 President other members and 4 other members  
 Meditation under the Consumer Protection Act, 2019  
 (Section 74) The State Governments shall establish a  
 consumer mediation cell to be attached to each of  
 District Commissions and State Commissions of state.  
 (Section 74(1)) Central Government shall establish  
 consumer mediation cell to be attached to the National  
 Commission (Section 74(2)) Holding companies  
 accountable for the default in service or manufacture is  
 the essence of the Consumer Protection Act. The  
 following is how a product manufacturer and service  
 provider can be held liable- Liability of product  
 manufacturer under the Consumer Protection Act, 2019  
 (Section 84) Product manufacturer will be liable for – (a)  
 Manufacturing defect in the product (b) Defective design  
 of the product or (c) Deviation from manufacturing  
 specifications or (d) Product not conforming to express  
 warranty or (e) No adequate instructions of correct usage  
 contained (in order to prevent harm or warning) Liability  
 even if he proves that he was not negligent or fraudulent  
 in making express warranty.(Section 84(2)) Liability of  
 product service provider (Section 85)- Product service  
 provider will be liable if- (a) Service provided was faulty or  
 imperfect or deficient or inadequate in quality, nature or  
 manner of performance which is required by or under  
 any law or pursuant to any contract (b) Act of omission or  
 commission or negligence or conscious withholding  
 information which caused harm (c) No adequate  
 instructions or warnings issued to prevent harm (d) No  
 conformity with express warranty or terms and  
 conditions of the contract.

<p>Common market: A 'common market' is the first significant step towards full economic integration and occurs when member countries trade freely in all economic resources, not just tangible goods. This means that all barriers to trade in goods, services, capital and labour are removed. In addition, as well as removing tariffs, non-tariff barriers are also reduced and eliminated. For a common market to be successful there must also be a significant level of harmonization of macroeconomic policies and common rules regarding monopoly power and other anti-competitive practices. There may also be common policies affecting key industries, such as the Common Agricultural Policy (CAP) and Common Fisheries Policy (CFP) of the European Single Market (ESM).</p> <p><b>SA</b> Study Material IB - Jagadeesh Sir.docx (D141315455)</p>

## Entire Document

PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts are still experimental— in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Objectives After studying this unit, we will be able to understand— • The basic concept of

tax and exempt incomes of different types. • The eligibility to claim deduction u/s 10AA. • The concept of agricultural income. • The tax treatment of share of income from firm. • The different exemptions available u/s 10(14). 1.1 Introduction to Tax Tax is a compulsory payment made by the people of a country to its government. Whenever, there is any income either by way of profits from business or remuneration for services or from sale or transfer of goods and services, unless it is expressly exempt from tax, tax shall be levied by the government on such income. Tax revenue is one of the best sources of government revenue to meet huge public expenditure. In every form of society, 10 NSOU • PGCO - V taxation plays a very significant role to raise fund for smooth running and maintenance of the society. Tax revenue collection is the most favorable choice of any nation since it is not 'quid pro quo' i.e. nothing is payable in respect of tax revenue collection in consideration thereof to the taxpayers. Thus, charges which are levied on product or services or income or activity are called Tax. Tax is actually a fee charged by the government on product or services, income or activity. There may be of two types of taxes; viz.- a) Direct Taxes and b) Indirect Taxes. Direct Taxes: Direct tax is a tax which is levied directly on income, thus when tax is levied directly (from the source)

**89% MATCHING BLOCK 3/875**

**SA**

CU-MBA-SEM-III-Tax Planning and Management- Se ... (D103495020)

on the income or wealth of a person, then it is called direct tax

e.g., income tax, Wealth Tax etc. Wealth tax has been abolished with effect from 28 th February 2016. The taxpayer becomes liable to pay direct tax personally and he cannot shift it on the shoulder of others. Indirect Taxes: The tax which is imposed indirectly on income is called Indirect Tax. Indirect Tax is not directly related to income, but when we buy something, sell something keeping aside the value of the transaction is called Indirect Tax. Thus, whether we are buying a pencil, lozenge or car we have to pay indirect tax. When tax is levied (indirectly) from the users of Goods and/or Services

**60%**

**MATCHING BLOCK 4/875**

The study of case law is an important and unavoidable part of the study of income-tax law.

Supreme Court is the apex court of our country. 1.2 Exempted Income There are certain incomes which are not part of the total income. Exempt Incomes are the incomes for which no tax is payable as per Income Tax Law i.e., these incomes are not included in the total income for the purpose of tax liability computation while taxable incomes are liable to tax under the Income Tax Act. Exempt income is that income on which there is no need to pay tax. Some instances are partner's share in firm's income, agricultural income, daily allowance of MPs and MLAs etc. 1.2.1 Kinds of Exempted Income Following are various kinds of income that are exempt from tax- i. House Rent Allowance. ii. Allowance on transportation, children's education, subsidy on hostel fee. iii. Exemption on Housing Loan. iv. Income defined as per Section 10, Section 54 of the Income Tax Act, 1961. v. Leave and Travel Allowance.

12 NSOU • PGCO - V 1.2.2 Various Sections under Section 10 Section Particulars Sec.10A Deduction relating to newly established undertaking under Section 10A. This section was applicable when an entrepreneur, who starts manufacturing or producing articles or things or provides any services during 01.04.2005 to 31.03.2020. Sec. 10AA Section 10AA deals with the deduction related to newly established undertakings which are in Special Economic Zones (SEZ). In April 2000, with a view to fascinating foreign investment in India, the Government proclaimed that tax approval would be provided for businesspersons who set up the definite businesses in Special Economic Zones. Therefore, primarily, SEZs were introduced to roll and continue under the dispensation of the Foreign Trade Policy. However, increasingly, the SEZ Act and SEZ instructions were shaped and made operative from the year 2006. Amount of Exemption = Profit

**96%**

**MATCHING BLOCK 8/875**

**W**

of Unit in SEZ × Export Turnover of Unit SEZ Total Turnover of Unit SEZ

Amount of Deduction The deduction under this section will be permitted as under for a total period of 15 relevant assessment years. 100% of export profit is qualified for the deduction for the first five years. 50% of export profit is eligible for the deduction for the next five years. Sum not surpassing 50% of export profit is qualified for the deduction for the next five years.

NSOU • PGCO - V 13 Example: 1. Durjoy Manufacturing Ltd. has a Unit at SEZ. The company Provided Total Sales Rs.4, 00, 000/- and Export Sales Rs.3, 00, 000/- and Net Profit Rs.1, 00, 000/- for the previous year 2020-21. Calculate the eligible deduction under section 10AA of the Income tax act, for the assessment year 2021- 2022, if the unit was set up and start manufacturing from 22-05-2013. Solution: Amount of Exemption = Profit

**96% MATCHING BLOCK 11/875**

**W**

of Unit in SEZ × Export Turnover of Unit SEZ Total Turnover of Unit SEZ

Profit Percentage =  $\frac{3,00,000}{4,00,000} = 75\%$  Profit from Export =  $\text{Rs.}1,00,000 \times 75\% = \text{Rs.}75,000$  Therefore, the exempted amount is Rs. 50% of Rs.75, 000 i.e., Rs. 37, 500/-. Note: Total Year = 8 (2013-2021). Therefore, Amount will be exempted @ 50%. 2. Charlie Ltd. has a Unit at SEZ. The company Provided Total Sales Rs.10, 00, 000/- and Export Sales Rs.8, 00, 000/- and Net Profit Rs.5, 00, 000/- for the previous year 2020-21. Calculate the eligible deduction under section 10AA of the Income tax act, for the assessment year 2021-2022, if the unit was set up and start manufacturing from 22-05-2015. Solution: Amount of Exemption = Profit

**96% MATCHING BLOCK 9/875**

**W**

of Unit in SEZ × Export Turnover of Unit SEZ Total Turnover of Unit SEZ 14

NSOU • PGCO - V Profit Percentage =  $80\%$  ( $\frac{8,00,000}{10,00,000}$ ) Profit from Export =  $5,00,000 \times 80\% = \text{Rs.}4,00,000$  Therefore, the exempted amount is Rs.2, 00, 000. Self-Practice Question: Priya Manufacturing Ltd. has a Unit at SEZ and another unit at Domestic Tariff Area (DTA). The company Provides the following details for the previous year 2020-21. Priya Ltd- Total Sales Rs.15, 00, 000/-, Export Sales 14, 50, 000/-, Net Profit Rs.10, 00, 000/-. Unit in DTA- Total Sales Rs.12, 00, 000/-, Export Sales Rs.12, 50, 000/-, Net Profit Rs.8, 00, 000/-. Calculate the eligible deduction under section 10AA of the Income tax act, for the assessment year 2021-2022, in the following situation if the unit was set up and started manufacturing from 22-05-2014. Ans. Rs.66, 670/-. 1.2.3 Eligibility for deduction under Section 10AA To avail deduction u/s 10AA of the Income Tax Act., SEZ units are required to fulfil the following conditions- i) The businessperson should be enclosed within the provisions of section 2 (j) of the Special Economic Zone Act, 2005. ii) Special Economic Zone unit should have commenced its business activity or provision of service, as the case may be,

**45% MATCHING BLOCK 10/875**

**W**

during the earlier year related to any assessment year beginning on or after 1st April 2006. iii) Special Economic Zone unit is not designed by

any splitting up, or the modernization of the business that is already in existence.

NSOU • PGCO - V 15 iv) Special Economic Zone unit is not designed by any transfer of plant or machinery, before used for any purpose, to a new business; and v) Units which have already enjoyed the advantage of deduction under section 10A of the Income Tax Act for a constant period of 10 years are not qualified to right deduction under Section 10AA of the Act. 1.3 Income Exempted from Tax as per Section 10 Some of the exempted income under section 10 are given in the table below: Sl. 304 Corporate Taxation.docx (D117962176)

Section 10(1), agricultural income earned by the taxpayer in India is exempt from tax.

But agricultural income earned abroad is taxable. Agricultural income is distinct under section 2(1A) of the Income-tax Act. As per section 2(1A), agricultural income usually means- i) Any rent or income which has been gained from land located in India and is used for the purpose of agriculture. ii) Any income derived from such land by farming processes which is included for the purpose of agricultural produce to make the product fit for the market or for the purpose of making the product saleable. iii) Any revenue which has been attributable to a farm house which has been subject to contentment of specific conditions and which has been specified in this regard in section 2(1A). Agricultural income can be defined as the income which has derived from trees or seedlings grown in a nursery and this will be considered as agricultural income. 1.4.1 Amount received

is exempt from tax in the hands of the partner. Further, in the circumstances where the share of the profit which has been obtained by a partner of LLP from the LLP will be exempt from tax in the hands of such partner. 18

NSOU • PGC0 - V 1.5 Exemptions under Section 10(14) Exemptions under section 10(14) refer to special allowances to employees provided under the Income Tax Act. Section 10(14) deals with special allowance, these specific allowances are actually treated in totally different way, this is categorized actually as a special exemption under Section 10 and no tax is being charged. The exception is actually dependent on the amount sanctioned or the actual money which has been operated for the precise purpose, whichever is actually lower. Some of the special allowances under sub-section (14) of Section 10 of the Income Tax Act include: i) Travelling allowance: Travelling allowance is an allowance which actually comprises daily compensation which is given for the purpose of covering expenditure while on an official tour or at the time of shifting / moving to a new job location. ii) Travel Grant: Allowance is approved to the staff for the aim of covering their travel expenditures while on an official tour or during the transfer of employment. It contains expenses incurred in transferring of private belongings, etc. iii) Uniform Allowance: Uniform allowance is given where in any office it is mandatory to wear uniform while the employees are on duty., the allowance is offered to cover outlays of purchase and preservation of uniform. iv) Conveyance Allowance: Where it is needed to travel while on duty then a conveyance allowance is being given to the employee, this allowance is provided to cover expenses suffered on official travelling. In our daily regular life, we need to travel from home to office, the cost which will be incurred for travelling from home to office will be borne by the employee. v) Research or Academic Grant: This exemption is given by education and/or a research institution for uplifting research or academic training, education, etc. vi) Special allowance under Section 10(14)(ii) include: Climatic allowance comprises reimbursement for working in high altitude or hilly areas.

NSOU • PGC0 - V 19 For hills of Himachal Pradesh, Uttar Pradesh, Jammu & Kashmir and therefore the North East up to Rs. 800. Deductions up to Rs. 7,000/month for Siachen. For other high-altitude places deductions up to Rs. 300. Grant of Rs. 200 for those working in pre-classified Tribal, Schedule or Agency areas like Karnataka, West Bengal, Madhya Pradesh, Assam, Orissa, Tamil Nadu, Bihar, Uttar Pradesh, and Tripura. As per Rule 2BB of Section 10 (14)(ii), soldiers personnel serving within the border area, remote places or in any disturbed areas are provided allowance starting from Rs. 200 to Rs. 1,300/month. A grant of Rs. 2,600/month is allowable under Section 10 (14)(ii), provided it's given to a private for delivering responsibilities in unusual fields like Nagaland, Jammu & Kashmir, Himachal Pradesh, Uttar Pradesh, Sikkim, Andhra Pradesh and Manipur. Section 10 (14)(ii) exemption is provided to an allowance of Rs. 100/child maximum up to 2 children. A hostel stipend can also be allowed for Rs. 300/month/child up to 2 children maximum. Grant of Rs. 3,900/month in Section 10 (14)(ii) is concentrated to those employed in soldiers for counterinsurgency. An exemption as per Section 10 (14)(ii) of Rs. 3,250/month is for members of the soldiers serving within the Andaman and Nicobar Islands or Lakshadweep Group of Islands. Other grants under sub-section (14)(ii) of Section 10 of the tax Act include: Rs. 800/month for underground mine workers. In highly active areas Rs. 4,200/month for workers. For workers in certain enhanced field areas Rs. 1,000/month. Transport allowance to physically inactivated employees Rs. 1,600/month. Rs. 1,600/month as transport allowance for workers to travel between homes to the office.

20 NSOU • PGCO - V 1.6 Summary After Studying this unit, we could understand—the concept of tax; Exempt incomes; Incomes exempt from tax as per section 10; Eligibility for deduction under section 10AA; Agricultural Income under section 10(1); Share of income from firm under section 10(2A) ; Some other exemptions under section 10. 1.7 Questions A. Multiple Choice Questions (MCQ) 1. A government employee who has been posted abroad and allowances given to them are - a) Fully exempt b) Partly exempted c) Fully taxable d) Taxable by the country where the person is posted 2. House rent allowances are- a) Fully exempted b) Partly exempt c) Fully taxable d) Taxable by the country where the person is posted 3. business income and chargeable under the head “Profits and Gains of Business or Profession”.

Actually, Business income is a type of earning which is classified as ordinary income arising from business for tax purposes. Profession is generally defined as various activities done by the human being by which they earn a living. To earn a living through profession one needs to have some intellectual skill and special knowledge. Examples of profession are Chartered Accountant, Cost and Management Accountant, Company Secretary in practice, doctor in practice, Lawyer in practice etc. As per section 2(23) profession also includes vocation. Vocation is actually a process or way through which a person passes his/her life. There are some vocations which are included within the meaning of profession. Line, we can give the example of engineers, tax consultants and accountants. If a CMA is practicing then the income of the practicing CMA will be chargeable to income from business and profession. Thus, here we actually get three terms, business, profession and vocation. 2.2 Business Business is being defined in the following terms. Business is being called either an occupation, profession, or trade, or business is a commercial activity which includes providing goods or services in exchange for profits within the allowed laws of country. By the following definition business can be defined. Business is generally defined as an organization, enterprise or entity which is engaged in professional, commercial or industrial activity. 2.3 Profession The term profession has not been defined under the Income Tax Act. It refers to an occupation requiring some degree of learning, skill and expertise. The term profession includes vocation as well [Section 2(36)].

 32 NSOU • PGCO - V 2.6.1 Expenditure on Scientific Research-Section 35 Expenditure on scientific research expenditure refers to expenses incurred on scientific research for the development of business and business related activities. It covers any scientific research expenditure, revenue or capital nature, which may help to improve an extension of any business or all the businesses of that class or any scientific research of a medical nature relating to the welfare of the workers employed in that business or all the businesses of that class, as the case may be. 2.6.1-1 Revenue Expenditure Where an assessee incurs any scientific research expenditure of revenue nature related to his business, such expenditure is allowed as deduction in full (i.e.,100% deduction from the A.Y. 2021-22 onwards) in the year in which it is incurred under section 35(1)(i).

**47% MATCHING BLOCK 40/875**

**W**

Any such expenditure incurred within 3 years immediately preceding the commencement of the business on payment of salary to research personnel engaged in scientific research

related to his business carried on by the taxpayer or on purchase of material inputs for such scientific

**95% MATCHING BLOCK 41/875**

**W**

research will be allowed as deduction in the year in which

the business is commenced. The deduction will

**100% MATCHING BLOCK 42/875**

**W**

be limited to the amount certified by the prescribed authority. 2.6.1-2 Capital Expenditure

Where an assessee incurs any scientific research expenditure of capital nature related to the business carried on by the assessee, such expenditure is deductible in full (i.e., 100% deduction for the A.Y. 2021-22 onwards) in the previous year in which it is incurred under section 35(1)(iv). However, any capital expenditure which has been incurred prior to the commencement of the business, the aggregate of the expenditure so

**47% MATCHING BLOCK 43/875**

**W**

incurred within the three years immediately preceding the commencement of the business shall be deemed to have been incurred in the previous year in which the business is commenced and will also qualify for deduction

as expenditure for scientific research incurred during the previous year. While claiming deduction for capital expenditure for scientific research related to the business of the assessee, the following points are to be noted: a) Disallowance of expenditure on land: There will be no deduction available under section 35 in respect of capital expenditure incurred on the acquisition of any land whether the land is acquired as such or as part of any property.

NSOU • PGC0 - V 33 b) Carry Forward of Deficiency: Capital expenditure incurred on scientific research which cannot be absorbed/set off owing to shortfall in business profits of the relevant previous year can be carried forward to the immediately succeeding previous year and shall be treated as the allowance for that year without any time bar for such carry forward. c) Disallowance of Depreciation: No depreciation will be admissible on any capital asset representing scientific research expenditure which has been allowed as a deduction under section 35 whether in the year in which such deduction was allowed or in any other previous year. d) Sale of Scientific Research Assets: Where any capital asset representing scientific research is sold, discarded, demolished or destroyed, either after the cessation of its use for scientific research purpose related to the business or without having been used for other purposes, the tax liability will be applicable as follows: i) Where the asset is sold, etc., after the cessation of its use for scientific research purpose,

**64% MATCHING BLOCK 44/875**

the undertaking of an Indian company which is entitled to amortization is transferred to another Indian company in a scheme of amalgamation or demerger within the 5-year period of amortization. In that event, the deduction in respect of previous year in which the amalgamation

or demerger takes place and the following previous year within the 5-year

NSOU • PGCO - V 43 period, will be allowed to the amalgamated company or resulting company and not the amalgamating company or demerged company. List of preliminary expenditure allowable as deduction under section 35D Amortization of preliminary expenditure is available towards eligible expenditure for deduction under section 35D includes- a) Expenditure for preparation of the feasibility report and project report. b) Expenses incurred for conducting market or other surveys which is

**62% MATCHING BLOCK 116/875**

**W**

necessary for the business of the assessee. c) Expenditure for acquiring engineering services relating to the

assessee's business. d) Legal expenses for drafting of Memorandum of Association and Article of Association of the company. e) Expenditure for the printing of Memorandum and Article of Association of the company. f) Expenses for drafting, printing, typing and advertisement of the prospectus of the company. g) Registration fees paid for registering the company under the Companies Act, 1956. h) Expenditure towards the issue of shares/ debenture for public subscription. i) Any other prescribed expenditure which is not deductible under any other provisions of the Act. However, for claiming deduction under section 35D, the assessee (other than a company or co-operative society) should- a) Get the accounts audited, for the year/ years during which the preliminary expenditure is incurred, by the practising-chartered accountant, and b) Furnish audit report in Form No. 3AE in the first year of claiming the deduction. c) Deduction under section 35D will apply to the amalgamated/ demerged company. d) The expenditure claimed/ allowed as a deduction under section 35D will not qualify for any other deduction under other provisions of the Act. 2.7 Taxation of Business Income of Companies For the purposes of taxation of business income of companies, companies are broadly classified as follows: 44 NSOU • PGCO - V 2.7.1

**100% MATCHING BLOCK 118/875**

**SA**

Tax Planning and Management BAA 751.doc (D91797431)

Indian Company [Section 2 (26)] Indian Company means a company formed and registered under the companies Act, 1956 and includes-a)

**59% MATCHING BLOCK 117/875**

**W**

A company formed and registered under any law relating to companies formerly in force in any part of India (other than the State of Jammu and Kashmir and the Union territories specified in (d) below: a) A corporation established by or under a Central, State or Provincial Act; b) Any institution association or body which is declared by the Board to be a company under section 2(17); c) A company formed and registered under any law for the time being in force in

**84% MATCHING BLOCK 119/875**

**SA**

Tax Planning and Management BAA 751.doc (D91797431)

the State of Jammu and Kashmir; d) A company formed and registered under any law for the time being in force in the Union territories of Dadra and Nagar Haveli, Goa, Daman and Diu and Pondicherry.

In the aforesaid cases, a company, corporation, institution, association or body will be treated as Indian company if its registered office is situated

**92%**      **MATCHING BLOCK 120/875**      **SA** Tax Planning and Management BAA 751.doc (D91797431)

in India. 2.7.2 Domestic Company [Section 2 (22A)] Domestic company means an Indian company or any other company which, in respect of its income liable to tax under this Act, has made the prescribed arrangements for the declaration and payment, within India

in accordance with section 194.

Domestic companies are further classified into two groups- Domestic companies in which public are substantially interested,

i.e., Public Company; Domestic companies in which public are not substantially interested, i.e., Private

**83%**      **MATCHING BLOCK 121/875**      **SA** Tax Planning and Management BAA 751.doc (D91797431)

Company. 2.7.3 Foreign Company [Section 2 (23A)] A foreign company means a company which is not a domestic company.i.e.

not registered under the Indian Companies Act and

**76%**      **MATCHING BLOCK 122/875**      **SA** Tax Planning and Management BAA 751.doc (D91797431)

whose control and management is located outside India and which has not made prescribed arrangement for declaration and payment of dividend within India. 2.7.4

Venture Capital Company A venture capital company is one which is engaged in in providing finance to venture capital undertakings mainly by way of acquiring equity shares of such undertakings, or by advancing loans to such undertakings and is approved by the Government in this behalf.

NSOU • PGCO - V 45 2.7.5 Computation of Taxable Income and Tax Liability of Companies The salient features of taxation of companies are discussed below: A company is a corporate body that has a separate and distinct legal entity from its shareholders. Domestic as well as foreign companies are liable to pay corporate tax under the Income Tax Act irrespective of their quantum of income. The taxable income of companies is computed in the same manner as used for other non-corporate assesses. New corporate tax rates have become applicable from 1st April 2019 onwards for certain types of corporations. In case of domestic companies, the rate of income- tax shall be 25% of the total income, if the total turnover or gross receipts of the previous year 2019-20 do not exceed four hundred crore rupees and in all other cases the rate of income-tax shall be 30% of the total income. However, domestic companies have an option for reduced rate of taxation under section 115BAA, section 115BAB and section 115BA of the Act on fulfilment of certain conditions mentioned therein. The tax rate is 15% in section 115BAB, 22% in section 115BAA and 25% in section 115BA. Surcharge is applicable at a flat rate of 10% in these cases irrespective of the amount of total income.

**100%**      **MATCHING BLOCK 124/875**      **SA** Basics of taxation.docx (D126935931)

The domestic company who has opted for special taxation regime under section 115BAA, 115BAB

and section 115BA is exempted from the provisions of MAT. Surcharge at the rate of 7% shall be levied

**66%**      **MATCHING BLOCK 123/875**      **W**

in case of a domestic company (except those opting for taxation under section 115BAA, section 115BAB

and section 115BA of the Act), if the total income of the domestic company

**71% MATCHING BLOCK 125/875 W**

exceeds one crore rupees but does not exceed ten crore rupees. Surcharge at the rate of 12%

shall be levied, if the total income of the domestic company (except those opting for taxation under section 115BAA, section 115BAB and section 115BA of the Act) exceeds Rs. 10 crore. However, non-resident or foreign companies will be liable to tax @ 40% ;of their total income plus

**91% MATCHING BLOCK 126/875 W**

surcharge @2% of tax where total income exceeds Rs. 1 crore/ @ 5% of tax if total income exceeds Rs. 10 crore

plus SAHE @ 4%. From the gross total income of corporate bodies so aggregated under different heads other than income from salary [since a company cannot have salary income], the deductions u/s 80 G, 80 GGA, 80 GGC, 80 IA, 80 IAB, 80 IB, 80 IC, 80 ID, 80 IE, 80 JJA and 80 JJAA only are allowable under Chapter VI-A of the Income Tax Act. 46 NSOU • PGCO - V 2.8 Taxation of Business Income of a Partnership Firm/LLP The following are the salient features of taxation of income of a partnership firm/LLP: The firm/LLP

**83% MATCHING BLOCK 129/875 SA**

M. Com. II Adc. Accountancy P. V & VII all.PDF (D142210236)

will be taxed as a separate entity, with no distinction between registered and unregistered firms.

**81% MATCHING BLOCK 127/875 W**

In computing the total income of the firm/LLP, any salary bonus, commission or remuneration, to

a partner, shall be deductible subject to certain restrictions. While computing the total income of a firm/LLP, the profit or loss as shown by Profit & Loss Account of the firm/LLP shall be adjusted in the same manner as is done in

**89% MATCHING BLOCK 128/875 W**

the computation of income under the head Profit and Gains of Business or Profession. The

share of income of a partner

**75% MATCHING BLOCK 130/875 W**

in the income of the firm will not be included in the hands of the partner

as it is fully exempt from tax under section 10(2A). Where a firm pays interest to any partner, the firm can claim deduction of such interest at a maximum rate of 12% p.a. according to the partnership deed. Interest paid in excess of the above will be disallowed in the hands of the firm. Where a firm pays any

**70% MATCHING BLOCK 131/875**

**W**

salary, bonus, commission or remuneration, by whatever name called, to any partner, it will be allowed as deduction in the hands of the firm

subject to following conditions : i) The salary is paid to a working partner under section 40(b)(i). For this purpose, 'working partner' means an individual partner

**83% MATCHING BLOCK 132/875**

**W**

who is actively engaged in conducting the business/ profession of the firm.

Sleeping partners or financing partners cannot be allowed any remuneration etc. by the firm. ii) The payment

**100% MATCHING BLOCK 133/875**

**W**

is authorized by, and is in accordance with, the terms of the partnership deed.

iii)

The payment relates to a period which falls after to the date of the partnership deed. In other. words, the deduction for salary to partners cannot be claimed with retrospective date. iv)

**29% MATCHING BLOCK 134/875**

**W**

The amount of remuneration, bonus, commission etc. to all the partners during a previous year should not exceed the limit specified below: a) On first Rs. 3,00,000 of book profit or in the case of loss b) On balance of book profit

Book Profit

Quantum of Deduction Rs. 1,50,000 or 90% of book profit, whichever is higher 60% of book profit

NSOU • PGCO - V 47 Income tax is levied on Partnership Firms and LLPs at a flat rate of 30% plus surcharge @ 12% if the total income exceeds Rs. 1 crore plus SAHE @ 4%. From the Gross Total Income of the firm/LLP, the deductions u/s 80 G, 80 GGA, 80 GGC, 80 IA, 80 IAB, 80 IB, 80 IC, 80 ID, 80 IE, 80 JJA and 80 JJAA are applicable. 2.9 Inadmissible Deductions - Section 40 While computing income from business or profession, certain expenses are expressly disallowed under section 40 of the Income Tax Act or in other words there are some inadmissible expenses by virtue of section 40 in computing taxable income from business or profession as follows: 2.9.1 Payment of any interest, royalty, fees etc. a) Section 40(a)(i): Where

**63% MATCHING BLOCK 135/875**

**W**

any interest, royalty, fees for technical services or other taxable sums other than salary, which is payable outside India or in India to anon-resident or to a foreign company

by an any assessee, on which tax has not been deducted

at source in the relevant previous year or, after deduction, the same is not deposited into the Government treasury

**84% MATCHING BLOCK 136/875**

**W**

on or before due date for filing of return under section 139(1), 100 % of such sum shall be disallowed.

However,

**42% MATCHING BLOCK 137/875**

**W**

where in respect of any such sum tax is deducted in subsequent year or paid and deposited after the due date for filing the return of income under section 139(1), such sum shall be deductible in the previous year in which tax

is so deducted or deposited, as the case may be. Example: B Ltd. paid technical fees of Rs. 50,000 to a foreign national in the P.Y. 2017-18 without deducting tax at source or after deduction of tax, the same has not been deposited to the Government

**100% MATCHING BLOCK 138/875**

**W**

on or before the due date of filing return under section 139(1). However,

in the previous year 2018-19, B Ltd. deducted tax at source on technical fees and deposited the same in the same previous year into the government exchequer. Show the tax treatment of the above for the relevant previous years in the hands of B Ltd. Solution: Since B Ltd. failed to deduct tax at source for paying technical fees to a foreign national or after deduction of tax, the same has not been deposited to the Government

**100% MATCHING BLOCK 139/875**

**W**

on or before the due date of filing return under section 139(1), 100 %

of such sum of technical fees i.e. Rs. 50,000 shall not be allowed as deduction in computing income from business of B Ltd. for the assessment year 2018-19 (previous year 2017-18).

48 NSOU • PGCO - V For the previous year 2018-19, since B Ltd. duly deducted tax at source and deposited the same with the Government, the sum of Rs. 50,000 will be allowed as deduction in computing income from business of B Ltd. for the assessment year 2019-20 (previous year 2018-19). b) Section 40(a)(ia): Where any salary,

**50% MATCHING BLOCK 140/875**

**W**

interest, royalty, fees for technical services or other taxable sums, which is payable in India to a resident by any assessee, on which tax has not been deducted

at source in the relevant previous year or, after deduction, the same is not deposited into the Government treasury

**84% MATCHING BLOCK 141/875**

**W**

on or before due date for filing of return under section 139(1), 30 % of such sum shall be disallowed.

However,

**42% MATCHING BLOCK 142/875**

**W**

where in respect of any such sum tax is deducted in subsequent year or paid and deposited after the due date for filing the return of income under section 139(1), such sum shall be deductible in the previous year in which tax

is so deducted or deposited, as the case may be. However, by virtue of first proviso to section 201(1), the payer of such sum to resident without tax deducted at source or after deduction tax has not been deposited with the Government,

**100% MATCHING BLOCK 143/875**

**W**

shall not be deemed to be an assessee-in-default in respect of such tax if

the recipient resident : a)

**89% MATCHING BLOCK 144/875**

**W**

has furnished his return of income under section 139; b) has taken into account such sum for computing income in such return of income; c) has paid the tax due on the income declared by him in such return of income, and d) furnishes a certificate to this effect from an accountant in

such form as may be prescribed. If the above conditions are satisfied, then for the purposes of section 40(a)(ia) the payer of such sum shall be deemed to have deducted tax at source and deposited the tax on the date of furnishing the return by the resident recipient. Example: On 15.6.2018, A Co. Ltd. paid Rs. 80,000 as commission to D Co. Ltd. (an Indian company) but failed to deduct tax at source or after deducting tax at source failed to deposit

**71% MATCHING BLOCK 145/875**

**W**

the same with the Government on or before the due date of filing return under section 139(1). However,

A Co. Ltd. deducted tax at source on commission paid to D Co. Ltd. and deposited the same with the Government in the previous year 2019-20 duly. Show tax treatment of the above in the hands of A Co. Ltd. for the relevant previous years. NSOU • PGC0 - V 49 Solution: Previous year 2018-19: Since A Co. Ltd. failed to deduct tax at source for paying commission to an Indian company or after deduction of tax, the same has not been deposited to the Government

**100% MATCHING BLOCK 146/875**

**W**

on or before the due date of filing return under section 139(1), 30 %

of such sum of commission i.e., Rs. 80,000 x 30% = Rs. 24,000 shall not be allowed as deduction in computing income from business of A Co. Ltd. for the assessment year 2019- 20 (previous year 2018-19). Previous year 2019-20: Since A Co. Ltd. deducted tax at source and also deposited the same with the Government

**67% MATCHING BLOCK 148/875**

**SA**

304 Corporate Taxation.docx (D117962176)

in the previous year 2019-20 on or before the due date of filing return under section 139(1), the sum of

Rs. 24,000 being 30% of the commission of Rs. 80,000 will be allowed as deduction in computing income from business of A Co. Ltd. for the assessment year 2020-21 (previous year 2019-20). Example: Suppose in the above case, though A Co. Ltd. failed to deduct tax at source or after deduction failed to deposit with the Government in the previous year 2018-19, D Co. Ltd. i.e. the recipient of commission income duly paid its advance tax on its total income for the previous year 2018-19 including commission income from A. Co. Ltd. and also submitted its return of income for the previous year 2018-19 duly under section 139(1). Also, A Co. Ltd. has received a certificate in prescribed form to this effect from a chartered accountant. Show the tax treatment for subsequent payment of tax by recipient of commission (D Co.Ltd.). Solution: After payment of tax by D Co. Ltd., the recipient of commission, A Co. Ltd. cannot be treated as an assessee-in-default in terms of first proviso to section 201(1), as the following conditions are satisfied: a) D Co. Ltd, the recipient of commission from A Co. Ltd. has submitted its return of income duly under section 139(1); b) D Co. Ltd. has taken into account the commission income in its return of income; c) D Co. Ltd. has paid tax duly on its total income including commission income; d) A Co. Ltd. has a certificate in prescribed form to this effect from a chartered accountant.

50 NSOU • PGCO - V It is, therefore, assumed that A Co. Ltd. has deducted and deposited tax duly as per section 40(a)(ia) and accordingly the sum of Rs. 24,000 being 30% of the commission of Rs. 80,000 will be allowed as deduction in computing income from business of A Co. Ltd. for the assessment year 2019-20 (previous year 2018-19). c) Salary Payable outside India without Tax Deduction [Section 40(a)(iii)]

**54% MATCHING BLOCK 147/875**

**W**

Section 40(a)(iii) is applicable if salary is paid outside India or paid to a non-resident and tax has not been paid

to the Government nor deducted at source under the Income-tax Act. 2.9.2 Default pertaining to Non-Deduction / Non-Deposit of Equalisation Levy [Section 40(a)(ib)] Any consideration paid or payable (to a non-resident for a specified service on which equalisation levy is applicable) will be disallowed in the following cases: a) Equalisation levy is deductible and such levy has not been deducted. b) Equalisation levy is deductible (and it is so deducted) but it is not

**100% MATCHING BLOCK 150/875**

**SA**

Basics of taxation.docx (D126935931)

deposited [on or before the due date of submission of return of income

under section 139(1)].

If, however, equalisation levy is deducted/deposited in a subsequent year, the aforesaid consideration

**92% MATCHING BLOCK 149/875**

**W**

shall be allowed as a deduction in computing the income of the previous year in which such levy has been paid. 2.9.3

Disallowance of royalty, licence fees, etc., in case of State Government Undertakings [Section 40(a)(iib)] The following shall not be allowed as deduction—

a)

**75% MATCHING BLOCK 151/875**

**W**

Any amount paid by way of royalty, licence fee, service fee, privilege fee, service charge or any other fee or charge (by whatever name called), which is levied exclusively on a State Government undertaking by the State Government. b) Any amount which is appropriated (directly or indirectly) from a State Government Undertaking by the State Government. 2.9.4

Tax on Non-Monetary Perquisite paid by the Employer [Section 40(a)(v)] - The provisions of section 40(a)(v) are given below – a) The employer provides non-monetary perquisites to employees. b) Tax on non-monetary perquisites is paid by the employer.

NSOU • PGCO - V 51 c) The tax so paid by the employer is not taxable in the hands of employees by virtue of section 10(10CC). d) While calculating income of the employer, the tax paid by the employer on non- monetary perquisites is not deductible under section 40(a)(v). 2.9.5 Payments to partners of a firm or LLP- Section 40(b) In the case of any firm assessable as such or a limited liability partnership (

**72% MATCHING BLOCK 152/875**

**W**

LLP) the following amounts shall not be deducted in computing the income from business of any firm/LLP: a) Any salary, bonus, commission, remuneration

by whatever name called, to any partner who is not a working partner. (In the following discussion, the term 'remuneration' is applied to denote payments in the nature of salary, bonus, commission); b) Any remuneration paid to the working partner or

**75% MATCHING BLOCK 153/875 W**

interest to any partner which is not authorised by or which is inconsistent with the terms of the partnership deed;

c) Any interest payment authorised by the partnership deed falling after the date of such deed to the extent such interest exceeds 12% simple interest p.a. d) Any remuneration paid to a partner, authorised by a partnership deed and falling after the date of the deed in excess of the following limits:

**42% MATCHING BLOCK 154/875 W**

On the first Rs 3 lakh of book profit or in case of loss, the limit would be the higher of Rs 1,50,000 or 90% of book profit and on the balance of book profit,

the limit would be 60%.

**88% MATCHING BLOCK 155/875 W**

Example: A firm has paid Rs. 8,00,000 as remuneration to its partners for the P.Y.2017-18, in accordance with its partnership deed, and it has a book profit of Rs. 10 lakh. Determine the remuneration allowable as

deduction under section 40(b). Solution:

The allowable remuneration calculated as per the limits specified in section 40(b) will be as follows:

**100% MATCHING BLOCK 156/875 W**

On first Rs. 3 lakh of book profit [Rs.3,00,000 × 90%] Rs. 2,70,000 On balance Rs. 7 lakh of book profit [Rs. 7,00,000 × 60%] Rs. 4,20,000

Remuneration allowable as deduction under section 40(b)

Rs. 6,90,000 Thus, the excess amount of remuneration

**100% MATCHING BLOCK 157/875 W**

of Rs. 1,10,000 (i.e., Rs. 8,00,000 – Rs. 6,90,000) would be disallowed as per section 40(b). 52

NSOU • PGCO - V 2.10 Expenses or Payments not Deductible in Certain Circumstances- Section 40A While computing income under the head 'Profits and gains from Business or Profession', certain expenses or payments are liable to be disallowed under section 40A of the Act as discussed below: 2.10.1 Amounts not deductible in respect of Payment to Relatives [Section 40A(2)] Amount paid to relatives or associates will be disallowed under section 40A(2), if the following conditions are satisfied: a) the payment is in respect of any expenditure; b) the payment has been made or is to be made to a specified person in respect of such expenditure; c) the payment for the expenditure is considered

**57% MATCHING BLOCK 158/875**

**W**

excessive or unreasonable having regard to: i) The fair market value of the goods, services or facilities; or ii) The legitimate business needs of the assessee's business or profession; or iii) The benefit derived by or accruing to

the assessee from the payment. If the above conditions are fulfilled, the Assessing Officer can disallow the expenditure to the extent it is considered excessive or unreasonable by the above objective standards or otherwise. For the purposes of section 40A(2), the following cases are to be considered – a) Payment made by an individual to his or her relative including husband, wife,

**100% MATCHING BLOCK 159/875**

**W**

brother or sister or any lineal ascendant or descendant of that individual.

b) Payment made by a company to a director of the company or any relative of the director. c) Payment made by a firm/AOP/HUF to a partner/member or a relative of partner/member. d) Payment made to an

**77% MATCHING BLOCK 160/875**

**W**

individual who has a substantial interest in the business of the payer or a relative of such individual.

e) Payment made to a company who has a

**61% MATCHING BLOCK 161/875**

**W**

substantial interest in the business of the payer, any director of such company or relative of such director.

f) Payment made to a firm/AOP/HUF

**67% MATCHING BLOCK 162/875**

**W**

who has a substantial interest in the business of the payer or partner/ member of such person

or relative of partner/member.

NSOU • PGCO - V 53 Example: Z Ltd. made a payment of Rs. 17,000 to a relative of its director for a piece of work done. However, the same work is available to be completed and done in the open market for Rs. 11,000 only. Show the tax treatment of the above. Solution: Since the work was done by Z Ltd. by the relative of its director in excess of the reasonable cost in the open market, the excess payment of Rs. 6,000 (17000-11,000) shall be disallowed by virtue of section 40A(2). 2.10.2 Payment exceeding Rs. 10,000 (Rs. 35,000 if an assessee makes payment for Plying, Hiring or Leasing Goods Carriages) otherwise than through prescribed modes [Section 40A(3)] According to section 40A(3) if an

**74% MATCHING BLOCK 163/875**

**W**

assessee incurs any expenditure in respect of which payment or agreement payments made in a day otherwise than by an account payee cheque or bank draft or

use of electronic system through bank account or any other prescribed

modes like use of credit card, debit card, net banking, RTGS, NEFT etc. exceeds Rs. 10,000 (Rs. 35,000 if an assessee makes payment for Plying, Hiring or Leasing Goods Carriages), such expenditure or payment shall not be allowed as deduction. Exceptions to the above rule provided under Section 40A(3) a) Payment made to a bank (including private sector banks, co-operative bank, credit societies), LIC, etc. b) Payment made to Government. c) Payment through banking system. d) Payment made by

**94% MATCHING BLOCK 164/875**

**W**

book adjustment by an assessee in the account of the payee against money due to the assessee for any goods supplied or services rendered by him to the payee.

e) Payment made to a cultivator, grower or producer in respect of the purchase of agricultural or forest produce or product of animal husbandry (including livestock, meat, hides and skins) or dairy or poultry farming or fish or fish products or products of horticulture or apiculture (even if these products have been subjected to some processing provided the processing has been done by the cultivator, grower or the producer of the product). f) Payment made to a producer in respect of the purchase of the products manufactured or processed without the aid of power in a cottage industry.

54 NSOU • PGCO - V g) Payment made to a person who ordinarily resides or carries on business in a village not served by any bank. h) Payment of terminal benefits, such as gratuity, retrenchment compensation, etc., not exceeding Rs. 50,000. i) Payment made by an assessee by way of salary to his employee after deducting tax and when such employee is temporarily posted for a continuous period of 15 days or more

**100% MATCHING BLOCK 165/875**

**W**

in a place other than his normal place of duty or on a ship

and does not maintain any account in any

**75% MATCHING BLOCK 166/875**

**W**

bank at such place or ship. j) Payment required to be made on a day on which the banks were closed either on account of holiday or strike. k) Payment made

by any person

**86% MATCHING BLOCK 167/875**

**W**

to his agent who is required to make payment in cash for goods or services on behalf of

such person. l) Payment made by an authorised dealer or a money changer against purchase of foreign currency or traveller's cheques in the normal course of his business. Example: ABC Ltd. purchased goods on credit from PQ Ltd. on June 13, 2019 for Rs. 63,000 for which ABC Ltd. made the following payments to PQ Ltd.: i) Rs. 5,000 in cash on July 5, 2019; ii) Rs. 22,000 by a bearer cheque on July 31, 2019; iii) Rs. 36,000 by an account payee cheque on August 2, 2019. Solution: i) Nothing will be disallowed for of the payment of Rs. 5,000 in cash as the payment does not exceed Rs. 10,000. ii) 100% of Rs. 22,000 will be disallowed under section 40A(3) as it was paid by bearer cheque. iii) Nothing will be disallowed for the payment of Rs. 36,000 as it was paid by account payee cheque. Example: P Ltd. purchased goods on credit from a relative of a director on February 12, 2019 for Rs. 60,000 (market value: Rs. 53,000). The amount was paid in cash on March 18, 2019 by P Ltd. Show the tax treatment of the above.

NSOU • PGCO - V 55 Solution: Out of the payment of Rs. 60,000, Rs. 7,000 (being the excess payment to a relative, i.e. 60,000 - 53,000) shall be disallowed under section 40A(2). As the payment was made in cash and the amount exceeds Rs. 10,000, 100% of the balance payment (i.e., Rs. 53,000) shall be disallowed under section 40A(3). 2.10.3 Disallowance in respect of Provision for Unapproved Gratuity Fund [Section 40A(7)] In terms of section 40A(7), it is provided that no deduction would be allowable to any taxpayer carrying on any business or profession on account of provision for gratuity made towards payment of gratuity to the employees on their retirement or on termination of employment, as the case may be, unless the contribution is made to an approved gratuity fund for the exclusive benefits of employees under an irrevocable trust. Thus, deduction under section 40A(7) shall be allowed only when- a) the amount of gratuity has actually become payable during the previous year to the employees' (provided deduction has not been claimed under clause (b) below); or b) when a provision has been made

**96% MATCHING BLOCK 168/875**

**W**

for payment of a sum by way of any contribution towards an approved gratuity fund.

Therefore,

**84% MATCHING BLOCK 169/875**

**W**

no deduction shall be allowed in respect of any provision made for the payment of gratuity to the employees,

even though the assessee may be following the mercantile system of accounting, unless it is a provision for the purpose of

**100% MATCHING BLOCK 170/875**

**W**

payment of a sum by way of any contribution towards an approved gratuity fund.

In other words, any provision for unapproved gratuity fund (for meeting future liability) is not deductible. Example: Mr. A retired from the service of D Ltd. on June 30, 2019. The company paid gratuity of Rs. 1,70,000, according to the provisions of the Payment of Gratuity Act, 1972. D Ltd. does not maintain any provision for gratuity account. Show the tax treatment of the above. Solution: Where gratuity is actually paid during the previous year or where gratuity has become payable during the previous year, it is deductible if no deduction has been claimed on the basis of provisions earlier. Consequently, Rs. 1,70,000 is allowed as deduction for the assessment year 2020-21 in the hands of D Ltd.

56 NSOU • PGCO - V 2.10.4 Amount not deductible

**100% MATCHING BLOCK 175/875**

**SA**

304 Corporate Taxation.docx (D117962176)

in respect of contributions to Non-Statutory Funds [Section 40A(9)]

**100% MATCHING BLOCK 171/875**

**W**

Any sum paid by the assessee as an employer by way of contribution towards

**95% MATCHING BLOCK 172/875**

**W**

Recognised Provident Fund, or Approved Superannuation Fund or an Approved Gratuity Fund,

is deductible to the extent it is required by any law. If the following conditions are satisfied, then contribution or payment is not deductible by section 40A(9) : a) The contribution/payment is made by an assessee as an employer. b) It is paid

**82% MATCHING BLOCK 173/875 W**

towards setting up (or formation of) any trust, company, association of persons, body of individuals, society or

it is paid by way of contribution to any fund. c) The contribution or payment is not required by any law. 2.10.5 Certain Deductions to be Allowed only on Actual Payment Basis [Section 43B] Section 43B is applicable only if the taxpayer maintains books of account on the basis of mercantile system of accounting. The provisions of section 43B are given below: The following expenses (which are otherwise deductible under the other provisions of the Income-tax Act) are deductible on payment basis:

a) any sum payable

**64% MATCHING BLOCK 174/875 W**

by way of tax, duty, cess or fee (by whatever name called under any law for the time being in force); b) any sum payable by an employer by way of contribution to provident fund or superannuation fund or any other fund for the welfare of employees; c)

any sum payable as bonus or commission to employees for service rendered; d) any sum payable as interest on any loan or borrowing from a public financial institution (i.e., ICICI, IFCI, IDBI, LIC and UTI)

**100% MATCHING BLOCK 176/875 W**

or a State financial corporation or a State industrial investment corporation;

e) interest on any loan or advance taken from a scheduled bank or

a

**92% MATCHING BLOCK 177/875 W**

co-operative bank other than a primary agricultural credit society or a primary co-operative agricultural and rural development bank;

f) any sum payable by

**85% MATCHING BLOCK 178/875 W**

an employer in lieu of leave at the credit of his employee; and g)

any sum payable to the Indian Railways for the use of railway assets. The above expenses are deductible in the year in which payment is actually made. However, if the aforesaid

**100% MATCHING BLOCK 179/875 W**

payment is actually made on or before the due date of submission of return of income,

deduction can be claimed under section 43B on accrual basis.

NSOU • PGC0 - V 57 2.11 Deemed Profits - Section 41 By virtue of the provisions of section 41 of the Income Tax Act, the following receipts are chargeable to tax as business income notwithstanding that the business or profession to which the receipts relate ceases to exist in the year in which these are received: a) Remission or Cessation of Trading Liability [Section 41(1)] b) Balancing Charge on Assets of

**100% MATCHING BLOCK 180/875**

**W**

an undertaking engaged in Generation or Generation and Distribution of Power [

Section 41(2)] c) Profit on Sale of Capital Assets used for Scientific Research [Section 41(3)] d) Recovery out of Bad Debts Allowed as a Deduction [Section 41(4)] e) Amount withdrawn from Special Reserve Created and Maintained by certain Financial Institutions [Section 41(4A)] f) Adjustment of Loss [Sec. 41(5)] g) Recovery after Discontinuance of Business or Profession [Sec. 176(3A), (4)] By virtue of section 41, the following receipts are chargeable to tax as business income notwithstanding that the business or profession to which the receipts relate ceased to be in existence in the year in which they are received: 2.11.1 Remission or Cessation of Trading Liability [Section 41(1)] i)

**83% MATCHING BLOCK 181/875**

**W**

Where an allowance or deduction has been made in the assessment for any year in respect of loss, expenditure or trading liability incurred by an assessee and subsequently,

during any previous year, the assessee concerned i.e. the assessee under whose hand the allowance or deduction was made earlier

**100% MATCHING BLOCK 182/875**

**W**

has obtained, whether in cash or in any other manner whatsoever, any amount in respect of such loss or expenditure or some benefit in respect of such trading liability by way of remission or cessation thereof,

the amount obtained by such person or the value of benefit accruing to him

**90% MATCHING BLOCK 183/875**

**W**

shall be deemed to be profits and gains of business or profession and accordingly chargeable to income-tax as the income of that previous year,

**100% MATCHING BLOCK 184/875**

**W**

whether the business or profession in respect of which the allowance or deduction has been made is

in existence in that year or not; or ii) Where the 'successor in business' of the assessee

**92% MATCHING BLOCK 185/875**

**W**

has obtained, whether in cash or in any other manner whatsoever, any amount in respect of which loss or expenditure was incurred by the assessee

**71% MATCHING BLOCK 186/875**

**W**

or some benefit in respect of the trading liability by way of remission or cessation thereof, the amount obtained by the

successor in business or  
58 NSOU • PGCO - V

**60% MATCHING BLOCK 187/875**

**W**

the value of benefit accruing to the successor in business shall be deemed to be profits and gains of

the

**83% MATCHING BLOCK 188/875**

**W**

business or profession, and accordingly chargeable to tax as the income of that previous year.

For the purposes of this section, "successor in business" means-

**100% MATCHING BLOCK 190/875**

**SA**

304 Corporate Taxation.docx (D117962176)

a) where there has been an amalgamation of a company

with another company, the amalgamated company; b) where the first-mentioned person i.e. the assessee concerned is succeeded by any other person in that business or profession, the other person; c)

**96% MATCHING BLOCK 189/875**

**W**

where a firm carrying on a business or profession is succeeded by another firm, the

other firm; d) where there has been a demerger, the resulting company. Example: ABC & Co. purchased on credit goods worth Rs. 85,000 from Fancy Traders in the year 2018-19. However, ABC & Co. did not make payment to Fancy Traders owing to some dispute as to the quality of goods supplied by Fancy Traders. ABC & Co. debited the amount of Rs. 85,000 in its Profit & Loss Account for the year ended 31.3.2019 and the same was allowed as business expenses. Later, on 15.9.2020 Fancy Traders made a settlement with ABC & Co. by receiving a cash of Rs. 60,000 as full and final recovery of the dues. Show the tax treatment of the above Solution: Here, the remission of Rs. 25,000 (Rs. 85,000-Rs. 60,000) in the liability of ABC & Co. shall be treated as deemed income from business of ABC & Co. for the previous year 2020-21.

2.11.2 Balancing Charge on Assets of

**100% MATCHING BLOCK 191/875**

**W**

an undertaking engaged in Generation or Generation and Distribution of Power [

Section 41(2)]

**60% MATCHING BLOCK 192/875**

**W**

Where any building, machinery, plant or furniture which is owned by the assessee in respect of which depreciation is claimed

under section 32(1)(i) and which was or has been used

**86%      MATCHING BLOCK 193/875      W**

for the purposes of business of generation or generation and distribution of power- is sold, discarded, demolished or destroyed and the 'Moneys Payable' in respect of such building, machinery, plant or furniture, as the case may be, together with the amount of scrap value, if any, exceeds the 'written down value', then, so much of the excess as does not exceed the difference between the 'actual cost' and the 'written down value' shall be chargeable to income-tax as income of the business of the previous year in which the moneys payable for the building, machinery, plant or furniture became due.

NSOU • PGC0 - V 59 Where the moneys payable in respect of the building, machinery, plant or furniture referred to in this sub-section become due in a previous year in which the business for the purpose of which the building, machinery, plant or furniture was being used

**93%      MATCHING BLOCK 194/875      W**

is no longer in existence, the provision of this sub-section shall apply as if the business is in existence in that previous year. 2.11.3

Profit on Sale of Capital Assets used for Scientific Research [Section 41(3)] Where an asset representing expenditure of a capital nature for scientific research purposes is sold, without having been used for other purposes, and the proceeds of the sale together with the total amount of the deductions made under section 35 exceed the amount of the capital expenditure, the excess or the amount of the deductions so made, whichever is

**70%      MATCHING BLOCK 195/875      W**

the less, shall be chargeable to income-tax as income of the business or profession of the previous year in which the sale took place.

However, where the moneys payable in respect of any asset referred to in this sub-section become due in a previous year in which the business for which capital expenditure for scientific research was made

**100%      MATCHING BLOCK 196/875      W**

is no longer in existence, the provisions of this sub-section shall apply as if the business is in existence in that previous year.

Example: X Co. Ltd. purchased a machine costing Rs. 1,40,000 in the P.Y. 2017-18 to be used for scientific research purposes and the same amount was allowed as deduction under 35 in the P.Y. 2017-18. Later, X Co. Ltd. sold the machinery for Rs. 54,000 on 23.2.2020. Show the tax treatment of the above. Solution: Here, the sale proceeds of Rs. 54,000 shall be treated as deemed business income of X Co. Ltd. for the P.Y. 2019-20. 2.11.4 Recovery of Bad Debts allowed as a deduction [Section 41(4)] Where an amount has been allowed as deduction in respect of a bad debt or part of debt under section 36(1)(vii), and thereafter an amount is subsequently recovered on any such debt or part which is greater than the difference between the debt or part of debt and the amount so allowed,

**62%      MATCHING BLOCK 197/875      W**

the excess shall be deemed income from business or profession of the previous year in which

it is recovered. The applicability of deemed income for such recovery shall not be affected even if

**82% MATCHING BLOCK 198/875****W**

the business or profession in respect of which the deduction has been allowed is

in existence in that year or not.

60 NSOU • PGCO - V Example: Z Ltd. sold goods worth Rs. 60,000 on credit to a customer in the P.Y. 2016-17. The customer did not pay the amount to Z Ltd. and accordingly Z Ltd. write off Rs. 60,000 as bad debt in its Profit & Loss Account for the year ended 31.3.2017. However, the Assessing Officer while assessing the taxable income of Z Ltd. for the A.Y. 2017-18 allowed Rs. 35,000 only as bad debt and disallowed the rest amount of Rs. 25,000 as recoverable in future. Later, in the P.Y. 2019-20, Z Ltd. finally recovered Rs. 42,000 from the defaulting customer. Show the tax treatment of the above. Solution: Here, the excess amount of bad debt recovery of Rs. 17,000 [42,000 – (60,000 - 35,000)] being the excess of debt recovered over the debt and the amount allowed as bad debt shall be treated as deemed income from business of Z Ltd. by virtue of section 41(4) for the P.Y. 2019-20 in which such recovery was made. 2.11.5 Amount withdrawn from Special Reserve created and maintained by certain Financial Institutions [Section 41(4A)]

**93% MATCHING BLOCK 199/875****W**

Where a deduction has been allowed in respect of any special reserve created and maintained under clause (viii) of sub-section (1) of section 36

by certain financial institution, banking company, co-operative bank and a housing finance company etc.,

**98% MATCHING BLOCK 200/875****W**

any amount subsequently withdrawn from such special reserve shall be deemed to be the profits and gains of business or profession and accordingly be chargeable to tax as the income of the previous year in which such amount is withdrawn

even if the business is not in existence in that previous year. 2.11.6

Adjustment of Loss of a business [Section 41(5)] The Income Tax Act does not allow a business loss to be carried forward for set off after 8 years. However, there is an exception provided by section 41(5). This exception is applicable if the following conditions are satisfied: a) The business or profession is discontinued. b) Loss of such

**64% MATCHING BLOCK 201/875****W**

business or profession pertaining to the year in which it is discontinued could not be set-off against any other income of that year.

c) Such business is not a speculation business. d) After discontinuation of such business or profession, there is a receipt which is deemed as business income under section 41(1), (3), (4) or (4A).

NSOU • PGCO - V 61 The unabsorbed loss pertaining to the year in which business/profession was discontinued is permitted to be set off against notional business income under section 41(1), (3), (4) or (4A) even after 8 years. It can be set off even if the return of loss under section 139(3) is not submitted in time. 2.11.7 Recovery after Discontinuance of Business or Profession [Section 176(3A), (4)] There may be income received after the discontinuance of the

**44% MATCHING BLOCK 202/875**

**W**

business or profession which will also be treated as deemed income of the previous year in which it is received. Where any business or profession is

discontinued  
in any year, any sum received after the discontinuance

**63% MATCHING BLOCK 203/875**

**W**

shall be deemed to be the income of the recipient and charged to tax accordingly in the year

of receipt, if such sum would have been included in the total income of the person who carried on the business or profession had such sum been received before such discontinuance. 2.12 Deductions from Gross Total Income Under Chapter VIA of the Income Tax Act, several deductions are available to different assesseees from gross total income. However, the following deductions are available in respect of gross total income under the head 'Income from Business or Profession': 2.12.1

**92% MATCHING BLOCK 204/875**

**W**

Deduction in respect of profits and gains from industrial undertakings or enterprises engaged in infrastructure development- Section 80-IA Deduction

under this section is available in respect of the following businesses; a) provision of infrastructural facility; b) telecommunication services; c) industrial park or special economic zones; d) power generation, transmission and distribution; e) undertaking set up for reconstruction of a power unit; and f) a cross-country natural gas distribution network 2.12.1-1 Provision of Infrastructural Facility: The infrastructure facilities refer to all toll roads, bridges or rail systems and housing and other activities that are related to highway projects. Water projects like

**100% MATCHING BLOCK 205/875**

**W**

water treatment system, irrigation project, sanitation, and sewerage system or solid waste management system

and travelling means including a port, airport, inland waterway or inland port or navigational channel in the sea can also avail this deduction.

62 NSOU • PGC0 - V The deduction for the infrastructure facilities is applicable to a company that is owned by an Indian company or a company that is owned by an authority, board, corporation or institution that comes under the Central or State Act. For a new infrastructure facility, there should be an agreement made to the Government, local authority or statutory body for developmental purposes. 100 per cent of the profit of the business of providing infrastructural facility is allowable as deduction for 10 years commencing from the initial assessment year in which the enterprise begins operating and maintaining the infrastructure facility. 2.12.1-2 Telecommunication Services: Telecommunication services include all agencies that provide telecommunication services such as

**88% MATCHING BLOCK 206/875**

**W**

basic or cellular for radio paging, domestic satellite service or network of trunking,

broadband network and internet services. The time limit for providing telecommunication services is from 1st April 1995 to 1st April 2005 to be eligible for deduction under section 80-IA subject to satisfying

**51% MATCHING BLOCK 207/875**

**W**

following conditions: a) It is not developed by splitting up or reconstruction of a business that has already been in use.  
b) It is not developed by the transfer of machinery or plant

that has already been in use. In case of telecommunication services, deduction under section 80-IA is available at 100 per cent of profit for the first 5 years commencing from the initial assessment year and at 30 per cent for the next 5 years thereof. 2.12.1-3 Industrial Parks or Special Economic Zones: In case of an undertaking which develops or operates industrial parks or special economic zones has to satisfy the following conditions to get the benefit of deduction under section 80-IA: a) The undertaking develops and operates or maintains and operates an industrial park or from the assessment year 2002-03 a special economic zone notified for this purpose

**87% MATCHING BLOCK 208/875**

**W**

in accordance with any scheme framed and notified by the Central Government;

b) The industrial park must start its operating during April 1, 2006 and March 31, 2011 and it should be notified by the Central Government under the Industrial Park Scheme, 2008 or the special economic zone must start operating during April 1, 1997 and March 31, 2005; c) From the assessment year 2006-07,

**60% MATCHING BLOCK 209/875**

**W**

the return of income should be furnished on or before the due date of submission of voluntary return of income

under section 139(1).

NSOU • PGCO - V 63 If return is not submitted or return is submitted belatedly, deduction under this section is not available; and d) Deduction under section 80-IA is available only if it is claimed in the return of income. As such, if the assessee fails to make a claim in his return of income of this deduction, no deduction will be allowed. If all the aforesaid conditions are satisfied, 100 per cent of profit is deductible for 10 years commencing from the initial assessment year which means the assessment year specified by the assessee at his option to be the initial year not falling beyond the fifteenth assessment year starting from the previous year in which the undertaking starts its operating and developing industrial park. 2.12.1-4 Power Generation and Distribution Undertaking: In case of an undertaking engaged in power generation and distribution, deduction under section 80-IA is available if the following conditions are satisfied: a) The undertaking should be a new undertaking and it

**78% MATCHING BLOCK 210/875**

**W**

should not be formed by splitting up or the reconstruction of a business already in existence; b) It should not be formed by transfer of machinery or plant previously used for any purpose;

c) The undertaking must be

**92% MATCHING BLOCK 211/875**

**W**

set up in any part of India for the generation or generation and distribution of power and it begins

the operation at any time during April 1, 1993 and March 31, 2017; d)

**55% MATCHING BLOCK 212/875****W**

The return of income should be furnished on or before the due date of submission of return of income

given by section 139(1), otherwise no deduction under this section will be available. e) Deduction for this purpose under section 80-IA is available only if it is claimed in the return of income. As such, if the assessee fails to make a claim in his return of income of this deduction, no deduction will be allowed. If all the aforesaid conditions are satisfied, 100 per cent of the profits deductible for 10 years commencing from the initial assessment year (Initial assessment year means the assessment year specified by the assessee at his option to be the initial year not falling beyond the fifteenth assessment year starting from the previous year in which the undertaking generates power or commences transmission or distribution of power). 2.12.1-5 Reconstruction of Power Unit: Deduction for reconstruction of power unit by an industrial undertaking is available if the following conditions are satisfied:

64 NSOU • PGC - V a) The undertaking set up for this purpose should be owned by an Indian company and set up for reconstruction or revival of a power generating plant; b) The undertaking so set up should be formed before November 30, 2005

Solution: Computation of book profit of PQ Ltd. under section 115JB for the assessment year 2021-22 Net profit as per P&L A/c 31,75,000 Add:

Net profit to be increased as per sec.15JB Provision for income-tax 6,24,000 Transfer to General Reserve 1,56,000 Provision for gratuity 1,05,000 Proposed dividend 1,11,400 Provision for losses of subsidiary 76,000 company Expenditure to earn agricultural 28,500 income Expenditure to earn dividend income 11,000 Depreciation 3,29,000 14,40,900 46,15,900 Less: Net profit to be decreased as sec. 115JB Amount credited to P&L A/c from 1,23,700 Special Reserve Amount credited to P&L A/c from 1,18,000 Revaluation Reserve (to the extent of depreciation on revaluation) Agricultural income 2,85,000 Dividend income 38,000 Depreciation (excl. depreciation (3,29,000- 2,11,000 on revaluation of assets) 1,18,000) Brought forward business loss of 1,23,000 8,98,700 Rs. 1,49,000 or unabsorbed depreciation of Rs. 1,23,000, whichever is loss Book Profit 37,17,200 Amount (Rs.) Amount (Rs.) Amount (Rs.)

78 NSOU • PGCO - V Amount (Rs.) Applicability of section 115JB (Rs.) 15 % of Book Profit, i.e., Rs. 37,17,200x15% 5,57,588 Add: Education cess incl. SAHE of 4% (Surcharge not applicable) 22,303 Tax liability under sec.115JB 5,79,891 Tax payable on total income as per normal prov. of income-tax 4,81,500 @30% i.e. Rs. 16,05,000x30% Add: Education cess incl. SAHE of 4% 19,260 Tax Payable under normal prov. of Income Tax Act, 1961 5,00,760 Here, it is observed that the tax liability under the normal provision of Income Tax Act, 1961 (Rs. 5,00,760) is less than 15% of book profit incl. surcharge and education cess computed under section 115JB (Rs. 5,79,891). Thus, the book profit so computed (Rs. 37,17,200) shall be deemed to be the total income of PQ Ltd. for the year ended 31.03.2021 and tax payable as per MAT provision shall be Rs. 5,79,891 including education cess as applicable. However, tax credit shall be available to PQ Ltd. under Section 115JAA at Rs. 79,131 being the excess of MAT paid over the tax liability under the normal provision of income- tax, i.e. Rs. (5,79,891 - 5,00,760). 2.14 Dividend Distribution Tax Dividend distribution tax refers to tax on dividend income distributed by a company to its shareholders. The dividend income is the amount received by an investor, whether it is an individual or HUF or a company assessee, on account of holding shares in a company. It is income from other sources in the hands of the recipient shareholders. Earlier the companies paying and distributing dividends were obliged to pay tax on behalf of the shareholders. However, the Finance Act, 2020 has completely changed the method of dividend distribution taxation. Dividend distribution tax which was tax on dividend declared and paid by companies to their shareholders under Section 115-O of the Income Tax Act has been discontinued with effect from 1 st April, 2020. The dividend paying companies are not liable to pay dividend tax on dividend distribution on or after 1 st April, 2020. Accordingly, all dividends received on or after 1 April 2020 is taxable in the hands of the recipient investors/shareholders and the company paying and distributing dividends are not liable to pay tax on dividend distributed. The recipient shareholders are now liable to pay tax on dividend income on the basis of their slab system of taxation.

NSOU • PGCO - V 79 However, the domestic companies paying dividends are liable to deduct tax at source while paying dividend on or after 1.4.2020 under Section 194 @ 10% on dividend distributed to the resident shareholders if the aggregate amount of dividend paid to a shareholder during a financial year exceeds Rs. 5,000. The recipient shareholders shall have to pay tax on dividends on the basis of their residential status, relevant slab rates applicable under the Act. The domestic companies are also liable to deduct tax at source under Section 195 in accordance with the relevant DTAA for payment of dividend to non-resident shareholders on or after 1.4.2020. Dividend income of non-resident shareholders shall be chargeable to tax @ 20% of the dividend income from a domestic company without any deduction. Dividend received by shareholders from a foreign company is taxable as income from other sources and shall be chargeable to tax as per the normal rate of tax based on slab system of taxation applicable to the shareholders. Dividend received from a foreign company is entitled to get tax

**76% MATCHING BLOCK 273/875**

**W**

double taxation relief under section 91 of the Income Tax Act. However, in case of

dividend received by a company from another company by virtue of its shareholding in another company, the dividends received being inter-corporate dividends is allowable as deduction under section 80M to avoid double taxation. 2.15 Provisions for Set off and Carry Forward of Losses Profit and losses are two sides of a coin. However, the Income tax law in India does offer taxpayers some assistances for set off of losses. The law comprises

**87% MATCHING BLOCK 274/875**

CU-MBA-SEM-III-Tax Planning and Management- Se ...  
(D103495020)

Carry forward and set off of accumulated business losses and unabsorbed depreciation

of the amalgamating company in case of merger/amalgamation- Section 72A The Income Tax Act, 1961 prescribes that unabsorbed depreciation of assets and accumulated business loss can be carried forward only by the same assessee under whose hands the loss incurred or depreciation remains unabsorbed except in case of succession of business by inheritance. However, under the provisions of Section 72A of the Act, in the case of

**100% MATCHING BLOCK 306/875**

**W**

amalgamation of a company, owning an industrial undertaking or a ship or a hotel with another company or

the amalgamation of a banking company with a specified bank, the amalgamated company is entitled to carry forward the unabsorbed depreciation and brought forward loss of the amalgamating company provided certain conditions are fulfilled. Accordingly,

**80% MATCHING BLOCK 308/875**

**SA**

CU-MBA-SEM-III-Tax Planning and Management- Se ...  
(D103495020)

the accumulated business loss and unabsorbed depreciation of the amalgamating company shall be deemed to be the loss and depreciation of the amalgamated company for the previous year in which amalgamation took place.

As a result of this, the amalgamated company shall enjoy a fresh period of 8 years to carry forward unabsorbed business loss of the amalgamating company (disregarding the period of carry forward of loss already entertained by the amalgamating company) and shall be able to carry forward unabsorbed depreciation for further indefinite period by virtue of section 72A of the Income Tax Act. However, to avail this tax neutrality, the amalgamating companies as well as the amalgamated companies are required to satisfy the following conditions :

84 NSOU • PGCO - V

**78% MATCHING BLOCK 309/875**

**SA**

304 Corporate Taxation.docx (D117962176)

a) Conditions to be fulfilled by the amalgamating company The amalgamating company should have been engaged in the business, in which the accumulated loss occurred or depreciation remains unabsorbed, for three or more years; The amalgamating company has held continuously as on the date of amalgamation at least three-fourths of the book value assets held by it, two years prior to the date of amalgamation. b) Conditions to be fulfilled by the amalgamated company The amalgamated company holds continuously for a minimum period of five years from the date of amalgamation at least

seventyfive per cent in

the book value of fixed assets of the amalgamating company acquired in a scheme

**84% MATCHING BLOCK 311/875**

**SA**

304 Corporate Taxation.docx (D117962176)

of amalgamation; The amalgamated company continues the business of the amalgamating company for a minimum period of five years from the date of amalgamation; The amalgamated company fulfils such other conditions as may be prescribed to ensure the revival of the business of the amalgamating company or to ensure that the

amalgamation is for genuine business purpose. 2.15.11-1  
Consequences

for not satisfying the conditions after adjusting loss/ depreciation In case the above specified conditions are not satisfied, then that part of brought forward loss and unabsorbed depreciation which has been set off by the amalgamated company shall be treated as the income the amalgamating company for

Objectives After studying this unit, we will be able to understand the concepts of— •

Specified persons to club income; • Various sections related to clubbing of income cross Transfer; and • Some incomes that are not applicable for clubbing. 3.1 Introduction In general an assessee is liable to tax in respect of his own income. However, in certain circumstances, the Income Tax Act provides for clubbing of income whereby income earned by some other person is assessed to tax in the hands of a specified person by virus of section 60 to 64 of the Act. Thus, clubbing is called as a process which is called of adding the income of other individual to one's own income. Sections 60 to 64 of the Income-tax Act, 1961 is related to clubbing of income and 65 is recovery section. Usually, when a person earns an income then only, he is needed to pay tax, but there are certain instances where one has to pay tax without earning of an income. Such their persons may be of his wife, daughter-in-law, minor son or any other relatives. Here generally income is being transferred without transferring the ownership and in such a situation the transferor

**75%**

**MATCHING BLOCK 321/875**

**W**

will be responsible to pay tax in respect of his income (if any) as NSOU • PGCO - V 95 well as income of other person too.

Sections 60 to 64 of the Act comprise numerous provisions involving to clubbing of income. 3.2 Specified persons to club income Income earned by any particular person cannot be clubbed randomly with income earned by another person. There are certain norms by which income earned can be treated under Income Tax Act 1961. While calculating total income of an individual each assessee needs to follow certain norms and while clubbing of certain income, we need to follow certain rules. Section 64, speaks about certain rules where there are some specified incomes of specified persons which can be clubbed with the income of the assessee while calculating total income of an individual. 3.3 Various Provision of Clubbing of Income Section 60 talks about transfer of income that takes place without transferring of ownership, here income is being transferred by the assessee without transferring the ownership of the asset, then section 60 will be applicable. Under Section 60 any income arises from such assets, it is taxable in the hands of transferor, and not transferee. Example- 1. Mr. Subhadip owns 10, 000, 20% debentures at Sunshine India Ltd. of Rs. 100/- each (

**73%**

**MATCHING BLOCK 323/875**

**W**

annual interest being Rs. 2, 00,000). On 25th December, 2020, he transfers interest income to Mr. Bikash, his friend, without transferring the ownership of these debentures.

Discuss tax consequences for the Assessment year 2021-22. Ans. The Taxable income in the hands of Mr. Subhadip is Rs. 2, 00, 000/- for the Assessment Year 2021- 22. But in the hand of Mr. Bikash it is Nil as the income was transferred without transferring the ownership of the asset. Sections Particulars Transfer of income without Transferring the Ownership of Asset u/s 60

96 NSOU • PGCO - V Sections Particulars 2. Mr. Roy had 1000, 10% Debentures @ Rs.100/- each in Sun Shine Ltd. Before going abroad for pursuing higher education Mr. Roy gave such Debentures to his friend Mr. Deep and advised to collect the interest. In April, 2020 the company gave Rs. 10,000/- as an interest to Mr. Deep. Subsequently, Deep spends such amount for his household expenses. In July, 2021 Mr. Roy came back from abroad and took back the Debentures. Discuss tax consequences of such income of Rs. 10, 000/- for the Assessment year 2021-22. Ans. The Taxable income in the hands of Mr. Roy is Rs. 10, 000/- for the Assessment year 2021-22. But in the hand of Mr. Deep it will not be taxable as the income was transferred without transferring the ownership of the asset. Section 61 deals with the kind of a situation where assets are being transferred to the transferee on a condition that the asset may revocable at any latter date. Section 61 is applicable in this case. If any income arises from such assets,

**71%**

**MATCHING BLOCK 327/875**

**SA**

304 Corporate Taxation.docx (D117962176)

it is taxable in the hands of transferor u/s 61 and not in the hands of

transferee. Example- 3. Mr. Roy had a playground. He transferred the property to his friend Mr. Dey through power of attorney. During the previous year 2020-21 Mr. Dey earned Rs. 60, 000/- as rent from the property. Compute taxable income in the hand of Mr. Roy and Mr. Dey for the Assessment year 2021-22. Ans. Mr. Roy has not transferred the property to Mr. Dey permanently, only power of attorney is given, as the property may be taken back at the latter date, by Mr. Roy, thus this amounts to revocable transfer. The taxable income in the hands of Mr. Roy is Rs. 60, 000/- for the Assessment Year 2021-22. It will not be taxable in the hands and Mr. Dey as it was a arevocable transfer. Revocable Transfer of Assets u/s 61

NSOU • PGCO - V 97 Sections Particulars 4. Richard had a playground. He transferred the property to his wife Mrs. Maria through power of attorney. During the previous year 2020-21 Mrs. Maria spends Rs. 40, 000/- towards the caretaker of the ground. She earned Rs. 1, 60, 000/- as rent from the property. Compute taxable income in the hand of Mr. Richard and Mrs. Maria for the Assessment year 2021-22. Ans. The taxable income in the hands of Mr. Richard is Rs. 1, 20, 000/- (1, 60, 000 - 40, 000) for the Assessment Year 2021-22. Mrs. Maria is not leable to tax as the asset assumes a right to re-acquire. Remuneration to Spouse u/s 64(1)(ii) Where the spouse of an individual receivex any remunsation from a concern where the individual holds substantial interest and the sponse of me individual does not prosess any technical or professional qualification to justify his/her remunsation, the remunsation so received by the sparse shall be clubbed under section 64(i)(ii) in the hards of the individual holding substantial right. Example- 5. Mr. Roy holds 60% of shares of ABC India Ltd. His wife, Mrs. Papiya works as the personal assistant in the office of the company. Mrs. Papiya gets a salary of Rs. 4, 80, 000/- p.a. from the company. Discuss tax consequences of such income for the assessment year 2021-22. If Mrs. Papiya had a technical skill would your answer differ? Ans. The income of Mrs. Papiya (Rs. 4, 80, 000/-) will be added up with the income of Mr. Roy as he has substantial interest in the company u/s 64(1)(ii) for the assessment year 2021-22. Yes, If Mrs. Papiya passesses technical skill, then the income of Mrs. Papiya need not be added. Her income would be assessed separately in her own hand.

98 NSOU • PGCO - V Sections Particulars 6. Mr. Dey holds 2/3rd of profits in a firm. He took his wife, Mrs. Dey as a manager in the firm. Mrs Dey did MBA in Finance from a renowned university. She gets a Salary of Rs. 16, 80, 000/- p.a. from the firm. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The income of Mrs. Dey (Rs. 16, 80, 000/-) will not be clubbed with the income of Mr. Dey though he has the substantial interest in the firm, as Mrs. Dey has a professional skill for the job u/s 64(1)(ii). So, the income of Mrs. Dey will be assessed separately. If an

**46% MATCHING BLOCK 324/875**

**W**

individual transfers (directly or indirectly) any asset (other than house property) without adequate consideration to his spouse, income arising from such asset will be included in the

total income of the transferor

u/s 64(1)(iv). Example- 7. Miss Munmun owns 10, 000, 20% debentures at Sunshine Ltd. of Rs. 100 each. On 25th December, 2020, she gifted these debentures to Mr. Das, her husband. During previous year Mr. Das earned by way of interest Rs. 2, 00, 000/- from such debenture. Discuss tax consequences for the Assessment year 2021-22. Ans. The debenture interest will be taxable in the hands of Miss Munmun for the assessment year 2021-22. The debenture interest of Rs. 2, 00, 000 will not be taxable in the hands of Mr. Das as debentures were gifted to him by his wife. Thus, clubbing provision u/s 64(i)(iv) will be applicable here. 8. Mrs. Monalisa had a house property. During previous year she transferred the property without any consideration to her husband, Rental income earned by her husband during the previous year was Income from Assets transferred to Spouse u/s 64(1)(iv)

NSOU • PGCO - V 99 Sections Particulars Rs. 60, 000/-. Discuss tax consequences for the Assessment year 2021-22. Ans. In this case Mrs. Monalisa will be the deemed owner of the property as such transfer is disregarded and will be considered for taxation u/s 22 and not in section 64(1)(iv) as such income is from the transfer of house property to spouse. The taxable income in the hands of Mrs. Monalisa is Rs. 42, 000/- (60, 000 - 30%) for the assessment year 2021-22. If an individual transfers (directly or indirectly) any asset after May 31, 1973 without adequate consideration to his son's wife, income arising

**88% MATCHING BLOCK 325/875**

**W**

from such asset will be included in the total income of the transferor.

Example- 9. Mr. Roy had 10, 000, 20% debentures at Sunshine India Ltd. of Rs. 100 each. During the previous year, Mr. Roy gave such debentures to his daughter-in-law, Mrs. Monalisa. During the previous year Mrs. Monalisa earned by way of interest Rs. 2, 00, 000/- from such debenture. Discuss tax consequences for the assessment year 2021-22. Ans. The income of Rs. 2, 00, 000/- will be clubbed with the income of Mr. Roy for the assessment year 2021- 22. And in the hands of Mrs. Monalisa it will not be taxable as income from any asset transferred to son's wife is taxable in the hands of transferor u/s 64(1)(vi). 10. Mrs. Dey had a fixed deposit (FD) of Rs.50,00,000/-. He transferred the FD to his son's wife Mrs. Lata. During the previous year 2020-21 Mrs. Lata earned Rs. 1, 40, 000/- as interest from the FD. Discuss tax consequences of such income in the hand of Mr. Dey and Mrs. Lata for the assessment year 2021-22. Ans. The income of Rs. 1, 40, 000/- from the asset transferred to son's wife will be clubbed with the Income from Assets transferred to Son's Wife u/s 64(1)(vi)

100 NSOU • PGCO - V income of transferor for the assessment year 2021- 22. Mrs. Lata shall not be taxable as income from any asset transferred to son's wife is taxable in the hands of transferor u/s 64(1)(vi). If an individual transfers (directly or indirectly) any asset to a person or an association of persons without adequate consideration with a condition that the person or association in return will pay an amount to the spouse of the transferor, then

**87% MATCHING BLOCK 326/875**

**W**

such income will be included in the total income of the transferor

u/s 64(i)(vii). Example- 11. Mr. Das had a house property. He transferred it to a trust without any adequate consideration with a condition that an income of Rs. 4, 80, 000/- will be paid to the spouse of Mr. Das, Mrs. Monalisa. Discuss the tax consequences of such income for the assessment year 2021-22. Ans. The rent of Rs. 4, 80, 000/- received by Mrs. Monalisa from the trust, will be clubbed with the income of transferor, Mr. Das u/s 64(i)(vii). 12. Mr. Dey had 1000 Equity Shares of Rs. 100/- each in Moon India Ltd. He transferred these to Mr. Das without any adequate consideration with a condition that an income of Rs. 60, 000/- will be paid to the spouse of Mr. Dey, Mrs. Muni. Discuss the tax consequences of such income for the assessment year 2021-22. Ans. The earning of Rs. 60, 000/- received by Mrs. Muni from Mr. Das, will be clubbed with the income of the transferor, Mr. Dey u/s 64(i)(vii). Sections Particulars Income from Assets transferred to a Person for the benefit of the Spouse of the transferor u/s 64(i)(vii)  
NSOU • PGC0 - V 101 Sections Particulars Any income which has been earned by an individual by transferring (directly or indirectly) asset on or after 01.06.1973 to a person or an association of persons without adequate consideration with a condition that the person or association in return will pay an amount to the son's wife of the transferor. Such income will be clubbed or added up in the total income of the transferor u/s 64(i)(viii). Example- 13. Mr. Roy had a Playground. He transferred it to a trust without any adequate consideration with a condition that an income of Rs. 8, 60, 000/- from it will be paid to the spouse of the son of Mr. Roy. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The earning of Rs. 8, 60, 000/- received by the son's wife from the trust, will be clubbed with the income of transferor, Mr. Roy u/s 64(i)(viii). 14. Mrs. Monalisa had a ground. She transferred the ground to the local market without any adequate consideration with a condition that an income of Rs. 4, 80, 000/- will be paid to the spouse of the son of Mrs. Monalisa. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The earning of Rs. 4, 80, 000/- received by the spouse of the son of Mrs. Monalisa from the local market, will be clubbed with the income of transferor, Mrs. Monalisa u/s 64(i)(viii). Any income accruing or arising to a minor child will be clubbed u/s 64(1A) to the total income of the parent whose income is higher (excluding minor's income). But, in case

**53%**

**MATCHING BLOCK 328/875**

**W**

where the marriage of his parents does not subsist, it will be clubbed with the income of that parent who maintains the minor child in the previous year.

Section 64(1A) will not be applicable when. Minor earns through manual work; or application of his skill, talent or specified knowledge or experience.

Income from Assets transferred to a person for the benefit of Son's Wife

u/s 64(1)(viii) Income of a Minor Child u/s 64(1A)

102 NSOU • PGC0 - V Sections Particulars Example- 15. Miss Sarbjit, a minor child earns Rs. 60, 000/- from the FD made by his parents. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The income of Sarabjit be clubbed to his parents' income whose total income is higher u/s 64(1A). 16. Miss Sanchari, a minor child earns Rs. 10, 000/- from uploading her smiling and singing photos in the YouTube. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The income of the minor girl will not be clubbed to her parents' income as such earnings are out of the application of her skill, talent or specified knowledge or experience in the particular field. So, in the hand of Sanchari, the minor girl, the income will be assessed to tax. N.B.- Child includes step child and/or adopted child also. u/s 2(15B). Income arising out of self-acquired property converted into joint family property without adequate consideration will be clubbed or added up with the total income of the transferor u/s 64(2). But, in case of such property being re-distributed among the members of the family, the proportionate income i.e., the share of spouse only will be added up or clubbed with the total income of the transferor member. Example- 17. Dr. Roy, is a member of a HUF. During the previous year he converted his self-acquired property without adequate consideration, yielding an income of Rs. 4,60,000/- p.a. into joint family property. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The earning of Rs. 4, 60, 000/- from the converted asset without adequate consideration will be clubbed  
Conversion of Self- acquired Property into Joint Family Property and Subsequent Partition u/s 64(2).

NSOU • PGCO - V 103 Sections Particulars with the total income of Dr. Roy for the assessment year 2021-22 u/s 64(2). 18. Mr. Roy had a self-acquired property. He transferred such property to the Hindu Undivided Family (HUF) business without adequate consideration. During the previous year such property was re-distributed among the members of the family. An income of Rs. 7,60,000/- was received by her spouse during the previous year. Discuss tax consequences of such income for the assessment year 2021-22. Ans. The earning of Rs. 7, 60, 000/- received by his spouse from the converted asset without adequate consideration will be clubbed with the total income of Mr. Roy for the assessment year 2021-22 u/s 64(2). The section deals with the collection of tax on such clubbed income. It empowers the assessing officer to serve a 'demand notice' to recover the applicable tax either from the person assessed or to whom the income actually belongs. Example- 19. Mr. Das had 1000, 12% Debentures of Rs. 100/- each in ABC Ltd. He transferred such shares to his wife Mrs. Puspa. During the previous year she earned of Rs. 12,000/- from such debentures. Discuss tax consequences of Mr. Das for the assessment year 2020-21 and discuss recovery of the applicable tax. Ans. The earnings Rs. 12, 000/- from transferred assets to spouse will be added up with the income of transferor. However, the Assessing Officer (AO) may collect tax either from the Mrs. Puspa (the recipient of income) or from Mr. Das (the deemed owner of the asset). 20. Mr. Roy is dealing with timber. He has a house property which was let out to a tenant with income of Rs. 6, 40,000/- per annum. He transfers the house property to his wife, Mrs. Roy as a gift. During the Collection of Tax u/s 65 104 NSOU • PGCO - V Sections Particulars year he had an income of Rs. 7, 60,000/- from the business. Compute income of Mr. Roy for the assessment year 2020-21 and discuss recovery of the applicable tax. Ans. The total income of Mr. Roy is Rs. 14, 00,000/- including the income from house property as transfer being disregarded. The concerned Assessing Officer (AO) has two options for recovery of such tax: (i) He may recover the entire amount of tax from Mr. Roy; or (ii) He may recover the amount of tax partly from Mr. Roy and partly from his wife. N.B.- (i) Clubbing of negative income will be calculated as usual. (ii) Income arising to the transferee from accretion or reinvestment of the income is not includible to the total income of the transferor. 3.4 Cross transfer Cross transfer is a very typical situation. When two or more transfers are inter-connected and be the parts of same transaction, such transfers will be treated as cross transfer. In such case, both the transfers will be disregarded and will be taxed in the hands of respective transferors. 1. Mr. Roy made a gift of Rs. 60,000/- to Mrs. Lata, the wife of his brother Mr. Dhruva to purchase a house property and immediately Mr. Dhruva transferred certain number of shares of Rs. 60,000/- to Mr. Roy's daughter Miss Sanchari. During the year ending March 31, 2021 the chargeable income from house property was Rs. 40,000/- while the amount of dividend received on the shares was Rs. 30,000/-. State with reason how and in whose hands these two items of income will be taxed. Ans. This is a case of cross transfer happened to by-pass the provisions of section 64(1). Therefore, income arising to Mrs. Dhruva (Rs.30, 000/-) will be taxed in the hands of Mr. Dhruva. And income arising to daughter of Mrs. Roy (Rs. 40, 000/-) will be taxable in the hands of Mr. Roy u/s 64(1A).

NSOU • PGCO - V 105 3.5 Cases Where Clubbing of Income not Applicable ●●●● Income transferred before marriage: If any asset has been given to fiancée before marriage, then that asset would not be treated under clubbing provision. The important factor under law is that relation between husband and wife should exist between the two persons at the time of execution of the transactions and at the time of receipt of income. ●●●● Income derived from clubbed income: Where any additional income arises to a transferee from accretion or reinvestment of transferred income. The clubbing provision shall not apply. ●●●● Saved money is not asset transferred: If any money is being saved for the purpose of meeting regular or household expenditure i.e., the money which has been saved will not fall under the ambit of clubbing provisions. 3.6 Examples of Clubbing of Income 1) Mr. Dayal and Mrs. Dayal have the following income for the P.Y. 2020-21: Mr. Dayal Rs. Rs. Income from Salary 3,25,000 1,30,000 Business income 1,86,000 — Income from other sources 58,000 1,07,000 Total 5,69,000 2,37,000 Compute taxable income of Mr. Dayal and Mrs. Dayal for the A.Y. 2021-22 assuming that Mrs. Dayal gets remuneration from or concern where Mr. Dayal holds substantial interest.

106 NSOU • PGCO - V Solution: Calculation of taxable of Mr. and Mrs. Dayal for the A.Y. 2021-22: Mr. Dayal Mrs. Dayal Rs. Rs. Income from Salary 3,25,000 — Income from Salary of Mrs. Dayal 1,30,000 — under section 64(i)(ii) Income for business 1,86,000 — Income from other sources 58,000 1,07,000 6,99,000 1,07,000 Note : It is assumed that Mrs. Dayal has no technical / professional skill to justify her renunciation. However, if it is assumed that Mrs. Dayal has proliferation or technical skill to justify her renunciation from the concern where her husband Mr. Dayal has substantial interest, the clubbing provision under section 64(i)(ii) will not attract. 2) Mr. Suresh (age: 35 years, resident) gifts Rs.10, 00, 000/- to Mrs. Suresh (age: 31 years, resident), she deposits the same in a bank @ 10 per cent per annum. Ashis, minor child of Suresh and Mrs. Suresh, Sanjoy has a bank deposit of Rs.80, 000/- (rate of interest 8 per cent) which was gifted to him by his grandfather. Other income of Suresh and Mrs. Suresh is as follows- Mr. Suresh: Rs.3, 60, 000/- [salary: Rs.2, 60, 000/-, bank interest: 1, 00, 000/-], Mrs. Suresh: Rs. 2, 70, 000/- (interest on company deposits). Out of interest income, Mrs. Suresh deposits Rs.1, 000/- in public provident fund. Suresh's contribution to the recognized provident fund is Rs. 45, 000/-. Find out the net income of Mr. Suresh and Mrs. Suresh for the assessment year 2021- 2022. Solution: Calculation for Net income of Mr. Suresh and Mrs. Suresh for the previous year 2020-2021 and assessment year 2021-2022. NSOU • PGCO - V 107 3)

4.1 Introduction The word assessment means to determine something. For income tax purposes, assessment means to find out the total income and also to find out the taxable payable thereon. Assessment also covers the process of finding out whether the tax paid by the assessee is correct or not. Thus, it is very much evident that the word assessment covers an important position in income tax, assessment means the process of collecting and also reviewing the information which has been filed by the assessee and also to examine whether the assessment is right or wrong. Thus, assessment refers to the calculation of income, sometimes for the purpose of resolving tax payable, by assessment income tax department also finds out the tax payable by the assessee. Assessment procedure involves four phases: the first phase involves the step where the assessee in his or her own capacity files the return of his total income, again return can also be filed by Tax Return Preparer on behalf of assessee. The second stage is concerned with computation of taxable income of the assessee. The third phase involves the matter of resolving the amount of tax payable by assessee on the basis of such calculation. The last phase is actually about the making of the assessment order and matter of issuing notice of demand specifying the amount, if any, payable by the assessee. The most important matter about assessment is that the process of assessment also involves reassessment and re-computation.

4.2 Income Tax Return Income Tax Return (ITR) is a specific form which an assessee is supposed to submit to the Income Tax Department of India in respect of his income earned from various heads viz.

**73%**

**MATCHING BLOCK 344/875**

**W**

income from salary, income from house property, income from business and profession, capital gains and income from other sources

such as dividend, interest on deposits, royalty income, winning on lottery, cross-word puzzles, betting and card games etc. It contains detail information about the assessee's income and the taxes already paid him and yet to be paid for the relevant previous year. For this purpose, the Income Tax Department has

118 NSOU • PGC0 - V prescribed seven types of ITR forms - ITR-1, ITR-2, ITR-3, ITR-4, ITR-5, ITR-6, ITR-7 and the applicability of these forms will depend on the nature of income and the type of taxpayers. 4.2.1 Voluntary Return [Sec. 139(1)] In income tax voluntary return refers to return being filed on a voluntary basis. There may be certain situations where income tax return has to be filed mandatorily, these situations include : (a) there are taxable income earned by the assessee; (b) where any TDS has been made from the income of the assessee; (c) where the assessee needs to claim a refund, in all these cases the return has to be filed on a mandatory basis. However, an assessee can file return as per his/her own will even if the filing of return is not mandatory and there is no binding or obligation on the assessee. Voluntary return with no taxable income can be filed by the assessee in certain cases where the assessee needs to submit return so that he can apply for bank loan or in certain cases to be eligible for carry forward and set off of losses. Section 139(1) – Mandatory Voluntary Returns Section 139 (1) deals with the situation when the return has to be submitted by the assessee on a mandatory basis. In the following situations, the filing of Income Tax Return is mandatory— Where a person other than a firm or company, has earned income which is above the basic exempted limit, then the person has to submit the return on a mandatory basis, within the due date specified under the Act. ●●●● Any private, public, domestic or foreign company situated and/or doing business in India has to file

**64% MATCHING BLOCK 346/875 SA** 304 Corporate Taxation.docx (D117962176)

return of income for every previous year on or before the due date in the prescribed form

irrespective of the amount of income or loss. ●●●● Every HUF (Hindu Undivided Family), AOP (Association of Persons) and BOI (Body of Individuals) – if the total income passes the prescribed exemption limit, are accountable to file the Income Tax Return in the prescribed form within the due date as mentioned under the Act. ●●●● Any firm LLP (Limited Liability Partnership) is liable to file return voluntarily irrespective of the amount of income or loss. 4.2.2 Filing Return of Loss [Sec. 139(3)] Generally, where any loss is suffered by an assessee in the preceding financial year, then in that case filing of tax return is not obligatory on the part of the assessee NSOU • PGC0 - V 119 section 139(3) of the Income Tax Act provides that an assessee is required to file a loss return within the due date specified. Filing of loss return is very significant because an assessee cannot be allowed to carry forward and set off of losses in certain cases if the assessee does not file a return of loss u/s 139(3). ●●●● Tax return for loss is required compulsory by the assessee in the following cases: a) If the loss takes place under

**87% MATCHING BLOCK 347/875 SA** Incmoe tax Planning.DOC (D116135474)

the head "Profits and Gains of Business and Profession" or under the head '

Capital Gains', loss return filing is obligatory if the assessee wants to carry forward this loss and offset with the upcoming income in future. b) In case the loss arises from the activity of owning and maintaining race horses, filing of loss return is obligatory. 4.2.3 Late Filing of Income Tax Return or Belated Return [Sec. 139(4)] The taxpayers have to file the tax return before the due date as defined under Section 139(1), or within the permissible time by a notice that is issued under the Section 142(1). If they fail to do so, they may still file the belated return for any previous year

**63% MATCHING BLOCK 349/875 SA** 304 Corporate Taxation.docx (D117962176)

at any time until the end of one year from the end of the relevant year of assessment or before conclusion of the assessment, whichever happens earlier.

However, the

taxpayer might be charged with a penalty of Rs. 5,000/-, under Section 271F of IT Act 1961, in case the return is submitted after the relevant assessment year. Again, the taxpayer submitting belated return would be liable to pay simple interest @ 1% per month u/s 234A for every month or part thereof delay. Interest shall be charged from the due date to the date of filing return or where no return has been filed up to the date of completion of assessment u/s 144 and shall be calculated on the amount of tax payable on returned income as reduced by advance tax, tax deducted at source and payment of self-assessment tax.

**4.2.4 Income Tax Return of Charitable and Religious Trusts [Sec. 139(4A)]** Filing Tax Return under Section 139(4A) is required by a person who takes an income derived from the

**51% MATCHING BLOCK 348/875 W**

property held under any trust or other legal compulsion, either exclusively for religious or charitable purposes or partly for such purposes only, or of income being voluntary contributions

referred to in sub-section 2(24)(ia), shall, in case

**100% MATCHING BLOCK 350/875 W**

the total income (without giving effect to the provisions of sections 11 and 12) exceeds the

maximum permissible amount which is not taxable under the Income Tax Act.

**4.2.5 Political Party to furnish the Return on Income [Section 139(4B)]** Section 139(4B) provides that every political parties are to file Income Tax Return in case the total income surpasses the maximum permissible tax-exempt limit. The total income is calculated for this precise purpose and under this act excluding the effects of provisions 120 NSOU • PGCO - V under Section 13A). The Chief Executive Officer or the Secretary of all political parties are obliged to furnish this return of income.

**4.2.6 Revised Return [Sec. 139(5)]** If any person having furnished a return u/s 139(1)

**57% MATCHING BLOCK 352/875 SA** 304 Corporate Taxation.docx (D117962176)

or in reply to a notice u/s 142(1) finds any omission or any incorrect statement, he may furnish a revised return at any time within one year from the end of the relevant assessment year or before the completion of assessment, whichever is earlier.

**4.2.7**

**Defective Returns [Sec. 139(9)]** Under section 139(9), where the Assessing Officer (AO) considers that the return submitted by an assessee is defective or imperfect, the AO

**63% MATCHING BLOCK 351/875 W**

may intimate the defects to the assessee with an opportunity to rectify the defects with 15 days from the date of giving such intimation.

This time-limit of 15 days

**86% MATCHING BLOCK 353/875 SA** 304 Corporate Taxation.docx (D117962176)

may be extended by the AO on an application made by the assessee. If the

assessee fails to rectify

**71%**

and ITR-6].

122 NSOU • PGCO - V The ITR Forms has been reviewed, the new ITR forms has been discussed below: ITR 1: ITR 1 may be filed in following situations- ●●●●● If Agricultural Income is less than Rupees Five Thousand. ●●●●● If the total income does not exceed Rs. 50, 00, 000/- . ●●●●● If not more than 1 Crore has been deposited in bank account in one particular year ●●●●● If not more than 1 Lakhs have been spent for electricity expenses ●●●●● If not more than 2 Lakhs have been spent for travelling abroad ITR 2: Individual and HUF can file ITR 2, those having the following criteria- ●●●●● Income is more than 50 Lakhs ●●●●● Agricultural Income is more than Rupees Five Thousand. ●●●●● If a person is an administrator of the company ●●●●● Persons who do not make money from business ventures. ●●●●● Income received through Salary, Pension, House property, lottery, horse race, capital gain ●●●●● Having foreign income or having foreign assets ITR 3: This is applicable for persons/HUF's being partners in firms and not carrying out business or profession with the following criteria- ●●●●● Individual and HUF can file the return ●●●●● Person having business and profession ●●●●● If the person is individual director of the company ●●●●● Income received as partner of a firm ●●●●● Investment in unlisted equity share ●●●●● Income from salary, pension, house property & other sources

NSOU • PGCO - V 123 ITR 4: Individual, HUFs, Partnership Firms which are having income from business and profession can opt for ITR 4 form, those who have chosen for presumptive income scheme under section 44AD, 44ADA, 44 AE will choose ITR 4 form, If the turnover is exceeding Rupees 2 crore, then the assessee has to file ITR 3 ITR 5: It can be filed by firm, Co-operative Society, Limited Liability partnership, Body of Individuals, Investment Fund, Estate of Insolvent, Local Authorities, Investment Fund and Business Trust ITR 6: The form can be filed electronically by companies other than companies defined under section 11 i.e those companies who are claiming exemption under income from a religious or charitable property. ITR 7: It can be filed by individuals holding a property of religious or charitable purposes. Political parties, medical institutions, News Agency, Educational Institutions, agencies involved in scientific research. 4.3.1 Due dates for filing return of income Under the Act, the following are the specific due dates mentioned for filing return of income: a)

**87% MATCHING BLOCK 359/875**

**W**

Where the assessee is required to furnish a report u/s 92E (

for having international Within 30 th November of the relevant A.Y. transactions)— b) Where the assessee is a company (without having international Within 30 th September of the relevant A.Y. transactions)— c) Where the assessee is a non-corporate assessee and is required to have the accounts Within 30 th September of the relevant A.Y. audited— d) In any other cases Within 31 st July of the relevant A.Y.

124 NSOU • PGCO - V 4.4 Kinds of Income Tax Assessment The assessments may be as follows: 4.4.1 Self-Assessment [Sec 140A] Every person, before submitting a return of income under section 139(1) or section 142(1) or section 148 or section 153A of the Income Tax Act is liable to make a self-assessment of his income to determine tax still payable after considering the tax already paid by way of advance tax, tax deduction at source etc. The assessee also has to pay interest up to the date of filing of the return along with self-assessment of tax. The return of income submitted by the assessee will be taken as the proof of payment of both tax and interest. Assessing officer, if he considers, may make an investigation for getting full information in respect of assessee's income.

**85% MATCHING BLOCK 360/875**

**W**

Where the amount paid by assessee falls short of the aggregate of tax and interest, the amount

so paid shall first be adjusted towards interest payable and the balance, if any, shall be adjusted towards tax payable. 4.4.2 Summary Assessment [Section 143(1)] On the basis of return filed by assessee under section 139(1) or section 142(1), the Assessing Officer may complete the assessment as summary assessment without making any query from the assessee concerned. However, before making any such assessment, the Assessing Officer (A.O.) may make following adjustments in the returned income of the assessee: i)

**90%      MATCHING BLOCK 361/875      W**

any arithmetical error in the return; ii) any incorrect claim, if such incorrect claim is apparent from any information in the return.

After completing the above adjustments as may be necessary, the A.O. shall send an intimation to the assessee

**93%      MATCHING BLOCK 363/875      W**

within a period of one year from end of the financial year in which the return

was submitted. The intimation shall specify the sum so payable by way of tax or any refund due, to the assessee. Where there is neither any adjustment nor any tax due from or refund payable to the assessee, the acknowledgement of the return shall be deemed to be the intimation under section 143(1) for the completion of assessment. 4.4.3 Regular or Scrutiny Assessment [Section 143(3)]

**89%      MATCHING BLOCK 364/875      W**

On the basis of return of income submitted by the assessee under section 139(1) or in

pursuance of a notice under section 142(1), if the A.O. is of the opinion

**61%      MATCHING BLOCK 365/875      W**

that the assessee NSOU • PGC0 - V 125 has understated the income or has computed excessive loss or has

short payment of tax in any manner, he may serve a notice under section 143(2) requiring him

**80%      MATCHING BLOCK 366/875      W**

to attend his office or produce or caused to be produced any evidence which the

A.O. may rely in support of the assessee's claim so as to give an opportunity of being heard to the assessee. Such a notice has to be served before

**100%      MATCHING BLOCK 367/875      W**

the expiry of six months from the end of the financial year in which the return is furnished.

After hearing such evidence as the assessee may produce in response to the notice under section 143(2) or

**84% MATCHING BLOCK 368/875**

**W**

such other evidence as the A.O. may require on specified points and after taking into account all relevant

information which  
the A.O. may have

**82% MATCHING BLOCK 369/875**

**W**

gathered, then the A.O. shall, by order in writing, make an assessment of the total income or loss of the assessee and determine the sum payable by

the assessee  
as further tax liability or the refund due to the assessee thereof. 4.4.4 Best Judgement Assessment[Section 144] Under section 144, an Assessing Officer,after considering all relevant material which he has collected, shall make a best judgement assessment to determine the total income or loss of an assessee: a) if the assessee

**69% MATCHING BLOCK 373/875**

**SA**

PRERNA KITTU SINGH UNIVERSITY DEPARTMENT OF CO  
... (D161889559)

fails to submit return as required under section 139(1) or section 139(4) or section 139(5); or b) if the assessee fails to comply with all the terms of a notice issued under section 142(1) or

fails to comply with  
the direction given under section 142(2A)  
as to get his accounts audited; or c) if the assessee, after

**90% MATCHING BLOCK 370/875**

**W**

having submitted a return, fails to comply with all the terms of a notice issued under section 143(2)

requiring his presence or production of evidence and documents; or d) if

**78% MATCHING BLOCK 371/875**

**W**

the Assessing Officer is not satisfied with the correctness or completeness of the accounts of the assessee or if no method of accounting has been regularly employed by the assessee.

Before making any such best judgment assessment, the assessee must be given an opportunity of being heard. Such

**80% MATCHING BLOCK 372/875**

**W**

opportunity shall be given by the A.O. by serving a notice calling upon the assessee to show cause on a date and time mentioned in the notice,

as to

the end of the relevant assessment year; b) in any other case, the notice shall be issued within four years from the end of the relevant assessment year. 4.5

Assessment or Reassessment Notice under

**75% MATCHING BLOCK 385/875**

**W**

section 148 of the Income Tax Act As per Section 147 of the Income Tax Act, 1961,

the Assessing Officer has the power to reassess a person's income based on tax returns which has been filed earlier. The Assessing Officer can do so by sending a notice under section 148 for income escaping assessment. As per Union Budget 2021 outcome- The time limit to re-open income tax assessment cases has been diminished to 3 years from 6 years. Also, in case of serious tax evasion the assessment can be re-opened for previous 10 years, in the case only when concealment of income is more than Rs. 50 lakhs.

4.5.1 Causes to receive a notice u/s 148 A person could receive a notice u/s 148 in circumstances where the assessing officer believes that such a person's income chargeable to tax might have escaped assessment. Where the proof supporting his reasons to believe is available, the A.O. would record his reasons in writing and send the person notice u/s 148. The assessing officer in this case cannot change his mind and go for re-investigation without a valid reason. In case the assessee has revealed all the documents and accurate information during the original assessment, the Assessing Officer cannot send a notice to the assessee for reassessing the same documents. Some of the evidences or new papers which show that the income has escaped assessment should come to the light. In case the original evidence or documents come to light representing that the individual has concealed income, then the AO could take action against such assessee under section 147 and 148.

128 NSOU • PGCO - V 4.5.2 Who can issue a notice under section 148 The Income Tax Act, 1961, Sec.151(1) contains the provisions for issue of notice:

**84%**      **MATCHING BLOCK 386/875**      **W**

After the end of four years from the end of relevant assessment year

no notice would be issued by an Assessing Officer under section 148, unless Principal Chief Commissioner or Principal Commissioner or Chief Commissioner or Commissioner is pleased, on reasons recorded by the AO, that it's a perfect case for issuing such notice. ●●●● Other than the above-mentioned cases in all other cases, no notice would be issued by an Assessing Officer under section 148, where AO is below the rank of a Joint Commissioner. Again, the notice wouldn't be issued unless Joint Commissioner is pleased, on explanations recorded by such AO, that it's a fit case for issuing such notice. ●●●● For the purposes of above (1) and (2), Principal Chief Commissioner or the Principal Commissioner or the Chief Commissioner or the Joint Commissioner the Commissioner, liable on the case, being pleased on reasons recorded by AO about the fitness of the case for issuing notice under section 148 of the Income Tax Act, need not issue the notice by himself.

4.5.3 Time limit to issue a notice u/s 148 ●●●● Section 149

**47%**      **MATCHING BLOCK 387/875**      **W**

of the Income Tax Act, states that the notice under section 148 can be issued within a period of 4 years from the end of

related AY (assessment year) in circumstance the income so evaded doesn't exceed INR 1 lac. ●●●● In case the revenue is more than INR one lac the notice under the said section could be issued within a period of 6 years from the end of related A.Y. subject to provisions comprised in section 151. ●●●● The notice under section 148 could be issued within a period of 16 years from the end of related A.Y. in situation the revenue that has run-away assessment narrates to assets located outside India. ●●●● Further, if the assessment has been done under section 143(3) or 147

**50%**      **MATCHING BLOCK 388/875**      **W**

no further action could be taken under section 147 after finishing of 4 years from the end of related A.Y. unless income chargeable to tax has run-away assessment for such

A.Y. due to letdown on assessee's part to file the return under section 139 or 142 or 148 or fully and truly revealing all the material facts essential for the assessment, for that AY.

NSOU • PGCO - V 129 4.6 Penalties and Prosecutions Under the Income Tax Act, there are provisions for levying penalty as well as prosecution for

**100% MATCHING BLOCK 390/875 SA** 304 Corporate Taxation.docx (D117962176)

default in complying with provisions of or with conditions prescribed under the Income- tax.

The quantum of levying penalty depends on the nature and gravity of default.

**100% MATCHING BLOCK 389/875 W**

Chapters XVII and XXI of Income-tax Act, 1961, contain various provisions empowering an Income Tax Authority to levy penalty in case of certain defaults under the

Act in the following cases where

**95% MATCHING BLOCK 391/875 SA** 304 Corporate Taxation.docx (D117962176)

the assessee: a) Is in default or is deemed to be in default in making payment of tax, including the tax deducted at source, advance tax and the self-assessment tax

with penalty of such an amount as Assessing Officer may impose but not exceeding tax in arrears [Section 221 read with Sec.201(1)]; b) Does not pay the advance tax in terms of section 208 of the Act with penalty

knows or believes to be false or does not believe to be true

with imprisonment from 6 months to 7 years [Section 277]; n) For abetting or inducing another person to make and deliver an account or statement or declaration relating to any taxable income

**100% MATCHING BLOCK 400/875 SA** 304 Corporate Taxation.docx (D117962176)

which is false and which he either knows or believes to be false

with imprisonment from 6 months to 7 years [Section 278]. 4.7 Advance Tax Payment Advance Tax is a type of tax which is paid by an assessee in advance within the relevant previous year. Advance tax is payable on the basis of estimated current income of the assessee by specified instalments during the relevant previous year. Advance Tax Payment by an assessee is in addition to any tax deducted at source from the income of the assessee. This type of tax can be paid through challans at bank branches which are sanctioned by the Income tax department. Payment of advance Tax can be made online through the website of the Income Tax department or the National Securities Depository. Who is liable to pay Advance Tax? The eligibility criteria which one has to accomplish in order to pay advance tax are: a) Assessee's current tax liability exceeds Rs.10,000 during the relevant previous year; b) Every income earned by an assessee incl. capital gains, winning from lottery, cross- word puzzles etc. is liable for payment of advance tax. Senior citizens i.e., an assessee who is above the age of 60 years are exempted from paying advance tax. An assessee, who has opted for computing business income under section 44AD on presumptive basis, shall be exempted from payment of advance tax. 4.7.1 Advance Tax Payment Due Date (Installment) Due date for payment of Advance Tax for all assesses including from F. Y. 2016– 2017 corporate assesseees.

NSOU • PGO - V 133 However, the above mentioned schedule would not apply to those taxpayers who have opted for presumptive scheme of taxation under section 44 AD or 44ADA. Such tax payeees would be liable to pay advance tax by 15th march@ 100%. 4.7.2 Computation of Advance Tax Liability

**65% MATCHING BLOCK 401/875 SA** 304 Corporate Taxation.docx (D117962176)

The amount of advance tax payable by an assessee in the financial year will be calculated as follows: 1) Estimating the present income of the financial year for which the advance tax is payable. 2) Computation tax as such on estimated income at the rate of tax

applicable for the relevant financial year. 3) Adding surcharge, educational cess and secondary & higher education charge. 4) Allowing relief if any, u/s 89, 90, 90A and 91. 5) Deducting tax deducted at source and tax collected at source during the P.Y. 6) The balance will be the amount of advance tax to be paid. 4.7.3 Exemption in Advance Tax Payments Senior citizens aged 60 years and above are exempted from paying the advance tax. ●●●● Salaried persons falling under TDS net are released from paying the advance tax. However, any incomes such as interest, capital gains rent and other non- salary income will also attract advance tax.

140 NSOU • PGC0 - V 4.8 Provision regarding TDS and TCS [Section 190]

**100% MATCHING BLOCK 414/875**

**W**

The concept of TDS was introduced with an aim to collect tax from the very source of income.

Under the Income Tax Act, it has become customary to deduct tax at source from income as when income is paid or  
credited to the receiver of income. In today's scenario, the collection of tax through TDS and TCS by Government of India  
amounts to a big share in the revenue of Indian Economy. The objective of charging tax deducted at source (TDS) and  
tax collection at source is to collect and recover tax from the source of income itself. Under the provisions of section  
190, where a person making

**68% MATCHING BLOCK 416/875**

**W**

payment of specified income to any other person, shall deduct tax at source and deposit the same into the accounts of the Central Government within the specified time. The person from whose income TDS is made would be entitled to get credit of the amount so deducted on the basis of Form 26 AS or TDS certificate issued by the

person making such deduction of tax at source along with mentioning the PAN of the deductee. Tax collection at source (TCS) is another mode of tax collection from the source of income by which a certain percent of specified transactions like sale of tobacco leaves, timber wood, minerals and mining materials, purchase of motor car of value exceeding Rs. 10 lakh etc. is deducted by the seller from the buyer of such products or things. The following are the cases where tax is deducted at source under various provisions of the Act : 4.8.1 Deduction of tax at source from salary [Section 192] Under Section 192, TDS is deducted at source at the time of actual payment of salary by the employer to his/her employees having income from salary more than the basic exemption limit under the Income Tax Act. This section is obligatory on every person responsible for paying any income chargeable to tax under the head 'Salaries' to deduct income-tax on the amount payable before transferring or crediting the amount of salary payable to the accounts of employees or before paying salary by way of any cheque or draft. Such income-tax has Advance Tax Payable Amount Rs. Due Date

**W**

at the time of credit of such income to the account of the payee or at the making such payment either in cash or cheque or draft or by any other mode. 4.9 Refund of Tax Section 237 of the Income Tax

Act, 1961 provides that any excess amount of tax paid by an assessee under the Act shall be refunded to the assessee. Where any person or assessee satisfies the assessing officer that the amount of the tax paid by him or paid by any person on his behalf during any previous assessment year exceeds the amount with which he is properly chargeable under the Act for that year, he is entitled to refund of excess amount of tax paid. It is right of every assessee to demand refund of excess tax paid by him. The tax authority after being satisfied with the facts and circumstances of the demand claimed by the assessee, shall issue order for the refund of excess tax paid by the assessee. Where the taxpayer has to make a claim of income-tax refund, then the claim should be made in Form No. 30. However, w.e.f., 01-09-2019, the Finance (No. 2) Act, 2019, it has amended whereby the refund can be claimed only through filing of return of income within the time limit prescribed under Section 139. However, as per section 240, in a case where the income-tax refund becomes due as a result of any order passed in an appeal or other proceeding under the Act, the Assessing Officer shall, except as otherwise provided in the Act, refund the amount to the taxpayer without making any claim in this behalf by the assessee.

4.9.1 Interest on Tax Refund Where any refund of tax is payable to an assessee, the assessee is entitled to receive interest along with the refund of tax as per the following provisions :

NSOU • PGCO - V 145 a) When refund is of any advance tax paid or tax deducted at source or tax collection at source, the interest is payable

**63%**      **MATCHING BLOCK 436/875**      **W**

at the rate of one-half percent per month or part of month from 1st April of the

at 1 per cent per month or part of month for the period commencing on the date immediately following the

due date of submission of

**91% MATCHING BLOCK 441/875**

**W**

return and ending on the date of : i) furnishing the return (where return

has been filed after due date by the assessee); ii) completion of assessment under section 144 (where no return has been filed by the assessee). b) Interest will be calculated on the amount of tax on total income computed after deducting amount of advance tax paid, tax deducted or collected at source, tax relief, tax credit of MAT (but not self-assessment tax). c) However, no interest would be payable where self-assessment tax has been paid in full by the assessee prior to the date of filing of return of income even if the return has been submitted after the due date of filing of such return in terms of section 139(1).

146 NSOU • PGCO - V Example: Mr. Z submitted his return of income for the assessment year 2020-21 on October 18, 2020 declaring his income at Rs. 8,80,000. The Assessing Officer completed his assessment on November 12, 2020 with an assessed income of Rs.7,56,000. Mr. Z paid advance tax of Rs. 36,000 during the previous year 2019-20 and he also paid the self-assessment tax in full for the said previous year before submitting his return on October 18, 2020. During the previous year 2019-20, tax deducted at source of Mr. Z was Rs. 15,000. Compute the amount of interest payable by Mr. Z under section 234A. Solution: Computation of interest payable by Mr. Z under section 234A for the Assessment Year 2020-21 (Previous Year 2019-20) Period of default for submission of return = Date on which return actually filed – Due date for filing of return = 3 months i.e., [October 18, 2020 – July 31, 2020] Assessed income by AO = Rs. 7,56,000 Tax liability on assessed income including education cess @ 4% = Rs. 66,248 Shortfall in payment of tax = Rs. (66,248 – 36,000 – 15,000) = Rs. 15,248. Interest payable by Mr. Z under section 234A = Rs. 15,248 × 1% × 3 = Rs. 457 4.10.2 Interest for default in payment

**72% MATCHING BLOCK 442/875**

**W**

of advance tax [Section 234B] If an assessee who is liable to pay advance tax, fails to pay such tax,

he shall be obliged

**75% MATCHING BLOCK 443/875**

**W**

to pay interest at the rate of 1% (simple interest) for every month or part

thereof from 1 st April of the assessment

**82% MATCHING BLOCK 444/875**

**W**

year to the date of determination of income under section 143(1) and where a regular assessment has been made to the date of such assessment.

However, if the assessee has paid advance tax partly and has paid

**88% MATCHING BLOCK 445/875**

**W**

less than 90 % of the assessed tax, he shall be chargeable to pay interest

at the rate of 1% (simple interest) for every month or part thereof from 1 st April of the assessment

**82% MATCHING BLOCK 446/875**

**W**

year to the date of determination of income under section 143(1) and where a regular assessment has been made to the date of such assessment.

Example: The final assessment of Mr. Sunil (aged 48 years) was passed by the A.O. for the A.Y. 2020-21 on November 22, 2020 at Rs. 9,25,000. Tax deducted at source of Mr. Sunil for the previous year 2019-20 was Rs. 31,000. Mr. Sunil also paid advance tax in the P.Y. 2019-20 as follows :

NSOU • PGCO - V 147 a) On Sept. 15, 2019 — Rs. 15,300 b) On Dec. 15, 2019 — Rs. 14,700 c) On March 15, 2020 — Rs. 11,100 d) On March 16, 2020 — Rs. 17,220 Compute the interest liability of Mr. Sunil under section 234B. Solution: Computation of interest payable by Mr. Sunil under section 234B Particulars Amount Rs. Assessed Income 9, 25, 000 Tax on Rs. 9, 25, 000 incl. edu. cess @ 4% 1,01,400 Less: Tax deduction at source 31,000 Assessed Tax 70,400 90% of assessed tax i.e. Rs.70, 400 x 90% 63,360 Less: Advance tax paid i.e. Rs. (15, 300 + 14, 700 + 11, 100 + 17, 220) 58,320 Shortfall in advance payment tax 5,040 Since the advance tax paid during the P.Y. 2019-20 is less than 90% of the assessed tax, Mr. Sunil is liable to pay interest under section 234B on the shortfall of Rs. 5,000 (rounded off) for 8 months [1.4.2020 to 22.11.2020] @1% per month. Thus, interest obligation of Mr. Sunil under section 234B = Rs. 5,000 × 1% × 8] 400 4.10.3 Interest for deferment of advance tax [Section 234C] Under section 234C of the Act, an assessee shall be liable to pay interest if he has not paid advance tax or has underestimated instalments of advance tax. In the case of non-corporate assessee a) If the amount of

of net tax payable less amount of advance tax paid on or before 15 th March of the relevant previous year shall be

payable. 4.10.4 Interest on excess refund [Section 234D] If an assessee is granted excess refund of tax under the Act, the assessee shall be liable to interest on excess refund under section 234D in the following circumstances : a) Where an assessee is granted a refund under section 143(1) but in fact he is not to get such refund under regular assessment; b) Where an assessee is granted a refund under section 143(1) and the refund so granted exceeds the amount refundable on regular assessment. The assessee, in such cases, shall be liable to pay interest at the rate of one-half percent per month or part thereof from the date of grant of refund to the date of regular assessment on NSOU • PGCO - V 149 the amount actually refunded in situation (a) above and on the excess of amount refunded over the amount refundable on regular assessment in situation (b). 4.10.5 Interest for failure to deduct or collect and pay tax at source [Section 201(1A)] Where a person who is responsible for deducting or collecting tax at source does not deduct or collect tax at source, either wholly or partly, or even after collecting and deducting tax, fails to pay the same as required under the Act, the person shall be liable to pay interest mandatorily as follows :

**67% MATCHING BLOCK 459/875**

**SA**

CU-MBA-SEM-III-Tax Planning and Management- Se ... (D103495020)

a) at the rate of 1 percent from the date on which tax was deductible to the date

when tax was actually collected or deducted; b) at the rate of 1.5 percent from the date on which tax was collected or deducted to the date when it was actually paid; Example: ABC Ltd. paid Rs. 50,000 to Mr. Yadav on 1.9.2020 towards royalty without tax deducted at source. Subsequently, another payment of Rs. 40,000 on account of royalty income was made by ABC Ltd. to Mr. Yadav on 28.2.2021 and total TDS of Rs. 9,000 being 10 per cent of total royalty payment was made by ABC Ltd. However, ABC Ltd. deposited the TDS only on 18.5. 2021. Compute the interest payable by ABC Ltd. under section 201(1A). Solution: Delay in deduction of tax at source = 6 months (from 1.9.2020 to 28.2.21) Delay in deposit of tax at source = 3 months (from 28.2.2021 to 18.5.21) Thus, interest chargeable under section 201(1A) is computed as follows: 1 per cent on Rs. 5,000 for 6 months = Rs. 300 1.5 per cent on Rs. 9,000 for 3 months = Rs. 270 Total interest payable by ABC Ltd. under section 201(1A) = Rs. 570 4.10.6 Interest for making late payment of income tax [Section 220(2)] Where an assessee fails to pay any tax (other than advance tax) in response to a notice of demand

**90% MATCHING BLOCK 458/875**

**W**

within 30 days of the service of notice of demand, the assessee

concerned shall be liable

to pay interest at the rate of 1% for every month or part thereof from the expiry of 30 days of the service of

notice of demand.

150 NSOU • PGCO - V 4.11 Appeals and Revision As per provisions of the Income Tax Act, where an assessee becomes aggrieved by the order of the taxation authority, he has the right of appeal before the appropriate authority. There are four stages of appeal under the Income Tax Act as follows: 4.11.1 Appeal to the Commissioner (Appeals) On being aggrieved, an assessee may appeal to the Commissioner (Appeals) for justice. Under

**63% MATCHING BLOCK 461/875**

**W**

section 248, where under an agreement or other arrangement, the tax deductible on any income, other than trust, in terms of section 195 is to be borne by the person by whom the income is payable,

**97% MATCHING BLOCK 462/875**

**W**

and such person having paid tax to the credit of the Central Government, claims that no tax

is

**100% MATCHING BLOCK 463/875**

**W**

to be deducted on such income, he may appeal to the Commissioner (Appeals) for a declaration that no tax was deductible on such income.

An appeal to the Commissioner (Appeals) against any order which is appealable is to be presented within 30 days from the date specified. 4.11.2 Procedure in Appeal [Section 250] For the purposes of an appeal, the

**77% MATCHING BLOCK 464/875**

**W**

Commissioner (Appeals) shall fix a day and place for the hearing of the appeal and shall give notice of the same to the assessee and the Assessing Officer against whose order the appeal is made. Both the assessee and the Assessing Officer have the right to be heard at the hearing of the appeal either in person or by an authorised representative. The

Commissioner (Appeals), before passing an order on an

**48% MATCHING BLOCK 466/875**

**SA**

304 Corporate Taxation.docx (D117962176)

appeal, may make such further enquiries as he thinks fit or direct the Assessing Officer to make further enquiries and to send the same to him. He may also allow the appellant to go into any grounds of appeal

not specified  
previously by the appellant

**100% MATCHING BLOCK 465/875**

**W**

if he is satisfied that the omission of that ground

was wilful or unreasonable.

**85% MATCHING BLOCK 467/875**

**W**

The order of the Commissioner (Appeals) disposing of the appeal shall be in writing and shall state the points for determination, the decision thereon and the reasons for the decision. On disposal of the appeal

the Commissioner (Appeals) must communicate the order passed by him to the assessee as well as the Commissioner. 4.11.3 Appeal to

**80% MATCHING BLOCK 468/875**

**W**

the Appellate Tribunal The Central Government shall constitute an Appellate Tribunal of judicial and accountant members to exercise the powers and discharge the conferred on the Tribunal by the Act.

An assessee can appeal to the Appellate Tribunal so formed for this purpose. Every appeal to the Appellate Tribunal has to be made from

**97% MATCHING BLOCK 469/875**

**W**

the date on which the order sought to be appealed against is communicated to the assessee or the Commissioner, as the case may be.

NSOU • PGCO - V 151 4.11.4 Appeal to the High Court Section 260A provides that a direct appeal may be made to the High Court against the orders of the Appellate Tribunal. The appeal

**83% MATCHING BLOCK 470/875**

**W**

shall be in the form of a memorandum of appeal, precisely stating

in it the substantial question of law involved. The

**85% MATCHING BLOCK 471/875**

**W**

appeal to the High court shall be made within 120 days from the date on which the order appealed against is received by the assessee, or the Chief Commissioner or Commissioner. 4.11.5

**78% MATCHING BLOCK 473/875**

**SA**

BEL\_Block-6- U17.docx (D142229445)

Appeal to the Supreme Court Under section 261, an appeal shall lie to the Supreme Court from any

judgement of the High Court delivered before the establishment of the National Tax Tribunal (NTT), in a case where

**73% MATCHING BLOCK 472/875**

**W**

the High Court certifies to be a fit one for appeal to the Supreme Court. The provisions of the Code of Civil Procedure, 1908 in regard to appeal shall apply in the case of appeals

to the Supreme Court in the same manner as in the case of appeals from decrees from a High Court. 4.11.6  
Revision of Orders

**85% MATCHING BLOCK 480/875**

**SA**

304 Corporate Taxation.docx (D117962176)

prejudicial to the revenue [Section 263] The Commissioner may call for and examine the record of any proceeding

under the

**98% MATCHING BLOCK 474/875**

**W**

Act. If he considers that any order passed by the Assessing Officer is erroneous in so far as it is prejudicial to the interests of the revenue, he may, after giving the assessee an opportunity of being heard and after making or causing to be made such inquiry as

may be necessary, pass a suitable order. The Commissioner can enhance, modify or cancel an assessment and can also direct that a fresh assessment should be made. Where any order referred to in section 263(1) passed by the Assessing Officer had

**80% MATCHING BLOCK 475/875**

**W**

been the subject-matter of any appeal, the powers of the Commissioner under section 263(1) shall extend and shall be deemed always to have extended to such matters as had not considered and decided in such appeal. No order shall be made after the expiry of 2 years from the end of the financial year in the order sought to be revised was passed. 4.11.7

Revision of other orders [Section 264] In the case of any other order (not being an order

**43% MATCHING BLOCK 476/875**

**W**

prejudicial to the Revenue) passed by any subordinate authority including the Deputy Commissioner (Appeals), the Commissioner may either on his own motion or on

receipt of an application from the assessee, call for the record of any proceedings under the Act in the course of which the order was passed. After making such enquiries as may be necessary the Commissioner may such order as he thinks fit. The Commissioner is not empowered to revise any order on his own motion if a period of more than one year has expired

**90% MATCHING BLOCK 477/875**

**W**

from the date of the order sought to revised. Under section 264, the

Commissioner of Income tax is empowered to revise an order passed by the subordinate authority where no appeal has been filed. For filing an application, 152 NSOU • PGO - V the time limit is one year.

**78% MATCHING BLOCK 478/875**

**W**

It is obligatory on the part of the Commissioner to pass an order within a period of one year from the end of

the financial year in which such application is made by the assessee for revision. 4.12 Settlement of Cases For the purposes of settlement of income-tax cases waiting for justice, the Settlement Commission was constituted in 1976 under section 245 B of Income-tax Act, 1961 (Chapter XIX-A) to expedite the process of mitigating tax disputes and litigations and to settle up the pending cases. The Commission has its Principal Bench at New Delhi and three Additional Benches at Chennai, Kolkata and Mumbai. The Settlement Commission consists of one Chairman and two Members in the Principal Bench in New Delhi and one Vice Chairman and two Members in each of the three Additional Benches. An assessee

**84% MATCHING BLOCK 479/875**

**W**

may make an application to the Settlement Commission to have the case settled, in such form

and in such manner as may be prescribed,  
on  
containing

**75% MATCHING BLOCK 481/875**

**W**

a full and true disclosure of his incomewhich has not been disclosed before the Assessing Officer

and the manner in which such incomehas been derived. The additional tax and interest thereon under section 234B and 234C have to be paid on or before the date of making the application and the proof of such payment is to be attached with the application. In terms of section 245C, an assessee may, at any stage of a case relating to him, make an application in the prescribed form and manner, containing

**77% MATCHING BLOCK 482/875**

**W**

a full and true disclosure of his income which has not been disclosed before the Assessing Officer. The form in which such

application is to be prescribed in 34-B which is notified under the Income-Tax Rules, 1962. The assessee should also disclose the following to the Settlement Commission for favouring the settlement of his case : a) The manner in which such income has been actually derived by the assessee; b) The additional amount of income-tax payable on such income; c) Such other relevant particulars as may be prescribed to assist the Commission to make settlement of the case. After receiving the application from the assessee for settlement purposes, the Commission shall call for report of the Commissioner of Income Tax under section 245D (2B). Where the report of the Commissionerof Income Tax is not received within the period of 30 days  
NSOU • PGCO - V 153 from the date of receipt of letter from the Commission, the Settlement Commission shall pass an order on the basis of its satisfaction on the litigation within 15 days of the expiry of the period of 30 days given to the Commissionerof Income Tax for submitting the report.The order passed by the Settlement Commission is conclusive as to the matters stated therein and no appeal lies to any authority against the order passed by the Settlement Commission.  
4.12.1 Objectives of the Income Tax Settlement Commission The following are the objectives of Tax Settlement Commission: a) To set up a quasi-judiciary machinery for giving opportunity to the defaulting taxpayers to achieve a clean status through compromise and settlement; b) To provide speedy settlement of pending disputes; c) To mitigate litigation by way of providing conclusiveness of proceedings; d) To resolve controversies in complicated cases; e) To ensure prompt collection of tax revenues at low cost of collection. 4.12.2 Powers of Settlement Commission The following are the powers of Settlement Commission: The Settlement Commission has all the powers of Income Tax authorities in respect of proceedings pending before it. It has the authority to reopen completed proceedings under section 245E of the Income Tax Act, 1961. It has unique jurisdiction to rectify any error committed by it when such error is prejudicial to a party for which that party is not responsible. However, it does not have the power to review its own order if the matter raised by the applicant has been properly considered and a decision has been taken thereon. It has the power to grant immunity from prosecution and penalty under the Income Tax Act,under the Indian Penal Code or any other Central Act. The Settlement Commission has the power to order provisional attachment to protect the interest of revenue. It may refer back a case to the concerned Assessing Officer where the assessee does not cooperate with the Commission. The Commission may waive interest permitted under the provisions of the Income Tax Act and Rules and the circulars issued thereunder. The Settlement Commission may also prohibit subsequent applications for settlement in certain cases, if so required.

154 NSOU • PGCO - V 4.13 Summary After studying this unit we would understand the concepts of voluntary. Return [Sec. 139(1)], Return of loss [Sec. 139(3)], Belated Return [Sec. 139(4)]. Advance Payment of Tax, Instalment and due dates for payment of advance tax,

provisions regarding Tax Deducted of Source, Refund of Tax, Interest, Appeals and Revisions under the I.T.Act, Settlement of Cases. 4.14 Questions A. Multiple Choice Questions (MCQ) 1. Advance Tax is being paid by a person other than senior citizen whose estimated total payable tax (liability) is Rs 10000 or more for the coming year. Among the following sections which is applicable, for those persons who are going to pay the tax in form of "advance tax" a) 205 b) 208 c) 215 d) None of these 2. Advance Tax has been paid in 4 installments, identify and mention which out of the four dates mentioned below in which all taxpayers (other than those eligible assessee, who are being referred in section 44AD or section 44ADA) are required to pay up to 45% of advance tax by the date of a) 15 th June b) 30 th June c) 15 th September d) None of these 3. The order of the Assessing Officer under section 210(3) requiring the taxpayer to pay advance tax on his current year's income may be passed during the financial year, but not later than- a) 15 th March b) Last day of January c) Last day of February d) None of these 4. Any person who is actually not having any income from business or profession is actually not liable to pay advance tax is being described in section 207 of Income Tax Act 1961 NSOU • PGCO - V 155 a) An individual resident having the age of below 60 years b) A resident HUF c) A non-resident individual d) A resident senior citizen (i.e., an individual of the age of 60 years or above) 5. As per section 208, every assessee has to pay advance tax whose estimated tax liability for the year exceeds ... and this tax has to be paid as per section 208. a) Rs. 5, 000/- b) Rs. 10, 000/- c) Rs. 15, 000/- d) None of these 6. An assessee who is not having any income under the head of Profit and Gains of Business and Profession and a person who is a resident individual and who is at the age of 60 years and above ... can claim exemption under section 207. a) On the first day of the financial year b) On the last day of financial year c) At any time during the year d) None of these 7. On receipt of the notice from the Assessing Officer to pay advance tax, if the taxpayer's estimate is lower than the estimate of the Assessing Officer, then he has to send intimation in Form No. to the Assessing Officer. a) 28A b) 34C c) 34D d) None of these 8. Which of the followings is/are not included in the taxable income? a) Income from smuggling activity b) Casual income c) Gifts of personal nature subject to a maximum of Rs. 50,000/- received in cash d) None of these 9. Akash Sharma received rent by sub-letting a building, who is engaged in the trading of fertilizer This will be taxable under the head- a) Income from house property b) Income from capital gains c) Income from profits and gains of business and profession d) Income from other sources 10. What is the maximum amount of deduction for family pension? a) Rs. 20, 000/- b) Rs. 15, 000/- c) Rs. 25, 000/- d) None of these B. Short Answer Type Questions 1. What is Summary Assessment? 2. Describe the term "Best Judgement Assessment". 3. Discuss the provisions of section 210 for payment of advance tax under different situations. 4. Describe the different types of assessment which has been allowed under the Income-tax Act. 5. There are different types of return submitted by different types of assesses, define the different due dates for filing of return of income for various kinds of assesses C. Broad Answer Type Questions 1. There are different aspects of advance payment of tax, briefly discuss the provisions in details. 2. What do you mean by the section 139(4)? 3. What do you mean by the term "Belated Return"? 4. Mr. Akash has a taxable total income estimated to be Rs.5,50,000/-. Compute the advance tax instalments if his TDS is Rs.5,000/-. Ans. Rs.18, 175/-. 5. The estimated taxable business income of Z Ltd for the financial year 2020-21 is Rs.6,00,000/- and taxable LTCG on 03-06-2020 is Rs.3,00,000/-. Compute the advance tax instalment assuming assessed TDS to be Rs.15,000/-. Ans. Rs.2, 32, 200/-. Answer Key (A) 1(b) 2(c) 3(c) 4(d) 5(b) 6(c) 7(a) 8(c) 9(d) 10(b).

The study of this unit, will help us to understand—

- Concept of GST and its genesis
- Constitutional amendment and legislative framework of GST
- Structure and benefits of GST
- Applicability of GST in India
- Levy and Collection of GST
- Liability to pay CGST

5.1 Introduction  
Goods and Services Tax (

**76% MATCHING BLOCK 484/875 SA** plag test final.docx (D164172032)

GST) has been identified as one of the most important tax reforms in post independence.

**61% MATCHING BLOCK 485/875 SA** 17218 JO.docx (D42922526)

GST is a path breaking indirect tax reform which will create a common national market by removing inter-state trade barriers. GST has subsumed ( absorbed or include) multiple indirect taxes imposed by central and state governments. Power to levy any tax is derived from the Constitution of India. As per

**70% MATCHING BLOCK 487/875 SA** Tax Planning and Management BAA 751.doc (D91797431)

article 265 of The Constitution of India no tax shall be imposed or collected except by the authority of any Law. The charging section is the must in any Taxing Law for levy( impose) and collection (payment) of taxes. The very basic for the charge of tax in any taxing statute is taxable event, i.e. the point of time when tax will be imposed. Under pre GST regime, each indirect taxes has separate taxable event (such as manufacture in case of Excise Duty, provision of services in case of Service Tax, sale of goods in case of VAT/ CST, etc.) Under the GST regime,

**95% MATCHING BLOCK 486/875 W**

the taxable event is supply of goods or services or both.

The scope of supply has been discussed in detail in unit-6. GST subsumed the following : Central taxes State taxes Central excise duty Sate VAT Additional excise duty Entertainment tax Service tax Entry tax Surcharge and cess Luxury tax Central sales tax Purchase tax GST was first introduced in France

**90% MATCHING BLOCK 488/875 SA** plag test final.docx (D164172032)

in the year 1954. Within 62 years of its introduction about 160 countries across the world have adopted GST.

Generally GST is popular for single model but Canada and Brazil also have dual model

**45% MATCHING BLOCK 489/875 SA** GST - M.Com-2nd Sem.docx (D129601189)

of GST. India has adopted a dual GST which will be imposed concurrently by centre and states. 5.2 Genesis of GST in India 2004

The idea of GST was emerged in India from the recommendation of

**90% MATCHING BLOCK 490/875 SA** 17218 JO.docx (D42922526)

Kelkar Task Force. 2007 Union Finance Minister, Shri P. Chidambaram, while presenting the central budget (2007-08) announced the

GST for introduction in India. 2014 NDA government tabled

Structure of GST 1. GST is levied on supply of goods and services			

across India (including Jammu

**64% MATCHING BLOCK 502/875**

**SA** ruchita (sip).edited (1) (1) (1).pdf (D144345467)

and Kashmir). It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Under GST credit of taxes paid at

previous stages is available as set-off from the output tax. 2. GST is destination based consumption tax. Benefit of tax (STCG/ UTGST) will accrue to the consuming state. 3. Centre and states will impose tax on goods and services simultaneously. Centre now can impose tax on sale of goods within State and States can impose tax on services. (a) Intra-State supply of goods and services CGST-Payable to Central Government SGST/ UTGST-Payable to State Government/ Union Territory (as applicable) where they are consumed (b) Inter-States Supply of goods and services IGST - Payable to Central Government 4. Centre will levy and administer CGST and IGST while respective States/ UTs will levy and administer SGST/UTGST. 5. Import will be treated as inter-States supply and IGST will be chargeable along with basic Customs duty. 6. However, in GST Export will be treated as Zero rated supplies and no IGST is payable. NSOU • PGCO - V 163 7. The rates of GST are 0.5%, 3%, 5%, 12%, 18% and 28%. In addition , compensation cess will be payable on pan masala, coal, aerated water and motor cars (Sin cess). There is no education cess or Swach Bharat cess or Krishi Kalyan cess on GST. 8. GST will be calculated on value of supply of goods and services, which is transaction value. (subject to some exceptions) 9. Under GST, every suppliers who have made taxable supply shall required to get himself registered under GST Law. 10. A registered person is entitled to take credit (deduction) of input tax paid from the output tax (if any) subject to following restriction: (a) Utilisation of IGST : first utilized for the payment of IGST then the balance may be utilized towards payment of CGST and SGST/UTGST (b) Utilisation of CGST: first utilized for the payment of CGST then the balance may be utilized towards payment of IGST. (c) Utilisation of SGST/UTGST: first utilized for the payment of SGST/UTGST then the balance may be utilized towards payment of IGST. 11. Under GST regime there is a seamless (without any obstruction) credit flow in case of inter-state supplies, which was not possible in pre GST period. No credit was available for CST paid by the buyer. Under GST regime the seamless credit will flow as follows: (a)

**96% MATCHING BLOCK 503/875**

172 NSOU • PGCO - V 6.7 Value of Supply 6.7.1 Determination of Supply 6.7.2. Illustration 6.8 Summary 6.9 Questions 6.0 Objectives After studying this unit, we will be able to understand and realise— • Scope of Supply, Composite supply and Mixed Supply • Place and Time of Supply • Date of Payment of GST • Value of Supply 6.1 Introduction The incidence of tax is the foundation stone of any taxation system. It determines the point at which tax would be levied (i.e. the taxable event). The earlier framework of taxable event across various areas of indirect taxes was subject to varying interpretations resulting in endless litigation since decades. Broadly, the controversies related to issues like whether a particular process amounted to manufacture or not, whether a particular transaction was sale of goods or rendering of services, etc. The GST laws resolve these issues by laying down one comprehensive taxable event, i.e. '

**55% MATCHING BLOCK 538/875**

**SA**

GST - M.Com-2nd Sem.docx (D129601189)

supply of goods or services or both'. GST law, by levying tax on the 'supply of goods and/or services',

departs from the historically understood concepts of 'taxable event' under the erstwhile indirect tax laws (i.e. sale under state VAT laws, manufacture under excise laws and provisioning of service under service tax laws). For a better understanding of this topic, it is imperative to understand the meaning of a few important terms which have been explained in this unit. 6.2 Definition of important terms Meaning of '

**95% MATCHING BLOCK 537/875**

**W**

Goods' {Section 2 (52) of CGST Act} 'Goods' means every kind of movable property other than money and securities but includes: actionable claim; growing crops, grass and things attached to/forming part of the land which are agreed to be severed before supply or under a contract of supply.

NSOU • PGCO - V 173 Meaning of ' Services' {Section 2(102) of

of Supply {Section 7 of CGST Act} Section 7(1): For the purposes of this Act, the expression "supply" includes: a) all forms of supply of goods or services or both such as sale, transfer, barter, exchange, licence, rental, lease or disposal made or agreed to be made for a consideration by a person in the course or furtherance of business; b) import of services for a consideration whether or not in the course or furtherance of business; c) the activities specified in Schedule I, made or agreed to be made without a consideration; and d) the activities to be treated as supply of goods or supply of services as referred to in Schedule II. • Section 7(2): Notwithstanding anything contained in sub-section (1), a) activities or transactions specified in Schedule III; or b) such activities or transactions undertaken by the Central Government, a State Government or any local authority in which they are engaged as public authorities, as may be notified by the Government on the recommendations of the Council, shall be treated neither as a supply of goods nor a supply of services. Section 7(3): Subject to the provisions of sub-sections (1) and (2), the Government may, on the recommendations of the Council, specify, by notification, the transactions that are to be treated as: 176 NSOU • PGCO - V a) a supply of goods and not as a supply of services; or b) a supply of

services and not as a supply of goods.

Overview of Supply : 6.3.1 Supply for consideration in course or furtherance of business {Section 7(1) of CGST Act} Section 7(1)(a) of CGST Act provides that a

**61% MATCHING BLOCK 557/875**

**W**

supply of goods/services should be carried out for consideration in the course or furtherance of business.

Modes of Supply:

**87% MATCHING BLOCK 559/875**

**W**

Section 7(l)(a) of CGST Act includes all forms of supply of goods or services or both such as sale, transfer, barter, exchange, licence, rental, lease or disposal made or agreed to be made for consideration in the course or furtherance of business.

Sale and Transfer: Earlier, VAT was levied by State Governments on sale of goods within their respective states wherein 'sale was defined to mean transfer of property in goods for consideration. Under CGST Act, sale has been treated as a form of supply leviable to GST. Barter and Exchange: Barter transactions involve only exchange of goods/services whereas exchange Inclusions Exclusions Supply for consideration in Activities to be treated course or furtherance of neither as Supply of goods business {Section 7(1 )(a)} nor Supply of services {Section 7(2) + Schedule III}

**92% MATCHING BLOCK 560/875**

Supply without consideration {Section 7(1 )(c)+

**96% MATCHING BLOCK 561/875**

**W**

Schedule I} Activities to be treated as Supply of goods or Supply of services {

Section 7 (1 )(d) +  
Schedule II)}

NSOU • PGC0 - V 177 may cover a situation where the goods are partly paid for in goods and partly in money. When there is a barter of goods or services, same activity constitutes supply as well as consideration. By making a specific inclusion in the definition of supply, all barter and exchanges have been made liable to GST. Licence, Lease, Rental etc: Licences, leases and rentals of goods were earlier treated as services where the goods were transferred without transfer of right to use (effective possession and control over the goods) and were treated as sales where the goods were transferred with transfer of right to use. Under the GST regime, such licences, leases and rentals of goods with or without transfer of right to use are covered under the scope of 'supply of services' because 'there is no transfer of title in such supplies. Such transactions are specifically treated as 'supply of services' under Schedule II of CGST Act.

CONSIDERATION: One of the essential conditions for the supply of goods and/or services to fall within the ambit of GST is that the supply should have been made for a consideration. However, consideration does not always mean money. It covers anything which might be possibly done, given or made in exchange for something else. Further, consideration need not always flow from the recipient of the supply. It can also be made by a third person. In Course or Furtherance of Business: GST is essentially a tax on only commercial transactions. Hence, only those supplies which are made in the course or furtherance of business qualify as 'supply' under GST. Resultantly, any supplies made by an individual in his personal capacity do not come under the ambit of GST unless they fall within the definition of business. Example: Rishabh buys a car for his personal use and after a year sells it to a car dealer. Sale of car by Rishabh to car dealer is not a supply under CGST Act because supply is not made by Rishabh in the course or furtherance of business. In order to understand the term 'in the course or furtherance of business', we need to understand the term 'business'. Business has been defined u/s 2(17) of CGST Act to include, inter-alia, any trade, commerce, manufacture, profession, vocation etc whether or not undertaken for a monetary benefit. Business also includes any

178 NSOU • PGC0 - V activity or transaction which is incidental or ancillary to the afore mentioned listed activities. Example: Sundaram Acharya, a famous actor, paints some paintings and sells them. The consideration from such sale is to be donated to a Charitable Trust - 'Kind Human'. The sale of paintings by the actor qualifies as supply even though it is a one-time occurrence. Import of Services for Consideration {Section 7(1)(b) of CGST Act} Section 7(1)(b) of CGST Act expands the scope of the term 'supply' by including importation of services for a consideration within its ambit irrespective of the fact whether such importation is in the course or furtherance of business or not. Section 7(i)(b) of CGST Act (ie importation of services for consideration) is the only exception to the condition of supply being in course or furtherance of business. Example: Mr. M, a proprietor, has received designing services for his house from an architect located in New York at an agreed consideration of US \$5,000. The import of services by Mr. M shall be treated as a supply u/s 7(i)(b) of CGST Act even though it is not in the course of or furtherance of business. 6.3.2 Supply without Consideration As a general rule, for an activity to qualify as supply, the same should have been provided for consideration. However, Section 7(1)(c) of CGST Act read along with Schedule I of CGST Act lists down the following four cases where existence of consideration is not a pre-requisite for an activity to qualify as supply: 1. Permanent Transfer/ Disposal of Business Assets: Transfer/disposal of business assets by an entity on permanent basis without consideration shall be regarded as supply if input tax credit has been availed on procurement of such assets. This clause is wide enough to cover transfer of business assets from holding to subsidiary company or vice versa without consideration. Example: Donation of old laptops to charitable schools by XYZ & Co. At the time of purchase of new laptops will

**88% MATCHING BLOCK 562/875**

**W**

qualify as supply provided input tax credit has been availed by XYZ & Co.

on such laptops. Example: A cloth retailer gives clothes from his business stock to his friend free of cost. In this case, transfer of business stock would amount to supply if he had claimed input tax credit on his procurement of such business stock. 2. Supply to Related Persons/Distinct Persons: Transactions involving supply of goods/services/both without consideration

NSOU • PGCO - V 179 between related persons or distinct persons as specified u/s 25 of CGST Act will qualify as supply provided such supply has been made in the course or furtherance of business. Taxability of Stock Transfers//Branch Transfers: Under the earlier law, no tax was applicable on stock transfers/branch transfers since such transactions do not involve transfer of property in goods. However, under the GST regime, stock transfers/branch transfers between different locations (with separate GST registrations) of same legal entity will qualify as 'supply'. Example: Raghbir Fabrics transfers 1,000 shirts from his factory located in Lucknow to his retail showroom in Delhi so that the same can be sold from there. The factory and retail showroom of Raghbir Fabrics are registered in the states where they are located. Although no consideration is charged, supply of goods from factory to retail showroom constitutes supply. Employer-Employee Transactions: The definition of 'related persons' covers employer-employee relationship within its scope. Accordingly, all employer-employee transactions should be regarded as supply irrespective of the fact whether consideration is involved or not. However, Schedule I of CGST Act provides that gifts given

**100% MATCHING BLOCK 563/875**

**W**

by an employer to an employee shall not be treated as supply

if the amounts of gifts given during a financial year does not exceed Rs 50,000. However, gifts exceeding Rs 50,000 shall be subject to GST. Moreover, Schedule III of CGST Act clearly states that services provided

**100% MATCHING BLOCK 564/875**

**W**

by an employee to the employer in the course of or in relation to his employment

shall not be treated as supply of services. Therefore, any kinds of benefits given by an employer to his employee in terms of contractual agreement entered into between the employer and the employee will not be subject to GST. Example: Where an employer provides free housing to his employee, when the same is provided in terms of the contract between the employer and employee and is part and parcel of the employee's remuneration package, no GST implications should arise on such free housing. 3.

Supply of Goods Between

**85% MATCHING BLOCK 565/875**

**W**

Principal & Agent: Supply of goods by a principal to his agent, without consideration, where the agent undertakes to supply such goods on behalf of the principal is considered as supply.

Similarly,

**87% MATCHING BLOCK 566/875**

**W**

supply of goods by an agent to his principal, without consideration, where the agent undertakes to receive such goods on behalf of the principal

is also considered as supply.

180

NSOU • PGCO - V Example: ABC Manufacturers Ltd. engages Raghav & Sons as an agent to sell goods on its behalf. For this purpose, ABC Manufacturers Ltd. has supplied the goods to Raghav & Sons. Supply of goods by ABC Manufacturers Ltd. to Raghav & Sons will qualify as supply even though no consideration has been recovered from Raghav & Sons. 4.

Import of Services from Related Persons Located Outside India:

**80%**

**MATCHING BLOCK 567/875**

**SA**

GST - M.Com-2nd Sem.docx (D129601189)

Import of services by a taxable person from a related person or from any of his establishments located outside India in the course or furtherance of business shall be treated as supply irrespective of

the presence of consideration. Example: ABC Associates received legal consultancy services from its head office located in Malaysia. The head office has rendered such services free of cost to its branch office. Since ABC Associates and the branch office are related persons, services received by ABC Associates will qualify as supply even though the head office has not charged anything from it. Example: Sumit, a proprietor registered in Delhi, has sought architect services from his brother located in US with respect to his newly constructed house in Delhi. Although services have been received by Sumit without consideration from a related person, the transaction will not qualify as supply since the same has not been received

**78%**

shall be treated neither as supply of goods nor as supply of services.

Resultantly, such activities shall not be liable to GST. Section7(2)(a) – Activities Under Schedule III: following activities covered under Schedule III of CGST Act can be termed as 'Negative List' under the GST regime: 1.

**91% MATCHING BLOCK 585/875 W**

Services by an Employee to his Employer in the Course of or in relation to his Employment.

NSOU • PGC0 - V 183 Services provided by an

**57% MATCHING BLOCK 586/875 W**

employee to his employer during the course of employment are not taxable under GST law. Services provided outside the course of employment for a consideration would qualify as

a supply and thus liable to GST. Example: If an employee provides private coaching to his employer's children, such services would not get covered under the above exclusion and would be liable to GST. Amounts paid by the employer to the employee for premature termination of a contract of employment are treated as amounts paid in relation to services

**100% MATCHING BLOCK 587/875 W**

provided by the employee to the employer in the course of employment.

Thus, such amount would not be liable to GST. Nature of Transaction Services provided by a casual worker to employer who gives wages on daily basis to the worker In case the casual workers are employed by a contractor, like a building contractor or security agency services, who deploys them for execution of a contract or for provision of security services Services provided on contract basis by a person to another Whether regarded as 'services carried out during the course of employment'? Yes. These are services provided by the worker in the course of employment. Yes. Services provided by the casual workers to the contractors are in the course of employment. However, services provided by the contractor to his client by deploying such workers would not be a service provided by the workers to the client in the course of employment. The consideration received by the contractor would therefore be taxable if other conditions of taxability are present. No. Services provided on contract basis (ie principal-to-principal basis) are not services provided in the course of employment. 2.

by way of any activity in relation to a function entrusted to a Panchayat under Article 243G of the Constitution

has been notified. 6.3.6 Illustration Problem 1: R is a supplier of goods located in Mumbai. In October, 2017 he has imported Consultancy Services for Development of IT Software from U.S.A. for a stipulated consideration of \$ 80,000. Will the import of consultancy services be treated as supply? Solution : The importation of service in the above case shall fall within the ambit of term "supply" as it

**100%      MATCHING BLOCK 593/875****W**

is for a consideration and in the course or furtherance of business

and shall be liable to IGST. Problem 2 : R is a supplier of goods located in Chandigarh. In November, 2017, he has imported 'Architecture Services' from a relative consultant located in Germany, without any consideration (monetary or non-monetary) for construction of his personal house. (a) Will the import of architecture services for personal use be treated as supply and liable to IGST? (b) What will be your answer if the above services have been imported by R in the course or furtherance of business? Solution : (a) Since, there is no consideration and it is for personal use, importation NSOU • PGCO - V 185 of service in the given case shall not fall within the ambit of term 'supply' and not liable to IGST. However, in the above example if the import of Architecture Service is for a consideration, it shall fall within the scope of term 'supply', although services have been imported for personal purposes. (b) Since the services have been imported from a related person and these are

**80%      MATCHING BLOCK 594/875****W**

in the course or furtherance of business, it will be treated as supply

even if it is without consideration, Problem 3 : A dealer of washing machines, who has availed input tax credit on washing machines, permanently transfers a washing machine from his stock-in-trade, for personal use at his residence. Will this transfer for personal use be treated as supply and liable for GST? Solution : Such transaction though without, a consideration shall constitute supply and be liable to GST, as it is a permanent transfer of washing machine for his personal use. Problem 4 : R, a Chartered Accountant, purchased 3 laptops of value Rs. 2,40,000 on 1.10.2017 and paid IGST amounting Rs. 67,200 thereon. He availed ITC of Rs. 67,200 in his books on the same day. After 3 years of using the laptops, he has donated one laptop to a college when its fair market value is Rs. 30,000. Will such donation be treated as supply and liable to GST? Solution : In the above case, R shall be liable to pay an amount under GST equivalent to: (a) The input tax credit availed on the said laptop as reduced by the input tax credit attributable to 3 years for which asset has been used in business, Input credit availed at the time of purchase of laptop = Rs. 22,400 (1/3 of the total input credit of Rs.67,200) Useful life of the laptop 5 years Unused period 2 years Therefore, GST amount payable (Rs. 22,400 x 2/5): Rs.8,960 (b) Tax payable on the fair market value of such capital goods as determined under section 15, i.e. 30,000 x 28% = 8,400. Whichever is higher. Thus, R shall be liable to pay GST amounting to Rs. 8,960 on donation of such laptop. 186 NSOU • PGCO - V Problem 5 : R is engaged in supply of certain goods in Delhi and Haryana. He wishes to transfer goods worth Rs. 1,40,000 from Delhi to its branch in Haryana. Will such transfer be treated as supply and liable for GST? Solution : R shall be treated as distinct persons. Thus any supply of goods or services or both between Delhi to branch at Haryana shall be subject to integrated tax in terms of IGST Act, even though such transaction may not involve any payment of consideration. Problem 6 : Employees of a R Ltd., which is a subsidiary of G Limited, have been sent on deputation basis to its Holding Company namely G Limited. Will such transfer on deputation be treated as supply and liable to GST? Solution : Such transfer of employee shall fall within the ambit of the term 'supply' even in the absence of any consideration. As both the companies fall under the definition of related person. Problem 7: R, the Principal located in Nagpur (Maharashtra) supplies certain goods to his agent G, located in Delhi. G undertakes to supply the said goods in Delhi on behalf of R. Will the above activity be treated as supply and liable for GST? Solution : As per

**93% MATCHING BLOCK 595/875****W**

Schedule I of CGST Act, supply of goods by a principal to his agent where the agent undertakes to supply such goods on behalf of the principal is treated as supply even if

such supply is without any consideration. Thus, such supply of goods by R to G shall fall within the ambit of the term 'supply' even if made without consideration and shall be liable for integrated tax under IGST Act. Problem 8: R works as an agent and is located in Mumbai. G is a manufacturer located in Delhi. R agrees to purchase certain goods from Mumbai on behalf of G every month and supply the same to G. Will the above activity be treated as supply and liable for GST? Solution : As per

**75% MATCHING BLOCK 596/875****W**

Schedule I of CGST Act, supply of goods by an agent to his principal where the agent undertakes to receive such goods on behalf of the principal shall be treated as supply even if it is without consideration.

Thus such supply of goods by R to G shall fall within the term of supply, even if made without consideration. This supply of goods from R to G shall be subject to integrated tax under IGST Act. Problem 9: R lives in Germany. His brother G is carrying on business in India. G imports technical services from R without any consideration in November, 2017

**76% MATCHING BLOCK 597/875****W**

in the course or furtherance of business. Will this be treated as supply

or services although G did not pay any consideration to R?  
NSOU • PGCO - V 187 Solution : As per Schedule I

**79% MATCHING BLOCK 599/875****SA**

GST - M.Com-2nd Sem.docx (D129601189)

of the CGST Act. import of services by a taxable person from a related person or from any of his other establishments outside India, in the course or furtherance of business shall be treated as supply

even if it is without any consideration. The said importation of service shall fall within the ambit of term "supply" and G shall be liable to pay integrated tax under IGST Act, 2017 even if R has provided consultancy services without any consideration. However, if such services are for personal use then it will not be treated as supply unless there is a

**72% MATCHING BLOCK 598/875****W**

consideration. Problem 10: Under a scheme of finance, Maruti Ltd. gives the possession of car to the buyer in November, 2017. It agrees to transfer the ownership of the car to the buyer in January, 2019 upon payment of full consideration of Rs. 9,60,000, in installments as agreed.

What will be the nature of this transaction? Solution : As per Schedule II

**88% MATCHING BLOCK 604/875****SA**

Vaishakhi Gandhi\_LLM 2nd yr Dissertation.pdf  
(D132370683)

forming part of the assets of the business carried on by him.

The closure of the business is due to his ill health. What will be the nature of this transaction? Solution : As per Schedule II of the CGST Act, where

**100% MATCHING BLOCK 615/875**

**SA**

Vaishakhi Gandhi\_LLM 2nd yr Dissertation.pdf  
(D132370683)

goods forming part of the assets of any business carried on by

a person

**99% MATCHING BLOCK 616/875**

**SA**

Vaishakhi Gandhi\_LLM 2nd yr Dissertation.pdf  
(D132370683)

shall be deemed to be supplied by him in the course or furtherance of his business immediately before he ceases to be a taxable person, unless— (i) the business is transferred as a going concern to another person; or (ii) the business is carried on by a personal representative who is deemed to be a taxable person.

In this case, such goods shall deemed to be supplied by him in the course of

**90% MATCHING BLOCK 617/875**

**SA**

Vaishakhi Gandhi\_LLM 2nd yr Dissertation.pdf  
(D132370683)

furtherance of his business immediately before he ceases to be a taxable person. Thus, the

capital goods which have some useful life and such inputs lying with him on which credit has been availed should be treated as deemed supply and shall be subject to GST. 6.4 Composite Supply and Mixed Supply GST is payable on supply of goods/ services at a rate notified by the government. In case of supply of single goods/ services poses no problem for determination of applicable GST rate, if they are clearly identifiable. However, some of the supplies are a combination of goods/combination of services/ combination of services and goods wherein each individual component of such supply attracts a different rate of tax. In such cases, determination of applicable rate of tax to be levied on such supplies may be a challenge. To address this issue, the GST law categorises such supplies into composite supplies and mixed supplies.

6.4.1 Composite Supply U/s 2(30) of CGST Act, 2017

Composite supply means

**89% MATCHING BLOCK 619/875**

**SA**

GST - M.Com-2nd Sem.docx (D129601189)

a supply – Made by a taxable person to a recipient 190 NSOU • PGCO - V consisting of two or more taxable supplies of goods or services or both, or any combination thereof, which are naturally bundled, and supplied in conjunction with each other in ordinary course of business,

and out of all supplies, one of which is principal supply. (Principal supply means predominant element of composite supply for which other supplies forming part of composite supply play an ancillary role) Condition for Composite Supply Any supply of goods or services will be treated as composite supply if it satisfies the following conditions simultaneously: i) supply of two or more taxable supply ii) it is naturally bundled i.e., goods or services are usually provided together in normal course of business. They cannot be separated. iii) One of the supplies must be principal supply. Tax liability for Composite Supply As per Sec. 8 of CGST Act, 2017

**100% MATCHING BLOCK 618/875 W**

a Composite Supply, comprising two or more supplies, one of which is a principal supply, shall be treated as a supply of such principal supply.

Accordingly the tax rate applicable for the goods or services which is treated as principal supply is the rate of tax for

**91% MATCHING BLOCK 620/875 W**

Composite Supply. 6.4.2 Mixed Supply As per Sec. 2(74) mixed supply means – Two or more individual supplies of goods or services or any combination thereof, Made in conjunction with each other By a taxable person For a single price Where such supply does not constitute a composite supply.

Condition for Mixed Supply Any supply of goods or services will be treated as mixed supply if it satisfies the following conditions simultaneously: 1. Supply of two or more individual supply 2. It is not naturally bundled i.e., goods or services are usually not provided together in normal course of business. They can be separated. 3. None of the supplies is principal supply.

NSOU • PGCO - V 191 Tax liability for Composite Supply As per Sec. 8 of CGST Act, 2017

**97% MATCHING BLOCK 621/875 W**

a Mixed Supply comprising two or more shall be treated as a supply of that particular supply which attracts the highest rate of tax. 6.4.3

**67% MATCHING BLOCK 622/875 W**

Guiding principles for determining a supply as Composite Supply or Mixed Supply Following guiding principles could be adopted to determine whether it would be a Composite Supply or Mixed Supply. Description Composite Mixed Supply Supply Naturally bundled Yes No Supplied together Yes Yes Can be supplied separately No Yes One is predominant supply for recipient Yes No Each supply

priced separately No No Criteria for determining natural bundle Perception of customer about the supply. Market trend i.e. how other supplier supplies. Nature of ingredient of supply. 6.4.4 Illustration Problem 1 : R is selling hampers consisting of canned foods, sweets, chocolates, cakes and dry fruits on diwali and other festivals. What is the kind of supply and at which rate will GST be payable by R? Solution : The supply of hamper consisting of canned foods, sweets, chocolates, cakes and dry fruits if sold for a single price shall be a mixed supply and the GST rate shall be rate of any of these items which attracts the highest rate of tax. However, if

**64% MATCHING BLOCK 623/875 W**

each of the items is supplied separately and is not dependant on any other item, it shall not be mixed supply

and GST rate applicable shall be the rate applicable for each supply. Problem 2: . R dispatched chocolates to G from Delhi to Punjab after getting it packed and paying insurance charges of such goods. What is the kind of such supply of chocolates and what rate will GST be applicable?

192 NSOU • PGCO - V Solution : Where

**100% MATCHING BLOCK 624/875**

**W**

goods are packed and transported with insurance, the supply of goods, packing materials, transport and insurance

is a composite supply and supply of goods is

the principal supply. GST rate applicable in this case shall be the GST rate of chocolates. Problem 3 : R purchases air travel ticket of Air India from Delhi to Bangalore for Rs. 9,000 which includes free food on board and free insurance.

What is the kind of such supply and what rate will GST be applicable? Solution: Air travel ticket from Delhi to Bangalore costing Rs. 9,000 includes free food on board and free insurance. Therefore, it is a case of composite supply. In this case, the transport of passenger, institutes the pre-dominant element of the composite supply, and is treated as the principal supply and all other supplies are ancillary. Hence, GST rate applicable in this case shall be the GST rate of transportation of passenger by air. Problem 4 : Mr. Ram being a dealer in laptops, sold laptop to a customer in Laptop Bag, for Rs. 55,000. CGST and SGST for laptop @ 18% and for laptop bag @ 28%. What would be the rate of tax leviable? Also find the GST liability. Solution : If the laptop bag is supplied along with the laptop in the ordinary course of business, the principal supply is that of the laptop and the bag is an ancillary. Therefore, it is a composite supply and the rate of tax would that as applicable to the laptop. Hence, applicable rate of GST 18% on Rs.55,000. CGST is Rs.4,950 and SGST is Rs. 4,950

Problem 5 : Mr. A booked a Rajdhani train ticket, which includes meal. Is it composite supply or mixed supply? Solution : It is a bundle of supplies. It is a composite supply where the products cannot be sold separately. The transportation of passenger is, therefore, the principal supply. Rate of tax applicable to the principal supply will be charged to the whole composite bundle. Therefore, rate of GST applicable to transportation of passengers by rail will be charged by IRCTC on the booking of Rajdhani ticket. Problem 6 : Big Bazar offers a free bucket with detergent purchased. Is it composite supply or mixed supply? Assume rate of GST for detergent @ 28% and bucket @ 18%. Solution : This is a mixed supply. These items can be sold separately. Product which has the higher rate will apply on the whole mixed bundle.

NSOU • PGCO - V 193 Problem 7: XYZ

**96% MATCHING BLOCK 625/875**

**W**

Ltd. is a manufacturer of cosmetic products, supplied a package consisting of hair oil (GST Rate -18%),

Sun screen cream (GST Rate - 28%), Shampoo (GST rate - 28%) and hair

**58% MATCHING BLOCK 626/875**

**W**

comb (GST Rate -12%). The Price per package is Rs. 500 (exclusive of taxes). 10,000 packages were supplied by the company

to its dealers. Determine the nature of supply and its tax liability. Solution : This supply would be regarded as mixed supply, since in this case each of the goods in the package have individual identity and can be supplied separately, but are deliberately supplied conjointly for a single consolidated price. The tax rates applicable in case of mixed supply would be the rate of tax attributable to that one supply (goods, or services) which suffers the highest rate of tax from amongst the supplies forming part of the mixed supply. Therefore, the package will be chargeable to 28% GST. The tax liability will be arrived as under : Particulars Rs. Value of taxable supply per package Rs. 500 No. of packages 10,000 Total Taxable Value of supply Rs. 50,00,000 Applicable GST Rate 28% Total Tax liability Rs.14,00,000 Problem 8 :

**92% MATCHING BLOCK 627/875**

**W**

A Ltd. a manufacturing concern in Rajasthan has opted for composition scheme furnishes you with the following information for Financial Year 2018-19. It requires you to determine its composition tax liability and total tax liability. In Financial Year 2017-18 total value of supplies including inward supplies taxed under reverse charge basis are Rs. 68,00,000. The break up of supplies are as follows – Particulars Rs. (1) Intra State Supplies of Goods X chargeable @ 5% GST 30,00,000 (2) Intra State Supplies made which are chargeable to GST 18,00,000 at Nil rate (3) Intra state supplies which are wholly exempt under section 11 of CGST Act, 2017 2,40,000 (4) Value of inward supplies on which tax payable under RCM (GST Rate 5%) 5,00,000 (5) Intra State Supplies of Goods Y chargeable @ 18 % GST 30,00,000 194

NSOU • PGCO - V Solution:

**91% MATCHING BLOCK 628/875**

**W**

The composite tax liability of A Ltd. shall be as under : (1) Computation of Aggregate Turnover and composite tax : Particulars Rs. (1) Supplies made under forward charge 30,00,000 (2) Supplies made which are chargeable to GST at Nil rate 18,00,000 (3) Supplies which are wholly exempt under section 11 of CGST 2,40,000 Act, 2017 (4) Value of inward supplies on which tax payable under RCM NIL (GST Rate 5%) (not to be included) (5) Intra State Supplies of Goods Y chargeable @ 18 % GST 30,00,000 Aggregate turnover 30,00,000 Rate of composite tax 2% Total Composite tax [Rs. 30,00,000 x 2%] 60,000 (2) Tax payable under reverse charge basis: Particulars Rs. Value of inward supplies on which tax payable under RCM 5,00,000 Rate of GST 5% Tax payable under RMC 25,000 Total Tax liability (

Rs. 60, 000 + 2, 5000) 85,000 6.5 Place of Supply Under the GST environment, Place of Supply (PoS) of Goods and Services is the most important concept because the chargeability of GST is based on three pillars. Taxable event i.e supply

**68% MATCHING BLOCK 630/875**

**SA**

GST - M.Com-2nd Sem.docx (D129601189)

Time of supply of Goods / Services (point of taxation) Place of Supply of Goods and Services.

Therefore it can be said that Place of Supply is very significant for computation of tax under GST regime. In case the Place of Supply is wrongly determined, it has vast implication under provision of Section 77. According to that section if a person wrongly collect and paid the CGST and SGST assuming the transaction is a Intra-State supply, while the actual transaction is a Inter-State supply, shall refund the CGST/SGST and paid IGST along with interest and vice versa. Under GST it is very important to determine

NSOU • PGCO - V 195 the nature of supply because it's only after determining the same we can make sure the tax that is to be collected and paid. Hence, in case the nature of supply is Inter-State we shall apply Integrated Goods and Service Tax (IGST) on the transaction and in case of Intra-State supply we need to apply both i.e.

**80% MATCHING BLOCK 629/875**

**W**

Central Goods and Service Tax (CGST) and State Goods and Service Tax (SGST).

As per Section 7 of IGST Act, a transaction is said to be a

**74% MATCHING BLOCK 631/875**

**SA**

M. Com. II Adc. Accountancy P. V & VII all.PDF (D142210236)

Intra-State supply if the location of supplier and the Place of Supply of goods and services are in same state or same Union Territory.

As per Section 8 of IGST Act, a transaction is said to be a Inter-State supply if

<b>80%</b>	<b>MATCHING BLOCK 632/875</b>	<b>SA</b>	CU-MBA-SEM-III-Tax Planning and Management- Se ... (D103495020)
the location of supplier and the Place of Supply of goods and services are two different States or two different Union Territory or			

one in Union Territory

and another is State Territory. Inter- State supplies also includes the supply of goods or services imported into India, where LoS (location of supplier) is outside India and PoS (Place of Supply) is in India, and supply of goods and services exported from India, where LoS in India but PoS is outside India. Apart from this, there are some specified transactions which actually looks like Intra- State supplies but deemed to be a Inter- State supplies, for example supplies made to or by SEZ units even within the State would be considered as Inter- State Supplies. All Intra- State supplies are governed by Central GST Act and State/ Union Territory GST Act, 2017 and applicable taxes are CGST plus SGST/UGST. So imposition of two different kinds of taxes on the same transaction indicates the equal share of taxes by Central and State/ UT Government. All Inter-State supplies are governed by the IGST Law applicable levy on the transaction is IGST. This IGST include the share of both Central Government and respective state/ UT Government which is consider as the Place of Supply. Thus the concept of Place of Supply is the utmost important from the point of Government to determine which State or Union Territory will get the share of IGST and it is also important for the business to identify which taxes to be imposed depending upon whether the transaction is Inter Sate supply or Intra- State supply. 6.5.1 Scope of the Provisions Sections 10 to 13 of the IGST Act, 2017 indicate the principles to determine the Place of Supply. 1. Section 10 governs the

location of supplier or location of recipient is outside India. 196			

NSOU • PGCO - V It is important to state that where Sections 10 and 12 deal with domestic transaction but Sections 11 and 13 deal with cross border transactions of goods and services. Also Sections 10 and 11 cover the

**41% MATCHING BLOCK 639/875****SA** GST - M.Com-2nd Sem.docx (D129601189)

Place of Supply of goods, but Sections 12 and 13 cover the supply of services, both are independent provisions. 6.5.2 Place of Supply of goods other than

export and import According to the related provisions, Rules governing the

**45% MATCHING BLOCK 637/875****W**

Place of Supply of Goods other than Imports and export (for Domestic supply) are as under- 1) where the supply involves movement of goods:

**83% MATCHING BLOCK 638/875****W**

Supply involves movement of goods whether by the supplier or the recipient, the Place of Supply of such goods shall be the location of the goods when the movement of goods terminates for delivery to the recipient.

This implies that place of supplier or receiver is of no consequence to determine the Place of Supply when it comes to those transactions which involve the movement of goods. The place where delivery terminates i.e. where the ownership is passed on shall be critical to determine the Place of Supply. Case study 1: A Ltd. of West Bengal sold 300 units of computer to Info Traders of Bihar, to be delivered at his office at Jharkhand. Place of Supply of goods is Jharkhand and IGST will be levied as it is a Inter- State supply. 2) where the goods are delivered on the direction of a third person:

**97% MATCHING BLOCK 640/875****W**

where the goods are delivered by the supplier to a recipient on the direction of a third person, whether acting as an agent or otherwise, before or during movement of goods, either by way of transfer of documents of title to the goods or otherwise, it shall be deemed that the said third person has received the goods and the Place of Supply of such goods shall be the principal place of business of such person.

When goods are delivered to a party on the direction of a third person the Place of Supply will be the location of such third person and not where the delivery terminates. Case study 2: Samanta Traders, a dealer in Furniture, located in west Bengal place an order to Rahim traders located at Assam, for 100 units of Chairs, with the direction that to deliver the Chairs to City College of Kolkata, West Bengal, who is the customer of Samanta Traders. There are two legs of the Transaction Leg 1: Samanta Traders and Rahim Traders, Place of Supply is West Bengal and IGST will be levied as Inter-State sale.

NSOU • PGCO - V 197 Leg 2: Samanta Traders and City College (having registered under GST), PoS of goods is West Bengal and Intra- State supply, CGST plus SGST will be charged. 3) Where supply involves no movement of goods:

**91% MATCHING BLOCK 641/875****W**

Where the supply does not involve movement of goods, whether, by the supplier or the recipient, the Place of Supply shall be the location of such goods at the time of the delivery to the recipient. However, when goods are

of such nature which does not require any movement,

**100% MATCHING BLOCK 642/875**

**W**

Place of Supply shall be the location of such goods.

Case study 3: Silk Traders of Gujarat Sold 20 pieces of silk salwar to Amit traders of west Bengal at Gujarat show room. Here the transaction is Intra -State Supply of goods, as Place of Supply is Gujarat. 4) When Goods are Installed :

**100% MATCHING BLOCK 643/875**

**W**

Where the goods are assembled or installed at site, the Place of Supply shall be the place of such installation or assembly.

Case study 4: Ramco Limited registered in Bihar opens a new office in Delhi. It purchases 10 ACs to be installed at its Delhi office from Patil electronics in Bihar. In this case, the location of the supplier is Bihar, but a Place of Supply of goods will be Delhi. Hence, IGST will be levied. 5) Goods on Board a conveyance : In case

**100% MATCHING BLOCK 644/875**

**W**

the goods are supplied on board a conveyance, including a vessel, an aircraft, a train or a motor vehicle, the Place of Supply shall be the location at which such goods are taken on board.

This provision includes

those purchases which are done while travelling on a conveyance. Case Study 5: Mr. Mehta is travelling on a cruise liner from Mumbai to Goa. He purchases a book from the in-house store in the cruise liner. These books were on-boarded from Mumbai. Registered place of business of the book shop is in Mumbai. Place of location of supplier is Maharashtra and Place of Supply of goods , in this case, will be Maharashtra. This is an Intra-State supply, and CGST and SGST will be charged. 6.5.3 Place of Supply of services other than export and import Broad principles governing the

**66% MATCHING BLOCK 645/875**

**W**

Place of Supply of services where the location of service supplier (provider) and recipient (Receiver) is in India,

are 13 in numbers, out of which 1 is general principle and 12 are specific situation based principles. For the most supplies of services, the places of supply of services are determined by "General 198 NSOU • PGCO - V Rule". However, some supplies are subject to special rules for fixing the Place of Supply of services, depending upon the nature of services referred in those respective rules. 1) General Rules: Where both supplier and recipient are located in India, the Place of Supply of service would be: a) When the service supplied or provided to persons registered under the GST the Place of Supply of service is the location of registered person. Case Study 7: Mr. Rahaman is the chartered accountant of West Bengal, provided professional services to ABC Ltd, of Assam. The PoS of the Service is the location of Registered person. Here it is Assam. So Mr. Rahaman will charge IGST for his service as Inter- State Supply. b) When the services are provided to an un-registered person but the address exists on records of the

**68% MATCHING BLOCK 646/875**

**W**

supplier of service, the Place of Supply of service is the location of service recipient of

to un-registered persons. Case study 8: Samanta Furniture of Kolkata is providing services of renting of furniture to Amit of Midnapur. Then the location of supply of services is at West Bengal, hence Intra- States supply. So both CGST and SGST will be levied. c) When the services are provided to an un-registered person but the address doesn't exists

**83% MATCHING BLOCK 647/875**

**W**

on records of the supplier of service, the Place of Supply of

service is the location of service supplier or provider. Case study 9: Infotech Kolkata is providing computer repair services to Rahul of Jharkhand, unregistered person and address is not available in its records. In this situation Place of Supply is location of service provider i.e West Bengal (Intra-State supply) The general rule has been framed keeping in the view the difference between B to B and B to C supplies. The rule is very well aligned with the overall philosophy of GST Act which is destination based consumption tax. 2) Specific Rules : a)

**66% MATCHING BLOCK 649/875**

**SA**

Vaishakhi Gandhi\_LLM 2nd yr Dissertation.pdf (D132370683)

Place of Supply of the Services in relation to immovable property is the location of

the immovable property without differentiating the B to B and B to C supplies (Availing input tax credit from a state where the service receiver has no place of business may difficult). The rule covers NSOU • PGCO - V 199 Services like architecture, interior decoration, construction or any others similar in nature. Services of accommodation for staying in hotel, guest house, lodge, inn etc. or for organising any function or events. b) Place of Supply for the restaurant and catering services personal grooming, health and beauty services etc., is the location of actual performance. c) Place of Supply for services like training and performance appraisal is the For Registered service recipient –location of the service recipient (can claim input tax credit) For un-registered recipient – place of actual performance (no question of claiming input tax credit) d) Place of Supply for the

**71% MATCHING BLOCK 648/875**

**W**

services provided by way of admission to an event or amusement park or any other place

is the location of the event or park without differentiating the B to B and B to C supplies. e) Place of Supply for the services provided by way of organising such events and other ancillary services in this connection is the For Registered service recipient –location of the service recipient (can claim input tax credit) For un-registered recipient – location of actual performance.(no question of claiming ITC). If the event is outside India then location of service recipient will be Place of Supply for un-registered person.. f) Place of Supply for the services transportation of goods, including mail or courier is the For Registered service recipient –location of the service recipient (can claim input tax credit) For un-registered recipient – location where goods are handed over for transportation g) Place of Supply for the services of Passenger transportation is For Registered service recipient –location of the service recipient (can claim input tax credit) For un-registered recipient – location where passenger embarks on a conveyance for the continuous journey. h) Place of Supply for the services on the board of conveyance like aircraft, vessel, train, motor vehicles is the first departure point of the conveyance of that journey.

200 NSOU • PGCO - V i) Place of Supply for the telecommunication services like data transfer, broadcasting, cable and DTH services to any person has been prescribed differently For fixed line, leased circuits, cable or dish antenna – place of installation For post paid mobile/ internet connection – location of billing address. For pre paid mobile/ internet connection – address of the selling agent or the location of sale in different situation. This is largely in the line with the provision followed by other developed nations. j) Place of Supply for banking and financial services including services of stock broking firm shall be Location of receiver is available in records - the location of service receiver. Location of receiver is not available in records – the location of service provider Such provision is similar to the previous provision in service tax. k)

Place of Supply for insurance services shall be the location of the service recipient

in case of business or otherwise. l) A special rule is framed for the advertising services provided to the government whether central or state / union territory. Place of Supply is the respective state for which the advertisement is meant for. After discussing the principles governing PoS for the entire domestic supplies of services, it may be seen that overall objective of the principle is to capture the location of consumption of services and to ascertain the PoS accordingly. 6.5.4 Illustration Problem 1 : (a) What shall be the place of supply and kind of GST chargeable, if R of Delhi makes a supply of goods to G of Gujarat? (b) What shall be your answer if G is also located in Delhi? Solution : (a) The place of supply in this case shall be Gujarat where the movement goods terminate and it will be a case of inter-State supply liable to IGST. (b) On the other hand, if G is also located in Delhi, the place of supply shall be Delhi and it will be a case of intra-state supply liable to CGST and Delhi SGST. Problem 2 : R of Ghaziabad (UP) comes to Delhi and wishes to buy a washing machine for his residence at Ghaziabad. He visited a showroom of washing machine of G in Delhi. G agreed to transport and deliver the washing machine to R at his residence in Ghaziabad for a sum of Rs. 20,000 including transportation charges. NSOU • PGCO - V 201 (a) What shall be the place of supply and kind of GST chargeable in this case? (b) Will the situation be different if R agrees to take the washing machine himself to Ghaziabad? Solution : (a) In this case, supply involves movement of goods from Delhi to Ghaziabad (UP) and responsibility of movement of goods is of the supplier G. The place of supply in this case shall be Ghaziabad where the movement terminates for delivery. Hence, it shall be a case of inter-state supply and liable to IGST. (b) The situation will not be different if R agrees, that he will himself move the goods to Ghaziabad. Problem 3 : R of Delhi has supplied goods to G of Ambala (Haryana). During the movement of goods G directed R to transfer the documents of title to S of Chandigargh (Union Territory). What shall be the 'place of supply' and kind of GST chargeable in this case? Solution : The place of supply of such goods shall be Chandigargh (Union Territory) and it will be a case of Inter-State supply liable to IGST. Problem 4 : R of Haryana, books an order to supply toys to J of Jaipur (Rajasthan). R places the order on G Itoys Ltd. Mumbai, the manufacturer of such toys and instructs G Toys Ltd. to deliver the toys directly to J of Jaipur to save the transportation cost. What shall be the place of supply and kind of GST Chargeable in this case? Solution : In this case goods are delivered to J in Jaipur by G Toys Ltd. the supplier of goods located at Mumbai on the direction of R. Delivery of goods by G Toys Ltd. to J of Jaipur (Rajasthan) shall be considered as supply to R of Haryana and the place of supply of this transaction shall be Haryana Sing the principal place of business of R. This supply

**87% MATCHING BLOCK 653/875**

**SA** Project\_GST\_VIBHUTI PATEL.pdf (D141952678)

shall be considered as inter-state supply and shall be subject to

IGST which will be charged by G Toys Ltd. of Mumbai in his invoice raised to R of Haryana. Problem 5 : R of Mumbai (Maharastra) enters into an agreement with G to Ammedabad (Gujrat) for installation of a machine in his factory at Goa. (a) What shall be the place of supply and kind of GST chargeable to this case (b) What shall be your answer if the machine has to be mstalled on G's factory at Pune (Maharastra) Solution : (a) The place of supply in this case shall be the place of installation of machine i.e. Ahmedabad (Gujrat). Thus it will be a case of inter-state supply and R will have to pay IGST at Delhi.

202 NSOU • PGCO - V (b) If this machine has to be installed by R on behalf of G in Pune (Maharashtra). It will be a case of intra-state supply and R will have to pay CGST and Maharashtra SGST at Mumbai. Problem 6 : R, a flight caterer, of Gurgaon (Haryana) has loaded food and drinks on Air India aircraft at Delhi on its flight from Mumbai to Amritsar via Delhi for passengers on board. What shall be the place of supply and kind of GST chargeable in this case? Solution : The place of supply in this case shall be Delhi from where foods and drinks were loaded on the aircraft and it will be a case of inter-State supply as R is in Gurgaon (Haryana) and the place of supply is in Delhi. Thus R will have to pay IGST at Delhi. Problem 7 : A ticket for anywhere travel in India is issued by Jet Airways to R. How would you determine the 'place of supply' in this case? Solution : In this case the place of embarkation will not be available at the time of issue of invoice as the right to passage is for future use. Accordingly, place of supply cannot be the place of embarkation. In such case,

**97% MATCHING BLOCK 651/875**

204 NSOU • PGCO - V 6.6 Time of Supply/ Point of Taxation GST is payable on supply of goods or services. A supply consists of elements that can be segregated or seperated in respect to time, like purchase order or agreement for sale, provision of services, despatch of goods, delivery of goods. Payment, entry of payment or amount deposited to Bank. So at which of these points of time, will GST become payable? Will it become payable when an agreements to supply goods or services are provided or when invoices is issued or when payment is made? What happens if the goods are delivered over a period of time? What happens if the services are provided over a period of time? Provision relating to 'time of supply' provides answer to all such questions that arise on the timing of the liability to pay CGST and SGST/UTGST (Intra-State supply) and IGST (Inter-State Supply) as time of supply fixes the point of time when the liabilites to pay tax arises.

**W**

determining the value of taxable supply. Since it is already included in the value, no treatment is required. (2) any amount charged for anything done by the supplier in respect of the supply of goods at the time of, or before delivery of goods shall be included in the value of taxable supply. Hence design and engineering charges shall also be included in the value of taxable supply. Since it is already included in the value, no treatment is required. (3) any amount that the supplier is liable to pay in relation to such supply but which has been incurred by the recipient of the supply and not included in the price actually paid or payable for the goods shall be included in the value of supply. Thus, commission paid to agent by recipient on instruction of supplier and freight and insurance charges incurred by recipient on behalf of supplier shall form part of value of taxable supply. (4) value of supply shall not include any taxes or cesses levied under CGST Act, SGST Act, UTGST Act and the GST(compensation to States) Act, if charged separately by the supplier.

Problem 4: From

the following information determine the value of taxable supply as per provisions of section 15 of the CGST Act, 2017. Value of machine (including GST @ 12%) : Rs. 15,00,000 The invoice value includes the following. (1) Taxes (other than CGST/SGST/IGST) charged separately 15,000 by the supplier (2) Weighment and loading charges 25,000 (3) Consultancy charges in relation to pre-installation 10,000 planning (4) Testing Charges 2,000 (5) Inspection Charges 4,500 Other information: (i) Subsidy received from Central government for setting 51,000 up factory in backward region (ii) Subsidy received from third party for timely supply 50,000 of machine to recipient (iii) Trade discount actually allowed shown separately 24,000 in invoice

220 NSOU • PGC0 - V Solution: Computation of Value of taxable supply of Goods Particulars Rs. Rs. Value of Machine - 15,00,000 Less : Deductions (1) Taxes other than CGST/SGST/IGST charged separately by the supplier (2) Weighment and loading charges - (3) Consultancy charges in relation to pre-installation planning - (4) Testing Charges - (5) Inspection charges charged before supply (6) Trade discount actually allowed shown separately in invoice 24,000 (24,000) Add: Subsidy received from third party for timely supply of 50,000 machine to recipient Cum tax value 15,26,000 Less: GST @ 12%[Rs.15,26,000 x 12/112] 1,63,500

**91% MATCHING BLOCK 707/875**

**W**

Value of taxable supply 13,62,500 Problem 5: Computation of value of taxable supply and tax payable. Determine the value of taxable supply as per Section 15 of the CGST Act, 2017 and the Rules thereof : Contracted sale price of goods (including CGST and SGST @ 5%) 10,56,000 The contracted sale price includes the following elements of cost : (i) Cost of drawings and design 5,000 (ii) Cost of primary packing 2,000 (iii) Cost of packing at buyer's request 4,000 (iv) Freight and insurance from 'place of removal' to buyer's premises 43,000 A discount of Rs. 6,000 was given by the supplier at the time of supply of goods. CGST and SGST is levied @ 5 % . Solution: Computation of Assessable value : Particulars Rs. Contracted sale price of goods 10,56,000 Less : Discount 6,000 (6,000) Cum tax value 10,50,000 Less: GST @ 5% [Rs.10,50,000 x 5 / 105] 50,000 Value of taxable supply 10,00,000 NSOU • PGCO - V 221 Working Notes : (1) any amount charged for anything done by the supplier in respect of the supply of goods at the time of, or before delivery of goods shall be included in the value of taxable supply. Hence drawing and design charges, cost of packing (even at buyer's request) shall form a part of the transaction value of the supply. Since these are already included in the value of the goods, hence separate treatment is not required. (2) The value of supply shall include any taxes, duties, cess, fees and charges levied under any law for the time being in force other than the CGST Act, the SGST Act, the UTGST Act and the GST (Compensation to States) Act, if charged separately by the supplier. (3) The value of supply shall not include any discount which is given before or at the time of supply. 6.8

Summary From the above discussion we could understand the concept of supply; scope of supply, composite supply and mixed supply; place and time of supply; Date of payment of GST; and value of supply. 6.9 Questions 1. Define the following terms as per CGST Act. 2017. a) Goods b) Services c) Consideraton d) Business e) Person f) Related Person g) Supply 2. What do you mean by considerations under CGST Act? 3. Illustration 7.16 Summary 7.17 Questions 7.0 Objectives The study of this unit will help us to understand— • Concept and applicability of composition levy; • Tax rate under GST Composition Scheme; • Persons eligible for Composition Scheme; • Restrictions and Validity of Composition levy; • Goods exempted from GST; • Services exempted from GST; • Concept of Reverse Charge Mechanism; • Time and Supply of goods and services and RCM; • Concept of Input Tax Credit (ITC) under GST; • Eligibility for claiming ITC; • Conditions for availing ITC; • Returns under GST; and • Payment of Tax.

NSOU • PGCO - V 229 7.1 Introduction to Composition Levy The GST law casts a lot of compliances and procedural burden on taxable person. These include : Proper classification of supply of goods/ services Correctly determining the applicable rate of tax Correct value of supply Raising proper invoice Maintaining proper records for availing credit of taxes paid on inward supplies Discharging monthly tax liability Filing monthly return, etc. Such cumbersome procedures are not in the best interests of small taxpayers. Resultantly, an alternative manner for discharging tax liability has to be prescribed keeping in the mind the interest of small tax payers since the small businessmen and small taxpayers are the backbone of Indian economy. The SMEs (Small Medium Size) Enterprises in India suffer from various constraints like non-availability of infrastructural facilities, inadequacy of requisite capital etc. for which they are not in a position to comply with the GST Rules and Regulations. To provide them some relief and necessary boost up to go ahead, the GST Council has given them the opportunity to pay certain specified percent of turnover as GST liability without rigorously complying with the GST Rules. The GST law seeks to simplify the compliance procedures for small taxpayers through composition scheme. Section 10 of CGST Act read along with "Composition Rules" of CGST Rules prescribes the regulations governing taxation of persons opting for composition scheme. 7.2 Applicability A registered person will be eligible to opt for payment of tax under composition scheme if his aggregate turnover did not exceed in the preceding financial year of the following amount: (a) North Eastern states including Himachal Pradesh – 75 Lakh (b) Other states including Uttarakhand – 150 lakh

230 NSOU • PGCO - V 7.3 Tax rate under Composition Scheme as percentage of turnover CGST SGST/UTGST TOTAL

Person supplying goods through an electronic commerce operator; Manufacturer of goods notified u/s 10(2)(e), i.e. ice cream, pan masala, tobacco and other manufactured tobacco substitutes; Casual person as well as non resident taxable person.

Service provider (except Restaurant and catering).

NSOU • PGCO - V 231 7.6 Restrictions imposed on Composition Supplier Multiple restrictions have been imposed on a person who opts for composition levy which has been described below: The goods held in stock of composition dealer should have been purchased from registered supplier. Where goods have been purchased from an unregistered supplier, the composition supplier should have paid the applicable tax under reverse charge basis u/s 9(4). The composition dealer is required to pay tax under reverse charge basis u/s 9(3) and 9(4) in CGST Act, 2017 if applicable to him. A dealer opting for composition scheme should not have been engaged in notified goods u/s 10(2)(e). A composition dealer

**93%****MATCHING BLOCK 747/875****W**

shall mention the words "composition taxable person, not eligible to collect tax" on supplies at the top of every bill of supply (

cannot issue Tax Invoice). Composition scheme has to be adopted uniformly by all the

**59%****MATCHING BLOCK 749/875****W**

registered persons having the same PAN. If one such registered person opts for normal scheme, other became ineligible for composition scheme. A

taxable person opting for composition scheme

**100%****MATCHING BLOCK 750/875****W**

shall not collect any tax from the recipient on supplies made by him.

A taxable person opting for composition scheme is not entitled to any credit on input tax paid. 7.7 Intimation of opting for composition levy In case an unregistered dealer opts to pay tax under composition scheme, he shall apply for registration in prescribed form (GST REG-01). As and when registration is granted, it shall be deemed that he has given an intimation to pay tax under composition scheme. In case of existing registered person who opts to pay tax under composition scheme based on condition given u/s 10 of CGST Act, shall apply in prescribed form prior to commencement of financial year (as eligibility of composition scheme depends on aggregate turnover of last year).

**82%****MATCHING BLOCK 751/875****W**

The option to pay tax under composition levy shall be effective from the beginning of the financial year

for which intimation has been filed.

taxable supply of Rs. 25,00,000 in Financial year 2017-18. The company wants to opt for composition scheme under Section 10 of CGST Act, 2017. As a GST consultant advise XYZ Ltd. whether it can opt for composition scheme.  
Solution : As per provisions of Section 10 of CGST Act, 2017, a manufacturer can opt for composition scheme if he is not engaged in making any inter-State outward supplies of goods. In this case since XYZ Ltd. has effected

inter-state

**93% MATCHING BLOCK 757/875**

**W**

taxable supply of goods, it cannot opt for composition scheme. Problem 2: Mr. A, a retailer who keeps no inventories, presents the following information for the year - (1) Purchases of goods : Rs. 50 lakhs (GST @ 5%). (2) Sales (at fixed selling price inclusive of all taxes): Rs. 60 lakhs (GST on sales @ 5%). Discuss whether he should opt for composition scheme if composite tax is 1% of turnover. Expenses of keeping detailed statutory records required under the GST Laws will be Rs. 1,20,000 p.a., which shall get reduced to Rs. 50,000 if composition scheme is opted for. Other expenses are Rs.3,00,000 p.a.

NSOU • PGCO - V 233 Solution:

**100% MATCHING BLOCK 758/875**

**W**

The cost to the ultimate consumer under two schemes is as

under -

**94% MATCHING BLOCK 759/875**

**W**

Conclusion: It is apparent that while cost to ultimate consumer, in both the cases remains same, the profit of the dealer is higher if the dealer opts for composition scheme. Hence, composition scheme should be opted. Problem 3: Applicability of composition scheme: XYZ Ltd. is having two factories. One factory is located in Rajasthan, manufacturing readymade garments and another factory located in Gujarat engaged in manufacturing auto components. The turnover details of Financial Year 2017-18 are as under: Articulars Rs. (1) Intra-State supply of readymade garments in Rajasthan 28,00,000 (2) Intra-State supply of auto- components in Gujarat 18,00,000 Total Value of taxable supplies 46,00,000 The company wants to opt for composition scheme for factory in Rajasthan and tax at normal rates in Gujarat. Advise. Solution: According to Section 10(2) of CGST Act, 2017, All Registered person having same PAN have to opt for Composition Scheme. If one opts for regular levy for one

registered place, others become ineligible for composition levy. Thus, XYZ Ltd. cannot opt for composition scheme in Rajasthan and pay normal tax in Gujarat.

Problem 4: The aggregate turnover of R & Sons, a registered firm during the financial year 2017- 18 is Rs. 5,00,000. During the financial year 2018-19, the aggregate turnover for the firm till 12.10.2018 is Rs. 800,000. On 13.10.2018 it issues three invoices of Rs. 1,50,000, Rs. 80,000 and Rs. 90,000. Will the firm Die to pay GST and if so on what amount?  
 Solution : R & Sons shall be liable to pay GST under normal scheme on all the three invoices as its turnover on 13.10.2018 exceeds Rs. 1 crore.  
 Problem 5: R Ltd. is manufacturing ice cream and its turnover in the financial year 2016-17 was Rs. 70,00,000. (a) Can R Ltd. opt for composition scheme during the financial year 2017-18? (b) What will be your answer if R Ltd. is a trader of ice cream?  
 Solution : (a) As per section 10(2)(e), the Government on the recommendation of the council can issue notification in case of manufacturer of certain goods who will not be allowed to opt for composition scheme. The Government has since issued a notification where the manufacturer of ice cream shall not be entitled to opt for composition scheme even if his aggregate turnover is within the limit of Rs. 1 crore prescribed. Hence, R Ltd. cannot opt for composition scheme. (b) R Ltd. in this case is a trader and not a manufacturer. Therefore, he can opt for composition scheme.  
 Problem 6: R of Delhi, a trader, wishes to make Inter-State sale of goods during the financial year 2017-18. Can he opt for composition scheme?  
 Solution : As per section 10(2)(c), a person who is engaged in making any Inter-State outward supply of goods is not eligible to opt for composition scheme. Hence, R will not be entitled to opt for composition scheme if he makes an Inter-State sale.  
 Problem 7: R, a trader, is selling tobacco and pan masala from his shop at Delhi. Can he opt for composition scheme? If so what are the conditions to be satisfied.  
 NSOU • PGC0 - V 235 Solution : As per notification issued under section 10(2)(e), a registered person who is a manufacturer of tobacco and pan masala cannot opt for composition scheme. But R in this case is not a manufacturer but a trader, hence he can opt for composition scheme.  
 Problem 8: R is having its head office located in New Delhi. It has two branches located in Noida, (UP) and Gurugram (Haryana). (a) Can he opt for composition scheme? (b) Can he opt for composition scheme in case of Delhi and Noida and the normal scheme for Gurugram?  
 Solution : (a) R can opt for composition scheme for all the branches provided the aggregate turnover of all the branches does not exceed Rs. 1 crore as he will be having one PAN number for all the branches. (b) R cannot opt for composition scheme in this case as he has to opt for composition scheme for all the branches because the registration of all the branches are on the basis of same PAN number.  
 7.9 Introduction to Exemption under GST and Reverse Charge Mechanism (RCM) Section 11 of CGST Act and Section 6 of IGST Act empower the government

242 NSOU • PGCO - V 7.13 Input Tax Credit (ITC) under GST In earlier Indirect tax regime, the credit mechanism for indirect taxes levied by the Union Government was governed by the CENVAT Credit Rules 2004, and the credit mechanism for State-level VAT on sale of goods was governed by the State under their respective VAT legislations. VAT legislation allowed input tax credit of VAT on input and capital goods for transaction within the state, but not on input and capital goods purchased from outside the state on which CST was paid. However, CENVAT credit Rules 2004 allowed availing and utilisation of credit of duty. Tax paid on both goods (capital and inputs) and services by the manufacturer and the service providers across the country. This resulted in cascading of taxes leading to increase in cost of goods/ services. Simultaneous introduction of GST at both central and state levels has integrated taxes on goods/services for the purpose of set off relief and ensured that the cascading effect prevalent under the earlier regime get removed, there by establishing

ABC Ltd., has made payment to FF Ltd. for such purchases in the month of October 2017. Total admissible Input tax credit for the month of September 2017. 36,000 Working Note: (1) No Input tax credit will be available since ABC Ltd. is not in possession of valid tax paying document. (2) As per

**92% MATCHING BLOCK 792/875 W**

Section 16(2), no registered person shall be entitled to the credit of any input tax in respect of any supply of goods

unless

**100% MATCHING BLOCK 794/875 W**

the tax charged in respect of such supply has been actually paid to the Government.

Since PQR Ltd. has not deposited the tax to the credit of Government, No ITC can be claimed by ABC Ltd. 246 NSOU • PGCO - V (3)

A

**75% MATCHING BLOCK 795/875 W**

registered person shall be entitled to take input tax credit on goods which are used or intended to be used in the course or furtherance of his business.

Since ABC Ltd. has purchased the goods for non business purpose, hence no credit will be admissible on such purchases. (4) Input tax credit is admissible only when registered person has received such goods. Since the goods are received in the month of October, 2017, input tax credit cannot be taken in the month of September, 2017. (5) Input tax credit shall be admissible in month of September, 2017 even if payment is made by ABC Ltd., in month of October, 2017. Problem 2 : S Ltd. a registered manufacturer of Jaipur entered in a contract with a supplier for supply of Input 'X' in October, 2017. As per contract it was agreed that 10,000 kgs of Input 'X' will be supplied for Rs. 7,28,000 (inclusive of CGST and SGST @ 6% each) in 4 lots, Invoice of Rs. 7,28,000 has been issued with supply of first lot of Input 'X'. Following further information has been provided regarding supply of Input received in subsequent lots. Briefly explain whether S Ltd. is eligible to take credit on proportionate basis. Input 'X' (in lots) Quantity in Kgs Date of Receipt of Supply First Lot 2,500 19-10-2017 Second lot 3,000 21-10-2017 Third Lot 1,500 12-11-2017 Fourth Lot 3,000 01-12-2017 Answer : No. S Ltd. is not eligible to take credit on proportionate basis. As per the provision of

**100% MATCHING BLOCK 796/875**

**W**

Section 16(2), where the goods against an invoice are received in lots or installments, the registered person shall be entitled to take credit upon receipt of the last lot or installment.

Therefore, in the given case, Input 'X' has been received in lots hence, the credit of tax of Rs. 78,000 i.e.  $(Rs. 7,28,000 \times 12 \div 112)$  paid on such input shall be taken by S Ltd. only after the fourth lot. Problem 3 : Determine the amount of input tax credit available with Diamond Manufacturing Ltd. in respect of the following items procured by them in the month of January 2018.

NSOU • PGCO - V 247 Problem 4 : ABC India Ltd. is engaged in the manufacture of some taxable goods. It purchased the following goods in the month of October, 2017 Item GST paid in Rs. i) Raw material used for production of the final product 1,20,000 ii) Goods used for generation of electricity for captive consumption 25,000 iii) Goods used for providing free warranty—Value of such free warranty provided by ABC India Ltd. is included in price of the final product 10,000 and is not charged separately from the customers iv) Light diesel oil 5,000 Note : ABC India Ltd. also purchased High Speed Diesel oil by paying central excise duty of Rs. 12,000, which is also used in the manufacturer of taxable output. Compute the amount of input tax credit available to ABC India Ltd. Answer: Statement showing Input Tax Credit of ABC India Ltd. Item GST paid in Rs. i) Raw materials 75,000 ii) Food and beverages & catering services are used in the 60,000 guest house primarily for stay of the newly recruited employees. iii) Inputs used for making structures for support on plant and 1,25,000 machinery iv) Capital goods used as part components for use in the 85,000 manufacture of final product Answer : Statement showing eligible input tax credit to Diamond Manufacturing Ltd. Items GST paid in Rs. i) Raw materials 75,000 ii) Food and beverages & catering services are used in the Not allowed guesthouse primarily for stay of the newly recruited employees. iii) Inputs used for making structures for support on plant and 1,25,000 machinery iv) Capital goods used as parts components for use in the 85,000 manufacturer of final product Total credit allowed 2,85,000

248 NSOU • PGCO - V 7.14 Returns under GST Under any taxation system filing of return is the most important compliance procedure which enables the tax administrators to estimate tax collection for a particular period and determine the correctness and completeness of tax compliances at taxpayer's level.

M. Com. II Adc. Accountancy P. V & VII all.PDF (D142210236)

The basic feature of return filing system in GST includes electronic filing of return. Uploading of invoice level information and auto-populated information relating to input tax credit from return of supplier to that recipient, invoice-level information matching and auto reversal of ITC in case of mismatch.

Section 37 to 48 of CGST Act read along with CGST rules prescribe the provisions relating to filing of return under GST. Same provision is applicable under IGST Act by virtue of section 20. 7.14.1 Furnishing details of outward supplies (i) U/s 37 of CGST Act, every registered person including casual registered person is required to furnish return (statement) capturing details of outward supplies. (ii) Form : GSTR-1 (iii) Period : Monthly through Electronic submission (iv) Time limit: 10th day of immediately succeeding month 7.14.2 Furnishing details of inward supplies (i) Every registered person including casual registered person is required to furnish a statement capturing details of inward supplies (ii) Form- GSTR-2. (iii) Periodicity : Monthly basis through Electronic submission. (iv) Time limit: After 10th day but on or before 15th day immediately succeeding month. Item GST paid in Rs. i) Raw material used for production of the final product 1,20,000 ii) Goods used for generation of electricity for captive consumption 25,000 iii) Goods used for providing free warranty–Value of such free 10,000 warranty provided by ABC India Ltd. is included in price of the final product and is not charged separately from the customers iv) Light diesel oil 15,000 v) High Speed Diesel oil Not allowed Total input tax credit 1,70,000

NSOU • PGCO - V 249 Note: Details of outward supplies for a month furnished by a supplier are communicated and made available electronically to the respective recipient of supply in form GSTR-2A through GST common portal after 10th day of the succeeding month. The recipient is provided an opportunity to add, correct or detail in a two-way communication process. After completion of such modification the recipient files the details of inward supplies during tax period (monthly or quarterly for composition levy) in Form GSTRN-2 by 15th day of that month. 7.14.3 Furnishing of return (i) U/s 39 of CGST Act, every registered person including casual registered person is required to furnish return capturing consolidated retails [outward and inward supplies and tax liability.] (ii) Form: GSTR-3 (iii) Periodicity: Monthly basis through Electronic submission 7.14.4 Furnishing of return by Composition Supplier (i) A dealer, who has opted for composition scheme, as prescribed u/s 10 of CGST Act, is required to furnish his return as per the required particulars (ii) Form : GSTR-4 (iii) Periodicity: Quarterly basis through Electronic submission (iv) Time Limit: Within 18 days from the expiry of quarter. 7.14.5 Filing of Annual Return (i) U/s 44 of CGST Act, all taxpayers filing regular returns [u/s 39] are required to file an annual return. (ii) Form: GSTR-9 (Regular tax payer) GSTR-9A (composition Tax payer) (iii) Time limit: 31st December of next financial year. 7.14.6 Steps in furnishing of Returns Step 1 : Filing of GSTR-1 The tax payer will upload the final GSTR-1 by 10th day of the month succeeding the month during which the supplies have been made. Modification in GSTR-1 would be allowed from 15th day to 17th day of the month on the basis of details uploaded by the respective purchaser in GSTR-2.

250 NSOU • PGCO - V Step 2 : Auto-Population of GSTR-2A GST common portal will auto populate GSTR-2A of tax payer based on invoice details reported by the supplier. While every taxpayer will be able to see the invoices uploaded by the respective supplier, they can finalise their GSTR-2 only after the last date of filing GSTR-1. Step 3 : Filing of GSTR-2 The invoice auto-populated in GSTR-2A will be accepted/ rejected/ modified by the purchaser in the GSTR-2. He will also be able to add additional invoice details in his GSTR-2 which have not been uploaded by their suppliers, provided he is in possession of valid invoice and he has actually received such supplies. The taxpayer can then file their GSTR-2

**88%**

**MATCHING BLOCK 799/875**

**SA**

Project\_GST\_VIBHUTI PATEL.pdf (D141952678)

between 10th and 15th day of the month succeeding the month during which

the supplies have been received. Step 4 : Reconciliation of outward and inward supplies Tax payer will have the option to reconcile their inward supplier with the details of outward suppliers furnished by the respective suppliers to find out whether the respective suppliers have missed out uploading any invoices in their respective GSTR-1. The recipient can prompt the suppliers to accept the inward supplies as uploaded by them the suppliers can accept / reject the modification made by the recipient between 15th day and 17th day and amend GSTR-1 accordingly. Step 5 : Finalisation of GSTR-3 Finalisation of GSTR-1 and GSTR-2 would enable tax payer in finalizing their GSTR-3. GST common portal would auto generate part A of GSTR-3 for the tax payer. GSTR would show the amount that will be credited debited to the ITC (input tax credit) ledger of the taxpayer. The tax payer will fill in the details of ITC that he intends to utilise for payment of taxes. Any balance amount will have to be paid by the taxpayer as cash. The return would also show the late fee and interest payable if any. Step 6 : Payment of Taxes and submission of GSTR-3 Any payment made through Challans gets credited to Electronic cash ledger. Payment of taxes has to be done by debiting Electronic cash ledger. The tax payer shall pay the self-assessed tax and submit his return.

NSOU • PGCO - V 251 7.15 Payment of Tax Introduction of E-ledger is a unique feature under the GST regime. Electronic ledgers or E-ledgers are the statements of cash and input tax credit in respect of every registered tax payer. In addition, each tax payer shall also have an electronic tax liability register. 7.15.1 Electronic Cash Ledger Electronic cash ledger, maintained on GST common portal is a statement which reflects deposits made in cash by a tax payer along with details of TDS/ TCS deposited on his account. The amounts recorded

**82% MATCHING BLOCK 798/875**

**W**

in Electronic cash ledger can be used for making any payment towards tax, interest, penalty, fees or any other amount

on account of GST. Two modes have been prescribed for payment of Tax: Mode A: (i) Internet Banking (ii) Use of credit card/ Debit card without any restriction on the amount Mode B: Over the counter (Maximum amount of Rs. 10,000 per challan per tax period) 7.15.2 Electronic Credit Ledger Electronic credit ledger, maintained on GST common portal, is a statement which reflects the details of ITC (input tax credit) as self assessed by a dealer in his returns. The amount recorded in Electronic Credit Ledger can be used only to make payment of output taxes. Other amount such as interest, penalty, fees can't be paid through utilising ITC. Further, where

**90% MATCHING BLOCK 800/875**

**W**

a registered person is liable to pay tax under Reverse Charge Mechanism,

such tax need to be discharged in cash only and ITC can't be utilised. 7.15.3 Electronic Liability Register Electronic Liability Register, maintained on GST common portal is a statement which reflects the total tax liability of a taxpayer for a particular period.

Objectives After studying this unit we will be able to understand the concept of

Customs Duties; Levy and Exemptions from Customs Duties; Valuation and Clearances of goods under Customs Duties. 8.1 Introduction After independence, manufacturing industries grew and trade expanded. Customs Act, 1962 was passed to consolidate Sea Customs Act, Land Customs Act & provisions for air customs. Basic Acts : There are two Acts, which form part of customs Law in India, namely, the Customs Act, 1962 and the Customs Tariff Act, 1975 : 1. The Customs Act, 1962 The Customs Act, 1962 is the basic Act for levy of customs duty in India. It contains various provisions relating to imports and exports of goods and merchandize as well as baggage of persons arriving in India. Objects of the Act The customs act is a consolidation of the provisions relating to sea, land and air customs. The main purpose of Customs Act, 1962 is the prevention of illegal imports and exports of goods. The objects of the Act, as defined in its Preamble are "to consolidate and amend the law relating to customs". Application of the Act The Act extends to the whole of India. It was extended to Sikkim vide Notification No. 185/79-Customs, dated 1st September, 1979, w.e.f. 1st October, 1979. Customs Tariff Act—Indian Tariff Act, 1934 was found to be inadequate to meet the needs of expansion of trade and industry. Tariff Revision Committee was formed, which recommended adoption of Brussels Trade Nomenclature of Customs Co-operation Council

NSOU • PGC0 - V 259 (CCCN), with modifications to suit Indian conditions. Accordingly Customs Tariff Act, 1975 was passed, which came into effect in 1976. The Act provided explanatory, clarificatory and interpretative rules and notes, which enabled proper classification of goods. Later, Customs Cooperation Council developed a new system of nomenclature known as 'Harmonised Commodity Description and Coding System' (HSN) to take into account latest changes in technology and pattern of international trade. On 28th February, 1986, Import schedule to the Customs Tariff Act, 1975 was replaced with a new schedule, based on HSN. This new schedule is expected to (a) reduce classification disputes (b) common code for goods in international trade (c) facilitate computerisation of customs classification and assessment work. [Central Excise Tariff was also replaced by a new tariff based on HSN on 28th February, 1986].

8.2 Definition "Manufacture" [Sec. 2(1)] includes any process (i) Incidental or ancillary to the completion of a manufactured products; and (ii) Which is specified in relation to any goods in the Section or Chapter notes of the [first] schedule to the Central Excise Tariff Act 1958 as amounting to manufacture [or;] (iii) [Which is specified in relation to any goods in the central government by notification in the Official Gazette as amounting to manufacture] and the word manufacture shall be considered accordingly and shall include not only a person who employs hired labour in the production or manufacture of excisable goods but also any person who engages in their production or manufacture on his own account.

8.3 Types of Duties The various types of Customs Duties are : (a) Basic Customs Duty; (b) Additional Customs Duty; (c) Special Customs Duty;

260 NSOU • PGC0 - V (d) Protective Duties; (e) Safeguard Duty; (f) Countervailing Duty; (g) Anti-Dumping Duty; and (h) Export Duty.

8.3.1 Basic Customs

**52% MATCHING BLOCK 806/875**

**W**

Duty Basic Customs Duty is levied under section 12 of the Customs Act. The rates at which duties of customs shall be levied

under the Customs Act, 1962 are specified in the First and Second Schedules to the Customs Tariff Act, 1975. The first Schedule enlists the goods liable to import duty and the Second Schedule enlists the goods liable to export duties. There are two types of rates of Basic Customs Duty, namely : (a) Standard Rates; and (b) Preferential Rates. Standard Rates of Duty : Standard rates of duty are applicable at the rate specified in Column 4 of the Tariff Schedule against each item/article specified in Column 3. In absence of any Notification for application of preferential rates of duty based on the country of origin, the standard rates of customs duty are invariably applied. Preferential Rates of Duty : The Government is empowered under section 25 of the Customs Act to prescribe by issuing Notification, preferential rate duty in respect of imports from certain preferential areas. As per section 4(3) of the Customs Tariff Act, "Preferential area" means any country or territory,

**100% MATCHING BLOCK 808/875**

**W**

which the Central Government may, by notification in the Official Gazette,

declare to be such area.

8.3.2 Additional Duty of Customs Section 3 of the Customs Tariff Act empowers the Central Government to levy additional duty equal to excise duty. Accordingly, any article, which is imported into NSOU • PGC0 - V 261 India shall, in addition to standard rate of duty, be liable to an additional duty equal to the excise duty for the time being leviable on a like article, if produced or manufactured in India and if such excise duty on a like article is leviable at any percentage of its value, the additional duty to which the imported article shall be so liable shall be calculated at that percentage of the value of the imported article. However, in case of any alcoholic liquor for human consumption imported

**100% MATCHING BLOCK 809/875**

**W**

into India, the Central Government may, by notification in the official gazette,

specify

the

rate of additional duty having regard to the excise duty for the time being leviable on a like alcoholic liquor produced or manufactured in different states or if a like alcoholic liquor is not produced or manufactured in any state, then, having regard to excise duty which would be leviable for the time being in different states on the class or description of alcoholic liquor to which such imported alcoholic liquor belongs. 8.3.3 Special Customs Duty Special Additional Duty is levied under section 3A

**92% MATCHING BLOCK 810/875**

**W**

of the Customs Tariff Act. Accordingly, any article which is imported into India shall, in addition, be liable to

a special additional duty, which shall be levied at a rate to be

**100% MATCHING BLOCK 811/875**

**W**

specified by the Central Government, by notification in the Official Gazette, having regard to the

maximum sales tax, local tax or any other charges for the time being leviable on a like article on its sale or purchase in India. However, until such rate is specified by the Central government, the special additional duty shall be levied and collected at the rate of eight per cent of the value of the article imported into India. The duty chargeable under section 3A shall be in addition to

**81% MATCHING BLOCK 812/875**

**W**

any other duty imposed under this Act or under any other law for the time being in force. 8.3.4

Protective Duties Section 6 of the Customs Tariff Act empowers the Central Government to levy a protective duty based on a recommendation made by the Tariff Commission established under the Tariff Commission Act 1951. The Central Government may upon receiving such recommendation, if it is satisfied that circumstances exist warranting to take immediate action to provide for the protection of the interests of any industry established in India, it

**91% MATCHING BLOCK 814/875**

**SA**

PRERNA KITTU SINGH UNIVERSITY DEPARTMENT OF CO  
... (D161889559)

may impose on any goods imported into India in respect of which

the said recommendation is made, a duty of customs of

262 NSOU • PGCO - V such amount, not exceeding the amount proposed in the said recommendation, as it thinks fit.

The duty so imposed on any goods is deemed to have been specified, in the First Schedule as the duty leviable in respect of such goods. 8.3.5 Safeguard Duty The Agreement on Safeguards has come into existence on 1st January, 1995, which authorises importing countries to provide protection to their domestic producers against serious injury caused or threatened to be caused to them by increased imports. The safeguard measures are intended to be applied only for a short duration with a view to allowing an opportunity to the domestic producers to adjust to the new situation of competition offered by the increased imports. In India, the Agreement on Safeguards has been implemented recently by introducing a new section 8B in the Customs Tariff Act, 1975 on 1st March, 1997. The Safeguard Duty Rules have been notified on 29th July, 1997. 8.3.6 Countervailing Duty Countervailing Duty can be imposed under section 9 of the Customs Tariff Act, 1975 to offset any adverse effect of subsidies granted on any goods exported to India. Section 9 of Customs Tariff Act provides that

**95% MATCHING BLOCK 813/875**

**W**

where any country or territory pays, bestows, directly or indirectly, any subsidy upon the manufacture or production therein or the exportation therefrom of any article including any subsidy on transportation of such article, then,

upon the importation of any such article into India, whether the same is imported directly from the country of manufacture, production or otherwise, and whether it is imported

subsidy relates to export performance; (b) The subsidy relates to the use of domestic goods over imported goods in the export article;

or

NSOU • PGCO - V 263 (c)

**90% MATCHING BLOCK 820/875**

**W**

The subsidy has been conferred on a limited number of persons engaged in manufacturing, producing or

exporting the article, unless such a subsidy is for— (i) Research activities conducted by or on behalf of persons engaged in the manufacture, production or export; (ii) Assistance to disadvantaged regions within the territory of the exporting country; or (iii) Assistance to promote adaptation of existing facilities to new environmental requirements. 8.3.7 Anti-Dumping Duty Dumping means export of an article from any country or territory of India at less than its normal value i.e., when the prices at which the goods are exported to India are less than the comparable price for the like product when destined for consumption in the domestic market of the exporting country. Antidumping duty is imposed for offsetting the adverse effects of increased imports, subsidized imports or dumped imports. The Central Government can impose anti-dumping duty only if the imports of dumped article into India cause and threaten

**91% MATCHING BLOCK 821/875 W**

material injury to any established industry in India and materially retards the establishment of any industry in India.

If the domestic industry has evidence to show dumping and material injury caused to it by dumped imports, it may make an application to the Director-General (Anti-dumping and Allied duties) in the Ministry of Commerce for an investigation in the matter. 8.3.8 Export Duty Section 8 of Customs Tariff Act provides for emergency powers to the Central Government to increase or levy export duties. Accordingly, where, in respect of any article, whether included in the Second Schedule or not, the Central Government is satisfied that the export duty leviable thereon should be increased or that an export duty should be levied and that circumstances exist which render it necessary to take immediate action,

**100% MATCHING BLOCK 822/875 W**

the Central Government may, by notification in the Official Gazette, direct

and amendment of the Second Schedule to be made, so as to provide for an increase in the export duty leviable or as the case may be, for the levy of an export duty on the article. 8.3.9 National Calamities Contingent Duty of Customs The Finance Act, 2003 provides for levy of national Calamity Contingent Duty of Customs on goods specified in Schedule VII to the finance Act, 2001 and imported into India by surcharge at the rate specified in the said Schedule VII as amended by Schedule XIII.

264 NSOU • PGCO - V 8.4 Levy of an Exemption from Customs Duties Dutiable goods : (1) Except as otherwise provided

3rd Proof • Classic Print & Process • December, 2021 PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts are still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Prof. (Dr.) Subha Sankar Sarkar Vice-Chancellor

[7] [ 7 ] Unit 1 Disclosures in Company Accounts and Accounting Standards Structure 1.1 Objective 1.2 Introduction 1.3 Objectives of Disclosure 1.4 Need for Regulation of Disclosures through Corporate Reporting Practices 1.5 Disclosures in Company Accounts in India 1.5.1 Disclosure in Company Accounts as per Companies Act 2013 1.5.2 Disclosures in Company Accounts as per Accounting Standards 1.5.3 Disclosures in Company Accounts as per SEBI Regulations 1.6 Summary 1.7 Exercises 1.1 Objective After going through this unit, you will be able to: ? Understand the disclosure requirements as per the Companies Act, 2013; ? Know the disclosure requirements as per the Indian Accounting Standards notified by the Ministry of Corporate Affairs in India; ? Know the disclosure requirements as per the SEBI regulations 1.2 Introduction Companies usually prepare financial statements to provide useful financial information to the users. However, preparation and presentation of some numbers through financial statements may not be enough to satisfy the information need of the large number of users as financial statements, by themselves, are not complete unless they are supplemented by relevant financial and non-financial information through formal disclosures. Thus, disclosures in and off the financial statements play an important role in shaping the decision-making exercises among stakeholders i.e., owners in specific and all other interested parties in general. However, disclosures [8] [ 8 ] must be formal and well regulated to ensure greater comparability across the companies and over time. In order to ensure adequate and effective corporate reporting in the interests of the investors and other users, disclosure requirements in India are guided by a number of regulations which will be discussed in the sections that follow. 1.3 Objectives of Disclosure The primary objective of corporate reporting through disclosures is to make the company visible to its stakeholders and improve the reliability and relevance of the financial information reported through the financial statements. In particular, disclosures aim to achieve the following specific objectives: a) To help the users better understand the numbers reported in the financial statements. b) To assess whether the profit or loss is the result of transactions between independent or unrelated parties or is the result of some manipulated dealings. c) To better assess the performance and financial state of various segments of the business. d) To guide the users in making useful changes in the reported numbers before they are compared against other organizations or previous years having different accounting policies in place. e) To better assess the management stewardship. 1.4 Need for Regulation of Disclosures through Corporate Reporting Practices Accounting, at various levels of preparation of accounts and presentation of final results through financial statements allow use of alternative accounting policies which may have significant bearing on the financial performance and financial state of affairs disclosed in the financial statements. As a result, the users of accounting information must be supplied with additional information in form of disclosures to better comprehend such results and make informed judgements before arriving at any economic decision. Till the first quarter of 20 th century, when the objectives of the preparation of financial statements were primarily to reveal the wealth generated and income earned by the proprietor, self-regulation was considered sufficient. But now when accounting

[9] [ 9 ] provides more than one interested party with quantitative financial information that helps them to make decisions about employment and use of resources in business and non-business entities and the reports are consulted by a large section of the people (including government) who have a wide range of interest in them (through in varying degrees), self-regulation has to be replaced by regulation through some outside agencies. Thus, in modern times, accounting regulation means regulation by other outside agencies like the government or regulatory agencies established by the government. Corporate form of business having separation between ownership and management came into existence during mid-eighteenth century, and it required quantities of capital greater than that could be provided by an individual or family. This was soon proved to be the most satisfactory form of business organisation and gradually were considered a cornerstone in the trading structure of the world. The separation between ownership and management has created another separation between 'financial function' and 'managerial function' as a result of which there has cropped up a number of accounting challenges and financial accounting and reporting has got an important social status. Since managers of corporate business houses manage other people's money rather than their own, it cannot be expected that they should look over it with the same anxious vigilance as the real owners do with respect to the management of the affairs of the business including financial function. In this situation, fraud and misappropriation of fund are also very likely to occur. During 1960 financial reporting system was made the subject of much criticism on some strong and reasonable grounds like (i) lack of uniformity in accounting practice that made difficult the comparison of different companies (ii) the multiplicity of accounting practices that made it possible for the management to select alternate representations of financial results which allowed earning to be manipulated and made it possible to conceal economic realities, etc. Government cannot allow the situation and acts as a passive observer. It felt, therefore, the necessity of regulating the corporate accounting and management and started promulgating the Companies Act, keeping in view the objective for protecting the interest of investors and other interested parties. Again, every democratic government with an aim of maximizing the social welfare has the capacity of being an independent and impartial regulator. Moreover, accounting profession of almost all the countries is in favour of imposing regulation on corporate accounting and reporting. Thus, the regulation of accounting is not only desirable but also essential in the interest of all concerned. But there are many differences as to the approach of regulation among countries. It is therefore, imperative to have external regulation in accounting. Accounting

[10] [ 10 ] has also accepted its importance for its healthy improvement and progress. Both maintenance of books of accounts and financial reporting are now guided by several provisions of the Companies Act, accounting standards and regulations by capital market regulators. It is to be remembered that accounting regulation should be consistent with some pre-determined objectives. These objectives cannot, again, be static and uniform in all countries and throughout all times. Rather they must be dependent on changing social economic need of the country concerned. 1.5 Disclosures in Company Accounts in India In India, preparation of company accounts and presentation of financial statements are guided by three major regulations – (a) Companies Act (b) Accounting Standards, and (c) SEBI Regulations. Major provisions of these regulations are discussed below: 1.5.1 Disclosure in Company Accounts as per Companies Act 2013 The Companies Act 2013, which replaces the Companies Act 1956, contains a number of important provisions that facilitates preparation of company accounts and effective dissemination of financial information generated therefrom. The relevant provisions in this context have been included in the following sections. ? Requirement of keeping books of account (Section 128) ? Preparation of Financial Statements (Section 129) ? Central Govt. to prescribe Accounting Standards (Section 133) ? Financial Statements, Board's report etc. (Section 134) ? Corporate Social responsibility (Section 135) Important provisions are discussed below (However, Section 135 has been discussed in detail in Unit No. 8): ? Section 128 : Requirement of keeping books of account (1) Every company shall prepare and keep at its registered office books of account and other relevant books and papers and financial statement for every financial year which

**90%**

accrual basis and according to the double entry system of accounting.

The books of accounts may be kept at a place other than the office of the company with due notification to the registrar. Moreover, the books of accounts or relevant papers may also be [11] [ 11 ] kept in electronic format. (2) For branch offices in India or outside India, books of account relating to such branch may be kept there. However, proper summarized returns periodically must be sent to the registered office. (3) The books of account and other books and papers maintained by the company within India shall be open for inspection at the registered office of the company or at such other place in India by any director during business hours, and in the case of financial information, if any, maintained outside the country, copies of such financial information shall be maintained and produced for inspection by any director. However, the inspection in respect of any subsidiary of the company shall be done only by the person authorized in this behalf by a resolution of the Board of Directors. (4) Where an inspection is made under sub-section (3), the officers and other employees of the company shall give to the person making such inspection all assistance in connection with the inspection which the company may reasonably be expected to give. (5) Every company shall preserve the books of accounts together with all the relevant vouchers in good condition for a period of not less than next eight years. However, where an investigation has been ordered in respect of the company under Chapter XIV, the Central Government may direct the company that the books of account may be kept for such longer period as it may deem fit. (6) The Act specifies the following persons to be in charge with the duty of complying with the provisions of maintenance of proper books of accounts – (i) Managing director; (ii) The whole-time director in charge of finance; (iii) The Chief Financial Officer; or (iv) Any other person of a company who has been charged by the Board in this respect. Accordingly, if there is any contravention with regard to such provisions, the above persons shall be punishable with imprisonment for a term which may extend to one year or with fine which shall not be less than fifty thousand rupees but which may extend to five lakh rupees or with both.

selected such accounting policies and applied them consistently and made judgments and estimates that are reasonable and prudent so as to give a true and fair view of the state of affairs of the company at the end of the financial year and of the profit and loss of the company for that period; (c) the directors had taken proper and sufficient care for the maintenance of adequate accounting records in accordance with the provisions of this Act for safeguarding the assets of the company and for preventing and detecting fraud and other irregularities; (d) the directors had prepared the annual accounts on a going concern basis;

and (e) the directors, in the case of a listed company, had laid down internal financial controls to be followed by the company and that such internal financial controls are adequate and were operating effectively. (f) the directors had devised proper systems to ensure compliance with the provisions of all applicable laws and that such systems were adequate and operating effectively. (6) A signed copy of every financial statement, including consolidated financial statement, if any, shall be issued, circulated or published along with a copy each of— (a) any notes annexed to or forming part of such financial statement; [14] [ 14 ] (b) the auditor’s report; and (c) the Board’s report referred to in sub-section (3). (7) If a company is in default in complying with the provisions of this section, the company shall be liable to a penalty of three lakh rupees and every officer of the company who is in default shall be liable to a penalty of fifty thousand rupees. ? Section 135 : Corporate Social responsibility This section provides that every company with a specified amount of net worth or turnover or net profit during any financial year must constitute the Corporate Social Responsibility Committee of the Board. The Committee shall formulate policy and specify as the areas listed in Schedule VII where the activities will be conducted. The content of the policy must be disclosed by the board in the website of the company. The section further provides that the Board shall ensure that at least two per cent

**97%**

**MATCHING BLOCK 14/516**

**SA** ACA-MCOS 34 MAIN.docx (D147306261)

of average net profits of the company made during three immediately preceding financial years shall be spent

as per the policy every year. If the company fails to spend such amount the Board shall give in its report the reasons for not spending. 1.5.2 Disclosures in Company Accounts as per Accounting Standards The main objective of accounting standard setting is to maintain uniformity in the presentation of economic data contained in the periodical accounts of corporate enterprises. In other words, it aims at harmonizing the diverse accounting policies and practices adopted by different enterprises and ensuring consistency in the reported information of an enterprise from year to year so that users of financial statements are in any position to understand and make proper use of financial statement for their decision purposes.

In India, accounting standards were traditionally issued by the Institute of Chartered Accountants of India

to suit the Indian business conditions. This set of accounting standards is known as Accounting Standards (AS). Though the same is still in force as per Companies (Accounting Standards) Rules 2006, considering the growing level of internationalisation, a new set of converged accounting standards has been promulgated and is being implemented in a phased manner. The new set of accounting standards is known as Indian Accounting Standards (Ind AS) which has been notified by the Ministry of Corporate Affairs as per Companies (Indian Accounting Standards) Rules 2015. As mentioned earlier this new set of accounting standards is converged with International Accounting Standards (IAS) and International Financial Reporting Standards (IFRS) and hence are more aligned with

[15] [ 15 ] the global best practices in the field of accounting with minor deviations to suit the Indian business conditions (the deviations are known as curve-ins or curve-outs). Following is a complete list of Ind ASs notified by the Ministry of Corporate Affairs (MCA) in India (as on 15.01.2021). Notifications Description

<b>98%</b>	<b>MATCHING BLOCK 15/516</b>	<b>W</b>
<p>Indian Accounting Standard (Ind AS) 101 First-time Adoption of Indian Accounting Standards Indian Accounting Standard (Ind AS) 102 Share-based Payment Indian Accounting Standard (Ind AS) 103 Business Combinations Indian Accounting Standard (Ind AS) 104 Insurance Contracts Indian Accounting Standard (Ind AS) 105 Non-current Assets Held for Sale and Discontinued Operations Indian Accounting Standard (Ind AS) 106 Exploration for and Evaluation of Mineral Resources Indian Accounting Standard (Ind AS) 107 Financial Instruments: Disclosures Indian Accounting Standard (Ind AS) 108 Operating Segments Indian Accounting Standard (Ind AS) 109 Financial Instruments Indian Accounting Standard (Ind AS) 110 Consolidated Financial Statements Indian Accounting Standard (Ind AS) 111 Joint Arrangements Indian Accounting Standard (Ind AS) 112 Disclosure of Interests in Other Entities Indian Accounting Standard (Ind AS) 113 Fair Value Measurement Indian Accounting Standard (Ind AS) 114 Regulatory Deferral Accounts Indian Accounting Standard (Ind AS) 115 Revenue from Contracts with Customers Indian Accounting Standard (Ind AS) 1 Presentation of Financial Statements Indian Accounting Standard (Ind AS) 2 Inventories Indian Accounting Standard (Ind AS) 7 Statement of Cash Flows Indian Accounting Standard (Ind AS) 8 Accounting Policies, Changes in Accounting Estimates and Errors Indian Accounting Standard (Ind AS) 10 Events after the Reporting Period Indian Accounting Standard (Ind AS) 12 Income Taxes Indian Accounting Standard (Ind AS) 16 Property, Plant and Equipment Indian Accounting Standard (Ind AS) 17 Leases Indian Accounting Standard (Ind AS) 19 Employee Benefits Indian Accounting Standard (Ind AS) 20 Accounting for Government Grants and Disclosure of Government Assistance [16] [ 16 ]</p>		

Notifications Description

<b>98%</b>	<b>MATCHING BLOCK 16/516</b>	<b>W</b>
<p>Indian Accounting Standard (Ind AS) 21 The Effects of Changes in Foreign Exchange Rates Indian Accounting Standard (Ind AS) 23 Borrowing Costs Indian Accounting Standard (Ind AS) 24 Related Party Disclosures Indian Accounting Standard (Ind AS) 27 Separate Financial Statements Indian Accounting Standard (Ind AS) 28 Investments in Associates and Joint Ventures Indian Accounting Standard (Ind AS) 29 Financial Reporting in Hyperinflationary Economies Indian Accounting Standard (Ind AS) 32 Financial Instruments : Presentation Indian Accounting Standard (Ind AS) 33 Earnings per Share Indian Accounting Standard (Ind AS) 34 Interim Financial Reporting Indian Accounting Standard (Ind AS) 36 Impairment of Assets Indian Accounting Standard (Ind AS) 37 Provisions, Contingent Liabilities and Contingent Assets Indian Accounting Standard (Ind AS) 38 Intangible Assets Indian Accounting Standard (Ind AS) 40 Investment Property Indian Accounting Standard (Ind AS) 41 Agriculture</p>		

In the above two categories of accounting standards may be found – one with serial number 1 to 41 and another with serial number 101 to 115. While the first set of Ind AS are the counterparts of International Accounting Standards with similar serial numbers the latter set corresponds to International Financial reporting Standards (IFRS) with the same serial numbers. Out of the above accounting standards Ind AS 1: Presentation of Financial Statements deals with the overall structure of financial statements of companies while all the other Ind ASs (except Ind AS 101: First-time Adoption of Indian Accounting Standards) deal with specific problem areas. I. Structure of Financial Statements

<b>94%</b>	<b>MATCHING BLOCK 22/516</b>	<b>SA</b>	MCOM-AFA - Plagiarism - M.Com - 1st Sem-USH.docx (D127906811)
<p>As per Section 129 of the Companies Act 2013, the financial statements shall give a true and fair view of the state of affairs of the company or companies, complying with the accounting standards notified under section 133 and shall be in the form or forms as may be provided for different class or classes of companies in Schedule III.</p>			

Accordingly, the type and content of financial statements must be in commensurate with Ind AS 1: Presentation of Financial Statements and Schedule III of Companies Act 2013.

[17] [ 17 ] (a) Ind AS 1: Presentation of Financial Statements According to Ind AS 1, companies prepare general purpose financial statements to exhibit a true and fair view with respect to (i) financial position (namely assets, liabilities and equity), (ii) financial performance (income, expenses including gains and losses), (iii) cash flows and (iv) use of its resources by the management. Accordingly, the following statements are included in the complete list of financial statements to be prepared by a company: ?

**75% MATCHING BLOCK 18/516**

**W**

A balance sheet at the end of the period; ? A statement of profit and loss (including other comprehensive income) for the period; ? A statement of changes in equity for the period; ? A statement of cash flows for the period; ? Notes, comprising a summary of significant accounting policies and other explanatory information; and ? Comparative information in respect of the preceding period;

and ?

**100% MATCHING BLOCK 19/516**

**W**

A balance sheet as at the beginning of the preceding period when an entity applies an accounting policy retrospectively or makes a retrospective restatement of items in its financial statements, or when it reclassifies items in its financial statements.

The above financial statements must possess the following features or characteristics in order to be relevant and reliable: ? True and fair presentation and compliance with Ind ASs. ? Adherence to Going Concern assumption (accounting should be done assuming that the entity will continue its business for an unforeseeable future unless the management intends to liquidate it) ? Accrual basis of accounting (all financial statements excluding Cash Flow Statement should be prepared following accrual basis of accounting) ? Materiality and aggregation (each material class of similar items should be presented separately) ? Offsetting (assets and liabilities should not be offset unless permitted by Ind AS) ? Frequency of reporting (financial statements are to be prepared normally annually) ? Comparative information (information for the previous period should be disclosed unless exempted by Ind AS)

[18] [ 18 ] ? Consistency of presentation (similar accounting policies should be continued; changes if any for appropriate presentation or as required by Ind AS will be allowed). The structure and content

**61% MATCHING BLOCK 20/516**

**W**

of financial statements (especially for Balance Sheet, Statement of Profit and Loss and Statement of Changes in Equity)

must conform to the structure given under Schedule III of the Companies Act 2013 as originally notified by the MCA on 06.04.2016 and amended from time to time. Also, the financial statements must clearly specify the presentation currency (e.g., in India, Indian rupee is the presentation currency) and the level of rounding off. Sufficient disclosures should be made with respect to the following: (i) Accounting Policies : The entity will have to disclose significant accounting policies like – ? basis of measurement used in preparing the financial statements (e.g., historical cost, realisation, fair value etc.); ? judgement made by the management in applying the accounting policy for recognition and measurement of the amount; and ? each specific accounting policy relevant for understanding the financial statements (such as in the area of revenue recognition, capitalisation of borrowing cost, investment property, employee benefits, inventories etc.) (ii) Estimation of Uncertainty : The entity will have to disclose the assumptions concerning the future and other major sources of estimation of uncertainty

**93% MATCHING BLOCK 21/516**

**W**

that have a significant risk of causing a material adjustment to the carrying value of assets and liabilities within the next financial

years. (iii) Capital Disclosure : The entity shall also disclose information as regards the process of managing the capital. (iv) Other Disclosure : The entity will also have to disclose information concerning the domicile and legal form including country of incorporation, description and nature of operations and principal activities and the nature of the parent etc. (b) Schedule III of the Companies Act 2013 : As regards to the structure of financial statements to be prepared Schedule III of the Companies Act 2013 proposes three divisions as follows: ? Division I which is applicable for preparation of financial statements for a company whose financial statements are required to comply with the Companies (Accounting Standards) Rules, 2006.

[19] [ 19 ] ? Division II which is applicable for preparation of financial statements for a company whose financial statements are required to comply with the Companies (Indian Accounting Standards) Rules, 2015. ? Division III which is applicable for preparation of financial statements for a Non-Banking Financial Company (NBFC) whose financial statements are drawn up in compliance of the Companies (Indian Accounting Standards) Rules, 2015. Since in this book we shall discuss the topics for companies other than NBFCs with reference to Companies (Indian Accounting Standards) Rules, 2015, only Division II will be relevant here. Division II contains the structure of Balance Sheet (Part I), Statement of Changes in Equity (Part I) and Statement of Profit and Loss (Part II). These are discussed below:

General Instructions for Preparation of Balance Sheet: 1.

**99% MATCHING BLOCK 25/516**

**W**

An entity shall classify an asset as current when - (a) it expects to realise the asset, or intends to sell or consume it, in its normal operating cycle; (b) it holds the asset primarily for the purpose of trading; (c) it expects to realise the asset within twelve months after the reporting period; or (d) the asset is cash or a cash equivalent unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period. An entity shall classify all other assets as non-current. 2. The

operating cycle of an entity

is the time between the acquisition of assets for processing and their realisation in cash or cash equivalents, When the entity's normal operating cycle is not clearly identifiable, it is assumed to be twelve months. 3.

**99% MATCHING BLOCK 26/516**

**W**

An entity shall classify a liability as current when - (a) it expects to settle the liability in its normal operating cycle; (b) it holds the liability primarily for the purpose of trading; (c) the liability is due to be settled within twelve months after the reporting period; or (d) it does not have an unconditional right to defer settlement of the liability for at least twelve months after the reporting period. Terms of a liability that could, at the option of the counterparty, result in settlement by the issue of equity instruments do not affect its classification. An entity shall classify all other liabilities as non-current. 4.

A receivable shall be classified as a 'trade receivable' if it is in respect of the amount due on account of goods sold or services rendered in the normal course of business. 5.

A payable shall be classified as a 'trade payable' if it is in respect of the amount due on account of goods purchased or services received in the normal course of business. 6.

A company shall disclose the following in the Notes:

[23] [ 23 ] A. Non-Current Assets I. Property. Plant

and Equipment: (i) Classification shall be given as: (a) Land (b) Buildings (c) Plant and Equipment (d) Furniture and Fixtures (e) Vehicles (f) Office equipment (g) Bearer Plants (h) Others (specify nature) (ii) Assets

under lease shall be separately specified under each class of assets. (iii) A reconciliation of the gross and net carrying amounts of each class

of assets at the beginning and end of the reporting period showing

additions, disposals, acquisitions

through business combinations and other adjustments shall be disclosed separately. VI. Investment (i) Investments shall be

classified as: (a) Investments in Equity Instruments; (b) Investments in Preference Shares; (c) Investments in Government or trust securities; (d) Investments in debentures or bonds; (e) Investments in Mutual Funds; (

f) Investments in partnership firms; or (g) Other investments (specify nature) Under each classification, details shall be given of names of the bodies corporate that are- (i) subsidiaries, (ii) associates, (iii) joint ventures, or (iv) structured entities, in whom investments have been made and the nature and extent of the investment so made in each such body corporate (showing separately investments which are partly-paid). Investments in partnership firms along with names of the firms, their partners, total capital and the shares of each partner shall be disclosed separately.

[25] [ 25 ] (ii) The following shall also be disclosed: (a) Aggregate amount of quoted investment and market value thereof; (b) Aggregate amount of unquoted investment; and (c) Aggregate amount of impairment in value of investment. VII. Trade Receivables: (i) Trade receivables shall be sub-classified as: (a) Trade Receivables considered good - Secured; (b) Trade Receivables considered good - Unsecured; (c) Trade Receivables which have significant increase in Credit Risk; and (d) Trade Receivables - credit impaired. (ii) Allowance for bad and doubtful debts shall be disclosed under the relevant heads separately. (iii) Debts due by directors or other officers of the company or any of them either severally or jointly with any other person or debts due by firms or private companies respectively in which any director is a partner or a director or a member should be separately stated. VIII. Loans: (i) Loans shall be classified as - (a) Security Deposits; (b) Loans to related parties (giving details thereof); and (c) Other loans (specify nature). (ii) Loans Receivables shall be sub-classified as: (a) Loans Receivables considered good - Secured; (b) Loans Receivables considered good - Unsecured; (c) Loans Receivables which have significant increase in Credit Risk; and (d) Loans Receivables - credit impaired. (iii) Allowance for bad and doubtful loans shall be disclosed under the relevant heads separately. (iv) Loans due by directors or other officers of the company or any of them either severally or jointly with any other persons or amounts due by firms or private companies respectively in which any director is a partner or a director or a member should be separately stated.

[26] [ 26 ] IX.

Bank deposits with more than 12 months maturity shall be disclosed under 'Other financial assets'. X. Other non-current asset: Other non-current assets shall be classified as - (i) Capital Advances; and (ii) Advances other than capital advances; (1) Advances other than capital advances shall be classified as: (a) Security Deposits; (b) Advances to related parties (giving details thereof); and (c) Other advances (specify nature). (2) Advances to directors or other officers of the company or any of them either severally or jointly with any other persons or advances to firms or private companies respectively in which any director is a partner or a director or a member should be separately stated, In case advances are of the nature of a financial asset as per relevant Ind AS, these are to be disclosed under 'other financial assets' separately. (iii) Others (specify nature). B. Current Assets I. Inventories: (i)

Inventories shall be classified as - (

a) Raw materials; (b) Work-in-progress; (c) Finished goods; (d) Stock-in-trade (

in respect of goods acquired for trading); (

e) stores and spares; (

f) Loose tools; and (g) Others (

specify nature). (ii) Goods-in-transit shall be disclosed under the relevant sub-head of inventories. (iii) Mode of valuation shall be stated. II. Investment: (i) Investments shall be

classified as - (a) Investments in Equity Instruments; (b) Investment in Preference Shares;

[27] [ 27 ] (c) Investments in government or trust securities; (d) Investments in debentures or bonds; (e) Investments in Mutual Funds; (

f) Investments in partnership firms; and (g) Other investments (specify nature). Under each classification, details shall be given of names of the bodies corporate that are - (i) subsidiaries, (ii) associates, (iii) joint ventures, or (iv) structured

entities, in whom investments have been made and the nature and extent of the investment so made in each such body corporate (showing separately investments which are partly-paid) (ii) The following shall also be disclosed (a) Aggregate

amount of quoted investments and market value thereof; (b) Aggregate amount of unquoted investments; (c) Aggregate amount of impairment in value of investments. III. Trade Receivables (i) Trade receivables shall be sub-classified as: (a)

Trade Receivables considered good - Secured; (b) Trade Receivables considered good - Unsecured; (c) Trade Receivables which have significant increase in Credit Risk; and (d) Trade Receivables - credit impaired. (ii) Allowance for bad and

doubtful debts shall be disclosed under the relevant heads separately. (iii) Debts due by directors or other officers of the company or any of them either severally or jointly with any other person or debts due by firms or private companies

respectively in which any director is a partner or a director or a member should be separately stated. IV.

Cash and cash equivalents: Cash and cash equivalents shall be classified as- a. Balances with Banks (

of the nature of cash and cash equivalents);

[28] [ 28 ] b. Cheques, drafts on hand; c. Cash on hand; and d. Others (specify nature). V. Loans: (i) Loans shall be classified as: (a) Security deposits; (b) Loans to related parties (giving details thereof); and (c) others (specify nature). (ii) Loans Receivables shall be sub-classified as: (a) Loans Receivables considered good - Secured; (b) Loans Receivables considered good - Unsecured; (c) Loans Receivables which have significant increase in Credit Risk; and (d) Loans Receivables - credit impaired. (iii) Allowance for bad and doubtful loans shall be disclosed under the relevant heads separately. (iv) Loans due by directors or other officers of the company or any of them either severally or jointly with any other person or amounts due by firms or private companies respectively in which any director is a partner or a director or a member shall be separately stated. VI.

Other current assets (specify nature): This is an all-inclusive heading, which incorporates current assets that do not fit into any other asset categories.

Other current assets shall be classified as- (i) Advances other than capital advances (1) Advances other than capital advances shall be classified as: (a) Security Deposits; (b) Advances to related parties (giving details thereof); (c) Other advances (specify nature) (2) Advances to directors or other officers of the company or any of them either severally or jointly with any other persons or advances to firms or private companies respectively in which any director is a partner or a director or a member should be separately stated. (a)

Earmarked balances with banks (for example. for unpaid dividend) shall be separately stated.

[29] [ 29 ] (b) Balances with banks to the extent held as margin money or security against the borrowings, guarantees, other commitments shall be disclosed separately. (

c) Repatriation restrictions, if any, in respect of cash and bank balances shall be separately stated. C. Equity: I. Equity

Share Capital: For each class of equity share capital: (a) the number and amount of shares authorised; (b) the number of shares issued, subscribed and fully paid, and subscribed but not fully paid; (c) par value per Share; (d) a reconciliation of

the number of shares

outstanding at the beginning and at the end of the period; (

e) the

rights, preferences and restrictions attaching to each class of shares including restrictions on the distribution of dividends and the repayment of capital; (f) shares in respect of each class in the company held by its holding company or its ultimate holding company including shares held by subsidiaries or associates of the holding company or the ultimate holding company in aggregate; (g) shares in the company held by each shareholder holding more than five per cent.

shares specifying the number of shares held; (h) shares reserved for issue under options and contracts or commitments for the sale of shares or disinvestment, including the terms and amounts; (i)

for the period of five years immediately preceding the date at which the Balance Sheet is prepared ? aggregate number and class of shares allotted as fully paid up

pursuant to contract without payment being received in cash; ?

aggregate number and class of shares allotted as fully paid up by way of bonus shares;

and ? aggregate number and class of shares bought back; (j) terms of any securities convertible into equity shares issued along with the earliest date of conversion in descending order starting from the farthest such date; (k)

calls unpaid (showing aggregate value of calls unpaid by directors and officers); (

l) forfeited shares (amount originally paid up).

[30] [ 30 ] II. Other Equity: (i) 'Other Reserves' shall be classified in the notes as - (a) Capital Redemption Reserve; (b)

Debenture Redemption Reserve; (c) Share Options Outstanding Account; and (d) others - (specify the nature and

purpose of each reserve and the amount in respect thereof); (Additions and deductions since last balance sheet to be shown under each of the specified heads) (ii) Retained Earnings represents surplus i.e., balance of the relevant column in

the Statement of Changes in Equity; (iii) A reserve specifically represented by earmarked investments shall disclose the fact that it is so represented; (iv)

Debit balance of Statement of Profit and Loss shall be shown as a negative figure under the head 'retained earnings'.

Similarly, the balance of 'Other Equity', after adjusting negative balance of

retained earnings, if any, shall be shown under the head 'Other Equity' even if the resulting figure is in the negative; and (v) Under the sub-head 'Other Equity', disclosure shall be made for the nature and amount of each item. D. Non-Current Liabilities: I. Borrowings: (i) borrowings shall be classified as - (a) Bonds or debentures (b) Term loans (I) from banks (II) from other Parties (c) Deferred payment liabilities (d) Deposits (e) Loans from related parties (f) Long term maturities of finance lease obligations (g) Liability component of compound financial instruments (h) Other loans (specify nature); [31] [ 31 ] (ii)

borrowings shall further be sub-classified as secured and unsecured.

Nature of security shall be specified separately in each case. (iii) where loans have been guaranteed by directors or others, the aggregate amount of such loans under each head shall be disclosed; (iv) bonds or debentures (along with the rate of interest, and particulars of redemption or conversion, as the case may be) shall be stated in descending order of maturity or conversion, starting from farthest redemption or conversion date, as the case may be, where bonds/debentures are redeemable by instalments, the date of maturity for this purpose must be reckoned as the date on which the first instalment becomes due; (v) particulars of any redeemed bonds or debentures which the company has power to reissue shall be disclosed; (vi) terms of repayment of term loans and other loans shall be stated; and (vii) period and amount of default as on the balance sheet date in repayment of borrowings and interest shall be specified separately in each case. II. Provisions : The amounts shall be classified as - (a) Provision for employee benefits; and (b) Others (specify nature). III. Other non-current liabilities : (a) Advances; and (b) Others (specify nature). E. Current Liabilities: I. Borrowings: (i)

Borrowings shall be classified as - (a) Loans repayable on demand (I) from banks (II) from other parties (b) Loans from related parties (c) Deposits (d) Other loans (specify nature); (

ii)

borrowings shall further be sub-classified as secured and unsecured.

Nature of security shall be specified separately in each case; (iii) where loans have been guaranteed by directors or others, the aggregate amount of such loans under each head shall be disclosed;

[32] [ 32 ] (iv) period and amount of default as on the balance sheet date in repayment of borrowings and interest, shall be specified separately in each case. II. Other Financial Liabilities: Other Financial liabilities

shall be classified as - (a) Current maturities of long-term debt; (

b) Current maturities of finance lease obligations; (c) Interest accrued; (d) Unpaid dividends; (e) Application money received for allotment of securities to the extent refundable

and interest accrued thereon; (f) Unpaid matured deposits and interest accrued thereon; (g) Unpaid matured debentures and interest accrued thereon;

and (h) Others (specify nature). 'Long term debt' is a borrowing having a period of more than twelve months at the time of origination III. Trade Payables: The following details relating to micro, small and medium enterprises shall be disclosed in the notes: (a) the principal amount and the interest due thereon (to be shown separately) remaining unpaid to any supplier at the end of each accounting year; (b) the amount of interest paid by the buyer in terms of section 16 of the Micro, Small and Medium Enterprises Development Act, 2006 (27 of 2006), along with the amount of the payment made to the supplier beyond the appointed day during each accounting year; (c) the amount of interest due and payable for the period of delay in making payment (which has been paid but beyond the appointed day during the year) but without adding the interest specified under the Micro, Small and Medium Enterprises Development Act, 2006; (d) the amount of interest accrued and remaining unpaid at the end of each accounting year; and (e) the amount of further interest remaining due and payable even in the succeeding years, until such date when the interest dues above are actually paid to the small enterprise, for the purpose of disallowance of a deductible expenditure under section 23 of the Micro, Small and Medium Enterprises Development Act, 2006.

[33] [ 33 ] Explanation - The terms 'appointed day', 'buyer', 'enterprise', 'micro enterprise', 'small enterprise' and 'supplier', shall have the same meaning as assigned to them under clauses (b), (d), (e), (h), (m) and (n) respectively of section 2 of the Micro, Small and Medium Enterprises Development Act, 2006.] IV. Other current liabilities: The amounts shall be classified as- (a) revenue received in advance; (b) other advances (specify nature); and (c) others (specify nature); IV. Provisions: The amounts shall be classified as- (i) provision for employee benefits; and (ii) others (specify nature) F. The presentation of liabilities associated with group of assets classified as held for sale and non-current assets classified as held for sale shall be in accordance with the relevant Indian Accounting Standards (Ind ASs) G.

Contingent Liabilities and Commitments: (to the extent not provided for) (

i) Contingent Liabilities shall be classified as- (a) claims against the company not acknowledged as debt; (b) guarantees excluding financial guarantees; and (c) other money for which the company is contingently liable. (ii) Commitments shall be classified as- (a) estimated amount of contracts remaining to be executed on capital account and not provided for; ( b) uncalled liability on shares and other investments partly paid; and (c) other commitments (specify nature). H. The amount of dividends proposed to be distributed to equity and preference shareholders for the period and title related amount per share shall be disclosed separately. Arrears of fixed cumulative dividends on irredeemable preference shares shall also be disclosed separately. I. Where in respect of an issue of securities made for a specific purpose the whole [34] [ 34 ] or part of amount has not been used for the specific purpose at the Balance sheet date, there shall be indicated by way of note how such unutilised amounts have been used or invested. J. Every company shall disclose the details of Specified Bank Notes (SBN) held and transacted during the period 08/11/2016 to 30/12/2016 as provided in the Table below: SBNs Other denomination Total notes Closing cash in hand as on 08.11.2016 (?) Permitted receipts (?) Permitted payments (?) Amount deposited in Banks Closing cash in hand as on 30.12.2016 Explanation : For the purposes of this clause, the term 'Specified Bank Notes' shall have the same meaning provided in the notification of the Government of India, in the Ministry of Finance, Department of Economic Affairs number S.O. 3407(E), dated the 8th November, 2016." . 7. When a company

be presented in the Statement of Profit and Loss in accordance with

the relevant Indian Accounting Standards II. Disclosure as per Other Ind ASs Some of the important Ind ASs and disclosure requirements specified therein are discussed below: Ind AS 2: Inventories This standard deals with the principles of valuation of inventories for the purpose of financial statements. It defines inventories as

**100% MATCHING BLOCK 45/516**

**W**

assets (a) held for sale in the ordinary course of business, (b) in the process of production for such sale, or (c) in the form of materials or supplies to be consumed in the production process or in the rendering of [39] [ 39 ] services.

It also prescribes that valuation of

**76% MATCHING BLOCK 46/516**

**W**

inventories must be done at the lower of cost and net realisable value.

While

**94% MATCHING BLOCK 48/516**

**SA**

original.doc (D34943452)

the cost of inventories shall comprise all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition,

**80% MATCHING BLOCK 49/516**

**SA**

M.Com.I\_Adv.\_Accountancy\_P.\_I\_\_\_\_III\_all.PDF (D142209931)

the net realisable value shall mean the estimated selling price in the ordinary course of business less the estimated costs of completion and

Ind AS 2, Inventories the estimated costs necessary to make the sale. As regards to the disclosure requirements, Ind AS 2 states that

**92% MATCHING BLOCK 50/516**

**SA**

M.Com.I\_Adv.\_Accountancy\_P.\_I\_\_\_\_III\_all.PDF (D142209931)

the financial statements shall disclose: (a) the accounting policies adopted in measuring inventories, including the cost formula used; (b) the total carrying amount of inventories and

the carrying amount in classifications appropriate to the entity; (c)

**68% MATCHING BLOCK 53/516**

**SA**

Canadian GAAPs.pdf (D917184)

the carrying amount of inventories carried at fair value less costs to sell; (d) the amount of inventories recognised as an expense during the period; (

e) the amount of any write-down of inventories recognised as an expense in the period; (f) the amount of any reversal of any write-down; (g) the circumstances or events that led to the reversal of a write-down; and (h) the carrying amount of inventories pledged as security for liabilities. Ind AS 7: Statement of Cash Flows The main objectives of Ind AS 7 is to disclose

**100% MATCHING BLOCK 51/516**

**W**

to require the provision of information about the historical changes in cash and cash equivalents of an entity by means of a statement of cash flows.

Ind AS 7 states that the

**66% MATCHING BLOCK 52/516 W**

statement of cash flows shall report cash flows during the period classified by operating, investing and financing activities.

Cash flow from operating activities shall be reported using either (a) the direct method, whereby major classes of

**77% MATCHING BLOCK 54/516 SA** Canadian GAAPs.pdf (D917184)

gross cash receipts and gross cash payments are disclosed; or (b) the indirect method, whereby profit or loss is adjusted

for the effects of transactions of a non-cash nature, any deferrals or accruals of past or future operating cash receipts or payments, and items of income or expense associated with investing or financing cash flows. Among other disclosure requirements, Ind AS 7 states that an entity shall disclose, together with a commentary by management,

**85% MATCHING BLOCK 56/516 SA** original.doc (D34943452)

the amount of significant cash and cash equivalent balances held by the entity that are not available for use by

the group.  
[40] [ 40 ]

**97% MATCHING BLOCK 55/516 W**

Ind AS 8: Accounting Policies, Changes in Accounting Estimates and Errors The objective of this Standard is to prescribe the criteria for selecting and changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies, changes in accounting estimates and correction of errors. The Standard is intended to enhance the relevance and reliability of an entity's financial statements, and the comparability of those financial statements over time and with the financial statements of other entities.

Ind AS 8 requires that an entity shall disclose

**74% MATCHING BLOCK 57/516 SA** 201311822 AFE 3782 ASIGMENT 2B 2021.pdf (D113025922)

the nature and amount of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in future periods, except for the disclosure of the effect on future periods when it is impracticable

to estimate that effect.

**100% MATCHING BLOCK 58/516 SA** 201311822 AFE 3782 ASIGMENT 2B 2021.pdf (D113025922)

If the amount of the effect in future periods is not disclosed because estimating it is impracticable, an entity shall disclose that fact.

In respect of prior period errors, the standard states that an entity shall disclose (a) the nature of the prior period error; (b) for

**53% MATCHING BLOCK 61/516**

**SA** 9702792, AFE3782, Assignment 2.pdf (D112831655)

each prior period presented, to the extent practicable, the amount of the correction (c) the amount of the correction at the beginning of the earliest prior period presented; and (d) if retrospective restatement is impracticable for a particular prior period, the circumstances that led to the existence of that condition and a description of how and from when the

error has been corrected.

**76% MATCHING BLOCK 59/516**

**W**

Ind AS 10: Events after the Reporting Period The objective of Ind AS 10 is to prescribe

guidelines regarding (a) adjustments to be done to

**96% MATCHING BLOCK 60/516**

**W**

an entity's financial statements for events after the reporting period; and (b) the disclosures that an entity should give about the date when the financial statements were approved for issue and about events after the reporting period. The Standard also requires that an entity should not prepare its financial statements on a going concern basis if events after the reporting period indicate that the going concern assumption is not appropriate.

As regards to the disclosure requirements, Ind AS 10 states that an entity shall disclose

**76% MATCHING BLOCK 63/516**

**SA** Canadian GAAPs.pdf (D917184)

the date when the financial statements were approved for issue and who gave that approval. If the entity's owners or others have the power to amend the financial statements after issue, the entity shall disclose that fact.

It also states that if an entity receives information after the reporting period about

**100% MATCHING BLOCK 62/516**

**W**

conditions that existed at the end of the reporting period,

it shall update disclosures that relate to those conditions, in the light of the new information. Also, an entity shall disclose, for each material category of non-adjusting event after the reporting period, (a)

**79% MATCHING BLOCK 69/516**

the nature of the event, and (b) an estimate of its financial effect, or a statement that such an estimate cannot be

done.

[41] [ 41 ]

**99% MATCHING BLOCK 64/516**

**W**

Ind AS 12: Income Taxes The objective of this Standard is to prescribe the accounting treatment for income taxes. The principal issue in accounting for income taxes is how to account for the current and future tax consequences of (a) the future recovery (settlement) of the carrying amount of assets (liabilities) that are recognised in an entity's balance sheet, and (b) transactions and other events of the current period that are recognised in an entity's financial statements.

As regards to the disclosure requirements, Ind AS 12 states that an entity must disclose the major components of tax expense (income) separately. It also requires an entity to disclose separately (a) the aggregate current and deferred tax relating to items that are charged or credited directly to equity, (b) the amount of income tax relating to each component of other comprehensive income, (c) an explanation of the relationship between tax expense (income) and accounting profit, (d) an explanation of changes in the applicable tax rate(s) compared to the previous accounting period, (e) the amount (and expiry date, if any) of deductible temporary differences, unused tax losses, and unused tax credits for which no deferred tax asset is recognised in the balance sheet etc. Ind

AS 16: Property,  
Plant and Equipment

**87% MATCHING BLOCK 65/516**

**W**

The objective of this Standard is to prescribe the accounting treatment for

**85% MATCHING BLOCK 66/516**

**W**

property, plant and equipment. The principal issues in accounting for property, plant and equipment includes recognition of the assets, the determination of their carrying amounts, the depreciation charges and impairment losses to be recognised in relation to them.

Ind AS 16 requires an entity shall

**91% MATCHING BLOCK 67/516**

**W**

disclose, for each class of property, plant and equipment (a) the measurement bases used for determining the gross carrying amount; (b) the depreciation methods used; (c) the useful lives or the depreciation rates used; (

**100% MATCHING BLOCK 68/516**

**W**

d) the gross carrying amount and the accumulated depreciation (aggregated with accumulated impairment losses) at the beginning and end of the period; and (e) a reconciliation of the carrying amount at the beginning and end of the period.

The Standard also requires that the financial statements of the entity shall disclose (a)

**90% MATCHING BLOCK 70/516**

**W**

the existence and amounts of restrictions on title, and property, plant and equipment pledged as security for liabilities; (b) the amount of expenditures recognised in the carrying amount of an item of property, plant and equipment in the course of its construction; (c) the amount of contractual commitments for the acquisition of property, plant and equipment; and (d) if it is not disclosed separately in the statement of profit and loss, the amount of compensation from third parties for items of property, plant and equipment that were impaired, lost or given up that is included in

profit or loss

[42] [ 42 ]

Ind AS 19: Employee Benefits

**77% MATCHING BLOCK 71/516**

**W**

The objective of Ind AS 19 is to prescribe the accounting and disclosure for employee benefits. As per this standard, an entity shall recognise (a) a liability when an employee has provided service in exchange for employee benefits to be paid in the future; and (b) an expense when the entity consumes the economic benefit arising from service provided by an employee in exchange for employee benefits.

Though the standard does not require disclose for specific items of employee benefits, other standards such as Ind AS 24 requires disclosure of information about related party transactions with post-employment benefit plans and post-employment benefits for key management personnel, Ind AS 37 requires that an entity must disclose information about contingent liabilities arising from post- employment benefit obligations and Ind AS 19 requires disclosure of employee benefits expense.

**86% MATCHING BLOCK 72/516**

**W**

Ind AS 20: Accounting for Government Grants and Disclosure of Government Assistance This Standard deals with accounting for, and in the disclosure of, government grants and in the disclosure of other forms of government assistance.

The Standard requires disclosure of (a) the accounting policy adopted for government grants, including the methods

**85% MATCHING BLOCK 73/516**

**W**

of presentation adopted in the financial statements; (b) the nature and extent of government grants recognised in the financial statements

and an indication of other forms of government assistance from which the entity has directly benefited; and (c) unfulfilled conditions and other contingencies attaching to government assistance that has been recognised.

**100% MATCHING BLOCK 74/516**

**W**

Ind AS 21: The Effects of Changes in Foreign Exchange Rates

The

standard deals with the issues in accounting for foreign currency transactions and foreign operations. It also deals with the process of translating financial statements into a presentation currency. The principal issues covered by the Standard include selection of

**100% MATCHING BLOCK 75/516**

**W**

exchange rate(s) to use and how to report the effects of changes in exchange rates in the financial statements.

As regards to the disclosure requirements, Ind AS 21 requires an entity to disclose (a) the amount of exchange differences recognised in profit or loss

**100% MATCHING BLOCK 78/516**

**SA**

Canadian GAAPs.pdf (D917184)

except for those arising on financial instruments measured at fair value through profit or loss in accordance with

Ind AS 109;  
and (b) net

**96% MATCHING BLOCK 76/516**

**W**

exchange differences recognised in other comprehensive income and accumulated in a separate component of equity, [43] [ 43 ]

and

**67% MATCHING BLOCK 77/516**

**W**

a reconciliation of the amount of such exchange differences at the beginning and end of the period.

It also requires disclosure of

**70% MATCHING BLOCK 85/516**

**SA**

Canadian GAAPs.pdf (D917184)

the functional currency and the reason for using a separate presentation currency, if so done, reason for change in functional currency of the reporting entity or a significant foreign operation.

Ind AS 23: Borrowing Costs This standard deals with the accounting of borrowing costs and disclosures thereof.

**100% MATCHING BLOCK 79/516**

**W**

Borrowing costs are interest and other costs that an entity incurs in connection with the borrowing of funds.

As per this standard,

**100% MATCHING BLOCK 80/516**

**W**

borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset form part of the cost of that asset.

**100% MATCHING BLOCK 81/516**

**W**

A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

Other borrowing costs are recognised as an expense.

According to Ind AS 23, an entity shall disclose: (a) the amount of borrowing costs capitalised during the period; and (b) the capitalisation rate used to determine the amount of borrowing costs eligible for capitalisation. Ind AS 24: Related Party Disclosures This standard deals with the reporting

**87% MATCHING BLOCK 82/516**

**W**

of related party relationships and transactions between a reporting enterprise and related

parties. The Standard requires disclosure of related party relationships, transactions and outstanding balances, including commitments, in the consolidated and separate financial statements

**76% MATCHING BLOCK 83/516**

**W**

of a parent or investors with joint control of, or significant influence over, an investee

presented

**89% MATCHING BLOCK 84/516**

**W**

in accordance with Ind AS 110, Consolidated Financial Statements, or Ind AS 27, Separate Financial Statements.

This Standard also applies to individual financial statements. For all entities, the Standard requires that relationships between a parent and its subsidiaries shall be disclosed irrespective of whether there have been transactions between them. An entity shall disclose the name of its parent and, if different, the ultimate controlling party. The entity shall also disclose key managerial personnel compensation both in total and under various specified categories. If an entity has had

**61% MATCHING BLOCK 86/516**

**W**

related party transactions during the periods covered by the financial statements, it shall disclose the nature of

the related party relationship as well as information about those Ind AS 24, Related Party Disclosures transactions and outstanding balances, including commitments, necessary for users to understand the potential effect of the relationship on the financial statements. Amounts incurred by the entity for the provision of key management personnel services that are provided by a separate management entity shall be disclosed.

[44] [ 44 ]

**98% MATCHING BLOCK 87/516**

**W**

Ind AS 27: Separate Financial Statements The objective of this Standard is to prescribe the accounting and disclosure requirements for investments in subsidiaries, joint ventures and associates when an entity prepares separate financial statements.

According to Ind AS 27, when a parent, elects not to prepare consolidated financial statements and instead prepares separate financial statements, it shall disclose in those separate financial statements (a) the fact that the financial statements are separate financial statements and that it has availed the exemption from consolidation (b) a list of significant investments in subsidiaries, joint ventures and associates and (c) a description of the method used to account for the investments listed under (b). When an investment entity that is a parent

**100% MATCHING BLOCK 88/516**

**W**

prepares separate financial statements as its only financial statements, it shall

disclose that fact. When

**90% MATCHING BLOCK 89/516**

**W**

a parent or an investor with joint control of, or significant influence over an investee,

prepares separate financial statements, the parent or investor shall identify the financial statements prepared in accordance with Ind AS 110, Ind AS 111 or Ind AS 28 to which they relate.

**98% MATCHING BLOCK 90/516**

**W**

Ind AS 28: Investments in Associates and Joint Ventures The objective of this Standard is to prescribe the accounting for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures.

As per Ind AS 28,

**100% MATCHING BLOCK 91/516**

**W**

an entity with joint control of, or significant influence over, an investee shall account for its investment in an associate or a joint venture using the equity method

except when the investment is exempted as per this standard. Under the equity method, on initial recognition the investment in an associate or a joint venture is recognised at cost, and

**46% MATCHING BLOCK 92/516**

**W**

the carrying amount is increased or decreased to recognise the investor's share of the profit or loss of the investee after the date of acquisition.

The investor's share of the investee's profit or loss is recognised in the investor's profit or loss.

**100% MATCHING BLOCK 93/516**

**W**

Distributions received from an investee reduce the carrying amount of the investment.

Adjustments to the carrying amount may also be necessary for changes in the investor's proportionate interest in the investee arising from changes in the investee's other comprehensive income. Such changes include those arising from the revaluation of property, plant and equipment and from foreign exchange translation differences. The investor's share of those changes is recognised in the investor's other comprehensive income.

Ind AS 32: Financial Instruments- Presentation; Ind AS 107: Financial Instruments – Disclosures and Ind AS 109 – Financial Instruments

Under Ind AS, three Standards deal with accounting for financial instruments. ? Ind AS 32 Financial Instruments: Presentation deals with the presentation and classification of financial instruments as financial assets, financial liabilities or equity and sets out the requirements regarding offset of financial assets and financial liabilities in the balance sheet. ? Ind AS 107 Financial Instruments: Disclosures sets out the disclosures required in respect of financial instruments. ? Ind AS 109 Financial Instruments contains guidance on the recognition, de-recognition, classification and measurement of financial instruments, including impairment and hedge accounting. Ind AS 107 prescribes the disclosures requirements for (a) different categories of financial assets (b) different categories of financial liabilities (c) re-classification of financial liabilities (d) de-recognition of financial assets and liabilities (e) financial assets pledged as collateral (f) allowances for credit losses (g) compound financial instruments with multiple embedded derivatives (h) defaults and breaches for loan payables (i) income, expense, gains or losses recognized in profit and loss (j) accounting policies followed (k) hedge accounting (l) fair value determination for financial assets and liabilities (m) risk disclosures.

**98% MATCHING BLOCK 95/516**

**W**

Ind AS 33: Earning Per Share The objective of this Standard is to prescribe principles for the determination and presentation of earnings per share, so as to improve performance comparisons between different entities in the same reporting period and between different reporting periods for the same entity.

According to Ind AS 33, an entity shall disclose (a) the amounts used as the numerators in calculating basic

**77% MATCHING BLOCK 96/516**

**W**

and diluted earnings per share, and a reconciliation of those amounts to profit or loss attributable to the parent entity for the period, (b) the weighted average number of ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other, (c)

**100% MATCHING BLOCK 97/516**

**W**

instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future, (

d) a description of ordinary share transactions or potential ordinary share transactions that occur after the reporting period and that would have changed significantly the number of ordinary shares or potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

[46] [ 46 ]

**98% MATCHING BLOCK 98/516**

**W**

Ind AS 34: Interim Financial Reporting The objective of this Standard is to prescribe the minimum content of an interim financial report and to prescribe the principles for recognition and measurement in complete or condensed financial statements for an interim period.

An interim period is a financial reporting period shorter than a full financial year. Interim financial report means a financial report containing either a complete set of financial statements (as described in Ind AS 1, Presentation of Financial Statements, or a set of condensed financial statements (as described in this Standard) for an interim period. As per Ind AS 34, disclosures shall include (a) a statement that the same accounting policies and methods of computation are followed in the interim financial statements as compared with the most recent annual financial statements (b) explanatory comments about the seasonality or cyclicity

**87% MATCHING BLOCK 99/516**

**W**

of interim operations (c) the nature and amount of items affecting assets, liabilities, equity, net income or cash flows that are unusual because of their nature, size or incidence (

d)

**95% MATCHING BLOCK 100/516**

**W**

the nature and amount of changes in estimates of amounts reported in prior interim periods of the current financial year or changes in estimates of amounts reported in prior financial

years (e) issues,

**93% MATCHING BLOCK 107/516**

**SA**

Canadian GAAPs.pdf (D917184)

repurchases and repayments of debt and equity securities (f) dividends paid (aggregate or per share) separately for ordinary shares and other shares, (

g) segment information, (h) events after the interim period that have not been reflected in the financial statements for the interim period, (i) the

**88% MATCHING BLOCK 101/516**

**W**

effect of changes in the composition of the entity during the interim period, (

j) information about fair value as required by Ind AS 113 and Ind AS 107, (k) the disaggregation of revenue from contracts with customers required by Ind AS 115.

**99% MATCHING BLOCK 102/516**

**W**

Ind AS 36: Impairment of Assets The objective of this Standard is to prescribe the procedures that an entity applies to ensure that its assets are carried at no more than their recoverable amount. An asset is carried at more than its recoverable amount if its carrying amount exceeds the amount to be recovered through use or sale of the asset. If this is the case, the asset is described as impaired and the Standard requires the entity to recognise an impairment loss. The Standard also specifies when an entity should reverse an impairment loss.

According to Ind AS 36,

**94% MATCHING BLOCK 103/516**

**W**

an entity shall disclose, among many things (a) the amount of impairment losses recognised in profit or loss during the period and the line item(s) of the statement of profit and loss in which those impairment losses are included. (b) the amount of reversals of impairment losses recognised in profit or loss during the period and the line item(s) of the statement of profit [47] [ 47 ] and loss in which those impairment losses are reversed. (c) the amount of impairment losses on revalued assets recognised in other comprehensive income during the period. (d) the amount of reversals of impairment losses on revalued assets recognised in other comprehensive income during the period.

The Standard also requires disclosure of information on impairment loss recognised and reversals made with respect to each reportable segment. Again, for each individual assets or cash generating unit, information such as (a) the events leading to impairment, (b) amount of loss recognised or reversed along with the description of individual assets or cash generating units (c) recoverable amount and related information.

**99% MATCHING BLOCK 104/516**

**W**

Ind AS 38: Intangible Assets The objective of this Standard is to prescribe the accounting treatment for intangible assets that are not dealt with specifically in another Standard. This Standard requires an entity to recognise an intangible asset if, and only if, specified criteria are met. The Standard also specifies how to measure the carrying amount of intangible assets and requires specified disclosures about intangible assets.

As regards to the general disclosures, Ind As 38 requires an entity to disclose,

**78% MATCHING BLOCK 105/516**

**W**

for each class of intangible assets (distinguishing between internally generated intangible assets and others), (a) whether the useful lives

are indefinite or finite and, if finite, the useful lives or the amortisation rates used; (b) the amortisation methods used for intangible assets with finite useful lives; (

**87% MATCHING BLOCK 106/516**

**W**

c) the gross carrying amount and any accumulated amortisation (aggregated with accumulated impairment losses) at the beginning and end of the period; (d)

the line item(s) of the statement of profit and loss in which any amortisation of intangible assets is included; (

**100% MATCHING BLOCK 108/516**

**W**

e) a reconciliation of the carrying amount at the beginning and end of the period.

An entity shall also disclose (a) for an intangible asset assessed as having an indefinite useful life, the carrying amount of that asset and the reasons supporting the assessment of an indefinite

**86% MATCHING BLOCK 109/516**

**W**

useful life, (b) a description, the carrying amount and remaining amortisation period of any individual intangible asset that is material to the

entity's financial statements, (c) for intangible assets acquired by way of a government grant and initially recognised at fair value – the fair value initially recognised, the carrying amount.

**97% MATCHING BLOCK 110/516**

**W**

Ind AS 40: Investment Property The objective of this Standard is to prescribe the accounting treatment for investment property and related disclosure requirements.

According to this standard, an owned investment property shall

**78% MATCHING BLOCK 111/516**

**W**

be recognised as an asset when, and only when: (a) it is probable that

the future economic benefits that are associated with the [48] [ 48 ] investment property

**73% MATCHING BLOCK 112/516**

**W**

will flow to the entity; and (b) the cost of the investment property can be measured reliably.

The owned investment property shall be measured initially at its cost. Transaction costs shall be included in the initial measurement. As regards to the disclosure requirements, an entity shall disclose (a) its accounting policy for measurement of investment property, (b) the criteria it uses to distinguish investment property from owner-occupied property and from

**100% MATCHING BLOCK 113/516**

**W**

property held for sale in the ordinary course of business

when classification is difficult, (c) the extent to which the fair value of investment property is based on a valuation by an independent valuer, (d) the amounts recognised in profit or loss for rental income from investment property, direct operating expenses arising from investment property that generated rental income during the period, direct operating expenses arising from investment property that did not generate rental income during the period, (e) the existence and amounts of

**71% MATCHING BLOCK 114/516**

**W**

restrictions on the realisability of investment property or the remittance of income and proceeds of disposal,

and (f) contractual obligations to purchase, construct or develop investment property or for repairs, maintenance or enhancements. In addition to above, the entity shall also disclose the depreciation method used, the useful lives or depreciation rate used, the gross carrying amount

**84% MATCHING BLOCK 115/516**

**W**

at the beginning and end of the period and a reconciliation between the

two and the fair value

**97% MATCHING BLOCK 116/516**

**W**

of investment property. Ind AS 41: Agriculture The objective of this Standard is to prescribe the accounting treatment and disclosures related to agricultural activity.

The standard applies to account for

**90% MATCHING BLOCK 117/516**

**W**

biological assets, agricultural produce at the point of harvest and government

grant when they relate to agricultural activity. Among many items, the general disclosures required by Ind AS 41 include disclosure relating to the aggregate gain or loss arising during the current period on initial recognition of biological assets and agricultural produce and from the change in fair value less costs to sell of biological assets, description of each group of biological assets, the nature of its activities involving each group of biological assets and non-financial measures or estimates of the physical quantities of (i) each group of the entity's biological assets at the end of the period and (ii) output of agricultural produce during the period. Additionally, an entity shall disclose (a)

**83% MATCHING BLOCK 118/516**

**W**

the existence and carrying amounts of biological assets whose title is restricted, and the carrying amounts of biological assets pledged as security for liabilities (b) the amount of commitments for the

development or acquisition of biological assets and (c) financial risk management strategies related to agricultural activity. There are additional disclosure requirements as well for biological assets where fair value cannot be measured reliably and for government grants in this respect.

[49] [ 49 ]

**94% MATCHING BLOCK 119/516**

**W**

Ind AS 102: Share Based Payment The objective of this Standard is to specify the financial reporting by an entity when it undertakes a share-based payment transaction. More specifically, it requires an entity to reflect in its profit or loss and financial position the effects of share-based payment transactions, including expenses associated with transactions in which share options are granted to employees.

According to this standard,

**100% MATCHING BLOCK 120/516**

**W**

an entity shall recognise the goods or services received or acquired in a share-based payment transaction when it obtains the goods or as the services are received. The entity shall recognise a corresponding increase in equity if the goods or services were received in an equity-settled share-based payment transaction, or a liability if the goods or services were acquired in a cash-settled share-based payment transaction.

However,

**100% MATCHING BLOCK 121/516 W**

when the goods or services received or acquired in a share-based payment transaction do not qualify for recognition as assets, they shall be recognised as expenses.

For

**100% MATCHING BLOCK 122/516 W**

equity-settled share-based payment transactions, the entity shall measure the goods or services received, and the corresponding increase in equity, directly, at the fair value of the goods or services received, unless that fair value cannot be estimated reliably. If the entity cannot estimate reliably the fair value of the goods or services received, the entity shall measure their value, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted.

As regards to the disclosure requirements, the standard requires an entity to disclose information that enables users of the financial statements

**92% MATCHING BLOCK 124/516 SA** Canadian GAAPs.pdf (D917184)

to understand the nature and extent of share-based payment arrangements that existed during the period, how the fair value of the goods or services received, or the fair value of the equity instruments granted, during the period was determined and the effect of share-based payment transactions on the entity's profit or loss for the period and on its financial position.

Ind AS 103: Business Combinations This standard deals with the principles and requirements as to

**97% MATCHING BLOCK 123/516 W**

how the acquirer recognizes and measures, in its financial statements, the identifiable assets acquired, the liabilities assumed and any non-controlling interest in the acquiree; recognises and measures the goodwill acquired in the business combination or a gain from a bargain purchase; and determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination.

The Standard requires

**88% MATCHING BLOCK 132/516 SA** new Sec B Corporate Accounting (1)-8-84.pdf (D142427798)

an entity to account for each business combination by applying the acquisition method. (

For details regarding the accounting for business combinations please refer to Unit 6)  
[50] [ 50 ] As regards to the disclosure requirements, the Standard requires the acquirer to disclose, with respect to each business combination that occurs during the reporting period,

**63% MATCHING BLOCK 125/516**

**W**

the name and description of the acquiree, acquisition date, the percentage of voting equity interests acquired, the primary reason for combination and the process of obtaining control, a qualitative description of the factors that make up the goodwill recognised, the acquisition-date fair value of the total consideration transferred as well as of each major class, contingent consideration

related information, amount recognised

**100% MATCHING BLOCK 126/516**

**W**

for each major class of assets acquired and liabilities assumed,

goodwill and gain on bargain purchase etc. Ind AS 108: Operating Segments It deals with the disclosure of information on the basis of segment of an enterprise. The Standard prescribes the rules for identification of reportable segments and the aggregation criteria for aggregating two or more segments into one. The disclosure requirements include both general information and entity wide disclosures. (For details, please refer to Unit 7)

**98% MATCHING BLOCK 127/516**

**W**

Ind AS 110: Consolidated Financial Statements The objective of this Indian Accounting Standard (Ind AS) is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities.

**100% MATCHING BLOCK 128/516**

**W**

A parent shall prepare consolidated financial statements using uniform accounting policies for like transactions and other events in similar circumstances.

**100% MATCHING BLOCK 129/516**

**W**

A parent shall present non-controlling interests in the consolidated balance sheet within equity, separately from the equity of the owners of the parent.

**98% MATCHING BLOCK 130/516**

**W**

Ind AS 111: Joint Arrangements The objective of this Indian Accounting Standard (Ind AS) is to establish principles for financial reporting by entities that have an interest in arrangements that are controlled jointly (i.e., joint arrangements).

**98% MATCHING BLOCK 131/516**

**W**

A joint arrangement is an arrangement of which two or more parties have joint control. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

A joint arrangement can either be a joint operation or a joint venture. Ind AS 113: Fair Value Measurement This Standard provides the definition of fair value and set out a framework for measuring fair value and requires disclosures about

**89% MATCHING BLOCK 133/516**

**W**

fair value measurements. Fair value as the price that would be received to sell an asset or paid to transfer a liability in [51] [ 51 ] an orderly transaction between market participants at the measurement date. To

increase consistency and comparability in fair value measurements and related disclosures,

**97% MATCHING BLOCK 134/516**

**W**

this Ind AS establishes a fair value hierarchy that categorises into three levels, the inputs to valuation techniques

used to measure

**98% MATCHING BLOCK 135/516**

**W**

fair value. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. Level 3 inputs are unobservable inputs for the asset or liability. The

standard  
requires  
an entity to

**100% MATCHING BLOCK 136/516**

**W**

disclose information that helps users of its financial statements assess both of the following: (

a)

**100% MATCHING BLOCK 137/516**

**W**

for assets and liabilities that are measured at fair value on a recurring or non-recurring basis in the balance sheet after initial recognition, the valuation techniques and inputs used to develop those measurements. (

b)

**100% MATCHING BLOCK 138/516**

**W**

for recurring fair value measurements using significant unobservable inputs (Level 3), the effect of the measurements on profit or loss or other comprehensive income for the period.

Ind AS 115: Revenue from contracts with Customers Ind AS 115 provides a single model for revenue recognition from the contracts with customers. The core principle of Ind AS 115 is that revenue should be recognised from

**69% MATCHING BLOCK 139/516**

**W**

the transfer of goods and services to a customer in an amount that reflects the consideration that the entity expects to be entitled

to in exchange for goods and services. Ind AS 115 suggests a five-step process for revenue recognition as follows: Step 1: Identify the contracts with customer Step 2: Identify the separate performance obligations Step 3:

<b>76%</b>	<b>MATCHING BLOCK 140/516</b>	<b>W</b>
Determine the transaction price Step 4: Allocate the transaction price to the performance obligations Step 5: Recognise revenue when (		

or as) a performance obligation is satisfied According to Ind AS 115, an entity shall disclose qualitative and quantitative information about the contract with customers. It shall ensure a separate disclosure of revenue from contracts with customers from other sources of revenue; impairment loss recognised on receivable or contract assets should be disclosed separately from other impairment losses; disclosure should be there for aggregate revenue, contract balances i.e., receivables, contract assets and contract liabilities; there should be disclosure of performance obligations, disclosure of transaction price allocated to the remaining performance of the patients and disclosure of use of practical expedients. [52] [ 52 ] Ind AS 116: Leases This Standard sets out the principles for the recognition, measurement, presentation and disclosure of leases. The objective is to ensure that lessees and lessors provide relevant information in a manner that faithfully represents those transactions. This information gives a basis for users of financial statements to assess the effect that leases have on

<b>100%</b>	<b>MATCHING BLOCK 141/516</b>	<b>W</b>
the financial position, financial performance and cash flows of an entity.		

According to this standard, at inception of a contract, an entity shall assess whether the contract is, or contains, a lease. A contract is, or contains, a lease if the

<b>57%</b>	<b>MATCHING BLOCK 144/516</b>	<b>SA</b>	M.Com.I_Adv._Accountancy_P._I____III_all.PDF (D142209931)
contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.			

At the commencement date, a lessee shall recognise a right-of use asset and a lease liability. The right-of-use asset shall be measured at cost. At the commencement date, a lessee shall measure the lease liability at the present value of the lease payments that are not paid at that date. The lease payments shall be discounted using the interest rate implicit in the lease, if that rate can be readily determined. If that rate cannot be readily determined, the lessee shall use the lessee's incremental borrowing rate. After the commencement date, a lessee shall measure the right-of-use asset applying a cost model. After the commencement date, a lessee shall measure the lease liability by: (a) increasing the carrying amount to reflect interest on the lease liability; (b) reducing the carrying amount to reflect the lease payments made; and (c) remeasuring the carrying amount to reflect any reassessment or lease modifications. A lessee shall disclose information about its leases for which it is a lessee in a single note or separate section in its financial statements. A lessee shall disclose, for the reporting period, (a) depreciation charge for right-of-use assets by class of underlying asset (b) interest expense on lease liabilities (c) the expense relating to short-term leases (d) the expense relating to leases of low-value assets (e) the expense relating to variable lease payments not included in the measurement of lease liabilities (f) income from subleasing right-of-use assets (g) total cash outflow for leases (h) additions to right-of-use assets (i) gains or losses arising from sale and leaseback transactions and (j) the carrying amount of right-of-use assets at the end of the reporting period by class of underlying asset. A lessor shall disclose the following amounts for the reporting period: (a) for finance leases: (i) selling profit or loss; (ii) finance income on the net investment in the lease; and (iii) income relating to variable lease payments not included in the measurement of the net investment in the lease. (b) for operating leases, lease income, separately disclosing income relating to variable lease payments that do not depend on an index or a rate.

[53] [ 53 ] 1.5.3 Disclosures in Company Accounts as per SEBI Regulations Stock exchanges have a vital role in the development of capital markets for the benefit of the corporate sector. At the same time, they exert influence on the reporting practices of companies with a view to safeguard the interest of present and potential investors through the compliance of Listing Agreement on the admission of securities for listing. The listing agreement is the most influential aspect of stock exchange regulation as far as the financial reporting is concerned. It aims at securing a regular supply of information to investors and others, and at specifying the information which must be supplied by a company. It also ensures consistency of company financial reporting requiring the disclosure of reasons for deviations from an existing policy. Moreover, according to the Agreement Form, each company is generally required to publish in a form, approved by the stock exchange, periodical interim statement, total turnover, gross profit, depreciation, net profit etc. Thus, the role of stock exchange, as a regulatory body, in corporate accounting is essentially very important. The Securities and Exchange Board of India (SEBI) came into existence in 1992 as an exclusive and regulatory body of Indian capital market. It has brought a new dimension in the field of securities transactions in India. During the last three decades, it has taken a number of steps in order to discharge the responsibility of regulating both the primary market (initial issue of securities) and secondary market (dealing with securities in the stock exchanges) with a view to bringing uniformity through the compliance of its guidance in the matter of financial reporting practices by the companies in the interests of both the present and potential investors. SEBI guidelines in respect of financial accounting and reporting is mainly covered by the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 notified on 02.09.2015. The main provisions relating to accounting and reporting or disclosures are discussed below: Chapter IV: Obligations of Listed Entity Which Has Listed Its Specified Securities Clause 33: Financial Results (1) While preparing financial results, the listed entity shall comply with the following: (a) The financial results shall be prepared on the basis of accrual accounting policy and shall be in accordance with uniform accounting practices adopted for all the periods. (b) The quarterly and year to date results shall be prepared in accordance with the recognition and measurement principles laid down in Accounting Standard 25 or Indian Accounting Standard 31 (AS 25/ Ind AS 34 – Interim [54] [ 54 ] Financial Reporting), as applicable, specified in Section 133 of the Companies Act, 2013. (c) The standalone financial results and consolidated financial results shall be prepared as per Generally Accepted Accounting Principles in India: Provided that in addition to the above, the listed entity may also submit the financial results, as per the International Financial Reporting Standards notified by the International Accounting Standards Board. Clause 34: Annual Report (2) The annual report shall contain the following: (a) audited financial statements i.e., balance sheets, profit and loss accounts etc. (b) consolidated financial statements audited by its statutory auditors; (c) cash flow statement presented only under the indirect method as prescribed in Accounting Standard-3 or Indian Accounting Standard 7, as applicable (d) directors report; (e) management discussion and analysis report - either as a part of director’s report or addition thereto; (f) for the five hundred listed entities based on market capitalization (calculated as on March 31 of every financial year),

**89%**

**W**

business responsibility report describing the initiatives taken by them from an environmental, social and governance perspective, in the format as specified by the Board

from time to time. Other than top five hundred listed companies based on market capitalization and listed entities which have listed their specified securities on SME Exchange, may include these business responsibility reports on a voluntary basis in the format as specified. (3) The annual report shall contain any other disclosures specified in Companies Act, 2013 along with other requirements as specified in Schedule V of these regulations. Clause 43: Dividends (1) The listed entity shall declare and disclose the dividend on per share basis only. Clause 48: Accounting Standard The listed entity shall comply with all the applicable and notified Accounting Standards from time to time.

[55] [ 55 ] Chapter V : Listed Entity Which Has Listed Its Nonconvertible Debt Securities or Nonconvertible Redeemable Preference Shares or Both Clause 52: Financial Results (1) The listed entity shall prepare and submit un-audited or audited financial results on a half yearly basis in the format as specified by the Board within forty- five days from the end of the half year to the recognised stock exchange(s). (4) The listed entity, while submitting half yearly / annual financial results, shall disclose the following line items along with the financial results: (a) credit rating and change in credit rating (if any); (b) asset cover available, in case of non-convertible debt securities; (c) debt-equity ratio; (d) previous due date for the payment of interest/ dividend for non-convertible redeemable preference shares/ repayment of principal of non-convertible preference shares /non-convertible debt securities and whether the same has been paid or not; and, (e) next due date for the payment of interest/ dividend of non-convertible preference shares /principal along with the amount of interest/ dividend of non-convertible preference shares payable and the redemption amount; (f) debt service coverage ratio; (g) interest service coverage ratio; (h) outstanding redeemable preference shares (quantity and value); (i) capital redemption reserve/debenture redemption reserve; (j) net worth; (k) net profit after tax; (l) earnings per share. However, the requirement of disclosures of debt service coverage ratio, asset cover and interest service coverage ratio shall not be applicable for banks or non-banking financial companies registered with the Reserve Bank of India. (6) The listed entity which has listed its non-convertible redeemable preference shares shall make the following additional disclosures as notes to financials: (a) profit for the half year and cumulative profit for the year; (b) free reserve as on the end of half year; (c) securities premium account balance (if redemption of redeemable preference share is to be done at a premium, such premium may be appropriated from securities premium account): Provided that disclosure on securities premium account balance may be provided only in the year in which non-convertible redeemable preference shares are due for redemption; (d) track record of dividend payment on non-convertible redeemable preference shares: Provided that in case the dividend has been deferred at any time, then the actual date of payment shall be disclosed; (e) breach of any covenants under the terms of the non-convertible redeemable preference shares: Provided that in case a listed entity is planning a fresh issuance of shares whose end use is servicing of the non-convertible redeemable preference shares (whether dividend or principle redemption), then the same shall be disclosed whenever the listed entity decided on such issuances.

[56] [ 56 ] Clause 53: Annual report The annual report of the listed entity shall contain disclosures as specified in Companies Act, 2013 along with the following: (a) audited financial statements i.e., balance sheets, profit and loss accounts etc; (b) cash flow statement presented only under the indirect method as prescribed in Accounting Standard-3/ Indian Accounting Standard 7; (c) auditors report; (d) directors report; (e) name of the debenture trustees with full contact details (f) related party disclosures as specified in Para A of Schedule V. Chapter VI: Listed Entity Which Has Listed Its Specified Securities and Either Non-convertible Debt Securities or Non-Convertible Redeemable Preference Shares or Both Clause 63: Applicability of Chapters IV and V (1) Entity which has listed its 'specified securities' and 'non-convertible debt securities' or 'non-convertible redeemable preference shares' or both on any recognised stock exchange, shall be bound by the provisions in Chapter IV of these regulations. 1.6 Summary Proper and adequate disclosure of information through preparation and presentation of financial and non-financial statements, charts, diagrams etc. is the need of the hour not only in interest of a wide variety of users for taking right decisions but also in the interest of the companies themselves in the matter of compliance of disclosure requirements as required by the Companies Act 2013, Indian Accounting Standards notified by MCA and SEBI (LODR) Regulations 2015. MCA and SEBI have been playing a remarkable role in the development of corporate accounting and reporting with a view to harmonizing diverse accounting and reporting practices in India through the legal framework of Acts, Standards and Regulations respectively. 1.7 Exercises 1. What are the objectives of disclosure of information? 2. What is meant by regulation of corporate accounting and reporting? Why is external regulation essential? 3. Explain in brief the disclosure requirements in the financial statements as per the Companies Act 2013.

[57] [ 57 ] 4. What is the necessity of accounting standards? Can accounting standards remove diverse financial accounting and reporting practices? 5. State the disclosure requirements in the financial statements for the following: a) Inventories (Ind AS 2) b) Statement of Cash Flows (Ind AS 7) c)

Exercises [59] [ 59 ] 2.1 Objective After going through this unit, you will be able to: ? know the meaning			

of goodwill, its types and the factors affecting

it; ? explain the need for valuation and methods of valuation; ? explain why valuation of shares is necessary and the methods of valuation. 2.2 Introduction Goodwill is an intangible asset but not fictitious. Since it is an intangible asset, it cannot be used as tangible assets like land & building, plant & machinery, furniture & fittings; but like other tangible assets it contributes to the profit earning capacity of the business. Again, goodwill is a valuable asset if the business is profitable; it is value less if the business is a losing one. When a business is able to earn profits at a rate higher than its similar counterparts, the business is said to possess goodwill. 2.3 Meaning of Goodwill Goodwill is the value of the reputation, connection or other advantage of the business judged in respect of its capacity to bring in, unaided, profits. It is that attractive force which brings customers into the business. Again, it is the value of excess earning power of a firm. Actually, it is the anticipated future excess earnings of an enterprise. Thus,

<b>93%</b>	<b>MATCHING BLOCK 150/516</b>	<b>SA</b>	MCOM-AFA - Plagarism - M.Com - 1st Sem-USH.docx (D127906811)
goodwill may be defined as the value of the reputation of a business in respect of profits expected in future over and above the normal level of profit earned by			

the undertaking belonging to the same class of business. 2.4 Types of Goodwill In business, there are two types of goodwill, namely, Purchased goodwill and Inherent or Non-purchased goodwill. Different types of goodwill are discussed in the paragraphs that follow. 2.4.1 Purchased Goodwill It may arise when a business purchases another business. Purchased goodwill is the excess of the purchase consideration over and above the fair value of the separable net assets acquired with an expectation of better future prospects of the entity as a whole. It must not exist in a business except by business purchase. Conventionally, only purchased goodwill is recognized in accounting. [60] [ 60 ] 2.4.2 Non-purchased Goodwill Internally generated goodwill is known as non-purchased, self-generated or inherent goodwill. It arises when a business generates its own goodwill over the years. It is not shown in the balance sheet. 2.5 Factors Contributing to Goodwill The following factors contribute significantly in developing the goodwill of an organization. 1. Superior management team 2. Outstanding sales manager of organization 3. Weakness in the management of a competitor 4. Effective advertising 5. Secret or patented manufacturing 6. Good labour relations 7. Outstanding credit rating 8. Top flight training programme for employees 9. Good public 'image' 10. Unfavourable development in operation of a competitor 11. Favourable association with another company 12. Strategic location 13. Discovery of talents or resources 14. Favourable tax conditions 15. Favourable government regulations 16. Favourable attitudes of customers 17. Excellent reputation for quality and reliability of products 18. Number of outlets for products 19. Number of service locations for products 20. Favourable agency agreements 21. Established list of customers 22. Established license to trade 23. Experienced work-force 24. Good relations with suppliers 25. Superior pension fund resources

[61] [ 61 ] 2.6 Need for Valuation of Goodwill In case of a joint stock company, the need for valuation of goodwill arises in the following circumstances: a. When the business of a company is taken over by another company for the purpose of amalgamation or absorption. b. When the shares of the company are not quoted on the stock exchange and their valuation is to be made for the purpose of taxation etc. c. When the business of a company is being taken over by the government. d. When a person (or a company) wants to buy a large block of shares of a company with a view to exercising control over the management of the company concerned. In case of a partnership organisation also valuation of goodwill may be necessary in case there is any change in the ownership structure of the organisation such as admission of a partner, retirement or death of a partner, change in profit sharing ratio etc. 2.7 Methods for Valuation of Goodwill Generally, there are three popular methods for valuation of goodwill. They are: (1) Super Profit Method; (2) Capitalization of Average Profits Method, and (3) Annuity Method. These may be discussed in the following paragraphs: 2.7.1 Super Profit Method The excess of average future maintainable profit over the normal profit is known as super profit. In this method, goodwill is taken as the sum of super profits of the future years for which such super profit is expected to be maintained. The elements to be taken into account in determining the value of goodwill are: (a) Average future maintainable trading profit; (b) Capital employed; (c) Normal rate of return; and (d) Number of year(s) for which super profit is expected to be maintained, i.e., number of years' purchase. Super

**80% MATCHING BLOCK 149/516**

**W**

Profit ? Future maintainable profit ? (Capital employed ? Normal rate of return) Goodwill ? Super profit ?

Number of year(s) for which super profit can be maintained. Following illustration will clarify the above steps.

[62] [ 62 ] Illustration 1: Valuation of Goodwill under Super Profit Method; Simple Problem Capital employed of Venus Ltd. was Rs. 20,00,000. Trading profits for the last 3 years were Rs. 2,90,000, Rs. 3,00,000 and Rs. 3,10,000 respectively. Normal rate of return is 12%. Super profit is expected to be maintained for 4 years. Determine the value of goodwill. Solution: Calculation of Super Profit Av. future maintainable trading profit [(2,90,000 + 3,00,000 + 3,10,000) / 3] Rs. 3,00,000 Less: Normal return @ 12% on capital employed ( Rs. 20,00,000 \* 12%) Rs. 2,40,000 Rs. 60,000 Value of goodwill ? Super profit ? No. of year

for which super profit can be maintained ? Rs. 60,000 ? 4 ? Rs. 2,40,000. The steps of calculation of goodwill under super profit method are now discussed in detail as follows: (a) Future Maintainable Trading Profit Future maintainable profit is an important factor in determining the value of goodwill. Future maintainable profit is ascertained by taking either simple average or weighted average, as the circumstance demands, of the past profits. Conventionally, profits of last 3 to 5 years are considered. When the past profits do not show any definite trend, simple average is used to ascertain the future maintainable profit. In case of existence of increasing or decreasing trend in the past profits, weighted average is taken in order to ascertain future maintainable profit. However, more weights are assigned to the profit figures of the immediate past years while less weights are given to the profit figures of the furthest past years. Moreover, only trading profits should be considered as goodwill in the result of organisation's operation and hence should not be affected by any non-trading expenses or losses and non-trading income. Nevertheless, ascertainment of future maintainable trading profit requires following adjustments: (1) Elimination of non-trading loss due to sale of asset(s), fire, earthquake, flood, strike, lock out, etc, from profit or loss. (2) Elimination of any non-trading expenses such as interest on loan or interest on debentures.

[63] [ 63 ] (3) Elimination of non-trading income arising out of sale of asset(s), dividend or interest income, etc. from profit or loss because capital employed consists only of trading assets. But, in case of income received from trading investments, no adjustment is needed. (4) In case of increase or decrease in the value of fixed assets on account of revaluation, under-charged or over-charged depreciation should be adjusted on the increased or decreased values. (5) In case of change in the corporate tax rate, tax charged at old rate should be added back and tax should be charged at new rate. (6) In case of change in accounting policy, profit or loss should be so adjusted to have profit or loss on the basis of uniform accounting policy. (b) Capital Employed It is the most important factor in valuation of goodwill because the volume of profit is significant only in relation to the capital used to earn it. Thus, while valuing the goodwill, capital employed refers to permanent resources used to earn operating or trading profit. Accordingly, capital employed means 'total assets minus non-trading assets minus fictitious assets minus current liabilities.' Alternatively, capital employed means 'net-worth plus long-term debt.' This basically, gives us the Trading Capital Employed. It is to be remembered that profit is expressed in terms of current prices. So, in order to make fair determination of capital employed, all assets and current liabilities (or, outside liabilities) are to be taken at current prices, because profit is measured at current price. In making so, all fixed assets and inventories are to be taken into account at current prices and the remaining current assets and current liabilities (or, outside liabilities) need not require any valuation as they are already stated at current prices. However, expected bad debt should be deducted from sundry debtors. Here, current prices will mean their fair value. Since the capital employed changes over the year, it would be better to have an average capital employed instead of capital employed (i.e., closing capital employed) because average capital employed is the true representative of the capital employed while evaluating goodwill. It is determined by deducting half of the current year's trading profit (after tax) from the closing capital employed. (c) Normal Rate of Return on capital employed Normal rate of return is the third important factor in valuing goodwill. It means the rate of return that a similar business is earning with the similar resources (i.e.,

[64] [ 64 ] capital employed). Such a return differs from industry to industry. It comprises of two components: (1) Risk-free rate : It is the pure interest rate prevailing in the concerned economy (the rate of return on fixed deposit in bank or government securities may be considered as risk-free rate). (2) Risk premium : It is the premium in addition to risk-free rate for taking business risk for the industry to which the company belongs. It is relevant to state that, higher is the business risk, the higher is the normal rate of return. In practice, industry average return is taken as normal rate of return. Consider the following comprehensive illustration. Illustration 2 : Valuation of Goodwill under Super Profit Method; Comprehensive Problem From the following information, determine: (a) Closing trading capital employed; (b) Average trading capital employed; and (c) Value of goodwill by super profit method (on the basis of 5 years' purchase of average super profit).

The summarized

ACA Unit 3 (1).docx (D145689842)

Ltd. as on December 31, 2020 Liabilities Amount Assets Amount Rs. Rs. 20,000 Equity Shares of Rs. 10 each 2,00,000  
Fixed Assets 3,50,000 1,000 9% Preference Shares Investments of Rs. 100 each 1,00,000 (6%

Govt. Deposit) 45,000 Reserve and Surplus 1,80,000 Current Assets 2,00,000 10% Debentures 90,000 Fictitious assets 55,000 Creditors 60,000 Provision for Taxation 20,000 6,50,000 6,50,000  
[65] [ 65 ] The current market value of the plant included in fixed assets is Rs. 15,000 more. The average profit of the company (after deductions of interest and govt. taxes) is Rs. 68,000. The normal rate of return on capital employed is 12%. Depreciation rate on plant 10%. Tax rate is 40%. Solution. (a) Closing Trading Capital Employed Particulars Rs. Total Assets as per given balance sheet 6,50,000 Less : Fictitious assets (55,000) Less : Investment (being non-trading) (45,000) Add : Increase in plant 15,000 Less : Provision for taxation (20,000) Creditors (60,000) Closing trading capital employed 4,85,000 (b) Average Trading Capital Employed Particulars Rs. Closing Trading Capital Employed as in (a) above 4,85,000 Less :  $\frac{1}{2}$  of \*current year's trading profit after taxes (70,880  $\times$   $\frac{1}{2}$ ) 35,440 Average trading capital employed 4,49,560 \* Here, it is assumed that current year's trading profit is same as the average maintainable trading profit. (c) Valuation of Goodwill (i) Super Profit Method: Particulars Rs. Average profit after interest and tax 68,000 Less : Income from investments after tax (45,000  $\times$  6%) (1,620) Less : Depreciation on the increased value of plant net of tax (15000  $\times$  10%  $\times$  60%) (900) Add : Debenture Interest (90000  $\times$  10%  $\times$  60%) 5,400 Average maintainable trading profit after tax 70,880.00 Less : Normal return on average trading capital 53,947.20 employed (4,49,560  $\times$  12%) Super profit 16,932.80

[66] [ 66 ] Goodwill  $\times$  Super Profit  $\times$  No of years for which super profit can be maintained  $\times$  5  $\times$  Rs.16,932.80  $\times$  5  $\times$  Rs.84,664  
2.7.2 Capitalization of Average Profits Method Under this method, average future maintainable trading profit is capitalised using normal rate of return on capital employed to arrive at the value of the firm (including goodwill). Goodwill is taken as the excess of the value of the firm (including goodwill) over the value of capital employed (excluding goodwill) for which goodwill is calculated. In this method the following elements are to be taken into account: (a) Average future maintainable trading profit; (b) Capital employed in the business for which goodwill is to be calculated; and (c) Normal rate of return in the industry to which the business belongs.

**72%**

**MATCHING BLOCK 151/516**

**W**

Value of the business  $\times$  (Average future maintainable trading profit) / (Normal rate of return) Value of goodwill  $\times$  Value of the business  $\times$

Value of capital employed Illustration 3 : Valuation of Goodwill Under Capitalisation Method Capital employed in Venus Company Ltd. is Rs. 20,00,000. Average future maintainable trading profit is Rs. 3,00,000. Normal rate of return is 12%. Find out the value of goodwill. Solution : Value of the business  $\times$  (Average future maintainable trading profit)/Normal rate of return  $\times$  (Rs. 3,00,000)/ 12%  $\times$  Rs. 25,00,000 Value of goodwill  $\times$  ( Value of the business)  $\times$  (Value of capital employed)  $\times$  Rs. (25,00,000  $\times$  20,00,000)  $\times$  Rs. 5,00,000 Illustration 4 : Valuation of Goodwill under Capitalization Method Refer to Illustration 2. Compute goodwill under Capitalization Method.

[67] [ 67 ] Solution : Capitalization Method Value of the business ? (Average future maintainable trading profit)/Normal rate of return ? (Rs. 70,880)/12% ? Rs.5,90,667 Value of goodwill ? (Value of the business) ? (Value of capital employed) ? Rs. (Rs.5,90,667 ? 4,85,000) ? Rs. 1,05,667 2.7.3. Annuity Method This method is the refinement of the super profit method. Super profit is expected to arise usually at the end of each financial year, i.e., at different points of time. In order to find out the value of goodwill, it would be unfair to simply multiply the super profit by the number of years' purchase for which super profit is expected to be earned. So future values of super profit must be discounted using appropriate discount rate (i.e., normal rate of return) with a view to getting present value of super profits. In case of annual super profit, the Annuity Formula can be used suitably for discounting future values of super profit in order to convert them into the present value; or, annual super profits can be multiplied by the sum of present values of the appropriate discount rate to find out the value of goodwill. Illustration 5 : Valuation of Goodwill Under Annuity Method Super profit of Venus Ltd. Rs. 60,000 per year can be maintained for 4 year. Discount rate is 12%. Find the value of goodwill. Solution : Goodwill (V) ? Super Profit ? PVIFA (i, n) Here, PVIFA 4 1 1 (1 ) 1 1 1(1 0.12) 3.0373 0.12 n i ? ? ? ? ? ? ? So, Value of goodwill ? Rs. 60,000 ? 3.0373 ? Rs. 1,82,238 Illustration 6 : Valuation of Goodwill Under Annuity Method Refer to Illustration 2. Compute goodwill under annuity method assuming appropriate discounting rate is 12%.

[68] [ 68 ] Solution : Annuity Method: Goodwill ? Super profit??Sum of present values at 12% for 5 years ? Rs. 16,932.80??3.6048 ? Rs. 61,039 2.8 Need for Valuation of Shares Shares of all public limited companies are not quoted on the stock exchange. Again, shares of private limited companies, in any case, will not be quoted. In case of change of hands of unquoted shares, value of such shares should be ascertained. Moreover, need for valuation of shares arises in the following circumstances: (1) Assessments under the estate duty, gift tax, wealth tax, etc. (2) Purchase of a block of shares generally involving acquisition of controlling interest in the company. (3) Formulation of schemes of amalgamation, absorption, reconstruction, etc. (4) Acquisition of interest of dissenting shareholders under a reconstruction scheme. (5) Compensating

**77% MATCHING BLOCK 152/516**

shareholders on the acquisition of their shares, by the government under a nationalisation scheme. (6) Conversion of preference shares into equity shares. (7) Advancing loan on the security of shares. (8)

Purchase of shares by the

**91% MATCHING BLOCK 153/516**

**W**

employees of the company where the retention of such shares is limited up to the period of their

retirement. 2.9 Methods of Valuation of Shares Basically, there are two methods used for valuation of equity shares. They are explained as below: 2.9.1 Net Asset Method This method is also known as asset backing method or intrinsic value method or break-up value method or balance sheet method. The essence of this method is the security, safety and asset cover of shares. Under this method, value per equity share is ascertained as follows: Value per equity share ? (Net assets available for equity shares)/(No. of equity shares)

[69] [ 69 ] The following important aspects should be considered while arriving at the 'net assets available for equity shares'. (1) A proper value should be placed on the goodwill of the business. Valuation of goodwill should be made using any of the methods, as explained in the preceding pages. (2) Proper valuation should be made for other intangibles like patents, trademarks, know-how, etc. They should be shown at their fair value. (3) Fictitious assets like debit balance in the profit & loss account, preliminary expenses, discount on debentures etc. should be excluded from total assets. (4) All tangible fixed assets and non-trading investments should be taken at their market values. In the absence of information relating to the market values of assets, balance sheet values may be taken as the market values. (5) Stock of finished goods including stock of raw materials and work-in- progress, should be valued at cost or market price, whichever is lower. (6) Adequate provision for bad and doubtful debts should be made against sundry debtors. (7) In case of equity shares having same nominal value, but different paid-up values, it is advisable to make notional calls on unpaid shares in order to make the partly paid-up shares notionally fully paid up. Amount to be realised from notional calls is taken as if cash in hand. (8) In case of equity shares having different nominal values and different paid- up values, it is advisable to distribute net assets available for equity shareholders before making notional calls among different groups of shares in proportion of paid up capital, and then make notional calls on unpaid shares to make them notionally fully paid up. Following liabilities should be deducted from the total assets arrived at as discussed above, in order to find out the net assets available for equity shareholders. (1) All long-term debts including outstanding interest. (2) Current liabilities like bank overdraft, sundry creditors, bills payable, outstanding expenses, pre-received incomes or provision for taxation. (3) All liabilities not provided for in the accounts, (4) Preference share capital including arrear preference dividends, if any.

[70] [ 70 ] Valuation of shares under net asset method is useful for formulating scheme of amalgamation or when a person (or, a company) wants to acquire a controlling interest in the company. This method is also suitable for those who are risk averse. Illustration 7 : Valuation of Shares Under Asset Backing / Net Assets Method

ascertain the value of each Equity Share by Net Asset Method on the basis of the

Balance Sheet immediately after redemption of Preference Shares taking into consideration of the following information: (a) Goodwill is valued at Rs. 85,000. (b) 10% of Sundry Debtors are to be considered as bad.

[71] [ 71 ] (c) A claim for compensation to an employee has been admitted on April 1, 2020, the amount involving being Rs. 5,000. (d) All other assets are to be taken at their book values. Solution : Net assets available for equity shareholders: Particulars Rs. Rs. Total assets as per last balance sheet 6,75,000 Add : Increase in goodwill 75,000 Less : Decrease in bank balance for redemption (1,10,000) of preference shares Less : Decrease in sundry debtors for bad debt (4,000) Less : Preliminary expenses (10,000) Less : Current liabilities: 6,26,000 Staff welfare fund\* 15,000 Employees' provident fund 1,40,000 Claim for compensation to an employee 5,000 Employees' saving A/c 20,000 Provision for taxation 40,000 Sundry Creditors 50,000 2,70,000 3,56,000 Value of each share ? (Net assets available for equity shares)/Number of shares ? Rs. 3,56,000/2,000 ? Rs. 178 \*Staff Welfare Fund is treated as current liability according to conservatism concept.

2.9.2 Yield Method Yield refers to effective rate of return from similar types of investment. Investors are interested in yield of the company and ultimately in dividend. The essence of this method is the return on investment. Hence, the valuation of shares should be based on return on investment of the company concerned. This method is also known as market value method or earning capacity method. Again, this method may be divided into two categories. They are: (1) Earnings Yield Method, and (2) Dividend Yield Method.

[72] [ 72 ] They are: (1) on the basis of expected rate of earning (for majority shareholders with long term view), and (2) on the basis of expected dividend (for minority shareholders with short term view). These are discussed below. ? Earnings Yield Method: This basis of valuation is most suitable to the holders of large block of shares (i.e., controlling interest/majority holding with long term view about the company). The formula for determining the yield value per equity share is:  $\text{Yield value} = \frac{[(\text{Expected rate of return}) \times (\text{Paid up value per share})]}{(\text{Normal Rate of Return})}$  In view of finding out the expected rate of return (or company yield), it is advisable to take the average of past years' earnings of the company. Moreover, it requires adjustment of the following aspects: (1) Abnormal losses due to fire, theft, burglary, etc. should be eliminated from the figures of profit and loss. (2) Non-recurring incomes and losses should be eliminated. (3) Capital profit or loss on account of sale of fixed assets should be eliminated. (4) Compensation paid to employees due to accident or voluntary retirement scheme (VRS) should be eliminated. (5) Compensation received for acquiring land or property of the company by the government, should be eliminated. (6) Adequate provision for taxation should be made. (7) Transfer to general reserve should be made. (8) Preference dividend should be considered. (9) Normal rate of return to equity shareholders (not on capital employed) should be considered. ? Dividend Yield Method: This basis of valuation is highly suitable to the holders of small block of shares (i.e., non-controlling interest/minority holding with short term view) because they are not interested in earning capacity of the company. As a result, expectation of the minority shareholders should be confined to the payment of dividend. The formula for ascertaining the yield value per share is:  $\text{Yield value} = \frac{[(\text{Expected rate of dividend}) \times (\text{Paid up value per share})]}{(\text{Normal rate of return})}$ .

[73] [ 73 ] In determining the expected rate of dividend, average of the immediate past 3 to 5 years of actual dividend paid by the company may be taken. This basis of valuation is preferred by investors who invest their funds with speculative motive and who are risk taker and are less interested in asset cover of their shares. dividend. Expected rate of dividend  $\frac{(14\% + 13\% + 15\%)}{3} = 14\%$  Normal rate of dividend  $12.50\%$  Yield value per share  $\frac{[(\text{Expected rate of dividend}) \times (\text{Paid up value})]}{(\text{Normal rate of dividend})}$  Fully paid up  $\frac{(14\% \times \text{Rs. } 10)}{12.50\%} = \text{Rs. } 11.20$  Partly paid up  $\frac{(14\% \times \text{Rs. } 7.50)}{12.50\%} = \text{Rs. } 8.40$

2.9.3 Preference Shareholders' Claim The claim of Preference Shareholders may be ascertained under the following situations: (1) When preference shares have priority as to the payment of capital only (i.e., non-cumulative), then preference shareholders' claim will be limited to paid up capital only. (2) When preference shares are redeemable at a premium, then preference shareholders' claim will be paid-up capital plus premium payable on redemption. (3) When preference shares have priority as to the payment of capital and arrear dividend (i.e., cumulative), the preference shareholders' claim will be limited to paid up capital plus arrear dividend. (4) When preference shares are participating, then preference shareholders' claim will be paid-up capital plus share of surplus of assets, if any, after payment of both preference share capital plus equity share capital. The question arrear preference dividend does not arise at all in case of non-cumulative preference shares. But when the shares are not specifically mentioned as non-cumulative, they should be considered as cumulative.

2.9.4 Fair Value of Share This is, of course, no valuation, but a compromise formula for bringing parties to an agreement. The fair value is simply the average of the values obtained by net asset method and yield method. It is often argued that the average of net asset value and yield value incorporates the merits of both the methods. For this reason, such average is called fair value. Thus, fair value per share  $\frac{(\text{Net asset value} + \text{Yield value})}{2}$ . Illustration 9 : Valuation of Equity and Preference Shares

Less : Transfer to General Reserve @ 20% 72,854 Preference dividend (3,00,000??8%) 24,000 96,854 Profit available for equity shareholders 2,67,414 Expected rate of return ? (Profit available for equity shares)??100]/Paid up equity capital ? (

Rs. 2,67,414/100)/Rs. 7,20,000 = 37.14% Normal rate of return to ESH = [Dividend per share/100]/ (Market price per share) = (Rs. 16/100)/Rs. 120 = 13.33% Yield value per share = [(Exp. Rate of return)/(Paid up value)] / (Normal rate of return to ESH): Fully paid up = (37.14%/Rs. 100)/13.33% = Rs. 278.62 Partly paid up = [37.14%/Rs. 80]/13.33% = Rs. 222.90 Fair Value per share: Fully paid up = Rs. (289.33 + 278.62)/2 = Rs. 283.98 Partly paid up = Rs. (269.33 + 222.90)/2 = Rs. 246.12 (b) Minority Shareholders (Dividend Yield): Average dividend = (18% + 19% + 20%)/3 = 19.33% Normal rate of return to ESH = 13.33% ESH = Equity Share Holding

[82] [ 82 ] Yield value per share = [(Exp. Rate of dividend)/(Paid up value)]/ (Normal rate of return to ESH) Fully paid up = [19.33%/Rs. 100]/13.33% = Rs.145.00 Partly paid up = [(19.33%/Rs. 80)/13.33% = Rs. 116.00 Fair value of a share: Fully paid up = Rs. (289.33 + 145.00)/2 = Rs. 217.17 Partly paid up = Rs. (269.33 + 116.00)/2 = Rs. 192.67 Note: Normal rate of return to ESH As mentioned earlier, the concept of normal rate of return to ESH is to be aligned with the concept of cost of equity capital (the minimum rate of return expected by equity shareholders). Accordingly, the normal rate of return to ESH has been calculated for earnings yield (for majority shareholders). Note that the rate is not the same with normal rate of return on capital employed. For dividend yield (i.e., for minority shareholders), the normal rate of dividend paid by other players in the industry should not be taken as the normal rate of return to ESH. This is because even a minority investor will also buy the shares of the company at Rs.120 per share and get dividend at 16% on face value of Rs.100 i.e., Rs.16. So, for him also the normal rate of return will be (16/120 \*100) =13.33%. 2.10 Using Relative Valuation This is a relatively new method of valuation which focuses on the industry dynamics and a firm's relative position in the industry. Under this method a valuation relative is first calculated that describes best a firm's relative position in the industry. The valuation relative can be – price earnings ratio (or P/E multiple), price to sales ratio, price to book value per share ratio, price to EBITDA per share ratio etc. The ratios are calculated for a firm which can be considered as the peer (comparable) of the firm whose valuation is under consideration. In the absence of any peer, the industry average can be taken. Once the valuation relative is finalized, it is then multiplied with the relevant characteristic value of the company to arrive at the per share value. Consider the following illustration.

[83] [ 83 ] Illustration 11 : Relative Valuation X Ltd. has a profit after tax of Rs. 2000000. It has 8%,

**76% MATCHING BLOCK 167/516**

**W**

Preference Share Capital of Rs. 1000000 and Equity Shares of Rs. 10 each fully paid

for Rs. 1500000. The P/E ratio of a peer firm in the industry is 12. Calculate the value per equity share of X Ltd. Solution : Calculation of EPS of X Ltd. Profit After Tax Rs. 2000000 Less: Preference Share Dividend (1000000\*8%) Rs. 80000 Earnings available for equity shareholders Rs. 1920000 Earnings per share = 1920000/ 150000 = Rs.12.80 Value per equity share = EPS of the company\*P/E ratio of the peer firm = Rs.12.80\*12 = Rs.153.60 2.11 Summary Valuation of shares demands valuation of goodwill. Valuation of goodwill and shares are the most controversial issues in financial accounting. Determination of capital employed, future maintainable profit, super profit, and the number of years for which either future maintainable profit or super profit can be maintained requires subjective judgment. Thus, result of subjective judgment of anyone may differ with the result of another, even it may differ between attitudes of oneself at different circumstances. Nevertheless, valuation of goodwill and shares are made using popular methods and conventions so that the chance of variation of computed result is minimum. 2.12 Exercises ? Theoretical Questions 1. What is goodwill? Explain different methods of valuation of goodwill. Which method of Valuation of goodwill is considered to be the best? 2. Can goodwill be sold alone? State the special features of goodwill. What are the circumstances where the need for valuation of goodwill arises in case of a company? 3. Why is average capital employed preferable in valuing goodwill? Why is 'Equity Approach' more acceptable over 'Long Term Fund Approach' in the light of valuation of shares of a company?

[84] [ 84 ] 4. Explain different methods of valuation of shares. State the choice of the particular method by equity shareholders who demand safety, security and asset cover. Also state the choice of the method by the holders of large block of shares for speculative motive and by the holders of small block of shares for receiving regular dividend and capital gain motive. ? Practical Problems Problem 1: Following information of Eastern Ltd. are available: 1. Profits earned after taxes: 2001 Rs. 80,000; 2002 Rs. 88,000 and 2003 Rs. 84,000 2. Normal rate of return: 10% 3. Capital employed: Rs. 7,50,000 including 8% debentures of Rs. 1,50,000 4. Present value of an annuity of rupee one for 5 years at 10% is Rs. 3.78 5. Profits

Modes of Winding Up/Liquidation 3.5 Liquidator 3.6 Statement of Affairs 3.6.1 Procedure for Preparation of Statement of Affairs 3.6.2 Deficiency Account (As per List H) 3.6.3 Illustrations on Preparation of Statement of Affairs 3.7 Liquidator's Final Statement of Account 3.7.1 Priority Chart for Payment towards Various Parties 3.7.2 Priority Chart Items Explained 3.7.3 Overriding Preferential Payments 3.6.4 Illustrations on Preparation of Liquidator's Final Statement of Account 3.8 Summary 3.9 Exercises 3.1 Objective After going through this unit, you will be able to: ? understand the legal provisions of liquidation with respect to its types according to the Companies Act, 2013; and ? know the procedure of the preparation of Statement of Affairs (by the company) and Liquidator's Final Statement of Account (by the liquidator). 3.2 Meaning of liquidation A company is an artificial person which is the creation of law. Thus, the life of a company can come to an end only through the process of law. The process of law undertaken to bring end to the life of a company is known as liquidation or winding up. It is not necessary that only insolvent company be liquidated. Sometimes, also it [88] [ 88 ] is essential to liquidate solvent and prosperous company. 3.3

**98% MATCHING BLOCK 176/516**

**W**

The Legal Framework of Liquidation or Winding Up in India Prior to Companies Act 2013, liquidation procedure of companies was guided by Companies Act 1956. The new Companies Act 2013, incorporated in it, Chapter XX, Winding Up for liquidation of companies. The provisions were narrated in Section 270 to 365. However, enforcement of those sections was deferred and the provisions of the 1956 Act were continued even after the implementation of 2013 Act. The same went on until the Insolvency and Bankruptcy Code (IBC) was introduced in May 2016. On 15.11.2016, Section 255 of the IBC was notified and by virtue of Section 255, the 2013 Act stands amended in accordance of schedule XI of the Code. The Code, for the first time, introduced a definition of "winding up" in section 2 (94A) of Companies Act 2013, whereby winding up means winding up under the Act or liquidation under the Code, thus harmonising both statutes. The Code also introduced ancillary changes to the Act. 3.4 Modes of Winding Up/Liquidation

The above diagram shows the different modes of liquidation of a company in

[89] [ 89 ] India as per the present legal framework discussed earlier. It is clear from the above diagram that, at present, Insolvency and Bankruptcy Code, 2016 primarily govern the liquidation process. Liquidation of a company in the event of inability of the company to pay debt and all voluntary liquidations on or after 01.04.2017 come under the purview of Insolvency and Bankruptcy Code, 2016. Only compulsory liquidations for grounds other than inability to pay debt is covered by Companies Act 2013. ?  
Winding up by the Tribunal

**100%**

**MATCHING BLOCK 177/516**

**W**

As per Section 270 of the Companies Act 2013, the procedure for winding up of a company can be initiated either: (a) By the tribunal or, (b) Voluntary. However, Section 304 of Companies Act,

allowing voluntary winding ups

**94%**

**MATCHING BLOCK 178/516**

**W**

of companies, has now been omitted and therefore Section 59 of the Insolvency and Bankruptcy Code 2016 is applicable from 1/4/2017 to deal with voluntary winding up cases. Moreover, the distinction between members' voluntary winding up and creditors' voluntary winding up has also been eliminated. As per section 271 of the Companies Act 2013, a company can be wound up by a tribunal in the following circumstances: 1. If the company has by special resolution resolved that the company be wound up by the tribunal. 2. If the company has acted against the interest of the integrity or morality of India, security of the state,

or  
has

Section 272 provides that a winding up petition is to be filed in the prescribed form. The petition for compulsory winding up can be presented by the following persons only: ? The company [90] [ 90 ] ? The creditors; or ? Any contributory or contributories ? By the central or state govt. ? By the registrar of any person authorized by central govt., for that purpose The winding up petition has to be accompanied with a Statement of Affairs (

to be discussed later in this unit).

The tribunal after hearing the petition has the power to dismiss it or to make an interim order as it think appropriate or it can appoint the provisional liquidator of the company till the passing of winding up order. ?

**100%**

**MATCHING BLOCK 181/516**

**W**

Voluntary Winding up Chapter V of Part II of the Insolvency and Bankruptcy Code contains Section 59 that deals with voluntary liquidation. As per Section 59 of the Code, the voluntary liquidation process can only be initiated by a corporate person, which has not committed any default. The company can be wound up voluntarily by the mutual agreement of members of the company, if: (i) The company passes a Special Resolution stating about the winding up of the company. (ii) The company in its general meeting passes a resolution for winding up as a result of expiry of the period of its duration as fixed by its Articles of Association or at the occurrence of any such event where the articles provide for dissolution of company.

Steps for Voluntary Winding up Process of Company as per Section 59 of the Insolvency and Bankruptcy Code, 2016 1. Declaration of Solvency duly verified by an Affidavit by Majority of Directors of the Company. Affidavit to be accompanied by: (i) Audited Financial Statement of past two years/Since Incorporation whichever is later. (ii) Records of Business Operations of past two year/Since Incorporation whichever is later. (iii) Report by the Registered Valuer about the valuation of the assets of the Company. (iv) Latest Financial Position of the Company, if any. 2. Within 4 weeks of Declaration of Solvency, Voluntary Winding up of the Company shall happen and there shall be an appointment of Insolvency Professional to act as Liquidator subject to the approval of the Members in General Meeting and creditors owing 2/3rd of the Value of the Debt of the Company through Special Resolution within 7 days of approval of liquidation of Company. Intimation of the same has to be made to the Registrar of Companies. 3. Company has to intimate Insolvency and Bankruptcy Board of India (IBBI)

[91] [ 91 ] regarding initiation of Voluntary Winding up within 7 days of approval of liquidation of Company/subsequent approval by the creditors. 4. Within 5 days of Appointment of Insolvency Professional as Liquidator: (i) A Public Announcement to be made in one English Newspaper and one Regional Language Newspaper having wide circulation where the registered office and the principal office if any, of the Company is situated. (ii) Public Announcement to be updated on website of the Company, if any. 5. Liquidator has to open a Bank Account in the Name of the Company followed by the words "in voluntary liquidation" in a scheduled bank within one month of passing of Special Resolution. 6. Intimate the Income Tax Department within One month of passing resolution regarding Voluntary Winding up of the Company and to obtain NOC for the same. 7. Prepare a Preliminary Report to be submitted within 45 days from the commencement of the liquidation process consisting details of: (i) Capital Structure of the Company (ii) Estimates of assets and liabilities as on the liquidation commencement (iii) Any further inquiry relating to promotion/formation/conduct of the business (iv) Proposed plan of action by liquidator including the timeline within in which he proposes to carry it out and the estimated liquidation costs. 8. The liquidator shall verify the claims submitted within 30 days from the last date for receipt of claims and may either admit or reject the claim. 9. Liquidator has to prepare list of stakeholders within 45 days from the last date for receipt of claims and also has to maintain Particulars/Minutes about any consultation with Stakeholders. 10. Liquidator has to value and sell the assets in the manner and mode approved by the Company and have to deposit proceeds of distribution in Bank Account 11. Liquidator has to distribute the Proceeds to the stakeholders within 6 months from the receipt of amount. 12. Liquidator has to maintain accounts for liquidation period and conduct audit for the same. 13. The entire process to be completed within 12 months from the date of commencement of liquidation. 14. If the liquidation process extends for more than 12 months, the liquidator shall – Within 15 days from the end of 12 months hold meeting of contributories and Present a Annual Report indicating: (i) Settlement of

[92] [ 92 ] List of Stakeholders (ii) Details of Assets remaining to be sold (iii) Distribution made to the stakeholders. 15. To prepare Final Report with details of Audited Accounts of Liquidation and send it to: (i) The Registrar of Companies (ii) The Insolvency and Bankruptcy Board of India (iii) The Adjudicating Authority, i.e., NCLT (National Company Law Tribunal). 3.5

Liquidator The person appointed for conducting the liquidation proceedings of the company is called 'Liquidator'. Under IBC, "liquidator" means an insolvency professional appointed as a liquidator in accordance with the provisions of Chapter III or Chapter V of this Part, as the case may be. In case of Voluntary winding up by an Insolvency Professional, the company must submit a Statement of Affairs to the liquidator. The general duties of the liquidator are to take into his custody all the property of the company and actionable claims and make the payments as per the order laid down in the Companies Act. 3.6 Statement of Affairs

**100% MATCHING BLOCK 183/516**

**W**

When the liquidator officially takes charge of the company from the BODs, the directors are required to communicate the present financial status of the company. Accordingly, apart from the Statement of Profit and Loss for the period ended on the liquidation and a balance sheet with carrying amount of assets and liabilities on the date of liquidation, they are also to prepare and submit a statement showing the estimated realisable value of assets and liabilities of the company under liquidation. The statement must also include the estimated Deficiency, if any. Such a statement is known as Statement of Affairs.

In case of winding up by Tribunal, Section 272(5) of the Companies Act, 2013, provides that a petition prescribed by the company for winding up before the Tribunal shall be admitted only if accompanied by a statement of affairs in such form and in such manner as may be prescribed. 3.6.1 Procedure for Preparation of Statement of Affairs The procedure of the preparation of Statement of Affairs is furnished hereunder: 1. Include all assets not specifically pledged (as per list A). The amount expected to be realised from individual asset including unpaid calls would be extended to the 'estimated realisable value' column.

[93] [ 93 ] 2. Include all assets specifically pledged (as per list B). The amount expected to be realised from individual asset would be compared with the amount due to the secured creditor(s) concerned. Surplus, if any, is to be extended to both the 'surplus carried to last column' and 'estimated realizable value' column. A deficit arising out of the amount due to the secured creditors exceeding the amount realisable from the asset is to be added to unsecured creditors. 3. The total of assets is available for all creditors excluding secured creditors as already covered by assets specifically pledged would be the sum of the amounts as in-paragraph (1) and (2) above. 4. Find the 'Summary of Gross Assets'. The amount would be the total of 'estimated realisable value of assets not specifically pledged' and 'other assets (gross estimated realisable value of assets specifically pledged). The amount of the gross assets would be shown in the main body of the statement of affairs but not in the 'estimated realisable value' column. 5. Place the amount of

Liquidator's Final Statement of Account

**100% MATCHING BLOCK 205/516**

**W**

Liquidator's Final Statement of Account is a statement to be prepared by the liquidator with details regarding the actual realizations of assets and payment to creditors. The same will be submitted to the appointing authority of the liquidator.

Though named 'Account', this is basically a 'Statement' and not a 'Ledger Account'. 3.7.1

**100% MATCHING BLOCK 206/516**

**W**

Priority Chart for Payment towards Various Parties While making payment towards various parties out of the amount realised from the assets of the company under liquidation, the liquidator is to abide by the following payment hierarchy. It is also known as the Priority Chart. 1. Secured creditors up to the amount available from the asset secured. 2. Cost of Liquidation [100] [ 100 ] a) Liquidator's remuneration b) Legal expenses c) Other expenses 3. Preferential Creditors 4. Debenture holders covered by floating charge on all assets 5. Unsecured creditors 6. Preference shareholders 7. Equity shareholders 3.7.2 Priority Chart

Items Explained The individual items of priority chart are explained below. 1.

**100% MATCHING BLOCK 207/516**

**W**

Secured Creditors : Secured creditors refer to the liabilities against which some assets have been kept as pledge.

They are paid up to the extent of amount realised from secured assets or the claim amount, whichever is lower. The surplus, if any, is utilised to pay others in the priority chart. The claim of secured creditors primarily includes principal amount of loan plus outstanding interest, if any, up to the date of liquidation. This claim is covered by the amount realised from the secured assets. However, in case they are paid on a date later than the liquidation date, they are also entitled to get

**81% MATCHING BLOCK 208/516**

**W**

lag period interest (i.e. interest from the date of liquidation up to the date of payment).

However, lag period interest is paid only if the company is solvent. A company is called solvent if it has sufficient amount left after paying in full all the liabilities up to the ordinary unsecured creditors. 2. Cost of Liquidation: This includes – (a) Liquidator’s remuneration, (b) legal charges (drafting charges for legal documents), and (c) other charges (travelling expenses, printing and stationery). 3.

**99% MATCHING BLOCK 209/516**

**W**

Preferential creditors: These are unsecured creditors who are paid in preference to others. As per Sec. 327 of the Companies Act, 2013, preferential creditors include the following: a) Due to Government: All revenues, taxes, cesses and rates due to the Central, State Government or to a local authority which have become due and payable within twelve months before the date of winding up order. b) Salary and Wages Outstanding: All wages or salary including wages payable for time or piece work and salary earned wholly or in part by way of commission of any employee in respect of services rendered [101] [ 101 ] to the company and due for a period not exceeding four months within the twelve months immediately before the liquidation date, subject to the condition that the amount payable under this clause to any workman shall not exceed Rs. 20000 per claimant. c) All amounts due in respect of contribution payable during the twelve months under the Employees’ State Insurance Act, 1948 or any other law. d) Compensation due under Workmen’s Compensation Act, 1923 in respect of death or disablement of any employee of the company. e) Any amount due to any employee from provident fund, pension fund, gratuity fund for the welfare of the employees maintained by the company. f) Accrued holiday remuneration becoming payable to the employee or in case of his death, to any other person in his right, on termination of his employment before, or by the effect of the winding up. g) The expenses of any investigation held in pursuance of Sec. 213 or 216 in so far as they are payable by the company. Note : Here, the term ‘workmen’, in relation to a company, means the employees of the company, being workmen within the meaning of clause (s) of section 2 of the Industrial Disputes Act, 1947 (14 of 1947). Hence, persons working in the managerial capacity are not workmen. 4.

Debenture holders Covered by Floating Charge: Their claim includes (a) principal amount and, (b) outstanding interest up to the date of liquidation. Also, lag period interest, if any, may be payable if the company is solvent. 5. Ordinary Unsecured Creditors: They are unsecured creditors other than preferential creditors. 6. Preference Shareholders: Their claim includes (a) capital, and (b) arrear dividend. However, arrear dividend will be payable only if the shares are cumulative and the arrear dividend is stated to be payable on liquidation as per the terms of issue of the shares. There is no question of any lag period dividend. 7. Equity Shareholders: They are paid at the end, if any surplus remains after payment to preference shareholders. 3.7.3

**96% MATCHING BLOCK 210/516**

**W**

Overriding Preferential Payments: As per Section 326 of Companies Act 2013, overriding preferential payments are to be paid in priority to all other debts as per the said Act. They include: [102] [ 102 ] (a) Dues to workmen, and (b) Debts due to secured creditors to the extent such debts rank to the security of every creditor shall be deemed to be subject to pari passu charge in favour of the workmen to the extent of workmen’s portion therein. 3.7.4

The Statement of Affairs and Deficiency Account are prepared by the company while the Liquidator's Statement of Account is prepared by the liquidator. For accounting purposes, the preparation of these statements, requires knowledge over the legal provisions regarding liquidation of company in particular and accounting knowledge in general. Actually, they are pro-forma based accounting which must comply with the legal requirements. 3.9

this unit you will be able to understand: ? The meaning of

financial instruments ? The process of identification of financial instruments ? How are financial instruments recognized in the financial statements? ? How are financial statements measured? ? What are the minimum disclosure requirements with respect to financial instruments?

[114] [ 114 ] 4.2 Introduction The term 'Financial Instrument' refers to a document which has some monetary value. For example, draft, cheques, bills of exchange and promissory notes. However, for the purpose of Indian Accounting Standards (Ind AS), financial instruments include a wide spectrum of assets and liabilities of entities. Contrary to the popular impression, it is not limited to investments or merely the capital market instruments and negotiable instruments mentioned above, rather, it includes, within its ambit, receivables, loans, cash deposits, investments, payables, debentures bonds etc. Every company, in its normal course of business or in process of investing its surplus funds deal with financial instruments. Because of this widespread use and typical character, accounting for financial instruments demands a detail discussion. This chapter will try to provide the students a basic understanding on identification, recognition, measurement and disclosure of financial instruments. Accordingly, the chapter will cover some important aspects (and not all) of three Indian Accounting Standards (Ind Ass) namely – (a) Ind AS 32 Financial Instruments: Presentation; (b) Ind AS 107 Financial Instruments: Disclosures (c) Ind AS 109 Financial Instruments. 4.3 Meaning of Some Important Terms (As per Ind AS) 1. Financial Instrument: As explained earlier,

**100%**

**MATCHING BLOCK 232/516**

**W**

a financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

For example, while draft, cheques, bills of exchange and promissory notes are financial liability from the viewpoint of the issuer, they are, at the same time, financial assets from the viewpoint of the holder. Similarly, while debentures and equity shares are financial liability from the viewpoint of the issuer, they are, indeed, financial assets from the viewpoint of the investor. In general, they are financial instruments. 2. Financial Asset:

**94%**

**MATCHING BLOCK 233/516**

**W**

A financial asset is any asset that is: a) cash; b) an equity instrument of another entity; c) a contractual right: (i) to receive cash or another financial asset from another entity; or [115] [ 115 ] (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favorable to the entity; or (d) A contract that will or may be settled in the entity's own equity instruments

that

**99%**

**MATCHING BLOCK 234/516**

**W**

is: (i) A non-derivative for which the entity is or may be obliged to receive a variable number of entity's own equity instruments; or (ii) A derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

Some common examples of financial assets include (a) trade receivables, (b) notes receivables, (c) loans receivables, and (b) bonds receivals etc. However, physical assets (such as inventories, landed property), leased assets, intangible assets (such as copyright, patent), prepaid expenses or income tax refunds are not financial assets. Examples of some typical financial assets are given below: ? Suppose, A Ltd. Has invested in the equity shares of B Ltd. The investment in equity instruments of B Ltd. is a financial asset to A Ltd. ? Trade receivable is a contractual right to receive cash from another party and hence is a financial asset. ? Suppose X Ltd. has bought a call option on shares of Y Ltd. When the option will be in the money X Ltd. can exercise the same. It is a financial asset to X Ltd. 3. Financial Liability:

**95% MATCHING BLOCK 235/516**

**W**

A financial liability is any liability that is a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavorable to the entity; or

For example, trade payables, bank loans, debentures and bond payables etc. Basically, whatever is a financial asset to an entity (the holder) is a financial liability to the issuer. However, income tax payable, excise duty payable, GST payable etc. are not financial liability.

[116] [ 116 ] 4.

**100% MATCHING BLOCK 236/516**

**W**

Equity Instruments: An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.

For example, ordinary shares issued by X Ltd. is an equity instruments from the viewpoint of X Ltd. 4.4 Financial Liability and Equity Instruments: Principles of Classification A financial instrument or its component parts should be classified by the issuer upon initial recognition as a financial liability or an equity instrument according to

**65% MATCHING BLOCK 239/516**

**SA**

Assignment 1.pdf (D134275548)

the substance of the contractual arrangement, rather than its legal form, and the definitions of a financial liability and an equity instrument.

Hence, for some financial instruments, although their legal form may be equity, the substance of the arrangements is that they are liabilities. The appropriate classification as a financial liability, equity or a combination of both is determined by the entity when the financial instrument is initially recognized and that classification is not generally changed subsequently unless the terms of the instrument change. Nevertheless, the following principles will be considered for classifying a financial instrument under financial liability or equity instrument. 1. Mandatory redemption and/or mandatory interest payments 2. Contractual obligation that is not explicit 3. Contingent settlement provisions The following examples will clarify the contention further. ? Contrary to its legal form, redeemable preference shares carrying fixed rate of dividend is classified as a financial liability because of its mandatory principal and dividend payment clause. Only non-redeemable preference shares with dividend payable at the discretion of the issuer can be treated as equity instruments. ? Perpetual loans carrying fixed rate of interest payable periodically are financial liability for its mandatory interest payment clause, though the principal payment is not mandatory. ? Similarly, preference shares redeemable after 5 years but not mandatorily in cash but may be through transfer of any landed property with equal value [117] [ 117 ] is also a financial liability as the contractual obligation is implicit and not explicit. ? Again, financial instruments without any dividend or interest obligation and even not redeemable in the normal course of business must be treated as financial liability if the same becomes redeemable upon the occurrence of any contingent event. 4.5 Classification of Financial Assets As per Ind AS 109, financial assets are classified as follows: Financial Assets Financial Assets at Fair Value

**73% MATCHING BLOCK 238/516**

**W**

Financial Assets at Fair Value through profit or loss Financial Assets at Amortized Cost Financial Assets at Fair Value through other comprehensive income

The above classification is based on the following two criteria – (i)

**79% MATCHING BLOCK 246/516**

**SA**

Assignment 1.pdf (D134275548)

the entity's Business Model (BM) for managing the financial assets; and (ii) The Contractual Cash Flow Characteristics (CCFC) of the financial

assets. ? Business Model (BM) An entity's business model may be to hold a portfolio of investments that it manages in order to collect contractual cash flows and another portfolio of investments that it manages in order to trade to realize fair value changes. Similarly, in some other cases, the entity originates or purchases a portfolio of mortgage loans and manages some of the loans with an objective of collecting contractual cash flows and manages the other loans with an objective of selling them. For example, a company may buy debentures to receive the contractual cash flow (i.e. regular periodical interest as well as principal amount at the maturity) or may buy ordinary shares with the objective to make profit as the share price increases.

[118] [ 118 ] ? Contractual Cash Flow Characteristics: Ind AS-109 requires an entity to classify a financial asset on the basis of its contractual cash flow characteristics

**76% MATCHING BLOCK 240/516**

**W**

if the financial asset is held within a business model whose objective is

to hold assets to collect contractual cash flows or

**88% MATCHING BLOCK 241/516**

**W**

within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets.

To do so, an entity has to determine whether the asset's contractual

**96% MATCHING BLOCK 242/516**

**W**

cash flows are solely payments of principal and interest on the principal amount outstanding. ?

Example of contractual

**100% MATCHING BLOCK 243/516**

**W**

cash flows that are solely payments of principal and interest

is a bond with a stated maturity date and when payments are linked with an inflation index. ? Example of contractual cash flows that are not solely payments of principal and interest is a bond that is convertible into a fixed number of equity instruments. Financial assets should be classified into the three broad categories (namely, Financial Assets carried at Amortized Cost,

**59% MATCHING BLOCK 244/516**

**W**

Financial assets carried at Fair Value Through Profit or Loss and Financial assets carried at Fair Value Through Other Comprehensive Income)

based on Business Model (BM) test and Contractual Cash Flow Characteristics (CCFC) as under:  
[119] [ 119 ] Financial Assets Financial Assets at Fair Value

**73% MATCHING BLOCK 245/516**

**W**

Financial Assets at Fair Value through profit or loss Financial Assets at Amortized Cost Financial Assets at Fair Value through other comprehensive income [120] [ 120 ]

The following diagram will clarify the process of classifying a debt instrument. The following diagram will clarify the process of classifying an equity instrument.

[121] [ 121 ] Note : Derivative classified as financial assets would be measured at fair value through profit or loss (FVTPL) only. 4.6 Classification of Financial Liability An entity shall classify all financial liabilities as - (i) Financial liabilities measured at amortized cost (ii) Financial liabilities at fair value through profit or loss (FVTPL) 4.7 Recognition of Financial Assets and Liabilities

**79% MATCHING BLOCK 247/516**

**W**

An entity shall recognise a financial asset or financial liability in its balance sheet when, and only when, the entity becomes party to the contractual provisions of the instrument.

This principle will be applied on the following: (a) Receivables and Payables Unconditional receivables and payables are recognised as financial assets or financial liabilities when the entity becomes a party to the contract and, as a consequence, has a legal right to receive or a legal obligation to pay cash. (b) Firm Commitment to Purchase or Sell Goods or Services Assets to be acquired and liabilities to be incurred as a result of a firm commitment to purchase or sell goods or services are generally not recognised until at least one of the parties has performed under the agreement. For example, an entity that receives a firm order does not generally recognise an asset (and the entity that places the order does not recognise a liability) at the time of the commitment but, instead, delays recognition until the ordered goods or services have been shipped, delivered or rendered. (c) Forward Contract A forward contract that is within the scope of this Standard is recognised as a financial asset or a financial liability on the commitment date, instead of on the date on which settlement takes place. When an entity becomes a party to a forward contract, the fair values of the right and obligation are often equal, so that the net fair value of the forward is zero. If the net fair value of the right and obligation is not zero, the contract is recognised as an asset or liability. (d) Option Contracts Option contracts that are within 'the scope of this Standard' are recognised as assets or liabilities when the holder or writer becomes a party to the contract. [122] [ 122 ] 4.8 Measurement of Financial Instruments 4.8.1 Initial Recognition ? Financial Assets: An entity shall measure a financial asset except trade receivable

**87% MATCHING BLOCK 248/516**

**W**

at its fair value plus in the case of a financial asset that is not at fair value through profit or loss, transaction costs that are directly attributable to the acquisition of the financial asset.

Trade receivables are measured at the transaction price as per Ind AS 115. In case of financial asset that is at FVTPL, transaction cost is written off in profit and loss statement. ? Financial Liability: An entity shall measure a financial liability

**64% MATCHING BLOCK 249/516**

**W**

at its fair value minus in the case of a financial liability that is not at fair value through profit or loss, transaction costs that are directly attributable to issuing of the financial liability. In case of financial

liability that is at FVTPL, transaction cost is charged to profit and loss statement (SPL). 4.8.2 Subsequent Measurement Financial Assets At Amortised Cost Initial recognition value minus repayment plus interest using effective interest\* method At FVOCI ? Fair value changes credited to OCI ? On derecognition, cumulative gain/ loss transferred to SPL ? Dividend/Interest credited to SPL At FVTPL ? Fair value changes credited to SPL ? Dividend/Interest credited to SPL Financial Liabilities At Amortised Cost ? At effective interest rate method At FVTPL ? Fair value changes relating to changes in own credit risk are presented through OCI (own credit risk is measured as the amount of fair value change not attributable to changes in market risk such as changes in benchmark interest rate) ? All other fair value changes are presented in SPL \*Effective interest rate is the rate of discount at which the sum total of the present value of future cash flow is equal the initial payments. It is basically the internal rate of return (IRR) of the instrument.

[123] [ 123 ] 4.9 De-recognition of Financial Instruments De-recognition of financial instruments means removal of an asset or a liability from the books as a result of sale, repayment, re-negotiation or default by the counter party. It is the end of the life cycle of an asset or a liability that begins with its recognition. 4.9.1 De-recognition of Financial Assets An entity de-recognises a financial asset only when: (a)

**71% MATCHING BLOCK 250/516**

**W**

The contractual rights to the cash flows from the financial asset expires (b) It transfers the

financial asset and the transfer qualifies de-recognition For a financial asset carried at amortised cost, de-recognition takes place at the final carrying amount which is itself the maturity value (as the carrying amount is calculated at effective interest rate method). For financial asset carried as FVTOCI, cumulative gain/ loss is transferred to SPL on the date of sale or transfer. For financial asset carried as FVTPL, the gain or loss on the date of sale is charged to SPL. 4.9.2 De-recognition of Financial Liabilities A financial liability (or a part thereof) is de-recognised only when the liability

**80% MATCHING BLOCK 251/516**

**W**

is extinguished. That is obligation under the contract is discharged or cancelled or expired.

The obligation is discharged by paying the creditor in cash, other financial assets or goods or services, or obligation is legally released. If a new debt instruments is issued with a different terms and conditions in exchange of the existing debt instrument then the debtor should recognise new financial liability and de-recognise the existing one with the difference being charged to SPL. Similarly, when a business transfers a financial asset to settle a financial liability, it should de-recognise the asset at fair value and de-recognise the financial liability with the difference being changed to SPL.

Consider the following illustrations.

[124] [ 124 ] Illustration 1 : Debt instrument carried at amortised cost, de-recognition On 01.01.2021, X Ltd. purchased Rs.2,00,000 face value, 3 year, 8% bonds of M Ltd. for Rs.1,89,848 which provides an effective interest rate of 10%. Compound Financial Instruments Not all financial instruments are either debt or equity. There may be some instruments which contain characteristics of both. These financial instruments are known as compound financial instruments. Examples of such instruments are convertible bonds which are convertible into equity shares whether mandatorily or at the option of the holder. 4.10.1 Accounting for Compound Financial Instruments A financial instrument that contains the characteristics of both liability and equity should be accounted for based on their substance rather than the legal form of the instrument. Accordingly, both the component parts should be separately identified and accounted for. Ind ASs emphasizes application of split accounting for compound instruments. The component parts maybe separated into liability and equity as per the following steps: Step 1 : Determine the carrying amount

<b>63%</b>	<b>MATCHING BLOCK 256/516</b>	<b>W</b>
of the liability component by measuring the fair value of a similar liability that does not have an associated equity component. The fair value of the liability component is the		

sum total of the present value of all future cash flows associated with the instrument. Step 2 : The value of the liability component should then be deducted from the initial issue proceeds of the instrument to get the carrying amount of the equity component as a residual figure. The allocation of the instrument into its component parts should be performed on initial recognition of the compound instrument such that no gain or loss is recognised. On conversion of a convertible instrument at maturity, the entity de-recognise the liability component and recognises it as equity. The original equity component remains as equity (although it may be transferred from one line item to another within equity to another). There is no gain or loss on conversion at maturity. Illustration 4 : Y Ltd. has issued 10,000 convertible debentures with a face value of Rs. 100 per debenture. The interest rate on the debentures is 5%.

<b>64%</b>	<b>MATCHING BLOCK 258/516</b>	<b>W</b>
The debenture holders have the option of converting these debentures into ordinary shares at the end of		

four years. The prevailing market rate for a similar debt which does not have a conversion right is 7%. Determine the carrying amount of liability and equity components. Also pass the journal entry on initial recognition. [128] [ 128 ] If 10 convertible debentures are to be converted into 2 equity shares of the company of Rs.10 each, show the journal entry on conversion. Solution : Carrying amount of the liability portion Particulars Rs. Note : Alternatively, the equity portion may be transferred to Capital Reserve. 4.11 Hedge Accounting Companies are often exposed to various types of financial risks such as interest rate risk and exchange risk. In order to minimise the loss due to such risks, entities use a risk management strategy known as hedging. Under hedging, companies resort to various derivative and non-derivative instruments to protect itself from the possible loss. Derivative instruments such as forward contracts, future contracts, option contracts and swaps are used to hedge. The basic principle in Ind AS 32 is that all derivatives are carried at fair value with gains and losses in the profit and loss account. However, derivatives are commonly used to hedge recognised assets and liabilities that are measured at cost, amortised cost or at fair value with gains and losses recognised in equity etc. This creates a mismatch in the timing of gain and loss recognition. Hedge accounting seeks to correct this mismatch by changing the timing of recognition of gains and losses on either the hedged item or the hedging instrument. This avoid much of the volatility that may arise if the derivative gains and losses were recognised in the profit and loss account, as required by the normal accounting principles. 4.11.1 Qualifying Criteria for Hedge Accounting An entity is allowed to apply hedge accounting if it meets the specified qualifying criteria, which are as below: ? There has to be eligible hedged item – it is an asset, liability or transaction that exposes an entity to risks regarding changes in the fair value or future cash flows. For example, suppose, X Ltd. has imported a machinery at \$50000 payable in 3 months from now. Here the liability of \$50000 is a hedged item. ? There has to be eligible hedging instrument – it is a

**87%**

**MATCHING BLOCK 259/516**

**W**

financial instrument, whose fair value or cash flows are expected to offset

the

**100%**

**MATCHING BLOCK 260/516**

**W**

changes in the fair value or cash flows of a designated hedged item.

In the above example, suppose the company has entered into a future contract to buy \$50000 after

[130] [ 130 ] 3 months. The future contract will be a hedging instrument. ? There has to be a relationship between the hedged item and the hedging instrument with formal designation and documentation. ? The hedge relationship meets the hedge effectiveness – it is the degree to which a hedging instrument offsets the changes in fair value or cash flow of the hedged item. 4.11.2 Classification of Hedging Relationship As per Ind AS 109, hedging relationships can be of three categories. (a) A fair value hedge, which hedges the exposure to changes in the fair value of an item or transaction. (b) A cash flow hedge, which hedges the exposure to changes in the expected cash flows. (c) Hedges of a net investment in an overseas operation, which reduce the exposure of an entity to foreign operations. ? Fair Value Hedge As mentioned earlier, in case of a fair value hedge the fair value changes of the hedged instrument is offset by the gain or loss on the hedging instrument. For example: (i) A potato grower may fix the value of the potato inventory by entering into a future contract. (ii) An entity may buy a put option to protect the fall in the value of its equity securities. Accounting for fair value hedge involves the following. (i) The gain or loss on the hedging instruments shall be recognised in profit or loss (or other comprehensive income if the hedging instrument hedges an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income). (ii) The hedging gain or loss on the hedged item shall adjust the carrying amount of the hedged item (if applicable) and be recognised in profit or loss. (iii) If the hedged item is a financial asset (or a component thereof) that is measured at the fair value through other comprehensive income, the hedging gain or loss on the hedged item shall be recognised in profit or loss. However, if the hedged item is an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income, those amounts shall remain in other comprehensive income.

[131] [ 131 ] Illustration 5 : Fair value hedge on cardamom X Ltd. owns inventories of cardamom of 5 kg which was purchased at Rs.5000 per kg three months ago. Management is concerned that the price may fall and hence the firm will have to incur losses on sale. The firm, therefore entered into a futures contract to sell the cardamom at Rs.5500 on 31.03.2020. At the year-end on 31.12.2019, X Ltd finds that the fair value of the cardamom has fallen to Rs.4800 per kg and the future price for delivery on 31.03.2020 is now Rs.5300 per kg. Management has designated the cardamom as a hedged item and the future contract as the hedging instrument. The hedge is deemed to be effective. Pass necessary accounting entries if (a) hedge accounting is not used, and (b) if hedge accounting is used. Solution : (a) The future contract will be recognised as a derivative asset at a value of Rs. (5500 ? 5300) ? 5 ? Rs.1000 and the inventory will still be measured at cost of Rs. 25000. The accounting entries will be: Derivative Asset A/c.....Dr 1,000 To Profit & Loss A/c 1,000 The gain on the futures contract is recognised immediately in profit or loss but no loss would be recognised on the value of inventory, causing a mismatch. (b) The future contract will be recognised as a derivative asset at a value of Rs. (5500 ? 5300) ? 5 ? Rs.1000 and the inventory will now be measured at Rs.4800 ? 5 ? Rs. 24000, so matching the gain and loss in profit or loss in the same period. The accounting entries will be as follows: Derivative Asset

<b>82%</b>	<b>MATCHING BLOCK 266/516</b>	<b>SA</b>	M.Com.I_Adv._Accountancy_P._I____III_all.PDF (D142209931)
A/c.....Dr 1,000 To Profit & Loss A/c 1,000 Profit & Loss A/c.....Dr 1000 To Inventory A/c 1,000			

This time both the gain and the loss affect profit or loss in the same period; hedge accounting has made it possible. ? Cash Flow Hedge Future cash flows might relate to existing assets and liabilities such as future interest payment or receipts and floating rate debt. Future cash flows can also relate

[132] [ 132 ] to forecasting sales or purchases in a foreign currency. Volatility in future cash flows will result from changes in the interest rates, exchange rates, equity prices or commodity prices. Cash flow hedge attempts to hedge this exposure to changes in the expected cash flows. Some examples of common cash flow hedges are: (a) an interest rate swap converting a floating rate loan to a fixed rate. (b) a forward foreign exchange contract hedging forecast future sale of inventory in a foreign currency or a forecast future purchase of inventory or equipment in a foreign currency. Accounting for cash flow hedge involves the following. (i) Provided the hedge is effective, changes in the fair value of the hedging instruments are initially recorded in OCI and taken to a separate component of equity. (ii) The amount recognised in OCI should be lower of a. the cumulative gain or loss on the hedging instruments from the inception of the hedge; and b. the cumulative change in fair value (that is present value) of the expected future cash flows on the hedged items from the inception of the hedge. (iii) If the cumulative change in the hedging instrument exceeds the changes in the hedged item (referred to as over-hedge) ineffectiveness will be recognised for the excess in P&L. If the cumulative change in the instrument is less than the change in the hedged item (sometimes referred to as under-hedge) no ineffectiveness will be recognised. (iv) For cash flow hedges

**78%      MATCHING BLOCK 262/516**

**W**

of a forecast transaction which subsequently results in the recognition of a non-financial

item such as fixed asset inventory or where a hedged forecast transaction for a non-financial asset or liability becomes a firm commitment for which fair value hedge accounting is applied, the carrying value of the item must be adjusted for the accumulated gain or losses recognise directly in equity (often referred to as basis adjustment). (v) For other cash flow hedge the accumulated game and losses recorded in equity should be reclassified to profit and loss in the same period or periods during which the hedged expected future cash flow affects P&L (for example, where interest income or expense is recognised or a forecast sale occurs). Where there is a cumulative loss on the hedging instrument and it is no longer expected that the loss will be recovered it must be immediately recognised in P&L. Illustration 6 : Cash Flow Hedge P Ltd. has items of inventory whose selling price is based upon the fair value of their commodity content. P Ltd. is concerned that the fair value of the committee will fall and so reduce the cash flow on the sale of the inventory. The company enters into a forward contract to sell the inventory at a fixed price in future. The cash flow from forecast sale of inventory is designated hedge item and the forward contract is designated as the hedging instruments. The heading is effective and qualified as a cash flow hedge. Suppose, the fair value of the commodity falls by Rs. 600, and due to a perfect hedge, the fair value of the forward contract increases exactly by Rs. 600. Pass necessary accounting entries if (a) hedge accounting is not used and (b) if hedge accounting is used. Solution : (a) Hedge accounting is not used The accounting entries, if hedge accounting is not used would be: Derivative Asset A/c.....Dr 600 To Profit & Loss A/c 600 The sale proceeds will be Rs.600 lower (or more) when the inventory is sold, presumed to be in the following period in this example. Therefore, there is a mismatch in profit. (b) Hedge accounting is used The accounting entries, if hedge accounting is used would be: Derivative Asset A/c.....Dr 600 To Other Comprehensive Income (then equity) A/c 600 The Rs. 600 gain, which was included as other comprehensive income, will be reclassified through profit or loss when the cash flow impact of the inventory affects profit or loss (i.e. when the inventory is sold). Using hedge accounting has allowed the gain to be matched with the loss.

[134] [ 134 ] ? Hedge of a Net Investment in Foreign Operation An entity may have overseas subsidiaries, associates, joint ventures or branches. It may hedge the currency risk associated with the translation of the net assets of these foreign operations into the group's presentation currency. Hedge of net investment in foreign operation shall be accounted for in the same way as cash flow hedge, i.e. the effective portion should be recognised in other comprehensive income and the ineffective element should be recognised directly in the profit or loss. The gain or loss on the instrument relating to the effective portion of The Hedge that has been recognised directly in the equity account,

**100%      MATCHING BLOCK 263/516**

**W**

should be recognised in the statement of profit and loss on

disposal of the foreign operation. 4.12 Disclosure Requirements for Financial Instruments Ind AS 107 prescribes the disclosures requirements for: (a) Different categories of financial assets (b) Different categories of financial liabilities (c) Re-classification of financial liabilities (d) De-recognition of financial assets and liabilities (e) Financial assets pledged as collateral (f) Allowances for credit losses (g) Compound financial instruments with multiple embedded derivatives (h) Defaults and breaches for loan payables (i) Income, expense, gains or losses recognized in profit and loss (j) Accounting policies followed (k) Hedge accounting (l) Fair value determination for financial assets and liabilities (m) Risk disclosures

Some important points of the above disclosure requirements are discussed below: ? Disclosure for Financial Assets (i) The entity should disclose the carrying amounts of each of the following categories of financial assets: - Financial assets at fair value through profit or loss [135] [ 135 ] - Held to maturity investments - Loan and receivable - Available for sale financial assets (ii) For loans and receivable at fair value through profit and loss account. Entity should disclose: - the maximum exposure to credit risk - impact of related credit derivative on credit exposures - change in fair value of loans and receivables for during the period and cumulative - change in fair value of any related credit derivative for during the year and cumulative ?

Disclosure for Financial Liabilities Entity should disclose the following financial liabilities at fair value through profit and loss account: (i) Change in fair value of a financial liability, during the period and cumulatively, attributable to changes that give rise to market risk. (ii)

**96% MATCHING BLOCK 264/516**

**W**

Changes in market conditions that give to market risk include changes in benchmark interest rate, the price of another entity's financial instrument, a commodity price,

Forex rate etc. The entity should also disclose the carrying amount of the financial liabilities measured at amortize cost. ? Disclosure for Re-classification

**86% MATCHING BLOCK 265/516**

**W**

If the entity has reclassified a financial asset as one measured at cost or amortized cost, rather than at fair value; or at fair value, rather than at cost or amortized cost, it should disclose the amount re-classified into and out of each category and the reason for that

re-classification. ? Disclosure for De-recognition An entity may have transferred financial assets in such a way that part or all of them do not qualify for de-recognition. If the entity either continues to recognize all of the assets or continues to recognize the assets to the extent of its continuing involvement, the entity should disclose: (i) The nature of the financial asset (ii) The extent of the entity's continuing involvement and any associated liabilities.

[136] [ 136 ] ? Disclosure for Compound Financial Instruments with Embedded Derivatives If the entity has issued an instrument that contains both a liability and an equity component and the instrument has multiple embedded derivatives whose values are independent (such as a callable convertible debt instrument), it should disclose the existence of those features. ? Disclosure for Income, Expense, Gains or Losses Recognized in Profit and Loss Account The profit and loss account disclosures requirements include the following: (i) Net gains or losses for each category of financial assets and liabilities. (ii) Available for sale gains or losses recognised in equity, in addition to those amounts re-classified from equity to profit or loss. (iii) Total interest income and total interest expense from

**62% MATCHING BLOCK 267/516**

**W**

financial assets and financial liabilities that are not measured at fair value through profit or loss. (

iv) Fee income and expense (other than the one considered for effective interest rate purposes)

**100% MATCHING BLOCK 268/516**

**W**

for financial assets and financial liabilities not measured at fair value

through profit or loss. (

v) Fee income and expense from trust and other fiduciary activities. (vi) Interest accrued on impaired financial assets. (vii) Impairment losses for each category of financial asset. ? Disclosure for Accounting policies Ind AS- 1 requires disclosure of an entity's significant accounting policies but Ind AS- 107 prescribes specific disclosure of certain policies relating to financial instruments such as: (i) The criteria for designating

**88% MATCHING BLOCK 269/516**

**W**

financial assets and financial liabilities as at fair value through profit or loss (

ii) The criteria for designated financial assets as available for sale (iii) The criteria for use of an allowance account (i.e. bad debt reserve), including writing off amount charges to such an account (iv) Whether trade date or settlement date accounting is used for regular way purchase or sale of financial assets (v) Accounting policy for financial assets that are subject to re-negotiation terms.

[137] [ 137 ] ? Disclosure for Hedge Accounting Ind AS 107 requires the following disclosures for each of the three types of hedge: (i) Description of the hedging instrument and their fair values at reporting date and nature of risk hedged (ii) When cash flows are expected to occur and when they are expected to affect P&L. (iii) Forecast transactions no longer expected to occur. (iv) Amount recognised in equity and re-classification to P&L (v) Gains and losses from hedging instruments and hedged risk (vi) Ineffectiveness recognised in P&L ? Risk Disclosure (a) Qualitative Risk Disclosure – for each of the three type of risks (i.e., credit risk, liquidity risk and market risk), the entity should disclose the following: (i) The exposure to the risk and how they arise (ii) The entity's objective, policies and processes for managing the risk and the methods used to measure the risk (iii) Any changes to these disclosures from the previous reporting period (b) Quantitative Risk Disclosure – the specific disclosure requirements for the three types of risks are as follows: (i) Credit Risk – The maximum credit exposure, description of collateral, credit quality of financial assets etc. (ii) Liquidity Risk – financial liabilities must be disclosed by contractual maturity based on undiscounted cashflows. (iii) Market Risk – disclosure of market risk sensitivity analysis 4.13 Summary Financial instruments are contracts that are either financial assets or financial liabilities or equity instruments. The same instrument is an asset to its holder while financial liability or equity instruments to its issuer. The identification of financial instrument as a liability or equity instrument is very crucial and determine the accounting for such instruments. The accounting also depends on the categorisation of financial assets and liabilities. All items of financial instruments are carried at fair value though the concept of such fair value differs a lot for liabilities and assets

[138] [ 138 ] based on their classification. The instruments are often found to be used as hedging instruments and hence their accounting as hedging instruments is equally important. 4.14 Exercises ? Theoretical Questions 1. What do you mean by financial instruments? 2. What is a financial asset? 3. State the principles that are applied in differentiating a financial liability from equity instruments. 4. How will you classify financial assets and liabilities? 5. Discuss about the accounting treatment of different categories of financial assets. 6. What is a compound financial instrument? How is it accounted for? 7. In what way a compound financial instrument is different from a financial liability instrument? 8. When and how a financial asset and liability de-recognised? 9. What is hedge accounting? Why is it important? 10. What are the different types of hedging relationships? 11. Define a fair value hedge. How is it different from cash flow hedge? 12. State the disclosure requirements with respect to the following: (a) Different categories of financial assets (b) Different categories of financial liabilities (c) Re-classification of financial liabilities (d) De-recognition of financial assets and liabilities (e) Compound financial instruments with multiple embedded derivatives (f) Income, expense, gains or losses recognized in profit and loss (g) Accounting policies followed (h) Hedge accounting (i) Risk disclosures ? Practical Problems Problem 1: Identify whether the following instruments are financial liabilities or equity instruments.

[139] [ 139 ] (a) Redeemable preference shares with discretionary dividend payment (b) Perpetual debt instrument with discretionary interest payment (c) A debt instruments whose principal amount may be repaid by transferring a non-current asset having at least equal value (d) A compulsorily convertible preference share [Ans. (a) Financial Liability (b) Equity Instrument (c) Financial Liability (d) Financial Liability] Practical 2: On 01.01.2021, Y Ltd. purchased Rs.1,00,000 face value, 3 year, 8% bonds of R Ltd. for Rs.94,924 which provides an effective interest rate of 10%. The bonds pay semi-annual interest on June 30 and December 31. Show how the bond will be accounted for in the books of Y Ltd and R Ltd. Practical 3: A company invested in equity shares of another company on 20.03.2021 for Rs. 10,000. Transaction cost is Rs. 200 (not included in Rs. 10,000). Fair value on Balance Sheet date i.e., 31.03.2021 is Rs. 12000. Assume that the asset has been classified as FVTOCI. Show how the financial asset is recorded in the balance sheet. If the asset is sold on 10.04.2021, how the same would be recorded. Practical 4: Z Ltd. has issued 20,000 convertible debentures with a face value of Rs.100 per debentures. The interest rate on the debentures is 5%.

**64%**

**MATCHING BLOCK 270/516**

**W**

The debenture holders have the option of converting these debentures into ordinary shares at the end of

four years. The prevailing market rate for a similar debt which does not have a conversion right is 7%. Determine the carrying amount of liability and equity components. Also pass the journal entry on initial recognition. If 10 convertible debentures are to be converted into 2 equity shares of the company of Rs.10 each, show the journal entry on conversion. Practical 5: P Ltd. owns inventories of mustard of 500 kg which was purchased at Rs.100 per kg three months ago. Management is concerned that the price may fall and hence the firm will have to incur losses on sale. The firm, therefore entered into a futures contract to sell the mustard at Rs.110 on 31.03.2020. At the year-end on 31.12.2021, P Ltd finds that the fair value of the mustard has fallen to Rs.96 per kg and the future price for delivery on 31.03.2022 is now Rs.106 per kg. Management has designated the cardamom as a hedged item and the future contract as the hedging instrument. The hedge is deemed to be effective. Pass necessary accounting entries if (a) hedge accounting is not used and (b) if hedge accounting is used.

[140] [ 140 ] Practical 6: K Ltd. has items of inventory whose selling price is based upon the fair value of their commodity content. K Ltd. is concerned that the fair value of the committee will fall and so reduce the cash flow on the sale of the inventory. The company enters into a forward contract to sell the inventory at a fixed price in future. The cash flow from forecast sale of inventory is designated hedge item and the forward contract is designated as the hedging instruments. The heading is effective and qualified as a cash flow hedge. Suppose, the fair value of the commodity falls by Rs.1200, and due to a perfect hedge, the fair value of the forward contract increases exactly by Rs.1200. Pass necessary accounting entries if (a) hedge accounting is not used and (b) if hedge accounting is used.

[141] [ 141 ] Unit 5 Consolidated Accounts Structure 5.1 Objective 5.2 Introduction 5.3 Benefits of Consolidated Financial Statements 5.4 Regulatory Framework of Consolidation in India 5.5 Consolidation as per Ind AS 110 5.5.1 Objective of Ind AS 110 5.5.2 Scope of Ind AS 110 5.5.3 Meaning and Evaluation of Control 5.5.4 Consolidation Procedure for Subsidiaries 5.6 Summary 5.7 Exercises 5.1 Objective After going through this unit, you will be able to: ? Understand when consolidation is to be done as per Ind AS 110; ? Prepare Consolidated Financial Statements on the date of acquisition; ? Prepare Consolidated Financial Statements on subsequent reporting dates. ? How are financial statements measured? ? The minimum disclosure requirements with respect to financial instruments? 5.2 Introduction In today's business scenario, companies are often found to do business by creating group companies in order to garner benefits like tax savings, higher efficiency in operation etc. As a result, separate financial statements prepared by companies under a group fails to provide a complete picture of how the group, as a whole, performs. This is why preparation of consolidated financial statements is considered to be of immense benefit for the users of financial information. In addition, the same is a legal requirement as well.

[142] [ 142 ] 5.3 Benefits of Consolidated Financial Statements The major benefits of preparation of consolidated financial statements include the following: a. Consolidated financial statements provide a complete overview of the parent and all its other group companies. b. Consolidated financial statements are easy to comprehend by the investors as otherwise they are to deal with numerous separate financial statements of group companies to evaluate the parent before making any decision. c. Since group companies may indulge in transactions between themselves, separate financial statements fail to present the net impact of these transactions on the consolidated entity. 5.3 Regulatory Framework of Consolidation in India In India, consolidation is regulated by – (a) The Companies Act 2013; and (b) Accounting Standards (presently Indian Accounting Standards i.e., Ind ASs) Major provisions of these two are discussed below. (a) The Companies Act, 2013: As per Section 129(3),

**86% MATCHING BLOCK 271/516**

**W**

where a company has one or more subsidiaries, it shall, in addition to standalone financial statements, prepare a consolidated financial statement of the company and of all the subsidiaries and associate companies in the same form and manner as that of its own and in accordance with applicable accounting standards.

However, the company shall also attach along with its financial statement, a separate statement containing the salient features of the financial statement of its subsidiary or subsidiaries and associate company or companies in such form as may be prescribed. As per Section 2(6) “associate company”, in relation to another company, means a company in which that other company has a significant influence, but which is not a subsidiary company of the company having such influence and includes a joint venture company. Explanation—For the purposes of this clause - (a) the expression “significant influence” means control of at least twenty per [143] [ 143 ] cent of total voting power, or control of or participation in business decisions under an agreement; and (b) the expression “

**94% MATCHING BLOCK 272/516**

**W**

joint venture” means a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

Again,

**96% MATCHING BLOCK 273/516**

**SA**

COMBINE Corporate Accounting(1).pdf (D61319284)

as per Section 2(87) “subsidiary company” or “subsidiary”, in relation to any other company (that is to say the holding company), means a company in which the holding company— (i) controls the composition of the Board of Directors; or (ii) exercises or controls more than one-half of the total voting power either at its own or together with one or more of its subsidiary companies: Provided that such class or classes of holding companies as may be prescribed shall not have layers of subsidiaries beyond such numbers as may be prescribed. Explanation—For the purposes of this clause – (a) a company shall be deemed to be a subsidiary company of the holding company even if the control referred to in sub-clause (i) or sub-clause (ii) is of another subsidiary company of the holding company; (b) the composition of a company’s Board of Directors shall be deemed to be controlled by another company if that other company by exercise of some power exercisable by it at its discretion can appoint or remove all or a majority of the directors.

Thus, according to the Companies Act, 2013, consolidation is a legal requirement for companies having subsidiaries, associates or investment in joint venture. (b) Accounting Standards (i.e., Indian Accounting Standards): Companies (Indian Accounting Standards) Rules, 2015 prescribes the following Ind ASs that deal with preparation of Consolidated Financial Statements and Separate Financial Statements of group entities. ?

Separate Financial Statements ? Ind AS 28: Investments in Associates and Joint Ventures [144] [ 144 ]

The consolidation requirements as per the above Ind ASs can be summarized as follows: Sole Control Subsidiary Consolidation as per Ind AS 103 (on the date of acquisition) and as per Ind AS 110 on subsequent reporting date Consolidation as per Ind AS 28 using Equity Method Joint Operation Follow Ind AS 111 Joint Venture Follow Ind AS 28/111 Identify the type of Joint Arrangement Associate Company Obtained Joint control Have Significant Influence Financial Assets Follow Ind AS 109 No Yes Yes Yes No No As per the above diagram, consolidation is required for subsidiaries, associates as well as for joint arrangements (joint operation or joint control). Disclosures in these cases are made as per Ind AS 112. However, for all other type of investments in another entity, the same is treated as a financial asset and accounted as per Ind AS 109. Disclosures for this situation is done following Ind AS 107 (follow Unit 4). It is to be noted in this context that, even if the consolidated financial statements are prepared in the above cases,

**100%**

**MATCHING BLOCK 275/516**

**W**

separate financial statements shall also be prepared (Ind AS 27) by the investor company and investments are valued at cost or as per Ind AS 109.

Though consolidation is required for subsidiaries, associates as well as joint arrangements, in this chapter our focus will be only on the first category of relationships i.e., on a parent-subsidiary relationship. For other two type of relationships (i.e., associates and joint arrangements) students may follow the respective Ind ASs.

[145] [ 145 ] 5.5 Consolidation as per Ind AS 110 5.5.1 Objective of Ind AS 110 The objective of Ind AS 110 is to provide principles of when and how an entity should prepare consolidated financial statements. 5.5.2 Scope of Ind AS 110 Ind AS 110 requires that only a parent should prepare consolidated financial statements (i.e., Consolidated Income Statement, Consolidated Balance Sheet, Consolidated Statement of Changes in Equity and Consolidated Cash Flow Statement along with Notes to Accounts). There are, however, certain exemptions regarding application of Ind AS 110. As per Ind AS 110, a parent that meets all of the following conditions is exempt from the compulsion of preparing consolidated financial statements: a)

**96%**

**MATCHING BLOCK 276/516**

**W**

it is a wholly-owned subsidiary or is a partially-owned subsidiary of another entity and all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the parent not presenting consolidated financial statements; b) its debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets); c) it did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market; and d) its ultimate or any intermediate parent produces consolidated financial statements that are available for public use and comply with Ind ASs.

Similar provisions have been included in Rule 6 of Companies (Accounts) Rules 2014. 5.5.3 Meaning and Evaluation of Control

**100%**

**MATCHING BLOCK 278/516**

**SA**

Assignment 1.pdf (D134275548)

An investor, regardless of the nature of its involvement with an entity (the investee), shall determine whether it is a parent by assessing whether it controls the

investee.

**94%**

**MATCHING BLOCK 282/516**

**SA**

Assignment 1.pdf (D134275548)

An investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. [146] [ 146 ]

Thus,

**100%**

**MATCHING BLOCK 279/516**

**W**

an investor controls an investee if and only if the investor has all the following: (a) power over the investee; (b) exposure, or rights, to variable returns from its involvement with the investee; and (c) the ability to use its power over the investee to affect the amount of the investor's returns.

Hence, absence of any one of the above elements will lead to absence of control. In such cases, the investor will not be treated as a parent and consolidation requirement will not arise. In order to avoid intricacies, control through acquisition of majority shareholding has been considered in this study materials. However, students must note that it is possible that an investor obtains control through means other than majority shareholding. In those cases, the investor will be a parent and consolidation as per Ind AS 110 cannot be avoided. Note : An

**100%**

**MATCHING BLOCK 280/516**

**W**

investor shall reassess whether it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control

stated above. 5.5.4 Consolidation Procedure for Subsidiaries

**60%**

**MATCHING BLOCK 281/516**

**W**

Consolidation of an investee i.e., subsidiary shall start from the date the investor i.e., parent obtains control of the subsidiary and will cease when the parent loses control of the

subsidiary. Thus, accounting for consolidation will start on the date of acquisition itself and the parent will need to prepare consolidated financial statements for each of the following reporting date. I. Accounting on the Date of Acquisition Since the acquiree company (i.e., subsidiary company) does not cease to exist after acquisition of its control by the acquirer, there will be no entry in the books of the subsidiary on the date of acquisition. However, the acquirer i.e., holding company shall have to measure the identifiable net assets acquired from A Non-Controlling Interest (NCI) is an ownership of less than 50% in a Company, where the equity state gives the investors a little influence NCI is also known as minority interest. NCI do not account for potential voting rights.

[147] [ 147 ] subsidiary at fair value, measure the NCI and goodwill or gain on bargain purchase on the date of acquisition and prepare a consolidated balance sheet (CBS) as on the date of acquisition after incorporating the same. The holding company shall pass the following entry in its consolidated accounts on the date of acquisition:

... (D143464517)

A/c (at fair value) ..... Dr. Goodwill A/c.....Dr. To Liabilities (at fair value) A/c To  
Consideration A/c To NCI A/c To Gain on Bargain Purchase A/c Consideration A/c..... Dr. To Cash  
A/c (if consideration is paid in cash) To Equity Share Capital A/c (

if  
shares are issued) To Securities Premium A/c (if shares are issued at  
premium) Accordingly, the fair value of assets and liabilities of subsidiary company will be merged to the corresponding  
assets and liabilities of the holding company in the CBS. The NCI will appear under 'Equity' separately and Goodwill will  
appear under Non-Current Assets while the Gain from Bargain Purchase will be credited to Capital Reserve and appear  
under 'Other Equity' separately. NCI may be measured at proportionate fair value of net identifiable assets or at fair value  
(calculated at per share basis or at market price). Goodwill or Gain from Bargain Purchase will be calculated as follows: (i)  
Ascertain the fair value of identifiable net assets on the date of acquisition (DOA). Fair value of identifiable net assets FV ?  
? Assets FV ? ? of Liabilites. or, Fair value of identifiable net assets = Share capital + Other Equity (± difference in fair value)  
(ii) Ascertain the purchase consideration paid by the holding company. (iii) Ascertain the value of NCI either as  
proportionate fair value of identifiable net assets or at fair value of proportionate shareholding. This depends on the  
policy of the parent.

[148] [ 148 ] Now, if [(ii) + (iii)] is higher than (i) above, the result is Goodwill and if [(ii) + (iii)] is lower than (i) above, the  
result is Gain on Bargain Purchase. In case NCI is measured at fair value, the result Goodwill is known as Full Goodwill as  
it includes the share of both NCI and Parent but if NCI is measured at proportionate fair value of identifiable net assets,  
the resultant Goodwill is Partial Goodwill representing parent's portion only. In case of wholly owned subsidiary, there  
will be no NCI. Illustration 1: NCI is measured at proportionate fair value of identifiable net assets. P Ltd. acquires 70% of S  
Ltd. for Rs.8,50,000 and issued equity shares at par. Fair value of S Ltd.'s identifiable net assets amount to Rs.9,00,000.  
Calculate NCI and Goodwill and show the treatment in the books of P Ltd. Assume that P Ltd. measures NCI at  
proportionate fair value of net identifiable assets. Solution : Fair value of net assets = Rs.9,00,000. Purchase  
Consideration = Rs.8,50,000 NCI (at proportionate fair value of net assets) = 30% of Rs.9,00,000 = Rs.2,70,000. Goodwill  
= Purchase consideration + NCI – Fair value of net assets = Rs.8,50,000 + Rs.2,70,000 – Rs.9,00,000 = Rs.2,20,000 P  
Ltd.

Illustration 3:

Non-controlling interest is measured at fair value but separate fair value of NCI is not given X Ltd. acquires 70% of Y Ltd. for Rs. 8,40,000 and issued equity shares at Rs. 12 per share (including Rs.2 as premium). Fair value of Y Ltd.'s identifiable net assets amount to Rs. 9,60,000. Calculate NCI and Goodwill and show the treatment in the books of X Ltd. Assume that X Ltd. measures NCI at fair value. Solution : Since, no separate fair value is given for NCI, we measure the fair value of NCI at per share basis (i.e., taking purchase consideration as base). Fair value of net assets = Rs.9,60,000. Purchase Consideration = Rs.8,40,000 (for 70%) NCI (at fair value) = Rs.8,40,000 ? 30% 70% = Rs.3,60,000 (considering PC as base) Goodwill = Purchase consideration + NCI – Fair value of net assets = Rs.8,40,000 + Rs.3,60,000 – Rs.9,60,000 = Rs.2,40,000 Number of equity shares issued = Rs.8,40,000 ÷ Rs.12 = 70,000 X Ltd.

Prepare the consolidated Balance Sheet as on 31.03.2021 of the group entities i.e., H Ltd. and S Ltd. Assume NCI is measured at proportionate fair value of net identifiable assets. Solution : (Rs. in lakh) Since, H Ltd. acquired 70% of S Ltd., remaining 30% shares represents NCI. Fair value of Identifiable Net assets = 4,950 + 900 + 375 + 1050 – 225 = Rs.7,050 or, Fair value of Identifiable Net assets = Share capital + Other equity +/- fair value changes = 3,000 + 3,450 + (4,950 – 4,500) + (900 – 750) = Rs.7,050 NCI (at proportionate fair value of net identifiable assets) = 30% of 7,050 = Rs. 2,115 Goodwill = Purchase Consideration + NCI – Fair value of Identifiable Net assets = Rs.6,300 + 2,115 – 7,050 = Rs.1,365 Note : Since, NCI is measured at proportionate fair value of net identifiable assets, computed value of Goodwill represents only the holding company's portion. Now, the CBS will be as follows :

II. Accounting on Any Subsequent Reporting Date After the date of acquisition, on all subsequent reporting dates the holding company shall continue to prepare the consolidated balance sheet (CBS) until its [155] [ 155 ] control over the subsidiary is lost. The following points must be considered in preparing a CBS on subsequent reporting date. 1. The Goodwill should be measured at the value computed on the date of acquisition as per Ind AS 103 less impairment loss, if any. Thus, Goodwill will not be amortized. 2.

**98% MATCHING BLOCK 295/516**

**W**

For consolidation on subsequent date the share of NCI in post-acquisition profit or loss of the subsidiary must be added to acquisition date value

of NCI. 3. In the subsequent CBS, the non-current items of the subsidiary are taken

**100% MATCHING BLOCK 296/516**

**W**

acquisition date fair value plus subsequent change in book value

after adjustment of any depreciation or amortization on the fair value gain or loss (i.e., difference between carrying amount and fair value on the date of acquisition). This may be termed as fair value adjustment. 4. In the subsequent CBS, the current items of the subsidiary should be taken at reporting date book value (i.e., they will be merged with parent's current assets item-by-item basis based on the value as per standalone balance sheets on the date of reporting). However, the fair value gain or loss on the date of acquisition on any current item should be reverted to the post acquisition retained earnings on the assumption that the item no longer exists on the reporting date i.e., realized during the year (assuming FIFO movement). 5. Thus, the post-acquisition profit or loss should be calculated as follows : Post-acquisition profit or loss of Subsidiary = Profit/ Loss reported by the subsidiary during the year – fair value changes in respect of current items reverted (see point 4) – fair value adjustment (see point 3) – any other items (such as unrealized profit etc.). The post-acquisition profit or loss, thus arrived will be shared by the parent and NCI in proportion of their shareholding. While parent's share will be credited to its 'other equity', the share of NCI will be added to the value of NCI on the acquisition date (see point no. 2). 6. Adjustment for inter-co transactions such as sale of goods, sale of fixed assets, inter-co debt, bonus issue by the subsidiary and dividend declared by the subsidiary should also have impact on the CBS (will be discussed in due course). 7. Parent's share of impairment loss on goodwill will be deducted from Consolidated Other Equity and NCI's share of impairment loss on goodwill (only in case NCI is measured at fa value) will be deducted from reporting date NCI (refer to point 2).

[156] [ 156 ] Illustration 7 : Preparation of CBS on subsequent reporting date On 31.03.2021, H Ltd. acquired 70% equity shares of S Ltd. at Rs.6,300 in cash and obtained control. After one year, i.e., on 31.03.2022, the balance sheets of the companies were as follows: Particulars H Ltd. S Ltd. Carrying Carrying Amount Amount (Rs. in lakh) (Rs. in lakh) Assets Non-current Assets PPE 9,750 4,125 Investment in S Ltd. 6,300 –

**62% MATCHING BLOCK 297/516**

Current Assets Inventories 1,200 825 Trade receivables 570 450 Cash and Cash Equivalent 6,705 2,130 Total 24,525 7,530 Equity and Liabilities Equity Share Capital (Rs. 10) 7,500 3,000 Other Equity 16,500 4,275 Non-current Liabilities – – Current Liabilities Trade

Payables 525 255 Total 24,525 7,530

The income statements of the two companies for the year ended on 31.03.2022 are given below:

Statement of Profit and Loss for the year ended on 31.03.2022

Particulars H Ltd. S Ltd. Carrying Carrying Amount Amount (Rs. in lakh) (Rs. in lakh) Assets Revenue 4,500 2,850 Cost of sales (-2,700) (-1,500) Administrative expenses (-600) (-525) Profit for the year 1,200 825

[157] [ 157 ] H Ltd. estimates that goodwill has impaired by Rs.147 lakh. The fair value adjustment to PPE was in respect to a plant having remaining useful life of 20 years with estimated residual value of zero. H Ltd. uses SLM for depreciation on PPE. All the inventory held by S Ltd. on the date of acquisition was sold during 2021-2022. Prepare the Consolidated Balance Sheet as on 31.03.2021 of the group entities i.e., H Ltd. and S Ltd. Solution : (Rs. in lakh) This problem should be considered as a continuation of Illustration no.5. 1. Goodwill = Goodwill on the DOA – Impairment during the year = Rs.1,365 – Rs.147 = Rs.1,218 2. Calculation of post-acquisition profit : Particulars Amount (Rs. in lakh) Profit during the year reported by S Ltd. 825 Less: Fair value changes in respect of current items now reverted Inventory (900-750) (150) Less: Fair value adjustment Depreciation on fair value gain on PPE [(4,950 -4,500)/20] (22.5) 652.5 3. NCI = Acquisition date NCI + share of post-acquisition profit = 2,115 + 30% of 652.5 = 2,310.75 4. Consolidated 'Other Equity' Particulars Amount (Rs. in lakh) Other equity of H Ltd. 16,500.00 Add. Share of post-acquisition profit (70% of 652.5) 456.75 16956.75 Less. Impairment of goodwill (147) 16809.75 Note : Since, NCI was measured at proportionate fair value of identified net assets, goodwill represents partial goodwill i.e., parent's portion only. Hence, impairment adjustment for goodwill should be done against parent only and not against the NCI. When NCI is measured at fair value, goodwill represents full value [158] [ 158 ] of goodwill. Then the impairment of goodwill will be adjusted proportionately against parent as well as NCI. 5. Balance of PPE PPE (Reporting date) = Combined book value of H and S + fair value gain on acquisition – Adjustment on fair value gain = 9,750 + 4,125 +450 – 22.5 = Rs.14302.5 lakh

201311822 AFE 3782 ASIGNMENT 2B 2021.pdf  
(D113025922)

Assets Non-current Assets PPE 14,302.50 Goodwill 1,218.00 Current Assets Inventories (1,200 + 825) 2,025.00 Trade receivables (570 +450) 1,020.00 Cash and Cash Equivalent (6,705 + 2,130) 8,835.00 Total 27,400.50 Equity and Liabilities Equity Share Capital (Rs. 10) 7,500.00 Other Equity 16,809.75 NCI 2,310.75 Non-current Liabilities – Current Liabilities Trade Payables (525 + 255) 780

Total 27400.50 Note:

Students may note that if Other Equity may be further classified into Reserves and Retained Earnings (i.e., Profit and Loss balance), then post-acquisition reserves and post-acquisition retained earnings may be separately determined. However, respective share of both of them will be subsequently added to Consolidated Other Equity (may be separately into Reserve and Retained Earnings head). ? Adjustments for Inter-company Transactions ? Inter-company/Mutual debt, Cash-in-transit, Goods-in-transit In the consolidated balance sheet, any inter-company (i.e., mutual debt) should be eliminated in full. In other words, in the CBS, the mutual amount is to be deducted

[159] [ 159 ] from both trade receivables and trade payables. In case the inter-co trade receivable is found to be higher than inter-co trade payables, the difference may be treated as cash-in-transit and goods-in transit and should be adjusted accordingly. While cash- in-transit is to be deducted from inter-company trade receivable, goods-in-transit is to be added to inter-company trade payables. Again cash-in-transit should be included in Cash and Cash Equivalent while goods-in-transit will be included in Inventories. Finally, the mutual indebtedness (now being equal) will be deducted from both trade receivables and trade payables in the CBS. ? Unrealized Profit on Inventory When a parent sold goods to a subsidiary or vice-versa at a price higher than its cost and a portion of such goods still remains unsold on the date of preparation of CBS, the question of adjustment of unrealized profit on inventory arises. The transaction can be of two types – downstream transaction (parent selling goods to subsidiary) and upstream transaction (subsidiary selling goods to parent). On consolidation, this unrealized profit must be eliminated in full. Accordingly, in the CBS inventories must be reduced by the amount of unrealized profit so calculated. In case of a downstream transaction (where the entire profit is included in parent's retained earnings), the full unrealized profit will be deducted from Other Equity of the parent. However, in case of an upstream transaction (where the entire profit is included in subsidiary's retained earnings and hence is to be proportionately shared by parent and NCI), the proportionate unrealized profit should be deducted from the Consolidated Retained Earnings in Other Equity and NCI. Illustration 8 : Preparation of CBS on subsequent reporting date; NCI at fair value calculated on per share value basis

Prepare

**90% MATCHING BLOCK 302/516**

**W**

Consolidated Balance Sheet of H Ltd. and its subsidiary S Ltd. as on 31.03.2022. Solution : (Rs.

in lakh) 1. Calculation of NCI and Goodwill on the DOA: Fair value of identifiable net assets on the DOA = Share capital + Other equity +/- Change in fair value = 3,000 + 3,000 +(3,800-3,500) – (500-200) = Rs.6,000 Purchase Consideration = Rs.5,000 NCI (measured at fair value) = Rs.5,000 x = Rs.1,250 Goodwill = Purchase Consideration + NCI – Fair value of Identifiable Net assets = 5,000 + 1,250 – 6,000 = Rs.250

[161] [ 161 ] 2. Goodwill on 31.03.2020 = Rs. 250 (Since there is no impairment) 3. Calculation of post-acquisition profit: Particulars Amount (Rs. in lakh) Profit during the year (cl. balance – op. balance i.e., 4,500 – 3,000) 1,500 Add : Fair value loss in respect of inventory now reverted\* 300 1,800 Less : Fair value adjustment Depreciation on fair value gain on PPE (3,800-3,500) x 10% 30 1,770 \*It is assumed that the corresponding inventory is realized during the year. 4. Unrealized profit on inventory = 50% of Rs.100 x 20% = Rs.10 (downstream transaction) 5. NCI on the reporting date = Acquisition date NCI + share of post-acquisition profit = 1,250 + 20% of 1,770 = Rs.1,604 6. Consolidated 'Other Equity' Particulars Amount (Rs. in lakh) Other equity of H Ltd. 17,500 Add.: Share of post-acquisition profit (80% of 1,770) 1,416 18,916 Less : Unrealized profit on inventory 10 18,906 7. Balance of PPE for CBS PPE (Reporting date) = Combined book value of H and S + fair value gain on acquisition – Adjustment on fair value gain = 13,800 + 300 – 30 = Rs.14,070 8. Balance of Inventories for CBS Inventories (Reporting date) = Combined book value of H and S – unrealized profit = 5,800 – 10 = Rs. 5,790 9. We assume that the difference between inter-company trade receivables and payables i.e., (80 – 60) = Rs.20 represent cash in transit. So, it is added to Cash and Cash Equivalent and deducted from Trade receivable and finally the mutual debt is deducted.

Unrealized profit on sale of assets Treatment for any unrealized profit on inter-company sale of fixed assets will be similar to that of sale of goods. In addition, as the buyer has charged depreciation on the value at which it acquired the asset from the seller, there arises a question of depreciation being overcharged for consolidation purpose. The depreciation so overcharged must be calculated and deducted from the corresponding asset. The same must be added in full to the Consolidated Retained Earnings in Other Equity in case of a downstream transaction and proportionately to the Consolidated Retained Earnings in Other Equity and NCI in case of an upstream transaction.

[163] [ 163 ] Illustration 9 : Preparation of CBS on subsequent reporting date; NCI at fair value; unrealized profit on inter-company sale of non-current assets.

**SA**

Assignment 1.pdf (D134275548)

an entity shall recognize a dividend from a subsidiary in its separate financial statements when its right to receive the dividend is established.

Based on the above provisions, the following treatments regarding dividend from subsidiary company can be suggested:

a. Proposed Dividend : Since the same is not approved, it won't have any adjustment in the separate or consolidated balance accounts of the subsidiary and parent. The subsidiary will only mention it in the foot note of its balance sheet as a contingent liability. Thus, in the CBS, the net liability towards the NCI should be reported in the footnote.

b. Dividend Payable : In some cases, subsidiary company may be found to have declared dividend and adjusted the same in its accounts, though not yet made the payment. In such a case, in the standalone balance sheet of the subsidiary company Other Equity will be shown net of dividend and a Dividend Payable account will appear in the Current Liability section. So, no further adjustment will be required in the standalone balance sheet of subsidiary company. However, in the standalone balance sheet of the holding company the following adjustment must be performed: (i) If the dividend is declared out of pre-acquisition profit: Holding company will make the following entry – Dividend Receivable A/c.....Dr To Investment in Subsidiary Company A/c Thus, if the holding company has wrongly included the above profit in its Profit and Loss A/c, the following rectification entry should be passed – Profit and Loss A/c.....Dr To Investment in Subsidiary Company A/c Accordingly, the amount (i.e., holding company's share of dividend) will be deducted from Other Equity and also from Investment in the standalone balance sheet of the holding company. (ii) If the dividend is declared out of post-acquisition profit: Holding company will make the following entry – Dividend Receivable A/c.....Dr To Profit and Loss A/c

[167] [ 167 ] (iii) If the dividend is declared partly out of pre-acquisition profit and partly out of post-acquisition profit: Holding company will make the following entry– Dividend Receivable A/c.....Dr To Investment in Subsidiary Company A/c (portion from pre-acquisition profit) To Profit and Loss A/c (portion out of post-acquisition profit) Now, the adjustment in the CBS will be as follows: In situation (i), no adjustment will be required for Goodwill and NCI as the same is calculated considering the pre-acquisition profit on DOA. The Dividend Receivable by holding company will be set off against the Dividend Payable by subsidiary in the CBS. Thus, in the CBS, only NCI's portion of dividend receivable will appear in the Current Liability section. In situation (ii), once the adjustment is done in the standalone balance sheet of the holding company, the post-acquisition profit should be calculated ignoring such dividend and should be shared accordingly. The Dividend Receivable by holding company will be set off against the Dividend Payable by subsidiary in the CBS. In situation (iii), if dividend is declared from both pre and post-acquisition profits, then for respective parts the adjustments will be done as stated above. Finally, Dividend Receivable by holding company will be set off against the Dividend Payable by subsidiary in the CBS. c. Dividend Paid: For dividend paid no adjustment will be required as the accounts have already been settled and nothing is outstanding. However, for dividend out of pre-acquisition profit received by holding company the rectification needs to be done if the share of dividend has been credited by the holding company to its Profit and Loss A/c. ? Inter-company Bills, Contingent Liability for Bills Discounted: Inter-company bills not yet discounted will be deducted from both assets (from Bills Receivable) and liability (Bills Payable). Contingent liability for bills discounted, if any, appears in the footnote of the standalone balance sheet of the holding and/or subsidiary (as applicable). In the footnote of CBS, the same should be shown net of inter-co bills discounted.

Bills Payable (including inter-co bills Rs.15) 200 – Dividend Payable 200 Total 13,600 5,000 Note : Contingent liability for bills discounted = Rs.20 lakh On 01.04.2020, S Ltd. had Rs.1,500 in its Other Equity. H Ltd. acquired 80% share of S Ltd. on 01.04.2020 at a consideration of Rs.2,900 payable in cash. The fair values of identifiable assets and liabilities were not different from the book values on the date of acquisition. NCI was to be measured at proportionate fair value of net identifiable assets. Assume that dividends were declared out of pre- acquisition profit. Prepare the Consolidated Balance Sheet of the group and the Separate Balance Sheet of H Ltd. on 31.03.2021. Solution : (Rs. in lakh) While solving the sum, the students must know that calculation of NCI and

[169] [ 169 ] Goodwill on the date of acquisition should be done ignoring the dividend declared out of pre-acquisition profit. 1. Calculation of Goodwill Fair value of identifiable net assets (represented by equity) = 2,000+1,500 = Rs.3,500 NCI = 20% of Rs.3,500 = Rs.700 Goodwill = Purchase Consideration + NCI – Fair value of identifiable net assets = 2,900 + 700 – 3,500 = Rs.100 2. Goodwill on the reporting date = Rs.100 3. Post-acquisition profit = cl. balance – adj. op. balance = 2,500 – (1,500- 200) = Rs.1,200 3. NCI on the reporting date = NCI on DOA + share of post-acquisition profit – share of pre-acquisition dividend included in NCI on DOA = 700 + 20% of 1200 – 20% of 200 = Rs.900 4. Investment to be shown in the separate balance sheet of H Ltd. = 2,900 – 80% of 200 = Rs.2,740. 5. Consolidated Other Equity = H Ltd.'s balance + Share of post-acquisition profit = 8,000 + 80% of 1,200 = Rs.8,960 Balance Sheet as on 31.03.2021 Particulars H Ltd. (Separate H Ltd. Bills Payable (including inter-co bills Rs.15) 200 200-10 40 Dividend Payable \_\_\_\_\_ – 200-160 15,790 Total 13,600 Note: Contingent liability for bills discounted = Rs.20 – Rs.5 = Rs.15 lakh ? Consolidation of Multiple Independent Subsidiaries A parent may have multiple independent subsidiaries by acquiring control over each of them separately. The structure looks like as follows: In such a situation, calculation for Goodwill on the DOA, NCI on the DOA, post-acquisition profit, Goodwill on the reporting date (after impairment) and NCI on the reporting date should be done separately. However, Consolidated Other equity must include parent's share of post-acquisition profit from all the subsidiary companies. ? Chain Holding However, parent-subsidiary relationship may be of such type where a parent controls a subsidiary which may control another subsidiary (say, ultimate subsidiary) and thus, the parent eventually gains control over the ultimate subsidiary. This structure is known as Chain Holding.

[172] [ 172 ] It can again be of the following two forms : Though all the steps in preparation of CBS remains the same in case of chain holding also, two important points should be kept in mind here. These are – determination of interest of Group and NCI and calculation of NCI on the reporting date. 1. Determination of interest of the Group and NCI: Situation 1: In the ultimate subsidiary interest will be of Group and NCI (combined) only. S 1 S 2 Interest in S 1 Group (i.e., P) 80% NCI 20% Effective Interest in S 2 Group (i.e., P) = 80% of 75% 60% NCI – Indirect = 20% of 75% 15% - Direct 25% 40% Situation 2: In the ultimate subsidiary interest will be of Group and NCI (combined) only. S 1 S 2 Interest in S 1 Group (i.e., P) 80% NCI 20% Effective Interest in S 2 Group (i.e., P) – Direct 10% - Indirect = 80% of 75% 60% 70% NCI – Indirect = 20% of 75% 15% - Direct (100 – 10-60-15) 15% 30%

[173] [ 173 ] 2. Calculation of NCI on the reporting date: After the usual process of determination of NCI on the reporting date, NCI's share in the investment in S 2 (20% in both the examples above) has to be deducted. Also, Goodwill calculation will consider only parent's portion of cost of investment (here 80%). Note : all other adjustments will be carried out in the usual manner. Consider the following illustration. Illustration 12 : Preparation of CBS under Chain Holding Structure On 31.03.2020, the balance sheets of H Ltd. A Ltd. and B Ltd. were as follows: Particulars Carrying Amount (Rs.in lakh) H Ltd. A Ltd. B Ltd. Total 29,090 ? Consolidated Income Statement In addition to CBS, in a holding-subsiary arrangement, the group also needs to report consolidated total comprehensive income i.e., Consolidated Statement of Profit and Loss and Other Comprehensive Income. The process of preparing the same is as follows: 1. Consolidate (i.e., merge) all the items of revenue from operation and other income line by line and eliminate inter-company transactions from the total. Inter-company revenue items may include sales by subsidiary (or by parent) to the parent (or subsidiary), interest received, royalty received, dividend received etc. 2. Consolidate (i.e., merge) all the items of expenditure such as purchase, operating expenses, finance costs etc. line by line and eliminate inter- company transactions from the total. Inter-company transactions may include purchase by subsidiary (or by parent) from the parent (or subsidiary), interest paid, royalty paid etc. 3. Determine the consolidated profit before tax. 4. Deduct consolidated tax expenses to get consolidated profit after tax. 5. Show profit attributable to parent and NCI. [180] [ 180 ] 6. Incorporate items of other comprehensive income and calculate the consolidated other comprehensive income after eliminating any inter- company items. 7. Show other comprehensive income attributable to parent and NCI. Note : Take special care to treat inter-company dividend (out of pre-acquisition and post-acquisition profit). This will however reflect in the Statement of Changes in Equity only. Consider the following Illustration. 5.6 Summary Preparation of consolidated financial statements is a legal compulsion in India as per the Companies Act 2013 as well as Ind AS 110, except for a few specific situations. The format and the process of consolidation have also been defined in the regulations. Consolidated financial statements help to provide a complete overview of the performance of the group as a whole and thereby help investors in making informed judgement before taking the decisions.

5.7 Exercises ? Theoretical Questions 1. State the advantages of preparing consolidated financial statements. 2. State the provisions of the Companies Act, 2013 regarding consolidation of accounts. 3. State the provisions of Indian Accounting Standards regarding consolidation of accounts.

[185] [ 185 ] 4. State the conditions to be satisfied by a parent in order to be exempted from preparing consolidated financial statements. 5. How will you evaluate 'control' by a parent in a subsidiary? ? Practical Problems 1. A Ltd. acquires 80% of B Ltd. by paying cash consideration of Rs.240 crore. The fair value of non-controlling interest on the date of acquisition is Rs.60 crore. The value of subsidiary's identifiable net assets as per Ind AS 103 is Rs. 260 crore. Determine the value of goodwill and pass the journal entry when (i) NCI is measured at fair value, and (ii) NCI is measured proportionate fair value of identifiable net assets. [Answer: (i) Goodwill Rs.40 crore (ii) Goodwill Rs.32 crore] 2. X Ltd. acquires 60% of Y Ltd. by paying cash consideration of Rs.1,500 lakh. The fair value of non-controlling interest on the date of acquisition is Rs.960 lakh. The value of subsidiary's identifiable net assets as per Ind AS 103 is Rs. 2,000 lakh. Determine the value of goodwill and pass the journal entry when (i) NCI is measured at fair value, and (ii) NCI is measured proportionate fair value of identifiable net assets. [Answer: (i) Goodwill Rs.460 lakh, (ii) 300 lakh] 3. A Ltd. acquires 80% of B Ltd. by paying cash consideration of Rs.800 lakh. The fair value of non-controlling interest on the date of acquisition is Rs.200 lakh. The value of subsidiary's identifiable net assets as per Ind AS 103 is Rs. 1,040 lakh. Determine the gain on bargain purchase and pass the journal entry when (i) NCI is measured at fair value, and (ii) NCI is measured proportionate fair value of identifiable net assets. [Answer: Gain on bargain purchase (i) Rs.40 lakh (ii) 32 lakh. 4. On 31.03.2021, H Ltd. acquired 70% equity shares of S Ltd. at Rs.12,600 in cash and obtained control. The balance sheets of the companies along with the fair value of assets and liabilities of S Ltd. on the date of acquisition were as follows:

Exercises 6.1 Objective After going through this unit, you will be able to: ? Know the meaning

of corporate restructuring, mergers and acquisitions and internal reconstruction ? Understand the types of scheme, its accounting aspects and formalities ? Have guidelines for preparation of different schemes ? Get in touch with the drafted schemes 6.2 Introduction In today's business world mergers and acquisitions, also known as business combination is the most popular means of expansion within and beyond the geographical territories of a country. However, the success of a business combination largely depends on how well the scheme for such merger and acquisitions is designed. Since accountants have the clear idea about the possible impact of business combination on the future course of action of the amalgamating companies, they are the best one to design such schemes. Also, companies suffering from severe financial crisis and accumulated losses may try to revive them through the process of internal reconstruction. Since many stakeholders are to compromise their interest in such an

[191] [ 191 ] event, only a properly designed internal reconstruction scheme can get acceptance from all parties. This also requires active involvement on the part of the accountants in designing such a scheme. The following sections of this chapter discuss in detail the process of designing the schemes. Also, the chapter discusses about the accounting treatment of merger and acquisition in the context of the newly introduced Ind AS 103, Business Combination. 6.3 Corporate Restructuring; Concept and Types Corporate restructuring is a process to modify the capital structure or operations of a corporate organization significantly. Corporate restructuring can be driven by a need for change in the organizational structure or business model of a company, or it can be driven by the necessity to make financial adjustments to its assets and liabilities. Frequently, it involves both. Companies may need to restructure either to expand itself in new products, new markets, to ensure uninterrupted supply of raw materials or to increase control over the distribution channels or to revive itself from extreme financial crisis. Accordingly, corporate restructuring can broadly be classified into two types – (a) External Restructuring (or Reconstruction), and (b) Internal Restructuring (or Reconstruction). 6.4 External Restructuring – Mergers and Acquisition The term ‘external corporate restructuring’ essentially means modifying the capital structure or operations of a corporate organization significantly by the intervention of any external party. External restructuring can be further segregated into mergers and acquisitions.

**74%**

**MATCHING BLOCK 336/516**

**W**

Merger is a process in which two or more existing companies unifies into another existing company or a new company is formed to take over the business of two or more existing companies.

As a result, the shareholders of the old companies become the shareholders of the new company. Mergers can be either congeneric (i.e., taking place between firms belonging to the same industry) or conglomerate (i.e., taking place between firms belonging to different industries). Again, congeneric merger can be either a horizontal integration (i.e., between two firms at the same level of operations, e.g., both are manufacturer of the same products in same or different markets) or vertical integration (i.e., between firms

[192] [ 192 ] located at different level of the value chain). Vertical integration can again be subdivided into forward integration (i.e., a manufacturer combining with a distributor) or backward integration (a manufacturer combining with a supplier of raw materials). On the other hand, an acquisition is a process where an existing company purchases another company and as a result the acquired companies goes into liquidation while the acquirer company continues the business of acquired company under its own name. Both the above two types of corporate restructuring are currently governed by Indian Accounting Standard (Ind AS) 103. Practically, Ind AS 103 covers all forms of business combinations. 6.5 Ind AS 103: Business Combination ?? Definition

**85%**

**MATCHING BLOCK 337/516**

**W**

of Business Combination: According to Ind AS 103, a business combination is a transaction or other event in which an acquirer obtains control of one or more businesses.

Accordingly, ? A

business combination is strictly different from merely an ‘asset acquisition’ where the acquirer acquires only one asset or a group of assets which can never amount to a business. ? For business combination, the control by one entity of another is sufficient and both the entity may continue to exist. In other words, business combination will certainly include all mergers and acquisition and also will include acquisition of less than 100% shares of the acquired company. ? In business combination, the acquired companies may cease to exist or may exist (even 100% subsidiary is possible). ?

Accounting for Business Combination A business combination is accounted for applying acquisition method. Application of acquisition method has the following steps:

a)

**65% MATCHING BLOCK 346/516**

**SA**

new Sec B Corporate Accounting (1)-8-84.pdf  
(D142427798)

Identifying the acquirer b) Determining the acquisition date c) Recognizing and measuring the identifiable assets acquired and liabilities assumed and any non-controlling interest in the acquire. d) Recognizing and

measurement of goodwill or gain from bargain purchase e) Disclosures

[193] [ 193 ] The steps are discussed below: a) Identifying the acquirer : Most of the time, the acquirer is usually the investor who acquires an investment or a subsidiary. The acquiree is

**83% MATCHING BLOCK 339/516**

**W**

the business that the acquirer obtains control of in business combination. The

following factors as described in Ind AS-103 shall be taken into consideration in deciding who is the acquirer: ?

**100% MATCHING BLOCK 340/516**

**W**

In a business combination effected primarily by transferring cash or other assets or by

in-curring

**98% MATCHING BLOCK 341/516**

**W**

liabilities, the acquirer is usually the entity that transfers the cash or other assets or incurs the liabilities. ? In a business combination effected primarily by exchanging equity interests, the acquirer is usually the entity that issues its equity interests. ?

**96% MATCHING BLOCK 342/516**

**W**

The acquirer is usually the combining entity whose relative size (measured in, for example, assets, revenues or profit) is significantly greater than that of the other combining entity or entities. ? In a business combination involving more than two entities, determining the acquirer shall include a consideration of, among other things, which of the combining entities initiated the combination, as well as the relative size of the combining entities. ? A new entity formed to effect a business combination is not necessarily the acquirer. If a new entity is formed to issue equity interests to effect a business combination, one of the combining entities that existed before the business combination shall be identified as the acquirer. In contrast, a new entity that transfers cash or other assets or incurs liabilities as consideration may be the acquirer.

Note : In case of

**98% MATCHING BLOCK 343/516**

**W**

a reverse acquisition, the entity that issues securities (the legal acquirer) is identified as the acquiree for accounting purposes. The entity whose equity interests are acquired (the legal acquiree) must be the acquirer for accounting purposes for the transaction to be considered a reverse acquisition. For example, reverse acquisitions sometimes occur when a private operating entity wants to become a public entity but does not want to register its equity shares. To accomplish that, the private entity will arrange for a public entity to acquire its equity interests in exchange for the equity interests of the public entity. In this example, the public entity is the legal acquirer because it issued its equity interests, and the private entity is the legal acquire because its equity interests were acquired. However,

the private entity will be the accounting acquirer and the public entity will be the accounting acquiree.

[194] [ 194 ] b) Determine

the acquisition date :

The acquisition date is

**72% MATCHING BLOCK 344/516**

**W**

the date on which the acquirer obtains control of the acquiree. It is generally the date on which the acquirer legally transfers the consideration (the payment for the investment), acquires the assets and assumes the liabilities of the acquiree -the closing date. However,

it can be earlier or later than the closing date, too. It depends on the contractual arrangements in the written agreements, if something like that exists.

**76% MATCHING BLOCK 345/516**

**W**

c) Recognize and measure the identifiable assets acquired, the liabilities assumed and the non-controlling interest in the acquiree:

An acquirer or investor shall recognize all

**63% MATCHING BLOCK 360/516**

**SA**

Assignment 1.pdf (D134275548)

identifiable assets acquired, liabilities assumed and non-controlling interests in the acquiree separately from goodwill. The acquirer shall

recognize even those assets and liabilities that have so far not been recognized by the acquiree. All assets and liabilities must be measured at acquisition-date fair value. In case the acquirer acquires less than 100% of shares in the acquiree, it shall also recognize non-controlling interest (NCI). Non-controlling interest may be measured using the (i) Fair value method; or (ii) Proportionate share method. d) Recognizing and Measurement Goodwill: Goodwill is measured at the acquisition date as the excess of 1 over 2 below: 1.

**87% MATCHING BLOCK 347/516**

**W**

The aggregate of ? The fair value of consideration transferred ? The amount of any non-controlling interest recognized ? In a business combination achieved in stages, the acquisition date fair value of the acquirer's previously held equity interest in the acquiree 2. The

assets and liabilities recognized in accordance with Ind AS-103. Goodwill may arise in the acquiring group's consolidated financial statements when a new subsidiary is acquired. Goodwill can also arise in the separate financial statements of an acquiring entity where it purchases the business and assets of another company. If the goodwill is negative as explained above, then it is a gain on a bargain purchase. That negative goodwill (excess) is recognized as gain on bargain purchase directly in equity as capital reserve. e) Disclosures:

**97% MATCHING BLOCK 348/516**

**W**

The acquirer shall disclose information that enables users of its financial statements to evaluate the nature and financial effect of a business combination that occurs either: ? during the current reporting period; or ? after the end of the reporting period but before the financial statements are approved for issue. [195] [ 195 ]

Note :

**100% MATCHING BLOCK 349/516 W**

When Acquiree Company ceases to exist due to business combination the accounting will be reflected on the stand-alone balance sheet of the acquirer company. But when Acquiree Company exists (i.e., Non-Controlling Interest exists) after business combination, accounting for business combination will reflect on consolidated balance sheet. In such cases reference to both Ind AS 103 and Ind AS 110 (

Consolidated Financial Statements) is made for consolidation. ? Illustrations on Accounting for Business Combination Situation 1 : Acquiring company acquires less than 100% shares in acquiree company. Illustration 1 : Non-controlling interest is measured at proportionate net assets value; Goodwill X Ltd. acquires 70% of Y Ltd. for Rs.8,40,000 and issued equity shares at par. Fair value of Y Ltd.'s identifiable net assets amount to Rs.9,00,000. Calculate NCI and Goodwill and show the treatment in the books of both X Ltd. and Y Ltd. Assume that X Ltd. measures NCI at proportionate fair value of net identifiable assets. Solution : Fair value of net assets = Rs.9,00,000. Purchase Consideration = Rs.8,40,000 NCI (at proportionate fair value of net assets) = 30% of Rs.9,00,000 = Rs.2,70,000. Goodwill = Purchase consideration + NCI – Fair value of net assets = Rs.8,40,000 + Rs.2,70,000 – Rs.9,00,000 = Rs.2,10,000 X Ltd.

Designing Merger and Acquisition Schemes Mergers and acquisitions need to be approved by the shareholders. Thus, schemes are to be prepared beforehand with all possible implications shown on accounts and financial statements and placed before the shareholders. Acceptance of any merger and acquisition proposal largely depend on how clearly the schemes are drawn. The task of drawing the scheme may be given to some experts like a chartered accountants' firm.

[216] [ 216 ] In order to draft the scheme of merger and acquisition, the following aspects should be carefully looked into:  
a) All assets including goodwill and liabilities of both the transferor company and the transferee company should be valued for the purpose of valuation of shares. b) Instead of taking full value of goodwill, differential goodwill may be taken in determining the value of shares. c) A convenient exchange ratio is to be ascertained. d) Some cash payment may be made in order to avoid fractional value of shares. e) Provision for liquidation expenses of the two or more companies to be amalgamated should be made. Again, provision for formation expenses should be made. In the case of insufficiency of cash in the hands of amalgamated company, arrangement of cash should be made with bank or shares may be sold, to the promoters or people for cash. Illustration 10 : A Ltd. is a public company having a paid-up

**87% MATCHING BLOCK 413/516**

share capital of Rs. 10 lakh consisting of 1,00,000 equity shares of Rs. 10 each.

Its net-worth as per last Balance Sheet as on 31.3.2020 is Rs. 15 lakh. The fixed assets of this company, the book value of which is Rs. 5 lakh, have a market value of Rs. 10 lakh. It was declaring dividend @ 10% p.a. for the last 3 years. B Ltd. is a public company having a paid up share capital of Rs. 1 crore consisting of 1,00,000 shares of Rs. 100 each. Its net-worth as per last Balance Sheet as on 31.3.2020 is Rs. 5 crore. Fixed assets of this company, the book value of which is Rs. 1.50 crore, have a market value of Rs. 2.50 crore. It was declaring dividend @ 20% p.a. for the last 3 years. The management of both the companies have agreed that A Ltd. should merge with B Ltd. Draft a scheme of merger of A Ltd. with B Ltd.

Solution : A & Co. The Board of Directors Chartered Accountants ..... Kolkata 700 073 Kolkata-700 001 Date : March.24, 2004 Sub : Scheme of merger of A Ltd. with B Ltd. Dear Sirs As requested, we have the pleasure in submitting hereunder the scheme of merger of A Ltd. with B Ltd. for your consideration:

[217] [ 217 ] 1. Valuation of Shares : Particulars A Ltd. B Ltd. Rs. Rs. A. Assets-backing value : (a) Net-worth : As per last balance sheet 15,00,000 5,00,00,000 Add : Increase in fixed assets 5,00,000 1,00,00,000 20,00,000 6,00,00,00 (b) Number of paid up share 1,00,000 1,00,000 (c) Value per share [(a)/(b)] Rs. 20 Rs. 600 B. Yield value : (a) Company rate of dividend 10% 20% (b) Market rate of dividend (assumed) 10% 10% (c) Paid up value per share Rs. 10 Rs. 100 (d) Value per share  $\{[(a)/(b)] \times (c)\}$  Rs. 10 Rs. 200 C. fair value per share :  $[(\text{Asset-backing value}) + (\text{Yield value})]/2$  Rs. 15 Rs. 400 II. Exchange Ratio : Let fair value per share of A Ltd. is A and that of B Ltd. is B. Now, exchange ratio is A : B = 15 : 400 or,  $A/B = (15)/(400)$  or,  $400A = 15B$  or  $80A = 3B$  Therefore, B Ltd. will issue 3 shares for every 80 shares in A Ltd. Total

[220] [ 220 ] Solution : B & Co The Board of Directors Chartered Accountants . . . . . Kolkata 700 001

Kolkata-700 001 Date: March 25, 2020 Sub : Scheme of merger of X Ltd. with Y Ltd. Dear Sirs As requested, we have the pleasure in submitting hereunder the scheme of merger of X Ltd. with Y Ltd. for your consideration: I. Valuation of Shares including Goodwill: While formulating the scheme of merger of X Ltd. and Y Ltd., importance is to be given to evaluate the special advantage attached to the companies. In other words, value of goodwill of the companies is to be determined. This will determine the shareholders' equity and the amount they can claim in the amalgamated company. The valuation of goodwill is as follows: (i) Closing Trading Capital Employed: X Ltd. Y Ltd. (Rs.) (Rs.) PPE 4,95,000 1,50,000 Current Assets 5,13,750 1,68,750 Total Assets 10,08,750 3,18,750 Less. Creditors 1,56,750 36,750 Capital employed 8,52,000 2,82,000 (ii) Average Maintainable Profits: Since the profits are showing an upward trend, it would be appropriate to use weighted average method for determining average profits. This is calculated as follows:

[221] [ 221 ] Weight Average Profits and Average maintainable profits Year X Ltd Y Ltd Profits Weights Product Profits Weights Product Rs. Rs. Rs. Rs. 2001-02 1,48,500 1 1,48,500 40,500 1 40,500 2002-03 1,64,250 2 3,28,500 47,100 2 94,200 2003-04 1,84,500 3 5,53,500 62,250 3 1,86,750 6 10,30,500 6 3,21,450 Weighted Average profits\*1,71,750 53,575 Less. Income from investment(120000 ? 4%) 4,800 – Average maintainable profits1,66,950 53,575 \*Weighted average Profits of X Ltd. [(10,30,500)/6]; Y Ltd. [(3,21,450)/6] (iii) Super Profits and Value of Goodwill: X Ltd. Y Ltd. (Rs.) (Rs.) Average maintainable profits 1,66,950 53,575 Less. Normal return on capital employed @10% 85,200 28,200 Super Profit 81,750 25,375 No of years' purchase 4 4 Goodwill at 4 years' purchase of super profits 3,27,000 1,01,500 (iv) Valuation of Shares: X Ltd. Y Ltd. (Rs.) (Rs.) Closing trading capital employed 8,52,000 2,82,000 Add. Goodwill 3,27,000 1,01,500 Add. Tax free bonds (non-trading) 1,08,000 - Net assets 12,87,000 3,83,500 No of shares 60,000 20,000 Intrinsic value per share 21.45 19.175

[222] [ 222 ] II. Exchange Ratio of Shares, Number of Shares to be issued and cash Requirement: It is difficult to find out a suitable exchange ratio of shares having regard to value of shares arrived at. It would be better to make some cash payment (as there is sufficient cash at bank) in order to find out a convenient exchange ratio. This can be achieved as follows: The

**58%      MATCHING BLOCK 425/516      SA      ACA-MCOS 34 MAIN.docx (D147306261)**

value of 10 shares of X Ltd. is Rs. 21.45 ? 10 = Rs. 214.50 The value of 10 shares of Y Ltd. is Rs. 19.175 ? 10 =

Rs. 191.75 Therefore, Z Ltd. will make payment to the shareholders of vendor companies as follows: (1) Z Ltd. will issue 21 shares of Rs. 10 each and pay Rs. 4.50 in cash every 10 shares in X. Ltd. (2) Z Ltd. will issue 19 shares of Rs. 10 each and pay Rs. 1.75 in cash every 10 shares in Y Ltd. As a result, the total number of shares to be issued by Z Ltd. will be as follows: (1) Shareholders of X Ltd. [(60,000) ? (21)/(10)] 1,26,000 shares (2) Shareholders of Y Ltd. [(20,000) ? (19)/(10)] 38,000 shares 1,64,000 shares Requirement of cash of Z Ltd. will be as follows: Rs. To pay shareholders of X Ltd. [(60,000) ? (4.50)/(10)] 27,000 To pay shareholders of Y Ltd. [(20,000) ? (1.75)/(10)] 3,500 Liquidation expenses of X Ltd. (assumed) 4,000 Liquidation expenses of Y Ltd. (assumed) 4,000 38,500

Internal Reconstruction The need for reconstruction arises when a company has accumulated huge losses or when a company finds itself over-capitalized, which means either that the value placed on assets is very high compared to their earning capacity or that the profits

generated by the company is not sufficient to pay a proper dividend. Considering these aspects, a company is required to be reorganized to inject fresh blood to save the company from its unwanted liquidation. In order to reorganize a company, the Board of Directors place a scheme before all the interested parties for their consent and get it approved by the Court for its implementation. When this is done without altering the name of the existing company, it is known as internal reconstruction. In other words, implementation of a scheme after it is consented to by all the interested parties, viz., shareholders, debenture-holders, creditors, etc., having the approval of the court with a view to bringing equilibrium between assets

[224] [ 224 ] and liabilities for better future without liquidation and change in the name of the existing company is known as scheme of internal reconstruction. 6.6.1 Circumstances of Internal Reconstruction Internal reconstruction is advisable or preferable under the circumstances noted below: (1) The present position of the company is bad but good days are ahead. (2) The shareholders, debenture-holders and creditors, specifically bankers have not only agreed to sacrifice but are also ready to subscribe to further capital. (3) The company is interested to carry forward its past losses or is interested to get the benefit of set off of past losses against future profits. This will ultimately minimize the tax burden for a few years, (4) The proposal for internal construction is consented to by all the interested groups of the company without any delaying tactics such as legal objections and dissensions. (5) The company is not willing to lose its present legal entity or the company is likely to have a fresh chance of avoiding liquidation. 6.6.2 Steps for Internal Reconstruction The fundamental basis of any reconstruction proposal

**45% MATCHING BLOCK 421/516**

**W**

is the earning capacity of the company. Even the payment of debenture interest is not possible unless the activities of the company are profitable. A very careful estimate should, therefore, be made

as to the future anticipated profits of

**71% MATCHING BLOCK 422/516**

**W**

the company. Unless profits are sufficient to meet all expenses including adequate depreciation, interest

on borrowed; capital, preference dividend and a reasonable return on equity capital, reconstruction would be useless because the need for another reconstruction will arise soon again. Thus, internal reconstruction should be made very carefully because when a company is once reconstructed, it must survive potentially for an indefinite long period. The essence of internal reconstruction is that the reconstructed company has the potentiality to generate sufficient profits in future. The equity shareholders will have to bear a higher proportion of losses because they are the real owners of the company. In course of distribution of losses to be written off among the various interested groups of the company, the

**76% MATCHING BLOCK 423/516**

**W**

control over the affairs of the company by the equity shareholders must not

be overlooked.

**50% MATCHING BLOCK 424/516**

**W**

The requirement of working capital should not be ignored. Cash may be required to pay off some dissenting creditors or even to pay arrear preference dividend.

The

[225] [ 225 ] willingness by the shareholders, debenture-holders, etc. to provide required cash fund is, thus, a basic requirement for the success of a reconstruction scheme. In order to implement the scheme of internal reconstruction, the following steps may be advocated: Statement of Estimated Total Loss Particulars (Rs.) Fictitious Assets like debit balance in the profit and loss account, xxx

**95%**

**MATCHING BLOCK 432/516**

**SA**

M.Com.I\_Adv.\_Accountancy\_P.\_I\_\_\_\_III\_all.PDF  
(D142209931)

preliminary expenses, discount on issue of shares and debentures, underwriting commission,

reconstruction expenses, etc. Add: Intangible Assets like goodwill, patents and trademarks to the extent they lost their values. xxx Add: Contingent liabilities like cumulative arrear preference dividend, etc. xxx Add: Loss on revaluation of assets and liabilities xxx xxx Less: Profit on revaluation of assets and liabilities xxx Net loss to be written off xxx (2) Estimation of realizable value of assets (in case of forced liquidation) and its likely distribution: Estimated realizable value of assets can be obtained by summing up all assets after valuation on the basis of forced sales (or, going concern value basis). Likely distribution of assets may be shown as follows: Particulars (Rs.) (Rs.) Estimated realizable value of all assets xxx Less :Preferential Creditors: Tax liability xxx Workers' dues xxx xxx Surplus assets available for secured creditors, unsecured xxx Creditors and shareholders Less : Secured Creditors: Debenture-holders (secured against assets) xxx Other secured creditors xxx xxx Surplus assets available for unsecured creditors xxx and shareholders [226] [ 226 ] Less :Unsecured Creditors Trade creditors, bills payable, etc. xxx xxx Surplus/Deficiency for shareholders xxx Less :Preference Shareholders' Claim: Preference share capital xxx Arrear preference dividend xxx xxx Surplus/Deficiency for equity shareholders xxx Less :Equity share capital xxx Deficiency as regards equity shareholders xxx (3) Writing off loss: This is a very crucial aspect of the scheme of internal reconstruction. If preferential creditors, secured creditors (i.e., debenture-holders) and Unsecured creditors are fully covered by the realizable value of assets, naturally they will not bear any loss. They are affected only if the realizable value of assets is insufficient to cover even their liabilities. In such an eventuality, they will have to make sacrifice. The order of their sacrifice will be (a) preferential creditors (no sacrifice), (b) secured creditors (sacrifice depending on the value of securities), and (c) unsecured creditors (heaviest sacrifice). The same principle is applicable to preference shareholders as to refund of their capital. They may be persuaded to share loss in a situation when the refund of preference capital is uncertain by the availability or otherwise of the realizable value of assets after its likely distribution to preferential creditors, secured creditors and unsecured creditors. In that situation, they will naturally forego arrear preference dividend and bear loss which will be relatively higher than that of the creditors. But the sharing of loss by the preference shareholders will be much lower than that of the equity shareholders. (4) Compensation to debenture-holders, other creditors and preference shareholders for bearing loss: The debenture-holders may be compensated by means of increase in the rate of interest in such a manner so that their total earnings on account of interest will remain the same as before. The same principle may be applied to preference shareholders. In case of need, non-participating preference shares may be converted into participating preference shares without disturbing the control of equity shares over the affairs of the company or, participating preference shares may be converted into equity shares if the existing control of the equity shares is not changed.

**66%**

**MATCHING BLOCK 426/516**

**W**

Payment of arrears of dividend to cumulative preference shareholders in cash may immediately invite difficulties. In such a case, a good method is to issue deposit certificates

to them to avoid immediate burden on liquid resources. But arrears of dividend on non-cumulative

[227] [ 227 ] preference shares are usually cancelled. As a part of compensation, some portion of unsecured creditors may be paid in cash through the arrangement of liquid funds. (5) Arrangement of working capital: Working capital is the life-blood of the business. Therefore, it is necessary that the reconstructed company should have adequate working capital at its disposal. It can be raised by further call on existing reduced shares sale of investments, issuance of new debentures and shares, arrangement of overdraft and the like. (6) Estimation and disposal of expected future profits: This is the last step but not the least in importance in the scheme of internal reconstruction. Under this section, due care should be given in estimating future profits and its disposal so that return on equity capital is fair.

Draft a suitable scheme of internal reconstruction which would help the company to reorganize in the following lines: (a) To write off the profit and loss account and goodwill.

[228] [ 228 ] (b) To depreciate plant and machinery by 10%. (c) To satisfy the arrears of preference dividends. (d) To provide Rs. 60,000 as liquid resources. Solution : Y & Co. The Board of Directors Chartered Accountants Unfortunate Ltd. Kolkata-700012 Kolkata-700 001 Date: March 29, 2020 Ref: Scheme of Internal Reconstruction of Unfortunate Ltd. Dear Sirs, With reference to your letter dated 10.03.2020, we are submitting the scheme of internal reconstruction hereunder: (1) Total loss to be written off: Particulars (Rs.) Debit balance in the profit and loss account 3,00,000 Goodwill 1,80,000 Depreciation on plant and machinery (5,40,000 ? 10%) 54,000 Arrear preference dividends (1,20,000 x 6% ? 3) 21,600 5,55,600 (2) Estimated realizable value of assets (in case of forced liquidation) and its likely distribution: Particulars Rs. Realizable value of assets: Plant and Machinery (5,40,000 x 90%) 4,86,000 Stock 1,74,000 Debtors 1,20,000 Cash at Bank 6,000 7,86,000 Less: Unsecured Creditors (Current Liabilities) 6,00,000 Surplus available for Shareholders 1,86,000 Less: Preference Shareholders' Claim: 6% Preference Share Capital 1,20,000 Arrear preference dividend 21,600 1,41,600 Surplus available for Equity Shareholders 44,400 Less: Equity Share Capital 6,00,000 Deficiency as regards Equity Shareholders 5,55,600

[229] [ 229 ] (3) Writing off Loss: In the context of the above relative position in liquidation loss to be written off should be shared as follows: (a) Current Liabilities: Since their claim is fully covered in case of force liquidation, naturally they will not sacrifice anything. (b) Preference Shareholders: The claim of preference shareholders is also fully covered even if force liquidation takes place. But in order to smoothen implementation of the scheme, equity shareholders cannot be asked to sacrifice more than 90% of their claim i.e., Rs.9 per share. In this situation, preference shareholders will be asked to sacrifice a bit, only Rs.15600 (i.e., Rs.5,55,600 – Rs.9 x 60,000) which will reduce their value by Rs.13 (i.e., Rs.15600/1,200) per share. The value after sacrifice will be Rs.87 (i.e., Rs.100 – Rs.13) per share. As a part of the compensation the rate of dividend may be increased from 6 % to 7.5%. (c) Equity Shareholders: In case of forced liquidation equity shareholders will get a very negligible amount considering time and expense on account of liquidation. In view of maintaining control over the affairs of the company equity shareholders will be asked to sacrifice lion's share, Rs.9 per share (i.e., Rs.10 x 90%). As a result, paid up value will be Re.1 (i.e., Rs.10 – Rs.9) per share. (4) Arrangement of Liquid Funds: Particulars Rs. Rs. Payment of arrears of preference dividend 21,600 Add: Requirement of liquid resources 60,000 81,600 Less: Cash at bank 6,000 Additional requirement of liquid resources 75,600 The above amount may be arranged as loan from bank at 10% p.a. (assumed) by the mortgage of plant and machinery by means of floating charge. (5) If your scheme is accepted, the Balance Sheet of Unfortunate Ltd. will be as below: Balance Sheet of Unfortunate Ltd. as on 31.03.2020 (and reduced)

Debit balance in the profit and loss account 1,01,500 Goodwill 50,000 Plant and machinery 2,000 Stock 3,000 Debtors 5,000 Arrear preference dividends (1,00,000 x 7% x 2) 14,000 Outstanding interest on debentures 3,000 1,78,500 Less: Increase in the value of investment 5,000 Decrease in WACF 1,000 6,000 1,72,500 (2) Estimated realizable value of assets (in case of forced liquidation) and its likely distribution: Particulars Rs. Rs. Building 90,000 Plant and Machinery (40,000 - 2,000) 38,000 Investments 25,000 Stock 12,000 Debtors (30,000 - 5,000) 25,000

[233] [ 233 ] Assets available for distribution 1,90,000 Less: Preferential Creditors: Tax liability 5,000 Workmen's accident compensation fund 9,000 14,000 Surplus assets available for secured creditors, unsecured 1,76,000 creditors and shareholders Less: Secured Creditors (10% Debenture with interest due) 33,000 Surplus assets available for unsecured creditors and 1,43,000 Shareholders Less: Unsecured Creditors Staff welfare fund 5,500 Profit sharing fund 10,000 Sundry Creditors (41,000 - 5,000) 36,000 51,500 Surplus assets available for preference and equity shareholders 91,500 Less: Preference shareholders' claim: 7% Preference share capital 1,00,000 Arrear preference dividend 14,000 1,14,000 Deficiency as regards preference shareholders 22,500 Less: Equity share capital 1,50,000 Deficiency as regards equity shareholders 1,72,500 (3) Writing off Loss In view of the above relative position in liquidation, the loss may be written off as below: (a) Preferential Creditors—As they are sufficiently covered, they will not sacrifice anything. (b) Secured Creditors (Debenture-holders) - They are also covered. Therefore, they cannot be asked to sacrifice anything. (c) Preference and Equity Shareholders - Since the preference shareholders have got the priority as to the return of capital as well as dividend at the time of liquidation, they usually cannot be asked to sacrifice anything. But the available surplus assets are not sufficient to pay their claims in full. Naturally, they may be persuaded to sacrifice something, and the equity shareholders' claim cannot be completely wiped of which means liquidation of the company. In these situations, the equity share value may be reduced to a token value of Re. 1 per share. Therefore, balance of loss of Rs. 37,500 [i.e., Rs. 1,72,500 - (Rs. 1,50,000 - Re. 1 x 15,000)] should be sacrificed by the preference shareholders. As a result, preference shares of Rs. 10 each fully paid will be reduced by Rs. 3.75 [i.e., Rs. 37,500/ 10,000] per share.

[234] [ 234 ] In view of making compensation to preference shareholders, the rate of dividend may be raised from 7% to 9%. (4) Arrangement of Working capital: In order to provide Rs. 25,000 for working capital, the company may be advised to sell the investments at the market value rather than collection of liquid funds from borrowing which is now difficult. This will not impose any burden of interest on operation of the company for taking loan. For paying arrears of preference dividend, Deposit Certificate may be issued in lieu of cash payment.

**68% MATCHING BLOCK 434/516**

**W**

This is preferable because it will not give any voting right and the certificate can be redeemed as soon as opportunity arises. (5)

If your scheme is accepted, the Balance Sheet of Progressive Ltd. will be as below: Balance Sheet of Progressive Ltd. as on 31.03.2020 (and reduced) Particulars (Rs.) I. Assets (1) Non-current Assets (a) Property, Plant and Equipment –

<b>100%</b>	<b>MATCHING BLOCK 435/516</b>	<b>W</b>
Building 90,000 - Plant and Machinery 38,000 (2) Current Assets Stock 12,000 Debtors 25,000 Cash at Bank 25,000 Total 1,90,000		

II.

<b>66%</b>	<b>MATCHING BLOCK 436/516</b>	<b>W</b>
Equity and Liabilities (1) Shareholders' Fund (a) Share Capital - 15,000 Equity shares of Re.1 each 15,000 - 10,000, 9% Preference shares of Rs.6.25 each 62,500 (2)		

Non-current Liabilities – 10% Debentures (Secured against Plant) 30,000 - Outstanding debenture interest 3,000 - Deposit Certificates 14,000 (3) Current Liabilities – Workmen accidental compensation fund 9,000 -Profit sharing fund 10,000 -Staff welfare fund 5,500 -Creditors 41,000 Total 1,90,000

[235] [ 235 ] (6) Disposal of expected future profits: In order to determine the expected future profits, it is required to ascertain the amount of capital employed. The capital employed after reconstruction of the company will be Rs. 1,07,500 consisting of equity share capital, 9% preference share capital and 10% debentures. Since tax liability will not arise for the coming few years because of the set off of past losses, earnings before interest may be taken to be, at a conservative estimate, at about 12% on capital employed, which will generate Rs. 13,000 per annum. The likely disposal will be: Rs. (i) For debenture interest (30,000 x 10%) 3,000 (ii) For preference dividend (62,500 x 9%) 5,625 (iii) For transfer to reserve (assumed) 2,580 (iv) For balance carried forward in the profit and loss account 1,795 (v) Estimated future profits before tax [(i) + (ii) + (iii) + (iv)] 13,000 We shall be glad to furnish you with, any further clarification that you may require. on preference shares are in arrear for two years. The directors of the company			

are of the opinion that if an additional plant is installed at a cost of Rs.1,20,000 and working capital needs are fully met, the company will earn enough profit to pay equity dividend @10% subject to a suitable scheme of internal reconstruction being put through. The existing buildings and plant & machinery are considered being worth Rs. 1,82,400 and Rs. 2,40,000 on a going concern basis. Debenture-holders are anxious to be paid the interest due to them but are willing to provide half of the additional capital required on suitable basis. Preference shareholders are willing to accept a reasonable sacrifice provided they are given berth in the equity capital. Suggest a suitable scheme of internal reconstruction. Solution : The Board of directors T & Co. Paradise India Ltd, Chartered Accountants 16, Gokhele Road Kalyani-741 235 Kolkata-700 022 Date: April 5, 2020 Sub : Internal Reconstruction of your Company Dear Sirs, As requested, we have given below our suggestions for a scheme of internal reconstruction for your consideration and for placing them before the different-classes of creditors and shareholders.

[237] [ 237 ] (1) Accumulated and expected loss to be written off: Particulars Rs. Rs. Debit balance in the profit and loss account 1,05,600 Goodwill 72,000 Patent (96,000 – 36,000) 60,000 Plant and machinery (3,09,600 – 2,40,000) 69,600 Arrear preference dividends (3,60,000 ? 6% ? 2) 43,200 3,50,400 Less: Increase in the value of building (1,80,000 – 1,56,000) 24,000 3,26,400 (2) Estimated realizable value of assets (in case of forced liquidation) and its likely distribution: Particulars Rs. Rs. Patent 36,000 Building 1,80,000 Plant and Machinery 2,40,000 Stock 76,000 Debtors (30,000 - 5,000) 68,000 Total Assets available for distribution 6,00,000 Less: Creditors having floating charges 6% Debenture holders 1,20,000 Interest due on above 14,400 1,34,400 Surplus assets available for unsecured creditors and 4,65,600 Shareholders Less: Unsecured Creditors Sundry Creditors 1,20,000 Bank overdraft 28,800 1,48,800 Surplus assets available for preference and equity shareholders 3,16,800 Less: Preference shareholders' claim: 6% Cumulative Preference share capital 3,60,000 Arrear preference dividend 43,200 4,03,200 Deficiency as regards preference shareholders 86,400 Less: Equity share capital 2,40,000 Deficiency as regards equity shareholders 3,26,400 (3) Writing off Losses: In the context of the above relative position, the loss of Rs.3,26,400 is suggested to be shared by different interested groups as below:

[238] [ 238 ] (a) Creditors having floating charge - Debentures having floating charge are fully covered, Thus, they cannot be asked to bear any loss. (b) Unsecured Creditors - Since they are sufficiently covered, they also will not bear any loss. (c) Preference Shareholders - The claim to preference shareholders is not fully covered. Surplus assets available for likely distribution between preference and equity shareholders is Rs.3,16,800 out of which the claim of preference shareholders including arrears of dividend is Rs. 4,03,200. In this situation, they will not only lose Rs. 86,400 but will also lose even more, considering time and expense in liquidation: Hence, they will find no alternative but to make an inevitable sacrifice. Since they are interested in getting berth in the equity capital, their sacrifice will naturally be commensurate to their aspiration and must be acceptable to the existing equity shareholders. It will be reasonable for them to forgo the arrears of preference dividend in full and to accept Rs. 2,40,000 9% cumulative preference shares of Rs. 100 each of the existing preference shares. This will mean that in future they will continue to receive Rs. 21,600 dividend which was earned by them previously and, therefore, their sacrifice will not be as heavy as it appears. In view of the higher rate of dividend, the market value of preference shares will rise and the greater likelihood of the dividend being paid regularly. (d) Equity Shareholders - The equity shareholders will be prepared to bear the balance of loss of Rs. 1,63,200 [i.e., Rs. 3,26,400 - (Rs. 4,03,200 - Rs. 2,40,000)]. The loss will be Rs. 68 [i.e., Rs.1,63,200/2,400] per share. As a result, paid up value per share should be reduced from Rs.100 to Rs.32. (4) Arrangement of working capital: It is required to calculate the working capital need of the proposed reconstructed company in order to make the scheme viable before the arrangement of working capital. The working capital need is calculated as follows Particulars Rs. Rs. To install a new plant 1,20,000 To pay outstanding debenture interest 14,400 To introduce further working capital so as to make current assets double the current liabilities: Current liabilities [(1,20,000 + 28,800) ? 2] Less: Existing current assets (76,000 + 68,000) 2,97,600 1,44,000 1,53,600 2,88,000

[239] [ 239 ] It is assumed that existing debenture-holders will provide half of the working capital need, Rs. 1,44,000 (i.e., Rs. 2,88,000???)1/2) by taking up additional debentures at an increased rate of 10%. The remaining amount may be raised from the existing equity shareholders because there is little scope for bank assistance in the form of loan. But the existing preference shareholders are desirous of an interest in the equity capital. However, it is not likely that equity shareholders would like to lose their control over the affairs of the company and they must retain the majority of shares. Under these situations, in order to retain control and to honour desire of the existing preference shareholders, remaining funds of Rs. 1,44,000 may be provided by two classes of shareholders equally, i.e., Rs. 72,000 each by equity and preference holders in the form of total 4,500 equity shares of Rs. 32 each fully paid. (5) Capital Structure after proposed reconstruction: The capital structure of the company will be as follows: Rs. (i) 2,400, 9% Cumulative

<b>90%</b>	<b>MATCHING BLOCK 440/516</b>	<b>W</b>
preference shares of 2,40,000 Rs.100 each fully paid (ii) 6,900 Equity shares of Rs.32 each fully paid		

Rs.2,20,800 (iii) 6% Debentures Rs.1,20,000 (iv) 10% Debentures Rs.1,44,000 (v) Total [(i)+(ii)+(iii)+(iv)] Rs.7,24,800 The authorized capital may be suggested at Rs.8,00,000 consisting of 4,000, 9%

<b>100%</b>	<b>MATCHING BLOCK 447/516</b>	<b>SA</b>	original.doc (D34943452)
cumulative preference shares of Rs.100 each and 12,500 equity shares of Rs.32 each. (6)			

If the scheme is implemented, the Balance Sheet of the company will be as follows: Balance Sheet of Paradise India Ltd. as on March 31, 2020 (and reduced) Particulars (Rs.) (1) Non-current Assets (a) Property, Plant and Equipment – Building at cost 1,80,000 - Plant and Machinery (2,40,000+1,20,000) 3,60,000 (b) Patent 36,000 (2) Current Assets Stock (Market value) 76,000 Debtors (considered good) 68,000 Cash at bank (2,80,000 – 1,20,000 – 14,400) 1,53,600 Total 8,73,600 [240] [ 240 ] II.

Bank overdraft (Limit Rs.30,000) 28,800 Total 8,73,600 (7) Expected future profit and its likely disposal: Unless the company, after internal reconstruction, is not sure of earning a profit of about 16% of its capital employed, i.e., Rs. 1,12,600 before interest and taxes, it will not be worthwhile to go ahead with the scheme. The likely disposal of expected profit will be: Rs. (i) For debenture interest (7,200 + 14,400) 21,600 (ii) For preference dividend (2,40,000 ? 9%) 21,600 (iii) For equity dividend (2,20,800 ? 10%) 22,080 (iv) For transfer to reserve (assumed) 10,920 (v) For paying taxes (may arise after 2 or 3 years because of set off of past losses), say at 40% {(ii) + (iii) + (iv)} ? {(40%)/(60%)} 36,400 (vi) Total profits before interest and taxes [(i)+ (ii) + (iii) + (iv) + (v)] 1,12,600 We shall be glad to furnish any further information that you may require. Thanking you, Yours faithfully, (Signature of the partner with seal) Chartered Accountants 6.7 Summary With the compulsion of the compliance of Ind AS-103, significant changes in accounting for mergers and acquisitions were noticed. In order to draft schemes on mergers and acquisitions, valuation of shares including goodwill, exchange ratio of shares, cash payment to avoid fraction, adequate provision for liquidation and formation expenses, etc. are required to be examined seriously.

[241] [ 241 ] While drafting schemes on internal reconstruction, it is required to follow the ‘steps for internal reconstruction’ in which different aspects, viz., losses to be written off, estimation of realizable value of assets in case of forced liquidation, writing off losses, compensation to those who will sacrifice, arrangement of adequate working capital, and estimation of expected future profits and its likely disposal, are to be discussed and demand careful and serious attention. However, consent of all interested groups of the concerned companies is the primary need in case of merger and acquisition scheme. But in the case of internal reconstruction scheme, approval of the court in addition to the consent of all interested parties of the company being reconstructed is a must. Nevertheless, an in-depth accounting knowledge is exclusively required for drafting any scheme, be it on amalgamation or on internal reconstruction. Schemes on amalgamations and mergers are drafted keeping in view the recommendation of Ind AS-103. 6.8 Exercises ? Theoretical Questions: 1. What do you mean by the terms ‘mergers’ and ‘acquisition’? What are the different forms of mergers? 2. What are the various steps for designing the scheme for mergers? 3. What are the prerequisites of internal reconstruction? 4. How can you draw a scheme of internal reconstruction which will be accepted to all the interested groups of the company being reconstructed? ? Practical Problems Problem 1 :

Equity and Liabilities (1) Shareholders' Fund (a) Share Capital – 4,500 Equity shares of Rs.100 each 4,50,000 - 7.5% Cumulative preference shares of Rs.100 each 6,00,000 (b) Other Equity – Profit and Loss (Dr.) (8,17,500) (2) Non-current Liabilities – 6% Debentures (Secured by floating

charges) 3,00,000 (3) Current Liabilities – Sundry creditors 5,25,000 Total 25,12,000

[247] [ 247 ] An analysis of causes leading to losses in the past reveals that processes are outdated and that sufficient credit is not allowed. Modernization of plant will cost Rs. 300000; Rs.150000 worth of present plant being retired and sold for Rs. 30000. Two months' credit has to be allowed for sales to be maintained at their proper level of Rs.1800000 leading to a profit before interest Rs. 90,000. Trade creditors include Rs.30000 payable to preferential creditors. Land and building are valued at Rs. 270000 and Patents are worth only Rs.15000. Preference dividend is in arrear for four years. You may assume that the company has to pay nothing for income tax for coming few years. Submit your proposal for the reconstruction of the company.

Exercises 7.1 Objective After going through this unit, you will be able to: ? know the meaning

of segments ? know the classification and process of identification of segments; ? know the benefits of segment reporting; ? know the segment accounting policies; and ? know the disclosure requirements of segment reporting as per Ind AS 108.

[249] [ 249 ] 7.2 Introduction Presently, we are passing through the age of change where everything tends to change. Those who cannot adapt to the change loses their position and eventually gets wiped out. Keeping pace with the changes, different professional accounting bodies, viz.,

**95%**

**MATCHING BLOCK 464/516**

**W**

Institute of Chartered Accountants of India, Institute of Cost Accountants of India,

etc. and other educational institutions like universities and IIMs have been changing their course curricula on a regular basis. Financial reporting, a part of accounting, is not an exception to this change. Users of financial information are not satisfied with the consolidated form of information. In addition, they require specific information for individual parts of the business. Considering this information need, ICAI issued 'AS-17: Segment Reporting' for compliance in maintaining accounts and reporting thereof by Indian companies which was mandatory for selected class of companies from accounting year 2001 onwards. With the recent introduction of the converged set of accounting standards namely Ind AS (Indian Accounting Standards), AS-17 has been replaced by Ind AS 108: Operating Segment. 7.3 General Meaning of Segment Generally, the term, 'segment' refers to a part cut off or a portion or a section of the totality. Likewise, in business, it means sectionalisation or categorisation of products or services and business zones of the company on the basis of dominance. In other words, dominating products or services and business zones of an enterprise are known as segments. Identification of various segments is needed for providing useful information to the users. 7.4 Meaning of Segment Reporting Segment reporting refers to the process of providing the relevant information about the dominant segments of the organization to the users of information in a formal well organised structure. The structure is uniform to all organizations to which the regulation applies, however, the segments to be identified is decided by certain rules. 7.5 Need for Segment Reporting Many large companies are engaged in the production and distribution of different products or services not only to serve the home market but also to serve the global market. Moreover, currently there has been a trend toward diversification by the line of business also. Keeping this in view, large companies operate either in a number of industries or in a number of locations within the country, or both. Again,

[250] [ 250 ] many companies are so diversified that domestic operations account for a minority of total revenues and no single business sector predominates. Thus, business locations of companies are not confined to any country's territory; even it extends to any place of the world. This phenomenon has gained importance with the emergence of globalization and liberalization all over the world. A business enterprise has to perform many functions including financial reporting for the users. In order to discharge financial reporting function, usually consolidated financial information is provided without disaggregating information on the basis of products or services and business locations. Providing this type of information will serve only the purpose of general assessment of the business while users may be directly affected by only one part of the company's business. Hence, the information need of the users is more than general information. They are rather interested in getting segment information with a view to measuring the efficacy or otherwise of the segments so that they can evaluate the overall performance of a business enterprise in a better manner.

**7.6 Benefits of Segment Reporting** As mentioned earlier, the area of financial reporting where segment-wise financial reporting practices are followed may be considered as Segment Reporting. Many large companies may have diversified product lines or plant and customer locations and these segments may differ from each other in respect of profitability, growth potential and risk. In this context, they essentially make segment reporting for highlighting different issues which are of immense help to the users of segment information in particular and consolidated information in general for measuring overall performance of companies. Segment reporting is surely beneficial to the users of financial information but it is also beneficial to the companies themselves in many respects. The benefits of segment reporting may be discussed from the point of view of companies and users as well, in the sub-heads that follow.

**7.6.1 Benefits of Segment Reporting from the point of view of users** Users of information are benefited in a number of ways as below: (1) It helps in providing a complete picture of information as required by the users, (2) It helps the users in evaluating the efficiency or otherwise of each segment. (3) It helps to assess the safety and security of the funds invested by the investors, (4) It helps to create confidence or otherwise in the minds of the existing and prospective investors. As a result, they may invest their funds accordingly.

[251] [ 251 ] (5) It helps in feeling good or otherwise in the matter of social security of the employees. (6) It helps the existing and prospective investors to understand the stock market reaction.

**7.6.2 Benefits of Segment Reporting from the point of view of companies** Every company derives the following benefits from segment reporting: (1) The main benefit of segment reporting is that it enables prediction of future cash flows and the risk thereof. (2) It provides a complete picture of the affairs of each segment. The result of each segment may be suitably compared with those of similar other segment over a number of years. This will facilitate management control over the working of each segment. (3) It not only helps in explaining segment-wise performance but it also helps in exhibiting financial position which are required in framing policy-making exercise. Based on it, the management can take decision for business expansion or otherwise.

**7.7 Segment Reporting as per Ind AS 108 'Operating Segment'** **7.7.1 Definition of Segment Information**

<b>100%</b>	<b>MATCHING BLOCK 465/516</b>	<b>W</b>
An entity shall disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates.		

Such information may be termed as 'Segment Information'. **7.7.2 Scope of the Standard** (i)

<b>77%</b>	<b>MATCHING BLOCK 466/516</b>	<b>W</b>
This Accounting Standard applies to companies to which Indian Accounting Standards (Ind ASs), notified under the Companies Act, apply. (ii) If any entity,		

which

**93% MATCHING BLOCK 467/516**

**W**

is not required to apply this Ind AS, chooses to disclose information about segments that does not comply with this Ind AS, it shall not describe the information as segment information. (iii) If any financial report contains both the consolidated financial statements of a parent that is within the scope of this Ind AS as well as the parent's separate financial statements, segment information is required only in the consolidated financial statements. [252] [ 252 ] 7.7.3

Concept of

**95% MATCHING BLOCK 468/516**

**W**

Operating Segments An operating segment is a component of an entity: (a) that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity), (b) whose operating results are regularly reviewed by the entity's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance, and (c) for which discrete financial information is available. An operating segment may engage in business activities for which it is yet to earn revenues. For example,

a start-up operation initiated by an organization may be treated as an operating segment before earning revenues. 7.7.4 Aggregation Criteria An organization may have two or more operating segments that exhibit similar long-term financial performance as they have similar economic characteristics. For example, if segments have similar economic characteristics, their long-term average gross margins would be expected to be similar. In such cases,

**97% MATCHING BLOCK 469/516**

**W**

two or more operating segments may be aggregated into a single operating segment if aggregation is consistent with the

core principle of this Ind AS, i.e., the segments have similar economic characteristics, and the segments are similar in each of the

**94% MATCHING BLOCK 471/516**

**W**

following respects: (a) the nature of the products and services; (b) the nature of the production processes; (c) the type or class of customer for their products and services.

Such aggregation naturally reduces the number of segments within a practical limit. 7.7.5 Identification of Reportable Segments Once the operating segments are identified, the management needs to identify the segments for which segment information will be disclosed. Such segments are called the reportable segments.

**97% MATCHING BLOCK 472/516**

**W**

An entity shall report separately information about an operating segment that meets any of the following quantitative thresholds: (a) Its reported revenue, including

both sales to external customers and [253] [ 253 ] intersegment sales or transfers, is 10 per cent

**75% MATCHING BLOCK 483/516**

**SA**

201311822 AFE 3782 ASIGMENT 2B 2021.pdf  
(D113025922)

or more of the combined revenue, internal and external, of all operating segments. (b) The absolute amount of its reported profit or loss is 10

per cent

**87% MATCHING BLOCK 473/516**

**W**

or more of the greater, in absolute amount, of (i) the combined reported profit of all operating segments that did not report a loss and (ii) the combined reported loss of all operating segments that reported a loss. (c) Its assets are 10 per cent or more of the combined assets of all operating segments.

In addition to above, additional

**90% MATCHING BLOCK 474/516**

**W**

operating segments that do not meet any of the quantitative thresholds may still be considered reportable,

if the

**90% MATCHING BLOCK 475/516**

**W**

management believes that information about the segment would be useful to users of the financial statements.

If the total external revenue reported by operating segments identified based on the quantitative thresholds plus those selected by the management voluntarily

**46% MATCHING BLOCK 476/516**

**W**

constitutes less than 75 per cent of the entity's total external revenue, then, additional operating segments shall be identified as reportable segments (even if they do not meet the criteria stated above) until at least 75 per cent of

the entity's total external revenue is included in reportable segments.

**100% MATCHING BLOCK 477/516**

**W**

Information about other business activities and operating segments that are not reportable shall be combined and disclosed in an 'all other segments' category.

Note 1: An entity may combine information about two or more operating segments that do not meet the quantitative thresholds to produce a reportable segment only if the operating segments have similar economic characteristics and share a majority of the aggregation criteria stated in section 8.6.4. Note 2: If management judges that an operating

**100% MATCHING BLOCK 478/516**

**W**

segment identified as a reportable segment in the immediately preceding period

is of continuing significance, it may continue to report the information about that segment even if it no longer meets the criteria for reportability. Note 3: If an operating

<b>100%</b>	<b>MATCHING BLOCK 479/516</b>	<b>W</b>
segment is identified as a reportable segment in the current period		

in accordance with the quantitative thresholds, segment data for the prior period shall also be disclosed even if that segment did not satisfy the criteria for reportability in that prior period,

<b>90%</b>	<b>MATCHING BLOCK 480/516</b>	<b>W</b>
unless the necessary information is not available and the cost to develop it would be excessive.		

Note 4: There should always be a practical limit to the number of reportable segments that an entity separately discloses as beyond that segment information will be too detailed to comprehend. Thus, the Standard provides that in case the number exceeds ten,

<b>100%</b>	<b>MATCHING BLOCK 481/516</b>	<b>W</b>
the entity should consider whether a practical limit has been reached. [254] [ 254 ] ?		

A Practical Problem on Identification of Reportable Segments: An enterprise operates through eight segments, namely, A, B, C, D, E, F, G and H. The relevant information about these segments is given in the following table (amounts in Rs.'000):

A	B	C	D	E	F	G	H	Total (segment)
1	2	3	4	5	6	7	8	9
255	15	10	15	50	20	35	400	1000
100	60	30	5	-	-	5	-	200
5	-90	15	-5	8	-5	5	7	40
15	47	5	11	3	5	5	9	100

Identify the reportable segments as per Ind AS 108. Solution : Calculation for identification of reportable segments as per Ind AS 108 (Operating Segments) The reportable segments are identified as follows – Particulars A B C D E F G H Total

Particulars	A	B	C	D	E	F	G	H	Total
1. Segment Revenue (a) External Sales	255	15	10	15	50	20	35	400	1000
(b) Inter Segment Sales	100	60	30	5	-	-	5	-	200
Total Revenue	100	315	45	15	15	50	25	35	600
% of segment revenue to total revenue of all segments taken together	16.7	52.5	7.5	2.5	2.5	8.3	4.17	5.83	100
2. Segment Results Profit/ (Loss)	5	15	8	5	7	40	-90	-5	-100
% of segment profit/loss to the higher of total profit or total loss in absolute figure	5	90	15	5	8	5	7	40	100
3. Segment Assets	15	47	5	11	3	5	5	9	100
% of segment assets to the total assets of all segments taken together	15	47	5	11	3	5	5	9	100

[255] [ 255 ] 1. As per the Segment Revenue criterion Segments A and B with segment revenue of more than 10% of the total revenue of all segments taken together, are identified as Reportable Segments. 2. As per the Segment Result criterion Segments B and C with segment profit or loss of more than 10% of the higher of total profit of all profit-making segments and total loss of all loss-making segments -in absolute figure- are identified as Reportable Segments. 3. As per the Segment Asset criterion Segments A, B and D with segment assets of more than 10% of the total assets of all segments taken together, are identified as Reportable Segments. Further, we assume that the management has not identified any other segments voluntarily at their discretion for reporting purpose. So primarily the reportable segments are A, B, C and D. Now total external sales of the above four segments = Nil +255+15+10 = 280 However, the threshold external sales = 75% of total external sales = 75% of 400 = 300. Thus, in order to achieve the threshold one or more segments are to be identified as reportable. Let us consider segment F with highest external sales for this purpose. So, finally, the reportable segments are – A, B, C, D, F and all other segments are to be reported on a consolidated basis under the head 'All Other Segments'. 7.7.6 Disclosure Requirements of Segment reporting as per Ind AS 108 ? General information

**65% MATCHING BLOCK 482/516**

**W**

An entity shall disclose the following general information: (i) factors used to identify the entity's reportable segments. (ii) the

judgements made by management in applying the aggregation criteria. (iii)

**100% MATCHING BLOCK 484/516**

**W**

types of products and services from which each reportable segment derives its revenues. ?

Information about profit or loss, assets and liabilities For each reportable segment the entity shall have to disclose the following main points: (a) revenues from external customers; (b)

**100% MATCHING BLOCK 485/516**

**W**

revenues from transactions with other operating segments of the same entity; (

c) interest revenue; (d) interest expense;

[256] [ 256 ] (e) depreciation and amortization; (f) material items of income and expense disclosed in accordance with Ind AS 1, Presentation of Financial Statements; (g)

**94% MATCHING BLOCK 486/516**

**W**

the entity's interest in the profit or loss of associates and joint ventures accounted for by the equity method; (h) income tax expense or income;

and (i) material non-cash items other than depreciation and amortization. ? Measurement An entity shall provide an explanation of the measurements of segment profit or loss, segment assets and segment liabilities for each reportable segment. ? Reconciliations An entity shall provide reconciliations of all of the following: (a) the total of the reportable segments' revenues to the entity's revenue. (b)

**84% MATCHING BLOCK 493/516**

**SA**

Canadian GAAPs.pdf (D917184)

the total of the reportable segments' measures of profit or loss to the entity's profit or loss before

tax expense (tax income) and discontinued operations. (c) the total of the reportable segments' assets to the entity's assets. (d) the total of the reportable segments' liabilities to the entity's liabilities. (e) the total of the reportable segments' amounts for every other material item of information disclosed to the corresponding amount for the entity. ?

**76% MATCHING BLOCK 487/516**

**W**

Restatement of previously reported information If an entity changes its internal organizational structure

in a manner that causes the composition of its reportable segments to change, the corresponding information for earlier periods, including interim periods, should be restated

**92% MATCHING BLOCK 488/516**

**W**

unless the information is not available and the cost to develop would be excessive. ?

Entity-wide disclosures The following information

**100% MATCHING BLOCK 489/516**

**W**

shall be provided only if it is not provided as part of the reportable segment information required by this

Ind AS. I.

**98% MATCHING BLOCK 490/516**

**W**

Information about products and services An entity shall report the revenues from external customers for each product and service, or each group of similar products and services. The

amounts of revenues reported shall be based on the financial information used to produce the entity's financial statements.

[257] [ 257 ] II. Information about geographical areas An entity shall report the following geographical information: (

a)

**100% MATCHING BLOCK 491/516**

**W**

revenues from external customers (i) attributed to the entity's country of domicile, and (ii) attributed to all foreign countries in total from which the entity derives revenues. (

b)

**100% MATCHING BLOCK 492/516**

**W**

non-current assets other than financial instruments, deferred tax assets, post- employment benefit assets, and rights arising under insurance contracts (

i) located in the entity's country of domicile, and (ii) located in all foreign countries in total in which the entity holds assets. III.

**96% MATCHING BLOCK 494/516**

**W**

Information about major customers An entity shall provide information about the extent of its reliance on its major customers. If revenues from transactions with a single external customer amount to 10 per cent or more of an entity's revenues, the entity shall disclose that fact, the total amount of revenues from each such customer, and the identity of the segment or segments reporting the revenues. 7.8

Summary Segment reporting is made for both the internal and external purposes. It plays an important role in disseminating disaggregated information to the users. Users of information may feel good in evaluating segment performance and overall performance of the company. This might encourage them. Stock market might show its reaction. Segment reporting also helps the management in framing policy decisions and in measuring growth potential, risks and returns. When segment reporting is used for internal purposes, it provides an opportunity to the management to keep constant watch over the bad and good performing segments. As a result, they can take corrective measures for the badly performing segment. They can also think about expansion for segment performing better than others with a view to enhancing overall profitability of the company.

7.9 Exercises ? Theoretical Questions: 1. What do you mean by the term 'segment' as used in business? 2. What is segment reporting? Why is segment reporting needed? What are the benefits of segment reporting? 3. State the conditions for identifying the reportable segments as per Ind AS 108. 4. State the disclosures that are to be made for each reportable segment.

[258] [ 258 ] ? Practical Problems: Problem 1 : An enterprise operates through eight segments, namely, A, B, C, D, E, F, G and H. The relevant information about these segments is given in the following table (amounts in Rs.'000):

Particulars	A	B	C	D	E	F	G	H
1. Segment Revenue (a) External Sales	5035	285	190	95	950	380	722	
(b) Inter Segment Sales	190	1140	570	95	-	-	95	-
2. Segment Results	95	-1710	285	-95	152	-95	95	133
Profit/ (Loss)								
3. Segment Assets	285	95	95	1140	57	95	95	38

Identify the reportable segments as per Ind AS 108. [Ans. Reportable Segments are A, B, C, D, F and other segments]

Problem 2 : An enterprise operates through eight segments, namely, A, B, C, D, E, F, G and H. The relevant information about these segments is given in the following table (amounts in Rs.'000) :

Particulars	A	B	C	D	E	F	G	H	Total (segment)
1. Segment Revenue (a) External Sales	663	37	25	13	125	50	87	1000	
(d) Inter Segment Sales	250	150	75	13	-	-	12	-	500
2. Segment Results	15	(270)	45	(15)	24	(15)	21		
Profit/ (Loss)									
3. Segment Assets	15	5	5	60	3	5	5	2	100

Identify the reportable segments as per Ind AS108. [Ans. Reportable Segments are A, B, C, D, F and other segments]

[259] [ 259 ] Problem 3 : An enterprise operates through eight segments, namely, A, B, C, D, E, F, G and H. The relevant information about these segments is given in the following table (amounts in Rs.'000):

Particulars	A	B	C	D	E	F	G	H
1. Segment Revenue (a) External Sales	6600	-	250	400	1200	500	180	870
(e) Inter Segment Sales	500	2000	1130	800	-	570	-	-
2. Segment Results	2700	150	(150)	(450)	150	(550)	(210)	(240)
Profit/ (Loss)								
3. Segment Assets	800	250	500	80	100	50	50	170

Identify the reportable segments as per Ind AS 108. [Ans. Reportable Segments are A, B, C, D, F and other segments]

Problem 4 : Determine the reportable segments from the following information of X Ltd for 2020:

Particulars	India	Brazil	Canada	Russia	USA	UK	Total (segment)
1. Segment Revenue (a) External Sales	750	20	250	400	160	100	1680
(f) Inter Segment Sales	150	60	80	220	390	10	910
2. Segment Results	170	(20)	(30)	270	150	(50)	
Profit/(Loss)							
3. Segment Assets	810	510	160	160	270	50	1960

Identify the reportable segments as per Ind AS108. [Ans. Reportable Segments are India, Brazil, Canada, Russia, USA and other segments]

[261] [ 261 ] 8.1 Objective After going through this unit, you will be able to: ? Understand the importance of recent developments in corporate financial accounting and reporting ? Know the importance and contents of Business Responsibility Report (BRR) ? Know the regulatory framework of CSR in India ? Know the importance of Integrated Reporting and contents of &gt;IR&lt; Framework 8.2 Introduction Accounting and reporting are dynamic in nature. While the changes in accounting are driven by the need to exhibit a true and fair view of the financial performance and financial state of affairs through financial statements, the same in reporting are driven by the ever-increasing need for information by the shareholders in particular and the stakeholders at large. In the past one decade or so, accounting and reporting across the world have seen many pertinent developments. Along with a fundamental knowledge of various accounting techniques, an accounting practitioner need to have a clear understanding of all these developments. 8.3 Business Responsibility Report

**100% MATCHING BLOCK 495/516**

**W**

Adoption of responsible business practices in the interest of the social set-up and the environment are as vital as their financial and operational performance. This is all the more relevant for listed entities which, considering the fact that they have accessed funds from the public, have an element of public interest involved, and are obligated to make exhaustive continuous disclosures on a regular basis.

Keeping this in mind, in July 2011, the

**95% MATCHING BLOCK 496/516**

Ministry of Corporate Affairs, Government of India, came out with the 'National Voluntary Guidelines on Social, Environmental and Economic Responsibilities of Business'. These guidelines contained comprehensive principles to be adopted by companies as part of their business practices and a structured business responsibility reporting format requiring certain specified disclosures, demonstrating the steps taken by companies to implement the said principles. [262] [ 262 ]

In line with the above Guidelines and considering the larger interest of public disclosure regarding steps taken by listed entities from Environmental, Social and Governance ("ESG") perspective, it was decided by SEBI to mandate inclusion of Business Responsibility Reports ("BR reports") as part of the Annual Reports for listed entities. Consequently, certain listing conditions are specified by way of inserting Clause 55 in the equity Listing Agreement. (Reference: SEBI Circular CIR/CFD /DIL/8/2012 dated August 13, 2012). As per the latest amendment of Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, preparation of BRR is mandatory for top 1000 market capitalization companies. 8.3.1 Applicability of BRR a. The requirement to include BR Reports as part of the Annual Reports shall be mandatory for top 1000 listed entities based on market capitalization at BSE and NSE. BSE and NSE shall independently draw up a list of listed entities who are required to prepare BR Report based on the said criteria and disseminate the same in their websites respectively. Other listed entities may voluntarily disclose BR Reports as part of their Annual Reports.

**100% MATCHING BLOCK 497/516**

**W**

Those listed entities which have been submitting sustainability reports to overseas regulatory agencies/stakeholders based on internationally accepted reporting frameworks need not prepare a separate report for the purpose of these guidelines but only furnish the same to their stakeholders along with

the details of the framework under which their BR Report has been prepared and

should engage with and provide value to their customers in a responsible manner. 1.

What percentage of customer complaints/consumer cases are pending as on the end of financial year. 2. Does the company display product information on the product label, over and above what is mandated as per local laws? Yes/No/N.A. /Remarks (additional information) 3. Is there any case filed by any stakeholder against the company regarding unfair trade practices, irresponsible advertising and/or anti-competitive behaviour during the last five years and pending as on end of financial year. If so, provide details thereof, in about 50 words or so. 4. Did your company carry out any consumer survey/ consumer satisfaction trends? 8.3.3 Availability of BRR BRR of an eligible company can be found as a part of the Annual Report of the company. Most of the companies also post a separate link in their Annual Report to access the soft copy of the report. 8.4 Corporate Social Responsibility Reporting 8.4.1 Concept of Corporate Social Responsibility A business cannot exist in isolation. In the process of its existence and growth it consumes various resources of the society and hence, in turn, must have an obligation towards the society. In the context of corporate organisations, recognising and discharging this obligation may be interpreted as Corporate Social Responsibility (CSR). The term 'corporate social responsibility' has hardly been defined in any legislation. Philip Kotler and Nancy Lee (2005) defined CSR as a "commitment to improve community well-being through discretionary business practices and contributions of corporate resources". Thus, CSR may be understood to be a philosophy imposing an obligation on the corporates to contribute to the society (whether towards any economic, social or ecological cause) along with the reinforced duty to conduct the business operations in an ethical manner. It should be viewed as a form of self-regulation, rather than merely a compliance towards a given regulation, that should be integrated into the business model.

[270] [ 270 ] 8.4.2 Benefits of CSR CSR practises bring in many benefits for society, the people within and the corporate itself. ? CSR enhanced corporate image and builds reputational capital. ? It often strengthens brand positioning. ? It gives the company a sense of satisfaction of economic and social contribution. ? CSR increases the acceptability of the company among the investors. ? Local economy as well as selective external stakeholders are directly benefited 8.4.3 Justification of CSR Policy CSR should not be viewed as a mere compliance requirement to any given legislation. Existence of a well-defined CSR policy is a must in today's business context. ? A well-defined CSR policy may help in building reputational capital which may help a company to maintain the investor confidence in turbulent times. It may even be helpful in bringing down the cost of capital. ? Good CSR policies shift the orientation of the company from short term profit generation to long term value addition. ? CSR policies towards maintaining ecological balances may contribute to conserve the continually depleting non-renewable resources. ? With growing globalization, when businesses are being viewed as expositors rather than saviours in the society, good CSR policy and execution of the same may work to counter this perception. 8.4.4 Present Legislation on CSR in India Keeping the immense importance of CSR in the society, regulators in different countries initiate well-defined regulatory mechanism to guide and monitor the corporate social responsibility (CSR) activities undertaken by corporate firms. Unfortunately, Indian regulators had largely overlooked such a requirement. There was no corresponding provision in the Companies Act 1956 on CSR. The Ministry of Corporate Affairs, Govt. of India had only issued a guideline namely 'Corporate Social Responsibility Voluntary Guidelines, 2009' which required companies to formulate a CSR policy to guide its strategic planning and provide a roadmap for its

[271] [ 271 ] CSR initiatives. Quite understandably, the effort was never taken seriously by the Indian corporate sector. However, with the introduction of the new Companies Act 2013, which has introduced a well-defined framework in this respect, the situation seems changing significantly and in a positive direction. The present legal framework on CSR in India comprises of – (a) Section 135 of Companies Act 2013 [Notified on 01.04.2014]; (b) Schedule VII of Companies Act 2013; and (c) Companies (Corporate Social Responsibility Policy) Rules 2014 [Notified on 01.04.2014]. The salient features of these regulations are given below. 1. Formation and Composition of CSR Committee : Every company having net worth of rupees five hundred crore or more, or turnover of rupees one thousand crore or more or a net profit of rupees five crore or more during the immediately preceding financial year (amendment effective from 19.09.2018) shall

**83%**

ACA-MCOS 34 MAIN.docx (D147306261)

constitute a Corporate Social Responsibility Committee of the Board consisting of three or more directors, out of which at least one director shall be an independent director.

However, companies, which are not required to appoint an independent director u/s 149(4), shall have in its Corporate Social Responsibility Committee two or more directors [Section 135(1)]. 2. Board's Report and CSR Committee : The Board's report u/s 134(3) shall disclose the composition of the Corporate Social Responsibility Committee. [Section 135(2)]. 3. Functions of CSR Committee : The Corporate Social Responsibility Committee shall – (a) formulate and recommend to the Board, a Corporate Social Responsibility Policy which shall indicate the activities to be undertaken by the company in areas or subject, specified in Schedule VII. (b) recommend the amount of expenditure to be incurred on the above activities; and (c) monitor the Corporate Social Responsibility Policy of the company from time to time. [Section 135(3)]

[272] [ 272 ] 4. Board's Responsibility : The Board shall— (a) after taking into account the recommendations made by the Corporate Social Responsibility Committee, approve the Corporate Social Responsibility Policy for the company and disclose contents of such Policy in its report and also place it on the company's website, if any, in such manner as may be prescribed; and (b) ensure that the activities as are included in Corporate Social Responsibility Policy of the company are undertaken by the company. [Section 135(4)] 5. CSR Spending : The Board of every company shall ensure that the company spends, in every financial year, at least two per cent

**100%****MATCHING BLOCK 506/516****W**

of the average net profits of the company made during the three immediately preceding financial years, in pursuance of its Corporate Social Responsibility Policy.

The company shall give preference to the local area and areas around it where it operates, for spending the amount earmarked for Corporate Social Responsibility activities. If the company fails to spend such amount, the Board shall specify the reasons for not spending the amount and unless the unspent amount relates to any ongoing project referred to in sub-section (6), transfer such unspent amount to a Fund specified in Schedule VII, within a period of six months of the expiry of the financial year. If the company spends an amount in excess of the requirements provided under this sub-section, such company may set off such excess amount against the requirement to spend under this sub-section for such number of succeeding financial years and in such manner, as may be prescribed. Any amount remaining unspent under sub-section (5), pursuant to any ongoing project, fulfilling such conditions as may be prescribed, undertaken by a company in pursuance of its Corporate Social Responsibility Policy, shall be transferred by the company within a period of thirty days from the end of the financial year to a special account to be opened by the company in that behalf for that financial year in any scheduled bank to be called the Unspent Corporate Social Responsibility Account, and such amount shall be spent by the company in pursuance of its obligation towards the Corporate Social Responsibility Policy within a period of three financial years from the date of such transfer, failing which, the company shall transfer the same to a Fund specified in Schedule VII, within a period of thirty days from the date of completion of the third financial year. If a company is in default in complying with the provisions of sub-section (5) or sub-section (6), the company shall be liable to a penalty of twice the amount

[273] [ 273 ] required to be transferred by the company to the Fund specified in Schedule VII or the Unspent Corporate Social Responsibility Account, as the case may be, or one crore rupees, whichever is less, and every officer of the company who is in default shall be liable to a penalty of one-tenth of the amount required to be transferred by the company to such Fund specified in Schedule VII, or the Unspent Corporate Social Responsibility Account, as the case may be, or two lakh rupees, whichever is less. [Section 135(5)] 6. Modalities of Undertaking CSR Activities [Rule 4] : a) The CSR activities shall be undertaken by the company, as per its stated CSR Policy, as projects or programs or activities (either new or ongoing), excluding activities undertaken in pursuance of its normal course of business. b) The Board of a company may decide to undertake its CSR activities approved by the CSR Committee, through ? a company established under section 8 of the Act or a registered trust or a registered society, established by the company, either singly or along with any other company; or ? a company established under section 8 of the Act or a registered trust or a registered society, established by the Central Government or State Government or any entity established under an Act of Parliament or a State legislature. c) A company may also collaborate with other companies for undertaking projects or programs or CSR activities. d) The CSR projects or programs or activities that benefit only the employees of the company and their families shall not be considered as CSR activities in accordance with section 135 of the Act. e) Companies may build CSR capacities of their own personnel as well as those of their Implementing agencies through Institutions with established track records of at least three financial years but such expenditure shall not exceed five percent of total CSR expenditure of the company in one financial year. f) Contribution of any amount directly or indirectly to any political party shall not be considered as CSR activity. 7. CSR Policy [Rule 6] The CSR Policy of the company shall, inter-alia, include the following namely:

[274] [ 274 ] (a) a list of CSR projects or programs which a company plans to undertake in areas or subjects specified in of the Schedule VII of the Act, specifying modalities of execution of such project or programs and implementation schedules for the same; and (b) monitoring process of such projects or programs. The CSR Policy of the company shall specify that the surplus arising out of the CSR projects or programs or activities shall not form part of the business profit of a company. 8. CSR Report [Rule 8] The Board’s Report shall include an annual report on CSR containing particulars specified in Annexure. 9. Areas of CSR Activities [Schedule VII] : The broad areas are: (i) Eradicating hunger, poverty and malnutrition, promoting health care including preventive health care and sanitation including contribution to the Swachh Bharat Kosh set-up by the Central Government for the promotion of sanitation and making available safe drinking water. (ii) promoting education, including special education and employment enhancing vocation skills especially among children, women, elderly and the differently abled and livelihood enhancement projects. (iii) promoting gender equality, empowering women, setting up homes and hostels for women and orphans; setting up old age homes, day care centres and such other facilities for senior citizens and measures for reducing inequalities faced by socially and economically backward groups. (iv) ensuring environmental sustainability, ecological balance, protection of flora and fauna, animal welfare, agroforestry, conservation of natural resources and maintaining quality of soil, air and water including contribution to the Clean Ganga Fund set-up by the Central Government for rejuvenation of river Ganga. (v) protection of national heritage, art and culture including restoration of buildings and sites of historical importance and works of art; setting up public libraries; promotion and development of traditional art and handicrafts; (vi) measures for the benefit of armed forces veterans, war widows and their dependents, Central Armed Police Forces (CAPF) and Central Para Military Forces (CPMF) veterans, and their dependents including widows (vii) training to promote rural sports, nationally recognised sports, paralympic sports and olympic sports

A responsibility statement of the CSR Committee that the implementation and monitoring of CSR Policy, is in compliance with CSR objectives and Policy of the company.

Sd/- Sd/- Sd/- (Chief Executive Officer (Chairman CSR (Person specified under clause (d) or Managing Director Committee) of sub-section (1) of section 380 or Director) of the Act) (wherever applicable) 8.4.6 Availability of CSR Report In India, CSR report of an eligible company may be found as an annexure to the Board's Report included in the Annual Report of the company.

[277] [ 277 ] 8.5 Sustainability Reporting and Global Reporting Initiatives 8.5.1 Sustainability Reporting Today's business organisation is often found to be committed towards sustainable business practices to ensure its participation in sustainable economic development. A sustainability report is a report published by a company or organization about the economic, environmental and social impacts caused by its everyday activities. It also presents the organization's values and governance model, and demonstrates the link between its strategy and its commitment to a sustainable global economy. Sustainability reporting can help organizations to measure, understand and communicate their economic, environmental, social and governance performance, and accordingly set goals, and manage change more effectively. It is the key platform for communicating sustainability performance and impacts – whether positive or negative. It is often considered as synonymous with other terms for non-financial reporting like triple bottom line reporting, corporate social responsibility (CSR) reporting, and more. It is also an intrinsic element of integrated reporting; a more recent development that combines the analysis of financial and non-financial performance. ? Benefits of Sustainability Reporting Sustainability reporting can have a wide range of business benefits. (a) Driver of innovation and learning Sustainability reporting often highlights inefficiencies and risk. It helps to identify opportunities for the business arising out of the changes in the business environment. (b) Building reputational capital Sustainability reporting increases the reputational capital of the business. It is highly accepted by the investors and other stakeholders. Higher acceptability many a times reduces the cost of capital in the long run. It also improves employee retention as employees are more inclined to be associated with a responsible company. (d) Raising corporate transparency Sustainability reporting raises corporate transparency. This improves the brand value of the company. It also helps stakeholders to assess the management quality.

[278] [ 278 ] (e) Balanced assessment by stakeholders Sustainability reporting requires disclosure of both positive and negative impact of business operations. As a result, stakeholders can have a balanced assessment of an organisation's activities. (f) Holistic assessment of emerging risks and opportunities Today, success of a business largely depends on how well it can manage the non-financial risks. Sustainability reporting provides adequate information in this respect and in the process highlights emerging markets and opportunities. It also improves business resilience and reassures investors that company is managing non- financial risk well. (g) Promotes stakeholder engagement and communications Sustainability reporting is stakeholder oriented rather than being merely shareholder oriented. This eventually ensure better stakeholder engagement and communications. (h) Aligned with objectives of annual reporting of financial information. Sustainability reporting is not totally separated from financial reporting rather it is aligned with objectives of annual reporting and discloses a holistic picture of the company. (h) Important source of information to the regulators and others Sustainability reporting is often an important source of information to the regulators and social activists. ? Contents of Sustainability Report As mentioned at the outset, sustainability reporting enables organizations to report on environmental and social performance. Accordingly, sustainability report includes all such information that depicts the impact, both positive and negative, of an organisation's business practices. It includes organisation's economic performance, impact of its activities on ecology (such as carbon footprint, waste management, conservation of non-renewable resources), its efforts to ensure occupational health and safety, upholding human rights, safe and sustainable product delivery and last but not the least organisation's efforts towards community development. ? Providers of Sustainability Reporting Guidelines Major providers of sustainability reporting guidance include:

[279] [ 279 ] ? GRI (GRI's Sustainability Reporting Standards) ? The Organisation for Economic Co-operation and Development (OECD Guidelines for Multinational Enterprises) ? The United Nations Global Compact (the Communication on Progress) ? The International Organization for Standardization (ISO 26000, International Standard for social responsibility) 8.5.2 Global Reporting Initiatives ? The History of GRI The Global Reporting Initiative (known as GRI) is an international independent standards organization that helps businesses, governments and other organizations understand and communicate their impacts on issues such as climate change, human rights and corruption. GRI was founded in Boston in 1997 following the public outcry over the environmental damage of the Exxon Valdez oil spill. It was formed by the United States-based non-profits CERES (formerly the Coalition for Environmentally Responsible Economies) and Tellus Institute, with the support of the United Nations Environment Programme (UNEP). The objective was to introduce an accountability mechanism to ensure companies adhere to responsible environmental conduct which later on widened further to include social, economic and governance issues. In 2000, the organisation issued its first guidelines (G1) on sustainability reporting. In 2001, GRI was established as an international independent organisation. In 2002 GRI moved its secretariat to Amsterdam, Netherlands and also issued the first update of its guidelines (G2) which was further modified in 2006 (G3) and 2013 (G4). Although the GRI is independent, it remains a collaborating centre of UNEP and works in cooperation with the United Nations Global Compact. ? Standards Issued by GRI The following is the list of standards issued by GRI: Universal Standards Effective date GRI 101: Foundation 2016 1 July 2018 GRI 102: General Disclosures 2016 1 July 2018 GRI 103: Management Approach 2016 1 July 2018 Topic-specific Standards [280] [ 280 ] Universal Standards Effective date GRI 200: Economic GRI 201: Economic Performance 2016 1 July 2018 GRI 202: Market Presence 2016 1 July 2018 GRI 203: Indirect Economic Impacts 2016 1 July 2018 GRI 204: Procurement Practices 2016 1 July 2018 GRI 205: Anti-corruption 2016 1 July 2018 GRI 206: Anti-competitive Behavior 2016 1 July 2018 GRI 207: Tax 2019 1 January 2021 GRI 300: Environmental GRI 301: Materials 2016 1 July 2018 GRI 302: Energy 2016 1 July 2018 GRI 303: Water and Effluents 2018 1 January 2021 GRI 304: Biodiversity 2016 1 July 2018 GRI 305: Emissions 2016 1 July 2018 GRI 306: Waste 2020 1 January 2022 GRI 307: Environmental Compliance 2016 1 July 2018 GRI 308: Supplier Environmental Assessment 2016 1 July 2018 GRI 400: Social GRI 401: Employment 2016 1 July 2018 GRI 402: Labor/Management Relations 2016 1 July 2018 GRI 403: Occupational Health and Safety 2018 1 January 2021 GRI 404: Training and Education 2016 1 July 2018 GRI 405: Diversity and Equal Opportunity 2016 1 July 2018 GRI 406: Non-discrimination 2016 1 July 2018 GRI 407: Freedom of Association and Collective Bargaining 2016 1 July 2018 GRI 408: Child Labor 2016 1 July 2018 GRI 409: Forced or Compulsory Labor 2016 1 July 2018 GRI 410: Security Practices 2016 1 July 2018 GRI 411: Rights of Indigenous Peoples 2016 1 July 2018

[281] [ 281 ] Universal Standards Effective date GRI 412: Human Rights Assessment 2016 1 July 2018 GRI 413: Local Communities 2016 1 July 2018 GRI 414: Supplier Social Assessment 2016 1 July 2018 GRI 415: Public Policy 2016 1 July 2018 GRI 416: Customer Health and Safety 2016 1 July 2018 GRI 417: Marketing and Labeling 2016 1 July 2018 GRI 418: Customer Privacy 2016 1 July 2018 GRI 419: Socioeconomic Compliance 2016 1 July 2018 ? Acceptability of GRI Sustainability Reporting Standards Though sustainability reporting standards are provided by many organisations, GRI Sustainability Reporting Standards are the most widely accepted. Like all other standards, GRI Sustainability Reporting Standards (GRI Standards) also help businesses, governments and other organizations understand and communicate the impact of business on critical sustainability issues. Some of the distinctive elements of the GRI Standards that have increased its wide acceptance, include: a) Multi-stakeholder input : GRI's approach is based on multi-stakeholder engagement, representing the best combination of technical expertise and diversity of experience to address the needs of all report makers and users. This approach enables to produce universally-applicable reporting guidance. All elements of the Reporting Framework are created and improved using a consensus-seeking approach, and considering the widest possible range of stakeholder interests which includes business, civil society, labour, accounting, investors, academics, governments and sustainability reporting practitioners. b) A record of use and endorsement : Of the world's largest 250 corporations, 92% report on their sustainability performance and 74% of these use GRI's Standards to do so. With over 23,000 GRI Reports recorded in GRI database, sustainability reporting using the GRI Standards is significant. c) Governmental references and activities : Enabling policy is a key aspect of GRI's overall strategy and they work with governments, international organizations and capital markets to further this agenda. As a result, 35 countries use GRI in their sustainability policies. In addition, GRI has long- standing collaborations with over 20 international organizations such as the UNGC, OECD and the UN Working Group on Business & Human Rights.

[282] [ 282 ] d) Independence : The creation of the Global Sustainability Standards Board in 2014, and related governance structure changes, have strengthened the independence of the standards aspect of our work. Its funding approach also ensures independence. GRI is a non-profit foundation with a business model that aims for a degree of self-sufficiency. Funding is secured from diverse sources; governments, companies, foundations, partner organizations and supporters. e) Shared development costs : The expense of developing GRI's reporting guidance is shared among many users and contributors. For companies and organizations, this negates the cost of developing in-house or sector-based reporting frameworks.

## 8.6 Integrated Report

The present corporate reporting framework across many nations requires companies to prepare multiple reports to meet the growing information needs of corporate stakeholders such as management discussion and analysis, auditor's report, directors' report etc. As a result, the information set appears to be disintegrated and fails to explain how an organisation, through a coordinated effort, has been able to create value. In this context, Integrated Reporting & IR < is increasingly gaining popularity by explaining how the interaction among organization's varied efforts to meet stakeholders' expectations can create value for the organization.

### 8.6.1 History of Integrated Reporting

In 2009, the Prince of Wales convened a high-level meeting of investors, standard setters, companies, accounting bodies and UN representatives including The Prince's Accounting for Sustainability Project, International Federation of Accountants (IFAC), and the Global Reporting Initiative (GRI), to establish the International Integrated Reporting Committee (IIRC), a body to oversee the creation of a globally accepted Integrated Reporting framework. In November 2011, the Committee was renamed the International Integrated Reporting Council. On 17 and 18 October 2011, the first Integrated Reporting Pilot Programme conference was convened in Rotterdam. The Pilot Programme is made up of a Business Network and Investor Network that are both feeding back to the IIRC with their progression towards Integrated Reporting. There are over 80 Businesses and over 25 Investors participating in the Pilot Programme. The Discussion Paper Towards Integrated Reporting – Communicating Value in the 21st Century was launched Monday 12 September 2011. It considered the rationale for Integrated Reporting, offering initial proposals for the development of an International Integrated Reporting Framework

[283] [ 283 ] and outlining the next steps towards its creation and adoption. Its purpose was to prompt input from all those with a stake in improved reporting, including producers and users of reports. On 26 November 2012 the IIRC released a Prototype of the International IR Framework, a significant further step towards publication of the Framework in 2013. This was an interim step intended to demonstrate progress towards defining key concepts and principles that underpin IR, and support organizations' ability to produce an integrated report. Finally, on 16 April 2013 the IIRC released the Consultation Draft of the International IR Framework.

### 8.6.2 Concept and Definition of Integrated Reporting

Integrated Reporting (&gt;IR&lt;) promotes a more cohesive and efficient approach to corporate reporting and aims to improve the quality of information available to providers of financial capital to enable a more efficient and productive allocation of capital. The primary purpose of an integrated report is to explain to providers of financial capital how an organization creates value over time. An integrated report benefits all stakeholders interested in an organization's ability to create value over time, including employees, customers, suppliers, business partners, local communities, legislators, regulators and policy-makers. According to IIRC, an integrated report is a concise communication about how an organization's strategy, governance, performance and prospects, in the context of its external environment, lead to the creation of value over the short, medium and long term.

### 8.6.3 Objectives of Integrated Reporting

The objectives of Integrated Reporting (&gt;IR&lt;) are:

- ? To improve the quality of information available to providers of financial capital to enable a more efficient and productive allocation of capital
- ? To promote a more cohesive and efficient approach to corporate reporting that can explain how an organisation creates value through a coordinated approach.
- ? To enhance accountability and stewardship for the broad base of capitals (financial, manufactured, intellectual, human, social and relationship, and natural) and promote understanding of their interdependencies
- ? Support integrated thinking, decision-making and actions that focus on the creation of value over the short, medium and long term.

[284] [ 284 ]

### 8.6.4 Integrated Reporting (&gt;IR&lt;) Framework

Integrated Reporting (&gt;IR&lt;) Framework is a detailed suggestive guidance on preparation of an integrated report. The framework has been issued by the International Integrated Reporting Council (IIRC). The objective of this framework is to provide the guidelines and the content element that will be the basis for preparation of an integrated report. Though the framework is primarily meant for private corporates, the same may be suitably adapted by public sector organizations and even not for profit undertakings. The framework only identifies the information to be included in an integrated report to enable the users to appropriately assess the organization's ability to create value. It does not provide any benchmark. Moreover, the framework is principles-based in order to strike an appropriate balance between flexibility and prescription that recognizes the wide variation in individual circumstances of different organizations and yet provide a decent degree of comparability. The framework details the value creation process as follows:

A. Value Creation; Meaning: An organisation creates value over time which gets manifested in increases, decreases or transformations of the capitals caused by the organization's business activities and outputs. The value is created by the organisation for itself, which enables financial returns to the providers of financial capital and also for others (i.e., stakeholders and society at large).

B. The Components of Value Creation Process:

1. Different Forms of Capital: All organizations depend on various forms of capital for their success. In this Framework, the capitals comprise financial (fund available from shareholders, loan providers), manufactured (building, plant etc.), intellectual (i.e., knowledge-based intangibles), human (people's competencies, capabilities and experience, and their motivations to innovate), social and relationship (the institutions and the relationships within and between communities, groups of stakeholders and other networks), and natural (All renewable and non-renewable environmental resources and processes that provide goods or services). All these forms of capital may not be equally relevant or applicable to all organisations. While most of the organisation do interact with all forms of capital, at times the interactions may be so minor to report some capitals in the integrated report.
2. External Environment: This includes economic conditions, technological change, societal issues and environmental challenges, sets the context within which the organization operates.

[285] [ 285 ] 3. Mission and Vision : It encompass the whole organization, identifying its purpose and intention in clear, concise terms. 4. Governance : Those charged with governance are responsible for creating an appropriate oversight structure to support the ability of the organization to create value. 5. Risk and opportunities : Continuous monitoring and analysis of the external environment in the context of the organization's mission and vision identifies risks and opportunities relevant to the organization, its strategy and its business model. 6. Strategy and Resource Allocation : The organization's strategy identifies how it intends to mitigate or manage risks and maximize opportunities. It sets out strategic objectives and strategies to achieve them, which are implemented through resource allocation plans. 7. Performance : The organization needs information about its performance, which involves setting up measurement and monitoring systems to provide information for decision-making. 8. Outlook : The value creation process is not static; regular review of each component and its interactions with other components, and a focus on the organization's outlook, lead to revision and refinement to improve all the components. 9. Business Model : At the core of the organization is its business model, which draws on various capitals as inputs and, through its business activities, converts them to outputs (products, services, by-products and waste). The organization's activities and its outputs lead to outcomes in terms of effects on the capitals. The capacity of the business model to adapt to changes (e.g., in the availability, quality and affordability of inputs) can affect the organization's longer-term viability. C. The Value Creation Process : In its attempt to create value for internal and external stakeholders, an organisation selects an appropriate business model based on its assessment of external environmental forces, its own vision and mission, assessment of risk and opportunities due to external changes and its attitude towards handling risks (or strategies). Then, based on a minutely designed resource allocation plan the organisation employs various capitals as inputs and converts them into output through a number of business activities. This results in augmentation in the capitals introduced in both quantitative and qualitative terms (like profits improves financial capital, remuneration, career advancement programmes and training improve human capital etc.) and thus value [286] [ 286 ] is created. This process, is however, not static. Thus, through a constant monitoring based on performance related information, the organisation assesses the changes required in all the components and relationships and accordingly brings in necessary and timely changes to further improve the value creation process. The following figure describes vividly this value creation process. 8.6.5 Integrated Report: Guiding Principles As proposed in the Integrated Reporting &IR framework, the guiding principles while preparing an integrated report are the following: ? Strategic focus and future orientation: An integrated report should provide insight into the organization's strategy, and how it relates to the organization's ability to create value in the short, medium and long term, and to its use of and effects on the capitals ? Connectivity of information: An integrated report should show a holistic picture of the combination, interrelatedness and dependencies between the factors that affect the organization's ability to create value over time ? Stakeholder relationships: An integrated report should provide insight into the nature and quality of the organization's relationships with its key stakeholders, including how and to what extent the organization understands,

[287] [ 287 ] takes into account and responds to their legitimate needs and interests ? Materiality: An integrated report should disclose information about matters that substantively affect the organization’s ability to create value over the short, medium and long term ? Conciseness: An integrated report should be concise ? Reliability and completeness: An integrated report should include all material matters, both positive and negative, in a balanced way and without material error ? Consistency and comparability: The information in an integrated report should be presented: (a) on a basis that is consistent over time; and (b) in a way that enables comparison with other organizations to the extent it is material to the organization’s own ability to create value over time. 8.6.6 Integrated Reporting: the International Scenario There is an increasing interest over Integrated Reporting worldwide. IIRC, the parent body of &gt;IR&lt; movement, with its council members and ambassadors, is constantly working for its global acceptance. So far 750 organisations have participated in the &gt;IR&lt; Network worldwide. 150 companies are practicing &gt;IR&lt; in Japan alone. Worldwide more than 1000 companies are using &gt;IR&lt; to communicate with their stakeholders. International bodies like B20 and IOSCO are taking serious interest in &gt;IR&lt; to use it as a tool to combat market challenges worldwide. Regulators in countries like Japan and UK are also in the process to recommend it as a route towards achieving a comprehensive reporting and financial stability with European Commission labelling it as ‘a step ahead’. 8.6.7 Integrating Reporting in India In India, integrated reporting is still at its nascent stage. In 2017 the Securities and Exchange Board of India (SEBI) endorsed the voluntary adoption of integrated reporting. The Regulator’s circular invited top 500 companies which prepare Business Responsibility Report (BRR) to voluntarily adopt integrated reporting with effect from 2017-18 financial year. The increased awareness, investor expectations and perceived benefits have resulted in more than 30 companies adopting integrated reporting in India through the last financial year. The list includes Tata Steel, Infosys, Mahindra and Mahindra, Wipro, Yes Bank and Reliance Industries. However, the regulators are still examining its mandatory adoption in India and any promulgation is yet to be confirmed.

[288] [ 288 ] 8.7 Summary During last few years corporate reporting in India and worldwide has changed a lot. Increased pressure of stakeholders including regulators has forced large companies to disclose information about the impact of their activities on economy, ecology and the society and also on their ethical conduct. In many cases corporates themselves are resorting to various innovative reporting means to make them more visible. Reporting such as BRR and CSR have been disclosing valuable information in this respect. Globally, GRI are issuing standards to be followed to prepare sustainability reporting. Multiple reporting practices will soon be merged into a single reporting exercise known as Integrated Report. All these reporting has become a integral part of a company’s regular exercises. 8.8 Exercises 1. Discuss the applicability of BRR in India. What are the components of a BRR? .2. Mention the nine principles of BRR. 3. What do you mean by corporate social responsibility? What are its benefits? 4. How will you justify preparation of a CSR policy? 5. Discuss the present regulation relating to CSR in India with respect to the following points: (a) applicability or eligible companies, (b) CSR spending (c) CSR committee (d) CSR policy (e) Areas of CSR activities. 6. What do you mean by Sustainability Report? What are its benefits? 7. Name a few organizations that provide sustainability standards. 8. Why and How was GRI formed? What is its major aim? Name the four broad areas where GRI standards have been issued. 9. What is Integrated Report? Which organization provides the Integrated Reporting Framework? 10. What is the aim of Integrated Report? 11. What are the different forms of capital as per the Integrated Reporting Framework? How is value created in an organization? 12. What is the present status of integrated reporting in India?

Preferential creditors: These are unsecured creditors who are paid in preference to others. As per Sec. 327 of the Companies Act, 2013, preferential creditors include the following: a) Due to Government: All revenues, taxes, cesses and rates due to the Central, State Government or to a local authority which have become due and payable within twelve months before the date of winding up order. b) Salary and Wages Outstanding: All wages or salary including wages payable for time or piece work and salary earned wholly or in part by way of commission of any employee in respect of services rendered [101] [ 101 ] to the company and due for a period not exceeding four months within the twelve months immediately before the liquidation date, subject to the condition that the amount payable under this clause to any workman shall not exceed Rs. 20000 per claimant. c) All amounts due in respect of contribution payable during the twelve months under the Employees' State Insurance Act, 1948 or any other law. d) Compensation due under Workmen's Compensation Act, 1923 in respect of death or disablement of any employee of the company. e) Any amount due to any employee from provident fund, pension fund, gratuity fund for the welfare of the employees maintained by the company. f) Accrued holiday remuneration becoming payable to the employee or in case of his death, to any other person in his right, on termination of his employment before, or by the effect of the winding up. g) The expenses of any investigation held in pursuance of Sec. 213 or 216 in so far as they are payable by the company. Note : Here, the term 'workmen', in relation to a company, means the employees of the company, being workmen within the meaning of clause (s) of section 2 of the Industrial Disputes Act, 1947 (14 of 1947). Hence, persons working in the managerial capacity are not workmen. 4.

<p>a reverse acquisition, the entity that issues securities (the legal acquirer) is identified as the acquiree for accounting purposes. The entity whose equity interests are acquired (the legal acquiree) must be the acquirer for accounting purposes for the transaction to be considered a reverse acquisition. For example, reverse acquisitions sometimes occur when a private operating entity wants to become a public entity but does not want to register its equity shares. To accomplish that, the private entity will arrange for a public entity to acquire its equity interests in exchange for the equity interests of the public entity. In this example, the public entity is the legal acquirer because it issued its equity interests, and the private entity is the legal acquiree because its equity interests were acquired. However,</p>		<p>A reverse acquisition occurs when the entity that issues securities (the legal acquirer) is identified as the acquiree for accounting purposes. PREFACE In the curricular structure introduced by this University for students of Post- Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that the university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Unit - 1  Concept and Understanding the Corporate Governance Structure 1.1 Objectives 1.2 Introduction 1.3 Important features of Corporate Governance 1.4 Composition of Board of Director 1.4.1 The Role of the Board of Directors in Corporate Governance 1.5 Other Components of Corporate Governance 1.6 Corporate Governance System Worldwide 1.7 Summary 1.8 Exercise 1.1 Objectives After going through this unit you will learn. • Corporate Governance and Role of Board: • Composition of Board of Directors; • Corporate Governance other components; • Corporate Governance system worldwide : Single board vs. Dual board; Germany Japanese system - 'networked model' vs. Anglo American system - 'high-tension model'; • Corporate Governance in India A journey through the historical models. 1.2 Introduction Corporate Governance refers to the way in which companies are governed and to what purpose. It provides power and accountability, and identifies decision makers 9 10 NSOU • PGC0-VIII of an organisation. Governance is a toolkit that enables management and the board to efficiently face challenges of running a company. Corporate governance ensures appropriate decision-making processes and controls to protect the interests of all stakeholders (shareholders, employees, suppliers, customers and the community). The Cadbury Report 1992 provides a useful definition : ‘

**MATCHING BLOCK 2/230**

**SA**

FINAL.docx (D136078620)

Gabrielle O’Donovan defines corporate governance as “an internal system encompassing policies, processes and people, which serve the needs of shareholders and other stakeholders, by directing and controlling management activities with good business savvy, objectivity, accountability and integrity. Sound corporate governance is reliant on external marketplace commitment and legislation, plus a healthy board culture which safeguards policies and processes.” 1.3

Important Features of Corporate Governance Important features of corporate governance are as follows: 1. Transparency : Transparency incorporates

**71%**

**MATCHING BLOCK 3/230**

**SA**

L.L.M DISSERTATION.docx (D110942008)

a system of checks and balances between key players – boards, management, auditors and shareholders. Transparency in

company’s action may be ensured through making non- partial disclosures of company rules, policy, accounts, etc. and timely disclosure of information complete in all respect equally to all shareholders about results; Annual General Meetings (AGMs); quarterly updates on company’s performance, risks, outlook, opportunities and threats etc. 2. Accountability : Corporate Governance necessitates taking into account the shareholders interests in every business decision which brought accountability of the Board of Directors of a company and their constituent responsibilities in focus. Board of Directors are the representors of the stakeholders and are accountable to the stake holders for decisions taken. 3. Trusteeship : “The doctrine of trusteeship is based on the Bhagavad Gita. The twin principles of ‘aparigraha’ (non-possession) and ‘Sambhawa’ (equalism) are the main principles of Bhagavad Gita. Corporates are the trustee of the shareholders and their money; they should use their wealth for the welfare of the society and the community at large.” Trusteeship involves

NSOU • PGC0-VIII 11 a strong code of discipline and ethical behaviour as well as equally strong principle of accountability. 4. Employees' Welfare : Good corporate governance is essentially concerned with company's human resource. Training, Identification and rewarding of performance, Focus on multi-skill programme where key executives are rotated to various functions to develop skills across different functions, Scholarships and/or educational facilities for children of the company's staff are common welfare policies adopted by corporate governance. 5. Environment Protection : Protection of environment should be the first priority of every socially responsible organization. Each company must take steps to make sustainable use of resources, establish a healthy and safe working environment, maintain ecological balance, take proactive steps to minimize waste generation and preserve the environment. 6. Meeting Social Obligations : social responsibility of a business is regulated by corporate governance through

directors who (1) do not have a material relationship with the company, (2)

is not part of the company's executive team, and (3) is not involved with the day-to-day operations of the company. 1.4.1 The Role of the Board of Directors in Corporate Governance The main role of board directors is oversight and planning. Corporate boards have the responsibility to take decisions in an organisation, considering how it will affect their employees, customers, suppliers, communities and shareholders. Good corporate governance was never intended to be directly involved in the daily operations of a corporation, and they are separate from management. Despite the differences, boards also regularly delegate some of their duties to board

NSOU • PGCO-VIII 13 committees. Corporate board committees act as a subset of the full board. Committees engage in issues for which the full board doesn't have time. Committees provide regular reports to the board on the matters they're charged with handling. Best practices for corporate governance encourage boards to offer the majority of board seats to independent directors. A well-composed board brings a diverse range of expertise, perspectives and knowledge into the boardroom. Regulators, investors and others are also making a big push for boards to consider diversity in a multitude of realms, including age, gender, experience, ethnicity, race, religion, skills and experiences. Executive, Non-Executive, independent directors including women director creates a dynamic team with expertise of business, general decision making, and independence of decision making.

1.5 Other Components of Corporate Governance People, Purpose, Process, and Performance are the Four Ps of Corporate Governance, the guiding philosophies behind why governance exists and how it operates. This is further illustrated below :

- People**-People come first in the Four Ps because people exist on every side of the business equation. They are the founders, the board, the stakeholder and consumer and impartial observer. People are the organisers who determine a purpose to work towards, develop a consistent process to achieve it, evaluate their performance outcomes, and use those outcomes to grow themselves and others as people.
- Purpose**-Every governance is made for a purpose and to achieve a purpose. The organisations mission, objectives, policies and projects should exist to further this agenda. Every small effort to goof governance will pay off and makes the business effective at achieving it's stated purpose.
- Process**-Governance is the process by which people achieve their company's purpose, and that process is developed by analysing performance. Processes are refined over time in order to consistently achieve their purpose, and it's always smart to take a critical eye to your governance processes. Correct process helps the company to grow effortlessly.
- Performance**-Performance analysis is an ability to look at the results of a process and determine whether it was successful (or successful enough), and then apply those findings to the rest of your organisation, is one of the primary functions of the governance process. Performance determines the efforts and gaps that leads to success or failure.

14 NSOU • PGCO-VIII 1.6 Corporate Governance System Worldwide

1. Anglo-American Model of Corporate Governance : In this model of corporate governance, shareholders elect the board of directors. They take up the advisory role. Shareholders usually control a private corporation through the board of directors. The board of directors performs three basic functions on behalf of the shareholders i.e. representation, direction and oversight. The board appoints and supervises the executive officers who will take care of the daily activities of the organization. However, the structural framework of the Anglo- American model as laid down by the legal system is depicted through the following diagram-

Shareholders Board of Directors Executive Directors Company Stakeholders Legal Systems Creditors elect appoints Governance Structure manages

Fig-1 : Anglo-American Corporate Governance Model As per this model, employees, suppliers and creditors are stakeholders in the corporations. The creditors have a lien on the assets of the corporation. The board of directors designs the policy of the corporation, which is then implemented by the management. Using a well-designed information system the board monitors the implementation of this policy in the organization. This model is most suitable for a production or manufacturing organization as it facilitates efficient monitoring of production, exchange and performance.

2. German Model of Corporate Governance : In this model of corporate governance, even though the shareholders own the

NSOU • PGCO-VIII 15 corporation, they do not directly control the governance mechanism. Here, we can find two-tier board structure- Supervisory Board and Management Board. Half of the members of Supervisory Board are elected by the labour unions while the remaining is elected by the share holders or owners of the corporations. In this model, the employees are not just stakeholders, but also have a say in the governance mechanism. Thus, employees become responsible for the policies that are to be implemented by them for attaining the objectives of the firm i.e. profit, market share, high turnover etc. The supervisory board, which is jointly appointed by shareholders and labour unions, appoints and monitors the management board. This management board conducts the day-to-day operations of the organization independently. But, the management board has to report to the supervisory board about their activities for a specific period. One of the unique features of this model is that the labour relations' officer finds a place on the management board. So, this model ensures workers participation in the governance mechanism. Here, the German model of corporate governance and the relationship between various constituents of the system is presented-

Shareholders  
Labour Unions  
Supervisory Board  
Management Board  
Company day to day functions  
Reports to  
Appoints and  
Independently run  
Appoint ½  
Appoint ½  
Supervises

Fig-2 : German Corporate Governance Model 3 Japanese Model of Corporate Governance : In the Japanese model of corporate governance, the financial institutions have a major say in the governance mechanism. The shareholders, along with the banks (the major capital providers of the Japanese firms), appoint the members on the

16 NSOU • PGCO-VIII board. In this model even the president is appointed on the basis of a consensus between shareholders and the banks. The President consults with the board and their relations are hierarchical in nature. Usually the board ratifies whatever decisions the president takes. The financial institutions that finance the business have a crucial role in it even though the shareholders are the owners of the business. In this model, the executive management (primarily board of directors) carries out the management function. Sometimes the financial institutions monitor the management function by nominating the management personnel. The banks even have the power to suspend the board in case of an emergency. The Japanese model of corporate governance is exhibited here with this self-explanatory diagram-

Fig-3 : Japanese Corporate Governance Model 4 Indian Model of Corporate Governance : The Indian model of corporate governance is a mix of the Anglo-American and German models of Corporate Governance. Corporations in India can be grouped into three categories: private companies, public companies, banks and other corporations. In case of closely hold family-run private companies, the founder, his family, and associates exercise maximum control over the activities of these companies. The businesses of private companies like that of the TATA group, the Reliance group or the Birla group are financed by retained earnings or/and debt. The role of external equity finance is minimal.

NSOU • PGCO-VIII 17 In case of public enterprises, the central and state governments choose the members of the board. Even after the disinvestment of some public companies, the government continues to have a considerable hold over the activities of the company. Here the interests of the stakeholders are generally given less priority. Large public sector enterprises are run to serve the interests of the government rather than aiming for efficiency and maximizing long term owner value. Shareholders

Fig-4 : Indian Model of Corporate Governance 1.7 Summary The chapter consist of explanation to how governance is important for sustainability in business. Board of directors brings a diverse range of expertise, perspectives and knowledge into the boardroom. So the composition of the board is relevant in good governance. People, Purpose, Process, and Performance are the Four Ps of Corporate Governance, the guiding philosophies behind why governance exists. The corporate governance system adopted world wide is also included in this chapter to understand the diversified approaches to corporate governance.

18 NSOU • PGCO-VIII 1.8 Exercise Group - A 1. The corporate governance structure of a company reflects the individual companies': (a) Cultural and economic system. (b) Legal and business system. (c) Social and regulatory system. (d) All of the above. 2. Under the \_\_\_\_\_, both internal and external corporate governance mechanisms are intended to induce managerial actions that maximize profit and shareholder value. (a) Shareholder theory. (b) Agency theory. (c) Stakeholder theory. (d) Corporate governance theory. 3. The system that is used by firms to control and direct their operations and the operations of their employees is called : (a) Corporate Compliance. (b) Corporate Governance. (c) Corporate Control. (d) Corporate Directive. 4. What is meant by the phrase CSR ? (a) Corporate Social Responsibility (b) Company Social Responsibility (c) Corporate Society Responsibility (d) Company Society Responsibility

NSOU • PGCO-VIII 19 5. Which of the following does the term Corporate Social Responsibility relate to ? (a) Ethical conduct (b) Environmental practice (c) Community investment (d) All of the above

Group – B 1. Mention few important features of Corporate Governance? 2. Explain the role of the Board of Directors in Corporate Governance ? 3. What are the other important components of Corporate Governance? 4. Explain the Indian model of Corporate Governance.

Group – C 1. Explain Corporate Governance system practices worldwide. 2. How is Corporate Governance important and how does composition of board of directors help in good governance. Ans. Group-A : 1. (d), 2. (b), 3. (b), 4. (a), 5. (d)

20 NSOU • PGCO-VIII Unit - 2  Corporate Governance in India Structure 2.1 Objectives 2.2 Introduction 2.3 Major recommendations of Corporate Governance Committees 2.4 An Overview on Various Initiatives towards Corporate Governance Movements in India 2.5 Corporate Governance Reform in Post Satyam Saga: Biggest Corporate Scam in India 2.6 A Brief Review of Reforms in Corporate Governance Mechanisms in India under the regime of the New Companies Act, 2013 2.7 Summary 2.8 Exercise 2.1 Objectives After going through this unit you will learn. • Main recommendations of the Corporate Governance Committees and Codes in India; • Corporate Governance and legislations in India; • Corporate Governance in the Public Sector in India. 2.2 Introduction Major committees have been formed to enhance the social benefit of corporate governance and optimum utilisation of resources available as CSR funds. These committees provide major recommendations which must be adopted to enhance the responsibilities of a business.

**100%**

**MATCHING BLOCK 13/230**

**SA**

DALJIT KAUR, KCL INSTITUTE OF LAWS, CH 2.docx (D20799525)

It was felt that under Indian conditions a statutory rather than a voluntary code would be far more purposive and meaningful.

The

Companies Act, 2013 has tried to make a paradigm shift in corporate governance mechanism in India by promulgating various timely and relevant provisions. 9

NSOU • PGCO-VIII 21 2.3 Major recommendations of Corporate Governance Committees Major recommendations of corporate governance committees are described below. Cadbury Committee Code of Best Practices Sir Adrian Cadbury, Chairman of Cadbury Schweppes and also considered the father/pioneer in the field of modern 'Corporate Governance', had in fact made its recommendation in 1992 with the publication of the 'code of best practices'. His recommendations were focused primarily on the composite functioning responsibility and accountability of a company's Board of Directors. Some of the major highlighting factors of his recommendations are furnished below : (a) Composition of board of directors : It is recommended that

**92%**

**MATCHING BLOCK 14/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

where the chairman is also chief executive, it is essential that there should be strong and independent element on the board with a recognized senior member. The board should include non-executive director of sufficient caliber and number for their views to carry significant weight in the board's decisions. (

Executive)

Director

**100%**

**MATCHING BLOCK 15/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

Service contracts should not exceed three years without shareholders' approval. (

b) Separation of the Post of Directors and Chairman : Given the importance and particular nature of the chairman's role, it should in principle be separate from that of the chief executive. If the two roles are combined in one person, it represents a considerable concentration of power. We recommend, therefore, that

**100%**

**MATCHING BLOCK 16/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

there should be a clearly accepted division of responsibilities at the head of a company, which will ensure

a

**93%**

**MATCHING BLOCK 17/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

balance of power and authority, such that no one individual has unfettered powers of decision. Where the chairman is also the chief executive, it is essential that there should be a strong and independent element on the board. (

c) Independence in Board Committees : To meet recommendations on the composition of sub-committees of the board, all boards will require a minimum of three non-executive directors, one

**70%**

**MATCHING BLOCK 18/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

of whom may be the chairman of the company provided he or she is not

also its executive head. Additionally, two of the three should be independent directors. By independence, we mean that apart from their directors' fees and shareholdings, they should

**76%**

**MATCHING BLOCK 19/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

be independent of management and free from any business or 22 NSOU • PGC0-VIII other relationship which could materially interfere with the exercise of their independent

judgment. Moreover, in order to promote independence in board it was also recommended that non-executive directors should not participate in share option schemes and for their service as non-executive directors not to be pensionable by the company. (d) Appointment of Non-Executive Directors : Given the importance of their distinctive contribution, non-executive directors should be selected with the same impartiality and care as senior executives. We recommend that

**100%**

**MATCHING BLOCK 20/230**

**SA**

Synopsis.docx (D109401775)

their appointment should be a matter for the board as a whole

and that there should be a formal selection process, which will reinforce the independence of non-executive directors and make it evident that they have been appointed on merit and not through any form of patronage. We regard it as good practice for a nomination committee (dealt with below) to carry out the selection process and to make proposals to the board. (e) Activities and Responsibilities of the Board :

**88%**

**MATCHING BLOCK 21/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

There should be a clearly accepted division of feasibilities at the head of company, which will ensure a balance of power and authority such that no one individual has unfettered powers of decision. Where the chairman is also the chief executive it is essential that there should be a strong and independent element on the board, with a recognized senior member. The Board should

**94%**

**MATCHING BLOCK 22/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

have a formal schedule of matter specifically reserved to it for decisions to ensure that the direction and control of the company is firmly in its hands.

Moreover, it was also recommended that in order to promote transparency

**61%**

**MATCHING BLOCK 23/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

in the system the non-executive directors should be appointed for specified terms. (f) The Role of

company Secretary :

**100%**

**MATCHING BLOCK 24/230**

**SA**

Synopsis.docx (D109401775)

All directors should have access to the advice and services of the company secretary, who is responsible to the Board for ensuring that board procedures are followed and that applicable rules and regulations are complied with. Any question of the removal of the company secretary should be a matter for the board as a whole. (

g)

**96%**

**MATCHING BLOCK 25/230**

**SA**

final combined copy.pdf (D136078516)

Standards of Conduct : It is important that all employees should know what standards of conduct are expected of them. We regard it as good practice for board of directors to draw up codes of ethics or statements of business practice and to publish them both internally and externally. (

h) Nomination Committee :

**95%**

**MATCHING BLOCK 26/230**

**SA**

business practice and to publish them both internally and externally. (

i) About Audit Committee : In the context of establishing "Audit committee" and defining its significance, "The Cadbury Committee" made important recommendations about formation, procedure of meetings of audit committee.

**98% MATCHING BLOCK 28/230 SA** Dissertation on Corporate Governance.docx (D27565990)

The board should establish an 'Audit Committee' of at least 3 non-executive directors with written terms of reference which deal clearly with its authority and duties

and they should normally meet at least twice a year. The external auditor should normally attend audit committee meetings, as should the finance director. (j) About meetings of the Board :

**100% MATCHING BLOCK 29/230 SA** Dissertation on Corporate Governance.docx (D27565990)

The board should meet regularly, retain full and effective control over the company and monitor the executive

managements.

**87% MATCHING BLOCK 30/230 SA** Dissertation on Corporate Governance.docx (D27565990)

The board should have a formal schedule of matters specifically reserved to it for decision to ensure that the director and control of the company is firmly in hands. (

k) Director's pay and Remuneration : There should be full and clear disclosure of director's

**100% MATCHING BLOCK 31/230 SA** Corporate governance in India an evaluation.pdf (D34933278)

total emoluments and those of the chairman and highest paid

U.K. directors,

**93% MATCHING BLOCK 32/230 SA** Dissertation on Corporate Governance.docx (D27565990)

including pension contribution and stock options. Separate figures should be given for salary and performance related elements and the basis on which performance is measured should be explained. Executive directors' pay should be subject to the recommendation of a 'Remuneration Committee' made up wholly or mainly of non-executive

director. (l) About Independent / Non-executive Directors : The Committee had made some important recommendations towards the presence of independent element in the board so as to ensure neutrality in decision making or other functioning of the board.

**93% MATCHING BLOCK 33/230 SA** DALJIT KAUR, KCL INSTITUTE OF LAWS, CH 2.docx (D20799525)

The Board should include non-executive directors of sufficient caliber and number for their views to carry significant weight in the board's decision. Non-executive directors should bring an independent judgment to bear on issues of strategy performance, resources including key appointments and standards of conduct. The majority should be independent of management

and

free from any business or other relationship which could materially interfere with the exercise of their independent judgment apart from their fees and shareholding. Their fees should reflect the time which they commit to the company.

**85% MATCHING BLOCK 34/230**

**SA**

Priya Nigam (CCL) -1200990018 A CRITICAL STUDY ... (D110262261)

Non- executive directors should be appointed for specified terms and reappointment 24 NSOU • PGO-VIII should not be automatic. Non-executive directors should be selected through a formal process and both this process and their appointment should be a matter for the board as a whole. (

m)

Reporting and Controls :

**100% MATCHING BLOCK 35/230**

**SA**

Chapter 1 Intro.docx (D35537869)

It is the Board's duty to present a balanced and understandable assessment of the company's position.

The board should ensure that an objective and professional relationship is maintained with the auditors.

**86% MATCHING BLOCK 36/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

The Directors should explain their responsibility for preparing the auditors about their reporting responsibilities. The Directors should report on the effectiveness of the company's system of their internal control. The directors should report that the business is a going concern with supporting assumption or qualifications as necessary.

Clause 49 of the Listing Agreement of SEBI evolved from the Recommendation of Kumarmanglam Birla Committee : The recommendations of the Kumarmanglam Birla Committee on corporate Governance had been implemented through the Listing Agreement. Clause 49 of the listing Agreement contains the requirements as regards corporate governance. This clause enjoins on

**96% MATCHING BLOCK 37/230**

**SA**

sikkim.docx (D27616321)

all listed companies to implement and comply with its requirements relating to corporate governance.

Now this clause 49 is to be strictly adhered to all listed companies (existing as well as new one) irrespective of their size and status. Some of the salient features of this law is furnished below : 1. Composition of Board of Directors : It is stated that – (i) Not less than 50% of the total number

**64% MATCHING BLOCK 38/230**

**SA**

Article \_Tom\_June2021.docx (D108563522)

of directors should comprise of non-executive directors, (ii) In case of a non-executive chairman, at least one-third of

the total number of directors should comprise of

**78% MATCHING BLOCK 39/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

independent directors. (iii) In case of an executive chairman at least half of the

total number of directors should comprise of independent directors. 2.

**59% MATCHING BLOCK 40/230**

**SA** harshitha dissertation fianl draft.docx (D111095166)

Composition of Audit Committee : It is stated that – (i) The audit committee shall have – ★ Minimum 3 members, all being non-executive directors, ★ Majority of the members being independent, ★

At least one member having financial and accounting knowledge,

NSOU • PGCO-VIII 25 ★

The chairman being an independent director

who shall remain present at the company's AGM. (ii)

**67% MATCHING BLOCK 41/230**

**SA** sikkim.docx (D27616321)

The audit committee should invite such of the executives, as it considers appropriate (and particularly the head of the finance function) to be present at the meeting of the committee, but on occasions it may also meet without the presence of any executives of the company. The finance director, head of internal audit and when required, a representative of the external auditor shall be present as invitee for the meetings of the audit committee. (iii) The company secretary of the company shall act as the secretary of the audit committee. 3.

Audit Committee-

powers and Function : (i)

**SA** Priya Nigam (CCL) -1200990018 A CRITICAL STUDY ... (D110262261)

Committee on Corporate Audit & Governance (Naresh Chandra Committee) : On 21 st August 2002, the Department of company Affairs (DCA) under the Ministry of finance and Company Affairs appointed a high level committee,

chaired by Mr. Naresh Chandra to examine various corporate governance issues. Some of the important recommendations of Naresh Ch. Committee are prescribed below – (A) Auditor – Company Relationship : 1. Disqualifications for audit assignments :

**60% MATCHING BLOCK 67/230**

**SA** Corporate governance in India an evaluation.pdf (D34933278)

In line with international best practices, the committee recommends an abbreviated list of disqualifications for auditing assignments which include- (i) Prohibition of any direct financial interest in the audit client

by the audit firm, its partners or members of the engagement team as well as their direct relatives (having more than 2% share of profit or equity capital of the audit client ). (ii)

**100% MATCHING BLOCK 68/230**

**SA** Corporate governance in India an evaluation.pdf (D34933278)

Prohibition of receiving any loans and or guarantees from or on behalf of the audit client

by the audit firm, its partners or any member of the engagement team and “their direct relatives”. \*(iii) Prohibition of any business relationship with the audit client by the auditing firm, its partners or any member of the engagement team and “their direct relatives”.

NSOU • PGCO-VIII 31 (iv) Prohibition of personal relationships which would exclude any partner of the audit firm or member of the engagement team being a relative of any of key officers of the client company i.e. any whole time director, CEO, CFO, company Secretary, senior manager belonging to the top two managerial levels of the company. \*(v) Prohibition of service or cooling off period, under which any partner or member of the engagement team of an audit firm who wants to join an audit client, or any key officer of the client company wanting to join an audit client would only be allowed to do so after 2 years from the time they were involved in the preparation of accounts and audit of that client. \*(vi) Prohibition of under dependence on an audit client so that no audit firm is unduly dependent on an audit client, the fees received from any one client and its subsidiaries and affiliates all together should not exceed 25% of the total revenues of the audit firm. However, this requirement will not be applicable to audit firms for the first 5 years from the date of commencement of their activities and for those whose total revenues are less than Rs. 15 lakhs per year. 2. List of Prohibited non-audit services : The committee recommended that the following

<b>100%</b>	<b>MATCHING BLOCK 69/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
services should not be provided by an audit firm to any			

audit client : (i) Accounting and book keeping services, (ii) Internal audit services, (iii) Financial information systems design and implementation, (iv) Actual services, (v)

<b>58%</b>	<b>MATCHING BLOCK 70/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
Broker, dealer, investment adviser or investment banking services, (vi) Outsourced financial services, (vii) Management functions including provision of temporary staff to audit clients, (viii) Any form of staff requirement, (ix) Valuation services and fairness opinion. 32			

NSOU • PGCO-VIII Further in case the firm undertakes any service other than audit or the prohibited services listed above. It should be done only with the approval of the audit committee. 3. Independence standards for consulting and other Entities that are affiliated to Audit Firms : ❖ Prohibition of under dependence : No more than 25% of the revenues of the Consolidated entity, comprising of the parent audit firm is subsidiaries, should come from a single corporate client with whom there is also an audit engagement. 4. Compulsory Audit partner Rotation : The committee felt that there is no need to legislate in favor of compulsory rotation of audit firms. However, the partners and at least of the engagement team (excluding article clerks and trainees)

<b>86%</b>	<b>MATCHING BLOCK 71/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
responsible for the audit of either a listed company or companies whose paid-up capital and free reserves exceed RS. 10 crore, or companies whose turnover exceeds Rs. 50 crore, should be rotated every 5 years.			

Also in line with the provisions of the European Union and the IFAC, persons who are compulsorily rotated, could if need be allowed to return after a break of 3 years. 5. Auditors disclosure of contingent liabilities : The Committee recommended that

<b>91%</b>	<b>MATCHING BLOCK 72/230</b>	<b>SA</b>	Dissertation on Corporate Governance.docx (D27565990)
management should provide a clear description in plain English of each material liability and its risks, which should be followed by the auditor’s clearly worded comments on the management view. 6.			

Auditor's disclosure of qualifications and consequent action : A qualification can be a serious indictment of the financial affairs and management of a company. The following are recommendations of the committee in respect of those cases – (i) Qualification to accounts, if any, must form a distinct and adequately highlighted section of the auditor's report to the shareholders, (ii) These must be listed in full in plain English starting the nature and causes of such qualifications, NSOU • PGCO-VIII 33 (iii) In case of a qualified auditor's report the audit firm may read out the qualification, with explanation, to shareholders in the company's AGM. (iv) It should also be mandatory for the audit firm to separately send a copy of the qualified report to the ROC, the SEBI and the principal stock Exchange; about the qualifications with a copy of this letter being sent to the management of the company. 7. Management's certification in the event of auditor's replacement : It is recommended that Section 225 of the companies Act needs to be amended to enable the shareholders to seek the causes why an auditor eligible to re-appointment is sought to be replaced. The audit committee will have to verify that the explanatory statement provided by management in this purpose is "true and fair" . 8. Auditor's annual certification of independence :

**94% MATCHING BLOCK 73/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

Before agreeing to be appointed, the audit firm must submit a certificate of independence to the audit committee or to the board of directors of the client company

certifying that the firm, together with all its wings- ❖ Are independent and have arm's length relationship with the client company. ❖ Have not engaged in any non-audit services listed and prohibited in earlier section of this report (a) ❖ Are not disqualified from audit assignments by virtue of breaching any limits, restrictions and prohibitions listed in (a) & (c) section of the report. 9. Appointment of Auditors : The audit committee of the board of directors shall be the first point of reference regarding the appointment of auditors. To discharge this fiduciary responsibility the audit committee shall: ❖ Discuss the annual work program with auditor, ❖ Review the independence of the audit firm in line with recommendation of the committee discussed in section (a), (b) & (c) above and; ❖ Recommend to the board with reasons the appointment/ reappointment  
34 NSOU • PGCO-VIII or removal of the external auditor along with the annual audit remuneration. 10. CEO and CFO certification of annual audited accounts : In line with section 302 of Sarbanes-Oxley ACT, 2002, of U.S., Naresh. Ch. Committee also recommended that

**65% MATCHING BLOCK 74/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

all listed companies as well as public limited companies whose paid-up capital and free reserves exceed RS. 10 crore. or turnover exceeds Rs. 50

crore,

**80% MATCHING BLOCK 75/230**

**SA**

the audit committee and in the notes on accounts whether or not there were significant changes in internal control and/ or of accounting policies during the year

under review. \*❖ In the event of any materially significant misstatements or omissions, NSOU • PGCO-VIII 35 the signing officers will return to the company that part of any bonus or incentive or equity based compensation which was inflated on account of such errors, as decided by the Audit committee. (B) Auditing the Auditors : 1. Setting up of independent quality Review Board : In line with one of the proposals of Sarbanes-Oxley Act, 2002 in U.S., our Naresh Ch. Committee also recommended that three independent Quality Review Board (QRB) should be established with appropriate legislative support one each for the ICAI, the ICSI and the ICWAI to periodically examine and review the quality of audit secretarial and cost accounting firms and pass judgment and comments on the quality and sufficiency of systems and infrastructure and practices. In the initial five years, the QRBs will focus their audit quality reviews to the audit firms which have conducted the audit for the top 150 listed companies. Each of these QRBs will be funded by their respective institutes. In the instance of a dispute between the findings of the QRBs and reviewers the matter should be referred to an appropriate appellate forum. 2. Proposed disciplinary mechanism for auditors : (i) Classification of offences and merging of schedules is recommended so that council is empowered to award all types of punishment for all types of offences. Further offences need to be categorized according to the severity of misconduct so that processes can be designed, and punishments awarded according to the severity of offences. (ii) Prosecution Directorate: an independent permanent directorate within the structure of ICAI shall be created which shall act as the Prosecution Directorate. This office will exclusively deal with all disciplinary cases. The prosecution directorate shall have the same powers as are vested in regard to (I) discovery and production of any document and (II) receiving evidence on affidavit. Establishment of some of the disciplinary mechanisms are prescribed – (a) Disciplinary Committee : Enquires in relation to misconduct of members shall be held by the 36 NSOU • PGCO-VIII disciplinary committee. Each bench should consist of five members headed by president or vice-President of ICAI. The disciplinary Committee referred to by Prosecution Directorate and record their decisions and conclusions in a report. This report shall also record the punishment to be awarded, if any to be member which can constitute (i) reprimand, (ii) removing the name of the member either permanently or for such a period as thought fit, (iii) monetary penalty and / or (iv) a combination of any two. (b) Council : All report submitted by the Disciplinary Committee should normally be considered by the council within 45 days from the date of report. It shall be the duty of the council of ICAI to act upon the decisions of the disciplinary committee. (c) Appellate Body : Headquartered in New Delhi, the Appellate Body shall consist of a presiding officer and four other members. In the event of the council deciding to appeal against the decisions of the Disciplinary Committee, the council may direct the Prosecution Directorate to place the case before the appellate Body. The presiding officer shall be a retired judge of the Supreme Court or a retired justice of a High Court. (C) Independent Directors : (a) Definition : The Naresh Ch. Committee provided an exclusive

definition of independent director. It stated that an independent director of a company is

<b>74%</b>	<b>MATCHING BLOCK 79/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
<p>a non-executive director of a company. (i) Apart from receiving director's remuneration, does not have any other material pecuniary relationships or transactions with the company, its promoters, its senior management or its holding company, its subsidiaries and associated companies. (ii) Is not related to promoters or management at the board, or one level below the board (</p>			

spouse and dependent parents, children or siblings). (iii)

<b>60%</b>	<b>MATCHING BLOCK 80/230</b>	<b>SA</b>	Synopsis.docx (D109401775)
<p>Has not been an executive of the company in the last three years. (iv) Is not a partner or an executive of the statutory auditing firm, legal firm, consulting firm, the internal audit firm that are associated with the company and has not been a partner or an executive</p>			

or of any such firm for the last three years,  
NSOU • PGCO-VIII 37 (v)

<b>63%</b>	<b>MATCHING BLOCK 81/230</b>	<b>SA</b>	Synopsis.docx (D109401775)
<p>Is not a significant supplier, vendor or customer of the company, (vi) Is not a substantial shareholder of the company, i.e. owning 2% or more of the block of voting shares, (</p>			

vii) Has not been a director, independent or otherwise, of the company for more than three terms of three years each (not exceeding 9 years in any case). (viii) Does not play a part of Cross-directorship. The committee recommended that the above criteria be made applicable for all listed companies

<b>89%</b>	<b>MATCHING BLOCK 82/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
<p>as well as unlisted public limited companies with a paid-up share capital and free reserves of Rs. 10 crore and above or turnover of Rs. 50 crore and above</p>			

w.e.f. the financial year beginning 2003. (b) Percentage of Independent Directors' & Minimum Board size :-

<b>93%</b>	<b>MATCHING BLOCK 83/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
<p>No less than 50% of the board of directors of any listed company, as well as unlisted public limited companies with a paid-up share capital and free reserves of Rs. 10 crore and above, or turnover of Rs. 50 crore and above, should consist of independent directors.</p>			

<b>90%</b>	<b>MATCHING BLOCK 84/230</b>	<b>SA</b>	Corporate governance in India an evaluation.pdf (D34933278)
<p>The minimum board size of all listed company, as well as unlisted public limited companies</p>			

of above type should be seven of which least four should be independent directors. However, this will not apply to : (i) Unlisted public companies, which have no more than 50 share holders and which are without debt of any kind from the public, banks or financial institutions, as long as they do not change their characters. (ii) Unlisted subsidiaries of listed companies. (c) Disclosure on duration of board meetings / committee meetings : The minute of board meetings and Audit Committee meetings of all listed companies as well as listed public limited companies of the above discussed must disclose the timing and duration of each such meeting, in addition to the date and member in attendance. If the director(s) participate in the meeting through tele-conferencing and video conferencing then a minute and signed proceedings of tele - conference or video conference should constitute proof of director(s)' participation.

38 NSOU • PGC0-VIII (d) Additional Disclosure to directors : In addition to the disclosures specified in clause 49 of listing agreement of SEBI, all listed companies as well as unlisted public companies of above type, Marginal Costing should transmit all press releases and presentation to analysts to all board members. (e) Independent directors on Audit Committees : Audit committees of all listed companies, as well as unlisted public companies of above type, should consist exclusively of independent directors. However, this will not apply to : (i) unlisted public companies which have no more than 50 share holders and which are without debt of any kind from any source (ii) unlisted subsidiaries of listed companies. (f) Audit Committee Charter : Audit committee charter should disclose – (i) Names of members of Audit committee, (ii) Functions of Audit committee, (iii) Dates & frequency of meetings, (iv) To what extent each of the functions listed in Audit committee charter were discharged in the course of the year, (v)

**54% MATCHING BLOCK 85/230**

**SA** Corporate governance in India an evaluation.pdf (D34933278)

Audit committee's view on internal control systems, perceptions of risks, (vi) Why the audit committee accepted and recommended the financial statements with qualifications. (

g) Remuneration of non-executive director: The maximum sitting fee permitted by the DCA is Rs. 5,000. But the committee is on the view that the amount of fees should be reviewed by the management and the shareholders. (h) Exempting non-executive directors from certain liabilities :- The committee is of the opinion that

**94% MATCHING BLOCK 86/230**

**SA** Dissertation-Draft 3 Final.pdf (D110259108)

it would be very difficult to attract high quality independent directors on the boards of Indian companies if they have to constantly worry about serious criminal liabilities under different Acts.

So, it is recommended that non-executive and independent directors should be exempted from certain

**81% MATCHING BLOCK 87/230**

**SA** Dissertation-Draft 3 Final.pdf (D110259108)

criminal and civil liabilities under certain Acts such as companies ACT, Negotiable Instruments ACT, Provident Fund Act

etc.

NSOU • PGC0-VIII 39 (i) Training of Independent

**70% MATCHING BLOCK 88/230**

**SA** Corporate governance in India an evaluation.pdf (D34933278)

directors : All independent directors should be required to attend at least one such training course

before assuming responsibilities as an independent director, or considering that enough programs might not be available in the initial years within one year of becoming an independent director. (D) Other important recommendations : (a) SEBI & Subordinate Legislation :

**80% MATCHING BLOCK 89/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

SEBI may refrain from exercising powers of subordinate legislation in areas where specific legislation exists

as in the Companies Act, 1956. In recognition of the fact that SEBI regulates activities in dynamic market conditions, the DCA should respond to SEBI's requirements quickly.

**88% MATCHING BLOCK 90/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

It would be appropriate for SEBI' to use its powers of subordinate legislation, in consultation with the DCA and vice versa.

A formal structure needs to be set up to ensure that the DCA,

**87% MATCHING BLOCK 91/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

which regulates all companies and SEBI which regulates only listed companies, act in coordination and harmony. (

b) Improving facilities in the DCA officer : The committee recommends a paradigm shift in the approach to staffing and equipping the department of company Affairs (DCA). Companies pay, largely by way of fees , approximately RS. 300 crores annually. In recommending these increases, the committee is only asking that services be commensurate with the income from fees charged, (c) Corporate serious Fraud office : Fraudsters are enemies of both the stake holders that they cheat directly of the corporate sector, which loses because the fraudsters scare away existing and potential investors. Corporate frauds are so intricate that they can only be unravelled by a multi-disciplinary task force, to be overseen by a committee headed by the cabinet secretary in respect of appointments and functioning of the office and coordination of works, the committee, therefore, suggests setting up a Corporate Serious Fraud Office (CSFO) without at this stage taking away the powers of investigation and prosecution from existing agencies. A corporate frauds task force has been set up recently in the US. (d) Filling up of the lacunae of Existing Law: In order to fill up the gap of existing legal practices, the committee had recommended that :

40 NSOU • PGC0-VIII (i) Penalties ought to be rationalized and related to the sums involved in the offence. (ii) A stricter regime should be prescribed for companies registered as brokers with SEBI, (iii) To ensure that proceeds of illegal acts and frauds do not escape recovery, Companies Act needs to be amended to give DCA the powers of attachment of bank accounts etc on the lines of the powers recently given to SEBI. (iv) Managers / promoters should be held personally liable when found guilty of offences . In such case, the legal fees and other charges should be recovered from the officers in default, especially if the offences pertain to betrayal of shareholders' trust or oppression of minority shareholders. (v) Consolidated Financial Statements should be made mandatory for companies having subsidiaries. (e) Miscellaneous Recommendations : (i) The committee recommended the strengthening of ROC offices, outsourcing of non-statutory works of ROC offices etc. (ii) Inserted a section analogous to sec. 233A which allow government to order special compliance audits. (iii) Section 239(1) (a) should be strengthened to prevent any unnatural stripping of assets or sale of shares by management / promoters. (iv) The committee felt that in the long run, Indian audit firms will have to consolidate and grow if they are to compete, especially in non- statutory functions, internationally. The committee recommends merging of indigenous audit firm to complete with foreign audit firms. Narayana Murthy Committee on Corporate Governance-March 2003 The Narayana Murthy Committee, appointed by SEBI, had made a number of recommendations in its draft report. Some of the salient recommendations are furnished below : (i) The committee had recommended that the

**87% MATCHING BLOCK 92/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

audit committee of publicly listed companies should be required to review the following information mandatory; financial statements, management discussion and analysis of financial

**96% MATCHING BLOCK 93/230 SA** Dissertation on Corporate Governance.docx (D27565990)

condition and results of operations, reports relating to compliance with laws and risk management

among others, (ii) The committee had also said that

**100% MATCHING BLOCK 94/230 SA** Synopsis.docx (D109401775)

all audit committee members should be “financially literate” and at least one member should have accounting or related financial management expertise, (

iii)

In case a company has followed a treatment different from that

**92% MATCHING BLOCK 95/230 SA** Synopsis.docx (D109401775)

prescribed in an accounting standard, management should justify why they believe such alternative treatment is more representative of the under lying business transaction. Management should also clearly explain the alternative accounting treatments in the footnotes to the financial statements. (

iv) The auditor may draw reference to this footnote without necessarily making it the subject matter of an audit qualification.

**98% MATCHING BLOCK 96/230 SA** Dissertation on Corporate Governance.docx (D27565990)

Companies should be encouraged to move towards a regime of unqualified financial statements. This recommendation should be reviewed at an appropriate juncture to determine whether the financial reporting climate is conducive towards a system of filing unqualified financial statements. (

v)

**100% MATCHING BLOCK 97/230 SA** Corporate governance in India an evaluation.pdf (D34933278)

A statement of all transactions with related parties including their bases should be placed before the independent audit committee

at each board meeting for formal approval. (

vi) This statement should include transactions of a non arm’s length nature also. Management should be required to explain to the audit committee the reasons for the non-arm’s length nature of the transaction. (vii) The committee believed that it is important for corporate boards to be fully aware of the risks facing the business and that it is important for shareholders to know about the risk management process. In light of this it was suggested that

**100% MATCHING BLOCK 98/230 SA** Synopsis.docx (D109401775)

procedures should be in place to inform board members about the risk assessment and minimization procedures. These procedures should be periodically reviewed to ensure that executive management controls risk through means of a properly defined framework. (

viii) It was also suggested that management should place a report before the board every quarter documenting

**92% MATCHING BLOCK 99/230 SA** final combined copy.pdf (D136078516)

any limitations to the risk taking capacity of the corporations. This document should be formally approved by the board. (

ix)

to review the performance of corporate governance and to determine the role of companies in responding to rumour and other price sensitive information circulating in the market to enhance the transparency and integrity of the market.  
2.4

An Overview on Various Initiatives towards Corporate Governance Movements in India At the time of Independence India bears the legacy of British-derived convention of corporate governance based on the Anglo- Saxon Model. However,

**74%**

**MATCHING BLOCK 106/230**

**SA**

DALJIT KAUR, KCL INSTITUTE OF LAWS, CH 2.docx (D20799525)

from 1947 through 1991, the Indian government pursued mixed economic policies when the state nationalized banks primarily became the principal provider of both debt and equity capital for private firms, thePublic Sector Undertakings were evaluated based on the amount of capital invested rather than on their return on investment, competition, especially

the foreign competition, was suppressed. In that time period a little emphasis on corporate governance mechanisms was given

**90%**

**MATCHING BLOCK 107/230**

**SA**

DALJIT KAUR, KCL INSTITUTE OF LAWS, CH 2.docx (D20799525)

in India. Public listed companies in India were only required to comply with limited governance and

NSOU • PGCO-VIII 43

**96%**

**MATCHING BLOCK 108/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

disclosure standards enumerated in the Companies Act of 1956, the Listing Norms, and the accounting standards set forth by the Institute of Chartered Accountants of India (ICAI). Faced with a fiscal crisis in 1991, the Indian Government responded by enacting a series of reforms aimed at general economic liberalization,

privatization and globalization (LPG) movements.

**86%**

**MATCHING BLOCK 109/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

The Securities and Exchange Board of India (SEBI) -- India's securities market regulator -- was formed in 1992 and by the mid- 1990s, the Indian economy was growing steadily, and Indian firms began to seek equity capital especially from abroad to finance expansion into the market spaces created by

LPG movement. Ever since its financial liberalization began in 1991, India has undergone significant Corporate Governance reforms. The need for capital especially that of coveted Foreign Institutional Investments (FIIs)

**100%**

**MATCHING BLOCK 110/230**

**SA**

Confederation of Indian Industry (CII) Desirable Corporate Governance : A Code, 1998

**96%**

**MATCHING BLOCK 112/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

The first major initiative was taken by the Confederation of Indian Industry (CII), India's largest industry and business association, which came up with the first voluntary code of corporate governance in 1998. More than a year before the onset of the East Asian crisis, CII had set up a committee

under the able leadership of Sri Rahul Bajaj

**96%**

**MATCHING BLOCK 113/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

to examine corporate governance issues, and recommend a voluntary code of best practices. Drawing heavily from the Anglo-Saxon Model of Corporate Governance, CII drew up a voluntary Corporate Governance Code. The first draft of the code was prepared by April 1997, and the final document, Desirable Corporate Governance: A Code, was publicly released in April 1998. The code was voluntary, contained detailed provisions, and focused on listed companies. However, the CII Code'

s voluntary nature did not result in a broad overhaul of governance norms and practices by Indian

**90%**

**MATCHING BLOCK 114/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

companies. Although the CII Code was welcomed with much fanfare and even adopted by a few progressive companies, it was felt that under Indian conditions a statutory rather than a voluntary code would be far more purposive and meaningful. Consequently, the second major corporate governance initiative in the country was undertaken by SEBI. 44

NSOU • PGCO-VIII (b) Clause 49 of the Listing Agreement of SEBI evolved from the Recommendation of Kumar Manglam Birla Committee, 1999 In early 1999, SEBI had

**97%**

**MATCHING BLOCK 115/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

set up a committee under Kumar Mangalam Birla to promote and raise the standards of good corporate governance. The Birla Committee specifically placed an emphasis on independent directors in discussing board recommendations and made specific recommendations regarding board representation and independence. The Committee also recognized the importance of audit committees and made many specific recommendations regarding the function and constitution of board audit committees.

Furthermore, the Committee made several recommendations regarding disclosure and transparency issues, in particular with respect to information

**95%**

**MATCHING BLOCK 116/230**

**SA**

sikkim.docx (D27616321)

to be provided to shareholders. Among other recommendations, the Birla Committee stated that a company's annual report to shareholders should contain a Management Discussion and Analysis (MD&A) section,

modelled after annual reports issued by companies in the United States,

**100% MATCHING BLOCK 117/230** SA sikkim.docx (D27616321)

and that companies should transmit certain information, such as quarterly reports and analyst presentations, to shareholders.

Furthermore, with respect to shareholder complaints, the Committee recommended that a board committee known as the Investors Grievance Committee, chaired by a nonexecutive director, be formed to address grievances. In early 2000, the SEBI board had accepted and ratified key recommendations of this committee, and these

**100% MATCHING BLOCK 118/230** SA Dissertation on Corporate Governance.docx (D27565990)

were incorporated into Clause 49 of the Listing Agreement of the Stock Exchanges

which is mandatory for almost every listed firm to comply with and report in proper way. (c) Committee on Corporate Audit & Governance (Naresh Chandra Committee), 2002

**85% MATCHING BLOCK 119/230** SA Dissertation on Corporate Governance.docx (D27565990)

The Naresh Chandra committee was appointed in August 2002 by the Department of Company Affairs (DCA) under the Ministry of Finance and Company Affairs to examine various corporate governance issues. The Committee submitted its report in December 2002. It made recommendations in twokey aspects of corporate governance : financial and non-financial disclosures and independent auditing and board oversight of management and made a series of commendations regarding, among other matters, the grounds for disqualifying auditors from assignments, the type of non-audit services that auditors should be prohibited from performing, and the need for compulsory rotation of audit partners.

NSOU • PGCO-VIII 45 (d)  
Narayana Murthy Committee on Corporate Governance, 2003

**88% MATCHING BLOCK 120/230** SA Dissertation on Corporate Governance.docx (D27565990)

The fourth initiative on corporate governance in India is in the form of the recommendations of the Narayana Murthy committee. The committee was set up by SEBI, under the chairmanship of Mr. N. R. Narayana Murthy, to review Clause 49, and suggest measures to improve corporate governance standards. Some of the major recommendations of the committee primarily related to audit committees, audit reports, independent directors, related party transactions, risk management, directorships and director compensation, codes of conduct and financial disclosures. The Murthy Committee, like the Birla Committee, described the international developments as a factor that motivated reform and stated that recent failures of corporate governance, particularly in the United States, combined with the observations of India's stock exchanges that compliance with Clause 49 up to that point

had been uneven, recommended further reform.

**100% MATCHING BLOCK 121/230** SA Dissertation on Corporate Governance.docx (D27565990)

The Murthy Committee examined a range of corporate governance issues relating to corporate boards and audit committees, as well as disclosure to shareholders.

The Murthy  
Committee

**77% MATCHING BLOCK 122/230 SA** Dissertation on Corporate Governance.docx (D27565990)

focused heavily on the role and structure of corporate boards and strengthened the director independence definition in the then-existing Clause 49, particularly to address the role of insiders on Indian boards

like  
the director cannot be

**63% MATCHING BLOCK 123/230 SA** Synopsis.docx (D109401775)

related to promoters or management at the board level, or one below the board; an executive of the company in the preceding three years; be a supplier, service provider, or customer of the

company; or a shareholder owning two percent or more of the company. The Murthy Committee also recommended that nominee directors (i.e., directors nominated by financial institutions particularly, with relationships with the company) be excluded from the definition of independent director, and be subject to the same responsibilities and liabilities applicable to any other director. In order to improve the function of boards, the Murthy Committee recommended that they should also receive training in the company's business model and quarterly reports on business risk and risk management strategies.

**94% MATCHING BLOCK 124/230 SA** sikkim.docx (D27616321)

The Murthy Committee also paid particular attention to the role and responsibilities of audit committees. It recommended that audit committees be composed of "financially literate" members,

with at least one member having accounting or related financial management expertise. It provided a greater role for the audit committee as well. For example, the Murthy Committee recommendations promoted disclosure and approval of related party transactions by the audit committee. In addition, the committee  
46 NSOU • PGC0-VIII

**75% MATCHING BLOCK 125/230 SA** sikkim.docx (D27616321)

stated that whistle-blowers must have access to the audit committee without first having to inform their supervisors,

and

**84% MATCHING BLOCK 126/230 SA** sikkim.docx (D27616321)

that companies should annually affirm that they have not denied access to the audit committee or unfairly treated whistle-blowers generally. SEBI

had initiated certain changes in Listing Agreement in line with the Murthy Report covering the areas of

Ria CHAPTER 2 HISTORICAL BACKGROUND.docx (D66093525)

the Government constituted an Expert Committee on Company Law under the Chairmanship of Dr. J.J. Irani

on 2nd December 2004 to advise on new Companies Bill. There were significant differences between the proposals contained in the Irani report and the requirements of Clause 49, particularly with respect to the board of directors. First, the requirements for independent directors were different in several respects. Clause 49 required that no independent director should have

**95%**

**MATCHING BLOCK 130/230**

**SA**

Corporate governance in India an evaluation.pdf (D34933278)

been an executive of the company in the preceding three financial years,

while the Irani Committee's recommendations weaken that requirement so that independent directors, along with their relatives, should not have been an employee of the company in any capacity only in the past single year. Similarly, while clause 49 prohibited an independent director from having served in any executive capacity in a statutory or internal auditing firm that has a material association with the company for the past three years, the Irani report recommended the same requirement for a period of one year only for independent directors and their relatives. The Irani Committee also recommended that a third of company directors be independent. 2.5 Corporate Governance Reform in Post Satyam Saga : Biggest Corporate Scam in India In the meanwhile

**100%**

**MATCHING BLOCK 131/230**

**SA**

sikkim.docx (D27616321)

in January 2009, the Indian corporate community was rocked by a massive accounting scandal involving Satyam Computer Services (Satyam), one

NSOU • PGCO-VIII 47

**84%**

**MATCHING BLOCK 132/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

of India's largest information technology companies. The Satyam scandal prompted quick action by the Indian government, including the arrest of several Satyam insiders and auditors, investigations by the MCA and SEBI, and substitution of the company's directors with government nominees.

Satyam'

s failures were many and systemic—from a weak auditing process to ineffective board oversight to a leader intent on committing fraud. Similar to their role in the first phase of corporate governance reforms, in the post-Satyam period, Indian corporate groups have once again advocated for reconsideration of India’s corporate governance rules and advocated for reforms.

**85% MATCHING BLOCK 133/230 SA** Dissertation on Corporate Governance.docx (D27565990)

Shortly after news of the scandal broke, the CII began examining the corporate governance issues arising out of the Satyam scandal and in late 2009, the CII Task Force put out recommendations on corporate governance reform. In addition to the

CII, a number of other corporate groups have joined the corporate governance dialogue.

NSOU • PGCO-VIII 61 Unit - 3 □ Shareholders and Corporate Governance Structure 3.1 Objectives 3.2 Introduction 3.3 Rights and Privileges of Shareholders 3.4 Grievance Redressal Mechanism in India 3.5 Investors protection and corporate governance 3.6 Shareholder Activism 3.7 Summary 3.8 Exercise 3.1 Objectives After going through this unit you will learn. • Rights and privileges of shareholders; • Grievance redressal process in India; • Relationship between Investor Protection and Corporate Governance; • Shareholder activism 3.2 Introduction Corporate governance is important to investors, and shareholders having rights and expectations under good corporate governance principles and practices. Their stake in corporate ownership makes their investments less susceptible to system risks. While good corporate principles are important for an industry, which continuously evolve with the time.. The original intent of good corporate governance principles gives shareholders the right to ask questions to affirm that the board and management are doing their best to increase shareholder value and to ensure that the board will be accountable to them. 61

62 NSOU • PGCO-VIII 3.3 Rights and Privileges of Shareholders Corporate governance is the system of rules and responsibilities delegated to several groups within a corporation as well as procedures on handling corporate matters. One of the groups, shareholders, is given certain rights as owners of corporations. These rights are protected by law, and honouring them is one of the objectives in corporate governance. 2. Voting : Shareholders have rights to vote on company decisions. They can vote on a variety of corporate matters including voting in officers, company acquisitions and mergers or liquidations of company assets. Voting on these matters generally take place when corporations have their annual meetings. Shareholders have the right to vote in person or by proxy if they can't attend the meetings. They can also vote by mail, telephone and/or by mail if corporations have these measures in place. 3. Inspecting : Shareholders also have rights to inspect their corporation's financial information. Inspecting the books gives shareholders a chance to view how their corporations are performing. This can be critical to shareholders' decisions to buy more shares or sell off what they already own. This right isn't as important to shareholders in public corporations because they can get the same information from the Securities and Exchange Commission. Public corporations have to file their financial information each year, and it's available to anyone interested in buying shares. Private companies do not have to file this information with the SEC; shareholders in private corporations still have the right to see their corporations' financial information. 4. Dividend Entitlement : If corporations are distributing profits in the form of dividends, each shareholder has the right to receive them. Dividend amounts are determined by the corporate officers and not by the ownership interests of the shareholders. These amounts can fluctuate yearly based on the corporations' earnings for that year. With that in mind, corporations with low earnings, net losses or have other plans with the profits to improve their businesses may not pay out dividends. However, corporations must pay every shareholder a dividend if they're distributing them and cannot select just a few to pay profits to and neglect the rest.

NSOU • PGCO-VIII 63 5. Rights to Sue : Shareholders who have been wronged by their corporations also have the right to sue. For example, if shareholders didn't receive their entitled share of dividends or were denied access to their corporations' financial information, they can bring legal actions against their corporations. Shareholders seeking to sue their corporations should check with their local authorities first on how to proceed. 6. Considerations : One of the objectives of corporate governance is to be fair to all shareholders. However, some corporations are issuing dual stocks that challenge the fairness and equality of all shareholders the corporate governance is trying to protect. Dual stocks are not available to all investors, and there are different levels of rights associated with each one. For example, one class of stocks could be issued for common investors, while another class is available to company executives, founders and their families. It's possible that the shareholders who own common stocks have less voting power than those who own the other class. 3.4 Grievance Redressal Mechanism in India The Securities and Exchange Board of India (SEBI) on August 13, 2020 has issued guidelines on investor grievances redressal mechanism for handling of SCORES complaints by stock exchange and Standard Operating Procedure for non- redressal of grievances by listed companies on non-compliance with certain provisions of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015. It lays down the procedure for handling complaints by the stock exchanges as well as standard operating procedure for actions to be taken against listed companies for failure to redress investor grievances. The following guidelines have been given by SEBI : • All the investors initially must take their complaints to the listed companies. The grievances can be submitted via SCORE platform as well, which can be used to directly submit the complaints to the companies. • Further, if the companies fail to resolve the complaints within a period of 30 days, the grievances shall be directly forwarded to the Designated Stock Exchanges (DES) via SCORE platform. • If the complainant is lodging a complaint on the SCORE platform, which

64 NSOU • PGCO-VIII has already been lodged separately with the listed company, the complainant shall mention the details of the complaint such as the date of lodging, period of cause, name of the company, registered address etc. • Once the receipt from the DSE is received for the lodging of the complaint via SCORE platform, the listed company shall resolve it within a period of 30 days and submit an Action Taken Report (ATR) for the same. • If the complainant is satisfied with the resolution from the company, the ATR shall be submitted to the SEBI. • In cases of failure to resolve the complaint for more than 60 days, the appropriate authorities shall initiate action for the same. SEBI will levy a fine of Rupees 1000 per day per complaint to the companies who are not able to resolve the issue within 60 days and for the breach of the SEBI (LODR) Regulations, 2015. it may suspend the company as well. The DSE shall issue a notice to such listed companies implying the fine applicable on to them and asking them to submit the ATR report for all the pending complaints within 15 days. Once the fines have been paid, the DSE shall intimate to unfreeze the accounts of the promoters. If the fines have been paid but the companies have not resolved the complaints, the DSE shall levy further fines and take appropriate actions for the same.

### 3.5 Investors Protection and Corporate Governance

Good corporate governance is a measure to ensure transparency and accountability which helps to prevent corporate scandals, fraud and issues pertaining to corporate liability. A good corporate governance structure prevents major disasters and ensures investors protection. Corporate governance is important to investors, and shareholders having rights and expectations under good corporate governance principles and practices. Their stake in corporate ownership makes their investments less susceptible to system risks. While good corporate principles are important for an industry, which continuously evolve with the time. Modern governance accounts for using digital technology to give boards the right information at the right time. By having this information at their fingertips, boards can start asking the right questions and incorporate the best answers into their decision-making process. Good corporate governance principles provide a system of checks and help to balance the power and

NSOU • PGCO-VIII 65 ensure that there are benefits for everyone involved. In essence, corporate governance is a structure whereby the shareholders own the operation, managers run the operation and board directors oversee the operation as agents of the shareholders. Good corporate governance ensures that the company has the proper rules, policies and practices to create long-term shareholder value. When the company's performance is down, shareholders have every right to begin asking questions. Usually, they start asking questions from the start to ensure that the company is practicing good governance. Getting the right answers to these questions means that their investments are in good hands. While shareholders have limited power to intervene, they have a lot of power as owners in the company. Shareholders elect the board of directors with the expectation that the board will fulfill their fiduciary duties and keep the best interests of the shareholders at the forefront of their decision-making. Shareholders expect boards to run as efficiently as possible. Shareholders can also reasonably expect that the board will perform strong oversight to ensure that the performance by officers and managers is ethical and strong. When the company's performance begins to slide in a negative direction, shareholders have the right to question whether board directors are truly independent. The original intent of good corporate governance principles gives shareholders the right to ask questions to affirm that the board and management are doing their best to increase shareholder value and to ensure that the board will be accountable to them.

### 3.6 Shareholder Activism

A shareholder activist is a person who attempts to use their rights as a shareholder of a publicly-traded corporation to bring about change within or for the corporation. Shareholder activism is a way that shareholders can influence a corporation's behaviour by exercising their rights as partial owners. While minority shareholders don't run the day-to-day operations, several ways exist for them to influence a company's board of directors and executive management actions. These methods can range from dialogue with managers to formal proposals, which are voted on by all shareholders at a company's annual meeting. Shareholder Activism Has Increased in Recent Years The term activism often accompanies notions of unrest. On the contrary, activism isn't always a bad thing. It's a process that can often lead to long-term meaningful change. Shareholders can be instrumental as change agents through

66 NSOU • PGCO-VIII private meetings, public votes, media debates and other avenues to drive better corporate governance practices. Corporations will almost surely pay a price for not paying attention to issues that lead to shareholder activism. Some of the big topics related to activism are executive pay, succession planning, diversity and board director independence. Shareholders are looking for assurance that executive pay increases are aligned with performance. Taking it a step further, shareholders are also interested in understanding how boards come up with their guidelines for executive pay structures. Shareholders are also seeking assurance that boards have the experience, skills and diversity to protect their investments and to enable the company to make steady long-term progress. The current climate encourages shareholders to scrutinize all new board director appointments and evaluate them based on how their talents and abilities enhance the board. Board directors need to be aware of other issues that can lead to shareholder activism, including taking a closer look at the board's strategy and use of capital. Another hot topic for shareholders is how corporations factor social, ethical and environmental matters into their strategies and general decision making. Shareholder activism drives better corporate governance because it ensures strong governance and approaches to investment styles that produce value for shareholders. Good corporate governance takes for granted that boards will continuously work toward board compositions that support the necessary skills and experience that will net long-term success for the company. The principles of good corporate governance also place a heavy focus on the fiduciary responsibilities of board directors in managing the corporation's assets. The focus on duty of care creates an environment in which shareholders are more apt to ask more questions about how the board and managers approach strategic planning, risk management and operations. Among other things, shareholders are seeking information about the board's approach to environmental, social and governance issues as well as their investment style and principles. When considering corporate investment styles, shareholders are inclined to be focused on absolute returns, as opposed to relative performance. Shareholders generally review the board's annual report and vote in favor of management's proposals if they're satisfied with them. Questions and red flags may invite formal discussions with the board and executive management. Boards can use these opportunities to attempt to explain and justify their actions. Where companies are regularly underperforming with little indication of improvement, activism may be looming. Dissatisfied shareholders may respond by voting against management at the annual general meeting. Activist shareholders may also follow up

NSOU • PGCO-VIII 67 their vote with a letter to the company explaining why they don't support the company's decisions and offer recommendations for changes. Shareholders would likely follow the company to see how willing the board is to make changes. 3.7 Summary Corporate governance is the system of rules and responsibilities delegated to several groups within a corporation as well as procedures on handling corporate matters. One of the groups, shareholders, is given certain rights as owners of corporations. These rights are protected by law, and honouring them is one of the objectives in corporate governance. Good corporate governance is a measure to ensure transparency and accountability which helps to prevent corporate scandals, fraud and issues pertaining to corporate liability. A good corporate governance structure prevents major disasters and ensures investors protection. A shareholder activist is a person who attempts to use their rights as a shareholder of a publicly- traded corporation to bring about change within or for the corporation. Shareholder activism is a way that shareholders can influence a corporation's behaviour by exercising their rights as partial owners. While minority shareholders don't run the day-to-day operations. 3.8 Exercise Group – A 1. Who controls the capital market in India? (a) SEBI (b) RBI (c) IRDA (d) NABARD 2. companies should undertake activities for economic and social development of communities and geographical areas,

particularly in the vicinity of their operations. These could include: education, skill building for livelihood of people, health, cultural and social welfare etc., particularly targeting at disadvantaged sections of society. CSR has made its place by providing enormous benefits to the society in India by eradicating hunger, poverty, malnutrition etc. and providing education, water, education, empowerment etc. to the needy ones. 69

70 NSOU • PGCO-VIII 4.3 CSR and the Stakeholder justification of CSR "Social Responsibilities refer to the businessman's decisions and actions taken for reasons at least partially beyond the firm's direct economic or technical interest." ---- Keith Davis So, CSR is the sense of obligation on the part of companies to build certain criteria and manage the business activities by taking strategic decisions. Each business entity should formulate a CSR policy to guide its strategic planning and provide a roadmap for its CSR initiatives, which should be an integral part of overall business policy and aligned with its business goals. The policy should be framed with the participation of various level executives and should be approved by the Board. The CSR Policy should normally cover following core elements : 1. Care for all Stakeholders : The companies should respect the interests of, and be responsive towards all stakeholders, including shareholders, employees, customers, suppliers, project affected people, society at large etc. and create value for all of them. They should develop mechanism to actively engage with all stakeholders, inform them of inherent risks and mitigate them where they occur. 2. Ethical functioning : Their governance systems should be underpinned by Ethics, Transparency and Accountability. They should not engage in business practices that are

**75%**

**MATCHING BLOCK 183/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

abusive, unfair, corrupt or anti-competitive. 3. Respect for Workers' Rights and Welfare : Companies should provide a

workplace environment that is safe, hygienic and humane and which upholds the dignity of employees. They should provide all employees with access to training and development of necessary skills for career advancement, on an equal and non- discriminatory basis. They should uphold the freedom of association and the effective recognition of the right to collective bargaining of labour, have an effective grievance redressal system, should not employ child or forced labour and provide and maintain equality of opportunities without any discrimination on any grounds in recruitment and during employment.

NSOU • PGCO-VIII 71 4. Respect for Human Rights : Companies should respect human rights for all and avoid complicity with human rights abuses by them or by third party. 5.

**73%**

**MATCHING BLOCK 184/230**

**SA**

Dissertation on Corporate Governance.docx (D27565990)

Respect for Environment : Companies should take measures to check and prevent pollution; recycle, manage and reduce waste,

should manage natural resources in a sustainable manner and ensure optimal use of resources like land and water, should proactively respond to the challenges of climate change by adopting cleaner production methods, promoting efficient use of energy and environment friendly technologies. 6. Activities for Social and Inclusive Development : Depending upon their core competency and business interest,

**89%**

**MATCHING BLOCK 185/230**

Dissertation on Corporate Governance.docx (D27565990)

companies should undertake activities for economic and social development of communities and geographical areas,

particularly in the vicinity of their operations. These could include: education, skill building for livelihood of people, health, cultural and social welfare etc., particularly targeting at disadvantaged sections of society. 4.4 CSR and Indian Corporations Corporate social responsibility under the company's act 2013: Companies act 2013 has brought a bundle of changes in Indian corporate business. CSR introduction in Section 135 is referred as a give and take policy, as the companies are taking resources from the society it needs to reduce the gap by providing something back the society. The concept goes way back in 1994 when John Elkington coined the need or Triple Bottom Line which was based on 3 pillars namely people planet and profit. Ministry of corporate affairs notified Section 135 and schedule VII and the provisions regarding Companies (Corporate Social Responsibility Policy) Rules, 2014 or generally known as CSR rules which came into effect from 1st April 2014. Companies now need to share a part of their profit on CSR activities as a contribution to the society, and these expenses cannot be claimed as business expenses. The

<b>87%</b>	<b>MATCHING BLOCK 186/230</b>	<b>SA</b> Kotak comm-Abhigyan.docx (D40491398)
guidelines issued by MCA on social, environmental and economic responsibilities of business		

mandated adaptation of CSR by the companies having the following during any financial year.  
72 NSOU • PGCO-VIII 1. Companies with a

<b>59%</b>	<b>MATCHING BLOCK 187/230</b>	<b>SA</b> Synopsis.docx (D109401775)
net worth of Rs. 500 crore or more, or 2. Companies having turnover of Rs.1000 crore or more, or 3. Companies achieving a profit of Rs. 5 crore or more		

And shall constitute a CSR committee on the board. Composition of corporate social responsibility committee is subjected to disclosure under sub section (3) of section 134. Which must constitute of minimum 3 director of which one must be independent. SEBI also mandated a top hundred listed companies at BSE and NSE on the basis of market capitalization for proper inclusion and disclosure of business responsibility report in their annual report. Major functions of CSR committee lies in formulation and recommendations about the CSR policy to the board and the amount of expenditure to be incurred in these activities. Monitoring these activities and policies are also another important function of CSR committee. With great powers come great responsibility that is why CSR committee is bound to some responsibilities which are : • Recommendations of the CSR committee are approved by the board which eventually becomes the CSR policy and disclosure of the contents of such policy in company report and website is required. Rule 9 of the CSR rules clarifies that a company qualifying under section 135 shall include a CSR report along with board report. • The company must spend at least 2% of the average net profits of three years immediately preceding financial year. Computation of net profit is as per section 198 of the companies act, MCA clarifies that profit means profit before tax. 4.5 Scope of CSR CSR is the continuing commitment by business to behave ethically and contribute towards economic development while improving the quality of life of the workforce and their families as well as of the local community and society at large. (l) In Schedule VII, for items (i) to (x), the following items and entries shall be substituted, namely : 1. Eradicating hunger, poverty and malnutrition, promoting preventive health care and sanitation and making available safe drinking water: 2. Promoting education, including special education and employment enhancing

NSOU • PGCO-VIII 73 vocation skills especially among children, women, elderly, and the differently abled and livelihood enhancement projects; 3. Promoting gender equality, empowering women, setting up homes and hostels for women and orphans; setting up old age homes, day care centers and such other facilities for senior citizens and measures for reducing inequalities faced by socially and economically backward groups; 4. Ensuring environmental sustainability, ecological balance, protection of flora and fauna, animal welfare, agroforestry, conservation of natural resources and maintaining quality of soil, air and water; 5. Protection of national heritage, art and culture including restoration of buildings and sites of historical importance and works of art; setting up public libraries; promotion and development of traditional and handicrafts; 6. Measures for the benefit of armed forces veterans, war widows and their dependents; 7. Training to promote rural sports, nationally recognized sports, Paralympic sports and Olympic sports; 8. Contribution to the Prime Minister's National Relief Fund or any other fund set up by the Central Government for socio-economic development and relief and welfare of the Scheduled Caste, the Scheduled Tribes, other backward classes, minorities and women; 9. Contributions or funds provided to technology incubators located within academic institutions which are approved by the Central Government 10. Rural development projects. 4.6 CSR Reporting According to the Global Reporting Initiative, a CSR report can be defined as : "A sustainability report is a report published by a company or organization about the economic, environmental and social impacts caused by its everyday activities. A sustainability report also presents the organization's values and governance model, and demonstrates the link between its strategy and its commitment to a sustainable global economy." CSR and sustainability reports can be used to achieve both internal and/or external goals. Internally speaking, CSR reports are important since they allow

74 NSOU • PGCO-VIII companies to estimate the impact of their activities on the environment, on society and on the economy. Through the detailed and meaningful data collected for the CSR report, companies have a chance to improve their operations and to reduce costs. Not only because they are empowered to optimize and reduce their energy consumption but also as they review their waste cycles and disposal which often leads to product innovation or circular economy opportunities. Finally, as collecting this data requires joint efforts from different departments, employees end up knowing that the company is focusing on CSR and sustainability, which is proven to increase employee retention and decrease turnover (and its costs). When it comes to external benefits, a CSR and sustainability report can help companies to better engage with their interested parties which may bring some benefits to the table. By letting their stakeholders know about the organization's short, medium and long-term projects decisions, companies can be better understood which may have positive financial outputs. For instance, it can allow stakeholders to be aware that a specific company is positively contributing to minimize the negative impacts of an environmental hazard or that it is only focused on growing profits for its managers and investors. In this way, consumers can decide whether they want to buy from a brand that protects orangutans by sourcing sustainable palm oil or not, investors can anticipate if companies are aware of the consequences of climate change is and will further have on their value chains and on business continuity, journalists can share best case practices, NGOs can put pressure so that companies review their sustainability policies, etc. Rule 8 of the CSR Rules provides that the companies, upon which the CSR Rules are applicable on or after 1st April, 2014 shall be required to incorporate in its Board's report an annual report on CSR containing the following particulars : • A brief outline of the company's CSR Policy, including overview of projects or programs proposed to be undertaken and a reference to the web-link to the CSR policy and projects or programs; • The composition of the CSR Committee; • Average net profit of the company for last three financial years; • Prescribed CSR Expenditure (2% of the amount of the net profit for the last 3 financial years); • Details of CSR Spent during the financial year; • In case the company has failed to spend the 2% of the average net profit of the last three financial year, reasons thereof;

NSOU • PGCO-VIII 75 • A responsibility statement of the CSR Committee that the implementation and monitoring of CSR Policy, is in compliance with CSR objectives and Policy of the company. The disclosure of contents of Corporate Social Responsibility Policy in the Board's report and on the company's website, if any, shall be as per annexure attached to the CSR Rules. 4.7 Summary Companies now need to share a part of their profit on CSR activities as a contribution to the society, and these expenses cannot be claimed as business expenses. The

80 NSOU • PGC0-VIII all men and women, human or natural rights, obedience to the law of land, concern for health and safety and increasingly, also for the natural environment. There are numerous reasons why organizations should act ethically. Since behaviour varies as per the values priorities, a mutual effort at all levels to deal with corporate ethics start with a clear understanding of core values, both organizationally as well as individually. Integrity is important for businesses and individuals alike. You can think of ethics as the twin of integrity : Business ethics are the code of morals adopted by an organization, representing the values the company runs on. Every stakeholder who interacts with the organization will be related to these morals. 5.3 Meaning-Business Ethics "Ethics itself is not the end, but the means to the end." – Swami Vivekananda Ethics, which is coined from the latin word 'Ethos' means character, is moral philosophy in action. Morality is described as a combination of concepts and beliefs by which a culture or a group regulates individual behaviors in society. So, Ethics is a set of standards, or a code, or value system, worked out from human reason and experience, by which free human actions are determined as ultimately right or wrong, good or evil. If an action agrees with these standards, it is ethical: if it does not agree, it is unethical. Actually, ethics is the discipline that examines one's moral standards or the moral standards of a society. Ethics is the basic concepts and fundamental principles of decent human conduct. It includes the study of universal values of such as the essential quality of all men and women, human or natural rights, obedience to the law of land, concern for health and safety and increasingly, also for the natural environment. Ethics are the set of moral principles that guide a person's behavior. These morals are shaped by social norms, cultural practices, and religious influences. Ethics reflect beliefs about what is right, what is wrong, what is just, what is unjust, what is good, and what is bad in terms of human behavior. They serve as a compass to direct how people should behave toward each other, understand and fulfil their obligations to society, and live their lives. ■ "Ethics itself is not the end, but the means to the end."—Swami Vivekanada. ■ "And upon this wealth of goodness-where honesty is not only valued for being the best policy, but because it can afford to go against all policies man's ethics are founded". Rabindranath Tagore.

NSOU • PGCO-VIII 81 ■ “Economics that hurts the moral well-being of an individual or a nation is immoral and, therefore, sinful... True economics never militates against the highest ethical standard, just as all true ethics to be worth its name must at the same time be also good economics.” Mahatma Gandhi.

5.4 Nature of Business Ethics

The characteristics or features of business ethics are :

1. Code of conduct : Business ethics is a code of conduct. It tells what to do and what not to do for the welfare of the society. All businessmen must follow this code of conduct.
2. Based on moral and social values : Business ethics is based on moral and social values. It contains moral and social principles (rules) for doing business. This includes self-control, consumer protection and welfare, service to society, fair treatment to social groups, not to exploit others, etc.
3. Gives protection to social groups : Business ethics give protection to different social groups such as consumers, employees, small businessmen, government, shareholders, creditors, etc.
4. Provides basic framework : Business ethics provide a basic framework for doing business. It gives the social cultural, economic, legal and other limits of business. Business must be conducted within these limits.
5. Voluntary : Business ethics must be voluntary. The businessmen must accept business ethics on their own. Business ethics must be like self-discipline. It must not be enforced by law.
6. Requires education and guidance : Businessmen must be given proper education and guidance before introducing business ethics. The businessmen must be motivated to use business ethics. They must be informed about the advantages of using business ethics. Trade Associations and Chambers of Commerce must also play an active role in this matter.
7. Relative Term : Business ethics is a relative term. That is, it changes from one business to another. It also changes from one country to another. What is considered as good in one country may be taboo in another country.
8. New concept : Business ethics is a newer concept. It is strictly followed only in developed countries. It is not followed properly in poor and developing countries.

82 NSOU • PGCO-VIII 5.5 Relationship between business ethics and corporate governance

Companies need to return good favour to every stakeholder; great returns for shareholders, jobs for employees, reliable products for consumers, responsible relations with the community and a clean environment. Business ethics is basically the implementation of general ethical principles to business dilemmas and brings a broader range of problems and concerns than law because everything that is legal might not be ethical. Ethics is the knowledge and awareness of what is right and wrong, and then pursuing the right path but, the right path can be difficult to follow. Business ethics provides people tools to deal with moral complexity in business, business decisions have ethical components- ethical implications should be weighed before acting. Ethics provides moral guidelines so that organizations can speed up the process of making decisions. Ethics that applies to business means business ethics is not a separate theory of ethics; instead, it is an application of ethics to business situations. Good Corporate Governance is a key to empower profits and reputation. It represents the relations

**100%**

**MATCHING BLOCK 189/230**

**SA**

Chapter 1 Intro.docx (D35537869)

among stakeholders used to determine and control the strategic direction and performance of

companies. Accountability is a major element and needs for corporate governance, fortifying the latter in the way that it offers a transparent template for governing critical decisions, activities, and procedures. Corporate Governance focuses on two major concerns about who benefits from corporate decisions/senior management actions and who should benefit from management action or corporate decisions? There are numerous reasons why organizations should act ethically. Since behaviour varies as per the values priorities, a mutual effort at all levels to deal with corporate ethics start with a clear understanding of core values, both organizationally as well as individually. Good corporate governance relates to internal practices and policies of a company. Although the issues regarding corporate governance are common across companies, each organization follows its own unique governance principles. It also ensures that long term strategic objectives and plans are well set up and the proper management structure is in place. The corporate governance actually presents the moral framework, the ethical frameworks and the value framework under which decisions are taken in an organization.

NSOU • PGCO-VIII 83 5.6 Kohlberg's Stages of Moral Development Kohlberg identified three levels of moral reasoning: pre-conventional, conventional, and post-conventional. Each level is associated with increasingly complex stages of moral development. Level 1 : Preconventional Throughout the preconventional level, organisations sense of morality is externally controlled. An organisation with pre-conventional morality has not yet adopted or internalized society's conventions regarding what is right or wrong, but instead focuses largely on external consequences that certain actions may bring. Stage 1 : Obedience-and-Punishment Orientation Stage 1 focuses on the child's desire to obey rules and avoid being punished. For example, an action is perceived as morally wrong because the perpetrator is punished; the worse the punishment for the act is, the more "bad" the act is perceived to be. Stage 2 : Instrumental Orientation Stage 2 expresses the "what's in it for me?" position, in which right behavior is defined by whatever the individual believes to be in their best interest. Stage two reasoning shows a limited interest in the needs of others, only to the point where it might further the individual's own interests. As a result, concern for others is not based on loyalty or intrinsic respect, but rather a "you scratch my back, and I'll scratch yours" mentality. An example would be when a child is asked by his parents to do a chore. The child asks "what's in it for me?" and the parents offer the child an incentive by giving him an allowance. Level 2 : Conventional Throughout the conventional level, a child's sense of morality is tied to personal and societal relationships. Children continue to accept the rules of authority figures, but this is now due to their belief that this is necessary to ensure positive relationships and societal order. Adherence to rules and conventions is somewhat rigid during these stages, and a rule's appropriateness or fairness is seldom questioned. Stage 3: Good Boy, Nice Girl Orientation In stage 3, children want the approval of others and act in ways to avoid disapproval. Emphasis is placed on good behavior and people being "nice" to others.

84 NSOU • PGCO-VIII Stage 4 : Law-and-Order Orientation In stage 4, the child blindly accepts rules and convention because of their importance in maintaining a functioning society. Rules are seen as being the same for everyone, and obeying rules by doing what one is "supposed" to do is seen as valuable and important. Moral reasoning in stage four is beyond the need for individual approval exhibited in stage three. If one person violates a law, perhaps everyone would—thus there is an obligation and a duty to uphold laws and rules. Most active members of society remain at stage four, where morality is still predominantly dictated by an outside force. Level 3 : Postconventional Throughout the postconventional level, a person's sense of morality is defined in terms of more abstract principles and values. People now believe that some laws are unjust and should be changed or eliminated. This level is marked by a growing realization that individuals are separate entities from society and that individuals may disobey rules inconsistent with their own principles. Post-conventional moralists live by their own ethical principles—principles that typically include such basic human rights as life, liberty, and justice—and view rules as useful but changeable mechanisms, rather than absolute dictates that must be obeyed without question. Because post-conventional individuals elevate their own moral evaluation of a situation over social conventions, their behavior, especially at stage six, can sometimes be confused with that of those at the pre-conventional level. Some theorists have speculated that many people may never reach this level of abstract moral reasoning. Stage 5 : Social-Contract Orientation In stage 5, the world is viewed as holding different opinions, rights, and values. Such perspectives should be mutually respected as unique to each person or community. Laws are regarded as social contracts rather than rigid edicts. Those that do not promote the general welfare should be changed when necessary to meet the greatest good for the greatest number of people. This is achieved through majority decision and inevitable compromise. Democratic government is theoretically based on stage five reasoning. Stage 6 : Universal-Ethical-Principal Orientation In stage 6, moral reasoning is based on abstract reasoning using universal ethical principles. Generally, the chosen principles are abstract rather than concrete and focus on ideas such as equality, dignity, or respect. Laws are valid only insofar as they are grounded in justice, and a commitment to justice carries

NSOU • PGCO-VIII 85 with it an obligation to disobey unjust laws. People choose the ethical principles they want to follow, and if they violate those principles, they feel guilty. In this way, the individual acts because it is morally right to do so (and not because he or she wants to avoid punishment), it is in their best interest, it is expected, it is legal, or it is previously agreed upon. Although Kohlberg insisted that stage six exists, he found it difficult to identify individuals who consistently operated at that level.

### 5.7 The Three Levels of Ethics

Most concrete ethical issues involve questions about what we ought to do in a given situation. Underlying these questions are more abstract ones about right and wrong and good and bad more generally. And some discourse in moral philosophy is even more abstract. Philosophers divide ethics into three different levels, which range from the very abstract to the concrete: metaethics, normative ethics, and applied ethics. Understanding these levels is a good step toward grasping the breadth of subject.

#### Metaethics

Metaethics is the most abstract and philosophical level of ethics. Where normative and applied ethics seek to determine what is moral, metaethics concerns itself with the nature of morality itself. It deals with the following types of questions : What does it mean when someone says something is “good” or “right”? What is moral value, and where does it come from? Is morality objective and universal, or is it relative to specific individuals or cultures? Do moral facts exist? These and other metaethical questions are important, but to figure out if a particular action is right or wrong, never get there pondering them. Answering these questions can resolve the problems of ethics and morality.

#### Normative Ethics

Normative Ethics is concerned with the appropriate standards for right and wrong behavior. Normative ethical theories establish prescriptions – whether by foundational principles or good character traits – for how one ought to act or live. The following are prominent normative ethical approaches :

86 NSOU • PGCO-VIII

#### Virtue Ethics

Virtue Ethics focuses on a person’s moral character. Virtue ethicists say we ought to develop virtuous characteristics – such as generosity, courage, and compassion – and exhibit virtuous behavior. This is different from other normative theories that propose more precise principles and rules for conduct. Deontological theories emphasize one’s moral duties and obligations. They focus on the act itself, as either intrinsically good or bad, regardless of its consequences. Consequentialist theories determine whether something is right or wrong by looking at its consequences. The ethical thing to do is that which has the best consequences (i.e., results in the most benefit, happiness, good, etc.) among the alternatives.

#### Applied Ethics

Applied ethics consists of the analysis of specific moral issues that arise in public or private life. Whereas normative ethics attempts to develop general standards for morality, applied ethics is concerned with specific moral controversies. Applied ethics can use normative ethical theories, principles or rules derived from such theories, or analogical reasoning. Context-specific norms or expectations, such as those characterizing a particular profession, arrangement, or relationship are also relevant to applied ethical analysis. The different levels of ethics can overlap and inform one another. Normative theories, for instance, are based on metaethical assumptions (or even explicit metaethical propositions), such as the existence or non-existence of objective and universal notions of right and wrong. And, as noted above, applied ethics can draw on normative theories to resolve moral disputes. Metaethical perspectives can also drip into applied ethical analysis. A moral relativist, for example, may contend that a practice deemed egregious by his own culture’s standards is truly morally permissible, or even obligatory, in the culture in which it occurs. Despite the overlap between the three levels, distinguishing between them is useful for clarifying one’s own views and analyzing those of others.

### 5.8 Corporate Integrity and its Importance

Corporate integrity is defined as a state or condition in which the objectives of the managers and the shareholders of a corporation are undivided and complete. The compensation of the managers and the shareholders is selected as a subset of the objectives. Integrity is important for businesses and individuals alike. You can think

NSOU • PGCO-VIII 87 of ethics as the twin of integrity: Business ethics are the code of morals adopted by an organization, representing the values the company runs on. Every stakeholder who interacts with the organization will be related to these morals. That's why it's so important for a business to have clear ethical standards. Here are seven great principles of business integrity for companies, their leaders and employees at all levels. 1. Trust - Customers and clients always rely on trustworthy companies. When trust is at the core of a company, it is easy to recognize. People know they can rely on the character, ability and value provided, and they feel valued in every interaction. 2. Quality - A dedication to high quality standards across the board shows that the company is committed to standing behind what it does and delivering the value it promises. Companies that regularly put out shoddy work or provide inconsistent service are telling customers and would-be customers that they really don't care about them. 3. Follow-through - Trust is built on follow-through, on meeting your obligations and commitments as promised. Follow-through also means being transparent about potential problems that might affect the timing or the end-result. It may not be the best outcome, but you can salvage the relationship by being upfront and honest. 4. Corporate Citizenship. As Deloitte notes, "Stakeholders today are taking an intense look at organizations' impact on society, and their expectations for good corporate citizenship are rising." It's not just customers who care. Employees are increasingly looking to work for companies that contribute positively to society. There's even evidence of a direct correlation between CSR index ranking and profitability. 5. Value Creation - Businesses are designed to create value, but in ethical companies, people view value creation in multiple ways – the company's profitability is just one of those lenses. They also feel obligated to create value for customers and "do right" by them. As such, it becomes a mutual exchange of value, one that builds strong bonds of loyalty. 6. Willingness to Change - Companies only change if there is a willingness to change and, specifically, a willingness to keep getting better. This starts with leaders who are willing to change and listen to other opinions. Getting feedback from team members and employees is the best way to understand different perspectives and improve the company for the future.

88 NSOU • PGCO-VIII 7. Respect - Last but not least is respect. Regardless of titles, ages, gender, race, positions or any other differences, everyone should be treated with respect. This goes for employees as well as the public at large. 5.9 Summary Ethics is a set of standards, or a code, or value system, worked out from human reason and experience, by which free human actions are determined as ultimately right or wrong, good or evil. If an action agrees with these standards, it is ethical: if it does not agree, it is unethical. Good corporate governance relates to internal practices and policies of a company. Although the issues regarding corporate governance are common across companies, each organization follows its own unique governance principles. It also ensures that long term strategic objectives and plans are well set up and the proper management structure is in place. Philosophers divide ethics into three different levels, which range from the very abstract to the concrete: metaethics, normative ethics, and applied ethics. Corporate integrity is defined as a state or condition in which the objectives of the managers and the shareholders of a corporation are undivided and complete. That's why it's so important for a business to have clear ethical standards. 5.10 Exercise Group - A 1. Values and ethics shape the- (a) Corporate unity (b) Corporate discipline (c) Corporate culture (d) Corporate differences 2. Which of the following factors encourage good ethics in the workplace? (a) Transparency (b) fair treatment to the employees of all levels (c) both (a) and (b) (d) bribe

NSOU • PGCO-VIII 89 3. Most companies begin the process of establishing organizational ethics programs by developing : (a) ethics training programs. (b) codes of conduct. (c) ethics enforcement mechanisms. (d) hidden agendas. 4. What is ethics? (a) Ethics is a system of moral principles (b) Ethics is the rules defined by the government (c) Ethics is the rules defined by the community (d) Ethics is the rules defined by the Society Group – B 2. Explain Kohlberg's Stages of Moral Development. 3. Describe the relation between business ethics and corporate governance. 4. What are the characteristics of business ethics ? 5. What is Corporate Integrity ? Explain its importance. Group – C 1. What is business ethics and explain the levels of business ethics. 2. Explain Kohlberg's Stages of Moral Development. Ans. Group-A : 1. (c), 2. (c), 3. (b), 4. (a)

90 NSOU • PGCO-VIII Unit - 6 □ Ethical Principles in Business Structure 6.1 Objectives 6.2 Introduction 6.3 Teleological Ethical Theory 6.4 Deontological Ethical Theory 6.5 Virtue ethics 6.6 System Development Ethical Theories 6.6.1 Major Types of System Development Ethical Theories 6.7 Summary 6.8 Exercise 6.1 Objectives After going through this unit, you will learn. • The teleological approach; • the deontological approach; • the virtue ethics approach; • the systems development approach; 6.2 Introduction Teleological means thinking rationally about the ends. Therefore this theory is also known as Consequential theory which denotes that an action is morally correct if the consequences of that action are more favourable than adverse to the target audiences. The System Development Ethical Theories state that the extent to which organization system is sensitive to the need to develop a work culture supportive of ethical conduct determines the ethical value of actions. Virtue or moral character of the person carrying out an action, rather than at ethical duties and rules, or the consequences of particular actions is equally important to assess. 90

NSOU • PGCO-VIII 91 6.3 Teleological Ethical Theory This word 'Teleological' is derived from two Greek words-Telos and Logos. Where telos means the purpose, goal or end, the logos on the other hand means reason. So together Teleological means thinking rationally about the ends. Therefore this theory is also known as Consequential theory which denotes that an action is morally correct if the consequences of that action are more favourable than adverse to the target audiences. Classification of Teleological Theory : The Teleological theory may be classified into three categories based on the consequences of the actual activity- 1. Egoism : It denotes that the consequences of the action are more favourable only to that individual performing the action. Egoism may be three types. It can be both descriptive and normative. (a) Psychological Egoism : This descriptive egoism denotes that each person has but one ultimate aim: her own welfare. (b) Normative Egoism : It claims about what one ought to do, rather than describe what one does do. (c) Ethical egoism : This form of egoism claims that it is necessary and sufficient for an action to be morally right that it maximize one's self- interest. (d) Rational egoism : It claims that it is necessary and sufficient for an action to be rational that it maximize one's self-interest. (e) Conditional egoism : This modern concept of egoism asserts that egoism is morally right and acceptable if it leads to morally acceptable ends; self-motivated actions can be considered morally acceptable, if they lead to the betterment of society and the public as a whole. 2. Utilitarianism : It means that the consequences of the action are more favourable than unfavorable to everyone. The utilitarianism may be of various types. (a) Positive Utilitarianism : This form of utilitarianism is based on the rule that to maximise the greatest amount of pleasure for the greatest number of people.

92 NSOU • PGCO-VIII (b) Negative Utilitarianism : This type of utilitarianism requires us to promote the least amount of suffering for the greatest number of people. (c) Sentient Utilitarianism : This is a type of utilitarianism that gives equal consideration to all sentient beings and not just humans in particular. Therefore, this utilitarian view can be incorporated in with all of the others. (d) Average Utilitarianism : Average utilitarianism suggests that we measure the utility of a population by calculating the average utility (finding out the utility of all people and then dividing by the amount of people) of that population. (e) Total Utilitarianism : This is an alternative view to average utilitarianism and gets around the mere addition paradox by stating that it is best to measure happiness/utility by the total utility/happiness that a society has. (f) Motive Utilitarianism : This type of utilitarianism incorporates the motives people have for their actions and gives weight to this when deciding if an action is morally right or wrong. If someone is known to be doing a seemingly good action with immoral motives then that action might be deemed as immoral when using motive utilitarianism. (g) Rule Utilitarianism : Rule Utilitarianism concerns itself with general moral rules that you should follow when making decisions. (h) Act or Case Utilitarianism : This Utilitarianism requires each case to be taken individually and appropriate calculations made for each one of them. The likelihood of consequences must be calculated for each potential action known and from there the action that will result in the most happiness should be chosen. (i) Two-level Utilitarianism : Level one is using Rule Utilitarianism (based on our intuitions) because it is efficient (in both time and effect). Level two however is using Act Utilitarianism when a situation requires more thought and more critical reflection. This system of using general moral rules for everyday simple decisions and serious analysis and calculation for more important decisions attempts to take the best of both (utilitarian) worlds and make utilitarianism more practical

NSOU • PGCO-VIII 93 3. Altruism : It signifies that the consequences of the action are more favourable than unfavorable to everyone except that individual. The altruism may be of different types- (a) Nepotism Altruism : This type of altruism is based on the activities centered around the family. Let's say your parents work every day to ensure that you have shelter, food, clothing, educational facilities and all the emotional support and nurturing you need to survive and thrive. Your parents self-sacrifice to care for the wellbeing of you would be seen as nepotistic altruism. (b) Reciprocal Altruism or Mutualism : It is the form of altruism, which is altruism seen through a give and take relationship. Your friend helps you both financially and morally when you are down, and whenever chances come you try to stand behind your friend when he badly needs you. (c) Group-based : Altruism-Group altruism – more generally, group solidarity – is very important in human society, and occurs there at multiple levels, ranging from small groups, organizations, communities, ethnic groups, nations, followers of the same religion, etc. Solidarity with other members of one's community or ethnic group is a ubiquitous and important social phenomenon. Nationalism is also a potent historical force, as is class solidarity. It has been argued (Wilson 2002) that the evolutionary "function" of religion is precisely to promote group cohesion. (d) Moral Altruism : The moral altruism entails sacrifice for others mediated via the individual's justification system. Moral altruism is uniquely human, although it likely has its motivational and emotional roots in the other three forms, especially reciprocal and group-based altruism.

Hunt-Vittel Model of Teleological Evaluation  $TE K = \sum [IW 1 \times PosCon 1 \times P Pos] - [IW 1 \times NegCon 1 \times P Neg] + [IW 2 \times PosCon 2 \times P Pos] - [IW 2 \times NegCon 2 \times P Neg] + \dots$

$IW 1 =$  Importance of Stakeholder 1  $PosCon 1 =$  Positive Consequences on Stakeholder 1  $NegCon 1 =$  Negative Consequences on Stakeholder 1

94 NSOU • PGCO-VIII P Pos = Probability of +ve consequences occurring P Neg = Probability of -ve consequences occurring

6.4 Deontological Ethical Theory The word 'deontological' is derived from the Greek word 'deno' which means duty or obligation. This theory focuses on certain fundamental duties that the human being should perform in his/her life. The duties of general human being covers the issues like duties toward oneself like preserving one's life and sharing happiness, duties to others like family duties, social duties, political duties etc and also indicates the duty towards spiritual forces. The greatest advocate of this theory was the eminent philosopher Immanuel Kant where he emphasised on the act through morally right way purely from duty with an argument that the highest good must be both good in it and good without qualification. In his words- "Nothing in the world—indeed nothing even beyond the world—can possibly be conceived which could be called good without qualification except a good will." - Kant (1785). The rights of the individual as reflected by this theoretical understanding may be of different types- (a) Negative rights theory : It asserts that an action is right if it protects the individual from harm or unwarranted interference from other people or any institution while exercising his right. (b) The positive rights theory : It advocates that an action is right if it provides or tends to provide an individual with anything that he needs to exist. (c) Social Contract Theories : It denotes that people contract with each other to abide by the moral and political obligations towards the society in which they live. This theory is based on the notion people should enter into an agreement with each other to give up some of their freedoms and accept the obligation to respect and safeguard the rights of the others. Thus, an individual gains the civil rights that constitute the social benefits that he is entitled to the extent he fulfills his due obligations towards the society. (d) Social Justice Theory : It denotes that the action will be considered right if it confirms the fairness in the distributive, retributive and compensatory dimensions of cost and rewards. The distributive dimension means the perceived fairness in the distribution of social benefits and burden among

NSOU • PGCO-VIII 95 the group members. The retributive dimension considers the punishment proportionate to the extent of crime while the compensatory dimension is the way people are compensated in relation to the injuries inflicted upon them. 6.5 Virtue ethics Virtue ethics is person rather than action based : it looks at the virtue or moral character of the person carrying out an action, rather than at ethical duties and rules, or the consequences of particular actions. It focuses on the actions that a person would have taken in different circumstances on the basis of their virtue. Being a kind of ethics it basically judges what's right and what's wrong. Virtue ethics provides guidance as to the sort of characteristics and behaviours a good person will seek to achieve. Virtue ethics is concerned with the whole of a person's life, rather than particular episodes or actions. A good person can be defined as someone who lives virtuously - who possesses and lives the virtues. Human beings are often more interested in assessing the character of another person than they are in assessing the goodness or badness of a particular action. This suggests that the way to build a good society is to help its members to be good people, rather than to use laws and punishments to prevent or deter bad actions. But it wouldn't be helpful if a person had to be a saint to count as virtuous. For virtue theory to be really useful it needs to suggest only a minimum set of characteristics that a person needs to possess in order to be regarded as virtuous. Virtue ethics teaches us about :

- An action is only right if it is an action that a virtuous person would carry out in the same circumstances.
- A virtuous person is a person who acts virtuously
- A person acts virtuously if they "possess and live the virtues"
- A virtue is a moral characteristic that a person needs to live well.

Most virtue theorists would also insist that the virtuous person is one who acts in a virtuous way as the result of rational thought (rather than, say, instinct). The modern theologian James F Keenan suggests :

- Justice : Justice requires us to treat all human beings equally and impar- tially.

96 NSOU • PGCO-VIII • Fidelity : Fidelity requires that we treat people closer to us with special care. • Self-care : We each have a unique responsibility to care for ourselves, affectively, mentally, physically, and spiritually. • Prudence : The prudent person must always consider Justice, Fidelity and Self-care. The prudent person must always look for opportunities to acquire more of the other three virtues

### 6.6 System Development Ethical Theories

The System Development Ethical Theories state that the extent to which organization system is sensitive to the need to develop a work culture supportive of ethical conduct determines the ethical value of actions.

#### 6.5.1 Major Types of System Development Ethical Theories

1. Personal Improvement Ethics : The personal improvement ethics states that an action is right if it is intended to promote the individual's personal responsibility for the continuous learning, improvement, holistic develop- ment and moral excellence. For example, the employees in order to gain expertise in their work enroll in the company's training programmes with a view to improving themselves as well as the organization's functioning.
2. Organizational Ethics : The organizational ethics any action intended for the development of the formal and informal organizational processes which in turn enhances the procedural outcomes, respectful caring, innovation in ethical work culture and systematic justice is right. For example, If there is no employee complaints Redressal system in the organization and also the employees do not have a voice system for feedback then it is the responsibility of the manager to implement such system and give a voice to the employee. By doing so, the manager supports individual and organizational moral development and reduce the intense resistance to the overall moral development.
3. Extraorganizational Ethics : The extra organizational ethics asserts that the action is right if it promotes or tends to promote the collaborative partnerships and respect the global and domestic constituencies representing the diverse political, economic, legal, social ecological and philanthropic concerns that affect the firm.

NSOU • PGCO-VIII 97 For example, it is the social responsibility of a manager to consider all the factors external to the organization such as political, legal, social, environmental, etc. that can affect the organizational business processes. Thus, the managers who cautiously assess the moral conduct of his employees and retribute (punish) their wrong doings then he is said to have successfully developed the system of ethics. In case, the manager relies exclusively on the character of his employees and do not implement morally supportive Intra-organizational systems and stable processes; then the organization is exposed to the future ethical risk.

6.7 Summary The Teleological theory may be classified into three categories based on the consequences of the actual activity-Egoism, Utilitarianism and Altruism. Deontological Ethical Theory focuses on certain fundamental duties that the human being should perform in his/her life. Virtue ethics provides guidance as to the sort of characteristics and behaviours a good person will seek to achieve. Virtue ethics is concerned with the whole of a person's life, rather than particular episodes or actions.

System Development Ethical Theories state that the extent to which organization system is sensitive to the need to develop a work culture supportive of ethical conduct determines the ethical value of actions. Organization is exposed to the future ethical risk if these ethical theories are not implemented properly.

6.8 Exercise Group – A

1. Which moral philosophy seeks the greatest good for the greatest number of people? (a) Consequentialism (b) Utilitarianism (c) Egoism (d) Ethical formalism
2. What is meant by the phrase 'teleological ethics'? (a) Is used to judge is an action is right, fair and honest.

98 NSOU • PGCO-VIII (b) An action can only be judged by its consequences (c) Developing the individual personal characteristics (d) The key purpose of ethics is to increase freedom

3. Moral principles provide \_\_\_\_\_ for moral judgments. (a) Circular (b) Law (c) Confirmatory standard (d) Behavior

Group – B

1. Explain teleological ethical theory.
2. What are the major types of system development ethical theories?
3. What is virtue ethics?
4. What are the different rights under Deontological Ethical Theory

Group – C

1. What are the ethical principles followed in a business.
2. What is system developmental ethics theory and explain the types of system developmental ethics theory.

Ans. Group-A : 1. (b), 2. (a), 3. (c)

NSOU • PGCO-VIII 99 Unit - 7  Business Ethics as a Strategic Response Structure 7.1 Objectives 7.2 Introduction 7.3 Strategic Vision 7.4 Corporate Philosophy 7.5 Stakeholder Theory 7.6 "Stakeholder" inclusive organization 7.7 Stakeholder mapping 7.8 Ethical leadership 7.8.1 The Importance of Ethical Leadership 7.9 Summary 7.10 Exercise

7.1 Objectives After going through this unit, you will learn.

- Strategic vision, corporate philosophy and the concept of enterprise strategy;
- Stakeholder theory and the "stakeholder" inclusive organization;
- Stakeholder mapping;
- Ethical leadership

7.2 Introduction Strategic visions are ideas for the direction and activities of business development. Generally included in a document or statement so all company managers can share the same vision for the company and make decisions according to the shared principals and company mission. Corporate philosophy is the basic beliefs that 99

100 NSOU • PGCO-VIII people in the business are expected to hold and be guided by maintaining high ethical standards in external and internal relationships to maximise success. On the other hand stake holders theory reflects the idea that companies create value through the cooperation of its stakeholders. Stakeholders engagement in management is also a vital part in ethical recognition of a company. Ethical leadership is defined as "leadership demonstrating and promoting 'normatively appropriate conduct through personal actions and interpersonal relations'".

### 7.3 Strategic Vision

Ethics are a set of moral standards that are relied upon to reach conclusions and make decisions. In a business environment, ethics is a key factor in responsible decision making. Maintaining a high ethical standpoint when operating your business can provide benefits to both the internal and external stakeholders of your business. Strategic management refers to the managerial process of forming a strategic vision, setting objectives, crafting a strategy and then over time initiating whatever corrective adjustments required for achieving the long-term objectives and goals of an organization.

#### Strategic vision :

Strategic visions are ideas for the direction and activities of business development. Generally included in a document or statement so all company managers can share the same vision for the company and make decisions according to the shared principals and company mission. A vision reflects management aspirations for the organization and its business providing a panoramic view of "where we are going" and giving specific about its feature business plans. It spells-out long-term business purpose and moods organization identity. A strategic vision points on an organization in a particular direction and charts a strategic path for it to follow. The mission statement a starting point for forming a strategic vision: Coming up with a vision statement that defines what business the company is presently in. it conveys the essence of "who we are, what we do, and where we are now". From mission statement to strategic vision: using the mission statement as a basis for deciding on long-term course making choices about "where we are going" and charting a strategic path for the company to pursue.

### 7.4 Corporate Philosophy

A company philosophy is "The way we do things around here." A business of high principles establishes a code of conduct and other prescriptive guidelines that strengthen corporate culture. In other words, corporate philosophy is the basic beliefs

NSOU • PGCO-VIII 101 that people in the business are expected to hold and be guided by maintaining high ethical standards in external and internal relationships to maximise success. Main- taining few guidelines can help in generating corporate philosophy like decisions should be based on facts, objectively considered, or the thought-through approach to decision making, the business should adjust with work forces in its environment, employees should be judged based on their performance, not on personality, educa- tion, or personal traits and skills and the business should be administered with a sense of competitive urgency. What can a business expect to gain by committing to high ethical standards? Basically, it is that better decisions are made: Facts are identified and evaluated with respect to ethical principles thereby stimulating a thoughtful process that weighs the costs and benefits of alternative actions; respects the rights of stakeholders; and commits to acting in accordance with the company's philosophy

#### A Company Philosophy is not the same as a code of ethics.

A code of ethics or code of conduct goes beyond the basic philosophy that guides decision-making and incorporates specific activities and relationships, and the behaviors expected of employees and management in these situations. From an ethical perspective, a company philosophy begins with a set of core values. For example, IBM's Leader- ship Principles state : "Our basic belief is respect for the individuals, for his rights and dignity." An example of a more product-oriented philosophy is Oracle's state- ment that: "Oracle's employees make excellence and quality a part of day-to-day work processes and seek continuous improvement in all that they do." The common element is a commitment to individuals that should guide the company in better serving their customers. Steve Jobs is quoted as saying: "Great things in business are never done by one person. They're done by a team of people." This sums up the true meaning of a company philosophy. It provides a roadmap to get from point "A" to point "B" and to do so in a way that honors the core values of the company, is consistent with its mission, adheres to the provisions in the code of ethics, and all of which is internalized by top management.

### 7.5 Stakeholder Theory

A stakeholder is an individual or group whose interests are affected by the operations of a business. To have a stake simply means that one's interests intersect with those of the business. In business ethics, stakeholders are mainly thought of normatively as sources or objects of a company's ethical duties. Stakeholder theory

102 NSOU • PGCO-VIII is a point of view within business ethics, popularized by Edward Freeman, holding that a company's managers are ethically obligated to pursue jointly or to balance the interests of its stakeholders in the conduct of its business. This reflects the idea that companies create value through the cooperation of its stakeholders. Stakeholder theory was offered initially as an approach to corporate governance; one operating in contradiction to the idea that managers' ethical obligation as managers is to advance the interests of a company's shareholders. More recently, it has been offered mainly as a theory of ethical management that may be compatible with managers' fiduciary duties to shareholders. Principles of Stakeholders Theory and Strategy Freeman outlined six principles that should govern the relationship between the stakeholders and the corporation.

- The principle of entry and exit : According to this principle, there must be clear rules that delineate, For example, the rules when it comes to hiring employees and terminating their employment should be clear-cut and transparent.
- The principle of governance : This principle is concerned with how the rules governing the relationship between the stakeholders and the firm can be amended. With unanimous consent, any changes
- The principle of externalities : This is concerned with how a group that does not benefit from the actions of the corporation has to suffer certain difficulties because of the actions of the corporation. The principle of externalities suggests that anyone who has to bear the costs of other stakeholders has the right to become a stakeholder as well based on stakeholder theory. Anyone who is affected by a business becomes a stakeholder.
- The principle of contract costs : Each party to a contract should either bear equal amounts when it comes to cost, or the cost they bear should be proportional to the advantage they have in the firm. Not all of these costs are financial in nature, so they may be difficult to quantify.
- Agency principle : This principle states that the manager of a firm is an agent of the firm and therefore has responsibilities to the stakeholders as well as the shareholders.
- The principle of limited immortality : This principle deals with the

NSOU • PGCO-VIII 103 longevity of a firm. To ensure the success of the organization and its owners alike, it is necessary for the organization to exist for a prolonged period of time. If the firm only exists for a very limited period of time, it would be advantageous for some of the stakeholders and disadvantageous for others. This violates the concept of a stakeholder theory. Thus the firm must remain in existence for a length of time, and it should be managed in a way that ensures its survival. "Limited" immortality refers to the fact that the firm can be long-lasting but it is impossible for it to actually be immortal.

### 7.6 "Stakeholder" Inclusive Organization

Inclusive stakeholder engagement requires a paradigm shift. A different mind- set will alter the nature and construction of our vision, shifting the focus to holistic sustainability as a key outcome and criterion for success. Sustainable approaches go beyond the environment: they include the social sustainability of the wider commu- nity. Organisational and project values, priorities and goals should be linked by a common thread of inclusion. It does not end at our organisation's front door, and failing to address it adequately has implications. Ethical behaviour underpins the concept of social value and the UN's Sustainable Development Goals. Current thinking and practices are yet to fully embed these, although some projects utilise knowledge-transfer to communities and training through apprenticeships and jobs. Mindsets can restrict how innovatively social value and sustainable benefits are delivered through projects. Inclusion as an integral element of project vision alters this, transforming both process and outcome. Too often, the focus is on outcome without fully tapping the opportunities available through the strategic vision and process. Inclusively engaging a wider definition of stakeholders, and redefining who should be positively affected by our projects, generates a wider buy-in, sense of inclusion and energy, driving project success – and ultimately delivering more sustainable benefits. Stakeholders emerge as a common thread linking issues that impact on project outcome. The position of people at the heart of project success is already well recognised, with stakeholder interaction a key cornerstone of project delivery. Effective stakeholder engagement (rather than merely management) is now recognised as essential in our approach to stakeholder strategy and delivery processes. Identifying and analysing stakeholders is a key initial stage of engagement. A stakeholder, by definition, is anyone who has an interest in, or is affected by, the outcomes of the project. That could encompass almost anyone, so analysis to determine significance

104 NSOU • PGCO-VIII becomes critical. Asking others to identify stakeholders can assist, but may be problematic. When we and others map stakeholders, past experiences and practices inform our assessments of who stakeholders are. Despite our best efforts, we still miss those stakeholders who reveal themselves at a later stage of projects. 7.7

Stakeholder Mapping Stakeholder mapping is the visual process of laying out all the stakeholders of a product, project, or idea on one map. The main benefit of a stakeholder map is to get a visual representation of all the people who can influence your project and how they are connected. People confuse stakeholders with shareholders. While shareholders own a part of a public company (through shares of stock) and are interested in the company's performance, it doesn't mean they should be stakeholders of each project or product launched by the company. Stakeholders can work on a more granular level and they are also often interested in the project's or product's performance, not just because it affects the company's stock performance. When a stakeholder map is critical It's good to have a detailed stakeholder map and know how to involve the right people when you plan to launch a major project or product. Building a product—

When building a new product from scratch you'll need to know the stakeholders for different groups. The number and the roles of stakeholders may vary depending on the type of product you are working on. Here is a list of potential stakeholders for this situation:

- Customers/Users : Knowing your audience is critical for creating a product that people will love. Think of the groups of people you are serving and their needs. To better segment your customer base, we recommend using our User Personas template.
- Industries/Markets : As a product developer, you can't ignore what's happening in your field, so brainstorming potential competitors, outlining market regulations, and writing down major trends can be very useful.
- Suppliers : For certain products (and especially for digital platforms like Airbnb, Uber, BlaBlaCar, and others), generating a supply of certain services is as important as creating demand. If you are building a platform, what are the key suppliers and how you can 'subsidize' one side of the demand/supply equation if needed.

NSOU • PGCO-VIII 105 • Investors : If your product needs substantial investments, you might want to include venture capital firms as major stakeholders since they will have the power to influence your product's future. Penetrating a market—If you're trying to penetrate a new market with your product you'll also need to designate a few stakeholder groups :

- New Customers. Trying asking yourself what are the needs of those who haven't heard about your product yet. Are there any subgroups within this group? We suggest using Personas template to better understand your new customers.
- Old Customers. Which Personas are critical for your sustainable growth? Adding them to your map and understanding their challenges is key to your product's success.
- New Retailers. Who are the main external stakeholders for your project? Whether you are creating a physical or a digital product, you need strong partnerships to reach new audiences. Starting a new project—Starting a new project will also need stakeholders internally. Here is how a list of stakeholders might look like:

- Project Manager
- Developer
- Designer
- CEO/C-Level exec

Benefits of Stakeholder Mapping Stakeholder mapping allows you to identify key players that will influence your project and its success.

1. Find out who has the most influence : When you build a stakeholder map, you can easily see who will have the highest level influence over a project, whether it's the CEO or a project manager.
2. Focus on those who benefit most : Stakeholder maps help you see who will benefit most from the end-product, so you can focus on marketing to that person for either sales or resources.
3. See where resources are most plentiful : Often when you build a stakeholder map, you'll see who has restraints on the project and who has more resources, so internally you can put the right people on your team.

106 NSOU • PGCO-VIII 4. Have a game plan : Overall, a stakeholder map gives you a good idea of who you're trying to satisfy when building this product/project. Four steps to building a stakeholder map Here is how you build a stakeholder map : 1. Brainstorming : Start by identifying all the potential stakeholders — people, groups, or organizations affected by your product or project, those who have influence over it, or have an interest or concern in its success. Write down their names on a whiteboard or in a shared virtual space. At this point, try to be as granular as possible — you can always eliminate duplicates or those who actually don't have 'skin in the game' later. 2. Categorization : Now it's time to group the results of your brainstorming. Are there any stakeholders that can be put into one category? How can you name this category? Are there any types of stakeholders you forgot about? To make sure you didn't forget about any of the key players, check out the 'When stakeholder map is critical' section to see examples of the types of stakeholders different projects require. 3. Prioritization : To create a communication plan, you have to prioritize key stakeholders and make sure you start talking to them early in the project. There are different ways you can prioritize the stakeholders. You can use the matrix we shared above, or you can ask your team to vote so you can see how the group defines the main players. 4. Stakeholder communications : Once your priorities are defined, it's important to come up with a plan for engaging all the major stakeholders. There is no single recipe that can fit all possible situations, but here are some best practices that can help you create transparency and accountability for your project : • You should have a lot of face-to-face communication with high- power, highly interested people. Building trust with them first is critical for your project. • If someone is opposed to the project, you can get a buy-in from someone with the same level of power first and then ask the latter to persuade the former. • Communicating early and often is also important, because people will need time to think before making a decision.

NSOU • PGCO-VIII 107 • Give each stakeholder a right amount of information depending on their interest. Some people need just an executive summary, while others will want to dive deeper. 7.8 Ethical Leadership Ethical leadership is defined as "leadership demonstrating and promoting 'normatively appropriate conduct through personal actions and interpersonal relationships.'" When you boil it down, this really means that ethical leadership is defined as putting people into management and leadership positions who will promote and be an example of appropriate, ethical conduct in their actions and relationships in the workplace. In the business world today, ethics are an increasingly important element and point of discussion. So leadership with ethics is very important to understand, to develop, and to recognize in the business world. If you want to become a business leader, learning about ethical leadership is crucial to help you get there. It's your responsibility to model moral behaviour in the workplace when you're in a position of power in an organization. Integrity, moral behaviour, and ethics are key to being a great leader. Learn about the value of ethical leadership, how to become an ethical leader, and see examples of leadership with ethics around us in the business world today. 7.8.1 The Importance of Ethical Leadership • Leadership that is ethical is important for a variety of reasons, for customers, employees, and the company as a whole. Leadership skills are crucial to help create a positive ethical culture in a company. Leaders can help investors feel that the organization is a good, trustworthy one. Customers are more likely to feel loyal when they see leaders in place in an organization. Good press is likely to come when there are ethical leaders in an organization. Partners and vendors will similarly feel they can trust and work well with an organization when they see leadership that is ethical displayed. • In the short-term, ethical leaders can help boost employee morale and help them feel excited about their management and their work. It can increase positivity and collaboration in your organization and make everyone feel happier to be at work.

108 NSOU • PGCO-VIII • In the long-term, ethical leadership can prevent company scandals, ethical dilemmas, and ethical issues. It can also help organizations gain more partnerships and customers, which can lead to more money at the end of the day. Loyal employees are also a crucial element of long-term success for a business. • At the end of the day, Leadership with ethics and ethical principles have major short-term and long-term benefits for organizations and individuals alike. 7.9 Summary Strategic visions are ideas for the direction and activities of business development. Generally included in a document or statement so all company managers can share the same vision for the company and make decisions according to the shared principals and company mission. A Company Philosophy is not the same as a code of ethics. A code of ethics or code of conduct goes beyond the basic philosophy that guides decision-making and incorporates specific activities and relationships, and the behaviour's expected of employees and management in these situations. Leaders can help investors feel that the organization is a good, trustworthy one. Customers are more likely to feel loyal when they see leaders in place in an organization. 7.10 Exercise Group – A 1. The primary stakeholders are : (a) Customers. (b) Suppliers. (c) Shareholders. (d) Creditors. 2. To be successful, business ethics training programs need to : (a) focus on personal opinions of employees. (b) be limited to upper executives. (c) educate employees on formal ethical frameworks and models of ethical decision making.

NSOU • PGCO-VIII 109 (d) promote the use of emotions in making tough ethical decisions. 3. \_\_\_\_\_is what constitutes right and wrong or good and bad, in human conduct in the context of an organization. What are the steps to be considered in shareholders mapping ? 4. What is ethical leadership ? Group – C 1. What is ethical leadership and mention its importance. 2. What is stakeholder's theory and what are the principles of Stakeholders Theory and also mention its strategy. Ans. Group-A : 1. (c), 2. (c), 3. (b)

110 NSOU • PGCO-VIII Unit - 8 □ Managing Ethical Dilemmas in Business Structure 8.1 Objectives 8.2 Introduction 8.3 Ethical Dilemma versus Ethical Issues 8.4 Characteristics of Ethical Dilemmas 8.5 The Dilemma Resolution Process 8.5.1 How to Solve an Ethical Dilemma ? 8.6 Ethical Issues in Business and how to address them 8.7 Summary 8.8 Exercise 8.1 Objectives After going through this unit, you will learn. • Ethical dilemma versus ethical issue; • Characteristics of ethical dilemmas; • The dilemma resolution process; • Common ethical dilemmas in different business areas-finance, marketing, HRM and international business 8.2 Introduction This is true even if you aren't sure yet what the right thing is! Sometimes the right choice is very clear, but sometimes it requires more work to figure it out. Ethical Issue is when a matter has both aspects of right and wrong. In an ethical dilemma, you must decide between doing the right thing and the wrong thing. The biggest challenge of an ethical dilemma is that it does not offer an obvious solution that would comply with ethics al norms. Throughout the history of humanity, people have faced such dilemmas, and philosophers aimed and worked to find solutions to them. 110

NSOU • PGCO-VIII 111 This chapter helps us to recognise the most common ethical issues and how to handle them. 8.3 Ethical Dilemma Versus Ethical Issue Ethical Issue is when a matter has both aspects of right and wrong. Ethical issues in business encompass a wide array of areas within an organization's ethical standards. Fundamental ethical issues in business include promoting conduct based on integrity and trust, but more complex issues include accommodating diversity, empathetic decision-making, and compliance and governance that is consistent with the organization's core values. According to the Global Business Ethics Survey of 2019, 25% of employees still feel that their senior managers do not have a good understanding of key ethical and compliance business risks across the organization. In order to manage the ethical issues in business that arises in your organization, you first need to develop a thorough understanding of what those issues can look like. Understanding how to detect and, most importantly, deter these issues before they become a problem can ensure your focus stays on business growth and success instead of remediation. 8.4 Characteristics of Ethical Dilemmas When you're unfamiliar with ethical dilemmas, it can be difficult to tell them apart from regular dilemmas and simple problems. Before you can attempt to recognize ethical dilemmas or respond to them, you need to know what sets ethical dilemmas apart. Although each ethical dilemma looks different, there are a few characteristics that they all share. • There is a right and wrong choice. In an ethical dilemma, you must decide between doing the right thing and the wrong thing. This is true even if you aren't sure yet what the right thing is! Sometimes the right choice is very clear, but sometimes it requires more work to figure it out. If you're dealing with a regular dilemma or an everyday problem, there may not necessarily be a choice that is wrong or right. • Someone (or something) could be hurt. In an ethical dilemma, someone or something could be harmed if the wrong decision is made. However, that harm doesn't just refer to physical pain—it can also mean being emotionally hurt. This could happen if the wrong decision causes someone to be upset, offended, or insulted. The hurt could also refer to harm that a business's

112 NSOU • PGCO-VIII reputation or financial situation might encounter if someone makes an unethical decision. Imagine that you work on a project with a classmate, and then the classmate takes all the credit for your work. Your classmate isn't being respectful, and now your grade will likely suffer. Or imagine that you don't want to get blamed for a mistake you made at work, so you tell your boss that your coworker made the mistake. This isn't honest, and your coworker will get in trouble. On the other hand, if you have two job offers and you're trying to decide which job is the best one for you, this isn't an ethical dilemma. It might be a tough decision for you, but no one is likely to be harmed. • They often deal with what's legal. A large part of ethical behavior is following the law. For example, if someone is considering stealing money, that's an ethical dilemma because there is a right and wrong choice—and one choice is clearly illegal. That doesn't mean that simply doing what's legal is enough, though! There are many behaviors that are technically legal but that may still be untrustworthy, dishonest, or otherwise unethical. So, in review : dilemmas are difficult situations in which you are required to make a decision. Ethical dilemmas (also sometimes referred to as ethical situations) involve deciding whether something is right or wrong.

### 8.5 The Dilemma Resolution Process

1. Establish the facts surrounding the ethical dilemma. Facts are important in law enforcement. To investigate all cases, officers must rely on facts to guard against misinformation and cognitive biases. This is also true in ethical dilemmas that we face. If the facts are not known to us, we must investigate everything that surrounds the dilemma to ensure we are acting on the right information. Avoid acting on rumours and gossip by verifying information through factual information and evidence.
2. Determine your legal obligations and duties. We must be sure what our professional and legal obligations are. Professional and legal obligations will likely allow us to easily decide on a course of action to take in an ethical dilemma. However, while professional and legal obligations may not always require a course of action that coincides with these obligations, our awareness of any professional and legal obligations must be known to allow us to be fully cognizant of the consequences of our actions should we choose to ignore professional or legal obligations.

NSOU • PGCO-VIII 113

3. Establish the interested participants involved. It is important to know who will be impacted by the course of action that we decide upon. Often the primary participants are easy to identify and it is the secondary participants that are often not considered. These may include friends, families, or employees that are related somehow to the primary participants in the ethical dilemma. Knowing the impact of the decision made to secondary participants may be particularly important for a decision made with utilitarian underpinnings; where the rights of those who are not part of the majority may not be considered.
4. Determine the ethical values of each participant. Determining ethical values is important to allow us an understanding of what is truly at stake. A participant in an ethical dilemma may value loyalty as the most important value. However, another participant may value equality as the more important value. When considered, the value of loyalty may not compare with equality, depending upon the ethical dilemma.
5. Consider normative ethical theories as an aide to determine a course of action. When considering options, normative ethical theories may assist us in determining the consequences of actions, or the duties we may be obligated to follow that fall outside of the laws, rules, and procedures. We may also assess whether the decision we are considering is rational from another perspective we have not considered. We may also settle on an option, and rely on an ethical theory to assist us in articulating the reasoning behind the option we have chosen.
6. Consider options that would be ethically sound. There may be several options to consider, and each option ought to be considered critically by determining what harm it would cause and what values the person being harmed holds. The participant should consider the positives and negatives of the decision and determine the risks and benefits associated with each option, as well as the benefits of each action, with these values in mind.
7. Consideration of the possible negative and positive outcomes of each possible option. Try to predict what may otherwise be unintended consequences of your decision. These consequences may not be readily apparent, but they require a critical analysis of the consequences of your decision. To help with this, try asking the following questions : • Would the action taken be well received if it was on the front page of a newspaper? While this should be a consideration, keep in mind that often the right decision may be the least popular in public opinion.

114 NSOU • PGCO-VIII • If the decision is job-related, would the agency or company you work for still hire you if it knew you would make this decision? If the answer is yes, then this should give weight to the decision you are about to make. • If the decision is not job-related, would the agency you would like to work for still hire you if it knew all the facts surrounding the dilemma and the decision you would make? If the answer is yes, then this should give weight to the decision you are about to make. Ethical Dilemma is when one is faced with a binary or multiple options of choice, or a confusion of understanding, based on ethics or the lack of it. An ethical dilemma (ethical paradox or moral dilemma) is a problem in the decision-making process between two possible options, neither of which is absolutely acceptable from an ethical perspective. Although we face many ethical and moral problems in our lives, most of them come with relatively straightforward solutions

### 8.5.1 How to Solve an Ethical Dilemma?

The biggest challenge of an ethical dilemma is that it does not offer an obvious solution that would comply with ethical norms. Throughout the history of humanity, people have faced such dilemmas, and philosophers aimed and worked to find solutions to them. The following approaches to solve an ethical dilemma were deduced :

- Refute the paradox (dilemma) : The situation must be carefully analyzed. In some cases, the existence of the dilemma can be logically refuted.
- Value theory approach : Choose the alternative that offers the greater good or the lesser evil.
- Find alternative solutions : In some cases, the problem can be reconsidered, and new alternative solutions may arise.

### 8.6 Ethical Issues in Business and how to address them

1. Harassment and Discrimination in the Workplace Harassment and discrimination are arguably the largest ethical issues that impact business owners today. Should harassment or discrimination take place in the workplace, the result could be catastrophic for your organization both financially and reputationally.

NSOU • PGCO-VIII 115 Every business needs to be aware of the anti-discrimination laws and regulations that exist to protect employees from unjust treatment.

- Age : applies to those 40 and older, and to any ageist policies or treatment that takes place.
- Disability : accommodations and equal treatment provided within reason for employees with physical or mental disabilities.
- Equal Pay : compensation for equal work regardless of sex, race, religion, etc.
- Pregnancy : accommodations and equal treatment provided within reason for pregnant employees.
- Race : employee treatment consistent regardless of race or ethnicity.
- Religion : accommodations and equal treatment provided within reason regardless of employee religion.
- Sex and Gender : employee treatment consistent regardless of sex or gender identity.

### 2. Health and Safety in the Workplace

Health and safety measures must be taken by an organisation to provide work safe and life safety of workers.

1. Fall Protection, e.g. unprotected sides and edges and leading edges
2. Hazard Communication, e.g. classifying harmful chemicals
3. Scaffolding, e.g. required resistance and maximum weight numbers
4. Respiratory Protection, e.g. emergency procedures and respiratory/filter equipment standards
5. Lockout/Tagout, e.g. controlling hazardous energy such as oil and gas
6. Powered Industrial Trucks, e.g. safety requirements for fire trucks
7. Ladders, e.g. standards for how much weight a ladder can sustain
8. Electrical, Wiring Methods, e.g. procedures for how to circuit to reduce electromagnetic interference
9. Machine Guarding, e.g. clarifying that guillotine cutters, shears, power presses, and other machines require point of operation guarding
10. Electrical, General Requirements, e.g. not placing conductors or equipment in damp or wet locations

116 NSOU • PGCO-VIII 3. Whistleblowing or Social Media Rants The widespread nature of social media has made employees conduct online a factor in their employment status. The question of the ethics of firing or punishing employees for their online posts is complicated. However, the line is usually drawn when an employee's online behavior is considered to be disloyal to their employer. This means that a Facebook post complaining about work is not punishable on its own but can be punishable if it does something to reduce business. In the same vein, business owners must be able to respect and not penalize employees who are deemed whistleblowers to either regulatory authorities or on social media. This means that employees should be encouraged, and cannot be penalized, for raising awareness of workplace violations online. 4. Ethics in Accounting Practices Any organization must maintain accurate bookkeeping practices. "Cooking the books", and otherwise conducting unethical accounting practices, is a serious concern for organizations, especially in publicly traded companies. 5. Nondisclosure and Corporate Espionage Many employers are at risk of current and former employees stealing information, including client data used by organizations in direct competition with the company. When intellectual property is stolen, or private client information is illegally distributed, this constitutes corporate espionage. Companies may put in place mandatory nondisclosure agreements, stipulating strict financial penalties in case of violation, in order to discourage these types of ethics violations. 6. Technology and Privacy Practices Under the same umbrella as nondisclosure agreements, the developments in technological security capability pose privacy concerns for clients and employees alike. Employers now have the ability to monitor employee activity on their computers and other company-provided devices, and while electronic surveillance is meant to ensure efficiency and productivity, it often comes dangerously close to privacy violation. 8.7 Summary In order to manage the ethical issues in business that arises in your organization, you first need to develop a thorough understanding of what those issues can look like. Understanding how to detect and, most importantly, deter these issues before

NSOU • PGCO-VIII 117 they become a problem can ensure your focus stays on business growth and success instead of remediation. Ethical Dilemma is when one is faced with a binary or multiple options of choice, or a confusion of understanding, based on ethics or the lack of it. An ethical dilemma (ethical paradox or moral dilemma) is a problem in the decision-making process between two possible options, neither of which is absolutely acceptable from an ethical perspective. Although we face many ethical and moral problems in our lives, most of them come with relatively straightforward solutions. Throughout the history of humanity, people have faced such dilemmas, and philosophers aimed and worked to find solutions to them. 8.8 Exercise Group - A 1. A \_\_\_\_\_ is a problem, situation, or opportunity requiring an individual, group, or organization to choose among several actions that must be evaluated as right or wrong. (a) Crisis (b) ethical issue (c) indictment (d) fraud 2. Ethics covers the dilemma : our rights and responsibilities (a) True (b) False Group – B 3. What are the characteristics of ethical dilemma ? 4. Explain the most common ethical dilemmas faced across the globe. 5. What are the steps involved in dilemma resolution process ? Group – C 1. Explain the most common ethical dilemmas faced across the globe. 2. What is ethical dilemma and what are the steps to be followed for dilemma resolution. Ans. Group–A : 1. (a), 2. (b)

118 NSOU • PGCO-VIII Corporate Governance Report Appointment/Re-appointment of Directors Mr. Rajan B Raheja, Non-executive Director retires by rotation in accordance with the provisions of the Companies Act, 2013 and being eligible offers himself for re-appointment at the ensuing Annual General Meeting. During the year, Mr. Bharat D Shah was re-appointed as Independent Director for a second term of five consecutive years w.e.f. 30 th April 2020 and Mr. Asish Kumar Mukherjee was re-appointed as Whole-time Director designated as Director- Finance and CFO w.e.f 1 st May 2020. Shareholders approved their re-appointments by way of Postal Ballot with the requisite majority on 25 th March 2020. Your Board of Directors wishes to record its sincere appreciation for the services rendered by Mr. Vijay Aggarwal during his long association with the Company. Mr. Raheja does not hold any Equity Shares in the Company and details as required under Regulation 36(3) of SEBI Listing Regulations has been appended to the Notice of the Annual General Meeting which is being circulated to the Members along with this report. Any person who becomes Director or Officer, including an employee who is acting in a managerial or supervisory capacity, shall be covered under Directors' and Officers' Liability Insurance Policy. The Company has provided insurance cover in respect of legal action brought against its Directors and officers for alleged wrongful acts under the Directors' and Officers' Liability Insurance subject to certain terms and conditions. Meetings and Attendance During the financial year ended 31 st March 2020, five (5) board meetings were held on 30 th April 2019, 2 nd August 2019, 6 th November 2019, 4 th February 2020 and 24 th February 2020 respectively. The previous Annual General Meeting was held on 3 rd August 2019. Directors' attendance at Board Meetings and at Annual General Meeting (AGM) : Name of Director No. of Board Attendance at Meetings Attended last AGM Mr. Bharat Dhirajlal Shah 5 Yes

NSOU • PGC0-VIII 119 Name of Director No. of Board Attendance at Meetings Attended last AGM Mr. Rajan B Raheja 3 – Mr. Gautam Chatterjee 5 Yes Mr. Asish Kumar Mukherjee 5 Yes Mr. Subir Chakraborty 4 Yes Mr. Arun Mittal 5 Yes Mr. Vijay Aggarwal\* 2 – Ms. Mona N Desai 5 Yes Mr. Sudhir Chand 5 Yes Mr. Nawshir H Mirza 5 Yes Mr. Surin Shailesh Kapadia 5 – Independent Directors Independent Directors play a significant role in the governance processes of the Board by enriching the Board’s decision making and also preventing possible conflicts of interest that may emerge in such decision making. The Company has appointed Independent Directors for a term of five years from their respective dates of appointment as per the requirements of the Companies Act, 2013 (“Act”) and

**100% MATCHING BLOCK 190/230 SA** Kotak comm-Abhigyan.docx (D40491398)

Securities & Exchange Board of India (Listing Obligations & Disclosure Requirements) Regulations, 2015 (

hereinafter referred to as “SEBI Listing Regulations”). The Nomination and Remuneration Committee identifies candidates based on certain laid down criteria and takes into consideration the need for diversity of the Board and accordingly makes recommendation to the Board. None of the existing Independent Directors serves as Independent Director in more than seven listed companies in line with the requirements of SEBI Listing Regulations. The said Independent Directors have also confirmed that they meet the criteria of independence as laid down in the Act and SEBI Listing Regulations, as amended and they are not aware of any circumstance or situation, which exist or may be reasonably anticipated, that could impair or impact their ability to discharge their duties with an objective independent judgment and without any external influence.

**66% MATCHING BLOCK 191/230 SA** Management of IDBI.docx (D17540507)

In the opinion of the Board, the Independent Directors fulfill the conditions specified in the

SEBI Listing Regulations and are independent of management.

120 NSOU • PGC0-VIII Directors’ Induction, Training and Familiarisation The Board is responsible for the selection of new directors on the recommendations received from the Nomination and Remuneration Committee. After getting appointed, the directors receive a formal letter of appointment which, inter alia, explains the role, functions, duties and responsibilities expected from him/ her as a director of the Company. The director is also explained in detail the compliances required to be made under the Act and the SEBI Listing Regulations and other relevant regulations. By way of an introduction to the Company, the director is presented with the Company profile, annual reports and an overview of the Company’s manufacturing facilities. All Non-executive directors newly inducted in the Board are introduced to the Company through appropriate orientation sessions. Presentations are made by various Executive Directors and Senior Management Personnel and site visits to various plant locations are organised for them to provide a complete oversight into the Company’s operations and business. Detailed presentations on Company’s business segments, if any, performance updates, global business environment, business strategy and risks involved are periodically made at the board meetings during the year. The details of such familiarisation programmes for Independent Directors along with the familiarisation policy are available on the company’s website at [http:// www.exideindustries.com/investors/governance-policies.aspx](http://www.exideindustries.com/investors/governance-policies.aspx) Board Portal – Meetings Management System With a view to leverage advancement in technology and reducing paper consumption, the Company has a web-based application for transmitting Board/ Committee agenda. The Directors of the Company receive the agenda in electronic form through this application, which can be accessed through browsers and iPads/ tablets. The application meets high standards of integrity and ensures confidentiality that is required for storage and transmission of Board/Committee agenda in electronic form. Code of Conduct for Directors and Senior Management Personnel All Directors and members of the Senior Management have affirmed their compliance with the Code of Conduct for Board of Directors and Senior Management Personnel (SMP) as on 31 st March 2020 and a declaration to that effect, signed by the Managing Director & CEO is enclosed and forms part of this report. The Code

NSOU • PGCO-VIII 121 of Conduct for Board of Directors and SMP has also been posted on the website of the Company at <http://www.exideindustries.com/investors/governance-policies.aspx> Committees of the Board The constitution, terms of reference and the functioning of the existing Committees of the Board is explained below. Each of these Committees demonstrates the highest levels of integrity and has the requisite expertise to handle issues relevant to their field. A. Audit Committee The Audit Committee acts as an interface between the Statutory Auditors and Internal Auditors, the Management and the Board of Directors. The Committee is governed by a Charter which is in line with the regulatory requirements mandated by the Act and SEBI Listing Regulations which was reviewed and amended by the Board of Directors during the year. The role / terms of reference of the Audit Committee is to – (a) Assist the Board of Directors of the Company in fulfilling its responsibilities to oversee the : (i) Company’s financial reporting process; (ii) the integrity of the Company’s financial statements according to the authority and responsibilities provided in the Charter; (iii) Auditors’ appointment, qualifications and independence; (iv) the performance of the Company’s internal audit function and that of statutory auditors. (b) Oversee the reporting requirements for inclusion in the Company’s annual report. (c) Laying down the criteria for granting the omnibus approval in line with Policy on Related Party Transactions and such approval shall be applicable in respect of transactions which are repetitive in nature. (d) Review with management of quarterly and annual financial statements. (e) Review the compliance of risk management system, adequacy and effectiveness of internal financial controls and system

**100% MATCHING BLOCK 192/230 SA L.L.M DISSERTATION.docx (D110942008)**

to ensure compliance with the provisions of all applicable laws. (

f) Review the compliance of SEBI (Prohibition of Insider Trading) Regulations, 2015, as amended from time to time and verify adequacy and effectiveness of internal control system to ensure its compliance.

122 NSOU • PGCO-VIII The role / terms of reference of the Audit Committee are in conformity with the SEBI Listing Regulations read in conjunction with Section 177 of the Companies Act, 2013. In addition to quarterly meetings for consideration of financial results, special meetings of the Audit Committee are convened. In these meetings, the Audit Committee, inter-alia, reviews various matters arising out of internal audit, control assurance reports and other areas as per its terms of reference. Composition and Attendance The Audit Committee at present has five (5) directors out of which four (4) are Non-executive Independent Directors. Mr. Nawshir H Mirza, Chairman of the Committee, is a Non-executive Independent Director and a Chartered Accountant, acknowledged as a financial expert in his own right. All the other members are well- versed in corporate finance and related areas. During the financial year ended 31 st March 2020, six (6) Audit Committee meetings were held on 30 th April 2019, 2nd August 2019, 30 th September 2019, 6 th November 2019, 4 th February 2020 and 19 th March 2020 respectively. The composition and attendance of the Committee meetings are as follows : Name of Director Category Designation Number of meetings attended Mr. Nawshir H. Mirza Independent Chairman 6 Non-executive Mr. Vijay Aggarwal \* Independent Member 2 Non-executive Ms. Mona N Desai Independent Member 6 Non-executive Mr. Sudhir Chand Independent Member 6 Non-executive Mr. Surin Shailesh Kapadia Independent Member 6 Non-executive Mr. Gautam Chatterjee \*\* Executive Member – \* Ceased to be director upon completion of tenure on 3 rd August 2019 \*\* Inducted as Member w.e.f. 20 th April 2020

NSOU • PGCO-VIII 123 The Chairman of the Committee was present at the Annual General Meeting of the Company held on 3 rd August 2019. The Managing Director & CEO, Director- Finance & CFO and other executive directors are permanent invitees to the Audit Committee meetings. The representative(s) of the Statutory Auditors also attend the Audit Committee meetings. The Company Secretary acts as the Secretary to the Committee. Other members of the management and Chief-Internal audit are also invited as may be required from time to time. During the year under review, the Audit Committee held a separate meeting with the Statutory Auditors to obtain their inputs on significant matters relating to their respective areas of audit without the presence of the management. B. Nomination & Remuneration Committee The terms of reference of the Nomination and Remuneration Committee inter alia includes the following : (i) To

**100%**

The Commission for the year ended 31 st March 2020 will be paid, subject to deduction of tax, after adoption of accounts by the Members at the ensuing Annual General Meeting. 2. The sitting fee paid to the Non-executive Directors is towards attending the Board and Audit Committee meetings held during the year. 3. Ceased to be director upon completion of tenure on 3 rd August 2019 Notes : All the Executive Directors of the Company have been appointed on a contractual basis. According to the contract, the notice period is three months.

126 NSOU • PGCO-VIII Payment of remuneration to the Executive/Whole-time Directors of the Company is governed by the terms and conditions of their appointment as recommended by the Nomination and Remuneration Committee and approved by the Board subject to the approval of the Shareholders and the Central Government, where applicable. Non-Executive/Independent Directors of the Company receive remuneration by way of fees for attending meetings of the Board or Committee thereof as approved by the Board from time to time within the prescribed limits. Non-executive Independent Directors may also be paid commission as approved by the Shareholders subject to a limit of 1 per cent of the net profits of the Company computed under the applicable provisions of the Companies Act, 2013. The Commission payable to the Independent Directors is determined by the Board upon the recommendation of Nomination & Remuneration Committee within the aforesaid limit of 1 per cent of the net profits after taking into account their attendance roles and responsibilities in various Committees of the Board, their operational and functional expertise and contribution made by them. Following the approval of the Shareholders in the Annual General Meeting held on 3 rd August 2019, the payment of commission to Non-executive Directors has been determined by the Board, which is well within the ceiling of 1 per cent of net profits of the Company for the year ended 31 st March 2020 as computed under applicable provisions of the Companies Act, 2013. The allocation of the Commission amongst the eligible Non-executive Independent Directors has been decided by the Board with each interested director present not participating in the deliberations in respect of his/her own commission. Shareholding of Non-executive Directors Name of Director No. of shares held as on 31 st March 2020 Ms. Mona N Desai 78,666 Mr. Sudhir Chand 18,872 Mr. Nawshir H Mirza 437 Apart from the above, there was no pecuniary relationship or transactions between the Company and Non-executive Directors. The performance criteria for the payment of remuneration to the Directors are in line with the Nomination and Remuneration Policy of the Company. Board Membership Criteria and list of core skills / expertise / competencies identified in the context of the business : In terms of requirement of SEBI Listing Regulations, the Board has identified NSOU • PGCO-VIII 127 the following core skills / expertise / competencies of the Directors in the context of the Company's business for effective functioning as given below : Definitions of Director's Qualifications Leadership Extended leadership experience for a significant enterprise, resulting in a practical understanding of organisations, processes, strategic planning, and risk management. b) Details of non-compliance by the Company, penalties, strictures imposed on the Company by the stock exchanges or SEBI or any statutory authority on			

any matter related to capital markets during the last three years. There was no such instance of non-compliance during the last three years. (c) Whistle Blower Policy/Vigil Mechanism In accordance with the provisions of the Companies Act, 2013 read with the Companies (Meeting of Board and its Powers) Rules, 2014 and SEBI Listing Regulations, every listed Company is required to have a vigil mechanism for the directors, employees and stakeholders to report their genuine concerns and grievances. The Company has a whistle-blower policy in place and the same is also available on the website of the Company. The Audit Committee of Directors is entrusted with the responsibility to oversee the vigil mechanism. During the year, no personnel were denied access to Audit Committee. The Whistle-Blower Policy is uploaded on the Company's website under the following web-link <http://www.exideindustries.com/investors/governance-policies.aspx> (d) Policy on Material Subsidiaries In accordance with the requirements of Regulation 16(1)(c) of SEBI Listing Regulations the Company has a policy on material subsidiaries. The policy on material subsidiaries have been uploaded on the Company's website under the following web-link <http://www.exideindustries.com/investors/governance-policies.aspx>

138 NSOU • PGO-VIII (e) Dividend Distribution Policy In accordance with Regulation 43A of SEBI Regulations, 2015, the Company has framed the Dividend Distribution Policy approved by the Board of Directors of the Company. The Dividend Distribution Policy of the Company endeavors to maintain a consistent approach towards dividend payment to its shareholders and regulate the process of dividend declaration and its payout by the Company in line with the laws in force. The Policy, inter alia, covers the financial parameters that will be considered when declaring dividends, internal and external factors that would be considered for declaring dividends and the circumstances under which shareholders can or cannot expect dividend. The Policy has been uploaded on the Company's website. The web-link is <http://www.exideindustries.com/investors/governance-policies.aspx> (f) As required under the provisions of the law, all other policies and disclosures are uploaded on the website of the Company at <http://www.exideindustries.com/investors/governance-policies.aspx> Investors are encouraged to visit the website of the Company to access such documents. (g) All mandatory requirements have been appropriately complied with and the non-mandatory requirements are dealt with at the end of the report. (h) Disclosure of commodity price risk and commodity hedging activities Lead and lead alloys are the primary materials consumed in the manufacture of batteries representing more than 70 per cent of total material consumption by value. The Company procures about 30 per cent of its lead and lead alloys requirement through imports or import parity pricing based on prices quoted on London Metal Exchange (LME). Balance 70 per cent of its lead and lead alloys are procured from local smelters, including its own smelters, prices of which are influenced by demand/supply situation as well as LME price movement. At times, prices of lead and lead alloys become volatile due to sudden changes in demand/supply situation as well as LME price movement due to international forces. The Company procures lead and lead alloys mostly at current pricing or on LME averages and there is no long-term contract for pricing.

NSOU • PGC0-VIII 139 About 30 per cent of the Company's business with OEMs as well as institutional customers have a "Lead price variation clause" (Lead price denominated pricing). Hence, this portion of the business is protected from lead price volatility. Balance 70 per cent of the Company's business to retail customers are exposed to lead price volatility as prices are determined by market forces. However, increasing usage of recycled lead, replacing consumption of pure lead, which is cheaper than pure lead and not directly exposed to LME price movement, to some extent reduces the risk of lead price volatility. Exposure to currency fluctuations and its impact on the Company's business is significant since about 30 per cent of lead and lead alloys procurement is based on "import parity price." Moreover, there are imports of a few other materials as well as most of the capital goods (machineries). While exposure to currency fluctuation on lead and lead alloys cost is to some extent mitigated as stated above, exposure on account of other imports remains. However, exports, which constitute about 7 per cent of the Company's business, act as an automatic hedge against risks resulting from currency fluctuation. As a policy, the Company does not enter commodity hedging. Accordingly, as on the date of reporting, there was no open position held by the Company on commodity futures or options. Same principle applies in case of currency also. Very few "forward covers" are taken, at times, against import liabilities, when the situation warrants. As at end of March 2020 there was no "forward cover contract" which remained open, for foreign currency liability.

(i) Certificate from Practising Company Secretary Certificate as required under Part C of Schedule V of SEBI Listing Regulations, received from Sushil Tiwari & Associates (ACS-6199/CP- 1903), Company Secretary, in practice certifying that none of the directors on the Board of the Company is debarred or disqualified from being appointed or continuing as directors of companies by the Board/Ministry of Corporate Affairs or any such statutory authority, is annexed at the end of this Report. (j) Total fees paid to Statutory Auditors of the Company Total fees for all services paid by the Company and its subsidiaries, on a 140 NSOU • PGC0-VIII consolidated basis, to the statutory auditor and all entities in the network firm/ network entity of which the statutory auditor is a part –Rs. 2,19,99,413/- (k) Disclosures in relation to the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013 : The status of the complaints filed, disposed and pending during the financial year ended 31 st March 2020 is given below : No. of complaints filed during the year 2019-20 1 No. of complaints disposed during the year 2019-20 Nil No. of complaints pending during the year 2019-20 1 \* \* The complaint was received in March 2020 and was under investigation by the Internal Complaints Committee at the end of the financial year. The investigation has since been completed and necessary action has been taken by the Company as on the date of this report. <b>72%</b>	<b>MATCHING BLOCK 202/230</b>	<b>SA</b>	Dissertation Prietesh_Role of Independent Dire ... (D111327491)
Director is a Director, who in the opinion of the Administrative Ministry is a person of integrity and possesses relevant expertise, experience.			

As already stated, all the Directors including Independent Directors are appointed by the Administrative Ministry. Further, the mechanism of evaluation of the Independent Directors as stated in paragraph VIII of Schedule IV to the Companies Act, 2013 does not apply in the case of a Government company, if the requirements in respect of matters specified in the said paragraph are specified by the concerned Ministries or Departments of the Central Government. Since the evaluation of performance of all the Directors is carried out by the Administrative Ministry and the Department of Public Enterprises, the Board of Directors is not in a position to give such confirmation as required under para C 2(i) of Schedule V to SEBI (LODR) Regulations, 2015 (as amended). Reasons of resignation of Independent Director(s) During the year none of the Independent Director(s) resigned before the expiry of his/her tenure. The directorship of Smt. Atreyee Borooh Thekedath ceased on account of completion of her tenure. Committees of the Board Audit Committee Terms of Reference The terms of reference of the Audit Committee was revised with effect from 1 st April, 2019 to make it in line with the Companies Act, 2013, ("the Act"), SEBI (LODR) Regulations, 2015 (as amended) and the Guidelines on Corporate Governance for Central Public Sector Enterprises, 2010 by Department of Public Enterprises (DPE). The terms of reference (as amended) of the Committee are as follows :

NOTE : The Nomination & Remuneration Committee was reconstituted with effect from 7 th December, 2019 \*Smt. Atreyee Borooah Thekedath ceased to be the Director of the Company w.e.f. 31 st January, 2020. # Shri Anil Kumar Upadhyay was appointed as member of the Committee w.e.f. 7 th December 2019. Remuneration Policy Balmer Lawrie (BL) is a CPSE under the administrative control of MoPNG and for all purpose we follow the relevant and applicable guidelines. There are four levels under which the matter is dealt with, these are as under : (a) For Members of the Board (b) For Executives below the Board Level (c) For non-Unionised Supervisors (d) For unionised categories of employee through collective bargaining. In matters related to the members of the Board, Executives below the Board Level, we are strictly governed by the Department of Public Enterprises [DPE] guidelines, issued from time to time and ensure compliance to all such guidelines and practices. The matter of finalization of remuneration, including wages and 156 NSOU • PGCO-VIII benefits of non-Unionised Supervisors is overseen by the Board of BL and it is essentially in line with DPE guidelines as applicable. For the unionised category the matter is decided based on a 5 years settlement period where the terms are decided based on collective bargaining. In this case the basic premises that governs the boundaries of any agreement is as laid out by the DPE. In all cases the Board of BL oversees all the above matters in the light of compliance of Government Guidelines and ethical Corporate Governance practices. Balmer Lawrie in fulfilling the statutory requirements has also a fully functional Nomination & Remuneration Committee. Performance evaluation criteria for Independent Directors on the Board. The Company being a Government Company, the criteria of independence as per Section 149 of the Companies Act, 2013 is determined by the Administrative Ministry. Hence, the evaluation criteria and such evaluation of Directors is done by the MoPNG.

Remuneration of Directors (a) There was no pecuniary relationship or transaction of any non-executive director vis-à-vis the Company

except the sitting fees paid to the Independent Directors, which has been detailed in this report as well as MGT-9 as attached to the Board's Report. (b) By virtue of Article 7A of the Articles of Association of the Company, the President of India is entitled to decide the terms and conditions of appointment of the Directors. This, inter alia, includes determination of remuneration payable to the Whole-time Directors. Non-Executive Independent Director is entitled to sitting fee for attending the Board and Committee Meetings. The sitting fee has been revised by the Board of Directors w.e.f. 5 th February 2020 at Rs. 20,000/- (Rupees Twenty Thousand only) per meeting of the Board and at Rs. 15,000/- (Rupees Fifteen Thousand only) for every Committee meeting attended by them. No sitting fee is paid to the Whole- time Director /Non-Whole time Government Nominee Director for the meetings of Board of Directors or Committees attended by them.

The first major initiative was taken by the Confederation of Indian Industry (CII), India's largest industry and business association, which came up with the first voluntary code of corporate governance in 1998. More than a year before the onset of the East Asian crisis, CII had set up a committee

to examine corporate governance issues, and recommend a voluntary code of best practices. Drawing heavily from the Anglo-Saxon Model of Corporate Governance, CII drew up a voluntary Corporate Governance Code. The first draft of the code was prepared by April 1997, and the final document, Desirable Corporate Governance: A Code, was publicly released in April 1998. The code was voluntary, contained detailed provisions, and focused on listed companies. However, the CII Code'

companies. Although the CII Code was welcomed with much fanfare and even adopted by a few progressive companies, it was felt that under Indian conditions a statutory rather than a voluntary code would be far more purposive and meaningful. Consequently, the second major corporate governance initiative in the country was undertaken by SEBI. 44

<p>The fourth initiative on corporate governance in India is in the form of the recommendations of the Narayana Murthy committee. The committee was set up by SEBI, under the chairmanship of Mr. N. R. Narayana Murthy, to review Clause 49, and suggest measures to improve corporate governance standards. Some of the major recommendations of the committee primarily related to audit committees, audit reports, independent directors, related party transactions, risk management, directorships and director compensation, codes of conduct and financial disclosures. The Murthy Committee, like the Birla Committee, described the international developments as a factor that motivated reform and stated that recent failures of corporate governance, particularly in the United States, combined with the observations of India's stock exchanges that compliance with Clause 49 up to that point</p>

### PREFACE

In the curricular structure introduced by this University for students of Post- Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout

of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Accounting and reporting provide necessary information about the economic and business health of a business organization by means of which not only the business organizations take business decisions more effectively and prudently but also the 9

10 NSOU • PGC0-X users of accounting information used to take several crucial investment decisions and as such accounting is called the language of business. Business enterprises follow the accounting and reporting practices of a country to which it belongs. In international perspectives, it is observed that various countries of the world have diverse accounting and reporting backgrounds. The business enterprises operating in these different countries resort to diverse accounting and reporting practices of a particular country to which they belong which make it a real hurdle for the global users to understand the meaning and interpretations of global accounting and reporting of various enterprises. This very often makes the business decision making risky and inappropriate leading to business failure and jeopardy. The need for a uniform accounting and reporting practices crops up to mitigate the deadlock in understanding the diverse accounting and reporting practices followed by businesses across the globe. This has resulted in the emergence of international accounting and reporting practices to be developed and adopted by all as far as practicable in the global sphere to instill a uniform standard of accounting and reporting for ease in international comparison and better cross-border trade in the present era of free trade regime across the globe.

### 1.2 International Accounting—Definition and Concept

International Accounting is defined as the global process of accounting fitted with accounting principles and reporting practices keeping in view the best practices followed by different countries of the world. International accounting involves the process of accounting relating to international transactions and other operational activities of various organizations engaged in international trade and commerce by prescribing accounting principles and practices that should be followed for achieving excellence in accounting and reporting in international perspectives. International accounting refers to that system of accounting which incorporates several best practices for accounting and reporting purposes prevailing around the globe with an attempt to develop and inculcate a universal approach of accounting and reporting for overall acceptance and perception by all irrespective of the domicile of users of accounting information. The evolution of international accounting has been the corner stone approach in maintaining and regularizing the process of accounting in international perspectives to match with the ultimate need of accounting to supply useful information to

NSOU • PGC0-X 11 different global users in a best possible manner. Accounting and reporting are highly intertwined to each other and are of great significance to deal with various issues related to business functions, growth and sustainability. A business cannot be expected to operate in an efficacious manner especially in the present era of international trade where trade is free from international protection by means of reducing the barriers to international trade and is very much exposed to both national and international competition unless it adopts the international practices and guidelines of accounting and reporting. The various decisions concerning inflow of foreign capital, foreign exchange, use of foreign technology, cross-border trades etc. are very much dependent on the nature of accounting and reporting practices followed by an organization. The use of international accounting and reporting practices followed by an organization makes the organization a real harbour for international trade and foreign players become very much interested to maintain business relations with such an organization. The reason is very clear since by adopting the international accounting and reporting practices, the economic as well as financial health of such an organization becomes easily understandable and perceptible to the foreign players who can undertake international comparison for taking effective and viable economic decisions. International accounting is not fundamentally different from traditional concept of accounting but it emphasizes on the method of accounting and reporting that can be globally accepted and understood fortified with the basic needs of integrity, comparability, transparency, understandability in accounting and reporting. Under the concept of international accounting there are thus several interacting issues like recording and translation of foreign transactions, convergence and harmonization of accounting standards followed by various global counterparts, preparation and promulgation of international accounting standards and international financial reporting standards etc. in tune with the international generally accepted accounting principles, conventions, practices followed by different countries of the world. International accounting is a specially within the entire discipline that focuses on using specific accounting standards that are relevant in the country as they are when the books of accounts are balanced with foreign counterparts globally comparable accounting standard promote transparency accountability and efficiency in the financial market around the globe.

12 NSOU • PGCO-X 1.3 Need and significance of International Accounting International accounting is very much concerned with identifying and highlighting the best international practices in accounting and reporting so as to maintain integrity, acceptability, understandability of accounting information by the global users. The present trend of free international trade has opened up and accelerated the scope of participation in foreign trade and commerce. Several small agencies, MNCs, corporate houses are found engaged in foreign trade across the globe. The participating firms, MNCs etc. belong to various countries which have distinct foreign exchanges, domestic accounting and reporting practices which are highly divergent. This very often leads to deadlock in understanding, interpreting and conceptualizing as well as communicating the accounting information conveyed by different firms operating in different countries since they are as diverse as the number of diverse economies take part in foreign trade. Business firms intending to operate in international platforms used to face stringencies in garnering foreign capital, technology, foreign direct investment etc. because of the lack of understandability, information communication owing to maintaining of accounts and reports by the firms in their domestic patterns and techniques. Consequently, the complexities involved in domestic accounting and reporting practices lead to disruption in international trade and commerce. The diversity in accounting and reporting aggravates further with the participation of diverse economic entities in the international platform. The role of international accounting is crucial and highly relevant to tackle the problems in managing diversity in accounting and reporting associated with international trade. Accordingly, international accounting under the aegis of various internationally reputed and accredited accounting and professional bodies like AICPA, IASB, FASB, IOSCO has formulated and issued several international accounting standards and financial reporting standards to cope with the operational complexities and diversities owing to socio-economic, political, cultural, technological and perceptual differences prevailing among the participating nations across the globe. 1.3.1 Needs of International Accounting International accounting has its magnificent role in managing different issues

NSOU • PGCO-X 13 faced by different nations in international trade and commerce. Diversity in accounting and reporting in international sphere acts as a major threat to achieve success in foreign trade despite its liberty in the free trade regime. The use of different terminologies in accounting, different concepts for recognitions of assets and liabilities, diversity in recording of transactions, valuations etc. by different nations have the striking adversity to achieve success in international trade. The following are the needs for studying international accounting: (a) International accounting significantly helps in outlining the ways and means to alleviate disparity in accounting and reporting practices followed by global firms. (b) It facilitates the harmonization and convergence process of divergent accounting and reporting practices prevailing around the globe at par with the best practices recommended by various internationally reputed accounting and professional bodies. (c) It helps to develop and formulate universally accepted accounting standards and financial reporting standards to reduce diversity in accounting and reporting across the national frontiers. (d) International accounting highlights the methodology to be adopted in foreign currency translations to make the domestic financial accounting and reporting information more user-friendly and appropriate to help undertake viable economic and investment decisions by foreign counterparts. (e) It helps to improve acceptability, understandability, transparency, comparability in accounting and reporting by removing divergence in accounting and reporting practices of the global participants in foreign trade. (f) The universality in accounting and reporting practices fortified by international accounting helps to strengthen international trade by accelerating the pace of inflow of foreign capital, FDI, foreign technology etc. for the cause of resource mobilization in international platform. (g) International accounting has the capacity to make international trade and commerce more fruitful and lucrative to the foreign traders because of the ease in cross-border trade by adopting the universally accepted international accounting and reporting practices.

14 NSOU • PGCO-X (h) International accounting has made it possible to bring harmony in accounting and reporting practices by bringing various recognized accounting and professional bodies of the world to work together to devise and formulate universally accepted policies in accounting and reporting. (i) The primary purpose of universally accepted, dependable, transparent, understandable, ethical and comparable accounting and reporting as well as disclosure requirements have got the momentum through international accounting across the globe. 1.4 Development in Accounting The history of development in accounting around the globe has been long cherished consequent on the continuous improvement of business activities. Accounting has its classic role to respond to various socio-economic situations reflecting economic, legal, cultural as well as political environment within which the business activities operate and flourish. The issues related to business and societies are as diverse as the countries engaged in trade and commerce. In fact, the socio-economic status of a country is highly interdependent on the level of economic activities carried on through business and trade pertaining to a specific country. Business has a magnificent role to influence and represent the social lives of a nation since society and business are interrelated to each other and one without the effective co-ordination of other becomes ineffective and cannot grow and survive. As such, the social cultures, likes and dislike, socio-economic status, political situations etc. are reflected through the language of business i.e. accounting. It is also to be mentioned here that the differences in socio-cultural-economic issues of various economies make the accounting practices highly divergent in nature around the globe. This diversity in accounting practices of several economies act as an impediment to international trade practices and make a barrier to foreign trade and commerce. To overcome this hurdle and to facilitate the free international trade, development of accounting practices has been very much significant. The international market players have given much emphasis to develop international accounting to provide a uniform platform of accounting practices to be followed by all participating international trade so as to ensure acceptability, understandability, comparability etc. in accounting and reporting.

NSOU • PGCO-X 15 1.4.1 Factors influencing the development of International Accounting The domestic pattern of accounting followed by different world economies are as diverse as the number of countries that follow accounting and reporting practices as per the socio-economic-political environment prevailing therein. Developed economies like USA, UK, France, Germany etc. follow the accounting practices in a compact manner to give emphasis on investors' protection, shareholders' value creation, better corporate governance, and transparency in disclosure etc. by adopting US GAAP and/or International Standards on Accounting issued by IASB. While most of the underdeveloped economies fail to do so in their accounting practices and as a result, the diversity in accounting practices crops up to work as a barrier to international trade and thus boost up the need for development of international accounting. The different issues that substantially influence the development of international accounting may be highlighted as below : (a) Sources of Finance : Accounting practices vary greatly due to diversity in sources of finance. In many developed countries like UK, USA etc. equity market oriented finance in business is deeply noticed where accounting practices gives focus on shareholders' value creation, return on investment as well as protecting their interests to help take appropriate business decision and risk aversion. In contrast, many other economies like France, Germany, Japan etc. mostly depend on institutional finance from banks and other financial organizations instead of equity finance for business investments. In this mode of business finance, accounting practices concentrate on protecting the interests of creditors and suppliers' of finance by adopting conservative practices in accounting since the banks and other suppliers of finance significantly control the businesses and get in well- touch of economic information being part of insider management. Accounting and disclosure practices in such cases remain mostly confined and less- public. (b) Legal System : The different legal systems prevailing in different countries make it highly inconvenient to operate in global market. Legal system refers to the system that describes how individuals and institutions interact with each other. Based on the nature of interactions between the individuals and

16 NSOU • PGCO-X the institutions in carrying out economic activities, legal frameworks are planned and implemented. Some countries follow stringent code of conducts and are also applied in economic activities to maintain accounting and reporting in a robust manner. In such cases, business enterprises have to follow specific accounting and reporting practices strictly as per code while other countries are not in a position to follow these since they do not have code of conducts and rules but they have their common law based guidelines to follow. These common law based guidelines are sometimes found to be flexible and have laxity in many cases. This diversity in legal system needs the development of international accounting to ensure universal approach in accounting. (c) Taxation Policy : Taxation policy followed by different world economies is independent in nature and scope. The economic result (business profit) is very often computed separately for accounting and tax purposes. Some countries determine profit uniformly for accounting and tax purposes while others determine accounting profit first and then by adjusting various expenses and incomes as per the existing tax laws compute taxable profits. In India, this practice is followed along with other nations. The use of accounting standards makes the difference in computing business profit significantly. The international taxation policy also has a great bearing in developing international accounting. (d) Socio-economic-political Environment : The wide diversity in social and political status significantly changes the business operations and their accounting practices keeping in view the needs and aspirations of the society, its people and the political regime going on. The state of economy, economic environments, level of inflation, nature of economic institutions, people's participation, domestic market players and foreign market players including MNCs etc. of a country strongly influence the accounting practices followed by it. It is, therefore, very much important to develop international accounting to prescribe the use of accounting practices by every nation to ensure uniformity irrespective of the state of their socio-economic-political environment. (e) Increasing Trend in International Trade : The economic liberalization and NSOU • PGCO-X 17 free trade policy across the national frontier have zoomed up international trade significantly relating to free flow of goods, services and capital. Many nations, whether developed or under-developed, rich or poor have been found to join the international platform with much of enthusiasm to deal in foreign trade. This ever-increasing trend in international trade participation by various world economies spurs the complexities involved in different accounting practices followed by different countries. To overcome this difference in accounting practices, the development of international accounting is considered very much important so as to accelerate the international flow of capital. (f) Diversity in Global Accounting and Reporting leading to Convergence Process : The wide diversity in global accounting and reporting practices seriously affect international trade for the difficulty in understanding and realizing the global accounting reports by different users. The convergence of accounting standards is aimed at reducing the difference in accounting and reporting practices followed by different world economies such that accounting and reporting become understandable, reliable and comparable to the users for taking appropriate economic decisions. The convergence of accounting practices is very much helpful to avoid ambiguity and lack of understanding by the global users of the accounting and reporting prepared by various countries as per their own sets of accounting and reporting rules and techniques. Development of international accounting is a step towards the convergence of accounting procedure across the globe to establish transparency and comparability in global accounting and reporting practices. (g) Level of Education and Cultural Background : Level of education as well as cultural background significantly influence the development of international accounting process. Accounting and reporting practices based on highly sophisticated accounting standards followed by developed countries may not be easily understood by other nations. Development and implementation of international accounting is considered very much important to help the culturally and educationally backward nations understand and conceptualize the highly standardized accounting and reporting in a much more competent manner to take appropriate economic decisions.

18 NSOU • PGCO-X 1.5 Scope of International Accounting The international accounting is much wider in scope and application consequent on the global need of it to cover different aspects on accounting and reporting across the globe. International accounting is aimed at providing guidelines to make the diverse accounting and reporting practices to merge into a unified system to ensure reliability, acceptability, comparability and adaptability of accounting information by the different stakeholders. The operational activities of international accounting looks forward and directs the manner and philosophy of recording international transactions, translation of foreign currency, preparation of inflation adjusted financial statements, accounting for transfer pricing, consolidation of foreign financial statements, foreign exchange risk management, international taxation etc. How international accounting assists these areas to make them fit for international acceptance may be described as follows : (a) Recording of international transactions : International transactions include transactions on export and import of goods and services, foreign lending and borrowing, conversion of one foreign currency into another foreign currency, foreign investments, unrequited money transfer etc. entered into between two or more foreign countries. International accounting starts with providing the guidance to record these transactions in line with the best international practices and standards. While prescribing the recording modalities of these transactions, international accounting highlights two approaches – single approach and dual transactions approach based on the dates of incurring the transactions viz. initial transaction date, interim reporting date and transaction settlement date. (b) Foreign Currency Translation : Foreign currency translation is the approach to convert the financial information of the foreign subsidiary of a parent company to the reporting currency of the parent company. Financial statement consolidation process by means of foreign currency translation is one of the key activities of international accounting. The translation of foreign currency is very much helpful for performance evaluation of globally dispersed subsidiaries of a parent company by restating the financial information and reports of the subsidiaries into the currency of the parent company. Foreign currency translation process is inherently concerned with the identification NSOU • PGCO-X 19 of functional currency of the foreign subsidiaries so as to restate

**65%**

**MATCHING BLOCK 1/150**

**W**

the financial statements of the foreign entities into the reporting currency of the parent company and thereafter to record the gains and losses of the translation

process. (c) Global Inflation : The level of inflationary situations prevailing in different parts of the globe significantly influences the development of international accounting. Price level changes across the global market frequently change the purchasing powers of goods and services and also distort the contents of financial statements representing profit figure, statement of affairs etc. International accounting provides the necessary guidelines to adopt measures to neutralize the impact of inflation on financial information. This is very much needed to make global financial reporting more acceptable and comparable to all in global spheres. (d) Global Financial Statement Analysis : Analysis of global financial statements which are prepared by various countries on the basis of their different accounting and reporting practices is highly relevant for the global users. This is so because the contents and manner of presentation of the global financial information are highly divergent and imperceptible in many cases to others. With the help of international accounting, analysis of global financial statements becomes really conducive to understand and interpret for taking appropriate economic decisions by the different users. (e) Segment Reporting : Segment reporting is an approach to report on various business segments based on geographical locations or on operational activities to disclose specific segmental information for better appraisal. International Accounting Standard 14 clarifies the classification of business into identifiable segments as also their accounting and disclosure practices for effective assessment and economic appraisal of different segments. (f) Transfer Pricing : In international transactions, transfer pricing occupies a crucial role. Multinational corporations working in different countries adopt transfer pricing as a measure to off-set the tax jurisdictions applicable in different countries. IAS 14 on segment reporting defines transfer pricing as “the pricing of products and services between industry segments or geographical areas’. International accounting highlights the adjustment

20 NSOU • PGCO-X process to reassess international financial results of multinational corporations which undertake transfer pricing mechanism. (g) Consolidation of Foreign Financial Statements : Consolidated financial statements disseminate financial results and financial positions of a group of interrelated companies as a unified whole for better understanding of the group performance by the different stakeholders. Preparation of consolidated financial statements of various interrelated business corporations working in different countries makes the consolidation process complex because of using different accounting backgrounds by the global parent corporations and their subsidiaries. International Accounting Standards 27 prescribes the detail procedure for the preparation and presentation of consolidated financial statements from the accounts of various foreign corporations in a uniform base for the overall benefits of different users in a fair and transparent manner. (h) Foreign Exchange Risk Management : Foreign exchange risk management is another important issue where international accounting has its role to play. Foreign exchange risk management of an enterprise is primarily concerned with monitoring and managing foreign exchange exposure with a view to maximize profitability, capital inflow and market value etc. International accounting with its vast exposure on global foreign market gives the necessary guidelines to control and manage foreign exchange risk. 1.6 Summary International accounting is the process of conceptualizing and monitoring the global accounting and reporting issues to blend into a unified whole system to be used by all for better understanding, comparing and transparency in accounting and reporting. International accounting is that branch of accounting which deals with recording and translation of foreign transactions, preparation and presentation of consolidated foreign financial statements at par with international GAAP and reporting practices. International accounting significantly helps in achieving harmonization of accounting and reporting practices across nations and this gives immense benefits to the investors and other global market players to take appropriate economic decisions in a much more informed manner.

NSOU • PGCO-X 21 Development of international accounting has become the prime issue to keep pace with the emerging trend of global trade, inflow of foreign capital, harmonization of accounting and reporting practices. International accounting looks for globalization of accounting and reporting practices by use of international accounting standards and practices. Diversity in accounting and reporting practices followed by various countries of the globe is systematically off-set by the adoption of international accounting standards. Various issues like recording of foreign exchange transactions, adjustment of foreign financial statements against inflation, consolidation of foreign financial statements, adjustment for transfer pricing methodology adopted by MNCs, foreign exchange risk management, segment reporting and many other concurrent issues fall within the scope of international accounting. 1.7 Key Words Development of Accounting : Development of accounting refers to the improvement in accounting system to match accounting with the global scenario concerning economic, legal political and cultural environment. Foreign Currency Translation : It the process of translating or restating financial information of global firms from one foreign currency into another as per requirement for better understanding and interpretation by the global users. International Accounting : International accounting is defined as that branch of accounting which deals with the recording and accounting of foreign transactions keeping in view the best practices followed by different countries of the world. Segment Reporting : Segment reporting is the approach to report on various business segments /units based on their geographical location or on the basis of their operational activities for better performance evaluation of the segments. Taxation Policy : It refers to the policy for the purpose of levying tax on economic activities and financial results of taxpayers. Transfer Pricing : It is the pricing adopted by multinational companies with the objective to minimize global tax liability. 1.8 Exercises 1. What do you mean by international accounting?

22 NSOU • PGCO-X 2. State the importance of international accounting. 3. What is meant by development of international accounting? 4. Explain in brief the different factors that influence the development of international accounting. 5. Define the concept of international accounting. State the needs of international accounting. 6. Explain the scope of international accounting in the present era of globalization. 7. Write short notes on – (a) Significance of International Accounting (b) Segment Reporting (c) Foreign Exchange Risk Management (d) Consolidation of Foreign Financial Statement

24 NSOU • PGCO-X 2.0 Objectives The objectives of studying Unit-2 • To understand the meaning and concept of convergence of international accounting standards • To conceptualize the meaning of convergence and harmonization of accounting standards • To identify the needs and significance of convergence of accounting standards • To understand the benefits and challenges of convergence of accounting standards • To know the organizations involved in the convergence process of international accounting standards 2.1 Introduction The world wide wave of globalization and liberalization has made the universe a single market for participation in international trade. Global market players are now free to enjoy trade with other nations without any barricade as regards flow of goods, services, capital, manpower and technology etc. But this free interplay between global partners may not be really conducive and fruitful and in fact creates hindrance to flourish if the level and the manner of accounting and reporting practices followed by different nations vary greatly. This makes the convergence of accounting standards a reality to overcome the situation. As such, the international convergence of accounting standards is considered very much significant to implement a single set of high quality accounting standards that can suit every nation as regards simplicity, understandability, transparency, reliability etc. of accounting and reporting information practiced and disclosed respectively to remove the barriers in inflow of goods, services, capital etc. in cross border trade. Various premier accounting and professional bodies around the globe have come forward to devise and set up universally accepted accounting standards to be followed by different nations for the preparation and presentation of accounting and reporting information in an all- inclusive manner for the satisfaction of all.

NSOU • PGCO-X 25 2.1 Convergence–Meaning and Concept In simple term convergence refers to the act of merging one thing with others. The convergence of accounting standards refers to the goal of establishing a single set of high quality accounting standards that can be used internationally to ensure transparency, comparability, reliability, materiality, understandability in accounting and reporting. Convergence in some form or other has been taking place for several decades, and efforts are being taken by harmonizing the diverse accounting practices with the aim to reduce the differences between accounting standards. Convergence is driven by several factors, including the belief that devising a single set of accounting requirements would increase the comparability of different entities' accounting information and will also boost up transparency and easy understanding of financial information, which will contribute to the inflow of foreign capital on national frontier and also a lot of benefits for the different stakeholders. 2.1.1 Harmonization and Convergence The two terms 'harmonization' and 'convergence' are used interchangeably and are almost considered synonymous since the difference in between these have become thin and blurred in the present era of globalization and continuous demand to increases stakeholders' confidence and understandability in the context of cross- border trade. Harmonization refers to the attempt to alleviate the disparities in financial reporting practices followed by different countries for maintaining their own set of accounting and reporting norms which are influenced by their socio-economic, cultural, political and legal systems existing therein. Harmonization is the process of increasing the compatibility of domestic accounting practices with that of the best global standard accounting practices so as to maintain a harmony in accounting and reporting around to globe to observe global comparability, understandability and transparency to the maximum possible level. In harmonization process, domestic set of accounting rules and standards are not given up In the content of financial accounting, convergence is the process of harmonising accounting standards issued by different regulatory bodies. The objective is to produce a common set of accounting standards to enhance the consistency, compar and efficiency of financial statements.

26 NSOU • PGC0-X completely and but they are made compatible with the global rules and standards by means of adaptation. However, convergence is the process of formulating a single set of high-quality universally accepted accounting and reporting standards to ensure greater transparency, reliability, understandability and comparability in accounting and reporting. In convergence process, the domestic/national set of accounting rules and standards are set aside and emphasis is given on adopting the IFRSs in exchange thereof to comply with the single set of high-quality universally accepted accounting and reporting standards to ensure investors' credibility, to accelerate free flow of foreign capital and technology so as to usher greater transparency, reliability, understandability and comparability in cross-border trade. Businesses in the United States prepare their financial statements in accordance with generally accepted accounting principles, or GAAP. Businesses in more than 100 other countries use a different set of rules, called International Financial Reporting Standards, or IFRS. Long-running efforts to bring these two sets of rules into alignment have been referred to as both harmonization and convergence. GAAP and IFRS have a great deal in common, but there are some major areas of differences. These areas include, amongst others, inventory valuation methods; processes for valuing and impairing (writing down) assets; accounting for research and development costs; and depreciation rules etc. In an era when investment regularly crosses national boundaries, the major standards-setting bodies -- the U.S. Financial Accounting Standards Board and the International Accounting Standards Board -- want to bring the two systems in line with each other so the same rules apply to all companies irrespective of their sizes, countries of operation.

### 2.3 Need and Significance of Convergence

Accounting and reporting practices have been developed and practiced by different global economies as per their states of socio-cultural background, economic conditions, political diplomacies etc. prevailing therein. It has been highly observed that the accounting and reporting around the globe are as diverse as the numbers of economies are involved. This has led to wide diversity in accounting and reporting activities across the globe which makes it an impediment to achieve global success. Thus a need arose for standardization and convergence to enable users of accounting

NSOU • PGC0-X 27 reports understand them properly and be in position to compare the accounting statements of one company with those of another. It is highly recognized that the diversity in global accounting and reporting practices have to be removed to offer a commonly accepted accounting practice for the benefit of all in terms of simplicity, comparability, understandability, transparency and reliability in accounting and economic information. The ultimate goal of convergence in international accounting is centered towards the formulation of a universally accepted set of global accounting and reporting standards by making these binding to all nations as far as practicable. The convergence of international accounting standards is highly necessitated in the present realm of globalization and liberalization where international market players face stringency in realizing and interpreting the global accounting and reporting information prepared under different accounting concepts and methodologies. Global convergence of accounting standards will significantly reduce the diversity in accounting standards followed by different countries. International Accounting Standards are authoritative guidelines aimed at narrowing the areas of differences and diversities in global accounting and reporting practices. Convergence of international accounting standards becomes very much helpful to the global investors to take appropriate economic decisions in a much more compact and informed manner. The multinational companies will be benefited to enter into more global markets with least of problems to comply with the rules and regulations of global capital market.

### 2.4 Benefits of Convergence of Accounting Standards

Convergence of accounting standards is a process by which the diversities in accounting practices followed by different global economies in areas like recognition, measurement, recording of events and transactions are sought to be removed by devising universally accepted practices for the sake of maintaining transparency, reliability, comparability etc. The global convergence of accounting standards is really helpful to augment the free follow of foreign capital in national frontier, to accelerate the pace of international trade, to encourage the multinational companies to ease up their compliance to global rules and formalities to concentrate on global trade practices and also to enhance stakeholders' confidence and reliability in taking viable economic decisions.

28 NSOU • PGCO-X The benefits of convergence of accounting standards may be highlighted as below: (a) Greater comparability : The convergence of international accounting standards will provide improved comparability among different entities' financial statements. Higher is the comparability of accounting information, greater is the scope for optimizing investment decision. (b) Lower transaction cost : The overall transactions costs will be lower for the preparers of financial reports, since they are entrusted to comply with a single set of universally accepted accounting standards, instead of maintaining multiple sets for different users at national and international levels. (c) Reduced supplementary information : Convergence significantly cut short the costs of doing business across national boundaries by reducing the need for supplementary information. (d) Greater transparency and disclosure responsibility : The convergence of international accounting standards will help to escort transparency in accounting and reporting practices with greater accountability and disclosure responsibility. (e) Higher efficiency in capital inflow : High-quality financial reporting standards that are used consistently throughout the world will improve the efficiency of capital allocation and the inflow of foreign capital will boost up since the foreign investors will be in better understanding of accounting information generated under international standards. (f) Improved investment decision : The convergence of international accounting standards motivates the investors to take investment decisions wisely by interpreting the global accounting information in a much more compact manner and their investment portfolio will be more diverse and will have less financial risk. (g) Credibility of financial reporting : Internationally converged accounting standards also help maintain credibility of financial reporting to the public and increase the efficiency of auditing work. The overall credential of different stakeholders will increase in the era of convergence. (h) Scope for global mergers : Convergence of accounting standards can

NSOU • PGCO-X 29 influence the multinational companies to take decision making strategies in the areas of global mergers and acquisitions to flourish international trade. 2.5 Challenges and Difficulties in Convergence of Accounting Standards The issue of convergence of accounting standards has challenges and difficulties so far as the question of adopting a single set of global accounting standards is concerned for all the nations. The following are the challenges of international accounting convergence : (a) Wide diversity in accounting and reporting : There are wide diversity in accounting and reporting practices followed by different countries and this diversity is due to significant differences in socio-cultural background, economic and political status etc. prevailing therein amongst others. A single set of standard accounting practice devised for all may not be equally applicable to each and every nation to adopt. (b) Complexity in global tax laws : There are many nations that follow different tax laws and have different tax legislations to identify taxable identities and measure taxable events. Some countries follow tax considerations for all types of taxable events, both domestic and foreign, while there are countries that do not charge tax on foreign taxable events and are called tax havens. All these make the convergence process a highly typical task and a challenging one. (c) Disparity in disclosure requirements : There exists diversity in disclosure laws of different countries; some are found to be lenient in disclosure requirements while others are found to be stringent in their disclosure practices. The adoption of universal international accounting standards may be a stressful exercise to those countries where there is laxity in disclosure requirements and they may be highly reluctant to the convergence process. (d) Lack of interpreting global information : Interpretation of global financial information based on international global standards is a hard task since it requires a clarity and knowledge of global accounting and reporting practices. All nations may not have the requisite skill and knowledge base at their

30 NSOU • PGC0-X disposal to understand and interpret the global financial information. Proper training and skill development is highly needed which may not be possible to all. (e) Lack of flexibility in applying international standards : Globally converged accounting standards are more or less rigid considering the formulation of a single set of universal accounting practices to be abided by all. However, due to the lack of its flexibility in approach, globally converged accounting standards may not be adopted by all nations for their sharp differences in socio-cultural background, economic and political status and many other factors. (f) Deficiency of accounting and auditing personnel : Effective implementation of globally converged accounting standards across the globe may be seriously hampered due to the deficiency of adequate number of expertise in accounting and auditing who may extend their whole-hearted co-operation in the convergence process.

### 2.6 Participation of International Organizations in the Convergence Process

Many internationally famous and premier institutional bodies around the globe are found to be associated with the convergence of accounting standards. Six organizations have become the major players in the formulation of international accounting standards and in promoting international accounting convergence:

1. International Accounting Standards Board (IASB)
2. European Union (EU)
3. International Organization of Securities Commission (IOSCO)
4. International Federation of Accountants (IFAC)
5. United Nations Intergovernmental Working Group of Experts on International Standards of Accounting and Reporting (ISAR), part of the United Nations Conference on Trade and Development (UNCTAD)
6. Organization of Economic Cooperation and Development Working Group of Accounting Standards (OECD Working Group)

NSOU • PGC0-X 31 2.6.1 International Accounting Standards Board International Accounting Standards Board (IASB) is an independent private sector standard setting organization. It was formerly known as International Accounting Standards Committee (IASC) which was founded in 1973 by professional accounting organizations in nine countries and was restructured in 2001. Before its restructuring, the IASC issued 41 International Accounting Standards (IASs) and a Framework for the Preparation and Presentation of Financial Statements. The IASB started its full fledged functions in standard setting from April, 2001 with representations of accounting organizations from several countries (approximately from 100 countries) to work together in devising accounting standards. With the help of remarkable and broad base support across the globe, IASB has become the linchpin in international accounting standard setting. The IASB Standards follow the principles of fair representation and full disclosure and have wide compatibility with the accounting standards promulgated in the US, UK, Canada and many other countries that use Anglo-Saxon accounting. Being an independent standard-setting body of the International Financial Reporting Standards (IFRS) Foundation, the IASB is responsible for the development and publication of IFRSs and for approving Interpretations of IFRSs as developed by the IFRS Interpretations Committee. The IASB operates under the oversight of the IFRS Foundation.

#### 2.6.1.1 Objectives of IASB

The objectives of IASB may be highlighted as below :

- (a) To develop in the public interest, a single set of high quality, understandable and enforceable global accounting standards which require high quality, reliable, transparent as well as comparable information in financial statements and other financial reporting to help participants of the global capital markets and other users take economic decisions;
- (b) To promote the use and application of these standards rigorously across the nations;
- (c) To bring about the convergence of national accounting standards and International Accounting Standards and International Financial Reporting Standards towards high quality solutions to remove divergent accounting and reporting practices followed around the globe;

32 NSOU • PGCO-X (d) To inculcate the practice of adopting universally accepted accounting standards to ensure harmonization in global accounting and reporting. Role of IASB : International Financial Reporting Standards (IFRSs) have become widely accepted across the globe. Many countries have started using IFRSs as the basis of their national accounting requirements and as the international benchmark of accounting and reporting. Under the IFRS Foundation Constitution, the IASB has complete responsibility for all technical matters of the IFRS Foundation including : (i) Full discretion in developing and pursuing its technical agenda, subject to certain consultation requirements with the Trustees and the public (ii) The preparation and issuing of IFRSs (other than Interpretations) and exposure drafts, following the due process stipulated in the Constitution (iii) The approval and issuing of Interpretations developed by the IFRS Interpretations Committee. Structure of IASB : The restructured IASB includes the following bodies to help in the process of development and publication of IFRSs- (1) Trustees, (2) IASB Board, (3) Standards Advisory Council and (4) International Financial Reporting Interpretation Committee (IFRIC). The roles and functions of the different bodies of IASB may be discussed as follows : 1. Trustees : The IASB has 22 trustees at present representing 6 from North America, 6 from Europe, 6 from Asia/Pacific region and 4 from any area to establish a balanced approach in geographical representation. The trustees appoint the members of the IASB, the International Financial Reporting Interpretation Committee and the Standards Advisory Council. The trustees are entrusted to raise fund for IASB and also to supervise and review the priorities and operations of the IASB including the approval of its annual budget. 2. IASB Board : The IASB Board develops and improves standards of financial accounting and reporting for businesses. The IASB Board is entrusted with full responsibility for all IASB technical matters including

NSOU • PGCO-X 33 the preparation and issuing of IASs, IFRSs, and Exposure Drafts etc. and also the final approval of interpretations by the IFRIC. Besides, the IASB Board is also responsible for approval of project proposals, methods and procedures for developing standards. The IASB Board is composed of total 14 members of which 12 are full time members and 2 may be part time. All the members are appointed for a 5-year term, renewable once. 3. Standard Advisory Council : The Standard Advisory Council, appointed by the trustees, is composed of 30 members or more for a renewable term of three years, having a diversity of geographic and professional backgrounds. The members of the Standards Advisory Council usually meet three times a year. The Council is responsible to give the board advice on its agenda and priorities and also to inform the board of the views of different organizations and individuals on the Council on major standards setting projects and to give other advice to the Board or the trustees. 4. International Financial Reporting Interpretations Committee (IFRIC) : The IFRIC is composed of 12 members who are appointed by the trustees. The IFRIC takes the responsibility to interpret the application of IASs, IFRSs in the context of IASB's framework and to publish draft interpretations, to review public opinions and moments on them as well as to obtain board approval for final interpretations. 2.6.2 European Union (EU) The European Union was established consequent on the Treaty of Rome in 1957. At present, EU comprises 27 member countries with the goal of harmonizing the legal and economic systems of its member states. The EU uses two instruments- Directives and Regulations for achieving the objectives of convergence. One of the goals of EU is to achieve integration of European financial markets. To this objective, the EU has introduced directives and undertaken major new initiatives to achieve a single market for : (i) raising capital on an EU-wide basis; (ii) establishing a common legal framework for integrated securities and derivatives markets; and (iii) achieving a single set of accounting standards for listed companies.

34 NSOU • PGC0-X The EU's Fourth Directive, issued in 1978, is the broadest and most comprehensive set of accounting rules within EU framework and includes format rules for financial statements, disclosure requirements and valuation rules applicable to both public and private companies. The Fourth Directive of EU aims to ensure that European companies disclose comparable and equivalent information in their financial statements. The Seventh Directive of EU, issued in 1983, emphasized the issue of consolidated financial statements for group of companies above a certain size to disclose specific notes including directors' report appended therein. The Eighth Directive of EU gave focused attention on various aspects of the qualifications of professionals authorized to carry out statutory audits by auditors having the minimum prescribed qualification.

2.6.3 International Organization of Securities Commissions (IOSCO) The International Organization of Securities Commissions (IOSCO) which was formed in 1983 consists of securities regulators of more than 100 countries. IOSCO has vehemently emphasized on international disclosure and accounting standards to facilitate the ability of companies to raise capital efficiently in global securities markets. To this objective, IOSCO in 1998 published a set of non-financial disclosure standards that may eventually enable companies to use a single prospectus for listing of shares on any of the world's major capital markets. In the light of the preamble of IOSCO's bye-laws, securities authorities of various countries decided to work together in a common platform to ensure better regulation of the markets, both domestic as well as international market, for the following purposes : (a) To exchange information and opinion on the basis their experiences to promote and develop domestic markets to maintain just, efficient and sound markets; (b) To apply their concerted efforts to establish standards and an effective surveillance of international securities transactions; (c) To provide mutual assistance to ensure the integrity of the markets by a vigorous application of the standards and by effective enforcement against offences; (d) To focus on the recommendations of IOSCO technical committee on

NSOU • PGC0-X 35 multinational disclosure and accounting to facilitate the growth of global capital markets.

2.6.4 International Federation of Accountants (IFAC) The International Federation of Accountants (IFAC) is a worldwide organization with 159 member organizations spread over 123 nations, representing more than 2.5 million accountants. It was established in 1997 at the Eleventh Congress of World Accountants. The council, which meets twice a year, sets IFAC policy and supervises its operations. The IFAC has been working with full integrity to develop qualitative international standards, to support its adoption and use, to maintain effective co- ordination with member organizations, to maintain liaison with other international bodies and also to act as international spokesman for the accountancy profession to flourish. In tune with the emerging needs of international accounting and auditing consequent on the continuous growth of global trade and commerce, the responsibilities of IFAC have been multiplied over the years to frame rules and regulations and to design upgraded standards to regulate and monitor the international accounting profession to work in a creditable manner. Accordingly, the IAFC has taken measures in formulating- (a) International Auditing and Assurance Standard Board; (b) International Code of Ethics; (c) International Education Standards; (d) International Public Sector Accounting Standards; (e) International Professional Accountants Standards, and (f) International Compliance Standards etc. Based on the philosophy of high-quality auditing standards being necessary for the rigorous interpretation and applications of accounting standards, IFAC set the following objectives : (a) To implement credible financial reporting for the efficient functioning of capital markets; (b) To develop international accounting and auditing standards for optimal harmonization at global level; (c) To support the development of accounting profession with harmonized standards to help them render high quality and reliable services to the public.

36 NSOU • PGC0-X 2.6.5 United Nations Intergovernmental Working Group of Experts on International Standards of Accounting and Reporting (ISAR) ISAR was established in 1982 and it is the only intergovernmental working group devoted to accounting and auditing at corporate levels. As its specific mandate, the ISAR targeted to promote the harmonization of national accounting standards for enterprises. For achieving the mandate, ISAR has formulated and promulgated best accounting practices in consultation with IASB. ISAR was the pioneer in conceptualizing the environmental reporting by business enterprises as a part of their corporate social responsibility performance and has given focused attention of corporate governance and accounting practices to be followed by small and medium enterprises. To accelerate the global harmonization of accounting practices, ISAR has conducted global technical assistance projects in areas like accounting reforms and retraining and also in designing and developing a long- distance learning programme in accountancy in countries such as Russia and Africa.

2.6.6 Organization for Economic Cooperation and Development (OECD) OECD is the international organization of the industrialized, market economy countries. The OECD functions through its governing body, the OECD Council, and its network of about 200 committees and working groups. Through its biannual publication Financial Market Trends, OECD assesses trends and prospects in the international and major domestic financial markets and prescribes the structure and regulation of securities markets so as to operate in a compact and effective manner. In 1976, the OECD had issued a code of conduct entitled 'Declaration on International Investment and Multinational Enterprises' for financial reporting practices to be followed by MNCs. In the context of accounting, OECD formed an Ad hoc Working Group on accounting standards in 1979 with the objectives: (a) To support current efforts by international, regional and national bodies towards harmonization of accounting practices; (b) To function as a forum for the exchange the views on UN efforts on accounting and disclosure standards; (c) To provide technical clarification to the terms used in disclosure guidelines.

NSOU • PGC0-X 37 2.7 Other Regional Accounting Organizations Accounting Organizations are typically not-for-profit with the mission of serving the accounting industry and the interests of professionals in accounting. Large number of regional accounting organizations are found to operate in different parts of the globe with the noble mission to achieve convergence in accounting and reporting practices for the benefits of global stakeholders so as to supply them transparent, reliable, comparable and standardized accounting information to help them take legitimate economic decisions especially with reference to international transactions. The following are names of some recognized regional accounting bodies around the globe: 1. American Institute of CPAs, USA 2. Arab Society of Certified Accountants, Jordan 3. Canadian Institute of Chartered Accountants, Canada 4. Chinese Institute of Certified Public Accountants, China 5. Conseil Supérieur de l'Ordre des Experts, France 6. Institut der Wirtschaftsprüfer in Deutschland, Germany 7. Institute of Chartered Accountants of India, India 8. Institute of Chartered Accountants in Ireland, Ireland 9. Institute of Chartered Accountants of New Zealand, New Zealand 10. Institute of Certified Public Accountants of Singapore, Singapore 11. Institute of Chartered Accountants of England and Wales, UK 12. Institute of Commercial and Financial Accountants of South Africa, South Africa 13. Japanese Institute of Certified Public Accountants, Japan 14. Korean Institute of Certified Public Accountants, Korea 15. Malaysian Institute of Accountants, Malaysia

2.8 Global Convergence of Accounting Standards In recent times, significant progress has been made towards achieving one set of universally accepted financial reporting standards. There is a growing realization

38 NSOU • PGC0-X that a globally accepted common financial reporting language will significantly usher economic growth by enhancing the efficiency of global capital markets. The convergence movement is the logical extension of harmonization of accounting and reporting practices that started its journey in the early 1990s. This movement has however made the challenges related to the convergence of the accounting standards more apparent than ever before. Convergence of international accounting standards is very much important to achieve global uniform accounting and reporting practices to ensure investors' credibility. The term global convergence of accounting standards refers to the goal of establishing a single set of accounting standards that will be used internationally, and in particular the effort to reduce the differences between the US generally accepted accounting principles (US GAAP) and the International financial reporting standards (IFRS). Convergence means to achieve harmony with IFRSs and more specifically convergence can be explained as the concerted activity to design and maintain national accounting standards in a manner that will comply with all the requirements of IFRS. In fact, after 1990s, the focus shifted from harmonization to convergence. In convergence, the ultimate goal is for GAAP and IFRS to come together in a single set of standards that would apply everywhere. There would no longer be a distinct GAAP or IFRS. However, convergence does not just involve GAAP. Several other major economies do not follow IFRS, including Japan and China. International convergence efforts are intended to bring those countries into the same set of international standards as well. Convergence is taking place in various countries, with over 100 countries having made public commitments supporting convergence towards the International Financial Reporting Standards (IFRS). Efforts towards convergence include projects that aim to improve the respective accounting standards, and those that aim to reduce the differences between them. Adoption would mean full-fledged use of IFRS as issued by the IASB by the Indian public companies. Convergence means that the Indian Accounting Standards (AS) and the International Financial Reporting Standards (IFRS) would, over time, continue working together to develop high quality, compatible accounting standards.

NSOU • PGC0-X 39 2.8.1 Status of Global Convergence of Accounting Standards International Financial Reporting Standards (IFRS) have already been adopted in many countries, and are in the continuous move to be adopted by many other countries of the globe. Some countries are working with the International Accounting Standards Board (IASB) to converge their own standards with IFRS. Globally, the adoption of IFRS ranges from the total adoption of IFRS in some countries to the requirement for adoption of local Generally Accepted Accounting Principles (GAAP) in other countries. In between, countries display varying levels of commitment to IFRS including the adoption of local versions of IFRS, a requirement for certain entities to use IFRS, permission to use IFRS, and in some instances the use of local GAAP that is converging with IFRS. The recent highlights about the adoption of IFRS convergence may be described as below: • In North America, the US Securities & Exchange Commission accepts IFRS for non-US registrants, Canadian listed companies are required to use IFRS commencing January 1, 2011, while Mexico announced plans to move to IFRS in 2012; • In Europe, the European Union (EU) requires companies listed in the EU countries to adopt IFRS beginning with their 2005 financial statements; • In Central America, companies are required to use IFRS; • Some South American countries require the use of IFRS, others require the use of IFRS as adopted locally, while others are moving towards convergence of local standards with IFRS; • In Asia and the Middle East, some countries require reporting under local GAAP, some require the use of IFRS as adopted locally, while others are moving towards convergence of local standards with IFRS; • In Oceania, local reporting entities are required to use IFRS as adopted locally; and • In many African countries, listed companies are required to use IFRS. 2.8.2 Advantages of Global Convergence Moving to a single set of global financial standards through global convergence process would be highly conducive to companies for better performance in global

40 NSOU • PGCO-X capital markets. It would be helpful to influence free movement of foreign capital across the national frontier since by means of global convergence the foreign investors would more capable of understanding and comparing global accounting and reporting information. The benefits of global convergence of accounting standards may be stated as follows : (a) Global convergence improves investors' confidence across the world with greater transparency and comparability; (b) It significantly facilitates the inter-firm or inter-industry comparisons to boost up investors' economic decision making process in a competent manner; (c) Global convergence makes easy the group consolidation by means of using same standard by all companies in a group wherever located; (d) Preparation of financial statements through global convergence process accelerates cross-border capital market listing of domestic securities and stocks; (e) Compliance to foreign securities markets becomes more concrete by means of reports, returns and other relevant financial as well as non-financial information prepared in the light of universally accepted global standards; (f) Global convergence creates a favourable ambience to domestic market players to enter into global market more competently by presenting financial statements in a globally accepted format.

### 2.8.3 Disadvantages of Global Convergence

There are disadvantages and in fact, some barriers to the development of one universally accepted set of Financial Reporting Standards that can be applied by all global enterprises. Convergence to one universally accepted set of standards has been hindered by many factors. The disadvantages of global convergence may be described as follows:

(a) There is one significant factor that standard-setting bodies and regulatory authorities tend to have different views or apply different frameworks while developing standards because of disparities in their socio-economic condition and cultural background;

NSOU • PGCO-X 41 (b) Different countries around the globe may not be able to afford adequate finance, time and mental stability to work for adopting global convergence spontaneously; (c) Resistance to global convergence often crop up from strong industry lobbying groups and other stakeholders who consider it a painstaking process; (d) Political pressure may deter the convergence process on the assumption that by adopting convergence, the independence of domestic accounting standards board may be hampered and the foreign accounting and reporting practices would create corporate deadlock and information jugglery. (e) Conversion can be costly for companies. Changes in technology, tax reporting requirements and compensation systems are a few areas that may prohibit the conversion process. (f) Standards must be applied consistently and enforcement must be uniform, otherwise, a single set of standards may appear to exist but will lack from desirable attributes such as transparency, understandability, comparability and consistency etc.

### 2.9 Summary

Convergence of International Accounting Standards or in other words Internationalization of Accounting Standards is highly relevant for maintaining a globally acceptable accounting and reporting practices for the sake of achieving transparency, reliability, understandability and comparability in accounting and reporting information by every nation. Accounting standards are the policy documents issued by recognized expert accountancy bodies relating to various aspects of measurements, valuations, treatments and disclosures of accounting transactions and events. Wide diversity is noticed around the globe in the context of accounting and reporting practices that create serious deadlock in cross-border trade, flow of foreign capital and technology in national frontiers. Thus, a need cropped up for standardization and convergence of accounting standards to enable the different users of global accounting reports to perceive and interpret these properly in a comparative manner

42 NSOU • PGC0-X for taking appropriate economic decisions. It is extremely difficult and in many cases impossible, for fair comparisons to be made between companies from different countries due to use own set of accounting and reporting standards. Convergence of international accounting and reporting standards is very much significant for cross-border trade since by means of achieving convergence, the burden of financial reporting would be lessened and the cost of financial statement preparation would be reduced. It is also important to market regulators and stock markets to reduce uncertainty about the comparability of published accounts thus enhancing transparency and investors' credence and helps in making informed economic decisions about the business enterprises. International Financial Reporting Standards (IFRS) have become the global standard for preparation of public company financial statements. The International Accounting Standards Board (IASB) has developed IFRS standards which are highly compatible for use by global firms to disclose their financial as well as non-financial information in a much more compact and user-friendly manner. Many of the world economies have adopted IFRSs as a measure to comply with the global means of reporting and accounting in affair and dependable manner. Though convergence of international accounting standards has some advantages, it has limitations as to its implementation because of diversity in socio-economic, political, cultural and legal framework prevailing in different countries. But for the sake of investors' protection, for increasing the investors' credence, for improving the investors' ability to compare and interpret global financial accounting and reporting prepared under different accounting backgrounds and in consequent to increase their capabilities to take global business decisions firmly, it is highly recommendable and desirable too, to undertake global convergence of accounting standards with much emphasis. Ultimately, the global convergence of accounting standards will augment inflow of foreign capital and improve foreign trade for the greater interests of less-developed economies of the world.

2.10 Key Words  
Convergence : Convergence is the act of merging one thing with others. The convergence of accounting standards is the act of establishing a single set of high

NSOU • PGC0-X 43 quality accounting standards that can be used internationally to ensure transparency, comparability, reliability, materiality, understandability in accounting and reporting. Global Convergence : Global convergence is based on the realization that a globally accepted common financial reporting language is inevitable to achieve economic growth by enhancing the efficiency of global capital markets. The convergence movement is the logical extension of harmonization of accounting and reporting practices around the globe to ensure investors' credibility as well as to ensure their protection. IAFC : International Federation of Accountants (IFAC) is a worldwide organization engaged to develop qualitative international standards and their adoption, to maintain effective co-ordination with member organizations and other international bodies to help develop accountancy profession. IASB : International Accounting Standard Board (IASB) is an independent private sector accounting body which formulates and develops International Financial Reporting Standards. IOSCO : The International Organization of Securities Commissions (IOSCO) is an international organization with exposure to international disclosure and accounting standards to facilitate the ability of companies to raise capital efficiently in global securities markets.

2.11 Exercises  
1. What do you mean by Convergence of Accounting Standards?  
2. State the needs and importance of Convergence of Accounting Standards.  
3. What are the benefits of Convergence of Accounting Standards?  
4. What are challenges and difficulties in Convergence of Accounting Standards?  
5. State the role of international organization for participating in the convergence process.  
6. What is IASB? Highlight the role of IASB in the convergence process.  
7. State the objectives of IASB.  
8. Explain in brief the structure of IASB.

44 NSOU • PGC0-X 9. What is IASB Board? What are the compositions of IASB Board?  
10. Define OECD. State the objectives of OECD in framing accounting standards.  
11. What are the other regional organizations that took part in the convergence process?  
12. Define global convergence of accounting standards. State the significance of global accounting standards.  
13. What are the advantages and disadvantages of Global Convergence of Accounting Standards?  
14. State the status of Global Convergence of Accounting Standards.

46 NSOU • PGC0-X 3.8 Key Words 3.9 Exercises 3.0 Objectives The objectives of studying this unit are • To understand the concept of foreign currency transactions and its recording • To conceptualize the meaning of foreign currency translation • To know the procedures of translation of foreign currency • To discuss the treatment of foreign currency translation gains and losses 3.1 Introduction International business relates to different nations participating in foreign trade in the course of imports, exports, foreign lending and borrowing etc. and inherently these foreign trades are incurred in different foreign currencies of the participating nations. Each nation uses its own foreign currency for settlement of trade and records these trade transactions in their own currencies. This makes a trouble to each other of the participating nations and to other users to understand and interpret the impact of accounting information prepared and presented in foreign currency. Over and above this, there are frequent changes in the value of one currency in relation another currency. This leads to undertake the attempts to convert foreign currency transactions in to home currency and this is popularly known as foreign currency translation. Foreign currency translation has become very much important for getting consolidated financial statement of a group of overseas companies in a single currency of the parent company. IAS 21 has given the prescribed guidelines for the foreign currency translations and for ascertaining the gains or losses due to foreign currency translation. 3.2 Foreign Currency Transaction-meaning The term foreign currency transaction refers to transactions entered into in foreign currency when two or more countries take part in international trade in between them. A foreign currency transaction is one that requires settlement, either NSOU • PGC0-X 47 payment or receipt, in a foreign currency. It is the distinguishing feature of foreign currency transaction that its settlement is effected in a foreign currency. Each country uses its own currency for trade settlement as per the existing exchange rates of traded foreign currencies. Enterprises around the globe come in contact to deal in foreign trade in the form of export, import of goods and services including transfer of technology and know-how, money transfers etc. by means of foreign currencies and record the transactions of trade in their own currencies. 3.2.1 Foreign Currency Transactions and AS 21 AS 21 defines foreign currency transactions as 'transactions whose terms are denominated in foreign currency which requires settlement in a foreign currency'. Foreign currency transaction arises when an enterprise- (i)

**77%**

**MATCHING BLOCK 2/150**

**W**

buys or sells on credit goods/services whose prices are denominated in foreign currency; (ii) borrows or lends fund and the amount payable or receivable are denominated in foreign currency; (iii) is a party to an unperformed

foreign exchange contract; (iv) acquires or disposes assets and incurs or settles liabilities denominated in foreign currency. 3.2.2 Recording of Foreign Currency Transactions In case of foreign currency transactions, a considerable effort is required for recording of such transactions since the exchange rates of foreign currency keep on changing frequently. When the exchange rate changes between the original purchase or sale transaction date and the settlement date, there arises a gain or loss on the exchange. A foreign currency transaction may be denominated in one currency but measured or recorded in another. In foreign currency transaction, the functional currency of an enterprise is to be conceptualized where

**85%**

**MATCHING BLOCK 3/150**

**W**

functional currency is the currency of primary economic environment in which the enterprise operates.

As for example, it is assumed that a US subsidiary operating in Thailand A foreign currency transaction is a transaction of sales or purchases demoninated in a currency other than the company's functional currency operating in the particular country.

48 NSOU • PGO-X made local purchases payable in Thai Baht while the functional currency of the US subsidiary is U.S. Dollar. In such a situation, the US subsidiary would measure the foreign currency transaction in U.S. Dollar though denominated in Thai Baht because the subsidiary would keep its books of account in its functional currency i.e. U.S. Dollar. In recording of foreign currency transaction, date of transaction is of vital issue. Three dates are primarily related to recording of foreign currency transaction: (a) Initial Transaction Date : It refers to the date on which the foreign currency transaction is initially occurred between the participating nations; (b) Interim Reporting Date : It is the date of making interim report about financial and operating results after the foreign currency transaction is occurred; and (c) Settlement Date : Settlement date is the date on which payment/receipt relating to foreign currency transaction is settled in between the participating nations engaged in foreign trade. Organizations making foreign currency transactions have to record the transactions in a systematic manner as follows : (a) Record the value of the transaction in home currency at the current exchange rate at the initial transaction date i.e. at the time of purchase or sale. (b) Calculate the value of the payment in home currency at the current exchange rate at the settlement date when the transaction is to be settled. (c) Post the receipt of the accounts receivable or payment of the accounts payable at the original rate at the time of settlement and record the loss on exchange by accounting for the difference between the original transaction value and the settlement amount. (d) Calculate the value of foreign-currency accounts receivable or payable at the spot rate at the end of the accounting year. (e) Record any change in value from the original transaction date as a foreign- currency gain or loss in the year and post the other side of the entry to accounts payable or accounts receivable, as considered necessary.

NSOU • PGO-X 49 However, the organizations engaged in overseas trade may buy forward currency contract to get a guaranteed rate to avoid loss in foreign currency. As per AS 21, the foreign currency transaction should be recorded initially

**34%**

**MATCHING BLOCK 4/150**

**W**

at the rate of exchange at the date of the transaction. Thereafter at each subsequent balance sheet date, foreign currency monetary amounts should be reported using the closing rate and non-monetary items carried at historical cost should be reported using the exchange rate at the date of the transaction while non-monetary items carried at fair value

should be reported at the rate that existed when the fair values were determined. Any exchange difference arising when monetary items are settled should be accounted for and reported. There are two approaches of recording foreign currency transaction- a) Single- transaction approach and b) Two-transaction approach. Under the single-transaction approach, it is considered that a transaction and its subsequent settlement are a single event. But under the two-transaction approach, it is considered that foreign currency transaction relating to sale or purchase is separate from the consequent settlement in the form of amount payable or receivable. 3.3 Foreign Currency Translation-Concept and Meaning The term 'translation' in the context of foreign currency, refers to the change in the monetary expression of financial date or in other words to convert financial data from one currency to another currency. Here, conversion from one currency to another does not mean conversion in physical terms; only the restatement of financial information prepared in one currency to some other currency as desired. Translation of foreign currency is very much significant consequent on the present era of ever-increasing cross-border trade where preparation of consolidated financial statement of a group of overseas companies is a bare necessity for the parent company operating in a different country. Foreign currency translation is an attempt to restate or convert a set of financial data prepared in a particular currency into a separate currency as per the needs to meet the finance reporting related requirements to ensure understandability, comparability, effective analysis and interpretation. Transactions are normally measured and recorded in terms of

**48%**

**MATCHING BLOCK 5/150**

**W**

the currency in which the reporting entity prepares its financial statements. This currency is usually the domestic currency of the country 50 NSOU • PGO-X in which the company is domiciled and

is called the reporting currency. Thus, translation is the process of expressing monetary amounts that are stated in terms of a foreign currency in the currency of the reporting entity by using an appropriate exchange rate.

**100%**

**MATCHING BLOCK 6/150**

**W**

An exchange rate "is the ratio between a unit of one currency and the amount of another currency for which that unit can be exchanged at a particular time."

Subsidiary companies prepare their accounting and reporting information as per the currency in operation of the countries where they operate and these financial statements of subsidiaries prepared under different foreign currencies are used by the parent company to prepare group financial statement for consolidation purpose. But the parent company faces trouble to consolidate since the financial data are based on various foreign currencies. It thus requires to translate i.e. convert the financial data of various subsidiaries denominated in different foreign currencies into a single currency of the reporting company (parent company) to make the consolidated financial statement really understandable and effective to interpret the group financial performance. Thus, the MNCs (Multi-national Corporations) translate the financial figures of subsidiaries into a single currency of the reporting MNCs for preparing consolidated financial statement in a meaningful and purpose-oriented manner. 3.3.1 Need for Foreign Currency Translation Foreign currency translation is primarily concerned with the preparation and presentation of consolidated financial statements of group of overseas companies in a single currency of the parent company by translating and restating the financial information. In the translation process, the financial data contained in the balance sheet and income statement of a foreign subsidiary are expressed or in other words restated in the currency denomination of the reporting entity. However, it is to be noted that by any means translation from one currency to another is not conversion of currency in physical term. The emphasis here is on expressing the financial Foreign currency transaction is a process of the financial statement in the currency in which the company presents its financial statements. Showing its assets liabilities, revenue, expenses etc. that are denominated in foreign currencies. Currency translation allens a company with foreign operations or subsidiaries to reconcile all of its financial statements in terms of local currency.

NSOU • PGCO-X 51 information of a foreign subsidiary prepared in functional currency (i.e. the currency of the country where the subsidiary operates) into the currency of the reporting country in which the parent entity is established such that the parent company can prepare consolidated financial statement with the help of restated financial data for better understanding the group performance. The need of foreign currency translation is highly significant as may be highlighted below: (a) Translation of foreign currency is required for consolidation of financial statements of overseas subsidiaries and the parent entity by expressing the financial information in a single currency called the reporting currency. (b) Foreign currency translation is very much needed to analyse and interpret the financial positions of various subsidiaries of a multinational corporation. (c) Translation of foreign currency by restating the financial information in a single currency is very much important in order to facilitate performance evaluation of subsidiaries operating across the globe. (d) The overall result of foreign currency translation of various overseas subsidiaries along with the parent entity significantly assists the global investors to take appropriate economic decisions. (e) Translation opens up the scope of higher global trade since the market players become interested to international trade for getting access to global trade information in a much more understandable and dependable manner. 3.3.2 Significance of Foreign Currency Translation Foreign currency translation is the designated process of restating the financial statements of enterprises from the currency in which these are prepared to another currency for consolidation purpose. The significance of foreign currency translation may be highlighted as follows: (a) Consolidation of Financial Statements- Overseas companies prepare their financial information in different currencies of the economic environments where they operate. These diverse financial statements based on different foreign currencies are not fit for preparing consolidated statements. Foreign currency translation significantly helps in restating these in a single currency to prepare globally consolidated financial statements.

52 NSOU • PGCO-X (b) Analysis and Interpretation of Financial Results of Overseas Companies- Global investors may not be able to understand and interpret the financial results of foreign companies prepared in different foreign currencies. Foreign currency translation offers the opportunity to express or restate the financial information prepared in a particular currency into the currency desired by the investors to help them understand and interpret the true financial positions of overseas companies for decision making purposes. (c) Comparison of Financial Statements of Subsidiaries- Foreign currency translation facilitates the comparison of financial statements of different subsidiaries by the parent entity although these subsidiaries prepare and present their financial information in their respective local currencies which may not be perceived by the parent entity for comparison purposes. (d) Uniformity in Presentation of Financial Information- Foreign currency translation tends to offer uniformity in presenting financial information of various overseas firms in a single currency i.e. the currency of the reporting entity. This renders a magnificent opportunity to assess the group financial performance of a host of companies in a compact and meaningful manner. 3.4 Methods of Foreign Currency Translation Overseas companies operating

**52%**

**MATCHING BLOCK 7/150**

**W**

in different countries prepare and present their financial statements denominated in the currency of the country where they operate

and function. The statements of the overseas subsidiaries do not afford benefits to the parent entity thereof to understand and realize the implications of the financial statements. To overcome the impasse, financial statements prepared in foreign currency are restated to the reporting currency of the parent company. This process of restating the financial information from one currency to another is known as foreign currency translation. Companies come across the need to adopt foreign currency translation when they have foreign operations that use different currencies to prepare financial statements. Accounting standards insist on to adopt a consistent translation methodology so that the translated financial reports truly reflect the underlying economic circumstances. Accordingly, companies operating internationally are found to undertake translation process so as to restate their assets, liabilities, revenues and NSOU • PGCO-X 53 expenses relating to the foreign subsidiaries in their domestic currency for which they apply different methods - (i) Single Rate Method and (ii) Multiple Rate Method. 3.4.1 Single Rate Method The single rate method, long popular in UK and other parts of Europe, applies a single exchange rate, the current exchange rate or closing exchange rate, to restate all foreign currency assets and liabilities in the reporting currency. Under this method, foreign currency revenue and expenses are translated at the exchange rates prevailing at the time of recognizing such items. However, for the sake of convenience, under the single rate method, translation work is performed by adopting the average exchange rate over the period. Under this method, the focus is given on the concept that a foreign subsidiary is a separate unit to prepare and publish its financial report in its own reporting domicile where it operates and as such the use of one single rate for the entire translation process is considered appropriate. The use of current rate or closing rate for translation purpose under the single rate method has the following advantages : (i) The computational work for translation purpose is less complex and less time consuming; (ii) The original relationships among the different aspects of financial statement of a foreign subsidiary remain intact as all the foreign currency financial statement items are translated by a single rate; (iii) By translating all foreign currency balances by current rate method, translation gains and losses are mostly offset due to the changes in exchange rates in reverse direction; (iv) The translation process makes the consolidated financial statements more understandable as well as user-friendly. 3.4.2 Multiple Rate Methods Under the multiple rate method, foreign currency translation is undertaken by any of the three methods- (a) Current-Noncurrent Method, (b) Monetary-Nonmonetary Method, and (c) Temporal Method. The three methods are described as follows : 3.4.2.1 Current-Noncurrent Method Under the Current-Noncurrent Method for foreign currency translation, all assets and liabilities are categorized into two groups-current and non-current based

54 NSOU • PGCO-X on some criteria. Current items representing current assets refer to those which complete its conversion process to reach to money or money equivalent within one operating cycle and current items representing current liabilities refer to those which are matured within one year. Non-current items are those which are not included in the current items category. All current assets and current liabilities of a foreign subsidiary are translated in their

**81%**

**MATCHING BLOCK 9/150**

**W**

parent company's reporting currency at the current exchange rate prevailing on the balance sheet date.

In case of non-current assets and liabilities, historical exchange rates prevailing on the dates of transaction are used for translation purposes. Income statement items other than depreciation and amortization charges are translated at the average rates applicable to each month of operation or on the basis of weighted average rate of the entire reporting period. Depreciation and amortization charges are translated at the historical rates entertained at the time of acquiring the relevant asset. However, the current-noncurrent method makes little economic sense. Using the current exchange rate to translate current assets implies that foreign currency cash, receivable, and inventories are equally exposed to exchange risk. This is simply not true. Moreover, current and non-current definitions are merely a classification scheme, based on conversion time to complete or on estimation of maturity period, of which rates to use in translation process.

3.4.2.2 Monetary-Nonmonetary Method Under the monetary-nonmonetary method, assets and liabilities are classified as monetary and non-monetary items. Monetary items are those for which a fixed contractual amount is receivable or payable in foreign currency. Non-monetary items are those for which no fixed contractual amount is specified. All monetary assets like cash, bills receivable and other highly liquid assets and all monetary liabilities (except owners' equity)

**51%**

**MATCHING BLOCK 11/150**

**W**

are translated at current exchange rate. Non-monetary assets and liabilities like fixed assets, long-term investments, term loans and advances are translated at historical rates. Income statement items

are translated

in the similar way as followed under current-noncurrent framework. However, as opposed to current-noncurrent method, monetary-nonmonetary method of translation views monetary assets and liabilities as exposed to exchange rate risk. As long as monetary items are settled in cash, translation of monetary items at current rate produces domestic currency equivalents to reflect true settlement values thereof.

NSOU • PGCO-X 55 3.4.2.3 Temporal Method Under the temporal method, all monetary items like cash, receivables, and payables are translated either at current exchange rate. Non-monetary items are translated at rates that preserve their original measurement bases. In fact, the temporal method of translation is similar to the monetary-nonmonetary method except for its treatment of non-monetary assets carried at current prices. When nonmonetary items abroad are valued at historical rate, the translation procedures resulting from the temporal method become virtually identical to those produced by the monetary-nonmonetary method. Revenues and expense items are translated at the rates that prevailed when the underlying transactions took place. However, in case of voluminous transactions average exchange rate is suggested to take into account for translation purpose. Illustration-3.1 The following is the balance sheet of Fair Play & Co. of USA, an Indian subsidiary as at March 31, 2018 : Liabilities & Capital Amount (USD) I. Share Capital : 45,000 (a) Owner's Equity II. Non-Current Liabilities : 30,000 Long Term Debt III. Current Liabilities : 15,000 Sundry Creditors 90,000 Assets I. Non-Current Assets : 20,000 (a) Land & Building 27,000 (b) Plant & Machinery II. Current Assets : 18,000 (a) Inventories 20,000 (b) Sundry Debtors 5,000 (c) Cash & Bank 90,000

56 NSOU • PGC0-X You are required to translate the above Balance Sheet of Fair Play & Co. into Indian Rupee under (i) Current Rate Method, (ii) Current-Noncurrent Method, (iii) Monetary-Nonmonetary Method and (iv) Temporal Method, assuming that the historical rate and current rate are- 1 US Dollar (USD) = 22 Indian Rupees (INR) and 1 USD = 25 INR respectively. Solution : Foreign Currency Translated Balance Sheet of Fair Play & Co. as on 31 st March, 2018

Amount	Current	Current-	Monetary-	Temporal	(USD)	Rate	Noncurrent	Nonmonetary	Method	Method	Method	Amount
Amount	Amount	Amount	(INR)	(INR)	(INR)	(INR)	(INR)	(INR)	(INR)	(INR)	(INR)	(INR)
Liabilities & Capital												
I. Share Capital : (a) Owner's Equity 45,000 11,25,000 10,74,000 9,30,000 9,84,000												
II. Non-Current Liabilities : (Bal. Fig.) (Bal. Fig.) (Bal. Fig.) (a) Long Term Debt 30,000 7,50,000 6,60,000 7,50,000 7,50,000												
III. Current Liabilities : (a) Sundry Creditors 15,000 3,75,000 3,75,000 3,75,000 3,75,000 90,000 22,50,000 21,09,000 20,55,000 21,09,000												
Assets												
I. Non-Current Assets : (a) Land & Building 20,000 5,00,000 4,40,000 4,40,000 4,40,000 (b) Plant & Machinery 27,000 6,75,000 5,94,000 5,94,000 5,94,000

3.5 Treatment of Translation Gains and Losses The foreign currency translation process used to restate the financial information of foreign subsidiaries to keep pace with the reporting currency of a parent entity very often gives rise to some translation gains or losses. These translation gains or losses arise for applying current exchange rate/terminal exchange rate/historical exchange rate for restating the financial information of overseas subsidiaries at par with the reporting currency. The translation gains or losses are treated by three methods- (i) Immediate recognition and reflection in the income statement, (ii) Deferral method, and (iii) Deferral and amortization method.

3.5.1 Immediate Recognition and Reflection Method This method is based on the traditional approach of conservatism and is also popularly known as non-deferral method. Under this method translation gains or losses are recognized as soon as they occur and are disclosed instantly in the same 60 NSOU • PGC0-X periodic income statement of the reporting entity in which such gains or losses arise. The immediate recognition method is considered efficient since it reflects and communicates the impact of translation process immediately after its occurrence without any delay to the users of financial information. The opponents of this method argue that the method of immediate recognition and reflection of translation gains and losses in the present income statement may cause significant fluctuation to the earnings of the reporting entity and it may disrupt the true interpretation of financial statements.

3.5.2 Deferral Method Unlike the immediate recognition method, the deferral method treats the foreign currency translation gains and losses by allowing to accumulate these separately as 'consolidated equity' and they are not transferred to the income statement. The ideology behind this practice of accumulation is that the translation gains and losses are never realized until the foreign operations are closed down and all the assets and liabilities belonging to foreign operations are returned back to the parent entity. This method is also considered reasonable based on the philosophy that changes in the subsidiary's net assets due to currency fluctuations are unrealized and further that such changes do not affect the subsidiary's cash flows and as such, it is improper to adjust the translation gains and losses in the reporting firms' current income. However, this practice of accumulating the exchange rate losses without recognizing these in the income statement of the relevant year of the parent entity becomes a mismatch and violates the basic accounting principle of conservatism and full disclosure.

3.5.3 Deferral and Amortization Method This method follows the practice of treating the translation gains and losses by amortizing these over the life of the concerned balance sheet items. The argument for doing so is that the cost of an asset includes the sacrifice required to discharge the related liabilities. The translation loss is thus treated as part of the related asset cost and amortized to expenses over its useful life. As the fixed assets are usually translated at historical rates of exchange, the amount of depreciation charged to income statement becomes lower than would have charged at current rates; thus by following this treatment of translation gains and losses, the inflated income so derived would be offset by the reduced income due to amortization of deferred

NSOU • PGC0-X 61 translation losses. However, this method is not free from criticism since it disregards the dual aspect concept of accounting.

**W**

Foreign Currency Translation and IAS 21 The objective of IAS 21 is to prescribe how to include foreign currency transactions and foreign operations in the financial statements of an entity and how to translate financial statements into a presentation currency. The principal issues are which exchange rate/s to use and how to report the effects of changes in exchange rates in the financial statements. For this

purpose, IAS 21 has given some key definitions:

**78%      MATCHING BLOCK 16/150**

**W**

Functional Currency—The currency of the primary economic environment in which the entity operates. Presentation Currency—The currency in

which  
financial statements are presented.

**97%      MATCHING BLOCK 10/150**

**W**

Exchange Difference—The difference resulting from translating a given number of units of one currency into another currency at different exchange rates.

Foreign Operation—

**69%      MATCHING BLOCK 12/150**

**W**

A subsidiary, associate, joint venture, or branch whose activities are based in a country or currency other than that of the reporting entity.

IAS 21 in relation to translation of financial statements prescribes that the methods to be adopted for translation purpose would depend on the nature of the foreign operation - i) integral to the operations of the reporting entity or ii) non-integral to the operations of the reporting entity. The foreign operation will be considered as non-integral to the operations of the reporting entity in the flowing cases : (a) The foreign operations are carried out with significant autonomy; (b) The foreign entity's transactions with the reporting entity are not of very high proportion; (c) The foreign entity's activities are financed principally from its own sources or by means of local borrowings instead of the reporting entity's fund;

62 NSOU • PGCO-X (d) The foreign entity's cost of labour, material and other components are paid primarily in local currency and not in the currency of the reporting entity; (e) The sales are primarily made in any currency other than reporting the entity's currency, where reporting currency is the currency in which an entity denominates its financial statement; (f) The day-to-day activities of the foreign operation do not directly affect the cash flows of the reporting entity. Any exchange difference arising  
when

**59%      MATCHING BLOCK 13/150**

**W**

monetary items are translated at rates different from those at which they were translated when initially recognized or in previous financial statements

are reported in profit or loss in the period, with one exception.

The exception is that 3.6.1 Translation for Integral Operations Foreign operations that are integral to the operations of the reporting entity are taken as if they are the transactions of reporting entity itself. Accordingly, these operations should be translated in line with the provisions of IAS 21. The prescribed procedures for translation of foreign operations as per IAS 21 are as follows: (a) Foreign currency monetary items representing cash and claims of fixed monetary obligations should be reported at the closing exchange rate being the spot rate for the immediate delivery of currencies exchanged on the balance sheet date. (b) Foreign currency non-monetary items representing all items of the balance sheet other than cash and cash equivalents should be reported at the rate prevailing on the date of transaction where these items are carried at historical cost. But if these are carried at fair values (such as revalued property, plant and machineries as per alternative requirements) should be reported at exchange rate that existed at the time of fair value determination. (c) Items of revenue and expenses should be reported at the rate prevailing on the date of transaction. However for simplicity and also as per usual practice, a monthly average rate concerning all items of revenue and expenses over the entire period except depreciation should be utilized for translation purposes. For depreciation charges, the translation rate should be the rate prevailing on the date of purchase of the relevant assets.

NSOU • PGCO-X 63 (d) Exchange difference arising when

**59% MATCHING BLOCK 14/150**

**W**

monetary items are translated at rates different from those at which they were translated when initially recognized or in previous financial statements

are to be reported in profit and loss statement of the period. Exchange differences arising on monetary items that form part of the

**70% MATCHING BLOCK 15/150**

**W**

reporting entity's net investment in a foreign operation are to be recognized in profit and loss

statement only on disposal of the net investment; otherwise they should be classified as a separate component of equity. Also any exchange differences arising on foreign liability has to be accounted for as a hedge of the reporting entity's net investment in a foreign entity. (e) Inventories are to be reported at the rate prevailing on the date of purchase. If the inventories are carried at a lower realizable value for price deflation or otherwise, these should be reported at the rate prevailing at the time of determining lower realizable value. 3.6.2 Translation for Non-integral Operations IAS 21 has prescribed for translation of financial statements of foreign operations that are non-integral to the reporting entity's operations as follows : (a) All balance sheet items representing assets and liabilities should be translated at the closing exchange rate, whether monetary or non-monetary nature. (b) Items of revenue

**62% MATCHING BLOCK 20/150**

**W**

and expenses items should be translated at the rate prevailing on the date of transaction. However,

special rules apply for translating

**60% MATCHING BLOCK 17/150**

**W**

the revenue and expenses items of a foreign entity whose functional currency is the currency of a hyperinflationary economy

in which case translation has to be made at the closing rate. (c) Exchange difference should be classified as a separate component of equity until the disposal of reporting entity's net investment in the foreign entity. (d) When

**59%****MATCHING BLOCK 18/150****W**

a foreign operation is disposed of, the cumulative amount of the exchange differences recognized and accumulated in the separate component of equity

relating to that foreign operation should be recognized in profit and loss statement of the reporting entity.

64 NSOU • PGCO-X 3.7 Summary Foreign currency translation refers to the change in the monetary expression of financial information disclosed in the financial statement of an enterprise. Translation of foreign currency is basically the restatement of financial information of a foreign subsidiary denominated in the functional currency (i.e. currency of the country in which the foreign subsidiary operates) into the reporting currency of the parent company to ensure understandability, comparability, effective analysis and interpretation. Thus, translation is the process of expressing monetary amounts that are stated in terms of a foreign currency in the currency of the reporting entity by using an appropriate exchange rate. A foreign currency transaction is one that requires settlement, either payment or receipt, in a foreign currency. It is the distinguishing feature of foreign currency transaction that its settlement is effected in a foreign currency. Each country uses its own currency for trade settlement as per the existing exchange rates of traded foreign currencies. In recording of foreign currency transaction, date of transaction is of vital issue and there three to be considered for recording purpose- initial transaction date, interim transaction date and settlement date. The foreign currency translation is very much needed for consolidation of financial statements of overseas subsidiaries and the parent entity by expressing the financial information in a single currency called the reporting currency for analyzing and interpreting the financial positions of various subsidiaries of a multinational corporation. Performance evaluation of subsidiaries operating across the globe cannot be made possible without the translation process which significantly assists the global investors to take appropriate economic decisions. The foreign currency translation has broader scope to zoom up foreign trade since the foreign market players become interested in cross-border trade for getting access to global trade information to adopt a consistent translation methodology so that the translated financial reports in a much more understandable and dependable manner. Accounting standards insist on truly reflect the underlying economic circumstances. Accordingly, companies operating internationally are found to undertake translation process so as to restate their assets, liabilities, revenues and expenses relating to the foreign subsidiaries in their domestic currency for which they apply

NSOU • PGCO-X 65 different methods - (i) Single Rate Method and (ii) Multiple Rate Method. Under the multiple rate method, foreign currency translation is undertaken by any of the three methods- (a) Current-Noncurrent Method, (b) Monetary-Nonmonetary Method, and (c) Temporal Method. The foreign currency translation process used to restate the financial information of foreign subsidiaries to keep pace with the reporting currency of a parent entity very often gives rise to some translation gains or losses. These translation gains or losses arise for applying current exchange rate/terminal exchange rate/historical exchange rate for restating the financial information of overseas subsidiaries at par with the reporting currency. The translation gains or losses are treated by three methods- i) Immediate recognition and reflection in the income statement, ii) Deferral method, and iii) Deferral and amortization method. IAS 21 has prescribed

**97%****MATCHING BLOCK 19/150****W**

how to include foreign currency transactions and foreign operations in the financial statements of an entity and how to translate financial statements into a presentation currency. The principal issues are which exchange rate/s to use and how to report the effects of changes in exchange rates in the financial statements. For this

purpose, IAS 21 has given some key definitions about functional currency, presentation currency, exchange difference and foreign operation as guidelines to follow. IAS 21 in relation to translation of financial statements prescribes that the methods to be adopted for translation purpose would depend on the nature of the foreign operation - (i) integral to the operations of the reporting entity or (ii) non-integral to the operations of the reporting entity.

### 3.8 Key Words

**Consolidation of Financial Statements :** Consolidation of financial statement is the process of merging the diverse financial statements of several overseas units operating under a parent company.

**Foreign Currency Transaction :** It refers to transactions entered into in foreign currencies of different countries engaged in international trade. A foreign currency transaction is one that requires settlement, either payment or receipt, in a foreign currency.

**Monetary Assets and Liabilities :** Assets and liabilities whose amounts are

66 NSOU • PGCO-X fixed by contract in terms of currency of the foreign entity are known as monetary and assets and liabilities.

**Non-current Assets and Liabilities :** Assets and liabilities which do not mature within one year within one operating cycle are known as non-current assets and non-current liabilities

**Non-Monetary Assets and Liabilities :** Assets and liabilities whose amounts are not fixed by contract in terms of currency of the foreign entity are known as monetary and assets and liabilities.

**Settlement Date :** Settlement date is the date on which payment/receipt relating to foreign currency transaction is settled in between the participating nations engaged in foreign trade.

**Single Rate :** The single rate refers to the rate applies a single exchange rate, either the current exchange rate or closing exchange rate, to restate all foreign currency assets and liabilities in the reporting currency. Foreign currency translation significantly helps in restating these in a single rate to prepare globally consolidated financial statements.

### 3.9 Exercises

1. What is meant by foreign currency transaction as per AS 21?
2. When does foreign currency transaction arise ?
3. What are the needs of foreign currency transactions ?
4. State the significance of recording foreign currency transactions.
5. What are the different dates associated with the recording of foreign currency transactions ?
6. What do you mean by foreign currency translation? What are its objectives ?
7. What are the different methods of foreign currency translation ? Explain those.
8. What is the single rate of translation ? State the advantages of using the single rate for translation purpose ?

NSOU • PGCO-X 67

9. What do you mean by multiple rate for translation of foreign currency ? What is the current-noncurrent method of translation ?
10. Distinguish between current-noncurrent method and monetary-nonmonetary method of translation.
11. What is meant by temporal method of translating foreign currency?
12. How are the translation gains/losses treated? What are the different methods for treating translation gains/losses?
13. State the immediate recognition and reflection method for treatment of translation gains/losses.
14. Distinguish in brief between the deferral method and deferral and amortization method for treatment of translation gains/losses.
15. What do you mean by non-integral foreign operation?
16. State the translation process for integral foreign operation.
17. State the translation process for non-integral foreign operation.
18. Balance sheet of Zigma Ltd. of USA, an Indian subsidiary as on 31st March 2018 :  
Liabilities USD Assets USD Equity Share Capital 1,20,000 Land & Building 1,00,000 Reserves and Surplus 50,000 Plant & Machinery 1,10,000 Long term Debt 80,000 Inventories (at market price) 60,000 Accounts Payables 30,000 Accounts Receivables 20,000 Other Current Liabilities 20,000 Cash & Bank 10,000 3,00,000 3,00,000  
Translate the above balance sheet into Indian rupees (INR) using different rates of translations assuming the historical rate and current rate of 1US Dollar (USD) are 62 INR and 70 INR respectively.

NSOU • PGC0-X 69 4.1 Introduction The primary objectives of international trade through traditional foreign trade or through the modern era of foreign trade with the aid of MNCs, e-commerce etc. is to maximize foreign exchange earnings from foreign markets for the growth of home economy. This concept has motivated the global market players to enter into foreign trade on a large scale in the seemingly borderless foreign economy especially in the epoch of globalization, liberalization and privatization. But due to wide diversity in international taxation policy, MNCs find it really difficult to operate globally through foreign affiliates to attain the objective of maximizing foreign earnings because of the increasing international tax liability and also the frequent changes in tax legislations. In fact, a substantial part of foreign exchange income earned has to be spent by the MNCs to bear the international tax burden. To overcome this deadlock, MNCs have been taking the transfer pricing mechanism as a step to combat with the international tax burden by way of shifting cost from low-tax jurisdiction to high-tax country to attract less tax burden. This shifting of cost from low-tax country to high- tax country arbitrarily helps to reduce taxable profits in high tax country so as to bear less tax burden than would have been payable without availing transfer pricing technique. Transfer pricing mechanism significantly helps MNCs and other foreign traders to pay less tax to the host country (source country) where foreign income is generated and to bring more of after-tax foreign income to home country (country of origin) by manipulating cost adjustment in intra-country transfer of goods and services. This practice has a negative impact in the economy of the source countries since they have to lose their fair share of national income in the form of tax revenue collection which could have earned from MNCs and others who carry on trade in such countries but for the transfer pricing mechanism adopted by them. To tackle the situation, international tax authorities have promulgated the arms' length principle, advance pricing agreement as a safeguard from the loss of tax revenue from the foreign traders operating in the host country. 4.2 Transfer Pricing and International Transfer Pricing-meaning Pricing of goods and services transferred from operations or manufacturing units located in one geographical area to other operations or units located at some other

70 NSOU • PGC0-X places is called transfer pricing. Transfer pricing is a common practice followed MNCs for transferring goods and services among the subsidiaries which trade among themselves or with the parent firm. A transfer price is the price which one segment (sub unit, department, division etc.) of an organization charges for a product or service supplied to another segment of the same organization. This transfer from one segment to another is only an internal transfer of goods and services and not a sale. Transfer pricing is a concept traditionally undertaken for the amount to be charged by one segment of an enterprise for a product or service that is supplied to another segment of the same enterprise with the intention to minimize the tax liability. With the evolution of MNC concept, segments of the enterprise started spreading as independent entities operating in various parts of the globe. Accordingly, the term has evolved to mean price which is charged between two or more entities of a MNC/associated enterprises operating in different countries. In common parlance,

**79% MATCHING BLOCK 21/150**

**SA** FMG-403 International Finance.pdf (D164737611)

transfer price is the price at which divisions of a company transact with each other, such as the trade of supplies or labour between

divisions or departments. Enterprises under the common ownership and control, transfer goods and services among them at some intra-company prices arrived at as per direction of the owner entity and this price is termed as transfer price which may be the original cost price of goods and services (for example, cost of manufacture) or may be the intra-company cost (for example, cost plus profit) or any other price as may be determined. Transfer pricing refers to value attached to transfer of goods or services between related parties. Thus, transfer pricing can be defined as the price paid for goods transferred from one economic entity to another, while they are operating under a common ownership in and around the globe, may be within a country or in cross- border. Transfer pricing refers to the process for pricing transaction between enterprises under common ownership and control and is more commonly used in international tax perspectives. In the context of international taxation, the term transfer pricing means the setting or fixing the prices of goods and services transferred by one company to another being interrelated companies in a manner that the ultimate tax burden of the companies as a whole is reduced. Under transfer pricing, the shifting of revenues and expenses (cost) is deliberately entertained through inter-company ties (MNCs operating foreign business with the help of foreign affiliates) gives

NSOU • PGCO-X 71 opportunity to the MNCs to minimize global tax burden. This deliberate shifting of revenue and cost adopted by MNCs to reduce global tax liability is popularly known as transfer pricing activity. Multinational companies (MNCs) enjoy some distinct advantages over the purely domestic companies since the MNCs have more geographical flexibility in locating their production and distribution systems. This geographical flexibility in operating in global sphere provides them unique opportunity to exploit differences among national tax jurisdictions so as to manage and even curtail their overall international tax burden by adopting transfer pricing mechanism.

#### 4.2.1 Objectives of International Transfer Pricing

International transfer pricing refers to the value attached to transfer of goods, services, and technology between MNCs and their foreign affiliates working at different geographical locations. While transferring goods and services, MNCs adopt transfer pricing methodology as a part of their international trade strategy to attain the following objectives:

- (a) To ensure free flow of goods/services in cross-border trade- International transfer pricing is aimed at monitoring the flow of goods and services among the divisions of a company operating across the globe. Setting or fixing transfer pricing for intra-divisional transfers is a crucial issue to continue foreign trade in highly competitive geographical locations.
- (b) To facilitate divisional performance measurement- Another important objective of transfer pricing is to measure the notional transfers/sales of one division to another division of MNCs. Thus, the value of transfer prices used in a division or unit will have a significant effect on the performance evaluation of the division/unit. In fact, transfer pricing becomes necessary when there are internal transfers of goods/services and it is required to appraise the performances of the divisions/units involved in foreign trade under MNCs.
- (c) To emphasize on maximizing foreign exchange earnings- MNCs operating globally with the of foreign affiliates focus on profit maximization in the form of foreign exchange earnings. Transfer pricing helps the process of

72 NSOU • PGCO-X determining the price at which goods are transferred from one profit center to another profit center within the same company to maximize profit.

- (d) To manipulate changes in firms' profitability- Under international transfer pricing, if prices are set too high, the selling global affiliates will be able to earn more and the buying affiliates will face hardship in the global market. However, if international transfer prices are set too low the buying affiliates will receive an unwarranted proportion of the profits. Thus, shifting of profits significantly manipulate profitability of affiliates.
- (e) To minimize global tax burden- The objective of setting international transfer pricing is to adopt cost allocation or shifting of cost from low tax jurisdiction to high tax jurisdiction to reduce international tax burden. The effect of shifting cost is that the profit attributable to one jurisdiction is shifted to another jurisdiction. The main object behind this cost allocation is to minimize international tax liability by reducing profits artificially in high tax jurisdiction so that tax obligation is reduced in a specific tax jurisdiction.

#### 4.2.2 Significance of International Transfer Pricing

The need for transfer pricing arises when intra-firm exchange of goods and services is occurred. In case of international trade, where global corporate enterprises operate foreign trade with the help of their designated affiliates or subsidiaries spread over different geographical locations. The parent entity and the subsidiaries very often make inter-changes of goods, services, technologies etc. at some predefined prices called transfer prices. The fixing of transfer pricing is very much significant to achieve overall success in cross-border trade where companies under common ownership and control run and operate foreign trade in various tax jurisdiction with an emphasis to maximize foreign exchange earnings and to minimize global tax liability. As such, transfer pricing has attracted increasing worldwide significance as may be highlighted below: ❖

Transfer pricing is more a global phenomenon than domestic matter since a group of companies under common ownership and control remain busy in different geographical locations to exploit foreign market for profit maximization.

NSOU • PGCO-X 73 ❖ The global firms i.e. the MNCs and their foreign affiliates are affected by more variables than are usually found in domestic operations. Foreign trade restrictions, frequent changes in foreign currencies, global trade pacts etc. heavily affect the business operations carried on by them across the globe. ❖ International transfer pricing strategies adopted significantly varies from industry to industry, country to country to meet the needs of people living in different geographical locations. ❖ International transfer pricing affects the social, economic, and political issues and relationships involving people and the MNCs operating in a particular country. Depending upon the status of local people, their habits, cultural heritage, standards of living etc., the fixing of transfer pricing policy should be adopted. ❖ International transfer pricing is significantly influenced by the prevailing international tax system since MNCs are highly interested to minimize global tax burden to optimize foreign exchange earnings. ❖ International transfer pricing technique of internal cost allocation among group companies operating globally is very much helpful to shift profits from high tax to low tax countries. 4.3 Technique of Transfer Pricing and its impact on International Tax Burden Business and investment opportunities are becoming increasingly international in the wake of sweeping wave of globalization. However, the tax systems of different countries vary greatly in terms of types and modalities of taxes including diversity in definitions and implications of income and expenses, exemptions, tax concessions, rates and collection procedures etc. This wide diversity in global tax system often prohibits the multinational companies to concentrate on cross-border trade. The overall global trade is hampered due to diverse global tax system and the MNCs try to restrict their foreign trade in those tax jurisdictions where tax burden is low and moderate and international tax administration is not so stringent. To achieve this

74 NSOU • PGCO-X target to reduce tax burden, firms operating globally under different tax jurisdictions incorporate transfer pricing mechanism as a vehicle. Internal allocation of cost between groups of globally operated firms is a suitable vehicle for shifting profits from high tax country to low tax country to minimize overall tax burden. The most common of such cost allocations are deliberate allocation of corporate overheads and administrative expenses at a greater degree to foreign affiliates operating in a high tax jurisdiction. This phenomenal mechanism of shifting cost from low tax to high tax country or shifting of profit or revenue from high tax to low tax country has the remarkable impact on to fabricate the tax burden of a foreign affiliate in particular and the parent entity as a whole engaged in foreign trade. As a strategic approach to manipulate international tax obligation, international transfer prices are fixed deliberately for goods and services transferred by a parent entity to its affiliate or by one affiliate to another and vice-versa. The foreign affiliate of an MNC operating in a low tax country endeavours to shift its production cost and other chargeable overheads to another foreign affiliate of the MNC operating in a high tax country. This increases the cost of production of the affiliate in high tax country and keeps the cost of production of the affiliate in low tax country resulting in decrease in the taxable profit of the affiliate in high tax country and also consequent increase in the taxable profit of the affiliate in low tax country. The impact of the mechanism will be to shoulder ultimate low tax burden for lowering profits in high tax jurisdiction. This way, international transfer pricing mechanism significantly helps multinational companies to minimize global tax burden. To demonstrate the magnificent international transfer pricing mechanism to minimize global tax burden as a whole, let us assume a hypothetical example where Lexus International, a global giant in Hong Kong has two wholly owned foreign affiliates Hexa of Hong Kong, a manufacturing subsidiary and Leva of India, a sales affiliate. It is reported that Hexa-Hong Kong consigns 300 pieces Smart Devices at 3,000 INR each to Leva-India which wholesales at 4,000 INR each. Table-1 exhibits in detail the consolidated total profits after tax (after adjusting inter-company sales and cost) and corporate tax liability of Lexus International ascertained at 4,52,000 INR and 1,08,00 INR respectively assuming corporate tax rate is 10% at Hong Kong (assumed a tax haven) and Indian corporate tax rate is 30%.

NSOU • PGCO-X 75 Table-1: Statement showing International Tax Burden (Figures in INR) Hexa-Hong Kong Leva-India Lexus International Sales 9,00,000 12,00,000 21,00,000 Less : Cost of salesa 5,40,000 9,00,000 14,40,000 Gross Margin 3,60,000 3,00,000 6,60,000 Less : Operating expenses assumed) 60,000 40,000 1,00,000 Profit before tax 3,00,000 2,60,000 5,60,000 Less : Corporate taxb 30,000 78,000 1,08,000 Profit after tax 2,70,000 1,82,000 4,52,000 (a) Assuming cost of sales of Hexa-Hong Kong is 60 % of sales. In case of Leva- India, cost of sales is transfer price of goods received from Hexa-Hong Kong. (b) 10% of 3,00,000 INR and 30% of 2,60,000 INR for Hexa-Hong Kong and Leva-India respectively Now, it is assumed that by adopting transfer pricing mechanism for reducing international tax burden, the transfer price (sale price) of 3,000 INR for inter-firm transfer by Hexa-Hong Kong to Leva-India is manipulated at 3,500 INR per piece of Smart Device. This increase in transfer price (sale price) of Hexa-Hong Kong will increase cost of sales of Leva-India by 1,50,000 INR [300 pieces at 500 INR each] and thus a shifting of cost of 1,50,000 INR is made from Hexa-Hong Kong to Leva- India. Table-2 shows the overall international tax burden of Lexus International is computed at 69,000 INR by adopting transfer pricing mechanism. Table-2 : Statement showing International Tax Burden under Transfer Pricing Mechanism (Figures in INR) Hexa-Hong Kong Leva-India Lexus International Sales 10,50,000 12,00,000 22,50,000 Less : Cost of salesa 6,30,000 10,50,000 16,80,000 Gross Margin 4,20,000 1,50,000 5,70,000 76 NSOU • PGCO-X Less : Operating expenses assumed) 60,000 40,000 1,00,000 Profit before tax 3,60,000 1,10,000 2,70,000 Less : Corporate taxb 36,000 33,000 69,000 Profit after tax 3,24,000 77,000 2,01,000 (a) Assuming cost of sales of Hexa-Hong Kong is 60 % of sales. In case of Leva-India, cost of sales is transfer price of goods received (10,50,000 INR) from Hexa-Hong Kong. (b) 10% of 3,60,000 INR and 30% of 1,10,000 INR for Hexa-Hong Kong and Leva-India respectively Table-3 shows the impact of manipulating transfer pricing in reducing overall tax burden of Lexus International. It is observed that by adopting the transfer pricing mechanism, the overall global tax burden of Lexus International has decreased from 1,08,000 INR to 69,000 INR showing a reduction of 36.1% as a whole. Table-3 : Statement showing reduction in International Tax Burden (Figures in INR) Hexa-Hong Kong Leva-India Lexus International Corporate Tax (as per Table-1) 30,000 78,000 1,08,000 Less : Corporate Tax (as per Table-2) 36,000 33,000 69,000 (Increase)/Decrease in tax burden (6,000) 45,000 39,000 (20%) [57.7%] [36%] Figures in per cent in parentheses show increase in tax burden of Hexa-Hong Kong and decrease in tax burden of Leva-India and Lexus International By adopting transfer pricing mechanism, practically the profit to the tune of 1,50,000 INR has been transferred from Leva-India (operating in high tax country) to Hexa-Hong Kong (operating in a low tax country) since the profit before tax of Leva-India has been computed at 2,60,000 INR (Table-1) as against 1,10,000 INR (Table-2). As a consequence of this shifting of profit of 1,50,000 INR from high tax country to low tax country (from Leva-India, India to Hexa-Hong Kong, Hong Kong) or alternatively by shifting of cost of 1,50,000 INR from low tax country (from Hexa-Hong Kong, Hong Kong) to high tax country ( Leva-India, India), Indian tax liability is reduced by 45,000 INR from 78,000 INR (vide Table-1) to 33,000 INR

NSOU • PGCO-X 77 (vide Table-2), whereas Hong Kong tax liability is increased by 6,000 INR (36,000 INR as per Table-2 as against 30,000 INR as per Table-1). This offers an overall international tax saving in the hands of Lexus International, Hong Kong amounting to 39,000 INR representing Indian tax saving of 45,000 INR minus additional Hong Kong tax liability of 6,000 INR (vide Table-3). This way transfer pricing mechanism effectively helps multinational companies to avail reduction in international tax burden at the cost of host country's tax revenue collection (i.e. India for Leva-India). However, for less developed countries and developing countries like India, transfer pricing mechanism adopted by MNCs goes against the socio-economic development since MNC operations act as a barrier to mobilize tax revenue from the global players operating in the host country. Besides, MNCs operating in the host countries make substantial changes in human psychology of people of the host countries regarding their buying habits, preference for foreign goods over the domestic goods etc. which distort overall domestic production and indigenous industrial development.

#### 4.4 Controlling International Transfer Pricing

The various world economies are in trouble how to check and control the international transfer pricing since it has the grueling impact to disregard the spirit of tax laws to raise tax revenue on international transactions. In the United States, Section 482 of the Internal Revenue Code empowers the Secretary of the Treasury to adopt measures to prevent a shifting of income or deductions between related taxpayers to exploit differences in national tax rates for which it recommended that transfers between related entities should be based on arm's length price. An arm's length price is one that an unrelated party would receive for the same or similar items under identical or similar situations. In line with other global economies, India has also taken measures to control and check transfer pricing to ensure appropriate tax revenue collection from foreign transactions. The presence of multinational companies in India and their ability to allocate profits in different tax jurisdictions by controlling prices in intra-group transactions has prompted to take measures relating to control and management of transfer pricing. Transactions between related entities may have inherent advantage as compared to transactions between unrelated entities. Such advantage may be by 78

NSOU • PGCO-X means of price concessions, extended credit period, reduced interest rates, lower logistics expenses, etc. With the advent of globalization, multinational companies (MNCs) have established presence in all parts of the world and are conducting business seamlessly. They can enjoy the privileges of doing business with related parties whereas companies which deal with unrelated parties in an open market are not able to exploit such benefits. Therefore, in order to ensure safe and fair dealing among all companies and markets, regulations for transfer pricing was highly needed. In addition to price related benefits, MNCs may also bear in mind the goal of minimizing tax burden and maximizing profits but the two tax jurisdictions/countries also need to ensure that they are not losing their fair share of tax revenue in such cases. This has raised an internationally accepted practice on the lines that 'transfer pricing' should be governed by the Arm's Length Principle (ALP) and the transfer price should be the price applicable in case of a transaction of arm's length. In other words, in transaction between associates it should be priced in the same way as a transaction between independent enterprises in an uncontrollable manner. The tax authorities implement transfer pricing regulations and strengthen the enforcement in order to prevent a loss of revenue faced by countries where these companies run and operate as a group member. Thus, to protect each country's fair share in an MNC's total profit, the global tax authorities have established principles under which it can be assumed that related parties deal with each other as if they were independent and this principle is called the arm's length principle.

#### 4.4.1 International Transfer Pricing and India

In the post globalization era, the continued MNC operations in India and the intention of the MNCs to allocate profits in different jurisdictions by controlling prices in intra-group transactions, made the issue of transfer pricing a matter of serious concern for the Indian Government. Just like their global counterparts, the Indian tax authorities presumed the ability or intention of the MNCs to resort to transfer pricing technique to shift profits deliberately from high tax country to low tax country and thereby to avoid Indian tax liability. All these led to the introduction of regulatory framework by Indian Government to check transfer pricing in the country.

NSOU • PGCO-X 79 Accordingly, sections 92 to 92F had been included in the Income-tax Act, 1961 to deal with issues relating to control and regulate the transfer pricing in the country so as to check tax avoidance by MNCs through international transactions. As per section 92B, an international transaction is one which satisfies the following criteria: (a) A transaction between two or more associated enterprises, either or both of whom are non-residents; (b) The transaction is in the nature of purchase, sale or lease of tangible or intangible property, or provision of services, lending or borrowing money or any other transaction having a bearing on the profits, income, losses or assets of such enterprises; (c) It includes a transaction in the nature of mutual agreement or arrangement between such associated enterprises for the allocation or apportionment of any contribution, cost or other expenses in connection with a benefit, service or facility provided in between such enterprises. Section 92F prescribes that arm's length price shall be applied in all international transactions entered between persons other than associated enterprises, in an uncontrolled conditions. Section 92C provides that the arm's length price in an international transaction shall be determined by any one of the following methods as follows : ■ Comparable uncontrolled price method; ■ Resale price method; ■ Cost plus method; ■ Profit split method; ■ Transactional net margin method

4.5 Advance Pricing Agreement Transfer pricing techniques adopted by MNCs in international transactions have much of negative impact on the tax mobilization by the host country where MNCs operate their business functions. The loss of due share of tax revenue that could have

80 NSOU • PGCO-X been raised through international taxation is a serious crisis which needs to be duly met. But the blatant wave of globalization and free trade spurs the MNCs to adopt transfer pricing as a means to avoid or reduce international tax burden. The host countries are in despair to lose their due share of tax revenue. A measure to foil this practice of MNCs to unduly avoid international tax burden has been felt all over the globe. Advance Pricing Agreement (APA) has been emerged as a respite to tackle the situation. Advance Pricing Agreement (APA) is devised as a mechanism whereby taxpayers and taxation authority voluntarily negotiate an agreed transfer price that is binding on both the parties to the agreement. APA is considered beneficial to both the parties of the agreement since by entering into an APA with an associated enterprise (AE), the taxing authority enjoys a certainty of applying for an Advance Pricing Agreement (APA) for settling price in an international transaction with the AE. Under the APA, a specific price for the tentative international transaction is mentioned well in advance and the same price is agreed upon mutually by the taxing authority and the AE to be followed over a certain period for determining tax liability thereof. As such, APA has the potential to reduce litigation between the parties of the agreement. In India, APA is an agreement entered into between a taxpayer or applicant and the Central Board of Direct Taxes (CBDT) to determine the arm's length price of future intra-company transactions. Once an APA has been entered into with respect to an international transaction, the arm's length price with respect to that international transaction, for the period specified in the APA, will be determined only in accordance with the APA and it shall be binding on the person as well as the Income-tax authorities for the specified transaction and period as covered in the APA. The APA is a specific agreement which is designed to provide certainty with regard to determination of arm's length price of the international transaction. As it is an agreement in advance, APA reduces the compliance costs by eliminating the risk of transfer pricing audit and resolving long drawn and time consuming litigation. APA also reduces the burden of record keeping, as the taxpayer knows in advance the required documentation to be maintained to substantiate the agreed terms and conditions of the agreement.

NSOU • PGC0-X 81 4.6 Safe Harbour A safe harbour is a provision of a statute or a regulation that specifies a certain conduct will be deemed not to violate a given rule. In the case of international transactions, a safe harbour simply means that the transfer price which is declared by the assessee shall be accepted by the income-tax authorities. In international transactions, there are increasing numbers of transfer pricing related disputes between the taxation authorities and the taxpayers who are foreign nationals. These litigations often make the tax settlement more complex and time consuming for which the taxing authorities have to wait long for tax collection at the cost of their national fund. Safe harbor rules in such cases may be the most deserving alternatives to mitigate the tax disputes and to accelerate tax collection and settlement. Many countries of the globe follow the safe harbour rule to settle long standing tax disputes. In Indian context also, safe harbour rule is followed as a measure to expedite the tax settlement procedure and to mitigate the increasing number of transfer pricing audits and prolonged tax disputes. As per provision of section 92CB of the Indian Income Act, the determination of arm's length price under section 92C or Section 92CA shall be subject to Safe Harbour rules for which CBDT has been empowered to prescribe safe harbour rules. Safe Harbour means circumstances in which the income-tax authorities shall accept the transfer price declared by the assessee. Safe harbour rule is very much significant for inspiring international transactions and if a country unnecessarily continues tax disputes with foreign nationals, the overall economic development of that country will be lagging behind for the lack of international transactions. It is to be noted that in some cases like inflow of foreign capital and technology, life saving drugs and medicines, new generations products, foreign technician services etc. international transactions are inevitable and cannot be avoided. By applying safe harbour rules, tax disputes relating to international transfer pricing may be required to be settled for the cause of attaining overall socio-economic development.

4.7 Summary In the present era of globalization, liberalization and privatization, there has been much emphasis on international trade. Individual traders, exporting organizations,

82 NSOU • PGC0-X and multinational companies around the globe are found to remain busy in international trade with the objective to earn foreign exchange earnings But due to wide diversity in international taxation policy, their attempts to earn foreign income are largely affected since a substantial part of their foreign income is squashed away to pay international tax liability. They find it really difficult to operate globally to attain the objective of maximizing foreign earnings because of the increasing international tax liability and also the frequent changes in tax legislations. To overcome this impasse, a new concept of transfer pricing has evolved whereby companies operating in different countries undertake the practice of shifting of cost and other expenses from low tax jurisdiction to high tax jurisdiction or of shifting profits from high tax jurisdiction to low tax jurisdiction. This shifting of cost or profits from one country to another has the sparking impact to reduce international tax burden. The MNCs operating with their foreign affiliates spread over different geographical locations in the globe are found to adopt this transfer pricing mechanism successfully to avoid or reduce their global tax burden. In case of intra-firms transfer of goods and services from one unit to another under the common ownership and control, the transfer pricing technique significantly helps the parent global entity to substantially reduce its overall foreign tax liability. However, this practice of tax avoidance availed by MNCs seriously hampers the tax revenue mobilization of countries (host countries) where the MNCs operate their foreign businesses with the help of their foreign affiliates. In fact, the host countries lose their due share of tax revenue which could have earned by them but for the application of transfer pricing technique by MNCs they fail to do so. This had been a matter of great concern to the governments of various countries for unduly sacrificing their due share of tax revenue likely to rise from foreign traders operating business in their tax jurisdiction. The arms' length principle (ALP) has emerged to check the tendency of MNCs to avoid tax obligation by means of transfer pricing methodology. The introduction of ALP has provided that prices of goods and services for intra-company transfer shall be determined for tax purposes based on arms' length price. The arm's length price is the price that is arrived at for transfers of goods and services between two or more persons who are unrelated and is entered into in an uncontrolled manner. Transfer prices often come under the scrutiny of taxation authorities when it is found different from the arm's length price to unrelated parties. This scrutiny by

NSOU • PGCO-X 83 taxation authorities sometimes leads to delay in tax settlements and disgruntlements among the MNCs and other foreign affiliates to operate globally in an uninterrupted manner. To tackle this, advance pricing agreement (APA) has been evolved whereby the taxation authorities and the taxpayers make necessary pricing agreements well in advance that shall be taken into account in case a dispute arises as to the authenticity of arm's length price for determining tax liability. Safe harbour rule is an important tool to mitigate the transfer pricing disputes in international transactions. A safe harbour simply means that the transfer price which is declared by the assessee shall be accepted by the income-tax authorities. Safe harbour rule is very crucial to settling transfer pricing related disputes between the taxation authorities and the taxpayers for the greater interest of motivating international trade for the benefits of both the tax jurisdiction nationals and the global taxpayers. 4.8 Key Words Arm's Length Price (ALP) : An arms' length price is the price which is entered between two or more unrelated parties in an uncontrolled manner. An arms' length price is one that an unrelated party would receive for the same or similar items under identical or similar situations. Advance Pricing Agreement (APA) : APA is regarded as a mechanism whereby taxpayers and taxation authority voluntarily negotiate an agreed transfer price that is binding on both the parties to the agreement. Safe Harbour : A safe harbour is a provision of a statute or a regulation that specifies a certain conduct will be deemed not to violate a given rule. In the case of international transactions, a safe harbour simply means that the transfer price which is declared by the assessee shall be accepted by the income-tax authorities. Transfer Price : A transfer price is the price which one segment (sub unit, department, division etc.) of an organization charges for a product or service supplied to another segment of the same organization. 4.9 Exercises 1. Define transfer pricing.

84 NSOU • PGCO-X 2. What is international transfer pricing? State the objectives of international transfer pricing. 3. What is meant by transfer pricing technique? Highlight the significance of international transfer pricing. 4. What are the objectives of using transfer pricing methodology? 5. Explain the impact of transfer pricing technique on international tax liability. 6. What is an arm's length price? 7. What do you mean by arm's length principle? 8. State the importance of arm's length principle in international transaction. 9. What are the different pricing methods for determining arm's length price? 10. What is an international transaction as per 92B? 11. What is meant by advance pricing agreement? 12. Explain the role of advance pricing agreement in settling disputes in international transaction. 13. What do you mean by safe harbour? 14. State the significance of safe harbour rule in international transaction.

88 NSOU • PGCO-X • understand the concept of Nostro, Vostro and Loro accounts, • explain the factors affecting the foreign exchange rates, • compute the direct and indirect exchange rate quotes using bid/ask rates, • explain the determinants and classification of exchange rates, and • describe the concepts of Currency Depreciation, Appreciation, Devaluation, Revaluation and currency convertibility. 5.1 Introduction With the development of increasing integration in global financial markets and the growth in the international trade and financial liberalization, the whole world economies have attracted enormous attention on exchange rate fluctuation and manage exchange rate. After the liberalization, privatization and globalization, the whole world converted in to one nation economy where the national currency plays a vital role for the decision making. The foreign exchange (sometimes abbreviated "forex") market typically conjures up images of a hectic trading room, full of computers and information networks, with traders talking excitedly on telephones. This image is a reality on the trading floors of the world's major banks and other financial institutions that make up the interbank market. It may help to think of the interbank market as the wholesale part of the forex market where banks manage inventories of currencies. There is also a less hectic retail side of the forex market, where the customers of the foreign exchange dealers buy and sell foreign currencies. These customers are the multinational corporations that market goods and services throughout the world and the institutional investors and money managers that invest capital or speculate throughout the world. The foreign exchange market operates 24 hours per day because the major financial centers where currencies are traded are geographically spread out. When it is midnight in London, England, it is morning in the Pacific and Asian markets. The first market activity is in Sydney (Australia) and Wellington (New Zealand), and it is quickly followed by trading in Tokyo and Osaka (Japan), Hong Kong, and Singapore.

NSOU • PGCO-X 89 5.2 The International Monetary Fund (IMF) In the course of its international business activities, an MNC may need financing from an Internationally active bank, use economic information provided by an international organization, operate within a regulatory framework set by local governments or international institutions, and deal with investor relations in several countries. The IMF is an international organization of 190 member countries, based in Washington, DC, which was conceived at a United Nations conference convened in Bretton Woods, New Hampshire, in 1944. The 45 governments represented at that conference sought to build a framework for economic cooperation that would avoid a repetition of the disastrous economic policies that had contributed to the Great Depression of the 1930s. The main goals of the IMF are to ensure the stability of the international monetary and financial system (the system of international payments and exchange rates among national currencies that enables trade to take place between countries), to help resolve crises when they occur, and to promote growth and alleviate poverty. To meet these objectives, the IMF offers surveillance and technical assistance. Surveillance is the regular dialogue about a country's economic condition and policy advice that the IMF offers to each of its members. Technical assistance and training are offered to help member countries strengthen their capacity to design and implement effective policies, including fiscal policy, monetary and exchange rate policies, banking and financial system supervision and regulation, and statistics. Economic crisis often occur when countries borrow excessively from foreign lenders and subsequently experience difficulties financing their balance of payments. The IMF is set up to offer temporary financial assistance to give member countries the breathing room they need to correct balance-of- payment problems. A policy program supported by IMF financing is designed by the national authorities in close cooperation with the IMF, and continued financial support is conditional on effective implementation of this program. This is known as IMF conditionality. The IMF charges market interest rates for these loans. In addition, the IMF also actively works to reduce poverty in countries around the globe, independently and in collaboration with the World Bank and other organizations. Here, loans are 90 NSOU • PGCO-X provided at below-market rates. The IMF's main resources are provided by its member countries, primarily through the payment of quotas, which broadly reflect each country's economic size. 5.3

Nostro, Vostro and Loro Accounts In interbank transactions, foreign exchange is transferred from one account to another account and from one centre to another

centre. Therefore, the banks maintain three types of current accounts in order to facilitate quick transfer of funds in different currencies. These accounts are Nostro, Vostro and Loro accounts meaning "our", "your" and "their". A bank's foreign currency account maintained by the bank in a foreign country and in the home currency of that country is known as Nostro Account or "our account with you". For example, An Indian bank's Swiss franc account with a bank in Switzerland. Vostro account is the local currency account maintained by a foreign bank/ branch. It is also called "your account with us". For example, Indian rupee account maintained by a bank in Switzerland with a bank in India. The Loro account is an

account wherein a bank remits funds in foreign currency to another bank for credit to an account of a third bank. 5.4

Concept of

**87% MATCHING BLOCK 24/150**

W

Exchange Rate Exchange Rate means the price of a nation's currency in terms of another currency. An exchange rate

thus

**92% MATCHING BLOCK 25/150**

W

has two components, the domestic currency and a foreign currency, and can be quoted either directly or indirectly. In a direct quotation, the price of a unit of foreign currency is expressed in terms of the domestic currency. In an in-direct quotation, the price of a unit of domestic currency is expressed in terms of the foreign currency. An exchange

rate that does not have the domestic currency as one of the two currency components is known as a cross currency, or cross rate. According to Layman, "an

**87% MATCHING BLOCK 30/150**

SA

FMG-403 International Finance.pdf (D164737611)

exchange rate is the price of one country's currency expressed in

another country's currency. In other words, the rate at which one NSOU • PGCO-X 91 currency can be exchanged for another". According to Shapiro, "an

**81% MATCHING BLOCK 26/150**

W

exchange rate is, simply, the price of one nation's currency in terms of another currency,

often termed the reference currency".

**100% MATCHING BLOCK 27/150**

W

An exchange rate has a base currency and a counter currency. In a direct quotation, the foreign currency is the base currency and the domestic currency is the counter currency. In an indirect quotation, the domestic currency is the base currency and the foreign currency is the counter currency.

Example The rupee/dollar exchange rate is just the number of

rupee that one dollar will buy. If a dollar will buy 100 rupee, the exchange rate would be expressed as 100/ \$, and the rupee would be the reference currency. Equivalently, the dollar/rupee exchange rate is the number of dollars one rupee will buy. Continuing the previous example, the exchange rate would be \$0.01/ (1/100), and the dollar would now be

**97%**

**MATCHING BLOCK 28/150**

**W**

the reference currency. Most exchange rates use the US dollar as the base currency and other currencies as the counter currency. However, there are a few exceptions to this rule, such as the euro and Commonwealth currencies like the British pound, Australian dollar and New Zealand dollar. Exchange rates for most major currencies are generally expressed to four places after the decimal, except for currency quotations involving the Japanese yen, which are quoted to two places after the decimal. Exchange rates can be

for spot or forward delivery. A spot rate is the price at which currencies are traded for immediate delivery; actual delivery takes place two days later. A forward rate is the price at which foreign exchange is quoted for delivery at a specified future date. The foreign exchange market, where currencies are traded, is not a physical place; rather, it is an

**100%**

**MATCHING BLOCK 31/150**

electronically linked network of banks, foreign exchange brokers, and dealers whose function is to bring together buyers and sellers of foreign exchange. 5.4.1

Factors Affecting Foreign Exchange Rates Foreign Exchange being a commodity like any other commodities, the exchange rates tend to fluctuate from time to time. There are various factors that cause the 92 NSOU • PGO-X fluctuations in the rates of exchange. These factors can be divided into several following groups. These groups can affect the exchange rates on a short term as well as long-term basis. 1. Fundamental Factors The fundamental factors include all such events that affect the basic economic and fiscal policies of the concerned government. These factors normally affect the long-term exchange rates of any currency. On short-term basis on many occasions, these factors are found to be rather inactive unless the market attention has turned to fundamentals. However, in the long run exchange rates of all the currencies are linked to fundamental causes. The fundamental factors are basic economic policies followed by the government in relation to inflation, balance of payment position, unemployment, capacity utilization, trends in import and export, etc. Normally, other things remaining constant the currencies of the countries that follow sound economic policies will always be stronger. Similarly for the countries which are having balance of payments surplus, the exchange rate will always be favorable. Conversely, for countries facing balance of payment deficit, the exchange rate will be adverse. Continuous and ever growing deficit in balance of payment indicates over valuation of the currency concerned and the dis-equilibrium created can be remedied through devaluation. 2. Political and Psychological Factors Political and psychological factors are believed to have an influence on exchange rates. Many currencies have a tradition of behaving in a particular way for e.g. Swiss franc as a refuge currency. The US Dollar is also considered a safer haven currency whenever there is a political crisis anywhere in the world. 3. Technical Factors The various technical factors that affect exchange rates can be mentioned as under: (a) Capital Movement : The phenomenon of capital movement affecting the exchange rate has a very recent origin. Huge surpluses of petroleum exporting countries due to sudden spurt in the oil prices could not be utilised by these countries for home consumption entirely and needed to be invested elsewhere productively. Movement of these petro dollars, started affecting

NSOU • PGCO-X 93 the exchange rates of various currencies. Capital tended to move from lower yielding to higher yielding currencies and as a result the exchange rates moved. (b) Relative Inflation Rates : It was generally believed until recently that one prima-facie direction for exchange rates to move was in the direction adjusted to compensate the relative inflation rates. For instance, if a currency is already overvalued, i.e., stronger than what is warranted by relative inflation rates, depreciation sufficient enough to correct that position can be expected and vice versa. It is necessary to note that exchange rate is a relative price and hence the market weighs all the relevant factors in a relative term, (in relation to the counterpart countries). The underlying reasoning behind this conviction was that a relatively high rate of inflation reduces a country's competitiveness in international markets and weakens its ability to sell in foreign markets. This will weaken the expected demand for foreign currency (increase in supply of domestic currency and decrease in supply of foreign currency). But during 1981-85 period exchange rates of major currencies did not confirm the direction of relative inflation rates. The rise of the dollar persistently for such a long period discredited this principle. (c) Exchange rate policy and intervention : Exchange rates are also influenced in no small measure by expectation of changes in regulation relating to exchange markets and official intervention. Official intervention can smoothen an otherwise disorderly market but it is also the experience that if the authorities attempt half-heartedly to counter the market sentiments through intervention in the market, ultimately more steep and sudden exchange rate swings can occur. In the second quarter of 1985 the movement of exchange rates of major currencies reflected the change in the US policy in favour of co-ordinated exchange market intervention as a measure to bring down the value of the dollar. (d) Interest rates : An important factor for movements in exchange rates in recent years has been difference in interest rates; i.e. interest differential between major countries. In this respect the growing integration of the financial markets of major countries, the revolution in telecommunication

94 NSOU • PGCO-X facilities, the growth of specialized asset managing agencies, the deregulation of financial markets by major countries, the emergence of foreign exchange trading etc. having accelerated the potential for exchange rates volatility. 4. Speculation Speculation or the anticipation of the market participants many a times is the prime reason for exchange rate movements. The total foreign exchange turnover worldwide is many a times the actual goods and services related turnover indicating the grip of speculators over the market. Those speculators anticipate the events even before the actual data is out and position themselves accordingly to take advantage when the actual data confirms the anticipations. The initial positioning and final profit taking make exchange rates volatile. These speculators many a times concentrate only on one factor affecting the exchange rate and as a result the market psychology tends to concentrate only on that factor neglecting all other factors that have equal bearing on the exchange rate movement. Under these circumstances even when all other factors may indicate negative impact on the exchange rate of the currency if the one factor that the market is concentrating comes out positive the currency strengthens. 5. Others The turnover of the market is not entirely trade related and hence the funds placed at the disposal of foreign exchange dealers by various banks, the amounts which the dealers can raise in various ways, banks' attitude towards keeping open position during the course of a day, at the end of the day, on the eve of weekends and holidays, window dressing operations as at the end of the half year or year, end of the month considerations to cover operations for the returns that the banks have to submit the central monetary authorities etc. — all affect the exchange rate movement of the currencies. 5.4.2 Exchange Rate Quotes Because exchange rates are relative prices, they can be expressed in two ways. Exchange rates can be quoted in direct terms as the domestic currency price of the foreign currency or in indirect terms as the foreign currency price of the domestic currency.

NSOU • PGCO-X 95 Direct quote A currency

**95%**

**MATCHING BLOCK 29/150**

**W**

quotation is the price of a currency in terms of another

currency.

For example, \$1 = 48.00, means that one dollar can be exchanged for 48.00. Alternatively, we may pay 48.00 to buy one dollar. A direct quote is the home currency price of one unit foreign currency. Thus, in the aforesaid example, the quote \$1 = 48.00 is a direct-quote for an Indian. For example, in the United Kingdom, people discuss the pound prices of various goods and assets. If you were in the United Kingdom, you might inquire, "How many pounds does it take to purchase that car?" or "What does that car cost?" In each case, you want to know the number of pounds that must be given up to purchase a specific car. An economist would say the answer to these questions is the value of the car in terms of the pound. Now, suppose you were in the United Kingdom, and you wanted to travel to Germany. If you thought you might need 1,000 euros on your trip, it would also be natural for you to inquire, "How many pounds does it take to purchase 1,000 euros?" or "What do 1,000 euros cost?" In each case, you want to know the number of pounds that must be given up to purchase this specific number of euros. Once again, economists would say that the answer is the value of 1,000 euros in terms of the pound. If the pound price of the euro is £0.90 &lt; ;, the pound cost of 1,000 euros is :1,000 \* 1£0.90 &lt; ; 2 = £900. Indirect quotes An indirect quote is the foreign currency price of one unit of the home currency. The quote Re.1 = \$0.0208 is an indirect quote for an Indian. (\$1/ 48.00 = \$0.0208 approximately) For the U.S. dollar, it is common for many exchange rates to be quoted in indirect quotes, such as ¥100 &lt; ; \$ for the Japanese yen or CHF 1.8 &lt; ; \$ for the Swiss franc. These exchange rates represent the amount of foreign currency that is equivalent to 1 dollar, which is also the amount of foreign currency required to purchase 1 dollar. Direct and indirect quotes are reciprocals of each other, which can be mathematically expressed as follows. Direct quote = 1/indirect quote and vice versa

96 NSOU • PGCO-X American Term and European Term Quotes in American terms are the

<b>100%</b>	<b>MATCHING BLOCK 33/150</b>	<b>SA</b>	14691e0019 - a study on comparative trend anal ... (D20963459)
rates quoted in amounts of U.S. dollar per unit of foreign currency.			

When the exchange rate is given at number of dollars per unit of foreign currency then this is quotation

<b>100%</b>	<b>MATCHING BLOCK 34/150</b>	<b>SA</b>	14691e0019 - a study on comparative trend anal ... (D20963459)
in American terms. While rates quoted in amounts of foreign currency per U.S. dollar are known as quotes in European terms.			

When the quotation is given as number of units of a currency per unit of dollar then this is known as quotation in European terms. For example, U.S. dollar 0.2 per unit of Indian rupee is an American quote while INR 44.92 per unit of U.S. dollar is a European quote. Most foreign currencies in the world are quoted

<b>100%</b>	<b>MATCHING BLOCK 32/150</b>	<b>W</b>	
in terms of the number of units of foreign currency needed to buy one			

U.S. dollar i.e. the European term. American quote The phrase American quote refers to the dollar price of a foreign currency—that is, the number of dollars it takes to purchase one unit of the foreign currency. Exchange rates of the British pound versus the dollar and the euro versus the dollar are commonly expressed directly in dollars per pound. European quote The indirect method of quoting exchange rates is also commonly referred to as a European quote (the amount of foreign currency needed to buy dollars) because most former European currencies, such as the Deutsche mark and the French franc, were quoted this way relative to the dollar. Direct and Indirect, American and European Quotes In the United States (US) In the United Kingdom (UK) \$ per £ Direct Indirect \$ per £ American American £ per \$ Indirect Direct £ per \$ European European In India In the United States (US) Rupee per \$ Direct Indirect

NSOU • PGCO-X 97 Bid, Offer/Ask and Spread A foreign exchange quotes are two-way quotes, expressed as a 'bid' and an offer' (or ask) price. Bid is the price at which the dealer is willing to buy another currency. Bid rate is the exchange rate at which the authorized dealer of foreign exchange (usually bank) is willing to buy foreign currency. The offer/ask is the rate at which he is willing to sell another currency. Ask rate is the exchange rate at which the authorized dealer of foreign exchange is willing to sell foreign currency. Thus a bid in one currency is simultaneously an offer in another currency. For example, a dealer may quote Indian rupees as 48.80 - 48.90 vis-a-vis dollar. That means that he is willing to buy dollars at 48.80/\$ (sell rupees and buy dollars), while he will sell dollar at 48.90/\$ (buy rupees and sell dollars). The difference between the bid and the offer is called the spread. The offer is always higher than the bid as inter-bank dealers make money by buying at the bid and selling at the offer. % Spread =  $\frac{\text{Offer} - \text{Ask}}{\text{Bid}} \times 100$  It must be clearly understood that while a dealer buys a currency, he at the same time is selling another currency. When a dealer wants to buy a currency, he/she will ask the other dealer a quote for say a million dollars. The second dealer does not know whether the first dealer is interested in buying or selling one million dollars. The second dealer would then give a two-way quote (a bid/offer quote). When the first dealer is happy with the 'ask' price given by the second dealer, he/she would convey "ONE MINE", which means "I am buying one million dollars from you". If the first dealer had actually wanted to sell one million dollars and had asked a quote and he is happy with the 'bid' price given by the second dealer, he/she would convey "ONE YOURS", which means "I am selling one million dollars to you".

Cross Rates It is the exchange rate which is expressed by a pair of currency in which none of the currencies is the official currency of the country in which it is quoted. For example, if the currency exchange rate between a Canadian dollar and a British pound is quoted in Indian newspapers, then this would be called a cross rate since none of the currencies of this pair is of Indian rupee.

98 NSOU • PGCO-X Cross Rate is an exchange rate that is derived from other exchange rates and it does not involve the home currency. Example : Cross rate when transaction costs are not involved : Suppose the exchange rates are : USD/INR=67.02 EUR/INR=74.68 Compute USD/EUR Cross rate. Solution :  $\frac{\text{USD/INR}}{\text{EUR/INR}} = \frac{\text{USD}}{\text{EUR}}$  So,  $\frac{\text{USD}}{\text{EUR}} = \frac{67.02}{74.68} = 0.897$  (It means 1 USD = 0.897 EUR)

5.4.3 Exchange Rate Quotations and Arbitrage Although the term "market rate" is often used it is not true that all banks will have identical quotes for a given pair of currencies at a given point of time. For example if Bank A gives the quote given above : /\$ : 34.85/34.92 At the same time Bank B quotes /\$ : 34.75/34.82 Such a situation will give rise to an arbitrage opportunity. Dollars can be bought at 34.82 from Bank B and sold at 34.85

**66% MATCHING BLOCK 39/150**

**W**

to bank A. Thus giving a net profit of 0.03 per dollar without any risk or commitment of capital.

This would lead to a situation where every dealer would like to buy from Bank B and sell to Bank A. However, in an efficient market this would not be allowed to prevail, if at all it does prevail it will be only for a few moments. Two Point Arbitrage If dollars are available in India at /\$ : 34.60/34.75 and at the same time Rupees are available in U.S.A at \$/ : 0.0285/0.0287.

NSOU • PGCO-X 99 In such a situation a trader can buy \$ from India at 34.75 and sell it at U.S.A for 34.84 (1/0.287). Thus making a net profit of 0.09 per dollar. This arbitrage transaction in which the trader buys

**92% MATCHING BLOCK 41/150**

**W**

a currency in one market and sells it at a higher price in another market is called "Two Point Arbitrage".

The bid and risk rate for dollars in terms of in U.S.A is computed as follows :  $(\$/\text{ask}) = 1/(\text{\$/bid})$  The ask on the rupee being the bid on the dollar and vice-versa. Problem : A bank in Canada displays the following spot quotation. C\$/\\$ : 1.3690/1.4200 At the same time a bank in New York quotes \\$/C\\$ : 0.7100/0.7234 (a) Is there an arbitrage opportunity? (b) If the Canadian bank lowers its ask rate to 1.3742, Is there an arbitrage opportunity? (c) If you buy one million U.S. \$ from Canada and sell them in U.S.A after the Canadian lowers its ask rate. What is the riskless profit you will make? Solution : (a) If we buy U.S. dollars from Canada we will pay C\$ 1.4200 per U.S. dollar. This can be sold in U.S.A for 1.4085 only there by leaving us with a loss. Hence there is no arbitrage opportunity. \\$/C\\$ : 0.7100/0.7234 C\$/\\$ :  $[\frac{1}{(\text{\$/C}\text{ask})}] / [\frac{1}{(\text{\$/C}\text{bid})}] : [\frac{1}{0.7234}] / [\frac{1}{0.7100}] : 1.3824/1.4085$

100 NSOU • PGCO-X (b) If the Canadian bank lowers its ask rate to 1.3742 we can buy U.S. \$ from Canada for C\$ 1.3742 and sell them in U.S.A for C\$ 1.4085 per U.S. dollar. Thus making an arbitrage profit of 0.0343 Canadian dollars on every U.S. dollar. (c)  $10,00,000 \times 1.3732 = 14,08,500$   $10,00,000 \times 1.4085 = 14,08,500$  Thus if one million U.S. dollars are bought from Canada and sold in America after the Canadian bank lowers its ask rate, the riskless profit that can be made is C\$ 35,300. Three Point Arbitrage Three point arbitrage refers to the transactions wherein a trader deals with three currencies, he starts with currency X, sells it for currency Y, sells currency Y for currency Z, and finally sells currency Z for currency X. After this process he should have more of Z than he began with. For three currencies X, Y and Z The no Arbitrage opportunity condition implies :  $(X/Y)_{bid} \geq (X/Z)_{ask} \times (Z/Y)_{ask}$   $(X/Y)_{ask} \leq (X/Z)_{bid} \times (Z/Y)_{bid}$  Problem : A bank in Wales is currently offering the following quotes: FFr/£ : 7.9970/7.9990 HK\$/£ : 11.9071/11.9091 At the same time a bank in Hong Kong is quoting FFr/HK\$ : 0.6750/0.6770 Is there an Arbitrage opportunity? Solution : One FFr gets  $\text{£}[1/(FFr/\text{£})_{ask}] = \text{£}(1/7.9990) = \text{£}0.1250$

NSOU • PGCO-X 101  $\text{£}[1/(FFr/\text{£})_{ask}]$  gets  $\text{HK}\$[1/(FFr/\text{£})_{ask}] [(FFr/\text{£})_{bid}] = (1/7.9990) (11.9071) = 1.4884$  And finally the amount of FFr is obtained  $\text{FFr}\{[1/(FFr/\text{£})_{ask}][(\text{HK}\$/\text{£})_{bid}(\text{FFr}/\text{HK}\$)_{bid}]\}$   $\text{FFr} [(1/7.9990) (11.9071) (0.6750)] = \text{FFr} 1.0048$  There is an arbitrage opportunity. A riskless profit of FFr 1.0048 per French Franc. Note : Problems given above are not real life situations, these type of arbitrage opportunities seldom appear in the market. Even if it does it will only be for a few moments and efficient traders are bound to take advantage of this situation. Covered Interest Arbitrage Investments abroad have to be converted into home currency on maturity. Exchange rate may have changed in the meanwhile. An investor may make a forward sale of funds to be repatriated on maturity. The process of investing abroad for higher returns and making a forward sale of the proceeds is known as covered interest arbitrage. An investment abroad will be undertaken if the return from interest rate differential exceeds the forward margin (difference between the forward and spot exchange rates). In general terms, the forward rate of the foreign currency will contain a discount (premium) if its interest rate is higher (lower) than that of the home currency. Covered interest arbitrages will go on till the market forces realign the forward margins with the interest rate differentials. Problem : If, –

**82% MATCHING BLOCK 35/150**

**W**

Spot rate : 42.0010 = \$ 1 – 6 month forward rate: 42.8020 = \$ 1 – Annualized interest rate on : 6 month rupee : 12 % 6 month dollar : 8% Calculate the arbitrage possibilities. 102 NSOU • PGCO-X Solution : The rule is that if the interest rate differential is greater than the premium or discount, place the money in the currency that has a higher rate if interest or vice –versa. Given the above data : Negative interest rate differential =  $(12-8) = 4\%$  Forward premia (annualized) =

$$\text{Forwardrate} - \text{Spotrate} = 42.8020 - 42.0010 = 0.8010$$

$$0.8010 \times 100 \times 6 / 12 = 40.05\%$$

**81% MATCHING BLOCK 36/150**

**W**

Negative interest rate differential & forward premia, therefore, there is a possibility of arbitrage inflow in India. Suppose, investment = \$1000 by taking a loan @ 8% in US. Invest in India at spot rate of 42.0010 @ 12 % for six months and cover the principal + interest in the six month forward rate. Principal = \$ 1000 = 42001. Interest on investment for six months =  $42,001 \times 12 / 100 \times 6 / 12 = 2520.06$  Amount at the end of six months = Interest + Principal =  $42001 + 2520.06 = 44,521.06$  Converting the above in dollars at the forward rate =  $\$ 44,521.06 / 42.8020 = \$ 1,040.16$  The arbitrageur will have to pay at the end of six months =  $\$1,000 + (\$1000 \times 8 / 100 \times 6 / 12)$  Hence, the arbitrageur gains  $(\$1040.16 - \$1040) = \$ 0.16$  on borrowing \$1000 for six months.

Sell US \$ at 6 month forward to receive  $236.3473 * 45.0010 = 10635.865$  Return the rupee debt borrowed at 12%. The amount to be refunded is ? 10,600

Profit =  $10635.865 - 10600.000 = 35.865$

104 NSOU • PGCO-X 5.4.4 Determination of Exchange Rates There is no generally accepted theory or model to determine exchange rates. However, there are certain approaches which provide a general framework for analysis of exchange rates which are discussed below : (a) Balance of payments : If payments by a country for its imports of goods and services and invisibles are out of step with its receipts for exports of goods and services and invisible, two possibilities arise. One, foreign currency payments exceed receipts and there is a deficit. This puts the home currency of the country under downward pressure against foreign currencies. Two, there is a surplus and there is an upward pressure on the home currency. In the former case, the home currency tends to depreciate, and in the latter to appreciate, against foreign currencies. (b) Demand and supply : The demand for a foreign currency to pay for imports, etc. and the supply of a foreign currency by way of receipts on account of exports, etc. vary at various rates of exchange. The rate which equilibrates the demand and supply should be the rate of exchange. Imagine a New York City firm exports its products to a German company. The business transaction will be settled in dollars so the American firm obtains revenue in its own currency and can pay its employees' salaries in dollars. To facilitate the transaction, the German firm needs to convert some of its capital from euros to dollars on the foreign exchange market. The supply of euros increases leading to an appreciation of the dollar and depreciation of the euro. It can also be said that the German firm increases the demand for dollars, again causing the dollar to appreciate in comparison to the euro. This transaction would have to be for a very large contract in order for the exchange rate to actually move a pip up or down. (c) Purchasing power parity : This theory maintains that free international trade equalises prices of tradable goods in different countries. So, a product will sell for the same price in common currency in all countries. Different rates of changes in prices i.e. different inflation rates must eventually induce off-setting changes in exchange rates in order to restore approximate price equality. Mathematically, the rate (or the expected rate) of change of the exchange rate should equal the rate (or the expected rate) of change of the

NSOU • PGCO-X 105 inflation rate. Evidence shows that there do exist disparities between changes in observed exchange rates and those in inflation rates in the short- run. But, the theory should hold in the long-run. (d) Interest rate : Interest rates are often highly related with inflation rates, and interest rate differentials between countries may be the result of inflation rate differentials. Therefore, interest rate differentials are also used as an important determinant of exchange rates. Interest rates in a country are determined, under free market conditions, by supply of and demand for money. Funds flow across countries in search of opportunities for higher returns. These flows between any two countries cause opposite changes in demand of and supply for their respective currencies. According to the theory of International Fisher Effect, the exchange rate of a currency with higher interest rate will depreciate to offset the interest rate advantage achieved by foreign investments till an equilibrium is achieved. (e) Relative income levels : If income level in a country rises and that in her trading partner remains unchanged, the demand by the former for the goods of the latter may increase. That is, the former would need more units of currency of the latter, while their supply remains unchanged. This would put upward pressure on the exchange rate of the latter. There can be different configurations of the relative income levels and of corresponding exchange rates. (f) Market expectations : Like other financial markets, foreign exchange markets react to any news that may have an effect on exchange rates in future. Expected developments regarding polity, economy etc. of a country is used to figure out how exchange rates would move. These peeps into the future impinge on the present as well as the future spot rates.

5.4.5 Classification of Exchange Rate System  
(i)

**64% MATCHING BLOCK 42/150**

(D135728834)

Fixed Exchange Rate A fixed exchange rate, sometimes (less commonly) called a pegged exchange rate, is a type of exchange rate regime wherein a currency's value is matched to the value of another single currency or to a basket of other currencies, or to another measure of value, such as gold. As the reference value rises and falls, so does the 106

NSOU • PGCO-X currency

**67% MATCHING BLOCK 43/150**

**SA** 062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

pegged to it. In addition, fixed exchange rates deprive governments of the use of an independent domestic monetary policy to achieve internal stability. A former president of the Federal Reserve Bank of New York described fixed currencies as follows : "Fixing the value of the domestic currency relative to that of a low-inflation country is one approach central banks have used to pursue price stability. The advantage of an exchange rate target is its clarity, which makes it easily understood by the public. In practice, it obliges the central bank to limit money creation to levels comparable to those of the country to whose currency it is pegged. When credibly maintained, an exchange rate target can lower inflation expectations to the level prevailing in the anchor country. Experiences with fixed exchange rates, however, point to a number of drawbacks. A country that fixes its exchange rate surrenders control of its domestic monetary policy." In certain situations, fixed exchange rates may be preferable for their greater stability. For example, the Asian financial crisis was improved by the fixed exchange rate of the Chinese renminbi, and the IMF and the World Bank now acknowledge that Malaysia's adoption of a peg to the US dollar in the aftermath of the same crisis was highly successful. Following the devastation of World War II, the Bretton Woods system allowed Western Europe to have fixed exchange rates until 1970 with the US dollar. Yet others argue that the fixed exchange rates (implemented well before the crisis) had become so immovable that it had masked valuable information needed for a market to function properly. That is, the currencies did not represent their true market value. This masking of information created volatility which encouraged speculators to "attack" the pegged currencies and as a response these countries attempt to defend their currency rather than allow it to devalue. These economists also believe that had these

countries instituted floating exchange rates, as opposed to

**40% MATCHING BLOCK 47/150**

**SA** 062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

fixed exchange rates, they may very well have avoided the volatility that caused the Asian financial crisis. Countries like Malaysia adopted increased capital controls believing that the volatility of capital was the result of technology and globalization, rather than fallacious macroeconomic policies which resulted not in better stability and growth in the aftermath of the crisis but sustained pain and stagnation. Countries adopting a fixed exchange rate must exercise careful and strict adherence to policy imperatives, and keep a degree of confidence of the capital markets in the management of such a regime, or otherwise the peg can fail. Such was NSOU • PGO-X 107 the case of Argentina, where unchecked state spending and

international economic shocks disbalanced the system and ended up forcing an extremely damaging devaluation (see Argentine Currency Board, Argentine economic crisis,

**76% MATCHING BLOCK 44/150**

(D135728834)

and the Mexican peso crisis). On the opposite extreme, China's fixed exchange rate with the US dollar until 2005

led to

**40% MATCHING BLOCK 45/150**

**SA** 062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

China's rapid accumulation of foreign reserves, placing an appreciating pressure on the Chinese yuan. A government or central bank using a fixed exchange rate

has linked the value of its currency to the value of another country's currency, or the price of gold. With a fixed exchange rate, a country determines that the value of a single unit of its currency is worth a certain amount of another country's currency. For instance, a small country fixes its currency to the U.S. dollar, saying one unit of its money is worth \$2. To maintain the rate, the country's central bank will buy or sell its own currency on the foreign exchange market in return for U.S. dollars. This will keep the exchange rate steady. But it requires the small country to maintain a large amount of U.S. dollars in reserve so that it can release or absorb extra dollars when necessary. Fixed exchange rates enable a currency's value to remain relatively stable, and can help lower inflation, which encourages investment. But a fixed exchange rate can also cause problems. A smaller country that fixes its currency to a larger country's currency loses its monetary independence, and in some instances, its control. A fixed exchange rate is also known as a pegged exchange rate. A pegged exchange rate occurs when one country fixes its currency's value to the value of another country's currency. It makes the exchange rate between the two countries constant and stable. But pegging an exchange rate has both pros and cons. Advantages of Fixed/Pegged Exchange Rate The biggest advantages come from the effect it has on a country's exports and trade, especially between a nation with low production costs and another country with a stronger currency. A richer, more mature nation may choose to produce its goods in a less mature nation, where production costs are smaller. When those less mature nations translate their earnings into their domestic currencies, they make a larger profit, creating a win/win situation for both countries. A pegged exchange rate also supports a rising standard of living and economic growth. And it protects a 108 NSOU • PGO-X nation from volatile swings in the foreign exchange rate, which reduces the likelihood of a currency crisis. Disadvantages of Fixed/Pegged Exchange Rate Among the disadvantages is the large amount of reserves a central bank has to maintain to make a pegged exchange rate work. Those large reserves can spark higher inflation, which causes prices to rise, creating problems for a country's economic stability. The central bank must also buy or sell its currency on the open market to keep its value in line with the pegged nation's currency.

**100%**

**MATCHING BLOCK 46/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

Maintaining a fixed exchange rate Typically, a government wanting to maintain a fixed exchange rate does so by either buying or selling its own currency on the open market. This is one reason governments maintain reserves of foreign currencies. If the exchange rate drifts too far below the desired rate, the government buys its own currency off the market using its reserves. This places greater demand on the market and pushes up the price of the currency. If the exchange rate drifts too far above the desired rate, the opposite measures are taken. Another, less used means of maintaining a fixed exchange rate is by simply making it illegal to trade currency at any other rate. This is difficult to enforce and often leads to a black market in foreign currency. Nonetheless, communist countries are highly successful at using this method due to government monopolies over all money conversion. This is the method employed by the Chinese government to maintain a currency peg or tightly banded float against the US dollar. Throughout the 1990s China was highly successful at maintaining: a currency peg using a government monopoly over all currency conversion between the Yuan and other currencies. Criticisms The main criticism of fixed exchange rate is that flexible exchange rates serve to automatically adjust the balance of trade. When a trade deficit occurs, there will be increased demand for the foreign (rather than domestic) currency which will push up the price of the foreign currency in terms of the domestic currency. That in turn makes the price of foreign goods less attractive to the domestic market and thus pushes down the trade deficit. Under fixed exchange rates, this automatic re- balancing does not occur.

NSOU • PGO-X 109 Despite the negatives, many major and minor economies favour a pegged exchange rate. A country can gain trading advantages while protecting its economic interests, but these advantages come at a price. (ii) Floating Exchange Rate A floating exchange

**95%**

**MATCHING BLOCK 50/150**

**SA**

FMG-403 International Finance.pdf (D164737611)

rate is a country's exchange rate regime where its currency is set by the foreign-exchange market through supply and demand for that particular currency relative to other currencies.

Thus, floating exchange rates change freely and are determined by trading in the forex market. This is in contrast to a "fixed exchange rate" regime.

**75%**

**MATCHING BLOCK 48/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

Floating rate may also refer to a floating interest rate applied to a loan or other lending product. A floating exchange rate or a flexible exchange rate is a type of exchange rate regime wherein a currency's value is allowed to fluctuate according to the foreign exchange market. A currency that uses a floating exchange rate is known as a floating currency.

The opposite of a floating exchange rate is a fixed exchange rate. Many economists think that, in most circumstances, floating exchange rates are preferable to fixed exchange rates. They allow the dampening of shocks and foreign business cycles. However, in certain situations, fixed exchange rates may

**50%**

**MATCHING BLOCK 49/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

be preferable for their greater stability and certainty. This may not necessarily be true, considering the results of countries that attempt to keep the prices of their currency "strong" or "high"

relative to others, such as the

UK or the Southeast Asia countries before the Asian currency crisis. Canada is the only country whose currency's value is determined absolutely and entirely by the foreign exchange market; in cases of extreme appreciation or depreciation, a central bank will normally

**75%**

**MATCHING BLOCK 52/150**

**SA**

FAYAD Jad.docx (D22005793)

intervene to stabilize the currency. Thus, the exchange rate regimes of floating currencies may more technically be known as a managed float. A central bank might, for instance, allow a currency price to float freely between an upper and lower bound, a price "ceiling" and "floor". Management by the central bank may take the form of buying or selling large lots in order to provide price support or resistance,

or, in the case of some national currencies, there may be legal penalties for trading outside these bounds. Fear of floating A free floating exchange rate increases foreign exchange volatility. This may  
110 NSOU • PGCO-X cause serious problems, especially in emerging economies. These economies have a financial sector with one or more

**49%**

**MATCHING BLOCK 51/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

of following conditions : • high liability dollarization • financial fragility • strong balance sheet effects When liabilities are denominated in foreign currencies while assets are in the local currency, unexpected depreciations of the exchange rate deteriorate bank and corporate balance sheets and threaten the stability of the domestic financial system. For this reason emerging countries appear to face greater fear of floating, as they have much smaller variations of the nominal exchange rate, yet face bigger shocks and interest rate and reserve movements. This is the consequence of frequent free floating countries' reaction to exchange rate movements with

monetary policy and/ or intervention in the foreign exchange market. (iii) Dual and Multiple Exchange Rate When faced with a sudden shock to its economy, a country can opt to implement a dual or multiple foreign-exchange rate system. With this type of system, a country has more than one rate at which its currencies are exchanged. So, unlike a fixed or floating system the dual and multiple systems consist of different rates, fixed and floating, that are used for the same currency during the same period of time. In a dual exchange rate system, there are both fixed and floating exchange rates in the market. The fixed rate is only applied to certain segments of the market, such as "essential" imports and exports and/or current account transactions. In the meantime, the price of capital account transactions is determined by a market driven exchange rate. In a multiple exchange rate system, the concept is the same, except the market is divided into many different segments, each with its own foreign exchange rate, whether fixed or floating. Thus, importers of certain goods "essential" to an economy may have a preferential exchange rate while importers of "non-essential" or luxury goods may have a discouraging exchange rate. Capital account transactions could, again, be left to the floating exchange rate. When faced with a sudden shock to its economy, a country can opt to implement a dual or multiple foreign-exchange rate system. With this type of system, a country

NSOU • PGO-X 111 has more than one rate at which its currencies are exchanged. So, unlike a fixed or floating system the dual and multiple systems consist of different rates, fixed and floating, that are used for the same currency during the same period of time. A multiple system is usually transitional in nature and is used as a means to alleviate excess pressure on foreign reserves when a shock hits an economy and causes investors to panic and pull out. It is also a way to subdue local inflation and importers' demand on foreign currency. Most of all, in times of economic turmoil, it is a mechanism by which governments can quickly implement control over foreign currency transactions. Such a system can buy some extra time for the governments in their attempts to fix the inherent problem in their balance of payments. This extra time is particularly important for fixed currency regimes, which may be forced to completely devalue their currency and turn to foreign institutions for help. Instead of depleting precious foreign reserves, the government diverts the heavy demand for foreign currency to the free-floating exchange rate market. Changes in the free floating rate will reflect demand and supply. The use of multiple exchange rates has been seen as an implicit means of imposing tariffs or taxes. For example, a low exchange rate applied to food imports functions like a subsidy, while the high exchange rate on luxury imports works to "tax" people importing goods which, in a time of crisis, are perceived as non-essential. On a similar note, a higher exchange rate in a specific export industry can function as a tax on profits. While multiple exchange rates are easier to implement, most economists agree that the actual implementation of tariffs and taxes would be a more effective and transparent solution: the underlying problem in the balance of payments could thus be addressed directly. While the system of multiple exchange rates may sound like a viable quickfix solution, it does have negative consequences. More often than not, because the market segments are not functioning under the same conditions, a multiple exchange rate results in a distortion of the economy and a misallocation of resources. For example, if a certain industry in the export market is given a favourable foreign exchange rate, it will develop under artificial conditions. Resources allocated to the industry will not necessarily reflect its actual need because its performance has been unnaturally inflated. Profits are thus not accurately reflective of performance, quality, or supply and demand. Participants of this favored sector are (unduly) rewarded better than other export market participants. An optimal allocation of resources within the economy can thus not be achieved. A multiple exchange rate system can also lead to economic rents for factors of production benefiting from implicit protection. This effect can also open up doors for increased corruption because people gaining may lobby to try and keep the rates in place. This, in turn, prolongs an already inefficient system. Finally, multiple exchange rates result in problems with the central bank and the federal budget. The different exchange rates likely result in losses in foreign currency transactions, in which case the central bank must print more money to make up for the loss. This, in turn, can lead to inflation.

5.5 Currency Depreciation, Appreciation, Devaluation and Revaluation Economic activity is globally unified today

**98%**

**MATCHING BLOCK 53/150**

**SA**

019\_FOREX MANAGEMENT AND CURRENCY DERIVATIVES.PDF (D142523013)

to an unprecedented degree. Changes in one nation's economy are rapidly transmitted to that nation's trading partners. These fluctuations in economic activity are reflected, almost immediately, in fluctuations in currency values.

Consequently, multinational corporations (MNCs), with their integrated cross-border production and marketing operations, continually face devaluation or revaluation worries somewhere in the world.

5.5.1 Currency Depreciation and Appreciation The terms appreciation and depreciation are typically used to describe changes in exchange rates when exchange rates are allowed to be flexible—that is, to fluctuate freely in response to changes in demand and supply. The fixed rate, which in turn attracts the unwanted attention of currency Devolution in the deliberate downward adjustment of a country's currency value. Devalning a currency reduces the cost a country's expats and can help shyinle trade deficit. Revaluation is the opposite to devaluation.

NSOU • PGCO-X 113 speculators who waste little time in testing the resolve of the central bank to defend the fixed exchange rate. A central bank must have sufficient foreign exchange reserves to be willing to buy all the offered amounts of its currency at the fixed exchange rate. If these forex reserves are insufficient, the bank may have no option but to devalue the currency. Effects on the Economy Devaluation often has an adverse effect on the economy initially, although it eventually results in a substantial increase in exports and a concomitant shrinkage in the current account deficit, a phenomenon known as the J-Curve. In the initial period after devaluation, imports become much more expensive while exports stay stagnant, leading to a larger current account deficit. The lower value of the domestic currency may also result in imported items costing much more, leading to "imported" inflation. Over time, however, the lower domestic currency makes exports more competitive in global markets, while consumers may eschew expensive imports, leading to an improvement in the current account deficit.

5.5.2 Currency Convertibility For the rapid growth of world trade and capital flows between countries convertibility of a currency is desirable. Without free Currency Depreciation is a decrease in the value of a currency relative to another currency.

A depreciated currency is less valuable (less expensive) and therefore can be exchanged for (can buy) a smaller amount of foreign currency. For example,  $\$1/\bullet 1 \rightarrow \$1.20/\bullet 1$  means that the dollar has depreciated against the euro. It now takes \$1.20 to buy one euro, so that the dollar is less valuable. At the same time, the euro has appreciated against the dollar: it is now more valuable. Currency Appreciation is an increase in the value of a currency relative to another currency.

An appreciated currency is more valuable (more expensive) and therefore can be exchanged for (can buy) a larger amount of foreign currency. For example,  $\$1/\bullet 1 \rightarrow \$0.90/\bullet 1$  means that the dollar has appreciated against the euro. It now takes only \$0.90 to buy one euro, so that the dollar is relatively more valuable. The euro has depreciated against the dollar: it is now relatively less valuable. A depreciated currency is less valuable, and therefore it can buy fewer foreign-produced goods with prices that are quoted in foreign currency terms.

114 NSOU • PGCO-X Example : • How many yen does a Japanese Honda cost?  $\yen3,000,000$  •  $\yen3,000,000 \times \$0.0098/\yen1 = \$29,400$  •  $\yen3,000,000 \times \$0.0100/\yen1 = \$30,000$  A depreciated currency means that imports are more expensive and domestically produced goods and exports are less expensive. A depreciated currency lowers the price of exports relative to the price of imports. An appreciated currency is more valuable, and therefore it can buy more foreign produced goods that are denominated in foreign currency. Example : • How much does a Honda cost ?  $\yen3,000,000$  •  $\yen3,000,000 \times \$0.0098/\yen1 = \$29,400$  •  $\yen3,000,000 \times \$0.0090/\yen1 = \$27,000$  An appreciated currency means that imports are less expensive and domestically produced goods and exports are more expensive. An appreciated currency raises the price of exports relative to the price of imports.

5.5.3 Currency Devaluation and Revaluation Sometimes, the government authorities of a country "fix," or "peg," the exchange rate of their money relative to a foreign money. Discrete changes in the values of exchange rates under such a fixed exchange rate system are called devaluations and revaluations of the currencies. If the monetary authorities increase the domestic currency price of foreign exchange, they are devaluing their money. Such actions increase the domestic currency prices of foreign monies and are often the result of a failure in government policy. Causes of Devaluation and Revaluation While devaluation is far more common than revaluation, both occur because the exchange rate has been fixed at an artificially low or high level. This makes it increasingly difficult for the central bank to defend t and unrestricted convertibility of currencies into foreign exchange trade and capital flows between countries cannot take place smoothly. Therefore, to achieve higher rate of economic growth and

NSOU • PGCO-X 115 thereby to improve living standards through greater trade and capital flows, the need for convertibility of currencies of different nations has been greatly felt. Under Bretton Woods system fixed exchange rate system was adopted by various countries. In order to maintain the exchange rate of their currencies in terms of dollar or gold various countries imposed several controls over the use of foreign exchange. This required some restrictions on the use of foreign exchange and its allocation among different uses, the currency of a nation was converted into foreign exchange on the basis of officially fixed exchange rate. When Bretton Woods system collapsed in 1971, the various countries switched over to the floating foreign exchange rate system. Under the floating or flexible exchange rate system, exchange rates between different national currencies are allowed to be determined through market demand for and supply of them. However, various countries still imposed restrictions on the free convertibility of their currencies in view of their difficult balance of payment situation.

#### 5.5.4 Meaning of Currency Convertibility

By convertibility of a currency we mean currency of a country can be freely converted into foreign exchange at market determined rate of exchange that is, exchange rate as determined by demand for and supply of a currency. For example, convertibility of rupee means that those who have foreign exchange (e.g. US dollars, Pound Sterlings etc.) can get them converted into rupees and vice-versa at the market determined rate of exchange. Under convertibility of a currency there are authorized dealers of foreign exchange which constitute foreign exchange market. The exporters and others who receive US dollars, Pound Sterlings etc. can go to these dealers which are generally banks and get their dollars exchanged for rupees at the market determined rates of exchange. Similarly, under currency convertibility, importers and other who require foreign exchange can go to these banks dealing in foreign exchange and get rupees converted into foreign exchange.

#### 5.5.5 Current Account and Capital Account Convertibility of Currency

A currency may be convertible on current account (that is, exports and imports of merchandise and invisibles) only. A currency may be convertible on both current and capital accounts. We have explained above the convertibility of a currency on current account only.

116 NSOU • PGCO-X By capital account convertibility we mean that in respect of capital flows, that is, flows of portfolio capital, direct investment flows, flows of borrowed funds and dividends and interest payable on them, a currency is freely convertible into foreign exchange and vice-versa at market determined exchange rate. Thus, by convertibility of rupee on capital account means those who bring in foreign exchange for purchasing stocks, bonds in Indian stock markets or for direct investment in power projects, highways steel plants etc. can get them freely converted into rupees without taking any permission from the government. Likewise, the dividends, capital gains, interest received on purchased stock, equity etc. profits earned on direct investment get the rupees converted into US dollars, Pound Sterlings at market determined exchange rate between these currencies and repatriate them. Since capital convertibility is risky and makes foreign exchange rate more volatile, is introduced only sometime after the introduction of convertibility on current account when exchange rate of currency of a country is relatively stable, deficit in balance of payments is well under control and enough foreign exchange reserves are available with the Central Bank.

#### 5.5.6 Convertibility of Indian Rupee

In the seventies and eighties many countries switched over to the free convertibility of their currencies into foreign exchange. By 1990, 70 countries of the world had introduced currency convertibility on current account; another 10 countries joined them in 1991. As a part of new economic reforms initiated in 1991 rupee was made partly convertible from March 1992 under the "Liberalised Exchange Rate Management scheme in which 60 per cent of all receipts on current account (i.e., merchandise exports and invisible receipts) could be converted freely into rupees at market determined exchange rate quoted by authorised dealers, while 40 per cent of them was to be surrendered to Reserve Bank of India at the officially fixed exchange rate. These 40 per cent exchange receipts on current account was meant for meeting Government needs for foreign exchange and for financing imports of essential commodities. Thus, partial convertibility of rupee on current account meant a dual exchange rate system. This partial convertibility of rupee on current account was adopted so that essential imports could be made available at lower exchange rate to

NSOU • PGCO-X 117 ensure that their prices do not rise much. Further, full convertibility of rupees at that stage was considered to be risky in view of large deficit in balance of payments on current account. As even after partial convertibility of rupee foreign exchange value of rupee remained stable, full convertibility on current account was announced in the budget for 1993-94. From March 1993, rupee was made convertible for all trade in merchandise. In March' 1994, even indivisibles and remittances from abroad were allowed to be freely convertible into rupees at market determined exchange rate. However, on capital account rupee remained nonconvertible.

**5.5.7 Advantages of Currency Convertibility**

Convertibility of a currency has several advantages which we discuss briefly:

1. Encouragement to exports : An important advantage of currency convertibility is that it encourages exports by increasing their profitability. With convertibility profitability of exports increases because market foreign exchange rate is higher than the previous officially fixed exchange rate. This implies that from given exports, exporters can get more rupees against foreign exchange (e.g. US dollars) earned from exports. Currency convertibility especially encourages those exports which have low import-intensity.
2. Encouragement to import substitution : Since free or market determined exchange rate is higher than the previous officially fixed exchange rate, imports become more expensive after convertibility of a currency. This discourages imports and gives boost to import substitution.
3. Incentive to send remittances from abroad : Thirdly, rupee convertibility provided greater incentives to send remittances of foreign exchange by Indian workers living abroad and by NRI. further, it makes illegal remittance such 'hawala money' and smuggling of gold less attractive.
4. A self – balancing mechanism : Another important merit of currency convertibility lies in its self-balancing mechanism. When balance of payments is in deficit due to over-valued exchange rate, under currency convertibility, the currency of the country depreciates which gives boost to exports by lowering their prices on the one hand and discourages

118 NSOU • PGCO-X imports by raising their prices on the other. In this way, deficit in balance of payments get automatically corrected without intervention by the Government or its Central bank. The opposite happens when balance of payments is in surplus due to the undervalued exchange rate.

5. Specialisation in accordance with comparative advantage : Another merit of currency convertibility ensures production pattern of different trading countries in accordance with their comparative advantage and resource endowment. It is only when there is currency convertibility that market exchange rate truly reflects the purchasing powers of their currencies which is based on the prices and costs of goods found in different countries. Since prices in competitive environment reflect that prices of those goods are lower in which the country has a comparative advantage, this will encourages exports. On the other hand, a country will tend to import those goods in the production of which it has a comparative disadvantage. Thus, currency convertibility ensures specialization and international trade on the basis of comparative advantage from which all countries derive benefit.
6. Integration of World Economy : Finally, currency convertibility gives boost to the integration of the world economy. As under currency convertibility there is easy access to foreign exchange, it greatly helps the growth of trade and capital flows between the countries. The expansion in trade and capital flows between countries will ensure rapid economic growth in the economies of the world. In fact, currency convertibility is said to be a prerequisite for the success of globalization.

**Currencies and Symbols**

An exchange rate is the relative price of two monies, such as the Japanese yen price of the U.S. dollar, the British pound price of the euro, or the Brazilian real price of the Mexican peso. Rather than write out the full name of these currencies, contractual parties use abbreviations. In banking and commercial transactions, it is important that all parties understand which currencies are being used. Hence, there is a need for standardization of the abbreviations. The International Organization for Standardization (called ISO from the Greek word for equal) sets these standards.

In this context, to make the interbank transactions smooth, banks maintain three types of current accounts (i.e Nostro, Vostro and Loro) to ensure quick uninterrupted transfer of funds in different currencies between the international banks. In order to determine the exchange rate for the currencies globally, the foreign exchange market (also known as Forex market) has emerged and the fixation of the exchange rates which can be quoted in direct terms or in indirect terms has been explained. Concept and computation of two-way quotes, expressed as a 'bid' and 'offer or ask price' and the difference between bid and ask is called spread is dealt in this unit. The concept of Fixed Exchange Rate, Floating Exchange Rate, Dual/Multiple Exchange Rate, currency appreciation, depreciation, devaluations and revaluations is also explained under this unit with suitable examples. 5.7 Exercise Short Answer type : 1. Discuss in brief the main objectives of IMF. 2. Explain the concept of exchange rate with example. 3. Discuss direct and indirect quotes with examples. 4. What is covered Interest Arbitrage? 5. What do you understand by the term 'cross rates'?

122 NSOU • PGCO-X Long Answer type : 1. Differentiate between Nostro, Vostro and Loro accounts. 2. Explain in brief the various factors affecting the foreign exchange rates. 3. Determine the cross-rate between INR and ZAR based on the following information: INR/USD : 75.37 (one -way spot exchange rate between INR and USD as on 31.03.2020) ZAR/USD : 17.73 (one-way spot exchange rate between ZAR and USD as on 31.03.2020) [Hints : 1 ZAR = (75.37/17.73) INR = 4.25 INR (Answer in Direct Quote) or, 1 INR = (17.73/75.37) ZAR = 0.2352 ZAR (Answer in Indirect Quote)] 4. Write short notes on : (a) Currency Appreciation (b) Currency Depreciation (c) Fixed exchange Rate (d) Floating exchange Rate 5. Discuss in brief the current account and capital account convertibility of currency. Explain the advantages of currency convertibility.

The Foreign Exchange Market (Forex, FX, or currency market) is a form of exchange for the global decentralized trading of international currencies.

It

**100% MATCHING BLOCK 56/150**

**W**

is the market in which individuals, firms and banks buy and sell foreign currencies or foreign exchange.

Financial centres around the world function as anchors of trading between a wide range of buyers and sellers around the clock, with the exception of weekends.

**100% MATCHING BLOCK 57/150**

**W**

The foreign exchange market determines the relative values of different currencies. The foreign exchange market assists international trade and investment by enabling currency conversion.

The purpose of the

**50% MATCHING BLOCK 58/150**

**W**

foreign exchange market is to permit transfers of purchasing power denominated in one currency to another i.e. to trade one currency for another. For example,

a Japanese exporter sells automobiles to a US dealer for dollars, and a US manufacturer sells machine tools to Japanese company for yen. Ultimately, however, the US company will be interested in receiving dollars, whereas the Japanese exporter will want yen because it would be inconvenient for the individual buyers and sellers of foreign exchange to seek out one another, a foreign exchange market has developed to act as an intermediary. 6.2 Features of Foreign Exchange Market The following features may be found in

**90% MATCHING BLOCK 62/150**

**SA**

Comprehensive Project edit.docx (D103071437)

the foreign exchange market: • The foreign exchange market is a worldwide market in which currencies are bought and sold against each other. • It is the largest market in the world. •

The worldwide Foreign Currency Exchange

Market trades several trillion dollars daily. • This daily volume is larger than the combined volume of all the world's stock markets. • It is a 24-hour market due to different time zones. The foreign exchange market is an over the counter (OTC) market place that determines the exchange rate of global currencies.

NSOU • PGCO-X 125 • It opens with the start of the workday on Monday in Sydney and then moves around the world, from one time zone to another until its closure on Friday in the New York. • The market is affected by the variety of factors. • Generally low margins of relative profit are found in this market compared with other markets of fixed income. 6.3

Functions of the Foreign Exchange Market The

**88% MATCHING BLOCK 60/150**

**W**

foreign exchange market merely a part of the money market in the financial centers is a place where foreign currencies are bought and sold. The buyers and sellers of claims on foreign money and

the

**100% MATCHING BLOCK 61/150**

**W**

intermediaries together constitute a foreign exchange market. It is not restricted to any given country or a geographical area. Thus, the foreign exchange market is the market for a national currency (

foreign money) anywhere in the world, as the financial centres of the world are united in a single market. The foreign exchange market performs the following important functions: (i) to effect transfer of purchasing power between countries- transfer function; (ii) to provide credit for foreign trade-credit function; and (iii) to furnish facilities for hedging foreign exchange risks-hedging function. (i) Transfer Function : The basic function of the foreign exchange market is to facilitate the conversion of one currency into another, i.e., to accomplish transfers of purchasing power between two countries. This transfer of purchasing power is affected through a variety of credit instruments, such as telegraphic transfers, bank drafts and foreign bills. In performing the transfer function, the foreign exchange market carries out payments internationally by clearing debts in both directions simultaneously, analogous to domestic clearings. (ii) Credit Function : Another function of the foreign exchange market is to provide credit, both national and international so as to promote foreign trade. Obviously, when foreign bills of exchange are used in international payments, a credit for about 3 months, till their maturity, is required. 126 NSOU • PGCO-X (iii) Hedging Function : A third function of the foreign exchange market is to hedge foreign exchange risks. In a free exchange market when

**87% MATCHING BLOCK 64/150**

**W**

exchange rates, i.e., the price of one currency in terms of another

currency change, there may be a gain or loss to the party concerned. Under this condition, a person or a firm undertakes exchange risk to a large extent if there are huge amounts of net claims or net liabilities which are to be met in foreign money. 6.4 Participants in Foreign Exchange Market

**96% MATCHING BLOCK 63/150**

**W**

Four levels of transactor or participants can be identified in foreign exchange markets. At the first level, are tourists, importers, exporters, investors, etc. These are the immediate users and suppliers of foreign currencies. At the next or second level are the commercial banks which act as clearing houses between users and earners of foreign exchange. At the third level are foreign exchange brokers through whom the nation's commercial banks even out their foreign exchange inflows and outflows among themselves. Finally, at the fourth and highest level is the nation's central bank which acts as the lender or buyer of last resort when the nation's total foreign exchange earnings and expenditures are unequal. The central bank then either draws down its foreign exchange reserves or adds to them.

The following are the participants in Foreign Exchange Market : (i) Companies/Multinational Corporations

**88% MATCHING BLOCK 65/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx  
(D111377740)

An important part of this market comes from the financial activities of companies seeking foreign exchange to pay for goods or services.

Many multinational companies exchange currencies to meet their import or export commitments or hedge their transactions against fluctuations in exchange rate.

**98% MATCHING BLOCK 66/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx  
(D111377740)

Commercial companies often trade fairly small amounts compared to those of banks or speculators, and their trades often have little short term impact on market rates. Nevertheless, trade flows are an important factor in the long-term direction of a currency's exchange rate. Some multinational

companies

**100% MATCHING BLOCK 67/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx  
(D111377740)

can have an unpredictable impact when very large positions are covered due to exposures that are not widely known by other market participants.

NSOU • PGCO-X 127 (ii) Governments Governments sometimes have requirements for foreign currency. This may be for paying staff salaries and local bills of an embassy abroad, or for a foreign currency credit line, most often in dollars, to a third world national government for industrial or agricultural development. In its turn, the third world nation's government will periodically have to pay interest due on any foreign loans with the capital sum eventually having to be repaid. It is more than likely the government would approach the market via its own central bank or a commercial bank. Foreign exchange rates are of particular concern to governments because changes in foreign exchange rates affect the value of products and financial instruments. As a result, unexpected or large changes can affect the health of a nation's markets and financial systems. Exchange rate changes also impact a nation's international investment flow, as well as export and import prices. These factors, in turn, can influence inflation and economic growth. (iii)

**98% MATCHING BLOCK 68/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx  
(D111377740)

Central banks National central banks play an important role in the foreign exchange markets. They try to control the money supply, inflation, and/or interest rates and often have official or unofficial target rates for their currencies. They can use their often substantial foreign exchange reserves to stabilize the market. Nevertheless, the effectiveness of central bank "stabilizing speculation" is doubtful because central banks do not go bankrupt if they make large losses, like other traders would,

and there is no convincing evidence that they do make a profit trading. The Reserve Bank of India, The Bank of England, the European Central Bank, the Swiss National Bank, the bank of Japan and, to a lesser extent, the Federal Reserve Bank will enter the market to correct what are felt to be unnecessarily large movements, often in conjunction with one another. By their actions, however, they can sometimes create the excesses they are specifically trying to prevent. (iv) Brokering Houses Brokering houses exist primarily to bring buyer and seller together at a mutually agreed price. The broker is not allowed to take a position in a currency and must act purely as a liaison. For this service, they receive a commission from both sides of the transaction, which will vary according to currency handled and from centre to centre. However, the use of live brokers has decreased in recent years, due mostly to the rise of the various interbank electronic brokerage systems.

128 NSOU • PGCO-X (v) International Monetary Market International Monetary Market (IMM) in Chicago trades currencies for contract amounts, which are relatively small in size and for only four specific maturities a year. Originally designed for the small investor, the IMM has grown apace since the early 1970s, and the major banks whose original attitude was somewhat jaundiced, now find that it pays to keep in touch with developments on the IMM, which is often a market leader. (vi) Speculators All the above participants in Foreign Exchange Market tend to have some sort of underlying exposure that has to be covered. Speculators, however, have no underlying exposure to hedge, rather they attempt to fulfil the adage “buy low, sell high” by attempting to trade for trading profit alone. Foreign exchange is an ideal speculative tool, offering volatility, liquidity and easy margin or leverage. This activity is vital to the stability of the markets. Without speculation, hedgers would find the market too illiquid to accommodate their needs. While speculators seek excess profits as a reward for their activities, the process of speculating itself drives the markets towards lower volatility and price stability. No modern commodity, equity, or debt market could operate without the speculators. It is estimated that up to 90% of the daily volume of trading activity in the foreign exchange markets is a result of speculator’s activity, with the balance primarily made up of commercial hedging transactions. (vii)

**96%**

**MATCHING BLOCK 69/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx (D111377740)

Investment management firms Investment management firms (who typically manage large accounts on behalf of customers such as pension funds and endowments) use the foreign exchange market to facilitate transactions in foreign securities. For example, an investment manager holding an international equity portfolio needs to purchase and sell several pairs of foreign currencies to pay for foreign securities purchases. Some investment management firms also have more speculative specialist currency overlay operations, which manage clients’ currency exposures with the aim of generating profits as well as limiting risk. While the number of this type of specialist firms is quite small, many have a large value of assets under management and, hence, can generate large trades.

NSOU • PGCO-X 129 (viii) Retail Clients Alongside these corporates, there is a none-too-significant volume from retail clients. This category includes many smaller companies, hedge funds, companies specialising in investment services linked to foreign currency funds or equities, fixed income brokers, the financing of aid programme by registered worldwide charities and private individuals. With the rise in popularity in online equity investing and a corresponding rise in online fixed income investing, it was only a matter of time before the average retail investor began to see opportunities in the foreign exchange market. Retail investors have been able to trade foreign exchange using highly leveraged margin accounts. The amount of trading, both in total volume and individual trade amounts, remains low and is certainly dwarfed by both the corporate and interbank market. (ix) Non-bank Foreign Exchange Companies Non-bank foreign exchange companies offer currency exchange and international payments to private individuals and companies. These are also known as foreign exchange brokers but are distinct in that they do not offer speculative trading but rather currency exchange with payments (i.e., there is usually a physical delivery of currency to a bank account). These companies’ selling point is usually that they will offer better exchange rates or cheaper payments than the customer’s bank. These companies differ from Money Transfer/Remittance Companies in that they generally offer higher-value services. (x) Money transfer/remittance companies and bureaux de change Money transfer companies/remittance companies perform high-volume low- value transfers generally by economic migrants back to their home country. The four largest markets receiving foreign remittances are India, China, Mexico and the Philippines. The largest and best known provider is Western Union with 345,000 agents globally followed by UAE Exchange. Bureaux de change or currency transfer companies provide low value foreign exchange services for travellers. These are typically located at airports and stations or at tourist locations and allow physical notes to be exchanged from one currency to another. They access the foreign exchange markets via banks or non-bank foreign exchange companies. Structure of Foreign Exchange Market (Source : Bekaert and Hodrick, International Financial Management)

130 NSOU • PGCO-X 6.5 Different Types of Foreign Exchange Markets Foreign exchange markets represent by far the most important financial markets in the world. Their role is of paramount importance in the system of international payments. In order to play their role effectively, it is necessary that their operations/ dealings be reliable. Reliability essentially is concerned with contractual obligations being honored. For instance, if two parties have entered into a forward sale or purchase of a currency, both of them should be willing to honor their side of contract by delivering or taking delivery of the currency, as the case may be. The major foreign exchange markets that exist are : (a) Spot markets, (b) Forward markets, (c) Futures markets, (d) Options markets, and (e) Swaps markets. Futures, Options and Swaps are called derivatives because they derive their value from the underlying exchange rates.

**100% MATCHING BLOCK 71/150**

**SA**

OSOU\_U-10\_OREIGN EXCHANGE MARKET.docx  
(D120109724)

Spot market refers to the transactions involving sale and purchase of currencies for immediate delivery. In practice, it may take one or two days to settle transactions.

Forward market transactions are meant to be settled on a future date as specified in the contract. Though forward rates are quoted just like spot rates, but actual delivery of currencies takes place much later, on a date in future. Futures market is a localized exchange where derivative instruments called 'futures' are traded. Currency futures are somewhat similar to forward, yet distinctly different. Options are derivative instruments that give a choice to a foreign exchange market operator to buy or sell a foreign currency on or up to a date (maturity date) at a specified rate (strike price). Swaps, as the term suggests, are simply the instruments that permit exchange of two streams of cash flows in two different currencies. The most active foreign exchange market is that of UK (London), followed by that of USA, Japan, Singapore, Switzerland, Hong Kong, Germany, France and Australia. All other markets, combined together, represent only about 15 per cent of the total volume, traded globally.

NSOU • PGCO-X 131 6.5.1 Spot Market Spot transactions in the foreign exchange market are increasing in volume. These transactions are primarily in forms of buying/ selling of currency notes, encashment of travellers' cheques and transfers through banking channels. The last category accounts for the majority of transactions. It is estimated that about 90 per cent of spot transactions are carried out exclusively for banks. The rest are meant for covering the orders of the clients of banks, which are essentially enterprises. The Spot market is the one in which the exchange of currencies takes place within 48 hours. This market functions continuously, round the clock. Thus, a spot transaction effected on Monday will be settled by Wednesday, provided there is no holiday between Monday and Wednesday. As a matter of fact, certain length of time is necessary for completing the orders of payment and accounting operations due to time differences between different time zones across the globe.

The most common way of stating a foreign exchange quotation is in terms of the number of units of foreign currency needed to buy one unit of home currency. Thus, India quotes its exchange rates in terms of the amount of rupees that can be exchanged for one unit of foreign currency. ●●●●●

Magnitude of Spot Market According to a Bank of International Settlements (BIS) estimate, the daily volume of spot exchange transactions is about 50 per cent of the total transactions of exchange markets. London market is the first market of the world not only in terms of the volume but also in terms of diversity of currencies traded. While London market trades a large number of currencies, the New York market trades, by and large, Dollar (75 per cent of the total), Deutschmark, Yen, Pound Sterling and Swiss Franc only. Amongst the recent changes observed on the exchange markets, it is noted that there is a relative decline in operations involving dollar while there is an increase in the operations involving Deutschmark. Besides, deregulation of markets has accelerated the process of international transactions. ●●●●● Participants in Spot Market Major participants on the spot exchange market are : (i) Commercial banks, (ii) Dealers, brokers, arbitrageurs and speculators, and (iii) Central banks.

132 NSOU • PGCO-X (i) Commercial Banks Commercial banks intervene in the spot market through their foreign exchange dealers either for their own account or for their clients. The

**100% MATCHING BLOCK 72/150****SA** Forex.docx (D155077539)

banks are intermediaries between seekers and suppliers of currency. The role of banks is to enable their clients to change one currency into another. Also, they operate on these markets to make a profit through speculation and the process of arbitrage. Big commercial banks serve as market-makers. They simultaneously quote, bid and ask prices, indicating their willingness to buy and sell foreign currencies at quoted rates.

The purchases and sales of large commercial banks seldom match, leading to large variation in their holdings of foreign currencies exposing them to exchange risk. When they assume the risk deliberately, they act as speculators. However, banks prefer to keep their exposure low and not get into unduly large speculations. (ii) Dealers, Brokers, Arbitrageurs and Speculators Dealers are basically involved in buying currencies when they are low and selling them when they are high. Dealers' operations are wholesale and majority of their transactions are interbank in nature although, once in a while, they may deal with corporates and central banks. They have low transaction costs as well as thin spreads which reflect their long experience in exchange risk management as well as the intense competition among banks. Wholesale transactions account for 90 per cent of the total value of foreign exchange deals. Dealers at the retail level cater to needs of customers wishing to buy or sell foreign exchange. The spread is wide in these transactions. Exchange brokers specialize in playing the role of intermediaries between different banks. They are not very large in number. For example, at the Paris exchange market, there are about 20 brokers. They are not authorized to take a position on the market. Their job is to find a buyer and a seller for the same amount for the given currencies. Their remuneration is in the form of brokerage. They are constantly in liaison with banks and in search of counterparties. A large portion of foreign exchange transactions is conducted through brokers. While they tend to specialize in certain currencies, they virtually handle all major currencies. Brokers exist because they lower the dealers' costs, reduce their risks and provide anonymity.

**100% MATCHING BLOCK 73/150****SA** Forex.docx (D155077539)

Arbitrageurs make gains by discovering price discrepancies that allow them to buy cheap and sell dear.

Their operations are risk-free, in a free and open market, the NSOU • PGCO-X 133 scope for currency arbitrage tends to be low and it is, by and large, accessible only to dealer banks. Unlike arbitrageurs, speculators expose themselves to risk. Speculation gives rise to financial transactions that develop when an individual's expectations differ from the expectations of the market.

**100% MATCHING BLOCK 74/150****SA** Forex.docx (D155077539)

Speculators transact in foreign exchange primarily because of an anticipated but uncertain gain as a result of an exchange rate change.

An open position denominated in foreign currency constitutes speculation. Banks or corporates, when they accept either a net asset or a net liability in foreign currency, are indulging in speculation. Speculators are classified as bulls and bears. A bull expects a currency to become more expensive in the future. He buys the currency either Spot or forward today in the belief that he can sell it at a higher price in the future. Bulls take a long position in the particular currency. A bear expects a particular currency to become cheaper in the future. He sells either Spot or forward today in the hope of buying it back at a cheaper rate in the future. Bears take a short position on a particular currency. (iii) Central Banks

**100% MATCHING BLOCK 75/150****SA** Forex.docx (D155077539)

Central banks intervene in the market to reduce fluctuations of the domestic currency and to ensure an exchange rate compatible with the requirements of the national economy. Their objective is not to make profit out of these interventions but to influence the value of national currency in the interest of country's economic well-being.

For example, if rupee shows signs of depreciating, central bank may release (sell) a certain amount of foreign currency. This increased supply of foreign currency will halt the depreciation of rupee. The reverse operation may be done to stop rupee from appreciation. ●●●● How a currency is described ● A currency is described either by a symbol (e.g., \$, £, ¥ and for US dollar, British pound sterling, Euro-zone euro, Japanese yen and Indian rupee respectively) or ● by a three-letter ISO Code (ISO 4217) (e.g., USD, GBP, EUR, JPY and INR for describing US dollar, British pound sterling, Euro-zone euro, Japanese yen and Indian rupee respectively).

134 NSOU ● PGCO-X ●●●● How quotations are given Currency pairs : ● In a currency pair, say, USD/INR = 63.50 the currency to the left of the slash is called the base currency, and the currency to the right of the slash is called the quote or the counter currency. ● A foreign exchange quotation is given by stating

<b>90%</b>	<b>MATCHING BLOCK 76/150</b>	<b>SA</b>	14691e0019 - a study on comparative trend anal ... (D20963459)
the number of units of 'quote currency' that can be exchanged for one unit of '			

base currency' ●

When the price for a currency is quoted, this is done in relation to another. For example, if the quotation is as follows : USD/JPY = 120.20, it means that 1 US dollar can be exchanged for 120.20 Japanese yen. ● In a currency pair, the currency to the

left of the slash is called the base currency, and the currency to the right of the slash is called the

quote or the counter currency. ● A foreign exchange quotation is given by stating the number of units of 'quote currency' (also known as price currency or payment currency) that can be exchanged for one unit of 'base currency' (also known as unit currency or transaction currency). Quotations in American terms and European terms ● In the

interbank market where trade involves dollars, quotes may be either in American terms or European terms. ● Quotes in American terms are given as number of dollars per unit of foreign currency. ● Quotes in

<b>83%</b>	<b>MATCHING BLOCK 77/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
European terms are given as number of units of a currency per			

unit of the US dollar. ● Quotation in terms of foreign currency per unit of US dollars (i.e., in European terms) is mostly prevalent in the interbank market ● Where the currencies involved are the EUR, the GBP and other British commonwealth, the quotation is given in American terms. ● In quotations involving the EUR and the GBP and other British Commonwealth currencies, the EUR is the base currency.

NSOU ● PGCO-X 135 Direct and Indirect Quotation ● Direct quotation – It is the amount of home currency equivalent to one unit (sometimes 100 units) of the foreign currency, e.g., 75.35/• when quoted from India or \$1.4526/£, when quoted from New York. ● Indirect quotation – It is the amount of foreign currency required for one unit of the local (or home) currency, e.g., \$1.5534/£ when quoted from London. ● The indirect quote is also known as the reciprocal quote since it is the reciprocal of the direct quote. Bid-ask rate ● Quotations are always given in pairs, e.g., \$1.5534-1.5536/£. ● The first rate is the buy rate or

<b>37%</b>	<b>MATCHING BLOCK 78/150</b>	<b>SA</b>	14691e0019 - a study on comparative trend anal ... (D20963459)
the bid rate, i.e., the rate at which the foreign exchange dealer is willing to buy foreign currency. ● The bid rate is therefore the rate at which the			

customer has to sell foreign currency. ● The second rate is, the ask or offer rate, i.e., the rate at which the foreign exchange dealer (usually the bank) is willing to sell foreign currency. ● The customer has to buy foreign currency at the ask rate. ● The bid rate is always is less than the ask rate.

**62% MATCHING BLOCK 82/150**

**SA**

TANVI\_RATHOD\_MMS 48\_FINAL\_BLACKBOOK..docx (D111377740)

Bid-ask spread • The bid-ask spread is the difference between the ask rate and the

bid rate. • The spread may be expressed in absolute terms as the number of basis points or in terms of a percentage  
 Example : Suppose the dollar is quoted as \$1.5536-1.5540/£. The spread is equal to \$ 0.0004 or 4 basis points.

Percentage spread- It

is the difference between the ask price and the bid price

expressed as a percentage of the ask price.

136 NSOU • PGCO-X Per cent spread =  $\frac{\text{Ask price} - \text{Bid price}}{\text{Ask price}} \times 100$   $\frac{1.5540 - 1.5536}{1.5540} \times 100 = 0.0257\%$

••••• Cross Rate It is an exchange rate that is computed from two other rates. Calculation of cross rates where transactions costs do not exist Suppose the following quotations are available. USD/INR = 63.91 EUR/INR = 75.35  
 EUR/USD cross rate =  $\frac{\text{EUR /INR}}{\text{USD/INR}} = \frac{75.35}{63.91} = 1.1790$  USD/INR 63.91 Calculation of cross rates where transactions costs do exist Suppose the following quotations are available. USD/INR = 63.91-94 EUR/INR = 75.35-39 EUR/USD cross rate  
 EUR/USD bid rate =  $\frac{\text{EUR/INR bid} \times \text{INR/USD bid}}{\text{bid ask EUR/INR}} = \frac{75.35 \times 94}{63.91} = 1.1784$  USD/INR 63.94 EUR/USD ask rate =  $\frac{\text{EUR/INR ask} \times \text{INR/USD ask}}{\text{ask bid EUR /INR}} = \frac{75.39 \times 96}{63.91} = 1.1796$  USD/INR 63.91 EUR/USD cross rate =  $\frac{1.1784 - 96}{1.1784 - 96} = 1.1784 - 96$  • Determination of Cross Exchange Rates

NSOU • PGCO-X 137 At the retail forex market, home currency can be easily exchanged directly against some major currencies of the world but in some cases an user might require to know the exchange rate prevailing for other not so popular currencies which are not quoted directly against the home currency and is quoted against the most frequently traded currencies. To illustrate, an Indian can easily find out from the currency dealers' the exchange rate prevailing for USD, GBP, EUR, JPY, AED, SGD, THB, AUD and accordingly an individual can exchange the home currency to obtain any of the quoted currencies but to know the exchange rate for ARS (Argentine peso) or PHP (Philippines Peso) or ZAR (South African Rand) against INR (Indian rupee) from a local currency dealer is not possible. The reason is at the retail level, dealers deal with only such currencies which are frequently exchanged. So, to obtain the relevant exchange rate prevailing between INR and ZAR we can work out indirectly the value of the exchange rate based on the following 3 steps : Step 1 : Find the spot exchange rate between INR and USD (if exchange rate quote is given directly) Step 2 : Find the spot exchange rate between ZAR and USD (if exchange rate quote is given directly) Step 3 : Work out the exchange rate between ZAR and INR (known as cross- rate) based on the above 2 given spot- exchange rates. One must clearly understand that out of the above 2 exchange rates involving 3 currencies, one of the currencies is a common currency for the given 2 exchange rate i.e. in this case it is USD. Let us again clarify the steps to determine the cross-rate between INR and ZAR with a different common currency now, say, EUR. Step 1 : Find the spot exchange rate between INR and EUR (if exchange rate quote is given directly) Step 2 : Find the spot exchange rate between ZAR and EUR (if exchange rate quote is given directly) Step 3 : Work out the exchange rate between ZAR and INR (known as cross- rate) based on the above 2 given spot- exchange rates.

138 NSOU • PGCO-X Both the approaches using USD or EUR (as the common currency) which are the most frequently traded currencies will lead to the same answer of the value of the exchange rate (cross-rate) between ZAR and INR.

**62% MATCHING BLOCK 79/150**

**W**

Example : If the Indian rupee is the home currency and the foreign currency is the US Dollar then what is the exchange rate between the rupee and the US dollar? Solution : US\$ 0.0217/1 reads "0.0217 US dollar per rupee." This means that for one Indian rupee one can buy 0.0217

US dollar.

**82% MATCHING BLOCK 80/150**

**W**

In this method, known as the European terms, the rate is quoted in terms of the number of units of the foreign currency for one unit of the domestic currency. This is called an indirect quote. The alternative method, called the American terms, expresses the home currency price of one unit of the foreign currency. This is called a direct quote. This means the exchange rate between the

US dollar and rupee can be expressed as : 46.08/US\$ reads “46.08 per US dollar.”

**80% MATCHING BLOCK 81/150**

**W**

Hence, a relationship between US dollar and rupee can be expressed in two different ways which have the same meaning : • One can buy 0.0217 US dollars for one Indian rupee. • 46.08 Indian rupees are needed to buy one

US dollar. 6.5.2 The Forward Market A forward exchange rate occurs when buyers and sellers of currencies agree to deliver the currency at some future date. They agree to transact

**76% MATCHING BLOCK 84/150**

**SA**

CP Shreya 2016 Bllkish 2026.docx.pdf (D103340857)

a specific amount of currency at a specific rate at a specified future date. The

forward exchange rate is set and agreed by the parties and remains fixed for the contract period regardless of the fluctuations in the spot exchange rates in future. The forward exchange transactions can be understood by an example. A US exporter of computer peripherals

**60% MATCHING BLOCK 83/150**

**W**

might sell computer peripherals to a German importer with immediate delivery but not require payment for 60 days. The NSOU • PGCO-X 139 German importer has an obligation to pay the required dollars in 60 days, so he may enter into a contract with a trader (typically a local banker) to deliver Euros for dollars in 60 days at a forward rate – the rate today for future delivery.

So, a

**52% MATCHING BLOCK 85/150**

**SA**

OSOU\_U-10\_OREIGN EXCHANGE MARKET.docx (D120109724)

forward exchange contract implies a forward delivery at specified future date of one currency for a specified amount of another currency.

The exchange rate is agreed today, though the actual transactions of buying and selling will take place on the specified date only. The forward rate is not the same as the spot exchange rate that will prevail in future. The actual spot rate that may prevail on the specified date is not known today and only the forward rate for that day is known. The actual spot rate on that day will depend upon the supply and demand forces on that day. The actual spot rate on that day may be lower or higher than the forward rate agreed today. An Indian exporter of goods to London could enter into a forward contract with his banker to sell pound sterling 90 days from now. This contract can also be described as a contract to purchase Indian Rupees in exchange for delivery of pound sterling. In other words, foreign exchange markets are the only markets where barter happens – i.e., money is delivered in exchange for money! Like the Spot exchange market, the Forward exchange market is not located at any specific place. The banks selling or buying currencies forward constitute the Forward market. This market fixes the rates at which currencies will be exchanged on a future date. The Forward market primarily deals in currencies that are frequently used and are in demand in the international trade, such as US dollar, Pound Sterling, Deutschmark, French franc, Swiss franc, Belgian franc, Dutch Guilder, Italian lira, Canadian dollar and Japanese yen. There is little or almost no Forward market for the currencies of developing countries. Forward rates are quoted with reference to Spot rates as they are always traded at a premium or discount vis-a-vis Spot rate in the inter-bank market. The bid-ask spread increases with the forward time horizon. ●●●● Importance of Forward Markets The Forward market can be divided into two parts—Outright Forward and Swap market. The Outright Forward market resembles the Spot market, with the difference that the period of delivery is much greater than 48 hours in the Forward market. A major part of its operations is for clients or enterprises who decide to cover against exchange risks emanating from trade operations. The Forward Swap market comes 140 NSOU ● PGCO-X second in importance to the Spot market and it is growing very fast. The currency swap consists of two separate operations of borrowing and of lending. That is, a Swap deal involves borrowing a sum in one currency for short duration and lending an equivalent amount in another currency for the same duration. US dollar occupies an important place on the Swap market. It is involved in 95 per cent of transactions. Major participants in the Forward market are banks, arbitrageurs, speculators, exchange brokers and hedgers. Commercial banks operate on this market through their dealers, either to cover the orders of their clients or to place their own cash in different currencies. Arbitrageurs look for a profit without risk, by operating on the interest rate differences and exchange rates. Speculators take risk in the hope of making a gain in case their anticipation regarding the movement of rates turns out to be correct. As regards brokers, their job involves match making between seekers and suppliers of currencies on the Spot market. Hedgers are the enterprises or the financial institutions who want to cover themselves against the exchange risk. ●●●●

Quotations on Forward Markets Forward rates are quoted for

**67%**

**MATCHING BLOCK 86/150**

**SA**

Forex.docx (D155077539)

different maturities such as one month, two months, three months, six months and one year. Usually, the maturity dates are

closer to month-ends. Apart from the standardized pattern of maturity periods, banks may quote different maturity spans, to cater to the market/client needs. The quotations may be given either in outright manner or through Swap points. Outright rates indicate complete figures for buying and selling. Quotation for Odd Number of Days Normally, forward quotations are made for standard maturity periods such as 1 month, 2 months, 3 months, 6 months and 9 months. For odd (broken) period, the rates can be negotiated. However, a convenient way is to interpolate the rates between two standard dates. Cost of Carry model – The relationship between forward and spot price can be summarized in terms of cost of carry which is computed as follows : Cost of Carry = Storage Cost + Interest paid to finance the asset – Income earned on the asset. Using Continuously Compounding Risk Free (CCRF) rate of interest, we get the following relationship between Forward price (F) and current Spot price (S<sub>0</sub>) under Cost of Carry model :

NSOU • PGCO-X 141  $F = S_0 e^{rt}$  Where,  $r$  = CCRF rate of interest  $t$  = contract period/ time till expiration of the contract  
 Assumptions under Cost of Carry model 1. The market is perfect. 2. There is no truncation cost. 3. All the assets are divisible. 4. Only one price prevails. 5. There are no restrictions in short selling. Example : Consider a 6 months forward contract on 100 shares with a price of Rs. 38 each. The CCRF rate of interest is 10% p.a. The share is expected to yield a dividend of Rs. 1.50 in 4 months from now. Calculate the forward price. Given  $e^{0.05} = 1.0513$  and  $e^{-0.0333} = 0.9672$   
 We know that for dividend paying share,  $F = (S_0 - I) e^{rt}$  Where,  $F$  = Required Forward/Contract Price  $S_0$  = Current Spot price  $r$  = CCRF rate of interest  $t$  = contract period/ time till expiration of the contract  $I$  = PV of dividend receivable after 4 months on 100 shares. = Rs.  $(1.50 \times 100) e^{-rt} = 150 \times e^{-0.1 \times 4/12} = 150 \times e^{-0.0333} = Rs. 150 \times 0.9672 = Rs. 145$  (approx) Therefore,  $F = Rs. [(38 \times 100) - 145] e^{0.1 \times 6/12} = 3655 e^{0.05} = 3655 \times 1.0513 = Rs. 3843$  (approx) Example : An exporter has sold goods worth £ 1 lakh to a customer in UK. Current spot price is Rs. 79.34/£. Expected date of collection is after 3 months when expected spot price of £ is Rs. 79. Forward price quoted by bank for 3 months is Rs. 79.27/£.

142 NSOU • PGCO-X In this situation, the following hedging technique should be adopted by the exporter to avoid loss due to exchange rate fluctuation : (i) To enter into a short forward contract to sell £ 1 lakh at Rs. 79.27/£ after 3 months. (ii) To realize £ 1 lakh after 3 months and sell at agreed price in forward market to get Rs. 79,27,000 (Rs. 79.27 × 1 lakh)  
 Note : Without such forward contract his selling price in the spot market would have been Rs. 79 lakh (Rs. 79 × 1 lakh). Additional price realized from forward contract is Rs. 27,000 (Rs. 79,27,000 – 7,00,000). This is treated as gain from forward contract. 6.5.3 The Futures Market Currency Futures were launched in 1972 on the International Money Market (IMM) at Chicago. They were the first financial Futures that developed after coming into existence of the floating exchange rate regime. It is to be noted that commodity Futures (com, oats, wheat, soyabeans, butter, egg and silver) had been in use for a long time. The Chicago Board of Trade (CBOT), established in 1948, specialised in future contract of cereals. The Chicago Mercantile Exchange (CME) started with the future contracts of butter and egg. Later on, other Currency Future markets developed at Philadelphia (Philadelphia Board of Trade), London (London International Financial Futures Exchange (LIFFE)), Tokyo (Tokyo International Financial Futures Exchange), Sydney (Sydney Futures Exchange), and Singapore International Monetary Exchange (SIMEX). The volume traded on the Futures market is much smaller than that traded on Forward market. However, it holds a very significant position in USA and UK (especially London) and it is developing at a fast rate. There are three types of participants on the currency futures market: floor traders, floor brokers and broker-traders. Floor traders operate for their own accounts. They are the speculators whose time horizon is short-term. Some of them are representatives of banks or financial institutions which use futures to supplement their operations on Forward market. They enable the market to become more liquid. In contrast, floor brokers, representing the brokers' firms, operate on behalf of their clients and, therefore, are remunerated through commission. The third category, called broker-traders, operate either on the behalf of clients or for their own

NSOU • PGCO-X 143 accounts. Enterprises pass through their brokers and generally operate on the Future markets to cover their currency exposures. They are referred to as hedgers. They may-be either in the business of export-import or they may have entered into the contracts for borrowing or lending. ●●●● Characteristics of Futures Contracts The major features of future contracts are as follows : (i) Organised Futures Exchanges All futures contracts are traded in organised exchanges. These exchanges are actually auction markets having a trading floor. Individuals, corporations and even market-making commercial banks trade through brokers or exchange members, who receive the orders to buy or sell and transmit this to the floor of the exchange. Trading takes place in designated areas, known as 'pits,' on the floor of the futures exchange through a system of open outcry in which traders announce bids to buy (i.e., take long positions) and offers to sell (i.e., take short positions) contracts. Long positions are matched with short positions. Trading also takes place on electronic trading platform as the GLOBEX in the case of the CME. In April 2001, CME expanded its foreign exchange coverage by offering electronic access to its full range of currency contracts virtually 24-hours a day via the GLOBEX electronic trading platform. This electronic trading access occurs "side-by-side" with floor trading in CME's currency pits during floor trading hours. (ii) Selected currencies Futures are available only in certain currencies like the British pound (BP), Canadian dollar (C1), Swiss franc (E1), Japanese yen (J1), Australian dollar (AD), New Zealand dollar (NE), South African Rand (RA), Russian ruble (RU), Swedish kronor (SKr), Norwegian krone (NKr), Brazilian real (BR), Chinese Renminbi (RMB), Indian rupee (SIR), and the Euro (EC) all against the US dollar. Cross-rate futures like AD/CD, AD/JY, AD/NE, BP/JY, BP/SF, CD/JY, EC/AD, EC/BP, EC/ CD, EC/JY, EC/NKr, EC/SF, EC/SKr, and SF/JY are also offered by the CME. Euro- paired and cross-currency futures are available in the New York Board of Trade (NYBOT). In India, futures are available in only four currencies – US dollar, euro, British pound and Japanese yen.

144 NSOU • PGCO-X (iii) Standardised Amounts Futures are traded in standardised sizes, e.g., one futures contract in the Chicago Mercantile exchange is for 62,500 pounds sterling, 100,000 Canadian dollars, 125,000 Euro, 100,000 Brazilian reals, 12,500,000 Japanese yen, 2,500,000 Russian rubles, 500,000 Mexican pesos, 125,000 Swiss francs, 100,000 Australian dollars, 2,000,000 Norwegian kroner, 2,000,000 Swedish kronor and 5,000,000 Indian rupees. (iv) Standardised value dates Futures contracts have only few value dates. For example, most currency contracts at CME are traded on the March quarterly cycle and go through a physical delivery process four times a year, i.e., on the third Wednesday of March, June, September and December. However, the Mexican peso and the South African rand are traded on all 12 calendar months. There are also two “cash-settled” contracts – the Brazilian real, traded on all twelve calendar months, and the Russian ruble, traded on the March quarterly cycle. In India the trading cycle is 12 months and it is cash-settled. (v) Clearing House Each futures exchange has an exchange clearinghouse whose purpose is to match and record all trades and to guarantee contract performance. In most of the futures exchange, the exchange clearinghouse is an independently incorporated organization but in some cases it is simply a department of the exchange. A contract between two parties gets split up into two contracts – a contract to buy and a contract to sell, the clearing house acting as the ‘seller’ and the ‘buyer’ in the two cases respectively. The clearinghouse thereby guarantees both sides of the two-sided contract. (vi) Margin requirement A buyer or a seller of a futures contract is required to post a margin in a margin account with his/ her broker who in turn posts a margin with a clearing member and the latter posts it with the clearing house of the exchange. Margins are deposits required to ensure that a clearing member can cover potential losses with his or her trading positions. Margins help to ensure that clearing members can meet their obligations to their customers and to CME Clearing. The margins vary according to the product and market volatility. The margin is now called performance bond. Margin NSOU • PGCO-X 145 may be posted either by depositing cash or, in the case of large institutional traders, by pledging collateral in the form of marketable securities or by presenting a letter of credit issued by a bank. Brokers sometimes pay interest on funds deposited in a margin account. If the actual margin falls below the maintenance level, the trader will be required to replenish it to the initial level. Such a demand is called a margin call. The additional deposit is called variation margin. In case of failure to make a variation margin payment, the broker will immediately liquidate some or all of the customer’s positions. In most cases the brokers require their customers to maintain minimum balances in their margin accounts in excess of the requirements of the exchange. If profit is generated, the trader will be able to withdraw excess funds from his account. (vii) Transactions costs Brokers charge commissions for their services instead of profiting from the bid- ask spread. Though commissions vary according to the type and size of the contract, in general, the cost is low. (viii) Daily settlement – marking to market Settlement, in case of futures contract, is made on a daily basis. The procedure is known as ‘marking to market’, which simply means that, at the close of every day, the futures contract is re-priced. This becomes the new price at the beginning of the next day. The difference between the opening and closing prices per day is transferred to the trader’s margin account. (ix) Delivery under futures contract Delivery is rare. Only about 1 per cent of futures traded in the US are actually delivered. Majority of the currency futures contracts is liquidated by entering into reversing contracts. For example, an investor who has gone long on 7th July on a September futures contract can liquidate the contract by taking a short position on 22nd August on a September futures contract. In India, delivery of foreign currency is not permitted and all futures contracts are cash settled in rupees. (x) Minimum price movement (Tick) Prices on futures contracts have a minimum amount by which they can move. The minimum amounts are established by the futures exchanges and are known as “ticks.”

146 NSOU • PGC0-X Example : An investor has bought a futures contract on the stock of Maruti Udyog Ltd. at Rs. 410. Each contract consists of 400 shares. The initial margin is set by the exchange at 4%, while the maintenance margin is 90% of initial margin. Clearing prices of the stock for the next 10 days are given below : Day 1 2 3 4 5 6 7 8 9 10 Price (Rs.) 410 420 400 390 440 441 450 460 455 465 Assume that on the 10 th day, the Investor squares off his position at Rs. 465. Find out the gain or losses of long and short positions of the investor. You are required to show necessary calculations. Solution : Contract Value = R. 410 × 400 shares = Rs. 1,64,000 Initial Margin = 4% of contract value = Rs. 1,64,000 × 4% = Rs. 6560. Maintenance Margin = 90% of initial margin = 90% of 6560 = Rs. 5904. If margin balance falls below maintenance margin, i.e. Rs. 5904, there will be margin call to restore the balance to initial margin. Note : In case of long position contract, initial price represents purchase price and clearing price represents selling price. So the increase in clearing price represents the increase in selling price leading to profit situation and decrease represent loss situation. Situation is opposite in case of short position contract. Table showing calculation for daily settlement (Long Position)

Day	Share	Total Profit/ Margin balance before Margin	Final Price	Amount (Loss)	margin call	Call Margin (Share Balance Price × 400 shares)
0	410	1,64,000	—	6,560	—	6,560
1	410	1,64,000	—	6,560	—	6,560
2	420	1,68,000	4,000	6,560 + 4,000 = 10,560	—	10,560
3	400	1,60,000	(8,000)	10,560 - 8,000 = 2,560	6,560 - 2,560 = 4,000	6,560

NSOU • PGC0-X 147 Day Share Total Profit/ Margin balance before Margin Final Price Amount (Loss) margin call Call Margin (Share Balance Price × 400 shares)

**96% MATCHING BLOCK 87/150**

**SA** SLM\_71.doc (D128242760)

Currency Option is a financial instrument that gives its holder a right but no obligation to buy or sell a currency sometime in the future.

Options are traded on over the counter (OTC) as well as on organized market. OTC market can be further subdivided into two parts : retail market and wholesale market. The retail market consists of individual clients as well as enterprises who buy Options from banks to cover against exchange risk. These clients are generally financial institutions and portfolio managers, apart from big enterprises.

**100% MATCHING BLOCK 88/150**

**SA** OSOU\_U-10\_OREIGN EXCHANGE MARKET.docx (D120109724)

The wholesale market comprises of commercial banks and investment banks.

They operate on 'OTC' Option market to cover the positions for their clients or for speculative purposes. The OTC Options markets represent a significant volume of transactions and they are developing very rapidly. In terms of volume of transactions, USA, UK and Japan are on top, followed by Switzerland, Singapore and France. On the OTC Options market, operations are carried out either directly between counterparties or through a broker. As indicated above, there are different categories of operators, such as enterprises who cover their receivables and payables and future cash flows, banks which profit by speculating, and above all, arbitrageurs who make profit by taking advantage of price distortions on different markets. All the operations on OTC market are carried out by telephone or by the system of Reuter or Telerate and may take place round the clock.

NSOU • PGCO-X 149 ●●●●● Important Features of Currency Options (i) Option on OTC market is a contract between two parties. This contract gives

**55% MATCHING BLOCK 100/150**

**SA** FMG-403 International Finance.pdf (D164737611)

the buyer of the Option contract a right—and not an obligation—to buy or sell a certain amount of

a currency

at

price fixed in advance. This right can be exercised either on a fixed maturity date or during the period up to maturity date. The buyer of an Option desires to avoid a risk while the seller of an Option is ready to assume that risk.

**95% MATCHING BLOCK 89/150**

**W**

There are two types of Options: call and put Options. A

buyer (also called holder) of a call Option acquires a right to buy currency A at a certain price against currency B. Likewise; a buyer of put Option acquires a right to sell currency A against currency B at a pre-fixed price. It should be noted that a rupee call Option that gives the holder the right to buy rupees against dollar is also a dollar put Option, giving the holder the right to sell dollar against rupee. (ii) When the right to use an Option is exercised on a fixed date (i.e. the date of maturity), the Option is said to be European Option. On the other hand, when the right to use an Option can be exercised any time during the life of the Option, up to the date of maturity, it is referred to as American Option. As stated earlier, it is the buyer of the Option who chooses to exercise or not to exercise his Option. To acquire that right, he pays a premium (or price) to the seller of the Option. As a result, the seller (writer) of the Option is under an obligation to buy or sell the amount of currency to the holder of the Option if the latter chooses to exercise his Option. The positions of buyer and seller of Options are different. While the buyer of an Option runs a risk of loss limited to the amount of premium paid and a possibility of unlimited gain. On the other hand, the seller of an Option has a risk of unlimited loss and the possibility of a gain limited to the amount of premium. (iii) On the OTC market, the size of an Option contract is of the order of 5 million dollars or, even more, with the amounts going beyond 100 million dollars on interbank markets. (iv) The currencies traded on the OTC market are those that are actively traded on Spot and Forward market. These are major currencies such as US dollar, Pound sterling, Deutschmark, Japanese yen, Swiss franc, French franc, Canadian dollar, Euro, etc. (v) The price of currency fixed in the contract is called exercise price. This price is chosen by buyer on the OTC market. It is generally close to

150 NSOU • PGCO-X Forward price in case of European Option. The Option price (called premium) is paid upfront at the beginning, by the buyer to the seller of Option. This premium puts the seller under obligation to act as per the choice of the buyer. On the OTC market, the premium is expressed in percentage, for example, 3 per cent of the amount of the Option. (vi) The maturity period-of an Option is limited. It may go up to 5 years. The delivery of currency takes place after two working days of the exercise of the Option. Options can be repurchased or resold, thus permitting the buyer to forego his right or seller to be relieved of his obligation, as the case may be, before the date of maturity. But the Option itself can become defunct when it is either exercised or has attained maturity. Normally, on the OTC Market, an Option can be resold only to the bank from which it was purchased. Example : Mr. X was bullish about ABC Co. Ltd. He buys 1000 shares at current market price of Rs. 210 per share. Fearing a fall in the market price he has bought option contract involving 1000 shares with exercise price of Rs. 212 at a premium of Rs. 7.80 per share. Calculate his profit/loss under different spot prices: Rs. 190, 195, 200, 205, 210, 215, 220 and 225. Also compute Break Even Point. Table showing profit/loss from strategy of long stock and long put

Spot Price	Exercise Price	Gross Profit from Stock	Gross Premium	Net Profit
190	212	22,000	7,800	14,200
195	212	17,000	7,800	9,200
200	212	12,000	7,800	4,200
205	212	7,000	7,800	0
210	212	2,000	7,800	(5,800)
215	212	0	7,800	(7,800)
220	212	0	7,800	(7,800)
225	212	0	7,800	(7,800)

NSOU • PGCO-X 151 Required Break Even Point = Purchase Price + Premium = Rs. (210 + 7.8) = Rs. 217.8 Here, NE means Not Exercised. ●●●● Spread Spread refers to the simultaneous buying of an Option and selling of another in respect of the same underlying currency. Spreads are often used by traders in banks. A spread is said to be vertical spread or price spread if it is composed of buying and selling of an Option of the same type with the same maturity with different strike prices. Spreads are called vertical simply because in newspapers, quotations of Options for different strike prices are indicated one above the other. They combine the anticipations on the rates and the volatility. On the other hand, horizontal spread combines simultaneous buying and selling of Options of different maturities with the same strike price. When a call option is bought with a lower strike price and another call is sold with a higher strike price, the maximum loss in this combination is equal to the difference between the premium earned on selling one option and the premium paid on buying another. This combination is known as bullish call spread. The opposite of this is a bearish call. Example : An investor decides to create a bull spread by

<b>80%</b>	<b>MATCHING BLOCK 90/150</b>	<b>W</b>
the way of buying a call option on a stock with an exercise price of		

Rs. 100 and for a premium of Rs. 5/share and selling a call option with exercise price of Rs. 110 and premium of Rs. 2/share. Calculate the profit/loss if on the settlement day spot prices of the security is Rs. 95, Rs. 106 and Rs. 113. Also compute Break Even Point (BEP). Table showing calculation of profit/loss from bull spread with call option

Spot Price	Exercise Price	Gross Profit from Long Call	Gross Profit from Short Call	Net Profit
95	110	0	0	(5)
106	110	6	0	1
113	110	13	0	8

\* First think from long call point of view and then reverse Here, BEP = Long call strike price + Net premium cost = Rs. (100 + 3) = Rs. 103.

152 NSOU • PGCO-X ●●●●● Covering Exchange Risk with Options A currency option enables an enterprise to secure a desired exchange rate while retaining the possibility of benefiting from a favorable evolution of exchange rate. Effective exchange rate guaranteed through the use of options is a certain minimum rate for exporters and a certain maximum rate for importers. Exchange rates can be more profitable in case of their favorable evolution. Apart from covering exchange rate risk, Options are also used for speculation on the currency market. ●●●●● Organized Market of Currency Options Apart from the OTC markets for currency Options, there exist organized currency option markets. They developed after equity Options. In 1982, stock exchanges of Montreal and Philadelphia introduced standardized currency options. Thereafter, Chicago Mercantile Exchange, LIFFE of London, Sydney Futures Exchange, MATIF of Paris and some others started trading in standardized currency Options. On organized markets, two types of Options exist: Options on cash or on spot, and Options on currency futures. The Option on cash (or physical currency) confers the buyer the right—and not an obligation—to buy or sell the currency on spot at an agreed rate till the date of maturity. The Option on currency futures gives the holder a right to buy or sell a future contract of a foreign currency on a future date at an agreed rate. The volume traded on organized markets continues to grow. Yet, it is much less than that on the OTC Options market which offers a greater number of choices. Banks are very active participants on the organized market. USA, France and UK are leading countries where organized markets of Options exist. The major participants on the organized markets are brokers, enterprises and banks that are active on OTC markets as well.

6.5.5 The Swaps Market Swaps involve exchange of a series of payments between two parties. Normally, this exchange is affected through an intermediary financial institution. Though swaps are not financing instruments in themselves, yet they enable obtainment of desired form of financing in terms of currency and interest rate. Swaps are over-the-counter instruments. The market of currency swaps has been developing at a rapid pace for the last fifteen years. As a result, this is now the second most important market after the spot currency market. In fact, currency swaps have succeeded parallel loans which had developed in countries where exchange control was in operation.

NSOU • PGCO-X 153 In parallel loans, two parties situated in two different countries agreed to give each other loans of equal value and same maturity, each denominated in the currency of the lender. While initial loan was given at spot rate, reimbursement of principal as well as interest took into account forward rate. However, these parallel loans presented a number of difficulties. For instance, default of payment by one party did not free the other party of its obligations of payment. In contrast, in a swap deal, if one party defaults, the counterparty is automatically relieved of its obligation. Likewise, despite the compensation of loans, they figured in balance sheets of enterprises. Owing to these limitations, currency swaps gained in importance. Currency swaps can be divided into three categories: (a) fixed-to-fixed currency swap, (b) floating-to-floating currency swap, and (c) fixed-to-floating currency swap. A fixed-to-fixed currency swap is an agreement between two parties who exchange future financial flows denominated in two different currencies. A currency swap can be understood as a combination of simultaneous

<b>100%</b>	<b>MATCHING BLOCK 91/150</b>	<b>W</b>
spot sale of a currency and a forward purchase of the same		

amounts of currency. This double operation does not involve currency risk. In the beginning of exchange contract, counterparties exchange specific amount of two currencies. Subsequently, they settle interest according to an agreed arrangement. During the life of swap contract, each party pays the other the interest streams and finally they reimburse each other the principal of the swap. A simple currency swap enables the substitution of one debt denominated in one currency at a fixed rate to a debt denominated in another currency also at a fixed rate. It enables both parties to draw benefit from the differences of interest rates existing on segmented markets. A similar operation is done with regard to floating-to-floating rate swap. A fixed-to-floating currency coupon swap is an agreement between two parties by which they agree to exchange financial flows denominated in two different currencies with different type of interest rates, one fixed and other floating. Thus, a currency coupon swap enables borrowers (or lenders) to borrow (or lend) in one currency and exchange a structure of interest rate against another—fixed rate against variable rate and vice versa. The exchange can be either of interest coupons only or of interest coupons as well as principal. For example, one may exchange US dollars at fixed rate for French francs at variable rate. These types of swaps are used quite frequently.

154 NSOU • PGCO-X ●●●●● Participants in Swap Deals Participants in swap markets are : (a) financial institutions, (b) big enterprises, and (c) international organizations and public sector institutions. Financial institutions play a very important role in swap operations. They influence, to a very great extent, the structure of operations and price of swaps. Currency swaps are useful to financial institutions as they enable them to make loans and accept deposits in the currency of their customers' choice. A financial institution may participate in the swap deal either as a broker, counterparty or an intermediary. When the financial institution acts as a broker only it when is not counterparty in the deal. It should search for counterparties; facilitate negotiations, while preserving the anonymity of counterparties. In the role of a counterparty, the financial institution incurs various risks—credit risk, market risk and delivery risk. When the bank or financial institution is counterparty to a swap, it tries to arrange another swap having symmetrical features against another company so as to balance its flows and reduce its own risk. Thus, if it has entered into a Dollar-Euro fixed-to-fixed swap with a German company, it will try to find an American company that would like a Euro- Dollar fixed-to-fixed swap involving the same amount and for the same duration. As an intermediary, the financial institution or the bank plays the role of counterparty as well as a broker at the same time. When the bank is counterparty or an intermediary, it is required to make quite complex arrangements in terms of several counterparties so as to reduce its own risks. Margins on swaps have diminished. They are lower even for currencies that are highly traded. Depending on the currencies involved in a swap, a bank may gain 5 to 12 basis points. The second categories of participants are enterprises. They are mostly multinationals, but there may also be big and medium enterprises with good ratings. French Public enterprises such as SNCF (French Railways) and EDF (French Electricity Company) take recourse to swap markets in order to obtain more favorable interest rates. For example, in May 1994, SNCF issued bonds worth 150 billion Italian lira on international capital market which it exchanged with an American enterprise for French francs through a swap contract. Currency swaps involve a long position in one bond, combined with a short position in another bond. They may also be considered as portfolio of forward contracts. Enterprises use them when they have excess in one currency and shortage in another. Sometimes, subsidized loans

NSOU • PGCO-X 155 available for promoting exports may be swapped for a desired foreign currency. Thirdly, other institutions such as World Bank and nation states also often take recourse to currency swaps and currency coupon swaps. ●●●●● Important Features of Swap Contracts Minimum size of a swap contract is of the order of 5 million US dollar or its equivalent in other currencies. But there are swaps of as large a size as 300 million US dollar, especially in the case of Eurobonds. The US dollar is the most sought after currency in swap deals. The dollar-yen swaps represent 25 per cent of the total while dollar-deutschemark account for 20 per cent of the total. The swaps involving Euro are also likely to be widely prevalent in European countries. Life of a swap is between two and ten years. As regards the rate of interest of the swapped currencies, the choice depends on the anticipation of enterprises. Interest payments are made on annual or semi-annual basis. ●●●●● Process of Swap Deals If there are two enterprises which have symmetrical requirement of capital, in two different currencies, a swap is possible. ●●●●● Pricing a Currency Swap As is clear from its definition, a swap is equivalent to borrowing and lending simultaneously. So the value (or price) of a swap should be equal to the difference between the present values of all inflows and all outflows. Pricing problem of a swap is essentially to find out as to what rate should be quoted so that the two series of cash flows have equal present value. For example, a bank is willing to swap 10 per cent fixed on French franc with 8 per cent fixed on an equivalent US dollar principal for 3 years. This means that the present value of franc payments at 10 per cent is equal to the present value of the dollar payments at 8 per cent, both expressed in a common currency. ●●●●● Reasons for Currency Swap Contracts At any given point of time, there are investors and borrowers who would like to acquire new assets/liabilities to which they may not have direct access or to which their access may be costly. For example, a company may retire its foreign currency loan prematurely by swapping it with home currency loan. The same can also be achieved by direct access to market and by paying penalty for premature payment.

156 NSOU • PGCO-X A swap contract makes it possible at a lower cost. Some of the significant reasons for entering into swap contracts are given below:

- Hedging Exchange Risk Swapping one currency liability with another is a way of eliminating exchange rate risk. For example, if a company (in UK) expects certain inflows of deutschemarks, it can swap sterling liability into deutschemark liability.
- Differing financial Norms The norms for judging credit-worthiness of companies differ from country to country. For example, Germany or Japanese companies may have much higher debt-equity ratios than what may be acceptable to US lenders. As a result, a German or Japanese company may find it difficult to raise a dollar loan in USA. It would be much easier and cheaper for these companies to raise a home currency loan and then swap it with a dollar loan.
- Credit Rating Certain countries such as USA attaches greater importance to credit rating than some others like those in continental Europe. The later look, inter-alia, at company's reputation and other important aspects. Because of this difference in perception about rating, a well reputed company like IBM even with lower rating may be able to raise loan in Europe at a lower cost than in USA. Then this loan can be swapped for a dollar loan.
- Market Saturation If an organization has borrowed a sizable sum in a particular currency, it may find it difficult to raise additional loans due to 'saturation' of its borrowing in that currency. The best way to tide over this difficulty is to borrow in some other 'unsaturated' currency and then swap. A well-known example of this kind of swap is World Bank-IBM swap. Having borrowed heavily in German and Swiss market, the WB had difficulty raising more funds in German and Swiss currencies. The problem was resolved by the WB making a dollar bond issue and swapping it with IBM's existing liabilities in deutschemark and Swiss franc.

Example : XYZ ltd. operating in USA requires \$34 lakhs for expansion purposes. Similarly

NSOU • PGCO-X 157 ABC Ltd. operating in Britain requires £ 20 lakhs. The interest rates prevailing in USA is 9% for both \$ and £ whereas in Britain the interest rates are 12% and 8% for borrowing in \$ and £ respectively. Assuming 1 £ = \$ 1.70 and the loan requirement is 6 months for both the parties, examine whether currency swap agreement beneficial? XYZ Ltd. requires \$ 34 lakhs and ABC Ltd. requires £ 20 lakhs which is equivalent to \$ 34 lakhs (£ 20 lakhs x \$ 1.70). So both the parties requires same principal amount. Benefit on interest rate £ Borrowing Rate \$ Borrowing Rate ABC Ltd. 12% 8% XYZ Ltd. 9% 9% Competitive advantage 3% 1% Here, XYZ Ltd. enjoys 3% benefit in £ loan and ABC Ltd. enjoys 1% benefit on \$ loan, i.e. both the parties enjoy competitive advantage. So as per the competitive advantage, XYZ Ltd. will borrow in terms of £ and ABC Ltd. will borrow in \$ and swap. Computation of net mutual benefit Company Intention Borrow Pays (5) Net Cost Cost without Net Benefit (1) (2) (3) (6) swap (7) (8) = (7- 6) ABC Ltd. Borrow £ \$ @ 8% £ @ 9% 9% 12% 3% XYZ Ltd. Borrow \$ £ @ 9% \$ @ 8% 8% 9% 1% Net Benefit of ABC Ltd. = £ 20 lakhs x 3% x 6/12 = £ 30,000 Net Benefit of XYZ Ltd. = \$ 34 lakhs x 1% x 6/12 = \$ 17,000 It shows that the currency swap agreement is beneficial for both the parties. 6.6 Summary

**100% MATCHING BLOCK 92/150**

of purchasing power denominated in one currency to another i.e. to trade one currency for another.

The Foreign Exchange Market performs three types of functions like Transfer Function, Credit Function and Hedging Function. The major Foreign Exchange Markets are Spot Market, Forward Market, Future Market, Option Market and Swap Market. Forward, Futures, Options and Swaps are called derivatives because they derive their value from the underlying exchange rates are discussed in detail here with suitable numerical problems. 6.7 Exercise 1. A foreign currency dealer quotes the following exchange rates : (i) INR/AED : 17.823/45 (ii) INR/THB : 1.16/35 (iii) INR/CAD : 34.42/78 You as a customer is interested to purchase 10,000 units of THB and then would like to convert THB so obtained into AED. Determine the amount of AED. 2. Determine the exchange rate between GBP and CAD using the following given rates : (i) USD/GBP : 1.63 – 1.74 (ii) CAD/USD : 1.123 – 1.245 3. Find the cross-rates between Pound Sterling and Arab Emirate Dinar based on the following exchange rate quotations: (i) CAD/GBP : 1.823/36 (ii) AED/CAD : 0.8334/48 4. Consider a three months forward contract on a non-dividend paying share which is available at Rs. 70. If CCRF rate of interest is 8% p.a. what would be the contract price? (e 0.02 = 1.0202) 5. Assume that 3 months future contract of nifty has spot price of Rs. 1090. CCRF rate of return is 12% p.a. and CCRF rate of yield on underlying asset is 4% p.a. Lot size is 200 shares. Find the value of future contract. NSOU • PGCO-X 159 6. An importer has purchased goods worth \$ 20,000 from a customer in USA. Current spot price is Rs. 72.34/\$. Expected date of payment is after 3 months when expected spot price of \$ is Rs. 74.32. Forward price quoted by bank for 3 months is Rs. 73.37/\$. What should the importer do protect himself the exchange rate fluctuation? 7. An investor has bought a futures contract on the stock of Tata Motors Ltd. at Rs. 1100. Each contract consists of 200 shares. The initial margin is set by the exchange at 4%, while the maintenance margin is 90% of initial margin. Clearing prices of the stock for the next 10 days are given below: Day 1 2 3 4 5 6 7 8 9 10 Price (Rs.) 1100 1200 1240 1390 1220 1140 1450 1124 1355 1465 Assume that on the 10th day, the Investor squares off his position at Rs. 1465. Find out the gain or losses of long and short positions of the investor. You are required to show necessary calculations. 8. Mr. Alen was bullish about XY Co. Ltd. He buys 500 shares at current market price of Rs. 110 per share. Fearing a fall in the market price he has bought option contract involving 500 shares with exercise price of Rs. 112 at a premium of Rs. 7 per share. Calculate his profit/loss under different spot prices: Rs. 120, 125, 100, 105, 110, 115, 120 and 125. Also compute Break Even Point. 9. An investor decides to create a bull spread by

**80% MATCHING BLOCK 94/150**

NSOU • PGC0-X 161 7.0 Objectives By the end of this lesson, learners will be able to: • describe the concept of Parity Condition in International Finance, • understand the important theories of the Equilibrium Framework, • explain the concepts of Purchasing Power Parity, Interest Rate Parity, Fisher Effect and International Fisher Effect, • differentiate between PPP, IRP and IFE, • explain the Parity relationships in International Finance, and ••••• compute various numerical problems relating to the Parity Conditions in International Finance. 7.1 Introduction It is necessary to know long-term future exchange rates in order

**64%**

**MATCHING BLOCK 96/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

to take strategic decisions concerning investment and management of foreign subsidiaries. These predictions of future rates will be written in the strategic plan of the group as a whole, comprising the parent as well as the different subsidiaries. Besides long-term future rates, it is equally important to estimate exchange rate in medium term, that is, over a period of one year, because cash flows of subsidiaries consist of domestic as well as foreign

currencies. Short-term prediction on the other hand, is necessary for managing exchange exposure on day-to-day basis. Generally graphs and charts are used for short-term prediction while fundamen- tals are used for predicting medium and long term rates. Fundamentals consist of factors like interest rates,

**48%**

**MATCHING BLOCK 97/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

inflation, economic growth, and money supply. It is reasonable to assume that these factors will have some impact on exchange rate. The effect of each of them may not always be distinctly clear, yet the fact is that each of the fundamental factors has an influence on the evolution of exchange rates. From the above, the significance of prediction of future exchange rate is apparent. Theorists have been trying to explain exchange rate variations and to predict their future course. Several theories have been propounded

to this effect.

162 NSOU • PGC0-X These theories, by and large, use factors such as

**86%**

**MATCHING BLOCK 98/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

inflation, interest rates and balance of payment deficit. The four important theories are : (1) Purchasing Power Parity (PPP), and (2) Interest Rate Parity (IRP). (3)

Fisher Effect (4) International Fisher Effect 7.2 Parity Conditions in International Finance Parity Conditions provide an intuitive explanation of the movement of prices and interest rates in different markets in relation to exchange rates. The derivation of these conditions requires the assumption of Perfect Capital Markets (PCM). • No transaction costs • No taxes • Complete certainty Note – Parity Conditions are expected to hold in the long-run, but not always in the short term. We shall now examine a simple yet elegant set of equilibrium (or parity) conditions that should apply to product prices, interest rates, and spot and forward exchange rates if the markets are not impeded. These parity conditions provide the foundation for much of the theory and practice of international finance. In competi- tive markets, characterized by numerous buyers and sellers having low-cost access to information, exchange-adjusted prices of identical tradable goods and financial assets must be within transactions costs of equality worldwide. This idea, referred to as the law of one price, is enforced by international arbitrageurs who follow the profit-guaranteeing dictum of “buy low, sell high” and prevent all but trivial deviations from equality. Similarly, in the absence of market imperfections, risk-adjusted expected returns on financial assets in different markets should be equal. Five key theoretical economic relationships, which are depicted in the following figure, result from these arbitrage activities. This framework emphasizes the links among prices, spot exchange rates, interest rates, and forward exchange rates.

NSOU • PGC0-X 163 According to the diagram, if inflation in, say, France is expected to exceed inflation in the United States by 3 per cent for the coming year, then the French franc should decline in value by about 3 per cent relative to the \$. By the same token, the one- year forward French franc should sell at a 3 per cent discount relative to the U.S. \$. Similarly, one-year interest rates in France should be about 3 per cent higher than one-year interest rates on securities of comparable risk in the United States. Expected percentage change of spot exchange rate of foreign currency –3% Forward discount or premium on foreign currency –3% Interest rate differential + 3% Expected inflation rate differential + 3% Interest rate parity Purchasing power parity Fisher effect International Fisher effect Unblased forward rate 7.3 Purchasing Power Parity (PPP) Theory The first original reference of PPP Theory was made by David Ricardo. However, Gustav Cassel popularized this theory in 1918. According to PPP theory, when exchange rates are of a fluctuating nature, the rate of exchange between two currencies in the long run will be fixed by their respective purchasing powers in their own nations. Purchasing Power Parity theory is based on the premise that the same product cannot have different prices in two different markets at any given point of time. This theory assumes restriction free movements of goods and absence of incidental costs such as transportation. According to this theory, if a product costs Rs 100 in India and \$ 2.5 in USA, then one US \$ has to be equal to Rs 40. That is, a sum of Rs 100 has the same purchasing

**40% MATCHING BLOCK 99/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

power as the sum of \$ 2.5. 164 NSOU • PGC0-X This theory was first enunciated by Gustav Cassel, a Swedish economist. He said that the purchasing power of a currency is determined by the amount of goods and services that can be purchased with one unit of that currency.

If there is more than one currency, the exchange rates between them should be such that they provide the same purchasing power to different currencies. In case

**57% MATCHING BLOCK 101/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

the existing rate is such that purchasing power parity does not exist, it is a situation of disequilibrium. It is expected that the exchange rate among different currencies

conforms eventually to purchasing power parity. Though this theory is conceptually sound, there are a number of factors

**80% MATCHING BLOCK 102/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

which prevent it from predicting exchange rate in practice. Some of the major factors in this regard are : (i) Trade restrictions, (ii) Government restrictions on exchange rates, (iii) Continuation of long-term flows despite the disequilibrium between purchasing power parity and exchange rates, (iv) Lack of definition of the relevant rate of inflation and price levels. For example, it is important to establish whether price indices should be based on only those commodities that are traded internationally or on all commodities. The PPP takes into account only the movement of goods and not that of capital. In operational terms, it is concerned only with the current account segment of Balance of Payments and not the total BOP. If a currency is an instrument of payment for other countries,

as is

**57% MATCHING BLOCK 103/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

the case with the US \$, then exchange rate may evolve in a manner independent of price level of the country concerned, i.e. USA. The PPP theory is ideal for predicting exchange rates in

specific situations such as high rate of inflation or monetary disturbances.

**39%**

**MATCHING BLOCK 104/150**

**SA**

062-Alfiya khan, foreign exchange risk in fina ...  
(D135728834)

In these specific situations, the response of individuals to changes in value of real and monetary assets is expected to be strong and the prediction of exchange rates by the PPP theory may

turn out to be realistic. Foreign currency is demanded by the people because it has some purchasing power in its own nation. Also domestic currency has a certain purchasing power, because it can buy some amount of goods/ services in the domestic economy. Thus, when home currency is exchanged for any foreign currency, in fact the domestic purchasing power is being exchanged for the purchasing power of that foreign

NSOU • PGCO-X 165 currency. This exchange of the purchasing power takes place at some specified rate where purchasing of two currencies nations gets equalized. Thus, the relative purchasing power of the two currencies determines the exchange rate. The exchange rate under this theory is in equilibrium when their domestic purchasing powers at that rate of exchanges are equivalent e.g., Suppose certain bundle of goods/ services in U.S.A. costs U.S. \$ 10 and the same bundle in India costs, ₹ 450/- then the exchange rate between Indian Rupee and U.S. \$ is  $\$1 = ₹45$ . Because this is the exchange rate at which the parity between the purchasing power of two nations is maintained. A change in the purchasing power of any currency will reflect in the exchange rates also. Hence under this theory the external value of the currency depends on the domestic purchasing power of that currency relative to that of another currency. In short, what this means is that a bundle of goods should cost the same in Canada and the United States once you take the exchange rate into account.

7.3.1. Purchasing Power Parity and Baseball Bats First suppose that one U.S. \$ (USD) is currently selling for ten Mexican Pesos (MXN) in foreign exchange market. In the United States wooden baseball bats sell for \$40 while in Mexico they sell for 150 pesos. Since  $1 \text{ USD} = 10 \text{ MXN}$ , then the bat costs \$40 USD if we buy it in the U.S. but only 15 USD if we buy it in Mexico. Clearly there's an advantage of buying the bat in Mexico, so consumers are much better off going to Mexico to buy their bats. If consumers decide to do this, we should expect to see three things happen: 1. American consumers desire Mexican Pesos in order to buy baseball bats in Mexico. So they go to an exchange rate office and sell their American \$s and buy Mexican Pesos. This will cause the Mexican Peso to become more valuable relative to the U.S. \$. 2. The demand for baseball bats sold in the United States decreases, so the price American retailers charge goes down. 3. The demand for baseball bats sold in Mexico increases, so the price Mexican retailers charge goes up. Eventually these three factors should cause the exchange rates and the prices in

166 NSOU • PGCO-X the two countries to change such that we have purchasing power parity. If the U.S. \$ declines in value to  $1 \text{ USD} = 8 \text{ MXN}$ , the price of baseball bats in the United States goes down to \$30 each and the price of baseball bats in Mexico goes up to 240 pesos each, we will have purchasing power parity. This is because a consumer can spend \$30 in the United States for a baseball bat, or he can take his \$30, exchange it for 240 pesos (since  $1 \text{ USD} = 8 \text{ MXN}$ ) and buy a baseball bat in Mexico and be no better off. 7.3.2. Purchasing Power Parity and the Long Run Purchasing-power parity theory tells us that price differentials between countries are not sustainable in the long run as market forces will equalize prices between countries and change exchange rates in doing so. You might think that my example of consumers crossing the border to buy baseball bats is unrealistic as the expense of the longer trip would wipe out any savings you get from buying the bat for a lower price. However it is not unrealistic to imagine an individual or company buying hundreds or thousands of the bats in Mexico then shipping them to the United States for sale. It is also not unrealistic to imagine a store like Walmart purchasing bats from the lower cost manufacturer in Mexico instead of the higher cost manufacturer in Mexico. In the long run having different prices in the United States and Mexico is not sustainable because an individual or company will be able to gain an arbitrage profit by buying the good cheaply in one market and selling it for a higher price in the other market. Since the price for any one good should be equal across markets, the price for any combination or basket of goods should be equalized. Why is a \$ worth ₹ 48.80, JPY 122.18, etc. at some point of time? One possible answer is that these exchange rates reflect the relative purchasing powers of the currencies, i.e. the basket of goods that can be purchased with a \$ in the US will cost ₹ 48.80 in India and ¥ 122.18 in Japan. There are two forms of the PPP theory: 1. Absolute form of PPP 2. Relative form 7.3.3. Absolute form of PPP

The Absolute Form of  
the PPP

**100%**

**MATCHING BLOCK 105/150**

**SA**

theses.docx (D3519078)

is based on the 'law of one price' which states that

people all over the world are willing to pay the same price for the same type  
NSOU • PGCO-X 167 of goods and services. It shows how

**53%**

**MATCHING BLOCK 106/150**

**SA**

FMG-403 International Finance.pdf (D164737611)

the exchange rate between the currencies of two countries is related to the price levels of the two countries. If the cost of a representative basket of goods and services

in the home country were the same as that in the foreign country, then absolute PPP would hold. If  $S_0$  is the spot exchange rate and  $P_h$  and

**76%**

**MATCHING BLOCK 107/150**

**SA**

FMG-403 International Finance.pdf (D164737611)

$P_f$  are the prices of the representative basket of goods and services

of the home country and foreign country respectively, then,  $S_0 = P_h / P_f$  The exchange rate must adjust in such a manner that the domestic price level and the foreign price (converted at the spot rate) become equal. An increase in  $P_h$  must be compensated by a corresponding increase in  $P_f$ . Otherwise,  $S_0$  would increase implying depreciation in the value of the home currency. In Equilibrium Form :  $S = \alpha P_D / P_F$  Where,  $S$  = spot rate  $P_D$  = is the price level in India, the domestic market.  $P_F$  = is the price level in the foreign market, the US in this case.  $\alpha$  = Sectorial price and sectorial shares constant. For example, a cricket bat sells for ₹ 1000 in India. The transportation cost of one bat from Ludhiana to New York costs ₹ 100 and the import duty levied by the US on cricket bats is ₹ 200 per bat. Then the sectorial constant for adjustment would be  $1000/1300 = 0.7692$ . Example :  $P_h = \text{Rs.}100$  and  $P_f = \$2$ , then  $S_0$  will be  $\text{Rs. } 50/\$$  Since  $S_0 = P_h / P_f$  If  $P_h$  increases to 102 due to inflation, then either  $P_f$  should increase to  $\$2.1$  or  $S_0$  should increase to  $\text{Rs.}51/\$$

Limitations of Absolute form of PPP • The assumption is that free trade will equalise the price of a commodity in different countries. Otherwise, arbitrage opportunities would arise in the international markets for real goods and services

168 NSOU • PGCO-X • The absolute version of PPP ignores the effect of transportation costs, quotas, tariffs, etc. on free trade • Free trade does not happen in reality and price of products and services in different countries is not equal • Absolute PPP is therefore unlikely to hold if these imperfections do exist

7.3.4. Relative version of the PPP The relative PPP is a weaker relationship than absolute PPP. It shows that the rate of change in the spot exchange rate between two countries will tend to equal the difference in the inflation rates between the two countries. This version of the PPP is popularly used. It becomes extremely messy if one were to deal with millions of products and millions of constants. One way to overcome this is to use a weighted basket of goods in the two countries represented by an index such as Consumer Price Index. However, even this could break down because the basket of goods consumed in a country like Finland would vary with the consumption pattern in a country such as Malaysia making the aggregation an extremely complicated exercise. The relative form of the Purchasing Power Parity tries to overcome the problems of market imperfections and consumption patterns between different countries. A simple explanation of the Relative Purchase Power Parity is given below : Assume the current exchange rate between INR and USD is ₹ 50 / \$1. The inflation rates are 12% in India and 4% in the US. Therefore, a basket of goods in India, let us say costing now ₹ 50 will cost one year hence ₹  $50 \times 1.12 = ₹ 56.00$ . A similar basket of goods in the US will cost USD 1.04 one year from now. If PPP holds, the exchange rate between USD and INR, one year hence, would be ₹  $56.00 = \$1.04$ . This means, the exchange rate would be ₹  $53.8462 / \$1$ , one year from now. This can also be worked backwards to say what should have been the exchange rate one year before, taking into account the inflation rates during last year and the current spot rate. Expected spot rate = Current Spot Rate x expected difference in inflation rates  $E(S_1) = S_0 \times (1 + I_d) / (1 + I_f)$  Where

NSOU • PGCO-X 169 E (S1) is the expected Spot rate in time period 1 S0 is the current spot rate (Direct Quote) I d is the inflation in the domestic country (home country) I f is the inflation in the foreign country According to Relative PPP, any differential exchange rate to the one propounded by the theory is the 'real appreciation' or 'real depreciation' of one currency over the other. For example, if the exchange rate between INR and USD one year ago was ` 45.00. If the rates of inflation in India and USA during the last one year were 10% and 2% respectively, the spot exchange rate between the two currencies today should be  $S_0 = 45.00 \times (1 + 10\%)/(1 + 2\%) = ` 48.53$  However, if the actual exchange rate today is ` 50,00, then the real appreciation of the USD against INR is ` 1.47, which is  $1.47/45.00 = 3.27\%$  and this appreciation of the USD against INR is explained by factors other than inflation. PPP is more closely approximated in the long run than in the short run, and when disturbances are purely monetary in character.

7.3.5. Criticism of Purchasing Power Parity (PPP) Theory 1. Limitations of the Price Index : As seen above in the relative version the PPP theory uses the price index in order to measure the changes in the equilibrium rate of exchange. However, price indices suffer from various limitations and thus theory too. 2. Neglect of the demand / supply Approach : The theory fails to explain the demand for as well as the supply of foreign exchange. The PPP theory proves to be unsatisfactory due to this negligence, as in actual practice the exchange rate is determined according to the market forces such as the demand for and supply of foreign currency. 3. Unrealistic Approach : Since the PPP theory uses price indices which itself proves to be unrealistic. The reason for this is that the quality of goods and services included in the indices differs from nation to nation. Thus, any comparison without due significance for the quality proves to be unrealistic.

170 NSOU • PGCO-X 4. Unrealistic Assumptions : It is yet another valid criticism that the PPP theory is based on the unrealistic assumptions such as absence of transport cost. Also it wrongly assumes that there is an absence of any barriers to the international trade. 5. Neglects Impact of International Capital Flow : The PPP theory neglects the impact of the international capital movements on the foreign exchange market. International capital flows may cause fluctuations in the existing exchange rate. 6. Rare Occurrence : According to critics, the PPP theory is in contrast to the Practical approach. Because, the rate of exchange between any two currencies based on the domestic price ratios is a very rare occurrence. Despite these criticisms the theory focuses on the following major points : 1. It tries to establish relationship between domestic price level and the exchange rates. 2. The theory explains the nature of trade as well as considers the BOP (Balance of Payments) of a nation. 7.4. Theory of Interest Rate Parity (IRP) Interest Rate Parity (IRP) theory is used to analyse

**78%**

**MATCHING BLOCK 109/150**

**SA**

CURRENCY DERIVATIVES.docx (D40639616)

the relationship between the spot rate and a corresponding forward (future) rate of currencies.

**100%**

**MATCHING BLOCK 108/150**

**W**

The IPR theory states interest rate differentials between two different currencies will be reflected in the premium or discount for the forward exchange rate on the foreign currency if there is no arbitrage - the activity of buying shares or currency in one financial market and selling it at a profit in another.

The theory further states size

**43%**

**MATCHING BLOCK 110/150**

**SA**

CURRENCY DERIVATIVES.docx (D40639616)

of the forward premium or discount on a foreign currency should be equal to the interest rate differentials between the countries in comparison.

Interest Rate Parity is a theory which states that 'the size of the forward premium (or discount) should be equal to the interest rate differential between the two countries of concern". When interest rate parity exists, covered interest arbitrage (means foreign exchange risk is covered) is not feasible because any interest rate advantage in the foreign country will be offset by the discount on the forward rate.

NSOU • PGC0-X 171 Thus, the act of covered interest arbitrage would generate a return that is no higher than what would be generated by a domestic investment. The Interest Rate Parity equation is given by :  $(1 + r_d) = F / S \times (1 + r_f)$   
 Where :  $r_d$  = The interest rate in the domestic currency or the base currency  $r_f$  = The interest rate in the foreign currency or the quoted currency  $S$  = The current spot exchange rate  $F$  = The forward foreign exchange rate  $(1 + r_d) =$  Amount that an investor would get after a unit period by investing a rupee in the domestic market at  $r_d$  rate of interest and  $F / S \times (1 + r_f) =$  Amount that an investor by investing in the foreign market at  $r_f$  that the investment of one rupee yield same return in the domestic as well as in the foreign market. Examples : For our illustration purpose consider investing € 1000 for 1 year. We'll consider two investment cases viz: Case I : Domestic Investment in the U.S.A., consider the spot exchange rate of \$1.2245/€ 1. So we can exchange our € 1000 @ \$1.2245 = \$1224.50 Now we can invest \$1224.50 @ 3.0% for 1 year which yields \$1261.79 at the end of the year. Case II : Foreign Investment Likewise we can invest € 1000 in a foreign European market, say at the rate of 5.0% for 1 year. But we buy forward 1 year to lock in the future exchange rate at \$1.20025/€ 1 since we need to convert our € 1000 back to the domestic currency, i.e. the U.S. \$. So € 1000 @ of 5.0% for 1 year = € 1051.27 Then we can convert € 1051.27 @ \$1.20025 = \$1261.79 Thus, in the absence of arbitrage, the Return on Investment (ROI) is same regardless of our choice of investment method.

172 NSOU • PGC0-X 7.4.1.

Types of Interest Rate Parity There are two types of IRP : 1. Covered Interest Rate Parity (CIRP)

<b>100%</b>	<b>MATCHING BLOCK 111/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
Covered Interest Rate theory states that exchange rate forward premiums (discounts) offset interest rate differentials between two sovereigns.			

Interest rate parity describes a no-arbitrage relationship between spot and forward exchange rates and the two nominal interest rates associated with these currencies. The relationship is called covered interest rate parity.

<b>100%</b>	<b>MATCHING BLOCK 112/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
In another words, covered interest rate theory holds that interest rate			

differen- tials

<b>100%</b>	<b>MATCHING BLOCK 113/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
between two countries are offset by the spot/forward currency premiums as otherwise investors could earn a pure arbitrage profit. Covered Interest Rate			

Ex- amples

this model Google Inc. is sure of the interest rate that it will earn, so it may convert fewer \$			

s

<b>94%</b>	<b>MATCHING BLOCK 118/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
to € today as its € will grow via interest earned. This is also called covering because by converting \$			

s

<b>95%</b>	<b>MATCHING BLOCK 119/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
to € at the spot, the risk of exchange rate fluctuation is eliminated.			

If  $(1 + r_d) = F / S \times (1 + r_f)$ , covered interest parity holds. There is no scope for covered interest arbitrage if  $(1 + r_d) \neq F / S \times (1 + r_f)$ , covered interest parity does not hold. There is scope for covered interest arbitrage and funds will move from home country to foreign country if  $(1 + r_d) < F / S \times (1 + r_f)$ . Funds will move from foreign country to home country if  $(1 + r_d) > F / S \times (1 + r_f)$ .  
NSOU • PGCO-X 173 2.

<b>100%</b>	<b>MATCHING BLOCK 120/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
Uncovered Interest Rate Parity (UIP) Uncovered Interest Rate theory states that expected appreciation (depreciation) of a currency is offset by lower (higher) interest.			

In the above example of covered interest rate, the other method that Google Inc. can implement is:

<b>88%</b>	<b>MATCHING BLOCK 121/150</b>	<b>SA</b>	FMG-403 International Finance.pdf (D164737611)
Google Inc. can also invest the money in \$s today and change it for € at the end of the month. This method is uncovered because the exchange rate risks persist in this transaction. Covered Interest Rate			

vs. Uncovered Interest Rate Recent empirical research has identified that uncovered interest rate parity does not hold, although violations are not as large as previously thought and seems to be currency rather than time horizon dependent. In contrast, covered interest rate parity is well established in recent decades amongst the OECD economies for short-term instruments. Any apparent deviations are credited to transaction costs. 7.4.2

**100%**

**MATCHING BLOCK 122/150**

FMG-403 International Finance.pdf (D164737611)

Implications of Interest Rate Parity Theory If IRP theory holds then arbitrage

is

**100%**

**MATCHING BLOCK 123/150**

**SA**

FMG-403 International Finance.pdf (D164737611)

not possible. No matter whether an investor invests in domestic country or foreign country, the rate of return will be the same as if an investor invested in the home country when measured in domestic currency. If domestic interest rates are less than foreign interest rates, foreign currency must trade at a forward discount to offset any benefit of higher interest rates in foreign country to prevent arbitrage. If foreign currency does not trade at a forward discount or if the forward discount is not large enough to offset the interest rate advantage of foreign country, arbitrage opportunity exists for domestic investors. So domestic investors can benefit by investing in the foreign market. If domestic interest rates are more than foreign interest rates, foreign currency must trade at a forward premium to offset any benefit of higher interest rates in domestic country to prevent arbitrage. 7.4.3.

Limitations of Interest Rate Parity Model In recent years the interest rate parity model has shown little proof of working. In many cases, countries with higher interest rates often experience currency appreciation due to higher demands and higher yields and have nothing to do with risk-less arbitrage.

174 NSOU • PGCO-X 7.5. Fisher Effect Interest rates and inflation are objects of financial fascination around the world. The Fisher effect is a theory about the relationship between the two, basically stating that when one rises, so does the other.

**100%**

FMG-403 International Finance.pdf (D164737611)

The Fisher Effect is an economic hypothesis stating that the real interest rate is equal to the nominal rate minus the expected rate of inflation.

It states that, in response to a change in the money supply, the nominal interest rate changes in tandem with changes in the inflation rate in the long run. For example, if monetary policy were to cause inflation to increase by 5 percentage points, the nominal interest rate in the economy would eventually also increase by 5 percentage points. In order to understand the Fisher effect, it's crucial to understand the concepts of nominal and real interest rates.

FMG-403 International Finance.pdf (D164737611)

In the late 1930s, U.S. economist Irving Fisher wrote a paper which posited that a country's interest rate level rises and falls in direct relation to its inflation rates. Fisher mathematically expressed this theory in the following way :  $R_{\text{Nominal}} = R_{\text{Real}} + R_{\text{Inflation}}$  The equation states that a country's current (nominal) interest rate is equal to a real interest rate adjusted for the rate of inflation. In this sense, Fisher conceived of interest rates, as the prices of lending, being adjusted for inflation in the same manner that prices of goods and services are adjusted for inflation. For instance, if a country's nominal interest rate is six per cent and its inflation rate is two

per cent, the country's real interest rate is four per cent ( $6\% - 2\% = 4\%$ ). In simple terms: an increase in inflation will result in an increase in the nominal interest rate. For example, if the real interest rate is held at a constant 5.5% and inflation increased from 2% to 3%, the Fisher Effect indicates that the nominal interest rate would have to increase from 7.5% (5.5% real rate + 2% inflation rate) to 8.5% (5.5% real rate + 3% inflation rate). The difference in the nominal interest rates would therefore be due to differences in the levels of inflation in different countries. This explains why, in equilibrium, interest rate differentials must be equal to inflation rate differentials. The Fisher Effect is stated as –

**W**

The forward rate of one currency will contain a premium (or discount) that is determined by the differential in interest rates between the two countries. As a result, covered interest arbitrage will provide a return that is no higher than a domestic return. The spot rate of one currency w.r.t. another will change in reaction to the differential in inflation rates between two countries. Consequently, the purchasing power for consumers when purchasing goods in their own country will be similar to their purchasing power when importing goods from foreign country. The spot rate of one currency w.r.t. another will change in accordance with the differential in interest rates between the two countries. Consequently, the return on uncovered foreign money market securities will on average be no higher than the return on domestic money market securities from the perspective of in-

vestors in the home country.

NSOU • PGCO-X 185 • understand the important types and techniques of Exposure Management, • explain the concepts of Strategic and Operational response under risk management, • compute various numerical problems relating to forward market hedge and money market hedge under Foreign Exchange Risk Management. 8.1 Introduction Due to variation in exchange rate, over a period of time the value of assets and liabilities or cashflows of an enterprise, that are denominated in foreign currencies undergo a change in their value, as measured in domestic currency. This variability in the value of assets and liabilities or cash flows is referred to as exchange rate risk. When the inflow and the outflow of assets and liabilities as well as claims and counterclaims in a foreign currency are matched against each other, then there is no net exposure. In such a situation, there is no foreign exchange risk. But foreign exchange risk results from an open position - the position can be either long or short. When an enterprise owns a net claim (or an asset) in foreign currency, it is said to be long; and when it has a liability in foreign currency, it is said to be short. Fluctuations in exchange rates leading to variations in the value of assets and liabilities warrant management or hedging of risk. The word 'hedging' means taking steps to reduce risk. 'Hedging' the risk and 'covering' the risk can be used synonymously. In other words, whatever we do to minimize our financial risk or currency risk is known as hedging. For example, travellers

**97%**

**MATCHING BLOCK 128/150**

**W**

going to visit another country have the risk that if that country's currency appreciates against their own their trip will be more expensive. An exporter who sells his product in foreign currency has the risk that if the value of that foreign currency falls then the revenues in the exporter's home currency will be lower.

Exchange rate risk or foreign currency risk is the possibility that currency fluctuations can affect a company's expected further operating cash flows. The risk arises due to change in price of one currency in relation to another.

**100% MATCHING BLOCK 129/150**

**W**

An importer who buys goods priced in foreign currency has the risk that the foreign currency will appreciate thereby making the local currency cost greater than expected.

Fund Managers and companies who own foreign assets are exposed to fall in the currencies where they own the assets. This is because if they were to sell those assets their exchange rate would have a negative effect on the home currency value. 8.2. Foreign Exchange Risk Foreign exchange risk arises when we deal in the foreign currency. Essentially, what it means is that if exchange rate changes, it affects the amount of cashflow, converted into domestic currency. There are three types of exchange risks. These are : (1) Transaction risk, (ii) Translation or Consolidation risk, and (iii) Economic risk. Moment in time when exchange rate charges

exchange rates 8.2.1 Transaction Risk Transaction risk is related to either (i) trade transactions, that is, exports and imports, or (ii) financial operations such as borrowing and lending in foreign currencies, or (iii) payment or receipt of dividends and interests. In other words, a transaction risk occurs when a company is committed to a foreign currency denominated transaction.

An exchange rate change in the currency of denomination  
NSOU • PGCO-X 187 of any such contract will result in a direct transaction exchange rate risk to the firm. It measures  
the effect of an exchange rate change on outstanding obligations that

**100% MATCHING BLOCK 132/150**

**W**

existed before exchange rates changed but were settled after the exchange rate changes.

This is also known as Transaction Exposure. Example : If an Indian exporter has a receivable of \$100,000 due in six months hence and if the dollar depreciates relative, to the rupee a cash loss occurs. Conversely, if the dollar appreciates relative to the rupee, a cash gain occurs. The above example illustrates that whenever a firm has foreign currency denominated receivables or payables, it is subject to transaction risk and their settlements will affect the firm's cash flow position. Thus, it deals with the changes in the cashflow which arise from existing contractual obligation. In fact, the transaction exposures are the most common ones amongst all the exposures. Let's take an example of a company which exports to US and the export receivables are also denominated in USD. While doing budgeting the company had assumed USD/INR rate of Rs. 62 per USD. By the time the exchange inward remittance arrives. USD/INR could move down to 57 leading to wiping off of commercial profit for exporter. Such transaction risk arises whenever a business has foreign currency denominated receipts or payments. The risk is an adverse movement of the exchange rate from the time the transaction is budgeted till the time the exposure is extinguished by sale or purchase of the foreign currency against the domestic currency.

**94% MATCHING BLOCK 133/150**

**W**

refers to gains or losses caused by the translation of foreign currency assets and liabilities into the currency of the parent company for consolidation purposes.

Translation risk principally impacts a company's balance sheet and results from the translation of foreign assets and liabilities into the company's home currency for accounting purposes consolidating financial statements, the translation could be done either at the end-of-the-period exchange rate or at the average exchange rate of the period, depending on the accounting regulations affecting the parent company. Thus, while income statements are usually translated at the average exchange rate over the period, balance sheet exposures of foreign

188 NSOU • PGCO-X subsidiaries are often translated at the prevailing current exchange rate at the time of consolidation. This occurs when the financial statements of a company's foreign subsidiaries are consolidated into the parent's statements and translated into the parent's reporting base currency. As a matter of fact, investors and financial institutions have an interest in knowing the consolidated position of the whole group in domestic currency. For example, a Swiss food company has an American subsidiary in the sweet business. The subsidiary company had an asset value of Swiss francs 52.5 million (or \$35 million) at the beginning of the year, when the exchange rate was sfr1.50 per \$1. There was no change in the asset value of the subsidiary during the year due to operational reasons. In that time, however, the Swiss franc strengthened to sfr1.43 per \$1. The asset value of the sweet company on the Swiss company's balance sheet has dropped to sfr 500,50,000 (\$35 million at 1.43), a loss of SFR 2 450 000 (52,500,000 minus 500,50,000), simply from the translation of the Swiss company's long-term investment in the American sweet company from dollars to Swiss francs. Again, this exposure can be eliminated or mitigated through the use of foreign exchange products such as a forward contract or a currency option. The exchange risk also affects the estate of an enterprise. For instance, a French company, selling a building owned by its Indonesian subsidiary, would obtain a lower price in Euros than that it would have got by selling it before the devaluation of Indonesian Rupiah in 1997. Different methods of translation are used by different enterprises. These are : (a) current/non-current method, (b) monetary/ non-monetary method, (c) closing (or current) rate method, and (d) temporal method (a) Current/Non-Current Method Based on the length of life of an asset or liability, this method uses closing rate for converting current assets and liabilities, and historic rates for converting non-current assets and liabilities Historic rate is the exchange rate which was used at the time of acquisition of an asset or incurring of a liability or when these items entered the balance sheet. The exchange position that results from this method corresponds to the working capital of the enterprise. An appreciation of foreign currency results in a translation gain if the working capital is positive (current assets are more than current liabilities) and a translation loss if the working capital is negative. Reverse

NSOU • PGC0-X 189 is true in the case of a depreciation of foreign currency. It is possible to modify the exchange position by modifying the factors that affect the working capital. As regards the income statement, its constituent items are converted at the mean rate for the period of the income statement. Exception is made for the figures relating to revenues and expenses linked with long term assets and liabilities (say depreciation and amortization) which are converted using historic rates, that is, at the rates as per the corresponding balance-sheet items. In other words, different revenue and expense items may be translated at different rates, under this method. (b) Monetary/Non-Monetary Method This method makes, a distinction between monetary assets and liabilities and nonmonetary ones. The monetary accounts consist of long-term debt, receivables, payables and cash. The non-monetary accounts are physical assets and liabilities such as inventories and fixed assets. Monetary assets and liabilities are converted by using closing rates while non-monetary ones are converted at histone rates. The figures of income statement are converted by using the mean rate of the period, except those related to revenues and expenses linked to non-monetary assets and liabilities which are converted at histone rates. Generally, depreciation expense and cost of goods sold fall in the latter category. These

**100% MATCHING BLOCK 135/150**

**W**

are translated at the same rate as the corresponding balance-sheet items.

Thus, it is possible that the cost of goods sold may be translated at a different rate from that used to translate sales. (c) Closing Rate Method As per this method all figures are converted by using closing or current rate. Under this method, if a firm's foreign-currency denominated assets exceed its foreign-currency denominated liabilities, a depreciation of foreign currency will result in a loss and appreciation will result in a gain. (d) Temporal

**85% MATCHING BLOCK 136/150**

**W**

Method This method is a modified version of the monetary/non-monetary method with the difference that

in this

**76% MATCHING BLOCK 137/150**

**W**

method, inventory is translated at the current rate. Income statement items are normally translated at an average rate. However, cost of goods sold and depreciation are translated at historic rates.

It is, thus, evident that the methods used give different results as regards the consolidation position and figures 190 NSOU • PGC0-X obtained for consolidation gain or loss are also different. Many companies do not provide cover against consolidation risk because they think of it as a simple accounting position. There are others which like to cover this risk. Depending on the method of conversion used, different strategies will be required to reduce the translation risk. For example, companies would try to reduce working capital if the foreign currency is likely to depreciate in the event of their using current/non-current methods. 8.2.3 Economic Exposure Economic Risk and Economic exposure refer to the extent to which the economic value of a company can decline due to changes in exchange rate. It is

**100% MATCHING BLOCK 138/150**

**W**

the overall impact of exchange rate changes on the value of the firm.

The essence of economic exposure is that exchange rate changes significantly alter the cost of a firm's inputs and the prices of its outputs and thereby influence its competitive position substantially. In essence,

**89% MATCHING BLOCK 139/150**

**W**

economic risk concerns the effect of exchange rate changes on revenues (domestic sales and exports) and operating expenses (cost of domestic inputs and imports).

Economic risk is usually applied to the present value of future cash flow operations of a firm's parent company and foreign subsidiaries.

**100% MATCHING BLOCK 140/150**

**SA** Li Lei o Nian nian masterthesis revised.doc (D685688)

Identification of the various types of currency risk, along with their measurement,

is essential to develop a strategy for managing currency risk. The measurement of operating exposure is difficult as it is not possible to ignore the effect of inflation while considering the impact of exchange rate change. The effect of these currency- induced changes on corporate revenues and costs depends on the extent of the company's international operations, its competitive environment and its degree of operational flexibility. In order to-manage these relative price changes, the company may adjust its production process or marketing mix. Moreover, a company may try to shift out of currencies which are moving against its long-term profitability. For example, over the period 1985-95, a UK company would have increased its earnings in sterling if it had bought imports denominated in US dollars and sold its exports denominated in Deutschmarks. This is because during this period, Pound sterling was appreciating.

Hedging Currency Risk A hedge is a type of derivative, or a financial instrument, that derives its value from an underlying asset.

**100% MATCHING BLOCK 141/150**

**SA** CURRENCY DERIVATIVES.docx (D40639616)

Hedging is a way for a company to minimize or eliminate foreign exchange risk.

There are a range of hedging instruments that can be used to reduce risk. Broadly these techniques can be divided into two parts (A) Internal Techniques and (B) External Techniques 8.3.1. Internal Techniques Internal hedging techniques are the techniques those are available within the business itself. These typically should always be considered before resorting to external methods as they can be cheap and relatively straightforward. These techniques explicitly do not involve transaction costs and can be used to completely or partially offset the exposure. These techniques can be further classified as follows :

192 NSOU • PGCO-X Companies engaged in exporting and importing, whether of goods or services, are concerned with decisions relating to the currency in which goods and services are invoked. Trading in a foreign currency gives rise to transaction exposure. Although trading purely in a company's home currency has the advantage of simplicity, it fails to take account of the fact that the currency in which goods are invoiced has become an essential aspect of the overall marketing package given to the customer. Sellers will usually wish to sell in their own currency or the currency in which they incur cost. This avoids foreign exchange exposure but buyers' preferences may be for other currencies. Many markets, such as oil or aluminium, in effect require that sales be made in the same currency as that quoted by major competitors, which may not be the seller's own currency. In a buyer's market, sellers tend increasingly to invoice in the buyer's ideal currency. The closer the seller can approximate the buyer's aims, the greater chance he or she has to make the sale. The seller's ideal currency is either home or one which is stable relative to it but often the seller is forced to choose the market leader's currency. Whatever the chosen currency, it should certainly be one with a deep forward market. For the buyer, the ideal currency is usually its own or one that is stable relative to it, or it may be a currency of which the purchaser has reserves. (i) Leading and Lagging : Leading and Lagging refer to adjustments at the time of payments in foreign currencies. Leading is the payment before due date while lagging is delaying payment post the due date. These techniques are aimed at taking advantage of expected devaluation and/or revaluation of relevant currencies. Lead and lag payments are of special importance in the event that forward contracts remain inconclusive. For example, Subsidiary b in B country owes money to subsidiary a in country A with payment due in three months' time and with the debt denominated in US dollar. On the other side, country B's currency is expected to devalue within three months against US dollar, vis-à-vis country A's currency. Under these circumstances, if company b leads pays early it will have to part with less of country B's currency to buy US dollars to make payment to company A. Therefore, lead is attractive for the company. When we take reverse the example-revaluation expectation- it could be attractive for lagging.

NSOU • PGCO-X 193 (ii) Netting : Netting involves associated companies, which trade with each other. The technique is simple. Group companies merely settle inter affiliate indebtedness for the net amount owing. Gross intra-group trade, receivables and payables are netted out. The simplest scheme is known as bilateral netting and involves pairs of companies. Each pair of associates nets out their own individual positions with each other and cash flows are reduced by the lower of each company's purchases from or sales to its netting partner. Bilateral netting involves no attempt to bring in the net positions of other group companies. Netting basically reduces the number of intercompany payments and receipts which pass over the foreign exchanges. Fairly straightforward to operate, the main practical problem in bilateral netting is usually the decision about which currency to use for settlement. Netting reduces banking costs and increases central control of intercompany settlements. The reduced number and amount of payments yield savings in terms of buy/sell spreads in the spot and forward markets and reduced bank charges. Investor A Investor A Investor B Investor B Investor A owes \$50,000 Investor A owes \$110,000 Investor B pays Investor A \$60,000 Fig. 2 Process of Netting Here, we provide a simple example of how netting is used in the real world. Investor A owes \$50,000 to Investor B, and Investor B owes \$110,000 to Investor A. In such a case, we are assuming the settlement date of both transactions and the currency of exchange is the same. Instead of Investor A and B making two separate payments to each other, the transaction values can be netted.

194 NSOU • PGCO-X As a result, Investor B would pay \$60,000 (net amount) to Investor A, whereas Investor A does not need to pay anything to Investor B. It is an example of settlement or payment netting. It is important to note that if the currencies in our example were different, then such a type of netting would not be used. (iii) Matching : Matching refers to the process in which a company matches its currency inflows with its currency outflows with respect to amount and timing. When a company has receipts and payments in same foreign currency due at same time, it can simply match them against each other. Hedging is required for unmatched portion of foreign currency cash flows. This kind of operation is referred to as natural matching. Parallel matching is another possibility. When gains in one foreign currency are expected to be offset by losses in another, if the movements in two currencies are parallel is called parallel matching. Although netting and matching are terms which are frequently used interchangeably, there are distinctions. Netting is a term applied to potential flows within a group of companies whereas matching can be applied to both intra-group and to third-party balancing. Both Netting and Matching presuppose that there are enabling Exchange Control regulations. For example, an MNC subsidiary in India cannot net its receivable(s) and payable(s) from/to its associated entities. Receivables have to be received separately and payables have to be paid separately. (iv) Price Variation : Price variation involves increasing selling prices to counter the adverse effects of exchange rate change. This tactic raises the question as to why the company has not already raised prices if it is able to do so. In some countries, price increases are the only legally available tactic of exposure management. Let us now concentrate to price variation on intercompany trade. Transfer pricing is the term used to refer to the pricing of goods and services, which change hands within a group of companies. As an exposure management technique, transfer price variation refers to the arbitrary pricing of intercompany sales of goods and services at a higher or lower price than the fair price, arm's length price. This fair price will be the market price if there is an existing market or, if there is not, the price which would be charged to a third party customer. Taxation authorities,

NSOU • PGCO-X 195 customs and excise departments and exchange control regulations in most countries require that the arm's length pricing should be used. (v) Asset and Liability Management : This technique can be used to manage balance sheet, income statement or cash flow exposures. Concentration on cash flow exposure makes economic sense but emphasis on pure translation exposure is misplaced. Hence our focus here is on asset liability management as a cash flow exposure management technique. In essence, asset and liability management can involve aggressive or defensive postures. In the aggressive attitude, the firm simply increases exposed cash inflows denominated in currencies expected to be strong or increases exposed cash outflows denominated in weak currencies. By contrast, the defensive approach involves matching cash inflows and outflows according to their currency of denomination, irrespective of whether they are in strong or weak currencies. 8.3.2. External Techniques External hedging techniques are the techniques those available outside the business. External methods are slightly costlier and complex than the internal techniques. Under this category range of various financial products are used which can be categorized as follows: (i) Money Market Hedging At its simplest, a money market hedge is an agreement to exchange a certain amount of one currency for a fixed amount of another currency, at a particular date. For example, suppose a business owner in India expects to receive 1 million USD in six months. This Owner could create an agreement now (today) to exchange 1Million USD for INR at roughly the current exchange rate. Thus, if the USD dropped in value by the time the business owner got the payment, he would still be able to exchange the payment for the original quantity of U.S. dollars specified. Advantages and Disadvantages of Money Market Hedge: Following are the advantages and disadvantages of this technique of hedging. Advantages (a) Fixes the future rate, thus eliminating downside risk exposure.

196 NSOU • PGCO-X (b) Flexibility with regard to the amount to be covered. (c) Money market hedges may be feasible as a way of hedging for currencies where forward contracts are not available. Disadvantages include (a) More complicated to organise than a forward contract. (b) Fixes the future rate - no opportunity to benefit from favourable movements in exchange rates (ii) Derivative Instruments A derivative transaction is a bilateral contract or payment exchange agreement whose value is derived from the value of one or more underlying, which can be commodities, precious metals, currency, bonds, stocks, stocks indices, etc.. Today, derivatives transactions cover a broad range of underlying - interest rates, exchange rates, commodities, equities and other indices. The term derivative is also used to refer to a wide variety of other instruments. These have payoff characteristics, which reflect the fact that they include derivatives products as part of their make-up. Transaction risk can also be hedged using a range of financial derivatives products which include: Forwards, futures, options, swaps, etc. These instruments are discussed in detailed manner in following pages Forward Contract Hedging The change in value in a forward contract is broadly equal to the change in value in the underlying. Forwards differ from options in that options carry a different payoff profile. Forward contracts are unique to every trade. They are customized to meet the specific requirements of each end-user. The characteristics of each transaction include the particular business, financial or risk - management targets of the counterparties. Forwards are not standardized. The terms in relation to contract size, delivery grade, location, and delivery date and credit period are always negotiated. In a forward contract, the buyer of the contract draws its value at maturity from its delivery terms or a cash settlement. On maturity, if the price of the underlying is higher than the contract price the buyer makes a profit. If the price is lower, the buyer suffers a loss. The gain to the buyer is a loss to the seller.

NSOU • PGCO-X 197 ❖ Forwards Rates :

**55%**

**MATCHING BLOCK 148/150**

**SA**

Forex.docx (D155077539)

A forward rate is an interest rate applicable to a financial transaction that will take place in the future. The forward rate is different from the spot rate.

Depending upon whether the forward rate is greater than the spot rate, given the currency in consideration, the forward may either be at a 'discount' or at a 'premium'. Forward premiums and discounts are usually expressed as annual percentages of the difference between the spot and the forward rates. ❖ Premium : If the forward rates are greater than spot rate then it is to be said in premium. When a currency is costlier in forward or say, for a future value date, it is said to be at a premium. In the case of direct method of quotation, the premium is added to both the selling and buying rates. Premium = Forward rate – Spot Rate. ❖ Discount : If the currency is cheaper in forward or for a future value date, it is said to be at a discount. In case of direct quotation, the discount is deducted from both the selling and buying rate. The following example explains how to calculate Premium / Discount both under Indirect/Direct quotes. Discount = Spot rate – Forward rate. Calculation of Premium and Discount of a currency To calculate the Premium or Discount of a currency vis-à-vis another, we need to find out how much each unit of the first currency can buy units of the second currency. For example, • For instance, if the Spot rate between INR and USD is 55 to a dollar and the six months forward rate is 60 to a dollar, it is clear the USD is strengthening against the Rupee and hence is at a premium which also means that Rupee is at discount. The premium of USD against INR is 5 for six months in absolute terms. However, forward premium is always expressed as an annual percentage. Therefore, this premium is calculated as  $[(\text{Forward Rate} - \text{Spot rate}) / (\text{Spot rate})] \times (12/6) = (60 - 55) / (55) \times 12/6 = 18.18\%$

198 NSOU • PGCO-X Rupee is at discount and to calculate the discount, we need to find out how many dollars each Rupee can buy today and six months from now. Therefore, the Spot rate of USD in terms of INR today is USD 1/55 = \$ 0.01818 and six months from now is USD 1/60 = \$ 0.01667. The discount is calculated as  $[(\text{Forward Rate} - \text{Spot rate}) / (\text{Spot rate})] \times 100 \times (12/6) = (0.01667 - 0.01818) / 0.01818 \times 12/6 = - 0.00151 / 0.01818 \times 12/6 = - 16.61\%$  The minus sign implies that the Rupee is at discount. Another important point to be noted in the above example is that the forward premiums do not equal forward discount always. In the aforesaid example, for instance, the rupee is trading at a discount of 16.67% while the dollar is trading at a premium of 18.18%. • Let's say you are in Swiss market and the CHF/USD spot exchange rate is 0.9880 and 3-month forward exchange rate is 0.9895. It means that right now it takes 0.9880 Swiss Francs to buy 1 US Dollar and in 3 months it will take 0.9895 Swiss Francs to buy 1 dollar, i.e. 0.0015 Swiss Francs more per 1 US Dollar. It shows that the foreign currency i.e., the US Dollar is trading at a forward premium because it takes more Swiss Francs to buy US Dollar in future. The CHF is trading at forward discount because 1 Swiss Franc is worth less in future.  $[(\text{Forward Rate} - \text{Spot rate}) / (\text{Spot rate})] \times (12/3) = [(0.9895 - 0.9880) / 0.9880] \times 100 \times 12/3 = + 0.61\%$  The plus sign implies that the USD is at premium. 8.4. Strategies for exposure management A company's attitude towards risk, financial strength, nature of business, vulnerability to adverse movements, etc. shapes its exposure management strategies.

**100% MATCHING BLOCK 142/150 W**

There can be no single strategy which is appropriate to all businesses. Four separate strategy options are feasible

for exposure management.

NSOU • PGCO-X 199 Exposure Management Strategies High Reward Low Reward

**90% MATCHING BLOCK 143/150 W**

All Exposures Left Unhedged All Exposures Hedged Active Trading Selective Hedging Low Risk High Risk 8.4.1 Low Risk : Low Reward This option involves automatic hedging of exposures in the forward market as soon as they arise, irrespective of the attractiveness or otherwise of the forward rate. The merits of this approach are that yields and costs of the transaction are known and there is little risk of cash flow destabilization. Again, this option doesn't require any investment of management time or effort. The negative side is that automatic hedging at whatever rates are available is hardly likely to result into optimum costs. At least some

management seems

**99% MATCHING BLOCK 144/150 W**

to prefer this strategy on the grounds that an active management of exposures is not really their business. In the floating rate era, currencies outside their home countries, in terms of their exchange rate, have assumed the characteristics of commodities. And business whose costs depend significantly on commodity prices can hardly afford not to take views on the price of the commodity. Hence this does not seem to be an optimum strategy. 8.4.2 Low Risk : Reasonable Reward This strategy requires selective hedging of exposures whenever forward rates are attractive but keeping exposures open whenever they are not. Successful pursuit 200

NSOU • PGCO-X

**95% MATCHING BLOCK 145/150**

**W**

of this strategy requires quantification of expectations about the future and the rewards would depend upon the accuracy of the prediction. This option is similar to an investment strategy of a combination of bonds and equities with the proportion of the two components depending on the attractiveness of prices. In foreign exchange exposure terms, hedged positions are similar to bonds (known costs or yields) and

un-hedged

**100% MATCHING BLOCK 146/150**

**W**

ones to equities (uncertain returns). 8.4.3. High Risk : Low Reward Perhaps the worst strategy is to leave all exposures

un-hedged.

**96% MATCHING BLOCK 147/150**

**W**

The risk of destabilization of cash flows is very high. The merit is zero investment of managerial time or effort. 8.4.4. High Risk : High Reward This strategy involves active trading in the currency market through continuous cancellations and re-bookings of forward contracts. With exchange controls relaxed in India in recent times, a few of the larger companies are adopting this strategy. In effect, this requires the trading function to become a profit center. This strategy, if it has to be adopted, should be done in full consciousness of the risks. 8.5

Practical Problems on forward market hedge and money market hedge

1. HDIL Ltd. is a listed real estate development company in India, with significant operations in the Mumbai Metropolitan Region has an export exposure of HKD 12,00,000 payable August 31, 2014. Hong Kong Dollar (HKD) is not directly quoted against Indian Rupee. The current spot rates are : INR/GBP INR. 82.05 HKD/GBP HKD 9.93 It is estimated that Hong Kong Dollar will depreciate to 10.89 level and Indian Rupee to depreciate against GBP to Rs. 84.83. Forward rates for August 2014 are

NSOU • PGCO-X 201 INR/GBP INR. 86.33 HKD/GBP HKD 10.77 Required : (i) Calculate the expected loss, if the hedging is not done. How the position will change, if the firm takes forward cover? (ii) If the spot rates on August 31, 2014 are: INR/ GBP = Rs. 82.09 HKD /GBP = HKD 9.99 Is the decision to take forward cover justified? Solution : Since the direct quote for ¥ and INR is not available it will be calculated by cross exchange rate as follows : INR/GBP × GBP/HKD = INR/HKD 82.05/9.93 = 8.2628 Spot rate on date of export 1HKD = INR 8.2628 Expected Rate of HKD for August 2014 = Rs. INR7.7897 (INR 84.83/HKD 10.89) Forward Rate of HKD for August 2014 = INR 8.0158 (INR 86.33/HKD 10.77) (i) Calculation of expected loss without hedging Value of export at the time of export (INR 8.2628 × HKD 12,00,000) INR 99,15,360 Estimated payment to be received on Aug. 2014 (INR 7.7897 × HKD 12,00,000) INR 93,47,640 Loss INR 5,67,720

202 NSOU • PGCO-X Hedging of loss under Forward Cover INR Value of export at the time of export (Rs. 8.2628 × HKD 12,00,000) INR 99,15,360 Payment to be received under Forward Cover (INR 8.0158 × HKD 12,00,000) INR 96,18,960 Loss INR 2,96,400 By taking forward cover loss is reduced to INR 2,96,400. (ii) Actual Rate of HKD on August 2014 = INR 8.2172 (INR 82.09/HKD 9.99) Value of export at the time of export (INR 8.2628 × HKD 12,00,000) INR 99,15,360 Estimated payment to be received on Aug. 2014 (INR 8.2172 × HKD 12,00,000) INR 98,60,640 Loss INR 54,720 The decision to take forward cover is still justified

2. A company is considering hedging its foreign exchange risk. It has made a purchase on 1st. January, 2008 for which it has to make a payment of British Pound GBP 73,500 on September 30, 2008. The present exchange rate is 1 GBP £ = INR 82.3953. It can purchase forward 1 1 GBP £ at INR 81.5375. The company will have to make a upfront premium of 2% of the forward amount purchased. The cost of funds to the company is 11% per annum and the rate of corporate tax is 45%. Ignore taxation. Consider the following situations and compute the Profit/Loss the company will make if it hedges its foreign exchange risk : (i) If the exchange rate on September 30, 2008 is INR 84.5000 per £. (ii) If the exchange rate on September 30, 2008 is INR 83.0000 per £.

NSOU • PGCO-X 203 Solution INR Present Exchange Rate INR 82.3953 = 1 GBP If company purchases £ 73,500 forward premium is £ 119860  $73,500 \times 81.5375 \times 2\%$  Interest on INR 119860 for 9 months at 11% 9888 Total hedging cost 129748 If exchange rate is INR 84.50/GBP Then gain (INR 84.5000 – INR 81.5375) for £ 73,500 217744 Less : Hedging cost 129748 Net gain 87996 If £ = INR 83.0000 Then loss (81.5375 – 83.00) for £ 73,500 107494 Add: Hedging Cost 129748 Total Loss 237242 3. A Company in India has shipped product to USA amounting to US\$ 50,000 to be payable after 3 months. The spot rate US\$ is Rs.48.2550. Since the cash settlement will take place after 3 months, the open position of US\$50,000 is a transaction risk for the Company. The Company asks for a forward quotation to a bank for hedging the risk. The Bank has given following information about the forward market. Spot rate : US\$1 : 48.2550/3500 3 month forward rate : 2500/3000 Using the above information, prepare the hedging strategy for the Company. Solution : The Company has open position for receivable of US\$50,000 to be settled after

204 NSOU • PGCO-X 3 month. Any appreciation of rupee against US\$ is a risk for the company. Expecting appreciation of rupee the Company planned to go for sell of forward contracts. The Company would sell US\$ 50,000, 3 month forward and the rate would be as follows : Current Spot : Selling rate : Rs.48.2550 Add 3 month forward rate : Rs. 0.2500 3 month forward sell rate : Rs. 48.5050 After 3 months, the company would surrender the US\$ 50,000 and get an exchange rate of Rs.48.5050 per US\$. If the rupee appreciated beyond 48.5050, then the company would be profitable. However, if rupee depreciated to 48.6500, than the company would be the loser. In this case the company may go for cancellation of forward contract by paying the required transaction cost. Forward Contract can be cancelled by the holder of the contract. In the case of cancellation, the party needs to pay exchange margin. 4. Walgreens Boots Alliance sold Omani Rial 3,22,500 value spot to your customer at Rs.167.43 per OMR & covered yourself in Uk stock exchange

on the same day, when the exchange rates were GBP 1 = OMR 0.4901 0.4941 Local inter-bank market rates for GBP were Spot GBP 1 = Rs. 80.71 80.86 Calculate cover rate and ascertain the profit or loss in the transaction. Ignore brokerage. Solution : The bank (Dealer) covers itself by buying from the market at market

selling rate. Rupee – GBP selling rate Rs. 80.86 Omani Rial – GBP OMR 0.4901 Rupee – Hong Kong cross rate Rs. 80.86 /0.4901, i.e. Rs.164.9867 Profit / Loss to the Bank

NSOU • PGCO-X 205 Amount received from customer (3,22,500 × 167.43) Rs. 539,96,175 Amount paid on cover deal (3,22,500 × 164.9867) Rs. 532,08,211 Profit to Bank Rs. 7,87,964 5. ABC Ltd. of USA has exported goods worth Can \$ 3,90,000 receivable in 9 months. The exporter wants to hedge the receipt in the forward market. The following information is available : Spot Exchange Rate Rs. 64.56/\$ Interest Rate in USA 1.25% Interest Rate in Indian 8% The forward rates truly reflect the interest rates differential. Find out the gain/loss to USA exporter if Indian Rs. spot rates (i) declines 1.5%, (ii) gains 5.5% or (iii) remains unchanged over next 6 months. Solution : Forward Rate  $64.56 \left[ \frac{1 + (0.08) \times 9/12}{1 + (0.0125) \times 9/12} \right] = \text{Rs.}67.7980$  (i) If spot rate decline by 1.5% Spot Rate = Rs. 64.56 × 1.015 =Rs.65.5284/\$ £ receipt as per Forward Rate ( $\$ 3,90,000 / \text{Rs.}67.7980$ ) = \$5752 £ receipt as per Spot Rate ( $\$ 3,90,000 / \text{Rs.}65.5284$ ) = \$5952 Loss due to forward contract = \$200 (ii) If spot rate gains by 5.5% Spot Rate = Rs. 64.56 × 1.055 =Rs.68.1108/\$ £ receipt as per Forward Rate ( $\$ 3,90,000 / \text{Rs.}67.7980$ ) = \$5752 £ receipt as per Spot Rate ( $\$ 3,90,000 / \text{Rs.}68.1108$ ) = \$5725 Gain due to forward contract = \$27 (iii) If spot rate remains unchanged £ receipt as per Forward Rate ( $\$ 3,90,000 / \text{Rs.}67.7980$ ) = \$5752

206 NSOU • PGC0-X E receipt as per Spot Rate (\$ 3,90,000/ Rs.64.56) = \$6041 Loss due to forward contract = \$289 6. Drehr Brewery, a company operating in Hungary is a landlocked country in Central Europe, has today effected sales to an Indian FMCG company, the payment being due 6 months from the date of invoice. The invoice amount is 227 lakhs Hungarian Forint (HUF). At today's spot rate, it is equivalent to Rs. 53.92 lakhs. It is anticipated that the exchange rate will decline by 11% over the 6 months period and in order to protect the HUF payments, the importer proposes to take appropriate action in the foreign exchange market. The 6 months forward rate is presently quoted as 3.91 HUF per rupee. You are required to calculate the expected loss and to show how it can be hedged by a forward contract. Solution : Spot rate of Rs. 1 against HUF = 227 lakhs HUF/Rs. 53.92 lakhs = 4.21 HUF 6 months forward rate of Re. 1 against yen = 3.91 HUF Anticipated decline in Exchange rate = 11%. Expected spot rate after 6 months = 4.21 HUF – 11% of 4.21 = 4.21 HUF – 0.46 HUF = 3.75 HUF per rupee Rs. (in lakhs) Present cost of 227 lakhs HUF 53.92 Cost after 6 months: 227 lakhs HUF / 3.75 HUF 60.53 Expected exchange loss 6.61 If the expected exchange rate risk is hedged by a Forward contract : Rs. (in lakhs) Present cost 53.92 Cost after 6 months if forward contract is taken 227 lakhs HUF/3.91 HUF 58.06 Expected loss 4.14

NSOU • PGC0-X 207 Note : If the exchange rate risk is not covered with forward contract, the expected exchange loss is Rs. 6.61 lakhs. This could be reduced to Rs. 4.14 lakhs if it is covered with Forward contract. Hence, taking forward contract is suggested. 7. Barclays is a British multinational bank and financial services company headquartered in London. It is a universal bank with operations in retail, wholesale and investment banking. Barclays provides financial services across the Globe. The Company raised an invoice amount is ₹ 6,77,500. Credit period is three months. Exchange rates in London are : Spot Rate (¥/£) 145.4967 – 145.5007 3-month Forward Rate (¥/£) 148.7859 – 148.7890 Rates of interest in Money Market : Deposit Loan ¥ 9% 11% £ 5% 8% Compute and show how a money market hedge can be put in place. Compare and contrast the outcome with a forward contract. Solution : In ¥ The borrowing rate is 11% per annum or 2.75% per quarter. Amount to be borrowed: ¥ 6, 77,500 / 1.0275 = ¥ 6, 59,367.40 Convert : Sell ¥ and buy £. The relevant rate is the Ask rate, namely, ¥ 145.5007 per £, (Note : This is an indirect quote). Amount of £s received on conversion is 4531.71 (¥6, 59,367.40 / ¥ 145.5007). Invest : £ 4531.71 will be invested at 5% for 3 months and get £ 4588.36 Settle : The liability of ¥ 6, 59,367.40 at interest of 2.75 per cent quarter matures to ¥ 6, 77,500 receivable from customer. Using forward rate, amount receivable is = ¥6, 77,500/ 148.7890 = £4553.43 Amount received through money market hedge = £ 4588.36 Gain = £ 4588.36 – £4553.43 = £34.93

208 NSOU • PGC0-X So, money market hedge is beneficial for the exporter. 8. Bhawal Steel Agency, are engaged in the manufacturing, supplying, exporting and importing of a wide range of Stainless Steel products etc. from Brazil and Slovak Republic and exports such products to Singapore and Australia after processing. The company has receivables of SGD 3,50,000 and payables of AUD \$ 2,45,00 three months from now. The following rates exchanges rates are available in the market: Exchanges Rates Rs. / SGD Rs. /AUD\$ Spot 46.9580 – 47.0080 49.6825 – 49.7025 Three month forward 47.0680 – 47.0880 49.7225 – 49.7425 The current rates (per annum) are as under Maturity Rupee (%) SGD(%) AUD\$(%) 3 months 7.00/8.00 3.00/3.20 5.00/5.20 The company is considering to cover the exposure either through the forward market or money market. You are required to advise the company as to which alternative should be better for covering both the payable and receivable. Solution : Receivable- SGD 3,50,000 3 month Alternative - I forward cover : Sell SGD 3,50,000 3m forward @ 47.0680 Inflow after 3 months = 3,50,000 × Rs.47.0680 = Rs.164,73,800 Alternative -II Money market cover (Borrow- sell-invest) Step I Borrow the PV of SGD 3,50,000 at 3.20% ∴ PV of SGD = SGD 3,50,000/1.008 = SGD 3,47,222 Step II Sell SGD 3,47,222 @ 46.9580 Getting = SGD 3,47,222 × Rs. 46.9580/SGD = Rs. 163,04,861

NSOU • PGC0-X 209 Step III Invest Rs. 163,04,861 @ 7% i.e. 1.75% Inflow =163,04,861 × 1.0175 = Rs.165,90,196 Since Rs. inflow is higher in alternative II, Firm should choose money market cover. Payable AUD 2,45,000 after 3 months Alternative - I forward cover : Buy AUD 2,45,000 for 3 month forward at 49.7425 So, outflow after 3 month = Rs.49.7425 × AUD 2,45,000 = Rs.121,86,913 Alternative II Money market Cover (Invest- Buy- Borrow) Step I : Invest the PV of \$ 100,000 @ 5/4 i.e., 1.25% AUD 245,000 / 1.0125 = AUD 2,41,975 Step II : Buy AUD 2,41,975 spot at Rs.49.7025 Requiring [ 2,41,975 × Rs.49.7025 ] = Rs. 120,26,778 Step III : Borrow Rs. 1,20,26,778 at 8/4 i.e., 2% So outflow after 3 month Rs. 120, 26,778 × 1.02 = Rs. 122, 67,313 Since Rupee outflow is lower under alternative I forward cover is recommended. 8.6

Summary The risk involved in Foreign Exchange Market, which arises due to variation in exchange rates and the value of assets or liabilities or cash flows of an enterprise changes, is referred as Exchange Rate Risk. But when the inflow and the outflow of assets and liabilities as well as claims and counterclaims in a foreign currency are matched against each other, then there is no net exposure. In such a situation, there is no foreign exchange risk. So, while dealing in foreign currency there can be arise three types of Foreign Exchange Risk these are Transaction, Translation or

210 NSOU • PGC0-X Consolidation Risk and Economic Risk. To minimize or eliminate the risk exposure, hedging is used. There are ranges of hedging instruments that can be used to reduce risk and the techniques are including Internal and External Techniques. External Techniques includes Money Market Hedging and derivatives Instrument which are explained in this unit with suitable numerical illustrations. Along with the techniques, there are four different strategies available for Exposure Management which includes Low Risk-Low Reward, Low Risk-Reasonable Reward, High Risk Low Reward and High Risk-High Reward which are also discussed under this unit. 8.7 Exercise Theoretical Questions 1. Does foreign currency exchange hedging both reduce risk and increase expected value? 2. Explain, and list several arguments in favour of currency risk management and several against. 3. Explain the concept of money market hedge. 4. Explain the concept of forward market hedge. 5. What is the break-even reinvestment rate when comparing forward and money market alternatives? Numerical Questions 1. Pacific Leather Goods Ltd. an Indian manufacturer exports leather goods to USA. The company is exporting 5000 units at a price of \$60. The company has imported some specialty chemicals from Europe to produce the export items. The cost of chemicals per unit of leather good stands at Euro 10. The fixed overhead cost per unit comes at Rs. 250 and other variable overheads, including the freight cost, add up to Rs. 1250 per unit. The payments for both exports and imports are due in six months. The current exchange rate are as follows : Rs./\$ 46.90 Rs./Euro 40.40 After six months (at the time of settlement of payments) the exchange rate turns out as follows : NSOU • PGC0-X 211 Rs./\$ 47.90 Rs./Euro 41.25 You are required to : (i) Calculate the loss/gain due to transaction exposure. (ii) Based on the following additional information calculate the losses/ gains due to transaction and operating exposure if the contracted export price per unit is Rs. 2700 : (a) The current exchange rate changes to Rs./\$ : 47.50 and Rs./Euro : 40.80 (b) Price elasticity of demand for the company's product in the USA is estimated to be 1.60. (c) The payments are to be settled at the end of sixth month. 2. ZPS Co, whose home currency is the dollar, took out a fixed-interest peso bank loan several years ago when peso interest rates were relatively cheap compared to dollar interest rates. ZPS Co does not have any income in pesos. Economic difficulties have now increased peso interest rates while dollar interest rates have remained relatively stable. ZPS Co must pay interest on the dates set by the bank. A payment of 5,000,000 pesos is due in six months' time. The following information is available : Spot rate 12.500–12.582 pesos per \$ Six-month forward rate 12.805–12.889 pesos per \$ Interest rates which can be used by ZPS Co: Borrow Deposit Peso interest rates 10.0% 7.5% Dollar interest rates 4.5% 3.5% What is the dollar cost of a forward market hedge? 3. An investor plans to exchange \$1,000 into euros now, invest the resulting euros for 12 months, and then exchange the euros back into dollars at the end of the 12-month period.

**76%**

**MATCHING BLOCK 149/150**

Negative interest rate differential & forward premia, therefore, there is a possibility of arbitrage inflow in India. Suppose, investment = \$1000 by taking a loan @ 8% in US. Invest in India at spot rate of 42.0010 @ 12 % for six months and cover the principal + interest in the six month forward rate. Principal = \$ 1000 = 42001. Interest on investment for six months =  $42,001 \times 12 / 100 \times 6 / 12 = 2520.06$  Amount at the end of six months = Interest + Principal =  $42001 + 2520.06 = 44,521.06$  Converting the above in dollars at the forward rate =  $\$ 44,521.06 / 42.8020 = \$ 1,040.16$  The arbitrageur will have to pay at the end of six months =  $\$1,000 + (\$1000 \times 8 / 100 \times 6 / 12)$  Hence, the arbitrageur gains  $(\$1040.16 - \$1040) = \$ 0.16$  on borrowing \$1000 for six months.

negative interest rate differential & forward premia. Hence, there is a possibility of arbitrage inflow in India. Let us evaluate the arbitrage possibility for an investment of \$1000 by taking a loan @ 8% in US. An arbitrageur would invest in India at the spot rate of Rs 42.0010 @ 12% for six months and cover the principal + interest in the six months forward rate. The calculations are shown below: Principal: \$1000 = Rs 42,001 Interest on investment for six months =  $\text{Rs } 42,001 \times 12 / 100 \times 6 / 12 = \text{Rs } 2520.06$  So amount at the end of six months = Interest + Principal =  $\text{Rs } (2520.06 + 42,001) =$  Converting the above in dollars at the forward rate =  $\$44,521.06 / 42.8020 = \$1,040.16$  The arbitrageur will have to pay at the end of six months =  $\$1,000 + (\$1,000 \times 8 / 100 \times 6 / 12) = \$ 1000 + \$40 = \$ 1040$  Hence, the arbitrageur gains  $(\$1,040.16 - \$1,040) = \$0.16$  on borrowing \$1,000 for six months. 100

Fixed Exchange Rate A fixed exchange rate, sometimes (less commonly) called a pegged exchange rate, is a type of exchange rate regime wherein a currency's value is matched to the value of another single currency or to a basket of other currencies, or to another measure of value, such as gold. As the reference value rises and falls, so does the 106

Fixed exchange rate A fixed exchange rate, sometimes (less commonly) called a pegged exchange scale, is a sort of exchange rate system wherein a currency's worth is coordinated to the estimation of another single currency or to a container of different monetary standards, or to another proportion of significant worth, for example, gold. As the reference esteem rises and falls, so does the

pegged to it. In addition, fixed exchange rates deprive governments of the use of an independent domestic monetary policy to achieve internal stability. A former president of the Federal Reserve Bank of New York described fixed currencies as follows : "Fixing the value of the domestic currency relative to that of a low-inflation country is one approach central banks have used to pursue price stability. The advantage of an exchange rate target is its clarity, which makes it easily understood by the public. In practice, it obliges the central bank to limit money creation to levels comparable to those of the country to whose currency it is pegged. When credibly maintained, an exchange rate target can lower inflation expectations to the level prevailing in the anchor country. Experiences with fixed exchange rates, however, point to a number of drawbacks. A country that fixes its exchange rate surrenders control of its domestic monetary policy." In certain situations, fixed exchange rates may be preferable for their greater stability. For example, the Asian financial crisis was improved by the fixed exchange rate of the Chinese renminbi, and the IMF and the World Bank now acknowledge that Malaysia's adoption of a peg to the US dollar in the aftermath of the same crisis was highly successful. Following the devastation of World War II, the Bretton Woods system allowed Western Europe to have fixed exchange rates until 1970 with the US dollar. Yet others argue that the fixed exchange rates (implemented well before the crisis) had become so immovable that it had masked valuable information needed for a market to function properly. That is, the currencies did not represent their true market value. This masking of information created volatility which encouraged speculators to "attack" the pegged currencies and as a response these countries attempt to defend their currency rather than allow it to devalue. These economists also believe that had these

pegged to it. What's more, fixed exchange rate deny legislatures of the utilization of an autonomous monetary financial arrangement to accomplish inner stability. A previous leader of the Federal Reserve Bank of New York portrayed fixed monetary forms as follows; "Fixing the value of the domestic currency relative to that of a low-inflation country is one approach central banks have used to pursue price stability. The advantage of an exchange rate target is its clarity, which makes it easily understood by the public. In practice, it obliges the central bank to limit money creation to levels comparable to those of the country to whose currency it is pegged. When credibly maintained, an exchange rate target can lower inflation expectations to the level prevailing in the anchor country. Experiences with fixed exchange rates, however, point to a number of drawbacks. A country that fixes its exchange rate surrenders control of its domestic monetary policy." In specific circumstances, fixed exchange rates might be best for their more noteworthy stability. For instance, the Asian money related emergency was improved by the fixed conversion standard of the Chinese renminbi, and the IMF and the World Bank presently recognize that Malaysia's selection of a peg to the US dollar in the fallout of a similar emergency was profoundly effective. Following the annihilation of World War II, the Bretton Woods framework permitted Western Europe to have fixed trade rates until 1970 with the US dollar. However others contend that the fixed trade rates (executed well before the emergency) had become so immovable that it had covered significant data required for a market to work appropriately. That is, the monetary standards didn't represent their actual market esteem. This masking of information created instability which urged theorists to "assault" the pegged monetary standards and as a reaction these nations endeavour to safeguard their currency rather than permit it to degrade. These market analysts also believe that had these

	Maintaining a fixed exchange rate Typically, a government wanting to maintain a fixed exchange rate does so by either buying or selling its own currency on the open market. This is one reason governments maintain reserves of foreign currencies. If the exchange rate drifts too far below the desired rate, the government buys its own currency off the market using its reserves. This places greater demand on the market and pushes up the price of the currency. If the exchange rate drifts too far above the desired rate, the opposite measures are taken. Another, less used means of maintaining a fixed exchange rate is by simply making it illegal to trade currency at any other rate. This is difficult to enforce and often leads to a black market in foreign currency. Nonetheless, communist countries are highly successful at using this method due to government monopolies over all money conversion. This is the method employed by the Chinese government to maintain a currency peg or tightly banded float against the US dollar. Throughout the 1990s China was highly successful at maintaining: a currency peg using a government monopoly over all currency conversion between the Yuan and other currencies. Criticisms The main criticism of fixed exchange rate is that flexible exchange rates serve to automatically adjust the balance of trade. When a trade deficit occurs, there will be increased demand for the foreign (rather than domestic) currency which will push up the price of the foreign currency in terms of the domestic currency.' That in turn makes the price of foreign goods less attractive to the domestic market and thus pushes down the trade deficit. Under fixed exchange rates, this automatic re-balancing does not occur. <p>not possible. No matter whether an investor invests in domestic country or foreign country, the rate of return will be the same as if an investor invested in the home country when measured in domestic currency. If domestic interest rates are less than foreign interest rates, foreign currency must trade at a forward discount to offset any benefit of higher interest rates in foreign country to prevent arbitrage. If foreign currency does not trade at a forward discount or if the forward discount is not large enough to offset the interest rate advantage of foreign country, arbitrage opportunity exists for domestic investors. So domestic investors can benefit by investing in the foreign market. If domestic interest rates are more than foreign interest rates, foreign currency must trade at a forward premium to offset any benefit of higher interest rates in domestic country to prevent arbitrage. 7.4.3.</p> <p><b>SA</b> FMG-403 International Finance.pdf (D164737611)</p>

	In the late 1930s, U.S. economist Irving Fisher wrote a paper which posited that a country's interest rate level rises and falls in direct relation to its inflation rates. Fisher mathematically expressed this theory in the following way : $R_{\text{Nominal}} = R_{\text{Real}} + R_{\text{Inflation}}$ The equation states that a country's current (nominal) interest rate is equal to a real interest rate adjusted for the rate of inflation. In this sense, Fisher conceived of interest rates, as the prices of lending, being adjusted for inflation in the same manner that prices of goods and services are adjusted for inflation. For instance, if a country's nominal interest rate is six per cent and its inflation rate is two
