10.1 Present Trends in International Business In this sub-section, the present trends in international business are discussed from the perspectives of international trade and international investment. International trade International trade can be broadly divided between trade in goods (merchandise) and trade in services. World trade in goods has increased dramatically over the last decade, rising from about \$10 trillion in 2005 to more than \$18.5 trillion in 2014 but, then fell to about \$16 trillion in 2015. Trade in services greatly increased between 2005 and 2015 (from about \$2.5 trillion to almost \$5 trillion). Although increasing, trade in services accounts for a much lower share. However, growth has slowed down significantly

18 ? NSOU ? PGO-III in the last few years and virtually stalled in 2015. In particular, while export volumes from developing countries had been growing at rates of more than 10 per cent per year between 2003 and 2008, the figure for 2015 was about one per cent. Moreover, volumes of trade fell for many countries both in terms of imports and exports, including China. In spite of the financial crisis of 2009, developing countries as a group have almost doubled the volumes of trade in goods since 2009. While import volumes have been growing relatively more than export volumes for developing countries, the opposite has happened in regard to developed countries. The relatively larger increase in the volumes of imports can be explained by the increase in consumer demand in developing countries. Growth in trade volumes has slowed down substantially in the last few years, especially in comparison to developing countries. Developed countries' trade volumes continued to increase, while trade volumes for developing countries stalled, both in regard to imports and exports. The value of trade in goods is virtually equal in developing and developed countries. On the other hand, about two thirds of trade in services originated from developed countries. BRICS account for an important share of trade in goods and services. LDCs continue to account for a very small share in overall trade. In 2015 the value of world trade has declined both for developed and developing countries. Developed countries' relative importance as suppliers in international markets is declining. Still, they account for about half of the value of exports of goods and about two thirds of exports of services. In 2015 developed countries' exports of goods were about \$8 trillion, while that of services added up to about \$3 trillion. In 2015, developing countries' trade summed up to about \$8 trillion in regard to goods and about \$2 trillion in regard to services. In 2015 BRICS exported about \$3 trillion in goods and about \$500 billion in services. LDCs' contribution to world trade remained minimal, although some increases in exports and imports of these countries have been recorded over the past decade. A very large part of world trade is clustered around three regions: North America, Europe and East Asia. Other regions' contribution to world trade is much lower. During 2015 trade declined in all regions across all trade flows, however with some differences. Trade flows declined the most in relation to the transition economies. Trade from and to North America was relatively more resilient. The increase in world trade between 2004 and 2014 was largely driven by the rise of trade between developing countries (South–South). By 2014, the value of South–

NSOU ? PGO-III ? 19 South trade had reached almost \$5.5 trillion, a magnitude close to that of trade between developed countries (North–North). The substantial decline in trade in 2015 was evenly spread between the trade flows of developing and developed countries. The significance of South–South trade flows for developing countries is evident when considering that in recent years, they represent more than half the trade of developing country regions (imports and exports). South–South trade share varies by region, from about 40 per cent in Latin America to almost 70 per cent in South Asia and East Asia. Although a certain proportion of South–South trade encompasses intraregional flows, an important part involves trade with China. Since 2005, China has become an increasingly important partner for all other developing country regions. Trade with China was more resilient in 2015, while a large part of the trade downturn was related to other South–South flows. International trade in goods can be differentiated by stage of processing, depending on their intended use along the production chain. Goods are, therefore, classified as primary, intermediates, consumer and capital (the latter comprising of machinery used for the production of other goods). Goods can also be differentiated by broad category, including natural resources, agriculture and manufacturing. With regard to the stage of processing, although there was a substantial contraction in 2015, intermediate products continued to make up the bulk of world trade. Trade in consumer and capital products represents another important share of world trade. In 2015, the value of trade in these two categories declined, but only marginally. Trade in primary products was greatly affected by the 2015 trade downturn, as in 2015 their value was at about \$2.6 trillion. With a value of over \$12 trillion in 2015, trade in manufacturing goods held a dominant position over trade in natural resources and agricultural products. Trade in agriculture was somewhat more resilient than the rest of the world trade. Trade related to developed countries remains an important part of international trade, especially in relation to imports. Participation in international trade varies significantly among developing regions. BRICS countries account for an important part of developing countries' trade, especially with respect to trade in intermediates and exports of consumer products. The participation of other developing country regions in world trade, both as importers and exporters, is more limited. In terms of value, a large amount of world trade relates to energy products (oil, gas, coal and petroleum products), chemicals, machinery, communication equipments and motor vehicles. In contrast, light manufacturing sectors, including textiles, apparel and tanning, comprised of a much smaller share of world trade. Agricultural sectors – which include food, vegetable and animal products, as well as oils and fats, tobacco and beverages –

20 ? NSOU ? PGC0-III accounted for a total of over \$1.5 trillion of trade flows, or less than 10 per cent of international trade. While the value of trade increased in all sectors between 2005 and 2014, it sharply fell in 2015, especially in energy products and basic metals. During the last decade, developing countries' presence in international markets has increased substantially as compared with developed countries. Their export market share has increased across all sectors and in particular in machinery, non-metallic minerals and communication equipments. With regard to services, travel and other business services represent the largest sectors, amounting to more than \$1 trillion each in 2015. Other important sectors include transport, telecommunications, computing and finance- related services. With exception of transport and other business services, trade in most of the other categories of services has been resilient to the trade downturn of 2015. The share of global exports of different service categories pertains to developed and developing countries. Although developed countries still account for the largest part of exports of services, the export market share has been shifting to the advantage of developing countries in most sectors. Two exceptions are intellectual property and goods-related services, the latter still originating on the whole from developed countries. Developing countries are also becoming important suppliers to international markets with regard to travel and transportation as well as computer and information services. (Source: Key Statistics and Trends in International Trade 2016, United Nations, Geneva, 2017)

International investment FDI inflows In 2016, FDI inflows to developed economies increased, after significant growth in the previous year. Inflows rose by 5 per cent to \$1 trillion. Developed economies' share in global FDI inflows grew to 59 per cent, the highest share since 2007. The increase of FDI in developed economies was mainly driven by equity investment flows in terms of cross-border M&As targeting developed countries. Large deals included the \$101 billion acquisition of SABMiller PLC (United Kingdom) by Anheuser-Busch Inbev (Belgium), the \$39 billion purchase of the generic drugs unit of Allergan PLC (United States) by Teva Pharmaceutical Industries Ltd (Israel) and the acquisition of ARM Holdings (United Kingdom) by SoftBank Group (Japan) for \$32 billion. Developing economies, in contrast, lost ground in 2016. Weak commodity prices and slowing economic growth affected foreign investment inflows, which fell by 14 per cent to \$646 billion – a level last observed in 2010. Cross-border M&A activity suffered a widespread downturn across developing regions during the year, falling by 18 per cent in aggregate value. In contrast, the value of announced greenfield projects rose by 12 per cent to \$516 billion, pulled by the announcement of a few very large investments in a small number of countries, while the majority of countries recorded declines. In developing Asia, the decline in inflows (-15 per cent to \$443 billion) was relatively widespread, with every major subregion registering reductions, except South Asia. Economic recession in Latin America and the Caribbean, coupled with weak commodity prices for the region's principal exports, factored heavily in the decline in FDI flows to the region (down 14 per cent to \$142 billion). Flows to Africa also registered a decline (-3 per cent to \$59 billion), with the region suffering external vulnerabilities similar to those in Latin America. The United States remained the largest recipient of FDI, attracting \$391 billion in inflows, followed by the United Kingdom with \$254 billion, vaulting from its 14th position in 2015 on the back of large cross-border M&A deals. China was in third position with inflows of \$134 billion – a 1 per cent decrease from the previous year. FDI outflows The flow of outward FDI from developed economies declined in 2016, falling 11 per cent to \$1 trillion. Nevertheless, their share in global outward FDI flows was roughly stable – dipping to 72 per cent from 74 per cent in 2015 – as outflows from developing economies slipped 1 per cent to \$383 billion and those from transition economies contracted 22 per cent to \$25 billion. Investment by European MNEs, which had surged in 2015, retreated significantly in 2016, falling 23 per cent to \$515 billion. This was driven by sharp reductions in outflows in Ireland (down 73 per cent to \$45 billion), Switzerland (down 71 per cent to \$31 billion) and Germany (down 63 per cent to \$35 billion). While the prolonged slump in corporate profits in Europe crimped investment, it provided renewed impetus to some corporations to seek transformative deals providing access to new markets and to generate cost savings. As a result, the value of cross-border M&As concluded by the continent's MNEs continuously increased, rising 40 per cent to \$435 billion. Investment by North American MNEs held roughly steady in 2016, despite a significant reduction in the value of their cross-border M&A purchases. The United States remained the world's largest outward-investing country, although flows declined marginally (-1 per cent) to \$299 billion. Net purchases through cross-border M&As by MNEs, in contrast, fell sharply (-39 per cent to \$78 billion), reflecting in part a slowdown in tax inversion

22 ? NSOU ? PGC0-III deals. FDI outflows from Canada posted a similar decline (-1 per cent to \$66 billion), despite the value of Canadian MNEs' acquisitions abroad falling 33 per cent to \$57 billion. A relatively small number of megadeals bolstered FDI flows by MNEs from other developed countries, which rose 20 per cent to \$164 billion. The ARM – SoftBank deal lifted outflows from Japan (13 per cent to \$145 billion). Investment by Israeli MNEs increased 26 per cent to \$13 billion, thanks in part to a series of acquisitions by Teva Pharmaceutical Industries. Outflows from other developed countries were also boosted by a significant swing from net divestment to net investment by Australian MNEs (from - \$2 billion in 2015 to \$6 billion in 2016). The year was marked by significant variation in outward investment by MNEs from developing and transition economies. Chinese outward FDI surged, rising 44 per cent to \$183 billion, propelling the country to the position of second largest home country for FDI for the first time. This coincided with the country becoming a net outward direct investor during the year. Chinese MNEs invested abroad to gain access to new markets and to acquire assets that generated revenue streams in foreign currencies. The rise in outward investment by Chinese MNEs was not without controversy, as a number of deals were scrutinized by policymakers both in China and abroad. Outward investment by African MNEs rose slightly (1 per cent to \$18 billion), largely reflecting a rise in outflows in Angola (35 per cent to \$11 billion) that more than offset a sharp reduction in flows from South Africa (-41 per cent to \$3 billion). In contrast, outward investment by MNEs from Latin America and the Caribbean collapsed (-98 per cent to \$751 million), falling to its lowest point since 1988, as outflows from Brazil and Mexico both swung to net divestment of foreign assets. FDI outflows from the transition economies registered a 22 per cent decline, falling to \$25 billion, as intracompany loans by MNEs from Kazakhstan turned negative. FDI by selected groups FDI flows to and from large economic groups such as the G20 and Asia Pacific Economic Cooperation (APEC), continued to dominate the global FDI landscape in 2016. These groups accounted for more than 50 per cent of global FDI inflows and outflows. Inflows to most groups (G20, APEC, NAFTA and BRICS) and country associations, such as the Commonwealth of Nations, rose for various economic and corporate reasons. Corporate reconfiguration, economic growth and improved business sentiments contributed NSOU ? PGC0-III ? 23 to the rise in these groups. The share of the largest groups in world FDI inflows (G20 and APEC) remained proportionately small relative to their weight in the global economy. Inward FDI stock exceeded outward stock in the Commonwealth, BRICS and ACP members, while the G20, APEC and NAFTA members continued to be significant capital exporters. The former groups are predominantly developing economies and are net recipients of FDI inflows, while the latter consist of comparatively more developed countries and emerging economies with increasing numbers of MNEs. Companies in the G20, APEC and NAFTA remained active investors. With the exception of NAFTA, outward FDI flows from all selected groups rose in 2016. Intragroup connectivity through FDI remained strong in the G20 and APEC, and growing in BRICS and ACP. In most groups, M&A activity significantly contributes to intragroup connectivity. FDI by sector, industry and mode of entry By 2015, the latest year for which data are available, about two thirds of global FDI stock was concentrated in the services sector, in line with its share in the world economy. Manufacturing and the primary sector accounted for 26 per cent and 6 per cent, respectively. Among services industries, the largest recipients of inward FDI stock were finance, business activities, trade and telecommunication. Within the manufacturing sector, five major industries, namely chemical products, food and beverages, electronics, motor vehicles and petroleum products, accounted for more than 70 per cent of all FDI stock in specified manufacturing activities. Within the primary sector, FDI in extractive industries, including oil and gas and metal mining, dominates, while investment stock in agriculture remains low. Low commodity prices have significantly affected FDI inflows to the primary sector over the last few years, which is weighing on the share of the primary sector in FDI stock, especially in Africa, Latin America and West Asia. Extractive industries play a dominant role in these developing regions' economies and they account for 20 to 30 per cent of their FDI stock. The amount of announced greenfield investment increased significantly as well. The total value of cross-border M&A sales rose by about 18 per cent to \$869 billion, the highest level since the outbreak of the global financial crisis. Cross-border M&A sales picked up across all three sectors, but particularly in major industries such as electronics, food and beverages, oil and gas, trading activities and utilities. In contrast to the rapidly rising value of cross-border M&As over the 2014–2016 period, the value of announced greenfield investments increased only modestly, suggesting

24 ? NSOU ? PGCO-III a relatively slow pace of international production expansion by MNEs. In 2016, the value of greenfield FDI announcements increased by 7 per cent to \$828 billion, pulled by some very large announced investments in a small number of countries while the rest of the world experienced a widespread slump. At the sectoral level, all manufacturing industries recorded a decline, with the total amount of greenfield FDI announced in the sector down by about 9 per cent to \$292 billion. Greenfield FDI in services registered an increase as well, rising by 15 per cent to \$481 billion, driven by a concentrated surge in construction investment in a small number of countries. (Source: World Investment Report 2017: Investment and The Digital Economy, United Nations) 1.10.2 Future Trends in International Business Multinational enterprises always have one eye to the future, by employing qualified staff to detect and plan for political, economic, social, technological and/ or ecological trends that might have a significant impact on future operations. The objectives of this 'watch' function or competitive intelligence is to help the company to position itself so as to take advantage of any opportunities and/ or protect itself from future rivals and adverse conditions. However, it is very difficult for MNEs to detect the event that are likely to bring them future success or failure in the context of complications inherent in today's rapidly shifting and increasing globalized markets. Since the year 2000 the international managers have focused on two of the main trends in international business- firstly, the rise of new economic powerhouses and secondly, the growing ecological constraint. The shifting geography of international business: McKinsey consultancy group (2008) stated that international executives' main concerns are: emerging economies, ecological sustainability, technological innovation, the globalization of labour, ethical business, powerful capital markets, advances in knowledge management and socio-economic or demographic changes. But every MNE is not affected to the same extent by each of the trends. However, there is a strong consensus among the experts that all the MNEs can expect to experience a 'global remix' due to the rise of the BRICs (Brazil, Russia, India and China) especially the last two. Though OECD economies and Middle Eastern OPEC states are holding important positions in the international business, the BRICs' rise constitutes an important change in the geographic centre of international business. Statistics reveal a clear rise in the proportion of international business conducted by the developing world, particularly the BRICs, in spite of industrialized countries ongoing dominance of world trade and investment.

NSOU ? PGCO-III ? 25 The business conditions in the BRICs are that: Firstly, Brazil, Russia, India and China do have several characteristics in common. Since the 1990s each country in BRICs has placed the greater emphasis on market economies. Secondly, growth in the BRICs can be divided between 'exogenous' drivers like exports and 'endogenous' internal dynamics which is mainly composed of domestic demand and investment including FDI by foreign firms. The foreign firms use these countries (BRICs) as manufacturing platforms for products and services that may be re-exported elsewhere. One driver for FDI is that the enormous number of young engineers and scientists are currently being trained in Chinese, Russian and particularly Indian Universities. Thirdly, rising wages in the BRICs have led to a rapid expansion in their middle classes. These expansion of the BRICs' middle classes is also significant because of the kinds of products that households purchase when they shift out of poverty. As income rises, people spend in areas (entertainment, consumer durables, leisure) that were once beyond their reach. This is a great opportunity for firms in the sector concerned. For mid-scale fast-moving consumer goods, rising demand from the BRICs' new middle classes has been a great opportunity for global retailers such as Wal-Mart, Carrefour and Tesco. Fourthly, the BRICs have provided a much needed boost for global car makers and their component manufacturer. For example, General Motors built corporate campus near Shanghai to develop environment friendly technologies targeting the local market. The southern Indian city of Chennai has recently hosted new factories built by leading carmakers like Nissan, Toyota, BMW and Ford. Companies originating in the BRICs are more accustomed to environments characterized by low costs, low prices and (sometimes) lower quality. The rise of MNEs in the 'global south' is a significant trend and is likely to have a strong impact on the future of international business. However, it is too early to predict whether international business, under the influence of BRICs and in reaction to the 2008 crisis, is about to go through a full-scale paradigm shift similar to the ones that were experienced in the 1930s and 1970s. The ecological constraint on international business: There is an almost unanimous opinion among governments, business leaders and academicians that the future will be characterised by an ever-tightening ecological constraint because of two reasons. Firstly, there is the damage caused by the pollution that is generated by the business firms. Secondly, there is resource depletion (i.e., consumption of raw material that cannot be replaced) or the exhaustion of the global stocks of the physical commodities that companies need for their production processes. Historically,

26 ? NSOU ? PGC0-III the business world has given insufficient recognition to the ecological constraint, but this is no longer the case. Now sustainability has become a mainstream concern. Accordingly, environmentalism (i.e., attitude that ecological sustainability should be priority factor in personal and organizational decision making) will be viewed not as a marginal concern but as an integral aspect of international business. In the future, MNEs will need to manage resources more efficiently and promote alternative energy sources through technological innovations. These changes will affect all international managers. Cross border supply chains will affect the global transportation of goods. Renewed localization will affect product definition and marketing. Logistics constraints will change human dynamics by increasing the use of video-conferencing and promoting long-term overseas assignments as opposed to short-term travel. International managers who integrate these ecological constraints into their business planning will have a competitive advantage over everyone else.

1.11 Summary ? International business refers to any business activity conducted in a foreign country by crossing of national boundary. Any business firm has to perform various activities such as marketing, sales, production, finance etc. When any one or more of such activities or the complete business is conducted abroad, the business firm is said to have the characteristics of international business. ? Now a days, international business refers to the exchange not only of physical goods but also of services, knowledge, skills and information and it covers a very broad spectrum of activities. Thus, by international business we mean business activities that involve

**100%**

**MATCHING BLOCK 8/173**

**W**

the transfer of resources, goods, services, knowledge, skills or information across national boundaries.

The resources include raw materials, capital and people. Goods consist of semi finished and finished assemblies and products. Services may be accounting, legal counsel, banking, insurance, management consulting, trade service, education, healthcare, tourism etc. Knowledge and skill may include technology and innovation, organizational and managerial skill, intellectual property rights such as copyrights, trademarks and brand names. Information flows may be database and information networks. ? The following are the salient features of international business: immobility of factors, heterogeneous markets, different currencies, geographical and climatic differences, NSOU ? PGC0-III ? 27 natural resources, balance of payments, different national policies and government intervention. ? International business transactions are broadly composed of international trade and international investment. By international trade we mean exchange of products (merchandise) and services (intangible) across national boundaries. By international investment we mean the transfer of assets to another country, or the acquisition of assets in that country. These assets include capital, technology, managerial talent and manufacturing infrastructure. With trade, products and services cross national boundaries; while in investment, the firm itself crosses border to secure ownership of assets located abroad. ? There are two types of international investment- foreign direct investment (FDI) and foreign portfolio investment (FPI). When the firm establishes a physical presence abroad through acquisition of productive assets such as capital, technology, labour, land, plant and equipment, it is known as foreign direct investment. On the other hand, by foreign portfolio investment we mean the passive ownership of foreign securities such as stocks and bonds for the purpose of generating financial returns and it does not entail active management on control over the assets. ? The importance of international business can be discussed from the perspectives of the global economy, the national economy, the firm, global corporate citizenship and career standpoint. These are also the reasons to study international business. ? The motivations for conducting international business include a variety of reasons. Firms often have more than one motive for international expansion. The motives will vary from one business activity to another. Generally companies go "global" for the following reasons: to seek opportunities for growth through market diversification; to earn higher margins and profits; to gain new ideas about product, services and business methods; to serve key customers that have been relocated abroad; to seek raw materials; to get factors of production at lower costs; to seek production efficiency; to develop economies of scale; to confront international competitors more effectively; to build rewarding relationship with a foreign partner; to avoid political and regulatory hurdles in order to diversify risk. ? Broadly international business faces four types of risks: cross-cultural risk, country risk, currency risk and commercial risk which are to be managed to avoid financial loss or product failure.

28 ? NSOU ? PGC0-III ? International business is the outgrowth of domestic business. As the magnitude of their operations grows, they find it profitable or otherwise necessary to build their plants and facilities in other foreign countries. Although international business is often considered as an extension of domestic business, it is significantly different from the latter due to the following reasons: different currency denomination; economic and legal ramifications; language differences; cultural differences; role of government; risk etc. ? World trade in goods had increased dramatically over the last decade, rising from about \$10 trillion in 2005 to more than \$18.5 trillion in 2014 and then fell to about \$16 trillion in 2015. Trade in services greatly increased between 2005 and 2015 (from about \$2.5 trillion to almost \$5 trillion). Although increasing, trade in services accounts for a much lower share. ? In spite of the financial crisis of 2009, developing countries as a group have almost doubled the volumes of trade in goods since 2009. While import volumes have been growing relatively more than export volumes for developing countries, the opposite has happened in regard to developed countries. The relatively larger increase in the volumes of imports can be explained by the increase in consumer demand in developing countries. Growth in trade volumes has slowed down substantially in the last few years, especially with regard to developing countries. Developed countries' trade volumes continued to increase, while trade volumes for developing countries stalled, both in regard to imports and exports. ? A very large part of world trade is clustered around three regions: North America, Europe and East Asia. Other regions' contribution to world trade is much lower. During 2015 trade declined in all regions across all trade flows, however with some differences. Trade flows declined the most in relation to the transition economies. Trade from and to North America was relatively more resilient. ? The increase in world trade between 2004 and 2014 was largely driven by the rise of trade between developing countries (South–South). By 2014, the value of South–South trade had reached almost \$5.5 trillion, a magnitude close to that of trade between developed countries (North–North). South–South trade share varies by region, from about 40 per cent in Latin America to almost 70 per cent in South Asia and East Asia. Although a certain proportion of South–South trade encompasses intraregional flows, an important part involves trade with China. Since 2005, China has become an increasingly important partner for all other NSOU ? PGC0-III ? 29 developing country regions. Trade with China was more resilient in 2015, while a large part of the trade downturn was related to other South–South flows. ? In 2016, FDI inflows to developed economies increased, after significant growth in the previous year. Inflows rose by 5 per cent to \$1 trillion. Developed economies' share in global FDI inflows grew to 59 per cent – the highest share since 2007. The increase of FDI in developed economies was mainly driven by equity investment flows in terms of cross-border M&As targeting developed countries. Large deals included the \$101 billion acquisition of SABMiller PLC (United Kingdom) by Anheuser-Busch Inbev (Belgium), the \$39 billion purchase of the generic drugs unit of Allergan PLC (United States) by Teva Pharmaceutical Industries Ltd (Israel) and the acquisition of ARM Holdings (United Kingdom) by SoftBank Group (Japan) for \$32 billion. ? The flow of outward FDI from developed economies declined in 2016, falling 11 per cent to \$1 trillion. Nevertheless, their share in global outward FDI flows remained roughly stable – dipping to 72 per cent from 74 per cent in 2015 – as outflows from developing economies slipped 1 per cent to \$383 billion and those from transition economies contracted 22 per cent to \$25 billion. ? FDI flows to and from large economic groups such as the G20 and Asia Pacific Economic Cooperation (APEC), continued to dominate the global FDI landscape in 2016. These groups accounted for more than 50 per cent of global FDI inflows and outflows. Inflows to most groups (G20, APEC, NAFTA and BRICS) and country associations, such as the Commonwealth of Nations, rose for various economic and corporate reasons. Corporate reconfiguration, economic growth and improved business sentiments contributed to the rise in these groups. The share of the largest groups in world FDI inflows (G20 and APEC) remained proportionately small relative to their weight in the global economy. ? By 2015, the latest year for which data are available, about two thirds of global FDI stock was concentrated in the services sector, in line with its share in the world economy. Manufacturing and the primary sector accounted for 26 per cent and 6 per cent, respectively. Among services industries, the largest recipients of inward FDI stock were finance, business activities, trade and telecommunication. Within the manufacturing sector, five major industries, namely chemical products, food and beverages, electronics, motor vehicles and petroleum products, accounted for more than 70 per cent of all FDI stock in specified

30 ? NSOU ? PGC0-III manufacturing activities. Within the primary sector, FDI in extractive industries, including oil and gas and metal mining, dominates, while investment stock in agriculture remains low. ? Objectives After studying this unit, you will be able to: ? understand the meaning and

features of  
foreign

exchange market ?

know the structure and functions of foreign

exchange market ? get an idea of different facets of foreign exchange quotation ? comprehend the concepts of devaluation and revaluation of domestic currency ? realize the concept of devaluation as a policy for correcting deficit in the balance of payments ? grasp the different exchange rate regimes and their mechanisms

2.2 Introduction There are more than 164 different types of currencies circulating among the 193 countries in the world. Individuals, companies and governments of these countries deal with trade and financial transactions with the help of their currencies. Liberalization, privatization and globalization create a need for a mechanism to convert one currency into another. Without such a mechanism, it would be difficult for companies to import and export foreign goods or for individuals to travel, spend and invest money in other countries. In this backdrop, the present unit provides an overview of the foreign exchange market and its different facets. It describes the different ways in which exchange rates are quoted and calculated. This unit also explains devaluation and revaluation of domestic currency and the different exchange rate regimes and their mechanisms.

NSOU ? PGCO-III ? 37 2.3 Concept of Foreign Exchange Market One currency is exchanged for another currency in the foreign exchange market. According to Kindleberger, "

market is an institutional arrangement for buying and selling of foreign currencies. Exporters sell the foreign currencies and importers buy them. Until the 1970

s, the foreign exchange market was small and specialized. The market changed fundamentally when the post-war Bretton Woods system broke down. Under the Bretton Woods system, the U.S. dollar was convertible into gold and other currencies were convertible to U.S. dollars at fixed exchange rates. In 1971, the US suspended the convertibility of the dollar into gold, and by 1973 the U.S. and other nations had accepted floating exchange rate. The change to floating exchange rates, the growth in the international trade, and the increase in the capital flows around the world led to the rapid growth of the foreign exchange market. The forex market is not located in the physical space and does not have a central exchange. Rather, it is an electronically linked network of a large number of individual foreign exchange trading centers, in which the market participants deal directly with each other. Thus, the foreign exchange market provides a single, cohesive, integrated and worldwide market by linking various individual foreign exchange trading centers spread all over the globe. There are a large number of foreign exchange trading centers in the world and each country has its own center(s). The functioning of each trading center is governed by the respective countries' laws, tax code, banking regulation, accounting rules and financial systems. Unlike the trading and stock exchange or commodity exchanges, foreign exchange trading is not governed by any unified body. Foreign exchange traders carry out their business through a network of communications. Although market participants are geographically far away from each other, they communicate with others with the help of high speed communication networks provided by the Society for World wide Interbank Financial Telecommunication (SWIFT). The Clearing House Interbank Payment System (CHIPS) links several banks and dealers involved in the forex transactions. In the past, forex transactions were conducted primarily by telegram, telephone or telex. But in recent times a lot of progress has been observed. The latest development in

38 ? NSOU ? PGCO-III foreign exchange trading is electronic trading. The electronic trading is a method of trading in which the market participants can see the bid- ask rates quoted by potential counter parties on their computer screens, match orders, and make deals electronically. With the advent of high speed digital data lines and satellites based communication systems, foreign exchange transactions are now carried out very rapidly. In most cases of currency trading, there is no physical transfer of paper notes and coins, but a series of digital entries exist in the account of the two parties. In view of developments in international communication networks, foreign exchange markets all over the world have eventually become one sophisticated global market. 2.4 Features of a Foreign Exchange Market The features of a

**50%**

**MATCHING BLOCK 17/173**

**SA**

International Trade-Material I semester.docx (D146751176)

foreign exchange market are discussed below: i. Location: Foreign exchange market is considered as an over the counter (OTC) market as there is no

physical place the participants meet to execute the deals of foreign exchange transactions. It has no fixed trading floor and no single governing authority. It is more an informal arrangement among the banks and brokers operating in a financial center to buy and sell currencies and it is connected to each other by tele-communications and satellite communication network. In the wholesale segment of the foreign exchange market, the dealings take place among the banks. However, in the retail segment of this market, the dealings take place between banks and their customers. The retail segment is located at different places of large cities. They cannot be considered as foreign exchange markets, but as the counters of such markets. ii. Size: Foreign exchange market is the largest financial market with a daily turnover of over USD 3 Trillion. Although forex markets were primarily developed to facilitate settlement of debts arising out of international trade, presently the turnover of this market is equivalent to the magnitude of world trade in goods and services. The largest foreign exchange market is London, followed by New York, Tokyo, Zurich and Frankfurt. iii. 24 hours market: The global foreign exchange market is a twenty-four-hour, non-stop market. Currency trading is carried out around the clock, around the globe. As foreign exchange centres are spread throughout the world, at any given point of time, some centers are closed while others are open for trade.

NSOU ? PGCO-III ? 39 For example, Europe's morning hours overlap with the late hours in Asia, and Europe's afternoon hours correspond to the morning hours in North America. The different time zones make the global foreign exchange market a real-time market. iv. Heavy trading during overlapping hours: Some centers are characterized by very heavy trading during certain times when their business hours overlap with those of many other trading centers. For example the morning business hours of New York and the afternoon business hours of London overlap and therefore, very heavy trading takes place during these hours in these two centers. This happens because participants can have access to the maximum number of potential buyers and sellers when many trading centers are open. v. Vehicle currency: The US dollar is sometimes called a vehicle currency because of its pivotal role in so many foreign exchange deals. A vehicle currency is one that is widely used to denominate international contracts made by parties who do not reside in the country that issues the vehicle currency. The Euro, which was introduced at the start of 1999, will evolve into a vehicle currency on a par with the dollar. Japanese yen is the third most important currency. The pound sterling, once second position to the dollar as a key international currency, has declined greatly in importance after the emergence of Euro. vi. Settlement of transactions: Forex markets make extensive use of the latest developments in telecommunications for transmitting as well as settling foreign exchange transactions. Banks use the exclusive network SWIFT to communicate messages and settle the transactions at electronic clearing houses such as CHIPS at New York. 2.5 Participants in the Foreign Exchange Market The participants in the foreign exchange market comprise of the following: i. Individuals: At the primary level, individuals who get remittances denominated in a foreign currency may sell their foreign currency for domestic currency, and those who travel abroad may buy foreign currency. ii. Corporates: The business houses, international investors and multinational corporations engaged in international business, may buy or sell foreign currency.

40 ? NSOU ? PGCO-III They operate by placing orders with the commercial banks. The deals between banks and their clients form the retail segment of foreign exchange market. iii. Commercial banks: Commercial banks are the major players in the market. They buy and sell currencies for their clients. They may also operate on their own. iv. Investors: Investors, including institutional investors may also require foreign currency for their direct investment or portfolio investment purposes. v. Dealers and Brokers: Dealers and brokers play a major role to buy and sell foreign currencies. Dealers act as a principal in a transaction and conduct business in their own account by committing their own funds, while brokers act as agents for an actual buyer/seller of foreign exchange and do not commit their own funds. Brokers do not take positions and, therefore, are not exposed to foreign exchange risks. They rely on the brokerage commission or fees that they receive from their clients. Dealers, on the other hand, rely on their bid-ask spread. There are different types of dealers. For example, in India an authorized dealer (AD) is an entity that is authorized by the RBI, to buy and sell foreign exchange. ADs are usually commercial banks, but non-bank entities may also be given this privilege. A money changer is an entity (which is not an AD) that is authorized by the RBI to trade in foreign exchange with non-banking clients (such as individuals), but has to surrender all foreign exchange received, to an AD. A market maker is an entity (usually a commercial bank) that offers two-way quotes (bid and ask) in the foreign exchange market. vi. Central Bank: The central bank of a country buys and sells foreign exchange with the view to stabilizing exchange rates and maintaining them within a range that it considers appropriate. The above individuals and institutions that participate in the forex market may also be classified as hedgers, arbitragers and speculators. Hedgers participate in the forex market to reduce the foreign exchange risk. They try to insure themselves against adverse foreign exchange rate movements while benefiting from favorable movements. Arbitragers attempt to make risk-less profits by entering into foreign exchange transactions simultaneously in two or more market centers. Speculators take positions in the forex market by anticipating whether the exchange rate will go up or down. They take positions to profit from exchange rate fluctuations.

NSOU ? PGCO-III ? 41 2.6 Structure of the Foreign Exchange Market or Market Segments of the Foreign Exchange Market The foreign exchange market is divided into wholesale market and retail market. The wholesale market is also known as the interbank market. The participants in this market consist of commercial banks, investment banks, central banks, corporations and high-net- worth individuals. These entities are discussed briefly: ? Commercial banks buy and sell foreign currencies for their customers and trade large volumes of foreign exchange with each other. ? Investment banks and other financial institutions (e.g. insurance companies, mutual funds, hedge funds etc.) also enter the forex market and become direct competitors to commercial banks. ? Domestic and multinational corporations participate in the forex market for their business purposes. Some high-net-worth individuals also participate in this market to meet their investment needs. ? The central banks of different countries may also participate in the forex market in order to control money supply, inflation and interest rates by influencing exchange rate movements in a particular direction. Among these participants, primary price makers or professional dealers make a two- way quotation to each other and to their clients. This group includes mainly commercial banks but some large investment dealers and a few large corporations also play the role of primary dealers. Three-tier system is observed among the professional dealers. In the first tier, a few giant multinational banks deal in a large number of currencies, in large amounts and often deal directly with each other without using brokers. In the second tier, there are large banks who deal in a smaller number of currencies and use the services of brokers more often. The last tier includes local institutions which make the market in a very small number of major currencies against their home currency. In the interbank market, currency notes rarely change hands. The buying/selling of a particular currency is actually the buying/selling of a demand deposit denominated in their currency. The retail market segment consists of trades between commercial banks and their corporate and non-corporate clients. Such trades are called merchant trades. Companies

42 ? NSOU ? PGCO-III need to buy/sell foreign exchange due to exports/imports, overseas loans, foreign exchange remittances (inward and outward) and inter-subsidiary transfers. Individuals need foreign exchange to meet the needs of education, medical treatment, tourism and travels. They may also wish to convert gifts of foreign currency into domestic currency. Currency notes, traveler's cheques and bank drafts are the common instruments in the retail market. Authorized restaurants, hotels, shops, banks and other entities deal with these instruments to provide easy access to foreign exchange for individual customers and also to convert their foreign currency into their home currency. The bid-ask spreads in the retail market are much wider than those of primary price makers. The transaction costs are also higher in this segment as compared to wholesale segment because of the small fraction of the turnover in the foreign exchange market. 2.7 Functions of the Foreign Exchange

Market The foreign exchange market serves the following important functions: i. To effect transfer of purchasing power between countries which is known as transfer function; ii. To provide credit for foreign trade which is called credit function; and iii. To minimize exposure to the risks of exchange rate changes that is known as hedging function. These functions are explained below: Transfer function Each country has a currency in which the prices of goods and services are quoted. In the United States, it is dollar (\$); in Great Britain, it is pound (£); in Japan, it is the Yen (¥) and so on. In general, within the borders of a particular country, one must use the national currency. This is not true for outside of a particular country. For example, a U.S tourist cannot use U.S dollars in Scotland to buy a bottle of Scotch whisky. Dollars are not recognized as legal currency in Scotland, the tourist must use British pounds. Fortunately, the tourist can go to a bank and exchange his/her dollars for pounds. Then he/she can buy the whisky. Thus, the basic function of the foreign exchange market is to facilitate the conversion of one currency into another, i.e., to accomplish transfers of purchasing powers between two countries. Transfer of purchasing power is necessary because international trade and NSOU ? PGCO-III ? 43 capital transactions normally involve parties living in countries with different national currencies. Usually participants in the forex market want to deal in its own currency, but the trade on capital transactions can be taken place outside the domestic market. Hence, they must deal in a foreign currency. When a tourist goes from one country to another, he/she is participating in the foreign exchange market. However, tourists are minor participants in the forex market; companies engaged in international trade and investment are major ones. International businesses have four main uses of foreign exchange markets. First, the payments a company receives for its exports, the income it receives from foreign investments, or the income it receives from licensing agreements with foreign firms may be in foreign currencies. To use those funds in its home country, the company must convert them to its home country's currency. For example, a company in Scotland exports its whisky to the United States. For this purpose, the Scotch company receives dollars, but since those dollars cannot be spent in Great Britain, they must be converted into British pounds. Second, international businesses use foreign exchange markets when they must pay a foreign company for its products or services in its country's currency. For example, a large British travel company arranges vacations for British school children and their teachers in France. French hotel proprietors demand payment in Euros, so British company must convert large sums of money from pounds into Euros to pay them. Third, international businesses use foreign exchange markets when they have additional cash that they wish to invest for short terms in money markets. For example, consider a U.S company that has \$100 million it wants to invest for six months. The maximum interest in US market may be 7 percent. However, the company may earn 13 percent if it invests in South Korean money market. Thus, the company may change its \$100 million into Korean won and invest it in South Korea. Note that the actual rate of return it earns on this investment depends not only on the Korean interest rate, but also on the charges in exchange rate between won and dollar during the intervening period. Finally, currency speculation is another use of foreign exchange markets. Currency speculation involves the short-term movement of funds from one currency to another in the hope of earning profits from shifts in exchange rates. For example, consider a U.S. company with \$10 million to invest for three months. Suppose the company suspects that the U.S. dollar is overvalued against the Japanese yen. In other words, the company expects the value of the dollar to depreciate against that of the yen. Suppose the current 44 ? NSOU ? PGCO-III dollar/yen exchange rate is \$1 = ¥120. The company exchanges its \$10 million into yen, receiving ¥1.2 billion. Over the next three months, the value of the dollar depreciates until \$1 = ¥100. Now the company exchanges its ¥1.2 billion back into dollars and finds that it has \$12 million. The company has made a \$2 million profit on currency speculation in three months on an initial investment of \$10 million.

**100%**

**MATCHING BLOCK 18/173**

**SA**

IBM SLM.docx (D111408454)

Credit function Another function of the foreign exchange market is to provide credit, both national and international, to promote foreign trade.

Because the movement of goods between countries takes time, inventory in transit must be financed. Specialized instruments, such as bankers' acceptances and letters of credit are available to finance international trade. Hedging function A third function of the foreign exchange market is to hedge foreign exchange risk. In

the context of forex market, hedging means covering risk arising from changes in the exchange rate. In a free exchange market when exchange rates

**92%**

**MATCHING BLOCK 19/173**

**SA**

IBM SLM.docx (D111408454)

change, there may be a gain or loss to the party concerned. Under this condition, a person or a firm undertakes a great exchange risk if there are huge amounts of net claims or net liabilities which are to be met in foreign money. Exchange risk as such should be avoided. For this the exchange market provides facilities for hedging anticipated or actual claims or liabilities through forward or futures contracts in exchange.

For instance, suppose an Indian importer imports goods from the USA for \$10 million and he needs this amount for making payments to the exporter. For this purpose, he will purchase US dollar futures contract which would lock in the price to be paid to the exporter in terms of US dollar at a future settlement date. By holding a futures contract, the importer does not have to worry about any change in the spot rate of the US dollar over time. On the other hand, if the Indian exporter exports goods to a US firm and has to receive US dollar for the exports, the exporter would sell a US dollar futures contract. This way the exporter will be locking in the price of the export to be received in terms of US dollar. Thus, the forex market provides 'hedging' facilities for transferring foreign exchange risk. 2.8 Exchange Rates An

**85%**

**MATCHING BLOCK 20/173**

**SA**

179E1150-International Economics.pdf (D165203112)

exchange rate is the rate at which one currency can be exchanged for another. It is the price of one currency

expressed in terms of another currency.

In this context you

NSOU ? PGCO-III ? 45 keep in mind basic pricing, say the price of an apple. If the price is Rs 50/apple, the price is Rs 50, the unit is the apple. Just as a product has a price in a store, a unit of currency has a price. For example, a book in a British airport can cost 13.25 British pounds or 30 US dollars. Likewise, a euro can cost either £0.72 or \$1.17. £13.25 £0.72 \$30.00 \$1.17 Focusing on the US dollar price for the book and the euro, these are the two ways to look at a transaction- from the customer perspective and from the store perspective. In the case of the book, from the customer perspective, the customer gets a book in exchange for 30 dollars. 30 USD Book This relationship can be written in terms of an 'exchange rate': 1book 1 30 USD 30 ? book/USD = 0.03 book/USD

46 ? NSOU ? PGCO-III This ratio says that the customer gets one book per 30 US dollars. Or, we put another way; one-thirtieth of a book per 1 US dollar. From the store perspective, it gets 30 US dollars per book, or: 30 USD 30 1book 1 ? USD/Book =30 USD/Book This rate says that the store gets 30 U.S. dollars per one book. You note that the exchange rates above-1/30 book/USD and 30/1 USD/Book- are simply inverse ratios of one another. In the case of the euro, from the customer perspective, the customer gets one euro in exchange for 1.17 US dollars. 1.17 USD 1 euro The exchange rate then is: 1euro 1 1.17 USD 1.17 ? Euro/USD = 0.85 euros/USD This ratio 0.85 Euros/USD says that the customer gets 1 euro per 1.17 U.S. dollars. Or, put another way 0.85 Euros per 1 US dollar. The inverse of that ratio gives the store perspective: 1.17 USD 1Euro = 1.17 USD/Euro This ratio says that the store gets 1.17 U.S. dollars per 1 euro.

NSOU ? PGCO-III ? 47 It is no matter which form the exchange rate takes—the ratio or inverse ratio—the relationship between the currencies is the same. Getting 1.17 US dollars per 1 euro is the same as getting 1 U.S. dollar per 0.85 Euros.

2.9 Foreign Exchange Quotation A foreign exchange quotation (or quote) is a statement of willingness to buy or sell at an announced rate for the two currencies. Quotations may be designated by traditional currency symbols or by ISO (International Standards Organization) codes. Actually ISO developed three-letter codes for all the currencies which abbreviate the name of the country as well as the currency. The codes were developed for use in electronic communications. Some of the major codes are given in the following table:

Currency	Traditional Symbol	ISO code
US Dollar	\$	USD
European Euro	•	EUR
Great British Pound	£	GBP
Japanese Yen	¥	JPY
Australian Dollar	A\$	AUD
Hong Kong Dollar	HK\$	HKG
Indian Rupee	₹	INR
South Korean Won	₩	KRW
Russian Ruble	Р	RUB
Switzerland Franc	Fr	CHF

Today, all wholesale trading, that is, the trading of currencies between major banks in the global market place, uses the ISO codes. Although there are no hard and fast rules in the retail markets and in business periodicals. European and American periodicals have a tendency to use the traditional currency symbols, while many publications in Asia and the Middle East have embraced the use of ISO codes. The paper currencies (bank notes) of most countries continue to use the country's traditional currency symbol.

48 ? NSOU ? PGCO-III 2.9.1 Principles of Exchange Rate Quotes Foreign exchange quotations follow a number of principles/conventions. The inter- bank market uses quotation conventions adopted by ACI (Association Cambiste Internationale). These conventions are explained below:

- Every currency exchange involves two currencies, currency 1 (CUR 1) and currency (CUR2): CUR1/CUR2 a currency pair is denoted by the three letter ISO codes for the two currencies, separated by an oblique or a hyphen. For example USD/INR : US dollar-Indian rupee GBP/JPY : Great Britain Pound-Japanese Yen EUR/USD : European euro-US dollar

ii. The currency to left of the slash is called the base currency or the unit currency. The currency to the right of the slash is called the

price currency or quoted currency. Thus, in USD/INR, US dollar is the base currency and Indian rupee is the quoted currency. iii. The quotation always indicates the number of units of the quoted currency, CUR2, required in exchange for receiving one unit of the base currency, CUR1. For example a USD/INR quotation will be given as number of rupees per dollar. Thus, a quotation of USD/INR 68 designates the US dollar (USD) as the base currency and Indian rupee (INR) as the quoted currency and the exchange rate is INR 68.00 = USD 1.00. If you can remember that

the currency quoted on the left of the slash is always the base currency and

always a single unit, you can avoid confusion. iv. Although a newspaper or magazine article will state an exchange rate as a single value, the retail or wholesale market for buying and selling currencies, uses two different rates, one for buying and one for selling. Thus, a quotation consists of two prices- bid price and ask price. This way of quoting exchange rate is known as two-way quotations. A two-way quotation gives

the exchange rate at which an authorized dealer (AD) is ready to buy a currency in the currency pair, and the exchange rate at which the AD is ready to sell a currency

in the currency pairs. A bid is the price (i.e., exchange rate) in one currency at which a dealer will buy another currency.

An ask price is the price (i.e., exchange rate) at which a

NSOU ? PGC0-III ? 49 dealer will sell the other currency. The price shown on the left of the oblique is the bid price and the price on the right is the ask price. For example, GBP/EUR 1.4015/1.4025 The dealer will buy 1 GBP and pay EUR 1.4015 in return. His bid rate for GBP is EUR 1.4015. He will sell one GBP and would want to be paid EUR 1.4025 in return. His ask rate for one GBP is EUR 1.4025. v. Quotations in inter-bank markets are usually given upto five or six significant digits and for decimal places. The last two digits have a value of 0.0001 if the currencies are quoted to four decimal places. The last two digits are called 'points' or 'pips' which represents the smallest price increment a currency can make against another currency in foreign exchange trading. vi. The quotations are usually shortened as follows: GBP/JPY: 1.5660/1.5670 will be given as 1.5660/70. When two dealers are conversing with each other, this may be further shortened to 60/70. The first three digits viz. 1.56 are known as the 'big figure' and professional dealers are supposed to know what the big figure is at all times. The quotations are always with respect to the dealers. For example, EUR/USD 1.2170/1.2178 Or 1.2170/78 EUR-Base currency You can sell 1 euro for 78 - Traders may quote \$1.2170-Bid price only the last two digits USD - Quoted currency You can buy 1 euro for on a rate. \$1.2178-Ask price However, according to Eiteman et al., the order of currencies in quotations used by traders is quite confusing. As noted by one major international banking publication: The notation EUR/USD is the system used by traders, although mathematically it would be more correct to express the exchange rate the other way around, as it shows how many USD have to be paid to obtain EUR 1. This is why the following currency quotes are also expressed as: EUR/USD 1 .2170 → \$1.2170/• USD/JPY 83.16 → ¥83.16/\$ GBP/USD 1.5552 → \$1.5552/£

50 ? NSOU ? PGC0-III and so on. vii. For every quote (A/B) between two currencies, there exist an inverse quote (B/ A), where currency A is being bought and sold with its price expressed in terms of B. Thus, a (B/A) quote is ask bid 1 1 A A B B ? ? ? ? ? ? ? ? ? ? 2.9.2 Direct and Indirect Quotations A direct quote is the price of a foreign currency in domestic currency units. In direct quote, the home currency fluctuates and the foreign currency against which it is quoted remains constant. Thus, a direct quote is a quote where the exchange rate is expressed in terms of number of units of the home currency of that country per unit of foreign currency. For example, if we say that \$1 = Rs. 68, we are expressing one unit of dollar (a foreign currency for an Indian) in terms of some units of domestic currency. Therefore, it is a dollar direct quote for an Indian in India and it is also expressed as USD/INR 68 or INR 68 per USD. Let us take another example. A woman might see the following quote in Paris: EUR 0.8415 = USD 1.00 In France, the home currency is the euro and the foreign currency is the dollar. This quotation in France is termed as a direct quote on the dollar or a price quote on the dollar. Verbally, she might say to herself "0.8415 euro per dollar" or "it will cost me 0.8415 euros to get one dollar". At the same time a man in New York City may see the following quote in a bank window: USD 1.1883 = EUR 1.00 In New York, the home currency is the dollar and the foreign currency is the euro. Thus, this would be a direct quote on the euro in the New York (the home currency price of one unit of foreign currency). An indirect quote is the price of the domestic currency in foreign currency units. In indirect quote, the foreign currency fluctuates and the home currency remains constant. Thus, an indirect quote is a quote where the exchange rate is expressed in terms of units of the foreign currency per fixed number of units of home currency. For example, if we say that ₹ 1 = \$0.0147, we are expressing a standard unit of rupee (domestic currency for an Indian) in terms of some units of foreign currency (\$). Thus, in this type of quote,

NSOU ? PGCO-III ? 51 the foreign currency fluctuates and the home currency remains constant. In ISO code the above indirect quotation is expressed as INR/USD 0.0147 or USD1.4705 per INR100 where unit for rupees is 100s. In the previous France-New York example of direct quotes, the corresponding indirect quotations for the two countries will be as follows: In France : USD1.1883 = EUR 1.00 In New York : EUR0.8415 = USD 1.00 The two quotes are obviously equivalent, one being the reciprocal of the other:  $1 \text{ EUR} \times 0.8415 / \text{USD} = \text{USD } 1.1883 / \text{EUR}$  As the indirect quotation is the reciprocal of the direct quote, one can obtain an indirect quote, given a direct quote and vice versa.

2.9.3 European terms and American terms European terms have been market practice for quotations in most of the countries of the past 60 years or more where the base currency is the US dollar. It refers to the quoting of the quantity of a specific currency per one US dollar. It means that whenever a currency's value is quoted, it is quoted in terms of number of units of currency to equal one US dollar. The result is that most currencies are quoted per U.S. dollar— Japanese yen per U.S. dollar, Brazilian real per U.S. dollar, Chinese renminbi per U.S. dollar and so on. There are two major exceptions to this rule of using European terms: the euro and the U.K pound sterling. Both are normally quoted in American terms; the U.S. dollar price of one euro and the US dollar price of one pound sterling. Additionally, Australian dollars and New Zealand dollars are normally quoted on American terms. Thus in American terms, USD becomes the quoted currency against these currencies (i.e., euro, U.K pound, etc.). American terms are used in quoting rates for most foreign currency options and futures, as well as in retail markets that deal with tourists and personal remittances. However, this is largely a result of established practices which have been perpetuated, not based on some basic laws of nature or finance. For instance, GBP 0.6210/USD, read as "0.6210 British pounds per US dollar" is a quotation in European terms (i.e., the foreign currency price of one US dollar). The USD1.6103/GBP, read as "1.6103 US dollars per British pound" is a quotation in American terms (i.e., the US dollar price of one unit of the foreign currency).

52 ? NSOU ? PGCO-III Let us take another example of currency quotations in European terms and American terms. Let us also assume that we are having two currencies-U.S. dollar (USD) and euro (EUR). European terms American terms ? ? Foreign currency price of one dollar (USD) US dollar price of one euro (EUR) ? ? USD/EUR 0.7125 EUR/USD 1.4035 Or Or USD 1.00 = EUR 0.7125 EUR 1.00 = USD 1.4035 ? ? USD is the base or unit currency EUR is the base or unit currency EUR is the quoted or price currency USD is the quoted or price currency Thus,  $1 \text{ EUR} \times 0.7125 / \text{USD} = \text{USD } 1.4035 / \text{EUR}$  It indicates that American terms and European terms are reciprocals. Foreign exchange traders may also use nicknames for major currencies. Some of the nicknames are as follows: Nick names Currency/ Currency pair Cable Exchange rate between U.S. dollars and U.K. pounds sterling Loonie Canadian dollar Kiwi New Zealand dollar Aussie Australian dollar Swissie Swiss francs Sing dollar Singapore dollar and so on.

NSOU ? PGCO-III ? 53 2.9.1 Spread

Spread is the difference between the ask price and the bid price

in a two-way quotation. The rate at which the dealer buys the foreign currency is known as bid rate/ price and another rate for selling the foreign currency is referred to as ask rate/price. Since dealers expect profit in foreign exchange operations, the two prices cannot be the same. The dealer will buy the foreign currency at a lower rate and sell the foreign currency at a higher rate and will make their profit from the spread. The spread is affected by a number of factors-such as currency involved, the volume of business, the market sentiments etc. The bid-ask spread may be quite large for currencies that are traded infrequently, in small volumes or both. In percentage terms, spread can be expressed in terms of the following:  $\text{Spread (percentage)} = \frac{\text{Ask price} - \text{Bid price}}{\text{Bid price}} \times 100$   $\text{Ask price} = \text{Bid price} \times \left(1 + \frac{\text{Spread (percentage)}}{100}\right)$   $\text{Bid price} = \frac{\text{Ask price}}{1 + \frac{\text{Spread (percentage)}}{100}}$

2.9.2 Cross rates Many currencies pairs are inactively traded, so their exchange rate is determined through their relationship to a widely traded third currency. A cross rate is the exchange rate between two currencies that are each expressed in terms of a third currency. The third currency is called the vehicle currency. A cross rate can be obtained by multiplying two exchange rates so as to eliminate a third currency that is common to both rates. The most common use of cross rate calculations is to determine the exchange rate between two currencies that are quoted against the US dollar but not against each other. Suppose there are three currencies A, B and C. Currency B is expressed in terms of A and currency C is also expressed in terms of A. Therefore, currency A is the vehicle currency. But currency B and C are not expressed in terms of each other. A cross rate is the exchange rate between currency B and C, using the exchange rates between currencies A and B, and currencies A and C. That is:  $B = \frac{B}{A} \times A = \frac{B}{A} \times \frac{A}{C} \times C$  ? ?

54 ? NSOU ? PGCO-III Accordingly, bid bid bid B B A , C A C ? where bid ask A 1 C C A ? ?  
? ? ? ? ? ? ? ? ? ? ? ? ? ? ask ask ask B B A C A C ? , where ask bid A 1 C C A ? ? ? ? ? ? ? ? ? ? ? ? ? ?

2.9.3 Spot exchange rate and Forward exchange rate Spot exchange rates are applicable to the purchase and sale of foreign exchange on an immediate delivery basis. Spot rate refers to the rate of exchange of the day on which the transaction has taken place for delivery within two business days. The forward exchange rate is the rate at which the actual exchange of currencies takes place at a specified date in the future. In general, spot rate and forward rates have two-way quotations, i.e. the quotation contains both the bid rate and the ask rate. If a forward rate in home currency is more than the spot rate, the

<b>100%</b>	<b>MATCHING BLOCK 22/173</b>	<b>SA</b>	IBM SLM.docx (D111408454)
foreign currency is said to be at a forward premium			

and if it is less than the spot rate, the foreign currency is at a forward discount. If the forward rate is equal to the spot rate, the foreign currency is said to be flat. The forward premium or discount can be expressed as an annualized percentage as follows: Annualized percentage forward premium/discount Forward rate Spot rate 360 100 Spot rate n ? ? ? Where n refers to the number of days for which the forward contract has been made. 2.9.4 Illustrations Problem 1 Identify whether the following is a direct quote in the USA. If not, find it.

NSOU ? PGCO-III ? 55 a) ≠ 69 = 1\$ b) GBP 1 = \$0.748 Solution A direct quote is one where one unit of foreign currency is expressed as some units of domestic currency. In the USA, \$ is the home currency. a) No. this is indirect quote in the USA. Direct quote in the USA would be ≠ 1 = \$ 1 69 = \$0.0144 b) This is a direct quote in the USA. Problem 2 From a Japanese point of view, which of the following is direct quote? Which is the indirect quote? a) JPY/GBP 310 b) GBP/JPY 0.00322 c) JPY/USD 230 d) USD/JPY 0.00434 Solution A direct quote is one where one unit of foreign currency is expressed as some units of domestic currency. For Japan, JPY is the home currency. a) Direct quote b) Indirect quote c) Direct quote d) Indirect quote Problem 3 A quotation is given as USD/CHF 1.6370/75 a) What are the two currencies involved? b) Is the rate being stated as USD per CHF or CHF per USD?

56 ? NSOU ? PGCO-III c) At what rate will the bank give the quote to buy USD? d) At what rate will it sell USD? e) How much is the bid-offer spread in points? Solution a) The two currencies are US dollar and Swiss franc b) The rate is being stated as CHF per USD or CHF price of 1 USD c) The bank will buy 1 USD for 1.6370 CHF d) The bank will sell 1 USD for 1.6375 CHF e) The bid-offer spread is 5 points. Problem 4 Given the bid-ask quotes for JPY/GBP 320-330, at what rate will: a) Mr. A purchase GBP? b) Mr. B sell GBP? c) Mr. C purchase JPY? d) Mr. D sell JPY? Solution a) Mr. A will purchase GBP at 330 b) Mr. B will sell GBP at 320 c) Here JPY/GBP 320 i.e., GBP/JPY 1/320 = 0.00312 Therefore, Mr. C will purchase JPY at 0.00312 d) Here JPY/GBP 330 i.e., GBP/JPY 1/330 = 0.00303 Therefore, Mr. D will sell JPY at 0.00303.

Problem 5 From the data given below, calculate forward premium or discount, as the case may be, of the dollar in relation to the rupee. Spot 1month forward 3monthsforward /\$ 67.8441/ 68.0144 68.1235/3000 67.5045/ 6456 ?

NSOU ? PGCO-III ? 57 Solution Since 1 month forward rate is higher than the spot rate, the U.S. \$ is at premium. The premium amount is determined separately both for bid price and ask price. Premium with respect to bid price = 68.1235 67.8441 360 100 67.8441 30 ? ? ? = 4.94 per cent per annum Premium with respect to ask price = 68.3000 68.0144 360 100 68.0144 30 ? ? ? = 5.04 per cent per annum In the case of 3 months forward, since spot rates are higher than the forward rates, the U.S. \$ is at a discount. Discount with respect to bid price = 67.5045 67.8441 360 100 67.8441 90 ? ? ? = - 2.00 per cent p.a Discount with respect to ask price = 67.6456 68.0144 360 100 68.0144 90 ? ? ? = - 2.17 per cent p.a

Problem 6 Calculate the cross rates for: a) Dinar/US dollar (ID/USD) b) /shekel (INR/NIS) c) Maltese lira/rupee (LM/INR) from the direct exchange rates provided by an AD. USD 1.1710/1• ≠ 17.10/AUD ≠ 44.20/USD Dinar 7.71/1• Shekel 6.40/AUD Maltese Lira 57.50/USD Solution Step 1: Identify the vehicle currency from two currency pairs.

58 ? NSOU ? PGCO-III Step 2: Calculate the appropriate exchange rates needed for the cross rate. Step 3: Apply the formula for the cross rate. Exchange rate Vehicle Cross rate required currency Dinar/USD(IS/USD) Euro(•) Dinar Dinar Euro USD Euro USD ? ? Dinar Euro = Dinar 7.71/euro Euro 1 1 USD USD/ Euro 1.1710 ? ? = Euro 0.8539 / USD Therefore ID/USD = (7.71) x (0.8539) = Dinar 6.5836/USD Rs/Shekel(INR/NIS) AUD (Rs/Shekel) = (Rupee/AUD) (AUD/Shekel) Rupee/AUD = Rs 17.10/AUD AUD/Shekel = 1 / (shekel/AUD) = 1/6.40 = 0.1563 Therefore, INR/NIS = (17.10)(0.1563) = Rs 2.6727/Shekel Maltese Lira/Rs USD (LM/INR) = (LM/USD) x (USD/INR) (LM/INR) (LM/USD) = LM 57.50/USD (USD/INR) = ? ? INR USD 1 1 44.20 ? = USD 0.0226/INR Therefore, (LM/INR) = (57.50)(0.0226) = LM 1.2995/INR 2.10 Concept of Devaluation and Revaluation of Domestic Currency In a fixed

**50% MATCHING BLOCK 21/173**

**W**

exchange rate regime, reduction in the value of a currency relative to another currency is called devaluation of a currency. In

other words, devaluation refers to NSOU ? PGCO-III ? 59 any increase in

**82% MATCHING BLOCK 23/173**

**SA** 179E1150-International Economics.pdf (D165203112)

the exchange rate of the domestic currency relative to a foreign currency. The opposite

phenomenon is known as revaluation or up-valuation of currency. Thus, revaluation refers to an increase in the value of the currency relative to another currency.

For example, if the Government of India changes its official exchange rate from USD/ INR 68 to USD/INR 70, it implies that the Indian rupee has been devalued against the US dollar. On the other hand, if the Government of India changes its official exchange rate from USD/INR 70 to USD/INR 66, it implies that the Indian rupee has been revalued or up-valued against the US dollar. However, in the floating exchange rate regime, a fall in a currency value relative to another currency is known as depreciation of currency and any increase in a currency value relative to another currency is known as appreciation of currency. It should be noted that the difference between devaluation and depreciation is that while devaluation is reduction of the external value of a currency as arbitrarily decided upon by the Government, depreciation stands for automatic reduction in the external value of a country's currency by market forces. However, both imply the same thing, i.e., lower value of the local currency in terms of foreign currencies. Similarly, both devaluation and depreciation produce similar effects-increase exports (by making local goods cheaper to foreigners), curtail imports (by making foreign goods expensive) and ultimately correct an adverse balance of payments and make it a favorable one.

2.11 Devaluation as a Policy for Correcting Deficit in the Balance of Payments In this section, the method of correcting a deficit in the balance of payments has been examined by depreciation or devaluation of the nation's currency. The term, depreciation, is related to flexible exchange rate system and devaluation is related to fixed exchange rate system. Devaluation refers to the deliberate (policy) increase in the exchange rate by the nation's monetary authorities from one fixed or pegged level to another. If a country devalues its currency, its import prices rise and this leads to a fall in the demand for imports. At the same time, prices of exports of the devaluing country will decrease in the world market. So as a result of devaluation, imports will fall on the one hand and exports will rise on the other. Hence, the balance of payments of the devaluing country is likely to improve. Since both depreciation and devaluation operate on prices to bring about adjustment in the nation's balance of payments, they are both referred to as the

60 ? NSOU ? PGCO-III price adjustment mechanism. This is to be distinguished from the income adjustment mechanism, which relies on income changes in the nation and abroad. However, there is no guarantee that devaluation will always lead to an improvement in the balance of payments. There are two approaches to consider the effectiveness of devaluation as a policy for correcting deficit in the balance of payments. The first approach is known as the elasticity approach, developed by Marshall and Lerner and the second approach is known as the absorption approach, developed by Sidney Alexander. These two approaches are discussed below: [The following discussion has been adopted from International Economics, written by Salvatore, D. For a better understanding of the present section you are advised to go through the above reference] 2.11.1 Elasticity Approach When a country suffers from deficit in the balance of payments, it wants to correct that deficit by raising the rate of exchange i.e., by devaluing its home currency. The condition under which devaluation will be successful has been discussed by Marshall and Lerner. The condition states that devaluation will be successful if

<b>64%</b>	<b>MATCHING BLOCK 24/173</b>	<b>SA</b>	179E1150-International Economics.pdf (D165203112)
the sum of absolute values of elasticities of demand for exports and imports is greater than unity.			

This condition is called the Marshall – Lerner condition. It is also known as elasticity approach as it is based on

<b>44%</b>	<b>MATCHING BLOCK 25/173</b>	<b>SA</b>	179E1150-International Economics.pdf (D165203112)
elasticities of demand for exports and imports. We now derive mathematically the Marshall–Lerner condition that the sum of the elasticities of the demand for imports and			

the demand for exports must exceed 1 for the foreign exchange market to be stable. This is valid when the supply curves of imports and exports (i.e.,  $S_M$  and  $S_X$ ) are both infinitely elastic, or horizontal and initially there is equilibrium in the balance of payments. To derive the Marshall–Lerner condition mathematically, let:  $X$  = quantity of exports  $M$  = quantity of imports  $P_X$  and  $P_M$  = prices of exports and imports in foreign currency  $q_X$  and  $q_M$  = prices of exports and imports in terms of domestic currency  $r$  = rate of exchange defined as units of domestic currency per unit of foreign currency i.e., 1 unit of foreign currency =  $r$  units of domestic currency

NSOU ? PGCO-III ? 61 Price elasticity of the demand for exports  $\epsilon_X = \frac{X}{P_X} \frac{dP_X}{dX}$  and  $\epsilon_M = \frac{M}{P_M} \frac{dP_M}{dM}$ . Therefore,  $\epsilon_X = \frac{X}{P_X} \frac{dP_X}{dX}$  and  $\epsilon_M = \frac{M}{P_M} \frac{dP_M}{dM}$ . Price elasticity of the demand for imports  $\epsilon_M = \frac{M}{P_M} \frac{dP_M}{dM}$ . Therefore,  $\epsilon_X = \frac{X}{P_X} \frac{dP_X}{dX}$  and  $\epsilon_M = \frac{M}{P_M} \frac{dP_M}{dM}$ . By definition  $P_X \cdot r = q_X$  and  $P_M \cdot r = q_M$ . Balance of trade in foreign currency It is assumed that demand for exports depends on foreign price of exports  $X = X(P_X) = X(q_X/r)$  and demand for imports is a function of domestic price of imports  $M = M(q_M) = M(P_M \cdot r)$ . Now  $B = X \cdot P_X - M \cdot P_M = X \cdot q_X/r - M \cdot P_M \cdot r$ . Since supply of exports is infinitely elastic,  $q_X$  is constant. Similarly since the supply of imports is infinitely elastic  $P_M$  is also constant. Then  $B$  is a function of  $r$  only. When devaluation takes place,  $r$  increases. Now devaluation will be successful if  $dB > 0$  when  $dr > 0$ .

Differentiating  $B$  with respect to  $r$  we get  $\frac{dB}{dr} = \frac{d}{dr} \left( \frac{X \cdot q_X}{r} - M \cdot P_M \cdot r \right) = -\frac{X \cdot q_X}{r^2} - M \cdot P_M$ . For devaluation to be successful,  $\frac{dB}{dr} > 0$  when  $dr > 0$ . This implies  $-\frac{X \cdot q_X}{r^2} - M \cdot P_M > 0$  or  $\frac{X \cdot q_X}{r^2} < -M \cdot P_M$ .

62 ? NSOU ? PGCO-III ?  $\frac{X \cdot q_X}{r^2} < -M \cdot P_M$  or  $\frac{X}{M} < \frac{r^2 \cdot P_M}{q_X}$ . Since  $\frac{X}{M} = \frac{P_M \cdot r}{q_X}$  (from  $B = 0$  in initial position), we have  $\frac{P_M \cdot r}{q_X} < \frac{r^2 \cdot P_M}{q_X}$  or  $1 < r$ . This is the Marshall – Lerner condition for successful devaluation. The condition states that for successful devaluation, the sum of absolute values of demand elasticities for exports and imports should be greater than unity. 2.11.2 Absorption approach A nation can correct a deficit in its balance of payments by devaluation. Because the improvement in the nation's trade balance depends on the price elasticity of demand for its exports and imports, this method of correcting a deficit is referred to as the elasticity approach. The improvement in the deficit nation's trade balance arises because devaluation stimulates the nation's exports and discourages its imports. However, the elasticity approach has been criticized on several grounds. Firstly, when

NSOU ? PGCO-III ? 63 devaluation takes place, it is difficult to measure real-world values of elasticities of demand for exports and imports. Different studies confirm that the sum of the elasticities of the demand for imports and the demand for exports is either below or very close to 1 in absolute value and the pre-war elasticity optimism was replaced by post-war elasticity pessimism. Secondly, the regression technique used to estimate elasticities leads to gross underestimation of the true elasticities in international trade which results from the identification problem in estimation (Orcutt, 1950). Thirdly, when the nation's net balance of trade is plotted on the vertical axis and time is plotted on the horizontal axis, the response of the balance of trade to a devaluation looks like the curve of a J and the figure assumes that the original trade balance was zero. This tendency of a nation's balance of trade to deteriorate first before improving as a result of devaluation in the nation's currency is called the J-curve effect. Several studies [e.g., Harberger (1957), Houthakker and Magee (1969), Stern, Francis, and Schumacher (1976), Spitaeller (1980), Artus and Knight (1984) (summarized and reviewed by Goldstein and Khan, 1985), Marquez (1990), and Hooper, Johnson, and Marquez (1998) etc.] have also confirmed the existence of a J-curve effect. Fourthly, there are not only lags in the response of a nation's trade and current account balances to a devaluation of its currency, but also the increase in the domestic price of the imported commodity may be smaller than the amount of the devaluation. Thus, the pass-through from devaluation to domestic prices may be less than complete i.e., less than one. The exchange-rate pass-through is the elasticity of local-currency import prices with respect to the local-currency price of foreign currency, often measured as the percentage change, in the local currency, of import prices resulting from a one percent change in the exchange rate between the exporting and importing countries. For example, a 20 percent depreciation in the nation's currency may result in a less than 20 percent increase in the domestic-currency price of the imported commodity in the nation. The reason is that foreign firms may be reluctant to increase in the price of its exports and are usually willing to absorb at least some of the price increase that they could charge out of their profits. Specifically, a foreign firm may only increase the price of its export commodity by 8 percent and accept a 12 percent reduction in its profits when the other nation's currency depreciates by 20 percent for fear of losing market share. That is, the pass-through is less than 1.

64 ? NSOU ? PGCO-III Sidney Alexander in 1952 developed an alternative approach in this respect which is called Absorption Approach. Alexander explained the Absorption Approach with the help of an identity that production or income (Y) is equal to consumption (C) plus domestic investment (I) plus foreign investment or the balance of trade (X - M), all in real terms where X is the export and M is the import. That is,  $Y = C + I + (X - M)$  Suppose A is equal to domestic absorption (C + I) and B is equal to balance of trade (X - M), we have  $Y = A + B$  By subtracting A from both sides, we get  $Y - A = B$  That is, domestic production or income minus domestic absorption equals the balance of trade. To improve the balance of trade (B) as a result of devaluation, Y must rise and/ or A must fall. If the nation is at full employment, production or real income (Y) will not rise, and the devaluation can be effective only if domestic absorption (A) falls, either automatically or as a result of contractionary fiscal and monetary policies. A devaluation of the deficit nation's currency automatically reduces domestic absorption if it redistributes income from wages to profits (since profits earners usually have a higher marginal propensity to save than wage earners). In addition, the increase in domestic prices resulting from the devaluation reduces the value of the real cash balances that the public wants to hold. To restore the value of real cash balances, the public must reduce consumption expenditures. Finally, rising domestic prices push people into higher tax brackets and also reduce consumption. Since we cannot be certain as to the speed and size of these automatic effects, contractionary fiscal and monetary policies may have to be used to cut domestic absorption adequately. Thus, while the elasticity approach stresses the demand side and implicitly assumes that slack exists in the economy that will allow it to satisfy the additional demand for exports and import substitutes, the absorption approach stresses the supply side and implicitly assumes an adequate demand for the nation's exports and import substitutes. It is clear, however, that both the elasticity approach and the absorption approach are important and both must be considered simultaneously.

NSOU ? PGCO-III ? 65 2.12 Different Exchange Rate Regimes and Their Mechanisms "An exchange-rate regime is the way an authority manages its currency in relation to other currencies and the foreign exchange market"(Wikipedia). One must have an idea in foreign exchange rate regimes to understand foreign exchange rate behaviour better, since the choice of foreign exchange rate regimes can influence how the exchange rate between two currencies moves and fluctuates on foreign exchange markets. The exchange rate can be totally flexible or completely free to float on the foreign exchange market on the one hand, and fixed or pegged to one of the major currencies or a basket of currencies on the other hand. Between these two extremes, there can be a few types of exchange rate arrangements and combinations. The different prevailing exchange rate regimes are explained below: [The following discussion has been adopted solely from International Economics, written by Salvatore, D. For a better understanding of the present section you are advised to go through the above reference, Pp. 656-673]

### 2.12.1 Optimum Currency Areas

An optimum currency area represents a group of nations whose national currencies are linked through permanently fixed exchange rates and the conditions that would make such an area optimum. The currencies of member nations could then float jointly with respect to the currencies of non-member nations. The formation of an optimum currency area also encourages producers to view the entire area as a single market and to benefit from greater economies of scale in production. With permanently fixed exchange rates, an optimum currency area is likely to experience greater price stability than if exchange rates could change between the various member nations. This greater price stability encourages the use of money as a store of value and as a medium of exchange, and discourages inefficient barter deals arising under more inflationary circumstances. An optimum currency area also saves the cost of official interventions in foreign exchange markets involving the currencies of member nations, the cost of hedging, and the cost of exchanging one currency for another to pay for imports of goods and services and when citizens travel between member nations (if the optimum currency area also adopts a common currency). The greatest disadvantage of an optimum currency area is that each member nation cannot pursue its own independent stabilization and growth policies in tune to its particular preferences and circumstances. For example, a depressed region or nation within an optimum currency area might require expansionary fiscal and monetary policies to reduce an excessive unemployment rate, while the more prosperous region or nation might require contractionary policies to curb inflationary pressures. The formation of an optimum currency area is more likely to be beneficial on balance under the following conditions: (1) the greater the mobility of resources among the various member nations, (2) the greater their structural similarities, and (3) the more willing they are closely to coordinate their fiscal, monetary, and other policies. An optimum currency area should aim at maximizing the benefits from permanently fixed exchange rates and minimizing the costs. It is not easy, however, to actually measure the net benefits accruing to each member nation or region from joining an optimum currency area. The case for the formation of an optimum currency area is to some extent also a case for fixed as opposed to flexible exchange rates. In the context of an optimum currency area, in March 1979, the European Union or EU (then called the European Economic Community or EEC) announced the formation of the European Monetary System (EMS) as part of its aim toward greater monetary integration among its members, including the ultimate goal of creating a common currency and a Community-wide central bank. The main features of the EMS were (1) the European Currency Unit (ECU), defined as the weighted average of the currencies of the member nations, was created. (2) The currency of each EU member was allowed to fluctuate by a maximum of 2.25 percent on either side of its central rate or parity. The EMS was thus created as a fixed but adjustable exchange rate system and with the currencies of member countries floating jointly against the dollar. Starting in September 1992, however, the system came under attack, and in August 1993 the range of allowed fluctuation was increased from 2.25 percent to 15 percent. (3) The European Monetary Cooperation Fund (EMCF) was established to provide short and medium-term balance-of-payments assistance to its members. In June 1989, a committee headed by Jacques Delors, the president of the European Commission, recommended a three-stage transition to the goal of monetary union. The first stage, which started in July 1990, called for convergence of economic performance and cooperation in monetary and fiscal policy, as well as the removal of all restrictions to intra-Community capital movements. The second stage, approved at a meeting in the Dutch city of Maastricht in December 1991, called for the creation of a European Monetary Institute (EMI) as the forerunner of a European Central Bank (ECB) to further centralize members' macroeconomic policies and reduce exchange rate margins by January

NSOU ? PGCO-III ? 67 1994. The third stage was to involve the completion of the monetary union by either 1997 or 1999 with the establishment of a single currency and a European Central Bank that would engage in foreign exchange market interventions and open market operations. At the beginning of 1999, the European Monetary System became the European Monetary Union (EMU) with the introduction of the euro and a common monetary policy by the European Central Bank. On January 1, 1999, the euro came into existence as the common currency of 11 countries of the euro area or Euroland (Austria, Belgium, Germany, Finland, France, Ireland, Italy, Luxembourg, Spain, Portugal, and the Netherlands). The creation of the euro is one of the most important events in postwar monetary history: Never before had a large group of sovereign nations voluntarily given up their own currency for a common currency. The European Commission, however, ruled that all countries (except Greece) had made sufficient progress for all to participate in the single currency. The United Kingdom, Denmark, and Sweden chose not to participate because of their unwillingness to lose complete control over their money supply and monetary policy, but they reserved the right to join later. Greece was admitted on January 1, 2001, Slovenia in 2007, Cyprus and Malta in 2008, Slovakia in 2009, and Estonia in 2011—thus increasing the number of members of the Eurozone countries to 17. As of the beginning of 2012, the 17 members of the Eurozone were

**70%**

Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia,

and

Spain. (see Figure 1). From January 1, 1999, euros were traded in financial markets, new issues of securities were denominated in euros, and official statistics in the euro area were quoted in euros, but euro bank notes and coins were not introduced until the beginning of 2002. That is, until that date, the euro was only a unit of account and not an actual physical circulating currency. From January 1 until July 1, 2002, euros and national currencies circulated together for nations that so chose, but by July 1, 2002, all national currencies were phased out (taken out of circulation), and euro paper currency and coins became the sole legal tender in the participating members of the euro area. 2.12.2 Currency Board Arrangements Currency board arrangements (CBAs) are the most severe form of exchange rate peg (fixed exchange rate system), short of adopting a common currency or dollarizing (i.e., adopting the dollar as the nation's currency). Under CBAs, the nation rigidly fixes (often by law) the exchange rate of its currency to a foreign currency and its central bank

68 ? NSOU ? PGCO-III ceases to operate as such. CBAs are similar to the gold standard in that they require 100 percent international-reserve backing of the nation's money supply. A nation usually makes this extreme arrangement when it is in deep financial crisis and as a way to effectively combat inflation. CBAs have been in operation in several countries or economies, such as Hong Kong (since 1983), Argentina (from 1991 to the end of 2001), Estonia (from 1992 to the end of 2010), Lithuania (since 1994), Bulgaria (since 1997), and Bosnia and Herzegovina (since 1997). The main advantage of CBAs is the credibility of the economic policy regime which results in lower interest rates and lower inflation in the nation. The cost of CBAs is the inability of the nation's central bank to (1) conduct its own monetary policy, (2) act as a lender of last resort, etc. 2.12.3 Dollarization Under dollarization, a foreign currency acts as legal tender. Besides the Commonwealth of Puerto Rico and the U.S. Virgin Islands, Panama has had full or official dollarization FIGURE 1: The Eurozone Countries as of the Beginning of 2012 (Adopted from Salvatore)

NSOU ? PGCO-III ? 69 since 1904. Ecuador fully dollarized in 2000 and El Salvador in 2001. Since 2001, Nicaragua has nearly fully dollarized and Costa Rica has considered it. The benefits of dollarization arise from the nation (1) avoiding the cost of exchanging the domestic currency for dollars and the need to hedge foreign exchange risks; (2) facing a rate of inflation as a result of commodity arbitrage, and interest rates; (3) avoiding foreign exchange crises and the need for foreign exchange and trade controls, fostering budgetary discipline; and (4) encouraging more rapid and full international financial integration. Dollarization also imposes some costs on the dollarizing country: (1) the cost of replacing the domestic currency with the dollar; (2) the loss of independence of monetary and exchange rate policies; and (3) the loss of its central bank as a lender of last resort to bail out domestic banks and other financial institutions facing a crisis.

2.12.4 Hybrid Exchange Rate Systems Hybrid exchange rate systems combine some of the characteristics of fixed and flexible exchange rates in various degrees. These involve different exchange rate bands of fluctuation about a par value, adjustable peg systems, crawling pegs, and managed floating. These are explained below: Exchange rate bands Most fixed exchange rate systems usually allow the exchange rate to fluctuate within narrowly defined limits. That is, nations decide on the exchange rate, or par value, of their currencies and then allow a narrow band of fluctuation above and below the par value. For example, under the Bretton Woods system, which operated during the postwar period until 1971, the exchange rate was allowed to fluctuate within 1 percent above and below the established par value, or fixed exchange rate. The actual exchange rate under a fixed exchange rate system is then determined by the forces of demand and supply within the band of fluctuation. The advantage of the small band of fluctuation under a fixed exchange rate system is that monetary authorities will not have to intervene constantly in foreign exchange markets to maintain the established par value, but only to prevent the exchange rate from moving outside the allowed limits of fluctuation.

70 ? NSOU ? PGCO-III Adjustable peg systems An adjustable peg system requires defining the par value and the allowed band of fluctuation, with the stipulation that the par value will be changed periodically and the currency devalued to correct a balance-of-payments deficit or revalued to correct a surplus. The Bretton Woods system was originally set up as an adjustable peg system, with nations allowed to change the par value of their currencies when faced with a "fundamental" disequilibrium. A truly adjustable peg system would be one under which nations with balance of-payments disequilibrium would in fact take advantage (or be required to take advantage) of the flexibility provided by the system and change their par values without waiting for the pressure for such a change to become unbearable. For an adjustable peg system to operate as intended, however, some objective rule would have to be agreed upon and enforced to determine when the nation must change its par value. Any such rule would to some extent be arbitrary and would also be known to speculators, who could then predict a change in the par value and profitably engage in destabilizing speculation. Crawling pegs Under crawling peg system or system of "sliding or gliding parities", par values are changed by small preannounced amounts or percentages at frequent and clearly specified intervals, say every month, until the equilibrium exchange rate is reached. The nation could prevent destabilizing speculation by manipulating its short-term interest rate so as to neutralize any profit that would result from the scheduled change in the exchange rate. For example, an announced 2 percent devaluation of the currency would be accompanied by a 2 percent increase in the nation's short-term interest rate. However, this would interfere with the conduct of monetary policy in the nation. Nevertheless, a crawling peg system can eliminate the political stigma attached to a large devaluation and prevent destabilizing speculation. The crawling peg system can achieve even greater flexibility if it is combined with wide bands of fluctuation. Nations wanting to use a crawling peg must decide the frequency and amount of the changes in their par values and the width of the allowed band of fluctuation. A crawling peg seems best suited for a developing country that faces real shocks and differential inflation rates.

NSOU ? PGCO-III ? 71 Managed floating Under a managed floating exchange rate system, the nation's monetary authorities are entrusted with the responsibility of intervening

**84%**

**MATCHING BLOCK 27/173**

**SA**

179E1150-International Economics.pdf (D165203112)

in foreign exchange markets to smooth out short-run fluctuations in exchange rates

without attempting to affect the long-run trend in exchange rates. To the extent that they are successful, the nation receives most of the benefits that result from fixed exchange rates while at the same time retaining flexibility in adjusting balance-of-payments disequilibria. Under a managed float there is still a need for international reserves, whereas under a freely floating exchange rate system, balance-of-payments disequilibria are immediately and automatically corrected by exchange rate changes (with stable foreign exchange markets) without any official intervention and need for reserves. However, the freely floating exchange rate system will experience exchange rate fluctuations that the managed float attempts to moderate. What proportion of the short-run fluctuation in exchange rates monetary authorities succeed in moderating under a managed floating system depends on what proportion of the short-run excess demand for or supply of foreign exchange they absorb. This, in turn, depends on their willingness to intervene in foreign exchange markets for stabilization purposes and on the size of the nation's international reserves. The larger the nation's stock of international reserves, the greater is the exchange rate stabilization that it can achieve. The present system thus exhibits a large degree of flexibility and more or less allows each nation to choose the exchange rate regime that best suits its preferences and circumstances. In general, large industrial nations and nations suffering from greater inflationary pressures than the rest of the world have opted for greater exchange rate flexibility than smaller developing nations or highly specialized open economies. Under the 1976 Jamaica Accords (which more or less formally recognized the de facto managed floating system in operation since 1973), a nation may change its exchange rate regime as conditions change, as long as this does not prove disruptive to trade partners and the world economy. In recent years a near consensus seems to be emerging that nations should only consider and choose between rigidly fixed exchange rates or fairly flexible ones. Intermediate systems are considered less attractive because they are more likely to lead to destabilizing speculation and thus become more easily unsustainable.

of foreign exchange market are: (i) Foreign exchange market is considered as an over the counter (OTC) market as there is no

physical place the participants meet to execute the deals of foreign exchange transactions. (ii) Foreign exchange market is the largest financial market with a daily turnover of over USD 3 Trillion. (iii) The global foreign exchange market is a twenty-four- hour, non-stop market. (iv) Some centers are characterized by very heavy trading during certain times when their business hours overlap with those of many other trading centers. (v) The US dollar is sometimes called a vehicle currency because of its pivotal role in so many foreign exchange deals. (vi) Forex markets make extensive use of the latest developments in telecommunications for transmitting as well as setting foreign exchange transactions. ? The participants in the foreign exchange market comprise of individuals, corporates, commercial banks, investors, dealers and brokers and central bank. ? The foreign exchange market is divided into wholesale market and retail market. The wholesale market is also known as the interbank market. The participants in this market consist of commercial banks, investment banks, central banks, corporations and high-net-worth individuals. The retail market segment consists of trades between commercial banks and their corporate and non-corporate clients. Such trades are called merchant trades. ?

The foreign exchange market serves the following important functions: (i) To effect transfer of purchasing power between countries

which is known as transfer function; (ii) To provide credit for foreign trade which is called credit function; and (iii) To minimize exposure to the risks of exchange rate charges that is known as hedging function. · ? An

**85% MATCHING BLOCK 30/173**

**SA** 179E1150-International Economics.pdf (D165203112)

exchange rate is the rate at which one currency can be exchanged for another. It is the price of one currency

expressed in terms of another currency. . ?

A foreign exchange quotation (or quote) is a statement of willingness to buy or sell at an announced rate for the two currencies. Quotations may be designated

NSOU ? PGCO-III ? 73 by traditional currency symbols or by ISO (International Standards Organization) codes. Actually ISO developed three-letter codes for all the currencies which abbreviate the name of the country as well as the currency.

? A bid is the price (i.e., exchange rate) in one currency at which a dealer will buy another currency. An ask price is the price (i.e., exchange rate) at which a dealer will sell the other currency. ? A direct quote is the price of a foreign currency in domestic currency units. In direct quote, the home currency fluctuates and the foreign currency against which it is quoted remains constant. ? An indirect quote is the price of the domestic currency in foreign currency units. In indirect quote, the foreign currency fluctuates and the home currency remains constant. Thus, an indirect quote is a quote where the exchange rate is expressed in terms of units of the foreign currency per fixed number of units of home currency. ?

European term refers to the quoting of the quantity of a specific currency per one US dollar. It means that whenever a currency's value is quoted, it is quoted in terms of number of units of currency to equal one US dollar. In American terms, USD becomes the quoted currency against these currencies (i.e., euro, U.K pound, etc.). American terms are used in quoting rates for most foreign currency options and futures, as well as in retail markets that deal with tourists and personal remittances. ?

Spread is the difference between the ask price and the bid price

in a two-way quotation. The rate at which the dealer buys the foreign currency is known as bid rate/price and another rate for selling the foreign currency is referred to as ask rate/price. ? A cross rate is the exchange rate between two currencies that are each expressed in terms of a third currency. The third currency is called the vehicle currency. A cross rate can be obtained by multiplying two exchange rates by each other so as to eliminate a third currency that is common to both rates. ? Spot rate refers to the rate of exchange of the day on which the transaction has taken place for delivery within two business days. The forward exchange rate is the rate at which the actual exchange of currencies takes place at a specified date in the future.

74 ? NSOU ? PGCO-III ? Devaluation refers to any increase in

**82% MATCHING BLOCK 31/173**

**SA** 179E1150-International Economics.pdf (D165203112)

the exchange rate of the domestic currency relative to a foreign currency. The opposite

phenomenon is known as revaluation or up-valuation of currency. ? There is no guarantee that devaluation will always lead to an improvement in the balance of payments. There are two approaches to consider the effectiveness of devaluation as a policy for correcting deficit in the balance of payments. The first approach is known as the elasticity approach, developed by Marshall and Lerner and the second approach is known as the absorption approach, developed by Sidney Alexander. ? The Marshall and Lerner condition states that devaluation will be successful if

**64% MATCHING BLOCK 33/173**

**SA** 179E1150-International Economics.pdf (D165203112)

the sum of absolute values of elasticities of demand for exports and imports is greater than unity. ?

Alexander explained the Absorption Approach with the help of an identity that production or income (Y) is equal to consumption (C) plus domestic investment (I) plus foreign investment or the balance of trade (X - M), all in real terms where X is the export and M is the import. That is,  $Y = C + I + (X - M)$ . Suppose A is equal to domestic absorption (C + I) and B is equal to balance of trade (X - M), we have  $Y = A + B$ . By subtracting A from both sides, we get  $Y - A = B$ . That is, domestic production or income minus domestic absorption equals the balance of trade. To improve the balance of trade (B) as a result of devaluation, Y must rise and/or A must fall. If the nation is at full employment, production or real income (Y) will not rise, and the devaluation can be effective only if domestic absorption (A) falls, either automatically or as a result of contractionary fiscal and monetary policies. ? "An exchange-rate regime is the way an authority manages its currency in relation to other currencies and the foreign exchange market". ? An optimum currency area represents a group of nations whose national currencies are linked through permanently fixed exchange rates and the conditions that would make such an area optimum. The currencies of member nations could then float jointly with respect to the currencies of non-member nations. The formation of an optimum currency area also encourages producers to view the entire area as a single market and to benefit from greater economies of scale in production.

NSOU ? PGCO-III ? 75 ? Currency board arrangements (CBAs) are the most severe form of exchange rate peg (fixed exchange rate system), short of adopting a common currency or dollarizing (i.e., adopting the dollar as the nation's currency). Under CBAs, the nation rigidly fixes (often by law) the exchange rate of its currency to a foreign currency and its central bank ceases to operate as such. CBAs are similar to the gold standard in that they require 100 percent international-reserve backing of the nation's money supply. ? Under dollarization, a foreign currency acts as legal tender. Besides the Commonwealth of Puerto Rico and the U.S. Virgin Islands, Panama has had full or official dollarization since 1904. Ecuador fully dollarized in 2000 and El Salvador in 2001. Since 2001, Nicaragua has nearly fully dollarized and Costa Rica has considered it. ? Hybrid exchange rate systems combine some of the characteristics of fixed and flexible exchange rates in various degrees. These involve different exchange rate bands of fluctuation about a par value, adjustable peg systems, crawling pegs, and managed floating. ? Most fixed exchange rate systems usually allow the exchange rate to fluctuate within narrowly defined limits. That is, nations decide on the exchange rate, or par value, of their currencies and then allow a narrow band of fluctuation above and below the par value. ? An adjustable peg system requires defining the par value and the allowed band of fluctuation, with the stipulation that the par value will be changed periodically and the currency devalued to correct a balance-of-payments deficit or revalued to correct a surplus. ? Under crawling peg system or system of "sliding or gliding parities", par values are changed by small preannounced amounts or percentages at frequent and clearly specified intervals, say every month, until the equilibrium exchange rate is reached. ? Under a managed floating exchange rate system, the nation's monetary authorities are entrusted with the responsibility of intervening

**SA**

International Trade-Material I semester.docx (D146751176)

The Balance of Payments According to the Balance of Payments Manual of the International Monetary Fund (IMF), the balance of payments (BOP) is a statistical statement that systematically summarizes, for a specific time period, the economic transactions of an economy with the rest of the world.

**95%**

**MATCHING BLOCK 37/173**

**W**

Transactions between the residents of a country and rest of the world

consist of: (i) those involving goods, services and income; (ii) those involving financial claims on the rest of the world and liabilities to the rest of the world and (iii) those (such as gifts) classified as transfers. 82 ? NSOU ? PGCO-III Thus, the balance of payments is a statistical

**61%**

**MATCHING BLOCK 39/173**

**SA**

nav 3-12-2018.docx (D44895527)

record of a country's international transactions with the rest of the world during a given period. A county's balance of payments

keep records of both its payments to and its receipts from foreigners. Any transaction resulting in a receipt from foreigners is entered in the balance of payments accounts as a credit. Any transaction resulting in a payment to foreigners is entered as a debit. Three types of international transactions are recorded in the balance of payments: (i) Transactions that arise from the export or imports of goods as services (ii) Transactions that arise from the purchases or sale of financial assets and (iii) certain other activities that result in transfers of wealth between countries.

### 3.4 Reasons for Studying Balance of Payments

Business managers, investors, consumers and government officials require balance of payments data because the data influences and is influenced by other key macroeconomic variables such as gross domestic product, employment levels, price levels, exchange rates, and interests rates. To determine monetary and fiscal policy of any country BOP data are required. Besides, balance of payments is worth studying for a few reasons: Firstly, balance of payments provides detail information concerning the demand and supply of country's currency. For example, if India imports more than its exports, then this means that the supply of rupee is likely to exceed the demand in the foreign exchange market, *ceteris paribus*. One can thus infer that the Indian rupee would be under pressure to depreciate against other currencies. On the other hand, if India exports more than it imports, then the rupee would be likely to appreciate. Thus, the BOP is an important indicator on a country's foreign exchange rate. Changes in the BOP may predict the imposition or removal of foreign exchange controls. Secondly, a country's balance of payments data may signal as a potential business partner for the rest of the world. If a country is facing a major balance of payments difficulty, it may not be able to expand imports from the outside world. Instead, the country may be tempted to impose measures to restrict imports and discourage capital outflows in order to improve the balance of payments situation. On the other hand, a country experiencing a significant balance of payments surplus would be more likely to expand imports, offering marketing opportunities for foreign enterprises, and less likely to impose foreign exchange restrictions.

### NSOU ? PGCO-III ? 83

Thirdly, balance of payments data can be used to evaluate the performance of the country in international economic competition. Suppose a country is experiencing trade deficits year after year. This trade data may then signal that the country's domestic industries lack international competitiveness. Fourthly, changes in a country's BOP may signal the imposition or removal of control over payments of dividends and interests, license fees, royalty fees, and other cash disbursements to foreign firms or investors.

### 3.5 Fundamentals of Balance of Payments Accounting

There are three main elements of the actual process of measuring international economic activity: (i) identifying what is and is not an international economic transaction; (ii) understanding how the flows of goods, services, assets and money debits and credits to overall BOP; and (iii) understanding the bookkeeping procedures for BOP accounting.

#### 3.5.1 Define International Economic Transactions

Transactions in BOP sense consist of those involving goods, services and income; those involving financial claims and liabilities; and those classified as transfers between an economy and the rest of the world. However, the determination of what constitutes a transaction must not be made strictly on the basis of logic but through adoption of general agreed-upon conventions.

#### 3.5.2 The BOP as a Flow Statement

The balance of payments is concerned with transactions and thus, deals with flows rather than with stocks. That is, the balance of payments deals with economic events that take place during a reference period and not with outstanding totals of economic assets and liabilities that exist at particular moments in time. Thus, the BOP tracks the continuing flows of purchases and payments between a country and all other countries. It does not add up the value of all assets and liabilities of a country on a specific date. Two types of business transactions dominate the balance of payments: 1. Exchange of real assets: The exchange of goods (e.g.; automobiles, computers, textiles etc) and services (e.g.; banking, consulting, travel services etc) for other goods and services (barter) or for money.

84 ? NSOU ? PGCO-III 2. Exchange of financial assets: The exchange of financial claims (e.g.; stocks, bonds, loans and purchase or sales of companies) for other financial claims or money. 3.5.3 Bookkeeping Procedures for BOP Accounting

The balance of payments is a statistical statement structured in a systematic fashion and data in the statement are recorded according to specific accounting rules. The basic accounting convention for a BOP statement is that every recorded transaction is represented by two entries with exactly equal values. One of these entries is designated a credit with a positive arithmetic sign; the other is designated a debit with a negative sign. In principle, the sum of all credit entries is identical to the sum of all debit entries, and the net balance of all entries in the statement is zero. In BOP statements, the two entries are used to recognize the giving and receiving sides of every transaction. Therefore, the BOP statement is similar to a typical financial statement prepared in accordance with the double entry system regularly used for recording business transaction. Accordingly, every credit in the account is balanced by a matching debit and vice versa. In practice, however, the accounts frequently do not balance. Data for balance of payments estimates often are derived independently from different sources; as a result, there may be summary net credit or net debit (i.e.; net errors and omission in the accounts). A separate entry, equal to that amount with the sign reversed, is then made to balance of accounts. The following are the rules for debit and credit entries in the balance of payments: 1. A country earns foreign exchange on some transactions and expends foreign exchange on others when it deals with the rest of the world. Credit transactions are those that earn foreign exchange (i.e., currency inflows are recorded as credits) and are recorded in the balance of payments with a plus (+) sign. For example, the export of Indian made goods earns foreign exchange for us, and is hence, a credit transaction. Borrowing abroad also brings in foreign exchange and is recorded as a credit. The sale of a service to a foreign resident, such as an airline trip on Indigo or 'hotel booking' in an Indian hotel, also earns foreign exchange and is a credit transaction. The following are some of the important credit transactions: (a) Export of goods or services, (b) Unilateral transfers (gifts) received from foreigners, (c) capital inflows. Capital inflows appear as credits because the nation is selling (exporting) valuable assets to foreigners. The capital inflows can take either of the two forms: (a) an increase in foreign assets of the nation, (b) a reduction in the nation's assets abroad. For example, when a UK resident acquires a stock in an NSOU ? PGCO-III ? 85 Indian company, foreign assets in India go up. This is a capital inflow to India because it involves the receipt of a payment from a foreigner. Similarly, when an Indian resident sells a foreign stock, Indian assets abroad decrease. This transaction is a capital inflow to India because it involves receipt of a payment from a foreigner. 2. Transactions that lead to outflow of foreign exchange are recorded as debits (i.e., currency outflows are recorded as debits) and are entered with a minus (-) sign. For example, when residents of India buy machinery from Japan or perfumes from France, foreign exchange is spent and the import is recorded as a debit. Similarly, when Indian residents purchase foreign services, foreign exchange is used and the entry is recorded as a debit. Thus the following are some of the important debit transactions: (a) Import of goods and services, (b) Unilateral transfer (or gifts) made to foreigners, (c) Capital outflows. Capital outflows show up as debits because they represent purchase (imports) of foreign assets. Capital outflows can also take any of the following forms: (a) An increase in the nation's assets abroad (b) A reduction in the foreign assets of the nation. Both the above transactions involve a payment to foreigners and are capital outflows. For example, an Indian resident purchases a US treasury bill. The transaction results in an increase in the Indian assets abroad and is a debit transaction since it involves a payment to foreigners. Similarly, the sale of an Indian subsidiary by a UK firm reduces foreign assets in India and is entered as a debit transaction. The IMF has suggested the application of uniform principle of valuation to all transactions recorded in the balance of payments. It is necessary for three reasons: (1) As each transaction has two sides, the double entry accounting rule would be violated if credit and debit entries did not possess the same values. (2) The absence of a uniform valuation principle would make it impossible to compare the BOP statement of one country with the BOP statements of other countries. 86 ? NSOU ? PGCO-III (3) If a uniform valuation system is not used, items recorded in balance of payments cannot be compared with one another, and serious problem of interpretation would be created for data users. 3.6 Composition of Balance of Payments Since

**50%**

**MATCHING BLOCK 40/173**

**SA**

179E1150-International Economics.pdf (D165203112)

the balance of payments records all types of international transactions of a country over a certain period of time, it

contains a wide variety of items. However, a country's international transactions recorded in BOP can be grouped into the following four components: 1.

**55% MATCHING BLOCK 41/173**

**SA** 179E1150-International Economics.pdf (D165203112)

The current account 2. The capital account 3. The errors and omissions 4. The reserve account The current account records the

exports and imports of goods, services and unilateral transfer between residents and non-residents. The capital account shows the transactions that involve changes in the foreign financial assets and liabilities of a country. The reserve account, on the other hand, records purchases and sales of international reserve assets such as dollars, foreign exchanges, goods and special drawings rights (SDRs). Let us now explain these accounts in a detailed manner. 3.6.1 The Current Account The current account measures the transfer of real resources (

**75% MATCHING BLOCK 42/173**

**SA** Lesson Plan 6- Balance of Payment.docx (D128097289)

goods, services, income, and transfer) between an economy and the rest of the world.

The current account is further subdivided into merchandise account and invisibles account. The merchandise account consists of transactions relating to exports and imports of goods. In the invisible account, there are three broad categories, namely: (a) Non-factor services such as travel, transportation, insurances and miscellaneous services, (b) transfer which do not involve any value in exchange (e.g., gift or grant) and (c) income which includes compensation of employees and investment income. Thus, all commercial transactions (export and import of goods and services), private remittances, incomes and transfers of goods and services from the government of the home country to foreign governments constitute currents account of a country.

NSOU ? PGCO-III ? 87 The current account is divided into four categories: merchandise trade, services, factor income and unilateral transfers. Merchandise trade consists of imports and exports of tangible goods, such as oil, wheat, cloths, automobile, computers and so on. Services include payments and receipts for legal, consulting, and engineering services, royalties for patents and intellectual properties, insurances premises, shipping fees and tourist expenditures. All exports of goods and services are credited to the current account and all imports of goods and services are debited to the current account. Factor income consists largely of payments and receipts of interests, dividends and other incomes on foreign investments that were previously made. The interests, dividends and other income received on assets held abroad are credited to current account, while the interests, dividends and other payments made on foreign assets held in the country are debited to the current account. Unilateral transfer involves "unrequited" payments. Examples include foreign aid, reparations, official and private grants and gifts. Unlike other accounts in the balance of payments, unilateral transfers have only one-directional flows, without offsetting flows. In the case of merchandise trade, for example, goods flow in one direction and payments flow in the opposite direction. For the purpose of the double entry bookkeeping rule, unilateral transfers are regarded as an act of buying goodwill from the recipients. So a country that gives foreign aid to another country can be viewed as importing goodwill from the latter. The remittances received and gifts or grants received under unilateral transfers, are credited to the current account, and the remittances made to other countries or unilateral transfers to foreigners are debited to the current account. In short, the rules for recording a transaction as debit and credit in the current account are: Debit (outflows) Credit(inflows) Goods Buy Sell Services Buy Sell Investment income Pay Receive Unilateral transfers Give Receive The balance of trade measures whether a country is a net exporter or net importer of goods. It is the differences between the value of visible export goods and the value of

88 ? NSOU ? PGCO-III visible import goods. A trade surplus indicates that the country's exports are greater than its imports and a trade deficit indicates that the country's imports are greater than its exports. The invisible items (services, incomes and transfer) along with the merchandise determine the actual current account position (i.e., surplus and deficit). The balance of current account represents the difference between the value of visible and invisible export items and the value of visible and invisible import items. When the country earns more than it spends or gives away to abroad, it is said to have a current account surplus. On the contrary, when the country gives away more than it earns from abroad, it has a current account deficit.

3.6.2 The Capital Account The capital account records the capital flows (or capital movements) into and out of the reporting country. Capital flows include both outflows and inflows. By capital outflow we mean all transactions which tend to enhance the net-claims position of the reporting country and capital inflow is defined as all transactions which tend to deteriorate it. Accordingly, capital outflows (or capital exports) refer to transactions giving rise to debit entries in the capital account of the balance of payments and capital inflows (or capital imports) refer to transactions giving rise to credit entries. It should be kept in mind that the term 'capital' in this context does not refer to real capital goods such as machinery, building etc. It merely refers to the stock of reporting country's claims against foreigners and the stock of foreign claims against the reporting country. Accordingly, capital flows (inflows and outflows) refer to changes in these stocks of claims. However, the capital account does not record the gross flows or movements. It rather records the net changes in the reporting country's foreign claims and liabilities. The net-claims portion is defined as the stock of all claims held by reporting country against foreigners minus the stock of all claims held by foreigners against the reporting country. The difference between capital inflow and capital outflows is called the balance of capital account. The sum of the current account and capital account indicates the balance of payments which could be in surplus or in deficit. The capital account can be divided into three categories: direct investment, portfolio investment and other investment. Direct investment occurs when the investors acquire a measure of control of the foreign business. Portfolio investment mostly represents sales NSOU ? PGCO-III ? 89 and purchases of foreign financial assets that are purely profit motivated return and do not involve a transfer of control. Portfolio investment comprises equity securities and debt securities which include corporate shares, bonds and notes, money market instruments, financial derivatives etc. Other investments include transactions in currency, bank deposits, short & long term trade credit, cross border loans from all types of financial institutions and so forth. All purchases of domestic assets by foreigners and all sales of foreign assets by Indians are credited to the capital account. All purchases of foreign assets made by the residents of India and all sales of domestic asset by foreigners are debited to the capital account. Increases in loans to foreigners by residents and decreases in loans to residents by foreigners are debited to the capital account. Increases in loans to residents by foreigners and decreases in loans to foreigners by residents are credited to the capital account. In short, the rules for double entry recording here are as follow: Debit(Outflows) Credit(Inflows) Portfolio ? Receiving a payment from ? Making a payment to a investment a foreigner foreigner ? Buying a foreign asset ? Selling a domestic asset to a ? Buying back domestic foreigner asset from its foreign ? Selling a foreign asset acquired owner. previously Foreign direct ? Buying a foreign asset for ? Selling a long term foreign investment purpose of control asset acquired previously ? Buying back from its foreign (not for purpose of control) owner a domestic asset ? Selling a foreign asset previously acquired for previously acquired for purpose purpose of control of control Other ? Enhancing the net claims ? Deteriorating the net claims investment portion in terms of bank position in terms of bank deposits, short term and long deposits, short term and long term trade credits etc. term trade credits etc.

90 ? NSOU ? PGCO-III The above classification of BOP has been in use for a long time and almost all textbooks provide the same classification. However, in the recent past, the IMF [BOP Manual, 5 th Ed., IMF] has switched to a different classification. Accordingly, all transactions are grouped into two categories: (a) The current account, and (b) The capital and financial account. The capital account is made up of transfers of financial assets and acquisition and disposal of non produced/ non financial assets. This account has been introduced as a separate component in the IMF's balance of payments only recently. The magnitude of capital transactions covered is relatively minor. The financial account consists of four components: direct investment, portfolio investment, net financial derivatives, and other assets investment.

3.6.3 Errors and Omissions The balance of payments is theoretically constructed on the basis of double entry book keeping which implies that the sum of total debits must necessarily be equal to the sum of total credits. In practice, however, the collection of statistical data for the construction of the balance of payments is inherently imperfect due to many reasons, e.g., unrecorded short term capital movements, cross- border financial transactions conducted electronically etc. Accordingly, in practice the sum of debits is unequal to the sum of credits. Thus, an additional entry is made in the balance of payments to restore the equality between the two sides- total debit and total credit. In the US it is called "errors and omissions". Recently the US Department of Commerce changed its name to "statistical discrepancy" in order to identify it clearly as a residual. The British call it "Balancing item".

3.6.4 Reserve Account The official reserve account includes transactions undertaken by the authorities to finance the overall balance and intervene in the foreign exchange market. When a country makes a net payment to foreigners because of a balance-of-payments deficit, the central bank of the country should either reduce its official reserve assets (such as gold, foreign exchange, SDRs etc.) or borrow funds from central banks. On the other hand, if a country has a balance-of-payments surplus, its central bank will either retire some of its foreign debts or acquire additional reserve assets from foreigners. The official reserve account is the total reserve held by official monetary authorities within a country. These reserves are normally composed of the major currencies used in

NSOU ? PGCO-III ? 91 international trade and financial transactions (so- called "hard currencies" like the US dollar, European euro and Japanese yen, gold, SDRs etc). While an increase in the holdings of foreign currency reserves by the country's central bank is debited to the official reserve account, a decrease in the holding of foreign currency reserves by the country's central bank is credited to the reserve account.

3.6.5 Illustrations Problem 1 Write down the BOP entries for the following transactions: (i) An Indian company sells Rs 2,00,000 worth of machinery to a UK Company. The UK Company pays for the machinery in 30 days. (ii) An Indian woman visits her husband in Japan. She cashes Rs. 6,00,000 worth of her Indian traveller's cheque at a Japan hotel. Before she returns to India, she spends Rs. 6,00,000 in Japan. (iii) The US Red Cross sends \$20,000 worth of flood relief goods in India. (iv) A Japanese purchases yen 40,000 worth of UK bonds and pays for it with a cheque drawn on an account. (v) A US bank lends \$60,000 to a Canadian firm. (vi) An Indian firm exports Rs 60,000 worth of goods to be paid in three months. (vii) An Indian resident visits USA and spends Rs 2,00,000 on hotel and meals and so on. (viii) A resident purchases foreign stock for Rs 1,00,000 and pays for it by increasing the foreign bank balances in India. (ix) A foreign investor purchases Rs 50000 worth of Indian treasury bills and pays by drawing down his bank balances in India by an equal amount. (x) US government gives a US bank balance of \$ 200000 to the government of a developing nation as part of the US aid programme.

92 ? NSOU ? PGCO-III Solution The BOP entries for these transactions are shown below:

Particulars	Debit	Credit
(i) Liquid short term capital	(-)Rs.200000	(+)Rs.200000
Exports [Explanation: In this transaction, merchandise exports are credited because they provide India with an increase in its claims on foreigners. At the same time, the Indian exporter should increase its short-term investment abroad; i.e., an increase in its account receivable.]		(+)Rs.600000
(ii) Total expenditure	(-)Rs.600000	(+)Rs.600000
Liquid short- term capital [Explanation: In this case, India received travel services from Japan to the extent of Rs. 600000. In return for these tourist services, the bank of Japan now has Rs. 600000 worth of rupees. The services provided by Japan are clearly a use of funds. The resulting increases in deposits of bank Japan represent a source of funds.]		(+)Rs.600000
(iii) Transfer payments [Explanation: The US sends its goods to India, this transaction reduces the real assets of the US. Thus, these transfers should be debited. The unilateral transfer of products by the US represents exports and these exports are credited.]	(-) \$20000	(+) \$20000
Exports		(+) Yen40000
(iv) Portfolio investments	(-) Yen40000	(+) Yen40000
Liquid short-term capital [Explanation: The Japanese now owes a UK bond, while UK owns Japanese Yen deposits.]		(+) Yen40000

NSOU ? PGCO-III ? 93 Since the acquisition of the UK bond increases Japan's portfolio of bank investments in foreign countries, the portfolio investments must be debited. At the same time, the Yen balance owned by UK, represents an increase in Japanese liabilities to foreigners. Hence, Japan's short term capital should be credited.] (v) Non-Liquid short-term capital (-)\$60000 (+)\$60000 Liquid short-term capital [Explanation: Since this loan reduces US purchasing power, the US non-liquid short-term liabilities must be debited. At the same the bank creates an increase a deposit balance for the foreign firm through its loan. Because this loan increases US short-term liabilities to foreigners, the liquid short-term liabilities should be credited.] (vi) Short-term capital outflow (-)Rs. 60000 (+)Rs. 60000 Merchandise exports [Explanation: Short-term capital outflow is debited because it represents an increase in Indian asset abroad while merchandise export is credited since this will lead to a receipt of payment from foreigners.] (vii) Travel services (-)Rs.200000 (+)Rs.200000 Short-term capital inflow [Explanation: Travel services are debited for Rs 200000 because the transaction here is similar to an Indian export. The payment itself is then entered as a short-term credit because it represents an increase in foreign assets in India.] (viii) Long term capital outflow (-)Rs100,000 (+)Rs100,000 Short term capital inflow [Explanation: Purchase of foreign stock increases

94 ? NSOU ? PGCO-III Indian assets abroad and thus long-term capital outflow is debited. Short term capital inflow is credited because the increase in foreign bank balance in India represents an increase in foreign assets in India.] (ix) Short term capital outflow (-)Rs 50 000 (+)Rs 50 000 Short term capital inflow [Explanation: Short-term capital outflow is debited because it represents a reduction in foreign bank balances in India while short-term inflow is credited since it represents a purchase of Indian treasury bills by a foreigner.] (x) Unilateral transfers (-) \$ 20 000 (+) \$20 000 Short term capital inflow [Explanation: Unilateral transfers are debited since extending aid involves a US payment to foreigners. Short- term capital inflow is credited because it represents an increase in foreign claims of foreign assets in the U.S.]

Problem 2 Record the following transactions and prepare the balance of payment statement. i. A U.K firm exports \$2000 worth of goods to be paid in six months. ii. A U.K resident visits USA and spends \$800 on hotel, meals and so on. iii. U.K government gives a UK bank balance of \$400 to the government of a developing nation as part of the UK aid program. iv. A UK resident purchases foreign stock for \$1600 and pays for it by increasing the foreign bank balance in the UK. v. A foreign investor purchases \$1200 of UK treasury bills and pays by drawing down his bank balance in the UK by an equal amount.

NSOU ? PGCO-III ? 95 Solution Particulars Debit (-) Credit (+) (in \$) (in \$) (i) Short term capital outflows Merchandise 2000 2000 exports (ii) Travel services purchased from foreigners 800 800 Short term capital inflow (iii) Unilateral transfer made Short term capital 400 400 inflow (iv) Long term capital outflow Short term capital 1600 1600 inflow (v) Short term capital outflow Short term capital 1200 1200 inflow If we assume that these five transactions are all the international transactions of UK during the year, the UK balance of payments is as follows: Particulars Debit (-) Credit (+) (in \$) (in \$) Merchandise 2000 Service 800 Unilateral transfers 400 Long term capital 1600 Short term Capital, net (-\$2000+\$800+\$400+\$1600+\$1200-\$1200) 800 2800 2800

96 ? NSOU ? PGCO-III 3.6.6. Structure of India's BOP The structure of India's BOP is represented below: Balance of payment I.

NSOU ? PGCO-III ? 97 3.7 The Balance-of-Payments Identity Since the balance of payments statement is prepared in terms of debits and credits based on double-entry system of book-keeping, total of debit entries must be equal to total of credit entries, if all the entries are recorded correctly. This is because two aspects (debit and credit) of each transaction recorded are equal in amount but appear on the opposite sides of the different account. In this accounting sense, the balance of payment of a country must always balance. In other words, the debit entries represent the total of all the uses made out of the total foreign exchange acquired by the country during a given period, while the credit entries represent the sources from which this foreign exchange is acquired by this country in the same period. The two sides as such necessarily balance. When the balance-of-payment accounts are recorded correctly, the combined balance of the current account, the capital account and the reserve account must be zero, i.e.,  $BCA + BKA + BRA = 0$  where  $BCA$  = Balance on the Current Account,  $BKA$  = Balance on the Capital Account  $BRA$  = Balance on the Reserve Account The balance on the reserve account,  $BRA$  represents the change in the official reserves. The above equation is the Balance-of-Payment Identity (BOPI) that must necessarily hold. The BOPI equation indicates that country can run a balance-of-payment surplus or deficit by increasing or decreasing its official reserves. However, it is not necessary that each account should individually balance. But these accounts taken together must balance each other. Thus, if there is a surplus in the current account, there must be a deficit in the

**75% MATCHING BLOCK 44/173 SA** 179E1150-International Economics.pdf (D165203112)

capital account and vice-versa. The fact that the balance of payments always balances

does not mean that there is no problem of surplus or deficit in the balance of payments. In fact, it is difficult to tell from

**55% MATCHING BLOCK 45/173 SA** nav 3-12-2018.docx (D44895527)

the balance of payments of a country whether there exists any surplus or deficit in the balance of payments

or not. Even if there is a surplus or deficit, the balance of payments must always balance. This equality of balance of payments account is an identity and is the results of the double entry system of accounts. It has no economic significance. It does not also represent any equilibrium condition.

98 ? NSOU ? PGCO-III 3.8 Equilibrium and Disequilibrium

**66% MATCHING BLOCK 46/173 SA** 179E1150-International Economics.pdf (D165203112)

in the Balance of Payments If a country has a deficit in its balance of

current account,

there will always be an off-setting transaction on the capital account to bring the balance of payments into equilibrium. For example, if a country's importers have imported \$100 more than the exporters have exported, they might have to borrow \$100 from the foreign exporters to pay for their purchases, and this would be registered as an inflow of capital on the capital account. There are, however, other capital flows which have no connection with the country's balance of payments situation. It may be, for instance, that a foreign exporter buys an advertising agency in the country at the cost of \$100, to be able to better market his products. This would also be registered as a capital inflow of \$100. The significance of these two transactions for the country's balance of payments is very different. We, therefore, have to distinguish between two types of transactions. The transactions recorded in the balance of payments account can be divided into two major categories: autonomous transactions and accommodating transactions. Autonomous transactions are those which are undertaken for their own sake, usually in response to business considerations and incentives but sometimes in response to a political consideration as well. Their main distinguishing feature is that they take place independently of the balance-of-payments position of the reporting country. All other transactions are called accommodating transactions. Thus, accommodating transactions do not take place for their own sake. Rather, they occur because other (autonomous) transactions are such as to leave a gap to be filled. Accommodating transactions may be automatic (i.e.; unplanned and unforeseen) or discretionary (i.e., planned and foreseen). In addition, accommodating transactions may be made by private persons or public authorities. Examples of autonomous transactions are: all exports of goods and services undertaken for profit, unilateral transactions, long term capital movements, short term capital movements etc. On the other hand, examples of accommodating transactions are: the sale of gold or foreign currencies by the central bank in order to fill the gap between the receipts and payments of foreign exchange by the private residents of the country, a gift or loan received by the authorities of a country from foreign governments for the purpose of filling a gap in the autonomous receipts and payments and so on. In order to know whether equilibrium exists in the balance of payments or not, we have to take into account only the autonomous transactions. If the autonomous receipts NSOU ? PGCO-III ? 99 and autonomous payments are equal,

**100%**

**MATCHING BLOCK 51/173**

**SA**

179E1150-International Economics.pdf (D165203112)

the balance of payments is said to be in equilibrium

and no accommodating transactions will take place. If the autonomous receipts and autonomous payments are not equal, the balance of payments is said to be in disequilibrium. If a country's autonomous receipts are larger than its autonomous payments, it will have a surplus in its balance of payments. This will then be settled by an accommodating transaction (which is equal to surplus) and it thereby brings the balance of payments into equilibrium.

**100%**

**MATCHING BLOCK 52/173**

**SA**

IB.docx (D154310691)

A country has a deficit in its balance of payments

if its autonomous receipts are smaller than its autonomous payments. This deficit will have to be settled by an accommodating transaction which brings the balance of payment into equilibrium. 3.9 Types of Disequilibrium in the Balance of Payments The following are the main types of disequilibrium in

**61%**

**MATCHING BLOCK 47/173**

**W**

the balance-of-payments: Cyclical Disequilibrium It takes place on account of trade cycles. Trade cycles follow different paths and pattern in different countries. There are no identical timings and periodicity of occurrences of cycles in different countries.

Cyclical fluctuations cause disequilibrium in the balance of payments because of cyclical change in income, employment, output and price variables. When prices rise during prosperity in the foreign country a country which has a highly elastic demand for imports experiences a decline in the value of imports and if it continues its exports further, it will show a surplus

**91% MATCHING BLOCK 48/173****W**

in the balance of payments. Structural Disequilibrium It emerges on account of structural changes occurring in some sectors of the economy at home or abroad which may alter the demand or supply relations of exports or imports or both. For example, if foreign demand for India's jute products decline because of some substitutes then the resources employed by India in the production of jute goods will have to be shifted to some other commodities of export.

If this is not easily possible, India's exports may decline, whereas imports remain the same. Disequilibrium in the balance of payments will arise.

**87% MATCHING BLOCK 49/173****W**

Moreover, a shift in demand takes place with the changes in tastes, fashion, habits, income etc. Propensity to import may change as a result. Demand for some imported goods may increase, while that for certain goods may decline leading to a structural change. 100 ? NSOU ? PGC0-III Short-run Disequilibrium A short-run disequilibrium in a country's balance of payment will be a temporary one, lasting for a short period, which may take place once in a while. When a country borrows or lends internationally, it will have short-run disequilibrium in its balance of payments as these loans are usually for a short period or even if they are for a long duration, they are repayable later on. Hence, the position will be automatically corrected and poses no serious problem.

When such disequilibrium (arising from the imports exceeding exports or even vice-versa) takes place year after year over a long period, it becomes chronic and seriously affects the country's economy and its international economic relations. Long-run Disequilibrium It

**93% MATCHING BLOCK 50/173****W**

refers to a deep-rooted, persistent deficit or surplus in the balance of payments of a country. It is secular disequilibrium emerging on account of the chronologically accumulated short-term disequilibria - deficits or surpluses. A long-term deficit in the balance of payments of a country tends to deplete its foreign exchange reserves and the country may also not be able to raise any more loans from foreigners during such a period of persistent deficits.

In short, true disequilibrium is a long-term phenomenon. It is caused by persistent deep rooted dynamic changes which slowly take place in the economy over a long period of time. It is caused by changes in dynamic forces/factors such as capital formation, population growth, territorial expansion, technological advancement, innovation etc. Concept of Fundamental Disequilibrium The International Monetary Fund (IMF) uses the term 'Fundamental Disequilibrium' to describe a persistent, long-run disequilibrium, especially deficits which exist continuously for a long period of time in a country's balance of payments. Unchecked series of short- run disequilibria in a country's balance of payments ultimately lead to the 'fundamental disequilibrium' in the long-run. There are deep-rooted causes and factors in a country's economy which are responsible for the emergence of fundamental disequilibrium in its balance of payments. The main objective of macro-economic policy of a country is to correct this fundamental disequilibrium. To correct this, various measures are required to be undertaken. IMF insists that member country facing a 'fundamental disequilibrium' in its balance of payments should consult the Fund, so that the Fund can advice for and assist in taking some appropriate measures like devaluation in overcoming the grave situation.

NSOU ? PGCO-III ? 101 3.10 Reasons for Disequilibrium in the Balance of Payments Any disequilibrium in the balance-of-payments arises due to a large number of causes or factors operating simultaneously. Types of disequilibrium differ from country to country, while the different kinds of disequilibrium and their causes in the same country will differ at different times. The following are the important causes producing disequilibrium in the balance of payment of a country: i. Cyclical fluctuations, their phases and amplitudes, differences in different countries, generally produce cyclical disequilibrium. ii. Huge development and investment programs in the developing economies are the root causes of the disequilibrium in the balance of payments of these countries. Their propensity to import goes on increasing for want of capital for rapid industrialization, while exports may not be boosted up to that extent as these are the primary producing countries. iii. One important cause of disequilibrium

**57%**

**MATCHING BLOCK 54/173**

**SA**

179E1150-International Economics.pdf (D165203112)

in the balance of payments is inflation in the domestic economy. If there is inflation in the country, prices of exports rise. As a result, exports fall.

On the other hand, importable goods become relatively cheaper. So imports rise. All these result in adverse balance of payments. iv. High population growth in poor countries also has adversely affected their balance of payments position. It is easy to see that an increase in population increases the need of these countries for imports and decreases the capacity to export. v. Disequilibrium in the balance of payments also arises as a result of international borrowing and investment. For example, a country may tend to have an adverse balance of payments when it borrows heavily from another country. vi. Changes in the production technique in domestic economy or in abroad may bring disequilibrium in the balance of payments. Technological changes in production will change quality, cost and prices of the products. vii. Disequilibrium in the balance of payments may arise due to changes in tastes and preferences of the domestic or foreign consumers. Then the exports or imports of the country will change. This may cause fundamental disequilibrium in the balance of payments.

102 ? NSOU ? PGCO-III viii. Demonstration effect is another most important factor causing deficit in the balance of payments of a country - especially of an underdeveloped country. When people of underdeveloped nation come into contact with those of advanced countries through economic, political or social relations, there will be a demonstration effect on the consumption pattern of those people and they will desire to have western style goods and pattern of consumption so that their propensity to import increases, whereas their exports quantum may remain the same or may even decline with the increase in income, thus causing an adverse balance of payments for the country. 3.11 Measures for Correcting Disequilibrium Various measures that may be used for correcting an adverse balance of payments are of two types: a) Monetary measures, and b) Non-monetary measures 3.11.1 Monetary Measures Monetary measures usually have two-edged effects in improving the balance of payments position. They boost up exports as well as check or curtail imports. The following monetary measures are usually employed so as to correct the adverse balance of payments: 1. Deflation: A traditionally suggested method of correcting disequilibrium is to deflate the home currency. Deflation means contraction of the home currency through dear money and credit policy and fall in the cost and prices of domestic goods. Naturally, domestic goods and exporting items of the country in the foreign market become relatively cheaper and demand for them will rise so that exports will increase. Moreover, deflation attempts to restrict home consumption through reduction of incomes; demand for goods at home will be reduced and more surpluses may become available for export purposes so that exports may be increased. However, deflation is forcefully employed when countries are on a gold standard or fixed exchange rates, because its workability assumes that exchange rates are unchanged during its course. 2. Exchange Depreciation: Another important method of correcting an adverse balance of payments is to depreciate the external (exchange) value of the home currency. This device obviously assumes that the country has adopted flexible exchange rate policy. Thus, exchange depreciation is feasible. By exchange depreciation is meant a decline in the rate of exchange of one country in terms of another's.

NSOU ? PGCO-III ? 103 Exchange depreciation of a country will tend to cheapen its domestic goods for the foreigners so that its exports will be boosted up, while its imports will be costlier so that they will tend to decline. Thus, imports will be checked and exports will be stimulated by a fall in exchange rate as the external value of the currency of a country. The country may thus, achieve a favourable balance to pay off an earlier deficit. 3. Devaluation: A mostly commonly adopted method consists of devaluation of the currency of a country faced with an adverse balance of payments. Devaluation simply means the lowering of the external value (i.e., exchange rate) of a country's currency by an official order. It should be noted that the difference between devaluation and depreciation of exchange rate is that while devaluation is reduction of the external value of a currency as arbitrarily decided upon by the Government, depreciation stands for automatic reduction in the external value of a country's currency by market forces. However, both imply the same thing, i.e., lower value of the local currency in terms of foreign currencies. Both devaluation and depreciation produce similar effects-increase exports (by making local goods cheaper to foreigners), curtail imports (by making foreign good expensive) and ultimately correct an adverse balance of payments and make it favorable one. 4. Exchange control: Restrictions on the use of foreign exchange by the central bank are called exchange controls. When an exchange control is adopted, all the exporters have to surrender their foreign exchange earnings to the central bank. Under exchange control, the central bank releases foreign exchanges only for essential imports and ensures the rest of the balance. This is the most direct method of curbing imports. An exchange control can prevent a complete breakdown, but it cannot eliminate the condition of disequilibrium. Thus, an exchange control offers no permanent solution to the problem of persistent disequilibrium. It can, at best, be justified only as a temporary measure, while other more fundamental adjustments are made to restore equilibrium in the balance of payments. 3.11.2 Non-monetary Measures Non-monetary measures are directly effective measures. But they work one way only. Tariffs and quotas, for instance, tend to restrict only imports. Export promotion measures, on the other hand, enhance exports only. The measures are explained below:

104 ? NSOU ? PGCO-III 1. Tariff (Import duties): Tariff is a fiscal device which may be used for correcting an unfavorable balance of payments position. It refers to custom duties levied on importers.

**100%**

**MATCHING BLOCK 55/173**

**SA**

179E1150-International Economics.pdf (D165203112)

A country having a deficit balance of payments position can restore and maintain equilibrium by means of

imposing tariff restrictions upon imports. 2. Imports Quotas: Fixing of imports quotas is another and better device used for correcting an adverse balance of payments. Under

**98%**

**MATCHING BLOCK 53/173**

**W**

the quota system, the government may fix and permit the maximum quantity or value of a commodity to be imported during a given period. By restricting imports through the quota system, deficit is reduced

or eliminated and thereby

**62%**

**MATCHING BLOCK 56/173**

**SA**

179E1150-International Economics.pdf (D165203112)

the balance of payments position is improved. 3. Exports promotion: To correct disequilibrium in the balance of

payment, it is necessary that exports should be increased. Government may adopt export promotion program which includes subsidies, tax concession to exporters, incentive for exports etc. Export or perish should be the slogan for any country facing the problem of fundamental disequilibrium in its balance of payments. All these non-monetary measures are, however, considered more effective, significant and are normally applicable than monetary measures in correcting the adverse

balance of payments. 3.12 Summary ? According to the Balance of Payments Manual of the International Monetary Fund (IMF), the balance of payments (BOP) is a statistical statement that systematically summarizes, for a specific time period, the economic transaction of an economy with the rest of the world. ? Transactions between the residents of a country and the rest of the world

consist of: (i) those involving goods, services and income; (ii) those involving financial claims on the rest of the world and liabilities to the rest of the world and (iii) those (such as gifts) classified as transfers. ? Balance of payments is worth studying for a few reasons: Firstly, balance of payments provides detail information concerning the demand and supply of a country's currency. Secondly, a country's balance of payments data may signal as a potential business partner for the rest of the world. Thirdly, balance of payment data can be used to evaluate the performance of the country in NSOU ? PGCO-III ? 105 international economic competition. Fourthly, changes in a country's BOP may signal the imposition or removal of control over payments of dividends and interests, license fees, royalty fees, and other cash disbursements to foreign firms or investors. ? There are three main elements of the actual process of measuring international economic activity: (i) identifying what is and is not an international economic transaction; (ii) understanding how the flows of goods, services, assets and money debit and credit to overall BOP; and (iii) understanding the bookkeeping procedures for BOP accounting. ? The basic accounting convention for a BOP statement is that every recorded transaction is represented by two entries with exactly equal values. One of these entries is designated a credit with a positive arithmetic sign; the other is designated a debit with a negative sign. In principle, the sum of all credit entries is identical with the sum of all debit entries, and the net balance of all entries in the statement is zero. ? A country earns foreign exchange on some transactions and expends foreign exchange on others when it deals with the rest of the world. Credit transactions are those that earn foreign exchange (i.e., currency inflows are recorded as credits) and are recorded in the balance of payments with a plus (+) sign. ? Transactions that use foreign exchange are recorded as debits (i.e., currency outflows are recorded as debits) and are entered with a minus (-) sign. ? A country's international transaction recorded in BOP can be grouped into the following four components:

**52% MATCHING BLOCK 59/173**

**SA** 179E1150-International Economics.pdf (D165203112)

The current account, The capital account, The errors and omissions, The reserve account. ? The current account measures the transfer of

real resources (

**75% MATCHING BLOCK 60/173**

**SA** Lesson Plan 6- Balance of Payment.docx (D128097289)

goods, services, income, and transfer) between an economy and the rest of the world.

The current account is further subdivided into merchandise account and invisibles account. ? The capital accounts records the capital flows (or capital movements) into and out of the reporting country. Capital flows include both outflows and inflows. By capital outflow we mean all transactions which tend to enhance the net-claims position of the reporting country and capital inflow is defined as all transactions which tend to deteriorate it. Accordingly, capital outflows (or capital exports) refer to transactions giving rise to debit entries in the capital account of the

106 ? NSOU ? PGCO-III balance of payments and capital inflows (or capital imports) refer to transactions giving rise to credit entries. ? The balance of payments is theoretically constructed on the basis of double entry book keeping system which implies that the sum of total debits must necessarily be equal to the sum of total credits. In practice, however, the collection of statistical data for the construction of the balance of payments is inherently imperfect due to many reasons, e.g., unrecorded short term capital movements, cross- border financial transactions conducted electronically etc. Accordingly, in practice the sum of debits is unequal to the sum of credits. Thus, an additional entry is made in the balance of payments to restore the equality between the two sides- total debit and total credit. In the US it is called "errors and omissions". Recently the US Department of Commerce changed its name to "statistical discrepancy" in order to identify it clearly as a residual. The British call it "Balancing item". ? The official reserve account includes transactions undertaken by the authorities to finance the overall balance and intervene in the foreign exchange market. When a country makes a net payment to foreigners because of a balance-of- payments deficit, the central bank of the country should either reduce its official reserve assets (such as gold, foreign exchange, SDRs etc.) or borrow funds from foreign central banks. On the other hand, if a country has a balance-of- payments surplus, its central bank will either retire some of its foreign debts or acquire additional reserve assets from foreigners. ? Since the balance of payments statement is prepared in terms of debits and credits based on double-entry system of book-keeping, total of debit entries must be equal to total of credit entries, if all the entries are recorded correctly. This is because two aspects (debit and credit) of each transaction recorded are equal in amount but appear on the opposite sides of the different account. In this accounting sense, the balance of payments of a country must always balance. ? The transactions recorded in the balance of payments account can be divided into two major categories: autonomous transactions and accommodating transactions. Autonomous transactions are those which are undertaken for their own sake, usually in response to business considerations and incentives but sometimes in response to a political consideration as well. Their main distinguishing feature is that they take place independently of the balance-of-payment positions of the reporting country. All other transactions are called accommodating NSOU ? PGCO-III ? 107 transactions. Thus, accommodating transactions do not take place for their own sake. ? The following are the main

**87%**

**MATCHING BLOCK 58/173**

**W**

types of disequilibrium in the balance-of-payments: Cyclical Disequilibrium, Structural Disequilibrium,

Short-run Disequilibrium,

Long- run Disequilibrium ? The

International Monetary Fund (IMF) uses the term 'Fundamental Disequilibrium' to describe a persistent, long-run disequilibrium, especially deficits which exist continuously for a long period of time in a country's balance of payments. Unchecked series of short-run disequilibria in a country's balance of payments ultimately lead to the 'fundamental disequilibrium' in the long-run. There are deep-rooted causes and factors in a country's economy which are responsible for the emergence of fundamental disequilibrium in its balance of payments. ? Any disequilibrium in the balance-of-payments arises due to a large number of causes or factors operating simultaneously. Types of disequilibrium differ from country to country, while the different kinds of disequilibrium and their causes in the same country will differ at different times. ? The various measures that may be used for correcting an adverse balance of payments are two types: a) Monetary measures, and b) Non-monetary measures. 3.13 Self Assessment Questions A. Objective type questions: Choose the correct answer from the given four alternatives. 1. The balance of payments is prepared in accordance with the a) single entry system of book-keeping b) double entry system of book-keeping c) cash basis accounting d) accrual basis of accounting 2. All exports of goods and services are credited to a) The current account b) The capital account 108 ? NSOU ? PGCO-III c) The reserve account d) The errors and omission account 3. All imports of goods and services are debited to the a) The current account b) The capital account c) The reserve account d) The errors and omission account 4. When a country earns foreign exchange, it is redeemed as a\_\_\_\_\_in BOP. a) debit entry b) credit entry c) capital entry d) none of these 5. Transactions that lead to outflow of foreign exchange are recorded as \_\_\_\_\_ in BOP. a) credit entry b) capital entry c) debit entry d) none of these 6. The

balance of payments always balance."-Explain the statement. 9. Explain the different types of disequilibrium in the balance of payments. 10. Explain monetary measures and non-monetary measures for correcting disequilibrium in the balance of payments.

NSOU ? PGCO-III ? 111 Unit 4 Multinational Companies Structure 4.1 Objectives 4.2 Basic Concepts 4.2.1 Types of MNCs 4.3 Reasons for the Growth of MNCs 4.4 How Multinational Corporations Enter a Foreign Market 4.5 Advantages and Disadvantages of MNCs 4.5.1 Advantages of MNC's for the host country 4.5.2 Disadvantages of MNC's for the host country 4.5.3 Advantages of MNCs for the home country 4.5.4 Disadvantages of MNCs for the home country 4.6 Multinational Companies in Emerging Economies 4.7 Summary 4.8 Self Assessment Questions 4.1 Objective After learning this chapter you will know the basic concepts relating to Multinational Companies, their growth, different forms and advantages and disadvantages. 4.2 Basic Concepts Multinational companies (also known as multinational enterprises) have been the most important type of firm operating in the economy. According to Sitkin and Bowen (2010), a firm that owns facilities in a single country but carries out transactions regularly outside its borders may qualify as multinational enterprises. According to Vernon and Wells Jr. (1986), MNCs represent a cluster of affiliated firms located in different countries that: 1. Are linked through common ownership, 2. Draw upon a common pool of resources, and 3. Respond to a common strategy, and respond to a common strategy.

112 ? NSOU ? PGCO-III Cavusgil, S. T et al.(2009) defines it as a large company with substantial resources that performs various business activities through a network of subsidiaries and affiliates located in multiple countries. The term affiliates signify a numerous number of independent business partners of an MNC situated in different parts of the globe. Normally, MNCs carry out R&D, procurement, manufacturing, and marketing activities in those countries, where they enjoy cost advantage. MNC is also known as Global Companies, International Companies or Transnational Companies, however, these terms theoretically have different meanings. 4.2.1 Types of MNCs Global Corporations: These companies produce in the home country and market these products internationally or vice versa (Punnett and Ricks,1997). Hence, certain operations are centralized and others are decentralized.

**87% MATCHING BLOCK 64/173**

**W**

Global Corporations develop knowledge in various countries, but their units do not share such knowledge across

the globe. International Companies: International Companies conducts the operations in one or more foreign countries, but with domestic orientation.

**96% MATCHING BLOCK 74/173**

**SA**

M21CM06DC.pdf (D155282201)

These companies extend the domestic product, price, promotion and other business practices to the foreign markets.

Transnational Companies : Transnational Companies produces, markets, invests and operates in different countries. Based on the strategic features, MNCs are grouped as ethnocentric, polycentric and geocentric. Ethnocentric firms are those that adopt home market-oriented policy and seldom distinguish between the domestic operation and global operation policies. Polycentric firms operate in a foreign country just to cater to the demand in those countries. On the other hand, the geocentric firms maintain a balance between home market and host market- oriented policies. 4.3 Reasons for the Growth of MNCS Robert J. Carbaugh lists some factors responsible behind the growth of the MNC. [https://yourbusiness.azcentral.com/reasons-multinational-corporations-23250.html]

Economies of Scale Converting a small manufacturer to a multinational may give the business an opportunity to achieve increased production efficiency. Because each manufactured unit shares fixed costs that are unrelated to the number of goods produced, the average cost per unit goes down as the number of units manufactured

enhances. ii) Non-Transferable Knowledge Occasionally, MNCs sell its knowledge in the form of patent rights to earn royalty from others. This relieves the MNC of the need to make a foreign direct investment. On the contrary, MNC that has a Production Process or Product Patent can make a larger profit by carrying out the production in a foreign country itself. iii)

**90% MATCHING BLOCK 67/173**

**W**

Market Growth Becoming a multinational helps a small business to expand, which enables the company to exploit new growth markets. This opportunity is especially beneficial if the domestic demand for the company's products or services has saturated. In the article "Dealing With the New World of Multinational Competition" on the PricewaterhouseCoopers website, Harry G. Broadman and Sunita Saligram write that multinationals seek opportunities in emerging markets in particular because the average growth rate of

the

**100% MATCHING BLOCK 69/173**

Product Sourcing Operating as a multinational provides small business with the option of conducting some of the company's offshore sourcing through subsidiaries, rather than independent contractors. This provides the business with a better opportunity to control the quality of its products or its product's components. Relying on its own subsidiaries as a source of supply also provides a business with the opportunity to better ensure promised delivery dates of critical product components. 114 ? NSOU ? PGCO-III v) Bypass Host Country's protecting Mechanisms National regulators generally discriminate against foreign subsidiaries unless the subsidiary is established enough regionally to be perceived as a domestic firm. Establishing foreign subsidiaries, therefore, could defend the business from bound governmental investigations, audits and prosecutions. The international subsidiary may be

the

**83% MATCHING BLOCK 71/173**

**W**

way for a business to expand into foreign countries and bypass the protecting controls of the mercantilism country.

v) Limit Transport prices High transportation prices will considerably raise the costs of merchandise offered by a business. Functioning as an international will cut back such prices by getting production provided from a manufacturer that's on the brink of

**55% MATCHING BLOCK 72/173**

**W**

the company's plants and therefore the product market. As a result, a domestic business could profit by investment in production plants in foreign countries and commercialism the factory-made merchandise on to shoppers in those countries,

instead of mercantilism the products from the home country. vi) Product Innovation MNCs with their sound Research and Development, invent new merchandise and improve existing merchandise. Developing countries, normally, suffer from lack of funds to take a position in Research and Development programmes. Therefore, they invite MNCs to their countries.

#### 4.4 How International Firms Enter an Overseas Market

1. Indirect Exporting MNCs could use domestically based agents who performs for a commission basis while not taking title to product, or merchants who sell the merchandise of the corporate in international markets (after taking title to the goods). They will additionally use the distribution channels of others within the international markets. On the contrary, few companies together sell merchandise through a firm referred to as associate export management company. The most advantage of exploitation of this strategy is that the mercantilism company will utilize the experience of the organization that has information concerning the country to which the products are being exported. The original company NSOU ? PGCO-III ? 115 may also have sensible links with the organization that organizes such export activities since each firm is placed within the same country.
2. Direct Exporting A company could adopt the direct mercantilism policy. the corporate develops overseas contacts, undertakes market research, handles documentation and transportation and decides the promoting combine. Conversely, associate MNC will use foreign-based agents or distributors. associate agent could conform to handle the merchandise solely, or together. Associate agent doesn't take title to the merchandise and works on commission. Taking the benefits of foreign-based agents and distributors MNC could transfer the title of the merchandise to distributors operative within the foreign market. However, the distributor's profit or commission relies on sales generated and that they might not have an interest in developing long-run market positions for the corporate, they would not be willing to place in further efforts to sell new merchandise and can provide most attention to commercialism established merchandise of the corporate which is able to generate most profit or commission for them. They would think about themselves to be representatives of their customers than of the corporate and will be reluctant to convey market feedback to the corporate. the corporate has restricted management over agents and distributors. Under this example, the MNC could establish a sales and promoting workplace within the foreign market and use its own salespersons. The employee pays attention to the event of the market and chances for feedback and alternative info from the market are higher. Thus, customers are taken care of higher and therefore the company's interest would be higher served. this can be a chic methodology, that the order sizes need to be massive.
3. Licensing The retail merchant has exclusive rights to supply and market the merchandise within the such space for a restricted amount. The licensor sometimes gets royalties on the sale of the merchandise. Under this technique, an overseas licensor provides a neighborhood retail merchant with access to technologies, patents, trademarks, ability or brand/company name in exchange for monetary or another type of compensation. 116 ? NSOU ? PGCO-III The advantage of licensing lies within the incontrovertible fact that the MNC (licensor) will enter a replacement market while not creating substantial investments. However, the corporate loses management over the assembly and promoting of the merchandise. It ought to be noted that the name of the licensor depends on the performance of the retail merchant. One disadvantage of licensing is that the loss of product and method ability to 3rd parties (licensee), who could become competitors once the agreement is over.
4. Franchising Franchising could be a style of contract wherever packages of services are offered by the franchiser to the franchisee reciprocally for a payment. Franchising is of 2 types: In ancient franchising, the merchandise factory-made or provided by the franchisor take centre stage. The manufacturer licenses to the franchisee the proper to sell or distribute a selected product exploitation the franchisor's trademark and brand name. Whereas in a very business format franchise the franchisee's business is merely noted by the marks it shares with the franchisor and alternative franchisees. Traditional franchising is mostly found in automobile, truck, living accommodations, and farm instrumentation dealerships; petrol service stations, etc. In business format franchising, the franchiser, like McDonald's, lends operative procedures, internal control, also because the product and brand name.
5. Joint Ventures An MNC could enter into a joint-venture agreement with an organization from the target country market. two kinds of the venture are there: written agreement and Equity joint ventures. In written agreement joint ventures, no joint enterprise with a separate identity is created. Two or a lot of companies enter into a partnership to share the value and profit. The partnership will be shaped for finishing a project, or for a protracted term co-operative effort. In associate degree equity venture, a replacement company is created during which the foreign and native firms share possession and management.
6. Direct Investment Foreign direct investment (FDI) is an investment in a business by an investor from another country for which the foreign investor has control over the company purchased. The Organization of Economic Cooperation and Development (OECD) defines control

NSOU ? PGCO-III ? 117 as owning 10% or more of the business. An MNC may make a direct investment by creating a new foreign enterprise, which is called a greenfield investment, or by the acquisition of a foreign firm, either called an acquisition or brownfield investment. 4.5 Advantages and Disadvantages of MNCS According to the ILO report on Multinational Enterprises and Social Policy, Geneva, 1973, "for some, the multinational companies are an invaluable dynamic force and instrument for wider distribution of capital, technology and employment; for others, they are monsters which our present institutions, national or international, cannot adequately control, a law to themselves with no reasonable concept, the public interest or social policy can accept". MNCs help both the home country and the host country. There are some disadvantages too. 4.5.1 Advantages of MNC's for the host country The possible benefits of an MNC to the host country may include: 1. Improving the balance of payments: FDI will usually help a host country to improve its

**87%**

**MATCHING BLOCK 73/173**

**SA**

M21CM06DC.pdf (D155282201)

balance of payments situation. The direct flow of capital into the country likely to result in import substitution and export promotion. Export promotion happens due to the multinationals using their production facility as a basis for exporting, while import substitution means that products previously imported may now be bought domestically. 2. Providing employment:

FDI will usually result in employment benefits for the host country as it is expected that most employees will be locally recruited. These advantages may be comparatively greater assuming that governments will usually try to attract firms to areas where there is relatively high state of sensible labour supply. 3.

**96%**

**MATCHING BLOCK 75/173**

**SA**

M21CM06DC.pdf (D155282201)

Source of tax revenue: Profits of multinationals will be subject to local taxes in most cases, which will provide a valuable source of revenue for the domestic government. 4. Technology transfer: MNCs will bring with them technology and production methods that are probably

not available to the host country. Workers will be 118 ? NSOU ? PGCO-III trained accordingly

**99%**

**MATCHING BLOCK 76/173**

**SA**

M21CM06DC.pdf (D155282201)

and domestic firms will see the benefits of the new technology. This is known as technology transfer. 5. Increasing choice: If the multinational manufacture for domestic markets as well as for export, then the local population will gain form a wider choice of goods and services and at a price possibly lower than imported substitutes. 6. National reputation: The presence of one multinational may improve the reputation of the host country and other large corporations may follow suite and locate as well. 4.5.2

Disadvantages of MNC's for the host country The possible disadvantages of a multinational investing in the host country may include : 1. Environmental impact: Multinationals will want to produce in ways that are as efficient and as cheap as possible and this may not always be the best environmental practice. They will often lobby governments hard to try to ensure that they can benefit from regulations being as sloppy as possible and given their economic importance to the host country, this influencing will often be quite effective. 2. Uncertainty: MNCS can move and change at very short notice and often will. This creates uncertainty for the host country. 3. Influence and political pressure: MNC often enjoys disproportionate influence over government and other organisations in the host country. Given their economic importance, governments will often agree to changes that may not be beneficial for the long-term welfare of their people. 4. Transfer pricing: MNCs

**99%**

**MATCHING BLOCK 77/173**

**SA**

M21CM06DC.pdf (D155282201)

will always aim to reduce their tax liability to a minimum. One way of doing this is through transfer pricing. The aim of this is to reduce their tax liability in countries with high tax rates and increase them in countries with low tax rates. They can do this by transferring components and part-finished goods between their operations in different countries at differing prices. Where the tax liability is high, they transfer the goods at a relatively high price to make the costs appear higher. This is then recouped in the lower tax

NSOU ? PGCO-III ? 119

**100%**

**MATCHING BLOCK 78/173**

**SA**

M21CM06DC.pdf (D155282201)

country by transferring the goods at a relatively lower price. This will reduce their overall tax bill. 5.

Low-skilled employment: The jobs created in the local environment may be low-skilled with the multinational employing expatriate workers for the more senior and skilled roles. Moreover, adopting the ethnocentric approach in staffing may affect the job market of the host country adversely. 6. Health and safety: Multinationals have been accused of cutting corners on health and safety in countries where regulation and laws are not as rigorous. Recently, in India Nestle was accused of some health-related problems with their popular product Maggie Noodles. 7. Export of Profits: Multinationals are likely to repatriate profits back to their 'home country', leaving little financial benefits for the host country. 8. Cultural and social impact - MNCs can dilute local customs and traditional cultures. For example, the sociologist George Ritzer coined the term McDonaldization to describe the process by which more and more sectors of American society as well as of the rest of the world take on the characteristics of a fast-food restaurant, such as increasing standardisation and the movement away from traditional business approaches. 4.5.3 Advantages of MNCs for the home country The MNCs home country has the following advantages 1. MNCs create opportunities for marketing the products produced in the home country throughout the world. 2. They create employment opportunities for the people of the home country both at home and abroad. 3. It gives a boost to the industrial activities of the home country. 4. MNCs

**90%**

help to maintain a favourable balance of payment of the home country in the long run. 5.

Home country can also get the benefit of foreign culture brought by MNC's.

120 ? NSOU ? PGCO-III 4.5.4 Disadvantages of MNC's for the home country 1. MNCs transfer the capital from the home country to various host countries, causing an unfavourable balance of payment. 2. MNCs may not create employment opportunities for the people of the home country if it adopts a geocentric approach. 3. As investments in foreign countries are more profitable, MNC's may neglect the home countries industrial and economic development. 4.6 Multinational Companies in Emerging Economies From the above discussion, it is revealed that MNCs play an important role in linking rich and poor economies, and in transmitting capital, knowledge, ideas and value systems across borders. MNCs' interaction with various institutions, organisations and individuals is generating positive as well as negative spillovers for various groups of stakeholders in both home and host countries. In

consequence, they are focal points in the popular debate on the merits and dangers of globalisation, especially when it comes to developing

and emerging economies. According to Meyer(2004), understanding the role of MNCs in emerging economies is essential both for policymakers and for MNCs themselves. Policymakers are influencing the regulatory regime under which both MNCs and local business partners operate. They are interested in understanding how foreign direct investment (FDI) influences economic development and national welfare. The expectation that FDI will be beneficial to the local economy, has motivated many governments to offer attractive incentive packages to allure investors. The motivation is that the social benefits of inward FDI would exceed the private benefits of FDI, and investors would take into account only the latter when deciding over investment locations. The Fortune Global 500 top 10 list by annual revenue 1. WalMart Stores (US) - \$485.8bn 2. State Grid (China) - \$315.1bn 3. Sinopec (China) - \$267.5bn 4. We began our discussion with the definition of an MNC. Then we tried to categorise MNCs. Next, the different reasons for the growth of MNCs have been discussed. Along with the economies of scale other factors such as non-transferable knowledge, market growth, product sourcing, product innovation, etc play a vital role in the growth of MNCs. Moreover, various channels 122 ? NSOU ? PGCO-III through which MNCs can enter the domestic market have been introduced. Furthermore, the advantages and disadvantages of MNCs to the home and host countries have been discussed in brief. 4.8 Self Assessment Questions Long answer type: 1. Discuss the factors behind the growth of MNCs. 2. Narrate the channels through which an MNC can enter into a domestic market. 3. What are

Summary 5.10 Self assessment Questions 5.1 Objectives After studying this unit, you will be able to: ? know the meaning of

global strategic management ? understand the framework for global strategy ? get an idea of competitiveness ? figure out the theories of competitiveness ? comprehend the pillars of competitiveness ? know Porter's diamond model of competitive advantage

124 ? NSOU ? PGCO-III 5.2 Introduction The global strategic management is intended to provide theoretical insights of strategy in a global perspective and to give some guidance as to how to deal with the realities of international business. Accordingly, this section provides an overview of the framework for global strategy, concept of competitiveness and its determinants and Porter’s diamond model of competitive advantage. These concepts will be helpful to understand the different topics in the subsequent units. 5.3 Concept of Global Strategic Management Global strategic management has emerged as a new field due to the rapid globalization of business. Globalization does matter to strategy creation due to the following reasons: (i) Multinational enterprises must be internally differentiated to respond to the environmental differences that exist in different business and geographic markets. (ii) Globalization involves the integration of corporate activities across borders. (iii) Global companies must understand customers from the perspective of both domestic and international standards and must have the ability to know the multiple locations far from the home base. Thus, global strategic management is nothing but a blend of strategic management and international business which develops worldwide strategies for global corporations. In order to understand this topic very meaningfully one must have a clear idea about strategy, strategic management and international business. Let us explain these concepts at the outset. William F Glueek (1972) defined strategy as “a unified, comprehensive and integrated plan designed to assure that the basic objectives of the enterprise are achieved.” Three adjectives were used by Glueek to define a plan and to make the definition adequate. ‘Unified’ means that the plan joins all the parts of an enterprise together, ‘comprehensive’ means it covers all the major aspects of the enterprise and ‘integrated’ means that all parts of the plan are compatible with each other .Thus, strategy is a plan of action that is adopted in order to achieve the objective(s) of the firm .Various other actions of the firm flow from the strategy. Strategy is a ‘mother’ plan of action or action principle for the firm. A business strategy is global when a company competes in the key market of the world and when the business system is made of integrated and co-ordinated activities across borders.

NSOU ? PGCO-III ? 125 Pearce and Robinson defined

**MATCHING BLOCK 84/173**

**SA**

Final update.docx (D130166870)

strategic management as “the set of decisions and actions resulting in formulation and implementation of strategies designed to achieve

the objectives of the enterprise”. In other words, strategic management is a stream of decisions and actions which leads to development of an effective strategy or strategies to achieve corporate objectives (Glueek & Jauch,1984). International business

**73%**

**MATCHING BLOCK 82/173**

**W**

refers to business activities that involve the transfer of resources, goods, services, knowledge, skills or information across national boundaries.

It is a cross-border business conducted in foreign country by crossing national boundary. As global integration takes place between countries and companies due to international business, the managers and the strategy researchers will have to find new ways to deal with globalization. The global strategic management is intended to provide theoretical insights of strategy in a global perspective and to give some guidance as to how to deal with the realities of international business. 5.4 Framework for Global Strategy A global strategy is the means by which an organisation defines its long-term objectives for the world market; builds, integrates and co-ordinates its business system to gain and sustain a global competitive advantage and enables an organisation to manage its operations worldwide. A global strategy consists of four major components: global strategic ambition, global strategic positioning, global business system, and global organisation which are elaborated in the following sub-sections. Note: This section has been adopted from "Lasserre, P. (2003). Global Strategic Management, Palgrave Macmillan, 36–60. 5.4.1 Global Strategic Ambition The global strategic ambition expresses the role an organisation wants to play in the world market place and how it views the future distribution of its sales and assets in the key regional clusters of the world. There are generally five types of role that a company plays in the world market as either global player or regional player or regional dominant global player or global exporter or global operator. These roles are discussed below: A company whose ambition is to be a global player aspires to establish a sustainable competitive position in the key markets of the world and to build an integrated business system of designs spread over those key markets. For example, SONY, Unilever, Ericsson, Procter & Gamble etc would qualify for such a description of their role.

126 ? NSOU ? PGCO-III A regional player defines its role as to capture a strong competitive advantage in one of the key regions of the world e.g., North America, Europe or Asia etc. and to be a marginal or relatively weak competitor in the other parts. Fiat in automobiles, NEC or Barclays would be examples of such an ambition. A regional dominant global player is a company whose role is more than a regional player but it is not yet selling across the key markets of the world. A global exporter is a company whose role is to sell products manufactured or services operated in its home country across the key markets of the world and who builds foreign operations only to support the export drive. The major aerospace or defence companies like Boeing, Airbus and Raytheon can be classified into this category despite the fact that they have some supporting assets (maintenance, sales offices, etc.) outside their home region. A global operator is a company that procures a large fraction of its product components in factories located outside its base market and which concentrates its sales in its domestic market. In such a case the ambition would hardly qualify as a global: however, many managerial issues of integration and co-ordination of activities, both in-house factories or long-term subcontracting, would be quite similar to those that a global company would have to face. In order to assess the degree of global ambition exhibited by companies, one should look at their distribution of sales, assets and personnel. Ideally, a pure global company would exhibit three major characteristics: ? First, it would have a distribution of its sales proportional to the distribution of markets in its industry. ? Second, it would have a distribution of its assets and work force proportional to the distribution of markets in its industry. ? Third, it would manage its activities on an integrated and co-ordinated way across the globe. In order to evaluate the extent to which a company has followed a global ambition, one can use two globalisation indices: the Global Revenue Index and the Global Capability Index. The Global Revenue Index (GRI) is calculated by taking the ratio of the company distribution of sales in the major world regions to the industry distribution of demand in the same regions. The Global Capability Index (GCI) is calculated in a similar way, but instead of taking the distribution of sales, one takes the distribution of assets for capital

NSOU ? PGCO-III ? 127 intensive industries or else of personnel. If one combines the GCI and the GRI in one chart, we obtain a mapping of the global ambition of players. A company low in both GRI and GCI would be a Regional Player, a company low in GRI and high in GCI would be a Global Operator, a company low in GCI and high in GRI would be a Global Exporter while a company high in both dimensions would be a Global Player and a company with an average score in both dimensions would be a Regional Dominant Global Player. As part of the strategy formulation process, companies can use the global indices to analyse their position and set their global ambition.

### 5.4.2 Global Strategic Positioning

Global positioning consists of two types of choices: (i) the choice of countries in which the company wants to compete and the role that those countries have to play in the global country portfolio; (ii) the various value propositions for the product or services of the company, corresponding to the type of segments and countries in which the company wants to compete.

**Choice of countries** Depending on the industries, countries differ in the opportunities they offer to companies for their strategic development. Some countries, given their size, growth or the quality of their human, natural or locational resources, are critical for companies' long-term competitiveness. Those countries are qualified as key countries. For example, Europe, North America and Asia are the three regional clusters that a global player would consider, but within those clusters some countries are more important than others, and should be given priority. In Asia, for instance, in the automobile sectors, Japan, Korea and, in the future, China can be considered as key countries. In Europe, Germany and, to a certain extent, the United Kingdom or France are also key countries. The second category of countries consists of countries that exhibit a high growth rate, making them strategically attractive in the near future. Those are the emerging countries. China, India, Brazil, Poland in the early twenty-first century generally qualify for that definition but, again, it is difficult to generalise since opportunities are industry-specific. The platform countries constitute a third category. These are the countries which, because of locational advantage, good logistical, financial, regulatory and legal infrastructure or qualified personnel, can serve as a 'hub' for setting up regional centres, global factories that are 'platforms' for further development. Singapore, Hong Kong, Ireland or Taiwan present these characteristics.

128 ? NSOU ? PGCO-III A fourth category would be the marketing countries, where the attractiveness of the market is good, without being as strategically critical as for the key countries. The type of presence in such countries should be assessed on its own merits, depending on the political, economic and business context. Countries with a strong resource base but limited market prospects would be classified as sourcing countries; for instance, Malaysia for rubber or Saudi Arabia for petroleum. Typically, a global company will control a portfolio of operations in these different categories of countries. The benefit of such categorisation is to establish priorities in investments and to guide entry strategies.

**Value proposition** The value proposition is the definition of a customer's value attributes that the company is offering to the market. It implies: ? Choice of value attributes ? Choice of customer segments ? Choice of degree of world standardisation of the product/service offering. Value attributes are the elements of the products or services that customers value when making their purchasing decision. Those include the product design, functionality, performance, quality, customisation and price, as well as the related service, the brand, the availability and other features. The set of those attributes for a particular group of customers and a particular product or service is the customer's value curve. Michael Porter has identified two 'generic' strategies corresponding to two types of value attributes: (a) A proposition based on value-enhancing attributes such as performance, quality, service, customisation. Porter calls this type of value attribute as differentiated. (b) A proposition based on price for standardised products or services. Porter calls this type cost leadership. The same typology can apply to global positioning: the company can either position itself as a global differentiator or a global cost leader. Customer segments are the groups of customers that have similar value curves. Those customer groups can be identified by income level, geographical location, age, socio-psychometric attributes in consumer goods and service industries or by industry, size, purchasing behaviour in business-to-business industries (B2B). The strategic choice at this level will be to decide whether the company concentrates its segmentation on one

NSOU ? PGCO-III ? 129 or two customer groups, a positioning that Michael Porter qualifies as Focused, or whether it attempts to embrace many or all customer segments, a positioning qualified as Broad. The third component of a value proposition is the choice between a standardised versus an adaptive-value proposition across countries. If one adopts a similar or standardised value attribute to the same type of customer segments across the globe, the approach will be qualified as Standard; if one tries to differentiate value attributes and segments according to the country or regions, the approach will be qualified as Adaptive. Then the company's value proposition will consist of trying to identify the customer groups it wants to serve (Focused or Broad), the type of value attribute it wants to offer (Cost versus Differentiation) to those customers, and whether it is homogeneous or not across country (Standardised versus Adaptive). Coca Cola, Swatch or SONY, for instance, have a standard value proposition across the globe and serve similar segments. Unilever and Procter & Gamble adjust their value proposition and their segmentation in different countries. The strategic choice of a value proposition dictates the type of capabilities that are needed to compete globally, and therefore the type of business system in which the company needs to invest.

### 5.4.3 Global Business System

A global business system decomposes the company value chain into elements which are spread and integrated across the world. It involves building and developing capabilities to compete successfully on the global market space in accordance with the positioning that has been already determined. A company value chain is the set of activities that a company employs in order to design, produce and deliver the value proposed to the customer. Each company has a different value chain according to the type of industry in which it operates and the degree of vertical integration it has adopted. However, one can distinguish three major generic components of a value chain:

- (a) Innovative activities: R&D, knowledge, creation, design
- (b) Productive activities: procurement, manufacturing, back office, operations, logistics
- (c) Customer relationship activities: marketing, sales, distribution, customer services.

In each of these activities, the company deploys resources, assets and competencies. Global capabilities are embodied in a business system deployed in various countries. In order to be competitive the company should be able to leverage some of its competitive advantages across countries. Competitive advantages are capabilities that are difficult to replicate or imitate and are non-tradable. Generally one can distinguish between two types of capabilities leading to competitive advantages:

- (a) Capabilities leading to an increase in customer value through performance, quality and brand services, leading to a Differentiated value proposition
- (b) Capabilities leading to a lower cost base, such as low-cost labour, low-cost sourcing, economies of scale in production, efficiency, leading to a Cost leadership value proposition.

Competitive advantage, in order to be valuable, needs to be long-lasting or sustainable. One can generally mention three ways of achieving sustainability:

- (a) Customer loyalty
- (b) Positive feedbacks
- (c) Pre-emption of capabilities.

Customer loyalty creates sustainability when customers keep coming back to a company by choice, because the product or service provided to them is unique or more valuable than competition. It can also be due to a brand that has imprinted an association of uniqueness to the product or service in the mind of the customer. It can also be due to high switching costs that customers would incur if they changed products or services: in that case the customer is locked-in. Coca Cola is the most characteristic example of sustainable competitive advantages coming from a strong brand. A high switching costs example is given by Microsoft, whose operating system is so dominant that a customer wishing to shift to a competitive system like Linux or Apple would have tremendous application software adaptation costs. Positive feedbacks are advantages that follow the logic of 'success brings success' and produce increasing returns. There are two kinds of positive feedback: 'network externalities' and 'experience effects'.

NSOU ? PGCO-III ? 131 Network externalities exist when the customer base of a product or service is such that it induces other products or service providers to adopt it in their own value proposition. For example, Microsoft Office followed the same path: more software available with Windows or more users of Microsoft Office attract more customers to buy Windows personal computers and to become users of Microsoft Office which in turn induces more Windows-based software, thereby attracting more customers. Experience effects exist when accumulated volume reduces costs or increases customer benefits in such a way that the competitors, being ahead in accumulated volume, can use their lower cost base or customer value advantage to eliminate weaker competitors, which, in turn, helps them to accumulate more volume which then helps them to eliminate more competitors, etc. The Boston Consulting Group (BCG) in the early 1970s developed the theory of the 'experience curve', a modern version of the 'learning curve' discovered in the 1930s by aerospace engineers, demonstrating that the cost of production in standard products or services decreases by a fixed percentage each time the accumulated volume of production doubles. Based on this law, they suggested that, for standard products, competitive strategies should be based on a race for accumulated volume that would ultimately lead the larger competitor to achieve a sustainable dominant profitable competitive position. Although the experience curve theory has been criticised for its simplistic assumptions (it applies mainly to standard products in price-sensitive markets), it has proven to be a powerful competitive advantage in many industrial or service sectors such as chemical products, electronic components or automotive parts. Pre-emption of capabilities is a type of competitive advantage based on the appropriation by one company of key resources or assets that competitors will find difficult to access, or to the development of competencies that are 'time incompressible'. Appropriation of resources or assets applies to the privileged access to natural resources such as location or mining concessions. It may apply to access to skills and talents when they are in limited supply, as is the case in many emerging markets such as the Internet- related sectors. It may apply to the right to do business, such as the obtaining of licences, as in telecommunications, or landing rights in air transport. Patenting is a form of pre-emption since it gives the patent holder a period during which it has the proprietary right to exploit the patent. It applies to distribution networks, partnerships or access to favourable locations, as in the retail or hospitality industries.

132 ? NSOU ? PGCO-III Building sustainability One of the key elements of any strategy is to be able to create and exploit sustainable competitive advantages. For global firms, the central issue is to be able to utilise their existing advantages in multiple-country leverages in order to compete successfully with local players and other global competitors. This can be done in two ways: (a) By being among the first competitors to enter a given market: first-mover advantages. (b) By exploiting capabilities already built up in other countries in order to displace and dominate existing competitors: leveraging advantages. During the process of globalisation, companies progressively split their value chain by spreading their activities across the world. The first stage is the export stage in which the only elements of the value chain which are set up in foreign countries are the sales, and even then not through direct investment but through local distributors, agents or licensing. The only possible direct investment at this stage, if the size of the market justifies it, is the creation of a representative office in one country or a regional office for a group of countries. The second stage is to invest in marketing subsidiaries actively to manage the marketing mix. Those subsidiaries are staffed with expatriates plus local recruits and their role is to co-ordinate the activities of the distributors, organise the promotion, set up logistics and service centres and, in some cases, some operational facilities, such as testing laboratories or assembling operations to support the sales effort. Those marketing subsidiaries may eventually take over the local distributors. When the market justifies or when local governments require a localisation of value adding activities, companies invest in manufacturing or operational facilities for the service sectors. Some R&D facilities may be localised as well, in order to adapt products or services to local conditions. These foreign investments are made either as wholly owned subsidiaries or joint ventures or acquisitions of local firms. At this stage, as the number of those investments increases, the company is a multinational, managing a portfolio of relatively independent worldwide subsidiaries. During the final stage of globalisation, multinational companies feel the competitive need to integrate and co-ordinate their worldwide operations to take advantage of economies of scale, transfer of know-how and resource optimisation. This leads to an

NSOU ? PGCO-III ? 133 interlocked set of value chain activities which falls broadly into three categories: the activities which have a global role to serve the whole world (global activities, such as global research centres, or global plants), those which have a regional role (regional activities) and those which are purely local (local activities). In the process of globalisation, companies may usually need to acquire and complement their capabilities by setting up partnerships. Strategic alliances for globalisation can take several forms: (a) Global alliances whose role is to pool complementing capabilities to reach world markets, or to achieve a critical mass in R&D. The most usual examples of world market partnerships are the airlines alliances such as Star or One- World, or Concert in the telecoms sector between BT and ATT. R&D global alliances are frequent in aerospace, life sciences, electronic defence industries or oil exploration. (b) Partnerships for market entry, joint ventures, franchises or licensing, whose role is to comply with local government requirements (as has been the case in China) or to facilitate entry or minimise risks in a particular country. (c) Acquisitions that from an ownership point of view, are not partnerships, since one party takes over the other, but from a management point of view can be assimilated to an alliance since different national and corporate cultures have to be combined. Acquisitions may have either a global or a local scope.

#### 5.4.4 Global Organisation

The final element of a global strategy is the design of an organisational architecture which is able to support and implement the global ambition, global positioning and global business system. Here, we will limit our comments to the key elements of choices that may be considered during the strategy formulation process. Stopford and Wells (1972), Heenan and Perlmutter (1979), Prahalad and Doz (1987), and Bartlett and Ghoshal (2000) have identified different types of structures, systems and cultures in the management of global firms. These different organisational choices have been mapped by Doz and Prahalad in what they call the Integration/Responsiveness Grid. The choice of an adequate organisational model is contingent upon the following factors: (a) The nature of the competitive context in the industry: The more 'global' is the industry, the more integrated and co-ordinated the activities and the more the

134 ? NSOU ? PGCO-III organisational structure should reflect this integration. The world functional or the global business structure or the matrix structure fulfils this requirement. (b) The strategic positioning adopted by the firm: A standardised positioning using cost leadership as a competitive advantage will require a tightly integrated organisation such as the world functional or the global business structure. Companies engaged in global business have to cope with a dual requirement: (a) They need efficiently to introduce and leverage their competitive advantages across borders; consequently their organisational design demands a certain degree of co-ordination and centralisation. (b) They need to adapt to local conditions; consequently their organisational design demands a certain degree of decentralisation and local autonomy. Organisational design reflects the way companies put this dual demand into action through the implementation of three interlocked elements: (a) Organisational structure: how roles, responsibilities and powers are assigned. (b) Organisational processes: how decisions are made, resource allocation commitments decided, policies enacted and rewards, sanctions and control exercised. Organisational processes include information processes, decision- making processes, planning and control processes and performance evaluation processes. (c) Organisational culture: the shared values and the dominant logic of doing business'; the 'dos' and 'don'ts' and what kind of behaviour is rewarded or sanctioned'. Based on the work of prior research, three generic organisational models are identified: ?

Global hub: a worldwide functional or global product structure ? Confederation: a multinational geographical structure ? Multidimensional: a matrix or transnational structure. A variety of structures is derived from these three generic models. It can be argued that there is no single best structure and that the adoption of a particular structure is contingent upon the competitive imperative.

NSOU ? PGCO-III ? 135 5.5 Concept of Competitiveness In order to understand the concept of competitiveness, let us consider some definitions of competitiveness offered by the experts and forums in this field: Krugman [1990, 1994]: If competitiveness has any meaning, it is simply just another way to express productivity. The ability of a country to improve its living standard depends almost entirely on its ability to raise its productivity. Competitiveness is meaningless word when applied to national economies. Porter [1990]: The only meaningful concept of competitiveness at the national level is national productivity. Competitiveness is an ability of an economy to provide its residents with a rising standard of living and a high employment on a sustainable basis. Porter (1990) suggests that competition and the seeking of competitiveness can be a win-win game, favouring all parties taking part in the race. OECD [1992]: The OECD defines competitiveness as the degree to which a state may produce goods and services that should pass the test of international competition, and in the same time to maintain and develop its incomes at national level. World Economic Forum [1996]: Competitiveness is the ability of a country to achieve sustained high rates of growth in GDP per capita. European Commission [2001]: Competitiveness of a nation is the ability of an economy to provide its population with high and rising standards of living and high rates of employment on a sustainable basis. Adamkiewicz-Drwi<sup>33</sup>o [2002]: The competitiveness of a company means adapting its products to the market and competition requirements, particularly in terms of product range, quality, price as well as optimal sales channels and methods of promotion. Ajitabh, Momaya [2004]: Competitiveness of a firm is its share in the competitive market. Porter et al. [2008]: The most intuitive definition of competitiveness is a country's share of world markets for its products. This makes competitiveness a zero-sum game, because one country's gain comes at the expense of others.

136 ? NSOU ? PGCO-III Chao-Hung, Li-Chang [2010]: A firm's competitiveness is its economic strength against its rivals in the global marketplace where products, services, people and innovations move freely despite the geographical boundaries. Altomonte et al. [2012] : External or international competitiveness is the ability to exchange the goods and services that are abundant in home country for the goods and services that are scarce in this country. From the analysis of the above definitions, it follows that competitiveness can be viewed from two perspectives- micro and macro. In the microeconomic approach, the competitiveness of goods and the competitiveness of firms are analysed. The competitiveness of goods and services mainly depends on their quality and price. These two elements have the greatest influence on the sales volume. However, other activities like market research, advertising, customer relations, distribution channels, customer support also contribute to the competitiveness. The competitiveness of firms is based on their ability to make profits, which, on the other hand, is largely determined by the competitiveness of their goods and services. Other factors contributing to the competitiveness are: the ability to increase the market share, corporate image and brands, the ability to access financial resources (Szentes, 2012; Wach, 2014). The concept of macro-level competitiveness or national competitiveness is twofold. On the one hand, macro competitiveness shows the ability of a country to sustain a high level of national income and a favourable position in the world economy. On the other hand, it shows the ability of a country to create a business environment in which the local firms and businesses are able to compete internationally. Porter (1990) went even further by saying that the competitiveness of a nation is equal to the competitiveness of its firms. The two best known measurement methods developed by the World Economic Forum (WEF) and the International Institute for Management Development (IMD) reflect this interdependency between micro and macro-level competitiveness. The Global Competitiveness Index (GCI, developed by WEF) is based on 12 pillars all consisting of several factors, but the pillars either characterise the macro competitiveness (e.g. institutions, infrastructure, macroeconomic environment, market size, education, health care), and micro competitiveness (e.g. labour market, financial market, market of goods, technology and

NSOU ? PGCO-III ? 137 innovation). The World Competitiveness Index (WCI, developed by IMD) has 4 main factors, but again, these factors are either macroeconomic in nature (e.g. economic performance, government intervention and infrastructure), or can directly be related to the businesses (Business efficiency). 5.6 Theories of Competitiveness Theories of competitiveness range from the macro-perspective to micro- perspective. An overview of these theories has been provided in the Table 4.1. Table 4.1: Theories of Competitiveness Concept/Theory Representative Main Issues Classical concepts and theories Concept of Adam Smith Each party involved in international free trade invisible hand can gain benefits by specializing in the production of goods in which it holds an absolute advantage. So, let every country export those goods it produces at the lowest costs and import those goods it produces at the highest costs. Comparative David Ricardo A country can benefit from foreign trade even advantage if it lacks any absolute advantage over its concept trade partners in the goods' production. It only needs to have relative advantage in any good in order to sell it abroad. Heckscher-Ohlin Eli Heckscher A country will specialize in producing and trade theory Bertil Ohlin exporting those commodities which require (natural resource relatively intensive use of locally abundant abundancetheory) factors of production. Relatively capital- abundant country will export capital-intensive commodities while relatively labour- abundant country will export labour-intensive commodities.

138 ? NSOU ? PGCO-III Neoclassical, Austrian and institutional concepts and theories of competitiveness Theory of John M. Clark Competitive advantage is driven by effective innovations introduced by the company. (workable) Innovations motivate firms to compete competition aggressively in order to obtain competitive advantage, which in turn leads to technological progress and economic growth at the macro- level. Theory of Wroe Alderson There are six potential sources of a firm's marketing competitive advantage: market segmentation, behaviour a way of communication (i.e. promotion and advertising) and reaching out to the customers (choice of distribution channel), product development, process improvement, and product innovations. Austrian Ludwig von Mises Market competition is an automatic dynamic schooltheory process and not a specific market structure. The tendency towards market equilibrium is the result of entrepreneurial activity. An enterprise wins or loses in competition depending on the strength of its capabilities and the degree it offers match the market needs. Evolutionary Joseph A. Crucial to long-term survival of firms in the economics Schumpeter marketplace is their constant adjustment to changing environment, mainly due to searching out new innovative recombination of the garnered resources. Theory of Joseph A. The company's ability to innovate is a key entrepreneurship Schumpeter for achieving competitive advantage over its and innovations rivals. The ability to create new solutions and

NSOU ? PGCO-III ? 139 the predisposition to take risks associated with testing them in the market underline the competition process and entrepreneurship. Differences both in the level of innovative capacity and entrepreneurship result in differences in the competitive position of any economic agent. Institutional Friedrich List In addition to economic factors, one's economics Max Weber James competitiveness is affected by social streams Buchanan institutions such as public authorities, trade unions, financial institutions, socio-political organizations, ownership and organizational structures and mental habits, rules and codes of conduct. Contemporary concepts and theories of competitiveness Krugman's Paul R. Krugman Productivity growth is the main driver of concept of competitiveness. International competitiveness competitiveness of countries is associated with their high standard of living Porter's theory Michael E.Porter Competitiveness depends on long run of productivity, which requires a business competitiveness environment that supports continual innovation in products, processes and management. The four underlining conditions driving the global competitiveness of country's companies include: factor endowments, demand conditions, related and supporting industries (clusters), and the firm's strategy, structure and rivalry. Note: This section has been adopted from "Competitiveness in The Economic Concepts, Theories and Empirical Research" by Tomasz Siudek and Aldona Zawojka; *Oeconomia* 13 (1) 2014, 91–108

140 ? NSOU ? PGCO-III 5.7 Twelve Pillars of Competitiveness This section presents a short description of each pillar of the Global Competitiveness Index. World Economic Forum (WEF) defines competitiveness as the set of institutions, policies, and factors that determine the level of productivity of a country. The level of productivity, in turn, sets the level of prosperity that can be reached by an economy. The productivity level also determines the rates of return obtained by investments in an economy, which in turn are the fundamental drivers of its growth rates. In other words, a more competitive economy is one that is likely to grow faster over time. The Global Competitiveness Index 4.0 evaluates the factors that collectively determine the level of a country's productivity—the most important driver of long-term improvements in living standards. The factors are organized into 12 pillars, and for presentation purposes they are grouped into four categories (viz. Enabling environment, Human capital, Markets and Innovation ecosystem) as shown in Figure 4.1

Figure 4.1 Global Competitiveness Index 4.0 Enabling environment Human capital Markets Innovation ecosystem ↓ ↓ ↓ ↓ Pillar 1: Institutions Pillar 5: Health Pillar 7: Product market Pillar 11: Business dynamism Pillar 2: Infrastructure Pillar 6: Skills Pillar 8: Labour market Pillar 12: Innovation capability Pillar 3: ICT adoption Pillar 9: Financial system Pillar 4: Macroeconomic stability Pillar 10: Market size

The development of the GCI 4.0 has been guided by the emergence of new fundamental changes in the functioning of national economies with the advent of the Fourth Industrial Revolution (4IR). According to WEF, successful economies in the 4IR era need to: ↓ ↓ ↓ ↓

NSOU ? PGCO-III ? 141 ? Be resilient, building buffers and economic mechanisms to prevent financial crises or mass unemployment and to respond to external shocks. ? Be agile, embracing change rather than resisting it. Companies, public policy- makers and workers should be able to quickly adapt how they operate and to take advantage of the opportunities to produce goods or provide services in new ways. ? Build an innovation ecosystem where innovation is incentivized at all levels and all stakeholders contribute to create the best conditions for new ideas to emerge, to be financed and commercialized as new products and services. ? Adopt a human-centric approach to economic development. This means that human capital is essential for generating prosperity and any policy that adversely affects human factors' potential will reduce economic growth in the long run. As a consequence, policy-making will have to ensure that the speed of change and the introduction of new technologies ultimately translate into better living conditions. WEF opines to look at the 12 pillars through the lens of the four meta- concepts: resilience, agility, innovative ecosystems and a human-centric approach. Looking at the GCI from this perspective enables to interpret the pillars as 4IR-readiness measures. The concept of resilience is reflected in the Financial system pillar (pillar 9), which includes measures to minimize the risk of a financial meltdown and resources to adjust to external shocks. By the same token, the Macroeconomic stability pillar (pillar 4) captures the extent to which a country's public sector can provide appropriate counter-cyclical measures and invest in projects that the private sector cannot finance. Similarly, the Skills pillar (pillar 6) captures workers' capacity to learn and adapt to changing circumstances. The concept of agility is present in the domestic market competition and entrepreneurial culture sub-pillars of the GCI because they imply greater capacity for "creative destruction, allowing innovative companies to emerge against incumbents and rewarding a risk-taking attitude. In addition, the concept is present in the public-sector performance sub-pillar: low levels of bureaucracy make it easier for businesses to re-organize and re-invent themselves when legal formalities are not taxing. Labour market flexibility (another sub-pillar) implies agility through easier re-allocation of talent across sectors and firms. The innovation ecosystem encompasses all pillars. Although business dynamism and innovation capability are the factors impacting innovation more directly, these need to be

142 ? NSOU ? PGCO-III complemented by high levels of human capital (health, education and skills); optimal allocation of skills (labour market functioning); and availability of venture capital and ad- hoc financial products (financial system development). A strong innovation ecosystem also presumes sound infrastructure, ICT readiness and institutions that allow ideas to flow and protect property rights, and a large market size that incentivizes the generation of new ideas. The human-centric approach to development is embodied by the health (pillar 5) and skills (pillar 6) pillars, which together account for one-sixth of the total GCI score and take a broad approach to human capital: health is thought of as a state of complete physical, mental and social well-being, not merely the absence of disease or disabilities; education measures the skills humans need to thrive in the 4IR. The labour market pillar (pillar 8) includes measures of talent reward and respect of workers' rights, while the innovation capability pillar (pillar 12) includes measures that capture human collaboration, interaction and creativity. Let us give an overview of these twelve pillars of competitiveness: Pillar 1: Institutions Pillar 1 captures security, property rights, social capital, checks and balances, transparency and ethics, public-sector performance and corporate governance. By establishing constraints, both legal (laws and enforcement mechanisms) and informal (norms of behaviours), institutions determine the context in which individuals organize themselves and their economic activity. Institutions impact productivity, mainly through providing incentives and reducing uncertainties. Pillar 2: Infrastructure Pillar 2 captures the quality and extension of transport infrastructure (road, rail, water and air) and utility infrastructure. Better-connected geographic areas have generally been more prosperous. Well-developed infrastructure lowers transportation and transaction costs, and facilitates the movement of goods and people and the transfer of information within a country and across borders. It also ensures access to power and water—both necessary conditions for modern economic activity. Pillar 3: ICT adoption Pillar 3 captures the degree of diffusion of specific information and communication technologies (ICTs). ICTs reduce transaction costs and speed up information and idea

NSOU ? PGCO-III ? 143 exchange, improving efficiency and sparking innovation. As ICTs are general purpose technologies increasingly embedded in the structure of the economy, they are becoming as necessary as power and transport infrastructure for all economies. Pillar 4: Macroeconomic stability Pillar 4 captures the level of inflation and the sustainability of fiscal policy. Moderate and predictable inflation and sustainable public budgets reduce uncertainties, set returns expectations for investments and increase business confidence—all of which boost productivity. Also, in an increasingly interconnected world where capital can move quickly, loss of confidence in macroeconomic stability can trigger capital flight, with destabilizing economic effects. Pillar 5: Health Pillar 5 captures health-adjusted life expectancy (HALE)—the average number of years a newborn can expect to live in good health. Healthier individuals have more physical and mental capabilities, are more productive and creative, and tend to invest more in education as life expectancy increases. Healthier children develop into adults with stronger cognitive abilities. Pillar 6: Skills Pillar 6 captures the general level of skills of the workforce and the quantity and quality of education. While the concept of educational quality is constantly evolving, important quality factors today include: developing digital literacy, interpersonal skills, and the ability to think critically and creatively. Education embeds skills and competencies in the labour force. Highly educated populations are more productive because they possess greater collective ability to perform tasks and transfer knowledge quickly, and create new knowledge and applications. Pillar 7: Product market Pillar 7 captures the extent to which a country provides an even playing field for companies to participate in its markets. It is measured in terms of extent of market power, openness to foreign firms and the degree of market distortions. Competition supports productivity gains by incentivizing companies to innovate; update their products, services and organization; and supply the best possible products at the fairest price.

144 ? NSOU ? PGCO-III Pillar 8: Labour market Pillar 8 encompasses “flexibility”, namely, the extent to which human resources can be reorganized and “talent management”, namely, the extent to which human resources are leveraged. Well-functioning labour markets foster productivity by matching workers with the most suitable jobs for their skill set and developing talent to reach their full potential. By combining flexibility with protection of workers’ basic rights, well-functioning labour markets allow countries to be more resilient to shocks and re-allocate production to emerging segments; incentivize workers to take risks; attract and retain talent; and motivate workers. Pillar 9: Financial system Pillar 9 captures the depth, namely the availability of credit, equity, debt, insurance and other financial products, and the stability, namely, the mitigation of excessive risk- taking and opportunistic behaviour of the financial system. A developed financial sector fosters productivity in mainly three ways: pooling savings into productive investments; improving the allocation of capital to the most promising investments through monitoring borrowers, reducing information asymmetries; and providing an efficient payment system. At the same time, appropriate regulation of financial institutions is needed to avoid financial crises that may cause long-lasting negative effects on investments and productivity. Pillar 10: Market size Pillar 10 captures the size of the domestic and foreign markets to which a country’s firms have access. It is proxied by the sum of the value of consumption, investment and exports. Larger markets lift productivity through economies of scale: the unit cost of production tends to decrease with the amount of output produced. Large markets also incentivize innovation. As ideas are non-rival, more potential users means greater potential returns on a new idea. Moreover, large markets create positive externalities as accumulation of human capital and transmission of knowledge increase the returns to scale embedded in the creation of technology or knowledge. Pillar 11: Business dynamism Pillar 11 captures the private sector’s capacity to generate and adopt new technologies and new ways to organize work, through a culture that embraces change, risk, new business models, and administrative rules that allow firms to enter and exit the market

NSOU ? PGCO-III ? 145 easily. An agile and dynamic private sector increases productivity by taking business risks, testing new ideas and creating innovative products and services. In an environment characterized by frequent disruption and redefinition of businesses and sectors, successful economic systems are resilient to technological shocks and are able to constantly re- invent themselves. Pillar 12: Innovation capability Pillar 12 captures the quantity and quality of formal research and development; the extent to which a country’s environment encourages collaboration, connectivity, creativity, diversity and confrontation across different visions and angles; and the capacity to turn ideas into new goods and services. Countries that can generate greater knowledge accumulation and that offer better collaborative or interdisciplinary opportunities tend to have more capacity to generate innovative ideas and new business models, which are widely considered the engines of economic growth. Note: This section has been adopted from “The Global Competitiveness Report 2018” by Klaus Schwab (ed.), World Economic Forum, 37–42. 5.8 Porter's Diamond Model of Competitive Advantage In 1990, Michael Porter in his well-known book, The Competitive Advantage of Nations, attempts to determine why some nations succeed and others fail in international competition. Porter and his team look at 100 industries in 10 nations and make an important contribution to existing literature on trade. Porter’s work is based by a belief that existing theories of international trade tell only part of the story. The essential task of Porter is to explain why a nation achieves international success in a particular industry. Why does Japan do so well in the automobile industry? Why does Switzerland excel in the production and export of watch? Why do Germany and the United States do so well in the chemical industry? Why do Italian companies do so well in the tile industry? These questions cannot be answered easily by the Heckscher-Ohlin theory and the theory of comparative advantage offers only a partial explanation. The theory of comparative advantage would say that Switzerland excels in the production and export of watch because it uses its resources very productively in this industry. Although this may be correct, this does not explain why Switzerland is more productive in this industry than Great Britain, Germany or Spain. Porter tries to solve this puzzle.

146 ? NSOU ? PGCO-III Porter theorizes that four broad attributes of a nation shape the environment in which local firms compete and these attributes promote the creation of competitive advantage. In the format of a figure this looks like a diamond and hence it is termed as Porter’s diamond (refer to Figure 4.2). Porter’s four attributes of national competitive advantage are as follows: 1. Factor Endowments: It implies a

**87%**

**MATCHING BLOCK 85/173**

**SA**

EMGN578 ( 2 ).docx (D142425824)

nation’s position in factors of production such as skilled labour or

the infrastructure necessary to compete in a given industry. The argument of factor endowments is similar to Heckscher-Ohlin theory. Actually Porter does not propose anything radically new, but he analyses the characteristics of factors of production. He recognizes hierarchies among factors, distinguishing between basic factors (e.g., natural resources, climate, location, and demographics) and advanced factors (e.g., communication infrastructure, sophisticated and skilled labour, research facilities and technological know-how). He argues that advanced factors are the most significant for competitive advantage. Unlike the naturally endowed basic factors, advanced factors are a product of investment by individuals, companies and governments. Thus, government investments in basic and higher education, by improving the general Figure: 4.2: Porter's diamond: Determinants of National Competitive Advantage

NSOU ? PGCO-III ? 147 skill and knowledge level of the population and by stimulating advanced research at higher education institutions, can upgrade a nation's advanced factors. For example, in India it is the large production of engineering graduates that has given the country to its' competitive advantage in IT services. The relationship between advanced and basic factors is complex. Basic factors can provide an initial advantage that is subsequently reinforced and extended by investment in advanced factors. Conversely, disadvantages in basic factors can create pressures to investment in advanced factors. For example, Japan, a country that lacks arable land and mineral deposits and yet it through investment has built a substantial endowment of advanced factors. Porter notes that Japan's large pool of engineers has been vital to Japan's success in many manufacturing industries. 2. Demand Conditions: It implies

**95% MATCHING BLOCK 86/173** SA EMGN578 ( 2 ).docx (D142425824)

the nature of home demand for the industry's product or service.

According to Porter, the home demand plays an important role in upgrading competitive advantage. Firms are typically more sensitive to the needs of their closest customers. Thus, the characteristics of home demand are particularly important in shaping the attributes of domestically made products and creating pressures for innovation and quality. Porter argues that a nation's firms gain competitive advantages if their domestic customers are sophisticated and demanding. Such consumers pressure local firms to meet high standards of product quality and to produce innovative products. Porter notes that Japan's sophisticated and knowledgeable buyers of cameras helped to stimulate the Japanese camera industry to improve product quality and to introduce innovative models. 3. Related and Supporting Industries: It implies

**85% MATCHING BLOCK 87/173** SA EMGN578 ( 2 ).docx (D142425824)

the presence or absence of supplier industries and related industries that are internationally competitive.

The benefits of investments in advanced factors of production by related and supporting industries can spill over into an industry, thereby helping it to achieve a strong competitive position internationally. For example, Swedish strength in fabricated steel products (e.g., ball bearings and cutting tools) has drawn on strengths in Sweden's steel industry. Similarly, Switzerland's success in pharmaceuticals is closely related to its previous international success in the technologically related dye industry. One consequence of this process is that successful industries within a country tend to be grouped into clusters of related industries. This was one of the most pervasive findings of Porter's study. 148 ? NSOU ? PGCO-III 4.

**58% MATCHING BLOCK 88/173** SA EMGN578 ( 2 ).docx (D142425824)

Firm Strategy, Structure and Rivalry: It implies the conditions governing how companies are created, organised and managed and the nature of domestic rivalry.

Porter makes two important points here. First, different nations are characterized by different management ideologies, which either help them or do not help them to build national competitive advantage. For example, Japanese are known for manufacturing, Germans for engineering and Americans for research and development. When Americans try to compete on manufacturing, the chances are that they may not succeed like Japanese. Thus, Just-in-Time and lean manufacturing would not be expected to benefit American firms as much as the design and development and introduction of new products into the market. A nation has to check as to which strategy is more suitable to it. Porter's second point is that there is a strong association between vigorous

<b>100%</b>	<b>MATCHING BLOCK 89/173</b>	<b>SA</b>	MBA-302 International Business and Internation ... (D164737016)
domestic rivalry and the creation and persistence of competitive advantage			

in an industry. Vigorous domestic rivalry induces firms to look for the ways to improve efficiency, which makes them better international competitors. Domestic rivalry creates pressures to innovate, to improve quality, to reduce costs, and to invest in upgrading advanced factors. All this helps to create world-class competitors. Porter speaks of these four attributes as constituting the diamond. He argues that firms

<b>96%</b>	<b>MATCHING BLOCK 90/173</b>	<b>SA</b>	nav 3-12-2018.docx (D44895527)
are most likely to succeed in industries or industry segments where the diamond is most			

favourable. He also argues that the diamond is a mutually interacting system. The effect of one attribute is contingent on the state of others. For example, Porter argues that favourable demand conditions will not result in competitive advantage unless the state of rivalry is sufficient to cause firms to respond to them. Unless the demand conditions are favourable, the factor endowments will not produce the competitive advantage. If supporting industries do not exist adequately, a nation with all other determinants available to it, will not develop competitive advantage. Porter maintains that two additional variables can influence the national diamond significantly: chance and government. Chance events, such as major innovations, can reshape industry structure and provide the opportunity for one nation's firms to replace another's. Government, by its choice of policies, can detract from or improve national advantage. For example, regulation can alter home demand conditions, government investments in education can change factor endowments, etc. If Porter is correct, we would expect his model to predict the pattern of international trade that we observe in the real world. Countries should export products from those

NSOU ? PGCO-III ? 149 industries where all four components of the diamond are favourable, while import in those areas where the components are not favourable. However, Porter's theory has not yet been subjected to independent empirical testing. Much about the theory rings true, but the same can be said for the new trade theory, the theory of comparative advantage and the Heckscher-Ohlin theory. It may be that each of these theories, which complement each other, explains something about the pattern of international trade. 5.9 Summary ? Global strategic management is nothing but a blend of strategic management and international business which develops worldwide strategies for global corporations. The global strategic management is intended to provide theoretical insights of strategy in a global perspective and to give some guidance as to how to deal with the realities of international business. ? William F Glueek (1972) defined strategy as "a unified, comprehensive and integrated plan designed to assure that the basic objectives of the enterprise are achieved." ? Pearce and Robinson defined

<b>57%</b>	<b>MATCHING BLOCK 91/173</b>	<b>SA</b>	Final update.docx (D130166870)
strategic management as "the set of decision and action resulting in formulation and implementation of strategies designed to achieve			

the objectives of the enterprise". ? Conducting business by crossing national boundary (i.e., international business) could itself be a strategy for a firm. Firm can take its unique product in terms of design, utility, quality or cost or skills or core competence or brand to other countries where these are not available. Accordingly, these firms grow considerably higher in all dimensions and earn greater profit than the domestic market. ? A global strategy consists of four major components: global strategic ambition, global strategic positioning, global business system, and global organisation. ? The global strategic ambition expresses the role an organisation wants to play in the world marketplace and how it views the future distribution of its sales and assets in the key regional clusters of the world. There are generally five types of role that a company plays in the world market as either global player or regional player or regional dominant global player or global exporter or global operator.

150 ? NSOU ? PGCO-III ? A company whose ambition is to be a global player aspires to establish a sustainable competitive position in the key markets of the world and to build an integrated business system of designs spread over those key markets. For example, SONY, Unilever, Ericsson, Procter & Gamble etc would qualify for such a description of their role. ? A regional player defines its role as to capture a strong competitive advantage in one of the key regions of the world e.g., North America, Europe or Asia etc. and to be a marginal or relatively weak competitor in the other parts. Fiat in automobiles, NEC or Barclays would be examples of such an ambition. ? A regional dominant global player is a company whose role is more than a regional player but it is not yet selling across the key markets of the world. ? A global exporter is company whose role is to sell products manufactured or services operated in its home country across the key markets of the world and who builds foreign operations only to support the export drive. The major aerospace or defence companies like Boeing, Airbus and Raytheon can be classified into this category despite the fact that they have some supporting assets (maintenance, sales offices, etc.) outside their home region. ? A global operator is a company that procures a large fraction of its product components in factories located outside its base market and which concentrates its sales in its domestic market. ? In order to evaluate the extent to which a company has followed a global ambition, one can use two globalisation indices: the Global Revenue Index and the Global Capability Index. The Global Revenue Index (GRI) is calculated by taking the ratio of the company distribution of sales in the major world regions to the industry distribution of demand in the same regions. The Global Capability Index (GCI) is calculated in a similar way, but instead of taking the distribution of sales, one takes the distribution of assets for capital intensive industries or else of personnel. ? Global positioning consists of two types of choices: (i) the choice of countries in which the company wants to compete and the role that those countries have to play in the global country portfolio; (ii) the various value propositions for the product or services of the company, corresponding to the type of segments and countries in which the company wants to compete.

NSOU ? PGCO-III ? 151 ? A global business system decomposes the company value chain into elements which are spread and integrated across the world. It involves building and developing capabilities to compete successfully on the global market space in accordance with the positioning that has been already determined. ? A company value chain is the set of activities that a company employs in order to design, produce and deliver the value proposed to the customer. Each company has a different value chain according to the type of industry in which it operates and the degree of vertical integration it has adopted. ? The final element of a global strategy is the design of an organisational architecture which is able to support and implement the global ambition, global positioning and global business system. ? Competitiveness can be viewed from the two perspectives- micro and macro. ? In the microeconomic approach, the competitiveness of goods and the competitiveness of firms are analysed. The competitiveness of goods and services mainly depends on their quality and price. These two elements have the greatest influence on the sales volume. However, other activities like market research, advertising, customer relations, distribution channels, customer support also contribute to the competitiveness. The competitiveness of firms is based on their ability to make profits, which, on the other hand, is largely determined by the competitiveness of their goods and services. Other factors contributing to the competitiveness are: ability to increase the market share, corporate image and brands, ability to access financial resources (Szentes, 2012; Wach, 2014). ? The concept of macro-level competitiveness or national competitiveness is twofold. On the one hand macro competitiveness shows the ability of a country to sustain a high level of national income and a favourable position in the world economy. On the other hand it shows the ability of a country to create a business environment in which the local firms and businesses are able to compete internationally. Porter (1990) went even further by saying that the competitiveness of a nation is equal to the competitiveness of its firms. ? The Global Competitiveness Index 4.0 evaluates the factors that collectively determine the level of a country’s productivity—the most important driver of long-term improvements in living standards. The factors are organized into 12 pillars, and for presentation purposes they are grouped into four categories (viz. Enabling environment, Human capital, Markets and Innovation ecosystem). Pillar

152 ? NSOU ? PGCO-III 1: Institutions captures security, property rights, social capital, checks and balances, transparency and ethics, public-sector performance and corporate governance. Pillar 2: Infrastructure captures the quality and extension of transport infrastructure (road, rail, water and air) and utility infrastructure. Pillar 3: ICT adoption captures the degree of diffusion of specific information and communication technologies (ICTs). Pillar 4: Macroeconomic stability captures the level of inflation and the sustainability of fiscal policy. Pillar 5: Health captures health-adjusted life expectancy (HALE)—the average number of years a newborn can expect to live in good health. Pillar 6: Skills capture the general level of skills of the workforce and the quantity and quality of education. Pillar 7: Product market captures the extent to which a country provides an even playing field for companies to participate in its markets. Pillar 8: Labour market encompasses “flexibility”, namely, the extent to which human resources can be reorganized and “talent management”, namely, the extent to which human resources are leveraged. Pillar 9: Financial system captures the depth, namely the availability of credit, equity, debt, insurance and other financial products, and the stability, namely, the mitigation of excessive risk-taking and opportunistic behaviour of the financial system. Pillar 10: Market size captures the size of the domestic and foreign markets to which a country’s firms have access. It is proxied by the sum of the value of consumption, investment and exports. Pillar 11: Business dynamism captures the private sector’s capacity to generate and adopt new technologies and new ways to organize work, through a culture that embraces change, risk, new business models, and administrative rules that allow firms to enter and exit the market easily. Pillar 12: Innovation capability captures the quantity and quality of formal research and development; the extent to which a country’s environment encourages collaboration, connectivity, creativity, diversity and confrontation across different visions and angles; and the capacity to turn ideas into new goods and services. ? Porter theorizes that four broad attributes of a nation shape the environment in which local firms compete and these attributes promote the creation of competitive advantage. In the format of a figure this looks like a diamond and hence it is termed as Porter’s diamond. Porter’s four attributes of national competitive advantage are as follows:

International Business.pdf (D142236558)

Objectives After studying this unit, you will be able to: ? understand

motivation and pressures of internationalization ? know the role of strategy in the context of value chain of the firm ? get an idea of strategic choices ? comprehend the market entry strategy ? explain organisation structure of international business 6.2 Introduction From the discussion in Unit 5 you are already aware of the different facets of the global strategic management which are intended to provide some guidance as to how to deal with the realities of international business. Following those ideas, this section provides an overview of the motivation and pressures of internationalization, role of strategy in the context of value chain of the firm. Besides, market entry strategy and organisation structure of international business are discussed in details in this unit. These concepts will be helpful to understand the realities of international business in a very meaningful way. 6.3 International Business as a Strategy Conducting business by crossing national boundary (i.e., international business) could itself be a strategy for a firm. Firm can take its unique product in terms of design, utility, quality or cost or skills or core competence or brand to other countries where these are not available. Accordingly, these firms grow considerably higher in all dimensions and earn greater profit than firms operating only in the domestic market. Let us take the example of McDonald's. Due to the brand of McDonald's it charges higher prices for its product in the developing countries than its domestic market or developed countries. This situation is also true for other chains like Pizza Hut. These chains offer standardized products, service and good hygiene to the customers and they enjoy competitive advantages due to their image. When customers enter a McDonald's or a Pizza Hut, they perceive that they are visiting a place of American origin. Actually these brands are selling American abroad-particularly in developing countries. Local

160 ? NSOU ? PGCO-III responsiveness or costs are not the constraints for the sale of these brands. Lower pricing strategy may not be suitable strategy in these chains as it may hurt the big 'American' image. However, these chains may have core competencies or excellent management skills, but these are not playing dominant roles as compared to brand image in the developing countries. The same situation may not prevail in the developed foreign countries such as the European countries. In these countries, the core competencies and management skill of these chains are also equally important along with the brand image. The pricing strategy is not the same as in underdeveloped countries. These chains sell their different strengths selectively in different countries. It could be the superior product quality and service to UK or France; it could be typical American-ness to South Asia. A good product could be replicated; technological and management skills can also be learnt. But, core competencies and brand images are very difficult to match. 6.4

Motivation of Internationalization Except for a few 'born-global' firms (e.g., the dot.com start-ups that arose around the year 2000), most of the world's leading MNEs are born in a home market where they grow before venturing abroad. The actual decision to internationalize and the way this is done, are often referred to as a strategic 'mode of entry' choice. By internationalization we mean the decision to enter into foreign markets. Internationalization studies revolve around schools of thought that try to explain why and how companies go abroad. Generally, the motivations for internationalization include market motives, economic motives and strategic motives. The motives will vary from one business activity to another, producing multiple motivations for the international firm with a broad scope of activities in different parts of the globe. Market Motives Market motives can be offensive or defensive. An offensive motive is to seize market opportunities in foreign countries through trade or investment. Amway, Avon and Mary Kay all entered China in the early 1990s in search of opportunities in China's direct marketing business.

NSOU ? PGCO-III ? 161 A defensive motive is to protect or hold a firm's market power or competitive position in the face of threats from domestic rivalry or changes in government policies. Dell, the world's leading personal computer-systems company, invested in Europe, Asia, Latin America and Africa partly because of strong competition in the U.S. domestic market. Similarly the voluntary restriction of exports to the United States of Japanese automobiles in 1980's prompted Toyota, Honda and Nissan to build the car manufacturing plants in the United States. Similarly, the North American and Asian companies in computer and electronics industries have invested heavily in European countries in order to bypass various barriers against import from non-European Union members. Economic Motives Firms go international to increase their return through higher revenues and/or lower costs. International trade or investment is a vehicle enabling the company to benefit from the differences in costs of labour, natural resources and capital, as well as the differences in regulatory treatments, such as taxation, between domestic and foreign countries. For example, many companies have expanded into Asia, seeking cheap labour or cheap resources. Firms such as Boeing, Microsoft, Compaq, Intel, Kodak, Coco-Cola established production facilities in China's special economic zones and open coastal cities in order to attain a significantly lower taxation rate than that applicable in the United States. Strategic Motives Firms often participate in international business for strategic reasons. They may intend to capitalize on their distinctive resources or capabilities already developed at home (e.g., technologies and economies of scale). By deploying these resources or capabilities abroad or increasing production through international trade, firms may be able to increase their cash inflows. Firms may also go international to be the first-mover in the target foreign market before a major competitor gets in. This may create some strategic benefits for the company such as technological leadership, brand image, customer loyalty and competitive position. Additionally, firms may benefit from vertical integration involving different countries. For example, a company in the oil exploration and drilling business may integrate "downstream" by acquiring or building an oil refinery in a foreign country that has a market for its refined products. Note: This section has been adopted from "Shankar and Luo (2004). "International Business". Wiley. 11-12.

162 ? NSOU ? PGCO-III 6.5 Pressures in Internationalization Various trends have converged in recent years as pressures in internationalization. The following are particularly notable: ? Worldwide reduction in barriers to trade and investment: The tendency of national governments to reduce trade and investment barriers has accelerated the process of internationalization. For example, tariffs on the import of industrial and medical equipment and countless other products have declined nearly to zero in many countries, encouraging freer international exchange of goods and services. ? Market liberalization and adoption of free markets: These events open roughly one-third of the world to freer international trade and investment. China, India and Eastern Europe have become some of the most cost effective locations for producing goods and services worldwide. ? Industrialization, economic development and modernization: Many emerging markets, rapidly developing economies in Asia, Latin America and Eastern Europe have now moved from being low value-adding commodity producers to sophisticated, competitive producers and exporters of premium products such as electronics, computers and aircraft. ? Integration of world financial markets: Financial market integration makes it possible for internationally active firms to raise capital, borrow funds and engage in foreign currency transactions. ? Technological Advances: The most important driver of internationalization has been technological advances in information, communication, manufacturing and transportation. Information Technology Information Technology (IT) is the science and process of creating and using information resources. Its effect on business has been revolutionary. Geographically distant subsidiaries of a multinational firm are now interconnected by intranets that facilitate instant sharing of data, information and experience across company operations worldwide.

NSOU ? PGCO-III ? 163 Communications The internet and internet-dependent system such as intranets, extranets, social media and e-mail connect billions of people and companies. Marketers use the internet to promote the widest range of products and services to customers worldwide. Manufacturing Computer-aided design (CAD) of products, robotics and production lines have transformed manufacturing, mainly by reducing production costs. Revolutionary developments facilitate low-scale and low-cost manufacturing; firms can make products cost effectively even in short production runs. Such developments benefit international business by allowing firms to adapt products more efficiently to individual foreign markets, profitably target small national markets and compete more effectively with foreign competitors that enjoy cost advantages. Transportation Firms consider the cost of transporting raw materials, components and finished products when deciding either to export or manufacture abroad. If transport costs to an important market are high, management may decide to manufacture merchandise in that market. The development of fuel-efficient jumbo jets, giant ocean-going freighters and new transportation technology have greatly reduced shipping times and costs. Note: This section has been adopted from Cavusgil et al. (2009). "International Business: Strategy, Management and The New Relations". Pearson. 61- 67. 6.6 Strategy and the Firm A firm's strategy can be defined as the actions that managers take to attain the goals of the firm. For most firms, the preeminent goal is to maximize long-term profitability. A firm makes a profit if the price it can charge for its output is greater than its average costs of producing that output. Profit ( $\Pi$ ) is thus, defined as the difference between total revenue (TR) and total cost (TC), or:  $\Pi = TR - TC = (P \times Q) - (C \times Q) = (P - C) \times Q = \pi \times Q$  where P = Price, Q= number of units sold, C = cost per unit,  $\pi$  = profit per unit of output.

164 ? NSOU ? PGCO-III Two basic conditions determine a firm's profit ( $\Pi$ ): the amount of value customers place on the firm's goods and services (sometimes referred to as perceived value) and the firm's cost of production. In general, the more value customers place on a firm's products, the higher the price the firm can charge for those products. The value of a product to a consumer is V; the price that the firm can charge for that product given competitive pressures and its ability to segment the market is P; and the unit cost of producing that product is C. The firm's profit per unit sold ( $\pi$ ) is equal to P-C, while the consumer's surplus is equal to V-P. The difference between V and P is, in part, determined by the intensity of competitive pressure, the higher the price that can be charged relative to V. The value created by a firm is measured by the difference between V and C (V-C); a company creates value by converting inputs that cost C into a product on which consumers place a value of V. A company can create more value for its customers either by lowering production costs, C, or by making the product more attractive through superior design, functionality, quality, and the like, so that consumers place a greater value on it (V increases) and consequently, are willing to pay a higher price (P increases). A firm has high profits when it creates more value for its customers and does so at a lower cost. We refer to a strategy that focuses on lowering production cost as a low cost strategy. We refer to a strategy that focuses on increasing the attractiveness of a product as a differentiation strategy. Michael Porter has argued that low cost and differentiation

96%

**MATCHING BLOCK 104/173**

**SA**

EMGN578 ( 2 ).docx (D142425824)

are two basic strategies for creating value and attaining a competitive advantage in an industry.

According to Porter, superior profitability goes to those firms that can create superior value, and the way to create superior value is to drive down the cost structure of the business and/or differentiate the product in some way so that consumers value it more and are prepared to pay a premium price. Superior value creation relative to rivals does not necessarily require a firm to have the lowest cost structure in an industry, or to create the most valuable product in the eyes of consumers. However, it does require that the gap between value (V) and cost of production (C) is greater than the gap attained by competitors.

6.6.1 The Firm as a Value Chain The firm as a value chain is composed of a series of distinct value creation activities including production, marketing and sales, materials management, R&D, human resources, information systems, and the firm infrastructure. These value creation activities can be categorized as primary activities and support activities.

NSOU ? PGCO-III ? 165 Primary Activities Primary activities have to do with the design, creation, and delivery of the product; its marketing; and its support and after-sale service. The primary activities are broken into four functions: research and development, production, marketing and sales, and service. Research and development (R&D) is concerned with the design of products and the production process. Although we think of R&D as being associated with the design of physical products and production process in manufacturing enterprises, many service companies also undertake R&D. For example, banks compete with one another by developing new financial products and new ways of delivering those products to customers. Online banking and smart debit cards are two recent examples of new product development in the banking industry. Earlier examples of innovation in the banking industry included automated teller machines, credit cards and debit cards. Production is concerned with the creation of a good or service. For physical products, when we talk about production we generally mean manufacturing. For services such as banking or retailing operations, "production" typically occurs when the service is delivered to the customer. For example, when a bank originates a loan for a customer it is engaged in "production" of the loan. The marketing and sales functions of firm can help to create value in several ways. Through brand positioning and advertising, the marketing function can increase the value (V) that consumers perceive to be contained in a firm's product. If these create a favorable impression of the firm's product in the minds of consumers, they increase the price that can be charged for the firm's product. Marketing and sales can also create value by discovering consumer needs and communicating them back to the R&D unit of the company, which can then design products that better match those needs. The role of the enterprise's service activity is to provide after-sales service and support. This function can create a perception of superior value (V) in the minds of consumers by solving customer problems and supporting customers after they have purchased the product.

Support Activities The support activities of the value chain provide inputs that allow the primary activities to take place. The materials management (or logistics) function controls the transmission of physical materials through the value chain, from procurement through production and into distribution. The efficiency with which this is carried out can significantly lower cost (lower C), thereby creating more value.

166 ? NSOU ? PGCO-III Similarly, the human resources function can help create more value in a number of ways. It ensures that the company has the right mix of skilled people to perform its value creation activities effectively. Information systems refer to the normal electronic systems for managing inventory, tracking sales, pricing products, selling products, and dealing with customer service inquiries and so on. Information systems when coupled with communications features of the internet can alter the efficiency and effectiveness with which a firm manages its other value creation activities. The final support activity is the company infrastructure. By infrastructure we mean the context within which all the other value creation activities occur. The infrastructure includes the organizational structure, control system and the culture of the firm. Because top management can exert considerable influence in shaping these aspects of the firm, top management should also be viewed as part of the firm infrastructure. Through strong leadership, top management can consciously shape the infrastructure of a firm and through that the performance of all other value creation activities within it.

### 6.6.2 The Role of Strategy

Many international markets are now extremely competitive due to the liberalization of the world trade and investment environment. In industry after industry, capable competitors confront each other around the globe. To be profitable in such an environment, a firm must both reduce the costs of value creation (lower C) and differentiate its product offering so that consumers value that product more (raise V) and are willing to pay more for the product than it costs to produce it. Thus, strategy is often concerned with identifying and taking actions that will lower the costs of value creation and/or will differentiate the firm's product offering through superior design, quality, service, functionality and so on.

### 6.6.3 Pressure for Cost Reductions and Local Responsiveness

Firms that compete in the global marketplace typically face two types of competitive pressure. They face pressure for cost reductions and pressures to be locally responsive.

#### Pressure for Cost Reductions

Increasingly, international businesses are facing pressures for cost reductions. Responding to pressures for cost reduction requires a firm to try to lower the costs of value creation by mass producing a standardized product at the optimal location in the world, wherever that might be, in order to realize location economy and experience curve effects. Cost reduction pressures can be particularly intense in the industries producing commodity-type products where meaningful differentiation on non-price factors is difficult and price is the main competitive weapon.

#### Pressure for Local Responsiveness

Pressure from local responsiveness arises from a number of sources including:

- Differences in consumer tastes and preferences: Strong pressures for local responsiveness emerge when consumer tastes and preferences differ significantly among countries, as they may be for historic and cultural reasons. In such cases, products and/or marketing messages have to be customized to appeal to the tastes and preferences of local consumers. This typically creates pressure to delegate production and marketing functions to national subsidiaries.
- Differences in infrastructure and traditional practices: Pressures for local responsiveness emerge when there are differences in infrastructure and/or traditional practices among countries. In such circumstances the product may need to be customized to the distinctive infrastructure and practices of different nations. This may necessitate the delegation of manufacturing and production functions to foreign subsidiaries.
- Differences in distribution channels: A firm's marketing strategies may have to be responsive to differences in distribution channels among countries. This may necessitate the delegation of marketing functions to national subsidiaries.
- Host government demands: Economic and political demands imposed by host- country governments may necessitate a degree of local responsiveness. For example, the politics of healthcare around the world requires that pharmaceutical firms manufacture in multiple locations. Pharmaceutical firms are subject to local clinical testing, registration procedures, and pricing restrictions, all of which require that the manufacturing and marketing of a drug should meet local requirements. Because Government and Government agencies control a significant proportion of the health care budget in most countries, they can demand a high level of local responsiveness. Note: This section has been adopted from "Hill et al.(2010). "International Business". Tata McGraw-Hill Publishing Company Limited. 405-421.

168 ? NSOU ? PGCO-III 6.7 Strategic Choices Firms use four basic strategies to enter and compete in the international environment: an international strategy, a multidomestic strategy, a global strategy and a transnational strategy. In this section we describe each strategy, identify when it is appropriate, and discuss the pros and cons of each. International Strategy Firms that pursue an international strategy try to create value by transferring valuable skills and products to foreign markets where indigenous competitors lack those skills and products. Most international firms have created value by transferring differentiated product offerings developed at home to new markets overseas. Accordingly, they tend to centralize product development functions at home (e.g., R&D). However, they also tend to establish manufacturing and marketing functions in each major country in which they do business. But while they may undertake some local customization of product offerings and marketing strategy, this tends to be limited. In most international firms, the head office retains tight control over marketing and product strategy. International firms include the likes of McDonalds, IBM, Kellogg's, Procter and Gamble, Wall-Mart and Microsoft. Microsoft, for e.g., develops the core architecture underlying its product at its Redmond campus in Washington state and also writes the bulk of the computer code there. However, the company does allow national subsidiaries to develop their own marketing and distributional strategy and to customize aspects of the product to account for such basic local differences as language and alphabet. An international strategy makes sense if a firm has a valuable core competence that indigenous competitors in foreign markets lack and if the firm faces relatively weak pressures for local responsiveness and cost reduction (As is the case for Microsoft). In such circumstances, an international strategy can be very profitable. However, when pressures for local responsiveness are high, firms pursuing this strategy lose to firms that emphasize customizing the product offerings and marketing strategy to local conditions. Multidomestic Strategy Firms pursuing multidomestic strategy orient themselves toward achieving maximum local responsiveness. The key distinguishing feature of multidomestic firms is that they extensively customize both their product offerings and their marketing strategy to match different national conditions. Consistent with this, they also tend to establish a complete

NSOU ? PGCO-III ? 169 set of value creation activities, including production, marketing, and R&D, in each major national market in which they do business. As a consequence, they are generally unable to realize value from experience curve effects and location economies. Accordingly, many multidomestic firms have a high cost structure. They also tend to do a poor job of leveraging core competencies within the firm. A multidomestic strategy makes most sense when there are high pressures for local responsiveness and low pressures for cost reduction. The high cost structure associated with the duplication of production facilities makes this strategy inappropriate in industries where cost pressures are intense. Another weakness associated with this strategy is that many multidomestic firms have developed into decentralized federations in which each national subsidiary functions in a largely autonomous manner. Global Strategy Firms that pursue a global strategy focus on increasing profitability by reaping the cost reduction that comes from experience curve effects and location economies. That is, they are pursuing a low-cost strategy. The production, marketing, and R&D activities of firms pursuing a global strategy are concentrated in a few favorable locations. Global firms tend not to customize their products offerings and marketing strategies to local conditions because customization raises cost (it also involves shorter production runs and the duplication of functions). Instead, global firms prefer to market a standardized product worldwide so that they can reap the maximum benefits from the economies of scale that underlie the experience curve. They also use their cost advantage to support aggressive prices in world markets. This strategy makes most sense where there are strong pressures for cost reductions and where demands for local responsiveness are minimal. Increasingly, these conditions prevail in many industries. In the semiconductor industry, for example, global standards have created enormous demands for standardized global products. Accordingly, firms such as Intel, Texas Instruments etc. pursue a global strategy. However, these conditions are not found in many consumer goods markets, where demands for local responsiveness remain high (e.g., processed food products). The strategy is inappropriate when demands for local responsiveness are high. Transnational Strategy Christopher Bartlett and Sumantra Ghoshal have argued that in today's environment, competitive conditions are so intense that to survive in the global market place, firms

170 ? NSOU ? PGCO-III must exploit experience-based cost economies and location economies; they must transfer core competencies within the firm, and they must do all of these while paying attention to pressure for local responsiveness. They note that in the modern multinational enterprise, core competencies do not just reside in the home country. Valuable skills can develop in any of the firm's worldwide operations. Thus, Bartlett and Ghoshal maintain that the flow of skills and product offerings should not be all one way, from home firm to foreign subsidiaries, as in the case of firms pursuing an international strategy. Rather, the flow should also be from foreign subsidiary to home country and from foreign subsidiary to foreign subsidiary- a process they refer to as global learning. Bartlett and Ghosal refer to the strategy pursued by firms that are trying to simultaneously create value in these different ways as a transnational strategy. A transnational strategy makes sense when a firm faces high pressure for cost reduction, high pressure for local responsiveness, and where there are significant opportunities for leveraging valuable skills within a multinational's global network of operations. In some ways, firms that pursue a transnational strategy are trying to simultaneously achieve cost and differentiation advantages. Note: This section has been adopted from "Hill et al.(2010). "International Business". Tata McGraw-Hill Publishing Company Limited. 422-425. 6.8 Market Entry Strategy International entry strategies concern where (location selection), when (timing of entry) and how (entry mode selection) international companies should enter and invest in a foreign territory during international expansion. These entry strategies are important because they determine an MNE's investment environment, operation treatment, resource commitment and evolutionary path. 6.8.1 International Location Selection (Where) International location selection involves country selection and region selection (e.g., state, province or city) for an MNE's foreign direct investment project(s). Locational determinants can be categorized into the following groups: (1) cost tax factors; (2) demand factors; (3) strategic factors; (4) regulatory/economic factors; and (5) socio-political factors. Cost/Tax Factors 1. Transportation costs: For country selection, MNEs should consider the costs

NSOU ? PGCO-III ? 171 incurred in transporting materials from a home (or foreign) country to a host country or transporting products from a host country to a home or international market. 2. Wage rate: Labour costs constitute a substantial proportion of total production costs. Foreign production is more likely to occur when production costs are lower abroad than at home. 3. Availability and costs of land: Availability of suitable plant sites, the cost of land, space for expansion and local government policy on renting or purchasing land have been recognised by international managers as critical factors in the early stages of project development and late stages of project operation. 4. Construction costs: This cost accounts for a substantial part of capital investment. Different sites vary in the cost of construction materials, labour, land, equipment rental and quality of construction. 5. Cost of raw materials and resources: MNEs are increasing the percentage of local outsourcing in total production. The localisation reduces foreign exchange risks from devalued currencies and improves relationship with local governments and indigenous firms. Under these circumstances, the costs of local materials and resource needed in production will affect the firm's gross profit margin. 6. Financing costs: the cost and availability of local capital are a major concern for MNEs because local financing provides much of the capital needed for mass production and operations. Financing by local banks and financial institutions also helps an MNE mitigate possible financial risks arising from fluctuations in foreign exchange rates and uncertain foreign exchange policies as well as political risks in a host country. 7. Tax rates: Both statutory and effective tax rates influence the firm's profitability. The statutory tax rate determines the general level of the tax burden shouldered by firms. The effective tax rate on corporate income, which is statutory corporate rate adjusted for all other taxes and subsidies affecting an MNE's taxable income, determines the company's net return from its operations. 8. Investment incentives: Many countries, especially developing ones, are competing to attract FDI to support their domestic economies. In so doing, they offer preferential incentives to foreign investors.

172 ? NSOU ? PGCO-III 9. Profit repatriation: Repatriation restrictions have a negative impact on the net income or dividends remitted to foreign headquarters. Restrictions can involve a remittance tax on the cash repatriated to a home country or a ceiling on the cash amount. Demand Factors 1. Market size and growth: Although different MNEs may not emphasize the same level of marketing in a host country, it is rare for them not to consider local consumers. 2. Presence of customers: MNEs may find it desirable to locate their manufacturing sites in the area where they have longstanding customers. The closer operations are to major buyers, the better the cost efficiency and marketing effectiveness. 3. Local competition: The intensity of competition in a host country or specific region is important because it directly impacts a firm's market position and gross profit margin from local sales. Strategic Factors 1. Investment in infrastructure: Today, MNEs attach increasing importance to infrastructure conditions. This is especially true for companies investing in knowledge or technology-intensive projects. 2. Manufacturing concentration: One of the major determinants of location selection is the strength of existing manufacturing activities. Cost saving can result from manufacturers locating in close proximity. A country or region with a strong concentration of manufacturing activity in certain industries or products is more likely to have an adequate labour pool and supply network supporting production or operations. 3. Industrial linkages: The nature and quality of the complementary industries and special services (distribution, consulting, auditing, banking, insurance, marketing services, etc.) are also important as MNE operations interact actively with these sectors in a host country. 4. Workforce productivity: As a result of increasing technological permeation and process innovation, international production requires high workforce productivity and superior labour skills. The labour requirement of new systems and techniques are driving the need for a better educated direct-labour workforce.

NSOU ? PGCO-III ? 173 5. Inbound and outbound logistics: Typical inbound (input) logistics include proximity to suppliers and sources of raw materials and inputs. Since MNEs have a tendency to rely more on local input sources, this type of logistics should be among the critical considerations for international managers. Outbound (market) logistics are based largely on proximity to major buyers and end consumers. This factor can heavily influence the effectiveness of customer responsiveness. When the firm pursues market penetration and product specialization strategies, the firm's profitability will be strongly associated with market logistics. Regulatory/Economic Factors 1. Industrial policies: In many countries, industrial policies are used to control new entrants (both foreign and local firms), net profit margins, degree of competition, structural concentration and social benefits. In selecting a location, MNEs need to make sure that the target country or region allows foreign business entry and that industrial policies are reasonably favourable or at least not a hindrance. 2. FDI policies: In determining a foreign location (country and region), MNEs need to learn how FDI policies there will impact their plans and payoffs. 3. Availability of special economic zones: One way many countries (especially in the developing world) attempt to attract FDI is through the establishment of special zones such as free trade zones (FTZs), special economic zones (SEZs), economic and technological development zones (ETDZs), high-tech development zones (HTDZs), open economic regions (OERs), bonded areas and so on. In general, these zones provide preferential treatment in terms of taxation, import duties, land use, infrastructure access and governmental assistance to MNEs. Sociopolitical Factors 1. Political instability: This factor reflects uncertainty over the continuation of present political and social conditions and government policies that are critical to the survival and profitability of a firm's operations in the host country. Changes in government policies may create problems related to repatriation of earnings or, in extreme cases, expropriation of assets. 2. Cultural barriers: Another trigger of uncertainty is differences in culture between the home and host countries. This factor determines a firm's receptivity and adaptability to the social context of a host country.

174 ? NSOU ? PGCO-III 3. Local business practices: Culture-specific business practices often constitute key forms of knowledge that MNEs must acquire. In fact, a prominent logic behind formation of international co-operative ventures with developing country enterprises is to gain such country-specific knowledge. 4. Government efficiency and corruption: International managers often perceive the "soft" infrastructure (e.g., regulatory environment and government efficiency) as having a greater and more enduring impact on firm operations than the "hard" infrastructure (e.g., transportation and communication). 5. Attitudes towards foreign business: Social and governmental attitudes towards foreign business often have visible or invisible influences on MNE operations and management. If the society and government of a host country are somewhat friendly to foreign business, MNEs will benefit from the congenial environment. 6. Community characteristics: Site selections must include considerations of community environment aspects such as community size, educational facilities, housing facilities, police and fire protection, climate, suitability for expatriates and their families, facilities for children, the social environment for spouses, hotel accommodations, crime level and other quality of life indicators. This environment is highly relevant because it affects costs, quality and security of living for foreign expatriates and their families. 7. Pollution control: Environment protection laws and regulations in the target location influence the choice and cost of investments. Before making a location decision, an MNE should appraise these laws and regulations, assess whether the firm is able to comply with them and evaluate whether it is financially feasible to invest in pollution control.

6.8.2 Timing of Entry (When) Timing of entry involves the sequence of an MNE's entry into a foreign market vis-à-vis other MNEs (i.e., first mover, early follower, and late mover). Timing of entry is important because it determines the risks, environments, and opportunities the MNE may confront.

**Early-Mover Advantages** When entering a foreign market, pioneering MNEs (first mover or early followers) generally have advantages such as greater market power, more preemptive opportunities, NSOU ? PGCO-III ? 175 and more strategic options over late entrants. These advantages might be ultimately reflected in higher economic returns compared with later movers. First, pioneering investors tend to outperform later entrants in acquiring market power. Early movers are able to invest strategically in facilities, distribution networks, product positioning, patentable technology, natural resources, and human and organizational expertise. If imitation of its product is expected to be expensive or involves a long time lag, a preemptive investment can be leveraged into significant long-run benefits for early movers. Moreover, market pioneers may benefit from the advantages of holding technical leadership, seizing scarce resources, and creating buyer switching costs. Second, early movers gain from preemptive opportunities. Early movers have the right to preempt marketing, promotion and distribution channels, while gaining product image, organizational reputation and brand recognition. Third, early movers benefit from many strategic options. Pioneer investors often have more strategic options in selecting industries, locations and market orientations (e.g., import-substitution, local market-oriented, export-market oriented etc.) in addition, early movers are often given priority access to natural resources, scarce materials, distribution channels, infrastructure etc.

**Early-Mover Disadvantages** Early movers, however, also suffer from some disadvantages compared to late entrants. Pioneer investors may be confronted with greater environmental uncertainty and operational risks. Environmental uncertainty generally comes from (1) underdeveloped FDI laws and regulations in a host country (2) the host government's lack of experience in dealing with MNEs and (3) infant or embryonic stages of the industry or market in a host country. Operational risks originate from (1) a shortage of qualified supply sources and other production inputs such as talented managers and R&D workforce; (2) under-developed support services such as local financing, foreign exchange, arbitration, consulting, and marketing; (3) poor infrastructure in transportation, utilities, and communications; and (4) an unstable market structure in which market demand and supply are misaligned and local governments often interfere with MNE operations. In contrast with early movers, late investors do not suffer, or suffer less, from the preceding uncertainties and risks. When late movers arrive, the host-country environment is usually more stable, regulatory conditions are more favorable, and the market infrastructure is already developed.

176 ? NSOU ? PGCO-III Early movers also tend to pay higher costs in learning and adapting to local environments and in countervailing imitation. Many early movers are compelled to invest more in building industrial infrastructure (e.g., supply bases and distribution networks) and technological or service standards. Finally, early movers may have to fight followers who imitate their strategies or innovations or infringe on their industrial (e.g., trade mark and brand) or intellectual property rights (e.g., patent, expertise, software). This cost is especially high when early movers invest in a country with underdeveloped and under-enforced legal systems in protecting these rights.

### 6.8.3 Entry Mode Selection (how)

An MNE seeking to enter a foreign market must make an important strategic decision concerning which entry mode to use. Entry modes are specific forms or ways of entering a target country to achieve strategic goals underlying international presence in that country. Entry mode choices fall into three categories: trade-related, transfer-related, and FDI-related. Along this sequence, the levels of resource commitment, organizational control, involved risks, and expected returns all increase. Within each category, these levels differ somewhat between specific modes.

#### Trade-Related Entry Modes

Trade-related entry modes include exporting, subcontracting, and countertrade. Exporting It is natural for most firms to get their start in international expansion through exporting in which the firm maintains its production facilities at home and sells its products abroad. Through exporting, the firm gains valuable expertise about operating internationally and specific knowledge concerning the individual countries in which it operates. Export offers the advantage of not requiring a very substantial presence in foreign countries. Generally, exporting is a type of international entry open to virtually any size or kind of firm, whereas other types of entry modes tend to demand greater resources and involve more risks. Over time, accumulated experience with exporting often prompts a firm to become more aggressive in exploiting new international exporting opportunities or consider FDI in the country to which it previously exported.

#### International Subcontracting

Subcontracting is the process in which a foreign company provides a local manufacturer NSOU ? PGCO-III ? 177 with raw materials, semi-finished products, sophisticated components, or technology for producing final goods that will be bought back by the foreign company. In most subcontracting businesses, local manufacturers are responsible only for processing or assembly in exchange for processing fees. In this situation, the local manufacturer does not own the property rights of materials or parts supplied by the foreign counterpart. Nike, for example, is still using subcontracting as its primary mode in China, Vietnam, Thailand, Indonesia, and Bangladesh. The company provides raw materials and technology, maintains proprietary rights over materials and products, controls production processes and product quality, and pays processing fees to local factories.

#### Countertrade

Countertrade is a form of trade in which a seller and a buyer from different countries exchange merchandise with little or no cash or cash equivalents, changing hands. Because of this nature, it is also viewed as a form of flexible financing or payment in international trade. Countertrade has evolved into a diverse set of activities that can be categorized as four distinct types of trading arrangements: ? Barter ? Counterpurchase ? Offset ? Buyback (or compensation)

Barter is the direct and simultaneous exchange of goods between two parties without a cash transaction. Barter trade occurs between individuals, between governments, between firms, or between a government and a firm, all from two different countries. Barter may be the oldest form of trade but it is certainly not history. A counterpurchase is a reciprocal buying agreement whereby one firm sells its products to another at one point in time and is compensated in the form of the other's products at some future time (e.g., Russia purchased construction machinery from Japan's Komatsu in return for Komatsu's agreement to buy Siberian timber). An offset is an agreement whereby one party agrees to purchase goods and services with a specified percentage of its proceeds from an original sale. Like counterpurchase, offset involves three contracts including sales, protocol, and purchase. Unlike counterpurchase whereby exchanged products are normally unrelated, products taken back in an offset are often the outputs processed by this party in the original contract.

178 ? NSOU ? PGCO-III Finally, buyback (or compensation arrangement) occurs when a firm provides a local company with inputs for manufacturing products (mostly capital equipment) to be sold in international markets, and agrees to take a certain percentage of the output produced by the local firm as partial payment. Transfer-Related Entry Modes Transfer-related entry modes are those associated with transfer of ownership or utilization of specified property (technology or assets) from one party to the other in exchange for royalty fees. They differ from trade-related entry modes in that the user in a transfer-related mode “buys” certain rights of transacted property (e.g., use of technology) from the other party (owner). These modes are extensively employed in technology- related or intellectual/industrial property right-related transactions. This category includes the following entry modes: ? International leasing ? International licensing ? International franchising ? Build-operate-transfer (BOT) International Leasing International leasing is an entry mode in which the foreign firm (lessor) leases out its new or used machines or equipment to the local company (often in a developing country). International lease arises largely because developing country manufacturers (lessee) do not have financial capability or lack foreign currency to pay for the equipment. In many cases, the leased equipment sits idle in the developed country but is in good operational condition, thus having a market in developing countries. International Licensing International licensing is an entry mode in which a foreign licensor grants specified intangible property rights to the local licensee for a specified period of time in exchange for a royalty fee. Such property rights

**45%**

**MATCHING BLOCK 107/173**

**SA**

031\_International business environment \_25-7-1 ...  
(D142523234)

may include patents, trademarks, technology, managerial skills, and so on. They allow the licensee to produce and market a product similar to the one the licensor has already been producing in its home country without requiring the licensor to actually create a new operation

abroad.

NSOU ? PGCO-III ? 179 International Franchising International franchising is an entry mode in which the foreign franchisor grants specified intangible property rights (e.g., trademark or brand name) to the local franchisee, which must abide by strict and detailed rules as to how it does business. Compared to licensing, franchising involves longer commitments, offers greater control over overseas operations, and includes a broader package of rights and resources. Production equipment, managerial systems, operating procedures, access to advertising and promotional materials, loans, and financing may all be part of a franchise. The franchisee operates the business under the franchisor’s proprietary rights and is contractually obligated to adhere to the producers and methods of operation prescribed in the business system. The franchisor generally maintains the right to control the quality of products and services so that the franchisee cannot damage the company’s image. In exchange for the franchise, the franchisor receives a royalty payment that amounts to a percentage of the franchisee’s revenues. Build-Operate-Transfer (BOT) Build-operate-transfer (BOT) is a “turnkey” investment in which a foreign investor assumes responsibility for the design and construction of an entire operation, and, upon completion of the project, turns the project over to the purchaser and hands over management to local personnel whom it has trained. In return for completing the project, the investor receives periodic payments that are normally guaranteed. BOT is especially useful for very large-scale, long-term infrastructure projects such as power-generation, airports, dams, expressways, chemical plants, and steel mills. FDI-Related Entry Modes In contrast to the preceding trade-related and transfer-related entry modes, FDI- related entry modes involve ownership of property, assets, projects, and businesses invested in a host country. Accordingly, firms undertaking FDI will control overseas operations and economic activities. FDI-related entry modes are more sophisticated than trade-related modes, and involve higher risk and longer-term contribution than both trade- and transfer- related choices. Compared with the later, FDI-related modes underline the firm’s long- term strategic goals of international presence and necessitate continuous contribution and commitment to investments and operations abroad. FDI-related entry modes include: ? Branch office ? Cooperative joint venture

180 ? NSOU ? PGCO-III ? Equity joint venture ? Wholly-owned subsidiary ? Umbrella holding company

**The Branch Office** A branch office is a foreign entity in a host country in which it is not incorporated but exists as an extension of the parent and is legally constituted as a branch. Corporate law in many countries allows foreign companies to open branches that engage in production and operating activities. Unlike representative offices which by law are prohibited from engaging in direct, profit-making business activities (they instead serve as liaisons, establishing contacts with governments and handling market research and consulting activities), branch offices are entitled to run businesses within a specified scope or location. A foreign subsidiary can also open a branch office in another region of the host country to expand its operations there. Branch offices are particularly utilized by transnational banks, law firms, and accounting or consulting companies. The Cooperative (or Contractual) Joint Venture The cooperative joint venture (also known as contractual joint venture) is a collaborative agreement whereby profits and other responsibilities are assigned to each party according to a contract. These do not necessarily accord with each partner's percentage of the total investment. Each party cooperates as a separate legal entity and bears its own liabilities. Most cooperative joint ventures do not involve constructing and building a new legally and physically independent entity. As such, cooperative joint ventures normally take the form of a document (cooperative agreement), whereas equity joint ventures take the form of a new entity. The Equity Joint Venture The most common foreign entry for MNEs has been through equity joint ventures. An equity joint venture entails establishing a new entity that is jointly owned and managed by two or more parent firms in different countries. To set up an equity joint venture, each partner contributes cash, facilities, equipment, materials, intellectual property rights, labour, or land-use rights. According to joint venture laws in most countries, a foreign investor's share must exceed a certain threshold of the total equity.

NSOU ? PGCO-III ? 181 The Wholly-Owned Subsidiary The wholly-owned subsidiary is an entry mode in which the investing firm owns 100 percent of the new entity in a host country. This new entity may be built from scratch by the investing firm (i.e., greenfield investment) or in acquiring a local business (i.e., cross-border acquisition). This mode offers foreign investors increased flexibility and control. It allows international managers to make their decisions without the burden of an uncooperative partner. Wholly-owned subsidiaries also allow foreign investors to set up and protect their own processes and procedures, which leads to more careful strategic and operational oversight. The Umbrella Holding Company The umbrella holding company is an investment company that unites the firm's existing investments such as branch offices, joint ventures, and wholly-owned subsidiaries under one umbrella so as to combine sales, procurement, manufacturing, training, and maintenance within the host country. Many foreign countries are now seeking better integration of these functions for a broad range of products and services within a single but important country (such as China and Brazil). Such coordination becomes necessary as each production division sets up its own foreign subunits separated from other division's foreign subunits in the same host country. Note: This section has been adopted from Shankar and Luo (2004). "International Business". Wiley. 260-283.

### 6.9 Organisation Structure of International Business

Organizational structure means three things: (1) the location of decision-making responsibilities within the structure, which is referred to as vertical differentiation; (2) the formal division of the organization into subunits, which is known as horizontal differentiation; and (3) the establishment of integrating mechanisms.

#### 6.9.1 Vertical Differentiation:

**Centralization and Decentralization** A firm's vertical differentiation determines where in its hierarchy the decision-making power is concentrated. Are production and marketing decisions centralized in the offices of upper level managers, or are they decentralized to lower level managers? Where does the responsibility for R&D decisions lie? Are strategic and financial control responsibilities

182 ? NSOU ? PGC0-III pushed down to operating units, or are they concentrated in the hands of top management? And so on. There are arguments for centralization and other arguments for decentralization also. Arguments for Centralization There are four main arguments for centralization. First, centralization can facilitate co-ordination. Second, centralization can help to ensure that decisions are consistent with organizational objectives. Third, by concentrating power and authority in one individual or a management team, centralization can give top-level managers the means to bring about needed major organizational changes. Fourth, centralization can avoid the duplication of activities that occur when similar activities are carried on by various subunits within the organization. Arguments for Decentralization There are five main arguments for decentralization. First, top management can become overburdened when decision-making authority is centralized, and this can result in poor decisions. Decentralization gives top management time to focus on critical issues by delegating more routine issues to lower level managers. Second, motivational research favours decentralization. Behavioral scientists have long argued that people are willing to give more to their jobs when they have a greater degree of individual freedom and control over their work. Third, decentralization permits greater flexibility—more rapid response to environmental changes- because decisions do not have to be “referred up the hierarchy” unless they are exceptional in nature. Fourth, decentralization can result in better decisions. In a decentralized structure, decisions are made closer to the spot by individuals who (presumably) have better information than managers several levels up in a hierarchy. Fifth, decentralization can increase control. Decentralization can be used to establish relatively autonomous, self-contained subunits within an organization. Subunit managers can then be held accountable for subunit performance. The more responsibility the subunit managers have for decisions that impact subunit performance, the fewer alibis they have for poor performance. Strategy and Centralization in an international Business The choice between centralization and decentralization is not absolute. Frequently it makes sense to centralize some decisions and to decentralize others, depending on the type of decisions and the firm’s strategy. Decisions regarding overall firm strategy, major financial expenditures, financial objectives, and the like are typically centralized at the NSOU ? PGC0-III ? 183 firm’s headquarters. However, operating decisions, such as those relating to production, marketing, R&D, and human resource management, may or may not be centralized depending on the firm’s international strategy. 6.9.2 Horizontal Differentiation: The Design of Structure Horizontal differentiation is concerned with how the firm decides to divide itself into subunits. The decision is normally based on the basis of function, type of business, or geographical area. In many firms, just one of these predominates, but more complex solutions are adopted in others. This is particularly likely in the case of international firms, where the conflicting demands to organize the company around different products and different national markets (to remain locally responsive) must be reconciled. In this section we look at different ways firms divide themselves into subunits. The Structure of Domestic Firms Most firms begin with no formal structure and are run by a single entrepreneur or a small team of individuals. As they grow, the demands of management become too great for one individual or a small team to handle. At this point the organization is split into functions reflecting the firm’s value creation activities (e.g., production, marketing, R&D, sales). These functions are typically coordinated and controlled by top management. Decision making in this functional structure tends to be centralized. Further horizontal differentiation may be required if the firm significantly diversifies its product offering, which takes the firm into different business areas. The International Division When firms initially expand abroad, they often group all their international activities into an international division. This has tended to be the case for firms organized on the basis of functions and for firms organized on the basis of product divisions. Regardless of the firm’s domestic structure, its international division tends to be organized on geography.

**98%**

**MATCHING BLOCK 103/173**

**W**

Worldwide Area Structure A worldwide area structure tends to be favoured by firms with a low degree of diversification and a domestic structure based on function. Under this structure, the world is divided into geographic areas. An area may be a country (if the market is large enough) or a group of countries. Each area tends to be a self-contained, largely autonomous entity with its own set of value creation activities (e.g., its own production, marketing,

and

**100% MATCHING BLOCK 105/173**

**W**

R&D, human resources and finance functions). Operations authority and strategic 184 ?

NSOU ? PGCO-III

**100% MATCHING BLOCK 106/173**

**W**

decisions relating to each of these activities are typically decentralized to each area, with headquarters retaining authority for the overall strategic direction of the firm and financial control.

Worldwide Product Division Structure A worldwide product division structure tends to be adopted by firms that are reasonably diversified and, accordingly, originally had domestic structures based on products divisions. As with the domestic product divisional structure, each division is a self-contained, largely autonomous entity with full responsibilities for its own value creation activities. The headquarter retains responsibility for the overall strategic development and financial control of the firm. Global Matrix structure Both the worldwide area structure and the worldwide product divisional structure have strengths and weaknesses. The worldwide area structure facilitates local responsiveness, but it can inhibit the realization of location and experience curve economies and for transferring core competencies, but it is weak in local responsiveness. Other things being equal, this suggests that a worldwide area structure is more appropriate if the firm's strategy is multi-domestic, while a worldwide product divisional structure is more appropriate for firm pursuing global or international strategies. 6.9.3 Integrating Mechanisms In the previous subsections, we have explained that the firms divide themselves into subunits. Now we need to examine some means of coordinating those subunits. One way of achieving coordination is through centralization. If the coordination task is complex, however, centralization may not be very effective. Higher-level managers responsible for achieving coordination can soon become overwhelmed by the volume of work required to coordinate the activities of various subunits, particularly if the subunits are large, diverse, and/or geographically dispersed. When this is the case, firms look toward integrating mechanisms, both formal and informal, to help for achieving coordination. Strategy and Coordination in the international Business The need for coordination between subunits varies with strategy of the firm. The need for coordination is lowest in multidomestic companies, is higher in international companies, higher still in global companies and highest in international companies.

NSOU ? PGCO-III ? 185 Multidomestic firms are primarily concerned with local responsiveness. Such firms are likely to operate with a worldwide area structure in which each area has considerable autonomy and its own set of value creation functions. Since each area is established as a stand-alone entity, the need for coordination between areas is minimized.

**Formal Integrating Mechanisms** The formal mechanisms used to integrate subunits vary in complexity from simple direct contact and liaison roles, to teams, to a matrix structure. In general, the greater the need for coordination, the more complex the formal integrating mechanisms need to be. Direct contact among subunit managers is the simplest integrating mechanism. By this 'Mechanisms', managers of the various subunits simply contact each other whenever they have a common concern. Direct contact may not be effective if the managers have differing orientation that act to impede coordination. Liaison roles are a bit complex. When the volume of contacts among subunits increases, coordination can be improved by giving a person in each subunit responsibilities for coordinating with another subunit on a regular basis. Through these roles, the people involved establish a permanent relationship. When the need for coordination is greater still, firms tend to use temporary or permanent teams composed of individuals from the subunits that need to achieve coordination. They are typically used to coordinate product development and introduction, but they are useful when any aspect of operations or strategy requires the cooperation of two or more subunits. Product development and introduction teams are typically composed of personnel from R&D, production, and marketing. The resulting coordination aids the development of products that are tailored to consumer needs and that can be produced at a reasonable cost. When the need for integration is very high, firms may institute a matrix structure, in which all roles are viewed as integrating roles. The structure is designed to facilitate maximum integration among subunits. The most common matrix in multinational firms is based on geographical areas and worldwide product divisions. This achieves a high level of integration among the product divisions and the areas so that, in theory, the firm can pay close attention to both local responsiveness and the pursuit of location and experience curve economies.

186 ? NSOU ? PGCO-III **Informal integrating Mechanism: Management Networks** In attempting to alleviate or avoid the problems associated with formal integrating mechanisms in general, and matrix structures in particular, firms with a high need for integration have been experimenting with an informal integrating mechanism: management networks that are supported by an organization culture that values teamwork and cross-unit cooperation. A management network is a system of informal contacts among managers within an enterprise. The great strength of a network is that it can be used as a non-bureaucratic conduit for knowledge flows within a multinational enterprise. For a network to exist, managers at different locations within the organization must be linked to one another at least indirectly. Two techniques being used to establish networks are information systems and management development policies. Firms are using their computer and telecommunications networks to provide the physical foundation for informal information systems networks. Electronic mail, videoconferencing, and high-speed data systems make it much easier for managers scattered over the globe to get to know one another. Without an existing network of personal contacts, however, worldwide information systems are unlikely to meet a firm's need for integration. Firms are using their management development programs to build informal networks. Tactics include rotating managers through various subunits on a regular basis so that they build their own informal network and using management education programs to bring managers of subunits together in a single location so that they can become acquainted. Both of these tactics are used at Unilever to build its informal management network. Note: This section has been adopted from "Hill et al.(2010). "International Business". Tata McGraw-Hill Publishing Company Limited. 438-451.

**6.10 Summary ? Internationalization** refers to the decision to enter into foreign markets. Internationalization studies revolve around schools of thought that try to explain why and how companies go abroad. ? The motivations for internationalization include: market motives, economic motives and strategic motives. The motives will vary from one business activity to another,

NSOU ? PGCO-III ? 187 producing multiple motivations for the international firm with a broad scope of activities in different parts of the globe. ? Various trends have converged in recent years as pressures in internationalization. The following are particularly notable: worldwide reduction in barriers to trade and investment, market liberalization and adoption of free markets, industrialization, economic development and modernization, integration of world financial markets, technological advances. ? The firm as a value chain is composed of series of distinct value creation activities including production, marketing and sales, materials management, R&D, human resources, information systems, and the firm infrastructure. These value creation activities can be categorized as primary activities and support activities. ? Many international markets are now extremely competitive due to the liberalization of the world trade and investment environment. In industry after industry, capable competitors confront each other around the globe. To be profitable in such an environment, a firm must both reduce the costs of value creation (lower C) and differentiate its product offering so that consumers value that product more (raise V) and are willing to pay more for the product than it costs to produce it. Thus, strategy is often concerned with identifying and taking actions that will lower the costs of value creation and/or will differentiate the firm's product offering through superior design, quality, service, functionality and so on. ? Firms that compete in the global market place typically face two types of competitive pressure. They face pressure for cost reductions and pressures to be locally responsive. ? Firms use four basic strategies to enter and compete in the international environment: an international strategy, a multidomestic strategy, a global strategy and a transnational strategy. ? International entry strategies concern where (location selection), when (timing of entry) and how (entry mode selection) international companies should enter and invest in a foreign territory during international expansion. These entry strategies are important because they determine an MNE's investment environment, operation treatment, resource commitment and evolutionary path. ? International location selection involves country selection and regional selection (e.g., state, province or city) for an MNE's foreign direct investment project(s).

188 ? NSOU ? PGCO-III Locational determinants can be categorized into the following groups: (1) cost tax factors; (2) demand factors; (3) strategic factors; (4) regulatory/economic factors; and (5) socio-political factors. ? Timing of entry involves the sequence of an MNE's entry into a foreign market vis-à-vis other MNEs (i.e., first mover, early follower, and late mover). Timing of entry is important because it determines the risks, environments, and opportunities the MNE may confront. ? An MNE seeking to enter a foreign market must make an important strategic decision concerning which entry mode to use. Entry modes are specific forms or ways of entering a target country to achieve strategic goals underlying international presence in that country. Entry mode choices fall into three categories: trade-related, transfer-related, and FDI-related. ? Trade-related entry modes include exporting, subcontracting, and countertrade. ? Transfer-related entry modes are those associated with transfer of ownership or utilization of specified property (technology or assets) from one party to the other in exchange for royalty fees. They differ from trade-related entry modes in that the user in a transfer-related mode "buys" certain rights of transacted property (e.g., use of technology) from the other party (owner). These modes are extensively employed in technology-related or intellectual/industrial property right-related transactions. This category includes the following entry modes: International leasing, International licensing, International franchising, Build-operate-transfer (BOT) ? FDI-related entry modes are more sophisticated than trade-related modes, and involve higher risk and longer-term contribution than both trade- and transfer-related choices. Compared with the later, FDI-related modes underline the firm's long-term strategic goals of international presence and necessitate continuous contribution and commitment to investments and operations abroad. FDI-related entry modes include: Branch office, Cooperative joint venture, Equity joint venture, Wholly-owned subsidiary, Umbrella holding company ? Organizational structure means three things: (1) the location of decision-making responsibilities within the structure, which is referred to as vertical differentiation; (2) the formal division of the organization into subunits, which is known as horizontal differentiation; and (3) the establishment of integrating mechanisms.

NSOU ? PGCO-III ? 189 6.11 Self Assessment Questions A. Objective Type Questions: Choose the correct answer from the given four alternatives. 1. The tendency of national governments to reduce trade and investment barriers has accelerated a) Global economic integration. b) Global political integration. c) Local economic integration. d) Local political integration. 2. Conducting business by crossing national boundary (i.e., international business) could itself be a/an a) objective for a firm b) strategy for a firm c) strategy for a state d) strategy for a country 3. The firm as a value chain is composed of series of distinct value creation activities including production, marketing and sales, materials management, R&D, human resources, information systems, and the firm infrastructure. a) production, marketing and sales b) production, marketing and sales and materials management c) production, marketing and sales, materials management, R&D, human resources, information systems, and the firm infrastructure. d) production, marketing and sales, materials management, R&D, and human resources. 4. Firms that pursue .....try to create value by transferring valuable skills and products to foreign markets where indigenous competitors lack those skills and products. a) a global strategy

190 ? NSOU ? PGCO-III b) a local strategy c) a multinational strategy d) an international strategy 5. Firms that pursue .....focus on increasing profitability by reaping the cost reduction that comes from experience curve effects and locations economies. a) a global strategy b) a local strategy c) a multinational strategy d) an international strategy 6. International entry strategies concern where (location selection), when (timing of entry) and how (entry mode selection) international companies should enter and invest in a .....during international expansion. a) local territory b) foreign territory c) regional territory d) national territory 7. International .....is an entry mode in which the foreign franchisor grants specified intangible property rights (e.g., trademark or brand name) to the local franchisee, which must abide by strict and detailed rules as to how it does business. a) exporting b) joint venture c) franchising d) countertrade 8. .... is a form of trade in which a seller and a buyer from different countries exchange merchandise with little or no cash or cash equivalents. a) exporting b) joint venture

NSOU ? IBM SLM.docx (D111408454)

The European Union (EU) 7.2.1 Introduction The European Union is a political and economic union having 28 member states that are located mainly in Europe.

It covers an area of 4,475,757 km<sup>2</sup> and an estimated population of over 510 million. The EU has its roots to the years after the end of World War II, when the leaders of six war worn countries- Germany, France, Belgium, Italy, Luxembourg, and the Netherlands sought to establish peace and prosperity through economic and political cooperation. They signed the Treaty of Paris, in 1952, founding the European Coal and Steel Community (ECSC). Signing the Treaty of Rome in 1957 led to the formation of the European Economic Community (EEC). Eventually, the EU was formed on 1 November 1993, Maastricht, Netherlands. Its Headquarter is situated at City of Brussels, Belgium. Membership to EU is open to any country with a democratic government, a good human rights record, and sound economic policies. The member states delegate sovereignty to the EU institutions to represent the interests of the European Union in general. If a member state decides to withdraw, it needs to notify the European Council of its intention. According to the guidelines provided by the European Council, the Union shall negotiate and conclude an agreement with that State, setting out the arrangements for its withdrawal, taking account of the framework for its future relationship with the Union. On 1 st July 2013, Croatia became 28 th member of EU. On the contrary following a referendum on 23 June 2016 in favour of withdrawing from the European Union, commonly known as BREXIT, British Prime Minister Theresa May invoked Article 50 on 29 March 2017. The United Kingdom is thus scheduled to withdraw from the EU on 29 March 2019.

7.2.2 Goals of the EU The goals of the European Union are to: ? promote peace, its values and the well-being of its citizens  
NSOU ? PGCO-III ? 195 ? offer freedom, security and justice without internal borders ? sustainable development based on balanced economic growth and price stability, a highly competitive market economy with full employment and social progress, and environmental protection ? combat social exclusion and discrimination ? promote scientific and technological progress ? enhance economic, social and territorial cohesion and solidarity among EU countries ? respect its rich cultural and linguistic diversity ? establish an economic and monetary union whose currency is the euro. The EU has taken some steps to become a full-fledged economic union: 1. Market access: Most of the tariffs and other barriers have been removed. 2.

**75%**

**MATCHING BLOCK 108/173**

**W**

Common market: Free movement of factors of production, i.e., labour, capital and technology among the member

countries. 3. Trade rules: Members removed customs procedures and regulations, which rationalizes transportation and logistics within Europe. 4. Standards harmonization: The EU is harmonizing technical standards, regulations, and enforcement procedures that relate to products, services, and commercial activities.

7.2.3 Institutions of EU The main institutions that administer the EU are listed in Article 13 as: The European Parliament: It consists of 749 members. Article 14 limits the number to 751 and also states that no member state shall have more than 96 MEPs. It can be noted that only Germany has 96 MEPs at the moment. The Parliament elects its own President and officers from within itself. It also elects the Commission President but does so following a proposal from the European Council. Its main function is to exercise law- making functions along with the Council. The European Council: It consists of Heads of State or Government of member states, plus its President and the President of the Commission. Its main function is to define the general policy of the Union.

196 ? NSOU ? PGCO-III The Council: It is the law-making body, along with the European Parliament. The Court of Justice of the European Union: It consists of a number of different courts, some specialised, with judges appointed by member states. The European Central Bank: Together with national central banks it constitutes the European System of Central Banks. The Court of Auditors: It consists of one appropriately qualified national of each member state, appointed by the Council on proposals from member states. They are appointed for six years at a time.

7.3 Association of Southeast Asian Nations (ASEAN) 7.3.1 Introduction The

**75% MATCHING BLOCK 109/173**

Mutual respect for the independence, sovereignty, equality, territorial integrity, and national identity of all nations; 2. The right of every State to lead its national existence free from external interference, subversion or coercion; 3. Non-interference in the internal affairs of one another; 4. Settlement of differences or disputes by peaceful manner; 5. Renunciation of the threat or use of force; and 6. Effective cooperation among themselves. 7.3.4 India- ASEAN

Relations India's relationship with ASEAN is a key pillar of Indian foreign policy and the foundation of its Act East Policy. India became a Sectoral Partner of the ASEAN in 1992, Dialogue Partner in 1996 and Summit Level Partner in 2002. There are, in total, 30 Dialogue Mechanisms between India and ASEAN, cutting across various sectors. India and ASEAN observed 25 years of their Dialogue Partnership, 15 years of Summit Level interaction and 5 years of Strategic Partnership throughout 2017 by undertaking a wide range of over 60 commemorative activities, both in India and through its Missions in ASEAN Member States, which concluded in the ASEAN-India Commemorative Summit on the theme "Shared Values, Common Destiny" on 25 January 2018 in New Delhi. At the ASEAN-India Commemorative Summit, PM and the ASEAN Leaders jointly adopted

198 ? NSOU ? PGCO-III Source: <https://asean.org/asean/asean-structure/organisational-structure-2/>.

NSOU ? PGCO-III ? 199 the Delhi Declaration and decided to identify Cooperation in the Maritime Domain as the key area of cooperation under the ASEAN-India strategic partnership. The main forum for ASEAN security dialogue is the ASEAN Regional Forum (ARF). India has been attending annual meetings of this forum since 1996 and has actively participated in its various activities. The ASEAN Defence Ministers' Meeting (ADMM) is the highest defence consultative and cooperative mechanism in ASEAN. The ADMM+ brings together Defence Ministers from the 10 ASEAN nations plus Australia, China, India, Japan, New Zealand, Republic of Korea, Russia, and the United States on a biannual basis.

Economic Cooperation: India-ASEAN trade and investment relations have been growing steadily, with ASEAN being India's fourth-largest trading partner. India's trade with ASEAN stands at US\$ 81.33 billion, which is approx. 10.6% of India's overall trade. India's export to ASEAN stands at 11.28% of its total exports. ASEAN accounting for approximately 18.28% of investment flows into India since 2000. FDI inflows into India from ASEAN between April 2000 to March 2018 was about US\$68.91 billion, while FDI outflows from India to ASEAN countries. ASEAN and India have been also working on enhancing private sector engagement. ASEAN India-Business Council (AIBC) was set up in March 2003 in Kuala Lumpur as a forum to bring key private sector players from India and the ASEAN countries on a single platform for business networking and sharing of ideas. [source: <http://mea.gov.in/aseanindia/20-years.htm>] 7.4 South Asian Association for Regional Co-operation (SAARC) 7.4.1 Introduction Organization of South Asian nations, founded in 1985 and dedicated to economic, technological, social, and cultural development emphasizing collective self-reliance.

Afghanistan joined the organization in 2007. Meetings of heads of state are usually scheduled annually; meetings of foreign secretaries, twice annually.

Headquarters are situated in Kathmandu, Nepal.

200 ? NSOU ? PGCO-III The areas of cooperation are agriculture; education, culture, and sports; health, population, and child welfare; the environment and meteorology; rural development (including the SAARC Youth Volunteers Program); tourism; transport; science and technology; communications; women in development; and the prevention of drug trafficking and drug abuse. The charter stipulates that decisions are to be unanimous and that "bilateral and contentious issues" are to be avoided. 7.4.2

Objectives

**80%**

**MATCHING BLOCK 120/173**

**SA**

Int\_Eco\_Block 2.pdf (D165067090)

The objectives of the Association are as follows: a) To promote the welfare of the peoples of South Asia and to improve their quality of life. b) To accelerate economic growth, social progress and cultural development in the region and to provide all individuals with the opportunity to live in dignity and to realize their full potential. c) To promote and strengthen collective self-reliance among the countries of South Asia. d) To contribute to mutual trust, understanding and appreciation of one another's problems. e) To promote active collaboration and mutual assistance in the economic, social, cultural, technical and scientific fields. f) To strengthen cooperation with other developing countries.

g)

**84%**

**MATCHING BLOCK 121/173**

**SA**

International Business.pdf (D142236558)

To strengthen cooperation among themselves in international forums on matters of common interests. h) To cooperate with international and regional organizations with similar aims and purposes. 7.4.3 Principles Cooperation within the framework of the Association is based on respect for the principles of sovereign equality, territorial integrity, political independence, non-interference in the internal affairs of other States and mutual benefit. Such cooperation

is to complement and not to substitute bilateral or multilateral cooperation.

NSOU ? PGCO-III ? 201 Such cooperation should be consistent with bilateral and multilateral obligations of Member States General Provisions: Decisions at all levels in SAARC shall be

**100%**

**MATCHING BLOCK 122/173**

**SA**

Int\_Eco\_Block 2.pdf (D165067090)

taken on the basis of unanimity Bilateral and contentious issues

shall be excluded from the deliberations of the Association. 7.4.4 Organizational Structure The SAARC comprises five layers of organizational structure: 1. Council: At the top, there is the Council represented by the heads of the government of the member countries. The council is the apex policy-making body. It meets once in 2 years time. 2. Council of Ministers: It is to assist the council. It is represented by the foreign minister of the member countries. Its functions include: a) Formulation of policies b) Review of functioning c) Deciding new areas of cooperation d) Chalk our additional mechanism e) Decide about general issues of commonality of interest of the SAARC member. 3. Standing Committee: It is comprised of the foreign secretariat of the member government. Its major functions are: a) To monitor and co-ordinate the programmes b) To determine inter-sectoral priorities c) To mobilise cooperation within and outside the region d) To deal with the modalities of financing. 4. Programming Committee: It consists of the senior official of the member governments. Its functions include: a) Scrutinizing the budget of the secretariats b) Finalizing the annual schedule

202 ? NSOU ? PGCO-III c) External activities assigned by the standing committee d) Analyses the respects of the technical committee. 5. Technical Committee: It consists of the representatives of the member nations. Its functions are: a) To formulate projects and programmes b) To monitor and execute the projects c) To submit reports. Under the new SAARC Integrated Programme of Action (SIPA), the number of Technical Committees has been reduced from eleven to seven mainly through the amalgamation of the different sectors covered by the various Technical Committees and eliminating overlapping, duplication and waste. The prime objective of the reorganization has been to enhance clarity in terms of the goals and targets of the activities undertaken, as well as to improve the Committees quality and efficacy. The seven Technical Committees under SIPA now cover 1. Agriculture and Development 2. Communications and Transport 3. Social Development 4. Environment, Meteorology and Forestry 5. Science and Technology 6. Human Resources Development, and 7. Energy. 6. Secretariat: The SAARC Secretariat is located in Nepal. Its main functions are: a. Coordination, execution and monitoring of SAARC activities. b. Servicing the SAARC meetings. c. Performing as a communication link between the SAARC and other international forums. The secretariat is headed by the Secretary-General appointed by the Council of Ministers. These are seven Directors (One from each member nation) and the general service staff. 7.4.5 SAARC Preferential Trading Arrangement (SAPTA) 7.4.5.1 Overview

Main components ? Tariff ? Para Tariff ? Non Tariff Direct Trade Measures SAPTA specified four negotiating approaches namely, product by product basis, across the board tariff reduction, sectoral basis and direct trade measures. However, it was agreed that tariff concessions would initially be negotiated on a product - by- product basis. The agreement also provides for negotiation of tariff concessions to be an ongoing process. The SAPTA envisages that concessions on tariff, para-tariff and non-tariff measures will be negotiated step -

by step improved and extended in successive stages.

IBM SLM.docx (D111408454)

National Schedules of Concessions The process of negotiation on the schedule of concession, which forms an integral part of the Agreement, commenced in 1993. For this purpose, the Inter-Governmental Group on Trade Liberalization (IGG) was set up. The IGG met on six occasions in various capitals. At the sixth meeting held in Katmandu on 20th and 21 st April 1995, the delegations held intensive rounds of bilateral and multilateral negotiations and agreed on the National Schedule of concessions to be granted by individual member states to other member states under the SAPTA Agreement. Four rounds of trade negotiations were concluded under SAPTA covering over 5000 commodities. Each Round contributed to an incremental trend in the product coverage and the deepening of tariff concessions over previous Rounds. During the first and second rounds, trade negotiations were conducted on a product by product basis. In the third and the fourth rounds, negotiations were conducted on chapter wise. Maintenance of SAPTA Concession The Agreement on the South Asian Free Trade Area (SAFTA) which was implemented with effect from 1st January 2006 will supersede the SAARC Preferential Trading Arrangement (SAPTA). On the issue of maintaining SAPTA concessions for LDCs, the Committee agreed that once the Non-LDCs member states complete the Trade Liberalization Programme (TLP) for LDC member states, SAPTA concessions would cease for LDC member states. However, if any item on which SAPTA concessions are available to LDC, appear in the sensitive lists of non-LDC, they shall maintain the same level of concession through derogation. The

Committee has further agreed that if the items under TLP enjoy tariff preferences under SAPTA, the Non-LDCs shall reduce their tariff on those items to a rate not higher than the rate applicable for LDCs under SAPTA on the date agreed for base rate for TLP. It was also agreed at the first SAFTA Ministerial Council Meeting held in April that LDCs should also maintain concessions under SAPTA for Non-LDCs until the completion of TLP irrespective of whether the products are in the sensitive lists or not.

NSOU ? PGCO-III ? 205 7.5 Summary The EU, ASEAN and SAARC are three important organizations operating in three different parts of the globe. Foundation of the European Coal and Steel Community (ECSC) in 1952 and signing the Treaty of Rome in 1957 led to the formation of the European Economic Community (EEC). Eventually, the EU was formed on 1 November 1993. It ensures that most of the tariffs and other barriers have been done away with, free movement of production factors-labour, capital and technology among the member countries, elimination of customs procedures and regulations, which rationalizes transportation and logistics within Europe. The ASEAN, was established on 8 August 1967 in Bangkok, Thailand to accelerate the

**96%**

**MATCHING BLOCK 129/173**

NSOU ? PGCO-III 2. What are those steps EU has taken to become a full-fledged economic union? 3. What are the principles of ASEAN? Objective Type Questions: 1. What is the full form of ECSC? 2. Where the headquarter of EU is situated? 3. What is the full form of SAPTA? 4. What is meant by SIPA? NSOU ? PGCO-III ? 207 Unit 8 International Financing and International Economic Institutions Structure 8.1 Objectives 8.2 International Financial Market 8.3 Market Access 8.4 Intergovernmental Organizations (IGO) 8.4.1 Euro Market 8.4.2 International Monetary Fund (IMF) 8.4.3 World Trade Organization (WTO) 8.4.4 World Bank 8.4.5 Asian Development Bank (ADB) 8.5 Summary 8.6 Self Assessment Questions 8.1 Objectives After studying this chapter students will be aware of different international economic institutions. After having a preliminary idea regarding international financial markets and different modes used in accessing domestic markets by foreign investors, they will learn about the Euro Markets, IMF, WTO, World Bank and ADB. 8.2 International Financial Market The International Financial Market is the place where financial wealth is traded between individuals and countries. To procure funds MNC is in a better position than the domestic firm as the former has greater access to the international financial market. The international financial market may be divided into two segments. International money market is concerned with short term funds. On the other hand, International capital market deals with long 208 ? NSOU ? PGCO-III term funds. International financial market may also be categorized from the point of view of resource providing agencies. They are as follows: a) Official Sources: i) Multilateral agencies like international development banks, such as the World Bank, IFC etc., regional development banks, such as the Asian Development Bank, etc. ii) Bilateral Agencies or different governmental agencies. b) Non-Official Sources: This channel comprises the borrowing and the lending streams such as Euro-currency market or international banks in one hand and divergent types of financial instruments in the international securities market on the other hand. Moreover, Swap is also very common in the international financial market. Different other derivative instruments are also being used in the market. 8.3 Market Access Market access is the ability of a company or country to sell goods and services across borders. Market access can be used to refer to domestic trade as well as international trade although the latter is the most common context. Market access is sometimes misunderstood with free trade. But they are not the same. Tariffs, duties and quotas put a barrier to free trade. Second, through complex negotiations participants typically push for market access that favours their particular export industries and attempting to limit market access to import products that could potentially compete with sensitive or politically strategic domestic industries. Market access is seen as an early step towards deepening trade ties. Market access is increasingly the stated goal of trade negotiations as opposed to true free trade. Apart from export and import foreign investments in the following three forms also play significant roles: Foreign Direct Investment (FDI): FDI is investing directly in another country. A foreign company which is based in some other country like the USA invests in India either by setting up a wholly-owned subsidiary or getting into a joint venture with some company based in India and then conducts its business in India. Examples: Various software companies like IBM India which is initially based in the United States but has opened its subsidiaries in a different part of India, Honda is yet another example in which Honda of Japan had joint ventured with Maruti Udyog Ltd.

NSOU ? PGCO-III ? 209 SBI life insurance is a joint venture life insurance company between State Bank of India (SBI) and BNP Paribas Assurance of France. Foreign Portfolio Investment (FPI): FPI is also direct investment but investment in only financial assets such as stocks, bonds etc. of a company located in another country. In the case of FPI, portfolio investment is an investment made by an investor who is not involved in the management and day-to-day decision making a company as in FDI. Example: Any foreign company invests in the shares of Infosys (based in India). Foreign Institutional Investment (FII): FII is an investor or group of investors who bring FPIs.

<b>95%</b>	<b>MATCHING BLOCK 131/173</b>	<b>SA</b>	MBA-302 International Business and Internation ... (D164737016)
Institutional investors include hedge funds, insurance companies, pension funds and mutual funds.			

They participate in the secondary market of the economy. To participate in the market of India, FIIs must register themselves with the Securities and Exchange Board of India (SEBI). 8.4 Intergovernmental Organizations (IGO) In the field of international business, there are many Intergovernmental Organizations (IGO). IGOs are there because many issues of international business cannot be dealt with in a national framework. Out of many such IGOs three most important IGOs that originated from the 1944 Bretton Woods conference are

<b>96%</b>	<b>MATCHING BLOCK 132/173</b>	<b>SA</b>	Int_Eco_Block 2.pdf (D165067090)
the International Monetary Fund (IMF), the International Bank for Reconstruction and Development (IBRD)			

or

<b>100%</b>	<b>MATCHING BLOCK 133/173</b>	<b>SA</b>	Int_Eco_Block 2.pdf (D165067090)
World Bank and the General Agreement on Tariffs and Trade (GATT),			

which gave birth of World Trade Organization (WTO). There is no dearth of studies trying to unearth the motivation behind the birth of the above IGOs. Researchers usually are of the opinion that these are the platforms where cross-border concerns could be handled. This was in reaction to the beggar-thy-neighbour policies [where one country purposefully tries to improve its economic position at the expense of its trading partners by keeping exchange rates artificially low, taxing imports, etc.] that some countries adopted in the 1930s, protectionism whose negative effects on world trade deepened the Great Depression. 8.4.1. Euro Market According to the Cambridge Business English Dictionary, Euro market can be viewed from two different angles. From the viewpoint of Finance, it is a large financial market for Eurocurrencies On the contrary, from the angle of Commerce it is defined as the 210 ? NSOU ? PGCO-III single market that includes all the countries in the EU which allow free trade between member countries and agrees to abide by a set of rules for trading with other countries. The Euro market is a massive market comprising many member nations of the EU and facilitates the free movement of goods and services. Putting differently, efficient trade mechanisms such as low tariffs, quotas etc. are kept in place and have a centralized monetary policy with most of them using a common currency - Euro. The euro market is a vital player in international trade. Figure adapted from the IMF website. The Eurocurrency market consists of banks (called Eurobanks) that accept deposits and provide loans in foreign currencies. Eurocurrency may be any deposit of a currency in a country other than that of the currency's origin. For example, a deposit of USD in a

NSOU ? PGC0-III ? 211 bank in Europe is a deposit of Eurodollars. The entire market for loans and deposits in Euro currency is the Euro currency Market. The Eurocurrency Market, instead of having buyers and sellers, has lenders and borrowers. It is noteworthy that the prefix "Euro" is historical in nature, indicating that the market was initially centred in Europe. A Euro currency is a freely convertible currency deposited in a bank located in a country which is not the native country of the currency. The deposit can be placed in a foreign bank or in the foreign branch of a domestic US bank. In the Eurocurrency market, short-term claims on commercial banks held by investors are transformed by intermediaries into long-term claims on final borrowers. Eurocurrency market is a chain of deposits and a chain of borrowers and lenders. The majority of Euro currency transactions involve transferring control of deposits from one Eurobank to another Eurobank. Loans to non- Eurobank borrowers account for less than half of all Eurocurrency loans. Usually, Euro banks are able to pay higher rates on deposits and charge lower rates on loans than purely domestic banks. This is possible because they can often avoid government regulations such as reserve requirements and the need to pay deposit insurance. This downs the cost of operations for Euro banks and these lower costs can be passed through to the clients. Euro currency loans are generally huge and the customers are well- known firms. Thus, the banks do not face much default risk and can charge lower margins on the large loans. The main feature of Euro currency loans is that they are usually floating rate (this also referred to as rollover pricing or as cost-plus pricing) and are typically set as a percentage over LIBOR. Eurobonds may be defined as bonds sold outside the country whose currency they are dominated in. They are similar to public debt sold in domestic capital markets. However, the Eurobond market is entirely free of official regulation and is self-regulated by the Association of International Bond Dealers. Borrowers in the Eurobond market are well known and have good credit ratings. The Eurobond market has grown rapidly in the last two decades, and it exceeds the Eurocurrency market in size.

8.4.2 International Monetary Fund (IMF) International Monetary Fund (IMF) is an international agency of 189 members. It has its headquarters in Washington, D.C. The Fund's aim is to stabilize currencies by monitoring the foreign exchange systems of member countries, and lending money to developing economies.

**54%      MATCHING BLOCK 137/173      SA      EMGN578 ( 2 ).docx (D142425824)**

The IMF's primary goal is to ensure the stability of the system of exchange rates and international payments which permits members to transact with each other. The

Fund's mandate was updated in 2012 to incorporate all macroeconomic and financial sector issues that bear on international stability. Objectives: Briefly, the objectives of the IMF are to: a) promote

**56%      MATCHING BLOCK 138/173      SA      nav 3-12-2018.docx (D44895527)**

international financial cooperation; b) facilitate the expansion and balanced growth of international trade; c) promote exchange stability; d) assist in the establishment of a multilateral system of payments; and e) make resources available to members experiencing

a balance of payments difficulties. IMF Fast Facts

Membership: 189 countries Headquarters: Washington, D.C. Executive Board: 24 Directors each representing a single country or

a group of countries Staff: Approximately 2,700 from 148 countries Total quotas: US\$668 billion (as of 9/13/16) Additional pledged or committed resources: US\$ 668 billion Committed amounts under current lending arrangements (as of 9/8/16): US\$159 billion, of which US\$144 billion have not been drawn. Biggest borrowers (amounts outstanding as of 8/31/16): Portugal, Greece, Ukraine, Pakistan Biggest precautionary loans (amount agreed as of 9/8/16): Mexico, Poland, Colombia, Morocco Surveillance consultations: 130 consultations in 2013 and 132 in 2014, and 124 in 2015 Capacity development: 274 person-years in FY2013, 285 in FY2014, and 288 in FY2015

NSOU ? PGCO-III ? 213 Organization and Finance: Management At the top of IMF's organizational structure is

**80% MATCHING BLOCK 135/173 W**

the Board of Governors. It consists of one Governor and one Alternate Governor

from each member country (generally from the central bank or the ministry of finance).

**90% MATCHING BLOCK 136/173 W**

The Board of Governors meets once a year at the IMF–World Bank Annual Meetings.

Governors sit on the International Monetary and Financial Committee (IMFC) and normally meet twice a year. The IMF's day-to-day work is supervised by its 24 member Executive Board, that represents the entire membership. This work is guided by the IMFC and supported by the IMF staff. Managing Director is the head of the staff and Chairperson of the Executive Board of IMF. The Managing Director is appointed by the Executive Board for a renewable term of five years. To assist the Managing Director there are Deputy Managing Director and three Deputy Managing Directors. According to the IMF's Articles of Agreement, the Managing Director shall be

**62% MATCHING BLOCK 139/173 SA** International Business.pdf (D142236558)

the chief of the operating staff of the Fund and shall conduct, under the direction of the Executive Board, the ordinary business of the Fund. Subject to the general control of the Executive Board, he shall be responsible for the

organization, appointment, and dismissal of the staff of the Fund. Governance Structure The present governance structure of the organization can be seen in the following pictorial representation ( adopted from the IMF website). Quotas IMF's main source of financing is quotas. Each member of the IMF is assigned a quota. This is based on its relative position in the global economy. The IMF regularly conducts general reviews of quotas in order to assess the adequacy of overall quotas and their distribution among members. The 14th review (the latest) was concluded in 2010 and the quota increases became effective in 2016. Each member of the IMF

**100% MATCHING BLOCK 140/173 SA** International Trade-Material I semester.docx (D146751176)

is assigned a quota expressed in special drawing rights (SDRs)

The member's capital subscription to the IMF is equal to its quota. Members pay up to 25 per cent of their quota in the form of reserve assets and the remainder in their own currency. A member borrows from the IMF by purchasing reserve assets using its own currency and repays the IMF by repurchasing its own currency using reserve assets. The total quota or capital subscription of all members are currently SDR 212.8 billion.

214 ? NSOU ? PGCO-III Other Functions of Quotas. Quotas determine the size of the IMF and play a central role in the IMF's operations. Other functions of quota are as follows: a) Lending Capacity. Quota subscriptions by members provide by far the bulk of the reserve assets available to the IMF to finance its lending operations. Therefore, quotas to a large extent determine the lending capacity of the IMF. b) Voting Power. Quotas largely determine the distribution of the voting power of the IMF and, therefore, the relative influence of individual members in decision-making at the IMF. c) Access Limits. The limit of members' access to IMF resources is stated as a per cent of quota . Hence, quotas determine the maximum level of a country's

NSOU ? PGCO-III ? 215 access. These access limits vary according to the type of borrowing arrangement between the member and the IMF. For example, under the credit tranches and the Extended Fund Facility, borrowing is subject to an annual limit of 100 per cent of quota and a cumulative limit of 300 per cent of quota. Special Drawing Rights (SDR) Special drawing rights (SDR) are the international type of monetary reserve currency created by the International Monetary Fund (IMF) in 1969. It is essentially an artificial currency used by the IMF and is a basket of national currencies. This operates as a supplement to the existing reserves of member countries. It is created due to the limitations of gold and dollars as the sole means of settling international accounts. SDRs increase international liquidity by supplementing the standard reserve currencies. SDRs are allocated by the IMF to its member countries and are backed by the full faith and credit of the member countries' governments.

**71%**

**MATCHING BLOCK 143/173**

Source: IMF) Surveillance Every year, the IMF sends economists to each of its member countries to examine fiscal and monetary policy, exchange rate, general macroeconomic stability, and any related policies, such as labour policy, trade policy, and social policy like pension system. This

216 ? NSOU ? PGCO-III process is in accordance with Article IV consultation. The purpose of this consultation is to provide an outside check on national decisions that might have an effect on the international economic system. IMF executive board discusses the report produced by the economists and gives it to the leaders of the country in question as to the official opinion of the IMF. A version of the report is also published and available as an IMF Public Information Notice (PIN). IMF also publishes its analysis of the world economic system in its World Economic Outlook twice per year and the Global Financial Stability Report, which focuses specifically on the international capital markets, also twice per year. Financial Assistance The IMF provides credits and loans to member countries having problems with the balance of payments to pay off their obligations and readjust their economic policies. To receive assistance the member-country must agree, through a "letter of intent," to implement changes in its fiscal and monetary policies that IMF experts have determined are necessary. The loans are disbursed in phases after ensuring that the receiving country moves forward with the reforms required to avail it. Loans are generally granted for relatively short periods of time ( for just a few months), or for as long as ten years, depending on the type of loan. The receiving country must pay back loans on time, on a rigorous schedule, because the loans are intended to be temporary assistance. The IMF provides assistance through several lending programs : a) Stand-by arrangements are loans granted for specific amounts over 12 to 18 months to deal with short-term problems. b) The Extended IMF's Facility is used to help a member-country deal with what are called "structural" economic problems resulting from a history of poor economic planning. The IMF attaches strong conditions to loans through this facility, which are granted for three to four-year terms. c) The Poverty Reduction and Growth Facility is granted at low-interest rates to poor countries. d) The Supplemental Reserve Facility grants short-term loans during crises but adds a surcharge to discourage too much borrowing.

NSOU ? PGCO-III ? 217 e) Contingent Credit Lines are granted during waves of crises that can spread from one country to another, called "contagions." f) Emergency Assistance is granted to countries facing military conflicts or other sudden disasters. Technical Assistance The IMF provides technical assistance on fiscal and monetary policy, regulatory procedures, tax policy, and collection of statistics, among other issues. Objectives of these programmes are : strengthening developing countries' abilities to reform and properly manage their macroeconomic policies. The IMF dispatches its own experts and private consultants on training missions to educate government officials and also runs the IMF Institute in Washington, D.C. to provide courses for officials. India and the IMF a) India joined the IMF on December 27, 1945, as one of the IMF's founder members. b) India accepted the obligations of Article VIII (Agreement on current account convertibility) on August 20, 1994. c) India subscribes to the IMF's Special Data Dissemination Standard. Countries belonging to this group make a commitment to observe the standard and to provide information about their data and data dissemination practices. Financial Assistance IMF credit has been beneficial in helping India respond to the emerging balance of payments problems on two occasions. In 1981-82, India borrowed SDR 3.9 billion under an Extended Fund Facility, the largest arrangement in IMF history at that time. In 1991- 93, India borrowed a total of SDR 2.2 billion under two stand-by arrangements, and in 1991 it borrowed SDR 1.4 billion under the Compensatory Financing Facility. Technical Assistance IMF has provided India with technical assistance in different areas, including the development of the government securities market, foreign exchange market reform, public expenditure management, tax and customs administration, and strengthening statistical systems in connection with the Special Data Dissemination Standards. Since 1981 the IMF has provided training to Indian officials in national accounts, tax administration, the balance of payments compilation, monetary policy, and other areas.

218 ? NSOU ? PGCO-III 8.4.3 World Trade Organization (WTO) The World Trade Organization is an intergovernmental organization that regulates international trade. It

**78%**

**MATCHING BLOCK 144/173**

**SA**

nav 3-12-2018.docx (D44895527)

is the only international organization dealing with the global rules of trade between nations.

Its main function is to ensure that trade flows as freely as possible.

**94%**

**MATCHING BLOCK 142/173**

**W**

The WTO officially commenced on 1 January 1995 under the Marrakesh Agreement, signed by 124 nations on 15 April 1994, replacing the General Agreement on Tariffs and Trade (GATT), which commenced in 1948.

Its headquarter is located in Geneva, Switzerland. Current member of this organization is 164 accounting for about 95% of world trade. Apart from these, 25 others are negotiating members. Roberto Azevêdo is the sixth Director-General of the WTO. His appointment took effect on 1 September 2013 for a four-year term. In February 2017, WTO members agreed to appoint Mr Azevêdo for a second four-year term, starting on 1 September 2017. Structure In WTO decisions

**96%**

**MATCHING BLOCK 145/173**

**SA**

International Trade-Material I semester.docx (D146751176)

are made by the entire membership typically by consensus. A majority vote has never been used in the WTO and was extremely rare under the WTO's predecessor, GATT. The WTO's agreements have been ratified in all members' parliaments. The WTO's top-level decision-making body is the Ministerial Conference which meets at least once every two years. Under this is the General Council (normally ambassadors and heads of delegation in Geneva, but sometimes officials sent from members' capitals) which meets several times a year in the Geneva headquarters. The General Council also meets as the Trade Policy Review Body and the Dispute Settlement Body. At the next level, the Goods Council, Services Council and Intellectual Property (TRIPS) Council report to the General Council.

A large number of

**91%**

**MATCHING BLOCK 148/173**

**SA**

IBM SLM.docx (D111408454)

specialized committees, working groups and working parties deal with the individual agreements and other areas such as the environment, development, membership applications and regional trade agreements. Secretariat The WTO Secretariat, based in Geneva, has around 640 staffs and is headed by a director-general.

NSOU ? PGCO-III ? 219 The Secretariat's main duties are: a)

**78%**

**MATCHING BLOCK 149/173**

**SA**

IBM SLM.docx (D111408454)

to supply technical support for the various councils and committees and the ministerial conferences; b) to provide technical assistance for developing countries; c) to analyze world trade, and to explain WTO affairs to the public and media; d) to provide legal assistance in the dispute settlement process and advises governments wishing to become members of the WTO.

WTO's main activities are: a) Negotiating the reduction or elimination of obstacles to trade (import tariffs, other barriers to trade) and agreeing on rules governing the conduct of international trade (e.g. anti-dumping, subsidies, product standards, etc.). b) Administering and monitoring the application of the WTO's agreed rules

**92%**

**MATCHING BLOCK 146/173**

**W**

for trade in goods, trade in services, and trade-related intellectual property rights.

c) Monitoring and reviewing the trade policies of members, as well as ensuring transparency of regional and bilateral trade agreements. d) Settling disputes among members regarding the interpretation and application of the agreements. e) Building capacity of developing country government officials in international trade matters. f) Assisting the process of accession of those countries who are not yet members of the organization. g) Conducting economic research and collecting and disseminating trade data in support of the WTO's other main activities. h) Informing the public about the WTO, its mission and its activities. Differences between GATT and WTO From 1948 to 1994, the GATT provided the rules for world trade and presided over periods that saw some of the highest growth rates in international commerce. It seemed well-established but throughout those 47 years, it was a provisional agreement and organization. Creation of WTO marked the biggest reform of international trade since the end of the Second World War. Whereas the GATT mainly dealt with trade in

220 ? NSOU ? PGCO-III

**87%**

**MATCHING BLOCK 147/173**

**W**

goods, the WTO and its agreements also cover trade in services and

intellectual property. The birth of the WTO also created new procedures for the settlement of disputes. GATT WTO 1. It is a set of rules. 1. It is a permanent institution. 2. It was designed with an attempt to 2. It has its own purpose. establish an International Trade Organization. 3. It was applied on a temporary basis. 3. Its activities are permanent. 4. It was originally a multilateral instrument, 4. Its agreements are multilateral. but plurilateral agreements were added at a later stage GATS, TRIMs, TRIPs GATS (General Agreements on Trade in Services) Trade-in services have rapidly grown field in the global scenario, particularly in developing countries. The rapid growth and change have prompted the members of the WTO to bring in changes in rules and regulations on trade in services. As a result, GATS was introduced on 1st January 1995. One of the important agreements of WTO contains two main parts: i) the framework of an agreement containing rules and regulations, and ii) the schedule of Nations who gave the commitment on access to their domestic markets by foreign suppliers. Each WTO member lists in its national schedule those services, which it wished to guarantee access to foreign suppliers. All member countries are considered as MFNs (Most Favoured Nations) i.e, all commitments apply on a non-discriminatory basis to all member countries. Moreover, National

**89%**

**MATCHING BLOCK 150/173**

**SA**

IBM SLM.docx (D111408454)

treatment implies treating foreigners and locals equally. Imported and locally produced goods should be treated equally, at least after the foreign goods have crossed the border. The same should apply to foreign and domestic services, and to foreign and local trademarks, copyrights and patents.

**100%**

**MATCHING BLOCK 151/173**

**SA**

IBM SLM.docx (D111408454)

National treatment only applies once a product, service or item of intellectual property has entered the market. Therefore, charging customs duty on an import is not a violation of national treatment even if locally-produced products are not charged an equivalent tax.

NSOU ? PGCO-III ? 221 Coverage of GATS: The GATS covers all internationally traded services except services provided by the Government and services in Air transport sector. The GATS defines that trade in services can be made in four ways, these are: 1. Services supplied from one country to another (e.g. International telephone calls). 2. Consumers from one country making use of another country (e.g. Tourism). 3. A company from one country setting up subsidiaries or branch to provide services in another country (e.g. Banking). 4. Individual travelling from their own country to supply services in other countries (e.g. Actress or construction worker). Benefits of Services Liberalisation: 1. An efficient services infrastructure provides a base for economic success. Services such as telecommunications, banking, insurance and transport supply strategically important inputs for all sectors. 2. People can have access to world-class services. 3. Trade liberalisation in services leads to low cost. For example, telecommunications. 4. Faster innovation takes place with liberalised services e.g. ATM, Phone banking, Internet banking etc. 5. Greater transparency and predictability benefit is there for customers. This makes possible for the people to make their investments in the service sector. 6. More FDIs are attracted in the countries, which will bring the new skills and technologies into the country. The domestic employees can learn the new skills from the MNCs. Trade-Related Investment Measures (TRIMs) It refers

**91%**

**MATCHING BLOCK 152/173**

**SA**

International Trade-Material I semester.docx (D146751176)

to certain condition or restrictions imposed by a Government in respect of foreign investment in the country.

The TRIM provides that the foreign capital would not be discriminated by the member Governments. Features of TRIMs 1. Abolition of the restriction imposed on foreign capital. 2. Offering equal rights to the foreign investor on par with the domestic investor.

222 ? NSOU ? PGCO-III 3. No restrictions on any area of investment. 4. No limitation or ceiling on the quantum of foreign investment. 5. Granting of permission without restrictions to import raw materials and other components. 6. No force on foreign investors to use total products and or materials. 7. Export of the part of the final product will not be mandatory. 8. Restriction on repatriation of dividend interest and royalty will be removed. 9. Phased manufacturing programming will be introduced to increase the domestic content of manufacturer. Trade-Related Intellectual Property Rights (TRIPs)

**100%**

**MATCHING BLOCK 153/173**

**SA**

International Trade-Material I semester.docx (D146751176)

Intellectual property rights are the rights given to persons over the creations of their minds. They usually give the creator an exclusive right over the use of his/her creation for a certain period of time.

It includes a. Protection of patent b. Copyright c. Industrial design d. Geographical indication. e. Trademarks f. Trade secrets g. Layout design (topographies of integral circuits) TRIPs agreement are of the following: i) TRIPs agreement includes nuclear energy, methods of agricultural and horticulture and biological processes and products for patentability. ii) It provides for granting product patent to food, medicine, drugs and chemical products. iii) The duration of patents will be of 20 years of both for product patents and process patents. iv) There is no specific provision for licenses of right or revocation of patents.

NSOU ? PGCO-III ? 223 v) There is a provision for the protection of plant variety by individual countries and to have an effective unique system of their own.

**98%**

**MATCHING BLOCK 161/173**

**W**

Geographical Indications: A geographical indication (GI) is a sign used on products that have a specific geographical origin and possess qualities or a reputation that are due to that origin. In order to function as a GI, a sign must identify a product as originating in a given place. In addition, the qualities, characteristics or reputation of the product should be essentially due to the place of origin. Since the qualities depend on the geographical place of production, there is a clear link between the product and its original place of production.

Dumping Dumping is, in general, a situation of international price discrimination, where the price of a product, when sold in the importing country, is less than

**83%**

**MATCHING BLOCK 154/173**

**W**

the price of that product in the market of the exporting country.

Different types of dumping Persistent-dumping This is international price discrimination that goes on indefinitely. Exporting firms benefit from this when demand in a foreign market is more elastic than the demand in the company's home market. Predatory-dumping Used by manufacturers as a means of eliminating competition in a foreign market. High domestic prices are used to supplement the reduced revenue of exporting cheaper goods. By exporting goods at cheap prices exporters are able to drive off any competition in the area. Once the competition has been eliminated, the firm can then raise the price of the product and generate more revenue. The importing country usually complains, because its market might end up being controlled by a foreign monopoly. Sporadic dumping This occurs when there is a temporary surplus of a specific product. Businesses will dump surplus goods in foreign markets without having to reduce prices in their domestic market. The domestic market refers to the market within a country's borders.

224 ? NSOU ? PGCO-III Anti-dumping measures To curb dumping, the importing country imposes tariff duty, import quota, import embargo and voluntary export restraint. On 26 October 2017, India has imposed anti-dumping duty on stainless steel from US, EU and China. India has also imposed anti-dumping duty on certain stainless steel products from the European Union and other countries including China and Korea, in order to protect the domestic industry from cheap imports. The duty was imposed by the Revenue department following the recommendation by the Directorate General of Anti- Dumping and Allied Duties (DGAD). ? The levied duty will range between 4.58 per cent and 57.39 per cent of the landed value of cold-rolled flat products of stainless steel. ? The anti-dumping duty will be in effect until 10 December 2020. ? The direction, however, exempts certain grades of stainless steel from the duty. ? The duty will be levied on the imports of stainless steel products from China, Taiwan, South Korea, South Africa, Thailand, the United States and the European Union. 8.4.4 World Bank World Bank was originally

**W**

in 1988 to promote foreign direct investment into developing countries to support economic growth, reduce poverty, and improve people's lives. MIGA fulfils this mandate by offering political risk insurance (guarantees) to investors and lenders. e) The International Centre for Settlement of Investment Disputes This facilitates international facilities for conciliation and arbitration of investment disputes.

Fact Sheet Formation July 1945 Type Monetary International Financial Organization Legal status Treaty Headquarters Washington, D.C., U.S. Membership 189 countries (IBRD) 173 countries (IDA) Key people Jim Yong Kim, president Parent organization World Bank Group Objectives The World Bank provides low-interest loans, interest-free credit and grants to improve education, health, and infrastructure. It also helps to modernize a country's financial sector, agriculture, and natural resources management. The Bank's stated goal is to "bridge the economic divide between poor and rich countries." It does this by turning "rich country resources into poor country growth." It has a long-term vision to "achieve sustainable poverty reduction."

226 ? NSOU ? PGCO-III To achieve this goal, the Bank works in six areas: 1. Overcome poverty by enhancing growth, especially in Africa. 2. Help reconstruct countries emerging from war, the biggest cause of extreme poverty. 3. Provide a customized solution to reduce poverty from middle-income countries. 4. Spur governments to prevent climate change. It helps them control communicable diseases, especially HIV/AIDS, and malaria. It also manages international financial crises and promotes free trade. 5. Work with the Arab League to improve education, build infrastructure, and provide micro-loans to small businesses. 6. Share its expertise with developing countries. Publicize its knowledge via reports and its interactive online database. The World Bank Group has set two goals for the world to achieve by 2030: a)

**91%**

**MATCHING BLOCK 162/173**

**W**

End extreme poverty by decreasing the percentage of people living on less than \$1.90 a day to not more than 3% b) Promote shared prosperity by fostering the income growth of the bottom 40% for every country

Organization The World Bank functions as a cooperative. The member countries are represented by a Board of Governors which is the ultimate policymaker at the World Bank. Generally, the governours are member countries' ministers of finance or ministers of development. They meet

President chairs meetings of the Boards of Directors and is responsible for the overall management of the Bank.

The President is selected by the Board of Executive Directors for a five-year, renewable term. The Executive Directors make up the Boards of Directors of the World Bank. They generally meet at least twice a week to oversee the Bank's business, including approval

NSOU ? PGC0-III ? 227 of loans and guarantees, new policies, the administrative budget, country assistance strategies and borrowing and financial decisions. The day to day operations of the World Bank is carried under the leadership and direction of the president, management and senior staff, and the vice presidents in charge of Global Practices, Cross-Cutting Solutions Areas, regions, and functions. The latest Organization Chart of the Bank is as follows: Source: <http://pubdocs.worldbank.org/en/404071412346998230/wbg-org-chart.pdf> India's Association with the World Bank India was one of the 17 countries, prepared the agenda for the Bretton Woods Conference (June 1944). It was also one of the 44 countries which signed the final agreement for the establishment of the World Bank. The name "International Bank for Reconstruction and Development" was first suggested by India to the drafting committee.

228 ? NSOU ? PGC0-III India has been accessing funds from the World Bank (mainly through IBRD and IDA) for various development projects. The World Bank Group's support for India's development agenda has contributed to improving outcomes in a range of sectors. Some results are as follows: a) Education: Between 2000-01 and 2017-18 elementary school enrolment raised by more than 33 million, rising from 156.6 million in 2000-01 to 189.9 million in 2017- 18. Over two-thirds of India's states have achieved universal primary enrollment. There is now a primary school within one kilometre of all habitations. b) Rural Livelihoods: Since 2011, the World Bank-supported National Rural Livelihoods Mission has mobilized 50 million poor rural women into self-help groups and their federations. These groups have leveraged \$30 billion from commercial banks. Over 3 million women now benefit from technical services in agriculture and nearly 2.8 million poor women have been elected to local government institutions. Poor rural women have not only benefitted from greater and more predictable access to a range of financial services, but they have also gained skills, support in business development, and been linked to markets. In Bihar, some women-owned collective enterprises have recorded a turnover of nearly \$2 million. c) Rural Water Supply and Sanitation: Since 2000, World Bank

**100% MATCHING BLOCK 165/173**

projects have contributed over \$3.4 billion in financing for rural water supply and sanitation. This has helped about 36 million people

in 40,000

**100% MATCHING BLOCK 167/173**

**W**

villages—with populations ranging from 150 to 15,000—gain better access to drinking water.

World Bank support in Uttarakhand, which contributed to establishing 24/7 water supply, received the Right to Information award for good governance and transparency. An independent impact assessment found 98 per cent user satisfaction and 90 per cent sustainability for this operation. d) Rural Roads: Since 2004, World Bank support of \$2 billion has helped build and improve around 40,000 km of all-weather rural roads in some of India's poorest and most inhospitable regions. The roads are revitalizing the rural economy and improving the quality of rural life in about 30,000 habitations by connecting them to schools, health centers, markets, and jobs. e)

**100% MATCHING BLOCK 166/173**

**W**

Health: World Bank support to India's health sector began in 1972.

Over the years, it has focused on helping India meet the health MDGs, improve child nutrition, and tackle the long-standing burden of disease. Over the last 2 decades, Bank projects have increasingly focused on improving the quality of health services provided by the public sector.

NSOU ? PGC0-III ? 229 In Uttar Pradesh, one of the poorest states in India, around 50 district hospitals have seen quality improvements and 19 of them have been accredited. In Karnataka and Tamil Nadu between 2004 and 2016, Bank health projects have contributed to a reduction of more than 40% in rates of maternal and infant mortality. Since 1990, mortality from TB has halved, and the prevalence of the infection has fallen by 55 per cent. More than 20 million people have been treated through Bank-supported programs since 1997, and 3.5 million deaths averted. India's response to HIV/AIDS is a global success story. Prevalence among adults has continued to fall, with new infections coming down by two thirds between 2007-15. f) Agriculture: Bank-supported watershed projects have helped raise farm yields and incomes for roughly 2 million farmers in the dry rain fed areas of Karnataka, and for more than 500,000 families in Himachal Pradesh and Uttarakhand. World Bank-financed operations in five states to rehabilitate irrigation systems, particularly community tanks, and to develop institutions at community and state levels to manage and maintain these systems. These operations led to over 2 million of land having improved irrigation, and corresponding improvements in productivity, and over 50% increase in paddy production. Successive operations in Uttar Pradesh have led to over 120,000 of sodic land reclaimed, with cropping intensity on these lands increasing from 25 per cent to 206 per cent. g) Energy: A series of investments amounting to over US\$ 2.5 billion since 1993 and intensive capacity-building support, the World Bank has helped POWERGRID, India's state-owned power transmission company emerge as the world's third-largest transmission utility. Overall, Bank financing to Power grid and Haryana Power operations directly resulted in over 5,000 km of transmission lines being installed. India's focus on renewable energy can have far-reaching, global implications for the battle against climate change. The Bank's \$625 million Solar Rooftop program has already financed around 500 MW of commercial and industrial installations (out of which 80 MW are already installed) and will help mobilize another commercial financing to the sector. 8.4.5

President is the chairman of the Board of Directors and

heads a management team comprising six Vice-Presidents, who supervise the work of ADB's operational, administrative, and knowledge departments. As a multilateral development finance institution, ADB provides loans, technical assistance and grants. Member governments are ADB's shareholders. ADB directly assists private enterprises in developing member countries through equity investments and loans. ADB maximizes the development impact of its assistance by a) facilitating policy dialogues, b) providing advisory services, and

NSOU ? PGCO-III ? 231 c) mobilizing financial resources through co-financing operations that tap official, commercial, and export credit sources. Operational Priorities To achieve its vision, ADB focuses on seven operational priority areas. Bank's support in these areas is delivered through both public and private sector operations, advisory services, and knowledge support. ? addressing remaining poverty and reducing inequality ? accelerating progress in gender equality ? tackling climate change, building climate and disaster resilience, and enhancing environmental sustainability ? making cities more livable ? promoting rural development and food security ? strengthening governance and institutional capacity ? fostering regional cooperation and integration ADB and India Since commencing operations in India in 1986, ADB has committed 209 sovereign loans totalling \$35.9 billion. From the website of ADB one can get two current projects of ADB relating to India. They are as follows: The Country Partnership Strategy (CPS), 2018–2022 for India aims to support the government's goal of faster, inclusive, and sustainable growth accompanied by rapid economic transformation and job creation. The new CPS articulates ADB assistance through the three strategic pillars: boosting economic competitiveness to create more and better jobs, providing inclusive access to infrastructure networks and services, and addressing climate change and increasing climate resilience. ADB's annual lending to India is proposed to be raised to a maximum of \$4 billion to support the country's transformation toward upper middle-income status. The country operations business plan (COBP), 2018–2020 aims to support the government's endeavour towards achieving faster, inclusive and sustainable growth through programs supporting the provision of inclusive access to infrastructure, boosting competitiveness and job creation, and helping address climate change issues.

232 ? NSOU ? PGCO-III 8.5 Summary The International Financial Market is the place where financial wealth is traded between individuals and countries. The international financial market may be categorized from the point of view of resource providing agencies. These are official and unofficial sources. Different accesses are there through which a domestic economy can procure coveted funds. Such as FDI and FII. In the field of international business, there are many Intergovernmental Organizations (IGO). Out of many such IGOs three most important IGOs that originated from the 1944 Bretton Woods conference are

Main components ? Tariff ? Para Tariff ? Non Tariff Direct Trade Measures SAPTA specified four negotiating approaches namely, product by product basis, across the board tariff reduction, sectoral basis and direct trade measures. However, it was agreed that tariff concessions would initially be negotiated on a product - by- product basis. The agreement also provides for negotiation of tariff concessions to be an ongoing process. The SAPTA envisages that concessions on tariff, para-tariff and non-tariff measures will be negotiated step -

National Schedules of Concessions The process of negotiation on the schedule of concession, which forms an integral part of the Agreement, commenced in 1993. For this purpose, the Inter-Governmental Group on Trade Liberalization (IGG) was set up. The IGG met on six occasions in various capitals. At the sixth meeting held in Katmandu on 20th and 21 st April 1995, the delegations held intensive rounds of bilateral and multilateral negotiations and agreed on the National Schedule of concessions to be granted by individual member states to other member states under the SAPTA Agreement. Four rounds of trade negotiations were concluded under SAPTA covering over 5000 commodities. Each Round contributed to an incremental trend in the product coverage and the deepening of tariff concessions over previous Rounds. During the first and second rounds, trade negotiations were conducted on a product by product basis. In the third and the fourth rounds, negotiations were conducted on chapter wise.

Maintenance of SAPTA Concession The Agreement on the South Asian Free Trade Area (SAFTA) which was implemented with effect from 1st January 2006 will supersede the SAARC Preferential Trading Arrangement (SAPTA). On the issue of maintaining SAPTA concessions for LDCs, the Committee agreed that once the Non-LDCs member states complete the Trade Liberalization Programme (TLP) for LDC member states, SAPTA concessions would cease for LDC member states. However, if any item on which SAPTA concessions are available to LDC, appear in the sensitive lists of non-LDC, they shall maintain the same level of concession through derogation. The

<p>are made by the entire membership typically by consensus. A majority vote has never been used in the WTO and was extremely rare under the WTO's predecessor, GATT. The WTO's agreements have been ratified in all members' parliaments. The WTO's top-level decision-making body is the Ministerial Conference which meets at least once every two years. Under this is the General Council (normally ambassadors and heads of delegation in Geneva, but sometimes officials sent from members' capitals) which meets several times a year in the Geneva headquarters. The General Council also meets as the Trade Policy Review Body and the Dispute Settlement Body. At the next level, the Goods Council, Services Council and Intellectual Property (TRIPS) Council report to the General Council.</p>

PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts are still experimental— in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Objectives The objectives of this unit are— □ To know about Managerial economics, its scope and nature; □ To highlight the importance of microeconomic theory of the firm and business units; □ To study demand analysis, production and cost analysis, market behavior and pricing of products; □ To examine theory of capital and investment decisions. 1.1. Introduction It is known to most of the students of Economics that the study of Economics as a subject dates back to 1776 when Adam Smith, the Father of Economics, published the famous title “The Wealth of Nations” in two volumes. Before this, the study of the subject had been carried out in ancient Greece where Economics was taken as the science of household management. However, the study of Managerial Economics had been first initiated in America immediately after the publication of the pioneering title “Managerial Economics” in 1951 by Joel Dean. During the last seven decades or so this subject has, increasingly, been popular and at the same time the book market all over the world has been flooded with a huge number of titles on this very subject.

8 NSOU • PGCO - II The emergence of Managerial Economics as a separate discipline of management studies can be contributed to at least three factors : (i) Growing complexity of business decision-making process because of changing market conditions and environment of business, (ii) consequently, the

**78%**

**MATCHING BLOCK 1/204**

**SA**

Block 02 Business Economics.pdf (D143762521)

increasing use of economic logic, theories, concepts and tools of economic analysis in the process of business decision-making

and (iii) Finally, vast increase in demand for professionally trained managerial manpower. The growing complexity of the business world has made the business decision-making process highly complex. About one hundred years ago most business units had been set up, owned and managed by individuals or business firms. Industries of large size had been few and scale of business operation was relatively small. The managerial capacity acquired through traditional family training and experience had, largely, been sufficient to manage small and at most medium scale business. It is a fact that a large part of private business is, still, run on small scale and managed in the traditional style of business management. However, there has been dramatic change in size, nature and content of the industrial business world. The highly growing complexity of the business world can, duly, be attributed to the growth of large scale industries, diversification of industrial products, growth of multinational corporations and mergers and take overs, specially after the Second World War. All these factors have contributed greatly to an increase in inter-firm, inter-industry and international rivalry, competition, risk and also uncertainty. Business decision-making in this kind of business environment is a highly complex matter. Naturally, the family training and experience are not at all sufficient to face such managerial challenges. The ever-growing complexity of business decision making has, obviously, enhanced the application of economic concepts, theories and tools of economic analysis in this area. The basic reason is that making an appropriate business decision needs a clear understanding of the business environment, market conditions and market fundamentals. For this an intensive and extensive analysis of the market conditions in the product, input and financial markets is highly needed. At the same time, economic theories, logic and tools of analysis have been developed both to analyse and predict market behaviour. The application of economic concepts, theories, logic and analytical tools both for the assessment and prediction of market conditions and business environment has proved to be of vital help in business decision-making. In effect, economic theories and analytical tools that are highly used in business decision-making have crystallized into a different growth of management studies, very popularly called “Business Economics” or “Managerial Economics”. NSOU • PGCO - II 9 1.2 Managerial Economics From the above analysis we may say that Managerial Economics is constituted of economic theories and analytical tools that are widely applied to business decision-making. Naturally, we should know something about Economics. Economics is a social science whose basic function is to study how people maximize their gains from their limited resources and opportunities. In economic terminology this is known as optimizing behaviour. This behaviour is selecting the best out of available options with the basic objective of maximizing gains from the given resources. According to Lionel Robbins, “

**100%**

**MATCHING BLOCK 2/204**

**SA**

Introductory Micro-Sem-1.pdf (D110812531)

Economics is the science which studies human behaviour as a relationship between ends and scarce means which have alternative uses”.

For example, Economics studies how households allocate their limited resources among various goods and services they seek to consume so that they are able to maximize their total satisfaction. Naturally, Economics is a study of the choice-making behaviour of the people. However, choice-making is not so simple as it appears to be as the economic world is highly complex and most economic decisions have to be taken under the condition of risk, uncertainty and imperfect knowledge. Now economic laws and tools of economic analysis are applied greatly in the process of business decision-making. This has led to the emergence of a separate branch of study known as “Managerial Economics”. Managerial Economics can, therefore, be defined as that branch of economic theory which analyses and discusses the problems of the business matters. From the above we may say that Managerial Economics aims at increasing the manager’s ability to understand and also to evaluate business problems and, therefore, help him in formulating right decisions. That means, Managerial Economics

**100%**

**MATCHING BLOCK 3/204**

**W**

deals with the application of economic theory to business management,

it is all economic aspects of managerial decisions. It is because of this reason that Managerial Economics is often called “Economics of Business Decisions”. According to G.P.E. Clarkson, “It is concerned with all decisions that have an economic implication irrespective of the level within the enterprise at which they are made. For management is a decision-making activity and to manage well is to control the decision-process so that the resulting behaviour is in keeping with stated objectives”. The emphasis is highly placed on intelligent application of quantitative techniques to business.

10 NSOU • PGCO - II 1.3 Nature of Managerial Economics After the definition of Managerial Economics let us concentrate our attention on the nature of this Economics. 1. Managerial Economics is primarily, micro economics in nature. Basically, there are two parts of Economics : (a) Micro Economics and (b) Macro Economics. The economics which is concerned with the whole economy is known as macro economics. Thus aggregate demand, general price level, business cycles etc. are within the purview of Macroeconomics. On the other hand, Microeconomics deals with smaller parts of an economy. For example, demand for a particular commodity, price of a commodity, profit of an individual firm are within the jurisdiction of Microeconomics. Managerial Economics, naturally, falls within the purview of Microeconomics since its basic concern is with the problems of the business firms. 2. Managerial Economics is not positive but normative. Economic theory has two divisions : (a) Positive Economics and (b) Normative Economics. In the former we concentrate on two things : there is a straight forward description, either of a part of the economy or of the whole economy. Besides, positive economic theory tries to explain the behaviour of either an economic unit or of economic aggregates. In Normative Economics, however, the economist says what he thinks should happen rather than what actually does happen. Managerial Economics is normative as it deals with what the management should do. Managerial Economics describes the goals of the entrepreneur and then prescribes how to attain these goals. That means, Managerial Economics is not descriptive but prescriptive. This Economics can better be called normative Microeconomic theory of the firms. 3. Students of higher Economics know that in pure Microeconomic theory they are to study theory on the basis of some assumptions most of which are abstract. Naturally, the analysis becomes far from reality. However, Managerial Economics is free from difficult abstract issues of economic theory and it concentrates, basically, on practical problems faced by the firms. 4. Together with Microeconomics, Macroeconomics is also highly useful in the study of Managerial Economics. This is so because this subject highlights an understanding of the environment where the firms have to operate. Some important topics of Macroeconomics, namely economic policies of the Government with regard to taxation, anti-monopoly measures, labour relations and the like affect the decisions of the firms.

NSOU • PGCO - II 11 Expectedly, the firm has no control over them and these are assumed to be externally given. However, the subject "Managerial Economics" deals with how the firm should adjust its various activities to cope with these important external Macroeconomic situations. 5. Last but not the least, though Managerial Economics is basically concerned with the theory of the firm, the entire demand analysis, specially, the concept of elasticity of demand is a very vital and practical topic of Managerial Economics. 1.4 The Scope of Managerial Economics It is known to us that Economics has two major branches : (a) Microeconomics and (b) Macroeconomics. Both Microeconomics and Macroeconomics have been applied to business analysis and decision making, directly or indirectly. In general, the scope

**79%**

**MATCHING BLOCK 4/204**

**W**

of Managerial Economics comprehends all those economic concepts, theories and tools of analysis which can be used to analyse the business environment and to find solutions to practical business problems. That means, Managerial Economics

is Economics applied to the business problems and decision-making. Broadly speaking, we may say that Managerial Economics is Applied Economics. Managerial Economics, though a part of economic theory, includes, basically, Microeconomics. What more, within Microeconomics, Managerial Economics is, basically, concerned only with those topics connected with the firm. Whatmore, the subject matter and scope of this subject has been increasing day-by-day. In spite of that we can say that the scope of Managerial Economics covers the following topics : (a) Demand Analysis, specially elasticity of demand. (b) Production Analysis (c) Cost Analysis (d) Market (Product) Analysis and Pricing Theory. (e) Profit Analysis and Profit Management. (f) Theory of Capital and Investment Decisions. Of late, however, there has been a trend towards the integration of Managerial Economics and Operations Research. Naturally, techniques like Linear Programming,

12 NSOU • PGCO - II Decision Theory, Inventory Models, Theory of Games have also come to be regarded as a very vital part of Managerial Economics. Let us now explain the above points, in short, one by one. Theory of Demand : Demand theory explains the consumers' behaviour. It answers the question : How do the consumers decide whether or not to purchase a commodity. How do they decide on the quantity of a commodity to be purchased? At what level of demand, does changing price become inconsequential in terms of total revenue? Therefore, the knowledge of demand theory can be helpful in the choice of commodities for production. In the demand theory there is a topic called demand forecasting which is highly important for the management as it will decide the production pattern keeping an eye to the demand for its products. Besides, the management should have some knowledge of the factors affecting demand for a commodity. This is needed because the management by changing the variables at its control can affect the level of demand. Again, it is known that the advertisement expenditure made by firms for a product is a very important determinant of its demand. Therefore, the level of demand can be affected by making a change in the advertisement expenditure. For the efficient organisation of the production process some knowledge of production and cost analysis is vital. For project planning, idea of production and cost analysis is vital. To obtain some level of profit some amount of output has to be produced and at the same time some amount of cost has to be incurred. The management is to decide how to obtain a given level of output at the minimum cost or how to obtain maximum output with a given cost. Profit management is an important area of Managerial Economics.

**83%**

**MATCHING BLOCK 6/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

The difference between total revenue and total cost is known as profit.

One basic aim of firms is to make maximum profits and the amount of profit enjoyed by the firm is a clear indicator of the degree of efficiency of a firm. Generally, the more efficient firms get more profit while less efficient firms get less profit. A very important area of Managerial Economics is pricing because the price policy followed by a firm influences the demand conditions and the revenue earned by the firm. Prices are determined under different markets in different ways. However, pricing is only an important aspect of market strategy. In a modern economy, however, the consumers want new and satisfying experiences. In keeping with the expectation of the consumers

NSOU • PGC0 - II 13 the firms introduce new products and services and try to bring superior variety of older products and thereby a business manager widens the range of choices open to the consumers in the expectation of expanding sales and revenues. Obviously, every successful business must have a product policy and keep its product line under constant review in accordance with the change in demand. Besides, every business should have a clear policy on promoting its own products. All these aspects indicate that product policy, market strategy and sales promotion are some of the vital aspects with which managers must be familiar and all these should be included in Managerial Economics.

1.5 Sample Questions A. Objective-type Questions : Choose the Correct alternative : 1. The Father of Economics is : (a) J. M. Keynes, (b) Adam Smith, (c) Alfred Marshall, (d) P. A. Samuelson. Ans. (b). 2. The study of Managerial Economics had been first initiated by : (a) J. R. Hicks, (b) Amartya Sen, (c) Robert Solow, (d) Joel Dean. Ans. (d). 3. A part of the subject matter of Managerial Economics is: (a) Determination of employment, (b) Determination of factor prices, (c) Demand analysis, (d) Interest rate determination. Ans. (c). 4. How prices of factors of production are determined is studied in : (a) Microeconomic Theory, (b) Managerial Economics, (c) Macroeconomic Theory, (d) Economics of Public Finance. Ans. (a) 5. Demand forecasting is studied in: (a) Only Microeconomics, (b) Only Managerial Economics, (c) Only Macroeconomics and (d) in both Microeconomics and Managerial economics. Ans. (d). 6. Mathematical tools are conveniently applied in : (a) Only Managerial Economics, (b) Only Macroeconomics, (c) Microeconomics and Managerial Economics, (d) Only Microeconomics. Ans. (c).

14 NSOU • PGC0 - II 7. Theory of employment is a subject matter of : (a) Microeconomics, (b) Macroeconomics, (c) Managerial Economics, (d) Managerial Economics and Microeconomics. Ans. (b). B. Short-type Questions (a) Give a definition of Managerial Economics. (b) "Managerial Economics has emerged from Microeconomics." Do you agree with this view? Give reasons in favour of your answer. (c) Explain the role of Mathematics in Managerial Economics. (d) Discuss, in brief, the subject matter of Managerial Economics. (e) Write a brief note on the nature of Managerial Economics. C. Essay-type Questions 1. Define Managerial Economics. Explain the nature and scope of Managerial Economics. 2. "Managerial Economics bridges the gap between economic theory and business practice." Explain with examples. 3. "Managerial Economics is applied Microeconomics" Elucidate. 4. Explain the role and responsibilities of a Managerial Economist. 5. "Managerial

**71%**

**MATCHING BLOCK 5/204**

**W**

Economics is the integration of economic theory in the business practice for the purpose of facilitating decision making and forward planning by management."

Discuss. 6. How does the study of Managerial Economics help a business manager in decision-making? Illustrate your answer with examples from production and pricing issues. 7. "Managerial Economics is essentially the application of Microeconomic theory of business decision making." Discuss the statement.

We are going to discuss it, in brief. 2.2 Meaning of Demand The concept "demand" in Economics refers to the quantity of a good or service that consumers are willing and able to purchase at various prices during a period of time given his/her income. It is to be remembered that demand in Economics is something more than the desire to purchase though desire is one element of it. A beggar, for instance, may desire food, but due to lack of means to purchase it, his demand is not effective. Thus effective demand for a thing depends on : (a) desire, (b) means to purchase and (c) willingness to use those means for that purchase. Unless demand is backed by purchasing power or NSOU • PGCO - II 17 ability to pay, it does not constitute demand. Two things are to be noted about quantity demanded. One is that quantity demanded is always expressed at a given price. At different prices different quantities of a commodity are generally demanded. Secondly, quantity demanded is a flow. We are concerned not with a single or isolated purchase, but with a continuous flow of purchases and we must, therefore, express demand as so much per period of time : one hundred kgs. of apples per day, one thousand kgs. of apples per week and so on. 2.3 Determinants of Demand There are a number of factors which influence household demand for a commodity. Important among these are : (a)

**62% MATCHING BLOCK 8/204**

**W**

price of the commodity itself, (b) income of the consumers, (c) prices of related commodities, (d) tastes and preferences of

consumers, (e) consumers' expectation, (f) size and composition of population, (g) distribution of income and (h) other factors. The above-listed factors can, easily, be presented in the form of a demand function as follows :  $Q_{dc} = f(P_c, Y, P_R, T, E, D)$  where  $Q_{dc}$  is the quantity demanded for a commodity  $c$ ,  $P_c$  is the price of the commodity itself,  $Y$  is the money income,  $P_R$  is the price of related commodities,  $T$  is the taste of the household,  $E$  is the expectation and  $D$  represents the size of the population and other remaining factors. The important determinants of demand are now being discussed : (a) Price of the commodity : The quantity demanded for a commodity is, generally, inversely related to the price of that commodity. From the day-to-day general behaviour of consumers, it is observed that the price of a commodity is the most important factor for determining its demand.

**87% MATCHING BLOCK 9/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142294418)

If price of a commodity increases, the demand for that commodity will

decrease and vice-versa. That means, demand for a commodity is negatively related to the price of that commodity. However, in reality, exceptions to this negative relationship are also observed. We may cite here that in case of Giffen goods the law of demand is positively related to the price of the good. (b) Income of the Consumer : Income of a consumer is another important factor in determining the demand for a commodity. The demand for a commodity is, in general, directly related to the income of the consumers. For normal goods, demand is directly related to income, that is, as incomes of the consumers go on increasing, the demand will

18 NSOU • PGCO - II also go on increasing. However, for inferior goods (say, some coarse grains), demand is negatively related to income of the consumers. (c) Prices of Related Goods : The related goods are of two types : Complementary and substitutable. Two goods are substitutable if when the price of one good increases (decreases), the demand for another good also increases (decreases). Tea and coffee are two substitute goods. On the other hand, in case of complementary goods (say, tea and sugar), if the price of one good increases (decreases), the demand for another good also decreases (increases). (d) Tastes

**70% MATCHING BLOCK 10/204**

**SA** microeco\_compilation-FINAL.pdf (D143604282)

and preferences of the Consumers : Tastes and preferences of the consumers also affect the consumers' demand for a commodity. If

the consumers' tastes and preference move in favour of the commodity, the consumer will demand more of the commodity. (e) Consumer's expectations also affect the demand for the commodity. That is, if consumers expect a rise (fall) in future price of a commodity, its demand will tend to increase (decrease). Apart from the factors discussed above, the market demand for a commodity will also depend on a number of other factors. 2.4 Law of Demand Under the above background we are in a position to explain the Law of Demand in the following way : Under the ceteris paribus clause the demand for

**76% MATCHING BLOCK 12/204**

**SA** Principles of Economics book new.doc (D112051420)

a commodity is inversely related to the price of the commodity itself. In

symbols, this law may be stated as  $D = f(p)$  with  $dD < 0 dp >$  ; .

**39% MATCHING BLOCK 11/204**

**W**

The law of demand is one of the most important laws of economic theory. According to this law, other things being equal, if the price of a commodity falls (increases), the quantity demanded for it will rise (

fall).

That means,

**56% MATCHING BLOCK 14/204**

**SA** Principal of Microeconomics.pdf (D110867814)

there is an inverse relationship between price and quantity demanded for a commodity, other things being the same. The law of demand

may be illustrated with the help of a

**65% MATCHING BLOCK 16/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142294418)

demand schedule and a demand curve. A demand schedule is a tabular presentation of different prices of a commodity

and its corresponding quantity demanded per unit of time.

NSOU • PGCO - II 19 Table 1 : Demand Schedule of an individual consumer  
Commodity Price (Rs.) Quantity Demanded (Units)  
A 5 10 B 4 15 C 3 20 D 2 35 E 1 60  
From the above table it is seen that when price of the commodity concerned is Rs. 5/ - per unit, a

**38% MATCHING BLOCK 13/204**

**W**

consumer purchases 10 units of the commodity. However, when price falls to Rs. 4, the consumer purchases 15 units of it. Again, when the price further falls, the quantity demanded

by the consumer goes on rising until at price of Re. 1, the quantity demanded by him rises to 60 units. From the table we thus see an inverse relationship between price and quantity demanded : as the price of the commodity goes on rising, the demand for it goes on falling. 2.5 The Demand Curve From the law of demand we have already seen a negative relationship between price of a commodity and quantity demanded for that commodity. This negative relationship between price and quantity demanded can, graphically, be presented in the following diagram, that is, Fig. 2.1 measuring price vertically and quantity demanded horizontally. Fig 2.1 : Quantity Demanded The hypothetical figures presented in Table-1 constitute the demand schedule. The graphical presentation of the demand schedule is known as a demand curve. price

20 NSOU • PGCO - II The above-drawn downward sloping demand curve DD, connecting price-quantity combinations is known as the demand curve for a commodity. The curve shows the quantity of X that a consumer would like to purchase at each price and its downward slope indicates that the quantity of 'X' demanded increases as its price falls given other factors. Hence the downward sloping demand curve is in accordance with the law of demand which as already stated, describes an inverse price–demand relationship. 2.6 Market Demand Schedule When we add up

**100%**

**MATCHING BLOCK 15/204**

**W**

the various quantities demanded by the number of consumers in the market we can obtain the market demand

schedule. The market demand refers to the sum of the quantities demanded by all households at various prices. For different households we can get different individual demand curves. Naturally, each individual demand curve expresses the quantity demanded by a household at a particular price. Obviously, by summing all the quantities demanded by all the households, at a particular price we obtain the market demand curve at that price. In this manner if we find the total quantities demanded at all prices, we can get a market demand curve. This market demand curve shows total quantities demanded by all households at various prices. Geometrically, by the horizontal summation of the individual demand curves we obtain the market demand curve. If the individual demand curves have normal properties, the market demand curve will also have normal properties. That means, if each individual household increases his quantity demanded when price decreases, the total quantity demanded will also increase as price decreases. However, even if some individuals purchase less of the commodity, when its price falls, the total quantity demanded may increase as price decreases, simply because most of the individuals will increase the quantity demanded as price decreases. Besides, with the fall in price of the commodity some new consumers who were not in a position to purchase the commodity previously, will now come to the market to purchase it. This reason also explains that total quantity demanded increases as price starts falling. Therefore, it can be said that under the 'ceteris paribus clause' there exists an inverse relationship between price of a commodity and the total quantity demanded for that commodity. Obviously, the market demand curve will be downward sloping. We draw the market demand curve on the basis of the assumption that all other prices, total household income and its distribution among households, tastes and preferences of the households are kept constant. In case any of these factors changes, the market demand curve will shift its position. For instance, if we assume that there is a rise in income for all households, each household will go into increasing quantity demanded at each price.

NSOU • PGCO - II 21 Naturally, each household's individual demand curve will go on shifting to the right. Consequently, the market demand curve will also shift to the right. In that manner, if prices of other commodities change or, if tastes of households go on changing, then also the market demand curve will make a shift in its position. The procedure for drawing the market demand curve from the individual demand curves has been demonstrated in the following diagram (Fig. 2.2) where along the horizontal axis we measure quantity demanded while price has been done vertically. For the sake of simplicity we have considered only two individuals : individual 1 and individual 2. Fig 2.2 : Horizontal summation of individual demand curves to get the Market Demand Curve At price  $op_1$  , the demand for the first individual is  $oq_1$  , while that of the second one is  $oq_2$  and hence the market demand will be  $oq_1 + oq_2 = OQ_1$  , say. Similarly, when price gets reduced from  $op_1$  to  $op_2$  , the demand for both the individuals increases, for the first individual the demand has become  $oq_{11}$  while for the second one it has become  $oq_{12}$  , and hence the market demand will be  $oq_{11} + oq_{12} = OQ_2$  in the third diagram. In this way we get another point ( $D_2$ ) on the market demand curve. Naturally, the locus of these points will give the market demand curve. We have drawn the market demand curve assuming that household's total income and its distribution among households, all other prices and tastes of households will remain constant. However, if any of these factors changes the market demand curve will shift its position. If we assume that there takes place a rise in income for all households, then naturally, each household will go on increasing quantity demanded at each price. Obviously, 2nd Diagram 3rd Diagram 1st Diagram

22 NSOU • PGCO - II each household's individual demand curve will shift to the right. Naturally, the market demand curve will shift to the right. 2.7

**100% MATCHING BLOCK 17/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Exceptions to the Law of Demand According to the law of demand,

more of a commodity will be demanded at lower prices than at higher ones, other things being equal. This law is valid in most of the cases. In spite of that there are certain cases where this law does not hold good. The followings are the important exceptions to the law of demand. (a) Conspicuous goods : Some consumers are habituated in measuring the utility of a commodity by its price i.e., if the commodity is expensive, they think that it has got more utility. Accordingly, they buy less of this commodity at low price and more of it at a higher price. Diamonds are often given as an example of this case. Higher the price of diamond, higher is the prestige value attached to them and hence higher is the demand for them. (b) Giffen goods : Sir Robert Giffen, an economist, was surprised to find out that as the price of bread increased, the workers of Britain started purchasing

**70% MATCHING BLOCK 18/204**

**SA** microeco\_compilation-FINAL.pdf (D143604282)

more bread and not less of it. This is something against the law of demand.

The reason for this is that when the price of bread went up, it caused such a significant decline in the purchasing power of the poor people that they were forced to cut down the consumption of meat and also other expensive food items. Since bread even when its price was higher than before was still the cheapest food item, people started consuming more of it and not less when its price shot up. (c) Conspicuous necessities : The demand for some goods gets affected by the demonstration effect of the consumption pattern of a social group to which an individual belongs. These goods, because of their constant use, have become necessities of life. For instance, in spite of the fact that the prices of refrigerators, coolers, cooking gas etc. have continuously been rising, their demand does not show any tendency to fall. (d) Future expectations about prices : It has been observed that when prices are rising, households expecting that the prices in the future will be still higher, tend to buy a large quantity of the commodities. For instance, when there is wide-spread drought, people expect that prices of foodgrains would rise in future. They start demanding larger quantities of foodgrains as their price rises. But it is to be noted that here it is not the law of demand which is invalidated but there is a change in one of the factors which was held constant while deriving the law of demand, namely change in the expectations of price of the people. (e) Behaviour in the share market : In the share market it is found that as the price

NSOU • PGCO - II 23 of any share increases, its demand also increases. In the same way when price of any share falls, the demand for that share also decreases. Therefore, the law of demand does not become applicable in the case of share market. (f) The law has been derived assuming consumers to be rational and knowledgeable about market conditions. However, at times consumers tend to be irrational and make impulsive purchases without any cool calculation about prices and usefulness of the product. In such contexts also the law of demand does not hold good. (g) Similarly, in practice, a household may demand larger quantity of a commodity even at a higher price because he may be ignorant of the ruling price of the commodity. Under such circumstances, the law of demand will remain invalid. 2.7.1 Giffen Good The name Giffen Good owes its origin to Sir Robert Giffen. He found that a rise in the price of bread had been followed by an increase in the demand for bread. As the price of bread goes up, the real income of the consumers decreases very much. Consequently, the consumers are forced to curtail the consumption of meat and other expensive food items. In the opinion of Nobel laureate Professor J. R. Hicks for a good to be a Giffen good, three conditions are of utmost importance : (i) the good must be an inferior one with large negative income effect, (ii) the substitution effect must be small and less strong than the income effect and (iii) the proportion of income spent upon the good must be very large. The concept "Giffen good" is, theoretically, possible. But, in practice, it can hardly occur. The basic reason behind this is that consumption of the people is mostly diversified so that people spend a small proportion of their incomes on a single commodity. Consequently, the strength of the income effect induced by the change in price is likely to be very small and thus the negative income effect can not, generally, outweigh the substitution effect in practice. Besides, a commodity may be a Giffen commodity to a single consumer. However, it is unlikely that the same commodity will be a Giffen one to all consumers at the same time. Thus for a heterogeneous group of consumers the income effect will be positive for some consumers and negative for some other consumers. Thus the market income effect will be weak and the market substitution effect will always be stronger than the market income effect.

24 NSOU • PGCO - II 2.8 Bandwagon, Snob and Veblen Effects We want to close our discussion on Demand Analysis by briefly making a brief discussion on the above-mentioned three effects on demand for a commodity. We are to recall that the great developmental economist, Harvey Leibenstein in his article entitled "Bandwagon, Snob and Veblen Effect in the Theory of Consumers' Demand" published in the Quarterly Journal of Economics (1950) had explained these effects. He had clearly shown that in the presence of these three effects the true market demand curve will diverge from the horizontal summation of the individual demand curves. We shall discuss these effects, in brief, in the following paragraphs. BANDWAGON EFFECT : A bandwagon effect is said to exist if any consumer tries to purchase the goods in order to behave like any member of his social group. He thinks that if other's demand for a good goes on increasing, so should his, as he wishes to identify him with them. Consequently, this effect makes the market demand curve more elastic. This effect has been demonstrated in figure 2.3(A). Fig 2.3 (A) : Bandwagon Effect In the above figure AC is the market demand curve when the selfishness axiom is considered. When price falls from OP 1 to OP 2 , the quantity demanded increases from OQ 1 to OQ 2 , assuming that the bandwagon effect is absent. However, if this effect is present, many more consumers will enter the market for having this good. Consequently, the demand has extended to OQ 3 . Thus the true market demand curve becomes AB instead of AC.

NSOU • PGCO - II 25 SNOB EFFECT : A snob effect exists when a consumer wants to differentiate himself from his social group by purchasing commodities which they do not purchase and conversely, reducing his purchase of commodities which they purchase. Accordingly, when their demand increases, his demand will come down. Obviously, snob effect is opposite to that of the bandwagon effect and has the effect of making the demand curve more inelastic. Fig. 2.3 (B) illustrates this case. From Fig. 2.3(B) we see that when price falls from OP 1 to OP 2 , the quantity demanded increases from OQ 1 to OQ 2 when the snob effect gets ignored. However, if the snob effect is operative, some consumers will reduce their purchase and the quantity demanded will increase to OQ 3 only. Therefore, the true market demand curve becomes AB which is relatively inelastic than AC. Fig 2.3 (B) : SNOB EFFECT VEBLLEN EFFECT : In any society there are some individuals who judge the quality of a commodity by merely looking at the price of the commodity itself. Therefore, whenever price of a commodity falls, some consumers will not be willing to purchase it, thinking that the fall in price is an indicative of a fall in quality of the commodity itself. In such a case the quantity demanded may even fall as price falls, resulting the market demand curve positively sloped. The Veblen effect may also make the market demand curve more inelastic. Figure 2.3 (C) has demonstrated the impact of this effect. In the following diagram AC is the demand

26 NSOU • PGCO - II curve when the Veblen effect becomes absent and when the price falls from OP 1 to OP 2 , the quantity demanded has increased from OQ 1 to OQ 2 . However, when this effect is operative, some consumers will disappear from the market whenever price starts falling and the quantity demanded will increase upto OQ 3 , not upto OQ 2 . But if the veblen effect is strong enough the quantity demanded may even be OQ 4 . That means, the quantity demanded may even decrease as price falls. However, the true demand curve becomes AB or even AD which is upward rising. Fig 2.3 (C) : VEBLEN EFFECT

2.8.1 Summary of These Three Effects The above-mentioned three effects actually imply interdependence among the purchase plans of the consumers. However, such interdependencies imply divergences between the true demand curve and the ordinary demand curves which have been obtained when the selfishness axiom has become operative. However, the extent of divergence will depend on the strength of these effects for any consumer and also on the number of consumers subject to such effects. Of course, there is no reason to suppose that the market is composed of people subject to only one of the effects. Most of the times, however, these effects will be eliminated as they play their role in opposite directions. Besides, these effects are relevant only when market demand, not individual demand, is considered.

NSOU • PGCO - II 27 2.9 Elasticity And Its Applications In Demand Analysis A very important concept in Managerial Economics is the concept of elasticity of demand which has got wide applications in both theory and practice. We know that the demand for a commodity depends, basically, upon three factors : (A) price of the commodity itself (p), (B) income of the consumers (y) and (C) price of the related commodity (p 1 ). That means, the demand can, symbolically, be expressed as  $D = f(p, y, p_1)$ . Elasticity is a very general concept of how responsive a dependent variable is to variation in an independent variable. Since demand for a commodity depends primarily upon three variables, there are three

types

of

elasticity of demand. These are : (i) Own price

**45% MATCHING BLOCK 19/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

elasticity of demand, (ii) Cross price elasticity of demand and (iii) Income elasticity of demand. However, by elasticity of demand we normally understand own price elasticity of demand or simply price elasticity of demand

as it has wide applications in different fields in theory and practice. So we shall, first of all, concentrate our attention on

**44% MATCHING BLOCK 21/204**

**W**

price elasticity of demand. 2.10 Price Elasticity of Demand By elasticity of demand we normally understand price elasticity of demand. It measures the degree of responsiveness of quantity demanded for a commodity following a change in own price

of the commodity

itself, assuming money income of the consumer and prices of related goods remain constant. This elasticity is the relative difference in the dependent variable (that is, quantity demanded) divided by the relative difference in the independent variable (that is, price). In symbols, this is expressed as  $e_p = \frac{q}{p} \frac{\Delta p}{\Delta q}$  ... (i) This is the measurement used by Professor Boulding and it is called the absolute measure of elasticity of demand. The basic drawback of this measure is that it is not unit-free and since it is not unit-free, it cannot be compared among different price elasticities for different commodities. Hence it has later been discarded and replaced by the new measure called the "relative measure of elasticity of demand". This measure is expressed as

28 NSOU • PGCO - II  $e_p = \frac{dq}{dp} \frac{p}{q}$  ... (ii) The basic difference between measurement (i) and (ii) is that in place of the absolute value of  $q$  and that of  $p$  the change in log value of  $q$  and that of  $p$  has been taken into consideration. Since log value of any number, irrespective of the unit of measurement, is free from unit of measurement, the measurement of price elasticity of demand given by (ii) is unit-free and can, therefore, be used to compare price elasticities of demand among a number of commodities expressed in various units. Besides, from (ii) we get  $e_p = \frac{dq}{dp} \frac{p}{q} = \frac{\text{Rate of change in quantity demanded}}{\text{Rate of change in price}} = \frac{\text{Percentage rate of change in quantity demanded}}{\text{Percentage rate of change in price}}$ . Since price and quantity demanded move in opposite directions,  $e_p$  must always be a negative number. However, we want to make this expression positive and we write it as  $e_p = (-) \frac{dq}{dp} \frac{p}{q} = (-) \frac{dq}{p} \frac{p}{q} \times \frac{p}{dp} = (-) \frac{dq}{p} \frac{p}{dp} \times \frac{p}{q} = (-) \frac{1}{p} \frac{dq}{dp} \times p = (-) \frac{1}{p} \times p \times \text{Slope of the demand curve} = (-) \frac{1}{p} \times \text{Reciprocal of the slope of the demand curve}$ .

2.10.1 Types of Own Price Elasticity of Demand Since own price elasticity of demand has been expressed as a ratio which can assume any of the following values, own price elasticity of demand can also be of the following values :  $e_p < 1$ ,  $e_p > 1$  and  $e_p = 0$ , and also  $e_p = \infty$ .

NSOU • PGCO - II 29 Let us consider these cases one by one : 1. Let  $e_p$  be less than one (that is,  $e_p < 1$ ). In this case  $\frac{dq}{dp} \frac{p}{q} < 1$ , that is, rate

**84%**      **MATCHING BLOCK 22/204**      **SA**      New MBA \_Managerial Economics.docx (D109293830)

of change in demand is less than the rate of change in price.

If this happens for a commodity, the commodity concerned will be said to have inelastic demand. Normally, commodities which are very necessary for our life are said to have inelastic demand. Some such commodities are salt, text book, green vegetables, rice, clothes etc. In this case

**50%**      **MATCHING BLOCK 20/204**      **W**

the percentage change in quantity demanded for a commodity is less than the percentage change in price of the commodity. 2. Let  $e_p$  be greater than one (that is,  $e_p > 1$ ). Naturally, in this case

$\frac{dq}{dp} \frac{p}{q} > 1$ . That means, the rate of

**76%**      **MATCHING BLOCK 24/204**      **SA**      GE-1 \_ Principles of Microeconomics.pdf (D148607329)

change in quantity demanded is greater than the rate of change in price.

If this happens for a commodity, the commodity concerned will be said to have elastic demand. Normally, demand is said to be elastic for luxurious goods. Some such goods are gold, diamond, very costly car etc. For such commodities

**100%**      **MATCHING BLOCK 25/204**      **SA**      BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)

the percentage change in quantity demanded is greater than the percentage change in price. 3.

Let  $e_p$  be exactly equal to one, that is,  $e_p = 1$ . In this case, the percentage change Fig 2.3 (D) : Different demand curves according to the different values of price elasticity of demand 6Rectangular Hyperbola

30 NSOU • PGCO - II

**89%**      **MATCHING BLOCK 23/204**      **W**

in quantity demanded is exactly equal to the percentage change in price. If this

happens for a commodity, the commodity concerned will be said to have unitary elasticity of demand. It is not possible to name a commodity having unitary elasticity of demand. However, this elasticity has some applications in Economic Theory. We shall later see that a firm, in order to maximise revenue, will be able to do so if  $e_p$  equals one. According to Alfred Marshall, a commodity will be said to have unitary elasticity of demand if total expenditure to be incurred by the purchaser remains invariant whatever be the price of the commodity. That is why, the shape of the demand curve having unitary elasticity will be a rectangular hyperbola. 4. Let  $e_p$  be zero. In this case  $dq/dp \cdot q/p = 0$  and this is possible when  $dq = 0$ . That means there is no change in quantity demanded whatever be the price of the commodity. In this situation the commodity concerned will be said to have perfectly inelastic demand. The demand curve will be a vertical straight line parallel to the vertical axis. Such a commodity is more relevant to supply. 5. Let  $e_p$  be  $\infty$ . In this case  $dq/dp \cdot q/p = \infty$ . This is possible when  $dp = 0$ . That means there is no change in price, that is, at the same price any amount may be purchased. This happens for the demand curve faced by a perfectly competitive firm where the demand curve is a horizontal straight line parallel to the horizontal axis. The shapes of these five types of demand curves have been presented in the above diagram (Fig. 2.3 D.) at each of which the quantity demanded has been measured along the horizontal axis while price has been measured along the vertical axis.

2.10.2 Measurement of Price Elasticity of Demand Price elasticity of demand is measured in two different ways : (a) Either over a portion of the demand curve or (b) on a particular point of the demand curve. When price elasticity is measured over a portion of the demand curve, it is known as arc price elasticity of Fig 2.3 (E) :

NSOU • PGCO - II 31 demand. On the other hand, if price elasticity is measured on a point of the demand curve, we get the point elasticity of demand. These two methods of measuring price elasticity have been discussed below. In the above diagram (Fig. 2.3 E) DD is the demand curve where over the portion AB of the curve we are interested in measuring the price elasticity of demand. Let A be taken as the initial point at which price =  $OP_0$  and quantity is  $OQ_0$ . Now change in price,  $\Delta p = P_0 - P_1$  while change in quantity demanded,  $\Delta q = Q_0 - Q_1$ . Hence corresponding to point A, price elasticity is,  $e_p = \frac{\Delta q}{\Delta p} \cdot \frac{p}{q} = \frac{Q_0 - Q_1}{P_0 - P_1} \cdot \frac{OP_0}{OQ_0}$ . However, if B is taken as the initial point, the same price elasticity of demand in the zone AB of the demand curve DD will be  $e_p = \frac{\Delta q}{\Delta p} \cdot \frac{p}{q} = \frac{Q_1 - Q_2}{P_1 - P_2} \cdot \frac{OP_1}{OQ_1}$ . However,  $e_p$  is not the same since initial price and initial quantity demanded change in these two situations. To get a unique value of price elasticity of demand over the arc AB, the initial price and initial quantity of demand are taken as the average of the prices of  $P_0$  and  $P_1$ , that is,  $\frac{OP_0 + OP_1}{2}$  and the average quantities, that is,  $\frac{OQ_0 + OQ_1}{2}$ . Hence the arc price elasticity of demand also known as the average

**57% MATCHING BLOCK 26/204**

**SA**

BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)

elasticity of demand is obtained as  $|e_p| = \left( \frac{\Delta q}{\Delta p} \right) \cdot \left( \frac{p}{q} \right) = \frac{Q_0 - Q_1}{P_0 - P_1} \cdot \frac{OP_0}{OQ_0} = \frac{Q_0 - Q_1}{P_0 - P_1} \cdot \frac{OP_0}{OQ_0}$

Q Q

$P_0 + P_1$

BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)

Price Elasticity of Demand The point price elasticity of demand is the limiting value of the arc price elasticity of demand when the

change in price, that is,  $\Delta p$  tends to zero. Thus, in symbols, the point price elasticity of demand will be  $e_p = \frac{p}{q} \frac{\Delta q}{\Delta p}$ . Here  $\frac{dp}{dq}$  denotes the slope of the demand curve. Let us now measure the point price elasticity of demand diagrammatically. The process of measuring the point price elasticity of demand has been demonstrated in the above diagram [Fig. 2.3 (F)]. Suppose that we want to measure price elasticity of demand on the point C of the straight line demand curve  $D_1 D_2$ . From the diagram we notice that at point C,  $p = OE = DC$ ,  $q = OD$  and the absolute slope of the demand curve  $D_1 D_2$  is  $\frac{dp}{dq} = \frac{CD}{BD}$  so that  $\frac{dq}{dp} = \frac{BD}{CD}$ . That is,  $|e_p| = \frac{p}{q} \cdot \frac{dq}{dp} = \frac{CD}{BD} \cdot \frac{OD}{CD} = \frac{OD}{BD} = \frac{OE}{BD}$ . Let us now consider the triangles AEC and CDB where  $\angle AEC = \angle CDB$  (right angles),  $\angle EAC = \angle DCB$  (since  $OA \parallel DC$ ) and  $\angle ACE = \angle CBD$  (since  $EC \parallel OB$ ). Therefore,  $\triangle AEC$  and  $\triangle CDB$  are similar and so their corresponding sides are proportional. That means,  $\frac{DB}{EC} = \frac{CD}{AE} = \frac{CB}{CA}$ . That is,  $\frac{DB}{EC} = \frac{EO}{AE} = \frac{CB}{CA}$ . That means,  $|e_p| = \frac{DB}{OD} = \frac{EO}{AE} = \frac{CB}{CA}$  = Lower segment of the demand curve / Upper segment of the demand curve.

NSOU • PGCO - II 33 Thus at a particular point on a straight line demand curve the point elasticity of demand is obtained as the ratio between the

**77% MATCHING BLOCK 28/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

lower segment of the demand curve below the point and the upper segment of the demand curve above the point.

Fig 2.3 (G) : By applying this formula, we can show that on a straight line

**100% MATCHING BLOCK 29/204**

**SA** MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

demand curve the absolute value of the price elasticity of demand

varies between 0 and  $\infty$ . In the annexed diagram at point B, the point elasticity of demand is Lower segment  $AB = \frac{OB}{AB} = 0$ . At point C, the point elasticity of demand is  $\frac{CB}{AC} > 1$  as  $CB > AC$ . At point D, this elasticity is  $\frac{DB}{AD} = 1$  as D is the mid-point between A and B. At point E the point elasticity of demand is  $\frac{EB}{AE} < 1$  as  $EB < AE$ . Finally, at point A the point elasticity of demand is  $\frac{AB}{uppersegment} = \frac{AB}{OA} = \infty$ .

34 NSOU • PGCO - II Thus the absolute value of the point elasticity of demand varies between 0 and  $\infty$ . 2.10.4

**46% MATCHING BLOCK 30/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142294418)

Income Elasticity of Demand The income elasticity of demand is defined as the responsiveness of the quantity demanded for a commodity resulting from a change in income of the consumer

alone, assuming that price of the commodity concerned and price of the related commodity remain unchanged. Thus, it is defined as  $e_y = \frac{dQ}{Q} \div \frac{dY}{Y}$ ,  $Y$  being income of the consumer.  $e_y = \frac{dQ}{Q} \div \frac{dY}{Y}$  = Rate of change in quantity demanded for a commodity  $\div$  Rate of change in income of the consumer. That is,  $e_y = \frac{\text{Proportionate change in quantity demanded}}{\text{Proportionate change in income of the consumer}}$ . 2.10.5 Uses of Income Elasticity of Demand Income elasticity of demand is very useful in classifying a number of commodities around us. Its uses will be understood in the following manner : 1. Let  $e_y$  be negative, that is,  $e_y < 0$ . Normally  $e_y$  is supposed to be positive. That is, with the increase/decrease in income more (less) of a commodity is demanded. But when  $e_y < 0$ , it will mean that with the increase (decrease) in income, demand for a commodity decreases (increases). If this happens for a commodity, the commodity concerned is called an inferior commodity. Cheap washing powder might be an example. Those living on a tight budget may be unable to afford reasonable quality of washing powder. But as their incomes increase, they give up the cheap washing powder and switch to a better quality of washing powder. Another example is with the increase (decrease) in income the demand for coarse variety of rice decreases (increases). Hence for an inferior commodity the income elasticity of demand is negative. 2. Let  $e_y$  be positive but greater than one. In such a case  $\frac{dQ}{Q} > \frac{dY}{Y}$ . That is, the rate of

**76% MATCHING BLOCK 31/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

change in quantity demanded is greater than the rate of change in income.

This happens for a luxurious or prestigious commodity. For example, with the increase (decrease) in income the demand for gold, jewellery, luxury car etc. generally, increases (decreases). Thus for a luxurious or prestigious good the income elasticity of demand is positive and its numerical value is greater than one. 3. Let  $e_y$  be positive but less than one, that is  $0 < e_y < 1$ . In this case the rate of

**76% MATCHING BLOCK 32/204**

**SA** Principal of Microeconomics.pdf (D110867814)

change in quantity demanded is less than the rate of change in income

of the consumer. This happens for a commodity which is a normal necessary, that is, commodities which are useful for our daily life. The uses of income elasticity of demand can also be understood from the following presentation : a Nature of a commodity Value of  $e_y$

**43% MATCHING BLOCK 33/204**

**W**

The income elasticity of demand for various categories of goods may, however, vary from time to time and also from household to household, depending on the choice and preference of the consumers, levels of consumption and income and their susceptibility to "demonstration effect". The other factor which may cause deviation from the general pattern of income elasticities is the frequency of increase in income.

If frequency of rise in income is high, income elasticities will conform to the general pattern. 2.10.6 Cross Price Elasticity of Demand Demand for a commodity is also influenced by the price of other related goods and services. The responsiveness for a

**84% MATCHING BLOCK 35/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

change in quantity demanded for a commodity resulting from a change in price

of its related commodity is measured by cross price elasticity of demand. Thus,  $ep_1 = 1 \frac{dq}{dp} \frac{dp}{dq}$  where  $q$  is the quantity demanded for a commodity (say  $x$ ) and  $p_1$  is the price of a related commodity (say  $y$ ).  $= 1 \frac{1}{p} \frac{dq}{dp} \frac{dp}{dq} = 1 \frac{dq}{dp} \frac{p}{q}$   
 $\frac{dq}{dp} \times \frac{p}{q} =$  Rate of change in demand for a commodity, say  $x$  / Rate of change in price of a related commodity, say  $y$ .  
 $\rightarrow$  Inferior  $\cdot 0$  Normal/necessary  $\cdot 1 \rightarrow$  Normal/luxurious  $\rightarrow$

36 NSOU • PGCO - II 2.10.7 Uses of Cross Price Elasticity of Demand Cross price elasticities are used to classify the relationship among a number of goods. It has been demonstrated in the following manner : Case 1 : Let  $ep_1 < 0$ . In this case

<b>46%</b>	<b>MATCHING BLOCK 36/204</b>	<b>SA</b>	Micro Economics Generic Elective-B.Com (H) (2).doc (D110479765)
an increase in the price of $y$ causes an increase in the quantity demanded for $x$ and the two products are said to be substitutes.			

That means, one product can be used in place of (substituted for) the other. Suppose that the price of  $y$  increases. This means that the opportunity cost of  $y$  in terms of  $x$  has increased. The result is that the consumers purchase less of  $y$  and more of the relatively cheaper good,  $x$ . Chicken and Mutton (tea and coffee) are examples of substitutes.

<b>70%</b>	<b>MATCHING BLOCK 34/204</b>	<b>W</b>	
An increase in the price of chicken (tea) usually leads to an increase in the			

demand for mutton (coffee) and vice versa. Case 2 : Let  $ep_1 > 0$ . In this case

<b>47%</b>	<b>MATCHING BLOCK 37/204</b>	<b>SA</b>	Micro Economics Generic Elective-B.Com (H) (2).doc (D110479765)
an increase in the price of $y$ causes a decrease in the quantity demanded for $x$ and the two products are said to be			

complements (goods that are used jointly or together). That means

<b>80%</b>	<b>MATCHING BLOCK 38/204</b>	<b>SA</b>	Micro Economics Generic Elective-B.Com (H) (2).doc (D110479765)
an increase in the price of $y$ leads to a reduction in the quantity demanded			

for that product. The diminished demand for  $y$  causes a reduced demand for  $x$ . Butter and bread, cars and tyres, computers and computer software are examples of pairs of goods that are complements. Cross elasticities are not always symmetrical. This means that a change in demand for good  $x$  caused by a change in the price of  $y$  may not equal the change in demand for  $y$  generated by a change in the price of  $x$ . Although the two elasticities are different, they are of the same sign. Case 3 : Let  $ep_1$  be zero. In this case an increase or decrease in the price of  $y$  does not have any impact on the demand for  $x$  so that  $ep_1$  becomes zero. The two goods will, obviously, be independent or unrelated. Therefore, the sign of cross price elasticity of demand helps us in understanding the relationship between two commodities : whether they are substitutes or complements or they are unrelated or independent of each other. 2.11 Relation between Elasticity of Demand and Total Expenditure Alfred Marshall had suggested to measure elasticity of demand in terms of total expenditure to be incurred by a consumer.

NSOU • PGCO - II 37 We know that under the ceteris paribus clause, demand for a commodity is a function of the price of the commodity itself. Thus as price changes along a demand curve, the quantity demanded will change. With such changes, an individual consumer's expenditure on the commodity would also change. By observing how this expenditure changes in response to price change, we can predict whether demand is elastic, inelastic or unitary elastic. We should remember that total outlay or expenditure or revenue is price multiplied by quantity demanded, that is,  $R = pq$ ,  $R$  being total expenditure,

**76% MATCHING BLOCK 39/204**

**SA** MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

p is the price of the commodity and q is the quantity demanded

by a consumer. We consider the following two cases : (a) We suppose that price of the commodity falls. Then according to this method, (i) the total outlay or expenditure on the good could increase and demand for the good would be price elastic, that is, elasticity  $< 1$ ; (ii) the total outlay or expenditure on the good could fall and demand for the good would be price inelastic, that is, elasticity  $> 1$  and (iii) the total outlay or expenditure on the good could remain the same and demand would be unitary elastic, that is,  $e = 1$ . (b) We suppose that price of the commodity rises. Then according to this method, (i) the total outlay or expenditure on the good falls and demand is elastic, that is,  $e < 1$ ; (ii) the total outlay or expenditure on the good also increases and demand is inelastic, that is,  $e > 1$  and (iii) the total outlay or expenditure on the good remains the same and demand is unitary elastic, that is,  $e = 1$ . It is to be noted that with the help of the total expenditure or outlay method, we fail to derive the exact value of elasticity of demand. The calculated value can, however, be used to indicate only whether elasticity is greater than or less than or equal to 1 (one). Exercise : 1. From the following demand schedule find the direction of elasticity when price falls from Rs. 10/ to Rs. 9/; from Rs. 9/ to Rs. 8/; from Rs. 8/ to Rs. 7/ and from Rs. 7/ to Rs. 6/, using the outlay method.  
38 NSOU • PGCO - II Solution :

**75% MATCHING BLOCK 40/204**

**SA** BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)

When price falls from Rs. 10/- to Rs. 9/-, total expenditure increases from Rs. 600/- to Rs. 675/.

So in this case demand is elastic. Again, when price falls from Rs. 9/ to Rs. 8/, total expenditure decreases from Rs. 675/ to Rs. 640/. So in this case the demand is inelastic. Moreover, when price falls from Rs. 8/ to Rs. 7/, expenditure decreases from Rs. 640/ to Rs. 588/. So in this case the demand is inelastic. Finally, when price falls from Rs. 7/ to Rs. 6/, total expenditure decreases from Rs. 588/ to Rs. 528. So in this case also the demand is inelastic. 2. The monthly market demand curve for calculators among management students is given by  $p = 400 - Q$ , p being price per calculator in rupees and Q is the number of calculators purchased per month. Obtain the price elasticity of demand when price is fixed at Rs. 300/ per calculator. Solution : We have  $Q = 400 - p$ . That is,  $p = 400 - Q \therefore dp/dQ = -1$ , or,  $dQ/dp = -1$ . Thus the price elasticity of demand at Rs. 300/ will be  $p/dQ \cdot Q/dp = (300/1400) \times -1 = -0.75$ . Ans. That is,  $R = pq$ , R being total expenditure,

**76% MATCHING BLOCK 42/204**

**SA** MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

p is the price of the commodity and q is the quantity demanded

by a consumer. We consider the following two cases : (a) We suppose that price of the commodity falls. Then according to this method, (i) the total outlay or expenditure on the good could increase and demand for the good would be price elastic, that is, elasticity  $< 1$ ; (ii) the total outlay or expenditure on the good could fall and demand for the good would be price inelastic, that is, elasticity  $> 1$  Price(Rs.) 10 9 8 7 6 Quantity 60 75 80 84 88 demanded(Kg)

NSOU • PGCO - II 39 and (iii) the total outlay or expenditure on the good could remain the same and demand would be unitary elastic, that is,  $e = 1$ . (b) We suppose that price of the commodity rises. Then according to this method, (i) the total outlay or expenditure on the good falls and demand is elastic, that is,  $e < 1$ , (ii) the total outlay or expenditure on the good also increases and demand is inelastic, that is,  $e > 1$  and (iii) the total outlay or expenditure on the good remains the same and demand is unitary elastic, that is,  $e = 1$ . It is to be noted that with the help of the total expenditure or outlay method, we fail to derive the exact value of elasticity of demand. The calculated value can be used to indicate only whether elasticity is greater than or less than or equal to 1 (one).

2.12 Advertisement or Promotional Elasticity of Demand (or Sales) The expansion of demand by means of advertisement and other promotional methods may be measured by advertising elasticity of demand, also called promotional elasticity. The promotional elasticity measures the responsiveness of demand to changes in advertising or other promotional expenses. The formula for its measurement is given by  $e_a = \frac{\text{Proportional change in sales}}{\text{Proportional change in advertisement expenditure}} =$

<b>52%</b>	<b>MATCHING BLOCK 43/204</b>	<b>SA</b>	DSC-10-Intermediate Microeconomics-II.pdf (D143881375)
$Q_A - \frac{\Delta Q_A}{Q_A} = \frac{\Delta Q_A}{Q_A} \times \frac{Q_A}{\Delta Q_A} = \frac{Q_A}{\Delta Q_A} \times \Delta Q_A = 2121 Q_A$			

40 NSOU • PGCO - II Even the same commodity may not respond the same way at different levels of advertising expenditure. This implies that advertising elasticity of demand differs between products and also between different levels of sales of the same product. The advertising elasticity of demand is affected by a number of factors, namely (1) stage of the product market, (2) effect of advertising in terms of time and (3) influence of advertising by rivals.

2.12.1 Factors on Which Elasticity of Demand Depends There are a number of factors which influence the price elasticity of demand for a good. The followings are some important

<b>32%</b>	<b>MATCHING BLOCK 41/204</b>	<b>W</b>	
<p>determinants of price elasticity of demand. (i) Number of substitutes available : Larger the number of substitutes available for a given commodity, the higher is the price elasticity of demand for it. The</p>			

substitution effect is felt very strongly in such cases. For example, demand for electric goods is very elastic. On the other hand, fewer the number of substitutes available, the lower will be the elasticity of demand. The substitution effect is felt very weakly or not felt at all. The demand for salt is a nice example of this case. (ii) Nature of the good : A good can be basic or non-basic, a necessity or a luxury. For necessity and basic goods demand is less elastic. They have to be consumed in certain quantity, irrespective of price prevailing. For example, food items (cereals, cooking oil, sugar, potatoes, salt, onions etc.) coarse clothing, transport to and from the place of work etc. have inelastic demand. The substitution effect is very weak for such goods. For non- basic and luxury goods demand would be elastic and both substitution and income effects are felt very strongly. For example, demand is elastic in cases like entertainment, electrical gadgets, finer clothes etc. (iii) Proportion of income spent on a good, that is, importance of the commodity in the consumer's budget also affects elasticity of demand for a commodity. Higher the budget proportion more strongly will the income effect be felt. As a result, demand for such goods will be highly responsive for price change. Therefore, demand will be elastic. For example, all consumer durables like refrigerator, geyser, motor bikes and washing machines tend to be more demand elastic. On the other hand, smaller the budget proportion, the more weak

NSOU • PGCO - II 41 will be the income effect. Demand for such goods will be insensitive to price change. Naturally, demand will be less elastic. (iv) Number of uses to which a commodity can be put : The more the possible uses of a commodity, the greater will be its price elasticity and vice versa. For example, milk has a number of uses. If its price falls, it can be used for a variety of purposes, like preparation of cream, curd, ghee and sweets. However, if its price increases, its uses will be restricted only to essential purposes, like feeding the children and sick persons. (v) Consumer habits : If a consumer is a habitual one of a commodity, no matter how much and how its price changes, the demand for the commodity will be inelastic. That is why the demand for liquor, cigarettes is inelastic. (vi) Height of price and range of price change : There are some goods like costly luxury items or bulky goods such as refrigerators, T.V. sets, which are highly priced in general. In such a case, a small change in price will have an insignificant effect on their demand. Their demand will, therefore, be inelastic. However, if the price change is large enough, then their demand will be elastic. In the same way, there are perishable goods like potatoes and onions etc. which are relatively low-priced and bought in bulk, so a small variation in their prices will not have much effect on their demand and hence their demand tends to be inelastic. (vii) Durability of the commodity : In the case of durable goods, the demand generally tends to be inelastic in the short run, e.g., furniture, motor bike, television etc. In the case of perishable commodities, on the other hand, demand is relatively elastic, e.g., vegetables, milk etc. (viii) Tied demand : The demand for those goods which are tied to others is normally inelastic as against those whose demand is of autonomous nature. (ix) Possibility of postponement : When the demand for a product is postponable, it will tend to be price elastic. In the case of consumption goods which are urgently and immediately required, their demand will be inelastic.

42 NSOU • PGCO - II 2.12.2 Uses of  
The Concept

**90%**

**MATCHING BLOCK 44/204**

**SA**

Micro Economics Generic Elective-B.Com (H) (2).doc  
(D110479765)

of Elasticity of Demand The concept of elasticity of demand has

a good number of uses : (a) Elasticity of demand is considered very useful in price determination. Whereas in case of perfect competition it determines how a change in supply would affect its price, in case of monopoly a supplier has to consider it in both normal price determination and in price discrimination. (b) This concept is considered useful in budget formulation, specially, the incidence of taxation on consumers depends upon elasticity of demand. A tax on a commodity having inelastic demand may be shifted to the consumers. (c) The terms of trade depend upon elasticity of demand and supply. Normally, the terms of trade are unfavourable to a country whose demand for imported foreign articles is inelastic, the reverse is also true when the import demand is elastic. (d) Elasticity of demand is helpful in forecasting demand. Given the elasticity of demand and the state of independent variable, it is possible to forecast the demand for a good. (e) The effectiveness of price controls also depends upon elasticity of demand. With an inelastic demand for a controlled product, it would, generally, sell in the black market. (f) The effect of devaluation of currency also depends upon elasticity of demand and elasticity of supply of goods and services entering into international trade. In case of inelastic demand for imports as well as inelastic supply for exports, devaluation may not be beneficial in terms of reducing the adverse balance of payments. 2.13 Demand Forecasting : Meaning Forecasting of demand is the art of predicting demand for a product or a service at some future date on the basis of certain present and past behavioural patterns of some related events. However, forecasting is no simple guessing, but it refers to estimating scientifically and objectively on the basis of some facts and events relevant to the art of forecasting. Every business enterprise should have distinct knowledge about the demand for its

NSOU • PGCO - II 43 product since business decisions regarding the amount of capital to be raised, labour needed, requirement of working capital, sources of raw materials, sales promotional activities etc. are highly dependent on the perception of the demand for its product. However, if this perception is erroneous, the decisions of the enterprise will not be correct and that will lead to huge losses. Hence, for a successful venture, correct estimation of future demand is highly significant. Demand forecasting is merely an attempt to estimate this future demand. Forecasting of demand plays a vital role in the process of planning and decision making whether at the national level or at the level of a firm. The importance of demand forecasting has increased overtime on account of mass promotion and production in response to demand. No useful business planning can be done without proper estimates of demand forecast. It can be said that all business planning starts with forecasting of demand because capital investment, production scheduling etc. have to be related with expected demand. Although it is said no forecast is completely fool-proof and correct but the very process of forecasting helps in evaluating various forces which affect demand and is, in itself, a reward because it enables the forecasting authority to know about various forces relevant to the study of demand behaviour.

### 2.13.1 Importance of Demand Forecasting

Demand forecasting is of high use both to the firms and to the Government. Some reasons can be advanced in support of this :

- (a) For production planning demand forecasting is a must. If a firm can, more or less, accurately forecast the future demand for its product, it can, accordingly, arrange its production schedule. Besides, it can also hire various factors of production in advance just to meet the necessities of production.
- (b) For inventory planning also demand forecasting is highly useful. If future demand is within the knowledge of the entrepreneurs, optimum level of inventory can be determined and maintained.
- (c) Apart from proper scheduling of production, demand forecasting enables a firm to avoid overproduction as well as underproduction.

44 NSOU • PGCO - II (d) For estimating the financial requirements a firm should be in the knowledge of demand forecasting. (e) Demand forecasting for a particular product gives an appropriate idea about demand forecast for future product. Forecast for bi-cycles gives an appropriate idea about future demand for tyres and tubes in bi-cycles. (f) Finally, demand forecasting is helpful to the Govt. of a country in a number of ways. To distribute any commodity among the public, to determine target of exports and imports, to give subsidy to any commodity, to estimate various components of Government budget, to formulate the overall economic planning in the country and the like more or less an accurate demand forecasting is a pre-condition.

### 2.13.2 Methods of Demand Forecasting

There is no easy method or simple formula which enables an individual or a business person to predict the future demand with certainty or to escape the hard process of thinking. The firm has to apply a proper mix of judgement and scientific formula in order to correctly predict the future demand for a product. Broadly speaking, demand forecasting may be categorised under two broad methods :

- (a) Survey Methods and
- (b) Statistical Methods.

In method (a) the demand for a product is forecast by enquiring the intentions and views of the participants going to the market. In method (b), on the other hand, past data are used to forecast future demand. Survey methods can, again, be divided into three categories :

- (i) Survey of Buyers' intentions
- (ii) Collective Opinion Method and
- (iii) Expert Opinion Method.

Let us now discuss these methods, in brief.

- (i) Survey of Buyers' Intentions : The most direct method of estimating demand, in the

NSOU • PGCO - II 45 short run, is to ask customers what they are planning to buy for the forthcoming period, usually, a year. So in this method the burden of forecasting is put on the customers. However, it would not be wise to depend wholly on the buyers' estimates and they should be used very cautiously in the light of a seller's own judgement. A number of biases may creep into the surveys. Besides, the customers may themselves misjudge their requirements or may mislead the surveyors. However, this method is useful when bulk of sale is made to industrial producers who, generally, have firm future plan. In the case of household customers this method may not prove very helpful. (ii) Collective Opinion Method : In this method salesmen are required to estimate expected sales in their respective territories. The rationale of this method is that salesmen being closest to the customers are likely to be the most intimate feel of the market. The estimates of salesmen are consolidated to find out the total estimated sales. These estimates are reviewed to estimate the bias of optimism on the part of some salesmen and pessimism on the part of others. These revised estimates are further examined in the light of factors like proposed change in selling prices, product designs and advertisement, expected changes in competition and changes in secular prices like purchasing power, income distribution, employment, population etc. The final sales forecast would emerge after these factors have been taken into account. Although this method is simple and is based on first hand information of those who are directly, connected with sales, this method is subjective as personal opinions can, possibly, influence the forecast. Besides, salesmen may be unaware of the broader economic changes having the impact of future demand. Therefore, forecasting could be useful in the short run, for the long run analysis, however, a better technique is to be applied. (iii) Expert Opinion Method : This method is also known as delfi method of investigation. In this method instead of depending on the opinions of buyers and salesmen, firms can obtain views of the specialists or experts in their respective fields. Opinions of different experts are sought and analysed. The process goes on until some sort of unanimity is arrived at among all the experts. This method is best suited in circumstances where intractable changes are occurring. Besides, it has the advantage of speed and cheapness.

46 NSOU • PGCO - II 2.14 Statistical Methods Statistical methods have proved to be very useful in forecasting demand. The important statistical methods of demand forecasting are : (i) Trend Projection Method (ii) Graphical Method (iii) Least Squares Method and (iv) Regression Method. Let us now discuss the above methods one by one. (i) Trend Projection Method : A firm which has been in existence for some time, will have accumulated considerable data on sales pertaining to different time periods. Such data when arranged chronologically yield 'time series'. This can be done either through graph or through least squares method. (ii) Graphical Method : A trend line can be fitted through a series graphically. Old values of sales for different areas are plotted on a graph paper and a free hand curve is drawn passing through as many points as possible. The direction of this free hand curve shows the necessary trend. The main drawback of this method is that it may show the trend but it fails to measure it. (iii) The Least Squares Method : This method is based on the assumption that the past rate of change of the variable under study will continue in the future. It is a mathematical procedure for fitting a line to a set of observed data points in such a manner that the sum of squared differences between the calculated and observed values is minimised. This technique is used to find a trend line which best fits the available data. This trend is then used to project the dependent variable in the future. This method is very popular because it is simple and inexpensive. (iv) Regression Method : This is a very common method of forecasting demand. Under this method a relationship is established between quantity demanded (the dependent variable) and independent variables such as income, price of the good, prices of related goods and so on. Once the relationship is established, we derive a regression equation

NSOU • PGCO - II 47

**82%**

**MATCHING BLOCK 45/204**

**SA**

Block 02 Business Economics.pdf (D143762521)

assuming the relationship to be linear. The equation will be of the form  $Y = a + bx$ . There

could also be a curvy linear relationship between the dependent and independent variables. Once the

**85%**

**MATCHING BLOCK 46/204**

**SA**

Block 02 Business Economics.pdf (D143762521)

regression equation is derived, the value of  $y$ , i.e. quantity demanded can be estimated, for any given value of  $x$ . The

values of a and b get estimated from given data on the basis of the following two normal equations :  $\sum_{i=1}^n y_i = na + b \sum_{i=1}^n x_i$  and  $\sum_{i=1}^n y_i x_i = a \sum_{i=1}^n x_i + b \sum_{i=1}^n x_i^2$ . Once the values of a and b get estimated, we can forecast y for a particular value of x from the equation  $Y = a + bx$ . This method can be estimated in two ways. Instead of linear regression equation the non-linear regression equation can also be fitted. Moreover, the multiple regression equation can be estimated in place of the simple regression equation incorporating more than one independent variable. The regression method is objective in the sense that we will get a unique forecast value of the demand for the unique sets of historical data on x and y, given the form of the regression equation. Besides, this method is less expensive and is simple to understand and, therefore, it is very popular.

**2.15 Estimation of Demand Functions** A demand function can be estimated given the information on price (p) and quantity demanded (q). This has been demonstrated in the following manner : Let the general form of the demand function with one independent variable be  $Y = a + bx$

48 NSOU • PGCO - II where 'a' and 'b' are two parameters. Given a set of n pairs of observations  $(x_1, y_1), (x_2, y_2), (x_3, y_3), \dots, (x_n, y_n)$  we are to estimate the values of the parameters 'a' and 'b'. We have to choose the values of a and b in such a way that the sum of squares of errors gets minimised. Hence the method is known as the least squares method. Now, error,  $e_i = \text{observed value} - \text{estimated value} = (y_i - Y_i) = (y_i - a - bx_i)$ . Thus, the sum of squares of errors =  $S = \sum_{i=1}^n e_i^2 = \sum_{i=1}^n (y_i - a - bx_i)^2$ . Since  $(x_i, y_i)$  are given, we see that S is a function of a and b only. For the minimization of S, the first order conditions are :  $\frac{\partial S}{\partial a} = \sum_{i=1}^n (y_i - a - bx_i) (-1) = 0$ ..... (A)  $\frac{\partial S}{\partial b} = \sum_{i=1}^n (y_i - a - bx_i) (-2x_i) = 0$ ..... (B) Equations (A) and (B) can be written in the following forms :  $\sum_{i=1}^n y_i = na + b \sum_{i=1}^n x_i$  ..... (A 1)  $\sum_{i=1}^n y_i x_i = a \sum_{i=1}^n x_i + b \sum_{i=1}^n x_i^2$  ..... (B 1) Equations (A 1) and (B 1) are known as normal equations. From the observed data we get the values of  $\sum_{i=1}^n y_i, \sum_{i=1}^n x_i, \sum_{i=1}^n y_i x_i$  and  $\sum_{i=1}^n x_i^2$ . Thus there are two equations needed for solving two unknowns, a and b. Therefore, solving equations (A 1) and (B 1) we get the estimated values of the parameters a and b. These estimated values when put in  $Y = a + bx$  give the necessary demand function. This can be explained with the help of the following example :

NSOU • PGCO - II 49 Example 1 : Fit a linear demand function to the following data : Price (p) : 4 5 6 8 9 Quantity demanded (q) : 90 85 75 77 80 Solution : Suppose the linear demand function is  $q = a + bp$ . The values of the parameters 'a' and 'b' can be obtained by solving the two normal equations :  $\sum q = na + b \sum p$  and  $\sum pq = a \sum p + b \sum p^2$ .  $\sum p = 4 + 5 + 6 + 8 + 9 = 32$   $\sum q = 90 + 85 + 75 + 77 + 80 = 407$   $\sum p^2 = 16 + 25 + 36 + 64 + 81 = 222$   $\sum pq = 4 \times 90 + 5 \times 85 + 6 \times 75 + 8 \times 77 + 9 \times 80 = 2571$  Here  $n = 5$ , so that the normal equations are :  $5a + 3b = 407$  and  $32a + 222b = 2571$ . Solving the above two equations we get  $a = 93.99$  and  $b = -1.96$  Hence the linear demand curve will be  $q = 93.99 - 1.96p$ . Verification At  $p = 4, q = 86.15$  At  $p = 5, q = 84.19$  At  $p = 6, q = 82.23$  At  $p = 8, q = 78.31$  At  $p = 9, q = 76.35$  Thus  $\sum q = 407.23$ .

50 NSOU • PGCO - II 2.16 Sample Questions A. Objective-type Questions: 1. Giffen goods are those goods for which the slope of the demand curve is : (a) Negative, (b) Positive, (c) Zero, (d) undefined. Ans. (b) 2. Marginal revenue will be zero when : (a)  $ep > 1$ , (b)  $ep < 1$ , (c)  $ep = 1$ , (d)  $ep = 0$ . Ans. (c) 3. If cross price elasticity of demand for good x and y is negative, the goods will be : (a) Substitutes, (b) Complements, (c) Independent and (d) Giffen. Ans. (b) 4. If regardless of change in its price, the quantity demanded for a good remains unchanged, then the demand curve for the good will be : (a) Horizontal, (b) Vertical, (c) Positively sloped, (d) Negatively sloped. Ans. (b) 5. If price elasticity of demand is zero, ( $ed = 0$ ), the demand curve will be : (a) A horizontal straight line, (b) A vertical straight line, (c) A downward falling straight line, (d) An upward rising straight line. Ans. (b) 6. In case of an inferior good, the income elasticity of demand is : (a) Positive, (b) Zero, (c) Negative, (d) Infinity. Ans. (c) 7. In case of a straight line demand curve meeting the two axes, the price elasticity of demand at the mid-point of the line would be : (a) 0, (b) 1, (c) 1.5, (d) 2 Ans. (b)

NSOU • PGCO - II 51 B. Short-type Questions : 1. What is the difference between individual demand and market demand? How are these two types of demand related? 2. What is cross price elasticity of demand? Is it possible to express or to measure complementarity or substitutability between two goods by means of cross price elasticity of demand? 3. Establish the relation among MR, AR and price elasticity of demand. From this relation find out the value of total revenue when price elasticity of demand is unity. 4. What is Giffen's paradox? Explain it clearly with an example. 5. What is the difference between individual demand and market demand? How are these two types of demand related? 6. Suppose

3.1. Production Function : An Introduction In Economics, the term production means transformation of inputs into outputs. We assume that production takes place only in firms. By a firm we mean a technical unit in which inputs are employed and outputs get produced. An input is a good or service that goes into the process of production. According to Professor Baumol, "An input is simply anything which the firm buys for use in its production or other processes". In other words, an input is any good or service which contributes to the production of an output. Economists have classified inputs as : (i) Land (N), (ii) Labour (L), (iii) Capital (K) and (iv) Organizational (O). Of these four basic inputs the two crucial ones are : L and K. Labour is a crucial factor as labour can speak, it can construct and destruct also. On the other hand, capital is another crucial factor as lack of capital is behind the backwardness of a country. Some inputs such as labour and land are not produced and these are known as primary inputs. An output may be tangible or intangible. Nature of inputs : Inputs may be either fixed or variable. Fixed and variable inputs are defined in economic sense and in technical sense also. In economic sense, a fixed input is one whose supply is inelastic in the short run, and is used in a fixed quantity in the short run. On the other hand, in technical sense, a fixed factor is one that remains fixed (or constant) for all levels of output. A variable input, on the other hand, is defined as one whose supply in the short-run is elastic. Thus labour and raw materials are variable inputs. All users of such factors can employ more quantity in the short run. In technical terminology, a variable input is one that changes with change in output. In the long run, however, all inputs are variable.

NSOU • PGC0 - II 55 3.2. Production Function The key concept in the theory of production is the production function. The word 'function' as used in Mathematics expresses the relationship between the dependent and the independent variables. Alternatively, a function shows a cause and effect relationship or an engineering relationship between inputs (independent variables or cause) and output (dependent variable or effect). Using one-output and two-input function, the relationship between output and inputs has been summarised in the following form :  $Q = f(L, K)$ , Q being the quantity of output produced; L and K denote the respective quantities of labour and capital. By using L and K in a production process, we obtain Q or output. The engineer or the technician of an establishment describes the production process in terms of three or more variables (like density, pressure and horsepower). The economist's production function incorporates the engineering technology. Production engineers tell us how many units of L and K are needed to yield output by using a particular process of production. However, which particular production process (out of a number of alternatives) will be chosen by the firm depends on the prices of inputs and output that are bought and sold in the market. An isoquant gives a constant level of output for alternative combinations of L and K. Therefore, a production function, being a technical one, presents physical combinations only. To an economist, however, production function is something more. A production activity shows costs for using inputs and revenues for output sold. Since the production function is given in the form of a table showing physical combinations of various inputs to obtain some units of output, it is not strictly within the domain of Economics. Economists are concerned not with the physical combinations but with the costs, revenue, output behaviour in respect to changes in inputs used, etc. Whenever there is a change in input in a production process, output changes. As a consequence various laws governing output have been obtained. The form of a production function of an establishment gets determined by the nature of technology whose size, naturally, depends on the time span. This implies that a short run production function is not the same thing as the long run production function. We shall, therefore, consider the short run and the long run production functions separately.

56 NSOU • PGCO - II 3.2.1 Fixed Proportion Production Function Fixed proportion production function can be expressed as  $Q = \min\left\{\frac{x_1}{a_1}, \frac{x_2}{a_2}\right\}$ . This implies that the amount of output that can be produced equals the minimum of the ratios, namely  $\frac{x_1}{a_1}$  and  $\frac{x_2}{a_2}$ . However, if  $\frac{x_1}{a_1} = \frac{x_2}{a_2}$ , both inputs, namely  $x_1$  and  $x_2$  will be fully utilised. But if  $\frac{x_1}{a_1} \neq \frac{x_2}{a_2}$  one input will be fully utilised while some amount of the other will be redundant. We assume that the two inputs are always employed in a fixed proportion. In such a case there is only one ratio in which the two factors, namely  $x_1$  and  $x_2$  can be employed. We assume that  $x_1 : x_2 = a_1 : a_2$ , where  $a_1$  and  $a_2$  are constants. That means  $\frac{x_1}{a_1} = \frac{x_2}{a_2}$  whence  $x_2 = \frac{a_2}{a_1} x_1$ . In the following Fig. 3.1 all points on the line OA satisfy the relation  $x_1 : x_2 = a_1 : a_2$ . Naturally, in this case there is only one process of production available to the producer; there is no substitution between the two factors in the production process. By a process of production is meant a ratio in which the two inputs get used. Let us consider a production function  $Q = f(x_1, x_2)$ ,  $x_1$  and  $x_2$  are two inputs used for production. Herein comes the concept of an isoquant or a production indifference curve or an equal product curve which

**58% MATCHING BLOCK 53/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

is the locus of various combinations of  $x_1$  and  $x_2$  that produce the same level of output

Q. Assuming strict complementarity between the inputs, i.e., no substitutability of factors of production, that is, factors of production are to be employed in a fixed proportion, the isoquants will be L-shaped as shown in figure 3.1 Fig : 3.1 : L-shaped iso-quants Input-output iso-quants or Leontief type iso-quants

NSOU • PGCO - II 57 In figure 3.1 "MAN" is the isoquant for the output level  $Q_1$ . For higher level of output we shall get a higher isoquant that lies to the right of the initial isoquant.  $M_1A_1N_1$  is another such isoquant. Obviously, only the points A or  $A_1$  are efficient points of production in the sense that at these points both factors of production are fully utilised. Any rational entrepreneur will always use the level of inputs given by the points A,  $A_1$  etc. Besides, only on these points total cost of producing a given level of output will be minimum. That means, in the long run all inputs are variable. In spite of such a difference between short run and long run, the actual length of time, that is, whether short run or long run, does not refer to any calendar time as it varies from a firm to another firm or from one industry to another industry. In consequence of the above differences between short run and long run we get

**90% MATCHING BLOCK 51/204**

**W**

two types of production function : (a) Short run production function and (b) long run production function.

A short run production function assumes capital to be fixed while labour to be variable. So the short run production function takes the form  $P = f(L, K)$ . Here labour or L is a variable input while capital or K is assumed to be fixed. In the short run production is subject to the law of variable proportions whereas production in the long run

**91% MATCHING BLOCK 55/204**

**SA** Principles of Economics book new.doc (D112051420)

is subject to the law of returns to scale. 3.3 The Law of

Variable Proportions or the Law of Diminishing Returns

to Factors As told above, a firm, in the short run, increases output only by varying variable inputs. So the firm's production function becomes  $P = f(L, K)$ , K - being fixed. For various values of L, we get different values of output, Q. The total product curve of labour expresses the relation between L and K. From this we also get the idea of average product (AP) and marginal product (MP). A firm, in the short run, goes on increasing its level of production by making changes in input-mix. Here we are interested in learning the returns to a variable input. Changes made in the input-mix and their impact on output have been studied under an empirical and celebrated law in Economics, that is, the law of variable proportions or the law of non- proportional returns or the law of diminishing returns to factors.

58 NSOU • PGCO - II 3.4.1 Statement of The Law The law states that under a given state of technology if the quantity of one factor of production, say, labour is increased by equal increments while the quantity of the other factor of production, say, capital, remains fixed, the consequent increment of total product will, eventually, decline (that is, total product will first increase but decrease after some point). This law has also been known as the law of eventually diminishing returns to factors. More explicitly, the law states that if we go on increasing more and more of a variable input (say, labour), the amount of other inputs, say, capital being held fixed, the returns to the variable input will become non-proportional : initially, it will show increasing returns, then constant returns for a while and eventually diminishing returns. In brief, as additional units of a variable input are added to a given amount of fixed input, the average and marginal products of the variable input will, eventually, come to decline. Let us clarify the meanings of TP, AP and MP. TP : Various values of a variable input, given a specified amount of the fixed input, will give us various values of output. Total output is usually called the total product (TP). A typical TP curve shows that initially it increases slowly, then more rapidly and thereafter more slowly again until it finally reaches a maximum level and then begins to decline. AP :

**100%**

**MATCHING BLOCK 56/204**

**SA**

Managerial Economics.pdf (D143428574)

The average product (AP) of an input is the total

product per unit of the variable input which is needed to produce this output. It is obtained by dividing total product by total units of the input. In symbols, the average product of labour (L) input will be :  $AP_L = \frac{TP}{L}$ . The AP curve rises initially, reaches a maximum and thereafter declines. MP : The marginal product (MP) is the change in total product resulting from a change in the use of the variable inputs. In symbols,  $MP_L = \frac{\Delta TP}{\Delta L}$  = change in total product resulting from the change in labour. This may also be defined as  $MP_L = \frac{\Delta TP}{\Delta L} = \frac{TP_n - TP_{n-1}}{n - (n-1)}$ .

NSOU • PGCO - II 59 That means, MP is the difference in total product of n units and that of (n – 1) units. Like AP, MP initially rises, reaches a peak and thereafter, declines. However, MP can be zero and negative if the MP curve touches and cuts the horizontal axis, respectively. Therefore, the returns to the variable input are non-proportional. Initially, we obtain increasing stage where TP, AP and MP are on the rise. Then we have the diminishing stage where TP increases at a slower rate and both AP and MP decline. Finally, we have a negative stage when TP decreases and MP becomes negative. 3.4.2 Graphical Presentation of the Law The above-stated law can, neatly, be presented in the following diagram (Fig. 3.2), measuring the variable input, labour, along the horizontal axis (assuming the amount of capital used is fixed) while total product (TP), average product (AP) and marginal product (MP) have been measured along the vertical axis. Fig. 3.2: Law of Variable Proportions Let us concentrate our attention first on the TP curve. Since labour is increased relative to the fixed inputs, the TP curve rises very rapidly, reaching its maximum slope at point F, the point of inflection. Upto the point of inflection, TP rises at an increasing rate. TP starts declining after the point of inflection has been reached. MP is the slope Labour Production

60 NSOU • PGCO - II of TP. Therefore, the maximum slope of TP (i.e., point F) must correspond to the maximum on MP (that is, point R). Once the employment of labour exceeds OL amount, TP increases at a diminishing rate, that is, its slope diminishes. When OM unit of labour is employed, AP becomes maximum. Since tangency of the dotted ray to the TP curve at point A defines the condition for highest AP, point S, thus, lies directly below point A. Beyond OM, TP continues to rise, though, at a diminishing rate and reaches maximum at point K. Here the slope of TP becomes zero and hence, MP becomes zero (corresponding to ON volume of labour employed). Beyond ON, if labour is employed, TP will decline and MP will become negative. Let us now explain the relations among TP, AP and MP in the above-mentioned three stages of production. Stage I is known as the stage of increasing returns where TP increases at an increasing rate and hence, AP and MP rise. This is the stage of increasing returns as in this stage AP of labour rises throughout. However, in this stage MP increases though declines after OL amount of labour gets employed. Throughout this stage, however, MP exceeds AP. Stage II is called diminishing stage since here both AP and MP decline, though positive. However, this is the most crucial stage as far as decision to produce is considered. Stage III is known as the stage of negative returns where TP declines and MP becomes negative. Let us now find out the relationship between AP and MP in the three stages of production : If  $MP < AP$ , AP will rise as labour increases. If  $MP > AP$ , AP will decline as labour increases. If  $MP = AP$ , then AP will be maximum. In stage I,  $MP > 0$  and AP is rising. Thus  $MP > AP$ . This is the increasing stage. In stage II,  $MP > 0$  but AP is falling. Thus  $MP > AP$  but TP is increasing because  $MP > 0$ , this is the diminishing stage. In stage III,  $MP < 0$  and TP is falling, this is the negative stage.

NSOU • PGCO - II 61 From the above analysis we are now interested in answering a question : Out of the three stages, where will the firm produce? Evidently, no rational profit-making firm would produce either in stage I or in stage III. A rational producer will always like to produce only in the second stage where both AP and MP of the variable input (that is, labour) as well as AP and MP of fixed inputs are positive. 3.5 Long Run Production Function Returns to Scale Now we are interested in studying the effect of changes in output when all factors of production in a particular production function are changed together. That means we intend to

**76% MATCHING BLOCK 54/204**

**W**

study the behaviour of output in response to a change in the scale.

A change in the scale means that all factors of production are increased or decreased in the same proportion. Changes in scale are different from changes in factor proportions. RELATION BETWEEN AVERAGE PRODUCT (AP) AND MARGINAL PRODUCT (MP) There is a unique relation between AP and MP and it is true for all "average" and "marginal" productivity conditions. This relation

**94% MATCHING BLOCK 57/204**

**SA**

Principal of Microeconomics.pdf (D110867814)

is as follows : (a) When AP is rising,  $MP < AP$ . (b) When AP is maximum,  $MP = AP$ .

and (c) When AP is falling,  $MP > AP$ . The above relation may be established in the following manner : We have  $AP = \frac{Q}{L}$ . Differentiating  $AP$  partially with respect to  $L$ , we get  $L \frac{\partial}{\partial L} \left( \frac{Q}{L} \right) = \frac{L \frac{\partial Q}{\partial L} - Q}{L^2} = \frac{MP - AP}{L}$ . or,  $L \frac{\partial}{\partial L} (AP) = MP - AP$ . or,  $L \frac{\partial}{\partial L} (AP) = 0$  when  $MP = AP$ . . . .  $L \frac{\partial}{\partial L} (AP) > 0$  when  $MP > AP$ ; Finally,  $L \frac{\partial}{\partial L} (AP) < 0$  when  $MP < AP$ . . . .  $L \frac{\partial}{\partial L} (AP) = 0$  when  $MP = AP$ ; Finally,  $L \frac{\partial}{\partial L} (AP) > 0$  when  $MP > AP$ . . . .  $L \frac{\partial}{\partial L} (AP) < 0$  when  $MP < AP$ . It is an empirically observed feature that all inputs have positive but diminishing marginal products. If  $L$  and  $K$  are the only factors of production  $MP_L > 0$  and  $MP_K > 0$ . Thus for any factor, initially, MP is positive. Then a situation arises when MP is zero and further on it falls as more of the factor is employed in production. Changes in output as a result of the variation in factor proportions form the subject matter of the law of variable proportions, whereas

**95% MATCHING BLOCK 58/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

the study of changes in output as a consequence of changes in scale forms the subject matter of returns to scale. The

study of changes in output following a change in the scale of production results in a "law of returns to scale", "which has, obviously, to be distinguished from the law of returns to a variable input." A firm can, obviously, change its scale of operation only if a sufficiently long time is allowed. Therefore, the "law of returns to scale" forms the subject matter of long run production function. If all inputs are increased by the same proportion, thereby keeping factor proportions unaltered, there occurs an increase in scale. The percentage increase in output due to one percent increase in all inputs determines the returns to scale. Let the one-output- two-variable input production function be given by  $Q = f(L, K)$ ...(a) If, now, these inputs are exactly doubled, output may be doubled. In this case the returns to scale are said to be constant. Thus  $2Q = f(2L, 2K)$ ...(b) However, if doubling or trebling of inputs causes output to increase by more than that, then there will be increasing returns to scale. Finally, returns to scale will be said to be decreasing, when doubling of inputs results in turning out an output less than that. As we increase the scale of production initially the increase in output becomes subject to increasing returns, then constant returns and ultimately diminishing returns to scale. At the beginning, if we increase all inputs by one percentage point, output will increase by more than one percent. Here we have the stage of increasing returns to scale (IRS). Next, if the

NSOU • PGCO - II 63 rate of increase in output remains constant following a one percent increase in input then we have the stage of constant returns to scale (CRS). Ultimately, the firm experiences diminishing returns to scale (DRS) as the scale of production rises. It is to be noted that what is called CRS in economic theory, in Mathematics we call it linear homogeneous production function or homogeneous production function of degree one. This at once suggests that "linearly homogeneous" and "constant returns to scale" are two interchangeable terms. For an easy understanding of the relation between stages of returns to scale and change in output we have used the following figure Fig. 3.3 Stages of Returns to Scale

3.6 Isoquant or Isoproduct Curve : Two-Variable Inputs We have so far concentrated our attention on only one variable input, namely labour. We say, now, that to produce a commodity we are in need of two inputs (that is, two- variable inputs). Moreover, we assume that these two inputs are substitutable throughout the production process. We can represent these two substitutable input production function in a diagram and get a curve called isoproduct curve or equal product curve or production indifference curve or an isoquant, which is similar to an indifference curve in the theory of consumer behaviour (made quite popular by Nobel Laureate Economist Professor J. R. Hicks 64 NSOU • PGCO - II and R. G. D. Allen). We may mention here that modern economists analyse the theory of production in terms of an isoquant. Let our production function be :  $P = f(L, K)$ . We assume that this production function is continuous and differentiable. Besides, the two factors are substitutable : we can employ more of one factor and less of the other to get the same amount of output. The various combinations of L and K that can produce a given level of output, when plotted on a graph paper, give us an equal product curve or an isoquant [We are to note that the

**76% MATCHING BLOCK 59/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Greek word 'iso' means 'equal' or 'same']. Therefore, an isoquant is a curve along which

output is same. Supposing that the output level is constant at  $Q_0$ , the equation of the isoquant will be given by  $Q_0 = f(L, K)$ ,  $Q_0$  being the fixed amount of output to be produced. For one possible level of output we get one isoquant. A higher level of output is indicated by a higher isoquant while a lower output level is indicated by a lower isoquant. This is a smooth isoquant which assumes continuous substitutability between labour and capital. In figure 3.4 capital has been measured along the vertical axis while labour is measured along the horizontal axis. We have drawn an isoproduct curve represented by a curve  $IQ_{100}$ . Point A, for example, on  $IQ_{100}$  represents just one possible combination of labour and capital that can be utilized for producing 100 units of output. Point B is another possible combination of labour and capital to produce the same level of output. However, at point B, more labour and less capital have been used. Points C, D and E have similar meanings. By joining these points by a continuous curve we get an isoquant. It is to be remembered that each and every point on an isoquant represents the same level of output. Therefore, an isoquant represents various combinations of two inputs, namely labour and capital that yield the same level of output. Fig. 3.4 : Isoquant

**50% MATCHING BLOCK 60/204**

**SA** Managerial\_Economics.pdf (D143729469)

An isoquant is a contour line showing different combinations of inputs that are physically capable of producing a given amount of output.

A family of isoquant is called an isoquant map. Higher-order isoquant represents higher level of output. By utilising more labour and more capital, a firm can produce larger output. For example, I Q 150 lies above I Q 100. An isoquant is analogous to an "indifference curve" having two points of distinction : (a) An indifference curve is made of two consumer goods whereas an isoquant is constructed by using two producer goods, namely labour (L) and capital (K) and (b) an indifference curve measures "Utility" not measurable, while an isoquant measures "output" which is always measurable.

3.6.1 Properties of an Isoquant Like an indifference curve in the theory of consumer behaviour, an isoquant has the following properties : (i) An isoquant normally slopes downward from left to right. Or, an isoquant has a negative slope. (ii) Isoquants are convex to the origin. (iii) No two isoquants have a common point. That means, isoquants cannot intersect or be tangent to each other. (iv) Higher isoquants represent higher level of output. Let us prove these properties in the simple possible manner : An isoquant is negatively sloped : If we move along an isoquant the amount of one input should increase while that of another must decrease. If both labour and capital yield positive marginal products, then increasing the number of labour while holding the number of capital constant, will enhance output. Therefore, if we want to maintain a constant amount of output when the quantity of labour (or capital) gets increased, the amount of capital (or labour) must decrease. This naturally implies a negatively sloped isoquant. An isoquant is convex to the origin : In course of our analysis of isoquant we assume that the two inputs which are needed for producing a given level of output are substitutes, of course, not perfect substitutes. Therefore, by virtue of the assumption of the diminishing "marginal rate of technical substitution between labour and capital" (MRTS K for L/MRTS L for K) an isoquant is convex to the origin.

66 NSOU • PGCO - II No two isoquants have a common point : Proof : If two isoquants intersect or touch each other, we will encounter an absurd result. In Fig 3.5 we have drawn two intersecting isoquants that have cut each other at point C. In such a case we shall show that this will lead to an absurd result. In the diagram (Fig. 3.5), points C and A lie on IQ 1 . As points C and A lie on IQ 1 , we can produce the same amount of output at both these points. In the same way we can produce the same amount of output at both points C and B. Thus, along points C and A we have  $OK_1$  amount of capital +  $OL_1$  amount of labour =  $OK_2$  amount of capital +  $OL_2$  amount of labour. Similarly,  $OK_1$  amount of capital +  $OL_1$  amount of labour =  $OK_2$  amount of capital +  $OL_3$  amount of labour. Equating the R.H.S. of the above two expressions, we get  $OL_2$  amount of labour =  $OL_3$  amount of labour. However, this is impossible. Hence we can say that two isoquants can not intersect each other.

3.6.2 Isocost Line Another important concept in the theory of production is Isocost line or equal cost line which represents the prices of two factors of production, namely labour and capital. Naturally, the cost of production is the sum of all costs on purchasing inputs (here labour and capital) required to produce some amount of output. Such cost information can be obtained from the isocost line similar to the budget line discussed in the context of demand analysis. An isocost line expresses different combinations of two inputs, namely labour and capital that can be purchased from a given amount of money. We assume that a typical firm uses two inputs, namely labour (L) and capital (K) whose respective prices are wage (W) and rate of interest (r). If 'C' represents the total cost of production for employing various units of L and K, then the equation of the isocost line will be  $C = W.L. + r.K$ . Fig. 3.5 : Labour

NSOU • PGCO - II 67 We suppose that the firm decides to purchase input K only. Then  $C - W.L. = r.K$  so that  $K = \frac{C - W.L.}{r}$ . From the above expression we note that with given amount of money at the disposal of the firm,  $\frac{C}{r}$  will be the maximum amount of capital that can be bought and utilised by the firm. This means that

**78% MATCHING BLOCK 61/204**

**SA** Managerial Economics.pdf (D143428574)

$\frac{C}{r}$  is the ordinate intercept of the isocost line. Also,  $\frac{C}{W}$  is

the slope of the line or price-ratio of the two inputs and this slope is negative. In the same way if the entire amount is spent on purchasing labour only, then the firm can purchase maximum amount of labour, i.e.,  $C/W$ . Solving for L we get  $L = C/r$ . Measuring labour on the horizontal axis we note that  $C/W$  will indicate the horizontal intercept. Measuring all the necessary information on a graph paper we get the isocost line AB shown in the annexed figure 3.6. In terms of the isocost line AB, point B is nothing but  $C/W$ , that is, the horizontal intercept. In the same way, point A is nothing but  $C/r$ , that is, the vertical intercept. A firm, however, goes on purchasing both the inputs, namely labour and capital. However, between points A and B, there are many purchasable combinations of capital and labour. If all these purchasable combinations of inputs are joined together, we will get the isocost line, AB. Therefore, an isocost line represents alternative combinations of capital and labour that may be collected with a given money expenditure. An increase in monetary expenditure will cause the isocost line to shift to the upward direction. However, there will be an inward shift of the isocost line if there is a decline in monetary outlay. Fig. 3.6 : ISO Cost Line Labour Capital

68 NSOU • PGCO - II The slope of the isocost line is  $-OA/OB = C/r - W = -W/r$ . In fine, we may say that if there is a parallel shift of the isocost line following a change in total expenditure, the slope of the equal cost line will remain the same. But, a change in the relative input prices will lead to a change in the slope of this line.

3.7 Equilibrium of a firm : Least-Cost Combination of Inputs Now, we are interested in studying the optimal combination of two inputs to be used by the firm. To put it in another way : how should a firm choose the correct or optimal combination of the two inputs? We know that the primary objective of a firm is

**83%**

**MATCHING BLOCK 62/204**

**SA**

Principles of Economics book new.doc (D112051420)

to maximise profit which is the difference between total revenue (TR) and total cost (TC).

Since revenue is reaped through markets, it is better not to talk about that at this moment. So we are to think of how through total cost, profit can be maximized. One possible way is to make the total cost as minimum as possible. There are two alternative ways to perform this job : (a) The firm can maximise output subject to a given cost or (b) The firm can minimise cost subject to a given output. It is to be remembered here that a firm cannot achieve the situation of maximum output and minimum cost simultaneously. Maximum output can be attained only at a given cost or, minimisation of cost situation will emerge at a given output level. So we are to consider both these two situations separately. Situation 1 : Output maximisation subject to a cost constraint. Let us suppose that the firm decides on a given cost level  $C_0$ . With this cost, the firm can purchase various combinations of the said two factors of production. As told earlier, all these combinations will lie on the iso-cost line,  $C_0$ . The objective of the firm is to maximise the level of output while remaining on this given iso-cost line. Fig 3.7. has demonstrated this picture. We assume that the firm remains on the iso-cost line AB. Naturally, the firm can purchase any combination of the two inputs labour and capital lying on the line AB, because all of them are equally expensive. However, by moving from P 2 to P 1 the firm can increase the level of output as P 1 is on a higher isoquant compared to P 2. In the same way, by moving from P 1 to P, the firm will be able to enhance the level of output further. We see that P is the point of tangency between an isoquant and the iso-cost line. Further, at P the highest possible level of output can be achieved. We are to note that the movement from NSOU • PGCO - II 69 P to P 3 is not, at all economic as we move from a higher isoquant to a lower one. As a rational producer the basic objective of the firm is to maximise output subject to the cost constraint. Geometrically, this means that the firm tries to attain the highest possible isoquant while remaining on the given iso-cost line. This can be achieved when one of the isoquants (here  $q_2$ ) becomes tangent to the given iso-cost line. The necessary condition for the maximisation of output is that the iso-cost line must be tangent to one of the isoquants. That is, the slope of the isoquant must equal the slope of the iso-cost line. We have already seen that

**52%**

**MATCHING BLOCK 65/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

the slope of the isocost line is  $-W/r$ . The slope of the isoquant equals the negative of the

ratio of marginal productivities, i.e.,  $1/2 \cdot q/x \cdot q/x \cdot \partial \partial - \partial \partial$ . Hence, the necessary condition for maximisation of output subject to a cost constraint is :  $1/2 \cdot q/x \cdot q/x \cdot \partial \partial - \partial \partial = W/r$ . That is,  $MRTS_{KL} = L/K \cdot MP_{MP} = W/r$ . That is,

**58%**

**MATCHING BLOCK 63/204**

**W**

the ratio of marginal productivities of two factors of production must equal the ratio of factor prices.

This condition is known as the necessary condition or, mathematically, the first order condition. The above condition can also be written as  $\frac{1}{q} \times \frac{W}{\partial \theta} = \frac{2}{q} \times \frac{r}{\partial \theta}$ . Fig. 3.7 Labour Capital

70 NSOU • PGCO - II Here,  $\frac{1}{q} \times \frac{W}{\partial \theta}$  is the amount of output that can be obtained by spending one unit of money in purchasing the factor L. In the same way,  $\frac{2}{q} \times \frac{r}{\partial \theta}$  is the amount of output that can be obtained by spending one unit of money in purchasing the factor K. As they are equal, we may say that the firm gets the same amount of output by spending one unit of money either on L or on K. Besides, there is another condition known as the sufficient condition or, mathematically, the second order condition which, in plain language, means

**89%**

**MATCHING BLOCK 64/204**

**W**

that the isoquant must be convex to the origin at the point of equilibrium.

This condition is, again, fulfilled at point P in diagram 3.7. Situation 2 : Cost minimisation subject to an output constraint : An alternative to maximising output for a given cost constraint is minimisation of cost subject to a stipulated level of output, say  $q_0$ . Under this least cost combination condition, a firm faces more than one isocost line and only one isoquant to represent the stipulated volume of output,  $q_0$ . We know that the same level of output can be produced by various combinations of the said two factors of production. The locus of all such combinations is an isoquant representing the output level  $q_0$ . As per the objective of the firm, the firm will, always, remain on this isoquant. The problem of the firm is to select a point on this isoquant which is least costly. This problem can be explained and solved with the help of the figure 3.8. Under this least cost combination condition, the firm faces more than one iso-cost line and only one isoquant  $q_0$  to represent the stipulated volume of output. From the diagram it is clear that the firm can produce  $q_0$  amount of output staying at any point such as P 2, P 1, P 3 and P 4 each lying on the isoquant. However, the cost level at P 1 is less than that at P 2. Here P is the point on the lowest possible iso-cost line. When we move from P 2 to P 1 we substitute labour for capital, such a substitution is profitable as total cost gets reduced as a result of this substitution. However, once we reach the point P no further substitution is profitable since total cost increases as we move to the right of P. Therefore, only at point P, the cost of producing the output level  $q_0$  is minimum.

NSOU • PGCO - II 71 Geometrically, the principle of cost minimisation requires that the firm under consideration tries to reach the lowest possible iso-cost line while remaining on the given isoquant. For this the necessary condition is that the isoquant will be tangent to one of the iso-cost lines. That means, when the slope of the iso-quant and that of the iso-cost line are identical, that is,  $\frac{q}{L} \frac{\partial \theta}{\partial \theta} = \frac{W}{r}$ . That is, the ratio of marginal productivities = Ratio of factor prices. In addition to the fulfilment of the necessary or first order condition for equilibrium, we need another condition known as the sufficient condition or the second order condition which states that the isoquant must be convex to the origin. Thus point P is the equilibrium point. 3.8 Expansion Path A highly relevant concept in the theory of production is the "expansion path" which is defined to be the locus of all input combinations for which the marginal rate of technical substitution equals the factor price ratio. If there are two factors of production and if their prices are constants, we will get a number of parallel iso-cost lines. Each of these iso-cost lines will be tangent to one of the isoquants. The locus of all these points of tangency between isoquants and parallel iso-cost lines is the expansion path of the firm concerned. Needless to say, the points on the expansion path are the most efficient combinations of the two factors of production needed for producing a commodity. The Fig. 3.8 Capital Labour

72 NSOU • PGCO - II expansion path is also known as the scale-line because it shows how an entrepreneur will change the quantities of the two factors when it goes on increasing the level of output. Since an expansion path represents the minimum cost combinations for various levels of output, it shows the cheapest way of producing each level of output, given the relative prices of the two factors. Along an expansion path, the cost of production increases, though the input prices remain the same. Thus there will be an output effect along an expansion path. The expansion path will be upward rising if both factors of production are non-inferior. A firm desirous of producing more output will employ more of both the factors. The first order condition of cost minimisation gives the equation of the expansion path which is  $L K MP MP = L K P P$  or,  $1 2 f f = W r$ . For expanding its level of output, the firm will select only those combinations of the two inputs which lie only on the expansion path. The expansion path will be upward rising if both the factors are non-inferior. However, it may be backward bending or downward sloping after some point if one of the factors becomes inferior. It is worth mentioning that the

expansion path of a linear homogeneous production function is a straight line through the origin.			

The Cobb-Douglas production function is a linear homogeneous production function. We shall see later that for this production function

<b>100%</b>	<b>MATCHING BLOCK 68/204</b>	<b>W</b>	
the expansion path is a straight line through the origin. 3.9			

Elasticity of Substitution A very important concept in connection with production function is "Elasticity of Substitution". We know that an isoquant represents a fixed amount of product for various levels of factors used in the production and its slope represents

<b>96%</b>	<b>MATCHING BLOCK 69/204</b>	<b>SA</b>	BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)
the marginal rate of technical substitution between the factors. The slope of the			

isoquant after a particular point (when the marginal product of the factor on the relevant axis becomes zero) becomes positive which, in turn, means that the substitution between the factors is no more possible. In other words, we may say that the slope or the curvature of the isoquant reflects the complementarity and substitutability between the two factors of production. Every firm is interested in knowing the extent of substitutability between the factors of production in order to maximise output or minimise cost looking at the prices which the factors demand in the market. The measure of substitution between the factors is known as the NSOU • PGCO - II 73 elasticity of technical substitution. This is a pure number and it measures the extent to which the substitution between the factors can take place. Since the substitution depends mainly on the slope of the isoquant (or RTS),

<b>66%</b>	<b>MATCHING BLOCK 67/204</b>	<b>W</b>	
elasticity of substitution is defined as the proportionate change in the ratio between the factors due to the proportional change in			

RTS. Thus elasticity of substitution,  $\sigma$ , is defined as Symbolically, elasticity of substitution between the two factors, say, labour (L) and capital (K) will be  $\sigma = \frac{L}{K} \frac{d \log L}{d \log \frac{L}{K}} = \frac{L}{K} \frac{d \log L}{d \log L - d \log K} = \frac{L}{K} \frac{1}{1 - \frac{d \log L}{d \log K}}$ . The followings are the uses of the elasticity of substitution : 1. The magnitude of  $\sigma$  is an indication of the extent with which the same amount of product can be maintained by substituting one factor for another. 2. The higher the value of  $\sigma$ , the higher is the degree of substitutability between the factors. 3. The value of  $\sigma$  can vary between 0 and  $\infty$ . 4. As  $\sigma \rightarrow \infty$ , the shape of the isoquant tends to be flatter. 5. As  $\sigma \rightarrow 0$ , the shape of the isoquant tends to be such as makes an angle of  $90^\circ$ . 6. When  $\sigma = \infty$ , the two factors are perfect substitutes and if  $\sigma = 0$ , the two factors are incapable of substitution.

3.10 Linearly Homogeneous Production Function Production functions homogeneous of the first degree are commonly referred to as linearly (or linear) homogeneous production functions. In such a case the production function itself need not be linear at all. This may be illustrated with an example. Proportionate Change in the ratio between the factors Proportionate change in the rate of technical substitution (RTS) .

74 NSOU • PGCO - II Let  $f(x, y) = \frac{1}{3} x y^2 + \frac{2}{3} x^2 y$  and it is definitely not a linear function. But  $f(Kx, Ky) = (\frac{1}{3})(Kx)(Ky)^2 + (\frac{2}{3})(Kx)^2(Ky) = \frac{1}{3} K^3 x y^2 + \frac{2}{3} K^3 x^2 y = K^3 (\frac{1}{3} x y^2 + \frac{2}{3} x^2 y) = K^3 f(x, y)$ . This shows that the above production function is linearly homogeneous. Linearly homogeneous production functions are widely used in economic literature. They are not only mathematically simple but also possess some important properties : 1. The function obeys constant returns to scale (CRS). Thus, for any value of C,  $f(CL, CK) = C f(L, K)$  by the definition of linear homogeneity. This implies that a proportionate change in all inputs results in an equal proportionate change in output and this is what is meant by CRS. 2. The average product (of either input) depends upon the capital labour (K/L) ratio alone and is independent of the absolute amounts of inputs used. Proof : From  $Q = f(L, K)$  we may write  $Q = L f(\frac{K}{L})$  where  $f(\frac{K}{L}) = \frac{1}{L} f(L, K)$ . Now,  $AP_L = \frac{Q}{L} = f(\frac{K}{L})$ . This means that the  $AP_L$  depends only on K/L ratio. Similarly,  $AP_K = \frac{Q}{K} = \frac{L}{K} f(\frac{K}{L}) = \frac{L}{K} f(\frac{K}{L})$ , revealing that the  $AP_K$  will also depend on the K/L ratio. 3. The marginal product (of either input) is the function of capital/labour ratio only. Proof : We have seen that  $Q = L f(\frac{K}{L})$  so that  $Q = L \phi(\frac{K}{L})$ .

NSOU • PGCO - II 75 Differentiating partially  $Q = L \phi(\frac{K}{L})$  with respect to L we get  $Q_L = \phi(\frac{K}{L}) - \frac{K}{L} \phi'(\frac{K}{L})$ . Thus  $MP_L = Q_L$  will depend upon the K/L ratio. In the same way,  $MP_K = Q_K = \frac{L}{K} \phi'(\frac{K}{L})$ . Therefore,  $MP_K$  also depends upon the input ratio alone. 4. The Euler's theorem for homogeneous function holds good. This means that for this production function  $Q = L \phi(\frac{K}{L})$   $Q_L L + Q_K K = \partial Q$ . Proof :  $Q_L L + Q_K K = (\phi(\frac{K}{L}) - \frac{K}{L} \phi'(\frac{K}{L})) L + \frac{L}{K} \phi'(\frac{K}{L}) K = L \phi(\frac{K}{L}) - K \phi'(\frac{K}{L}) + L \phi'(\frac{K}{L}) = L \phi(\frac{K}{L}) = Q$ . Mathematically, Euler's theorem states that the value of a linearly homogeneous function can be shown as the sum of the terms, each of which shows the product of the value of a variable and the partial derivative of the function with respect to the same variable. Economically, the theorem states that total product is the sum of the quantities of each input multiplied by their respective marginal products. That means, if every factor is

paid according to its marginal product, total product will be fully exhausted. This is

<b>75%</b>	<b>MATCHING BLOCK 70/204</b>	<b>SA</b>	18 SLM Farhaqn Ahmad Assistant Prof Distance E ... (D143003267)
paid according to its marginal product, total product will be fully exhausted. This is			

also known as the product exhaustion theorem. 3.11 The Cobb-Douglas Production Function Probably the best known production function in Economics is the Cobb-Douglas production function which had been so named after the pioneering study in which Douglas fitted a function suggested by Cobb for the U. S. data. This function takes the form :  $Q = A L^\alpha K^\beta$  where Q is the amount of output produced, L and K are labour and capital inputs respectively, A is a positive constant,  $\alpha$  and  $\beta$  are positive fractions. It is a very popular function and it has the following properties : 1. The function is non-linear. However, it is log linear because with the help of logarithmic transformation it can be written as  $\log Q = \log A + \alpha \log L + \beta \log K$ . Since it is log linear, it is very simple to handle. 2. The function is very often written in the form  $Q = A L^\alpha K^{1-\alpha}$ . In this special case where  $\alpha + \beta = 1$ , the function shows CRS. Proof : From  $Q = A L^\alpha K^{1-\alpha}$ , we have

NSOU • PGCO - II 77 = A (CL) α (CK) 1-α = A C α L α C 1-α K 1-α = A C L α K 1-α = C A L α K 1-α = CQ. It is not necessary that α + β = 1 in the Cobb-Douglas production function. If the function is homogeneous of degree one, the CRS will prevail. If it is of degree less than one, decreasing returns to scale prevails. Similarly, if it is of degree greater than one, there are increasing returns to scale. 3. The function yields diminishing returns to each input. Proof : From Q = A L α K β we get MP L = Q L ∂ ∂ = A α L α-1 K β . Also, ∂ ∂ Q L ∂ ∂ = A α (α - 1) L α-2 K β < 0. Since α is a positive fraction, (α - 1) is negative. This means that the rate of change in the marginal product of input L is negative, implying that MP L declines. Similarly, MP K = Q K ∂ ∂ = β A L α K β-1 = A β L α K β-1 . Also, ∂ ∂ Q K ∂ ∂ = A β L α (β - 1) K β-2 < 0. This suggests that MP K also declines. 4. α and β show the output elasticity of inputs L and K respectively. Proof : The output

**45% MATCHING BLOCK 73/204**

**SA** 18 SLM Farhaqn Ahmad Assistant Prof Distance E ... (D143003267)

elasticity of an input is defined as the ratio of the proportionate change in the output resulting from the proportionate change in the

input.

78 NSOU • PGCO - II Thus, e Q, L = Q L Q L ∂ ∂ = L Q L Q ∂ ∂ × ∂ = L Q L · Q ∂ ∂ = α A L α-1 K β × L A L K α β = α. In the same way, e Q, K = Q K Q K ∂ ∂ = Q K · K Q ∂ ∂ = β A L α K β-1 × K A L K α β = β. 5. α and β show the relative distributive shares of inputs L and K respectively. Proof : The relative distributive share of input L is given by L L MP Q × = Q L Q L ∂ ∂ × ∂ = L A L K A L K α-1 β α β = α . Therefore, the relative distributive share of input L is α. Similarly, the relative distributive share of input K is β. Since K MP K Q × = K A L K A L K α β-1 α β β = β . 6. Labour and capital are essential factors of production, that is, if either input is zero, output will also be zero. 7. The expansion path of the Cobb-Douglas production function is linear and it passes through the origin. Proof : The Cobb-Douglas production function is Q = A L α K β . Thus, log Q = log A + α log L + β log K. Differentiating, partially, with respect to L and K we get

NSOU • PGCO - II 79 1 P · P L ∂ ∂ = L α and 1 P P K ∂ ∂ = β K . Now, MP L = P L ∂ ∂ = α P L and MP K = P K ∂ ∂ = β P K . The first order condition for the optimization requires that L K MP MP = L K P P . That is, P L P K α β = L K P P That is, K · L α β = L K P P . That is, α K P K = β L P L . That is, α K P K - β L P L = 0. That means, the expansion path generated by the Cobb-Douglas production function is linear and it passes through the origin. 8. For this production function the elasticity of substitution is unity. Proof : We know that the elasticity of substitution is σ = Percentage change in factor quantity ratio / Percentage change in marginal productivity ratio . = L K K d log L MP d log MP ( ) | ( ) ( ) | ( ) = L K L K MP K d d MP L K MP L MP ( ) | ( ) ( ) | ( )

80 NSOU • PGCO - II For this production function L K MP MP = 1 1 A L K A L K α- β α β- α β = K · L α β . Thus, L K MP d MP ( ) | ( ) = K d L α ( ) | | β ( ) . Hence, σ = K K d d L L K K · L L α ( ) ( ) | | | β ( ) ( ) α β = K K d L L · K K d L L α ( ) ( ) | | | β ( ) ( ) α ( ) | | β ( ) = 1. This also means that if the production function is linear and homogeneous then the elasticity of substitution between the factors (say, labour and capital) will be one. 9. The Cobb-Douglas production function gives an example which exhibits constant returns to scale but at the same time there are diminishing returns to each factor of production.

3.11.1 Limitations of The Cobb-Douglas Production Function Although the Cobb-Douglas production function has a wide use and scope in the field of Economics and its use is constantly increasing in different sectors of agriculture and manufacturing industry, it has been criticized by different economists. The main critics of this function are K. J. Arrow, H. B. Chenery, B. S. Minhas and R. M. Solow. The followings are the main criticisms : 1. The main drawback of this production function is that it contains only two inputs i.e., Labour and capital. But, in reality, other factors are equally important in the production techniques. So this function is inapplicable for multiple inputs. 2. The production function operates under constant returns to scale. The law of increasing

NSOU • PGCO - II 81 and decreasing returns to scale are also operating in the production process. However, this function is not applicable in these situations. 3. The function assumes that technological knowledge remains constant or there is no technological change in the production process. But the production scale can also change with the change in technology. Thus stagnant technology assumption of the function is unrealistic. 4. This function assumes that all inputs are homogeneous. In fact, all units of a factor are not equally efficient. For example, in the labour population some labourers are efficient while others may not be. 5. In the function, the parameters  $\alpha$  and  $\beta$  represent the shares of labour and capital in total production respectively. It is only true when there is perfect competition in the market. But if there is imperfect competition or monopoly in the economy, the above relationship does not hold good. 6. The function does not give any information regarding inter-connection or relations between the production factors, thus it ignores the possibility of the negative marginal productivity of a factor. 7. Since it has considered only the positive marginal productivity of factors, it ignores the possibility of the negative marginal productivity of a factor.

3.12 The Constant Elasticity of Substitution Production Function [CES Production Function] A more general type of production function having constant elasticity of substitution (not necessarily equal to one) is the CES production function having the form  $q = A[\alpha x_1^{-\rho} + (1 - \alpha)x_2^{-\rho}]^{-1/\rho}$ , where  $A > 0$ ,  $\alpha > 0$ ,  $\rho > -1$ ,  $\rho$  is the parameter. From this production function we can find out the marginal productivity of two inputs  $x_1$  and  $x_2$ . Marginal productivity of  $x_1$ ,

$$MP_{x_1} = \frac{\partial q}{\partial x_1} = \frac{1}{\rho} A \alpha^{-\rho} x_1^{-\rho-1} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} = \frac{1}{\rho} A \alpha^{-\rho} x_1^{-\rho-1} q^{-\rho} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} \dots (1)$$

Again, the marginal product of input  $x_2$  is  $MP_{x_2} = \frac{\partial q}{\partial x_2} = \frac{1}{\rho} A (1-\alpha)^{-\rho} x_2^{-\rho-1} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} = \frac{1}{\rho} A (1-\alpha)^{-\rho} x_2^{-\rho-1} q^{-\rho} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} \dots (2)$

NSOU • PGCO - II 83 =  $\frac{1}{\rho} A \alpha^{-\rho} x_1^{-\rho-1} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} = \frac{1}{\rho} A \alpha^{-\rho} x_1^{-\rho-1} q^{-\rho} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} = \frac{1}{\rho} A \alpha^{-\rho} x_1^{-\rho-1} q^{-\rho} [\alpha x_1^{-\rho} + (1-\alpha)x_2^{-\rho}]^{-1/\rho-1} \dots (1)$

84 NSOU • PGCO - II That is,  $\sigma + \rho\sigma = 1$ . That is,  $\rho\sigma = 1 - \sigma$  whence  $\rho = \frac{1-\sigma}{\sigma}$ . This reveals that the parameter  $\rho$  of the CES production function is closely related with the elasticity of substitution. For the CES production function  $RTS = \frac{MP_{x_2}}{MP_{x_1}} = \frac{(1-\alpha)^{-\rho} x_2^{-\rho-1}}{\alpha^{-\rho} x_1^{-\rho-1}} = \frac{(1-\alpha)^{-\rho} x_2^{-\rho-1}}{\alpha^{-\rho} x_1^{-\rho-1}} \dots (1)$  and  $RTS$  will be decreasing if  $\rho < -1$ . Again, when  $\rho > -1$ ,  $\sigma > 0$ . The isoquants generated from the CES production function will be downward sloping and convex. However, the particular shape will depend upon the value of  $\rho$ .

3.12.1 Few Limiting Cases of this Production Function Some limiting cases of the above production function can now easily be pointed out : 1. If  $\sigma \rightarrow 1$  and  $\rho \rightarrow 0$  the CES production function is reduced to the Cobb-Douglas production function. 2. However, as  $\rho \rightarrow \infty$ ,  $\sigma \rightarrow 0$ ; the  $RTS$  approaches zero if  $x_1 < x_2$  or approaches  $\infty$  if  $x_1 > x_2$ . In such a case no substitution is possible and the isoquants become L-shaped. Such a case happens with a production function having fixed coefficients. 3. If  $\sigma < 1$ , that is if  $-1 < \rho < 0$  the isoquants will be convex to the origin and will cut both the axes. On the other hand, if  $\sigma > 1$ , that is, if  $\rho < -1$ , the isoquants are convex to the origin. However, in this case instead of cutting the two axes the isoquants will be asymptotic to both the axes. 4. If  $\sigma = 1$ , that is, if  $\rho = 0$ , the isoquants become straight lines and inputs are perfect substitutes of each other. 5. All these results show that the CES production function is a completely general type of production function from which isoquants of different shapes can be derived as special cases.

3.12.2 Some Problems and their Solutions 1. Suppose the production function of an imaginary firm is given by  $Q = x_1 x_2 - 0.2x_1^2 - 0.8x_2^2$ . Assume  $x_2 = 10$ , determine the equations of the AP curve and of the MP curve

NSOU • PGCO - II 85 of  $x_1$ . Find at what values of  $x_1$  will AP and MP be zero. Solution : Putting the value of  $x_2 = 10$ , the given production function becomes  $Q = 10x_1 - 0.2x_1^2 - 80$ . Now, AP of  $x_1 = AP_1 = \frac{1}{x_1} \frac{dQ}{dx_1} = 10 - 0.4x_1$  and MP of  $x_1$  will be  $MP_1 = \frac{1}{x_1} \frac{dQ}{dx_1} = 10 - 0.4x_1$ . When  $AP_1 = 0$ ,  $10 - 0.4x_1 = 0$ . That is,  $10x_1 - 0.2x_1^2 - 80 = 0$ . That is,  $2x_1^2 - 10x_1 + 80 = 0$ . That is,  $2x_1^2 - 100x_1 + 800 = 0$ . That is,  $x_1^2 - 50x_1 + 400 = 0$ . That is,  $(x_1 - 10)(x_1 - 40) = 0$ . Thus when  $x_1 = 10$  and  $40$ ,  $AP_1$  will be zero. When  $MP_1 = 0$ ,  $10 - 0.4x_1 = 0$ . That is,  $x_1 = 10 \div 0.4 = 25$ .

2. Given the production function  $Q = 12x_1x_2$  and prices per unit of  $x_1$  and  $x_2$  Rs.2/- and Rs.4/- respectively and total cost of output Rs. 80, obtain the maximum output subject to the cost constraint. Solution : The theoretical expression of the cost function is given by  $r_1x_1 + r_2x_2 = c$ . Hence, here the equation of the cost line is  $2x_1 + 4x_2 = 80$ . That is, the slope of the isocost line is  $\frac{1}{2} \frac{r_2}{r_1} = \frac{2}{4} = \frac{1}{2}$ . From the given production function  $Q = 12x_1x_2$ , We get  $f_1 = \frac{1}{x_1} \frac{dQ}{dx_1} = 12x_2$

86 NSOU • PGCO - II Also,  $f_2 = \frac{1}{x_2} \frac{dQ}{dx_2} = 12x_1$ . That is, the slope of the isoquant is  $\frac{1}{12} \frac{f_1}{f_2} = \frac{1}{12} \frac{12x_2}{12x_1} = \frac{x_2}{x_1}$ . The necessary condition for maximisation of output is  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . That is,  $12x_2 = 12x_1$ . For the maximisation of output the necessary condition is  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . That is,  $2x_1 = x_2$ . Putting  $x_1 = 2x_2$  in the cost equation we get  $2(2x_2) + 4x_2 = 80$ . That is,  $x_2 = 10$  and  $x_1 = 20$ . Let us put the above values of  $x_1$  and  $x_2$  so that we get  $Q = 12 \times 20 \times 10 = 2400$  units (approx). Thus, the maximum producible output is 14 units. 3. Obtain the equation of the expansion path when the production function is of the form  $Q = 8x_1^{1/2}x_2^{1/2}$ . Solution : From the given production function

NSOU • PGCO - II 87  $Q = 8x_1^{1/2}x_2^{1/2}$  we get  $f_1 = \frac{1}{x_1} \frac{dQ}{dx_1} = 4x_1^{-1/2}x_2^{1/2}$  and  $f_2 = \frac{1}{x_2} \frac{dQ}{dx_2} = 4x_1^{1/2}x_2^{-1/2}$ . Hence,  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . Moreover,  $\frac{1}{x_1} \frac{dQ}{dx_1} = 15$ . The equation of the expansion path is given by the relation  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . That means,  $4x_1^{-1/2}x_2^{1/2} = 4x_1^{1/2}x_2^{-1/2}$ . That is,  $x_1 = x_2$ . That is,  $x_1 - x_2 = 0$ . Therefore, the equation of the expansion path is given by  $x_1 - x_2 = 0$ . 4. Suppose the production function is given by  $Q = 2A^{1/2}x_1^{1/2}x_2^{3/2}$ , show that the expansion path is given by  $2r_1x_1 = r_2x_2$ , where  $r_1$  and  $r_2$  are the unit prices of  $x_1$  and  $x_2$  respectively. Solution : From  $Q = 2A^{1/2}x_1^{1/2}x_2^{3/2}$ , we get

88 NSOU • PGCO - II  $f_1 = \frac{1}{x_1} \frac{dQ}{dx_1} = A^{1/2}x_1^{-1/2}x_2^{3/2}$ . Also,  $f_2 = \frac{1}{x_2} \frac{dQ}{dx_2} = 3A^{1/2}x_1^{1/2}x_2^{1/2}$ . Hence,  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . The equation of an expansion path is given by  $\frac{1}{x_1} \frac{dQ}{dx_1} = \frac{1}{x_2} \frac{dQ}{dx_2}$ . That is,  $2r_1x_1 = r_2x_2$  or,  $r_1x_1 - r_2x_2 = 0$  Ans. 5. Assume the production function of a commodity is given as  $Q = K^2 - 3KL + 4L^2$ . Obtain the maximum amount of capital that can be employed when 7 units of labour are employed. Solution : For the employment of 7 units of labour the production function becomes  $Q = K^2 - 21K - 4 \times 49$ . Let us now find the marginal productivity of capital. That is,  $MP_K = \frac{dQ}{dK} = 2K - 21$ . The maximum amount of capital that is to be employed is equal to that unit where the marginal productivity of capital is zero. That is,  $\frac{dQ}{dK} = 0$ . That is,  $2K - 21 = 0$ . That is,  $K = \frac{21}{2} = 10.5$  units. That means, 10.5 units of capital are to be employed. 6. A short run production function is given as  $Q = 10L + 15L^2 - L^3$ ,  $Q$  is output,  $L$  is labour employed per unit of time. (i) Derive  $MP_L$  and  $AP_L$  schedules and (ii) Find the output at which  $AP_L = MP_L$ .

NSOU • PGCO - II 89 Solution : (i)  $MP_L = \frac{dQ}{dL} = 10 + 30L - 3L^2$ .  $AP_L = \frac{1}{L} \frac{dQ}{dL} = \frac{10 + 15L - L^2}{L}$ . (ii)  $AP_L = MP_L \Rightarrow \frac{10 + 15L - L^2}{L} = 10 + 30L - 3L^2$ .  $\Rightarrow 3L^2 - L^2 - 30L + 15L = 0$ .  $\Rightarrow 2L^2 - 15L = 0$ .  $\Rightarrow 2L - 15 = 0 \Rightarrow L = \frac{15}{2}$ . Thus  $Q = 10 \times \frac{15}{2} + 15 \times \left(\frac{15}{2}\right)^2 - \left(\frac{15}{2}\right)^3 = 75 + 3375 \div 4 - 3375 \div 8 = 497$  (approx) Thus the required amount of output is 497 units (approx). 7. Let the production function of a firm be given by  $Q = 8LK - L^2 - K^2$ . Find out the marginal productivity of  $L$  and  $K$ . Also show that  $Q_L \frac{dQ}{dL} + Q_K \frac{dQ}{dK} = Q$ . Solution : From  $Q = 8LK - L^2 - K^2$ , we get  $MP_L = \frac{dQ}{dL} = 8K - 2L$  and  $MP_K = \frac{dQ}{dK} = 8L - 2K$ . Now,  $Q_L \frac{dQ}{dL} + Q_K \frac{dQ}{dK} = L(8K - 2L) + K(8L - 2K) = 8LK - 2L^2 + 8KL - 2K^2 = 16LK - 2L^2 - 2K^2 = 2(8KL - L^2 - K^2) = 2Q$ . Hence proved.

**78% MATCHING BLOCK 71/204**

**W**

$$L \frac{dQ}{dL} + K \frac{dQ}{dK} = L(8K - 2L) + K(8L - 2K) = 8LK - 2L^2 + 8KL - 2K^2 = 16LK - 2L^2 - 2K^2 = 2(8KL - L^2 - K^2) = 2Q$$

$LK - 2L^2 - 2K^2 = 2(8KL - L^2 - K^2) = 2Q$ . Hence proved.

90 NSOU • PGCO - II 3.13 Some Numerical Examples on Elasticity of Substitution 1. Find the elasticity of substitution for the following production functions : (a)  $q = \alpha x_1 + (1 - \alpha)x_2$  and (b)  $q = 1/2 Ax x \alpha - \alpha$ . Solution : For (a)  $q = \alpha x_1 + (1 - \alpha)x_2$ . We have  $f_1 = 1/q \cdot \partial q / \partial x_1 = \alpha$  and  $f_2 = 2/q \cdot \partial q / \partial x_2 = 1 - \alpha$ . Naturally,  $f_1 f_2 = \alpha(1 - \alpha)$  so that  $\log f_1 f_2 = \log \alpha + \log(1 - \alpha)$ . That means,  $d \log f_1 f_2 = d \log \alpha + d \log(1 - \alpha) = d \log \alpha - d \alpha / (1 - \alpha)$ . For (b)  $q = 1/2 Ax x \alpha - \alpha$ , we have  $f_1 = 1/q \cdot \partial q / \partial x_1 = 1/2 Ax x \alpha - \alpha$ . Also,  $f_2 = 2/q \cdot \partial q / \partial x_2 = (1/2 A) x_1 x_2 \alpha - \alpha$ . That means,  $f_1 f_2 = (1/2 A) x_1 x_2 \alpha - \alpha$ . Hence,  $\log f_1 f_2 = \log(1/2 A) + \log x_1 + \log x_2 + \log \alpha - \alpha$ . Thus,  $d \log f_1 f_2 = d \log(1/2 A) + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha$ . That is,  $d \log f_1 f_2 = d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha$ . Hence,  $\sigma = 2 \cdot d \log x_1 f_1 / d \log f_1 f_2 = 2 \cdot d \log x_1 / (d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha)$ . For (b)  $q = 1/2 Ax x \alpha - \alpha$ , we have  $f_1 = 1/q \cdot \partial q / \partial x_1 = 1/2 Ax x \alpha - \alpha$ . Also,  $f_2 = 2/q \cdot \partial q / \partial x_2 = (1/2 A) x_1 x_2 \alpha - \alpha$ . That means,  $f_1 f_2 = (1/2 A) x_1 x_2 \alpha - \alpha$ . Hence,  $\log f_1 f_2 = \log(1/2 A) + \log x_1 + \log x_2 + \log \alpha - \alpha$ . Thus,  $d \log f_1 f_2 = d \log(1/2 A) + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha$ . That is,  $d \log f_1 f_2 = d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha$ . Hence,  $\sigma = 2 \cdot d \log x_1 f_1 / d \log f_1 f_2 = 2 \cdot d \log x_1 / (d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha)$ .

NSOU • PGCO - II 91 That is,  $\log 2 \cdot d \log x_1 f_1 / d \log f_1 f_2 = 2 \cdot d \log x_1 / (d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha)$ . That is,  $2 \cdot d \log x_1 f_1 / d \log f_1 f_2 = 2 \cdot d \log x_1 / (d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha)$ . Hence,  $\sigma = 2 \cdot d \log x_1 f_1 / d \log f_1 f_2 = 2 \cdot d \log x_1 / (d \log K + d \log x_1 + d \log x_2 + d \log \alpha - d \alpha)$ . 3.13.1 Some Problems and their Solutions 1. Examine the nature of returns to scale in case of the following production functions : (a)  $Q = 2K + 3L + KL$ , (b)  $Q = 20K^{0.6} L^{0.5}$  (c)  $Q = 100 + 2L + 3K$ , (d)  $Q = 5K^a L^b$ ,  $a + b = 1$  and (e)  $Q = K L$ . Solution : (a) For  $Q = 2K + 3L + KL$ , let us double the inputs K and L to get  $2(2K) + 3(2L) + 2K \cdot 2L = 4K + 6L + 4KL = 4K + 6L + 2KL + 2KL = 2(2K + 3L + KL) + 2KL = 2Q + 2KL < 2Q$ . This indicates that there are increasing returns to scale. (b)  $Q = 20K^{0.6} L^{0.5}$ . Doubling inputs K and L we get  $20(2K)^{0.6} (2L)^{0.5} = 20 \cdot 2^{0.6} K^{0.6} \cdot 2^{0.5} L^{0.5} = 20 \cdot 2^{1.1} K^{0.6} L^{0.5} = 20 \times 2.14 \times K^{0.6} L^{0.5} = 42.8 K^{0.6} L^{0.5} > 2Q$ . This implies that returns to scale are increasing. (c)  $Q = 100 + 2L + 3K$ . Doubling inputs we get,  $100 + 2(2L) + 3(2k) = 100 + 6k + 4L = 200 + 6k + 4L - 100 = 2Q - 100 > 2Q$ . This illustrates that returns to scale are decreasing. (d)  $Q = 5K^a L^b$ ,  $a + b = 1$ . Doubling the inputs we get,  $5(2K)^a (2L)^b = 5 \cdot 2^a K^a \cdot 2^b L^b = 5 \cdot 2^{a+b} K^a L^b = 2 \cdot 5 K^a L^b = 2Q$ . Therefore, returns to scale are constant. (e)  $Q = K L$ . Let us double the inputs to get  $2K \cdot 2L = 4KL = 4Q$ . Thus as a result of doubling inputs, there is no change in output implying that returns to scale are decreasing.

<b>100%</b>	<b>MATCHING BLOCK 72/204</b>	<b>W</b>
K) $0.6(2L)^{0.5} = 20 \cdot 2^{0.6} K^{0.6} \cdot 2^{0.5} L^{0.5} = 20 \cdot 2^{1.1} K^{0.6} L^{0.5} = 20 \times 2.14 \times K^{0.6} L^{0.5} = 42.8 K^{0.6} L^{0.5} < 2Q$		

Q. This implies that returns to scale are increasing. (c)  $Q = 100 + 2L + 3K$ . Doubling inputs we get,  $100 + 2(2L) + 3(2k) = 100 + 6k + 4L = 200 + 6k + 4L - 100 = 2Q - 100 > 2Q$ . This illustrates that returns to scale are decreasing. (d)  $Q = 5K^a L^b$ ,  $a + b = 1$ . Doubling the inputs we get,

92 NSOU • PGCO - II 5(2K)^a (2L)^b = 5 \cdot 2^a K^a \cdot 2^b L^b = 5 \cdot 2^{a+b} K^a L^b = 2 \cdot 5 K^a L^b = 2Q. Therefore, returns to scale are constant. (e)  $Q = K L$ . Let us double the inputs to get  $2K \cdot 2L = 4KL = 4Q$ . Thus as a result of doubling inputs, there is no change in output implying that returns to scale are decreasing. 3.14 Sample Questions A. Objective-type Questions : Choose the correct alternative (a) One empirical production function is (i)  $P = f(L, K)$ , (ii)  $P = AL^\alpha K^\beta$ , (iii)  $P = K L$ , (iv)  $P = 2K + 3L + KL$ . Ans. (ii) (b) The nature of returns to scale in case of the production function  $P = 20K^{0.6} L^{0.5}$  is : (i) Increasing, (ii) Decreasing, (iii) Constant, (iv) Cannot be ascertained. Ans. (i) (c) Suppose the production function of a firm is given by  $Q = 8LK - K^2 - L^2$ . The marginal product of L is : (i)  $8K - 2K$ , (ii)  $8K - 2L$ , (iii)  $8K - 2K - 2L$ , (iv)  $8 - 2K - 2L$ . Ans. (ii) (d) One important property of an isoquant is : (i) It is concave to the origin, (ii) It is a vertical straight line, (iii) It is a horizontal straight line, (iv) It is convex to the origin. Ans. (iv) (e) One particular isoquant indicates : (i) A fixed amount of output, (ii) The amount of output cannot be ascertained, (iii) Zero level of output, (iv) Varying level of output. Ans. (i)

96 NSOU • PGCO - II 4.2 Introduction It is a fact that

**100%**

**MATCHING BLOCK 78/204**

**SA**

Block 02 Business Economics.pdf (D143762521)

the study of business behaviour concentrates on the production process,

that is, the conversion of inputs into outputs and, obviously, the relationship between output and costs of production. In the previous chapter, that is, in chapter three, we have studied the firm's production analysis and we have dealt with how inputs are combined to produce output. In the present chapter we shall explain how cost is defined, determined and measured. In reality, however, economists use the term, 'cost' in different ways. We may say that economists are concerned with the opportunity costs whereas the accountants are interested in historical rather than opportunity cost.

**4.3 Accounting costs and Economic costs** Cost considerations play a very important role for taking any business decision. However, very often cost means different things to different people. The basic fact is that economists and accountants measure cost of production according to their individual purpose and interests. This means that there is a big difference between the very concept of cost as understood by economists and as done by the accountants. An accountant is primarily concerned with the financial statements. That is why he considers only those costs which involve direct actual cash payments of a firm. That is, accounting costs constitute prices of raw materials, wages and salaries for workers, prices of fuel and power, insurance tax etc. The accountants take into account actual expenses and costs on a historical basis. Various empirical studies of cost function go on utilising accounting data that record what has happened. Besides, it presents information which will protect various interests of people like tax collectors, creditors and stock holders. However, an economist's thought of cost is, to some extent, different from that of an accountant's view. Accounting data that record actual costs do not take into account economic data. This means that the notion of cost as understood by accountants has little relevance to decision-making. For the purpose of decision-making, economists besides considering accounting costs, also consider an additional cost, that is, opportunity cost. The opportunity cost is the cost measured in terms of the next best alternative foregone. For example, when the owner-manager of a firm spends time for someone,

NSOU • PGCO - II 97 as a rule, he does not have to pay wage. Obviously, the owner manager sacrifices this wage by doing unpaid work for himself. This foregone wage is the opportunity cost, though this wage is not an actual cash outlay. This implicit cost or the so-called opportunity cost, should be included in economic costs. Therefore, decision-making depends not only on accounting costs but also on opportunity cost. So far as the decision-making is concerned, accounting costs or accounting data will provide only little information. Historical data provide an imperfect guide for the future. Any decision-making should be concerned with future costs and revenues. It is because of this reason that the managerial economists cannot ignore future costs and also revenues for decision-making, as they consider forward-looking view of the firm. Besides, accountants and economists differ over the question of depreciation. Usually, accountants record depreciation on a time-related basis and depreciation is very often not related to actual use of various assets. So far as accounting standard is concerned, accountants use tax rules to determine depreciation which may not reflect the actual wear and tear of an asset. Economists calculate not only explicit cost for the acquisition of capital assets but also cost associated with wear and tear. Accountants' notion of depreciation is based on the original cost of plant and machinery whereas economists' notion should be based on replacement value. Economists' notion of cost is very much useful for managerial decisions as accounting costs involve several limitations.

**4.4 Short Run Cost Analysis** We know that the

**57%**

**MATCHING BLOCK 77/204**

**W**

cost function is a derived function and it has been derived from the production function. As the nature of production

in the short period is different from that of the long period, nature of cost function is different under different time periods. The short run has been defined to be that time period when the firm cannot change its fixed inputs for increasing output. It is only by varying variable inputs that a firm can change its volume of output. In the short run, therefore, total cost (TC) may be divided into two broad components : (i) Fixed cost (F.C.) and (ii) Variable Cost (V.C.). It is to be remembered that total cost encompasses all necessary expenses required to do a business.

BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Fixed Costs : Fixed costs are those costs which do not vary with

the

level of output.

These costs represent the payments made for the use of fixed factors of production.

98

NSOU • PGCO - II Some common examples of fixed costs are expenditure on advertisement, fixed plant and equipment, rent charges etc. More precisely, we may say that costs that arise due to the use of fixed inputs are termed fixed costs. Whether a firm produces or not, it will have to incur fixed costs. Therefore,

**71%**

**MATCHING BLOCK 81/204**

**SA**

BOOK---Principles of Microeconomics-1 - Lesson ...  
(D143600665)

fixed cost is independent of the level of output. Whatever the level of output (

even if it is zero), fixed costs remain unchanged. The fixed cost curve has been presented in Fig. 4 (a) where the TFC curve has been drawn parallel to the horizontal axis along which the level of output has been measured. Fig. 4(a) It is clear from the figure 4(a) that the firm incurs a fixed cost amounting to OA, whether it produces or not. That means even for zero amount of output total fixed cost is OA unit. Fixed costs are also known as supplementary costs or overhead costs. Some examples of such costs are : (i) salaries of top officials, (ii) interest on borrowed funds, (iii) expenses for municipal rent on land, (iv) depreciation of machinery etc. Variable Cost (VC) : Variable costs are those costs which change directly with the change in output. If the firm does not produce, it will not have to use variable inputs. Therefore, when nothing is produced, variable cost will be zero. However, if the firm wants to produce, it will have to increase the use of variable inputs. Naturally, more output implies employment of more variable inputs and more variable cost. Therefore, variable cost rises in response to an increase in output. Fig. 4(b) has demonstrated the graph of the variable cost. We see from the diagram that the VC curve has started from the origin revealing that when no output (or zero output) has been produced, the variable cost has become zero. As soon as output goes on increasing, VC curve starts rising. Therefore, Fixed Costs Output

NSOU • PGCO - II 99 Fig. 4(b) Fig. 4(c) the VC curve has, broadly, been an inverse S-

**100%**

**MATCHING BLOCK 80/204**

**W**

shaped because of the operation of the law of variable proportions.

Initially, as more variable inputs get employed, the average variable cost starts falling. However, afterwards, use of more variable inputs leads to a rise in average variable cost. It is because of this reason that, initially, at a low level of output VC rises more than the rise in output. Variable costs include wages of daily wage earners, cost of packaging, transport cost, cost of raw materials etc. Variable Costs → Output ↑ TC, TVC, FC ↑ → Output TC = FC + VC

100 NSOU • PGCO - II Total Cost (TC) : The sum total of fixed cost and variable cost gives rise to total cost. The TC curve has been presented in Fig. 4(c). From this figure we notice that the TC curve, in the short run, has started from the point where from the FC curve has started. This implies that when the level of output is zero, total cost covers only fixed cost. However, with the increase in the level of output, TC rises since variable costs come into operation. That is why the TC curve takes the shape of the VC curve. At any level of output, the vertical distance between TC and FC measures the VC. In this way, by vertically adding FC and VC, we get TC. 4.5 Shapes of the

**66%**

**MATCHING BLOCK 83/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Short Run Cost Curves (i) Average Fixed Cost (AFC) : Fixed cost per unit of output produced is known as average fixed cost.

So by dividing the total fixed cost by the level of

output we get AFC. In symbols,  $AFC = \frac{FC}{Q}$  where  $Q$  = quantity of output. As the level of output goes on increasing and  $FC$  remains fixed, the  $AFC$  goes on declining continuously. This is so because as the volume of fixed cost is divided by the larger and larger volume of output,  $AFC$  must be declining. Besides, the  $AFC$  is a rectangular hyperbola in the sense that all rectangles formed by  $AFC$  are of equal sizes. [Here we see that  $AFC \times Q = FC = \text{constant}$  and this is the equation of a rectangular hyperbola]. Thus the  $AFC$  curve is asymptotic to both the axes. This implies that the  $AFC$  curve touches neither the horizontal axis nor the vertical axis. Cost Rectangular Hyperbola Output  $O$   $q_1$   $q_2$   $q_3$  Fig. 4 (d) illustrates the shape of the  $AFC$  curve

NSOU • PGCO - II 101 In the diagram the [Fig. 4(d)], the  $AFC$  curve is a rectangular hyperbola where all the rectangles are of equal sizes since area of each rectangle say,  $OA'Aq_1$ ,  $OB'Bq_2$  and  $OC'Cq_3$  is equal as total fixed cost which is equal to the area of each rectangle is fixed. (ii) Average variable cost (AVC) :  $AVC$  is the variable cost per unit of output produced. The  $AVC$  has been

**76% MATCHING BLOCK 86/204**

**SA** Principal of Microeconomics.pdf (D110867814)

obtained by dividing  $TVC$  by the level of output ( $Q$ ). That is,  $AVC =$

$\frac{TVC}{Q}$ ,  $TVC$  is total variable cost and  $Q$  is the amount of output produced. If we put  $AVC$  on a graph paper, we will find that, initially,  $AVC$  will come down, will reach a minimum, and, thereafter, it will start rising. This means that the  $AVC$  curve is U-shaped. Behind this U-shapedness nature of the  $AVC$  curve lies the operation of the law of variable proportions. In short, there is a relationship between costs of production and input productivity. We assume that labour is the only variable input and, thus, labour cost is the only variable cost. Labour cost is nothing but quantity of labour employed, multiplied by the wage rate. That means, Variable cost =  $L \cdot W$ ,  $L$  being amount of labour employed and  $W$  is the wage rate. Now,  $AVC = \frac{VC}{Q} = \frac{W \cdot L}{Q}$ . However, average product ( $AP$ ) is  $\frac{Q}{L}$ . Hence  $AVC = \frac{W}{AP}$ . That is,  $AVC = W \cdot \frac{1}{AP}$  where  $AP$  is the average productivity of labour. Therefore,  $AVC$  is the wage rate multiplied by the reciprocal of average productivity of labour. Since, at the initial stage,  $AP$  rises, thereafter, it reaches a maximum and then declines,  $AVC$  must, therefore, initially fall, reach a minimum and thereafter it will rise. That means, the movement of the average product ( $AP$ ) curve has just been the reverse

102 NSOU • PGCO - II of the  $AVC$  curve. The relation between the  $AP$  curve and the  $AVC$  curve has been portrayed in Fig. 4(e). Fig 4(e) :  $AP$  and  $AVC$  Curves The inverse relationship between  $AP$  and  $AVC$  curves has been demonstrated in figure 4(e). The upper panel reveals that as labour starts increasing  $AP$  rises and consequently  $AVC$  declines. At  $OL_2$  level of employment since  $AP$  is maximum  $AVC$  at the  $Oq_2$  amount of output must be minimum. Beyond  $OL_2$  amount of labour, as  $AP$  goes on declining,  $AVC$  rises. This means that the  $AVC$  is U-shaped.  $AC$  or  $ATC$  :

Average Cost ( $AC$ )

is the

**60% MATCHING BLOCK 82/204**

**W**

total cost per unit of output produced. Thus  $AC$  is obtained by dividing total cost ( $TC$ ) by output. That means,  $AC = \frac{TC}{Q} =$

$\frac{FC}{Q} + \frac{VC}{Q} = AFC + AVC$ . This means that the sum total of  $AFC$  and  $AVC$  gives  $AC$ . Naturally,

**78% MATCHING BLOCK 87/204**

**SA** microeco\_compilation-FINAL.pdf (D143604282)

the shape of the  $AC$  curve is governed by the shapes of  $AFC$  and  $AVC$  curves.

Evidently,  $AVC$  output

NSOU • PGCO - II 103 is U-shaped. We know that as output gets expanded both AFC and AVC decline, so AC must decline. Though AVC now rises, the significant decline in AFC causes AC to decline more. It is because of this reason that AC's minimum point comes later than AVC's minimum point. From Fig. 4(g) it is seen that upto OQ 2 amount of output, AC declines. However, beyond OQ 2 level of output, AC starts rising. This shows that increase in output beyond OQ 2 level will lead to an increase in AVC. That means, the increase in AVC more than offsets the fall in AFC. This suggests that in this region of output, AVC becomes stronger than AFC and AC continues to rise. Therefore,

**70% MATCHING BLOCK 84/204**

**W**

the AC curve is U-shaped. It is U-shaped because of the operation of the law of variable proportions.

Marginal Cost (MC) :

**55% MATCHING BLOCK 85/204**

**W**

Marginal cost is the change in total cost attributable to a change in output. That means, MC is

an addition to the

Microeconomics- Theory and Applications-I1 (1).doc (D112011699)

total cost when one more unit of output is produced.

Symbolically, it is defined as  $MC = \frac{\Delta TC}{\Delta Q}$ . That is,  $MC = \frac{TC_n - TC_{(n-1)}}{n - (n-1)}$ , that is, MC is the additional cost for producing the n-th unit of a product when (n - 1) units of the product have already been produced. We should remember that in the short run, fixed costs do not change. In this period output changes due to change in the use of variable inputs. Therefore, by change in total cost we mean here change in total variable costs only. Naturally, fixed costs do not have any bearing on MC. That means, MC is independent of fixed cost. Therefore,  $MC = \frac{\Delta TVC}{\Delta Q}$ . MC refers to change in total variable cost which results from a change in output. This can be proved in the following manner :  $MC = \frac{TC_n - TC_{(n-1)}}{n - (n-1)} = \frac{(FC + VC_n) - (FC + VC_{n-1})}{n - (n-1)} = \frac{FC + VC_n - FC - VC_{n-1}}{n - (n-1)} = \frac{VC_n - VC_{n-1}}{n - (n-1)}$ . Thus,  $MC = \frac{\Delta TVC}{\Delta Q}$ . The MC may also be defined as the reciprocal of marginal product (MP) multiplied 104 NSOU • PGCO - II by the price of the variable input. To show that let us assume that labour is the variable input whose cost, i.e., wage cost, is the variable cost. Therefore,  $\Delta TVC = W \cdot \Delta L$ . Dividing both sides by  $\Delta Q$  we get,  $\frac{\Delta TVC}{\Delta Q} = W \cdot \frac{\Delta L}{\Delta Q}$ . However,  $\frac{\Delta L}{\Delta Q} = MP$ . Therefore,  $MC = W \cdot MP$ . It is because of this reason that it is said that

**76% MATCHING BLOCK 90/204**

**SA**

microeco\_compilation-FINAL.pdf (D143604282)

the shape of the MC curve is governed by the shape of the

MP curve. Since MP initially increases, reaches a maximum and thereafter declines, MC initially falls, reaches a minimum and thereafter rises. Therefore,

**90% MATCHING BLOCK 88/204**

**W**

the MC curve is U-shaped because of the operation of the law of variable proportions.

This information has been portrayed in the following Fig. 4(f). Fig. 4(f) : MP and MC curves Output Labour MP L

NSOU • PGCO - II 105 In the above figure, as labour employment increases, MP initially rises and consequently, MC falls with the rise in output. MP reaches maximum when OL units of labour are employed. The corresponding output level is OQ where MC has become minimum. Thereafter, additional employment of labour causes marginal product to fall even to zero or to become negative whereas MC goes on rising continuously. Therefore, the MC curve is the reciprocal of the MP curve. All the short run cost curves can be represented in a single diagram shown below, Fig 4(g). The AFC curve has been drawn as a rectangular hyperbola. This curve has been declining steadily. The AVC curve is U-shaped, through its minimum point (N) passes the MC curve. The sum of AFC and AVC gives the AC curve which lies above both AFC and AVC curves. Also, at Fig 4(g) : AVC, AFC, AC and MC curves the minimum point of AC (that is, point P), MC passes through. We are to note that AVC and AC get closer as the level of output goes on rising since AFC declines continuously as output rises. Like AC and AVC, the MC curve is also U-shaped. MC equals both AC and AVC at their minimum points. Besides, MC lies below both AVC and AC throughout the range over which these curves fall. However, it lies above them when they are rising. It is to be noted that all the cost curves except the AFC curve are U-shaped. Cost per unit of output

Output  
106 NSOU • PGCO - II RELATIONSHIP BETWEEN AC AND AVC. There are two ways for getting the AC : (a)  $AC = AFC + AVC$ . and (b)  $AC = TC / Q$ . But  $AVC = TVC / Q$ . That is,  $AVC$

**78% MATCHING BLOCK 92/204 SA** Principles of Economics book new.doc (D112051420)

is a part of AC, given  $AC = AFC + AVC$ . Moreover, both AVC and AC have U-

shapes because of the operation of

**83% MATCHING BLOCK 91/204 W**

the law of variable proportions. However, the minimum point of AC lies to the right of the minimum point of AVC.

The basic reason behind this is that AC not only includes AVC but also AFC which continuously falls as output rises. Besides, initially, with the rise in output, AVC falls. So AC must fall. AVC starts rising after OQ amount of output is being produced, its rise over a certain range is offset by a fall in AFC. That is why, AC goes on falling over the range of output even if AVC rises. That is why, AC's minimum point comes at a later range of output than AVC's minimum point. But once OQ 2 amount of output gets produced, the influence of

**83% MATCHING BLOCK 93/204 SA** Principal of Microeconomics.pdf (D110867814)

the rise in AVC becomes stronger than the fall in AFC, so AC starts rising.

RELATION BETWEEN AVERAGE COST (AC) AND MARGINAL COST (MC) We know that total cost (TC) = Average cost (AC) Quantity of output produced. Thus,  $TC = AC \times Q$ . Also, marginal cost (MC),  $MC = \frac{dTC}{dQ}$ . That is,  $MC = \frac{d}{dQ}(AC \cdot Q)$ ,  $= \frac{d}{dQ}(AC \cdot Q) = AC + Q \frac{dAC}{dQ}$ . That is,  $MC = AC + Q \frac{dAC}{dQ}$ . (a) Now,  $\frac{dAC}{dQ}$  is the slope of AC. Since AC and Q are all non-negative,  $MC < AC$  if and only if  $\frac{dAC}{dQ} < 0$ . NSOU • PGCO - II 107 and  $MC > AC$  if and only if  $\frac{dAC}{dQ} > 0$ . Finally,  $MC = AC$  if and only if  $\frac{dAC}{dQ} = 0$ . The slope of AC will reduce to zero at its minimum point. That is why, at AC's minimum point,  $AC = MC$ . That means, when AC is minimum, AC equals MC. If the slope of AC is positive, that is, if AC curve is rising,  $MC < AC$ . Further, if the slope of AC is negative, that is, if AC curve is falling,  $MC > AC$ . From the above analysis we can summarize the relation between AC and MC as follows: 1. When AC falls, MC also falls and

**78%**

**MATCHING BLOCK 94/204**

**SA**

microeco\_compilation-FINAL.pdf (D143604282)

the rate of fall of MC is greater than the rate of fall of

AC. 2. When AC is minimum and remains constant, MC and AC are equal or identical. 3. When AC rises, MC also rises and the rate of increase of MC is greater than that of AC. The above-mentioned relationship between AC and MC can, graphically, be demonstrated in the following Fig. 4(h). Fig. 4(h) In the above diagram (Fig. 4h) we measure production horizontally and cost vertically. At point E, AC has become minimum and constant for a while. At this point both AC and MC have become identical. Before reaching point, E, AC is continuously decreasing and MC is also continuously decreasing. However, the rate of decrease of MC is greater than that of AC. After the point E, AC is increasing and so is MC. However, the rate of increase of MC is greater than that of AC. Cost Production

108 NSOU • PGC0 - II 4.6 Derivation of Long Run Average Cost Curve (LAC) Let us now deal with the procedure for deriving the long run average cost curve. We are to remember that long run is said to be

**45%**

**MATCHING BLOCK 95/204**

**SA**

compiled file.docx (D137395535)

that time period when a firm under consideration can change all its inputs. In reality, in the long run there are no fixed inputs– all inputs are variable. This implies that in the long run

**88%**

**MATCHING BLOCK 96/204**

**SA**

compiled file.docx (D137395535)

there is no fixed cost–all costs are variable. In the long run,

therefore,

**90%**

**MATCHING BLOCK 97/204**

**SA**

compiled file.docx (D137395535)

a firm can change its scale of production according to its necessity. In the short run,

the

**97%**

**MATCHING BLOCK 98/204**

**SA**

compiled file.docx (D137395535)

size of a plant or scale remains fixed while, in the long run changes in plant size

or in scale can be made. A firm,

**90%**

**MATCHING BLOCK 99/204**

**SA**

compiled file.docx (D137395535)

in the long run, can move from one plant to another

one. It can also

**100%**

**MATCHING BLOCK 100/204**

**SA**

compiled file.docx (D137395535)

build up a large-sized plant or a smaller one,

if the situation so demands. The

**79%      MATCHING BLOCK 101/204      SA      compiled file.docx (D137395535)**

long run, is a "planning horizon" in the sense that it acts as a guideline to the firm with regard to the future decision

of

**73%      MATCHING BLOCK 102/204      SA      compiled file.docx (D137395535)**

output. We know that production takes place in the short period. Every firm aims at producing for a future date and chooses many aspects of the short run

in which it operates in the future. Therefore, long run consists

**84%      MATCHING BLOCK 103/204      SA      compiled file.docx (D137395535)**

of all short run situations among which the firm may choose. Thus, LAC is derived from SAC curves. LAC depicts the lowest possible average cost for

the production of various possible levels of output. In order

**69%      MATCHING BLOCK 104/204      SA      compiled file.docx (D137395535)**

to derive the LAC curve, we assume that there are three different sizes of plants in an industry, namely small, medium and large. Three SAC curves, namely SAC 1 , SAC 2 and SAC 3 represent respectively

small- sized, medium-sized and large-sized plants. These have been demonstrated in figure 4(i). These SAC curves are also called plant curves. As

**90%      MATCHING BLOCK 105/204      SA      compiled file.docx (D137395535)**

we are considering the long run situation, the firm can choose any plant size where it will operate in the future to produce a given level

of output at the least possible cost. Fig 4(i) : SAC curves for three plant sizes SAC 1 SAC 2 SAC 3

NSOU • PGC0 - II 109 If the firm decides to produce OQ 1 amount of output, it is sure to choose the plant size denoted by SAC 1 . A lower level of

**84%      MATCHING BLOCK 106/204      SA      compiled file.docx (D137395535)**

output (say OQ 1 ) can also be produced on SAC 1 though at a higher cost. However, the same plant size, (i.e., SAC 1 ) enables a firm to produce larger output at a lower cost. If OQ 2 amount is considered to be

the most profitable amount of output, the firm will choose SAC 2 , that is, the medium-sized plant. However, taking such a decision is not so easy as it appears to be at the

**75%      MATCHING BLOCK 107/204      SA      compiled file.docx (D137395535)**

first sight. Assume the firm operates at SAC 1 and demand for its product rises gradually. However, it can produce OQ 1

amount of output at the possible

**81% MATCHING BLOCK 108/204 SA** compiled file.docx (D137395535)

lowest cost even operating on SAC 1 . But production beyond OQ 1 will need a larger cost. If the firm expects to produce OQ 1 (seen in

the figure) its choice of plant size becomes difficult as

**88% MATCHING BLOCK 109/204 SA** compiled file.docx (D137395535)

costs are the same for both the plant sizes, namely SAC 1 and SAC 2 . However, the choice of the optimal plant size depends on the firm's

expectation with regard to

**79% MATCHING BLOCK 110/204 SA** compiled file.docx (D137395535)

its demand for product in the coming years. At this level of output, cost can not be the determinant of the choice of a plant size. Now, the firm expects its demand for the product to increase in future. Therefore, the firm will instal the plant number SAC 2 rather than SAC 1 .

With a lower level of cost larger output can now be produced. In the same way though the output level

**93% MATCHING BLOCK 111/204 SA** compiled file.docx (D137395535)

OQ 1 can be produced by both the plant sizes, SAC 2 and SAC 3 , it is economic to use the plant size represented by SAC 3 .

Let us now

**74% MATCHING BLOCK 112/204 SA** compiled file.docx (D137395535)

assume that the industry faces a larger number of plant sizes represented by five SAC curves shown in figure 4(j). These curves will generate a smooth and continuous curve called the planning curve or LAC curve. Each point on this curve shows the least possible cost for producing the corresponding level of output. Thus the LAC curve is a planning curve since it is the curve which helps a firm to decide what plant is to be established for producing an output level consistent with the optimal cost. Naturally, the firm selects that short run plant which yields the minimum cost of producing the anticipated output level. To produce a particular

amount of

**100% MATCHING BLOCK 113/204 SA** compiled file.docx (D137395535)

output in the long run, the firm must select a point on the LAC curve corresponding to that output and it will then build a relevant short-run plant and operate on the corresponding SAC curve.

Let us now suppose that

**90% MATCHING BLOCK 114/204 SA** compiled file.docx (D137395535)

the firm thinks that for producing output OQ 1 , point A on SAC 1 becomes the most profitable one. Naturally, it will build up a plant at the lower cost represented by SAC 1 (At point A, SAC 1 is tangent to the LAC curve). But the firm could reduce its cost by expanding output to the amount associated with point B, 110

NSOU • PGC0 - II the minimum point on SAC 1 . We now assume that

**65% MATCHING BLOCK 115/204 SA** compiled file.docx (D137395535)

the firm anticipates that demand for its product would be rising in future. So, it would construct a new plant represented by SAC 2 and will operate at point D on SAC 2 , thereby lowering its unit cost. (Corresponding to the output level OQ 2 , SAC 2 is tangent to LAC). In the same way, for output OQ 3 , the firm will construct SAC 3 and operate at

point E as here the unit cost has become the least. For output level

**85% MATCHING BLOCK 116/204 SA** compiled file.docx (D137395535)

OQ 4 , the firm will construct plant size SAC 4 and will operate at point F, though the minimum point of SAC now lies to the left of the operational point F.

**75% MATCHING BLOCK 117/204 SA** compiled file.docx (D137395535)

Each point of the LAC is, therefore, the point of tangency with the corresponding SAC curves. The LAC curve is the locus of all the tangency points. Consequently, the LAC curve has been called the envelope curve as it envelopes a family of SAC curves.

Fig 4(j) : LAC Curve However, the

**87% MATCHING BLOCK 118/204 SA** compiled file.docx (D137395535)

LAC curve throughout its length is not tangent to the minimum points of all SAC curves.

**97% MATCHING BLOCK 119/204 SA** compiled file.docx (D137395535)

Only at point E, the minimum point of LAC, is tangent to the minimum point of SAC.

We are to

**90% MATCHING BLOCK 120/204 SA** compiled file.docx (D137395535)

note here that at the points of tangency SAC = LAC. But to the right or

to the left of the tangency point SAC > LAC. Therefore,

**68% MATCHING BLOCK 125/204**

**SA** compiled file.docx (D137395535)

we can say that the LAC curve is U-shaped, that is, initially it falls, reaches

a minimum point and rises afterwards as level of output gets expanded. However,

**80% MATCHING BLOCK 126/204**

**SA** compiled file.docx (D137395535)

the U-shapedness of the LAC curve is less pronounced than the U-shapedness of

the SAC curve. cost output

NSOU • PGCO - II 111 4.7 Some Problems and Their Solutions 1. Let a firm's cost function be  $C = 20 + 3Q + 0.2Q^2$ . Show that MC equals AC when the latter is minimum. Solution : Here  $AC = \frac{C}{Q} = \frac{20}{Q} + 3 + 0.2Q$ . Also,  $MC = \frac{dC}{dQ} = 3 + 0.4Q$ . AC will be minimum when  $\frac{dAC}{dQ} = 0$ . Now,  $\frac{dAC}{dQ} = -\frac{20}{Q^2} + 0.2 = 0$ . That is,  $0.2 = \frac{20}{Q^2}$ , that is,  $0.2Q^2 = 20$ . That is,  $Q^2 = \frac{20}{0.2} = 100$ . That is,  $Q = 10$ . When  $Q = 10$ ,  $MC = 3 + 0.4 \times 10 = 7$ . Also, when  $Q = 10$ ,  $AC = \frac{20}{10} + 3 + 0.2 \times 10 = 7$ . Therefore,  $MC = AC$  when the latter is a minimum.

2. If the total cost function is given by  $TC = 100 - 2q + 0.5q^2$ , show that the slope of the average cost (AC) curve is negative when output is less than 10. Solution : Here  $AC = \frac{TC}{q} = \frac{100}{q} - 2 + 0.5q$ . 112 NSOU • PGCO - II Now, the slope of  $AC = \frac{dAC}{dq} = [100q^{-2} - 2 + 0.5q] = (-1)100q^{-2} + 0.5 = 0.5 - \frac{200}{q^2}$ . That is, the slope of  $AC = 0.5 - \frac{200}{q^2}$ . When  $q = 10$ , the slope of  $AC$  is  $0.5 - \frac{200}{10^2} = 0.5 - 2 = -1.5$ . Thus when  $q > 10$ , say 9, the slope of  $AC$  will be negative, i.e., less than  $-0.5$ .

3. Show mathematically that the marginal cost has no relation to fixed costs. Solution : Let the total cost function be  $C = K + f(Q)$  where  $K = TFC = \text{Constant}$  and  $f(Q)$  is TVC. Now,  $AC = \frac{C}{Q} = \frac{K}{Q} + \frac{f(Q)}{Q} = AFC + AVC$ . Also,  $MC = \frac{dC}{dQ} = \frac{dK}{dQ} + \frac{df(Q)}{dQ} = 0 + f'(Q) = f'(Q)$  since  $K$  is a constant. That means, marginal cost has no relation to fixed costs.

4. Suppose  $C = a + bx + cx^2$  is the total cost function of a firm,  $x$  being the quantity of output. Show that  $\frac{dAC}{dx} = \frac{1}{2} \frac{MC - AC}{x}$ . Solution : Since  $TC = a + bx + cx^2$ ,  $AC = \frac{C}{x} = \frac{a}{x} + b + cx$  and  $MC = \frac{dC}{dx} = b + 2cx$ . Now,  $\frac{dAC}{dx} = \frac{d}{dx} \left( \frac{a}{x} + b + cx \right) = -\frac{a}{x^2} + c = \frac{-a + cx^2}{x^2} = \frac{cx^2 - a}{x^2}$ . Also,  $\frac{1}{2} \frac{MC - AC}{x} = \frac{1}{2} \frac{(b + 2cx) - (\frac{a}{x} + b + cx)}{x} = \frac{1}{2} \frac{cx - \frac{a}{x}}{x} = \frac{cx^2 - a}{2x^2}$ . (i)

NSOU • PGCO - II 113 Thus,  $\frac{dAC}{dx} = \frac{1}{2} \frac{MC - AC}{x}$ . (ii) From (i) and (ii) the result follows. 5. Suppose the total cost function is given by  $C = 15q - 6q^2 + q^3$ . Obtain the equations of AC and MC curves. Find the output level at which AC is minimum and show, further, that when AC is minimum, AC equals MC. Solution :  $AC = \frac{C}{q} = \frac{15q - 6q^2 + q^3}{q} = 15 - 6q + q^2$  and  $MC = \frac{dC}{dq} = 15 - 12q + 3q^2$ . When AC is minimum,  $\frac{dAC}{dq} = 0$ . Now,  $\frac{dAC}{dq} = -6 + 2q = 0$ . Thus  $\frac{dAC}{dq} = 0 \Rightarrow -6 + 2q = 0$ . That is,  $q = 3$ . That is,  $-6 + 2q = 0$ . That is,  $q = 3$ . Further,  $\frac{d^2AC}{dq^2} = 2 > 0$ . Hence AC is minimum when  $q = 3$ . When  $q = 3$ ,  $AC = 15 - 6 \cdot 3 + 3^2 = 15 - 18 + 9 = 6$ . When  $q = 3$ ,  $MC = 15 - 12 \cdot 3 + 3(3^2) = 15 - 36 + 27 = 6$ . Thus, when AC is minimum,  $AC = MC$ .

6. Let the total cost be given by  $C = 5000 + 1000q - 500q^2 + 2 \cdot 3 q^3$ . Answer the following questions : (i) Find the MC function, (ii) Find the expression for the slope of the MC function, (iii) Find the average total cost function, (iv) At what value of  $q$  does MC equal AVC? Solution : (i) since the cost function is  $C = 5000 + 1000q - 500q^2 + 2 \cdot 3 q^3$ , 114 NSOU • PGCO - II  $MC = \frac{dC}{dq} = [5000 + 1000q - 500q^2 + 2 \cdot 3 q^3] = 1000 - 2 \times 500q + 2 \cdot 3 \cdot 3q^2 = 1000 - 1000q + 2q^2$ . Ans. (ii) The slope of the MC function is  $\frac{dMC}{dq} = [-1000 + 4q]$ . Ans. (iii) Average total cost function =  $c_1$

**52% MATCHING BLOCK 121/204**

**W**

$q = [5000 + 1000q - 500q^2 + 2 \cdot 3 q^3] = 5000q + 1000 - 500q + 2 \cdot 3 q^2$ . Ans. (iv)  $TVC = TC - TFC = 5000 + 1000q - 500q^2 + 2 \cdot 3 q^3 - 5000 = 1000q - 500q^2 + 2 \cdot 3 q^3$ . Hence,  $AVC = \frac{TVC}{q} = 1000 - 500q + 2 \cdot 3 q^2$ .

Now,  $MC = AVC$  means  $1000 - 1000q + 2q^2 = 1000 - 500q + 2 \cdot 3 q^2$ . That is,  $-1000q + 500q + 2q^2 - 2 \cdot 3 q^2 = 0$ . That is,  $-500q + 4 \cdot 3 q^2 = 0$ . That is,  $4 \cdot 500 q^2 - 500 q = 0$ . That is,  $4 \cdot 3 q^2 - 500 q = 0$ , that is,  $q = \frac{500}{4 \cdot 3} = 375$  units. Ans.

NSOU • PGC0 - II 115 7. Given the total cost function  $C = 1000 + 10q - 0.9q^2 + 0.04q^3$ , determine the rate of output that leads to minimum AVC. Solution : Let us, first of all, find the MC.  $MC = \frac{dC}{dq} = \frac{d}{dq} [1000 + 10q - 0.9q^2 + 0.04q^3] = 10 - 1.8q + 0.12q^2$ . Now,  $TVC = TC - TFC = 10q - 0.9q^2 + 0.04q^3$ .  $AVC = \frac{TVC}{q} = 10 - 0.9q + 0.04q^2$ . Since the minimum point of AVC occurs at its intersection with MC, let us equate AVC and MC.  $10 - 0.9q + 0.04q^2 = 10 - 1.8q + 0.12q^2$ . That is,  $1.8q - 0.9q + 0.04q^2 - 0.12q^2 = 0$ . That is,  $0.9q - 0.08q^2 = 0$ . That is,  $q(0.9 - 0.08q) = 0$ . That is,  $q = 0$  and  $q = \frac{0.9}{0.08} = 11.25 = 11$  (say) units. Therefore, the required amount of output is 11 units. 8. Express mathematically the relation between AC and MC. Solution : We know that when AC is falling,  $MC > AC$ . Now,  $AC = \frac{C}{Q}$ . When AC is falling,  $2C \frac{dc}{dQ} < C \frac{dC}{dQ}$ . That is,  $2 \frac{dc}{c} < \frac{dC}{C}$ . That is,  $2 \frac{dc}{c} - \frac{dC}{C} < 0$ . That is,  $2 \frac{dc}{c} - \frac{dC}{C} < 0$ .

116 NSOU • PGC0 - II That is,  $MC > AC$ . Again, when AC is constant,  $\frac{dc}{c} = \frac{dC}{C}$ . That is,  $MC = AC$ . Also, when AC is increasing,  $\frac{dc}{c} > \frac{dC}{C}$  and  $MC < AC$ . Therefore, the relation between AC and MC can be stated in plain language as: (a) When AC is constant,  $AC = MC$ . (b) When AC is increasing,  $AC > MC$ . (c) When AC is decreasing,  $AC < MC$ . 9. The total cost, C, of a firm is given by  $C = 1000 + 100q - 80q^2 + 13q^3$  where q is the quantity produced. (i) Find the marginal cost of production. (ii) At what value of q does marginal cost equal average variable cost? Solution : (i)  $MC = \frac{dC}{dq} = \frac{d}{dq} [1000 + 100q - 80q^2 + 13q^3] = 100 - 160q + 39q^2$ . (ii) In the given problem  $TVC = 100q - 80q^2 + 13q^3$ . Thus  $AVC = \frac{TVC}{q} = 100 - 80q + 13q^2$ . Now,  $MC = AVC \Rightarrow 100 - 160q + 39q^2 = 100 - 80q + 13q^2 \Rightarrow 26q^2 - 80q = 0 \Rightarrow 2q(13q - 40) = 0 \Rightarrow 2q = 0 \Rightarrow q = 0$  or  $13q - 40 = 0 \Rightarrow q = \frac{40}{13} \approx 3.08$ .

<b>57%</b>	<b>MATCHING BLOCK 122/204</b>	<b>W</b>
$q = 120$ . Thus when $q = 120$ , $MC = AVC$ . 10. Express, mathematically, the relation between AC and MC. Show, further, that MC has no relation to fixed costs. Solution : The total cost function of a firm can be expressed as $C = K + f(Q)$ where K is TFC = Constant and $f(Q)$ is TVC, a function of output. The average cost function is $c(Q) = \frac{C}{Q} = \frac{K}{Q} + \frac{f(Q)}{Q} = AVC + AFC$ . The marginal cost function is $\frac{dC}{dQ} = \frac{d}{dQ} [K + f(Q)] = \frac{df(Q)}{dQ}$ as K is constant. Therefore, the marginal cost has no relation to fixed costs. 11. Suppose a firm's cost function is $C = 20 + 3Q + 0.2Q^2$ . Prove that MC equals AC when the latter is a minimum. Solution : Here $MC = \frac{dC}{dQ} = 3 + 0.4Q$ and $AC = \frac{C}{Q} = \frac{20}{Q} + 3 + 0.2Q$ . For minimization of cost let us differentiate AC w.r.t. Q and set the first derivative equal to zero. Now, $\frac{dAC}{dQ} = \frac{d}{dQ} [\frac{20}{Q} + 3 + 0.2Q] = -\frac{20}{Q^2} + 0.2 = 0$ . Hence, $0.2 = \frac{20}{Q^2} \Rightarrow 0.2Q^2 = 20 \Rightarrow Q^2 = 100 \Rightarrow Q = 10$ . When $Q = 10$ , $MC = 3 + 0.4(10) = 7$ and $AC = \frac{20}{10} + 3 + 0.2(10) = 2 + 3 + 2 = 7$ . Therefore, $MC = AC$ when the latter is a minimum. 118 NSOU • PGC0 - II 12. Suppose that the total cost function is given by $TC = 100 - 2q + 0.5q^2$ . Show that the slope of average cost (AC) is negative when output is less than 10. Solution : The AC is defined as $AC = \frac{TC}{q} = \frac{100 - 2q + 0.5q^2}{q} = \frac{100}{q} - 2 + 0.5q$ . Now, $\frac{dAC}{dq} = \frac{d}{dq} [\frac{100}{q} - 2 + 0.5q] = -\frac{100}{q^2} + 0.5$ . The slope of AC is $0.5 - \frac{100}{q^2}$ . When $q > 10$ , say, 9 the slope of AC will be negative, i.e. less than $-0.5$ . Hence proved. 4.8 Sample Questions A. Objective-type Questions (a) What kind of a curve is average fixed cost (AFC)? : (i) U-shaped, (ii) rectangular hyperbola, (iii) downward falling and (iv) upward rising. Ans. Meaning and features of a market, classification of markets. ii. Various aspects of Revenue in different markets. iii. Perfectly competitive market and its various aspects. iv. Supply curve of a firm under perfectly competitive market.

122 NSOU • PGCO - II 5a.2 Introduction Market occupies a very important position in the modern complex monetary organization. Adam Smith, the Father of Economics, in his great book "Wealth of Nations" published in 1776 in two volumes had, very rightly, pointed out that division of labour is limited by the extent of the market. Market helps the producers to take the economic decisions which are of basic nature : what to produce and how to produce. Naturally, market highly affects the producers, consumers and various other sections of a society. Professor Wicksteed had, rightly, recommended : "The market is the characteristic phenomenon of economic life. The constitution of markets and market prices are the central problems of Economics." 5a.3 Meaning of a Market In ordinary language, "market" refers to a place where commodities are bought and sold. In this sense we talk of Hong Kong Market, Mumbai Market, Howrah Market and the like. However, in Economics, "market" has no reference to a place but to a particular commodity which is being bought and sold. In reality, we very often speak of tea market, bullion market, labour market, share market and so on. In Economics "market" refers to a group of buyers and sellers taking part in the exchange of a commodity. The buyers and sellers may be scattered within a country or may be abroad. However, there must be some contact by means of meetings, fairs, published price lists or through telephone, e-mail, whatsapp, fax or some other forms of communication. 5a.4 Features of a Market Thus, in Economics, there are four basic features of a market : (i) Buyers and sellers : In a market there must have the existence of buyers and sellers. However, there is no definite limit to these numbers. (ii) There must be some contact : There must have some contact among the buyers and sellets. This contact may be either direct or indirect. (iii) There must be the existence of a commodity : In a market there should be a commodity to deal with. In case there are different commodities there will be different markets.

NSOU • PGCO - II 123 (iv) The existence of a price : In the market there should be price for the commodity that is bought and sold. 5a.5 Classification of Markets Markets may be classified into various ways : 1. On the basis of Area : According to the area covered, markets

**66% MATCHING BLOCK 127/204**

**W**

may be classified into local markets, regional markets, national markets and international markets. (a) Local

Market : Local markets refer to a market in a particular village or locality. Generally, perishable goods like milk, butter, vegetables have local markets. (b) Regional Market : Regional market refers to a market which covers a particular region. Generally, bulky articles like bricks and stones have regional markets. (c) National Market : If the demand for and supply of a commodity is spread over the entire country, the market is said to be a national market. Generally, jute, cotton, wheat, rice and tobacco etc. have national markets. (d) International Market : When the demand for and supply of a commodity is at the global level, the market is said to be an international market. Normally, valuable metals like gold, diamond, silver etc. have an international market. 2. On the basis of Time : On the basis of time element, a market has been classified into very short period, short period and long period markets. (a) Very short period markets : A very short period is that in which supply can neither be increased nor can it be decreased to adjust to demand. This period is also known as market period. Vegetables market, fruit market and markets for perishable goods are examples of such markets. (b) Short Period : Short period refers to a period of time in which the rate of production is variable. An increase in production is possible by an intensive use of capital or by enlarging the size of the plant. (c) Long Period : By long period we mean a period of time in which the supply of the commodity can be varied according to the conditions of demand. Long period involves many years. 3. On the basis of a Commodity : On the basis of a commodity concerned markets may be classified as (a) Share Market : A share market is a place in which shares are bought and sold. Thus Calcutta share market, Mumbai share market are examples of a share market. (b) Bullion Market : A bullion market is a place in which valuable metals like diamonds, gold, silver etc. are traded.

124 NSOU • PGCO - II (c) Money Market : A money market is a place in which short term credit instruments are bought and sold. London money market, Mumbai money market, New York money market, etc. are some of the money markets in the world. (d) Capital Market : A capital market is meant for very long period loans of capitals. 4. On the basis of

**68% MATCHING BLOCK 128/204**

**SA**

Managerial Economics.pdf (D143428574)

the volume of Business : On the basis of the volume of business also sometimes markets have been classified into wholesale markets and retail markets.

In the former market goods are transacted in large quantities whereas in the latter market goods are transacted in small quantities. 5. Classification on the basis of transactions : Markets may be classified, on the basis of transactions, into the spot market and the future market. A spot market is that market where goods are physically exchanged on the spot. On the other hand, future market is one where an agreement is made on the spot while exchange of goods takes place in future, as agreed upon by the parties. 6. Classification on the basis of

**70% MATCHING BLOCK 129/204**

**SA**

Managerial Economics.pdf (D143428574)

the "status of sellers" : On the basis of the status of sellers, markets have, broadly, been classified into primary markets, secondary markets and terminal markets.

A primary market is a market where goods are transacted from the producers to the wholesalers. A secondary market is a market where the wholesalers act as an intermediate link between the producers and the retailers. A terminal market is one where the goods are transferred from the retailers to the ultimate consumers. 7. Classification on the basis of Government Regulations : On the basis of the Govt. regulations, markets may also be classified as regulated markets and unregulated markets. A regulated market is one where transactions are governed by various rules and regulations as framed by the Government. On the other hand, a market where transactions of goods and services are left to market forces of demand and supply is known as an unregulated market. 8. On the basis of Competition : According to the degree of competition, markets may be classified into perfect markets and imperfect markets. Perfect markets : A perfect market is one where there is perfect competition. Sometimes a distinction is made between pure competition and perfect competition. Perfect competition is a wider concept which includes not only the conditions of pure competition but also a few more imperfect market. A market is imperfectly competitive if the actions of one or more buyers or sellers have a perceptible influence on price. An imperfect market may assume the following forms :

NSOU • PGCO - II 125 (a) Monopoly market. (b) Monopolistically competitive market. (c) Oligopoly market. (d) Duopoly market. (e) Bilateral monopoly. (f) Monopsony. (g) Duopsony. and (h) Oligopsony. 5a.6 Factors Affecting the Size of a Market The size or extent of a market depends upon a number of factors : (i) Nature of the commodity and (ii) General Conditions. NATURE OF THE COMMODITY (a) Wide demand : A commodity which is of universal demand will have a wide market. The best example of a commodity having wide demand is fuel oil which has wide demand and has unlimited market. On the other hand, a commodity which is local in character will have a limited market. Thus Malayalam novels and Tamil films have only a regional market. (b) Durability : A commodity being durable in nature will have wide market. Thus goods like gold, silver etc. have very wide markets since these commodities can be preserved for a long time and can also be transported without any damage. On the other hand, perishable commodities like vegetables, milk and flowers have only limited markets. However, the development of processing facilities, refrigeration and air lifting have greatly increased the size of the market for perishable goods also. (c) Portability : An important pre-requisite for wide markets is that the commodity should be easily portable. It must be small in size but possess a high value. Goods like machines and cotton textiles are easily portable and thus they command wide markets. On the other hand, bricks and stones enjoy only a narrow market. (d) Grading and Sampling : Grading means dividing the goods on the basis of 126 NSOU • PGCO - II quality. Sampling means a part representing the whole. Goods which are amenable to grading and sampling normally command an international market. Grading helps the purchasers to identify the quality of the product without making the inspection. (e) Adequate Supply : To have a wider market the commodities should have an adequate supply. However, rare pictures and paintings though they could not be supplied in plenty, enjoy international markets because of their prestige value. 5a.7 General Conditions Affecting the Demand for a Commodity The demand for a commodity is highly affected by the general conditions prevailing in the country : 1. Peace and security : The existence of political stability, peace and security are of vital importance for a smooth trade. If the law and order situation in a country due to political unrest and revolutionary attitudes of some groups become very bad, markets will get hampered. 2. Stable Currency and Efficient Financial Institutions : With the help of well- developed banks and other financial institutions, marketing can be profitable and easily carried on over wide and extensive areas. In the modern world, international trade depends on the value of the home currency and the confidence it inspires among foreigners. 3. Government Policy : The import and export policy of the Government of a country has also a considerable impact on the size of the market. If the Government imposes a lot of restrictions in the form of quotas and duties, trade will be affected. Likewise restrictive policies of the importing country will also have an adverse effect on the exporting country. 4. Transport and Communication : A properly developed transport system in the form of roads, railways, steamships and aeroplanes is highly useful for the widening of both internal and international trade. Likewise, efficient means of communications, like post office and telegraphs, telephones, email etc. help the traders to keep in touch with their distant markets and send information regarding market trends. 5. Degree of Division of Labour : Adam Smith, the Father of Economics, said "Division of Labour is limited by the extent of a market". However, the extent of the market also depends upon division of labour. Division of labour by reducing the average cost of production increases the size of the market.

NSOU • PGCO - II 127 REVENUE ANALYSIS A very important component of the equilibrium position of a firm under any form of a market is the revenue, the other component being cost which has already been dealt with, in detail, in a previous chapter (i.e., chapter 4) Hence in this section we will concentrate our attention on revenue analysis only. 5a.8 The Concept of Revenue By revenue we mean receipts derived from sales.

**78% MATCHING BLOCK 130/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

Revenue depends upon the price at which, quantities of output are sold by the firm. A firm's revenue can be categorised as : (

a) total revenue (TR), (b) average revenue (AR) and (c) marginal revenue (MR).

**97% MATCHING BLOCK 131/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

Total Revenue : Total revenue is the total sales receipts of output produced over a given period of time. Total revenue depends on two factors : (

a)

**81% MATCHING BLOCK 132/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

the price of the product and (b) the quantity sold of the product. By multiplying the quantity sold (Q), by its selling price (P),

we get total revenue. Thus  $TR = P \times Q$ . It may be illustrated with the following example. Suppose a producer intends to sell 1,00 units of a commodity at a price of Rs. 300 each. In this case total revenue will be  $TR = Rs. 300 \times 100 = Rs. 30000/-$ .  
AVERAGE REVENUE : By 'average revenue' we mean

**41% MATCHING BLOCK 133/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

revenue obtained per unit of output sold. This is obtained by dividing total revenue by the number of units of output sold. That means,  $AR = \frac{TR}{Q}$ , Q being total units of output sold. In our previous example, total revenue is

Rs. 30000/- and total output sold is 100 units. Hence, Average revenue =  $\frac{Rs.30000}{100 \text{ units}} = Rs. 300/-$

**86% MATCHING BLOCK 134/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

By definition, 'average revenue' is the price. Price is always expressed per unit. Per unit sales receipt is also called average revenue. Since sellers receive according to price, price and average revenue are one and the same thing.

It may be proved in the following manner :  $AR = \frac{TR}{Q} = \frac{P \times Q}{Q} = P$ .  
MARGINAL REVENUE : Marginal revenue is the additional or extra revenue that a firm gets by selling one more unit of an item. It may simply be stated as the revenue

**91% MATCHING BLOCK 135/204**

**SA** New MBA \_Managerial Economics.docx (D109293830)

or sales receipt of the marginal unit of the firm's output. Algebraically, the marginal revenue of

the n-th

**70%**

**MATCHING BLOCK 136/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

unit per period of time of a given product is the difference between the total revenue earned by selling  $(n - 1)$  units from the total revenue by selling  $n$  units per period of time. That is,  $MR_n = TR_n - TR_{(n-1)}$ . Here  $n$  stands for the number of units of output sold.

It may be illustrated in the following manner. If a firm sells 10 units of output  $X$  for Rs. 300

**90%**

**MATCHING BLOCK 137/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

each, its total revenue will be Rs. 3000/-. If it were to sell one more unit, i.e., a total of 11 units of  $X$ , it could do it at a lower price, say,

Rs. 280 per unit. Its total revenue in that case will be Rs. 3080/-.

**100%**

**MATCHING BLOCK 138/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

In other words, the eleventh unit has made a net addition

to only Rs. 80/- to its previous total revenue of Rs. 3000/- from the sale of 10 units. By applying the above formula we get  $MR_{11} = TR_{11} - TR_{10}$ . That is,  $MR = Rs. 3080/- - Rs. 3000/- = Rs. 80/-$ . Marginal revenue is also defined to be

**55%**

**MATCHING BLOCK 139/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

the rate of change in total revenue when the increment in the sale of output is assumed to be one unit more. Hence, marginal revenue may also

be

**100%**

**MATCHING BLOCK 140/204**

**SA**

New MBA \_Managerial Economics.docx (D109293830)

defined as the ratio of change in total revenue to a unit change in output sold.

It may, symbolically, be expressed as  $MR = \frac{dTR}{dQ}$ . When the revenue function is given in the algebraic form, then to find marginal revenue we can, more easily, apply this form. Example : Suppose the revenue function of a firm is given by  $R = 500Q - 2Q^2$ . Then the marginal revenue will be  $MR = \frac{dR}{dQ} = \frac{d}{dQ} [500Q - 2Q^2] = 500 - 2 \times 2Q = 500 - 4Q$ . 5a.9 The Relationship Between Average Revenue, Marginal Revenue and the Price Elasticity of Demand We know that total revenue = Price  $\times$  Quantity sold That is,  $TR = P \times Q$ . Now,  $MR = \frac{dTR}{dQ} = \frac{d}{dQ} [P \times Q] = Q \frac{dP}{dQ} + P$ .

NSOU • PGCO - II 129 =  $1 + P \frac{dQ}{dP} = 1 + \frac{1}{e_d}$ . . . ed =  $\frac{dQ}{dP} \frac{P}{Q}$ . That means,  $MR = Price \left[ 1 + \frac{1}{e_d} \right]$ . Some observations on this relation : Observation 1 : Let  $e_d = 1$ . That is, the commodity has unitary elasticity. In this case,  $MR = P \left[ 1 + \frac{1}{1} \right] = 0$ . That is, MR is zero. So when the commodity has unitary elasticity, MR is zero. That means, total revenue is maximum. Thus, for maximization of total revenue, the commodity concerned should have unitary elasticity of demand. Observation 2 : Let  $e_d$  be greater than 1 (one), say, 3. In this case  $MR = P \left[ 1 + \frac{1}{3} \right] = P \times \text{a positive fraction} = \text{Positive}$ . So, MR is positive. MR is positive means with more sale, total revenue will go on increasing. Observation 3 : Let  $e_d$  be less than one, say,  $\frac{1}{3}$ . In this case,  $MR = P \left[ 1 + \frac{1}{\frac{1}{3}} \right] = P(1 - 3) = \text{Negative}$ . That is, MR is negative. MR is negative means with more sale, total revenue will go on decreasing. This is, however, an unrealistic case. Of the above three observations, only the first two are realistic. However, many firms now-a-days intend to maximise revenue. For this the necessary condition is that the commodity concerned should have unitary elasticity of demand. This is also the condition for maximising the sales or revenue of a firm.

130 NSOU • PGCO - II 5a.10 Relation Between MR And AR Curves Under Different Forms of a Market 1. Since price elasticity of demand ( $e_d$ ) is, by definition, non-negative, the MR will always be less than price ( $=$  average revenue) at all levels of output. This is obvious because  $MR = P(1 - e_d)$  and  $MR = AR = P$ . Thus, graphically, the MR curve always lies below the AR curve. 2. Under a perfectly competitive market  $e_d$  is infinity ( $\infty$ ). Hence in this form of market  $MR = P(1 - e_d) = P(1 - \infty) = P(1 - 0) = P$ . Therefore, under perfect competition  $MR = Price = AR$ , that is, under perfect competition  $MR = Price = AR$ , that is, under perfect competition  $MR$  curve =  $AR$  curve and both are horizontal straight lines, being parallel to the horizontal axis. This has been demonstrated in the following diagram. (Fig. 5.1) Fig : 5.1 Perfect competition Also, since under perfect competition  $MR = AR = Price$ , we have  $MR = price(1 - e_d)$ .  
Revenue Quantity

NSOU • PGCO - II 131 That is,  $MR = Price = AR$ . This means that under perfect competition  $1 - e_d = 0$ . This implies that  $e_d = \infty$ . Therefore, under perfect competition the commodity concerned has perfectly elastic demand. 3. Under monopoly, price or average revenue is always greater than marginal revenue. We have  $e_d = AR - MR$ . However, under monopoly  $e_d$  is greater than zero but less than 1. Therefore, monopoly demand is inelastic. Hence, monopoly demand curve is always downward sloping. This has been presented in the following diagram. (Fig 5.2) Fig : 5.2 Monopoly  
RELATION BETWEEN AVERAGE REVENUE (AR) AND MARGINAL REVENUE (MR) From the above analysis let us now summarise the relation between AR and MR as under : 1. When AR is constant, MR is also constant and AR and MR are identical. Revenue Quantity

132 NSOU • PGCO - II 2. When AR increases, MR also increases. However, the rate of increase of MR is greater than the rate of increase of AR. 3. When AR decreases, MR also decreases. However, the rate of decrease of MR is greater than the rate of decrease of AR. These three relations may be illustrated graphically in the following manner : Fig : 5.3  
GENERAL DISCUSSION OVER EQUILIBRIUM OF THE FIRM AND INDUSTRY In Economics, equilibrium means a state of balance or a state of no change. This means that whenever an economic unit attains equilibrium, it does not want any further change from its position already attained. Thus a producer is said to be in equilibrium when he gets maximum output with the least cost combination of various inputs. THE CONCEPT OF A FIRM A firm is, generally, a decision making business unit which organizes and directs the production of goods and services. Professor Watson in his "Price Theory and Its Uses" stated, "A firm is a unit engaged in production for sale at a profit and with the objective of maximizing the profit".  
Naturally,

**75% MATCHING BLOCK 141/204 SA** New MBA \_Managerial Economics.docx (D109293830)

a firm is in equilibrium when it has no intention either to expand or to contract its output.

According to Professor Hanson, "A firm is said to be in equilibrium when the entrepreneur has no motivation to change its organization or its scale of production".  
Revenue Quantity  
Revenue Quantity  
Quantity  
NSOU • PGCO - II 133 ASSUMPTIONS MADE FOR DISCUSSING EQUILIBRIUM OF A FIRM A. APPROACH OF TOTAL REVENUE AND TOTAL COST : It is known to us that Total profit = Total Revenue – Total Cost. That is,  $\pi = TR - TC$ . Thus, profits are

**100% MATCHING BLOCK 142/204 SA** Principal of Microeconomics.pdf (D110867814)

the difference between total revenue (TR) and total cost (TC)

per period of sales. If TR and TC curves of the firm are given, the profit maximizing level of output will be that level where the vertical distance between TR and TC is the greatest. Moving either to the left or to the right will reduce the amount of profit that will be earned by the firm. Naturally, the firm will alter its production upto the point where

**67% MATCHING BLOCK 143/204 SA** Managerial Economics.pdf (D143428574)

the difference between total revenue and total cost will be maximum. At this level of output the

firm will have no intention to change its output and, naturally, the equilibrium will be a stable one. EQUILIBRIUM OF THE FIRM UNDER THE PERFECTLY COMPETITIVE MARKET Because of the various characteristics of a firm under a perfectly competitive market each firm in this market is just a price taker, not a price maker. Since the firm is simply Fig. 5.4 Price and Cost Profit Maximising point Total Loss TR Break-even point Total Loss Maximum Total Profit Curve Best Output Output Profit

134 NSOU • PGCO - II a price taker, a firm can sell as much as it wishes though only at a given price. This is the reason why the total revenue curve of a firm in this market is an upward sloping straight line drawn at an angle of 45°. The shape of the TR curve shows that the total revenue of the firm is increasing with an increase in production at the same ratio. It has been demonstrated in the above diagram (Fig 5.4) measuring output horizontally while revenue and cost have been measured vertically. In the above figure 5.4 TR is the total revenue curve while TC is the total cost curve of a firm under the perfectly competitive market. Initially, the firm has been incurring loss upto OQ 1 level of output. At point A where OQ 1 level of output gets produced, total revenue just covers total cost and so A is the break-even point. Beyond the point A any further increase in production leads to an increase in profits. Hence between outputs OQ 1 and OQ 2 , total revenue is in excess of total cost. So profitable range of production is Q 1 Q 2 . However, profit is not maximum at all levels of output in the range between OQ 1 and OQ 2 . Total profit is maximum at that point where the vertical distance between TR and TC becomes maximum. Such an output can be obtained by drawing a tangent to TC and that to TR. These two tangents are parallel to each other. The maximum distance between TR and TC is PS. The equilibrium level of output is OQ where total profit is maximum. DEFECTS OF THE TR AND TC APPROACH However, according to many economists, explanation of equilibrium of a firm by total revenue and total cost approach is cumbersome because of the following two reasons : 1. The maximum vertical distance between total revenue and total cost is not always easy to see at a glance. 2. Besides, it is not possible to discover the price per unit of the product at the first sight. To get the price per unit of output, we are to divide total revenue by total output sold. 5a.11 Marginal Revenue And Marginal Cost Approach Because of the above-mentioned defects of TR and TC approach for explaining the equilibrium position of a firm another approach, that is, i.e., Marginal Revenue and Marginal Cost Approach has been introduced. Mrs. Joan Robinson in her book, 'The Economics of Imperfect Competition' had used the tools of marginal revenue and marginal cost to explain the equilibrium of a firm.

NSOU • PGCO - II 135 We know that Total Profit = Total Revenue – Total Cost. In symbols,  $\pi = TR - TC = R(Q) - C(Q)$ , Q being the quantity of output. For the maximisation of profit there are two conditions : (a) Necessary or first order condition : According to this condition,  $\frac{d\pi}{dQ} = 0$ . That is,  $\frac{dR(Q)}{dQ} - \frac{dC(Q)}{dQ} = 0$ . That is,  $R'(Q) - C'(Q) = 0$ . That is,  $MR - MC = 0$ . That is,  $MR = MC$ . Therefore, the equality between the marginal revenue and marginal cost is the necessary or the first order condition for the maximisation of profit. (b) Sufficient or the second order condition According to this condition,  $\frac{d^2\pi}{dQ^2} < 0$ . This means that  $\frac{d^2R(Q)}{dQ^2} - \frac{d^2C(Q)}{dQ^2} < 0$ . That is,  $\frac{d^2R(Q)}{dQ^2} < \frac{d^2C(Q)}{dQ^2}$ . In language, this means that at the profit maximising point the rate of change in marginal revenue is less than the rate of change in marginal cost. To simplify this further, this condition states that just before attaining maximum profit, marginal revenue is more than marginal cost and just after attaining maximum profit marginal cost is greater than marginal revenue. To be more specific, at the profit maximising point the marginal cost curve will cut the marginal revenue curve from below. A FIRM UNDER PERFECTLY COMPETITIVE MARKET A perfectly competitive market is one

**100% MATCHING BLOCK 144/204**

**SA** BA 1st Sem Micro Eco SLM AMU.doc (D142294418)

in which there are a large number of buyers and sellers

of a homogeneous product and neither a buyer nor a seller has any control over the price of the product. Such a market is characterised by the following features :

136 NSOU • PGCO - II FEATURES OF A PERFECTLY COMPETITIVE MARKET 1. INNUMERABLE SELLERS AND BUYERS : Under perfect competition the number of sellers is assumed to be so large that the share of each seller in the total supply of the product is very small. Therefore, not a single seller can have any influence on the market price by changing his supply or can charge a higher or lower price. Obviously, firms are mere price takers, not price makers. In the same way, the number of buyers is so large that the share of each buyer in the total demand for the product is very small and that not a single buyer or a group of buyers can influence the market price. 2. HOMOGENEOUS PRODUCT : The commodities supplied by all the firms of an industry are assumed to be homogeneous or almost identical. Homogeneity of the product implies that buyers do not make any distinction between product supplied by various firms of an industry. Product of each firm is regarded as a perfect substitute for the products of all other firms. Hence, no firm can gain any competitive advantage over other firms. This assumption eliminates the power of all the suppliers of the firms to charge a price higher than

**48%**

**MATCHING BLOCK 145/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142294418)

the market price. 3. PERFECT MOBILITY OF FACTORS OF PRODUCTION : Factors of production are freely mobile between the firms. Labour can freely move from one firm to another

or from one occupation to another, as there is no barrier to labour mobility. Similarly, capital can also move freely from one firm to another. 4. FREE ENTRY AND FREE EXIT : There is no legal or market barrier on the entry of new firms to the industry, nor is there any restriction on exit of the firms from the industry. 5. PERFECT KNOWLEDGE : Both the buyers and sellers have perfect knowledge about the market conditions. It means that all the buyers and sellers have full information regarding the prevailing and future prices and availability of the commodity concerned. 6. NO GOVERNMENT INTERFERENCE : There is no Government intervention in the market. This means that tariff,

**100%**

**MATCHING BLOCK 146/204**

**SA**

Managerial Economics.pdf (D143428574)

subsidies, rationing of production or demand and so on are ruled out.

NSOU • PGCO - II 137 7. ABSENCE OF COLLUSION AND INDEPENDENT DECISION MAKING BY FIRMS : In this market there is no collusion between the firms; they are not in league with one another in the form of guild or cartel. Nor are the buyers in any kind of collusion among themselves. 5a.12 Graphical Presentation of the Short Run Equilibrium of a Perfectly Competitive Firm. Under the perfectly competitive market, Total Revenue = price × quantity sold. or,  $TR = pq$ . Hence, Average Revenue,

**63%**

**MATCHING BLOCK 147/204**

**SA**

Principles of Economics book new.doc (D112051420)

$AR = \frac{TR}{q} = \frac{p \times q}{q} = p$ . Thus, under perfect competition, AR is identical with price. Now, marginal revenue,  $MR =$

$dTR/dq = p$ . Hence under perfect competition,  $p = AR = MR$  will be simply a horizontal straight line parallel to the horizontal axis as has been shown in figure 5.5(a) Fig. 5.5(a) Revenue P Quantity

138 NSOU • PGCO - II Fig. 5.5(b) Since AR is a horizontal straight line, MR is also so and AR and MR coincide. In diagram 5.5(b)  $PAR = MR$  represents this feature of the market. Besides, SAC, SAVC and SMC have all usual shapes. Naturally, the vertical distance between SAC and SAVC indicates the AFC (= the average fixed cost). In figure 5.5(b) at points e and e<sub>1</sub>,  $MR = MC$ . Hence by virtue of the necessary condition, the firm should attain equilibrium at both these points. However, it cannot attain equilibrium at point e where  $AC < AR = \text{price}$  as this will lead to loss to the firm. Hence it will proceed to point e<sub>1</sub> where it will produce and will sell  $oq_1$  units of output. At this stage its  $AR = OP = e_1q_1$  so that its  $TR = e_1q_1 \times oq_1 = oPe_1q_1$ . Here  $AC$  is  $C_1q_1$  so that  $TC$  is  $oq_1 \times C_1q_1 = op_1c_1q_1$ . Obviously, the firm attains profit to the tune of the area  $PP_1c_1e_1$  which is referred to as abnormal or supernormal profit. The difference between points e and e<sub>1</sub> is that at e only the necessary condition for the maximization of profit is getting satisfied while at e<sub>1</sub> both the necessary and sufficient conditions are satisfied. Hence it is usually said that "for maximization of profit the equality between MR and MC is only the necessary condition but not the sufficient one". Since the firm does not attain equilibrium at point e, it is generally said that "perfect competition is incompatible (inconsistent) with increasing returns to scale". Revenue, Cost, Price and Profit Break even point Shut down point Quantity  $AR_2 = MR_2$

NSOU • PGCO - II 139 The possibility of earning supernormal profit will attract other firms to enter into the industry and as a consequence supply of the commodity will go on increasing. This will, obviously, lead to a fall in price of the commodity. Hence the new average revenue curve will be  $AR_1$  and  $AR_1 = MR_1$  and the new equilibrium point is e<sub>2</sub> where both the conditions for maximization of profit get satisfied. At e<sub>2</sub> the firm produces and sells  $oq_2$  units of output and it is here where  $AC = AR = MR = \text{price}$ . This means that at e<sub>2</sub> only normal profit is attained : at e<sub>2</sub>, SAC is tangent to AR and the point e<sub>2</sub> is referred to as the "break-even point" (that is, the normal profit-earning point). The break-even point is the point of tangency between the SAC curve and the AR curve. Even at this stage new firms will make entry into the market, leading to more supply, causing less price. So long as  $P > AC$ , the firm will incur loss but it will stay in the market in the hope of earning profit in near future. If  $\text{price} > AC$ , but  $p < AVC$ , then the entire amount of SAVC will be covered and a part of AFC will be covered. The firm will consider worthwhile to stay in the market so long as  $P > AVC$  &lt;  $=$  . However, if  $P > AVC$ , it will be uneconomic on the part of the firm to stay in the market. Hence the firm will remain in equilibrium at point e<sub>3</sub> where SAVC has become tangent to the  $AR_2 = MR_2$ . However, if  $\text{price} > SAVC$ , the firm will totally close down the business. That is why, the point 'e<sub>3</sub>' is referred to as the "shut down point" where only total variable cost gets covered. So the shut down point is the point of tangency between SAVC and the AR curve. From the above analysis we may thus say that a firm under perfectly competitive market will attain equilibrium in the short run if the following conditions are simultaneously satisfied : 1.  $MR = MC$ . 2. MC cuts MR from below. 3.  $\text{Price} < AC$  &lt;  $>$ ; = but  $\text{price} > AVC$ . 5a.13

**78% MATCHING BLOCK 148/204**

**SA** BOOK---Principles of Microeconomics-1 - Lesson ... (D143600665)

Long Run Equilibrium In the long run all costs are variable, there is no

question of having fixed cost. In the short run, there is the possibility of getting supernormal profit, normal profit and even incurring loss. In the long run, however, supernormal profit will be competed away and the inefficient firms will leave the industry. Only the efficient firms will survive in the long run when they will have to be satisfied with the attainment of only normal profit. This situation has been demonstrated in figure 5.6 where along the horizontal axis we measure quantity of output produced and sold whereas along the vertical axis revenue, cost, price and profit have been measured.

140 NSOU • PGCO - II Revenue, Cost, Price and Profit Quantity Fig. 5.6 In figure 5.6 the firm has attained equilibrium at point e\*, satisfying both the conditions for the attainment of maximum profit. Hence in the long run a firm under perfectly competitive market will attain equilibrium when 1.  $MR = MC$  2. MC cuts MR from below and 3.  $MC = MR = AR = \text{price} = AC$ . That means that in the long run,  $\text{Price} = \text{Average cost}$ . Therefore, in the long run the firm attains only normal profit and at the same time it produces at the minimum cost.

**100% MATCHING BLOCK 149/204**

**SA** Principal of Microeconomics.pdf (D110867814)

THE SHORT RUN SUPPLY CURVE OF A FIRM UNDER PERFECT COMPETITION

After discussing the profit maximizing level of output of a firm under the perfectly competitive market now we are interested in discussing how a firm under this market derives its supply curve. The supply curve of a firm under a perfectly competitive market can be derived from the principle of the maximisation of profit. It is known to us that under the ceteris paribus clause (other things remaining the same), a supply curve gives a unique relationship between price and quantity supplied and the supply function is given by  $s = f(p)$

NSOU • PGCO - II 141 with  $ds dp > 0$ , that is, the slope of the supply curve is positive. We know that a firm under the perfectly competitive market attains equilibrium at the points of intersection of its marginal cost curve with successive average revenue curves. This can be illustrated in diagram 5.7 where along the horizontal axis we measure quantity while along the vertical axis revenue and cost have been measured. The firm under consideration is initially in equilibrium at point  $e_3$  where two conditions for attaining equilibrium have been satisfied. The firm produces and sells  $oq_3$  amount of output at price  $op_3$  and it attains supernormal profit. When price comes down from  $OP_3$  to  $OP_2$  the profit maximizing conditions are satisfied at  $e_2$  and the firm attains equilibrium at  $e_2$  producing and supplying  $oq_2$  amount of output at price  $OP_2$ . At this point price =  $OP_2 = e_2 q_2 =$  average cost. Thus at point  $e_2$  the firm is in a position to cover its entire cost, there is neither profit nor loss. The point  $e_2$  is called the "break- even" point where only normal profit is earned. However, if price becomes less than  $OP_2$  but more than  $OP_0$ , the firm will be in a position to cover the entire amount of the fixed cost (the vertical distance between AC and AVC is the Fig. 5.7 average fixed cost) and a part of the variable cost. The firm will continue production and supply Revenue, Cost, Price, Profit Quantity

142 NSOU • PGCO - II it in the market as it will be able to cover the total variable cost. Thus when price falls from  $OP_2$  to  $OP_1$  the firm produces and supplies  $oq_1$  amount of output. In the same way when price comes down to  $OP_0$  the firm attains equilibrium at point  $e_0$  where both the conditions of attaining equilibrium get satisfied. So at price  $OP_0$  the firm produces and supplies  $oq_0$  amount of output. The point  $e_0$ , that is, the point of tangency between  $AVC$  and  $AR = MR$  line is known as the shut down point where the firm is able to cover only the variable cost (not even a portion of the fixed cost). If price comes below  $OP_0$  the firm will not produce anything and will not supply any amount also. From what has been stated above it is clear that the points  $e_0$ ,  $e_1$ ,  $e_2$  and  $e_3$  on the MC curve of a firm under the perfectly competitive market, in the short run, are

**71% MATCHING BLOCK 150/204**

SA

BOOK--Principles of Microeconomics-1 - Lesson ... (D143600665)

on the supply curve. By joining these points, we get a curve known as

the supply curve. This curve corresponds to SMC curve. Therefore, under the perfectly competitive market in the short run,

**57% MATCHING BLOCK 151/204**

SA

Introductory Micro-Sem-1.pdf (D110812531)

the MC curve that lies above the AVC curve is the firm's supply curve in the short run.

This may also be stated as the

**100% MATCHING BLOCK 152/204**

SA

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

MC curve above the shut down point is the supply curve

of a firm under perfect competition in the short run. Naturally, supply falls to zero if price of the commodity falls below AVC. We may sum up the above analysis by stating that  $S = S(P)$  such that  $S(P) > 0$  when  $P \geq AVC$  and  $S = 0$  when  $P < AVC$ . However, there are many firms in a competitive industry, each producing that quantity of goods where its MC curve intersects  $AR = MR$  curve. All firms sell the product at the same price. Naturally, it is apparent that the industry supply curve, of course, in the short run under the perfectly competitive market, is equal to the horizontal summation of all firms' supply curve or MC curve above the minimum point of the AVC. Naturally, like the individual supply curve, the short run industry supply curve is upward sloping. We end our discussion of the supply curve by saying the statement of Professor R. G. Lipsey : "The supply curve for a competitive industry is the horizontal sum

product is zero in case of pure monopoly and very low in the case of simple monopoly (

who will charge the same price for all the buyers).

NSOU • PGCO - II 145 5b.4 Causes for The Growth of Monopoly There are a number of causes leading to the growth of monopoly : 1. There may be ownership of the strategic raw materials or exclusive knowledge of production techniques. 2. There may be patent rights for a particular product or for a production process. 3. There may be

**89% MATCHING BLOCK 160/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

Government licensing or the imposition of foreign trade business to exclude foreign competition. 4. The size of the market may be such as not to support more than one plant of optimum size. 5. The

monopolist may set limit price to prevent entry of new firms. 5b.5 Objectives of The Monopolist The natural objective of the monopolist is, obviously, to maximize profit which

**100% MATCHING BLOCK 161/204**

**SA**

Principal of Microeconomics.pdf (D110867814)

is the difference between total revenue (TR) and total cost (TC).

This objective of the monopolist will, obviously, be fulfilled if two conditions are simultaneously fulfilled : (i) Necessary or first order condition : This condition is the equality between marginal revenue (MR) and marginal cost (MC) and (ii) Sufficient or the second order condition which states that at the profit maximizing point the marginal cost curve should cut the marginal revenue curve from below. 5b.6 Equilibrium of A Monopolist (A) SHORT RUN EQUILIBRIUM : A monopolist faces a negatively sloping demand curve or average revenue (AR) curve. The reason behind this is that though he is a monopolist, if he wants to sell more he must lower down the price of his product. Since the average revenue curve is downward sloping, the corresponding MR curve lies below the AR curve, that is,  $AR \neq MR$ . Since the monopolist is a price maker, he should take both price and output decisions.

**87% MATCHING BLOCK 163/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

However, given the downward sloping demand curve, these two decisions are interdependent :

fulfilment of one decision leads to the fulfilment of another decision. That is why, the monopolist will either set the price and sell the amount that the market will absorb or determine output which will be sold at the corresponding

146 NSOU • PGCO - II price. However, for the monopolist the essential point for profit maximization is the fulfilment of both the first order and the second order conditions.

**5b.7 Short Run Equilibrium** In the short run a monopolist can earn pure profit or economic profit as well as normal profit. In the short run a monopolist may also incur a loss. All these possibilities appear in the following figure where there are three diagrams : (a), (b) and (c). In each of these diagrams we measure output along the horizontal axis while revenue, cost and price have been measured along the vertical axis. The equilibrium point in each diagram is corresponding to this equilibrium point the monopolist produces OQ amount of output and sells it at a price OP. Fig. 5.8 : (a) Supernormal profit, (b) Normal profit and (c) Loss From diagram (a) we see that the monopolist earns supernormal profit since at OQ level of output total revenue OPRQ is in excess of total cost OTSQ by TPRS which is the amount of supernormal profit. Thus the monopolist will earn supernormal profit after attaining equilibrium when  $MC = MR > AR < AC$ . In other words, a monopolist will earn supernormal profit when the average cost curve will lie below the demand curve. Diagram (b) demonstrates the situation of earning normal profit since here total revenue OPRQ equals total cost OPRQ. Therefore, the condition for getting normal profit, that is,  $MC = MR > AR = AC$  has been satisfied. That means that a monopolist will be satisfied with normal profit when the AC curve at a particular point coincides with the AR curve. In the short run, the monopolist may also incur loss. This case has been demonstrated in figure (c) above where at the equilibrium point e total revenue of the monopolist (a) (b) (c) NSOU • PGCO - II 147 is OPRQ while total cost is OTSQ and consequently, the amount of loss is TPRS. Thus a monopolist will incur loss in the short run when the AC curve lies above the AR curve at the equilibrium level of output. But the monopolist will continue production in the short run if he can cover up only average variable cost. This implies that if the loss of the monopolist equals total fixed cost, the monopolist will stay in business. However, if the monopolist fails to cover up the variable cost, that is, if  $P > AVC$ , only then he will stop production. It may be noted that there cannot be loss in the long run.

**5b.8 Long Run Equilibrium** In the long run, the monopolist can change his scale of production in such a way that he may attain the greatest amount of profit. However, since entry is blocked, excess profit will be enjoyed by the monopolist.

**62% MATCHING BLOCK 162/204**

**W**

In the long run a monopolist may also earn normal profit. However, in the long run

a monopolist will not incur any loss.

**5b.9 Some Interesting Points About Monopoly Equilibrium**

**1. The monopolist will never attain equilibrium in the inelastic portion of his demand curve or AR curve.** This means that a monopolist attains equilibrium at the elastic range of his demand curve. The primary goal of the monopolist is to attain maximum profit. This can be attained when  $MC = MR$ . But  $MR = AR \times \frac{1}{n}$  (where  $n > 1$ ). If  $n < 1$  at a particular point on a straight line demand curve, then naturally, MR becomes positive (that is,  $MR > 0$ ). Costs are always positive (costs can never be negative or it cannot be zero also). Equilibrium must occur when positive MC equals positive MR. However, if  $n > 1$ , MR will be negative. Negative MR can never be equal to positive MC. Therefore, in this range of the demand curve, a monopolist can not attain equilibrium. Finally, when  $n = 0$ , MR will be zero. Equilibrium can not be attained even in this case because positive MC cannot be matched with zero MR. From what has been stated above, it follows that a monopolist always operates and attains equilibrium only at the elastic zone ( $n > 1$ ) of his demand curve in order to attain maximum profit.

**148 NSOU • PGCO - II 2. A monopolist never operates at the lowest point of his average cost curve where cost comes to be the least.** More specifically, the monopolist operates somewhere to the left of the minimum point of his AC curve, whether in the short run or in the long run. This happens because of the nature of the demand curve. Since the demand curve is downward falling, it must be tangent to the falling portion of the AC curve. Since the monopolist operates at this point, it implies that the monopolist firm cannot utilise its plant optimally. This also implies the under-utilisation of resource. Since entry is closed, there is no urgency on the part of the monopolist to operate at the lowest point of its AC curve. On the contrary, a competitive firm always operates at the lowest point of its AC curve since in this case the demand curve is perfectly elastic.

**5b.10 Monopoly Supply Curve** It is interesting to note that a monopoly firm has no well-defined supply curve. This may be due the fact

**100%**

**MATCHING BLOCK 164/204**

**SA**

Micro Economics Generic Elective-B.Com (H) (2).doc (D110479765)

that there is no unique supply curve for the monopolist

to be derived from his marginal cost curve. We know that under perfect competition, the

**97%**

**MATCHING BLOCK 165/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

short run MC curve above the shut down point is the supply curve which shows a unique relationship between price and quantity. At a particular price, a particular amount of the commodity will be supplied. However, under monopoly, there is no such one-to-one correspondence between price and quantity supplied. This is

due to

**76%**

**MATCHING BLOCK 167/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

the fact that output decision of a monopolist does not only depend on

MC

**91%**

**MATCHING BLOCK 168/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

but also on the shape of the demand curve. Consequently, shifts in demand do not trace out a series of prices and quantities as happens with a competitive supply curve. It may happen that a monopolist, given his MC curve, may supply a particular quantity at different prices depending on the elasticity of demand. Hence, the construction of a supply curve from the

marginal cost curve is not possible under monopoly and for that matter under any branch of imperfect competition. 5b.11 Price Discriminating Monopolist A monopolist may, very often, charge different prices for his product to different customers without making any qualitative change for his product. This practice of charging different prices for the same product to different customers is known as price discrimination. A monopoly firm being the only one seller in the market is free to charge different prices to different markets or buyers when conditions are appropriate for this. If the firm follows such a policy in practice, we will call it price discrimination. Instead of selling all output at a single price, the monopoly firm charges higher price for a part of its output and thereby increases its revenue.

NSOU • PGCO - II 149 5b.12 Forms of Price Discrimination Price discrimination may take many forms. The common forms of price discrimination may, briefly, be stated as follows : (A) PERSONAL DISCRIMINATION : Generally, depending upon the economic status of buyers, different prices may be charged to different buyers in providing similar service. For instance, a surgeon may charge a high operation fee to a rich patient and a lower one to a poor patient. (B) AGE DISCRIMINATION : On the basis of age of the buyers price discrimination may be possible. For example, a barber may charge lower rates for children's hair cuts than those for adults. In railways and bus transport services, it is a commonly adopted form of price discrimination that persons below 12 years of age are charged at half the rate. (C) SEX DISCRIMINATION : In selling some goods, producers may discriminate between male and female buyers by charging low prices to females. For example, an organizing firm may provide seats to ladies at concessional rates. (D) SIZE DISCRIMINATION : On the basis of size of quantity of the product, different prices may be charged. For example, an economy size tooth paste tube is relatively cheaper than a small size tube. Similarly, a product is sold in the retail market at a higher price than in the wholesale market by the producer. (E) USE DISCRIMINATION : Sometimes, depending upon the kind of use of the product, different rates may be charged. For example, an electricity distribution company may charge low rates for industrial use as compared to the high rates for AC. (F) NATURE OF COMMODITY DISCRIMINATION : Sometimes, because of the nature of a commodity, price discrimination may be made. For example, freight charges by the railways are different for coal and iron for the same distance. (G). TIME DISCRIMINATION : On the basis of time of service, different rates may be charged. For example, cinema houses charge lower rates of admission for mornings and matinee shows than for regular shows. 5b.13 Necessary Conditions For Making Price Discrimination Possible Under price discrimination different buyers pay different prices. So, price in one market must be higher and lower in another market. The following two necessary conditions must be satisfied for the system of price discrimination to function. 150 NSOU • PGCO - II (i) For making price discrimination possible, goods must not be transferred from one market to another. That means, price discrimination must preclude resale of the goods. To be more specific, price discrimination will break down if buyers purchase the monopoly product from the low-priced market and sell it in the high-priced market. (ii) Demand must not be shifted from the dearer market to the cheaper one. This means that price discrimination will not be possible if buyers of the product transfer themselves from one market to another market. (iii) It may happen that buyers do not know what prices that the monopolist charges are prevailing in different markets. Such ignorance on the part of the buyers may cause price discrimination to exist. Besides, laziness of consumers may lead to differences in prices of the monopoly product. Customers may care little for the difference in prices though they know the difference in prices. Moreover, customers may care little for the differences in prices though they know the difference in prices. Nature of the product may demand price discrimination to stay. Personal services of say, doctors, lawyers are such that price discrimination is supposed to exist. Finally, there may be legal sanction for price discrimination. For illustration, the railway charges different fares to different passengers. 5b.14 Conditions for Successful Price Discrimination We may point out that even if price discrimination is possible, it may not be profitable for the monopolist to discriminate prices. Charging two different prices to different buyers may not necessarily result in higher profit. To make price discrimination profitable, the following three conditions must be fulfilled : (1) The seller must have a monopoly power. This means that it can be maintained only under monopoly. It can not be done either in perfect competition or in monopolistic competition. (2)

**100% MATCHING BLOCK 166/204**

**W**

The elasticities of demand in different markets must be different.

Under this situation the monopolist will charge higher price in the market having relatively inelastic demand and lower price in the market having relatively elastic demand. Proof : Let there be two markets 1 and 2 having respective prices  $p_1$  and  $p_2$  and respective elasticities of demand  $e_1$  and  $e_2$  .

NSOU • PGCO - II 151 Naturally,  $MR_1 = p_1 \frac{1}{e_1}$  and  $MR_2 = p_2 \frac{1}{e_2}$ . The condition for equilibrium is  $MR_1 = MC$  and  $MR_2 = MC$  so that  $MR_1 = MR_2$ . Hence  $p_1 \frac{1}{e_1} = p_2 \frac{1}{e_2}$ . That means,  $p_1 = p_2 \frac{e_1}{e_2}$ . Now, assume  $e_1 = 3$  and  $e_2 = 5$  so that  $p_1 = p_2 \frac{3}{5}$ . Thus  $p_1 < p_2$ . That is,  $p_1 < p_2$ . Hence when  $e_1 > e_2$ ,  $p_1 < p_2$  proved. 5b.15 Relation Between Elasticity Of Demand And The Policy Of Price Discrimination Let there be two markets 1 and 2 having respective elasticities  $e_1$  and  $e_2$ , respective prices  $p_1$  and  $p_2$  and respective marginal revenues  $MR_1$  and  $MR_2$ . Hence,  $MR_1 = AR_1 \frac{1}{e_1}$  and  $MR_2 = AR_2 \frac{1}{e_2}$ . For equilibrium,  $MR_1 = MR_2 = MC$ .

152 NSOU • PGCO - II That means  $AR_1 \frac{1}{e_1} = AR_2 \frac{1}{e_2}$ . That is,  $AR_1 = AR_2 \frac{e_1}{e_2}$ . If  $e_1 = e_2$ , then  $AR_1 = AR_2$ . That is,  $P_1 = P_2$ . This amounts to saying that if elasticities of demand are of uniform nature in all markets, it will not be possible and also profitable too, to discriminate between buyers. That means, the monopolist will charge the same price to all buyers. On the other hand, if  $e_1 < e_2$  then  $AR_1 < AR_2$ . That is,  $MR_1 < MR_2$ . That is,  $p_1 > p_2$ . That is, the monopolist will charge a higher (lower) price in the market in which demand is less (more) elastic. But it must be noted that the coefficient of elasticities of demand for the product in all markets should have a value greater than one. This is because of the fact that the monopolist does always operate at the elastic zone ( $e > 1$ ) of his demand curve. 5b.16 Equilibrium Conditions Under Price Discrimination Let us assume that the monopolist concerned produces  $q$  units of a commodity. Of these  $q$  units he intends to sell  $q_1$  units in market 1 and  $q_2$  units in market 2 so that  $q_1 + q_2 = q$ . Naturally, profit of the monopolist will be

NSOU • PGCO - II 153  $\pi = TR - TC = TR_1 + TR_2 - TC = R_1(q_1) + R_2(q_2) - C(q_1 + q_2)$ . For maximization of profit we are to set  $\frac{\partial \pi}{\partial q_1} = 0$  and  $\frac{\partial \pi}{\partial q_2} = 0$ . Now,  $\frac{\partial \pi}{\partial q_1} = R_1 - C = 0$ . That is,  $R_1(q_1) = C(q_1 + q_2)$ . That is,  $MR_1 = MC$ . (a) Again,  $\frac{\partial \pi}{\partial q_2} = R_2 - C = 0$ . That is,  $R_2(q_2) = C(q_1 + q_2)$ . That is,  $MR_2 = MC$ . (b) Hence, for equilibrium under price discrimination,  $MR_1 = MR_2 = MC$ . This is the necessary condition for equilibrium. We are to remember that at the stage of production no discrimination had been made. The sufficient condition is that at the profit maximizing point the MC curve should cut the MR curve from below. 5b.17 Graphical Presentation of Equilibrium of a Discriminating Monopolist The equilibrium position of a price discriminatory monopolist can, graphically, be, presented in the following diagram where there are three diagrams : 1, 2 and 3. In diagram 1 the

**75%**

**MATCHING BLOCK 169/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

AR and MR curves show the average and marginal revenue curves of the monopolist

in market 1 where a part of his total output is being sold. Diagram 2 reveals the corresponding AR and MR curves of the monopolist in market 2. Finally, diagram 3 reveals

154 NSOU • PGCO - II the equilibrium situation of the discriminatory monopolist. From the diagrams it is clear that the demand curve in market 1 is relatively inelastic while that in market 2 is relatively elastic. In diagram 3, the combined marginal revenue curve, that is,  $MR_i = \sum$  has been obtained by the lateral summation of the two marginal revenue curves in the two markets. In this diagram the equilibrium point has been attained where  $MR_i = MC = \sum$  and the MC cuts the  $MR_i = \sum$  from below. Therefore, the monopolist sells  $oq$  units of his output Fig. 5.9 The monopolist has to allocate total output  $oq$  in the two sub-markets in such a way that MR in each of the two sub-markets is equal to  $oq$ . From the diagrams it is clear that the monopolist sells  $oq_1$  units of output  $oq$  in market 1 at price  $OP_1$  and  $oq_2$  units of output  $oq$  in market 2 at price  $OP_2$ . Naturally,  $oq_1 + oq_2 = oq$ . It is to be noted here that demand for the monopolist's output in market 1 is relatively inelastic while that in market 2 is relatively elastic, that is,  $e_1 > e_2$ . Obviously,  $OP_1 > OP_2$ . Quantity Diagram-1 Market-1 Quantity Diagram-2 Market-2 Quantity Diagram-3 P 2 R 1

NSOU • PGCO - II 155 5b.18 Degree of Monopoly Power An important feature of Monopoly is that the monopolist enjoys some power commonly known as monopoly power. By this power is meant the amount of discretion which a monopolist enjoys with regard to price and output policy. That means, the monopoly power indicates the degree of control which a seller exerts over the price and output level of his product. It may also indicate the deviation from perfect competition. There are a number of measures of this degree of monopoly power. 1. Lerner's Measure : The divergence between price and marginal cost is the main source of monopolistic exploitation. Professor Abba P. Lerner has expressed this gap per unit of price as  $DMP = \frac{P - MC}{P} = \frac{P - MR}{P} = \frac{1}{|e|}$ . Thus the index of monopoly power varies inversely with the elasticity of demand. The greater the absolute price elasticity of demand the lower the degree of monopoly power and vice versa. Since under perfect competition,  $P = MC$ , the degree of monopoly power is zero under this form of market. Alternatively, we know that under perfect competition  $|e| = \infty$ . Hence under

**64% MATCHING BLOCK 170/204**

**SA** MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

perfect competition, index of monopoly power =  $\frac{1}{|e|} = \frac{1}{\infty} = 0$ . On the other hand, when the monopolist has no cost of production, that is,

$MC = 0$ , then the index of monopoly power is unity. Hence Lerner's measure of the index of monopoly power lies between zero (0) and unity (1). It is zero under perfect competition while unity when there is costless monopoly. 2. Size of supernormal profits : Another indicator of the strength of monopoly power is the size of supernormal profits. Supernormal profit, under perfect competition, in the long run, is zero. However, it is, generally, positive under monopoly. Hence the size of supernormal profits has been a measure of the degree of monopoly power. We know that supernormal profits arise when  $P > AC$ . Hence  $(P - AC)$  may be regarded as an indicator of monopoly power. 156 NSOU • PGCO - II 3. Rate of profit : The rate of profit may also be used as a measure of the degree of monopoly power. The rate of profit has been defined as the ratio of total profit to total capital employed. The higher the rate of profit, the greater is the degree of monopoly power. The rate of profit is zero in the long run under perfect competition and hence the monopoly power is zero, though it is positive under monopoly. 4. Cross price elasticity as a measure : The concept

**80% MATCHING BLOCK 172/204**

**SA** microeco\_compilation-FINAL.pdf (D143604282)

of cross price elasticity of demand as a measure of the degree of

monopoly power has been used by Professor Triffin. The cross price elasticity of demand has been defined as the percentage change in sales of the  $i$ -th firm due to one percentage change in price charged by the  $j$ -th firm. In symbols,  $e_{ij} = \frac{dQ_i}{Q_i} \div \frac{dP_j}{P_j}$ . Obviously,  $e_{ij}$  will be zero under pure monopoly while for perfect competition  $e_{ij}$  is infinity ( $\infty$ ). Hence  $e_{ij}$  will be zero for pure monopoly whereas  $e_{ij}$  is infinity under perfect competition. Therefore,

**88% MATCHING BLOCK 173/204**

**SA** IA Rama.docx (D35177919)

the lower the value of cross price elasticity of demand, the greater the

degree of monopoly power and vice versa. However, if this cross price elasticity is finite, there is neither pure competition nor is there pure monopoly. 5b.19 Multiplant Monopoly Sometimes a monopolist may produce his output to be sold in the market in several plants with, obviously, different cost conditions. In this case the market is said to be the multiplant monopoly. Let us assume that the monopolist produces his entire output in two different plants with different cost structures. We also assume that the monopolist knows his market demand. In such a situation the monopolist has to solve two problems : (a) how much total output is to be produced and sold and (b) how much total amount of output is to be distributed between the two plants. We assume that the monopolist wants to maximize his profits.

NSOU • PGCO - II 157 Let us assume that  $q_i$  is the amount of output to plant, be produced in the  $i$ -th plant,  $i = 1, 2$ . Let  $c_i$  be the total cost to be incurred by the  $i$ -th plant  $i = 1, 2$ . Hence the cost functions of the two plants are  $c_1 = c_1(q_1)$  and  $c_2 = c_2(q_2)$ . The revenue function can be written as  $R = R(q_1 + q_2)$ . Hence total profit of the monopolist will be  $\pi = R(q_1 + q_2) - C_1(q_1) - C_2(q_2)$ . The first order condition for maximization of profit needs:  $\frac{\partial \pi}{\partial q_1} = 0$ . That is,  $R'(q_1 + q_2) = C_1'(q_1)$ . Also,  $\frac{\partial \pi}{\partial q_2} = 0$ . That is,  $R'(q_1 + q_2) = C_2'(q_2)$ . Hence the first order condition for the maximization of the monopoly profit is  $MR = MC_1 = MC_2$ . The second order condition for the maximization of profit needs  $\frac{\partial^2 \pi}{\partial q_1^2} < 0$  or,  $\frac{\partial^2 \pi}{\partial q_2^2} < 0$ . That is,  $\frac{\partial^2 \pi}{\partial q_1^2} < 0$ ;  $\frac{\partial^2 \pi}{\partial q_2^2} < 0$ . In language,

**100% MATCHING BLOCK 171/204**

**W**

the second order condition for profit maximization requires that the

monopolist's MC in each plant should be steeper than MR. The equilibrium of the multiplant monopolist can, clearly, be explained with the help of the following diagram where along the horizontal axis quantity sold is measured while revenue and cost are measured along the vertical axis.

158 NSOU • PGCO - II Fig. 5.10 In the first panel of the above diagram we have drawn the AC and MC curves for plant A in panel A and those for plant B in panel B. By the horizontal summation of the MC curves, we get the combined MC curve in panel C. In this panel AR and MR curves have also been drawn. The equilibrium price and output levels have been determined at the intersection point of the MR and MC curves, that is, at point E. Obviously, the equilibrium level of output is  $OQ_0$  while the equilibrium price is  $OP_0$ . The multiplant monopolist, in this way, will decide how much output is to be produced and at what price it is to be sold. The next task of the monopolist will be to determine the levels of output to be produced in each plant. For that we have drawn a horizontal line from E towards the left. This line has cut  $MC_2$  at H while  $MC_1$  at E<sub>1</sub>. At these points the profit maximizing conditions (that is,  $MR = MC_1 = MC_2$ ) have been satisfied. From the diagram we note that  $OQ_1$  amount of output will be produced in plant 1 while  $OQ_2$  amount of output will be produced in plant 2. Naturally,  $OQ_1 + OQ_2 = OQ_0$ . The multiplant monopolist will, in this way, distribute his output among his plants for the maximization of profit. Finally, by drawing the respective AC curves for the two plants we can find out the profits of the monopolist from the two plants. From the diagram we note that the monopolist will get profit equalling to the area ABCD from the first plant while he will get profit equalling to the area KLHG from the second plant. NSOU • PGCO - II 159 5b.20 Degrees of Price Discrimination Professor Pigou has distinguished between different types of price discrimination in the following three manners : 1.

**87% MATCHING BLOCK 174/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Price discrimination of the first degree. 2. Price discrimination of the second degree.

and 3. Price discrimination of the third degree. Let us discuss these three degrees of price discrimination one by one. 1.

**83% MATCHING BLOCK 175/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Price discrimination of the first degree : This type of price discrimination is said to occur when the monopolist is able to sell separate unit of the output at a different price

to the same buyer. That means, it involves maximum possible exploitation of each buyer. That means, it involves a complete shift of consumers' surplus to the seller. Such discrimination is also called perfect price discrimination. In negotiating with each buyer the monopolist charges him the maximum price he is willing to pay under the threat of denying selling of any quantity to him. That means, he offers every buyer a "take- it-or-leave it" choice. This type of price discrimination has been presented in the following figure where

**100%**

**MATCHING BLOCK 176/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

the demand curve also becomes the MR curve of the monopolist

whose total revenue for OX amount of output has been shown by the shaded area. Fig. 5.11 2. Price discrimination of the second degree : In such cases the goods are divided into different blocks of units and for each block a different price is charged. Such a price discrimination is possible if each individual buyer has perfectly inelastic demand for the product below and above a certain price. Such a case has been shown in figure 5.11 where DD is the market demand curve. This market is divided into four groups. In Revenue and Price Output

160 NSOU • PGCO - II Fig. 5.12 the first group the X 1 th unit of the good has demand price equal to OP 1 . So all the buyers in this group pay OP 1 price and the group gets DK 1 P 1 as consumer's surplus. Similarly, for group 2, 3 and 4 consumers pay OP 2 , OP 3 and OP 4 and get the consumers' surplus equivalent to DK 2 P 2 ; DK 3 P 3 and DK 4 P 4 respectively. In this manner the seller divides the total output into different groups and sub-groups in such a way that for each group/sub-groups he charges a different price. 3.

**87%**

**MATCHING BLOCK 177/204**

**SA**

BA 1st Sem Micro Eco SLM AMU.doc (D142399516)

Price discrimination of the third degree : This is said to occur when the seller divides buyers

according to their income, location, types of uses of the product etc. and charges different prices from each group of buyers. Thus the seller is at an advantage segregating the buyers into different groups and charging them different prices so long as the demand elasticities of these groups differ. Naturally, this is the most common type of price discrimination. 5b.21 Sample Questions A. Objective-type Questions : (a) (i) A monopolist can charge any price to maximise profits, (ii) A monopoly firm can fix its price any where along the demand curve, (iii) If monopoly's Revenue and Price Output

NSOU • PGCO - II 161 MC = 0, it fixes its price where e = 0, (iv) The slope of the monopoly's MR curve is twice that of AR curve. Ans. (iv) (b) Under monopoly the supply curve has (i) A positive slope, (ii) A negative slope, (iii) A slope = 0, (iv) None of the above. Ans. (iv) (c) What is the shape of the demand curve faced by a firm under perfect competition? (i) Horizontal, (ii) Vertical, (iii) Positively sloped, (iv) Negatively sloped. Ans. (i) (d) Which is the other name that is given to the average revenue curve? (i) Profit curve, (ii) Demand curve, (iii) Indifference curve, (iv) Average cost curve. Ans. (ii) (e) Price discrimination will be profitable only if the elasticity of demand in different markets in which the total market has been divided is (i) Uniform, (ii) Different, (iii) Less, (iv) Zero. Ans. (ii) (f) Discriminating monopoly implies that the monopolist charges different prices for his commodity : (i) From different groups of consumers, (ii) For different uses, (iii) At different places, (iv) Any of the above. Ans. (iv) (g) Which is the first order condition for the profit of a firm to be maximum? (i) AC = MR, (ii) MC = MR, (iii) MR = AR, (iv) AC = AR. Ans. (ii) (h) Under which of the following forms of market structure does a firm have no control over the price of its product? (i) Monopoly, (ii) Monopolistic competition, (iii) Oligopoly, (iv) Perfect competition. Ans. (iv) B. Short-type Questions : (a) Explain the shape of the demand curve of a firm operating under a perfectly competitive market. (b) Calculate the ratio of prices charged by a discriminating monopolist in two markets, A and B, having price elasticities of demands as -0.5 and -1.5 respectively.

162 NSOU • PGCO - II (c) A monopolist's marginal cost is  $MC = 50 + 3Q$  and the demand for its product is  $Q = 150 - P$ . Find out the profit maximizing output and also the equilibrium price. (d) A monopolist's demand curve is  $P = 200 - 5q$ . Find the MR function of the monopolist. (e) Suppose the demand function of a firm is given by  $P = 20 - Q$  and the total cost function is given by  $C = Q^2 + 8Q + 2$ . Find out the output level that maximizes total profit. Also find out the corresponding price. (f) Show that the profit-maximizing quantity for

**76%**

**MATCHING BLOCK 178/204**

Managerial Economics.pdf (D143428574)

equality between marginal revenue and marginal cost is only necessary but not a sufficient condition

for maximization of profit in a perfectly competitive market". Explain, in detail. 4. What is monopoly? What are its basic features? How does monopoly arise? 5. What is price discrimination? When is price discrimination possible and when is it profitable? 6. Discuss how the equilibrium price and quantity are determined under monopoly. 7. A monopolist faces the demand curve given by  $p = 20 - q$  and his cost function is given as  $c = q^2 + 8q + 2$ . Determine the profit maximizing output and the corresponding price of the monopolist.

NSOU • PGCO - II 163 Unit 6(a)  Monopolistic Competition Structure 6a.1 Objectives 6a.2 Introduction 6a.3 Characteristics of Monopolistic Competition 6a.4 Proportional Demand Curve Vis-a-vis Perceived Demand Curve 6a.5 Equilibrium situation of a Firm under Monopolistic Competition 6a.5.1 Short Run Equilibrium 6a.5.2 Long Run Equilibrium 6a.6 Product Differentiation 6a.7 Analysis of Selling Cost or Advertisement Expenditure in Monopolistic Competition 6a.8 A Comparative study among Perfect Competition, Monopoly and Monopolistic Competition 6a.9 Sample Question 6a.1 Objectives The primary objectives of this unit are : i. To define Monopolistic Competition, indicate its characteristic features and explain its equilibrium. ii. To explain the concept of product differentiation. iii. To discuss selling cost and its implications. 6a.2 Introduction Till 1920's perfect competition and monopoly had been the two favourite analytical models of the economists. However, these two extreme market forms are far from reality. What we find in reality is some sort of a middle group between these two extreme forms. Most of the producing firms are not monopolists since they are to face competition against each other. On the other hand, these firms are not price-takers since they do not operate under perfectly competitive conditions. This sort of intermediate market structure was built up independently by late Professor Mrs. Joan Robinson of England in 1933 and Professor E. C. Chamberlin of the USA also in 1933. It may be mentioned

164 NSOU • PGCO - II that Professor Robinson called this newly built but realistic market form as "Imperfect Competition" whereas Professor Chamberlin called his market as "Monopolistic Competition". However, we are interested in going through Chamberlin's model of "Monopolistic Competition". DEFINITION : Monopolistic Competition refers to a market structure in which a large number of sellers sell differentiated products which are close substitutes for one another. It may be recalled that a close substitute is one whose cross elasticity is unity or greater. This form of market combines the basic elements of both perfect competition and monopoly. The element of monopoly in monopolistic competition arises from the fact that each firm has an absolute right to produce and sell a branded or patented product. Other firms are prevented by laws from producing and selling a branded product of other firms. This gives a firm monopoly power over production, pricing and sale of its own branded product. The element of competition comes from the fact that each branded product is a close substitute for another and firms selling branded products of the same generic category have to compete for the market share. 6a.3 Characteristics of Monopolistic Competition The monopolistically competitive market has the following characteristics : 1. There are a large number of buyers and sellers. However, the number of sellers is not as large as that under perfect competition. 2. Product differentiation : Each seller sells a differentiated product. This implies that the product of each seller is different from that of others. The difference between the products of different sellers is either in quality or in labels or trade marks. Hence, the product of every seller is different. Viewing from this angle, each seller is a monopolist. However, under pure monopoly the product has no close substitutes. But under monopolistic competition

the products of different sellers are close substitutes of one another. One product can be

used in place of the other. Hence, under monopolistic competition, firms have monopoly in production but competition in selling. Hence, the market has been termed as "Monopolistic Competition". 3. Free entry and free exit : In this market there is no barrier on the entry of new firms and exit of old firms from the industry. Entry of new firms reduces the market share of the existing ones and exit of firms does the opposite. The consequences of free entry and exit of firms lead to intensive competition among the firms for both retaining and increasing their market share. 4. As each seller is a monopolist, his AR curve is downward sloping and naturally,  $MR > AR$ . Each seller is a price maker, not a price taker. This implies that every seller can influence the price. Evidently, he can sell more at a lower price or sell less at a higher price.

NSOU • PGCO - II 165 5. Selling Costs : Since each firm produces a differentiated product, each firm has to make some heavy expenditure on advertisement and other sales promotional schemes for his product. However, there is no such advertising costs under monopoly or under perfect competition. In a perfectly competitive market we discuss the equilibrium of a firm and equilibrium of the industry. By industry we mean the whole set of those firms which produce a homogeneous product. However, under monopolistic competition the firms do not produce a homogeneous product. Hence the concept of an industry is not applicable here. Instead, the concept of "product group" has been used by Chamberlin. By product group we mean as a collection of firms producing almost similar goods but not identical goods. Under monopolistic competition each firm is a monopolist seller. He is producing a single product. No one is producing exactly that commodity. For example, there are tooth pastes of various brands in the market. However, only one firm is producing Colgate tooth paste. Thus the producer of Colgae toothpaste is a monopolist and the equilibrium of this producer will be determined in the same manner as in a monopoly market. 6a.4 Proportional Demand Curve Vis-a-vis Perceived Demand Curve We know that monopolistic competition is an amalgam of perfect competition and monopoly. Naturally, a monopolistically competitive firm does not face a horizontal demand curve. However, a competitive firm has experience of facing a horizontal demand curve since goods produced by all firms are homogeneous in nature. Product differentiation is one of the vital assumptions of monopolistic competition where goods are not perfect substitutes like those under perfect competition. Goods produced by a large number of monopolistic competitors are very closely related to each other. Each product is a very close substitute for the product of others. It is because of this product differentiation that every firm enjoys some sort of monopoly power since each product is of unique nature. Therefore, the demand curve faced by a monopolistically competitive firm is negatively sloping. For explaining his theory of monopolistic competition Professor Chamberlin has considered two types of demand curves : (a) proportional demand curve or actual sales curve and (b) perceived demand curve or anticipated demand curve. The first type of demand curve can be drawn by assuming that all the monopolistically competitive firms charge the same price while the latter demand curve is drawn on the assumption that the competitor sellers will not change the original price. In the following diagram, Fig 6.1 D P is the proportional demand curve faced by a particular firm when all the sellers

166 NSOU • PGCO - II Price Output charge the same price whereas DA is the anticipated demand curve facing the firm if all sellers maintain the original price. Fig. 6.1 Two types of demand curve We start with a price OP 1 at which OQ 1 amount of output gets sold. Let us now assume that a typical firm wishes a cut in price from OP 1 and he will expect his sales to go up. This, according to Chamberlin, is due to the fact that all other firms will keep this price at OP 1 . In the same way, if the particular seller wishes to raise the price of the product, he can expect that there will be a drastic fall in sales because of the fact that all other sellers will keep their price at OP 1 . Therefore, the individual firm perceives a demand curve DA at OP 1 price since every seller expects that his action to go, will remain unnoticed by his rivals. In the diagram the DA curve is more elastic than DP because each firm, in this model, believes that no other firms will react to changes in its price. Expecting elastic demand, each firm has an incentive to lower the price of its product for capturing a lower share of the market. That means, if a particular firm reduces price of its product from OP 1 to OP 2 , it can expect its sales to increase to OQ 3 . Since every firm expects that no other firms will cut price, the gain in the ultimate analysis will be smaller. If all firms reduce price to OP 2 , the actual sales will be OQ 2 , not OQ 3 . Because of this reason, the D P curve is more steep or less elastic than the DA curve. The D P curve shows the actual sales as it takes into account the effects of the actions of the competing sellers to the price changes by the firm. However, the DA curve shows anticipated changes in quantity sold when it contemplates a change in price. Under this form of market, each seller has the belief that his actions will go unnoticed. Hence every

NSOU • PGCO - II 167 firm ignores the reaction of rival sellers and, thus he behaves independently. All firms, acting independently, do actually sell less than what they do anticipate. But in the present context we have not used anticipated or perceived demand curves to describe the equilibrium situation of a firm under monopolistic competition. 6a.5 Equilibrium situation of a Firm under Monopolistic Competition We know that the basic condition for attaining maximum profit is to produce that level of output at which  $MR = MC$  and at the same time at which the MC curve cuts the MR curve from below. In this market product differentiation gives rise to a negatively sloped demand curve or AR curve. In this form of market the demand curve or the AR curve facing the firm has been drawn on the assumption that all the rival firms do not change their prices. However, the demand curve is relatively more elastic. The corresponding MR curve lies below it. 6a.5.1 Short Run Equilibrium The short run equilibrium of a firm under monopolistic competition has been illustrated in the following diagram fig. (6.2) where quantity of output has been measured horizontally whereas revenue, cost, price and profit have been measured vertically. In the diagram both the conditions for the attainment of maximum profit have been satisfied at point e which is the point of equilibrium. Fig. 6.2 Revenue, Cost and Profit Qyantity of Output 168 NSOU • PGCO - II From the diagram it is seen that the firm sells OQ units of output at price OA so that its total revenue becomes  $OA \times OQ = OABQ$ . For producing OQ units of output the average cost is CQ so that total cost becomes  $OQ \times CQ = ODCQ$ . Hence the amount of pure profit is  $OABQ - ODCQ = ABCD$ . A firm,

**80% MATCHING BLOCK 182/204**

**SA** microeco\_compilation-FINAL.pdf (D143604282)

in the short run, may earn only normal profit if  $MC = MR$  &gt; AR =

AC happens. A loss may take place in the short run also if  $MC = MR$  &gt; AR &gt; AC takes place. 6a.5.2 Long Run Equilibrium In the long run, the monopolistic competition comes closer to the perfect competition because the freedom of entry and exit allows firms to enjoy only normal profit. Whenever some firms earn pure profit in the long run some other firms may be attracted to join this product group thereby driving excess profit to zero. Experiencing losses for a long time, losing firms may be induced to leave the product group, thereby eliminating losses. Therefore, all firms in the long run are to be satisfied only with normal profit. In the following diagram (Fig. 6.3) the long run equilibrium has been attained at point E where LMC equals MR. Fig. 6.3 The equilibrium output determined in this way is oq 1 at which AR equals AC. The firm will get normal profit by selling oq 1 units of output at price OP 1 . We may note here that a monopolistically competitive firm always operates somewhere to the left of Price Revenue and Cost Output

NSOU • PGCO - II 169 the minimum point of its AC curve. It may be noted that as the demand curve is not perfectly elastic or as the demand curve is negatively sloping, the AR curve becomes tangent above the lowest point of the AC curve (i.e., point T). Thus each firm produces at a cost higher than the minimum one and attains only normal profit. Under perfectly competitive market, the long run equilibrium is attained at that point at which  $MR = MC = AC = AR = \text{Price}$ . Since the AR curve is perfectly elastic, a tangency between AR and AC takes place only on the lowest point of the AC curve. In the above diagram fig. 6.3, the dotted  $AR = MR$  curve is the demand curve faced by a competitive firm. Equilibrium has been attained at point S where  $LMC = MR = AR = \text{lowest point of LAC}$ . The competitive output determined in this way is  $oq_2$  and this will be sold at the price  $op_2$ . Therefore, we may conclude that the monopolistically competitive

**78%**

**MATCHING BLOCK 183/204**

**SA**

compiled file.docx (D137395535)

output ( $oq_1$ ) is less than the perfectly competitive output ( $oq_2$ ) and monopolistically competitive price ( $op_1$ ) is higher than the competitive price (

$op_2$ ). Naturally, the difference in output to the extent of  $q_1 - q_2$  measures excess capacity or unused capacity faced by a monopolistically competitive firm. Production at a higher cost means wastage of resources or underutilization of resources. Under perfect competition since production takes place at the lowest point of the AC curve, there does not occur any wastage of resources in this market. The society gets the larger amount of output and the consumers also get output at a lower price. Therefore, as perfect competition maximizes social welfare, it is an ideal form of market. However, social welfare is not maximised under monopolistic competition since the society gets lower output compared to the perfectly competitive output and buyers purchase the differentiated products at a high price. From what has been stated and verified above, it may be observed that "perfect competition is the ideal form of market".

**6a.6 Product Differentiation** We know that in the modern business goods are not identical or homogeneous in quality. We notice that goods are very closely related or slightly differentiated. Professor Chamberlin's monopolistic competition is featured by the existence of commodities that have fairly good, though not perfect substitutes. This trend has put its shadow in modern markets. In our daily life we see various types of detergent, toilet soaps etc. Each variety is close to the other and that is why buyers do not mind much if they fail to get their chosen item, because very close alternatives appear before them. Product differentiation is usually of two varieties : (a) real and (b) spurious. A real product differentiation is noticed when the inherent characteristics of the products (for

170 NSOU • PGCO - II example, chemical composition of say, margo soap is different from that of Haman soap) are different. Again, product differentiation may be spurious or fancied. That means the product is basically the same but through advertisements or packaging differences get established. The above-mentioned product differentiation makes the sellers enjoy some degree of monopoly power. Buyers get usually fascinated to buy a particular variety of a product. It is the brand loyalty that creates some sort of monopoly. Naturally, product differentiation leads to a negatively sloping demand curve. But the monopoly power is limited since rival firms' products are in the market and the customers may move to these products. That means, the monopoly sellers face some sort of competition. This implies that the demand curve faced by a monopolistically competitive seller will be really elastic. Moreover, modern sellers very often engage themselves in price war for promoting their sales. So, Professor Chamberlin, besides stressing on price competition, had given stress on non-price competition. Product differentiation, in modern business, has justified the importance of selling expenses or selling costs. According to Chamberlin, product differentiation and selling costs are two basic forms of non-price competition. In modern days by spending on attractive advertisement expenditure many buyers may be induced to purchase the product even without price-cutting. This implies that selling expenses have a great influence on demand for a product. That means in Chamberlin's model,

**88%**

**MATCHING BLOCK 185/204**

**SA**

MA 1st Sem Micro Eco SLM AMU.doc (D142294444)

demand is influenced not only by the price of the product but also by the style of the product, the services associated with it and the selling activities of the firm.

Just to attract more customers in their favour, sellers very often compete with each other that may have high influence on demand for the product. These demand influencing variables (not the price of the product) are the elements of non-price competition. 6a.7 Analysis of Selling Cost or Advertisement Cost in Monopolistic Competition There is a vital difference between monopolistic competition and perfect competition. Under perfect competition since products of all firms are homogeneous or identical in quality, no individual firm has any incentive for making any sort of advertisement for its product. Gains from advertisement by an individual firm have spill over effects in the sense that the gains will get distributed among all firms in the industry. However, such is not the case for monopolistic competition as different sellers produce slightly different goods. It is the very product differentiation that enables a monopolistically competitive seller to exercise some type of monopoly power. Naturally, sales promotional activities are undertaken by sellers to persuade many buyers to buy their products. Sales promotion,

NSOU • PGCO - II 171 in this way, involves selling cost which is, obviously, to be distinguished from production cost. Naturally, under monopolistically competitive market, total cost of producing a product is the sum total of production cost and selling cost. Professor Chamberlin was the first economist to introduce the concept of selling cost. Through various sales promotional activities and advertising every firm claims that his product is better than his rival's one. Naturally, selling costs are those costs which are incurred by a firm to influence or persuade buyers to buy its product in place of products of others. In the language of Professor Chamberlin, selling costs are those costs which are incurred by a monopolistically competitive firm in order to alter the position or shape of the demand curve for a product. The obvious purpose of selling cost is, therefore, to capture the saleable markets in order to increase total revenue and, ultimately, profit. As the buyers have imperfect knowledge about the firm, price, quality of the product, existence of rival sellers etc. and since there is the possibility of altering wants of buyers through advertisement and other sales promotional activities, sellers are tempted to incur selling costs. Naturally, selling costs increase and shift the demand curve to the right. Let us now consider the effect of advertising on price-output decision of a monopolistically competitive seller. We are interested in finding out the optimum output, price and also selling cost. This has been demonstrated in the following diagram, Fig 6.4. Fig. 6.4 Selling Cost and Equilibrium Revenue, Cost and Price P b P a O AC b AC a AR b AR a

172 NSOU • PGCO - II We know that advertisement has got two roles to play : (a) It leads to an increment in cost and (b) it leads to a shift in the demand curve in the upward direction. In the diagram AR is the average revenue of the firm before the introduction of any selling expenses. AC is the average cost of production and this does not take into account advertisement costs or selling costs. The profit maximizing output is determined at the point of intersection between MR and MC, which have not been shown in the figure. 6a.8 A Comparative study among

Perfect Competition, Monopoly and Monopolistic Competition Perfect competition and monopoly are two extreme forms of market.

In reality, neither of these markets is found. In the real world many industries fall in between. One realistic market is monopolistically competitive market, named by Professor Chamberlin. It is so called because it has elements of both monopoly and perfect competition. But the fundamental aim of all sellers of all these market forms is the maximisation of profit which gets satisfied when MR equals MC and MC cuts MR from below. The fundamental differences between perfect competition, monopoly and monopolistic competition may be pointed out in the following paragraphs :

(a) Structural Differences : Under the perfectly competitive market, there are innumerable number of firms each producing homogenous goods. However, each firm in the market is so small that it fails to exert any influence on either price or quantity of output. Naturally, the firms are merely price-takers. However, under monopolistic competition there are a large number of sellers, each selling slightly different products. Product differentiation enables a firm to exercise some power over price and output. That is, sellers in this model, behave as "price-makers". A monopolist seller has full control over his price-output decision. In both perfect competition and in monopolistic competition there is complete freedom of entry and exit of firms. This condition is true only during the long period. In the short period, however, entry or exit of new firm is legally prohibited in monopoly.

(b) Behavioural Differences : A firm under perfect competition behaves as a price-taker. So the demand curve faced by it is a horizontal straight line. Under perfect competition since price is fixed, the AR curve coincides with the MR curve. A monopolist faces a negatively sloped demand curve and it can have perceptible

NSOU • PGCO - II 173 influence over price and output. Naturally, in this market the MR curve is negatively sloping and it lies below the AR curve. Under monopolistic competition this is also true. From this point of view the difference between monopoly and monopolistic competition is that the demand faced by a monopolistically competitive seller is relatively more elastic. Under perfect competition price is fixed and so the firm has to undertake only output decisions. Besides, goods sold by competitive firms are perfect substitutes. Because of absolute product homogeneity, no firm reveals any eagerness to spend money on any kind of promotional activity. Similar is the case with a monopolist who does not find any urgency to spend money on advertisement as there is no rival seller. However, a monopolistically competitive seller has to incur some kind of "selling costs" in order to give information about its product or rivals' products. In reality, in order to attract more and more customers in its favour, additional expenditure on selling cost is a mere necessity. In every market sellers adopt the technique of independent price decision. However, all sellers of all markets form a basic principle which is that at the point of equilibrium there will be equality between MR and MC. Under perfect competition  $MR = AR$ ,  $MC = MR = AR = P = \text{price}$ . However, in both monopoly and monopolistic competition this behavioural rule is slightly modified to  $MC = MR > AR = \text{price}$ , simply because in both these two markets  $AR < MR$ . Both a monopoly firm and a monopolistically competitive firm produce at that region of its demand curve where the coefficient of elasticity of demand is greater than one. However, under perfect competition the coefficient of elasticity of demand is infinite.

(c) Optimum Capacity and Sub-Optimal Capacity of Production : A competitive firm always produces at the minimum point of its AC curve. This amounts to saying that a firm utilises its plant optimally. As the AR curve is a horizontal straight line, a competitive firm will always produce at the lowest point of its AC curve. However, in both monopoly and monopolistic competition the demand curve is negatively sloping. Thus it is due to the nature of the demand curve that a firm fails to operate at the minimum point of its AC curve. It operates somewhere

**100% MATCHING BLOCK 184/204**

**W**

to the left of the lowest point of the AC curve.

This implies that resources are not optimally utilised. Consequently, a higher price for the product is charged and a lower amount of output is produced. From

174 NSOU • PGCO - II this point of view perfect competition is an ideal market where social welfare becomes maximum. However, this welfare gets reduced in both monopoly and monopolistic competition. (D) Supply Curve : Under perfect competition the MC curve above the shut down point is the short run supply curve. However, under monopoly or monopolistic competition the supply curve remains indeterminate. This means that in these two forms of market the MC curve is not the supply curve. 6a.9 Sample Questions 1. What are the characteristics of monopolistic competition? 2. Distinguish between short run and long run equilibrium under monopolistic competition. 3. What is product differentiation? How does the producer make product differentiation? 4. What is the significance of selling cost under monopolistic competition? Explain.

NSOU • PGCO - II 175 Unit 6(B)  Oligopoly Structure 6a.1 Objectives 6b.2 Introduction 6b.3 Main Features of Oligopoly 6b.3.1 Classification of Oligopoly 6b.3.2 Collusive Oligopoly 6b.4 Cournot's Duopoly Model 6b.5 Kinked Demand Curve Model of Oligopoly 6b.6 Sample Questions 6a.1 Objectives The basic objectives of this unit are to indicate : i. Main features of oligopoly. ii. Classification of oligopoly. iii. Discuss equilibrium under different forms of oligopoly. 6b.2 Introduction Many of the markets resemble monopolistic competition where sellers behave independently, that means, actions of one seller go unnoticed by his rival sellers. In contrast, many of the markets, in reality, are dominated by a few sellers where interdependence among themselves is the basic element. While taking price-output decision, each seller takes into account the actions of other sellers. Such a market form is popularly known as oligopoly. This term has been derived from 'Oligos' which means few and 'polis' which means sellers. This means that oligopoly is said to exist when there are few sellers. However, many economists opine that when the number of sellers varies between 2 and 20, the market is said to be an oligopolistic market. The extreme form of this oligopoly is 'duopoly' when the number of sellers is exactly two. However, there is no such precise 'number limit'. Precisely, it may be stated that the key issue is not numbers but rather interdependence among sellers. Thus it is said that oligopoly is said to prevail when there

176 NSOU • PGCO - II are few firms or sellers in the market producing and selling a homogeneous or differentiated product. That is why it is often referred to as "competition among the few". Under oligopoly there is no fixed number of sellers. However, we may say that the number of sellers should be such that there will be interdependence among the sellers regarding their behaviour. If the product is homogeneous, we call it pure oligopoly or oligopoly without product differentiation. However, if products are differentiated, we call it imperfect oligopoly or oligopoly with product differentiation. According to Professor Baumol, "An oligopoly is a market dominated by a few sellers at least several of which are large enough relative to the total market to be able to influence the market prices". 6b.3 Main Features of Oligopoly There are some special characteristics of oligopoly. These are as follows : (1) Few sellers :

<b>100%</b>	<b>MATCHING BLOCK 188/204</b>	<b>SA</b>	18 SLM Farhaqn Ahmad Assistant Prof Distance E ... (D143003267)
Oligopoly is a market structure in which a small number of			

rival firms dominate the industry. It is under oligopoly that rivalry among firms takes its most direct and active forms. (2) Product : Products sold by oligopolistic firms can either be homogeneous or differentiated. For example, industries producing bread, cement, steel, petrol, cooking gas, chemicals, aluminium and sugar are industries characterised by homogeneous oligopoly. If firms of an oligopoly industry sell differentiated products, it is called differentiated or heterogeneous oligopoly. Automobiles, television sets, soaps and detergents, refrigerators, soft drinks, computers, cigarettes etc. are some examples of heterogeneous oligopoly. (3) Lack of Uniformity : Lack of uniformity in the size of firms is a unique feature of oligopoly. Some firms may be small while others may be large. (4) Importance of advertising and selling costs : Under oligopoly each seller has to inform his buyers about the quality of his product. Consequently, he has to incur advertising and selling costs. (5) Competition : Competition implying struggle of rivals against rivals is a very unique feature in the oligopolistic market. (6) Uncertainty : Uncertainty in the behaviour of firms is a special feature of oligopoly. (7) Elements of monopoly : Under oligopoly there are only a few firms in the market. The existence of product differentiation creates "brand loyalty" on the part of the consumers,

NSOU • PGCO - II 177 which is the basic source of monopoly power. Again, through collusion, the existing firms can raise price and earn some monopoly income. 6b.3.1 Classification of Oligopoly An oligopoly market is beset with the problem of price determination as the actions and reactions of rival firms vary from one industry to another. We shall classify oligopoly market on the basis of (a) specific assumptions about the actions and reactions between firms and (b) nature of the product. On the basis of the nature of the product the oligopoly model may be either homogeneous or differentiated. In case of the homogeneous oligopoly or pure oligopoly the products of different firms are homogeneous. If oligopoly sellers sell homogeneous goods, price differences between products will be, to some extent, insignificant. That means, greater the homogeneity of the product, greater will be interdependence among sellers. This implies that whenever a seller changes the price of his product, the sales of the rival sellers will be affected. Naturally, the rival sellers will change their pricing policy. In case of differentiated oligopoly sellers sell slightly different products. The change in price by one seller will now have less direct effect upon his rival sellers. Hence, under differentiated oligopoly the assumption of interdependence among few sellers becomes less significant. Insignificant rival consciousness greatly complicates the price- output determination model of oligopoly. However, most of our oligopoly models belong to this category. Again, oligopoly market has been characterised by 'Competition' and 'collusion'. Interdependence of a firm may encourage firms to compete with their rivals or may cause sellers to collude with each other. The former oligopoly market is known as non-collusive oligopoly while the latter is known as collusive oligopoly. Non-collusive Oligopoly : In case of non-collusive oligopoly market, even though the firms are interdependent in the market, they go on behaving independently. Under this category of oligopoly the behaviour of a seller will depend upon how he thinks his rivals will react to his decision making. The seller just makes a guess about the reaction of the competing firms, selling homogeneous goods. Therefore, an autonomous or conjectural behaviour is studied by firms of rival firms while setting the price of his product, the firm believes that rival firms will not make any counter move when he changes price of his product. Such behaviour is called autonomous behaviour. However, for oligopoly market this kind of autonomous behaviour is self-contradictory. So the classical non-collusive models of oligopoly, namely the Cournot model, Bertrand's

178 NSOU • PGCO - II model and Edge Worth's model fail to determine equilibrium of a firm and an industry. Assuming the absence of collusion some economists have been successful in explaining equilibrium of a firm. Of these non-collusive oligopoly models the followings are worth mentioning : (a) Cournot's duopoly model, (ii) Kinked demand curve model of P. Sweezy and (iii) Stackleberg's leadership model. 6b.3.2 Collusive Oligopoly In case the firms collude we get the case of collusive oligopoly. Very often non-collusive oligopoly may lead to a cut-throat competition among sellers, leading ultimately towards monopoly business. Sellers having influence may retaliate. Just to prevent this competitive price cutting or retaliation sellers very often make a collusive agreement which may be open or tacit. Formation of cartel is one form of open collusive agreement. 6b.4 Cournot's Duopoly Model In Economics a market with two sellers and a large number of buyers is called a duopoly market. Duopoly is a special case of oligopoly where there are a few sellers. This model of duopoly

**100%**

**MATCHING BLOCK 190/204**

**SA**

Managerial\_Economics.pdf (D143729469)

is based on the following assumptions : (i) There are only two

interdependent sellers selling a homogeneous commodity. (ii) There are a large number of buyers in the market. (iii) Both the duopolists have identical cost curves. It is assumed that each duopolist has zero cost of production. (iv) Each duopolist wants to maximize his total profit in each period. (v) Each duopolist makes an output plan during a period and this can not be revised in that period. (vi) No duopolist sets the price. However, each accepts the price of his product at which total planned output can be sold. (vii) Each duopolist is fully aware of the mutual interdependence between their output plans. However, each is quite ignorant of the direction and magnitudes of the revision in his rival's plan that would be induced by any given change in his own. Each duopolist assumes that the output level of his rival is constant at a certain level and adjusts his own output in order to maximise his total profit. Let  $q_i$  be the output level of the  $i$ -th seller,  $i = 1, 2$ . Hence total output is  $q = q_1 + q_2$ . We assume that the demand curve faced by each duopolist is a straight line,

NSOU • PGCO - II 179 given by  $p = a + bq$ ,  $p$  being price,  $a$  and  $b$  are constants,  $a > 0$ ,  $b > 0$ . Total profit of the first duopolist is given by  $\pi = pq_1 = (a + bq_1)q_1 = [a + b(q_1 + q_2)]q_1 = aq_1 + bq_1^2 + bq_1q_2$  ....(A) That is,  $\pi_1 = \pi_1(q_1, q_2)$ .....(B) We can get various combinations of  $q_1$  and  $q_2$  from which a fixed level of profit of the first duopolist can be obtained. Naturally, the locus of all such combinations of  $q_1$  and  $q_2$  will be an iso-profit curve or a profit indifference curve of the first seller. For each level of  $\pi_1$  we get one such profit indifference curve of the first seller. As per our assumption the objective of the first duopolist is to maximize  $\pi_1$  for variations in  $q_1$ , assuming  $q_2$  to be constant. To do that we are to set  $\frac{d\pi_1}{dq_1} = 0$ . That is,  $a + 2bq_1 + bq_2 = 0$ ....(C) That is,  $bq_2 = -a - 2bq_1$  whence  $q_2 = -\frac{a}{b} - 2q_1$  . This is a straight line having slope  $-2$  and intercept  $\frac{a}{b}$  - (positive, assuming  $a > 0$  and  $b > 0$ ). In the following diagram  $R_1R_1$  is a straight line reaction function of the first seller. This function gives us those combinations of  $q_1$  and  $q_2$  for which the profit of the first duopolist will be maximum. Naturally, all points on  $R_1R_1$  fulfil condition (C). In the same way the profit level of the second duopolist is given by  $\pi_2 = pq_2 = [a + b(q_1 + q_2)]q_2 = aq_2 + bq_2^2 + bq_1q_2$  . That is,  $\pi_2 = \pi_2(q_1, q_2)$  . We can get the profit indifference curve of the second duopolist as  $\pi_2 = aq_2 + bq_2^2 + bq_1q_2$  .....(D) The objective of the second duopolist is to maximize  $\pi_2$  for variations in  $q_2$  assuming  $q_1$  to be constant. That is,  $\frac{d\pi_2}{dq_2} = a + 2bq_2 + bq_1 = 0$  .....(E)

180 NSOU • PGCO - II That is,  $2bq_2 = -a - bq_1$ , whence  $q_2 = -\frac{1}{2} \frac{a}{b} - \frac{1}{2} q_1$  . This is also the equation of a straight line having slope  $-\frac{1}{2}$  - and an intercept of  $\frac{a}{2b}$  . This straight line is  $R_2R_2$  in the diagram Fig (6.5) and it is the reaction function of the second Fig. 6.5  $q_2$   $q_1$  duopolist. This line will be downward sloping with a positive intercept. We see from the diagram that the intercept of  $R_2R_2$  is less than that of  $R_1R_1$  . Also, the absolute value of the slope of  $R_2R_2$  is less than that of  $R_1R_1$  . Thus the reaction function of the second duopolist is flatter than that of the first one. The first duopolist remaining on  $R_1R_1$  intends to maximise his profit and the second one remaining on  $R_2R_2$  will try to maximise his profit.  $F$  is the point of intersection of both the reaction curves and it is here that both the sellers maximise their profits. At this equilibrium point the first duopolist's output level is  $q_1^*$  while that of the second one is  $q_2^*$ , which are, obviously, the equilibrium output levels. Both the conditions (C) and (E) get fulfilled at the intersecting point  $F$ . Thus there are two equations (C) and (E) and also there are two unknowns. By solving the equations we can determine the values of  $q_1$  and  $q_2$  . We have already seen that  $a + 2bq_1 + bq_2 = 0$  and  $a + 2bq_2 + bq_1 = 0$ . Hence, adding both sides we get  $2a + 2b(q_1 + q_2) + b(q_1 + q_2) = 0$ . That is,  $2a + 2bq_1 + bq_1 = 0$  . . .  $q_1 + q_2 = q$ . That is,  $2a + 3bq = 0$  whence  $q = \frac{2a}{3b}$  .

NSOU • PGCO - II 181 If  $q = \frac{2a}{3b}$ , then  $p = a + bq = a + \frac{2a}{3} = \frac{5a}{3}$  . Thus price in the duopoly market will be  $\frac{5a}{3}$  . Had there been perfectly competitive market having demand curve  $p = a + bq$  (assuming zero cost), the equilibrium will be attained where price equals marginal cost, i.e., price = 0, that is,  $p = a + bq = 0$  or  $q = -\frac{a}{b}$  . Now, assume that there was monopoly with zero costs and with the same demand function  $p = a + bq$ , equilibrium will be achieved when  $MR = 0$ , i.e.,  $a + 2bq = 0$  or  $bq = -\frac{a}{2}$  - or  $q = -\frac{a}{2b}$  . Therefore, we see that the monopoly output is  $\frac{a}{2b}$  . That means, we get the result that with zero costs and straight line demand curve the monopoly output is half of the competitive output and duopoly output is two-thirds of the competitive output. It can be proved that equilibrium in the cournot model of duopoly is actually stable. 6b.5 Kinked Demand Curve Model of Oligopoly

**80% MATCHING BLOCK 187/204**

**W**

The Kinked demand curve model of oligopoly was originally developed by Paul M. Sweezy in 1939

and later by Professors Hall and Hitch. However, this is not a theory of equilibrium price-output determination under oligopoly. It has been found, empirically, that price under oligopoly, if determined once, will remain rigid or sticky at that very level. This model of oligopoly seeks to explain this price rigidity in terms of a "Kink" on the demand curve. According to this model of oligopoly, the demand curve that any individual seller faces, has a Kink at the prevailing price-quantity combination. Due to the existence of such a "Kink" on the demand curve the marginal revenue curve becomes discontinuous. It is this very discontinuity in the MR curve that leads to price rigidity under oligopoly. This model of oligopoly does not deal with price and output determination. Rather, it seeks to establish that once a price-quantity combination is determined, an oligopoly firm does not find it profitable to change its price even when there is a considerable change in the cost of production and also a change in demand for the product.

182 NSOU • PGCO - II The "Kink" in the demand curve stems from the asymmetric behavioural pattern of the sellers. According to Professor Sweezy each duopolist has the belief that if he lowers the price of his product, his competitors will not follow him. But, in reality, his rivals must react by reducing their prices. Again, he believes that

**87% MATCHING BLOCK 189/204**

**W**

if he raises the price above the prevailing price, his competitors will

also raise their prices. However, in reality, the rivals will not follow his price-rise. It is this very particular assumption that gives rise to a "Kink" in the demand curve under oligopoly. We assume that the prevailing price of an oligopoly product in the market is AE or OP in the following figure.

**65% MATCHING BLOCK 191/204**

**SA**

compiled file.docx (D137395535)

If one particular seller increases the price above OP, the rival sellers will go on keeping the prices of their products at OP.

In consequence of high price charged by the firm, the buyers will shift to products supplied by other sellers who have kept their prices at the old market rate. Naturally, sales of the first seller will sharply drop. It is because of this reason that the demand curve in the zone (dE) is relatively elastic.

**100% MATCHING BLOCK 202/204**

**SA**

compiled file.docx (D137395535)

On the other hand, if a seller reduces the price of his product

below AE, others will follow him so that demands for their products do not diminish. Naturally, the demand curve in this region (ED) is relatively inelastic. It is this behavioural pattern that explains why in the oligopoly market prices are inflexible even when costs and demand change. The resulting demand curve is, therefore, dED shown in diagram 6.6.

Price Fig. 6.6 Quantity

NSOU • PGCO - II 183 The "Kink" in the demand curve at point E results in a discontinuous MR curve. The marginal revenue (MR) curve has two segments at the level of output less than OA, the MR curve (that is dG) will correspond to dE portion of the AR curve and for output greater than OA, HMR the MR curve (that is, HMR) will correspond to the demand curve ED. Therefore, discontinuity in the MR curve has occurred between points G and H. This means that between these two points, the MR curve is vertical. The length of this discontinuity depends upon the relative elasticity at E on dE and the relative inelasticity of the demand curve at E on ED. We may mention here that dE is relatively elastic while ED is relatively inelastic. Proof : We know that  $MR = price \times (1 - \frac{1}{e})$ . Let price be Rs. 10 and e be 2 and 3. Hence,  $MR_1 = 10 \times (1 - \frac{1}{2}) = 5$  and  $MR_2 = 10 \times (1 - \frac{1}{3}) = 6.7$ . Hence the gap between MR 1 and MR 2 is 1.7. Further, let e 3 = 5 so that  $MR_3 = 10 \times (1 - \frac{1}{5}) = 8$ . Hence the gap between MR 1 and MR 3 will be 3. This proves that the larger the elasticity at E on dE and the smaller the elasticity at E on ED the greater is the length of the discontinuous zone on the MR curve. In diagram 6.7 the length of the discontinuity is GH. The marginal rule tells us that both the conditions for profit maximisation, that is, (i)  $MR = MC$  and (ii) the slope of the MR curve is less than that of the MC curve are satisfied in the discontinuous range of the MR curve. Hence, the equilibrium level of price and output are determined as OP o and OQ respectively.

184 NSOU • PGCO - II Fig. 6.7 We now suppose that

**58% MATCHING BLOCK 192/204**

**W**

the marginal cost curve of the firm passes through the discontinuous range of the MR curve. Naturally, the

equilibrium of the oligopolistic firm is given by the Kinked point. The equilibrium price is  $OP^0$  and quantity is  $OQ$ . For any level of output less than  $OQ$ ,  $MR < MC$ . Hence the oligopolistic firm will raise the levels of output. Again, for any amount of output greater than  $OQ$ ,  $MR > MC$ . Naturally, the oligopolistic firm will reduce the level of output. Thus, total amount of output gets maximized at the Kink though the profit - maximizing condition ( $MR = MC$ ) is not fulfilled. The discontinuous portion (that is,  $GH$ ) of the  $MR$  curve implies that there is a range within which costs or demand may change without affecting the equilibrium price (i.e.,  $OP^0$ ) and output (that is,  $OQ$ ). For instance, if the cost condition of the oligopolist rises, the  $MC$  curve shifts to  $MC_1$ , though the equilibrium price remains unchanged at  $OP^0$ . Again, if the total cost falls so that the  $MC$  curve shifts to  $MC_2$  but it still passes through the discontinuous portion of the  $MR$  curve, then also price remains unchanged at  $OP^0$ . Hence, for the existence of a discontinuous portion of the  $MR$  curve, price is rigid or sticky under oligopoly. The main difficulty

**87%**

**MATCHING BLOCK 193/204**

**W**

of the Kinked demand curve theory is that it does not explain

AR, MR, MC Quantity  $P^0$

NSOU • PGCO - II 185 the price-output determination. It does not define the level at which price will be set to maximise profits. The Kinked demand curve model of oligopoly can explain the rigidity of prices in a situation of changing costs and of strong rivalry. However, it fails to explain the level of the price at which the Kink will take place. That means, the Kinked demand curve model fails to explain the height of the kink. Thus, it is not a theory of pricing, but merely a tool for explaining why the price, once determined in some way or another, will tend to remain fixed there. Sweezy had introduced the Kinked demand curve as an operative tool for the determination of equilibrium in oligopolistic markets. Later, Hall and Hitch used this model not as a tool of analysis for the determination of output and price in markets forming oligopoly but to explain why the price, once determined by virtue of average cost pricing principle, will remain sticky. Hall and Hitch had used the Kinked demand curve for explaining the stickiness of prices in oligopolistic markets and not as a tool for the determination of price.

6b.6 Sample Questions A. Objective-type Questions : (a) The monopolistically competitive market is associated with : (i) P. A. Samuelson, (ii) J. R. Hicks, (iii) J. M. Keynes, (iv) Chamberlin. Ans. (iv) (b) What does a monopolistic competition have in common with monopoly? (i) A large number of firms, (ii) A downward sloping demand curve, (iii) The ability to collect with respect to price, (iv) Mutual inter-dependence. Ans. (ii) (c) The key feature of oligopoly is : (i) Excess Capacity, (ii) Product differentiation, (iii) High profitability, (iv) Interdependence of firms. Ans. (iv) (d) Which one is true for a monopoly? (i) The product cannot be produced by small firms, (ii) There can be close substitutes for the product, (iii) There is a uniproduct with no close substitutes, (iv) Products are high-priced. Ans. (iii)

186 NSOU • PGCO - II (e) Under which of the following forms of market structure does a firm has no control over the price of its products? (i) Monopoly, (ii) Monopolistic competition, (iii) Oligopoly and (iv) Perfect competition. Ans. (iv) (f) To which of the market situations does the market for cars conform? (i) Monopoly, (ii) Perfect competition, (iii) Monopolistic competition and (iv) Oligopoly. Ans. (iv) (g) The length of the discontinuous zone of the  $MR$  curve corresponding to the demand curve under the Kinked demand curve model of oligopoly depends on (i) Elasticity of demand, (ii) Cost of production, (iii) Revenue and (iv) Price. Ans. (i). B. Short-type Questions : 1. Explain the features of a monopolistically competitive market. 2. Explain your understanding of "selling cost". 3. Make a clear distinction between profitable demand curve and perceived demand curve. 4. Write a brief note on "product differentiation". In which form of market it is found? 5. Explain the basic features of oligopoly. 6. Make a brief classification of oligopoly. 7. Explain the implication of the concept of "Kink" at the kinked demand curve model of oligopoly. 8. Whose name is associated with the Kinked demand curve model of oligopoly? What is the implication of the existence of the Kink? C. Essay-type Questions : 1. What are the characteristics of a monopolistically competitive market? Why do firms under such a market have excess capacity even in the long run?

NSOU • PGCO - II 187 2. Mention the main features of monopolistic competition. Discuss the conditions of

equilibrium of a firm under monopolistic competition in both the short run and the long run. 3. "

Monopolistic competition is more like perfect competition than like monopoly". Do you agree with this view? If so, substantiate arguments in favour of your answer. 4. What are selling costs? Why are they peculiar to monopolistic competition? 5. Why does a Kink arise at the going price in the market demand curve under oligopoly? Explain the implications of this Kink. 6. What is an oligopoly market? Explain the main features of oligopoly. Make a brief classification of oligopoly. 7. Explain, in detail, the Cournot's model of duopoly. 8. What is the Kinked demand curve hypothesis? What is the implication of this Kink? Explain, graphically, how price and quantity are determined in this model of oligopoly. 188 NSOU • PGCO - II Unit 7 □□□□□ Theories of the firm Structure 7.0. Objective 7.1. Introduction 7.1. Bring out alternative theories of the firm. ii. Discuss Baumol's sales maximisation principle. iii. Discuss Williamson's Expense Preference Model. iv. Bring out Behavioural Theories. 7.0. Introduction In this unit, we will study a number of topics which are outside the purview of the mainstream neo-classical analysis of the firm. Firstly, we will study some alternative theories of the firm. Next, we will study the case of a multi-product firm and how it settles prices of its products. Then, we will go into some special pricing techniques, like peak-load.

NSOU • PGCO - II 189 7.1 Alternative Theories of the Firm Neo-classical theories characterised the firm as a 'black-box', which transforms inputs into outputs to earn the maximum profit. This is convenient for tackling issues like pricing, output, entry etc. as it ignores the details about the internal structure of the firm, along with its contractual and organisational basis. It also suggests that the optimal size of the firm is simultaneously determined with the number of firms in the industry. In case of a free entry situation, the size and number are determined by the extent of the demand for the product and the structure of technology. The economies of scale and scope are limited to the extent. If the question is asked: what limits the size of the firm? The focus on technology, demand, externalities suggest no obvious reason why a firm cannot monopolise the market. If there are diseconomies of scale associated with a single plant, the firm will surely go for multi-plant operation. So, it is necessary to spin the 'black belt'. In fact, in the last seventy years, the neo-classical methodology has tried to open the box. The early works on managerial discretion focussed on the organisational structure and the goal of the firm and its consequences. They recognised the separation of ownership from control in the corporate enterprise. This section gives a brief review of the earlier work on discretion and related theories. 7.1.1. Baumol's Sales Maximisation Model Baumol (1958) argued that the goals pursued by managers (e.g., salaries, status, power, prestige, security etc.) are correlated with sales revenue. He suggested that the main objective of the firms is sales maximisation. For maximising sales revenue, the firm will set a lower price to produce a greater output than that would be under profit maximisation. The underperformance of a firm is visible by its decreasing level of profit and the firm has to take some action. If a firm earns below a minimum accepted level profit (MALP), then the management is at a risk from either shareholder action or take-over raiders. Thus the pursuit of sales is tempered by the need to earn enough profit. This model assumes that MALP has defined a value, above which there would be no chance of intervention. In the absence of any profit constraint, the firm maximises revenue by choosing price  $P$  and output  $q$  such that  $MR = 0$ , as per figure 7.1. This maximises revenue but pays no attention to the resulting profit in this figure, the profit is  $\pi$ . If MALP is  $\pi -$ , then the firm's objective is to choose  $P$  and  $q$  such as to maximise  $R$  subject to profit  $\pi \geq \pi -$ .

190 NSOU • PGCO - II Figure 7.1 : Baumol's Sales Maximisation If MALP is at the level  $2\pi$ , then the solution is unconstrained, i.e., revenue is maximised by setting  $MR = 0$  where  $\pi \geq 2\pi$  and the profit. So long as the MALP is less than the maximum attainable level of profit, the firm sets a price below the profit maximising level. The sales revenue maximising firm (Baumol) and the profit maximising firm behave differently, when the environmental variables change. In figure 7.2, we will show some simple cases. In panel A, we have the consequence of an increase in fixed cost (or  $q$   $m$  =point that maximises output  $q$   $l$  = profit constrained sales maximising output  $q$   $R$  =Free sales maximising output

NSOU • PGCO - II 191 lump sum tax); here the profit curve would fall everywhere by the amount of increase. Panel B shows the effect of an increase in corporate tax rate. In both of these cases, the Baumol firm reduces output and increases price. Lane C, on the other hand, shows the imposition of a per unit sales tax (or VAT). This leads to a fall in the would-be- net-profit function which is proportional to the level of output. The impact of this for both a profit maximising firm and a Baumol firm would be change in output, of course, and the Baumol firm would be more sensitive. Figure 7.2 : Some Comparative states of Baumol's firm The firm would be cost-efficient if the MALP constraint binds, otherwise not. This is, again, not at all realistic, the managers will always have some preference for more profit rather than loss. From the welfare perspective, the Baumol firm is likely to be cost-efficient, the set price would be lower than that of the profit-maximising firm. One of the weaknesses of the model is that it implies that the management prefers more sales to less and does not care about profit, till it falls below the MALP. At the point, profit becomes all important. In reality, of course, it is expected that the management would be concerned about both profit and revenue. So, this model can be modified by assuming that the managers maximise a utility function of the form  $U(\pi, R)$ . Here utility is increasing for both  $\pi$  and  $R$  and the indifference curves have usual shape. In Figure 7.3, the locus of attainable combinations of  $\pi$  and  $R$  have been derived from Figure 7.1. a) Effect of increase in fixed cost of increase in lumpsum tax (b) Effect of corporation tax increase (c) Effect of sales tax increase

192 NSOU • PGCO - II Figure 7.3 : Alternative Version of the Baumol Model When output is zero, both profit and revenue are also zero. As output increases, both of them increase, until  $\pi$  reaches a maximum ( $R$  would be still increasing). As output further increases,  $\pi$  starts falling whilst  $R$  increases till it reaches a maximum value. Further increases in output lead to a fall in both  $\pi$  and  $R$ . The optimum output is characterised by the usual tangency solution, which is less than maximum revenue and also less than maximum profit. 7.1.1. Williamson's Expense Preference Model Williamson (1964) suggested that managers show preference for expense; they derive utility from expenditure on staff, managerial emoluments and discretionary profits. Higher profits reduce the risk of embarrassment in case of adverse environmental fluctuations or take-over or profit-related payments. Excess may be partly attractive because not only it increases the dimensions of the managerial pyramid but also the pressure on manager concerned. Here we will present a compact version of the model by focusing simply on the profit and expenses  $S$  ( $S$  is the composite expenditure on perquisites, on-line staffing etc.) The Williamson constraint of MALP necessary for survival and constraint on minimum expenditure necessary on staff are ignored.

NSOU • PGCO - II 193 Figure 7.4 : Williamson's Expense Preference Model The managerial utility function  $U(\pi, S)$  gives rise to a usual form of indifference curves, as depicted in Figure 7.4. If the gross profit is denoted by  $\pi_g = R(q) - C(q)$ , then there must be a profit-maximising price and output for the firm to attain a maximum level of gross profit. This is denoted by  $\pi_m$  as shown in Figure 7.4. The actual net profit depends on the level of staff and related expenses :  $\pi = \pi_m - S$ . As  $\pi_m$  is a constant, the graph of the attainable combinations of  $(\pi, S)$  is the straight line AB in Figure 7.4. The optimal choice  $(\pi_w, S_w)$  is given by the point of tangency with the highest attainable managerial indifference curve. This implies cost inefficiency as expenditures on staff are positive but 'unnecessary', The original Williamson model is richer than this simplistic version, but the message remains the same. Managers have utility by spending resources on themselves and so, such firms will not be cost-efficient. The welfare implication of such a firm is more difficult to assess than in the Baumol case. The firm is maximising profit as it is cost-inefficient, for those who receive it. If  $S$  consists solely of staff perks and payments, this would imply a simple transfer of money from shareholders to managers; the consequence would be welfare neutral. But if  $S$  includes employment of excess staff, this involves loss of welfare.

194 NSOU • PGCO - II 7.2. Marris's Growth Maximisation Hypothesis Marris (1963, 1964) developed a dynamic model of firm. He proposed that managers are concerned with growth maximisation, with expanding product demand and variety over time. Empirical evidences are there to show that managers prefer internal to external promotions as the latter implied adopting new working practices and less job security. Marris's model implies a growing firm gives the managers the opportunity for internal promotions, career development and job security. It also examines the implication of the means of financing the growth. We are not going into a detailed exposition of the model as it is quite complex and a number of ad hoc assumptions (specially with respect to pricing and demand for the product, alignment of manager's and owners' interest etc.) are also criticised. Its main merit lies in its focus on the dynamic factors.

7.2.1. Behavioural Theories The behavioural theories (Simon 1957, Cyert and March 1963) viewed the firm as a coalition or participants or groups or participants (e.g. shareholders, creditors, suppliers, consumers and various categories of managers and workers). who work for the interest of the firm in a variety of payment The goals of the firms result in implicit bargain between various interested parties, influence of the parties on the overall direction of the firm is dependent on their bargaining power. All these elements are consistent with the game-theoretic treatment of the firm, where the individuals are seen self-interested utility-maximisers. But the behavioural theories do not agree to the neo-classical paradigm of homo economicus. As for example, the employees may have aspiration levels rather than a reservation wage. Aspiration levels can increase upward with increase in experience but there will be no active job seeking until current wage is sufficiently below the aspiration level. The same idea applies to consumer behaviour, brand loyalty to mismatch between price quality. The difference between the payments required to keep the persons in their posts and the total possible revenues of the organisation is called organisational slack. In a stable environment, it may be thought that wages should converge on aspiration levels and competitive pressure may lead firms zero (or close to it) organisational slack. As the environments are not stationary (business) cycles, technological progress), the firms must strive to maintain themselves an ever-moving best-practice frontier. The main features of the behavioural theory are as follows :

NSOU • PGCO - II 195 (i) it argues that only individuals (not firms) have goals; (ii) it argues that agents have bounded rationality and satisfies rather optimise); (iii) It recognises that information is costly; (iv) It views firms as coalition of agents. Many of these ideas are incorporated in the 'optimising perspective' of neo-classical economics.

7.3. Multi-Product Firms and Multi-Product Pricing Most of the text books in Economics focus the single-product firm, whereas, in practice, most firms produce more than one product The reasons for this can be traced to either technological or organisational advantages of the firm. Conglomerate firms may produce products which are not very related to one another and whose production processes may be largely independent. In such cases, where there is independence of the products both on the demand and the production side, the problem of pricing and marketing of the products is almost the same as the single-product firm. However, usually firms produce a product line where products are usually substitutes or complements. Apart from demand inter-dependencies, there are cost dependencies too. These arise when products utilise common production process, common inputs, common inventory etc. These interdependencies imply that theoretically, it is no longer possible to determine the profit-maximising price of each product in isolation. Pricing of the whole range of a firm's product has to be undertaken simultaneously in a system-wise solution.

7.3.1. Multi-product Firms Multiple products are likely to be produced within a single organisational structure, if it is more profitable to do so. The reasons can, loosely, be categorised as demand or cost-related. (a) Demand-related reasons : The argument is that drawing products under umbrella of a single matter may help to facilitate price discrimination, to create barriers to entry to leverage monopoly power. (i) Price Discrimination A firm with monopoly power could improve its profitability by designing non-linear schedules by which it sells its products. Typically, it involves quantity discounts. Firms usually apply this technique when they bundle products. A car manufacturer will typically

196 NSOU • PGCO - II offer a model with wide range of specifications, such that the higher specification model is cheaper than the cost of buying a lower-specification model and buying separately the additional specifications. If we think of a situation where different firms provide different items having monopoly power over its item, then if they can be brought under the single umbrella, there may be no savings in cost, only in organisational benefits, pricing of different commodity bundles is likely to be better co-ordinated and controlled within a single firm. (ii) Barriers of Entry and Monopoly Leveraging Monopoly leveraging of exploit monopoly power in one market either to prevent others being able to enter, or to achieve a dominant position in another market. Microsoft forced PC manufacturers to install Internet Explorer (its internet browser software) as a condition of obtaining licenses for windows 95 operating system. This internet browser is not superior to the others in the market, but as Microsoft has a stranglehold over the market for operating systems, it is able to leverage a significant market share for that product. The dominant firm gains by setting the price above its marginal cost and earning additional profit. Thus, tying together can be beneficial for the multi-product firm. In principle, separate firms can also sell their products too and such practices are quite common. But generally, such interfirm collusive agreements are illegal and subject to government intervention. But if it happened within the firm, it becomes difficult to track such processes. So this is also another rationale for multi-product firms alongside other organisational economies. (b) Cost-Related Reasons The cost based rationale for multi-product firm is based on the concept of economies of scope, which is a special case of cost-sub-additivity. A cost function is sub-additive if it is cheaper to produce any given output vector in one batch than in a set of smaller batches. In the two-product case, this simply means that  $C(q_1, q_2) < C(q_1) + C(q_2)$ . In general, economies of scope arise because input resources have the characteristics of a public good, i.e., the use of the input does not deplete its availability for other users. Examples can be given of a database with many users or using electricity at night for other purpose, once it is installed day time production only. Of course, these examples of natural economies of scope associated with productions such as beef and hide or refining oil in a multiplicity of products. Multi-product firms facilitate a capacity utilisation over time by reducing indivisibilities or lumpiness in the production process. Apart from overall firm economies of scope, one can distinguish the technological or plant economies of scope. These are with the production process itself while firm economies additionally include organisational economies.

NSOU • PGCO - II 197 (c) Financial Reasons It is sometimes argued that by diversification and production of a wide range of outputs the firm spreads its risks, specially if the products are not close substitutes and thus likely to be affected by some environmental products of market movements. This argument is not very tenable as such diversification does not add value to the company. As the shareholders are already diversified, they can get more advantage by diversifying their own portions, rather than the products. (i) there may be some tax advantages associated with such diversification; (ii) diversification facilitates dividend smoothing; (iii) Diversification would benefit managers as it reduces a company's total risk; (iv) larger the enterprise, the lower the costs of raising finance, thus benefiting the firm. Thus, there is an assorted range of financial pressures which tend to encourage the formation of multi-product firms. 7.3.2. Multi-Product Pricing Till now, we have shown that when there are economies of scope, there is an incentive to set up a multi-product firm. With common provision and use of common facilities, the cost function will feature some degree of interdependency in the sense that the marginal cost of production of each product may be affected not only by its output level, but also by that of the other products in the range. Similarly, as the products in product range are often related and hence they have substitutes, demand. Independence is also common. In such cases, profit-maximising prices cannot be determined independently. Table 7.1 shows the point. Table 7.1 : The Multi-product pricing problem

Demand	Independent (zero cross-price elasticities)	Non-zero cross-price elasticities	Cost Independent	Price each product System
Independent	Independent System solution	System solution required	Independent System solution	System solution required
Dependent	System solution required	System solution required	System solution required	System solution required

198 NSOU • PGCO - II If there is interdependence either on the cost or on the demand side, then the theoretical problem of setting prices in order to maximise profits requires the solution of a set of simultaneous equations (equal to the number of products). It is not possible to identify this optimum by setting prices for the various products either sequentially or independently. If there is independence on both cost and the demand side, then the products may be priced in isolation. Here for optimising prices for multiple products, the demand and cost functions for each product are necessary. Here we would assume that demand and cost functions (also how cost varies with changes in output mix and volume) are known with certainty. Suppose the firm manufactures  $n$  products. Ordinary demand functions would be of the form :  $q_i = f_i(p_i)$ ,  $i = 1, 2, \dots, n$ .....(7.1) where  $q_i = 1, \dots, n$  are the quantities demanded and  $p_i = (p_1, p_2, \dots, p_n)$ .....(7.2) are the prices set by the firm. The prices of each of the firm's  $n$  products may have influence on the sales of each product although typically the own price would be the major determinant of an individual's sales of products. The total cost of producing output  $q$  is assumed to be a smooth cost function  $C(q)$ . The firm's profits are thus given as  $\pi = \sum_{i=1}^n p_i q_i - C(q)$ .....(7.3) Given the ordinary demand function (7.1), the first-order necessary conditions for maximum profits are more easily obtained through analysis in price space. This treats  $n$  prices as choice variables and the first order conditions are thus :  $\frac{\partial \pi}{\partial p_j} = q_j + \sum_{i=1}^n (p_i - \frac{\partial C(q)}{\partial p_i}) (\frac{\partial q_i}{\partial p_j}) = 0$ ,  $j = 1, 2, \dots, n$ .....(7.4) In fact, so long as the demand and cost functions are reasonably well-behaved in conjunction with the demand equation (7.1), are sufficient to identify the optimum prices, outputs and attainable profit for the firm.

7.4. Some Special Pricing Techniques  
7.4.1 Peak-load pricing Many firms face a systematically varying demand for their product. The most common

NSOU • PGCO - II 199 examples are utilities like electricity, gas and telephone. Demand may fluctuate over a daily or weekly cycle or even an annual cycle. This implies that it may pay the firm to vary price systematically over time as well. The advantages of varying price will depend on (i) substitutability of demand : the extent to which consumers can substitute demand at one point of time to another, (ii) the extent to which the firm has to produce for demand just in time (rather than through accumulation of inventory). Here we can show the example of electricity where demand during the daytime is considerably higher than at night. Consumers are unable to store electricity; if the firm charges a lower price electricity at night (the off-peak rate), this gives the consumers an incentive to purchase at night to use it during the day. If storage was costless, then purchase would have been done only at lower price (then it would be no more off-peak). So storage has to be difficult or costly for the consumers if peak pricing has to be sustainable. These are special types of perishable goods. This difficulty also affects the producer. If it is costly for the producer to store the product, he will also go for just-in-time production, This implies that peak level demand has to be dealt with directly, i.e., the installed capacity needs to cope with the anticipated peak level of demand and so, by opportunity cost reasoning, peak demand is more costly to provide than off peak. The marginal cost of providing one more unit of output at the peak is the sum of the marginal running costs plus the marginal cost of providing the additional unit of capacity, whereas since the capacity is already there, the marginal cost of off-peak period is simply the running cost. These differences in cost would also provoke the firm to differentiate in pricing between the peak and off peak periods, peak load pricing differs depending on the objective of the firm. Usually, peak-load pricing deal with welfare-maximising objective as in most of the cases. The firm is a public utility. However, following extensive privatisation all over the world, the profit maximizing firms should be studied. SOME PROBLEMS AND THEIR SOLUTIONS : 1. The demand curve faced by a firm is  $p = 110 - 2q$  and  $c = q^3 - 3q^2 + 50q + 10$  is the cost function. Obtain the profit maximising output of the firm. Also obtain the Lerner's index of monopoly power,  $\frac{p - MC}{p}$  in the concerned market. Solution : We know that  $\pi = TR - TC = pq - c = (110 - 2q)q - (q^3 - 3q^2 + 50q + 10)$

200 NSOU • PGCO - II That is,  $\pi = 110q - 2q^2 - q^3 + 3q^2 - 50q - 10 = -q^3 + q^2 + 60q - 10$  To maximise  $\pi$  we are to set the first order condition  $\frac{d\pi}{dq} = 0$ . But  $\frac{d\pi}{dq} = -3q^2 + 2q + 60 = 0$  That is,  $3q^2 - 2q - 60 = 0$ . That is,  $q = \frac{2 \pm \sqrt{4 + 720}}{6} = \frac{2 \pm 26.96}{6} = 4.8$ . The second order condition needs  $\frac{d^2\pi}{dq^2} = -6q + 2 = -6(4.8) + 2 = -26.8 < 0$ . Thus the profit maximizing level of output is 4.8 units. The price is  $p = 110 - 2 \times 4.8 = 100.4$  Also,  $MC = \frac{dc}{dq} = 3q^2 - 6q + 50$ . When  $q = 4.8$ ,  $MC = 3(4.8)^2 - 6(4.8) + 50 = 90.3$ . Now, monopoly power is  $\frac{p - MC}{p} = \frac{100.4 - 90.3}{100.4} = 0.10$  Thus, Lerner's index of monopoly power = 0.10. 2. X, the monopolist, has the demand curve given by  $p = 20 - q$  and his cost function is  $c = q^2 + 8q + 2$ . Obtain the profit maximising output and the corresponding price of the monopolist. Solution : We know that  $\pi = TR - TC$  Now,

**76% MATCHING BLOCK 195/204**

**W**

$$TR = pq = (20 - q)q = 20q - q^2 \text{ Thus } \pi = 20q - q^2 - 8q - 2 = 12q - 2$$

$q^2 - 2$  Naturally, the monopolist will want to maximise  $\pi$ . For this we are to set  $d/dq \pi = 0$ .

NSOU • PGCO - II 201 Now  $d/dq \pi = 0$  means  $d/dq (12q - 2q^2 - 2) = 0$  That is,  $12 - 4q = 0$ , That is,  $q = 3$ . Besides,  $d^2/dq^2 \pi = -4 < 0$ . That is, the second order condition is also satisfied. Hence, the profit maximising level of output of the monopolist is 3. Naturally,  $p = 20 - 3 = 17$ . 3. The revenue function and the cost function of a firm are  $R = 1000Q - 2Q^2$  and  $C = Q^3 - 59Q^2 + 315Q + 2000$ . Obtain the profit maximizing level of output. Solution : Here  $\pi = R - C = 1000$

**100% MATCHING BLOCK 196/204**

**W**

$$Q - 2Q^2 - (Q^3 - 59Q^2 + 315Q + 2000) = 1000Q - 2Q^2 - Q^3 + 59Q^2 - 315Q - 2000 = -Q^3 + 57Q^2 - 315Q - 2000.$$

Now,  $d/dQ \pi = 0 \Rightarrow d/dQ [-Q^3 + 57Q^2 - 315Q - 2000] = 0$  That is,  $-3Q^2 + 114Q - 315 = 0$  That is,  $-3(Q^2 - 38Q + 105) = 0$  That is,  $Q^2 - 38Q + 105 = 0$  That is,  $Q^2 - 35Q - 3Q + 105 = 0$  That is,  $Q(Q - 35) - 3(Q - 35) = 0$  That is,  $(Q - 35)(Q - 3) = 0$  Thus  $Q$  is either 3 or  $Q$  is 35. Now,  $d^2/dQ^2 \pi = -6Q + 114$  At  $Q = 3$ ,  $d^2/dQ^2 \pi < 0$  and at  $Q = 35$ ,  $d^2/dQ^2 \pi > 0$ . This means that the profit maximising level of output is 35 units. 7.7. Sample Questions 1. Consider a single-product firm for which the demand function is  $p = 100 - q$  and total costs are  $C(q) = q^2$ . Find out the profit-maximising price, output and profitability of the firm. If the firm is a Baumol sales revenue maximiser, what is the choice of price and output if the MALP is 450? What is the difference in economic welfare in the two cases?

202 NSOU • PGCO - II 2. Critically discuss Williamson's Expense Preference Model. 3. Do you think that Marris's growth Maximisation Hypothesis gives a sufficient explanation of a firm's objective? 4. Why does a firm decide to produce multiple products? 5. Discuss the problem of multi-product pricing for demand-independent and demand-interdependent products. What are the problems of getting a solution for cost-dependent and cost-interdependent products? SOME NUMERICAL PROBLEMS 4. You are given the following demand and cost functions  $p = 250 - 3q$  and  $c = 3q + 5q^2$  respectively. Obtain the profit maximizing price and output. Solution : Let  $\pi$  stand for total profit and  $R$  stand for total revenue. Now,

**80% MATCHING BLOCK 197/204**

**W**

$$\pi = TR - TC = pq - TC = (250 - 3q)q - 3q - 5q^2 = 250q - 3q^2 - 3q - 5q^2 = -8q^2 + 247q$$

For maximisation of profit  $d/dq \pi = 0$ . That is,  $d/dq [-8q^2 + 247q] = 0$  That is,  $-16q + 247 = 0$ . That is,  $q = 247/16 = 15.4$ . Also,  $d^2/dq^2 \pi = -16 < 0$ . Hence the second order condition is also satisfied. Therefore, the profit maximising level of output is  $q = 15.4$  units = 15 units; price =  $250 - 3 \times 15 = 205$  Ans. 5. A competitive firm sells its output at a fixed price of Rs. 4 per unit. The cost function of the firm is given as  $c = 0.04q^3 - 0.9q^2 + 10q + 5$ . Find the profit maximising output level of the firm and determine the corresponding total profit, total revenue and total variable cost. Solution : We have

**100% MATCHING BLOCK 198/204**

**W**

$$\pi = TR - TC = 4q - [0.04q^3 - 0.9q^2 + 10q + 5] = 4q - 0.04q^3 + 0.9q^2 - 10q - 5 = -0.04q^3 + 0.9q^2 - 6q - 5$$

Now,  $d/dq \pi = -12$

**71% MATCHING BLOCK 199/204**

**W**

$$q^2 + 1.8q - 6 = 0 \text{ NSOU} \bullet \text{PGCO - II 203} \Rightarrow -12q^2 + 180q - 600 = 0 \Rightarrow 12q^2 - 180q + 600 = 0 \Rightarrow q^2 - 5q + 50 = 0$$

$$\Rightarrow q^2 - 10q - 5q + 50 = 0 \Rightarrow (q - 5)(q - 10) = 0$$

Thus  $q = 5$  or  $10$ . The second order condition for maximisation needs  $\frac{d^2 \pi}{dq^2} < 0$ . That is,  $-0.24q + 1.8 < 0$   
 When  $q = 5$ ,  $\frac{d^2 \pi}{dq^2} = 0.6 > 0$ . When  $q = 10$ ,  $\frac{d^2 \pi}{dq^2} = -0.6 < 0$  Therefore, when  $q = 10$ , profit will be maximum Here  $TR = \text{Total Revenue} = pq = 4 \times 10 = 40$   $\pi = -15$ . That is, negative profit.  $TVC = 0.04q^3 - 0.9q^2 + 10q$   
 When  $q = 10$ ,  $TVC = 50$ ,  $TFC = 5$ . Thus,  $TC = 55$  and  $TR = 40$  Thus,  $\pi = TR - TC = 40 - 55 = -15$ . 6. A revenue maximising firm requires profit of at least Rs. 1500. Its demand and cost functions are :  $p = 304 - 2q$  and  $c = 500 + 4q + 8q^2$ . Determine his output level and price. Compare these values with those that would be achieved under profit maximisation. Solution : Here

**61% MATCHING BLOCK 200/204**

**W**

$$TR = PQ = (304 - 2q)q = 304q - 2q^2 = 300q - 10q^2 - 500 \text{ Now, } \pi = TR - TC = 304q - 2q^2 - 500 - 4q - 8q^2 = 300q - 10q^2 - 500$$

But the firm needs a minimum profit of Rs. 1500.  
 204 NSOU • PGCO - II Hence,  $\pi = 300$

**100% MATCHING BLOCK 201/204**

**W**

$$q - 10q^2 - 500 = 1500 \Rightarrow 300q - 10q^2 - 2000 = 0 \Rightarrow 30q - q^2 - 200 = 0 \Rightarrow q^2 - 30q + 200 = 0 \Rightarrow q^2 - 20q - 10q + 200 = 0 \Rightarrow q(q - 20) - 10(q - 20) = 0 \Rightarrow (q - 20)(q - 10) = 0$$

Thus,  $q$  is either 20 or 10. But the firm needs maximisation of revenue. Hence  $q = 20$ . Also, from  $q^2 - 30q + 200 = 0$  we get  $q = 30 \pm \sqrt{900 - 800} = 20$ . That is,  $q = 20$  or  $10$ . Now,  $p = 304 - 2 \times 20 = 264$   $TR = 304 \times 20 - 2 \times 20^2 = 6080 - 800 = 5280$   $C = 500 + 4 \times 20 + 8 \times 20^2 = 500 + 80 + 3200 = 3780$ . Under profit maximisation,  $\pi = -10q^2 + 300q - 500$  Now,  $\frac{d\pi}{dq} = 0 \Rightarrow -20q + 300 = 0 \Rightarrow q = 15$  Also,  $\frac{d^2 \pi}{dq^2} = -20 < 0$   $p = 304 - 2 \times 15 = 274$   $c = 500 + 4 \times 15 + 8 \times 15^2 = 500 + 60 + 1800 = 2360$   $\pi = pq - 2360 = 274 \times 15 - 2360 = 4110 - 2360 = 1750$ . 7. A fashion industry has the demand function  $p = -20 - Q$  and its total cost function is  $c = Q^2 + 8Q + 2$ . Determine the optimal output  $Q$ , price ( $p$ ), total revenue  $R$  and total profit. (a) under profit maximisation, (b) under sales revenue maximisation, (c) under sales revenue maximisation subject to the profit constraint of Rs. 10.

NSOU • PGCO - II 205 Solution : (a)  $\pi = TR - TC = PQ - TC = PQ -$

**100% MATCHING BLOCK 203/204**

**W**

$$TC = (20 - Q)Q - Q^2 - 8Q - 2 = 20Q - Q^2 - Q^2 - 8Q - 2 = -2Q^2 + 12Q - 2$$

Now,  $\frac{d\pi}{dQ} = -4Q + 12 = 0 \Rightarrow Q = 3$  Also,  $\frac{d^2 \pi}{dQ^2} = -4 < 0$ . (b) Total sales or total sales revenue,  $R = PQ = (20 - Q)Q = 20Q - Q^2$  Now,  $\frac{dR}{dQ} = 0 \Rightarrow 20 - 2Q = 0$  that is,  $Q = 10$  (c)  $\pi = TR - TC = -2Q^2 + 12Q - 2 = 10$  That is,  $\pi = -2Q^2 + 12Q - 12 = 0 \Rightarrow 2Q^2 - 12Q + 12 = 0$  That is,  $Q = 12 \pm \sqrt{144 - 96} = 12 \pm 4 = 8$  or  $4$ . Thus  $Q = 4.7$  and  $Q = 1.3$  Actually,  $Q = 4.7$  Ans. 8. The revenue function and the cost function of a firm are  $R = 1000Q - 2Q^2$  and  $C = Q^3 - 59Q^2 + 1315Q + 2000$ , respectively. Find out the profit maximising level of output of the firm. Solution : Here  $\pi = R - C = 1000$

**100%**

**MATCHING BLOCK 204/204**

**W**

$$Q - 20Q^2 - (Q^3 - 59Q^2 + 1315Q + 2000) = 1000Q - 2Q^2 - Q^3 + 59Q^2 - 1315Q - 2000 = -Q^3 + 57Q^2 - 315Q - 2000$$

Now,  $d dQ \pi = 0 \Rightarrow d dQ [-Q^3 + 57Q^2 - 315Q - 2000] = 0$  That is,  $-3Q^2 + 114Q - 315 = 0$  That is,  $-3(Q^2 - 38Q + 105) = 0$

206 NSOU • PGCO - II That is,  $Q^2 - 38Q + 105 = 0$  That is,  $Q^2 - 35Q - 3Q + 105 = 0$  That is,  $(Q - 35)(Q - 3) = 0$   
Thus,  $Q$  is either 3 or  $Q$  is 35. Now,  $2 \frac{d dQ \pi}{d Q} = -6Q + 114$  At  $Q = 3$ ,  $2 \frac{d dQ \pi}{d Q} < 0$  and at  $Q = 35$ ,  $2 \frac{d dQ \pi}{d Q} > 0$ .  
That means, the profit maximizing level of output is 35 units. 7.5 Sample Questions A. Objective-type Questions : Choose the correct alternative : (a) Sales maximisation hypothesis was introduced by : (i) Baumol, (ii) Simon, (iii) Williamson, (iv) Madrid. Ans. (i) (b) One of the alternative theories of the firm is : (i) Theory of Simon, (ii) Theory of Baumol, (iii) Theory of Samuelson, (iv) Theory of Joan Robinson. Ans. (ii) (c) The condition for maximisation of profit is attained at the point where : (i)  $MR = MC$ , (ii)  $MR = 0$ , (iii)  $MC$  cuts  $MR$  from below, (iv)  $MC$  cuts  $MR$  from above. Ans. (i) (d) The condition for maximisation of revenue is : (i)  $MC = 0$ , (ii)  $MR = 0$ , (iii)  $AR = 0$ , (iv)  $AC = 0$ . Ans. (ii) (e) Williamson's theory of firm deals with the theory of profit maximisation : (i) Correct, (ii) incorrect, (iii) uncertain, (iv) cannot be said a-priori. Ans. (ii)  
NSOU • PGCO - II 207 B. Short-type Questions : (a) Write a short note on peak-load pricing (b) What do you know about multiple-product pricing? (c) How can you decide the condition for getting maximum sales? (d) Obtain, mathematically, the relation among  $MR$ ,  $AR$  (= price) and the price elasticity of demand. Hence derive the condition for attaining maximum revenue. (e) Explain, in brief, the welfare implications of Williamson's model. C. Essay-type Questions : (a) Explain the Marris's model of managerial discretion. How would you compare it with Williamson's model? (b) Explain why managers in many occasions consider sales maximisation as a more alternative goal vis-a-vis profit maximisation. "The objective of sales maximisation subject to a 'satisfactory' level of profit is attained at a level of output higher than that of profit maximisation." How can you arrive at such a statement? Give reasons for your answer. (c) Explain, clearly, Williamson's expense preference model. (d) Explain whether you think that Marris's growth maximisation hypothesis gives a sufficient explanation of a firm's objective. (e) What arguments can you prescribe against profit maximisation hypothesis?

Objectives The primary objectives of this unit are : i. To give the definition of inflation. ii. To discuss different types of inflation. iii. To explain the effects of inflation. iv. To explain Phillips Curve. 8.2. Introduction Inflation which now-a-days confronts the economic policy makers throughout the whole world in the form of a dominant economic problem is, not at all, a new phenomenon since from the earliest days of recorded history, mankind has been puzzled by the rising prices. Besides, inflation is one of the major issues in Macroeconomics as it affects various aspects of an economy. It also assumes enormous importance in Managerial Economics because performance of business is closely linked to inflation. Naturally, it is essential to examine different types of inflation and various conditions that lead to inflationary situations.

NSOU • PGCO - II 209 8.3. Definition In Economics, the term "inflation" has been defined differently by different authors and there is no unanimity among these definitions. Some economists have defined inflation as a stage of rising price, not as a stage of rise in prices. There may be some situations where there is a rise in prices, but after a period of time this rise in prices gets stopped. In such a situation we say that this is not an inflationary situation. There may be different definitions of inflation. However, we shall give here the definition of inflation as had been advanced by Gardner Ackley in his Macroeconomic Theory. According to Professor Ackley, "Inflation is a persistent and appreciable rise in the general or average of prices". According to this definition, a sporadic price spurt or an imperceptible rise in prices will not be inflation. Professor Ackley has, further, stated that we define inflation as rising prices, not as "high" prices. In some sense inflation is, thus, a state of disequilibrium; it must be analysed dynamically rather than with the tools of statics. 8.4. Different Types of Inflation Inflation is mainly caused by excess demand or decline in aggregate supply or output. The former leads to a rightward shift of the aggregate demand curve while the latter causes the aggregate supply curve to shift leftward. The former is called (1) demand- pull inflation (DPI) while the latter is called (2) the cost-push inflation (CPI). 8.5 Demand-pull Inflation Theory There are two theoretical approaches to the demand-pull inflation : (a) the classical approach and (b) the Keynesian approach. According to the classical economists or monetarists, inflation is caused by an increase in money supply which leads to a rightward shift in the negatively sloping aggregate demand curve. Given a situation of full employment, classical economists maintained that a change in money supply brings about an equiproportionate change in the price level. That is why monetarists argue that inflation is always and everywhere a monetary phenomenon. The Keynesians do not find any link between money supply and price level causing an upward shift in aggregate demand. According to Keynesians, aggregate demand may rise due to a rise in consumer demand or investment demand or Government expenditure or net exports or the combinations of these four components of aggregate demand. Given full employment, such increase in aggregate demand leads to an upward pressure in prices. Such a situation is referred to as "Demand-Pull Inflation" which can, graphically, be explained in the following diagram (Diagram 8.1).

210 NSOU • PGCO - II Figure 8.1 : Demand-Pull Inflation : Shifts in AD curves Just like the determination of price of a commodity, the level of prices is determined by the interaction of aggregate demand and aggregate supply. In diagram 8.1, the aggregate supply curve before the full employment stage is positively sloping and becomes vertical after the full employment stage is reached. AD 1 is the initial aggregate demand curve that intersects the aggregate supply curve AS at point E 1 . The determined price is thus OP 1 . As the aggregate demand curve shifts from AD 1 to AD 2 , price level rises to OP 2 . Thus, an increase in aggregate demand at the full employment stage leads to an increase in the price level only, rather than the level of output. However, how much price level will rise following an increase in aggregate demand depends on the slope of the AS curve. 8.5.1 Causes of Demand-Pull Inflation The DPI originates in the monetary sector. Monetarists' argument that "only money matters" is based on the assumption that at or near full employment excessive money supply will increase aggregate demand and will, thus, cause inflation. Price level National output

NSOU • PGCO - II 211 An increase in nominal money supply shifts aggregate demand curve rightward. This enables people to hold excess cash balances. Spending of excess cash balances by them causes price level to rise. Price level will continue to rise until aggregate demand equals aggregate supply. Keynesians argue that inflation originates in the non-monetary sector or the real sector. Aggregate demand may rise if there is an increase in consumption expenditure following a tax cut. There may be an autonomous increase in business investment or Government expenditure. Government expenditure is inflationary if the needed money is procured by the Government by printing additional money. In brief, increase in aggregate demand, that is, increase in  $(C + I + G + X - M)$  causes price level to rise. However, aggregate demand may rise following an increase in money supply generated by the printing of additional money (Classical argument) which drives prices upward. Therefore, money plays a vital role. That is why Milton Friedman argues that inflation is always and everywhere a monetary phenomenon. There are other reasons that may push aggregate demand and, hence, price level upwards. For instance, growth of population stimulates aggregate demand. Higher export earnings increase the purchasing power of the exporting countries. Additional purchasing power means additional aggregate demand. Purchasing power and hence, aggregate demand may also go up, if Government repays public debt. Again, there is a tendency on the part of the holders of black money to spend more on conspicuous consumption goods. Such a tendency fuels inflationary fire. So, demand pull inflation is caused by a variety of factors.

8.6 Cost-push Inflation Like aggregate demand, aggregate supply also generates inflationary process. As inflation is caused by a leftward shift of the aggregate supply we call it the cost push inflation (CPI). The CPI is normally associated with non-monetary factors. The CPI arises due to the increase in cost of production. The cost of production may rise due to a rise in cost of raw materials or increase in wages. However, wage increase may lead to an increase in productivity of workers. If this happens, the aggregate supply (AS) curve will shift to the rightward, not leftward direction. Here we assume that productivity does not change in spite of an increase in wages. Such increase in costs are passed on to consumers by firms by raising the prices of the products. Rising wages lead to rising costs. Rising costs, again, lead to rising prices. Again, rising prices prompt trade unions to demand higher wages. Therefore, an inflationary wage-price spiral starts. This causes the aggregate supply curve to shift leftward.

212 NSOU • PGCO - II The cost push inflation has been demonstrated in diagram 8.2 where national output has been measured horizontally while price level has been measured vertically. Below the full employment stage this AS curve is positively sloping and at full employment stage it becomes perfectly inelastic. Figure. 8.2 : National Output The point E 1, that is, the intersection point between AD 1 and AS 1 curves determine the price level (OP 1). There is now a leftward shift of aggregate supply curve to AS 2. With no change in aggregate demand, this causes price level to rise to OP 2 and output to fall to OY 2. With the reduction in output, employment in the economy declines or unemployment rises. Further shift in AS curve to AS 3 results in the higher price level, OP 3 and a lower volume of aggregate output (OY 3). Therefore, cost push inflation may arise even below the full employment (Y F) stage.

8.6.1 Causes of Cost-Push Inflation It is the cost factors that pull the prices upward. One of the important causes of price rise is the rise in price of raw materials. For instance, by an administrative order the Government may hike the price of petrol or diesel or freight rate. Now at higher prices the firms have to buy these inputs. This leads to an upward pressure on cost of production. Not only this the CPI is sometimes imported from outside the economy. Price level

NSOU • PGCO - II 213 Increase in the price of petrol from OPEC compels the Govt. to increase the price of petrol and diesel. These two important raw materials are needed by every sector, especially the transport sector. As a result, transport costs go up resulting in higher general price. Besides, the CPI may be induced by wage-push inflation or profit-push inflation. Trade unions demand higher money wages as a compensation against inflationary price rise. If increase in money wages exceed labour productivity, aggregate supply will shift upward and leftward. Firms often exercise power by pushing prices up independently by pushing prices, up independently of consumer demand to expand their profit margins. Fiscal policy changes, such as increase in tax rates also leads to an upward pressure in cost of production. For example, an overall increase in excise tax of mass consumption goods is inflationary. That is why, the Government is, then, accused of causing inflation. Finally, production setbacks may result in decreases in output. Natural disaster, gradual exhaustion of natural resources, work stoppages, electric power cuts etc. may cause aggregate output to decline. In the midst of this output reduction, artificial scarcity of any goods created by traders and hoarders just simply ignite the situation. Inefficiency, corruption, mismanagement of the economy may also be the other reasons. Thus, inflation is caused by the interplay of various factors. A particular factor cannot be held responsible for any inflationary price rise.

8.7 Inflationary Gap A very important concept in connection with the theory of inflation is "Inflationary Gap". Moreover, the excess demand inflationary analysis has been described in terms of this inflationary gap. This gap is measured as the excess of the aggregate demand, that is,  $C + I + G$  over the full-employment aggregate supply  $Y_F$  as has been demonstrated in diagram 8.3. That means, the situation  $C + I + G < Y_F$  is an indicator of the presence of inflationary gap in an economy. On the other hand, if  $C + I + G > Y_F$  there is presence of deflationary gap in the economy. Obviously, both the situations of inflationary gap and deflationary gap are situations of disequilibrium. The concept of 'inflationary gap' may be defined as the positive difference between the actual level of aggregate demand which exists in an economy at the full employment level of income and the amount of aggregate demand which is needed to attain full employment. Again, since the amount of aggregate demand needed for attaining full employment should be equal to the amount of aggregate supply at full employment, we may also say that inflationary gap is the excess of the actual aggregate effective demand in the economy over the aggregate supply at the full employment level. Let us draw, in diagram 8.3, a vertical line  $Y_F K$  at the full employment income  $Y_F$

214 NSOU • PGCO - II and we see that for full employment to exist in the economy, the aggregate demand function,  $C + I + G$ , in the said diagram should cut the 45° line at its intersection with the full employment line  $Y_F K$ . Since the aggregate demand schedule cuts the 45° line  $Y \equiv C + I + G$  at point E which is located to the right and above B, the point of intersection of the 45° line with the full employment line  $Y_F K$ , in the economy there is inflationary gap of the magnitude of AB present in the economy. This gap has been measured as a distance between the aggregate demand schedule  $C + I + G$  and the 45°-line indicating  $Y = C + I + G$  at the full employment income,  $Y_F$ . In the figure aggregate consumption has been shown as a function of aggregate income  $Y$ , and the linear consumption function assumed to be of the form  $C = a + by$ ,  $a$  being autonomous consumption while  $b$  being the marginal propensity to consume (mpc),  $0 < b < 1$ .

Figure 8.3 : Aggregate Income ( $Y$ ) Aggregate investment,  $I$ , and government spending,  $G$ , are both autonomously determined. Hence the aggregate demand function  $C + I + G$  has been drawn parallel to the consumption function, the distance between the two being  $I + G$ . If aggregate real output could increase without limit, then aggregate real income would increase to  $Y_C$  at which level the aggregate real output (that is, supply) and aggregate real expenditure will be in equilibrium. If, on the other hand, aggregate real output or supply cannot increase beyond  $Y_F$ , the real income cannot also exceed  $Y_F$  at which the  $C, I, G$  Inflationary Gap  $K E Y = C + I + G$  45°  $Y_C$

NSOU • PGCO - II 215 aggregate demand ( $C + I + G$ ) exceeds the aggregate output by  $AB$ , that is,  $Y F + AB = C + I + G$ . Naturally,  $AB$  is the magnitude of inflationary gap which, obviously, will raise the general price level. This gap will disappear only when the aggregate money in the general price level increases from  $Y F$  to  $Y C$  causing an increase in the general price level. The increase in the money income is wholly due to the increase in prices as the aggregate real output is constant at the full employment output,  $Y F$ . The magnitude of inflationary gap gets eliminated and the inflationary process is halted when the new equilibrium aggregate money income is established at  $Y C$ . The change (increase) in the aggregate money income from  $Y F$  to  $Y C$  is wholly accounted for by the increase in prices with no increase having taken place in the aggregate real output remaining fixed at the full employment output,  $Y F$ .

8.8 Effects of Inflation From the standpoint of reality inflation is a very unpopular matter in any economy. Various opinion surveys conducted in the USA, India and many other countries of the world reveal that inflation is the most important concern of the people of any society as it badly affects their standard of living. Many people are of the opinion that inflation is enemy number one. A high rate of inflation makes the life of the poor really miserable. It redistributes income and wealth in favour of some and harms others greatly. By making the rich richer and also the poor poorer, it militates against social justice. Moreover, inflation lowers national output and employment and impedes long run economic growth. This is specially true in many developing countries like India. The effects of inflation can, broadly, be divided into the following categories : (a) Effects on real income (b) Effects on distribution of income and wealth (c) Effects on output and (d) Effects on long-run economic growth. Let us now discuss the above-mentioned effects of inflation, in brief :

8.9 Effects on Real Income Inflation erodes real incomes of the people. The effects of inflation can be examined if the difference between money income or nominal income and real income can, clearly, be understood. It is the change in the general price level that makes the crucial difference between these two concepts. We know that money income means the income such as wages, interest and rent received in terms of rupees. Real income, on the other hand, implies amount of goods and services which we can buy with the money income. That

216 NSOU • PGCO - II means, real income is the purchasing power of a person's money income. If our nominal income or money income increases at a lower rate than the rate of increase in the general price level (that means, the rate of inflation) people will be able to buy less goods and services, that is, people's real income will be lower. Real income will increase only if nominal income rises faster than the rate of inflation. Inflation, obviously, reduces the purchasing power of money and, therefore, it, adversely, affects real income of the people.

8.10 Effects of inflation on distribution of income and wealth A vital effect of inflation is that it redistributes income and also wealth in favour of some at the cost of some others. Inflation, adversely, affects those who receive relatively fixed income and goes in favour of businessmen, traders, producers and some others who get flexible incomes. It brings windfall profits for the producers and also traders. Naturally, all people do not lose as a result of inflation; rather some people gain from it. However, unanticipated inflation harms creditors and goes in favour of the debtors. Obviously, inflation, in this way, redistributes income in favour of the latter. Obviously, those who get fixed incomes, stand to lose from the effect of inflation. Workers and salaried people who earn from fixed wages and salaried people who earn from fixed wages and salaries, get hit extremely in consequence of unanticipated inflation. These people very often enter into contract with the employers regarding wages or salaries fixed in nominal terms. Naturally, when inflation occurs, the purchasing power of their nominal income falls to a great extent leading to a high fall in their levels of living. Obviously, when inflation persists for some years, we notice great demands for revision of wages and salaries. Pensioners also fall in this category of the people who get income in fixed nominal terms. Definitely, businessmen, that is, entrepreneurs and traders stand to get a gain by inflation. During periods of inflation the prices of goods produced by entrepreneurs rise relatively faster than the cost of production since wages lag behind the rise in prices of goods. Consequently, inflation leads to an increase in the profits of the businessmen. Inflation also, adversely, affects wealth holders who hold their wealth in the form of cash, demand deposits, savings and fixed deposits and also interest bearing bonds and debentures. Naturally, these wealth holders get severely hurt by inflation, as it reduces the real value of their wealth. Inflation reduces the real rate of interest earned by the depositors. Consequently, it has been observed that during periods of rapid inflation people like to convert their holdings of money into golds and physical property in order to avoid the loss due to inflation.

NSOU • PGCO - II 217 8.11 Effects on Output There is a good deal of uncertainty and at the same time disagreement as to whether inflation will favourably or adversely affect national output. It can be said that its effect on output also depends on whether it has been caused by demand-pull or cost-push factors. 8.12 Effects Of Inflation On Long-run Economic Growth Many economists argue that inflation of a mild nature has a tonic effect on the long- run economic growth. The driving force in the process of economic growth has been high profit margins created by inflation. They go on arguing that wages lag behind the rise in the general price level and thus create higher profit margins for businessmen and industrialists. This, naturally, tends to increase the profit share in national income. Obviously, savings go up and this, as a consequence, ensures higher rate of investment. With greater rate of inflation more accumulation of capital goods gets made possible. This accumulated capital generates a higher rate of long-run economic growth. 8.13 Bad Effect of Inflation on Economic Growth However, it is widely recognised that far from encouraging savings and encouraging higher rate of economic growth, inflation slows down the rate of capital accumulation. There are, however, many reasons behind this observation : (i) When because of rapid inflation value of money gets declined, people will not like to keep money with themselves and will, therefore, be eager to spend it before its value goes down heavily. This leads to an increase in the consumption demand and, therefore, lowers their saving. This discourages them to go on saving. (ii) Inflation leads to unproductive form of investment in gold, jewellery, real-estate, construction of houses etc. (iii) A highly considerable consequence of inflation is that it acclerates the problem of poverty in the underdeveloped countries. (iv) Finally, inflation adversely affects the balance of paymets (BOP) of a country and, thereby, hampers economic growth of the country concerned. 8.14 Phillips Curve The famous "Phillips Curve" has been discussed in the context of inflation. The relationship between inflation and unemployment had drawn considerable interest among economists throughout the world over the last seventy years or so. A noted British

218 NSOU • PGCO - II economist, A.W. Phillips, published an article in the year 1958. In doing so he used historical data on the rate of wage inflation and unemployment rate of the United Kingdom spanning almost a century from 1861 to 1957. In his study he showed that, in fact, there existed an inverse relationship between the rate of wage inflation and the rate of unemployment. It was also shown that a similar negative relationship holds for rate of change of prices (that is, inflation) and the unemployment level. However, the rate of wage increase had long been taken to be the primary determinant of the rate of price increase (or vice-versa). Hence a Phillips curve can, easily, be restated as a relationship between unemployment and the rate of price inflation. This inverse relationship implies that for reducing unemployment price in the form of a high rate of inflation has to be paid while for reducing the rate of inflation, price in terms of a higher rate of unemployment has to be done. On graphically fitting a curve to the historical data, a downward sloping curve exhibiting the inverse relationship between the rate of inflation and rate of unemployment was obtained. This trade-off is known to exist in the short run, not in the long run. This has been presented in diagram 8.4 where along the horizontal axis rate of unemployment has been measured while along the vertical axis rate of change in price and rate of change in wage have been indicated. Figure. 8.4 : Rate of Unemployment The Phillips curve drawn in diagram 8.4 is downward sloping from left to right. This suggests that there is a trade-off between inflation and unemployment. W W Δ P P Δ

NSOU • PGCO - II 219 Originally, the Phillips curve was constructed in terms of the negative relationship between the rate of increase in wage rate,  $\Delta W/W$  and unemployment rate ( $U$ ). Now, there is a direct relationship between the inflation rate and wage rate. For illustration, every thing being equal, if initially, money wage rate increases by 7% per year and labour productivity increases by 3% per year, then the price level will increase by 4%. This suggests, immediately, that there will be inflation rate to the tune of 4%. A rise in the money wage rate from 7% to 9% per year with no change in the 3% growth rate of labour productivity will tend to raise the inflation rate from 4% to 6%. Hence a rise in the wage rate without an increase in productivity will have a direct effect on inflation. Now, if in addition to this direct effect between the rate of wage increase and the price increase, there is also an inverse relationship between the rate of wage increase and rate of unemployment, then it follows that there is an inverse relationship between the inflation rate and the unemployment rate. This analysis of the particular relationship between the rate of increase in price and the unemployment rate has been shown in the short run version of the Phillips curve as has been demonstrated in diagram (8.4). In the above diagram both the rate of change of wage rate ( $\Delta W/W$ ) and the rate of inflation ( $\Delta P/P$ ) have been measured along the vertical axis while the rate of unemployment has been shown along the horizontal axis. The upper curve relates  $\Delta W/W$  to  $U$ , whereas the lower one relates  $\Delta P/P$  to  $U$ , which is based on the assumption of 3% increase in labour productivity per year. The relationship between the wage rate and the unemployment rate assumes that  $\Delta W/W$  will be 3% per year if  $U$  is 9%. Accordingly, the Phillips curve reveals that  $\Delta P/P$  will be zero or the price level will be stable if  $U$  is 9%. Again, if  $\Delta W/W$  is 9% with  $U$  of 6%,  $\Delta P/P$  is 6%. From the above analysis we can, easily, observe that there is a negative relationship between the unemployment, rate and rate of change in wage rate which, in turn, indirectly shows the negative relationship between the rate of change in inflation and unemployment.

220 NSOU • PGCO - II 8.15 Sample Questions A. Objective-type Questions : Choose the correct alternative : (1) Inflation-unemployment trade off had, first, been shown by : (a) Milton Friedman, (b) J. M. Keynes, (c) J. R. Hicks, (d) A. W. Phillips. Ans. (d) (2) Which of the following is the cause of inflation? : (a) Increase in money supply, given full employment, (b) Increase in cost of production, (c) Increase in aggregate demand over available output, (d) All of the above. Ans. (d) (3) One of the following is not true : (a) Cost-push inflation may appear only at the full-employment stage, (b) Demand-pull inflation appears after full employment, (c) Demand-pull inflation is caused by both monetary and non-monetary factors, (d) Cost-push inflation is also known as wage-push inflation. Ans. (a) (4) Phillips curve shows the relationship between inflation and unemployment as : (a) A positive one indicating trade-off between the two, (b) An inverse one indicating trade off between the two, (c) A direct and proportional one, (d) None of the above. Ans. (b) (5) One of the following is not true during inflation : (a) Wage-earners gain, (b) Profit-earners gain, (c) Real incomes decline, (d) Speculators gain. Ans. (a) (6) When there is inflation the economic condition of the pensioners gets : (a) Improved, (b) Deteriorated, (c) Remains unaltered, (d) Cannot be ascertained. Ans. (b). B. Short-type Questions : 1. How is inflation caused by demand-pull factors? 2. What is meant by inflation? It is said that during inflation the rich becomes richer and the poor becomes poorer. Justify the statement.

NSOU • PGCO - II 221 3. What is a Phillips curve? What does this curve indicate? 4. Distinguish between demand-pull and cost-push inflation. How do you separate them from each other? 5. What is Inflation? Briefly discuss the different types of inflation that are experienced in an economy. C. Essay-type Questions : 1. What do you mean by inflation? Show its effects on (i) income distribution and (ii) economic growth. 2. How do you describe demand-pull inflation and cost-push inflation in terms of aggregate demand and supply curves? How is the distinction between these varieties of inflation made? 3. Explain with the help of a neat diagram the causes of "inflationary gap". 4. What is a Phillips curve? Draw such a curve and explain its nature. 5. "From the standpoint of reality inflation is a very unpopular matter in an economy". Do you agree with this view? If so, substantiate reasons behind your opinion.

<p>assume that the industry faces a larger number of plant sizes represented by five SAC curves shown in figure 4(j). These curves will generate a smooth and continuous curve called the planning curve or LAC curve. Each point on this curve shows the least possible cost for producing the corresponding level of output. Thus the LAC curve is a planning curve since it is the curve which helps a firm to decide what plant is to be established for producing an output level consistent with the opitmal cost. Naturally, the firm selects that short run plant which yields the minimum cost of producing the anticipated output level. To produce a particular</p> <p><b>SA</b> compiled file.docx (D137395535)</p>

PREFACE In a bid to standardise higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses: core, generic discipline specific elective, and ability/ skill enhancement for graduate students of all programmes at Elective/ Honours level. This brings in the semester pattern, which finds efficacy in tandem with credit system, credit transfer, comprehensive and continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility to choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry acquired credits. I am happy to note that the University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade "A". UGC Open and Distance Learning (ODL) Regulations, 2017 have mandated compliance with CBCS for U.G. programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Under Graduate Degree Programme level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning Materials (SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English. Eventually, these will be translated into Bengali too, for the benefit of learners. As always, we have requisitioned the services of the best academics in each domain for the preparation of new SLMs, and I am sure they will be of commendable academic support. We look forward to proactive feedback from all stake-holders who will participate in the teaching-learning of these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success.

is a combination of two words - Business and Environment.

It varies in size (measured by the number of employees/sales volume/investment), location (local-national-international, rural-urban), mode of distribution channel (wholesaler- retailer), ownership (Public Ltd., Private Ltd., Family Business and Partnership), orientation (profit-seeking, non-profit seeking), economic activities (production, trade, banking, insurance, finance, agency, advertising, packaging) etc. Business activities are to be performed under legal restrictions, government requirement to fulfil the demands of all interested parties like consumers, employees, owners and others having stakes in 7

NSOU PGCO-IV 8 business directly and indirectly. This Unit throws light on the conceptual framework, nature, significance, types-elements of business environment, competitive business environment and the factors in coping up with the challenges of business environment. 1.2 Concept of Business Environment The first wing of business environment i.e. business is accepted as the organised effort of enterprises to supply consumers with goods and services for a profit. In its activities, business should consider the people as the focal point around whom, by whom and for whom it is to be run. Apart from the manufacturing business having physical conversation process, there are service organisations (IT firms, software developer, banks, risk absorbers, malls, etc.) which run without any physical conversation process. Besides, principles and practices of managing a business can be found in NGO, hospital or a B-school too. In this regard, as social being, business should adopt social activities and therefore, to survive successfully in environment, business should balance between commercialisation and socialisation. Nevertheless, business sometimes accepts profitability aspects more preferably than enduring values such as honesty, truth, justice, love, devoutness, aesthetic merit and respect for nature. Likewise, if business exploits workers, harms interests of consumers, degrades nature and the environment, destroys handicraft and renders artisans jobless, causes scams and scandals, multiplies needs and makes people greedy and avaricious etc., it will destroy social forum. The other wing of Business Environment i.e. environment refers to all internal (employees, shareholders, unions, managers, support activities, core competences, value creation and synergy) and external forces (political-legal-economic, technological, social-cultural, global and natural) which would have impact on the function of business. Environment forces businesses to operate around and within it irrespective of any movement in isolation. With the above discussed concepts, it can be framed that Business Environment is "the aggregate of all the forces, factors and institutions which are external to and beyond the control of an individual business enterprise but which exercise a significant influence on the functioning and growth of individual enterprises". It is basically "the aggregate of all conditions, events and influences that surround and affect business" (Keith Davis). Additionally, it can be regarded

<b>100%</b>	<b>MATCHING BLOCK 2/322</b>	<b>SA</b>	Business Environment M.Com II semester.docx (D146772726)
<p>as "the total of all things external to firms and industries which affect their</p>			

business firm and operation" (Bayard O. Wheeler). Thus "

<b>77%</b>	<b>MATCHING BLOCK 3/322</b>	<b>SA</b>	Business Environment M.Com II semester.docx (D146772726)
<p>business environment encompasses the climate or set of conditions, economic, NSOU PGCO-IV 9 social, political or institutional in which business operations conducted" (</p>			

Arthur M. Weimer). 1.3 Nature and Significance of Business Environment 1.3.1 Nature of Business Environment Business environment would have multi-faceted natures which vary country-to-country. Figure - 1.1 reflects the nature of business environment. Aggregative Inter-related Contextual Nature of Business Environment Dynamic General and specific Forces Inter-temporal Relative Uncertain Figure 1.1 The nature of business environment Business environment is the aggregate of inter-related and interdependent internal and external forces having influence on the working and decision-making of an enterprise where one factor (e.g. economic environment) would have high impact on other (e.g. non-economic environment like economic conditions). It accepts contextual perspective as it provides macro framework within which the business firm (a micro unit) operates and has to follow the legal formalities. It deals with dynamic forces of general (economic, social, political, legal, natural and technological conditions) and specific kinds (investors, customers, competitors, suppliers etc.) which is inter-temporal also i.e. changes over time. It seems to be a relative concept as depending on the political-economic-social-cultural environment of a country. As business environmental issues are highly dependent on future context it has to deal with uncertainty. Business environment thus would have high impact on the performance of business concern and success of business firms where a factor that has a favourable impact on one firm may adversely affect another firm. Therefore, management of a business enterprise must have a deep understanding and appreciation of the environment.

NSOU PGCO-IV 10 1.3.2 Significance of Business Environment It is very important for business firms to understand their environment and changes occurring in it. Business enterprises which know their environment and are ready to adapt to environmental changes would be successful and vice versa. A business can obtain this knowledge through environmental scanning which is a process by which business firm can monitor their relevant environment to detect opportunities and threats. Significance of business environment and its knowledge to cope up with the challenges can be listed below in Figure 1.2. First Mover Advantage Early Warning Signal Change Agent Public Image Customer Focus Strategy Formulation Significance of Business Environment Figure 1.2: Significance of Business Environment Enterprises with environmental awareness can opt for the opportunities of the market and do not let their competitors to adopt these. Thus they can enjoy first mover advantage in the market. Environmental awareness also offers the enterprises early warning signal of the threat or crisis in the market and thus would help them to minimise the adverse effect, if there be any in the market. With the concerned understanding, the enterprises would get proper customer focus or orientation with which they can satisfy the changing demands of the customers and offer services/products as per their requirements. Without environmental understanding enterprises cannot formulate strategy based on the strength, weakness, opportunity and threat of the environment. Likewise, they cannot have any information regarding the strategy of their competitors which would not allow them to counter attack their competitors. Environmental scanning would help the business leader to understand the aspiration of people and other environmental forces which would help the business leader to take steps towards strategy alteration as change agent. Considering all relevant environmental issues in due course and time, therefore, can establish public image of

NSOU PGCO-IV 11 the business leaders in market, indulge them to keep continuous learning on environment in view of getting awareness of every change in environment. Box:1.1 Case Studies on significance of understanding business environment Environmental awareness offers business leaders to enjoy 'First Mover Advantage' which can be found for Maruti Suzuki who became the leader in small car market because it was the first to recognise the need for small car on account of adjusting with rising petroleum prices and opting for large middle class customers. Environmental understanding would also help Maruti Udyog to face the threatening of the market when new firms entered in the mid segment cars (threat), Maruti Udyog increased the production of its Esteem threefold. Increase in production enabled the company to make faster delivery. As a result, the company captured a substantial share of the market and became a leader in this segment. Environmental knowledge helps business leaders to formulate strategy as experienced by ITC which realised that there was vast scope for growth in the travel and tourism industry in India and the Government was keen to promote this industry because of its employment potential. With the help of this knowledge, ITC planned new hotels both in India and abroad. Likewise, Hindustan Unilever promoted small sachets of shampoo and other products considering the affordability of middle class customers which was customer focus also. Source: Gupta, C.B. (2019), Sultan Chand & Sons, New Delhi. 1.4 Types and Elements of Business Environment Business environment can be segregated into two - Internal Environment and External Environment. Internal Environment refers to all the factors (business firm structure, policies and programmes, personnel, physical facilities and marketing mix) existing within a business firm which the firm can alter or control. Internal environment imparts strength (an inherent capability of an enterprise which can be used to gain strategic advantage over its competitors) and weakness (an inherent limitation or constraint of an enterprise which creates a strategic disadvantage). External Environment consists of forces and factors which are found as uncontrollable to the firm (national

NSOU PGCO-IV 12 income, social forces, government policies, population etc.). External environment creates favourable (opportunity) or unfavourable (threat) condition to the business. Figure: 1.3 - Types and Elements of Business Environment Internal Environment: Culture of a company with values, beliefs and attitudes of the founders and top management of a company, exercises a strong influence on what the company stands for, how it does things and what it considers important. To become successful, the value system of a company should be shared by all the employees. Mission and objectives of the company control its priorities, strategies, product market thrust area and development process. Business decision is related to the management and business firm structure and the degree of professionalization of management. In this regard, qualified, experienced board and sound formal management structure facilitate decision Types and Elements of Business Environment Internal Business Environment External Business Environment Micro Environment Macro Environment Culture Mission and Objective Top Management Structure Power Structure Company image and brand equity Human and other resources Elements Elements Custom Competitors Suppliers Marketing Intermediaries Financiers Public Workers and Trade Union Political and Legal Environment Social and cultural Environment Economic Environment Financial Environment Global Environment Technological and physical Environment Natural Environment Elements

NSOU PGCO-IV 13 making process. The power structure in connection with the internal relationship between Board of Directors and Chief Executive is accepted as an important factor. In this regard, the top management can enjoy relationship with shareholders and employees to take all important decision smoothly in proper way. Image and brand equity would play as important assistance while taking finance, entering into new markets, communicating with suppliers-dealers, forming alliances etc. The employees of the company i.e. the human resource, if is motivated properly, can be proved as the precious asset which can carry on the values and morale of the company. Besides the other resources (financial position, capital structure, distribution system and marketing competence, R&D and technological capability, physical assets, facilities, production capacity, technology etc.) management information system etc. would also influence on the performance of the company. External

<b>50%</b>	<b>MATCHING BLOCK 4/322</b>	<b>SA</b>	023E1110,119E1110,193E1110-Business Environmen ... (D165201747)
Environment: Micro or Task Environment consists of the actors in the immediate environment of the company which affect the performance of			

it (Philip Kotler). Business firms must put their primary effort in managing the relationships among all the Micro Environmental elements efficiently (Customers, Competitors, Suppliers, Workers and Trade Union, Marketing Intermediaries, Financiers and Public) and understanding their requirements following which they should perform. It is also recommended as Direct Action Environment or specific forces or Stakeholders considering the groups in the company's immediate operating environment having stake in the company. So these are the individuals, groups and agencies with which the business firms come into direct contact. Therefore, the success of the business firms is based on the capacity of it to deal with the micro forces effectively even though the micro environmental issues are common for all the business firms. Among the Micro Environmental factors, customers (individuals, households, Government department, commercial establishments etc.) are found globally and play crucial roles as they are that group of stakeholders whose satisfaction makes successful existence of the business firm. Hence, the target group of customers or market segment can be selected based on the profitability, elasticity of demand, dependability, degree of competition and growth prospects. Customer's view point helps the business firm to get knowledge regarding full range of competition in market or about the scope of competitors who are also important stakeholders of the business firm. Company may have direct competitors (who offer same or similar products or services e.g. LG NSOU PGCO-IV 14 Washing Machine vs. IFB Washing Machine) and/or indirect competitors (in entertainment industry, Television has to face competition from Radio). Competitors carry full range of domestic and multinational sources due to economic liberalisation and globalisation. The other stakeholder of Micro Environment, Suppliers, also influence the successful performance of the business firm as they would control the quality of the input of the products and uninterrupted operation to minimise inventory carrying costs. Business firm, in this regard, should consider multiple supplier base which depends on the relationship with the suppliers and connects with power equation i.e. the extent to which each of them is dependent on the other (e.g. Maruti Suzuki undertook vendor development to ensure timely and regular supply of materials and parts). In a business firm, workers and trade union play an important role as production and other operations are related to efficient performance of the workers, while a conducive environment regulates relationship with the business firm and the trade unions. Through Marketing Intermediaries like middlemen (agents, wholesalers and retailers link between the company and its customers), transportation firms and warehouses (assistance in physical distribution of products), advertising agencies, marketing research agencies etc. (help in promoting, selling and distributing products to consumers). Apart from financiers, they play a vital role in providing finance to the business firm without which the company cannot survive. On the other side, Public [media group, environmentalists, non-government business firm (NGOs), consumer associations and local community] imposes pressure on business activities in favour of social norm, ethics and customer orientation by disclosing irregularity (if any) in front of all of its stakeholders.

**External Environment: Macro** Macro Environment refers to the remote/general environment where a business firm does not interact with the elements regularly and thus it is recognised as Indirect Action Environment. The elements of Macro Environment create both opportunity and threatening and are less controllable factors forcing the business firm to adapt the environmental changes like production within the country instead of importing this due to internal price hike of raw material, etc. In Macro Environment, Political and Legal Element is another one which relates to Government affairs and comprises of (i) The constitution of the country, (ii) Political Business firm (business firm and

**67%**

**MATCHING BLOCK 5/322**

**SA**

COM 332 Strategic Management - II.pdf (D165094087)

philosophy of political parties; ideology of the Government, nature and extent of bureaucracy, influence of primary groups,

business donations to political parties, political consciousness etc.; (iii) Political stability (structure of military and police force, election

NSOU PGCO-IV 15 system, law and order situation, President's Rule, Foreign infiltrations, Secessionist activities, etc.; (iv) Image of the country and its leaders, (v) Foreign policy (alignment or non-alignment, relations with neighbouring countries); (vi) Defence and military policy; (vii) Laws governing business and legal system, serves as the regulatory framework of business; (viii) Flexibility and adaptability of laws (constitutional amendments and direction of public policies) and (ix) The judicial system (implementation and effectiveness of laws). Besides, the another important element of Macro Environment, Social and Cultural carries characteristics of society and consists of (i) Demographic forces (size, composition, mobility and geographical dispersal of population), (ii) Social institutions and groups, (iii) Caste structure and family business firm, (iv) Educational system and literacy rates, (v) Customs, attitudes, beliefs, values and life styles and (vi) Tastes, preferences of people and their buying behaviour. From apart, Macro Environment also is influenced by Economic environment like (i) The nature of economic system (capitalist, socialist or mixed economy), (ii) Economic structure (occupational distribution of labour force, structure of natural output, capital formation, investment pattern, composition of trade, balance/imbalance between different sectors, five year plans, (iii)

**68%**

**MATCHING BLOCK 6/322**

**SA**

International Trade-Material I semester.docx (D146751176)

Economic policies (industrial policy, import-export policy, monetary policy, fiscal policy, foreign investment and technology policy), (

iv) Business firm and development of the capital market (banking system, securities market etc.), (v) Economic indices (gross national product, per capita income, rate of savings and investment, price level, balance of payments position, interest rates etc.), (vi) Economic infrastructure and stage of development of the economy and (vii) Product markets and factor markets (degree of competition, market size etc.). Moreover, the business firm deals with Technological and Physical Environment (sources and types of technology, rate of technological change, approaches to production of goods and services, new processes and equipment, research and development (R&D) systems). Natural Environment, in this regard, also plays a significant role having climate and geographical conditions; ecological system, levels of pollution and agricultural, commercial and other natural resources. Global Environment also contains a significant role in Macro environment of a business firm having (i) International Agencies (World Bank, IMF, WTO, EEC etc.), (ii) International Conventions, (iii) Treaties and agreements, (iv) Economic and business condition (v) Development in information and communication technology, (vi) International Political factors, (vii) The state of the world economy and distribution of world output, (viii) International economic co-operation, (ix) International market structure and competition, (x) barriers to

NSOU PGCO-IV 16 international trade and investment, (xi) National economic policies of different countries, (xii) Role of multilateral economic institution, (xiii) Cultural factors of different countries, (ix) Growth and transfer of technology and (x) Growth and Spread of multinationals. Figure- 1.4 exhibits business environment and its different elements. Figure: 1.4 Business Environment and its different elements 1.5 Competitive Business Environment A system where different businesses compete with each other by using various marketing channels, promotional strategies, pricing methods, etc. can be recommended as competitive environment. Business firm in this regard should follow the regulations within this system. Competition and competitors would reshape the marketing principles Macro/Indirect Environment Micro/Direct Environment Internal Environment Business Firm Mission & Objective Management Structure Power Structure Company Image & Brand Equity Human & other resources Customers Market Intermediaries Political & Legal Natural Financial Economic Technological and Physical Political & Legal Competition Suppliers Public Financer Culture

NSOU PGCO-IV 17 and business decisions of the business firms. From apart, customers do have high impact on business decision as business confirms high-quality goods at affordable price to satisfy customers' demand. This would somehow encourage the business firm to invest more time on research and development to improve the product quality. Changes in technological application in production process or the way, customers would buy their products can influence on the structure of market condition (e.g. Amazon changed products' distribution channel to meet the expectations of wide range customers). Therefore, innovations motivate the consumer goods companies and open up markets for small firms that previously had no opportunity to compete with bigger companies. In competitive scenario, concerned business may reduce the price of the product than that of the others which somehow would give pressure on other companies. In market competitive framework, business firm can find four basic types of competition - Pure competition [(i) many business firms produce similar products, (ii) many consumers buy them (iii) manufacturers cannot influence the price of the product and (iv) price is defined by supply and product demand]; Monopolistic competition [(i) many business firms produce products slightly differ from each other. Customers can distinguish the products because of the differences in quality, features, etc., (ii) businesses actively will use advertising to promote their products and convince consumers that their products have better quality and (iii) business firms improve the quality of products or add some extra features to the products and thus can easily manipulate the price of the products. So, business firms can play as the price makers (have the power to influence the price of products)]; Oligopoly [(i) small number of businesses (usually two or more); (ii) businesses don't compete but collude to obtain high market returns. They set and keep prices high together or under the leadership of one particular business firm; (iii) profit margins are comparatively higher than in a more competitive environment and (iv) businesses often face a prisoner's dilemma, an incentive to cheat and act in their interests at the expense of other companies]; Monopoly [(i) only one business firm produces a unique product; (ii) the firm would not face any competition as the product would not have any substitutes and thus the firm would decide the price of the product and set barriers for new companies to enter]. Business firms would have to develop knowledge regarding different market conditions and degree of competition therein according to which the same can take business strategy. Business firm should develop a market competitive analysis to determine the business strategy of its competitors in market. The factors to be determined to develop the business strategy model can be discussed as under (Table: 1.1)

NSOU PGCO-IV 18 SWOT Analysis The external and internal factors that influence a business firm can be divided into Strength (S), Weakness (W), Opportunity (O) and Threat (T). SWOT helps business firm to identify the competitive advantage of business firm in market by comparing the strength and weakness (ST) of the competitors which can define the further marketing strategy and steps to lead the market. Strategic Group Analysis This analysis would assist the business firm to identify the factors bringing profitability in market and the position of competitors' in competitive environment. With this analysis, business firm can have idea regarding the strategies of all strong competitors in various strategic dimensions. Porter's Five Forces The five forces [Threat of new entry, Buyers' Power, Supplier' Power, Threat of Substitute, Competitive Rivalry] explores competitive market forces in the industry and helps define the industry's strengths and weaknesses influencing industrial level of competition. Growth Share Matrix With this analysis, business firm mainly the large one, would have detailed idea on the products which should be invested in accordance with their competitiveness and attractiveness within the market. Likewise, the business firm can detect the products which are worthing than that of the others which are not so. Perceptual Mapping The position of the firm's product against that of its competitors can be known with this analysis which would also enable the firm to understand whether the respective firm's positioning strategy matches its target audience and also the gaps which are to be resolved. Table: 1.1 - Competitive Analysis of Business Environment

NSOU PGCO-IV 19 1.6 Coping with the challenges of Business Environment Business firm is influenced by several environmental factors which shape up the strength, weakness, opportunity and threat. Therefore, environment is considered as multi-dimensional and very complex in nature. In a specific geographic condition, industries and business have to change their business related policies as people of a particular area have similar tastes, preferences and requirements which may differ region-to-region and state-to-state. Likewise, the ecological factors (availability of natural resources) are also related to the performance of business firm in respect of its production quality and variety. In the same manner, business firm should consider environmental protection i.e. controlling of environmental pollution (any unfavorable alteration of this natural environment is called environmental pollution) [Environment (Protection) Act, 1986;

Air (Prevention and Control of Pollution) Act, 1981; Water (Prevention and Control of Pollution) Act, 1974].

From apart, business environment is highly influenced by demographic environment which includes some sub-factors like Size, Growth, Age and Sex compositions of population, Educational levels, Languages, Caste, Religion etc. Business environment has to absorb also the challenge for economic environment having three important factors - (i) economic systems, (ii) economic policies and (iii) economic conditions with more direct and deliberate impact than other factors. Political and Legal Environment are connected with the laws and regulations within which the business firms should conduct their affairs in a specific country (e.g. in India, the business firms would have to maintain comprehensive labour legislation under which they have to pay minimum wages to workers in specific industries with statutory bonus payment). In the same way, Social and Cultural factors containing society as a whole with an aggregate of all sub-cultures each with distinct concepts, beliefs and faith, pose a serious challenge to the business concern and to the business managers while formulating business strategies and policies. The Physical (weather, climatic conditions etc.) and Technological (knowledge of how to do things) factors would have high impact on business environmental policies and practices. Several researchers (Joseph Schumpeter, Richard Eelles and Prof. Kahn and Wiener) time-to-time considered the terms like 'Innovation', 'Revolution', 'Break Through', the output of technical application in operation of business firm which implies the importance of the factors for survival of the firms in competitive scenario. Besides, emphasis is also given on prompt application of technology in operation after its invention which genuinely increases the potentiality of the business firms in competition.

NSOU PGCO-IV 20 To cope up with the situation, some factors should be taken into consideration as reflected in Figure:1.5 Figure - 1.5 Factors to cope up with environmental challenges. Buffering techniques (stocking material, preventive maintenance, employee training, building inventory) are used to soften the impact of environment on business firm i.e. to avoid damage due to changes in environment. Likewise, levelling takes attempts to reduce fluctuations in the environment e.g. special air fares for night flights. Anticipation, acquiring information about probable changes in the environment, helps the business firm to foresee the customer needs, competition, technology and availability of human resources. Rationing, allocating organisational resources according to system of priorities, is taken into account when an organisation is unable to meet all demands. Business firms may take creative approach to environment facing the challenges and converting threats into opportunities. It can create suppliers' group with which dependence on sole supplier can be avoided. Sometimes, the business firms may collaborate with others and may enter into contract (Public relation, lobbying etc.). Often the business firm adopts change in its production process to meet customer's requirements. But while changing the product line or any other operations, the interrelationship between various elements of environment and their likely impact should be understood. Business firms may also take the option of Contracting wherein it can overcome uncertainty regarding the supply of inputs and sale of finished products. Sometimes, to cope up with the environmental challenges, the firm may be attached with Coalescing where it can merge with its mother firm. E.g Hindustan Unilever n

NSOU PGCO-IV 21 Limited took over Tata Oil Mills to acquire greater control over the market. From apart, in order to increase its competitive power, a firm may acquire key personnel from other firms. This will provide information about the market to the company. 1.7 Summary Business Environment is the aggregate of all the forces, factors and institutions which are external to and beyond the control of an individual business enterprise but which exercise a significant influence on the functioning and growth of individual enterprises. It is a/an (a) aggregate of inter-related and interdependent internal and external forces, (b) a contextual perspective, (c) dynamic force of general and specific kinds and (d) inter-temporal and uncertain factor. Enterprises with environmental awareness can opt for the opportunities of the market and does not let their competitors to adopt these. Thus they can enjoy getting - first mover advantage, early warning signal, customer focus, strategy formulation, changing agent, public image and continuous learning. Business environment can be segregated into two - Internal Environment (Culture, Mission and objectives, management and business firm structure, power structure, Image and brand equity, human resource of the company) and External Environment [Micro/Task Environment having individual impact (Customers, Competitors, Suppliers, Workers and Trade Union, Marketing Intermediaries, Financiers and Public) and Macro (Political and Legal Environment, Social and Cultural Environment, Economic environment, Technological and Physical Environment, Natural Environment, Global Environment)]. In this context, business firm should have detail knowledge regarding the market competition in different shapes and degrees through SWOT Analysis, Strategic Group Analysis, Porter's Five Forces, Growth Share Matrix and Perceptual Mapping. In business environment, basically 6 factors force the firms to change their policies - Geographical/Ecological or Natural, Demographic, economic, Political/Legal, Social and Cultural and Physical and Technological factors. Hence, to deal with the competitive situation, business firms can adopt Buffering, Levelling, Anticipation, Rationing, Dominating, Changing, Contracting, Coalescing and Procuring Key Personnel. 1.8 Questions Objective Type: 1. Business Environment refers (a) Only Internal Environment, (b) Only Internal Environment, (c) Both Internal and External Environment, (d) None of the above. 2. Element of business environment 'competitor' is under (a) Micro Environment, (b) Macro Environment, (C) Both Micro and Macro Environment, (d) None of the above. Short Answer type: 1. Define Business Environment. What is its significance in today's world? 2. What environmental factors do give impact on the business firm to change its policy? Long Answer type: 1. What are the different types of business environment? Or Specify the Micro and Macro environmental factors 2. Explain competitive environment of a business firm. 1.9 Further Readings Aswathappa, K. (2019). Essentials of Business Environment (15th Revised Edition), Himalaya Publishing House. Cherunilam, F. (2012). Business Environment - Text and Cases (21st Revised Edition), Himalaya Publishing House. Fernando, A.C. (2011). Business Environment, Pearson. Gupta, C.B. (2019). NSOU PGCO-IV 23 Unit 2 Environmental Analysis Structure 2.0 Objectives 2.1 Introduction 2.2 Concept and features of Environmental Analysis 2.3 Importance of Environmental Analysis 2.4 Benefits and uses of Environmental Analysis 2.5 Process of Environmental Analysis 2.6 Business Environmental Forecasting—Concept, Limitations 2.7 Linkages between Environmental Analysis and Strategic Management 2.8 Limitations of Environmental Analysis 2.9 Summary 2.10 Questions 2.11 Further Readings 2.0 Objectives After going through the unit you will be able to understand the— Concept of environmental analysis Importance of environmental analysis Process of environmental analysis Limitations of environmental analysis 2.1 Introduction Business firms should have detailed knowledge regarding the environmental changes as they have to capture the changing demands of customer base. It should comprehend various environmental forces for determining the opportunity and threatening in the environment through environmental scanning or environmental appraisal. Environmental monitoring and forecasting in this regard is very significant to make the business firms know about the environment through the data base and good analytical skill. Business firms that are able to read the early warning signals contained in the environmental changes and make appropriate adjustments in their policies, can reduce risk and 23

NSOU PGCO-IV 24 uncertainty. Environmental search leads to the identification of various sources influencing the enterprise. Through diagnosing, the positive and negative impact of environment can be known. This Unit throws light on the concepts, features, importance, benefits and process of environmental analysis, concepts and limitations of environmental forecasting, linkage between environmental analysis and strategic management and limitations of environmental analysis.

2.2 Concept and features of Environmental Analysis Environmental Analysis can cover two broad issues - Environmental Search or Monitoring the Environment and Environmental Diagnosis or identifying opportunities and threats. It contains features like (i) Holistic Exercise, (ii) Continuous Process and (iii) Exploratory Process. Holistic exercise considers total view of environment rather than a selective part. Here, business firm must scan the circumference of its environment in order to maximise its utility and minimise the chances of surprise due to uncertainty in volatile movement of customer's demand. Environmental Analysis is confirmed as a continuous process instead of being an intermittent scanning system. This can assist the business firm to maintain track of the rapid pace of development taking all interconnected items of environment. Through Environmental Analysis, a large part of the process seeks to explore the unknown dimensions of the possible future where environment is concerned with present development through monitoring. It would emphasise on "What could happen" and not necessarily on "What will happen."

2.3 Importance of Environmental Analysis In an uncertain business environment, business firms would have to get a vision of the business and a system of environmental analysis. The role of environmental analysis in this regard can be compared with the radar in a ship which shows signal for existence of rock, reefs and clear water in the uncharted sea. Environmental Analysis keeps the Business firms alert and informed regarding the business environment and makes them aware of the linkage between organisation and its environment. With this analysis, early warning signals of environmental threats and opportunities for business firms can be highlighted on. Environmental Analysis makes the business firms know about the transformation of business environment and the causes of disequilibrium. It will help the business policy planners to sketch relevant planning in view of avoiding irrelevant alternatives or options. Therefore, it will help the business firm to formulate right strategies and to modify the existing ones. Figure-2.1 reflects the factors showing the importance of environmental analysis.

NSOU PGCO-IV 25 Importance of Environmental Analysis First Mover Advantage Early Warning Signal Focus on Customer Strategy Formulation Change Agent Public Image Continuous Learning

Figure 2.1: Importance of Environmental Analysis Environmental Analysis offers environmental awareness to business firm with which the firm can have accessibility of early opportunities instead of losing them to competitors. Therefore, environmental analysis assists the business firms to get the first mover advantage (e.g. Maruti Udyog became the leader in the small car market because it was the first to recognize the need for small cars on account of rising Middle class). Besides, the business firm can have early warning signal of external environmental threats and opportunities which helps it to take appropriate course of action in due time. One of the threatening which business firms generally face in environment is the changing demand of customer. With environmental analysis the business firm can focus on customer and thus can take action in advance. It basically assists the business planners to formulate strategy to combat competition in market and also guides the firm to diversify its business to other sectors following the demands of the sector (e.g. focusing on the vast scope of travel and tourism in India, ITC planned hotels here apart from its other businesses). Therefore, Environmental Analysis and its wings like Environmental Monitoring and Scanning help the business firms to act as change agent depending on the current aspirations of people and other environmental forces. All these efforts establish public image of the business firms in market as they obey the environmental structure change properly through Environmental Analysis. Hence, to carry on regular environmental scanning and analysis in view of making business firms aware of the environmental changes, it would be very wise to keep on continuous learning by the same.

NSOU PGCO-IV 26 2.4 Benefits and uses of Environmental Analysis Environmental Analysis explained the process through which all the internal (Strength and Weakness) and external (Opportunities and Threats) components having influence on the firms' activities, can be examined. Environmental Analysis requires a constant stream of information to find out the best course of action. Strategic planners use the information gathered from the environmental analysis for forecasting trends for future advance under which whether the organisational goal can successfully be achieved is tested. If the organisational goal cannot be achieved, it is suggested to develop a new strategy or modify the old one. The benefits and uses of Environmental Analysis can be structured below in Figure - 2.2. Benefits and uses of Environmental Analysis Identification of Internal Insights - Strength and Weakness Long-term business Strategy and decision making Optimum Use of Resource Survival and Growth Identification of External Metrics - Opportunity and Threat Figure 2.2 - Benefits and Uses of Environmental Analysis Environmental Analysis can provide internal insights (Strength and Weakness) to the organisation to assess employee's performance, customer satisfaction, maintenance cost etc. and to take corrective action whenever required. Likewise, the external metrics would help the business firm to respond to the environment in a positive manner and to align the strategies according to the objectives of the organisation. It can sketch threats at an early stage assisting the organisation in developing strategies for its survival. Additionally, it identifies opportunities like the prospective customers, new product, segment and technology to occupy a maximum share of the market than its competitors. Therefore, the knowledge on environmental strength, weakness, opportunity and threat helps the business firm to survive and grow in the competitive business world. Moreover, systematic analysis of business environment helps the firm to reduce wastage and make optimum use of available resources. Therefore, proper analyses of environmental factors help the business firm to frame long-term plans and policies that could help in easy accomplishment of the organisational objectives. Thus

NSOU PGCO-IV 27 environmental analysis assures optimum utilisation of scarce human, natural and capital resources. Hence, Environmental Analysis enables the firm to select the best option for the success and growth of the firm and thus helps the firms to frame precise decision. In all these issues, it assures optimum utilisation of scarce human, natural and capital resources to the best option to fulfil organisational objectives.

### 2.5 Process of Environmental Analysis

Environmental Analysis examines all the components - internal (strengths and weakness of the business entity) and external (opportunities and threats outside the organization) having influence on the performance of the organization. These evaluations are later translated into the decision-making process and helps align strategies with the firm's environment. The process of Environmental Analysis is based on four steps. Step 1: environmental Scanning, Step 2: Environmental Monitoring, Step 3: Environmental Forecasting and Step 4: Diagnosis. The process of Environmental Analysis is structured as under in Figure 2.3.

NSOU PGCO-IV 28 2.6 Business Environmental Forecasting - Concept, Limitations Forecasting is a process of analyzing the past and present movements and trends to obtain some idea or clues regarding future trends in any event. It is a systematic approach with well thought-out, scientific methods and procedures and proper analysis of data and facts with the help of both quantitative and qualitative techniques. Through Environmental forecasting, managers of business firms attempt to predict the future characteristics of the organizational environment and hence make decisions today that will help the firm deal with the environment of tomorrow. Therefore, Environmental Forecasting can estimate the future events which would have a major impact on the enterprises by estimating the intensity, nature and timing of the external forces that may affect the performance of a firm, disrupt its plans, or force a change in its strategies. Forecasting follows specific steps to measure the trends of future like: (i) Identification of relevant environmental variables; (ii) collection of information, (iii) Selection of forecasting technique and (iv) Monitoring. Managers should formulate an effective strategy with critical examination of firm's environment where different variables do exist to give influence on firm's performances. Environmental Forecasting assists to identify the most relevant variables depending on the strategic situation through analyzing the environmental situation where omission of critical variables or inclusion of non-relevant variables could have misleading effects. After detecting the relevant variables, Environmental Forecasting would identify the sources of information, determine the type of information and collect the required information to analyze the variables for prediction. Based on the nature of forecast decision, the amount and accuracy of the available information, availability of time, importance of the forecast and the cost required to be borne to collect the information, the forecasting technique would be chosen. Environmental Forecasting will work properly if the characteristics of the variables or their trends can be monitored regularly which will include some new variables and decline some existing ones. The strategic manager in this regard should understand the current state of environment and also the future state. Hence, after implementation, managers should continuously evaluate this to have further improvement. In this regard, though, sometimes forecasting may falsely determine the future, to

NSOU PGCO-IV 29 become successful, business firms should adopt proper forecasting which can be continued through some significant techniques both qualitative and quantitative. Qualitative Forecasting Technique considers the views of individuals on future trends of an event with the application of (i) Sales Force Composite (combining the sales predictions of experienced sales people), (ii) Customer Evaluation (individual customer's estimate of purchase based on one's choice would be pooled), (iii) Executive Opinion (managers get together and devise a forecast based on their pooled opinions), (iv) Delphi Technique (a consensus of expert opinion with a panel of experts unknown to each other can choose to study a particular question), (v) Anticipatory Surveys (a form of sampling where mailed questionnaires, telephone interviews, or personal interviews are used to target larger population). In Quantitative Forecasting Technique, the business firms would adopt figures and data to quantify the trends and movements of any events in market with (i) Time-Series Analysis (fit a trend line to past data and then to extrapolate this trend line into the future), (ii) Regression Modelling (a mathematical forecasting technique in which an equation with one or more input variables i.e. independent is derived to predict another variable i.e. dependent variable), (iii) Econometric Modelling: (the sophisticated methods of forecasting that attempts to describe the relationships between the different sectors of the economy), (iv) Environmental Scanning (a process by which organizations monitor their relevant environment to identify opportunities and threats affecting their business). Environmental Forecasting assists a business firm to get an idea regarding present and future position of events in competitive market. Applying this, the business firms would get some advantages like: Forecasting enables the manager to plan for the future of the business firm. Without adequate environmental information regarding the movements of different events, business firms cannot sketch its future plan. A true Environmental Forecasts can easily point out the environmental changes where from the firm can have benefit (expand/grow) if the change sounds favourable to it or can get preparation for protection if the change sounds unfavourable to it. Environmental Forecasting would help the business firm to detect the weak spots, or ignored areas that the firm can recover with effective control and planning techniques.

NSOU PGCO-IV 30 As Environmental Forecasting requires collecting information or data on relevant events in market, it can build up better communication and coordination amongst them. But Environmental Forecasting cannot avoid limitations in its application as disclosed under. Forecasting is only an estimate and here, as future is very uncertain, even if the use of best forecasting techniques, the business firm cannot predict the future events with 100% success.

Forecasting is based on assumption, approximations, normal conditions etc. which would make the forecast unreliable. The data and information required to make formal forecasts would involve a lot of time and money. Additionally, if the qualitative data are to be converted into quantitative data, it would also consume huge amount of cost. But all these issues will not prove lesser importance of Environmental Forecasting which if timely is being made, can give proper idea regarding the environment avoiding the uncertainties in environment. 2.7 Linkages between Environmental Analysis and Strategic Management Strategy is the means to achieve ends. It is a unified, comprehensive and integrated plan which carries out the activities relating to the strategic advantages of the firm to the challenges of the environment (William Glueck). Strategy is an art and science of directing military forces and the plan of action to defend oneself or to defeat rivals and is

designed to ensure that the basic objectives of the enterprise are achieved.

It fits drives for both competitive advantage and sustainability. Managers have to fit core competence, critical resources and key success factors (Porter). When 'Strategy' is combined with management (man manages men tactfully), we can achieve 'Strategic Management', a process of identifying, choosing and implementing activities that will enhance the long term performance of a company by setting direction and by creating ongoing compatibility between the internal skill and resources of a company and the changing external environment within which it operates. It considers (i) determination of long-term goals and objectives of an enterprise, (ii) adoption of the course of

NSOU PGCO-IV 31 action and (iii) allocation of resources necessary to carry out these goals as important issues (Chandler). Environmental Analysis adopts as a vital role in a process of Strategic Management which consists of the following steps: Step 1: Identifying and defining business mission and objectives: Strategic Management process begins with the formulation of mission (the fundamental unique purpose that sets an organisation apart from other organisations and identifies the scope of its operations in terms of products and markets which can establish company image in market) and objectives (the end results which are to be realised for achieving the mission which should be modified or redefined with changes in the external and internal environment). Mission and objectives lay down the foundation for strategic management to answer some basic questions like (i) What business the company is on? (ii) What should the company's business be? (iii) Who are the company's customers? Step 2: Strength, Weakness, Opportunity and Threat (SWOT) Analysis: Environmental Analysis reveals the organisation's opportunities and threat in external environment, while corporate appraisal focuses on the strength and weakness. In this regard, sometimes due to not having adequate strength, business firms may not be able to exploit opportunities or have to face threatening. In this context, Environmental Analysis assists the firm to focus on the core competent arena where the firm enjoys maximum competitive advantage. Therefore, firm should invest maximum to the most promising sector disinvesting the lesser competitive places. E.g. Parle sold its soft drink business (Thumpsup) to concentrate mineral water (Bisleri). Step 3: Strategic Alternatives and Choice of Strategy: Generation of strategic alternatives and the choice of the most appropriate strategy would be considered as the third step of Strategic Management where Environmental Analysis would help the business firm to detect SWOT and likewise, assists them to choose the most promising alternatives out of the several ones on the basis of the mission and objectives of the business firms. The chosen alternatives, therefore, are considered as the most potential business strategy to fight against the competition. Step 4: Implementation of Strategy: Only formulation without implementation cannot build up any proper strategy for

NSOU PGCO-IV 32 the business firm to fight against the competition. In this regard, detailed planning and necessary system (sound organisational structure, effective leadership, functional policies, effective information system, control system and resource allocation) is important to make a chosen strategy successfully implemented. Step 5: Evaluation and Control of Strategy: Strategic Management is treated as a dynamic process where continuous evaluation is required to test the viability of the chosen strategy to meet the objectives and mission which would specify the requirement to adopt necessary changes whenever something goes wrong. The chosen strategy in this regard may fail to meet the objectives due to poor implementation, unforeseen changes in the environment or inappropriate strategic choice. The corrective actions (more effective implementation of strategy, better analysis of internal and external environment and changes in the organisational mission and objectives etc.) in this context would be based on the cause of failure. Therefore, without Environmental Analysis, strategy of business firms would not be possible to sketch successfully as the analysis considers SWOT and also proper accessibility of objectives and mission by the business firms.

### 2.8 Limitations of Environmental Analysis

Environmental Analysis though is proved as a scientific technique with which business firms can have detail idea regarding the factors having impact on the business performance, some limitations may reduce its potentialities. Environmental Analysis assumes that forecasting does not change haphazardly and an orderly pattern can be found in its behavior. Therefore, the forecast based on which the analysis is made may be unreliable. Forecasts may not be fully true as it indicates the trend of future events. The forecasting techniques only can forecast about the trend in environment where it cannot assure that the trend will definitely be happened. So, faulty forecasting is evenly found with varied degrees in different situations. Forecasting involves a lot of time and money in collecting, analysis and interpretation of data. It should assure that benefits arrived from it should be more than the costs involved here.

NSOU PGCO-IV 33 Forecasting does not guarantee organization effectiveness and too much dependence on environmental analysis may be harmful to the organization. Now, it is obvious that the assumptions of forecasting are objective in kind, based on the relevant facts. Managers should undertake precaution while making forecasting and in this regard, sufficient data must be collected and used to improve the forecasting quality as much as possible. Plans must be kept flexible through contingency planning and other means.

### 2.9 Summary Environmental Analysis

Environmental Analysis can cover two broad issues - Environmental Search or Monitoring the Environment and Environmental Diagnosis or identifying opportunities and threats. It contains some features like (i) Holistic View, (ii) Continuous Process and (iii) Exploratory Process. Environmental analysis assists the business firms to get the first mover advantage, early warning signal, focus on customer and to formulate strategy. Environmental Analysis and its wings like Environmental Monitoring and Scanning help the business firms to act as change agent and to build up public image of the business firms in market. Hence, to carry on regular environmental scanning and analysis, it would be very wise to keep on continuous learning by the same. Environmental Analysis can provide internal insight and external metrics. The knowledge on environmental strength, weakness, opportunity and threat helps the business firm to survive and grow in the competitive business world. Proper analyses of environmental factors help the business firm to (i) frame long-term plans and policies and to get optimum utilisation of scarce human, natural and capital resources. Environmental Analysis enables the firm to select the best option for the success and growth of the firm and assures optimum utilisation of scarce human, natural and capital resources to the best option to fulfil organisational objectives. Environmental Analysis examines all the components - internal (strengths and weakness of the business entity) and external (opportunities and threats outside the organization) having influence on the performance of the organization. These evaluations are later translated into the decision-making process and helps align strategies with the firm's environment. In Environmental Forecasting, the managers of business firms attempt to predict the future characteristics of the organizational environment and hence make decisions today that will help the firm deal with the environment of tomorrow. Though the forecasting always cannot give accurate estimate of the environmental issues, it would

NSOU PGCO-IV 34 be better to adopt the forecasting techniques - qualitative and quantitative in due time and course. The process of Environmental Analysis is based on four steps. Step 1: environmental Scanning, Step 2: Environmental Monitoring, Step 3: Environmental Forecasting and Step 4: Diagnosis. Environmental Analysis adopts as a vital role in a process of Strategic Management, a process of identifying, choosing and implementing activities that will enhance the long term performance of a company by setting direction and by creating ongoing compatibility between the internal skill and resources of a company and the changing external environment within which it operates. Strategic Management adopts five steps while formulating and implementing strategies - Step 1: Identifying and defining business mission and objectives, Step 2: Strength, Weakness, Opportunity and Threat (SWOT) Analysis, Step 3: Strategic Alternatives and Choice of Strategy, Step 4: Implementation of Strategy and Step 5: Evaluation and Control of Strategy. But Environmental Analysis is having some limitations as sometimes it is based on unreliable, untrue and lengthy forecasting. 2.10 Questions Objective type: 1. Environment Analysis covers (a) Environmental Search or Monitoring the Environment and Environmental Diagnosis or identifying opportunities and threats, (b) only Environmental Search or Monitoring the Environment, (c) Only Environmental Diagnosis or identifying opportunities and threats, (d) None of the above. 2. Steps of Environmental Analysis (a) 1: environmental Scanning, 2: Environmental Monitoring, 3: Environmental Forecasting and 4: Diagnosis, (b) 1: Environmental Scanning, 2: Environmental Monitoring, 3: Diagnosis, 4: Environmental Forecasting, (c) 1: environmental Scanning, 2: Environmental Forecasting and 3: Diagnosis, 4: Environmental Monitoring, (d) None of the above, Short Answer type: 1. Define Environmental Analysis. What are features of Environmental Analysis? 2. Narrate the importance and uses of Environmental Analysis. 3. State the limitations of Environmental Analysis

NSOU PGCO-IV 35 Long Answer type 1. How can Environmental Analysis be processed? 2. Define Business Environmental Forecasting and discuss the limitations of it. 3. Explain how can Environmental Analysis be linked with Strategic Management? 2.11 Further Readings Aswathappa, K. (2019). unit, you will be able to understand the— Concept of Socio-cultural environment

Elements of Culture Cultural resources Changing objectives of business 3.1 Introduction Business firms are recognised as the social units which being not set up in vacuum, should be aware of all environmental alternatives in which these have to work. Among all the environmental factors, socio-cultural factors are considered as the important ones dealing with the social functions and attitudes of all social components which offer modifications and re-modifications of business operations. This Unit throws light on the concept and importance of socio-cultural environment of business, elements of culture in India, cultural resources, societal and organisational culture, business and society and changing objectives of business. 36

NSOU PGCO-IV 37 3.2 Concept and importance of socio-cultural environment of business Business socio-cultural environment is supposed to hold the customs, values, attitudes, beliefs, habits, languages, demographic characteristics and other forms of interaction between the members of the society and consumerism. This directs the business to practice and can be reflected by its vision and mission statement. In socio-cultural environment, three aspects can be pointed out - Changes in our life-styles and social values (changing role of women, emphasis on quality of goods instead quantity of goods, greater reliance on government, greater preference for recreation activities), Major social problems (concern for pollution of environment, demand for socially responsible marketing policies, head for safety in occupations and products, etc.), Growing consumerism (consumer dissatisfaction on a large scale against unfair trade practices). Different countries contain different socio-cultural factors and thus would control the operation of business firms differently. Below mentioned Box - 3.1 expresses the different dimensions of socio-cultural factors in India and Japan. Box: 3.1 Comparative Assessments of Socio-Cultural Factors of Japan and India The socio-economic factors are different for different countries depending on the cultural, language, religion, demography etc. Below mentioned Table shows the different factors of socio-cultural aspects of India and Japan. Socio-cultural factors between Japan and India NSOU PGCO-IV 38 Importance of socio-cultural environment in business firms can be explained as under. Society and culture control the business management process like production and sale of goods, managerial and operational patterns and the determination of the success or failure of foreign subsidiaries. Any business firm which aims at entering any market for its products and services must develop complete understanding of socio-cultural environment where it is involved in and thus adapt its strategies. Social environment in many countries is responsible for emphasizing social responsibility of business and customer oriented marketing approach. For instance, McDonald's started opening stores in India and changed its menu of burger (without beef or sometimes veg) considering the socio-cultural environment of the country where most of its proposed customers did not eat beef and might be vegetarians too. Employees' behaviour additionally would also be shaped for different socio-cultural aspects of the country. In this regard, a people-oriented business concern would like to consider more emphasis on business value creation NSOU PGCO-IV 39 through employee focused policies like granting flexible time, maternity leave, day-care services etc. In any competitive business environment, the changing preferences of customers for products and services are accepted as significant socio-cultural factors influencing business and business decisions. Society and culture have an impact on every aspect of the overseas business of multinational companies mainly since the era of globalisation where the firms are crossing the limits of boundaries of their domestic countries and going to the other parts of the world accepting different degrees of work motivation, profit motivation, business goals, negotiating styles, attitudes towards the development of business relationships, gift-giving customs, greetings, significance of body gestures, meaning of colours and numbers. Multinational companies should be aware of predominant attitudes, values, and beliefs in each host country where they decide to expand their business activities. Differences in attitudes and values among management of a parent company and expatriate managers at the subsidiary level, on the one hand, and managers and employees in host countries, on the other, can contribute to serious functional problems. 3.3 Elements of culture in India Culture of civilisation is that complex whole

is cumulative as it is passed on from generation to generation in a given society

which would be reflected through social interaction among people over a period of time and would be taken as an acceptable patterns for meeting biological and social needs. It is of two types - Material (man-made things like telephone, television, automobile, internet etc.) and Non-material (language, belief, ideas attitudes, values and other similar factors. The basic elements of culture can be designed as (i) Knowledge and Beliefs, (ii) Ideals, (iii) Preferences. NSOU PGCO-IV 40 Knowledge and Beliefs: People notions of reality i.e. knowledge and beliefs would include scientific realities as well as myths and metaphysical beliefs. Shared quality of belief system is an element of culture having a great sociological interest. In this context, people who share a particular culture tend to be holistic towards those who do not share their beliefs. Ideals: The social norms defining situational right/wrong, customary/expected can be defined as ideals i.e. folkways (guidelines enforced informally for proper behaviour e.g. respect for elders) and more (obligations treated vital for the welfare of the society - positive i.e. rewards for the right behaviour and negative i.e. punishment for wrong behaviour) sanctions are used to enforce ideals. Shared value is an important part of culture. Preferences: Society defines the attractive or unattractive things in life as objects of desire. Culture of a country lays down the life style of countrymen as per preference which may be attractive in one country, while unattractive in other. The Global Leadership and Organisational Behaviour Effectiveness (GLOBE) research programme (1993), detected nine dimensions like (i) Assertiveness, (ii) Future Orientation, (iii) Gender Differentiation, (iv) Uncertainty Avoidance, (v) Power Distance, (vi) Individualism/Collectivism, (vii) In-Group Collectivism, (viii) Performance- Orientation and (ix) Human Orientation in socio-cultural aspect. Assertiveness is the extent to which a society encourages people to be tough, confrontational and competitive vs. modest and tender. Likewise, culture of a country can also be sketched on the basis of whether the country-men are futuristic/ planning-based or not. The extent to which a society maximises gender role differences as measured by how much status and decision-making responsibilities women have. Social reliance on norms and procedures to alleviate the unpredictability of future events would also define knowledge and belief of country-men. Culture can also be defined by the power distance i.e. the power to be shared among individuals equally/unequally. It can also be defined as the degree to which individuals are encouraged by societal institutions to be integrated into groups within organisations and society. On the contrary, culture will also be defined the extent to which members of society take pride in membership in small groups (family and circle of close friends) and the organisations in which they are employed. Culture can also be referred to the degree to which a society encourages and rewards group members for performance improvement and excellence and for being fair, generous, caring and kind to others.

NSOU PGCO-IV 41 3.4 Cultural Resources Cultural resources are referred to the physical objects or places of past human activity i.e.historic site, object, landscape, structure or even a natural feature of significance to a group of people traditionally associated with it e.g. buildings or old roads, prehistoric village sites, rock inscriptions, objects of importance to a culture or community for scientific, traditional, religious. Therefore, maintenance and protection of cultural resources in compliance with laws is necessary. In these circumstances, decisions must be made to strike a balance between practical growth and the protection of cultural resources. As a result of this, federal and state agencies have created laws and regulations for the protection of cultural resources. It is important to note that the term historic property is defined as any cultural resource listed on or eligible for listing on the National Register of Historic Places (NRHP) (Section 106). These can include various resource types such as historic and prehistoric archaeological sites, houses, historic districts, engineering features such as roadbeds, railways, or bridges, battlefields, historic and cultural landscapes, and traditional cultural properties. However, not all cultural resources are by definition historic properties. They must be determined eligible for listing or must already be listed in the NRHP.

3.5 Societal Culture and Organizational Culture Culture refers to the beliefs, values and behavior that together form a people's way of life. Organizational culture (the norms, shared values and expectations) determines the manner in which people interact as well as approach to the objective- oriented work. It is the unique personality of an organization that influences the behavior of the members in that organization. Societal culture is the norms, expectations, and shared values of a society or a group of people living in a particular place. It is the culture that a particular follows to interact in such a way to share a common interest. For any given organization to run well, there organizational culture and societal culture must be in harmony. A favourable working environment in an organization makes employees feel unity among their peer with healthy competition and loyal to their employer. Likewise, organizational culture would also help to structure out business strategy, production process, productivity, organizational environment and effectiveness. Organisation is accepted as an integral part of social system. Therefore, it is a social institution,

NSOU PGCO-IV 42 performing a social mission and having a broad influence on the way people live and work together. It is recognized that the direction of business is important to the public welfare that business perform a social function. In any organization, culture is rooted in the organizational activities and practiced consistently in all operations. It focuses on a conditional relationship among the individuals within the organization who would like to socialize into it. Though it accepts a shared behavior, it would find less impact on the individuals as culture is not inculcated in their lives and they have to learn about it after being members of that organization. On the contrary, culture within a society is inbuilt in individuals at early stage of their lives with deep acceptance without frequent change in the norms. Therefore, societal culture holds values which should be practiced consistently in society in assurance of maintenance social norm which are being shared with all individuals with great impact in their lives. Box 3.1 reflects how societal culture affects management approaches and organisational behavior

Box 3.1 Effect of Societal culture on organisational behavior.

Hodgetts and Luthans highlighted on the effect of societal culture on organisational behaviour in (i) Centralised and Decentralised Decision Making, (ii) Safety Vs. Risk, (iii) Individual Vs. Group Rewards, (iv) Informal Vs. Formal Procedure, (v) High Vs. Low Organisational Loyalty, (vi) Co-operation Vs. Co-ordination, (vii) Short-term Vs. Long-term Horizon, (viii) Stability Vs. Innovation. Sometimes, in some companies, employees are not allowed to take part in decision making process, while in some other, the middle and lower levels take part in decision making. This practice in an organisation reflects the centralisation and decentralisation principle in decision making process found in an organisation as reflected by the social norms.

In some societies, organisational decision makers are risk-averse and would face great difficulties with conditions of uncertainty

where in some other societies, organisations deal with risk-taking attitude of it where decision making under uncertainty is common. As per societal culture, some organisations prefer individual reward for his/her outstanding performance there, while in other organisations, group effort is only recognised and rewarded which reflects the other norms of societal culture. In some societies, informal means are used to accomplish any organisational activity,

NSOU PGCO-IV 43 while formal way of activity is the major means of activities in some other societies. As per societal culture, in some organisations, individuals identify very strongly with their organisation or employers, while in other organisations, they identify with their occupational groups (mechanic, engineer etc.) which shows high and low organisational loyalty respectively. In an organisation, whether performances of individuals are found in cooperative or competitive environment can be determined as per the societal norm within which the same is operating. Some organisations focus most heavily on short-term horizons or goals (profit and efficiencies), while

**85%**

**MATCHING BLOCK 13/322**

**SA**

Differentiation based on criteria such as age, sex, caste, occupation, education income and so on, is an important aspect of social structure and cultural organization. Each stratum is assigned or supposed/expected to have a certain rank or position, role or limitations etc. in the societal set-up

which would be very important to recognize. Institutions are clusters of norms organized and established for the pursuit of some needs or activities of a social group supported by the group's knowledge, beliefs and values, as well as by the meaningful aspects of material culture.

are more interested in long- range goals such as market share and tech- nological development The culture of other countries

put high value on innovation and change.

NSOU PGCO-IV 46 Based on these cultural differences, international organisations should be managed and conducted. 3.7 Changing Objectives of Business Business, industry or commerce is referred to as commercial activities which aim at making profit, while as per modern outlook the non-profit objective i.e. social responsibility of the business should be taken as one of the main objective of the business concern. Therefore, business is a social institution, performing a social mission and having a broad influence on the way people live and work together (Davis and Blomstorm). Calkins in this context showed that business is recognized as the direction of business important to public welfare that businessmen perform a social function. Therefore, business is the development and processing of economic values in society. The Private (non-Government) portion of the economy holds its primary purpose as to provide goods and services to customers at a price, but the lines of distinction are getting hazy as business and government overlap their functions in organizations (Communications, Satellite Corporation etc.). Business is, therefore, the economic and commercial activities of institutions having other purposes and the business enterprises which do not aim at making any profit (charitable hospital, public relation organisations etc.) invest capital, price and market their products, services or ideas, manage their human resources and so on. Business connects with whole society which is regarded as ecology (the mutual relation of human population or system with their environment. Now, both the economic objectives (survival, profitability, innovation, market share and growth) and social objectives (services to customers, employees and community) are complementary to each other and cannot be separated in long run, while conflict between these objectives is found in short run. Therefore, reconciliation should be maintained between these two objectives considering the overall business objectives - Primary Objectives [(i) to extend, develop and improve the company's business and build up its financial independence; (ii) to pay fair and regular dividends to the shareholders; (iii) to pay fair wages under the best possible conditions to the workers; (iv) to reduce prices to consumers] and Secondary Objectives [(i) to provide bonus for the workers; (ii) to assist in promoting amenities for the locality; (iii) to assist in developing the industry in which the firm operates; (iv) to promote education, research and development in the techniques of the industry or any other purpose

NSOU PGCO-IV 47 which the directors and members in general meeting have approved. Davis and Blomstorm pointed out that in taking an ecological view of business in a system relationship with society, three ideas - Values, Viability and Public Visibility should be considered. Values are the guidelines for employee's decisions in the interface of business and strong motivators for people in a business. These are the sources of institutional drive. Like other social institutions, business develops certain believes, systems and values for which they stand. Values derive from a multitude of sources, such as the mission of business as a social institution, the nation in which a business is located, the type of industry in which it is active and the nature of its employees. Viability is the drive to live and grow, to accomplish the potential not yet reached and to achieve all that a living system is capable of becoming a viable, vigorous institution in society. A viable institution must initiate its share of forces in its own environment rather than merely adjust to outside forces as a bucket of quicksand does. Every business needs a drive and spirit all its own to make it a positive actor on the social stage rather than a reactor or a reflector. Public Visibility can be regarded as the extent to which an organisation's activities are known to persons outside the organization. It is different from the idea of public image (what people think about an organisation's act). The importance of public visibility is that it subjects business activities to public examination, discussion and judgment, while business activities cannot be judged without knowing the acts. Therefore, it can be declared

<b>71%</b>	<b>MATCHING BLOCK 31/322</b>	<b>SA</b> 023E1110,119E1110,193E1110-Business Environmen ... (D165201747)
that business is an integral part of the social system. It is the social		

organ to help accomplish the social goals. 3.8 Summary Socio-cultural factors are important in dealing with the social functions and attitudes of all social components which would offer modifications and re-modifications of business operations. Business socio-cultural environment is supposed to hold the customs, values, attitudes, beliefs, habits, languages, demographic characteristics and other forms of interaction between the members of the society and consumerism. Culture of civilisation is that

34%

**MATCHING BLOCK 32/322**

(D165201747)

complex whole which includes knowledge, belief, cult, morales, law, custom and other capabilities and habits acquired by a man as a member of society. It is the software of mind and the basic determinant of human personality which is

meaningful to people due to its symbolic quality. Societal culture is the norms, expectations, and shared values of a society or a group of people living in a NSOU PGCO-IV 48 particular place. It is the culture that a particular follows to interact in such a way to share a common interest. For any given organization to run well, there organizational culture and societal culture must be in harmony. Business should take proper attention on different categories of culture - Centralised - Decentralised Decision making, Safety - Risk, Individual - Group Reward, Informal - Formal Procedure, High - Low Organisational Loyalty, Cooperation - Competition, Short-term- Long-term Horizon and Stability- Innovative. While highlighting on changing objectives of business, an ecological view of it in a system relationship with society should be taken based on three ideas - Values (guidelines for employee's decisions in the interface of business and strong motivators for people in a business), Viability (the drive to live and grow, to accomplish the potential not yet reached and to achieve all that a living system is capable of becoming a viable, vigorous institution in society) and Public Visibility (the extent to which an organisation's activities are known to persons outside the organization) should be considered. Here, Cultural resources, the physical objects or places of past human activity,i.e.historic site, object, landscape, structure or even a natural feature of significance to a group of people traditionally associated with it, should properly be taken care of as per legislation. 3.9 Questions Objective type: 1. Culture refers to (a) beliefs, values and behaviour, (b) beliefs and values, (c) Only Vales, (d) None of the above. 2. Statement: (1) Assertiveness is the extent to which a society encourages people to be tough, confrontational and competitive vs. modest and tender. (2) ulture of a country can also be sketched on the basis of whether the country-men are futuristic/ planning-based or not. (a) Only (1) is true, (b) Only (2) is true, (c) Both (1) and (2) are true, (d) Both (1) and (2) are false. Short Answer type: 1. What do you mean be socio-cultural environment of business? What is its importance in business world? 2. Write a short note on Cultural Resources. NSOU PGCO-IV 49 3. Discuss the changing objectives of business in today's world. Long Answer type: 1. What are the different elements of culture in India? 2. Explain briefly the societal and organisational culture in business environment. 3.10 Further Readings Aswathappa, K. (2019). NSOU PGCO-IV 50 Unit 4 Economic Environment of Business Structure 4.0 Objectives 4.1 Introduction 4.2 Social Responsibility of Business 4.3 Economic Environment of Business - Importance and Factors 4.4 Economic Role of the Government of India 4.5 Economic Reforms in India 4.5.1 Liberalization 4.5.2 Privatisation 4.5.3 Globalisation 4.6 Summary 4.7 Questions 4.8 Further Readings 4.0 Objectives After going through the unit, you will be able to understand the— Social responsibility of business Inportance of economic environment Economic reforms in India 4.1 Introduction It is well said that "a business firm and its environment are mutually interdependent, interacting with one another continuously. Environment is the supra-system of which the firm is only a small sub-unit. It can survive and thrive only when the environment desires its output of goods and services and is prepared to approved of and endorse its activities". Business, theone unit of the total economy, transacts with all other 50

NSOU PGCO-IV 51 sectors of the economy which constitutes economic environment. This Unit throws light on the social responsibility of business, economic environment and its importance and factors, economic role of the Government of India and economic reforms in India. 4.2 Social Responsibility of Business "Social Responsibility requires managers to consider whether their action is likely to promote the public good, to advance the basic beliefs of our society, to contribute to its stability, strength and harmony" (P. F. Drucker). The concept of social responsibility, therefore, needs to be differentiated from social obligation (the typical activities of an organization directed in response to market forces and internal aspirations) and social responsiveness (anticipate in changing or emerging social problems and respond to them). Social responsibility is much broader as it requires an organisation to meet the expectations, norms and values of the society. It implies responsibility to society beyond the basic economic responsibility of efficiency and profitability. As an economic agent of society, business must use its economic power to protect and promote public interest and social values. Keith Davis (1973) described social responsibility as the obligation of the

**82%**

**MATCHING BLOCK 33/322**

**SA**

023E1110,119E1110,193E1110-Business Environmen ...  
(D165201747)

decision-makers to take decisions which protect and improve the welfare of the society a whole along with their own

interests". It is the intelligent and objective concern for the welfare of the society that restrains individual and corporate behavior from ultimately destructive activities, no matter how immediately profitable and leads in the direction of positive contribution to human betterment variously as the latter may be defined (Andrews, 1971). Social Responsibility contains some implications: An organization can discharge its social responsibility only through the individuals who manage and control social obligation which relates with personal attitude. Social Responsibility would develop attitude and policies in favor of the business concern. It is as interpersonal and reciprocal relationship where the company owes responsibility towards social groups and every social group in exchange of that would perform for the society. Social responsibility of a manager needs to be commensurate with his social power (power to influence the society). The standard of social obligations can be fixed keeping in view social norms

NSOU PGCO-IV 52 and expectations. Therefore, the extent of these obligations may differ from society to society. The concept of social responsibility is not inconsistent with the profit objective. An organization cannot fulfill its social obligations unless it survives and grows. Business organization cannot survive without profit and also without fulfilling social responsibility in long run. Social responsibility is a continuing obligation. Any business enterprise remains responsible to society throughout its continued existence. Every business organization should ensure that its activities should fulfill social interest. 4.3 Economic Environment of Business - Importance and Factors Business environment is influenced by the economic environment consisting of the economic system, macroeconomic scenario, financial system, economic policies, legislations, planning, degree of competition, nature of demand for goods and services, lifestyles, consumer attitudes and behavior, market segments and so on. Economic environment itself is influenced by the nature of economic system (nature of property rights, ownership of means of production, production relation, role of planning, functioning of market and price mechanism etc. where the structural anatomy consists of the economic parameter - the structure of national output, the occupational distribution of labour force employed, the capital formation, trade composition etc.). The Government of the country also plays its role by influencing the business economic environment through its own activities and policies (economic planning, annual budget, fiscal policies, industrial regulations, business law, controls of price and wage and affecting the external sector such as EXIM Policy). The formulation and implementation of the Acts and policies of the Government would determine economic growth which along with the business/trade cycle significantly would affect the economic environment. Importance: Economic environment shapes up the overall business activities and holds the important aspects like (i) referring

**100%**

**MATCHING BLOCK 34/322**

**SA**

M21CM06DC.pdf (D155282201)

to all those economic factors which have a bearing on the functioning of a business unit, (

ii) a complex phenomenon that embodies the macroeconomic system, its structure, the various sectors of the economy, policies, rules and regulations administered by the government, central planning, availability of

NSOU PGCO-IV 53 resources and their exploitation, the level and stage of development etc. (iii) proper assessment of economic environment-related issues, the managers can forecast market trends and therefore, can make better investment choices and competitive strategies, (iv) assisting the managers of the foreign companies and markets to predict events that might affect the company's future performance etc. Factors: Economic environment is a complex phenomenon that embodies the macroeconomic system, its structure, the various sectors of the economy, policies, rules and regulations administered by the Government, central planning, availability of resources and their exploitation, the level and stage of development etc. The macro and micro economic factors have considerable influence on business and pose opportunity as well as threat to a firm. The factors are (i) Growth Strategy, (ii) Economic System, (iii) Economic Planning, (iv) Industry, (v) Agriculture, (vi) Infrastructure, (vii) Financial and fiscal sectors, (viii) Removal of regional imbalances, (ix) Price and distribution controls, (x) Economic Reforms, (xi) Human Development, (xii) Human Development and (xiii) Per capita and national income. The economic environment which now prevails in our country is the result of the economic growth strategy relentlessly pursued during the past five decades by the Government of India. It was believed that the savings rate in the economy and the growth rate can be increased if India invested heavily in capital goods and heavy industry sectors at the expense of the consumer goods sector. Since the investments in these sectors were high, largely beyond the capability of the private sector and profitability was low, it followed that such investments would have to be undertaken by the state. As for policies to achieve these objectives, the Plan went on to state that: "In some cases, fiscal or price incentives may have to be relied on, in others, a licensing system may be essential, in still others, fixation of profit margins, allocation of scarce raw materials or other regulatory devices may be necessary. If the targets of planned investment are to be achieved, means have to be found to secure that the necessary resources do in fact, become available and are not devoted to consumption". The State emerged both as the mobiliser of savings as well as important investor and owner of capital. Since State was to be the primary agent of economic NSOU PGCO-IV 54 change, it followed that private sector activities had to be strictly regulated and controlled to conform to the objectives of the state policy. Under the policy, foreign trade had a relatively small role, partly because of the belief that trade was biased against developing countries and primary producers and partly because of the intellectual conviction that export prospects were severely limited. The growth strategy also meant, in the early years of planning, a relative neglect of public investment in agriculture. This negligence of agriculture was supported by the prevailing view that a growing labour force in the developing countries could only be absorbed in industry, and that in the early stages of industrialisation, it was necessary for agriculture to contribute to the building up of modern industry by providing cheap labour. A faster development of industry was the central objective of planning. The present growth strategy of India can be a benchmark for other countries both developing and developed. The features of the strategy are: (i) India has strong democracy which offers several strategies to economic growth. (ii) Economy has been bottom-up driven and not imposed by State. (iii) Economic growth has been propelled by domestic demand and not anchored on exports. (iv) Growth owes largely to manufacturing and not solely dependent on services. (v) Growth has been inclusive. Several welfare measures to benefit poor people have been part of the path towards prosperity. There are three distinct economic philosophies - Capitalism, Socialism and Communism. The system of Capitalism stresses on the philosophy of individualism believing in private ownership of all agents of production, in private sharing of distribution processes that determine the functional rewards of each participant and in the individual expression of consumer choice through a free marketplace. In this regard, the Welfare State concept, the modification of modern capitalism, provides an increasing degree of State regulation when certain deficiencies appear in the economy. Some argue that the acceptance of certain welfare State objectives is necessary to provide flexibility for capitalism, otherwise it might become static and be destroyed because of certain faults. Under Socialism, the tools of production

NSOU PGCO-IV 55 are to be organised, managed and owned by the Government with the benefits accruing to the public. A strong public sector, agrarian reforms, control over private wealth and investment and national self-reliance are the other plans of socialism which do not involve an equal division of existing wealth among the people but advocates the egalitarian principle. It believes in providing employment to all and emphasises suitable rewards to the efforts put in by every worker. Also called Fabian socialism, this philosophy is followed in our country and other social democratic countries in the world. Communism goes further to abolish all private property and property rights to income. The State would own and direct all instruments of production. Sharing in the distributive process would have no relationship to private property since this right would not exist. Alternatively called Marxism, communism was followed in Russia, China and East European countries. In this regard, a midway between capitalism and communism, Mixed economy is accepted as the economic philosophy of India. Closely resembling socialism, the concept of mixed economy admits the existence of private enterprises along with public ownership. The economic set-up under the philosophy is split up into three parts - (i) Sector in which both

**87%**

**MATCHING BLOCK 35/322**

**SA**

M21CM06DC.pdf (D155282201)

production and distribution are entirely managed and controlled by the State the

complete exclusion of private enterprise, (ii) Sectors in which the State and private enterprise jointly participate in production as well as in distribution and (iii) Sector in which the private enterprise has complete access subject only to the general control and regulation of the State. The Industrial Policy of 1956 has clearly demarcated the areas meant for each of these sectors of economy. The concept of mixed economy has guided our economy for the past three and the half decades. Economic planning is a major component of macro business environment. It spells out priorities of the economy, sets targets, decides on budget allocation and monitors the progress - all within a time frame of five years. After the expiry of a five year period, the exercise is repeated for the next five years and so on. Obviously, planning is an on-going process not being encouraged or disrupted by the economic philosophy a country pursues. India is the best example of successful launch of five yearly plans and their successful implementation. The Government of India has created a separate agency - Planning Commission - to formulate and implement plans. Economic planning, as is being practised in India, essentially involves the following steps - (i) A survey and diagnosis of the NSOU PGCO-IV 56 present economic environment, (ii) Identifying objectives which need to be attained within a plan period, (iii) specifying strategies by which the objectives should be achieved, (iv) identifying resources and decide on different allocations to various sectors, (v) implement the strategies and evaluate to identify progress/gaps. As stated earlier, planning assumes relevance when resources are limited but priorities are many. Specifically, planning is justified on the following grounds: (i) Increase in production to the maximum possible extent so as to achieve higher levels of national and per capita incomes, (ii) Achieve full employment, social justice and equality, (iii) Improving quality of life of people, (iv) Pushing up the role of investment on all sectors of the economy, (v) Achieve sustainable development. Various administrative controls have held the country back in its road towards industrialisation. Industrial licensing, product reservation for public sector and small-scale industries, MRTP and asset classification of companies, foreign exchange regulation, tariffs and quotas, labour market rigidities are some measures hampering the country's progress. Though some of them have been lifted with the advent of new economic policy, several of them are still in force. According to a study conducted by McKinsey and Co., a second and much bigger wave of manufacturing outsourcing is due to arrive. The first wave was \$460 billion and consisted of low-tech items like toys and garments. The second wave could reach \$1.6 trillion and will comprise high-tech areas like automotive, engineering and chemicals. In second wave, India and China will be benefitted. India has large low-cost and skilled workforce. The country has one of the world's largest labour pools. This large labour pool will limit increase in wage rates for the next 20 years. India has vast raw materials supply base. The country has abundant raw material, e.g. cotton (India is the third largest producer of cotton accounting for 3% of world output), ferrous raw materials (India has 5% of world iron-ore deposits and produces 3% of the world's steel) and non-ferrous raw materials. India has emerged as the second largest small car market in the world, the biggest diamond cutting and polishing centre worldwide and the largest producer of tea, milk and pulses. 1 The intrinsic advantages offered by India have led to the entry of MNCs and to 1 Fernando, A.C. (2011). Business Environment, Pearson.

NSOU PGCO-IV 57 scale up the operations of domestic companies. Several global majors are moving out of the centres if economic meltdown by investing into the fresher pastures that the Indian market offers. All the car makers have manufacturing centres in the country. Therefore, there is enough scope for making globally competitive manufacturing carried out in India. In diverse sections - pharmaceuticals, chemicals, textiles, metals, refining, cement, auto and ancillaries, Indian firms are performing competitively and are exporting major chunks of outputs. Any new plant coming up in any industry can be designed to become globally competitive. Several MNCs are willing to export out of India. Suzuki, Hyundai, e.g. view India as a car hub. ABB plans to make India a global sourcing base for some of its products. Every sector of the economy employs natural, human and material resources and contributes to the aggregate flow of goods and services during a time period, usually specified as one year. This aggregate flow of goods and services represents a total income earned by factors of production employed during the year and is popularly called national income or national product. However, it must be admitted that our growth rates have been less than the plan target and below the required growth rate of about 10% p.a. The primary reason for low growth levels in the national income is the deficiency in investment, high capital-output ratio, low agricultural and industrial growth and population explosion. Industrial growth cannot happen without strong agriculture base. Three ways demonstrate the dependence of industry on agriculture: production linkages, demand linkages and savings and investment linkages. Production linkages occur because agriculture is both a recipient and a supplier to industry. Agriculture offers jute, cotton and sugarcane to agriculture-based industries and receives, in turn, fertilisers, machinery and electricity from industry. This interdependence is age-old and is family entrenched. It is also pointed out by economists that a 10% growth in agriculture would increase industrial output by 5%. Demand linkages between agriculture and industry are equally strong. Urban income and industrialisation have impacted demand for food and agricultural raw materials considerably. Likewise, rural income has changed consumption pattern of people. More significant are the savings and investment linkages that have developed between agriculture and industry. The relative terms of trade between the two sectors not only influence the level of private savings and investment, they also manifest themselves into governmental saving and expenditure.

NSOU PGCO-IV 58 Agriculture contributes to capital formation in at least two ways: (i) Capital- output ratio is low in agriculture and (ii) Consumption pattern of farm population does not change with in change in income level. India has a few competitive advantages in agriculture. These strengths need to be leveraged to make the primary sector more vibrant. With inherent advantages in biotechnology, IT, energy, input-output ratios and labour costs, Indian agriculture has tremendous potential that can be unlocked through new opportunities thrown up by the current global food crisis which is shifting the terms of trade in favour of agriculture. On the achievement side, the claims made relate to industry, agriculture, infrastructure, foreign trade, growth rate, control of inflation and the standard of living of the people. It is asserted that significant progress has been made in all these and many more during the last five decades of economic planning

#### 4.4 Economic Role of the Government of India

In any country, Government plays its economic role by ensuring the economic growth, stability and thus development through applying rules and regulations. Many early post-independence leaders, in view of achieving high and balanced economic development with attention to poor through appropriate programs and measures, were influenced by socialist ideas and advocated government intervention to guide the economy, including state ownership of key industries. Moreover, due to country's large size, substantial natural resources and desire to develop its own defence industries, Indian leaders focused industrialization as the key to economic development. Government of India in its promotional practice introduces Industrial Progress, Nationalisation, Antipoverty Program, Planning Development etc. In Industrial regime, Government of India started its promotion in 1948 where it found monopoly in some sectors (armaments, atomic energy, and railroads) and exclusive rights in some other (minerals, iron and steel industries, aircraft manufacturing, shipbuilding, and manufacturing of telephone and telegraph equipment). Private companies operating in those fields were guaranteed at least ten years more of ownership before the government could take them over. Government (Public sector) felt more extended presence in its 1956 policy wherein seventeen industries were found under public sector

NSOU PGCO-IV 59 exclusively. Moreover, to maintain the resolution for industries producing capital and intermediate goods, public sector took twelve industries. Private sector was relegated primarily to production of consumer goods. Government of India additionally introduced nationalisation of the life insurance business (1956), the general insurance business (1973) and large commercial banks (1969). Over the years, the Central and State Governments formed agencies, and companies engaged in finance, trading, mineral exploitation, manufacturing, utilities and transportation. The public sector was extensive and influential throughout the economy, although the value of its assets was small relative to the private sector. Moreover, Government of India framed The Industries (Development and Regulation) Act of 1951 and the Essential Commodities Act of 1955 (with subsequent additions) legislation to extend price controls on some products (steel, cement, drugs, nonferrous metals, chemicals, fertilizer, coal, automobiles, tires and tubes, cotton textiles, food grains, bread, butter, vegetable oils etc.). From apart, to strengthen the licensing system in order to decrease the concentration of private economic power and to place restraints on certain business practices which are contrary to public interest, The Monopolies and Restrictive Practices Act (1970) was designed. In 1985, Government of India abolished some of its licensing regulations, while in 1991, it introduced "new economic policies" covering (i) reduction of quantitative restrictions on imports, import duties on capital goods, (ii) decreases in subsidies, (iii) liberalized interest rates, (iv) sale of shares in selected public enterprises and (v) tax reforms. With increase in liberalisation and privatisation in 1991, the number of sectors reserved for public ownership was slashed and except in defence industry, the private-sector investment was encouraged in energy, steel, oil refining and exploration, road building, air transportation and telecommunications. Foreign-exchange regulations were liberalized, foreign investment was encouraged, and import regulations were simplified. Despite these changes, the economy remained highly regulated by international standards. The import of many consumer goods was banned, and the production of 838 items, mostly consumer goods, was reserved for some companies. Import controls and tariff policy stimulated local manufacturers toward NSOU PGCO-IV 60 production of import-substitution goods. But the growing dependence of the economy on imports, greater vulnerability of its balance of payments, reliance on debt, and the consequent susceptibility to outside pressures on economic policy directions caused concern. From apart, Government's extensive controls and pervasive licensing requirements created imbalances and structural problems in many parts of the economy. Further, extensive Government controls on large public sector called for inefficient bureaucratic performances that took inordinate time to process applications and forms. India has had a number of antipoverty programs since the early 1960s like the National Rural Employment Programme and the Rural Landless Employment Guarantee Programme to help the poor attain self-sufficiency in food production and to access food throughout the country at controlled prices, a major determinant of wage scales. After the late 1970s, the central government, by holding reserve stocks and importing grain adequately and early could maintain sufficient supplies to meet the increased demand. The government has supplied water by financing well digging and, since the early 1980s, by power-assisted well drilling; rescinded land taxes for drought areas; tried to maintain stable food prices; and provided food through a food-for-work program. In the 1980s and early 1990s, Indian government attempted to provide basic needs at stable, low prices(i) to increase income through pricing and regulations like supplying water from irrigation works, fertilizer, and other inputs; (ii) to foster location of industry in backward areas; to increase access to basic social services (education, health, and potable water supply) and (iii) to help needy groups and deprived areas. State Governments are important participants in antipoverty programmes. The constitution assigns responsibility to the states in a number of matters, including ownership, redistribution, improvement, and taxation of land (The Constitutional Framework, chapter 8). State Governments implement most Central Government programs concerned with land reform and the situation of small landless farmers. The Central Government tries to establish programs and norms among the states and union territories, but implementation has often remained at the lower bureaucratic levels. In some matters concerning subsoil rights and irrigation projects, the Central Government exerts political and financial leverage to obtain its objectives, but the states sometimes modify or retard the impact of Central Government policies and programs. Indian leaders adopted the principle of formal economic planning soon after

NSOU PGCO-IV 61 the independence as an effective way to intervene in the economy to foster growth and social justice. In the First Five-Year Plan (FY 1951-55) attempt was taken to stimulate balanced economic development while correcting imbalances caused by World War II and partition with placing priority on Agriculture, irrigation and power generation. In the Second Five-Year Plan (FY 1956-61), emphasis was on industrialization, particularly basic, heavy industries in the public sector and on infrastructure with social goals like equal distribution of income and extension of the benefits of economic development to the large number of disadvantaged people. The Third Five-Year Plan (FY 1961-66) aimed at implementing a substantial rise in national and per capita income while expanding the industrial base and rectifying negligence in agriculture in the previous plan. Due to some political issues (was with China and Pakistan), three annual plans guided development between FY 1966 and FY 1969 while plan policies and strategies were re-evaluated. The Fourth Five-Year Plan (FY 1969-74) called for a 24 per cent increase over the third plan in real terms of public development expenditures. The Fifth Five-Year Plan (FY 1974-78) was subsequently approved in late 1976 but was terminated at the end of FY 1977 because a new government wanted different priorities and programs. The economy operated under annual plans in FY 1978 and FY 1979. The Sixth Five-Year Plan (FY 1980-85) was intended to be flexible and was based on the principle of annual "rolling" plans. Public-sector development spending would be concentrated in energy (29 per cent); agriculture and irrigation (24 per cent); industry including mining (16 per cent); transportation (16 per cent); and social services (14 per cent). In practice, slightly more was spent on social services at the expense of transportation and energy where the main objective was to increase employment, especially in rural areas, in order to reduce the level of poverty. The Seventh Five-Year Plan (FY 1985-90) envisioned a greater emphasis on the allocation of resources to energy and social spending at the expense of industry and agriculture. The planners assumed that public savings would increase and help finance government spending which did not occur instead of the government relied on foreign borrowing for a greater share of resources than expected. After Annual plans (1990-1992), the schedule for the Eighth Five-Year Plan (FY 1992-97) was framed and affected by changes of government and by growing uncertainty over what role planning could usefully

NSOU PGCO-IV 62 perform in a more liberal economy with three general goals - (i) to cut back the public sector by selling off failing and inessential industries while encouraging private investment in such sectors as power, steel, and transport, (ii) to propose that agriculture and rural development have priority and (iii) to renew the assault on illiteracy and improve other aspects of social infrastructure, such as the provision of fresh drinking water. The Ninth Five-Year Plan (1997-2002) came after 50 years of Indian Independence with primarily focus on the use of latent and unexplored economic potential of the country to promote economic and social growth. It offered strong support to the social spheres of the country in an effort to achieve the complete elimination of poverty. The Tenth Five-Year Plan (2002-2007) was expected to follow a regional approach to bring down inequalities with main objectives like to (i) attain 8% GDP growth per year, (ii) reduce poverty rate by 5% by 2007, (iii) provide gainful and high-quality employment at least to the addition to the labour force, (iv) reduce in gender gaps in literacy and wage rates by at least 50% by 2007, (v) introduce 20-point program, (vi) achieve the target growth (8.1%) expenditure of ₹43,825 crore (US\$6.1 billion) for tenth five years. The Eleventh Five Year Plan (2007-2012) aimed at (i) increasing the enrolment in higher education of 18-23 years of age group by 2011-12, (ii) focusing on distant education, convergence of formal, non-formal, distant and IT education institutions, (iii) reducing poverty, gender inequality (iv) emphasising social sector and delivery of service therein, (v) ensuring empowerment through education and skill development, (vi) ensuring rapid, inclusive growth and environmental sustainability, (vii) increasing growth rate in agriculture, industry and services to 4%, 10% and 9% respectively, (viii) reducing total fertility rate to 2.1, (ix) providing clean drinking water for all by 2009 and (x) increasing agriculture growth to 4%. In the Twelfth Five-Year Plan (2012- 2017), the Government of India took the main objectives like (i) to create 50 million new work opportunities in the non-farm sector, (ii) to remove gender and social gap in school enrolment, (iii) to enhance access to higher education, (iv) to reduce malnutrition among children aged 0-3 years, (v) to provide electricity to all villages, (vi) to ensure that 50% of the rural population have access to proper drinking water, (vii) to increase green cover by 1 million hectare every year and (viii) to provide access to banking services to 90% of households. The on-going Thirteenth Five Year Plan (2017-2022) envisages

NSOU PGCO-IV 63 an allocation of Rs. 26,83,924 crore for the armed forces which includes Rs.13,95,271 crore under the revenue segment and the remainder for defraying the capital expenditure. Given the secrecy surrounding the plans, it is unlikely that much will be known about the outcomes intended to be achieved. Therefore, it can be taken that Indian economy, a mix of public and private enterprise, is too large and diverse to be wholly predictable or responsive to directions of the planning authorities. Major shortcomings include insufficient improvement in income distribution and alleviation of poverty, delayed completions and cost overruns on many public-sector projects, and far too small a return on many public-sector investments. In all these aspects, our Government performs its level best to meet up all targets and thus to make out country a flourished one.

#### 4.5 Economic Reforms in India

The neo-liberal policies of Economic Reforms were introduced by the Narsimha Rao Government in India in 1991 in forms of LPG (Liberalisation, Privatisation and Globalization) to curb the severe economic crisis due to external debt, decreasing motion of foreign currency reserve, balance of payment crisis, decline in export, reduction in revenue and inefficiency in economic management in the 1980s. The reforms categorised into two groups - stabilisation measures (short-term in nature and attempt to control the crisis situation by maintaining sufficient foreign exchange reserves) and structural reform policies (long-term policies that attempt to improve the overall economic condition by increasing the international competitiveness and removing the rigidities and other restraining obstacles).

#### Liberalization

Several economic reforms that were imposed under Liberalization include expansion of production capacity, de-servicing producing areas, abolishing industrial licensing by the Government, and freedom to import goods in view of curbing the regulations or restrictions that were imposed on free trade. Liberalisation allowed opening up the economic borders for foreign investments and Multinational Companies where many changes in licensing and procedures, import of technology, import of capital goods coupled with a reasonable rate of public investment, total protection to domestic industries from international competition through quantitative restrictions on imports as well as high tariff rates were found. In liberalisation, the industrial licensing system was almost abolished except for in cigarettes, alcohol, hazardous chemicals, electronics, NSOU PGCO-IV 64 aerospace, drugs and pharmaceuticals and industrial explosives. Additionally, defence equipment, atomic energy generation, and railway were kept exclusively under the public sector while some industries were provided the liberty to fix the prices for their products by the government. Financial sector (banks, stock exchange operations, and foreign exchange market) in this respect enjoyed liberty to take some of major financial decisions on their own though in under control of Reserve Bank of India (RBI). Moreover, Foreign Institutional Investors (FII) (merchant bankers, pension funds, mutual funds, etc.) were allowed to invest in the Indian financial market. Additionally, Quantitative restrictions were completely abolished from April 2001, import licensing and export duties were removed to increase the competitive position of Indian goods in the international market.

#### Privatisation

Privatization, the selling the government-owned enterprises to private companies or Government withdrawal from management, deals with opening of doors to the sectors or industries which were once preserved for Government. It seems to give more opportunities to private sector in regulating different services and restricts Government strict intervention there. Government encourages privatisation to improve the efficiency of certain public sector industries some of which are highly regarded as Maharatnas (Oil Corporation Limited and Steel Authority of India Limited), Navratnas (Hindustan Aeronautics Limited and Mahanagar Telephone Nigam Limited) and Miniratnas (Bharat Sanchar Nigam Limited, Airport Authority of India, and Indian Railway Catering and Tourism Corporation Limited). With privatization, FDI (Foreign Direct Investment) was introduced in India giving healthy competition to the Indian goods and services.

#### Globalisation

Globalisation was a result of the integration of world economy and trade interdependence. It helps to promote outsourcing in business operation like in Business Process Outsourcing (BPO), Voice-based business process, Record keeping, Banking services etc. Basically, Globalisation is the way out through which any Indian company can open its branches in Foreign companies e.g. ONGC Videsh operates in 16 countries, Tata Steel operates in 26 countries etc. In India, the economic environment after reform in 1991 experienced a drastic change like (i) agriculture sector witnessed a decline, (ii) there was a fluctuation in

NSOU PGCO-IV 65 the industrial sector, and the service sector experienced a significant growth, (ii) Foreign Direct Investment (FDI) and Foreign Institutional Investment (FII) have increased from about USD 100 million (in 1990-91) to USD 467 (billion in 2012-13). Though under the policy of globalisation, international market is open for all, it is more beneficial for the developed countries. Local industries of developing countries are also facing lot of problems, as they now have to compete with the companies in foreign countries and the countries still have no access to developed countries' local markets. 4.6 Summary The concept of social responsibility needs to be differentiated from social obligation and social responsiveness. Social responsibility is much broader as it requires an organisation to meet the expectations, norms and values of the society. Economic environment itself is influenced by the nature of economic system. It holds the importance as (i) it

**100%**

**MATCHING BLOCK 50/322**

**SA**

M21CM06DC.pdf (D155282201)

refers to all those economic factors which have a bearing on the functioning of a business unit, (

ii) it is a complex phenomenon that embodies the macroeconomic system, its structure, the various sectors of the economy, policies, rules and regulations administered by the government, central planning if there is one, availability of resources and their exploitation, the level and stage of development etc. (iii) with proper assessment of economic environment-related issues, the managers can forecast market trends and therefore, can make better investment choices and competitive strategies, (iv) economic environment would assist the managers of the foreign companies and markets to predict events that might affect the company's future performance etc. Economic environment holds the factors like (i) Growth Strategy, (ii) Economic System, (iii) Economic Planning, (iv) Industry, (v) Agriculture, (vi) Infrastructure, (vii) Financial and fiscal sectors, (viii) Removal of regional imbalances, (ix) Price and distribution controls, (x) Economic Reforms, (xi) Human Development, (xii) Human Development and (xiii) Per capita and national income. The economic environment which now prevails in our country is the result of the economic growth strategy relentlessly pursued during the past five decades by the Government of India. The neo-liberal policies of Economic Reforms were introduced by the Narsimha Rao government in India in 1991 in forms of LPG (Liberalisation, Privatisation & Globalization) to curb the severe economic crisis due to external debt, decreasing motion of foreign currency reserve, balance of payment crisis, decline in

NSOU PGCO-IV 66 export, reduction in revenue and inefficiency in economic management in the 1980s. Government of India in its promotional practice introduces Industrial Progress, Nationalisation, Antipoverty Program, Planning Development etc. 4.7 Questions Objective type: 1. First Five Year plan was for the period of (a) FY 1940-44, (b) FY1947-51, (c) FY 1959-63, (d) FY1951-55 2. The neo-liberal policies of Economic Reforms were introduced by the (a) Rajiv Gandhi Government, (b) Narsimha Rao Government, (c) Narendra Modi Government, (d) None of the above Short Answer type: 1. Write Short Note on Economic Reforms in India 2. Explain the importance and factors of economic environment of business. Long Answer type: 1. Narrate social responsibility of business firm. 2. Describe the Economic Role of the Government of India. 4.8 Further Readings Aswathappa, K. (2019). Essentials of Business Environment (15th Revised Edition), Himalaya Publishing House. Cherunilam, F. the science of people or population which is a product of the number of births, deaths, and migrations

having features like size, age, sex, life expectancy, work participation rate, employment status, rural-urban divide, levels of education, casts, ethnicity, language and religion. Demography does have a huge impact on business activities. This unit is concerned about the concept, feature and importance of demographic environment, components of demographic environment and its linkage with business environment. 2 <https://worldsustainable.org/demographic-characteristics/> 67 NSOU PGCO-IV 68 5.2 Demographic Environment - Concept, Feature and Importance The word 'demographic' originates from Geek which contains two meaning of Demos i.e. people or population and Grafein i.e. writing. Different researchers and organisations time-to-time have declared the definition of demography. 2

**100% MATCHING BLOCK 37/322**

**W**

Demography is the name given to the study and interaction of the population, and the influence of changes in composition and population growth.

Demography

is the scientific study of human population, primarily with respect to their size, structure and development. (United Nations, 1958:3)

**100% MATCHING BLOCK 38/322**

**W**

Demography is the statistical and mathematical study of the size, composition, and spatial distribution of human populations and of changes over time in these aspects through the operation of five processes of fertility, mortality, marriage, migration, and social mobility (Bogue, 1962:1-2).

Different countries hold different demographic cultural aspects. From this view point, demography in India holds the features like (i)High population density, (ii) Overwhelming proportion of rural population (iii) Fast rate of population growth, (iv) Declining proportion of women, (v) High percentage of non-workers, (vi) Ethnic diversity, (vi) Lop-sided age structure. 3

**57% MATCHING BLOCK 39/322**

Being one of the most populous countries in the world, occupying the second place after China and accounting for 16.7% of the world population, India contains only 2.42% of the total world area. Amongst the total population in India, about 72% lives rural area indicating massive dependence on agriculture and other rural industries. The average annual exponential growth rate

dropped gradually from 2.22% in 1971- 81 to 2.14% in 1981-1991 and again 1.9% in 1991-2001. This was happened because of the expansion of urban centres. The urban centres

**W**

attributed more to the sociological factors like low preference for the female child in the family. Here, in absence of proper attention, the female child falls sick for malnutrition. A large number of women also die during childbirth. In India, only 40 per cent can be classified as workers-this includes the population below 15 years also (i.e., child labour),

while participation of 3 <https://www.yourarticlelibrary.com/geography/7-striking-features-of-indian-demography/42397>

**100% MATCHING BLOCK 46/322**

**W**

Demographic characteristics help us learn about the conditions of the population in a region

like education, health, etc. which can offer more important information about the population if can properly be connected like size, distribution, structure, change in population with economic, health, education, etc. From apart, some factors like birth, death, migration, or social changes would have causal relationship that cannot be separated. Therefore, the differences and growth for each group of population can be observed with time series data. Demographic characteristics make it easy for us to identify the relationships among the factors in a structured and systematic manner with which population growth in the future can be predicted considering fertility, mortality and migration as the main causes of change in population (size and distribution).

**100% MATCHING BLOCK 47/322**

**W**

Demographic characteristic is one of the most contributing factors in decision making

as almost every Government decision and policy considers demography as the basic element to make it fair. 5.3

Components of Demographic Environment Demographic composition refers to the proportion or number of people which can be identified according to a certain characteristics. The demographic composition provides a mathematical description of the people living in a specific area. Some of the most common and important demographic components can be Density (the relation between the area covered by the city and the number of residents, typically expressed as the number of inhabitants per square mile), Gender (the male-female ratio of a population used to examine the income of women versus that of men), Age (information about the number of people in a certain age range like babies, within 18-24 years or seniors providing information preferences and trends among age groups and helps NSOU PGCO-IV 70 policymakers to orient social programme like healthcare or child support), Social Class (characteristics like average income, level of education, occupation and size of home providing information about socio-economic condition), Ethnicity (information about the national or racial background of the population to identify possible vulnerabilities among minority groups)etc. In World population, an exponential increase is found which invites some questions like - How quickly will we increase from the present number of population? How will that population be distributed? Where is population the highest? Where is it slowing down? Where will people live? The study of population or demography, therefore, reveals three most important components which can answer these questions - fertility, mortality and migration. These three components would be called as demographic process and thus determine the elements of population change because they affect the situation of population. In this regard, fertility is related to the population growth, mortality to the population decrease and migration is related to the population change due to the incoming and outgoing migration where marriage also is included causing migration of women. Demographic measures are the actual changes in size, composition and distribution due to changes in demographic components. Fertility Fertility, the reproductive function, refers to the ability to bear offspring and is related to the live birth which starts when a women gives the first birth (within 15- 49 years). It can be measured by the actual number of birth having four measures - Crude Birth Rate (CBR) (the simplest way of measuring fertility defined as the number of live births occurring in that area in a given period of time, usually, a year, divided by the total population of that area as estimated at the middle of the year. It is expressed in terms of 'per 1000 of population'); General Fertility Rate (GFR) (it gives the number of births occurring within a given population during a specified year per 1000 women aged 15 to 49 in the population at mid-year); Age-Specified Fertility Rate (ASFR) (this may be computed for each age from 15-49 years); Total Fertility Rate (TFR) (it is referred to the number of children of a women which would bear during her childbearing age under on-going age-specific fertility rate. It can be measured with sum of age-specific fertility rates calculated for the same single year). Mortality WHO mentioned that "Death is the permanent disappearance of all evidence of life at any time after birth has taken place". It is a natural process of birth and death goes on incessantly. It is a perpetual process causing decline in population. All-cause mortality rates by age and sex for WHO Member States are developed from available

NSOU PGCO-IV 71 death registration data, sample registration systems and data on child and adult mortality from censuses and surveys. Cause-of-death distributions are estimated from death registration data, and data from population-based epidemiological studies, disease registers and notification systems for selected specific causes of death. Causes of death for populations without useable death-registration data were estimated using cause-of-death models together with data from population-based epidemiological studies, disease registers and notification systems for 21 specific causes of death. Deaths per 1,00,000 population are measured as unit. Migration Migration means the movements of people from place to place where movement of people inside the country is called national migration and movement of people from one country to another is called international migration. Migration shifted from the original place is called out-migrants and those people who live in their destination called in-migrants. Likewise, people who shift from one country to another are called emigrants for departure and immigrants for the destination. The difference in the number of people due to immigration and emigration in a country is called gross migration. National migration can be estimated by comparing: "place of residence one year prior to the census with the place of residence during the census enumeration, and/or " place of residence five years prior to the census with the place of residence during the census enumeration, and/or " place of birth with the place of residence during the census enumeration. Demographic composition, therefore, would assist the planner to make policies for different groups of people. 5.4 Linkages between of Demographic Environment and Business Environment The demographic environment differs from country to country and from place to place within the same country or region. Demographic factors such as size of population and growth of population rates, age composition, ethnic composition, density of population, rural-urban distribution, family size, nature of the family income levels etc. have very significant implications for business. In business environment, the growth and success of a business would highly be dependent on the targeted demographic variables of interest. Therefore, any strategy i.e. any commitment of present resources to the future expectations, has to start with demographics (P. F. Drucker) having tremendous economic and business implications.

NSOU PGCO-IV 72 The size of population is an important determinant of demand for many products. There are countries with less than a lakh of people on the one hand and those with over a thousand million on the other hand. Poor countries with small population do not attract big businesses while at the same time can create promising niches for small firms. In this context, advanced countries with large population attract business with high cut-throat competition. Population Growth Rate, the another section having high impact on demography can also alter business-related decision e.g. declining birth rate and consequent fall in the size of the baby population, the market for baby products of some companies (Johnson & Johnson) has been limited for which they have to switch over to other businesses. On the contrary, the declining birth rate can make prosperity to some companies like hotel, restaurants for serving the childless couples or couples having small families. Therefore, it is obvious that business should necessarily ponder over whether the falling birth rate and the shrinkage in the number of young people and also people under eighteen is a threat or opportunity. Hence, the collapsing birth rate may be an opportunity where having fewer children means the child becomes precious and large amount of disposable income would be spent on him. A developing country with steady increase in income with high population growth rate but with decreasing birth rate can drive fast growth of the markets. Likewise, a poor country with high population can enjoy a sizeable market for luxurious goods and services (e.g. if just 5 per cent of the Indian population is well to do, the absolute number is larger than the total population of many of the high income economies). High population growth rate also implies an enormous increase in labour supply. Cheap labour and a growing market have encouraged many multinationals to invest in developing countries. Moreover, the occupational and spatial mobility of population have implications for business. The labour who can enjoy mobility between regions and occupations, would offer lower problem than otherwise. On the other hand, a heterogeneous group of labour with different languages, preferences, tastes, beliefs etc. would generate different human resources strategies in business. The changes in age structure has lot of implication in business like pharmaceutical, insurance companies etc. which are very much inclined with aged group of people. Likewise, the job preference of each group of people would differ. Ethnicity can be considered as another demographic issue influencing business operation. In this regard, each specific group would have certain specific buying habit and demand. Though marketers should not over generalise ethnic group, within each group different consumers can be found with different demands.

NSOU PGCO-IV 73 Demographic structure would also attract international marketer and it would be accepted that larger is the population, larger with the demand e.g. India has around sixteen per cent of the world's population and is second to China. Also, India has a relatively younger population compared to China. A large number of people in middle income group (280 and 300 million) can also attract market for consumer durables. Additionally, 25 million approximate baby births can emerge a large market for baby products. The sex and age composition have their own corresponding impacts on goods and services. Moreover, a large market created by an ever increasing population offers an incentive to the use of division of labour, mechanisation and large scale production. Additionally, large labour force limits the use of technology. Availability of cheap labour and their wage limit would be determined with the present position of demographic environment of the country. 5.5 Summary The word 'demographic' is related with

**88% MATCHING BLOCK 48/322**

**W**

the science of people or population which is a product of the number of births, deaths, and migrations

having features like size, age, sex, life expectancy, work participation rate, employment status, rural-urban divide, levels of education, casts, ethnicity, language and religion. Different countries hold different demographic cultures. From this view point, demography in India holds the feature like (i) Population Too Large for Area, (ii) Overwhelming Proportion of Rural Population (iii) Fast Rate of Population Growth, (iv) Declining Proportion of Women, (v) High Percentage of Non-workers, (vi) Ethnic Diversity, (vi) Lop-sided Age Structure. Demographic environment is considered as an interdisciplinary science connecting with statistics, geography, economics, health and others.

**100% MATCHING BLOCK 49/322**

**W**

Demographic characteristics help us learn about the conditions of the population in a region

like education, health, etc. which can offer more important information about the population. From apart, some factors like birth, death, migration, or social changes would have causal relationship that cannot be separated and with time series data, the differences and growth for each group of population can be observed. The demographic composition provides a mathematical description of the people living in a specific area. Some of the most common and important demographic components can be Density, Gender, Age, Social Class, Ethnicity etc. The study of population or demography, therefore, reveals three most important components which can answer these questions - fertility, mortality and migration. Demographic factors such as size of population and growth of population rates, age composition, ethnic composition, density of population, rural-urban distribution, family size, nature of the family income levels etc. have very significant implications for business. In business environment, the

NSOU PGCO-IV 74 growth and success of a business would highly be dependent on the targeted demographic variables of interest. Therefore, any strategy i.e. any commitment of present resources to the future expectations, has to start with demographics having tremendous economic and business implications. 5.6 Questions Objective type: 1. The study of population or demography reveals the components like (a) fertility, mortality and migration, (b) fertility, mortality, (c) mortality and migration, (d) fertility and migration. 2. Statement: 1. Demographic environment is considered as an interdisciplinary science connecting with statistics, geography, economics, health and others. 2 Demographic Environment contains special attention to all the academicians. Below mentioned points can establish importance of Demography. (a) Both (1) and (2) are true, (b) Only (1) is true, (c) Only (2) is true, (d) None is true. Short Answer type: 1. Define Demographic Environment 2 State the features and importance of Demographic Environment Long Answer type: 1. What are the Components of Demographic Environment? 2. Explain the linkages between of Demographic Environment and Business Environment 5.7 Further Readings Aswathappa, K. (2019). NSOU PGCO-IV 75 Unit 6 Political and Legal Environment Structure 6.0 Objectives 6.1 Introduction 6.2 Political and legal environment of business in India - Concept and Scope 6.3 Intellectual Property Rights 6.3.1 The Patents Act, 1970 6.3.2 Copyright Act, 1957 6.3.3 Trade Mark Act, 1999 6.4 Consumer Protection Act, 1986 6.4.1 Modified Consumer's Protection Act, 2019 6.5 Summary 6.6 Questions 6.7 Further Readings 6.0 Objectives After going through the unit, you will be able to understand the— Meaning of political environment Meaning of legal environment Meaning of IPR 6.1 Introduction In business environment, political and legal environment deal with the factors which affect a business concern indirectly with lot of factors such as the current political party in power, the degree of politicization of trade and industry, the efficiency of the current government, government policies, current legal framework, the public attitude towards the economy, etc. All enterprises should take concern about different environmental factors (political, legal, demographic, economic, social and technological) 75

NSOU PGCO-IV 76 for taking better decisions on firm's progress. The political factors of any country introduce a risk factor in the industry which can suffer losses, or it can reduce profitability. There could be many reasons due to which political environment may change, and it depends on country to country. This unit throws light on the concept and scope of political and legal environment of business in India; Intellectual Property Rights (The Patent Act, 1970, The Copyright Act, 1957; Trade Mark Act, 1999) and Consumer Protection Act, 1986. 6.2 Political and Legal Environment of business in India - Concept and Scope The political structure of a country is one of the important considerations that a business should give before entering the country. There could be many political ideologies that could be present in their society. Therefore, it is suggested that before entering the country for business, the business should understand the country. It is perhaps the least predictable elements amongst all factors of the business environment.

Governments view business organizations as a critical vehicle for social reform, (iii) Governments pass legislation			

having impact on

<b>91%</b>	<b>MATCHING BLOCK 60/322</b>	<b>SA</b>	Business Environment M.Com II semester.docx (D146772726)
the relationship between the firm and its customers, suppliers, and other companies, (iv) Government is liable for protecting the public interest, (v) Government actions influence the economic environment, (vi) Government is a major consumer of goods and services.			

Political decision of a country would affect/influence economic environment, socio-cultural environment, emergence and acceptance of new technologies. The legal environment addresses the necessity to use or not the Sharia Law and the issue of standardisation and certification. A sound and functionallegal systemwould always be accepted with laws that equally protect both consumers and manufacturers. There are various other matters like company law, royalty law, Patent law, intellectual property rights.Sometimes legislation would create new business opportunities (e.g. mandatory recycling laws have boosted the recycling industry and launched dozens of new companies making new products). 6.3 Intellectual Property Right - Concept and Importance Intellectual Property Rights (IPRs) are common types of legal Intellectual Property protection for those who create. These rights have actually contributed enormously to the world, in particular economically.Many companies as well as their consumers can have knowledge regarding thePatents, Trade Marks, and Copyrightsof the IP- backed products.

**69% MATCHING BLOCK 61/322**

**SA** Arjun - IPR Chapter .docx (D142539833)

IP refers to creation of the mind (inventions, literary and artistic works, designs and symbols, names and images) used in commerce.

Legal protection of IP, therefore, would

**100% MATCHING BLOCK 62/322**

in the body of the vessel or in the machinery, tackle, apparatus or other accessories

thereof, so far as the invention is used on board the vessel and for its actual needs only; or (b) in the construction or working of the aircraft or land vehicle or of the accessories thereof, as the case may be. (2) This section shall not extend to vessels, aircrafts or land vehicles owned by persons ordinarily resident in a foreign country the laws of which do not confer corresponding rights with respect to the use of inventions in vessels, aircraft or land vehicles owned by persons ordinarily resident in India while in the ports or within the territorial waters of that foreign country or otherwise within the jurisdiction of its courts.

**Rights of co-owners of Patents.** — Where a Patent is granted to two or more persons, each of those persons shall, unless an agreement to the contrary is in force, be entitled to an equal undivided share in the Patent. — Subject to the provisions contained in this section and in section 51, where two or more persons are registered as grantee or proprietor of a Patent, then, unless an agreement to the contrary is in force, each of those persons shall be entitled, by himself or his agents, to rights conferred by section 48 for his own benefit without accounting to the other person or persons. -Subject to the provisions contained in this section and in section 51 and to any agreement NSOU PGCO-IV 89 for the time being in force, where two or more persons are registered as grantee or proprietor of a Patent, then, a licence under the Patent shall not be granted and share in the Patent shall not be assigned by one of such persons except with the consent of the other person or persons. Where a Patented article is sold by one of two or more persons registered as grantee or proprietor of a Patent, the purchaser and any person claiming through him shall be entitled to deal with the article in the same manner as if the article had been sold by a sole Patentee. — Subject to the provisions contained in this section, the rules of law applicable to the ownership and devolution of movable property generally shall apply in relation to Patents; and nothing contained in sub-section (1) or subsection (2) shall affect the mutual rights or obligations of trustees or of the legal representatives of a deceased person or their rights or obligations as such. — Nothing in this section shall affect the rights of the assignees of a partial interest in a Patent created before the commencement of this Act.

**Power of Controller to give directions to co-owners.** - — Where two or more persons are registered as grantee or proprietor of a Patent, the Controller may, upon application made to him in the prescribed manner by any of those persons, give such directions in accordance with the application as to the sale or lease of the Patent or any interest therein, the grant of licenses under the Patent, or the exercise of any right under section 50 in relation thereto, as he thinks fit. — If any person registered as grantee or proprietor of a Patent fails to execute any instrument or to do any other thing required for the carrying out of any direction given under this section within fourteen days after being requested in writing so to do by any of the other persons so registered, the Controller may, upon application made to him in the prescribed manner by any such other person, give directions empowering any person to execute that instrument or to do that thing in the name and on behalf of the person in default. — Before giving any directions in pursuance of an application under this section, the Controller shall give an opportunity to be heard- (a) in the case of an application under sub-section (1) to the other person or persons registered as grantee or proprietor of the Patent; (b) in the case of an application under NSOU PGCO-IV 90 sub-section (2), to the person in default. — No direction shall be given under this section so as to affect the mutual rights or obligations of trustees or of the legal representatives of a deceased person or of their rights or obligations as such, or which is inconsistent with the terms of any agreement between persons registered as grantee or proprietor of the Patent.

**Grant of Patent to true and first inventor where it has been obtained by another in fraud of him:** — Where the Patent has been revoked under section 64 on the ground that the Patent was obtained wrongfully and in contravention of the rights of the petitioner or any person under or through whom he claims, or, where in a petition for revocation, the Appellate Board or court, instead of revoking the Patent, directs the complete specification to be amended by the exclusion of a claim or claims in consequence of a finding that the invention covered by such claim or claims had been obtained from the petitioner, the Appellate Board or court may, by order passed in the same proceeding, permit the grant to the petitioner of the whole or such part of the invention which the Appellate Board or court finds has been wrongfully obtained by the Patentee, in lieu of the Patent so revoked or is excluded by amendment. — Where any such order is passed, the Controller shall, on request by the petitioner made in the prescribed manner grant to him— (i) in cases where the Appellate Board or court permits the whole of the Patent to be granted, a new Patent bearing the same date and number as the Patent revoked; (ii) in cases where the Appellate Board or court permits a part only of the Patent to be granted, a new Patent for such part bearing the same date as the Patent revoked and numbered in such manner as may be prescribed provided that the Controller may, as a condition of such grant, require the petitioner to file a new and complete specification to the satisfaction of the Controller describing and claiming that part of the invention for which the Patent is to be granted. — No suit shall be brought for any infringement of a Patent granted under this section committed before the actual date on which such Patent was granted.

NSOU PGCO-IV 91 Term of Patent: — Subject to the provisions of this Act, the term of every Patent granted, after the commencement of the Patents (Amendment) Act, 2002,

**74% MATCHING BLOCK 116/322 SA** Abhishek Pandey @ 9.7.2021.docx (D110295562)

and the term of every Patent which has not expired and has not ceased to have effect, on the date of such commencement, under this Act, shall be twenty years from the date of filing of the application for the Patent. Explanation: — For the purposes of this sub-section, the term of Patent in case of International applications filed under the

Patent Cooperation Treaty

First owner of Copyright- Subject to the provisions of this Act, the author of a work shall be the first owner of the Copyright therein: Provided that- (a) in the case of a literary, dramatic or artistic work made by the author in the course of his employment by the proprietor of a newspaper, magazine or similar periodical under a contract of service or apprenticeship, for the purpose of publication in a newspaper, magazine or similar periodical, the said proprietor shall, in the absence of any agreement to the contrary, be the first owner of the Copyright in the work in so far as the Copyright relates to the publication of the work in any newspaper, magazine or similar periodical, or to the reproduction of the work for the purpose of its being so published, but in all other respects the author shall be the first owner of the Copyright in the work; (b) subject to the provisions of clause (a), in the case of a photograph taken, or a painting or portrait drawn, or an engraving or a cinematograph film made, for valuable consideration at the instance of any person, such person shall, in the absence of any agreement to the contrary, be the first owner of the Copyright therein; (c) in the case of a work made in the course of the author's employment under a contract of service or apprenticeship, to which clause (a) or clause (b) does not apply, the employer shall, in the absence of any agreement to the contrary, be the first owner of the Copyright therein; 1 [(cc) in the case of any address or speech delivered in public, the person who has delivered such address or speech or if such person has delivered such address or speech on behalf of any other person, such other person shall be the first owner of the Copyright therein notwithstanding that the person who delivers such address or speech, or, as the case may be, the person on whose behalf such address or speech is delivered, is employed by any other person who arranges such address or speech or on whose behalf or premises such address or speech is delivered;] (d) in the case of a Government work, Government shall, in the absence

NSOU PGCO-IV 97

**99% MATCHING BLOCK 149/322****W**

of any agreement to the contrary, be the first owner of the Copyright therein; 2 [(dd) in the case of a work made or first published by or under the direction or control of any public undertaking, such public undertaking shall, in the absence of any agreement to the contrary, be the first owner of the Copyright therein. Explanation.- For the purposes of this clause and section 28A, "public undertaking" means- (i) an undertaking owned or controlled by Government; or (ii) a Government company as defined in section 617 of the Companies Act, 1956 (1 of 1956); or (iii) a body corporate established by or under any Central, Provincial or State Act;] (e) in the case of a work to which the provisions of section 41 apply, the international organization concerned shall be the first owner of the Copyright therein. [Provided that in case of any work incorporated in a cinematograph work, nothing contained in clauses (b) and (c) shall affect the right of the author in the work referred to in clause (a) of sub-section (1) of section 13.] Registration of Copyright:

**96% MATCHING BLOCK 150/322****W**

There shall be kept at the Copyright Office a register in the prescribed form to be called the Register of Copyrights in which the names or titles of works and the names and addresses of authors, publishers and owners of Copyright and such other particulars as may be prescribed may be entered. Entries in Register of Copyrights.- (1) The author or publisher of, or the owner of or other person interested in the Copyright in, any work may make an application in the prescribed form accompanied by the prescribed fee to the Registrar of Copyrights for entering particulars of the work in the Register of Copyrights provided that in respect of an artistic work which is used or is capable of being used in relation to any goods or services, the application shall include a statement to that effect and shall be accompanied by a certificate from the Registrar of Trade Marks referred to in section 3 of the Trade Marks Act, 1999 (47 of 1999),

**100% MATCHING BLOCK 151/322****W**

to the effect that no trade mark identical with or deceptively similar to such artistic work has been registered under that Act in the name of, or that no application has been made under that Act for such registration by, any person other than the applicant. (2) On receipt of an application in respect of any work under sub-section (1), the Registrar of Copyrights may, after holding such inquiry as he may deem fit, enter the particulars of the work in the Register of Copyrights. Indexes - There shall be also kept at the Copyright Office such indexes of the Register of Copyrights as may be prescribed. Form and inspection of register - The Register of Copyrights and indexes thereof kept under this Act shall at all reasonable times be open to inspection, and any

NSOU PGCO-IV 98

**99% MATCHING BLOCK 152/322****W**

person shall be entitled to take copies of, or make extracts from, such register or indexes on payment of such fee and subject to such conditions as may be prescribed. Register of Copyrights to be prima facie evidence of particulars entered therein - The Register of Copyrights shall be prima facie evidence of the particulars entered therein and documents purporting to be copies of any entries therein, or extracts therefrom, certified by the Registrar of Copyrights and sealed with the seal of the Copyright Office shall be admissible in evidence in all courts without further proof or production of the original. Correction of entries in the Register of Copyrights.- The Registrar of Copyrights may, in the prescribed cases and subject to the prescribed conditions, amend or alter the Register of Copyrights by- (a) correcting any error in any name, address or particulars; or (b) correcting any other error which may have arisen therein by accidental slip or omission. Rectification of Register by 1 [Appellate Board] - The [Appellate Board], on application of the Registrar of Copyrights or of any person aggrieved, shall order the rectification of the Register of Copyrights by- (a) the making of any entry wrongly omitted to be made in the register, or (b) the expunging of any entry wrongly made in, or remaining on, the register, or (c) the correction of any error or defect in the register. Entries in the Register of Copyrights, etc., to be published - Every entry made in the Register of Copyrights or the particulars of any work entered under section 45, the correction of every entry made in such register under section 49, and every rectification ordered under section 50, shall be published by the Registrar of Copyrights in the Official Gazette or in such other manner as he may deem fit.

**98% MATCHING BLOCK 153/322****W**

Infringement of Copyright When Copyright infringed - Copyright in a work shall be deemed to be infringed- (a) when any person, without a licence granted by the owner of the Copyright or the Registrar of Copyrights under this Act or in contravention of the conditions of a licence so granted or of any condition imposed by a competent authority under this Act- (i) does anything, the exclusive right to do which is by this Act conferred upon the owner of the Copyright, or (ii) permits for profit any place to be used for the communication of the work to the public where such communication constitutes an infringement of the Copyright in the work, unless he was not aware and had no NSOU PGCO-IV 99 reasonable ground for believing that such communication to the public would be an infringement of Copyright; or (b) when any person- (i) makes for sale or hire, or sells or lets for hire, or by way of trade displays or offers for sale or hire, or (ii) distributes either for the purpose of trade or to such an extent as to affect prejudicially the owner of the Copyright, or (iii) by way of trade exhibits in public, or (iv) imports into India, any infringing copies of the work provided that nothing in sub-clause (iv) shall apply to the import of one copy of any work for the private and domestic use of the importer. Explanation- For the purposes of this section, the reproduction of a literary, dramatic, musical or artistic work in the form of a cinematograph film shall be deemed to be an "infringing copy". Certain acts not to be infringement of Copyright- (1) The following acts shall not constitute an infringement of Copyright, namely- (a) a fair dealing with any work, not being a computer programme, for the purposes of- (i) private or personal use, including research; (

**98%****MATCHING BLOCK 154/322****W**

ii) criticism or review, whether of that work or of any other work; (iii) the reporting of current events and current affairs, including the reporting of a lecture delivered in public. Explanation.- The storing of any work in any electronic medium for the purposes mentioned in this clause, including the incidental storage of any computer programme which is not itself an infringing copy for the said purposes, shall not constitute infringement of Copyright. [(aa) the making of copies or adaptation of a computer programme by the lawful possessor of a copy of such computer programme, from such copy- (i) in order to utilise the computer programme for the purpose for which it was supplied; or (ii) to make back-up copies purely as a temporary protection against loss, destruction or damage in order only to utilise the computer programme for the purpose for which it was supplied; (ab) the doing of any act necessary to obtain information essential for operating inter-operability of an independently created computer programme with other programmes by a lawful possessor of a computer programme provided that such information is not otherwise readily available; (ac) the observation, study or test of functioning of the computer programme in order to determine the ideas and principles which underline any elements of the programme while performing such acts necessary for the functions for which the computer programme was supplied; (ad) the making of copies or adaptation of the computer programme from a personally legally obtained copy for non-commercial personal use; (b) the transient or incidental storage of a work or performance purely in the technical process of electronic transmission or communication to the public; (c) transient or incidental storage of a work or performance for the purpose of providing electronic NSOU PGCO-IV 100 links, access or integration,

**100%****MATCHING BLOCK 155/322****W**

where such links, access or integration has not been expressly prohibited by the right holder, unless the person responsible is aware or has reasonable grounds for believing that such storage is of an infringing copy: Provided that if the person responsible for the storage of the copy has received a written complaint from the owner of Copyright in the work, complaining that such transient or incidental storage is an infringement, such person responsible for the storage shall refrain from facilitating such access for

cassette or other container thereof, namely:- (a) if such work is a cinematograph film required to be certified for exhibition under the provisions of the Cinematograph Act, 1952 (37 of 1952), a copy of the certificate granted by the Board of Film Certification under section 5A of that Act in respect of such work; (b) the name and address of the person who has made the video film and a declaration by him that he has obtained the necessary licence or consent from the owner of the Copyright in such work for making such video film; and (c) the name and address of the owner for the Copyright in such work. Omitted by the Copyright Act, 2012 (27 of 2012), s. 33 (w.e.f. 21-6-2012). 1 Ins. by Act 27 of 2012, s. 32 (w.e.f. 21-6-2012). 2 Ins. by Act 65 of 1984, s. 4 (w.e.f. 8-10-1984). 3 Subs. by Act 38 of 1994, s. 2, for "record" (w.e.f. 10-5-1995). Importation of infringing copies- (1) The owner of any right conferred by this Act in respect of any work or any performance embodied in such work, or his duly authorised agent, may give notice in writing to the Commissioner of Customs, or to any other officer authorised in this behalf by the Central Board of Excise and Customs,- (a) that he is the owner of the said right, with proof thereof; and (b) that he requests the Commissioner for a period specified in the notice, which shall not exceed one year, to treat infringing copies of the work as prohibited goods, and that infringing copies of the work are expected to arrive in India at a time and a place specified in the notice. (2) The Commissioner, after scrutiny of the evidence furnished by the owner of the right and on being satisfied may, subject to the provisions of sub-section (3), treat infringing copies of the work as prohibited goods that have been imported into India, excluding goods in transit: Provided that the owner of the work deposits such amount as the Commissioner may require as security having regard to the likely expenses on demurrage, cost of storage and compensation to the importer in case it is found that the works are not infringing copies. (3) When any goods treated as prohibited under sub-section (2) have been detained, the Customs Officer detaining them shall inform the importer as well as the person who gave notice under sub- section (1) of the detention of such goods within forty-eight hours of their detention. (4) The Customs Officer shall release the goods, and they shall no longer be treated as prohibited goods, if the person who gave notice under sub-section (1) does not produce any order from a court having jurisdiction as to the temporary or permanent disposal of such goods within fourteen days from the date of their detention.

**W**

as the Central Government may, by notification in the Official Gazette,

direct. (7) The Register of Trade Marks, both Part A and Part B, existing at the commencement of this Act, shall be incorporated in and form part of the register under this Act. Registration of parts of Trade Marks and of Trade Marks as a series.- (1) Where the proprietor of a trade mark claims to be entitled to the exclusive use of any part thereof separately, he may apply to register the whole and the part as separate Trade Marks. (2) Each such separate trade mark shall satisfy all the conditions applying to and have all the incidents of, an independent trade mark. (3) Where a person claiming to be the proprietor of several trade marks in respect of the same or similar goods or services or description of goods or description of services, which, while resembling each other in the material particulars thereof, yet differ in respect of- (a) statement of the goods or services in relation to which they are respectively used or proposed to be used; or (b) statement of number, price, quality or names of places; or (c) other matter of a non-distinctive character which does not substantially affect the identity of the trade mark; or (d) colour, seeks to register those Trade Marks, they may be registered as a series in one registration. Registration of Trade Marks as associated Trade Marks.- (1) Where a trade mark which is registered, or is the subject of an application for registration, in respect of any goods or services is identical with another trade mark which is registered, or is the subject of an application for registration, in the name of the same proprietor in respect of the same goods or description of goods or same services or description of services or so nearly resembles it as to be likely to deceive or cause confusion if used by a person other than the proprietor, the Registrar may, at any time, require that the trade marks shall be entered on the register as associated Trade Marks. (2) Where there is an identity or near resemblance of marks that are registered, or are the subject of applications for registration in the name of the same proprietor, in respect of goods and services which are associated with those goods or services, or goods or services

NSOU PGCO-IV 114 of that description, sub-section (1) shall apply as it applies as where there is an identity or near resemblance of marks that are registered, or are the subject of applications for registration, in the name of the same proprietor in respect of the same goods or description of goods or same services or description of services. (3) Where a trade mark and any part thereof are, in accordance with the provisions of sub- section (1) of section 15, registered as separate trade marks in the name of the same proprietor, they shall be deemed to be, and shall be registered as, associated Trade Marks. (4) All Trade Marks registered in accordance with the provisions of sub- section (3) of section 15 as a series in one registration shall be deemed to be, and shall be registered as, associated Trade Marks. (5)

**100% MATCHING BLOCK 197/322**

**SA**

Abhishek Pandey @ 9.7.2021.docx (D110295562)

On application made in the prescribed manner by the registered proprietor

of two or more Trade Marks registered as associated Trade Marks, the Registrar may dissolve the association as respects any of them if he is satisfied that there would be no likelihood of deception or confusion being caused if that Trade Mark were used by any other person in relation to any of the goods or services or both in respect of which it is registered, and may amend the register accordingly. Effect of registration of parts of a mark- (1) When a trade mark consists of several matters, its registration shall confer on the proprietor exclusive right to the use of the trade mark taken as a whole. (2) Notwithstanding anything contained in sub- section (1), when a trade mark- (a) contains any part- (i) which is not the subject of a separate application by the proprietor for registration as a trade mark; or 15 (ii) which is not separately registered by the proprietor as a trade mark; or (b) contains any matter which is common to the trade or is otherwise of a non-distinctive character, the registration thereof shall not confer any exclusive right in the matter forming only a part of the whole of the trade mark so registered.

to the register and renew the registration of the trade mark either generally or subject to such conditions or limitations as he thinks fit to impose, for a period of ten years from the expiration of the last registration.

**100%**

**MATCHING BLOCK 207/322**

**SA**

Abhishek Pandey @ 9.7.2021.docx (D110295562)

Absolute grounds for refusal of registration.- (1) The trade marks- (a) which are devoid of any distinctive character, that is to say, not capable of distinguishing the goods or services of one person from those of another person; (b) which consist exclusively of marks or indications which may serve in trade to designate the kind, quality, quantity, intended purpose, values, geographical origin or the time of production of the goods or rendering of the service or other characteristics of the goods or service; (c) which consist exclusively of marks or indications which have become customary in the current language or in the bona fide and established practices of the trade, shall not be registered:

Provided that a trade mark shall not be refused registration if before the date of application for registration it has acquired a distinctive character as a result of the use made of it or is a well-known trade mark. (2)

**100%**

**MATCHING BLOCK 208/322**

**SA**

Abhishek Pandey @ 9.7.2021.docx (D110295562)

A mark shall not be registered as a trade mark if- (a) it is of such nature as to deceive the public or cause confusion; (b) it contains or comprises of any matter likely to hurt the religious susceptibilities of any class or section of the citizens of India; (c) it comprises or contains scandalous or obscene matter; (d) its use is prohibited under the Emblems and Names (Prevention of Improper Use) Act, 1950 (12 of 1950). (3) A mark shall not be registered as a trade mark if it consists exclusively of- (a) the shape of goods which results from the nature of the goods themselves; or (b) the shape of goods which is necessary to obtain a technical result; or (c) the shape which gives substantial value to the goods.

Explanation.-For the purposes of this section, the nature of goods

NSOU PGCO-IV 116 or services in relation to which the trade mark is used or proposed to be used shall not be a ground for refusal of registration. Limitation as to colour-(1) A trade mark may be limited wholly or in part to any combination of colours and any such limitation shall be taken into consideration by the tribunal having to decide on the distinctive character of the trade mark. (2) So far as a trade mark is registered without limitation of colour, it shall be deemed to be registered for all colours. Relative grounds for refusal of registration.- Save as provided in section 12, a trade mark shall not be registered if, because of- (a) its identity with an earlier trade mark and similarity of goods or services covered by the trade mark; or (b) its similarity to an earlier trade mark and the identity or similarity of the goods or services covered by the trade mark, there exists a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark. A trade mark which- (a)

**88%**      **MATCHING BLOCK 209/322**      **SA** Arjun - IPR Chapter .docx (D142539833)

is identical with or similar to an earlier trade mark; and (b) is to be registered for goods or services which are not similar to those for which the earlier

trade mark is registered in the name of a different proprietor, shall not be registered if or to the extent the earlier trade mark is a well-known trade mark

**100%**      **MATCHING BLOCK 210/322**      **SA** Arjun - IPR Chapter .docx (D142539833)

in India and the use of the later mark without due cause would take unfair advantage of or be detrimental to the distinctive character or repute of the earlier

trade mark. A trade mark shall not be registered if, or to the extent that, its use in India is liable to be prevented- (a) by virtue of any law in particular the law of passing off protecting an unregistered trade mark used in the course of trade; or (b) by virtue of law of Copyright. Nothing in this section shall prevent the registration of a trade mark where the proprietor of the earlier trade mark or other earlier right consents to the registration, and in such case the Registrar may register the mark under special circumstances under section 12. Explanation.-For the purposes of this section, earlier trade mark means- (a) a registered trade mark or an application under section 18 bearing an earlier date of filing or an international registration referred to in section 36E or convention application referred to in section 154 which has a date of application earlier than that of the trade mark in question, taking account, where appropriate, of the priorities claimed in respect of the Trade Marks; (b) a trade mark which, on the date of the application for registration of the trade mark in question, or where

NSOU PGCO-IV 117 appropriate, of the priority claimed in respect of the application, was entitled to protection as a well-known trade mark. (5) A trade mark

**95%**      **MATCHING BLOCK 212/322**      **SA** Arjun - IPR Chapter .docx (D142539833)

shall not be refused registration on the grounds specified in sub-sections (2) and (3), unless objection on any one or more of those grounds is raised in opposition proceedings by the proprietor of the earlier

trade mark. (6) The Registrar shall, while determining whether a trade mark is a well-known trade mark, take into account any fact which he considers relevant for determining a trade mark as a well-known trade mark including- (i) the knowledge or recognition of that trade mark in the relevant section of the public including knowledge in India obtained as a result of promotion of the trade mark; (ii) the duration, extent and geographical area of any use of that trade mark; (iii) the duration, extent and geographical area of any promotion of the trade mark, including advertising or publicity and presentation, at fairs or exhibition of the goods or services to which the trade mark applies; (iv) the duration and geographical area of any registration of or any application for registration of that trade mark under this Act to the extent that they reflect the use or recognition of the trade mark; (v) the record of successful enforcement of the rights in that trade mark, in particular the extent to which the trade mark has been recognised as a well-known trade mark by any court or Registrar under that record. The Registrar shall, while determining as to whether a trade mark is known or recognised in a relevant section of the public for the purposes of sub-section (6), take into account- (i) the number of actual or potential consumers of the goods or services; (ii) the number of persons involved in the channels of distribution of the goods or services;

**100% MATCHING BLOCK 211/322**

**W**

Subs. by Act 40 of 2010, s. 2, for clause (a) (w.e.f. 8-7-2013). (

iii) the business circles dealing with the goods or services, to which that trade mark applies. Where a trade mark has been determined to be well known in at least one relevant section of the public in India by any court or Registrar, the Registrar shall consider that trade mark as a well-known trade mark for registration under this Act. The Registrar shall not require as a condition, for determining whether a trade mark is a well-known trade mark, any of the following, namely:- (i) that the trade mark has been used in India; (ii) that the trade mark has been registered; (iii) that the application for registration of the trade mark has been filed in India; (iv) that the trade mark- (a) is well-known in; or (b) has been registered in; or (c) in respect of which an application for registration has been filed in, any jurisdiction other than India, or (v) that the trade mark is well-known to the public at large in India.

NSOU PGCO-IV 118 While considering an application for registration of a trade mark and opposition filed in respect thereof, the Registrar shall- (i) protect a well-known trade mark against the identical or similar Trade Marks; (ii) take into consideration the bad faith involved either of the applicant or the opponent affecting the right relating to the trade mark. Where a trade mark has been registered in good faith disclosing the material information to the Registrar or where right to a trade mark has been acquired through use in good faith before the commencement of this Act, then, nothing in this Act shall prejudice the validity of the registration of that trade mark or right to use that trade mark on the ground that such trade mark

**100% MATCHING BLOCK 213/322**

**SA** FINAL DRAFT SIDDHARTH KAMBOJ.docx (D40236165)

is identical with or similar to a well-known trade mark.

Registration in the case of honest concurrent use, etc.-In the case of honest concurrent use or of other special circumstances which in the opinion of the Registrar, make it proper so to do, he may permit the registration by more than one proprietor of the trade marks which are identical or similar (whether any such trade mark is already registered or not) in respect of the same or similar goods or services, subject to such conditions and limitations, if any, as the Registrar may think fit to impose. Prohibition of registration of names of chemical elements or international non-proprietary names-No word- (a) which is the commonly used and accepted name of any single chemical element or any single chemical compound (as distinguished from a mixture) in respect of a chemical substance or preparation, or (b) which is declared by the World Health Organisation and notified in the prescribed manner by the Registrar from time to time, as an international non-proprietary name or which is deceptively similar to such name, shall be registered as a trade mark and any such registration shall be deemed for the purpose of section 57 to be an entry made in the register without sufficient cause or an entry wrongly remaining on the register, as the circumstances may require. Use of names and representations of living persons or persons recently dead- Where an application is made for the registration of a trade mark which falsely suggests a connection with any living person, or a person whose death took place within twenty years prior to the date of application for registration of the trade mark, the Registrar may, before he proceeds with the application, require the applicant to furnish him with the consent in writing of such living person or, as the case may be, of the legal representative of the deceased person to the connection appearing on the trade mark, and may refuse to proceed with the application unless the applicant furnishes the Registrar with such consent.

NSOU PGCO-IV 119 Penalty Meaning of applying Trade Marks and trade descriptions-(1) A person shall be deemed to apply a trade mark or mark or trade description to goods or services who- (a) applies it to the goods themselves or uses it in relation to services; or (b) applies it to any package in or with which the goods are sold, or exposed for sale, or had in possession for sale or for any purpose of trade or manufacture; or (c) places, encloses or annexes any goods which are sold, or exposed for sale, or had in possession for sale or for any purpose of trade or manufacture, in or with any package or other thing to which a trade mark or mark or trade description has been applied; or (d) uses a trade mark or mark or trade description in any manner reasonably likely to lead to the belief that the goods or services in connection with which it is used are designated or described by that trade mark or mark or trade description; or (e) in relation to the goods or services uses a trade mark or trade description in any sign, advertisement, invoice, catalogue, business letter, business paper, price list or other commercial document and goods are delivered or services are rendered to a person in pursuance of a request or order made by reference to the trade mark or trade description as so used. (2) A trade mark or mark or trade description shall be deemed to be applied to goods whether it is woven in, impressed on, or otherwise worked into, or annexed or affixed to, the goods or to any package or other thing. Falsifying and falsely applying Trade Marks-(1) A person shall be deemed to falsify a Trade Mark who either, - (a) without the assent of the proprietor of the Trade Mark makes that trade mark or a deceptively similar mark; or (b) falsifies any genuine trade mark, whether by alteration, addition, effacement or otherwise. (2) A person shall be deemed to falsely apply to goods or services a trade mark who, without the assent of the proprietor of the trade mark, - (a) applies such trade mark or a deceptively similar mark to goods or services or any package containing goods; (b) uses any package bearing

Penalty for selling goods or providing services to which false trade mark or false trade description is applied-Any person who sells, lets for hire or exposes for sale, or hires or has in his possession for sale, goods or things, or provides or hires services, to which any false trade mark or false trade description is applied or which, being required under section 139 to have applied to them an indication of the country or place in which they were made or produced or the name and address of the manufacturer, or person for whom the goods are manufactured or services provided, as the case may be, are without the indications so required, shall, unless he proves,- (a) that, having taken all reasonable precautions against committing an offence against this section, he had at the time of commission of the alleged offence no reason to suspect the genuineness of the trade mark or trade description or that any offence had been committed in respect of the goods or services; or (b) that, on demand by or on behalf of the prosecutor, he gave all the information in his power with respect to the person from whom he obtained such goods or things or services; or (c) that otherwise NSOU PGCO-IV 121 he had acted innocently, be punishable with imprisonment for a term which shall not be less than six months but which may extend to three years and with fine which shall not be less than fifty thousand rupees but which may extend to two lakh rupees provided that the court may, for adequate and special reasons to be mentioned in the judgment, impose a sentence of imprisonment for a term of less than six months or a fine of less than fifty thousand rupees. 6.4

The Consumer Protection Act, 1986 The industrial revolution and the development in the international trade and commerce has led to the vast expansion of business and trade, as a result of which a variety of consumer goods have appeared in the market to cater to the needs of the consumers and a host of services have been made available to the consumers like insurance, transport, electricity, housing, entertainment, finance and banking. A well organised sector of manufacturers and traders with better knowledge of markets has come into existence, thereby affecting the relationship between the traders and the consumers making the principle of consumer sovereignty almost inapplicable. The advertisements of goods and services in television, newspapers and magazines influence the demand for the same by the consumers though there may be manufacturing defects or imperfections or short comings in the quality, quantity and the purity of the goods or there may be deficiency in the services rendered. In addition, the production of the same item by many firms has led the consumers, who have little time to make a selection, to think before they can purchase the best. For the welfare of the public, the glut of adulterated and sub-standard articles in the market has to be checked. In spite of various provisions providing protection to the consumer and providing for stringent action against adulterated and sub-standard articles in the different enactments like Code of Civil Procedure, 1908, the Indian Contract Act, 1872, the Sale of Goods Act, 1930, the Indian Penal Code, 1860, the Standards of Weights and Measures Act, 1976 and the Motor Vehicles Act, 1988, very little could be achieved in the field of Consumer Protection. Though the Monopolies and Restrictive Trade Practices Act, 1969 and the Prevention of Food Adulteration Act, 1954 have provided relief to the consumers yet it became necessary to protect the consumers from the exploitation and to save them from adulterated and sub-standard goods and services and to safe guard the interests of the consumers. In order to provide for better protection of the interests of the consumer the Consumer

NSOU PGCO-IV 122 Protection Bill, 1986 was introduced in the Lok Sabha on 5th December, 1986. The Consumer Protection Bill, 1986 seeks to provide for better protection of the interests of consumers and for the purpose, to make provision for the establishment of Consumer councils and other authorities for the settlement of consumer disputes and for matter connected therewith. It seeks, inter alia, to promote and protect the rights of consumers such as- (a) the right to be protected against marketing of goods which are hazardous to life and property; (b) the right to be informed about the quality, quantity, potency, purity, standard and price of goods to protect the consumer against unfair trade practices; (c) the right to be assured, wherever possible, access to an authority of goods at competitive prices; (d) the right to be heard and to be assured that consumers interests will receive due consideration at appropriate forums; (e) the right to seek redressal against unfair trade practices or unscrupulous exploitation of consumers; and (f) right to consumer education. These objects are sought to be promoted and protected by the Consumer Protection Council to be established at the Central and State level. To provide speedy and simple redressal to consumer disputes, quasi-judicial machinery is sought to be setup at the district, State and Central levels. These quasi-judicial bodies will observe the principles of natural justice and have been empowered to give relief of a specific nature and to award, wherever appropriate, compensation to consumers. Penalties for noncompliance of the orders given by the quasi-judicial bodies have also been provided. The Central Consumer Protection Council The Central Government shall, by notification, establish with effect from such date as it may specify in such notification, a Council to be known as the Central Consumer Protection Council (hereinafter referred to as the Central Council). The Central Council shall consist of the following members, namely:- (a) the Minister in charge of the consumer affairs in the Central Government, who shall be its Chairman, and (b) such number of other official or non-official members representing such interests as may be prescribed. Procedure for meetings of the Central Council: The Central Council shall meet as and when necessary, but at least one meeting of the Council shall be held every year. The Central Council shall meet at such time and place as the Chairman may think fit and shall observe such procedure in regard to the transaction of its business as may be prescribed.

NSOU PGCO-IV 123 Objects of the Central Council : The objects of the Central Council shall be to promote and protect the rights of the consumers such as,- (a) the right to be protected against the marketing of goods and services which are hazardous to life and property; (b) the right to be informed about the quality, quantity, potency, purity, standard and price of goods or services, as the case may be so as to protect the consumer against, unfair trade practices; (c) the right to be 'assured, wherever possible, access to a variety of goods and services at competitive prices; (d) the right to be heard and to be assured that consumer's interests will receive due consideration at appropriate Fora; (e) the right to seek redressal against unfair trade practices 3[or restrictive trade practices or unscrupulous exploitation of consumers; and (f) the right to consumer education. The State Consumer Protection Councils : (l) The State Government shall, by notification, establish with effect from such date as it may specify in such notification, a Council to be known as the Consumer Protection Council for (hereinafter referred to as the State Council). [(2) The State Council shall consist of the following members, namely : (a) the Minister in-charge of consumer affairs in the State Government who shall be its Chairman; (b) such number of other official or non-official members representing such interests as may 'be prescribed by the State Government. (c) such number of other official or non-official members, not exceeding ten, as may be nominated by the Central Government.) (3) The State Council shall meet as and when necessary but not less than two meetings shall be held every year.

Summary 7.5 Questions 7.6 Further Readings 7.0 Objectives After going through the unit, you will be able to understand the— Various objectives of Environment Protection Act. Various of provisions of pollution prevention laws. 7.1 Introduction India in its constitution did not contain any provision for Natural Environmental protection. However, since 42nd Amendment to the Constitution, the Government prescribed the protection of environment i.e. forests, lakes, rivers and wildlife as a fundamental duty of the citizens of the country. This amendment also added new Directive Principles of State Policy, (Article 48A) which directed

**96%**

**MATCHING BLOCK 234/322**

**SA**

dessertation.docx (D27473427)

the State to protect and improve the environment and to safeguard forests and

wildlife. This unit throws light on The Environmental Protection Act, 1986 and the various pollution prevention laws in India -

**81% MATCHING BLOCK 235/322 SA** dissertation.docx (D27473427)

The Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 133

NSOU PGCO-IV 134 7.2 The Environmental Protection Act, 1986

**83% MATCHING BLOCK 236/322 SA** dissertation.docx (D27473427)

Government of India enacted Environment Protection Act (EPA) (1986) under Article 253 of the Constitution

which came into force on 19th November, 1986 in response to Bhopal Disaster after Wildlife Protection Act, 1972;

**81% MATCHING BLOCK 237/322 SA** dissertation.docx (D27473427)

The Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981.

The Act as in the introduction reflects that it is "an Act to provide for the protection and improvement of environment and for matters connected therewith. Whereas the decisions were taken at the United Nations Conference on the Human Environment held at Stockholm in June, 1972, in which India participated, to take appropriate steps for the protection and improvement of human environment. Whereas it is considered necessary further to implement the decisions aforesaid

**96% MATCHING BLOCK 238/322 SA** dissertation.docx (D27473427)

in so far as they relate to the protection and improvement of environment and the prevention of hazards to human beings, other living creatures, plants and property".

Therefore, the Act takes its objective as

**67% MATCHING BLOCK 239/322 SA** dissertation.docx (D27473427)

to implement the decisions of the United Nations Conference on the Human Environment where attempt was taken to protect and improve human environment through preventing hazards to human beings, other living creatures, plants and property. The Act plays as an "umbrella" legislation designed to provide a framework for Central Government coordination of the activities of various central and state authorities.

Objectives of the Environmental Protection Act, 1986 The chief objectives of the Environmental Protection

**61% MATCHING BLOCK 240/322 SA** dissertation.docx (D27473427)

Act, 1986 are: To implement the decisions made at the United Nations Conference on Human Environment held in

Stockholm. To create government authority to regulate industry that can issue direct orders including closure orders. To coordinate activities of different agencies operating under the existing laws and to create an authority or authorities for environment protection. To provide punishment to those who endanger human environment, safety and health. To enact sustainable development is also one of the goals of the EPA, 1986. If the act is not armed with the power to ensure sustainable development, it will become a barren shell. To enact general law on environmental protection which could cover uncovered

NSOU PGCO-IV 135 gaps in the areas of major environmental hazards as the existing laws generally focused on specific types of pollution or on specific categories of hazardous substances and some major areas of environmental were not covered. To attain protection of the right to life under Article 21 of the Constitution. Definitions under the Environmental Protection Act, 1986 In this Act, unless the context otherwise requires,— (a) "environment" includes water, air and land and the inter- relationship which exists among and between water, air and land, and human beings, other living creatures, plants, micro-organism and property; (b) "environmental pollutant" means any solid, liquid or gaseous substance present in such concentration as may be, or tend to be, injurious to environment; (c) "environmental pollution" means the presence in the environment of any environmental pollutant; (d) "handling", in relation to any substance, means the manufacture, processing, treatment, package, storage, transportation, use, collection, destruction, conversion, offering for sale, transfer or the like of such substance; (e) "hazardous substance" means any substance or preparation which, by reason of its chemical or physico-chemical properties or handling, is liable to cause harm to human beings, other living creatures, plant, micro-organism, property or the environment; (f) "occupier", in relation to any factory or premises, means a person who has, control over the affairs of the factory or the premises and includes in relation to any substance, the person in possession of the substance; (g) "prescribed" means prescribed by rules made under this Act. (Source:[https://www.indiacode.nic.in/bitstream/123456789/4316/1/ep\\_act\\_1986.pdf](https://www.indiacode.nic.in/bitstream/123456789/4316/1/ep_act_1986.pdf)) Important Provisions under the Environmental Protection Act, 1986 In the domain of environmental protection, Environmental Protection Act, 1986 empowers the Centre to 'take all such measures as it deems necessary'. The Act can coordinate and execute nationwide programme and plan to further environmental

NSOU PGCO-IV 136 protection. With the provision of this Act, environmental quality standards, particularly those concerning the emission or discharge of environmental pollutants can be mandated. It would impose restrictions on the location of industries and side-by-side would ensure power of entry for examination, testing of equipment and analyse the sample of air, water, soil or any other substance from any place. The Act empowers any person, apart from authorised government officers, to file a complaint in a court regarding any contravention of the provisions of the Act. Box-7.1 shows the provision of Environmental Protection Act, 1986. Box-7.1 Provisions under Environmental Protection Act, 1986 Power of the Central government for measures to protect and improve the Environment: It is the power vested in the central government that they can take any reasonable and valid steps and measures for the purpose of the protection and improvement of the quality of the environment. These measures are taken for the prevention, control and abatement of environmental Pollution. Such measures may include measures with respect to all namely as follows. 1. Laying down the standards for the quality of the standards of the environment. 2. Coordination of actions which are obliged to the state officers and other authorities under any law. 3. Execution and proper planning of the worldwide national programme for the prevention, controlling and the abatement of environmental pollution. 4. Restrictions to be applied in any of the industries, process and any operation shall be carried out. 5. It is the power and the duty of the government to lay down the procedure to carry forward safeguards for the prevention of many inevitable accidents which may inculcate in more environmental pollution. 6. Proposal of remedies should be put forward for the protection and prevention of further incidents. 7. Duty and power to lay down the procedures and safeguards to handle the hazardous substance.

NSOU PGCO-IV 137 8. Examination of manufacturing processes should be done, materials, substances which are likely to cause environmental pollution. 9. Power to inspect at various premises, equipment, material and the substances and power to direct the authorities for the prevention and control of environmental pollution. 10. To collect the dissemination in the respect of information related to environmental pollution. 11. Preparation of the manuals, codes, guides which are considered suitable enough for controlling environmental pollution. 12. One of the most important tasks is to establish the laboratories. 13. Serving other matters which are necessary for the central government to deal for the effective implementation of the Environmental Protection Act, 1986. Under Section 3 of the following act, the central government has the power to authorize or constitute other authorities for the accurate implementation of powers and duties which are mentioned above. Section 3 of the Environmental Protection Act holds importance due to the fact of a better regulatory mechanism. In the case of Vellore Citizens' Welfare Forum v Union of India, the Supreme Court has directed the central government to constitute the 'authority' for the implementation of powers under section 3(3). Thus, the Court directed while keeping in the notice about the degrading quality of the environment that authorities should implement the 'precautionary principle' and 'pollution pay principle'. Power to give direction The central government in the exercise of powers designated by the Act can issue the directions in writing to any of the persons or any officer. They shall be bound to comply with these given directions. The powers to issue directions will include the power to direct which are as follows: (i) The direction of closure, prohibition or the regulation of any industry and its operational process.

NSOU PGCO-IV 138 (ii) Direction for the stoppage or regulation of the supply of electricity, including any other services. The Environment (Protection) Rules, 1986 The rules of Environment protection came into force on 19th November 1986 and these rules provide for the following: 1. The standards of quality of air, soil and water for various areas and purposes of environment. 2. The standard set up to know about the limits of the environmental pollutants. 3. Rules include the procedure and safeguards needed to handle the hazardous substance. 4. Restrictions and some prohibitions on handling the hazardous substances in different areas and premise. 5. The procedures and safeguards required for the prevention of accidents which may cause environmental pollution and also the remedies for it. 6. The prohibition and restrictions possessed on the location of industries in different areas. Prevention, Abatement and Control of Environmental Pollution Section 7 of the Environment Protection Act 1986 suggest that no person in the country shall be carrying any of the activity or operation in which there is a large emission of gases or other substances which may lead to excess environmental pollution. It provides certain standards that ought to be maintained in which it is a must that no person is allowed to damage the environment and if a person is found guilty for causing damage to the environment by polluting the pollution pay principle. He can be asked for the 'exemplary damages' if he is found guilty of damaging the environment. Section 8 provides that any person who is handling the hazardous substance needs to comply with the procedural safeguards. If the emission is to a very large extent or is apprehended through an accident, the person responsible for it is obliged to mitigate from that place in order to reduce the environmental pollution. He is also required to give intimation to the higher authorities regarding the same and for that one receipt of remedies shall be required to prevent or to mitigate the environmental pollution.

NSOU PGCO-IV 139 In subsection (1) it is also provided that if a person wilfully delays or obstructs the person designated by the central government, he will be charged guilty under this act. Procedure to be followed for the legal proceedings under the Environmental Protection Act The following procedure needs to be followed for the legal proceedings. 1. The notice must be delivered to the occupier or his agent and it must indicate the intention or the analysis of the issue of a particular case. 2. Samples of the extent of pollution to be checked must be taken in the presence of the occupier or the agent. 3. The sample should be sent directly to the laboratory without any delay in the process. 4. The sample should be kept in a container with a label on it and it should have the signature of both the occupier party and the person taking the sample. The Central Government must recognise at least one or two laboratories under this act and the report of analysis can be used as evidence of the facts stated in any procedure done under this act. Penalty for the Contravention of Rules and orders of this Act The most important goal of the environmental protection act is to provide for the punishment of the offence of endangering the human environment, safety and health. Section 15 states that any person who is not complying to the provisions stated in this act and its failure or contravention will make him liable and punishable as the following: 1. In terms of imprisonment up to the extension of the time span of five years. 2. With fine which may extend to the term of one lakh rupee. 3. Or the liable person has to deal with both of the punishments. 4. If the contravention of the offence that continues for one year, the punishment can extend up to seven years.

NSOU PGCO-IV 140 Section 24 states a provision that if any offence is punishable under the Environment Protection Act and also under other Act, then the person shall not be liable under the Environment Protection Act, 1986. Offences by the Companies and the Governmental Departments Section 16 of the Environmental Protection Act, 1986 explains the principle of vicarious liability of the In-charge person such as directors, Managers and secretary etc. for if the offence is committed by any company. He is not held liable for the following: 1. If the offence is committed without his knowledge. 2. If he has taken diligent care to prevent the commission of the offence. There cannot be a liability on his part if he proves the following. 1. That the offence was committed without his knowledge. 2. If he has exercised the diligent care to prevent the commission of any offence. Who can make a complaint? A complaint can be filed by two parties: 1. The Central Government or any authority associated with the Government. 2. Any person who has given the notice of complaint within the term of sixty days of the alleged offence or has the intention to make the complaint to Governmental authority or the Central Government. Source:<https://blog.ipleaders.in/environment-protection-act-1986/> Though many other Acts related to Environment have been introduced to the Indian legislature but the Environment Protection Act, 1986 has been drafted to cover all the aspects and problems of environment. 7.3 Various pollution prevention laws in India In the following two sub-sections deal with the two important enactments like

**81% MATCHING BLOCK 241/322 SA** dissertation.docx (D27473427)

The Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981.

The Water (Prevention and Control of Pollution) Act, 1974 The Water (Prevention and Control of Pollution) Act, 1974

was applied in the first instance to the whole of the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal and the Union Territories; and it shall apply to such other State which adopts this Act by resolution passed in that behalf under clause (1) of article 252 of the Constitution. It shall come into force, at once in the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal and in the Union territories, and in any other State which adopts this Act under clause (1) of article 252 of the Constitution on the date of such adoption and any reference in this Act to the commencement of this Act shall, in relation to any State or Union territory, mean the date on which this Act comes into force in such State or Union territory. Objectives: The Water (Prevention and Control of Pollution) Act, 1974 was established to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith. (<http://www.pcbassam.org/rules/WaterAct.pdf>) Definitions: In this Act, unless the context otherwise requires, - (a) "Board" means the Central Board or a State Board; (b) "Central Board" means the Central Pollution Control Board Constituted under section 3;] (c) "member" means a member of a Board and includes the chairman thereof; (d) "occupier", in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance;] (dd) "outlet" includes any conduit pipe or channel, open or closed carrying sewage or trade effluent or any other holding arrangement which causes or is likely to cause, pollution; NSOU PGCO-IV 142 (e) "

**87% MATCHING BLOCK 243/322 SA** dissertation.docx (D27473427)

pollution" means such contamination of water or such alteration of the physical, chemical or biological properties of water or such discharge of any sewage or trade effluent or of any other liquid, gaseous or solid substance into water (whether directly or indirectly) as may, or is likely to, create

a

**95% MATCHING BLOCK 245/322 SA** dissertation.docx (D27473427)

nuisance or render such water harmful or injurious to public health or safety, or to domestic, commercial, industrial, agricultural or other legitimate uses, or to the life and health of animals or plants or of aquatic

organisms; (f) "prescribed" means prescribed by rules made under this Act by the Central Government or, as the case may be, the State Government; (g) "sewage effluent" means affluent from any sewerage system or sewage disposal works and includes sullage from open drains; 1 [(gg) "sewer" means any conduit pipe or channel, open or closed, carrying sewage or trade effluent;] (h) "State Board" means a State Pollution Control Board constituted under section 4]; (i) "State Government" in relation to a Union territory means the Administrator thereof appointed under article 239 of the Constitution; (j) "stream" includes- (i) river; (ii) water course (whether flowing or for the time being dry); (iii) inland water (whether natural or artificial); (iv) sub-terranean waters; (v) sea or tidal waters to such extent or, as the case may be, to

**68% MATCHING BLOCK 244/322 W**

such point as the State Government may, by notification in the Official Gazette, specify in this

behalf; (k) "trade effluent" includes any liquid, gaseous

**94% MATCHING BLOCK 246/322 SA** dissertation.docx (D27473427)

or solid substance which is discharged from any premises used for carrying on any 3 [Industry, operation or process, or treatment and disposal system], other than domestic sewage. (

<http://www.pcbassam.org/rules/WaterAct.pdf>) Central Board and its functions as per the Water (Prevention and Control of Pollution) Act, 1974 The Central Board shall consist of the following members, namely:- (a) a full-time chairman, being a person having special knowledge or practical experience in respect of matters relating to environmental protection or a person having knowledge and experience in administering institutions dealing with the matters aforesaid, to be nominated by the Central Government; (b) such number of officials, not exceeding NSOU PGCO-IV 143 five] to be nominated by the Central Government to represent that Government; (c) such number of persons, not exceeding five to be nominated by the Central Government, from amongst the members of the State Boards, of whom not exceeding two shall be from those referred to in clause (c) of sub-section (2) of section 4; (d) such number of non-officials, not exceeding three, to be nominated by the Central Government, to represent the interests of agriculture, fishery or industry or trade or any other interest which, in the opinion of the Central Government, ought to be represented; (e) two persons to represent the companies or corporations owned, controlled or managed by the Central Government, to be nominated by that Government; (f) a full-time member- secretary, possessing qualifications, knowledge and experience of scientific, engineering or management aspects of pollution control, to be appointed by the Central Government. The Central Board shall be a body corporate with

**87% MATCHING BLOCK 248/322 SA** Abhishek Pandey @ 9.7.2021.docx (D110295562)

the name aforesaid having perpetual succession and a common seal with power, subject to the provisions of this Act, to acquire, hold and dispose of property and to contract, and may, by the aforesaid name, sue or be sued.

Functions of Central Board: (1) Subject to the provisions of this Act, the main function of the Central Board shall be to promote cleanliness of streams and wells in different areas of the States. (2)

**68%**

**MATCHING BLOCK 247/322**

**W**

In particular and without prejudice to the generality of the foregoing function, the Central Board may perform all or any of the following functions, namely:— (

a) advise the Central Government on any matter concerning the prevention and control of water pollution; (b) co-ordinate the activities of the State Boards and resolve disputes among them; (c) provide technical assistance and guidance to the State Boards, carry out and sponsor investigations and research relating to problems of water pollution and prevention, control or abatement of water pollution; (d) plan and organise the training of persons engaged or to be engaged in programmes for the prevention, control or abatement of water pollution on such terms and conditions as the Central Board may specify; (e) organise through mass media a comprehensive programme regarding the NSOU PGCO-IV 144 prevention and control of water pollution [(ee) perform such of the functions of any State Board as may be specified in an order made under sub-section (2) of section 18]; (f) collect, compile and publish technical and statistical data relating to water pollution and the measures devised for its effective prevention and control and prepare manuals, codes or guides relating to treatment and disposal of sewage and trade effluents and disseminate information connected therewith; (g) lay down, modify or annul, in consultation with the State Government concerned, the standards for a stream or well: Provided that different standards may be laid down for the same stream or well or for different streams or wells, having regard to the quality of water, flow characteristics of the stream or well and the nature of the use of the water in such stream or well or streams or wells; 1 Ins. by Act 53 of 1988, s. 8. [Act 6 of 1974] (h) plan and cause to be executed a nation-wide programme for the prevention, control or abatement of water pollution; (i) perform such other functions as may be prescribed. (3) The Board may establish

of Water Pollution constituted under section 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), shall, without prejudice to the

exercise and performance of its powers and functions under this Act, exercise the powers and perform the functions of the Central Board for the Prevention and Control of Air Pollution under this Act. Function of Central Board (1) Subject to the provisions of this Act and without prejudice to the 9 <http://www.pcbassam.org/rules/WaterAct.pdf> NSOU PGCO-IV 150 performance, of its functions under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), the main functions of the Central Board shall be to improve the quality of air and to prevent, control or abate air pollution in the country. (2)

**81% MATCHING BLOCK 262/322****W**

In particular and without prejudice to the generality of the foregoing functions, the Central Board may- (

a) advise the Central Government on any matter concerning the improvement of the quality of air and the prevention, control or abatement of air pollution; (b) plan and cause to be executed a nation-wide programme for the prevention, control or abatement of air pollution; (c) co- ordinate the activities of the State and resolve disputes among them; (d) provide technical assistance and guidance to the State Boards, carry out and sponsor investigations and research relating to problems of air pollution and

**62% MATCHING BLOCK 265/322****SA** dissertation.docx (D27473427)

prevention, control or abatement of air pollution; (e) advise the State Government on any matter concerning the prevention, control or abatement of air pollution; (f) collect and disseminate information relating to

air pollution; (g) collaborate with the Central Board in organising the training of persons engaged or to be engaged in programmes relating to prevention, control or abatement of air pollution and to organise mass-education programme relating thereto; (h) inspect, at all reasonable times, any control equipment, industrial plant or manufacturing process and to give, by order, such directions to such persons as it may consider necessary to take steps for the prevention, control or abatement of air pollution; (i) inspect air pollution control areas at such intervals as it may think necessary, assess the quality of air therein and take steps for the prevention, control or abatement of air pollution in such areas; (j) lay down, in consultation with the Central Board in regard to the standards for the quality of air laid down by the Central Board, standards for emission of air pollutants into the atmosphere from industrial plants and automobiles or for the discharge of any air pollutant into the atmosphere from any other source whatsoever not being a ship or an aircraft provided that different standards for emission may be laid down under this clause for different industrial plants having regard to the quantity and composition of emission of air pollutants into the atmosphere from such industrial plants; (k) advise the State Government with respect to the suitability of any premises or location for carrying on any industry which is likely to cause air pollution; (l) perform such other functions as may be prescribed or as may, from time to time, be NSOU PGCO-IV 151 entrusted to it by the Central Board or the State Government; (m) to do such other things and to perform such other acts as it may think necessary for the proper discharge of its functions and generally for the purpose of carrying into effect the purposes of this Act. State Board and its functions as per the Air (Prevention and Control of Pollution) Act, 1981 A State Board may establish or recognise a laboratory or laboratories to perform its functions under this section efficiently. - No State Board shall be constituted for a Union territory and in relation to a Union territory, the Central Board shall exercise the powers and perform the functions of a State Board under this Act for that Union territory provided that in relation to any Union territory the Central Board may delegate all or any of its power and functions under this section to such person or body of persons as the Central Government may specify. In any State in which the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), is in force and the State Government has constituted for that State, a State Board for the Prevention and Control of Water Pollution under section 4 of that Act, such State Board shall be deemed to be the State Board for the Prevention and Control of Air Pollution constituted under section 5 of this Act and accordingly that State Board for the Prevention and Control of Water Pollution shall, without prejudice to the exercise and performance of its powers and functions under that Act, exercise the powers and perform the functions of the State Board for the Prevention and Control of Air Pollution under this Act. Constitution of State Board - (1) In any State in which the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), is not in force, or that Act is in force but the State Government has not constituted a State Board for the Prevention and Control of Water Pollution under that Act, the State Government shall, with effect from such date as it may, by notification in the Official Gazette, appoint, constitute a State Board for the Prevention and Control of Air Pollution under such name as may be specified in the notification, to exercise the powers conferred on, and perform the functions assigned to, that Board under this Act. (2) A State Board constituted under this Act shall consist of the following members, namely:- (a) a Chairman, being a person, having a person having special knowledge

NSOU PGCO-IV 152 or practical experience in respect of matters relating to environmental protection, to be nominated by the State Government provided that the Chairman may be either whole-time or part-time as the State Government may think fit; (b) such number of officials, not exceeding five, as the State Government may think fit, to be nominated by the State Government to represent that Government; (c) such number of persons, not exceeding five, as the State Government may think fit, to be nominated by the State Government from amongst the members of the local authorities functioning within the State; (d) such number of non- officials, not exceeding three, as the State Government may think fit, to be nominated by the State Government to represent the interest of agriculture, fishery or industry or trade or labour or any other interest, which in the opinion of that government, ought to be represented; (e) two persons to represent the companies or corporations owned, controlled or managed by the State Government, to be nominated by that Government; (f) a full-time member-secretary having such qualifications knowledge and experience of scientific, engineering or management aspects of pollution control as may be prescribed, to be appointed by the State Government. Provided that the State Government shall ensure that not less than two of the members are persons having special knowledge or practical experience in, respect of matters relating to the improvement of the quality of air or the prevention, control or abatement of air pollution. (3) Every State Board constituted under this Act shall be a body corporate with the name specified by the State Government in the notification issued under sub-section (1),

The Government of India enacted the Environment Protection Act of 1986 under Article 253 of the Constitution

which came into force on 19 November 1986 in response to Bhopal Disaster after Wildlife Protection Act, 1972;

**81%****MATCHING BLOCK 272/322****SA**

dessertation.docx (D27473427)

The Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981.

The Act as in the introduction reflects that it is "an Act to provide for the protection and improvement of environment and for matters connected therewith: Whereas the decisions were taken at the United Nations Conference on the Human Environment held at Stockholm in June, 1972, in which India participated, to take appropriate steps for the protection and improvement of human environment. Whereas it is considered necessary further to implement the decisions aforesaid

**96%****MATCHING BLOCK 274/322****SA**

dessertation.docx (D27473427)

in so far as they relate to the protection and improvement of environment and the prevention of hazards to human beings, other living creatures, plants and property". The

Water (Prevention and Control of Pollution) Act, 1974 was established to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith. Air (Prevention and Control of Pollution) Act, 1981 extends to the whole of India and

**100%****MATCHING BLOCK 273/322****W**

shall come into force on such date<sup>1</sup> as the Central Government may, by notification in the Official Gazette, appoint.

An Act to provide for the prevention, control and abatement of air pollution, for the establishment, with a view to carrying out the aforesaid purposes, of Boards, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith. 10 <http://www.pcbassam.org/rules/WaterAct.pdf>

Study Material IB - Jagadeesh Sir.docx (D141315455)

Objectives After going through the unit, you will be able to understand the— Concept of International business

environment Meaning and benefits of MNCs Functions of WTO Concept of SEZ Need of foreign collaboration 155  
NSOU PGCO-IV 156 8.1 Introduction International Business (IB) is a multidimensional concept comprising of various risks and issues like exchange risks, political risks, cultural differences, legal and taxation issues, economic, socio-cultural and technological environmental factors. It is the business environment surrounding of which the international companies run their businesses. It connects only with those big enterprises having operating units outside their own country. It also relates with the institutional arrangements of managerial direction of economic activity in abroad for example joint ventures with locally owned business or with foreign governments. This unit throws light on the concept and importance of International Business, concept and reason of Globalisation, concepts, characteristics, benefits and dangers of Multinational Companies (MNCs), origin and function of World trade Organisation (WTO), Trading blocs, Government policy on Foreign Investment and Foreign Collaboration and Indian Experience. 8.2 International Business Environment - Concept and Importance IB includes any type of business activity that crosses national borders. Sometimes, IB is synonymously used for Foreign Business Operations (domestic operations within a foreign country) and Comparative Business (similarities and differences among countries) but these two fields do not put their interest on searching the facts related to the cross national boundaries activities. For example, the vital question of potential conflicts between the nation-state and the multinational firm, which receives major attention in IB, is not like to be centred or even peripheral in foreign operations and comparative business. IB relates massive in scale and deals with exercising a major influence over political, economic and social from many types of comparative business studies and from knowledge of many aspects of foreign business operations. International competition may not be the matter of choice when survival is at stake. However, only firms with previously substantial market share and international experience could have stronger economies, better standard of living and steadier growth. As per Operational for Economic Co-Operation and Development (OECD), if a country deals with higher scale of international trade practices (Germany, Japan, Switzerland etc.), it can enjoy boosted standard of living of its countrymen, while the countries having lower ratios of international trade (Greece, Spain, Italy etc.) are facing some serious economic challenges and problems. Besides, exporting opens new markets for a company to increase its sales. Therefore, a company having a good

NSOU PGCO-IV 157 export market would be in a better position and the other companies supplying materials to the exporters also can get the flavour. Companies doing export can create job opportunities 2% to 4% higher than other companies do not involve in any export business (<https://bizfluent.com/about-6656701-trade-agreements-important-.html>). In the same line, the imported products result lower price and expands the choices for the customers of better quality products which would force the local companies to increase product lines at lower price and better quality. IB frames better international relationship among different countries by removing rivalry and promoting peace and harmony with confidence and good faith. For example, IB makes good trade relationship between United States and China even though having significant political differences. Their relationship evolved and changed a lot over the past decades. Not too long ago, it was characterized by mutual tolerance, intensifying diplomacy and bilateral economic relationships. A policy of a free international trade environment when on the one hand strengthens the economies of all countries with imports and exports at lower price, better quality of products offering higher standard of living with employment generation, on the other hand, causes for loss of some jobs. Therefore, it has a stronger synergistic effect on the creation of new jobs and improved economic conditions.

8.3 Globalisation - Concept and Reason Concepts: Globalisation is referred to as the integration of countries into world economy or one global market involving removal of all trade barriers between countries. It is the shift towards a more integrated and interdependent world economy with two main components - the globalization of market and the globalization of production. 11 Further, as per International Monetary Fund, Globalisation is

<b>73%</b>	<b>MATCHING BLOCK 277/322</b>	<b>SA</b>	Sambalpur_MBA_SEM_1_Business Environment_Merge ... (D156214879)
the growing economic interdependence of countries world-wide through increasing volume and variety of cross broader transaction			

of

<b>100%</b>	<b>MATCHING BLOCK 278/322</b>	<b>SA</b>	BA7401_International_Business_Management.pdf (D154411848)
goods and services and of international capital flows and also through the more rapid and widespread diffusion of technology.			

Therefore, it is a process of internationalization of products, markets, technologies, capital, human resources, information and culture and characterised by growing interdependence between the countries of the world with free flow of goods, services, capital technology and labour among different countries e.g. movement of semi-conductor industry to South Korea and Taiwan; movement of knowledge work and services to India etc. 11 Hill, C. (1999). International Business - Competing in the Global Market Place, McGraw Hill, Boston.

NSOU PGCO-IV 158 Globalisation deals with five stages of internationalization (a) domestic companies export to foreign countries through their dealers/distributors, (b) domestic companies may export to foreign countries directly where an export department may be established for those purpose, (c) domestic company establishes production and marketing operations in key foreign countries, (d) domestic companies may set up a full-fledged company in the foreign country with all the facilities, (e) domestic companies become true transnational companies by serving the needs of foreign customers just like the host country's company serves. Therefore, to smoothen the process of Globalisation, there should be removal of quotas and tariffs; liberalization of Government rules and regulations; freedom to business and industry; removal of bureaucratic formalities and procedures; adequate infrastructure; incentives for research and development; administrative and government support to industry; development of money market and capital market; competition on the basis of quality, price, delivery and customer services. Globalisation contains its features like (i) expansion of business operation throughout the world, (ii) abolition of differences between domestic and foreign market leading to integration of individual countries of the world into one global market, (iii) creating interdependency between nations, (iv) buying and selling of goods and services from/to any country in the world, (v) development of products based on the world market standard, (vi) availability of manufacturing and marketing facilities at anywhere in the world, (vii) global orientation of corporate strategies, organizational structure and managerial practices. In the effort of adopting Globalisation, the best mode of process should be considered from the options like exporting, licensing and franchising, contract manufacturing, management contract, turnkey contract, third country location, joint venture and direct investment. Exporting is the simplest and traditional mode of entering foreign market. Domestic company may export its products directly or through intermediaries in foreign market. But it may not be the best alternative due to import barrier in foreign markets. Licensing and franchising is the easy way to get entered into foreign market because little involvement of efforts and commitments of resources are involved and in this context, a firm in one country permits a firm in another country to use its patents, trademarks, technology, copyright, technical know-how and marketing skill against royalty or fee. In contract manufacturing, the company enters into a contract with a firm in the foreign market to manufacture or assemble the product. The company, however, retains the responsibility of marketing the product. In management contract, a company contracts with a firm or government in a foreign country to manage the entire project or undertaking for a specified period. Under

NSOU PGCO-IV 159 turnkey contract, the company contracts with a foreign firm to design and build an entire operation. In third country location, a company may have to enter the foreign market from a third country when commercial transactions between two countries are not possible. Joint Venture in mode of Globalisation can be possible when local firm and foreign firm share ownership and management in a joint venture. The strategy which provides adomestic company complete control over production and quality with a fully owned manufacturing facilities abroad, can be considered as direct investment. Reasons: Globalisation offers several opportunities which prove its importance in international market. It attracts, wider market, rapid industrialization, greater specialization, competitive gains, higher production, price stabilization, increase in employment and income, higher standard of living, international economic cooperation and world peace. Globalisation exhibits larger markets to domestic firms to export their surplus output there. It helps to make free flow of capital and technology between two countries with which the developing countries would be benefited to get all production amenities from developed countries and thus can boost up industrialization with job opportunities. This ultimately encourages better welfare facilities for the countrymen like education, health, sanitation etc. Moreover, Globalisation assists a company to flourish in a specific sector having competitive or comparative advantage as it increases competition for domestic firms through imports and Multinational Corporation (MNCs). Additionally, it leads to spread up of manufacturing facilities in different countries and let the countries enjoy free trade and international competition to equalize price levels in international markets with economic co-operation (trade agreement, investment treaties, standardisation of commercial procedures, avoidance of double taxation etc.). Furthermore, it promotes cultural exchange and mutual understanding among different nations. But Globalisation sometimes involve certain risks, threats and costs like interdependence between nations of the world, threat to domestic industries, unemployment, drain of basic resources, alien culture to local values etc. Therefore, the ability of a country to maximize these gains depends on country's size, macroeconomic policy, infrastructure, technology, socio-economic institutions, quality of human resources, good governance in public services as well as in the corporate sector.

NSOU PGCO-IV 160 8.4 Multinational Corporations Multinational Corporation (MNC) accounts for a significant share of the world's investment, production, employment and trade. The next two sub-sections deal with concept, characteristics, benefits and danger of these. 8.4.1 Multinational Corporation - Concept and Characteristics As per United Nations, Multinational Corporation is an

**100% MATCHING BLOCK 279/322**

**SA** COM 332 Stretagic Management - II.pdf (D165094087)

enterprise which controls assets - factories, mines, sales offices and the like - in two or more countries.

International Labour Organisation (ILO) opined that

**75% MATCHING BLOCK 280/322**

**SA** M21CM06DC.pdf (D155282201)

the essential nature of the MNC lies in the fact that its managerial headquarters (

called parent company) are

**77% MATCHING BLOCK 281/322**

**SA** M21CM06DC.pdf (D155282201)

located in one country (known as home country) while the enterprise carries out operations in a number of other countries (known as host countries)

as well. Therefore, MNC

**100% MATCHING BLOCK 282/322**

**SA** 023E1110,119E1110,193E1110-Business Environmen ... (D165201747)

is an enterprise which carries on business operations in more than one

company. It extends its investments, manufacturing, marketing activities in several countries through a network of branches and subsidiaries known as foreign affiliates. In MNCs, decisions are decentralized where it operates like domestic company of the country and responds to the specific needs of each country's market. Here, the term Multinational Corporation is interchangeably used with the terms International Corporation (has a domestic country orientation in so far as the overseas operations are treated as appendages to the headquarters), Global Corporation (produces in home country/globally and market globally/at home), Transactional Corporation (invests, produces, markets, operates, across the world for global competitiveness). MNC is found under three models - Centralised, Regional and Multinational. Under Centralised

**90% MATCHING BLOCK 283/322**

**SA** Business Environment M.Com II semester.docx (D146772726)

model, companies put up an executive headquarters in their home country and build various manufacturing plants and production facilities in other countries

with which tariffs and import quota can be avoided and lower production costs can be enjoyed. Under Regional Model, the

**76%**

**MATCHING BLOCK 284/322**

**SA**

Business Environment M.Com II semester.docx  
(D146772726)

company keeps its headquarters in one country that supervises a collection of offices located in other countries. It includes subsidiaries and affiliates all report to headquarters. Under Multinational Model, a parent company operates in the home country and puts up subsidiaries in different countries where the subsidiaries and affiliates are more independent in their operations.

Characteristics: A Multinational Corporation is characterized by decentralized federation of assets NSOU PGCO-IV 161 and responsibilities (Bartlett and Ghoshal).

**85%**

**MATCHING BLOCK 285/322**

**SA**

M21CM06DC.pdf (D155282201)

Firms that participate in international business, however, large they may be solely be exporting or by hunting technology are not multinational

enterprises.

Therefore, MNC finds its characteristics as large size, world-wide operation, centralised ownership and control, sophisticated technology, professional management, international market, high brand equity etc. Basically, MNC has very high assets and turnover where it has to own a huge amount of physical and financial assets with high target and substantial profitability. Besides, MNC maintains network of branches with production and marketing operations in different countries, while the source of command is found in one country (home country). MNC adopts sophisticated capital-intensive technology in production and marketing activities to achieve substantial growth which should be continuous by conducting merger and acquisition. MNCs, therefore, use to spend a great deal of money on marketing and advertising to sale out products and brands which are internationally standardized and made by top quality managers. There are various factors which help the MNC to reach at its goal like market expansion, market superiorities, financial superiorities, technical superiorities etc.

**52%**

**MATCHING BLOCK 286/322**

**SA**

M21CM06DC.pdf (D155282201)

Companies in developed economies would expand their operations overseas to exploit the market abroad. MNC would also enjoy marketing superiorities over the

domestic market due to (a)

**73%**

**MATCHING BLOCK 287/322**

**SA**

M21CM06DC.pdf (D155282201)

availability of more reliable and up-to-date information about market conditions, (b) popular brands and image

and so reputation in the market, (c) more effective sales promotion technique, (d) wide distribution network, (e) transportation and warehousing facilities etc. For MNC, it would be very beneficial to set up business in countries having target consumer market. MNC is also financially superior to the domestic companies for having

**87%**

**MATCHING BLOCK 291/322**

**SA**

M21CM06DC.pdf (D155282201)

huge financial resources, more effective and economic utilization of funds through transfer of excess funds from

other countries, easy access and mobilisation of financial capital market and different types of resources etc. Moreover, due to having strong research and development departments, foreign exchange reserve to import raw material, capital equipment and technology, MNC

**100%**

**MATCHING BLOCK 292/322**

**SA**

M21CM06DC.pdf (D155282201)

can invent and innovate new products and processes more easily and frequently

than the domestic companies. 8.4.2 Multinational Corporation - Benefits and Danger MNC though ensures benefits to both home and host country where it incorporates and works, some disadvantageous facts are also attached with its operations to both home and host countries. Table - 8.1 shows the benefits and danger of MNC as given to home and host country.

NSOU PGCO-IV 162 Table - 8.1 Benefits and danger of MNCs to Host and Home countries Benefits of MNC Host Country Investment, employment and income would be increased Industrialisation and economic development are ensured for having growth of ancillary and service industries. Advanced technology to the host country is available. Sophisticated management technique in business firms is found. Capability of innovation and invention is increased. Competition and breaking of monopoly is found. National economy is integrated economically and culturally. Danger of MNC Host Country Capital intensive technique may not be appropriate to developing countries, Economic and political sovereignty of developing countries may be undermined. Acquiring monopoly over the market would hamper the existence of domestic firms. Lower employability of domestic people for employing of foreign staff. Deployment of natural and non-renewable resources due to indiscriminate use. Repatriation of profit, dividend and royalty reduces Balance of Payment. Distortion of consumption pattern, undermining local culture and promoting conspicuous consumption. Ignorance of high priorities by investing in high profit sector. Source: Gupta, C.B. (2019), Business Environment, Sultan Chand and Sons, New Delhi. Home Country World-wide marketing of product in home country is possible. Increase in employ- ment opportunity is enjoyed. Increasing industrial activities is found. Improving Balance of Payment position through inflows of dividend and interest is present. Home Country Disturbing proper structure of Balance of Payment due to trans- fer of capital. Loss of employment due to location of manufacturing and marketing facilities in abroad. Underdeveloped indus- trial and economic ac- tivities. Distorting home country's culture. NSOU PGCO-IV 163 MNC offers (i) inflow of capital, (ii) reduces government aid dependencies in the developing world, (iii) allows countries to purchase imports, (iv) provides local employment, (v) improves the local infrastructure, (vi) diversifies local economies, (vii) creates consistent consumer experiences, (viii) encourages more innovation, (ix) enforces minimum quality standards and (x) increases cultural awareness. MNC plays a leading role of capital inflow to the developing world with

**88%**

**MATCHING BLOCK 288/322**

**W**

building factories, investing in training centres and supporting educational facilities with intention of improving their productive capacities.

It ensures

**45%**

**MATCHING BLOCK 289/322**

**W**

more access to the import/export market, better goods, more opportunities and higher wage standard to build up standard of living for

the country-men. MNC puts special importance on infrastructural and educational development for the country where it operates and countrymen with whom the operation would be carried on. MNC ensures more variety in local production level depending mainly on agriculture. It would thus reduce reliance on commodities having volatile prices. MNC is incredibly diverse giving it an added strength. It actually considers the necessity of local market thinking to include new perspectives. Nevertheless, MNC (a) creates higher environmental loss, (b) does not always leave profits local, (c) imports skilled labour and thus destroys employment generation from local community, (d) supports 'sweatshop' labour (

**92% MATCHING BLOCK 290/322**

**W**

weak labour conditions allow multinationals to lower wages to the greatest extent possible to pad their own profit margins), (

f) creates one-way raw material resource consumption, (g) encourages political corruption, (h) builds legal monopoly and (i) puts other companies out of business. 12 8.5 World Trade Organisation (WTO) - Origin and Function Origin: The

successor to General Agreement on Tariffs and Trade (GATT), The World Trade Organisation

was established on 1st January, 1995 with its Head Office located at Geneva, Switzerland. It is the embodiment of the Uruguay Round. The day-to-day work of WTO is entrusted to the General Council. The Ministerial Conference is the highest authority of WTO consisting of all representative member nations. It meets almost every three years and is empowered to take decisions on all matters under the multilateral trade agreements. India is one of the founder members among 146 members of WTO. 12 <https://vittana.org/19-advantages-and-disadvantages-of-multinational-corporations>

NSOU PGCO-IV 164 Functions of WTO WTO offers (i) raising of standard of living, (ii) ensuring full employment, (iii) expanding production, trade in goods and services, (iv) optimizing use of world's resources and (v) enjoying sustainable development. Additionally, it performs (a) administering and implementing the multilateral trade agreement, (b) providing a forum for multilateral trade negotiations among the members, (e) overseeing national trade policies, (f) facilitating settlement of trade disputes among members, (g) cooperating with other international institutions involved in global policy making. 8.5.1 Difference between GATT and WTO

**71% MATCHING BLOCK 294/322**

**SA**

International Trade-Material I semester.docx (D146751176)

The General Agreement on Tariffs and Trade (GATT) (1947) was formed as a result of

Bretton Woods Agreement as an international trade treaty which was signed by 23 nations. It was enacted to bolster the economic recovery which aimed at expanding world trade, by abolishing those trade barriers, such as reducing tariff, quota, subsidies etc. GATT took three main provisions (a) all member nations are considered as equal about tariff, (b) restrictions on the number of import and export were prohibited subject to some exceptions, (c) provision to encourage trade of developing countries. GATT remained till 1994, after which it was replaced by the World Trade Organisation (WTO), the sole international body concerned with the provisions of cross-country trade. Basically, there is an agreement called WTO agreement, which is duly signed and negotiated by member nations of the world and confirmed in their parliaments. WTO is a place, where the governments of member countries attempt to resolve their trade problems, encountered by them during the trade with other countries. It aimed at liberalizing trade, for the benefit of all the nations, but it also imposes certain barriers, such as to provide protection to consumers or stop the spreading a disease.

**97% MATCHING BLOCK 295/322**

**SA**

M21CM06DC.pdf (D155282201)

GATT refers to an international multilateral treaty, signed by 23 nations to promote international trade and remove cross-country trade barriers. On the contrary, WTO is a global body which deals with the rules of international trade between member nations. While GATT is a simple agreement, there is no institutional existence, but have a small secretariat. Conversely, WTO is a permanent institution along with a secretariat.

NSOU PGCO-IV 165

**MATCHING BLOCK 296/322**

**SA**

M21CM06DC.pdf (D155282201)

The participating nations are called as contracting parties in GATT, whereas for WTO, they are called as member nations. GATT commitments are provisional in nature which the government can make a choice to treat it as a permanent commitment or not after 47 years. On the other hand, WTO commitments are permanent, since the very beginning. The scope of WTO is wider than that of

GATT

**97%**

**MATCHING BLOCK 297/322**

**SA**

M21CM06DC.pdf (D155282201)

in the sense that the rules of GATT are applied only when the trade is made in goods. As opposed to, WTO rules are applicable to services and aspects of intellectual property along with the goods. GATT agreement is primarily multilateral, while plurilateral agreement is added to it later. In contrast, WTO agreements are purely multilateral. The domestic legislation is allowed to continue in GATT, while the same is not possible in the case of WTO. The dispute settlement system of GATT was slower, less automatic and susceptible to blockages. Unlike,

the dispute settlement system of WTO is very effective. 8.5.2 WTO Agreements Box - 8.1 shows the WTO Agreement

WTO Agreements comprise the Agreement Establishing the World Trade Organization and its Annexes. Annexes 1A to 3 are integral parts of the Agreement and are binding on all members of the WTO ("single undertaking" mentioned earlier). The members are 153 countries as of February 2010. In contrast, the agreements included in Annex 4 are independent agreements and, therefore, would give binding only on the members that have accepted them. Below, we briefly describe each agreement of the WTO. This is an agreement for implementing the results of the Uruguay Round and establishing the World Trade Organization, which will be a framework for future multilateral trade negotiations. The Agreement comprises general provisions on the WTO's organization, membership, decision-making, etc. The General Agreement consists of: (i) the provisions of GATT, 1947 (including those amended by the terms of legal instruments that have taken effect before the entry into force of the WTO Agreement); (ii) legal instruments, such as NSOU PGCO-IV 166 protocols and certifications relating to tariff concessions, protocols of accession, etc., that have taken effect under the GATT 1947 before the entry into force of the WTO Agreement; and (iii) the six understandings that are deemed to be an integral part of the GATT 1994, such as Article II:1(b) and Article XVII.

Agreement on Agriculture: The Agreement on Agriculture includes specific and binding commitments made by WTO Member governments in the three areas of market access, domestic support and export subsidization for strengthening GATT disciplines and improving agricultural trade. These commitments were implemented over a six-year period. The Agreement also includes provisions on the implementation of these commitments.

Agreement on the Application of Sanitary and Phytosanitary (SPS) Measures: This agreement establishes multilateral frameworks for the planning, adoption and implementation of sanitary and phytosanitary measures to prevent such measures from being used for arbitrary or unjustifiable discrimination or for camouflaged restraint on international trade and to minimize their adverse effects on trade (see Chapter 10 "Standard and Conformity Assessment Systems").

Agreement on Textiles and Clothing: Textile trade was governed by the Multi-Fiber Arrangement (MFA) since 1974. However, the GATT principles had been undermined by import protection policies, etc. The agreement provides that textile trade should be deregulated by gradually integrating it into GATT disciplines over a 10-year transition period, which expired at the end of 2004.

Agreement on Technical Barriers to Trade (TBT): Standards and conformity assessment systems, such as industrial standards and safety/environment regulations, may become trade barriers if they are excessive or abused. This agreement aims at preventing such systems from becoming unnecessary trade barriers by securing their transparency and harmonization with international standards.

Agreement on Trade-Related Investment Measures (TRIMs): In relation to cross-border investment, countries receiving foreign investment may take various measures, including imposing requirements, conditions and In the Uruguay Round, negotiations were initially conducted with an eye toward expanding disciplines governing investment measures. However, the Agreement on Trade-Related Measures, which was the result of the negotiations, banned only those investment measures inconsistent with the provisions of Article? (principle of national treatment)

NSOU PGCO-IV 167 and Article XI (general elimination of quantitative restrictions) which have direct adverse effects on trade in goods. As examples, the Agreement cited local content requirements (which require that certain components be domestically manufactured) and trade balancing requirements. Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 (Anti-Dumping Agreement): This agreement aims at tightening and codifying disciplines for calculating dumping margins and conducting dumping investigations, etc. in order to prevent anti-dumping measures from being abused or misused to protect domestic industries. Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994 (Customs Valuation Agreement): In order to implement GATT Article VII (customs valuation) in a more consistent and reliable manner, this agreement specifies rules for the application of the article and aims to harmonize customs valuation systems on an international basis by eliminating arbitrary valuation systems. Agreement on Pre-shipment Inspection (PSI): This agreement aims to secure transparency of PSI and to provide a mechanism for the solution of disputes between PSI agencies and exporters. Note: Pre-shipment Inspection is a system under which a pre-shipment inspection company i.e. importing country (mostly developing countries) conducts inspection of the quality, volume, price, tariff classification, customs valuation, etc. of merchandise in the territory of the exporting country on behalf of the importing country's custom office and issues certificates Agreement on Rules of Origin: This agreement provides a program for the harmonization of rules of origin for application to all non-preferential commercial policy instruments. It also establishes disciplines that must be observed in instituting or operating rules and provides for dispute settlement procedures and creates the rules of origin committee. However, details on the harmonization of rules of origin are left for future negotiations. Agreement on Import Licensing Procedures: In order to prevent import licensing procedures of different countries from becoming unnecessary trade barriers, this agreement aims at simplifying administrative procedures and ensuring their fair operation. NSOU PGCO-IV 168 Agreement on Subsidies and Countervailing Measures: This agreement aim at clarifying definitions of subsidies, strengthening disciplines by subsidy type (extension of the range of prohibited subsidies, etc.), and clarifying procedures for adopting countervailing tariffs. Agreement on Safeguards This agreement aims at clarifying disciplines for requirements and procedures for imposing safeguards, and related measures, etc. in relation to the application of safeguards (emergency measures to restrict imports) of GATT Article XIX. General Agreement on Trade in Services (GATS): This agreement provides general obligations regarding trade in services, such as most- favored-nation treatment and transparency. In addition, it enumerates 155 service sectors and stipulates that a member country cannot maintain or introduce, in the service sectors for which it has made commitments, market access restriction measures and discriminatory measures that are severer than those on the commitment table (see Chapter 11 "

**88%**

**MATCHING BLOCK 298/322**

**SA**

Trade in Services"). Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS):

This agreement

stipulates most-favored-nation treatment and national treatment for intellectual properties, such as copyright, trademarks, geographical indications, industrial designs, patents, IC layout designs and undisclosed information. In addition, it requires Member countries to maintain high levels of intellectual property protection and to administer a system of enforcement of such rights. It also stipulates procedures for the settlement of disputes related to the agreement (see Chapter 12 "Protection of Intellectual Property Rights").

**100%**

**MATCHING BLOCK 299/322**

BA7401\_International\_Business\_Management.pdf (D154411848)

Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU).

This agreement provides the common rules and procedures for the settlement of disputes related to the WTO Agreements. It aims at strengthening dispute settlement procedures by prohibiting unilateral measures, establishing dispute settlement panels whose reports are automatically adopted, setting time frames for dispute settlement, establishing the Appellate Body, etc. Trade Policy Review Mechanism (TPRM) Annex 3 provides the procedures for the Trade Policy Review Mechanism to conduct periodical reviews of Members'

NSOU PGCO-IV 169 trade policies and practices conducted by the Trade Policy Review Body (TPRB). Plurilateral Trade Agreements 1 Agreement on Trade in Civil Aircraft Concurrently with the Uruguay Round, negotiations were under way to revise the civil aircraft agreement (an agreement from the Tokyo Round) and strengthen disciplines on subsidies. However, no agreement has yet been reached and the agreement reached under the Tokyo Round remains in effect. Agreement on Government Procurement: This agreement requires national treatment and non-discriminatory treatment in the area of government procurement (purchase or lease of goods and services by governments) and calls for fair and transparent procurement procedures. It also stipulates complaint and dispute settlement procedures. The new Government Procurement Agreement is based on the Agreement of 1979 (an agreement from the Tokyo Round), but expands its scope. The new Agreement covers the procurement of services (in addition to goods) and the procurement by sub-central government entities and government-related agencies (in addition to central government).

**80% MATCHING BLOCK 300/322** SA Study Material IB - Jagadeesh Sir.docx (D141315455)

Trade bloc is an intergovernmental agreement or often part of a regional intergovernmental organization where regional barriers to trade (tariffs and non-tariff barriers) are reduced or eliminated among the participating states.

It is basically a free-trade zone, or near-free-trade zone, formed by one or more tax, tariff and trade agreements between two or more

**76% MATCHING BLOCK 301/322** SA Study Material IB - Jagadeesh Sir.docx (D141315455)

countries within a geographic region that protect them from imports from non-members

and thus defends its members against global competition. It is a form of economic integration and can increasingly shape the pattern of the world trade where defense against the global competition is obtained through established tariffs on goods produced by member states, import quotas, government subsidies, onerous bureaucratic import processes, technical and other non-tariff barriers. In regional trading bloc, the member states also cooperate in economic, political, security, climatic and other issues affecting the region like similar levels of per capita GNP, geographic proximity, similar or compatible trading regimes and political commitment to the regional organization. Advocates of the worldwide free trade are usually opposed to the trading blocs which they argue and encourage regional trade as opposed to the global free trade. Box 8.2 reflects different Regional Trading Blocs.

NSOU PGCO-IV 170 Box 8.2 Different types of Regional Trading Blocs

**97% MATCHING BLOCK 302/322** SA Study Material IB - Jagadeesh Sir.docx (D141315455)

Preferential Trade Area: Preferential Trade Areas (PTAs) exist when countries within a geographic region agree to reduce or eliminate tariff barriers on selected goods imported from other members of the area. This is often the first small step towards the creation of a trading bloc. Free trade area: Free Trade Areas (FTAs) are created when 2 or more countries in a region agree to reduce or eliminate barriers to trade on all

the goods coming from other members. This is the most basic form of economic cooperation. Member countries remove all barriers to trade among themselves but are free to independently determine trade policies with non-member nations. An example is the North American Free Trade Agreement (NAFTA). Customs union: This type provides for economic cooperation as in a free-trade zone. Barriers to trade are removed between member countries. The primary difference from the free trade area is that

**76% MATCHING BLOCK 303/322** SA IB.docx (D154310691)

members agree to treat trade with non-member countries in a similar manner.

The customs union involves the removal of the tariff barriers among the members, as well as the acceptance of the common (unified) external tariff in contradiction to the non-members. This means that the

**92% MATCHING BLOCK 304/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

members may negotiate as a single bloc with third parties, such as with other trading blocs, or with the WTO. The

Gulf Cooperation Council (GCC) for the Arab States of the Gulf is an example.

**95% MATCHING BLOCK 305/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

Common market: A 'common market' is the first significant step towards full economic integration and occurs when member countries trade freely in all economic resources, not just tangible goods. This means that all barriers to trade in goods, services, capital and labour are removed. In addition, as well as removing tariffs, non-tariff barriers are also reduced and eliminated. For a common market to be successful there must also be a significant level of harmonization of macroeconomic policies and common rules regarding monopoly power and other anti-competitive practices. There may also be common policies affecting key industries, such as the Common Agricultural Policy (CAP) and Common Fisheries Policy (CFP) of the European Single Market (ESM).

This type allows for the creation of economically integrated markets between member countries. Trade barriers are removed, as are any restrictions on the movement of labour and capital between member countries. Like customs unions, there is a common

NSOU PGCO-IV 171 trade policy for trade with non-member nations. The primary advantage to the workers is that they no longer need the

**57% MATCHING BLOCK 306/322**

**SA** IB.docx (D154310691)

visa or work permit to work in another member country of the common market. An example is the Common Market for Eastern and Southern Africa (COMESA).

Economic and monetary union: This type is created when countries enter into an economic agreement to remove barriers to trade and adopt common economic policies. An example is the European Union (EU). Monetary union is a type of trade bloc which is composed of an economic union (common market and customs union) with a monetary union. Monetary union is established through a currency-related trade pact. An intermediate step between pure monetary union and a complete economic integration is the fiscal union. Economic and Monetary Union of the European Union with the Euro for the Euro-zone members is the example of monetary union. Political union: In order to be successful the more advanced integration steps are typically accompanied by the unification of economic policies (tax, social welfare benefits etc.), reductions in the rest of the trade barriers, introduction of the supranational bodies and gradual moves towards the final stage, a "political union". Political union is a final stage in the economic integration with more formal political links among the countries. A limited form of the

**91% MATCHING BLOCK 308/322**

**SA** BA7401\_International\_Business\_Management.pdf (D154411848)

political union may exist when two or more countries share common decision-making bodies and have common policies.

It is the unification of previously separate nations. The unification of West & East Germany in 1990 is an example of the total political union. Source: <https://enterslice.com/learning/regional-trading-blocs/> Trading Bloc offers advantages to its member countries like (i) Free trade within the bloc (free access to each other's markets, members are encouraged to specialize), (ii) Market access and

**94% MATCHING BLOCK 307/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

trade creation (free trade enables high-cost domestic producers to be replaced by lower-cost and more efficient imports), (

iii)Economies of scale (

**91% MATCHING BLOCK 309/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

application of scale economies, which will lead to lower costs and lower prices for consumers), (iv) Jobs (

By removing the restrictions on the labour movement, economic integration can help expand job opportunities), (v)

**95% MATCHING BLOCK 310/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

Protection (firms inside the bloc are protected from cheaper imports from outside)

and (vi) Consensus and cooperation (regional understanding and similarities may also facilitate closer political cooperation).

NSOU PGCO-IV 172 But side-by-side the Trading Bloc would also have to face some disadvantages like (i) loss of benefits (the benefits of free trade among the countries in different blocs is lost), (ii) Distortion of trade (

**92% MATCHING BLOCK 311/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

Trading blocs are likely to distort world trade, and reduce the beneficial effects of specialization and the exploitation of comparative advantage)

and (iii) Inefficiencies and trade diversion (

**100% MATCHING BLOCK 312/322**

**SA** Study Material IB - Jagadeesh Sir.docx (D141315455)

inefficient producers within the bloc can be protected from more efficient ones outside the bloc).

Table - 8.2 reflects the world-wide different Regional Trading Blocs. Table- 8.2 Regional trading Blocs Free Trade Area (FTA) European Common Market (ECM) European Union (EU) European Free Trade Association (EFTA) Latin American Free Trade Association (LAFTA) It is a designated group of countries that have agreed to eliminate tariffs, quotas and preferences on goods and services traded between them. A FTA is formed through a free trade agreement. Unlike a customs union, members of a free trade area do not have the same policies with respect to non- members, meaning different quotas and customs. Example: Asia-Pacific Trade Agreement (APTA), European Economic Area (EEA), South Asia Free Trade Agreement (SAFTA) etc. A common market is a customs union with common policies on product regulation and freedom of movement of the factors of production (capital and labour) and of enterprise. Example: Economic and Monetary Community of Central Africa (CEMAC), Arab Customs Union etc. EU is one of the largest economic and political entities in the world. It is the single market with common trade policy and single currency (euro). EFTA (5th May, 1960) was set up by those European nations which could not join the EU. It provides for the liberalisation of trade among the member countries. Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay jointly set up LAFTA (2nd January, 1962) with its main goal as to eliminate all duties and restrictions so as to create a free trade zone in Latin America. NSOU PGCO-IV 173 South Asian Free Trade Area (SAFTA) European Economic Community (EEC) or European Common Market (ECM)

**77%****MATCHING BLOCK 313/322****SA**

Study Material IB - Jagadeesh Sir.docx (D141315455)

North American Free Trade Agreement (NAFTA) Association of South-East Asian Nations (ASEAN) South Asian Association for Regional Cooperation (SAARC)

SAFTA (2006) aimed at abolition of all kinds of trade and tariff restrictions. Ultimately it will pave the way for the creation of common market with common currency. The SAFTA agreement allows any member country to pull out of the treaty at any time. The EEC (1st January, 1958) was set up by six European nations. It consists of 15 countries in Europe. The main objective of EEC is to promote a harmonious development by economic activities, a continuous and balanced expansion, increase in stability, accelerated raising of the standard of living and closer relations between the member states belonging to it. NAFTA (1st January, 1994) helped all the member countries in increasing industrial development, employment, income and living standards. However, this trade bloc is a major hurdle for the globalisation of business as two major developed countries are involved in this agreement. ASEAN (set up in 1960s but started in 1970s), an important regional economic grouping which is emerging as major one in world trade having member countries like Brunei, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam. India, Bangladesh, Bhutan, Maldives, Nepal, Pakistan and Sri Lanka established SAARC in December, 1985. In 2007, Afghanistan became its 8th member. The objectives of SAARC were to (i) improve the quality of life, (ii) develop the region economically, socially and culturally, (iii) provide opportunity to the people in the region to live in dignity and to exploit their potential. (iv) enhance jointly the self-reliance of the member countries, (v) extend cooperation to other trading blocs, (vi) create unity among the member countries on issues of common interest in the international forums etc.

NSOU PGCO-IV 174 The BRIC Alliance Economic and Social Commission for Asia and Pacific (ESCAP) Source: Gupta, C.V., Business Environment, Sultan Chand & Sons, New Delhi. 2019 Indian Experience: India, the one of the notable country in Asia, recognised the effectiveness of the Export Processing Zone (EPZ) model in promoting exports and established Asia's first EPZ in Kandla in 1965 to overcome the shortcomings experienced on account of the multiplicity of controls and clearances; absence of world-class infrastructure, and an unstable fiscal regime with a view to attracting larger foreign investments. In India, Special Economic Zones (SEZs) Policy was announced in April 2000 in view of making SEZs an engine for economic growth supported by quality infrastructure complemented by an attractive fiscal package, both at the Centre and the State level with the minimum possible regulations. Box-8.3 reflects SEZ and its related policies in India. SAARC members signed the SAARC preferential Trading Arrangement (SAPTA) (11th April, 1993) in order to (a) gradually liberalise the trade among member countries, (b) eliminate tariffs, (c) promote and sustain mutual trade and economic cooperation among the member countries. BRIC, an acronym coined by Jim O'Neil, the Goldman Sachs group economist for a four countries alliance - Brazil, Russia, India and China was formally set up on 16th May, 2008. It aimed at promoting multilateral arrangements to challenge the US concept of unipolar world. ESCAP, originally was ECAFE (Economic Commission for Asia and Far East) has 48 member countries and 10 associate members. The region of ESCAP is sub-divided into Pacific Island countries, ASEAN (4 countries), developing and developed ESCAP nations, China and the newly industrialising countries and South Asian countries. ESCAP promotes socio-economic development of the region.

NSOU PGCO-IV 175 Box 8.3 - SEZs in India SEZs in India functioned from 01.11.2000 to 09.02.2006 under the provisions of the Foreign Trade Policy. Fiscal incentives were made effective through the provisions of relevant statutes. To in-still confidence in investors and signal the Government's commitment to a stable SEZ policy regime i.e. greater economic activity and employment, a comprehensive draft of SEZ Bill prepared after extensive discussions with the stakeholders. A number of meetings were held in various parts of the country both by the Ministry of Commerce and Industry as well as senior officials for this purpose. The Special Economic Zones Act, was passed by Parliament in May, 2005 which received Presidential assent on the 23rd of June, 2005. The draft SEZ Rules were widely discussed and put on the website of the Department of Commerce offering suggestions/comments. Around 800 suggestions were received on the draft rules. After extensive consultations, the SEZ Act, 2005, supported by SEZ Rules, came into effect on 10th February, 2006, providing for drastic simplification of procedures and for single window clearance on matters relating to central as well as state governments. The main objectives of the SEZ Act are: (i) generation of additional economic activity; (ii) promotion of exports of goods and services; (iii) promotion of investment from domestic and foreign sources; (iv) creation of employment opportunities and (v) development of infrastructure facilities. It is expected that this will trigger a large flow of foreign and domestic investment in SEZs in infrastructure and productive capacity, leading to generation of additional economic activity and creation of employment opportunities. The SEZ Act 2005 envisages key role for the State Governments in Export Promotion and creation of related infrastructure. A Single Window SEZ approval mechanism has been provided through a 19 member inter-ministerial SEZ Board of Approval (BoA). The applications duly recommended by the respective State Governments/UT Administration are considered by this BoA periodically. All decisions of the Board of approvals are with consensus. The SEZ Rules provide for different minimum land requirement for different class of SEZs. Every SEZ is divided into a processing area where alone the SEZ units would come up and the non-processing area where the supporting infrastructure is to be created.

NSOU PGCO-IV 176 The SEZ Rules provide for: Simplified procedures for development, operation, and maintenance of the Special Economic Zones and for setting up units and conducting business in SEZs; Single window clearance for setting up of an SEZ; Single window clearance for setting up a unit in a Special Economic Zone; Single Window clearance on matters relating to Central as well as State Governments; Simplified compliance procedures and documentation with an emphasis on self-certification. Source: <http://sezindia.nic.in/index.php>, Gupta, C.V., Business Environment, Sultan Chand & Sons, New Delhi. 2019 In Trading Block, the member countries may trade more with each other than with non-member nations. This practice would increase trade with less efficient or more expensive producer because it is in a member country. In this sense, weaker companies can be protected inadvertently with the block agreement acting as a trade barrier for which the regional agreements have formed new trade barriers with countries outside of the trading bloc. 8.7 Government Policy on Foreign Investment Government of India eased restrictions on Foreign Direct Investment (FDI) in India with a view to promoting the 'Make in India' and 'Start up India' initiatives. The reforms are wide ranging. These aim at easing business performance, simplifying and rationalizing the process of FDI. The key highlight of the recent reforms is that more FDI proposals in more sectors will now be placed under the automatic route and not required the consent of the government. Of particular note is the liberalization in the Broadcasting, Construction, Defence and Single Brand Retailing sectors. Box- 8.4 reflects the Government policy on Foreign Investment in India. Box- 8.4 Government Policy on Foreign Investment in India Sectors liberalized set out below the key differences between the old FDI policy and the new FDI policy in each of sector of the economy (or transaction type) that has been further liberalized.

NSOU PGCO-IV 177 Manufacturing - At the outset, it should be noted that the definition of "Manufacture" in the FDI policy has been amended to mean: "a change in a non- living physical object or article or thing (a) resulting in transformation of the object or article or thing into a new and distinct object or article or thing, having a different names, characters and uses; or (b) bringing into existence of a new and distinct object or article or thing with a different chemical compositions or integral structures."

**75%**

**MATCHING BLOCK 314/322**

**SA** M21CM06DC.pdf (D155282201)

Subject to the provisions of the FDI policy, FDI in the manufacturing sector is

permitted and further, a manufacturer is permitted to sell its products manufactured in India through wholesale and/or retail, including through e-commerce without government approval. Previously, the position was that an Indian manufacturing company having FDI was not allowed to do retail trading in any manner whatsoever through e-commerce. This is a welcome change from the previous policy and is clearly designed to further encourage investors to 'Make in India'. Construction - Under the old FDI policy, the minimum area to be developed was 20,000 square meters and a minimum amount of USD 5,000,000 had to be invested within 6 months of the commencement of business. The new FDI policy removes both of these requirements, which will allow foreign equity to access smaller developments. Previously, foreign investors were permitted to exit projects only upon completion or the development of trunk infrastructure and the repatriation of FDI or the transfer of equity before project completion by a non-resident investor to a non-resident investor required approval of the Foreign Investment Promotion Board (the "FIPB"). Under the new FDI policy, a foreign investor is permitted to exit and repatriate its foreign investment before the completion of a project without FIPB approval, provided that a lock-in period of three years (the "Lock In Period") has expired, calculated with reference to the date of each tranche of equity invested. The new FDI policy also treats each phase of a project as a separate project for the purposes of FDI. This means that a major construction development can be broken down into smaller phases and an investment relating to a particular stage of a project can be repatriated even though the larger project still continues to be under construction. The impact should be significant for larger developments like townships and large infrastructure construction projects, insulating foreign investors from the risk of delay to overall project completion. Under the new FDI policy, the sale of an equity stake from a non-resident to another non-resident, without repatriation of the investment, before the expiry of the Lock In Period is permitted without the consent of the FIPB and an exit is permitted at any time if the trunk infrastructure in relation to the project has been completed. The new FDI policy

NSOU PGCO-IV 178 goes on to clarify that any rental income or other income arising from the project (that does not amount to a transfer) will not amount to Real Estate Business. The previous policy barred FDI in the Real Estate Business, defined to be the relevant portion of any business, "dealing in land and immoveable property with a view to earning profit or earning income therefrom" and the revised position is a welcome step to encouraging foreign real estate investors to invest in the construction sector. The new FDI policy further clarifies that the transfer of ownership of an investment vehicle from residents to a non-resident is also permitted following the expiry of the Lock In Period. While the previous FDI policy did not define transfer, the new FDI policy clarifies that it means: (i) the sale, exchange or relinquishment of the asset; (ii) the extinguishment of rights therein; (iii) its compulsory acquisition under law; (iv) any transaction allowing the possession of immoveable property of the nature referred to in section 53 A of the Transfer of Property Act 1882; and (v) any transaction involving the acquisition of shares in a company or any agreement or arrangement which has the effect of transferring, or the enabling of enjoyment of, any immoveable property. Hence under the new FDI policy, it is clear that the sale of shares in an offshore holding company, holding property through its Indian subsidiary, following the expiry of the Lock In Period will now be permitted. Defence - Under the old FDI policy, foreign investment of up to 49 % in an Indian joint venture was permitted under the government approval route. Portfolio investment and investment by Foreign Venture Capital Investors ("FVCIs") was restricted to 24 %. Foreign investment above 49 % was permissible, but subject to approval by the Cabinet Committee on Security. The new FDI policy substantially improves the situation. Foreign investment up to 49 % will now be permitted under the automatic route and portfolio investment and investment by FVCIs is also permitted up to 49 % under the automatic route. Foreign investment above 49 % will be considered by the FIPB. Further, it should be noted that in the event of infusion of fresh foreign investment, within the permitted cap, resulting in a change in ownership or the transfer of a stake by an existing investor to a new foreign investor, government approval will be required. Broadcasting previously, up to 26 % FDI was permitted under the approval route in the case of FM radio broadcasting, the up-linking of news and current affairs television channels. Also, FDI up to 100 % was permissible under the Government approval route for the up-linking of non-news and current affairs TV channels and the down-linking of TV channels. Now, up to 100 % FDI is permissible in the following broadcasting carriage services outlined in FDI Policy, namely

NSOU PGCO-IV 179 teleports, Direct-To-Home, Cable Networks, Mobile TV and 3 The provision basically refers to such contracts where the transferee has either taken steps or continues to be in possession of immovable property as a part performance of the contract. FDI of up to 49 % is permissible under the automatic route while acquiring anything more than 49 % would require Government approval. In relation to broadcasting content services, FDI up to 49 % is permissible under the government approval route in case of FM radio and the up-linking of news and current affairs TV channels. Further, FDI of up to 100 % is permissible under the automatic route in the case of up-linking of and current affairs TV channels as well as the down-linking of such TV channels. Where the sectorial cap is 49 %, new FDI policy further clarifies that the company would need to be owned and controlled by resident Indian citizens and Indian companies, which are owned and controlled by resident Indian citizens. Hence, the largest Indian investor should hold 51% of the total equity, excluding the equity held by Public Sector Banks and Public Financial Institutions. Banking - The new FDI policy now permits full fungibility of foreign investment in the private banking sector. Limited liability partnerships - Under the earlier FDI policy, Government approval was required for investment in LLPs. Further, the terms 'ownership' and 'control' with reference to LLPs had not been defined and downstream investments were not permitted by LLPs. Under the new FDI policy, 100% foreign investment is now permitted under the automatic route in LLPs operating in sectors or activities where 100% FDI is allowed under the automatic route and there is no FDI linked performance conditions. The term 'ownership' has also been defined and an LLP is considered to be owned by resident Indian citizens if more than 50% of the investment in it is contributed by resident Indian citizens or entities and such resident Indian entities have a majority of the profit share. 'Control' has been now defined to include the right to appoint a majority of the directors or to control the management or policy through their shareholding or management rights or otherwise through shareholders' agreement or other voting agreements. Further in case of LLPs, 'control' would mean the right to appoint a majority of the designated partners, where such designated partners have control over all the policies of the LLPs. LLPs receiving foreign investment will also be permitted to make downstream investment in another company or LLPs in sectors in which 100% FDI is permitted under the automatic route and there is no FDI-linked performance condition.

NSOU PGCO-IV 180 However, the LLP must notify the Secretariat for Industrial Assistance, the Department for Industrial Policy and Promotion and the FIPB of its downstream investment in the prescribed format within 30 days of such investment. It should be noted that foreign direct investment in legal services is still prohibited. FDI by way of share swaps - Under the previous FDI policy, Government approval was required for investment into a sector by way of swap of shares even in sectors where FDI was permitted under the automatic route. Now, Government approval will not be required for investment in sectors permitting foreign investment under the automatic route by way of swap of shares. Threshold limit for FIPB approval - It should be noted that the threshold limit for FDI approval has been raised. Previously, it was INR 3,000Crore (approximately USD 450 million). Now, it has been increased to INR 5,000Crore (approximately USD 755 million). Receipt of FDI in companies without operation - Indian companies having no operations and which do not have any downstream investment are now permitted to have infusion of foreign investment under the automatic route. However, such companies which intend to do business reserved under the Government approval route will have to take the approval of the Government prior to such infusion. Further, as and when such a company commences business or makes downstream investments, it will have to comply with the relevant sectorial conditions and caps. The new FDI Policy has relaxed FDI in the above-mentioned sector from 74% to 100% under the Government approval route. According to the Department of Industrial Policy and Promotion, India has now thrown open 92.5 % of FDI through the automatic route, which is a welcome development. The recent reforms are a necessary change to the regulatory environment in India and another step closer to the goal of full convertibility. However, it will require some time to see whether these changes trigger a spurt in FDI. It should be noted that the reforms stop short of lifting curbs on multi-brand retailers, such as retail giant Wal-Mart, which to date has focused on its wholesale business in India. That segment was opened to foreign investment in 2012, but the limit remains at 51%. With the Delhi High Court ordering an Enforcement Directorate investigation into 21 e-commerce firms earlier this month for alleged FDI violations, there is a pressing need to rationalize the position in multi-brand retail through e-commerce for further progress to be made. Source: <https://www.oecd.org/dev/2698620.pdf>

NSOU PGCO-IV 181 Accordingly, Foreign Institutional Investors, Foreign Portfolio Investors and Qualified Foreign Investors can now invest up to the sector limit of 74 % provided that there is no change of control and management of the investee company. Plantations - Earlier, the FDI policy prevented foreign investment in the plantation sector other than in tea plantations. Under the new FDI Policy, in addition to tea, the government has decided to open up coffee, rubber, cardamom, palm oil and olive oil plantations to foreign investment of up to 100 % under the automatic route. However, it has been clarified that the prior approval of the state government concerned is required in case of any land use change. Single brand retail - Under the earlier FDI policy, companies having FDI beyond 51 % had to comply with a local sourcing requirement of 30 % of the value of goods purchased, preferably from Micro, Small and Medium enterprises ("MSMEs") or similar entities. This requirement to source from MSMEs has been a particularly controversial requirement for foreign investors selling niche products and has to be fulfilled for a period of 5 years, beginning on 1st April of the year during which the first tranche of FDI is received. The new FDI policy now clarifies that the 30 % local sourcing rule applies from the date of first opening the store (as opposed to the date of receipt of FDI) and that in sectors involving 'state-of-the-art' and 'cutting-edge technology', this sourcing norm may be relaxed, subject to government approval. This is a welcome change and should be beneficial for all foreign investors selling niche products whose component parts cannot be sourced from the local market. More importantly, the previous prohibition on retail trading through e-commerce has been lifted. This is a welcome change since retailers were previously in the curious position of being able to sell through 'bricks and mortar', but unable to sell through 'clicks and mortar'. Also, under the new FDI policy, certain conditions of the FDI policy requiring products to be sold under the same brand internationally and the investment by the non-resident entity being the brand owner (or through legally binding agreement with the brand owner) have been lifted. Duty-free - Under the new FDI policy, 100 % investment is now permissible under the automatic route, setting up duty-free shops located and operated in customs bonded areas at airports in India. Previously, the FDI policy was silent on this sector. Wholesale trading - Earlier, it was not permissible for a single entity to undertake activities in both wholesale trading and single brand retailing. Now, a single entity may undertake both wholesale trading and single brand retailing provided that they carry out such activities separately. Civil aviation - Earlier, foreign investment of up to 49 % was permissible in Scheduled Air Transport Services and domestic scheduled passenger airline services. Now, Scheduled Regional Air Transport Services may receive foreign investment of up to 49 % under the automatic route. In relation to chartered services, the position used to be that foreign equity in non-scheduled air transport services and ground-handling services were capped at 74 % through the automatic route. The new FDI policy raises the bar, increasing foreign equity investment up to 100 % under the automatic route. Pursuant to the Aircraft Rules, 1937 Section (3)(49) "Scheduled Air Transport Service" means air transport services based on a published time-table so regular that they constitute a recognizable systematic series. Pursuant to a notification from the Director General of Civil Aviation dated August 23, 2007, "Scheduled Regional Air Transport Services" means services which operate primarily in a designated region and which on grounds of operational and commercial exigencies may be allowed to operate from its designated region to airports in other regions, except the metro airports of other regions. <https://www.oecd.org/dev/2698620.pdf> <https://www.oecd.org/dev/2698620.pdf> 8.8 Foreign Collaboration and Indian Experience Indian and foreign companies make collaboration through its sale of technology, spare parts and use of foreign brand names for its final products. During 1980s, liberalization process resulted a considerable spurt in foreign collaborations. Accordingly, out of the total 12,760 foreign collaboration agreements approved during the period between 1948 and 1988, about 6,165 agreements (i.e., 48.3 per cent) were approved during the period between 1981 and 1988. Moreover, with the liberalization of foreign investment policy announced during the post-1991 period, the number of foreign collaborations in India increased considerably. During the period from August 1991 to November 1993, total number of foreign collaboration proposals approved by the Government was 3,467, including 1,565 proposals of foreign equity valued as Rs.122.9 billion. Again during the period 1991 to September 1998, total actual inflow of Foreign Direct Investments was to the extent of \$11.96 billion (Rs.42,173Crore) 13 . Box-8.5 reflects various facts of foreign collaboration in India.

NSOU PGCO-IV 183 13 <https://www.yourarticlelibrary.com/india-2/foreign-collaboration-and-mnacs/63280> Box - 8.5  
 Facts of Foreign collaboration in India Foreign collaborations in Indian industry helped diversifying production spectrum into steel, light and heavy engineering, petroleum refinery, man-made fibre manufacture, automobile, chemical, pharmaceuticals and several other types of industrial products. The development of the basic industries would have been possible with the support of technical know-how and skills made available from foreign companies through such foreign collaborations approvals. Therefore, the gain from foreign collaboration in Indian industries is realised both in terms of increase in physical output, training of technicians, technology transfer and development of skills of modern management. Foreign Collaboration: By the term foreign collaboration we mean an agreement for setting up of an enterprise jointly by the foreign and native enterprises. There are two approving authorities for foreign collaboration: 1) Reserve Bank of India (RBI) and 2) Department of Industrial Development in the Ministry of Industry, Government of India. Foreign collaboration may take place mainly in three forms: (i) Collaboration between Indian and foreign private companies; (ii) Collaboration between Indian government companies and foreign private companies; and (iii) Collaboration between Indian Government and foreign government. Foreign collaboration may be of two different types: (a) Financial Collaboration (foreign equity participation) where foreign equity alone is involved; (b) Technical Collaboration (technology transfer) involving licensing technology by the foreign collaborator on due compensation. Under the changing globalized scenario, attainment of international competitiveness is become very important. Such competitiveness can be attained through foreign collaboration especially through technical collaboration in country like India.

NSOU PGCO-IV 184 Government Policy of Foreign Collaboration: The policy followed by the Government of India on Foreign Collaboration and foreign private investment is based mainly in the approach adopted in 1949. The basic policy followed is to welcome foreign private investment on a selective basis in those areas which are advantageous to the Indian economy. The conditions under which foreign capital or foreign collaboration is welcome include. (i) All undertakings (Indian or Foreign) have to conform to the general requirements of the Industrial policy of the Government (ii) Foreign enterprises are to be treated at par with their Indian counterparts. (iii) Foreign enterprises were given freedom to remit profits and repatriate capital, subject to foreign exchange considerations.

Sambalpur\_MBA\_SEM\_1\_Business Environment\_Merge ... (D156214879)

The Industrial Policy 1991 prepared a specified list of high technology and high investment 34 priority industries (

Annexure III) in which automatic permission will be available for foreign direct investment up to 51% foreign equity. Thus this new policy faced Indian industries from official controls for fully exploiting opportunities for promotion of foreign investment. Thus it is felt that foreign investment and foreign collaboration would bring advantages of technology transfer, marketing expertise, product diversification, introduction of modern managerial techniques and new possibilities for export promotion for Indian Industries. Areas of Foreign Collaboration: Time-to-time, the Government of India issues a list of industries indicating clearly where foreign investments may be permitted. Foreign Investment Promotion Board (FIPB) of Government of India also considers import of technology in industries listed in Annexure A and Annexure B of Schedule 1 of Foreign Exchange Management Regulations, 2000 subject to compliance with the provisions of the Industrial Policy and Procedures as notified by Secretarial for Industrial Assistance (SIA) in the Ministry of Commerce and Industry of Government of India, from time to time. Procedure for Setting up Foreign Collaboration: As per the Government Policy and Foreign Exchange Laws prevailing in India, proposals for foreign investment and technical collaborations would require

NSOU PGCO-IV 185 Government approval. Later on, with adoption on New Industrial Policy, 1991 and subsequent amendments of laws regulating foreign collaborations and industry, this procedure has been simplified further. With the enactment of FEMA, foreign collaborations and investments have become much easier. Investment and Policy of Foreign Collaboration: In recent years, lot of changes have been brought in the foreign investment and foreign collaboration policy for creating a more favourable fiscal environment for foreign collaborations and investment virtually in every sector of the economy excepting those selective industries reserved for the public sector. The obstacles that once stood in the path of foreign collaborations are becoming thing of the past. The procedures for approval from the Government are now being simplified continuously in order to make foreign investments more attractive and beneficial. Foreign Collaboration and MNCs: In India, collaboration with Indian industrialists is

**47% MATCHING BLOCK 316/322**

**SA** COM 332 Strategic Management - II.pdf (D165094087)

a common form of participation of MNCs in Indian industry. In India, foreign collaboration agreements are being made between Indian and foreign

companies through its sale of technology, spare parts and use of foreign brand names for its final products. In India, almost all the new industries in the large and medium scale category, set up in the post-independence period, had some foreign collaboration agreement. During 1980s, liberalisation process resulted a considerable spurt in foreign collaborations. Accordingly, out of total 12,760 foreign collaboration agreements approved during the period between 1948 and 1988, 6,165 agreements (i.e., 48.3%) were approved during the period between 1981 and 1988. Again with the liberalisation of foreign investment policy announced during the post-1991 period, the number of foreign collaborations in India increased considerably. During the period from August 1991 to November 1993, total number of foreign collaboration proposals approved by the Government was 3,467, including 1,565 proposals of foreign equity valued as Rs.122.9 billion. Again during the period 1991 to 2005, total actual inflows of Foreign Direct Investments was to the extent of \$32.29 billion (Rs.1,31,385 crore) and till 2013-14, total inflow of FDI stood at \$173.28 billion.

NSOU PGCO-IV 186 Favourable Impact of Foreign Collaboration: Foreign Collaborations have some favourable impacts on Indian economy. Initially, Indian industries were concentrated on consumer goods sector only. Foreign collaborations in Indian industry have helped the sector to diversify its production spectrum which includes steel, light and heavy engineering, petroleum refinery, man-made fibre manufacture, automobile, chemical, pharmaceuticals and several other types of industrial products. Without the support of technical knowhow and skills made available from foreign companies through such foreign collaborations approvals, the development of such basic industries would have been difficult. Thus the gain from foreign collaboration in Indian industries is realised both in terms of increase in physical output, training of technicians, technology transfer and development of skills of modern management. 8.9 Summary International business (IB) includes any type of business activity that crosses national borders. It is a multidimensional concept comprising of various risks and issues like exchange risks, political risks, cultural differences, legal and taxation issues, economic, socio-cultural and technological environmental factors. Globalisation is referred to as the integration of countries into world economy or one global market involving removal of all trade barriers between countries. It is the shift towards a more integrated and interdependent world economy with two main components - the globalization of market and the globalization of production. Further, as per International Monetary Fund, Globalisation is

goods and services and of international capital flows and also through the more rapid and widespread diffusion of technology.

Multinational Corporation (MNC) accounts for a significant share of the world's investment, production, employment and trade having both benefits and costs to home and host country where it incorporates and work.

NSOU PGCO-IV 187 The

successor to General Agreement on Tariffs and Trade (GATT), The World Trade Organisation

was established on 1st January, 1995 with its Head Office located at Geneva, Switzerland. It is the embodiment of the Uruguay Round. India is one of the founder members among 146 members of WTO. The Ministerial Conference is the highest authority of WTO consisting of all representative member nations. It meets almost every three years and is empowered to take decisions on all matters under the multilateral trade agreements. Trading Bloc offers advantages to its member countries like (i) Free trade within the bloc (free access to each other's markets, members are encouraged to specialize), (ii) Market access and

Protection (Firms inside the bloc are protected from cheaper imports from outside)

and (vi) Consensus and cooperation (Regional understanding & similarities may also facilitate closer political cooperation). India, the one of the first in Asia recognising the effectiveness of the Export Processing Zone (EPZ) model in promoting exports, established Asia's first EPZ in Kandla in 1965 to overcome the shortcomings experienced on account of the multiplicity of controls and clearances; absence of world-class infrastructure, and an unstable fiscal regime and with a view to attract larger foreign investments. In India, Special Economic Zones (SEZs) Policy was announced in April 2000 in view of making SEZs an engine for economic growth supported by quality infrastructure and complemented by an attractive fiscal package, both at the Centre and the State level with the minimum possible regulations. Government of India eased restrictions on Foreign Direct Investment ("FDI") in India with a view to promoting the 'Make in India' and 'Start up India' initiatives. The reforms are wide ranging and aim to ease doing business, simplifying and rationalizing the process of FDI. The key highlight of the recent reforms is that more FDI proposals in more sectors will now be placed under the automatic route and not require the consent of the government. Of particular note is the liberalization in the Broadcasting, Construction, Defence and Single Brand Retailing sectors. Indian and foreign companies through its sale of technology, spare parts and use of foreign brand names for its final products, make collaboration. During 1980s, liberalization process resulted a considerable spurt in foreign collaborations.

NSOU PGCO-IV 188 8.10 Questions Objective Type: 1. What is the full form of the trading block EU (a) European Union, (b) English Union, (c) External Union, (d) Empower Union. 2. What is the full form of the trading block EFTA (a) English Free Trade Association, (b) Empower Free Trade Association, (c) External Free Trade Association, (d) European Free Trade Association. Short Answer type: 1. Narrate the concept of International Environment. Explain its importance. 2. What do you mean by the concept of 'Globalisation'? 3. Narrate briefly the Foreign Collaboration in India Long Answer type: 1. Write a note on Multinational Corporation. 2. Discuss about WTO. Distinguish between GATT and WTO. 3. Write a note on Trading Blocs. 4. Explain briefly the Government Policy on Foreign Investment in India. 8.11 Further Readings Aswathappa, K. (2019). or drug may be imported by the Government for the purpose merely of its own use or for distribution in any dispensary, hospital or other medical institution maintained by or on behalf of the Government or any other dispensary, hospital or other medical institution which the Central Government may, having regard to the public service that such dispensary, hospital or medical institution renders, specify in this behalf by notification in the Official Gazette. General principles applicable to working of Patented inventions.-Without prejudice to the other provisions contained in this Act, in exercising the powers, regard shall be had to the following general considerations, namely;- (a) that Patents are granted to encourage inventions and to secure that the inventions are worked in India on a commercial scale and to the fullest extent that is reasonably practicable without undue delay;

Now it is 45 days (Section 41)Now 50% of award amount  
 Now all provision applicable to direct seller has been  
 extended to e- commerce Now DCF has power to review  
 Section 49(2) and 59(2) of the new act gives power to the  
 State Commission and NCDRC respectively to declare  
 any terms of contract, which is unfair to any consumer, to  
 be null and void District commissionState  
 commissionNational Consumer Dispute Redressal  
 Commission President and 4 other members NSOU  
 PGO-IV 128 Meditation under the Consumer Protection  
 Act, 2019 (Section 74) The State Governments shall  
 establish a consumer mediation cell to be attached to  
 each of District Commissions and State Commissions of  
 state. (Section 74(1)) Central Government shall establish  
 consumer mediation cell to be attached to the National  
 Commission (Section 74(2)) Holding companies  
 accountable for the default in service or manufacture is  
 the essence of the Consumer Protection Act. The  
 following is how a product manufacturer and service  
 provider can be held liable— Liability of product  
 manufacturer under the Consumer Protection Act, 2019  
 (Section 84) Product manufacturer will be liable for— (a)  
 Manufacturing defect in the product (b) Defective design  
 of the product or (c) Deviation from manufacturing  
 specifications or (d) Product not conforming to express  
 warranty or (e) No adequate instructions of correct usage  
 contained (in order to prevent harm or warning) Liability  
 even if he proves that he was not negligent or fraudulent  
 in making express warranty (Section 84(2)). Liability of  
 product service provider (Section 85)- Product service  
 provider will be liable if- (a) Service provided was faulty or  
 imperfect or deficient or inadequate in quality, nature or  
 manner of performance which is required by or under  
 any law or pursuant to any contract (b) Act of omission or  
 commission or negligence or conscious withholding  
 information which caused harm (c) No adequate  
 instructions or warnings issued to prevent harm (d) No  
 conformity with express warranty or terms and  
 conditions of the contract.
