NSOU l PGEL - 1&2 1 FOREWORD

98%	MATCHING BLOCK 1/83	SA	PGELT 9A PDF.pdf (D165254853)

In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in Subject introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation.

96%	MATCHING BLOCK 3/83	SA	PGELT 9A PDF.pdf (D165254853)

Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analyses. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing and devising of proper lay-out of the materials. Practically speaking, their role amounts to an involvement in invisible teaching. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great part of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these

to

100%	MATCHING BLOCK 2/83	SA	PGELT 9A PDF.pdf (D165254853)

admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr) Subha Sankar Sarkar Vice Chancellor 2

NSOU l PGEL - 1&2 Bachelor Degree Programme (BDP) Subject: Core Course in Sociology Course Code: SO-CC-03 Choice Based Credit System (CBCS) Course Title: Introduction to Sociology - III

NSOU l PGEL - 1&2 3 Introduction to Course Materials Welcome to all the students who wish to pursue a course in MA ELT, here at Netaji Subhas Open University. We congratulate you on your choice and we are sure you will not only enjoy the courses on offer but also stand to benefit from them in carving out a career for yourselves. ELT is a happening discipline, and this can take you places both domestically and internationally. The purpose of this introduction is to familiarize you with the structure of the courses and how the course materials are packaged to be delivered to you. We understand your difficulties as a learner on the distance mode, and we try to answer most of the questions that may arise in your minds as you go through these materials. To facilitate this, you need to understand how these materials are structured and presented to you. Each semester will have six courses and the courseware of each of these will be presented in the form of a book. To help you feel comfortable, we have attempted to maintain the design of each course similar. Occasionally, there may be a few variations that are necessitated due to the topic of discussion. Otherwise, all courses have a uniform structure. Each course is presented in the form of a set of four modules. Each module is independent and can be read without having to read the other modules. This is in keeping with the recent thinking on curricular development - the modular curriculum. What does this mean? Each module is complete in itself. It has a set of objectives, descriptions, illustrations, and assessment questions. Therefore, you can read, understand and take the necessary tests to get grades after reading each module. However, they are also linked to the other modules and this becomes obvious as you progress. Each module, at the beginning, helps you recall what you have studied in the previous modules and links the contents of the present module to what is discussed earlier. This helps you gain a sense of continuity to pursue the course. Like each course, each module is also designed uniformly. We will discuss it here. Each module is sub-divided into four units. These units are additive and not modular. This means, you need to study the units in the order they appear for Unit 2 is a continuation of Unit 1, Unit 3 a continuation of Unit 2 and so on. The four units put together help you understand a topic or a concept as the case may be. How are these units structured? Units are structured in as simple a manner as possible. Each unit begins with an outline of the topics to be discussed. This is followed by a set of objectives and some preliminary

questions to assess your knowledge of the topic under discussion. The unit progresses by introducing the concepts, illustrating them with familiar examples, providing a couple of tasks or questions for you to answer so that you may monitor your progress. Often we have cross references to other units in other modules. In such cases we have taken care explain the concept briefly for immediate use. Such explanation will help you not lose track of the discussion in progress. Once you have completed reading the unit, you may go to other units which have been referred to for a deeper understanding of the concept and also relate the two units with each other. Each unit ends with a summary of the points discussed and some questions for you to answer. At the end of four units (each module) we have provided a list of reference which you may access at the time of your contact programme or in a nearby library, if you an access to one. In the course of each unit, you will come across several self-check tasks. Please attempt each of these tasks for they help you to progress further in the unit. We have also provided answers to these self-check questions to reassure you about your progress. These questions are called formative questions. At the end of each unit, we also have some questions which help you express your understanding of the entire unit. These are summative questions. You may share the answers to these questions with your tutor in the university and seek a feedback, or share your answers with the teachers during the contact classes. We hope this structure suits your study habits. We propose to work out a schedule and give it to you. This will help you plan your time, complete your work on time and thus achieve your degree faster than others. This schedule is suggestive (recommendatory and not mandatory) to help you plan your work properly. Often, students like you tend to postpone the work and closer to the dates of contact classes and examination, you will feel the burden of having to study all the books at one go. This will be a very difficult task, and we would not like you to land in such a situation. We are sure you appreciate this. Let us not make this introduction a long one. It is only to set you start reading, and what you need to read lies ahead. Go ahead, and enjoy the course you have taken. Wish you all the best S Mohanraj Jaysankar Basu Sumana Bandyopadhyay

But in Applied Linguistics, more specifically in Language Teaching, it is usually limited to learning a foreign or second language. It includes the whole process, strategies, and factors influencing language learning. It is meant to develop the ability to communicate in target language. The concept of language teaching has evolved through ages. Thinkers, researchers and practitioners have contributed a lot in developing a sound theoretical foundation upon which the present practice depends. Today language teaching is grounded on inputs from linguistics, sociolinguistics, psycholinguistics, education, communication. So a language teacher should have a sound perception of the trends and practices in language teaching-learning.
Module -1 p Introduction to ELT NSOU l PGEL - 1&2 11

12 NSOU l PGEL - 1&2 1.2 Objectives The purpose of this unit is to share with you the basics of language learning and its theories. On completing this unit we would be able to: l Define language learning l Differentiate between language acquisition and language learning l Understand the theories of language acquisition/learning 1.3 Introduction to Language Learning Let us study the conversation between Sima and Tania: Sima: My grandpa taught me only grammar. He thought learning language means learning grammar. Tania: My father would teach me the structures only. He would say to learn a language we should learn the structures of the language. Sima: So widely different they are. Then what is language learning? I get confused. Tania: My English teacher always speaks in English. She says, learn to communicate in English. Sima: Then language is only a means of communication, isn't it? Tania: Right! What an idea! Language is a means of communication. So learning language is to learn how to communicate by using language. What inferences can we draw from the conversation? 1. Language is a means of communication 2. Learning language means developing the capacity to communicate by using the target language. Linguists say that learning language, spoken or written, is to develop four skills required for effective communication: a) Listening: the ability to understand what a speaker says; b) Speaking: the ability to express one's ideas, thoughts, and feelings, etc.; c) Reading: the ability to comprehend a written text; and d) Writing: the ability to express ideas, thoughts and feelings etc. in written form. 1.4 How do we learn a language? A new-born human child expresses everything through smile or tears. But gradually they interact with the linguistic environment that encompasses them. They develop language ability in a natural course. In this sense children are natural language acquirers. They pick up language without conscious learning. We may call them self-motivated language

NSOU l PGEL - 1&2 13 acquirers. They listen to what speakers around them pronounce and try to imitate. They have the inherent ability to generate the rules for themselves. They develop a good book of grammar and vocabulary of their own. It is evident that: 1. Young children use their own innate language-learning strategies to acquire their home language or mother tongue. 2. Children try to use the same innate language-learning strategies throughout life in picking up the second language. 3. Language games and play-like activities help them to learn the language effectively. First they make sense of the activity and then get meaning from the adult's shared language. 4. When monolingual children reach puberty and become self conscious, their flexibility in picking up a second language diminishes. 5. Spoken language develops naturally before reading and writing. 1.5 Stages of language learning 1.5.1 Silent Period This is the period of observation and perception. In case of learning home/mother language babies listen to the sounds and communicate through facial expressions only before they start speaking. When they learn a second language a similar silent period is found. Research suggests the existence of a 'silent period' of about three months in natural second-language learning situations before the learner attempts to produce any language. The input that the learner receives at this stage serves as a base for production. 1.5.2 Beginning to Talk After the silent period comes the early production of language in the form of single words ('dog', 'pen', 'book', 'chair' etc.) or stock phrases ('That's a pen', 'This is a book', 'What's that' etc.). The learner imitates the pronunciation and begins to talk. However, such early production is limited to few words, fragments of sentences, and short sentences. This phase continues for some time before they can develop their own phrases or speeches. 1.5.3 Developing Language Proficiency Once the route to acquisition gets opened, children pick up the target language and develop their own proficiency to communicate. They gradually begin to create whole sentences.

1.6 Acquisition and Learning Although very often the terms, acquisition and learning, are used interchangeably to refer to the same thing, i.e. developing language ability, scholars find a subtle line of demarcation or distinction between the two. Acquisition refers to the natural process that the child uses to internalize the linguistic systems of home language. But learning is a conscious effort to develop language ability in a formal set up. The distinction is as follows: Language Acquisition 1. Implicit and subconscious 2. Exposure to target language in informal setting. 3. Focus on meaningful communication 4. Fluency is more important than accuracy 5. Error correction and explicit rules are secondary 6. Understanding grammar intuitively 7. Depends on attitude of the learner 8. Stable order of acquisition Language Learning 1. Explicit and conscious 2. Exposure to target language in a controlled formal setting 3. Focus on both form and meaning 4. Accuracy is more important than fluency 5. Error correction and explicit rules are primary 6. Memorising rules of grammar 7. Depends on aptitude of the learner 8. raded from Simple to Complex order of language items 1.6.1 Factors Affecting Language Acquisition i. Age: According to Lenneberg (1968) there is a critical period (i.e. between two years and puberty) for effective language acquisition. In case of second language acquisition adults start more quickly and then slow down. Though children start more slowly, they finish up at a higher level. (Cook,1991:85) ii. Sex: Studies of first and second language acquisition show that girls are better learners than boys. iii. Motivation: Intrinsic motivation (i.e. motivation that comes from within) accelerates language acquisition. iv. Attitude: There is a positive correlation between attitudes and achievement. Attitude may include general dispositions towards learning the target language and the target language community or speakers. v. Aptitude: Aptitude is the ability to learn. In a general sense, it is 'knack' for languages. It a combination of various abilities. A learner with a high language aptitude can lean a second or foreign language more quickly and easily than a learner with low aptitude. vi. Cognitive style: It refers to the manner in which we perceive, conceptualize, organize and recall information. A difference in cognitive style may result in significant differences in second language learning. A field-dependent person cannot separate an object or event from the context (=field) in which it appears. But a field-independent person has the capacity to process information or consider an object or event independent of the context. 1.7 Conditions for Developing Language Skills 1. Exposure to Language: Behind every successful language-learning experience lies the fact that learners are exposed to adequate amount of data of language to be learnt. It is evident from the relative success of English-medium schools. There additional exposure comes through teaching-learning of other subjects. A single text book developed for all types of learners is presented all through the session is inadequate. Regular exposure to a wide variety of meaningful language inputs can be effective. 2. Comprehensible Input: The input to which the learners are exposed should be comprehensible. Inputs may include textbooks, other print materials, media support, and the use of 'authentic' or 'available' materials. But learners require to understand what they are listening to or reading. The burden of incomprehension is to be minimized. Only reception of comprehended input may result in development of productive skills. 3. Print-rich Environment: The classroom must display signs, charts, labels, notices. A variety of activity can be undertaken in a print-rich environment.

4. Interaction: Learners must be encouraged to interact. Interaction promotes language learning. They should be active participants, not passive learners. 5. Use of Supplementary Materials: The teacher's own limited language proficiency is to be complemented in various ways such as introducing ICT in teaching, story reading, shared reading of big books, the use of reading cards, talking books. 6. From Lexical knowledge to Higher-order skills: Lexical knowledge is considered to be central to communicative competence and learning of a second language. Higher-order skills such as grammar, vocabulary, writing, reference skills are to be introduced after basic linguistic competence is acquired. 7. Linking to everyday life: Activities and tasks need to be linked to everyday experience of the learner. 8. Learning must be fun and interesting: Language-learning sessions are fun and interesting. The teacher should concentrate on concepts children have already understood in their home language. In this way, while learning English as a second language children are not learning two things, a new concept as well as new language. Rather they learn English to talk about something they already know. 9. Handling Mistakes: It is natural that learners make mistakes. But they should not be told that they have made a mistake simply because any deliberate correction immediately demotivates them. Mistakes may be part of the process of framing rules of English. If the learner says, 'We goed', the teacher should say, 'Yes, you went'. This will result in internalization of the past form of the irregular verb 'go'. 10. Comfortable Classroom Situation: The learner need to feel secure and comfort and know that there is some obvious reason for using English. The classroom should provide learners with security and comfort. The more comfortable they feel, the more likely it is that they will learn. 1.8 Language Learning Theory and Practice: an overview Behind every practice lies a theory and behind a theory lies a philosopher or a school of thought. The knowledge that a philosopher or a school of thought advocates may be authoritative and devoid of reason; or, it may be rational and logical. The dogma of religious authority was seriously challenged with the birth of rational intellect. Those who raised questions were often punished and even put to death. The era of logic began

when people began to think systematically about thinking itself. The first systematic approach to reasoning was deductive method. It is attributed to Aristotle and the Greeks. The deductive method moves from general assumption to specific application. It made significant contribution to the development of modern problem-solving. Centuries later, Francis Bacon advocated inductive process of moving from specific observations to the generalizations through the evidences of many individual observations. Bacon's idea freed logic from some of the hazards and limitations of deductive thinking and thereby opened up the way of discovering new truth. The deductive method of Aristotle and the inductive method of Bacon were fully integrated in the work of Charles Darwin. Thus through ages our constant endeavour to find out the truth or unknown has given rise to a number of theories. These theories mould the practice. 1.8.1 Theories of Language learning: an introduction ELT is a practice that has evolved over the years. The practice depends on how we look upon language and language-learning. Children can internalize the linguistic systems of their home language in about five years, but philosophers, linguists and psychologists have not been able to answer how it happens in about two thousand years. Their efforts have given rise to a number of theories of language learning or acquisition. 1.8.2 Theories up to nineteenth century a) Plato: Plato believes that knowledge is innate. It is something that humans have. This idea is called Plato's Problem. Life is short but humans are able to accomplish so much with so little time given to them. It is possible because humans are born with knowledge. In this way he views language as an innate human element. b) Descartes and Cartesian Linguistics: Like Plato French philosopher Descartes believes in the innateness of language. He thinks that language acquisition is a simple and easy process. It reflects the general rationality of human beings. He considers language as a means of interaction. The Cartesian movement focuses on Descartes' belief that language is used creatively. According to Chomsky the Cartesian movement presents universal principles behind every language. The central doctrine of Cartesian Linguistics maintains that the general features of grammatical structure are common to all languages. Descartes' idea of language is that it is a form of self-expression, not merely communication.

c) Locke's Tabula Rasa: John Locke, the seventh century English philosopher, is well-known for his theory of tabula rasa. The theory states that at birth human mind is a 'tabula rasa', meaning a 'blank slate' which receives as well as records sensory impression and experience. Locke's theory comes in sharp conflict with that of Plato and Descartes. While Plato and Cartesian linguistics hold the view that in language learning we use our own innate abilities, Locke focuses on external sensory input. d) Herder's Inherent Impulse: Johann Guttfried von Herder, a German philosopher of the eighteenth century, thinks that language is too imperfect to have been a divine gift. He conceives of language as an 'instinctive impulse similar to that of an embryo pressing to be born'. His theory implies that language is an inherent impulse. e) Charles Darwin: Charles published his views on language in Descent of Man (1871). He acknowledges that there is only a difference of degree between the language of human beings and that of lower animals. 1.8.3 Current Theories of Language Learning 2. Skinner and the Theory of Behaviourism: In the middle of the twentieth century B.F. Skinner agreed with Locke's ideas of sensory input and developed his own theory of Behaviourism. In his Verbal Behaviour (1957) Skinner points out that all behavior is no more than a response to the stimuli around us and there is no innate programming within human beings to learn a language. In other words, language is learned from the environment. 3. Chomsky and Universal Grammar: At the same time when Skinner was working on his theory of behaviourism, Noam Chomsky, in his Syntactic Structures claimed that the child has the ability to generate an infinite number of well-formed sentences. The child, according to Chomsky, possesses some language universals as 'latent language structures' and it forms the basis for language acquisition. These universal elements that structure all languages build up the concept of Universal Grammar (UG) and the device which is instrumental in acquisition is known as Language Acquisition Devic(LAD). Thus the behaviourist theory of language learning through imitation, conditioning, and reinforcement was challenged by Chomsky's proposal about language acquisition. 4. Schuman's Acculturation Model: John H. Schumann designed this model of second language acquisition in 1978. It describes the process by which immigrants

pick up a new language while being completely immersed in that language. It focuses on social and psychological aspects that influence acquisition. Based on the social-psychology of acculturation this model maintains that certain social and psychological variables cluster into a single variable, acculturation. Learners' acquisition depends on their acculturation to the target language group. 5. Krashen's Monitor Model: This model is also known as Input Hypothesis. It is a group of hypotheses of second language acquisition developed by Stephen Krashen. The main ideas are: i. Language acquisition is largely subconscious since it stems from informal, natural communication. ii. Language learning is conscious and driven by error correction iii. Grammar is largely acquired in a predictable series and order iv. Language acquisition occurs with comprehensible input(i.e. hearing or reading text that are just slightly above the current language level of the learner) v. A monitor can be anyone or anything that corrects our language errors and pressures us to communicate correctly. 1.8.4 Current Theories of Learning and Language Acquisition 1. Piaget's Theory: According to Piaget learning is the outcome of child's continual interaction with the world. Learning occurs through assimilation and accommodation. The child learns the target language with purpose and acts intentionally. In practice, Piaget's theory has given birth to collaborative learning and constructivism in language learning. NCF 2005 lays emphasis on this aspect: " Learning takes place through interactions with the environment around, nature, things and people, both through actions and through language." (NCF 2005, p-18) 2. Vygotsky's Theory: A child is an active sense-maker. As child's language develops the thought within is broken down into smaller units of speech. This theory introduces the concept of Zone of Proximal Development (ZPD). ZPD is a space between what a child can do alone and what he/she can almost do but cannot do alone. Adults mediate the world and make it accessible to them. Gradually a child moves from dependence to independence. Social interaction plays a significant role. 3. Bruner: The credit of introducing the concept of scaffolding goes to Bruner. His theory redefines the role of adults who make children interested in the task. 20 NSOU l PGEL - 1&2 1.8.5 From theory to practice: major issues 1. Age and L2: Psycholinguists suggest that children can learn more effectively in between 5-12 years, i.e. before puberty. (Critical Period Hypothesis) 2. Interference of L1: If there exists much similarity between L1 and L2 in vocabulary and sentence pattern, L1 may have positive effect on learning of L2. Otherwise, L1 may have affect learning of L2. When a Bangla-speaking learner is exposed to a running commentary in Hindi, the learner can understand much of it. 3. Learning Principles a. Within ZPD the learners should be given wider exposure b. Learners are to be engaged to search for meaning c. Teachers should design tasks and activities suitable for the target learners d. Space should be given for development of language ability at every stage of learning e. Social interaction is to be promoted through collaborative tasks f. The focus should be on development skills g. Learners should be guided to activities in such a way that they can construct as well as generate their own rule and apply the same in multiple situations 1.9 Summary After completing our journey through this lesson, let us sum up what we have learnt: 1. In applied Linguistics Language learning usually refers to learning a foreign or second language. It is learning to communicate. It involves development of four skills – Listening, speaking, reading, and writing. 2. Language teaching depends on inputs from linguistics, sociolinguistics, psycholinguistics, education, communication etc. 3. Exposure to language promotes language proficiency. 4. There are different stages of language learning: silent period, beginning to talk, developing language proficiency. 5. Acquisition and learning are two terms often used interchangeably. Acquisition refers to the natural, self-motivated, subconscious picking up of a language while language learning requires a conscious effort in formal setting. 6. Age, sex, motivation, attitude, aptitude, and cognitive style are considered to be major factors that influence language acquisition or learning. 7. The following conditions play significant roles in developing language skills: exposure to language, comprehensible input, print-rich environment, interaction, use of supplementary material, course of gradual development from lexical knowledge

to higher-order skills, linking learning to everyday life, joyful and comfortable classroom environment, use of games and fun, careful handling of mistakes, etc. 8. Theories of language learning are helpful for practicing teachers in understanding how teaching practice has been changing with the evolution of theoretical basis. While Plato and Descartes conceive of language as an innate human element, Locke focuses on external sensory input. Herder considers language as an inherent impulse. 9. Modern theories of language learning are sharply divided into two categories. While Behaviourist or Empiricists like skinner consider language learning as habit formation through imitation and conditioning, Nativists like Chomsky thinks every child possesses some language universals. Chomsky developed the idea of Language Acquisition Device (LAD) and Universal Grammar (UG). Acculturation model of Schuman focuses on social and psychological aspects of acquisition. Krashen's Monitor Model suggests a number of hypotheses relating to language acquisition. 10. Current trends in language learning incorporate the theories of language acquisition as well as theories of learning. Based on Piaget's developmental psychology the National Curriculum Framework 2005 lays emphasis on constructivism. Vygotsky's concept of ZPD and social interaction, Bruner's scaffolding, skinner's reinforcement, and all other inputs from different branches of study constitute the framework of ELT today. 1.10 Review Questions A. Short answer type: 1. What does language learning mean? 2. How does acquisition differ from learning? 3. We pick up our mother tongue at an early age. Is this acquisition or learning? Give reasons. 4. What is silent period in language learning? 5. How do children communicate before they start speaking? 6. How does a child start speaking?(in complete sentences? In single word?...) 7. What is cognitive style? How can a difference in cognitive style affect language learning? 8. How much important is exposure to language?

9. How can you maximize comprehensible input? 10. Do you require supplementary material for your learner? Why? B. Argumentative Questions: justify the validity of the following statements 1. Children learn a language through conditioning (Stimulus-Response bonding and reinforcement) 2. Language ability is innate. 3. In West Bengal English (L2) should be taught through Bangla. 4. Language learning is learning the rules of grammar. 5. A second language can be introduced at any stage of learning? 6. L1 affects the learning of L2. 7. English teachers do require theoretical foundation for teaching English. 8. Our classroom teaching should be teacher-centric. 9. Listening and Speaking are not necessary for learning a second language. 10. Because of lack of time a carefully structured and graded language items are to be introduced. C. Analytical/ Illustrative Questions 1. How can the study of this unit help you as an English teacher? (Hints: develop concept of language learning – a greater opening for understanding how linguists and psychologists look upon language learning – show the way to successful teaching through manipulation/exploitation of multiple factors contributing to learning – develop a sound foundation for teaching – sharpen and sensitize professional skill , etc) 2. What are the new concepts and issues introduced in this unit? How can these concepts provide an English teacher with insight into the learners and learning? (Hints: Learning and acquisition, silent period, exposure to language, comprehensible input, supplementary material, linking learning to life, fun, handling mistakes, behaviourist theory, UG and LAD, Acculturation Model, Monitor Model, accommodation and assimilation, ZPD, scaffolding, etc – develop learning principles – better understanding of the learners and learning) 3. Dr. Richard says: In the case of a foreign language, however, the starting point may be zero, and a limited amount of time may be available in school for foreign language instruction. How can you prepare yourself in such a situation? [Hints: language items (words, phrases, structures, functions etc.) to be selected on the basis of frequency, suitability, learners' needs, societal needs, teachability, etc. — items to be structured and graded carefully – to be introduced gradually keeping in mind principles of learning and language learning] 4. What is the difference between mother tongue teaching and second language teaching? (Hints: learners come to school after acquiring basic proficiency in mother tongue – can listen to and speak in mother tongue – importance on development of reading, writing and higher order skills – in case L2 the situation is different – limited time for classroom transaction – items to be arranged properly to provide learners with exposure to the target language through comprehensible input , etc.) 5. Discuss elaborately how we can make classroom teaching interesting? 6. How, as language teachers, should we handle learners'mistakes, without demotivating them? 7. What the similarities do we find between Plato and Descartes in their concepts of language? 8. Write an analytical note on the meaning or signification 'tabula rasa'? 9. How do behaviourists look upon language and language learning? 10. Who challenged the behaviourists, and discuss the premises for challenging this school? 1.11 Suggested Reading Cook, V. 1991. Second Language Learning and Language Teaching. London: Edward Arnold. Krishnaswamy, N, Verma S. K. and Nagarajan M. 2002. Modern Applied Linguistics. Macmillan India Limited. Lennenberg, E. H. 1967. The Biological Foundation of Language. New York: Wiley NCERT. 2005. National Curriculum Framework 2005. New Delhi. NCERT.

24 NSOU l PGEL - 1&2 Unit - 2 p Language Features Structure 2.1 Introduction 2.2 Objectives 2.3 What is Language? 2.4 Features of Language 2.5 Language of the world: its role 2.6 Language at home and school 2.7 Language and Communication 2.8 Summary 2.9 Review Questions 2.10 References 2.1 Introduction According to Charles Barber: "It is language, more obviously than anything else,that distinguishes humankind from the rest of the animal world. Humans are tool-making animals; but language itself is the most remarkable tool that they have invented, and the one that makes most of the others possible." (P-1) As recorded in the Bible: "In the beginning was the word". Both these quotes point to the primacy of language. Human beings conceive the world through language. Without language we cannot discover our identity as individuals and social beings. What purpose does language serve? Let us see what H.G. Widdowson says: It serves as a means of cognition and communication: it enables us to think for ourselves and to cooperate with other people in our community. It provides for present needs and future plans, and at the same time carries with it the impression of things past. (Linguistics: 3) It is language that makes us come to terms with brute realities of human experience. Let us think of Caliban in Shakespeare's The Tempest. Caliban 'gabbles like a thing most brutish' until Prospero teaches him language. 2.2 Objectives After reading the unit, learners will: a) Understand the nature of human language,

NSOU l PGEL - 1&2 25 b) Differentiate human communication from animal communication, c) Explore the difference between the language of the world and that of the classroom, and d) Examine the features of communicative language and relationship between language and communication. 2.3 What is Language? Human language is a signalling system. A system is a complex whole, a set of interconnected parts. How does the system of language function? This system of a language functions through sounds, words and structures. These are integrated with one another and constitute the complex organic whole which is language. When someone says, "Mother is reading a letter', he/she uses sounds, words, and an accepted sentence pattern. All these elements are so integrated together that they make communication possible. The system of language works through symbols or signs, the symbols being words. Language functions effectively when the symbols used are known to both — the speaker and the listener, the writer and the reader. These symbols are varied and complex.So for communication it is necessary that there should a meaning attached to the sound or sounds constituting a symbol. In the history of each individual speech is learned before writing. The written language is therefore secondary and derivative. There are communities that have speech without writing. But there can be no human community which has a written language without a spoken or signed one. Task 1 Read the text given below and answer the questions that follow Language is at the heart of human life. Without it, many of our most important activities are inconceivable. Try to imagine relating to your family, making friends, learning, falling in love, forming a relationship, being a parent, holding – or rejecting – a religious faith, having political ideals, or taking political action, without using words. There are other important activities, of course, which do seem to exist without language. Sexual relations, preparing and eating food, manual labour and crafts, the visual arts, playing and listening to music, wondering at the natural world, or grieving at its destruction. Yet even these are often developed or enhanced through language. We would perceive them quite differently had we never read about them or discussed them. (Guy Cook: Applied Linguistics, P-3) Questions a. What purpose does language serve in our daily life? Prepare a list of activities in which we use language.

26 NSOU l PGEL - 1&2 b. What other activities do require use of language? c. What activities can be enhanced through language? d. Add some points of your own to this list of activities that demands communication through language: gossip and chat, flirt and seduce, play games, sing songs, tell stories, teach children, ..., ..., ..., ..., ..., etc. e. Justify the view that linguistic activities seem to be intrinsic to human life, as natural to us as flight is to birds. 2.4 Features of Language Once Bertrand Russell observed: 'No matter how eloquently a dog may bark, but he cannot tell you that his parents were poor but honest'. (Widdowson 2019:5) Herein lies the difference between human communication and animal communication. Other animals communicate with one another by means of cries and body movement. Birds signal to each other by singing, bees by dancing. These signals are limited to particular states of affairs. They lack the essential flexibility of human language. The distinctive features that account for flexibility of human language are considered design-features or characteristics of human language. a) Arbitrariness In case of animal communication there exists an apparent relation between the signal and the message they want to convey. For example, bees indicate the direction and distance of source of honey from hive by means of their dance. Some animals have postures signifying submission. But in human language, except in case use of onomatopoeic word or expression, there is no resemblance between the signal and the message. In this sense human language is arbitrary. The link between the signal or sign and the message is a matter of convention and such conventions differ radically from language to language. Do you find any logical relation between 'milk' and the substance it signifies? What is 'water' in English is 'jal' in Bangla. Although there exists a conventional link between form (sign or signal) and meaning (message), the linguistic forms do not resemble what they signify. Only in case of onomatopoeic words the sound seems to be an echo to the sense. For example, the italicized words in 'the mewing of the cat' 'the murmurous haunt of flies on summer eves', 'the humming of the bees' the sounds represent the sense.

Task 2 1. Give a single word for 'the quality of being based on random choice, i.e. choice guided by no reason or system'? 2. Is there any logical relationship between 'cow' and the animal it signifies? How would you describe the relationship? 3. The codes used in animal communication are limited in number. – Do you agree? 4. Do all bees all over the world use the same code for conveying the message for a particular purpose, say, passing information about the source of honey? 5. Do all the cats of the same species use same code for mating? 6. Does a human child learn any language if s/he is brought up in isolation? (Clue: human child requires exposure to language for acquiring language) 7. How can you recognize a singing bird without seeing the bird? Can a bird sing if it is reared in captivity? 8. What is LAD? (Clue: Language Acquisition Device) 9. What is the role of environment in activating innate language ability?

b) Duality Human language consists of a set of basic sounds known as phonemes. These phonemes are generally meaningless in isolation. But these are instrumental in forming signs or signals that convey message. They combine with each other following rules of language and become meaningful. In this sense human language operates on two levels of structure. At one level the elements have no meaning in themselves and at another level they combine to form meaningful units. This kind of operational organization of human language into two distinct levels is called duality. For example, 'p', 'e', and 'n' are basic sound elements of English but these are meaningless in isolation. When they are combined to form the word 'pen', the combination becomes a meaningful unit. This duality can operate both in spoken and written language. No animal communication can exploit so wide range of elemental sounds to produce meaningful signals. Task 3 1. How many basic sounds are there in your mother tongue? 2. How many basic sounds are there in English? 3. Do all the basic sounds have individual meaning? 4. If you utter the 'p-t-e-y-r-o', will the utterance convey anything? How can we arrange those basic sounds to be meaningful? 5. Do we use all the basic sounds together to form a word?

6. What are the two layers or levels of language? (Clue: Layer1— meaningless individual sounds; Layer2—meaningful combination of individual sounds) 7. You know /f/ and /v/ are two basic sounds in English. So /f/ has no meaning. Nor has /v/ any meaning. Now say how they serve to make up two different words: 'safe' and 'save'? c) Patterning Human language follows a well-defined internal pattern. Only a fixed pattern of sounds or letters or words is considered meaningful. For example, 'tae' is not a word. But these letters can be arranged in a meaningful pattern: 'tea', 'eat', 'ate'. How many words can we form by rearranging the letters 'otps'? What are they? d) Creativity Most animals use a fixed number of signs for conveying messages. But human beings can produce and understand such utterances that are marked by novelty and originality of expression. In this sense human language is highly creative. With proper exposure to language we can create infinite number of sentences. e) Vocal Animal cries are not articulate. But human language is primarily made up of vocal sounds produced by a physiologically articulatory mechanism. History of human civilization testifies that human language is primarily spoken. The written language is based on spoken form. Writing came much later as an attempt to represent vocal sounds. f) Displacement Animal communication is concerned with the present. A bird or a cow cannot communicate a message relating to the past or beyond immediate environment. But human language can communicate messages about distant time and place. This aspect of human language is called displacement. g) Structure dependence Human language follows a structural pattern. When language acquisition takes place a child naturally picks up the structure and gradually produces the language maintaining the structure. h) Social We conduct our social lives by using language. We share a set of conventional communicative signals for maintaining social contact. In this sense language is social.

i) Cultural When human language is used it is bound up with culture in multiple and complex ways. We express facts, ideas or events that are communicable because they refer to a stock of knowledge about the world that other people share. It embodies cultural reality. The signs that are used have cultural value. It is a symbol of cultural identity of the speakers. In a sense, language is culture-preserving and culture – transmitting. Through language culture is preserved and transmitted to the next generation. j) Dynamic Language is not static. It is dynamic. All through the course of its history it goes on changing. This change is found at all levels – at the level of sounds, words, meanings and sentence patterns. But as the change is not rapid and revolutionary, it can be traced if we stand apart and take samples from text of different ages. Shakespeare's English differs in some points from both English in the Middle Ages and that of today. Every generation modifies language to meet changing demands of the people who use it. New words are being coined and formed. Let us consider the case of 'Monosyllabication'. It is the process of becoming monosyllabic. Monosyllabism is is one of the most prominent features of modern English. As a result of this tendency of language we now use 'bus' in place of 'omnibus', 'phone' in place of 'telephone', 'bike' from 'bicycle' and so on. There are many English sentences which show the condensed power of monosyllabism, as found in Modern Chinese (Mandarin). For example, we use 'Waste not, want not'; 'First come, first served', 'Live and let live'. Very recently a new word, 'covidiot', has been formed by blending two different words 'COVID' and 'idiot'. It means a stupid person who stubbornly ignores 'social distancing protocol', thus helping to further spread COVID-19. It also refers to a person who hoards groceries, needlessly spreading COVID – 19 fears and depriving others of essential supplies. Task 4 1. Have you noticed currency of any new word in recent times? If you can't remember take up the following words: netigen, tsunami, smishing etc. Now give the meaning of those words. 2. Give the original word from which the later syllables have been dropped: ad, demo, exam, lab, memo, mike, pub, stereo. Language of the world: its role Can you imagine this world without language? It is language that distinguishes human beings from the rest of the creatures. It is primarily human. We cannot think about our

existence without language. While other animals use a limited set of signs to convey messages, human beings use language to convey an infinite set of messages. It is one of the most significant basic capabilities that form the basis for the development of understanding, values and skills. Let us see what NCF 2005 states: "Language and other forms of expression provide the basis for meaning making, and sharing with others. They create possibilities of development of understanding and knowledge, providing the ability to symbolize, codify, and to remember and record. Development of language for a child is synonymous with development of understanding and identity, and also the capability of relating with others. It is not only verbal languages with scripts, but also languages without scripts, sign languages, scripts such as Braille and the performing arts, that provide the bases for making meaning and expression."(P-26) Activity1: What role does language of the world play? Point out from your experience and study. (Clues:social communication, cultural transmission, sharing, understanding meaning, codifying thoughts and feelings, expressing needs, gaining knowledge, remembering and recording, establishing identity, representing the society, making life comfortable in social setting, daily transaction of business, handing a computer or mobile, speaking of the past, sending a message or e-mail, reading any written text, etc.) 2.6 Language at home and school An educational institution is a society in miniature. Since language is essentially a social phenomenon, the language used in the classroom should reflect the society. It should aim at developing linguistic as well as social competence among the learners. At home children enjoy liberty in using language. Starting with their babbling and telegraphic codes, they gradually learn a lot of words. After a silent period, while they try to follow their parents and teachers, they begin to produce speeches for communication. At school the situation is different. Children are taught to use language correctly. They are expected to pronounce, spell, punctuate and use every word properly. So at school their previous knowledge and skill undergo modifications. And the learners gradually develop them under the guidance of their teachers. They learn their language eliminating all deviations. Much time is spent on different types of task to enhance their level of achievement. While at home children learn the dialect of their own linguistic environment. But in classroom they learn the standard variety of language. The standard is generally used in written communication. Text books and dictionaries are written in standard codes.

Task 5 a. Do children pronounce as distinctly as their parents at home? b. How do parents react to any deviation in using mother tongue at early stage? c. What instructions and stock phrases would you suggest for teaching English in the beginning? Make a list of them. (Clue: Good morning – thanks – Yes, no – okay— ....) d. How should a teacher select his words and expressions for classroom communication? Give examples. 2.7 Language and Communication We havealready learnt the definition, features and functions of language. Now Let us explore how language is used as a means of communication. Some aspects: i. What is Communication? Communication is an act of interchanging ideas, information or messages from one person or place to another, through words or signs which are understood by both the sender and receiver. Human beings are social creatures. It is through linguistic communication that they cooperate with others within the group. Without effective communication a social group cannot function properly. ii. What are the elements of communication? Communication is a two-way activity involving the following major elements: sender, message, encoding, channel, receiver, decoding and feedback. iii. How does this process function? Think of a phone call. You have a thought of feeling to be communicated. This is the message and you are the sender. First encode your message, i.e. convert your thought or feeling into speech (with proper tonal quality). Now send it through your mobile. The mobile will convert your speech into electromagnetic wave which will reach the destination. There the phone of the receiver, whom you call, converts the wave into code and, by decoding the receiver understands your thought or feeling. Thus a message is encoded and then sent from one individual called the sender to another called the receiver through a channel. In the receiving end the message is decoded and given feedback, if communicated effectively. iv. What serves as channel? There are a variety of channels available: face-to-face, phone calls, emails, social media, brochures, advertisements, television, etc. v. What is the relationship/difference between Language and Communication? 1. Language is a tool of communication and Communication is the process of transferring messages.

2. Language changes dynamically but communication is rather static. 3. Language is not the only means of communication. Many other tools such as gestures, tone, signs, symbols etc can communicate effectively. vi. What is the precondition of effective communication? A. Both the speaker and the listener (or the reader and the writer, as the case may be) should share a common language that can be used as a means of communication. B. Knowing the rules of grammar and vocabulary is as much essential as being able to put them to use in appropriate context. Chomsky used the term Linguistic Competence to mean this knowledge of rules of a particular language. And the actual manifestation of that knowledge or competence in communicative situation is called Performance. C. Chomsky's notion of Linguistic Competence cannot take into account all the factors governing communication. Grammatical knowledge alone is not enough to help us participate effectively in a communicative situation. One must know — (1)the socio-cultural situation (i.e. the attitudes, values, conventions, prejudices, and preferences of the people who use the language); (2) the nature of the participants (i.e. relationship between/ among those involved in communication, their status, interests etc.); (3) the role of the participants (i.e. the relationship in the social network, like teacher-student, doctor-patient, mother-daughter etc.); (4) the nature and function of the speechevent(i.e. whether it is a face-to-face conversation for a particular purpose, or a formal exchange of words for requests, persuasion etc.); and (5) the mode or medium (i.e. spoken or written or any other form). (Krishnaswamy, N et al 2002: 20-25) D. Dell Hymes used the term Communicative Competence as a deliberate contrast to Chomsky's Linguistic Competence. According Hymes, a person equipped with knowledge of language rules, i.e. having only linguistic competence, would not be able to communicate. Hymes suggests that four types of knowledge are required for successful communication: possibility, feasibility, appropriateness, and attestedness. Asuccessful communicator should know whether something is possible; whether something is feasible in relation to the means available; whether something is appropriate; and whether something is performed. So the notion of communicative Competence includes linguistic knowledge, interaction skills, cultural knowledge and understanding of the communication event and context, and knowledge of conventions of language use. E. Widdowson thinks if Linguistic Competence is an abstraction of grammatical knowledge, Communicative Competence is an abstraction of social behaviour.

NSOU l PGEL - 1&2 33 In order to participate in language-based activities, the user of language requires the ability to use language to achieve certain ends or purposes. This ability to use language appropriately in a social context is called Pragmatic Competence. (Krishnaswamy, N et al 2002: 20-25) F. In actual communication some conventional expressions like 'Good morning', 'Hello', 'How do you do', 'Namaste', 'Jayguru' etc. are exchanged. Such verbal or non-verbal communication to start a conversation, or greet someone is called Phatic Communion. It has no informative function. But it has a social function. In case of online communication 'likes' or use of 'emoji' serve this phatic function. It helps us to avoid silence. Task 6 a. What is the relation between Communicative Competence and Linguistic Competence? b. What are the qualities of a competent speaker? 2.8 Summary In this unit we have learnt about human language and its characteristics. The main features are: arbitrariness, duality, creativity, patterning, displacement, structure dependence, dynamic change. Some features of human language, like arbitrariness and duality, distinguish it from other kinds of animal communication. Such features are called design features. We have also learnt what purpose language serves in the society, at home and in school. We have examined the role of language as a means of communication and precondition for effective communication. We have also learnt the importance of phatic communion. 2.9 Review Questions 1. Schools are a good barometer of both language use and social values... (Guy Cook 2019:14) – Do you support this view? Justify. (Clue: Learners come from different socio-cultural background – bring their own home language – each variety shows social values – there are differences between individuals, social groups, generations – language is used differently in speech and writing, in formal and informal situations – learners struggle for achieving the standard variety – teacher's role as a facilitator is important).

34 NSOU l PGEL - 1&2 2. The features that make human language flexible and distinctively human are called 'design features'. What are the two main design features of language? (Clue: arbitrariness and duality). 3. Explain with suitable examples: Words are arbitrary in form but they are not random in their use. 5. How does human communication differ from animal communication? 6. In children's fiction we find talking animals. They are also found in adult fiction. In Swift's Gulliver's Travels and Orwell's Animal Farm we find creatures cast in our image. What are such creatures called? What sort of language do such creatures use? (Clue: anthropomorphic creatures – talk like human being – pigs in Animal Farm talk like politicians). 7. How do children learn their mother tongue? Give your idea. 8. What is Universal Grammar (UG)? Is it a cognitive construct? (Clue: LAD provides a closed set of common principles of grammatical organization known as UG – formation of UG depends on exposure to linguistic environment). 9. How does language function as a means of communication and social control? (Clue: means of interpersonal communication – functions as a system of signs to meet elaborate cultural and communal needs of human societies) 10. Why does Michael Halliday call 'language as social semiotic'? (Clue: 'semiotic' means relating to signs or symbols – language, like gestures and images, convey human message – as a means of social interaction – language functions as a system of signs developed to express social meanings) Suggested Reading Akmajian, A. et al. NSOU l PGEL - 1&2 35 Unit - 3 p Aspects of Language Skills Structure 3.1 Introductiosn 3.2 Objectives 3.3 Language as a Skill 3.4 Features of Language Skills and Their Classification 3.5 Key Contributions in Conceptualizing the Notion of Language as a Skill 3.6 Experts Versus Novices in Language Use as a Skill 3.7 The Four Language Skills 3.7.1 Listening 3.7.2 Speaking 3.7.3 Reading 3.7.4 Writing 3.8 Summary 3.9 Review Questions 3.10 References 3.1 Introduction Let us try to recall our observation of how a child learns the mother tongue. We have noticed that in learning the mother tongue, the first thing that a child acquires is the ability to understand the spoken word i.e. the skill of listening. Next, he/she tries to reproduce these sound sequences to express his own desires and needs and thereby acquires or develops the skill of speaking gradually. For an illiterate person this basic ability to listen and speak constitutes his/her language ability which is considered as skills of 'oracy'. However, the abilities to read and write are considered as skills of 'literacy'. Thus, language ability in its totality constitutes for basic skills – Listening, Speaking, Reading, and Writing swhich in short is expressed as LSRW. 3.2

Objectives

After going through this unit you would be able to: l Understand the

basic concept of 'skill' in language learning l Examine some selected significant conceptualisations of the term 'language as a skill'

l Understand the evolution of the nature of language as a skill in three stages l Idsentify the differences between experts and novices in skilful language use l Understand the various theoretical aspects of the four language skills – listening, speaking, reading and wri\ting 3.3 Language as a Skill Let us begin by understanding the concept of 'skill'. Longman Dictionary of Applied Linguistics defines skill as "an acquired ability to perform an activity well, usually one that is made up of a number of co-ordinated processes and actions. Many aspects of language learning are traditionally regarded as the learning of skills, such as learning to speak, or read ûuently. Thus, you have certainly noticed that all competent language users exhibit a number of different abilities in real life situation like writing letters, speak face-to-face or on telephone, listen to conversations, etc. These abilities are the 'skills'. Hence, language learning is considered a skill-subject rather than a knowledge- subject as it requires more of doing or performing rather than knowing.It is not a content- based subject like-science, social studies, commerce, mathematics, etc., which aims to impart information and fill the human mind with knowledge. Since language is a skill, it naturally comes under psychomotor and cognitive domains. Language skills (LSRW) comprises of various elements called 'sub-skills'. Very often a language-user uses more than one skill. A participant in a conversation for example, takes turn in both listening and speaking. The following grid represents a four-fold view of language as skill: SKILL Comprehension skills Production skills MEDIUM Spoken Listening Speaking Written Reading Writing Fig. 3.1 Our understanding of the concept of language as skill calls for a realistic context of language use for communicative purposes, so that the vast potential of the notion of language can be limited to what people really do in socio-cultural situations. Therefore, such a definition can be conceived as:

a) Language skills help us communicate within the constraints of the language use or usage to influence others in a variety of life situations panning across myriad relationships. b) Language skills decide the competence of language users to cope with communication across various societal strata. c) Language skills require whole-person involvement in verbal communication, which is to say that language users tap all their resources and mental capacities for communicative situations, such as their cognitive system, emotions, volition, imagination, imagery, verbal language and body language, visual and analogical information processing, personal culture, etc. d) Language skills are sufficiently specific for the purpose of TEFL / TESL, i.e. sensitive to modality-specific considerations; focus on the sub-codes and their distinctive features. Check your progress : 1 What do you understand by the term 'skill'?
....
.... How is language a set of skills?
....
.... 3.4 Features of Language Skills and Their Classification Let us now try to understand the various features of the language skills. You might have noticed that two of the language skills – listening and reading are apparently passive processes, requiring less exertion on the part of the language user. These two skills are called Receptive Skills or Skills of Comprehension because while listening or reading the language user is at the receiving end of the communication process, but he/she is actively involved in the process of thinking. He/she is technically called the 'receiver' or 'decoder'. However, reception is always a two-way process and we should keep in mind that there is no simple relation between transmitting a message and receiving it.Attaching meaning to the received text indicates more accurately the reciprocal process between the decoder and the encoder i.e. the sender of the message. Comprehension involves not only reception of the message but also construction of meaning from the message received. Thus, we as listenersor readersnot only decode the text but addvalue with our personal opinion and judgements, thereby creating a unique interpretation.

Hence, experts often term the 'receptive skills' as 'interpretative skills'. Speaking and writing, on the other hand, are called Productive Skills or Skills of Expression. They are more active skills and require a lot of effort and competency in acquiring and exhibiting the skills. We can also classify the four skills following another approach. Listening and speaking which demand the exercise of the auditory and the speech organs may be called audio- lingual or aural-oral skills; while reading and writing involving the visual and psychomotor organs may be called graphic-motor skills. It is now quite clear to us that language is not simply a mix of diverse skills; it is a complex and integrated skill. What makes a skill difficult is not performing its single component, but the integration of all of the components instantaneously. Fluent speakers perform all these operations with ease, but their skill is the result of practice and expertise.We experience that when we are engaged in conversation we also require to listen and speak almost at the same time. The same is the case with reading and writing. Further, it is noteworthy that no one can produce a speech sound that he/she has not heard before or write a letter of the alphabet that he/she has not seen. These elements constitute the 'language code' and each language has its own unique set of codes. The root problem in learning a language, therefore, is one of internalising the language code. Check your progress : 2 What are distinctive features of language skills? ....
.... How would you classify language skills?
....
.... 3.5 Key Contributions in Conceptualizing the Notion of Language as Skill As second language teachers it is important for us to know about the significant contributors in establishing the concept of 'language as skill'. Fitts (1964) was one of the first authors in the field of language learning to identify three stages of acquiring a skill: 1) the cognitive stage, in which the learner makes the initial approximation of the skill- demanding task, based on background knowledge, observation and instructions;

2) the associative stage, in which the task is consolidated while some errors are eliminated; 3) the autonomous stage, in which the skill is gradually established and improved. In 1968, Welford published a volume on general mental and sensory-motor skills accounting for factors which make up expert, rapid and accurate performance. In his conception, skill involves decision-making, i.e. selection and co-ordination, or integration, a highly constructive, flexible form of behaviour. Herriot (1970) proposed explicit distinction between the linguist's perspective of language as a formal system external to the user and the user's perspective of language as interpersonal behaviour, i.e. communication. He blames linguists for inserting their formal system external to the user to represent the user and opposed 'any effort to install linguists' models of language as models of psychological processes' (Herriot,1970). It is noteworthy that language behaviour has the following properties of skilled behaviour: a) the hierarchical nature (skills consist of hierarchies and subhierarchies of operations which must be integrated by language users to keep pace with the fluency demand); b) some criterion of success (a norm or target); and c) automatization, anticipation and feedback. A significant contribution in the research on language as skill is Levelt (1975, 57; 1978; 1989) who observed: "One of the most general features of complex tasks is their hierarchical structure. This means that the task consists of subtasks, sub-sub-tasks, etc. The idea is that execution of one part of the task requires the completion of various smaller operations in accurate temporal integration. Each of these operations may in its turn require a set of still more elementary operations. Speaking is an excellent example of hierarchical task structure. This can be understood by following the steps indicated below: a) hierarchical organization, i.e. higher order, more important decisions influence the subordinated, lower-order choices; this implies the ability to integrate tasks and sub-tasks within one episode of activity; b) hybrid (i.e. mixed) processing, i.e. the higher-order choices, more significant because related to the communicative intention, are slower and controlled by our attentional resources, while the lower-order subordinated ones, related to formulation (i.e. planning and lexical insertion) and articulation, are performed in fractions of seconds (they are too fast to be controlled by our attentional resources or to be available to our awareness); automaticity in processing, i.e. limited demand on the processing resources, calls for the activation of procedural representations; c) language use as skill is an act of composing, which requires not only the acquisition of the complex nature of tasks, but also the ability to act in a largely unpredictable and changing environment in which the speaker of a language has to keep track of

the ongoing communication, plan and execute his or her utterance, comprehend the intention of the interlocutor and plan ahead. Check your progress : 3 What was Fitts's propositions in considering language as skill? .... Discuss hierarchical structure of a task supporting the concept of language as skill. .... 3.6 Experts Versus Novices in Language Use as Skill Let us now try to identify how experts in the use of language skills can be contrasted with novices on the basis of such criteria as fluency in their speech-performance, degree of accuracyin the use of words, certainty regarding forms, meta-cognitive regulation of their performance, the awareness of the global target model for the performance, and the use of elaborate forms. Fig. 3.4 (Anderson, 1981) EXPERTS 1. Are characterized by fluency in performance 2. Accurate performance in the sense of a rather limited number of errors 3. Display certainty regarding the forms 4. Longer, more developed/elaborated tasks 5. More strategies and metacognitive regulation 6. Mental global model, or standard 7. Deeper processing, more critical evaluation of the task. NOVICE 1. Are characterized by change in strategy in performance 2. Requires correction while performing. 3. Do not display certainty regarding the forms 4. Less developed/elaborated tasks 5. Fewer strategies and metacognitive regulation 6. Independent of concepts 7. Not rule-bound in critical evaluation of the task.

NSOU l PGEL - 1&2 41 3.7 The Four Language Skills When talking about language skills, the four basic ones are: listening, speaking, reading and writing (LSRW). In the 1970s and early 1980s, the four basic skills were generally taught in isolation in a very rigid order, such as listening before speaking. However, with the advent of the communicative approach to language teaching, it has been recognized that we generally use more than one skill at a time, leading to more integrated exercises. Though now we will study the theoretical aspects of each of these four skills separately. 3.7.1 Listening a) Listening vs hearing: As a suitable starting point for dealing with the listening skill in foreign language teaching is to consider the following question: How is 'hearing' different from 'listening'?We often use the two terms 'hearing and listening' interchangeably, but there is an important difference between them. According to Stephen Lucas, Although both hearing and listening involve sound perception, the difference in terms reflects a degree of intention" So, the listening process is guided by our intention which is psychologically an excitation of nerve pathways in the brain to organise incoming stimuli in an efficient way, (Rost, 2002) quoted that: "Intention is the initiation of involvement ..., it is used for organizing what is heard and seen, to organize language in terms of topics (what the language is about) and information value (what the language signal is relevant to us?)." So listening and hearing are not synonymous. Hearing occurs when your ears pick up sound waves being transmitted by a speaker, listening involves making sense out of what is being transmitted (Hamilton, 1999) as he quoted: "Hearing is with the cars, listening is with the mind." b) Definition Listening is a prerequisite to all skills of language. It is the process of understanding speech in a ûrst or second language. The activity of listening is not an act of just recording the speaker's utterances and repeating them as with tape recorders

92%	**MATCHING BLOCK 9/83**	**SA**	S.R.Kulkarni.docx (D42808051)

they are. It is a process of making meaning out of spoken language. Listening involves: 1] receiving the systematic sounds of the language, 2] processing and constructing sounds into words, 3] giving meaning to the words and getting meaning from the words received, 4] ability to interpret and comprehend the speaker's utterances.

c) Listening Process Richards (1990) draws a

100%	**MATCHING BLOCK 10/83**	**SA**	S.R.Kulkarni.docx (D42808051)

two-way process of listening comprehension: bottom-up and top-down processing.

Top-down processing, makes use of "higher level", non-sensory

information to predict or interpret "lower level" information that is present in the data. The other way, bottom-up processing, makes use of the information present in the input to achieve higher level meaning. For example, in word recognition, the higher level information is knowledge of permissible words as well as actual words of a language, while the lower level information is the actual phonetic input (or orthographic input in the case of written word recognition). In sentence comprehension or the interpretation of an utterance, the lower level information is words, while the higher level information includes knowledge of grammar, semantics, and pragmatics. d) BOTTOM-UP Processing It is agreed that the language process has a definite order, it means from the lowest level of detail to the highest level (Buck, 2001). The same view is directly applied in listening, precisely in the Bottom–up processing,to assume that in this process the listener focuses and gives much importance to the smallest units of speech than the individual words and after to phrases to combine them in order to achieve understanding and build a whole (Harmer, 2001). In this process the listener is solely dependent on the incoming input for the meaning of the message. First of all, sound signals are organised into words; the words into phrases, then to clauses and at last into a whole sentence. In this process two factors help the listeners a lot for grasping the meaning of the message – his/her lexical and grammatical competence. Let's take an utterance from a conversation and observe the process involved in which we proceed with understanding the meaning: Input: Prem could not reach school in time. At first the input is organised into words: Prem / could / not / reach / school / in / time. Then it is organised into sense groups: Prem / could not reach/ school / in time. Thus Harmer argues that: "Without a good understanding of a reasonable proportion of the details gained through some Bottom-up processing, we will be unable to get any clear general picture of what the text is about" (Harmer, 2001, 201) e) TOP-DOWN Processing "Top down process is the opposite of Bottom-up, students start from their background knowledge" (Helgesen, Brown, 1995). To explain this process more, (Harmer,2001) indicates that in this processing, the listener tends to get the message's general view and absorb the overall picture of the listening passage. This is helped if the listener has the ability to have appropriate expectations of what is going to come across. It utilises schemata (background knowledge and global understanding) to derive meaning from and interpret the message. For example, There was a big traffic jam. Prem could not reach school in time.

With the help of the italicised words we can come to an understanding that it is an of offering explanation for Prem's late-coming. But we can draw this conclusion only when we have a word-perception that someone cannot reach a place in time if there is a traffic jam on the roads. f) Types of Listening Let us now study the different types of listening we engage ourselves into at various points of time: a) Discriminative listening: Discriminative listening is the most basic type of listening, whereby the difference between different sounds is identified. If you cannot hear differences, then you cannot make sense of the meaning that is expressed by such differences. We learn to discriminate between sounds within our own language early, and later are unable to discriminate between the phonemes of other languages. This is one reason why a person from one country finds it difficult to speak another language. Listening is a visual as well as auditory act, as we communicate a lot through body language. We thus also need to be able to discriminate between muscle and skeletal movements that signify different meanings. b) Biased listening: Biased listening happens when the person hears only what they want to hear, typically misinterpreting what the other person says based on the stereotypes and other biases that they have. c) Evaluative listening: In evaluative listening, or critical listening, we make judgments about what the other person is saying. We seek to assess the truth of what is being said. We also judge what they say against our values, assessing them as good or bad, worthy or unworthy. Evaluative listening is particularly pertinent when the other person is trying to persuade us, perhaps to change our behaviour and maybe even to change our beliefs. d) Appreciative listening: In appreciative listening, we seek certain information which we appreciate, for example that which helps meet our needs and goals. We use appreciative listening when we are listening to good music, poetry or maybe even the stirring words of a great leader. e) Sympathetic listening: In sympathetic listening we care about the other person and show this concern in the way we pay close attention and express our sorrow for their ills and happiness at their joys. f) Empathetic listening: When we listen empathetically, we go beyond sympathy to seek a deeper understanding how others are feeling. This requires excellent discrimination and close attention to the nuances of emotional signals. When we are being truly empathetic, we actually feel what they are feeling. g) Focused listening: This is 'intensive listening' for information or for transacting business. The listener is attentive and pays full concentration on what the speaker is saying.

44 NSOU l PGEL - 1&2 h) Casual listening: Often we listen to something or somebody without much concentration. This is called casual or superficial listening and is prevalent in social context when we interact with others. g) Barriers to Listening: There are certain factors which create barriers in proper listening: a) Lack of concentration and attention: Paying rapt attention what we are listening is very essential. This largely depends on the topic of the text and learner background. b) Lack of prior knowledge and proficiency: While listening to a speech, it is essential to have some prior knowledge, and this constitutes the schema and facilitates easy comprehension. c) Problems related to the message: The content of the text plays a major role in facilitating both points 'a' and 'b' stated above. d) Problems related to the speaker: The style a speaker adapts also impacts the listening. The pace, the words the speaker uses are of utmost importance in facilitating listening. e) Physical setting: The setting or the conditions surrounding the listening activity are important. There should be no external noise and the atmosphere should be conducive for proper listening. 3.7.2. Speaking Skills A) Definition

---

87%	**MATCHING BLOCK 11/83**	**SA**	Anandhakumari P.doc (D40342753)

Speaking is an interactive process of constructing meaning that involves producing and

---

receiving and processing information (Brown, 1994; Burns & Joyce, 1997). It is often spontaneous, open-ended, and evolving. The brain encodes an idea and sends signals to the mouth for proper articulation. B) Features of Speech a) Speech is immediate: Speech in most circumstances is instantaneous and the speaker is pressed for time and this condition decides many of the features of speech b) Speech is reciprocal: Speech is the most interactive of all the four skills in the sense that it involves face-to-face communication and immediate response. In such a reciprocal exchange, a speaker will often have to adjust his vocabulary and message to take the listener into account. c) Non-verbal devices of speech: Features of speech include rhythm, intonation and non-linguistic cues like sighs, silence, etc. Speech is also accompanied by non- verbal communication such as gestures and facial expressions.

NSOU l PGEL - 1&2 45 d) Normal non-fluency of speech: This results from the unprepared nature of speech. The speaker consciously and unconsciously uses certain time-creating devices like hesitations, unintended repetitions, false starts and fillers. Fillers are the insertion of sounds (umm) or words ('you know', 'I mean' etc.) to fill in the empty spaces between utterances. e) Simple structure: In general, speech is simpler in grammatical structure compared to the other productive skill i.e. writing. Spoken language uses less co-ordination and subordination. A speaker has to take account of the limited memory span of the listener and cut a long message into convenient units. C) Barriers to Speaking: Let's now discuss some of the barriers typically faced by us as communicators while speaking: · Most speakers cannot sustain spoken interaction beyond short segments in the target language · Speakers' communication is marked by frequent breakdowns · Speakers most often fail to use appropriate vocabulary needed to talk about common utterances to express their thoughts · Speakers lack various communication strategies like use of fillers, repair of communication, etc. · Speakers who cannot participate actively in conversation and remain passive listeners · Speakers attempt to translate from L1 to L2 leading to translational fallacies · Inadequate and inappropriate use of non-verbal cues to support listeners' comprehension 3.7.3 Reading Skill A) Definition "Reading is a process of constructing meaning from written texts. It is a complex skill requiring the coordination of interrelated sources of information" (Anderson, Hiebert, Scott, & Wilkinson, 1985, p. 6. Cited in Stanley, 2007.) Thus, reading is the act of deciphering and understanding a written text. B) Features of Reading: a) Reading is purposeful: There is always a reason for reading. In general, we read either for information or for pleasure. Our purpose for reading a recipe is obviously different from reading a legal document or a story. Hence, we need to define our purpose before we read something. b) Reading is selective: The type of reading we do or the way we read a text varies according to our purpose of reading. We don't read all the texts that we see or

view everyday. We quickly scan a page in the telephone directory to locate a name, a telephone number, or an address but we need to pay careful attention to each and every word in a legal document. c) Difference in reading speed: Our reading speed varies according to content and purpose. A good reader uses the minimum number of clues in the text – semantic or syntactic – to extract information they need. We all have experienced that we read a novel or a short story faster than we read a text or a study material. d) Reading is silent: Reading for comprehension is silent. Reading aloud is a specialised skill used by actors, newsreaders, anchors, but rarely by a general reader for comprehension. e) Reading is text-based: Reading comprehension is based on the text as input and may include variety of texts viz. newspaper reports, brochures, advertisements and billboards, notices, etc. f) Reading is based on comprehension: Understanding meaning of the text is integral to reading rather than the result of it. g) Reading involves complex cognitive skills: While reading we do not merely decode the message, we make predictions, draw inferences – we anticipate based on what we read. That is why reading is called "a psycholinguistic guessing game" h) Reading involves world knowledge:Comprehension and interpretation of a text involves the synthesis of the information embedded in the text along with our knowledge of the context and the topic. C) Different Types of Texts: The various types of texts that we require to read everyday commonly include the following: a) Narrative and Creative texts such as stories, novels, poems, other literary pieces b) Factual texts such as descriptions, announcements, advertisements, brochures, notices, reports, menu, and agenda, etc. c) Procedural texts sets of instructions for operating machinery or equipment, safety procedures, and emergency procedures d) Diagrammatic texts like signs, photographs, simple maps, floor plans, timetables, street directories, flowcharts, time lines, charts and tables e) Transactional texts such as memoranda, forms, business letters f) Discursive texts presenting simple arguments Different types of reading comprehension are often distinguished, according to the reader's purposes in reading and the type of reading used. The following are commonly referred to:

NSOU l PGEL - 1&2 47 a) Literal comprehension: Reading in order to understand, remember, or recall the information explicitly contained in a passage. b) Inferential comprehension: Reading in order to ûnd information which is not explicitly stated in a passage, using the reader's experience and intuition, and by inferring c) Critical or evaluative comprehension: Reading in order to compare information in a passage with the reader's own knowledge and values d) Appreciative comprehension: Reading in order to gain an emotional or other kind of valued response from a passage. D) The Reading Process: Reading is getting from the text what the author intends. It is the visual aspect of learning and contains the following steps: a) Recognition: This step takes place almost before any physical aspect of reading begins. It is the ability to say whether or not a word encountered has a particular suggested meaning. It includes recognising the script and the language. b) Assimilation: This accounts for the ability of the reader to absorb/understand what is given in the text. c) Intra-integration: This is the ability to connect different parts of a text to provide a coherent meaning. d) Extra-integration: This is the ability of the reader to relate what is read to what the reader already knows. e) Retention: It is the ability to remember things or store information for future reference. f) Recall: This step refers to the ability to retrieve the stored information when needed. E) Types of Reading:Now let's have a look into the types of reading we often engage ourselves into. In general, there are two types of reading: Intensive and Extensive reading. Intensive reading is generally at a slower speed, and requires a higher degree of understanding than extensive reading. It involves the deconstruction of a text. The aim is to get as much information as possible. By reading intensively, we read a text closely paying attention to vocabulary and grammar. Extensive reading on the other hand refers to reading to gain a general understanding of what is read. It is intended to develop good reading habits, to build up knowledge of vocabulary and structure, and to encourage a liking for reading. F) Barriers to Effective Reading:In general, most readers are likely to face the following problems: l Lack of grammatical and linguistic competence: Unfamiliar script and inability to decipher is the first major problem while reading. l Lack of motivation:Reading for information and knowledge requires motivation and discipline.The motivation is largely integrative and not instrumental.

48 NSOU l PGEL - 1&2 l Lack of concentration: A reader needs to pay close attention to what is being read and needs to do it consciously with concentration l Articulating the words and sentences loudly: Reading aloud or mouthing every word reduces the speed of reading and makes it an uninteresting task. l Finger reading: Following a line either with a finger or a pencil as you read also reduces the speed of reading. l Narrow eye span: Several readers read each word and move their heads as the text moves from left to right. This also hampers the speed of reading. 3.7.4. Writing Writing is a conscious, deliberate, and planned activity. For learning to writein L1 one need not learn words and their meaning but their coherence. One can convert his inner speech into writing without any hindrance. But, for learning to write in L2 one requires to learn consciously each and every linguistic element through instruction or proper guidance. Further, the learning experience of L1 is different from that of L2. In the process of learning L2 writing, previous experience (that is L1) may get in the way of learning of writing at all levels of L2. Writing is essentially a communicative act. We write in order to communicate our message with the reader. Thus, we write with a purpose and for a specific reader. The different purposes of writing include: l To give information (notes, notices, articles, text-books, brochures, etc.) l To entertain (short stories, novels, drama, skits, etc.) l To persuade (advertisements, leaflets, etc.) l To give opinions (editorials, reviews, etc.) The target reader may be different also. The text may be written for: l The general public (articles, reports, etc.) l A personal friend or relation (personal letter) l Business associate (official letters, business reports, etc.) l A superior/subordinate or a peer at the work place

66%	**MATCHING BLOCK 12/83**	SA	R_RAMYA SRI_English_PhD.pdf (D154535646)

The purpose of writing and the needs of the audience determine the shape of the

text and our style of writing. A) Writing and Writing Skill:Writing is a skill that demands on the part of the writer to trace the shape and size of the letters of the alphabet appropriately to form words, sentences and also convey the required meaning. It is a complex task that demands the writer's constant attention. Hence, writing is also defined as 'a thinking process'. B) Types ofWritings: In non-creative forms of writing, we can broadly identify the following kinds of writings: NSOU l PGEL - 1&2 49 a) Descriptive writing: Descriptive writing provides a verbal picture or account of a person, place, event or a thing. b) Narrative writing: Narrative writing reports an event or tells the story of something that happened. c) Expository writings: Expository writing providesdetailed information about a topic. Patterns of development within expository writing include giving examples, describing a process of doing or making something, analysing causes and effects, comparing and/or contrasting, deûning a term or concept, and dividing something into parts or classifying it into categories. d) Argumentative writing: Argumentative writing attempts to support a controversial point or defend a position on which there is a difference of opinion. e) Formal or official writings:Formal and official writings include office correspondence like notices, minutes, reports, business letters and other formal writings like letters job applications, etc. Apart from the aforesaid types, there is literary or creative writing like writing ûction, drama, skits, and poetry that reûect the writer's originality, imagination, feelings and emotions. These may not include factual events. ESL writing programmes have often been based on the assumption that novice writers should begin with the simplest mode – the descriptive writing, and gradually move to learning the most difûcult – the argumentative one. C) The Writing Process: The task of writing is a systematic process and follows a set of additive steps. These can be listed as follows: a. Planning b. Drafting c. Revising d. Editing e. Final draft. Planning is the stage when the writer can think of the topic and develop an outline or a flow chart or a synopsis of the writing to done. During the drafting stage the writer develops the points as outlined in the planning stage. The third one is revision stage; in this stage, we need to refine ideas in our compositions. Next, the editing stage the writer carefully goes through to draft to ensure there are no errors of spelling, grammar and organisation. Once this is ensured, the writer produces a final copy for the consumption of the reader. D) Difficulties in Writing:Writing is a complex skill that demands a lot of coordination. Here are a few points that we need to pay attention to while writing.

50 NSOU l PGEL - 1&2 a) Originality: A writer should attempt to express his/her thoughts in a personal language rather than copy from other sources. b) Limited resources:Writing is a developmental process. We cannot be the best of writers from the beginning. We learn by making errors, and by following the examples set by others. The less we read, the poorer we will be as writers. c) Rule bound: All writing demands a set of conventions in terms of format and style of drafting. These rules and conventions vary depending on text-type.The basic structure needs an introduction, proper development and a logical conclusion. d) Requires planning: Writing is a permanent record of events or information and hence requires proper planning before drafting and the write-up is to be meticulously packaged ensuring legibility. e) Time constraint: Good writing requires good amount of time for preparing rough drafts, editing, revising and then finally presenting the final draft. This requirement of time at times can pose a barrier. Check your progress : 4 Listening is different from hearing. Do you agree? .... What do you understand by the terms 'top-down' and 'bottom-up' process of listening? .... What are basic features of speech? .... What problems do you face as a second language speaker? .... What is Reading? What are the basic features of reading? .... How is intensive reading different from extensive reading? .... Discuss the process involved in writing. .... 3.8. Summary Our discussion in the entire unit can be summarised as follows:

NSOU l PGEL - 1&2 51 l Language ability is a set of skills and language learning is considered a skill- subject rather than a knowledge-subject as it requires more of doing or performing rather than knowing. l Language ability in its totality constitutes for basic skills – Listening, Speaking, Reading, and Writing which in short is termed as LSRW. l Listening and reading are called receptive skills or skills of comprehension l Speaking and writing are called productive skills or skills of expression l Listening and hearing are two different aural processes l Listening involves top-down and bottom-up processing l Different types of listening include: Discriminative listening, Biased listening, Evaluative listening, Appreciative listening, Sympathetic listening, Focused listening and Casual listening l Spoken language is immediate, reciprocal and is supported by non-verbal cues. l Oral interactions can be characterised in terms of routines, which are conventional ways of presenting information which can either focus on information or interaction. l The process of reading involves various steps: Recognition, Assimilation, Intra- integration, Extra-integration, Retention and Recall l Reading for comprehension calls for silent reading l Reading can be intensive (reading for information, study) or extensive (reading for pleasure) l Writing is an outcome of a writing skill which refers to the writer's linguistic ability in making use of the mechanics of writing. l The act of writing involves five stages: Prewriting, Drafting, Revising, Editing, and producing the final draft. 3.8 Reviesw Questions 1. What are some of the arguments you can put forth to establish language is a set of skills? 2. What are some of the common features that cut across all language skills? 3. How are the language skills classified and what is the basis for such classification? 4. Why is writing considered a complex skill? 5. What are some of the habits that impede reading? 6. Discuss the factors that the writing process involves. 7. how can we effectively enhance our receptive skills or capability for comprehension of language, written or spoken?

52 NSOU l PGEL - 1&2 8. What are the different types of writing or textualization in a broader sense? Write separately a note on each type. 9. Reading is a process of decoding and constructing meaning from the written texts. Discuss. 10. Summarise the four language skills. 3.10. Suggested Reading Anderson, R.C., Hiebert, E.H., Scott, J.A., & Wilkinson, I.A.G. (1985).Becoming a nation of readers: A report of the Commission on Reading. Washington, DC. The shift of attention to a scientific explanation of how language skills are acquired isrelated to the influences from linguistics as well as with psycholinguistic interpretations of human skilled behaviour. The acceptance of the skill-theory oriented language instructions has far-reaching implications for the organization of classroom work and for providing learners with quality practice conducive to the development of multiple aspects of language performance.

54 NSOU l

PGEL - 1&2 4.2

Objectives

After going through this unit you will be able to: a)

Understand the

theoretical framework of teaching listening, speaking, reading and writing. b) Examine some important concepts in teaching the four language skills. c) Understand the various sub-skills of listening, speaking, reading and writing. d) Understand the emerging trends in teaching the four skills and their integration. 4.3. Teaching Listening Skill The teaching of listening has gained significance in recent years than it did in the past. Earlier views of listening saw it as the mastery of discrete skills or micro-skills, such as recognizing reduced forms of words, recognizing cohesive devices in texts, and identifying key words in a text, and that these skills should form the focus of teaching. Later views of listening drew on the field of cognitive psychology, which introduced the notions of bottom-up and top-down processing and to the role of prior knowledge and schema in comprehension. Listening came to be seen as an interpretive process. Current views of listening hence emphasize the role of the listener, who is seen as an active participant in listening, employing strategies to facilitate, monitor, and evaluate his or her listening. 4.3.1 Sub-Skills of Listening We are aware that each language skill comprises a large number of sub-skills and the value and relevance of these sub-skills vary

| 90% | MATCHING BLOCK 14/83 | SA | S.R.Kulkarni.docx (D42808051) |

from one situation to another. Rost (1990) has identified two kinds of clusters of micro-skills of listening: 'Enabling skills' (those employed in order to perceive what the speaker is saying and to interpret

the intended meaning)

| 100% | MATCHING BLOCK 15/83 | SA | S.R.Kulkarni.docx (D42808051) |

and 'Enacting skills' (those employed to respond appropriately to the message). 1. Enabling Skills:

Enabling skills further consists of two psycho-linguistic abilities: A) Perception and B) Interpretation A) Perception i.e. recognising prominence within utterances, including: p Discriminating sounds in words, especially phonemic contrasts. p

| 100% | MATCHING BLOCK 16/83 | SA | S.R.Kulkarni.docx (D42808051) |

Discriminating strong and weak forms, phonetic change at word boundaries.

p Identifying use of stress and pitch (information units, emphasis, pause, pace, rhythm etc.)
NSOU l PGEL - 1&2 55 B) Interpretation i.e.

| 85% | MATCHING BLOCK 17/83 | SA | S.R.Kulkarni.docx (D42808051) |

formulating content sense of utterance, including: p Deducing the meaning of unfamiliar words. p Inferring implicit information. - Inferring links between

prepositions. p

Formulating a conceptual framework linking utterances, including: Recognising discourse markers (clarifying, contrasting), constructing a theme over a stretch of discourse, predicting content, identifying elements that help to form an overall schema, maintaining and updating the context.

p

Interpreting (possible) speaker intention, including: identifying an 'interpersonal' frame speaker-to-hearer; maintaining changes in prosody and establishing consistencies; noting contradictions, inadequate information, ambiguities; differentiating between fact and opinion. 2. Enacting Skills:

Enacting skills refer to making appropriate response (based on the enabling skills) including: p Transcoding information into written form (such as, notes). p Identifying which points need clarification. p

Integrating information with that from other sources. p Providing appropriate feedback to the speaker. 4.3.2.

Principles of Teaching Listening Now let's move on to studying some of the principles of teaching listening. In this context, it is important for us to note the proposition of Harmer (2007) who mentions two different kinds of listening which can be practised: Extensive Listening: It is a kind of listening which the students often do for pleasure. They can enjoy listening to because they more or less understand them without the intervention of a teacher or course materials to help them. This kind of listening is very important from the motivational point of view, because it increases dramatically when students make their own choices about what they are going to listen to. Intensive Listening: It is the one in which "students listen specifically in order to study the way in which English is spoken. It usually takes place in classrooms or language laboratories, and typically occurs when teachers are present to guide students through any listening difficulties, and point them to areas of interest." Penny Ur (1996), in this regard, suggests that it is important to work on the development of listening comprehension, and, hence, teaching listening can be categorised into two modes. The first one is teaching linguistic nuances like phonemic variations, discrimination of similar sounds in words, recognising word boundaries, recognising morphemes, distinguishing grammatical and lexical items in sentences. The second one is teaching how to listen in a context, how to deduce meaning of an unfamiliar word, how to recognize

theme over discourse. These two modes are important and inseparable for teaching of listening comprehension. We should note that fluent listening results only from wide exposure to the target language. Listening, like other language skills, is acquired only by participation. Hence, teachers should enable the students to listen to native speakers from the beginning. 4.3.3. Selecting Listening Tasks & Materials An important aspect to consider when selecting listening tasks is the one mentioned by Hadfield (2008). He proposes the selection of texts to be made according to students' interests and level of proficiency.' He also proposes to balance the listening text with the tasks, which means that the listening text should be "slightly above what can be easily understood by our learners that can be balanced with a relatively easy task or vice versa." Next important factor is the selection or developing materials. In developing or choosing materials for listening appropriate to students, Morley (1991) suggests three important principles: relevance, transferability/applicability, and task-orientation. The materials must be relevant to the interests and level of the students of the class. The content, structures, and words used in the listening materials should be of such a nature that these are transferable and can be utilised in other classes and outside the classroom. Task-orientation materials, on the other hand, focus on performance based on what is presented as listening material viz. writing notes, drawing a map, summarising information, etc. In respect of classroom teaching principles Nunan and Miller (1995) proposes developing listening skills under seven major headings: Developing cognitive strategies (listening for the main idea, listening for details, and predicting); developing listening with other skills (listening and speaking, listening and pronunciation, and listening and vocabulary); listening to authentic material (such as weather reports, television daytime dramas, news, discussions, advertisements, etc.); using technology (phone mail, recording messages, etc.); listening for academic purposes, and listening for fun. NSOU l PGEL - 1&2 57 What are some of the considerations of selecting tasks and materials for developing listening skill?

....

.... 4.4. Teaching Speaking Skill Let us now focus on the teaching of speaking skills. Speaking skill deserves as much meticulous attention e as other language skills are concerned, in both first and second languages since in ESL classrooms, teaching speaking skills plays a significant role for the learner's good oral achievement (Bygate, 1987). Language learning today is regarded less as an 'acquisition of structure' than asthe learning of items of language uses. Thus, the methodologies for language teaching to be adopted by us need to be based on the linguistic insights as to the nature of the language and also on the socio-psychological insights as to the processes involved in its use; this can effectively result in the development of communicative competence of the learners. Therefore, it is obvious that as teachers. we need to have a clear notion of the concept of Communicative Competence. In "

100%	**MATCHING BLOCK 21/83**	**SA**	R.Brammathevan PhD Thesis English.doc (D122388163)

Theoretical Bases of Communicative Approaches to Second Language Teaching and Testing" (Applied Linguistics, 1980),

Michael Canale and Merrill Swain identified four components of communicative competence. According to them Communicative Competence is the knowledge of not only something that is formally possible in a language, but also the knowledge of whether it is feasible, appropriate, or to be done in a particular speech community. It includes: a) Linguistic competence (also formal competence), that is knowledge of the grammar, vocabulary, phonology, and semantics of a language b) Sociolinguistic competence (also socio-cultural competence), that is, knowledge of the relationship between language and its non-linguistic context, knowing how to use and respond appropriately to different types of speech acts, such as requests, apologies, thanks, and invitations, knowing which address forms should be used withdifferent persons one speaks to and in different situations, and so forth. c) Discourse competence which refers to knowing how to begin and end conversations; it deals with cohesion and coherence in different conversational contexts, in terms of selection of style, and bringing about a unity in the utterances or a written text. d) Strategic competencerefers to compensatory strategies in case of grammatical or socio-linguistic or discourse difficulties, such as the use of reference sources,

58 NSOU l PGEL - 1&2 grammatical and lexical paraphrase, requests for repetition, clarification, slower speech, or problems in addressing strangers when unsure of their social status or in finding the right cohesion devices. It is also concerned with such performance factors as coping with the nuisance of background noise or using gap fillers. 4.4.1 Sub-Skills of Speaking Let's now study the sub-skills of speaking that are required to be developed in order make the learners competent speakers. The sub-skills of speaking include the following: l Fluency: It refers to the features which give speech the qualities of being natural and normal, including native-like use of pausing, rhythm, rate of speaking, and use of interjections and interruptions. l Accuracy in terms of the syntactic and semantic features of the language l Accuracy in respect of segmental and supra-segmental features l Performing the desired language functions viz. requesting, commanding, etc. l Appropriate in respect of socio-cultural and pragmatic context of communication l Turn-taking skills l Speaking at relevant length l Responding and initiating conversations l Ability to apply communication repair and repetition strategy l Ability to use a wide range of words and grammatical features as per requirement l Using the appropriate discourse markers l Providing the appropriate non-verbal support 4.4.2 Principles of Teaching Speaking Let us now come to understanding some of the fundamental principles of teaching speaking skills. Littlewood (1992) proposes two significant principles: a) teaching speaking as a skill in the classroom and b) developing speaking skill through exposure and use. a) Teaching/learning speaking as a skill: Within this framework there are three main aspects: l Teachers need to make learners aware of the key features of the target performance, so that they can create the mental plans which are necessary for producing it themselves. l Teachers need to provide learners with practices in converting these plans into actual behaviour so that in due course the basic concept plans can operate automatically, in response to higher level decisions. These two aspects of teaching/ learning help develop the cognitive and behavioural dimensions necessary for

NSOU l PGEL - 1&2 59 individual components. Littlewood calls these components "part-skills" of the total skill. The particular skills of communication that learners are to practise include: pronouncing new sounds, selecting vocabulary items, producing grammatical structures, expressing specified communicative functions, using devices for managing conversations. l Language learners must be capable of expressing an idea or taking part in a conversation by selecting particular structures or vocabulary, not only as part of a controlled activity in which their focus is on the items in question, but also in response to a particular communicative intention which arises, unpredicted, during interaction. This component is called "Total-Skill" or "Whole-Task" practice. It requires the various skills to be integrated into a systematic network, so that the performer can select whichever ones are needed in order to carry out the plans conceived at higher levels. In the terminology used by W.M Rivers (1983) the first two components listed above make up the "skill-getting" stage of language learning and the third is the "skill-using" stage. Skill-getting comprises cognition and production (or pseudo communication). Skill-using involves interaction (both in the reception and expression of messages). b) Developing speaking skills through exposure and use: The following are the conditions that are necessary for developing oral competency: l The most obvious condition is that there must be some kind of exposure to language input so that the natural learning mechanisms have something to work on. For the sake of our learners in our class rooms and outside the classrooms, we have to expose them to English through clearer pronunciation, slower pace, simpler structures and common vocabulary. l Many experts believe that it is interaction with other people, rather than simple exposure to language, that plays the most crucial role in enabling acquisition to take place. l Natural learning depends on the learner's active engagement with the language and so motivation is an important factor. A child brought up in a multilingual cosmopolitan setting will pick up a language faster than a child brought up in a monolingual setting. Thus, the three basic conditions of natural learning are exposure to the language, interaction with other people and the need to communicate. This account of natural language learning can be described with the help of the following diagram Figure 4.1):

60 NSOU l PGEL - 1&2 Figure 4.1. (Littlewood, 1992) It is clear to us that both the skill-learning model and the natural learning model have provided the foundations for teaching approaches which have been successful in the classroom. As each kind of learning has its useful contribution to make in the classroom it would be desirable to look for ways of integrating them in a broader framework. Thus, Littlewood represents the nature of, and possible relationship between, these two types of learning in the following disam (Figure 4.2): (Skill learning) (Natural learning) Input from instruction Input from communication | | (conscious learning) (subconscious acquisition) | | "Learnt items" "Acquired system" | (may enter, through use) | (increasing degrees of (increasing degrees automaticity) of "correctness") Figure 4.2 (Littlewood, 1992)

Check Your Progress : 2 What do you understand by the term Communicative Competence?

....

.... Discuss the implication of Littlewood's concept of skills-learning and natural-learning approach in developing speaking skills.

....

.... 4.5. Teaching Reading Skill Traditionally, the purpose of learning to read in a language was to appreciate literature in that language. Reading materials and texts were also literary texts. Since then language teaching approaches and methods have moved towards development of skills. The current communicative approach to language teaching has redefined the role of reading and also the type of texts which can be used for developing reading skills. We, the teachers play a significant role in developing reading skills of learners. As teachers we need to help them to read in diverse ways and use sub-skills that will help them to improve and understand what they are reading efficiently, (Hadfield, 2008). 4.5.1 Sub-Skills ofReading In Teaching by Principles (1994) Brown lists fourteen micro-skills that mature readers should employ in interpreting a text: 1. Recognise the distinctive graphemes (letters) and orthographic (written) patterns of English 2. Retain chunks of language of different lengths in the short-term memory 3. Recognise a core of words, and derive meaning from word order patterns 4. Read what is written at an efficient rate of speed according to the purpose 5. Recognise grammatical word classes (nouns, verbs, etc.), systems (tense, agreement, pluralisation, etc.), patterns, rules and elliptical forms 6. Recognise that a particular meaning can be expressed in different grammatical forms 7. Recognise cohesive devices in written discourse and their role in signalling the relationship between and among clauses

62 NSOU l PGEL - 1&2 8. Recognise the rhetorical forms of written discourse and how they are significant for the way a reader interprets these forms 9. Recognise the communicative function of a written text, according to form and purpose 10. Work out context that is not explicit (or obvious) by using background knowledge 11. From events, ideas, etc. described, work out links and connections between events, arrive at an understanding of causes and effects, and recognise features of the text such as main idea, supporting ideas, new information, generalisation and exemplification 12. Distinguish between literal and implied meaning 13. Detect culturally specific information and understand it by placing it in a context of the appropriate cultural schemata 14. Develop and use a wide range of reading strategies such as skimming, scanning, detecting discourse markers, guessing the meanings of words from context, and activating schemata for the interpretation of texts. 4.5.2 Selection ofTexts and Tasks Selection of reading texts is a crucial aspect of developing reading skills. We judiciously choose the texts for the learners considering certain factors. Hadfield (2008) mentions three important aspects to consider when teachers choose texts for classroom use: One of them is that texts should be interesting and motivating. It is obvious that learners will learn better if the reading material engages their interest. Being appropriate to learners' level is another aspect. In general, the intensive reading texts worked on in class should be slightly above learners' level. If everything is easy for them, they will not be practising reading skills. On the other hand, extensive texts should be slightly below learners' level so that they can read fluently, for pleasure. Finally, to have a variety of different text types is also an aspect to consider when selecting reading tasks. Some students need to have a range of different kinds of texts and it is a good idea that teachers include some authentic texts. Texts with cultural references and inputs are also quite beneficial. Thus, editorial of a newspaper, letters to the editor, advertisements, film reviews, etc. can be quite handy materials for the teachers. Another crucial aspect of teaching reading skill is the selection of appropriate reading tasks and exercises. Different kinds of texts offer opportunities for different kinds of exploitation. Traditionally, texts have been exploited by means of questions. However, recent trends have adopted more flexible and creative approach to supplement questions. Thus, apart from literal, inference and evaluation questions, tasks involving non-linguistic

responses e.g. drawing figures, plotting or constructing a map from given description, matching exercises, sequencing, sign-post questions, etc. can be effectively used to develop reading competency. 4.5.3 DevelopingGood Reading Habits As competent language teachers, we need to inculcate good reading habits within our learners. Some of the good reading habits include: a) Reading a lot and reading all types of texts for pleasure and profit and enjoying doing so. b) Reading silently and not mouthing or whispering while reading. c) Avoiding finger reading. d) Trying to read in chunks and not attempting to read every syllable or word in a sentence; reading in small segments to construct meaning. e) Not getting stuck with unfamiliar lexical items; rather, inferring through linguistic and contextual clues. f) Applying various strategies of reading considering the purpose and time duration of reading. g) Trying to predict while reading what follows. h) Applying one's own known knowledge to gain full entrance into textual meanings. Check Your Progress : 3 Which sub-skills of reading would you like to develop among your students and why? .... 'A reader who reads in volumes is a good reader'. Comment. .... 4.6. Teaching of Writing Skills As teachers we experience that students are generally reluctant to writing mainly because writing needs more deliberate involvement than reading, and students are afraid that, what they write may be full of errors in a language in which they may not have attained even partial mastery. They may apprehend facing difficulty in composing their thoughts in English which is usually a second or foreign language to them. We have already

discussed the areas of difficulty in writing in the previous unit. Sometimes they think in their native vernacular and try to translate it into English resulting in errors of direct translational flaws of syntax and grammar as well as sentence structure and meaning. Since standards of writing are more stringent than otherskills, students need to be trained to proceed from writing short passages to longer essays, both creative and analytical. 4.6.1 The Teaching Perspective From a teacher's point of view writing can be viewed and taught as a developmental process as is reading. It can also be viewed from four perspectives (Bowen 1985): l Mechanics: Emphasised in the low beginner stages of language skills acquisition (beginning); l Extended Use of Language: Emphasised in the high beginner and low intermediate stages of language skills acquisition (elementary); l Writing with Purpose: Emphasised in the high intermediate and low advanced stages (intermediate); and l Full Expository Prose: Emphasised in the terminal stage (advanced). Further,Raimes classifies approaches to teaching writing into five types: l controlled to free writing approach l free writing approach l paragraph pattern approach l grammar-syntax-organization approach l communicative and process approaches. In the controlled to free approach, "students are first given sentence exercises, then paragraphs to copy or manipulate grammatically, for instance, changing questions to statements, present to past, or plural to singular. They might also change words or clauses or combine sentences" (Raimes 1983).In the free writing approach, students are asked to "write freely on any topic without worrying about grammar and spelling for five or ten minutes. The teachers do not correct these short pieces of free writing; they simply read them and perhaps comment on the ideas the writer expressed" (Raimes 1983). In the paragraph pattern approach, "students copy paragraphs, analyse the form of model paragraphs, and imitate model passages. They put scrambled sentences into paragraph order, they identify general specific statements, they choose or invent an appropriate topic sentence, they insert or delete sentences" (Raimes 1983). In the communicative approach to writing, students are asked to assume the role of a writer who is writing for an audience to read. Whatever is written by a student is modified in some way by other

students for better communicative effect. In the process approach to writing, in contrast to the product-approach students "move away from a concentration on the written product to an emphasis on the process of writing" (Raimes 1983). They ask 'not only questions about purpose and audience, but also the crucial questions: How do I write this? How do I get started?" (Raimes 1983). Thus, the process-oriented approach to writing emphasises the composing processeswriters make use of in writing (such as planning, draft in gandrevising) andwhichseekstoimprovestudents'writingskills throughdeveloping their use of effective composing processes.This approach is sometimes compared with aproduct- oriented approach or aprose model approach,that is, one which focuses on producing different kinds of written products and which emphasis esimitation of different kinds of model paragraphs or essays. It is to be noted that a proper blend of these approaches to writing will give best results. For example, the controlled to free approach to writing helps us to focus on proper mechanics in the initial stage, whereas communicative approach to writing will be very effective once students have some control over the mechanics and have acquired a good number of words and sentence structures to help match these with their thoughts. 4.6.2. Sub-Skills of Writing Like the other language skills writing constitutes certain sub-skills. No matter whatever approach you adopt as a teacher, you would require to develop the sub-skills of the learners in order to make them competent writers. These sub-skills are as follows: l Mechanics - handwriting, spelling, punctuation l Word selection - vocabulary, idioms, tone l Organization - paragraphs, topic and support, cohesion and unit l Syntax - sentence structure, sentence boundaries, stylistics, etc. l Grammar - rules of verbs, agreement, articles, pronouns, etc. l Content - relevance, clarity, originality, logic, etc. l The writing process - getting ideas, getting started, writing drafts, revising etc. l Purpose - the reason for writing, justification Almost a similar scheme of sub-skills has been excellently reflected in Ann Raimes's (1983) representation of what goes into a good write up (Figure 4.3):

66 NSOU l PGEL - 1&2 PRODUCING A PIECE OF WRITING Figure 4.3 (Raimes, 1983) Classes on writingshould have the potential to help consolidate and improve the students' speaking and reading skills. However, it is important to remember that writing is an important skill which can be taught as an end in itself, although none of the language skills is not essentially different from the other language skills. Focusing on writing as an independent skill helps us identify the specific problems faced by the learners, and identify the specific needs of the learners relating to writing. Mechanics of writing are distinct from the mechanics of other skills such as speaking and reading. While reading involves seeing and pronouncing, writing involves association of sounds with mental composition of thoughts and their orderly presentation, and bodily movements. Check Your Progress : 4 Discuss the various sub-skills of writing would you like to develop as a teacher? ....

....

NSOU l PGEL - 1&2 67 How does Ann Raimes classify the various approaches to writing?

....

.... 4.7. Integrated Approach to Language Teaching Let us now focus on the integrated teaching approach of language skills. In the past decades, one or two of the four traditional skills were given prominence in EFL classes where one or two skills were dominant over the others. Oxford (2001) describes this approach as segregated-skill approach saying that such segregation is reflected in traditional EFL/ESL programmes that offer classes more focused on segregated language skills. Yet, segregated- skill approach was found to be contradictory to the natural way of acquiring a language and there has been a movement to integrated approaches that encourage the teaching of all four skills within the general framework. In real life, language skills are rarely used in isolation; it is a rare situation where the four skills occur in mutual segregation.For instance; a person reads a letter and replies it by writing after reading, and may possibly talk about it after writing it. Two or more language skills are generally integrated in everyday language use. Teaching skills in isolation leads to distinction between classroom and real life language use. Thus, in natural language learning, skill integration is inevitable and in the language classroom skills need to be practised in integration. We should note that there are several benefits of using an integrated-skills approach in language teaching. First, integrating language skills provides more purposeful and meaningful learning at all levels.Besides, it contributes to coherent teaching and to better communication. It also brings variety into the classroom with teachers enriching the classroom instructions by integrating language skills cooperatively. By integrating the skills, students learn to operate the language and they can easily transfer the acquired knowledge to the other areas (Rivers, 1981).Further, segregated skill approach never quite completes a lesson. According to Oxford (2001), one of the most relevant advantages of using the integrated-skill approach is that it "exposes English language learners to authentic language and challenges them to interact naturally in the language." She also comments that exposing students to communicative situations helps them to get an idea of the "richness and complexity of the English language." Oxford (2001) further states that there are two types of integrated-skill instructionwhich are Content-Based Language Instruction and Task-Based Instruction: In Content-Based Instruction, students practice all the language skills in a highly integrated, communicative

68 NSOU l PGEL - 1&2 fashion while learning contents such as science, mathematics, and social studies. Content- based Language Instruction is valuable at all levels of proficiency, but the nature of the content might differ by proficiency level. For beginners, the content often involves basic social and interpersonal communication skills, but past the beginning level, the content can become increasingly academic and complex. In Task-Based Instruction, students' basic pair work and group work are often used to increase student interaction and collaboration. For instance, students work together to write and edit a class newspaper, develop a script, enact scenes from a play, or take part in other joint tasks. More structured cooperative learning formats can also be used in task-based instruction. Task-based instruction is relevant to all levels of language proficiency, but the nature of the task varies from one level to the other. Check Your Progress : 5 Do you think that integrated approach to language teaching is effective? If yes, why? .... What are some of the considerations for integrating language skills while teaching? .... You would study further aspects of teaching the four language skills (LSRW)in detail viz. the various approaches, methods and techniques, tasks & activities, materials, lesson plans for developing the skills and their sub-skills in the subsequent modules. 4.8. Summary In this unit we have studied the following: l The various theoretical conceptualisations of teaching listening, speaking, reading & writing skills as conceived by experts l The sub-skills of listening which include '

| 100% | MATCHING BLOCK 22/83 | SA | S.R.Kulkarni.docx (D42808051) |

Enabling skills' (those employed in order to perceive what the speaker is saying and to interpret

the intended meaning)

72 NSOU l PGEL - 1&2 Module - 2 p Listening Skills and Speaking Skills Unit : 5 p Listening Skills 1 Structure 5.1 Introduction 5.2 Objectives 5.3 Listening types and styles 5.4 Stages of the Listening Process 5.5 Sub skills of listening 5.6 Barriers to effective listening 5.7 Teaching Listening Skills 5.8 Summary 5.9 Review Questions 5.1 Introduction Listening skill shave an important role in effective communication. It is the ability to accurately receive and interpret messages in the communication process. Without effective listening, messages are not heard properly and easily misunderstood. As a result, communication breaks down. Listening skill takes much of our time. Adults spend 45% of their engaged time for listening, 30% for speaking, 16% for reading and 9% for writing. Listening is thus used more than speaking, reading and writing. 5.2 The objectives of this unit are: a) Get an introduction to the types and styles of listening b) Understand theoretical aspect of listening skills c) Understand the sub skills of listening d) Learn how listening skills can be taught in a classroom Hearing is accidental and automatic response to contextual sound(s). For example, we are surrounded by sounds of vehicles, construction workers. We hear those sounds and ignore them. Hearing is accidental, involuntary and effortless. Listening is purposeful and focused. It is concentrated attention with the purpose of understanding the meanings

expressed by the speaker. It requires effort and motivation. Thus, listening is focused, voluntary and intentional. For many years, listening skills was not regarded as a skill which needsto be taught in a classroom. And it was assumed that listening skills could be acquired through exposure. The emphasis was on the productive skills. The relationship between the receptive and the productive skills was not well understood. Today the role of listening comprehension is determined by the development of theories of the nature of language comprehension and carefully designed listening courses in language programs. Therefore listening has to be acquired and deserves greater attention in ESL programs. 5.3 Listening types and styles Listening is of three types in interpersonal communication. The types are: informational, critical and empathetic.Informational listening is listening to learn. We seek certain information which we appreciate, especially those which meet our needs and goals. Critical listening is listening to evaluate and analyse. We make judgements about what the other person is saying. We assess the truth of the message; judge against our values, asses them as good or bad, worthy or unworthy. Therapeutic or empathetic listening is listening to understand feeling and emotion. In therapeutic listening, the listener has a purpose, of empathizing with the speaker and helps the speaker understand, change or develop in some way. Task 1: Justify T/F from the following statements: 1. Critical listening can also be called evaluative, judgmental or interpretive listening. 2. Informational listening is also known as content listening and appreciative listening. 3. Biased listening is a kind of critical listening. Your Answer:

74 NSOU l PGEL - 1&2 Each type of listening has a different goal. The goals of a listener that define the types of listening are: a) Appreciative:the appreciative goal of listening is seeking information which the listener can appreciate and meet the needs of the listener. Listening to music, poetry or stirring words in speech have appreciative goals. b) Empathic: The empathic goalof listening is to show concern to identify with the speaker and understand the situation in discussion. The focus is on the speaker and on the speaker's perspective. Along with the grasp of the literal meaning of the words, the goal is to try to get the feelings that the speaker is expressing. For example, if one of your batch mates is having conflict with another batch mate, you can acknowledge one person's stress while also considering that the other person has his/her own challenges and is likely to be offensive. c) Comprehensive: The comprehensive goal of listening is to actively participate in the communication process. The focus is on the message. Taking notes of the speaker's main points, identifying the structure of speech and the support evidences are listener activities for this goal.Watching news, listening to a lecture, or getting directions for reaching a destination are examples of comprehensive goal. d) Critical: the critical goal of listening is to evaluate or scrutinize what is being said. The focus is first on the speaker and then on the evaluation of the speaker's message. The listener questions 'what is the speaker trying to say?'. For example, if there is a debate, and the listener need to decide who spoke well, the listener uses critical listening goal. A listening style is a set of attitudes and beliefs about listening. It the manner in which an individual attends to the message of another person. There are four different styles of listening. These listening styles are people-oriented, action-oriented, content-oriented and time-oriented. The people-oriented listener can tune into the speakers emotions, feelings and moods. These listeners look out for common interests and build relation with the speaker.They are more attentive to the speaker than to the message. Action- oriented listeners appreciate clear, easy to follow, straightforward and error free messages. They are primarily interested in what the physical actions a speaker wants the listeners to engage in. Content-oriented listeners favor technical information. They are interested in the meaning and credibility of the speaker's message. These listeners form judgements after listening to all the details.Time-oriented listening is the opposite of content-oriented

listening. These listeners are efficient with use of time. They are not concerned with the details and want to get to the point quickly. They pay attention to messages that are short, concise and of limited commitments. Task 2: Identify the learning style from the following (A-H): People oriented A. I ask questions to help speakers get to the point more quickly. B. I am frustrated when others don't present their ideas in orderly, efficient way. Action oriented C. When listening to others, I quickly notice if they are pleased or disappointed. D. I prefer to hear facts and evidence so I can personally evaluate them. E. I become involved when listening to the problems of others. Content Oriented F. When in a hurry, I let others know that I have a limited amount of time to listen. G. I interrupt others when I feel time pressure. Time Oriented H. I like the challenge of listening to complex information. Your Answer:

5.4 Stages of the Listening Process The listening process is an interactive process, not a passive skill. It also involves two kinds of cognitive processes. Top-down and Bottom-up.These two processes can occur simultaneously. The top-down processing suggests that the listener constructs the original meaning of the received sounds. It is a reconstruction process where the listener uses prior knowledge of the context and situation to decipher the meaning of the spoken discourse. The bottom-up is a listening process of decoding sounds that the listener hears in a linear fashion. Beginning from phonemes, the decoding is liked to words, phrases, chunks of utterances and finally to texts. Messages can be stored as one sound, one word, one phrase and one utterance. The listening process includes four stages. These are: Receiving, Understanding, Evaluating and Responding. In the Receiving stage, the listener hears a message that is been sent by a speaker. Receiving is the intentional focus on hearing the speaker's message. The primary tool of the receiving stage is 'the ear'. In the Understanding stage, the learner attempts to learn the meaning of the spoken discourse (verbal and non-verbal language) the speaker is trying to communicate.Learning the meaning of the message is not always easy. This is the stage of shared meanings between the speaker and the listeners. In this stage the listener determines the context and the meanings of the words. Before getting the meaning of the message it is difficult to focus on what the speaker is saying. For example, if you walk in a lecture class halfway through, you may get the words and sentences that are in the lecture, but you may not understand immediately, what the speaker is talking about – the main point, a side note or a digression into details. In the Evaluating stage, the listener retains the key points of the speaker's message using memory or via note taking. The message collected from the speaker is evaluated quantitatively and qualitatively. Evaluating helps in forming an opinion of what is heard by a listener and develop a response. In the Responding stage the listener responds with brief verbal affirmations like 'I see', 'I know', 'sure ',' Thank you' or 'I understand' etc. as well as with non-verbal reactions. Non verbal reactions are gestures (nodding, making eye contact, tapping a pen, grimacing) and body languages. The speaker looks for responses from the listener to determine if the message delivered has been understood. When the listener responds verbally, the speaker and listener roles are reversed. Responding adds actions to listening process.

5.5 Sub skills of Listening Listening for general understanding–This sub skill of listening train learners to grasp the main points or general information in an audio. Learners when stuck up on a detail, an unknown word or phrase miss outthe bigger picture. The activities on Listening for general information usually consist of a) social dialogues between two people (giving personal details for: application form, for booking a ticket), b) a monologue on a social subject, c) a discussion between two or four people and d) a formal lecture. The learner works on a set of tasks framed on these audio. Listening for specific information – specific or factual information consists of a name, a place, an object, a profession, a number or a quantity. Before listening and while listening, the learner needs to have an idea of the listening discourse. Listening to a song / story and fill in gaps are some of the activities in listening for specific information. Predictive listening- prediction is an activity, in which the learners predict what they are going to hear before listening to a text. They predict what vocabulary they might hear and what kind of emotions the speaker might have felt. Then they listen to the discourse to confirm the predictions. For example, an activity, in which the learners listen to descriptionsof an unnamed and well known people and predicts who is being talked about. Listening for pleasure- The purpose of this sub skill is listening for comfort, enjoyment, or satisfaction. Appreciative listening is listening for pleasure. Examples of this sub skill are listening to music or listening to a comedy routine. An activity of listening for pleasure is listening to two versions of a story to identify differences. Inferential listening-the sub skills of listening when the listeners have to reach a conclusion after listening to an information. The purpose is to infer the meaning of the message. This meaning is inferred using clues and prior knowledge about the situation to work out the meaning of what one hears. Let us look at an example. Suppose you are a tourist in your country whose regional language you do not speak. In a restaurant you hand over your card to pay the bill, but the server seems to say something apologetically. Even though you do not understand the language, you can conclude that the restaurant doesn't take credit cards and you need to pay cash. This is inferring meaning, using clues and prior knowledge about a situation to work on the meaning of what is heard. An activity of inferential listening is listening to discourses on different people talking without informing the topic and then inferring on the topics from the listening discourse.

Intensive listening- classroom listening activity is intensive listening. The listeners focus on a certain detail, where the motivation is having to answer a certain question on a listening exercise or text. A common activity on intensive listening is listening to instructions and signpost a map. The advantage of intensive listening activities is that the learner can n it at individual pace and go back and forth as needed to complete the task. The purpose of intensive listening is to prepare the learners for reading other texts on their own, using bottom up processing. These activities require patience and time. The intensive listening comprehension is the building block in developing overall listening skills. Task 3: Follow the map and label all the buildings. Find the sub skills of listening involved in the activity. 1. The Mall is next to the Cinema Hall. 2. The Police Station is on the corner of two main roads. 3. The bank is next to the Girls' School. 4. The telecom office is on a wide street. 5. The grocery is at the corner, on the same street from the Auto stand.

6. The ATM is opposite to the Post office. 7. The library is a long walk from the pond. Your Answer:

5.6. Barriers to Effective Listening

Let us discuss the barriers of listening. In order to improve the process of active listening, this would be effective. A listening barrier is created if one keeps thinking on how to respond within the talk. This activity distracts us from fully concentrating on the whole message. This barrier is getting ready to speak or thinking about counter argument. The second barrier is daydreaming. The listener's mind is occupied with some other thoughts, other than what the speaker is saying. The third barrier is connecting to the speech and reflecting on the listener's previous experiences. All the attention of the listener shifts on this recap situations. The fourth barrier to effective listening is not asking questions. Asking questions allows the listener to fill in the gaps in the mental construction of the listener developed during the message. Lapse of memory is the fifth barrier. This reduces information retention. Memory lets the speaker to identify the listening context of you have heard before.

5.7 Teaching Listening Skills

Active listening skills can develop when both, the teacher and the learner(s) maintain eye contact, listen for total meaning, and ask questions. A part of listening skill is to understand whether the learner could comprehend a certain topic or concept. It's important to ask for clarifications. Many of our learners are unsure and shy to ask questions. The teachers can encourage learners to get involved and ask questions if they do not understand

a part of the lesson. Maintaining eye contact is important to keep away wandering minds during a lesson. The learner's eyes should be focused on the instructor, maintaining eye contact where ever possible. Listening for meaning is a form of active listening. Attentive and active listeners focus on the words and on word intentions in an interpersonal communication. A listening discourse has a central meaning and other details meant to clarify meaning. At first, the learner can develop on discerning the central meaning and then to the anecdotes, explanations and other details of clarification. Link past and current learning and learning not to get distracted are two other techniques of teaching listening. Learners learn best when they can link what they have learnt in the past with what they are currently learning. As learners are listening to a new material, they can be asked to situate what they are learning in the context of what they've previously learnt from their native language. If the teacher/instructor suspects that there are gaps in their learner's knowledge, then, the listening can be preceded by schema-building activities to prepare learners for the listening task. Learning not to get distracted is important for staying focused and attentive. For this, the distracting devices like mobile phones or tablets are put away. Learners also put aside excessive materials from the courses that may drift attention from the current listening activity. Elimination of distraction helps the learner to stay focused on listening tasks. Adjust your note taking style to the lecture. Effective listeners adapt their note taking to the teaching. Learners need to be conscious on developing strong note taking skills. Writing down every word of the speaker and concentrating on fascinating tidbits of information are two weakness of note taking. Efficient note takers develop good habits, which strengthen listening skills. These are learning to concentrate on the speaker's main ideas and supporting materials and using key-word outlines to summarize the speaker's message.

5.8 Summary

In this unit, we got introduced to how to develop Listening Skills, its theoretical concepts. The sections for developing listening skills include types and styles of listening and stages in the listening process. Teaching listening sub-skills require selection of suitable materials and activities. We will learn on them in the next unit.

5.9 Review Questions

1. State the differences between listening and hearing. 2. How are listening skills taught? Give an illustration describing a specific classroom context. 3. Why do listening styles types have different goals? Discuss with illustrations. 4. What are the barriers of listening according to your learning experience? What skills did you develop to overcome them? 5. Discuss the stages of the listening in top-down and bottom-up processing. 6. Can you relate the sub-skills of listening to the different listening types? Why or Why not? 7. Discuss activities for teaching predictive and inferential listening. 8. "Listening styles different from listening types." Do you think so? Justify your answer. 9. How is intensive listening taught? Discuss examples from real life situations. 10. Discuss the response stages in different styles of listening.

82 NSOU l PGEL - 1&2 Unit - 6 p Listening Skills – 2 Structure 6.1. Introduction 6.2. Objectives 6.3 Activities on active Listening-1 6.3. Activities in active Listening -2 6.4. Lesson Plan on Listening Skills 6.5. Activities on Lesson Plan 6.6. Review Questions 6.7 References 6.1 Introduction In Unit 5(Listening skills-1), we have discussed different types and styles of listening. This unit focuses on the activities. We as teachers expect our learners to listen attentively to lectures and assignments. To get the learner's attention it is necessary to teach listening skills. Effective listeners let the speaker(s) know that they have been heard and encourage them to share their thoughts and feelings. The non-verbal cues of the listener are: maintaining eye contact, nodding and smiling or agreeing by saying 'yes'.In the previous unit we have discussed the components of active listening. These are: concentration, understanding, responding, and remembering what to say. Research says that most of us are poor and inefficient listeners and we remember less than 50% of what we hear. 6.2 Objectives The objective of the unit is to introduce you to l Activities on effective listening l · Activities on listening and speaking skills l Lesson Plan on Listening Skills The cognitive characteristics of active listening are inquiring, paraphrasing and summarizing. There are many benefits to active listening and there are flaws as well. Active listening strengthens patience, makes one approachable (minimizes misunderstandings, errors, mistakes, communication gap and builds strong a conversation), increases competence and knowledge (diffuses conflict and helps to understand and comprehend the message / discussion better) andhelps to detect and solve problems.

NSOU l PGEL - 1&2 83 Active listening doesn't include: pretend to pay attention, being stuck in your thoughts, ignoring what is not clear and asking irrelevant details. A problem of active listening is disruption. The speaker faces the challenge of addressing the point raised by the listener. It makes the speaker waste a lot of time and delivers a low-quality speech which may not serve the intended purpose. Task 1: List 5 benefits of active listening in your Workplace. Your answer: 6.3 Activities on Active Listening-1 Task 2: Point out the 'Signs of active listening'(Smile, eye contact, posture, and distraction) from the following sketches: Sketch 1:

84 NSOU l PGEL - 1&2 Your answer: In sketch 1, the man on the left has a gesture that indicates superiority and arrogance towards the man sitting opposite. He attempts to block the person in front of him, from sight. His head is tiled back to 'look down his nose' at him. He is defensive as his knees are held tightly together and he is holding a wine glass with both hands to form a barrier. The man in the middle is excluded from the conversation of the other two men. He seems aloof with his thumbs-in-waistcoat gesture. He is leaning back and sitting with his legs apart. His head is in neutral position. The man on the right has heard enough and is ready to leave. His foot and body are pointed towards nearest exit. He is gesturing disapproval, the head is slightly down, and eyebrows and corners of his mouth are also turned down. Task 3: Discuss the signs of active listening from sketch 2.

NSOU l PGEL - 1&2 85 Your answer: The man on the left is using gestures to convey openness and honesty, open palms, head up, foot forward, coat unbuttoned, arms and legs apart, smiling and leaning forward. However, his message is not getting across. The man and the women he is talking with are not convinced by his words. The woman is in defensive gesture, sitting back with legs crossed, partial arm-barrier and a clenched fist. She is using critical evaluation gesture, hand to face and her head is down. The man is using raised steeple gesture showing that he is confident. Thus the signs of active listening are discussed from facial and body gestures. These gestures speak on our activities and feedbacks during a coversation. There are two other sketches, sketch 3 and sketch 4, which are on tense atmosphere and mirrored gestures. Discuss these pictures in the following tasks. Task 4:Discuss the signs of active listening from sketch 3.

86 NSOU l PGEL - 1&2 Your answer: The three men in the picture are in a tense atmosphere. All of them are sitting back keeping maximum distance from each other. The man in the right has negative gestures and is causing problem for the other two men. During his conversation, he's using deceit gesture, the nose touch; and defensive gesture with partial arm barrier. The right arm has crossed the body. He is not concerned about the other two men opinion as he has leg-over-chair gesture and his body is pointed away from them. The man on the left disapproves of what the man in the left is saying. He is using disapproval gestures. His left hand is in lint-picking gesture. He is defensive and uninterested, legs are crossed and pointed away.The man in the middle would like to say something but he is holding back his opinions. He is gripping the arms of his chair and has locked ankles, showing self-restraint. He is pointing his body to the man on the right and gesturing non-verbal challenge to him. Task 5: Discuss active listening from gestures in sketch 4.

NSOU l PGEL - 1&2 87 Your Answer: In sketch 4, the man on the left and the women on the right have mirrored each other's gesture. They are interested in each other. This is gesture with their heads supported on their wrists and legs crossed, but lookingat each other in a friendly manner. The man in the middle is interested in what the other man has to say, but is not interested in his facial and body gestures. He has a tight lipped smile, head and eyebrows are down, showing disapproval and anger. His arms and legs are tightly crossed, showing his negative attitude. He is giving sideways glance to the other man. Discuss the roles of the people. In your opinion who they are and what is the conversation probably on? Similarly, discuss the roles of people in Sketches 1, 2 and 3. 6.4Activities on listening comprehension- 2 Listen to the song "She's Leaving Home" twice. She's Leaving Home – The Beatles Wednesday morning at five o'clock As the day begins Silently closing her bedroom door Leaving a note that she hoped would say more She goes downstairs to the kitchen Clutching her handkerchief

Quietly turning the backdoor key Stepping outside, she is free Task 6 Before listening to the rest of the song answer the following: 1. What is the girl doing? 2. Why is she leaving? She (we gave her most of our lives) Is leaving(sacrificed most of our lives) Home (we gave her everything money could buy) She's leaving home, after living alone, for so many years (bye bye) Father snores as his wife gets into her dressing gown Picks up the letter that's lying there Standing alone at the top of the stairs She breaks down and cries to her husband "Daddy, our baby's gone. "Why would she treat us so thoughtlessly? How could she do this to me? She (we never thought of ourselves) Is leaving (never a thought for ourselves) Home (we struggled hard, all our lives to get by) She's leaving home after living alone, for so many years (bye bye) Friday morning at nine o'clock She is far away Waiting to keep the appointment she made Meeting a man from the motor trade She (what did we do that was wrong) Is having (we didn't know it was wrong) Fun (fun is the one thing that money can't buy)

Something inside that was always denied, for so many years (bye bye) She's leaving home, Bye Bye Task 7: Answer the questions after 1 st listening: 3. Are her parents happy about it? 4. Is she happy about it? Your answer: Task 8: Answer the questions after 2 nd listening: 5. When does she leave home? 6. How does she tell her parents that she has left? 7. Were her parents good to her? 8. What is her mother doing in the song? 9. In your opinion what did the letter say? 10. Can you think of a title for the song? 11. What did her parents not provide? Your answer: Task 8: Listen and Fill in the gaps with correct form of the verbs (present simple or continuous). Wednesday morning at five o'clock As the day _____ Silently closing her bedroom door Leaving a note that she hoped would say more She _____ downstairs to the kitchen

Clutching her handkerchief Quietly turning the backdoor key Stepping outside, she is free Father _____ as his wife _____ into her dressing gown Picks up the letter that's _____there Standing alone at the top of the stairs She _____ down and _____to her husband "Daddy, our baby's gone. "Why would she treat us so thoughtlessly? How could she do this to me? Friday morning at nine o'clock She is _____ away Waiting to keep the appointment she made Meeting a man from the motor trade She (what did we do that was wrong) Is _____(we didn't know it was wrong) Fun (fun is the one thing that money can't buy) Something inside that was always denied, for so many years (bye bye) Your answer: 6.5 Lesson Plan on Listening Skills Let us now look at how we can teach this poem song to a class of advanced learners with a lesson plan. A lesson plan is developed by the teacher to guide class learning. The details of a lesson plan vary depending on the preference of the teacher, topic being covered and the needs of the learners. A lesson plan can have three stages. Warm up, While-listening and Follow up (Independent practise). The following format is a lesson plan on teaching listening skills on the song 'She's leaving home'. Lesson audio: https://www.youtube.com/ Materials 1. Audio file and the lyrics 2. Power point on 'Active Listening' 3. Work sheets 1-3. Lesson Objectives 1. Learners will refer to the source information of different actions. 2. Learners will identify the use of present simple and continuous in the narration. Warm up and objective Discussion 1. Start the warm up activity with the ppt. 2. Inform the learners that they are going to listen to a song and introduce theme of the song and the singers. Instruct and Model 1. Use the audio file and play the song twice. After first listening, the learners work on Worksheet 1 (questions 1-3). 2. Separate the learners into groups of two or three. After second listening, they will work on Worksheet 2 (questions 4-10). Activity: Speaking. 3. Students will take turns to fill in the blanks on worksheet 3. 4. Identify and circle the words you hear in the song: clutching dressing gown struggled thoughtlessly handkerchief Appointment 5. Have the students present the actions in the song in a venn diagram or continuum or spider design, in the sequence in which they occur and share it to the class. Guided Practise 1. Have the learners in pairs identify the use of present simple and continuous from 'intention or plan' and 'something is likely to happen' after reading the lyrics. 2. Make them act out the poem from the mother and the daughter's perspectives.

92 NSOU l PGEL - 1&2 Independent Practise 1. Give the power point as an additional study. 2. Learners will create their own sentences with the words identified in activity 4 and bring it to the class. 3. Quiz learners orally as they present their sentences. Assessment 1. Correct and grade the homework sheet. 6.6. Activities on Lesson Plan Design two lesson plansfor high school learners on the following listening discourses: A. 'I have taken such an inordinately long time over pouring out what was agitating my soul, to those whom I had just now the privilege of serving. I have been called their leader or, in the military language, their commander. But I do not look at my position in that light. I have no weapon but love to wield my authority over anyone. I do not sport a stick which you can break into bits without the slightest exertion. It is simply my staff with the help of which I walk. Such a cripple is not elated, when he has been called upon to bear the greatest burden. You can share that burden only when I appear before you not as your commander but as a humble servant. And he who serves best is the chief among equals. I want to declare to the world. Although I may forfeit the regard of many friends in the West and I must bow my head low, but even for their friendship or love I mustnot suppress the voice of conscience - promoting my inner basic nature today. There is something within me impelling me to cry out my agony. I have known humanity. I have studied something of psychology. Such a man knows exactly what it is. I do not mind how you describe it. That voice within tells me, 'You have to stand against the whole world although you may have to stand alone. You have to stare in the face of the whole world although the world may look at you with bloodshot eyes. Do not fear. Trust the little voice residing within your heart. It says: "Forsake friends, wife and all; but testify to that for which you have lived and for which you have to die. I want to live my full span of life. And for me I put my span of life at 120 years. By that time India will be free, the world will be free." '

NSOU l PGEL - 1&2 93 - M.K. Gandhi, address at Bombay, 1942. B. "As stated by author Sharon Anthony Bower, "the basic difference between being assertive and being aggressive is how our words and behaviour affect the rights and well-being of others." An assertive person is respected and even admired, but an aggressive person does not gain anyone's respect and is avoided if possible. Although there may seem to be a fine line between being assertive and being aggressive, there really is not. Unfortunately, there seems to be the misconception that if you are more forceful than you used to be, you might have become aggressive. There is a big difference between being assertive and being aggressive. For instance, assertive people can state their opinion and remain respectful of others. Aggressive people ignore, and sometimes attack other people's opinions in an effort to make their opinions to be seem to be the correct one. A comparison of assertive behaviour versus aggressive behaviour may serve as a good guideline of how to conduct yourself in different circumstances so that you project the appropriate behaviour you want to be perceived by others." Assertive Behaviour Aggressive Behaviour Speaks openly Interrupts and talks over other people Speaks at an adequate tone of voice Speaks louder than others Makes eye contact, and maintains it Stares at the other person Stands with a relaxed but assertive posture Stands very rigid during conversations Participates in group conversations Takes control of conversation Values other people as well as him/ herself Values him or herself more than other people Speaks to the point Only takes him or herself into consideration Tries to be fair and not hurt anyone Hurts people to avoid being hurt him or herself Sets and reaches goals while being fair to Hurts others in the process of reaching others goals

94 NSOU l PGEL - 1&2 - Maritza Manresa –How to be Assertive Without Being Perceived As Aggressive Task 9 What is the topic of discussion and where is it taking place for the following conversations? Conversation I A: Why are you on a bench? How are you feeling these days? B: I don't know. I am bored and restless I guess. A: Why? B: I have so much time and nothing to do. A: Why don't you go out and have some fun? B: I would, but I have to save some money, so I decided to be at home. A: That sucks. B: After a while, I start to feel anxious. A: Try to relax and read a good book. That is a good way to kill time. B: That's true. How about you? How are you doing these days? A: My Kid has just finished kindergarten and I am proud of him. B: That's great to hear. He must be big now. A: Yes, he has grown a lot in the last year. Your Answer: Conversation II A: How was your Saturday? B: I did pretty good. I shot a 13. A: Not bad. I thought you were going to break single. B: I had a chance. I shot a 4 on the front nine, but didn't do well on the back nine. A: What happened? B: My drive was totally off. But I hit two balls OB. That killed my score. A: If it wasn't for the penalty strokes, you could easily have broken a single. B: But overall, I shot well, so I am cheering for myself. How about you? A: I hit a great range, but not on a golf course. Your answer:

6.7 Review Questions 1. Discuss the benefits of active listening. 2. Why are lesson plans needed in teaching a language class? 3. Why do you need to modify a lesson plan format? What changes do you want to incorporate for your own learners? 4. What are the stages in your lesson plan in the activity in 6.5 A and B? 5. How will you modify your lesson plan in 6.5 B, if the learners are graduates? 6. How can you modify the lesson plan activities for the song "She is leaving home" if your learners are in standard VII? 7. Suggest two activities at the warm up stage for the modified lesson plan of the song, "She is leaving home". 8. Compare the song "She is leaving home" with songs or events of the same theme. 9. Design two independent activities for lesson plan of 6.6 B. 10. Suggest a plan for assessment for 6.6 A. 6.8 References: Manresa, Martiza. Learning to say NO when you usually say YES. New Delhi: Jaico Publishing House. Pease, A. 1981.Body Language.Sheldon Press.140-146. Cambridge University Press 2001. Whiticker, Alan. J. Speeches that changed the world. 96 NSOU l PGEL - 1&2 Unit - 7 p Speaking Skills 1 Structure 7.1 Introduction 7.2 Objectives 7.3 Airstream Mechanisms 7.4 From Speech sounds to Human Speech 7.5 Social Aspects of Speech 7.6 Summary 7.7 Review Questions 7.8 References 7.1 Introduction: In units 5 and 6 of this module, you have looked at the listening skills and their usefulness. You have also looked at some exercises to develop listening skills. In the next two units (7 and 8) we shall look at the Speaking skills and some exercises to strengthen these skills. Speaking Skills: What do we mean by speaking skills? All of us obviously know how to speak. We learnt it as children and we have been speaking since then. Do we need to pay special attention to this skill? Is it essential to spend time either teaching or learning this skill? These are some of the common questions that anyone would like to ask. This unit hopefully attempts to answer these questions. Let us begin with a simple question. Why do we ask all these questions? The answer is quite obvious. We always do not pay much attention to something that is common and with which we have a proximal affinity. Speaking is one such skill, and hence we often take it for granted. We think it is easy to speak, and do not recognize the niceties to observe and the refinement that is required while speaking. Besides this, we also need to speak appropriately in different contexts with different people. This forms the crux of these two units. Before we begin to discuss the speaking skills further, let us know what you know about speaking skills. Task 1: Suppose you are asked to define speaking skills how would you define it? Write your answer below: Your response: Speaking can be defined as follows:

NSOU l PGEL - 1&2 97 a. It is a person's ability to convey a message orally. b. It is a person's ability to convince the listener. c. It is a person's ability to influence the listener. Suppose we put these three factors together, we may arrive at a definition which may read as follows: 'Speaking is an ability to convey a message, so as to affect the audience as the speaker intends'. (Modified from Martin Parrott's definition of writing.) When you look at this definition, you may start reflecting on whether you speak well or whether you have some deficiencies because of which you may not be able to achieve either of the points two and three or both. The two units on speaking focus on these aspects of speaking skills. 7.2

| 100% | **MATCHING BLOCK 31/83** | **SA** | PGELT 9B PDF.pdf (D165254854) |

Objectives: After going through this unit, the learners will be able to: a. Understand the

mechanism of producing speech. b. Understand the sub-skills of speaking. c. Appreciate the etiquette practiced while speaking. d. Participate in a discussion, debate in a proper manner. How is speech produced? This is the first question we will answer, but briefly. We have discussed this in detail in your Phonetics course. You have looked at the forty four speech sounds in English, and how they are produced with the help of a diagram representing speech organs. We are sure you remember this. In this unit we will not go into all these details, but briefly let you know about a mechanism called air-stream mechanism and its role in speech production. We know how important it is to breathe. If we have difficulties in breathing, we feel uncomfortable, and when we cannot breathe, we meet our death. What has this to do with speaking? Speaking is defined as 'modified breath'. While speaking, we inhale and exhale air (through the mouth) exactly like we do this through our nostrils while breathing normally. When we exhale air through the mouth, and while doing so, if we can manipulate the position of our tongue, the lower jaw, the soft palate, we produce speech. It for this reason, speech is also called modified breathe. Let us look at this activity in some detail. 7.3 Airstream Mechanisms The main organ that takes in air and pumps it out is the lung. The air-stream that we use to speak is therefore called the 'pulmonary air-stream mechanism'. Speech sounds can

be produced while breathing air out or breathing the air in. The sounds produced while breathing the air out are called eggressive sounds; the sounds produced while breathing the air in are called ingressive sounds. English has no ingressive sounds. (Some African languages have ingressive sounds e.g. Nkrumah, former President of Ghana). For our purposes we shall look at only the eggressive sounds as produced while speaking English. When the diaphragm exerts pressure on the lungs, the pulmonary air, escapes from the lungs, passes through the esophagus and reaches the larynx or the voice box.Depending on the position of the glottis, the sound produced will either be voiced or voiceless. (If the glottis, (a pair of thin fleshy muscles) is held loosely together, they vibrate and produce a voiced sound. If they are stretched, and held apart from each other, the air escapes freely, and the sound produced is voiceless.) This air stream further reaches the oral cavity for the soft palate is raised blocking the nasal passage. The air escapes from the mouth to the outside through a variety of obstacles — the position of the tongue can cause obstruction to the air stream at various points, similarly the closure of lips either partially or completely can also cause obstructions. Besides these, the widening of the lips or the rounding of them can also alter the quality of speech produced. Based on the voice quality, and the types of obstruction, the speech sounds produced are classified using the following criterion:Air-stream mechanism, the place of articulation, and manner of articulation. To cite an example let us label and describe one sound. /p/ - This is the first sound that is described in your phonetics course. We call it a voiceless, bilabial, plosive. How does this fit into the criterion we have mentioned just now. /p/ Voiceless — this describes the quality of air-stream. It has passed through the voice box with the glottis stretched and held tightly apart. The pair of glottis does not vibrate and hence the speech sound produced by such air-stream is voiceless. /p/ bilabial — the two lips are the articulators. The lower lip (which is mobile) meets the upper lip and seals the oral passage. This closure does not allow the air to pass out. The air inside the oral cavity builds a pressure. /p/ plosive — this sound is produced as an explosion. The explosion happens with the lips parting suddenly, and the compressed air in the oral cavity being released suddenly causing an explosion. With these three qualities attributed to the sound /p/ we call it a voiceless, bilabial, plosive.

English language has forty four speech sounds, and each sound has a distinct description. Based on such description we have the following classes of sounds: Plosives — six in number Fricatives — nine in number Affricates — two in number these add up to twenty four sounds. Rolls/laterals — two in number Semi-vowels — two in number Nasals — three in number These twenty four sounds constitute the consonants. There are other twenty sounds which are called the vowels. What is the difference between consonants and vowels? In CC3,while describing the pulmonary air-stream mechanism, we will describe how the air while passing through the mouth can meet with several obstacles. These obstacles cause the production of consonants. When the air stream passing out of the lungs gets voiced, but passes out of the mouth freely, and continuously, the sound produced will be a vowel. Try producing sounds like /i/ or /a/ or /e/. You can continue to say this for a long time till you can. There are twenty vowel sounds in English. These are divided into two types, the pure vowels (twelve in number) and eight combined vowels (diphthongs). You have studied these sounds in details in your phonetics course. Task 2: To recap, let us answer a couple of questions: How do the human beings produce speech? Does English have any speech sounds produced while breathing the air in? Do you think classifying speech sounds is systematic? Your response: Humans produce speech using pulmonary air-stream mechanism. All English speech sounds are eggressive and the classification of the speech sounds is very systematic. So far we looked at the individual sounds. Individual sounds do not make speech. They need to combine to form syllables, words, phrases and sentences. These syllables, words, etc. need to be uttered properly to convey meaning to the listener. Only then, do the speech sounds acquire some significance and become part of human speech. We shall look at this in the next section. }

7.4 From Speech Sounds to Human Speech

When we combine a few of the speech sounds (called phonemes) we get a syllable. We cannot randomly combine any phoneme with any other phoneme, we need to follow certain possible combinations permitted by the phonology of the language. Every syllable has one vowel and may or may not have any consonant sounds. Syllables combine to form words. Certain words have just one syllable, and there are quite a few words with two, three or more syllables in them. When a word has more than one syllable in it, only one syllable takes the stress. Good speech requires us to know which syllable in a word receives the stress. This is learnt by following rules as given in a book of phonology, or by looking up a dictionary or by listening to people who speak English properly. Dictionary is a good source for learning pronunciation, and you should learn this quickly. Another aspect of good speech is learning how to utter a sentence. While uttering a sentence, we need to pay attention to three things – the word that takes the stress, the tone of the utterance and the rhythm of the utterance. There are simple ways of knowing this. The most important word in the sentence, the word that carries the meaning of the sentence carries the stress. The word that carries the stress is important, and it is called the tonic syllable. Why do we call it a tonic syllable? While uttering a sentence, we do not pronounce all the syllables in the sentence at the same pitch. We vary thepitch,itiseither rise or fall or fall and rise. Normally, it the tonic syllable that decides where the pitch of the sentence changes. This means, the pitch on each syllable keeps rising till we reach the tonic syllable, and from there onwards falls successively on other syllables in a sentence. This adds meaning to what you say while speaking. This is another aspect of good speech. Then we have one more element called the rhythm. In Indian languages, we have a syllable timed rhythm – in other words, the time taken to utter a sentence depends on the number of syllables in the sentence. However, in English, it is not the number of syllables, but it depends on the number of stressed syllables. The time taken to move from one stressed syllable to the other remains the same. Therefore, we call English a stress-timed rhythm. You have learnt all these aspects in details while studying phonetics. Hence we will not provide any illustrations for each of these points. We have tried to summarize the lessons you learnt earlier very briefly. We suggest you do the following task to refresh your memory of the course in phonetics.

Task 3: a. Here are a few polysyllabic words. Divide these words into syllables and identify the stressed syllable. i. Institution ii. Linguistics iii. Assignment iv. Intelligibility v. Phonology b. Look at the following sentences. Mark the syllables that are stressed in them, and read them aloud with proper rhythm. i. The book you are reading is written by a famous author. ii. There are five students in this class who have scored full marks. iii. Your teacher has asked you to walk with him after the school. iv. Are there any restaurants nearby where we can have some lunch? v. Is this the building you were talking about last evening So far we have looked at speech sounds, their combinations to form words and utterances. We have also looked at the concept of stress both at the word and sentence levels. Further we have discussed the importance of following some rules while uttering a sentence paying attention to pitch, stress and rhythm. Now we shall look at some social aspects of speech (etiquette) and conclude the unit.

7.5 Social Aspects of Speech

We speak to communicate with others. We communicate with a variety of people, friends, relatives, seniors, sub-ordinates, strangers, bosses and others. We do not speak with each one of them the same way. The way you speak to your mother is very different from the way you speak to your sister. Why does this happen? Who has taught us to make these differences? We learn these things in our mother tongue naturally, by observing others around us. Family is a great educator in moulding our speech. While speaking English (which is not our mother tongue) we need to learn the principles of etiquette differently. Here are some suggestions. 1. Make sure what the relationship between you and the other person you are talking to is. This is represented by the word 'Who'. There can be several types of relationships which matter. 2. The second important aspect is the topic of our communication. This is represented by the word 'What'. The number of topics we can talk about is infinite.

3. The place where we are communicating with each other isalso an important aspect and this is represented by 'Where'. Here again, the possibilities can be many. 4. The time of the day when we are speaking to a person matters. This controls our tone and quantity of talk. This aspect is indicated using the word 'When' and the twenty four hour day can be sliced into many parts. 5. Without a reason, we normally do not talk to a person. The reason for talking is indicated by 'Why' and to list all reasons for our talking to someone is almost impossible. 6. There are various modes using which we can talk to a person and this is indicated by 'How'. All these six factors are analysed and put in the form of a table. The number of possibilities indicated is not exhaustive. But this will provide you with some idea and you may add other possibilities in each category. You may do this when you find time and make the table as exhaustive as possible. Who A stranger A senior relative Parents Siblings (both elder and younger) Cousins (close and distant) Friends (old, new, familiar, formal) Colleagues (both seniors and subordinates) Your boss (and other very senior officials in your establishment) What Serious Non- serious Domestic Official Social Political Academic Gossip When Early morning While working End of the day Why Gossip Reporting Explaining Chatting Narrating Discussing Arguing Convincing Requesting Emergency How Telephone Face to Face Lecturing Secretive Personal Public Forum Theatre Where Office Corridors Canteen Party Official- Meeting Home Friend's place Public place

NSOU l PGEL - 1&2 103 Here again, we have not given you any illustrations to show how speech varies from situation to situation, or how these six factors control our speech. You may reflect on this with the knowledge you have of Bangla and extrapolate it to English. In the next unit, we shall look at exercises to practice all the aspects discussed here. We will conclude with a brief summary of the unit. 7.6 Summary We began with our objectives for teaching speech. We looked at the speech production briefly and various aspects associated with speech production. Later, we looked at the importance of aspects like stress, pitch, tone and rhythm in conveying meaning. Finally, we looked at some features of etiquette that we need to observe while speaking. 7.7 Review Questions 1. In your nderstanding, how do you define and describe speaking ability. 2. What are some of the precautions we need to take while speaking? 3. Is speaking in English different from speaking Bangla? How are the two similar or different? 4. How are rules of courtesy and etiquette common to English and Bangla? What are some of the problems Bangla speakers of English may have in appropriating this? 5. Can you give some examples of confusion that can be caused because of using wrong word stress? How does it affect communication? 7.8 References 1. Balasubramanian, T. (2007). In this unit we shall look at some of the teaching strategies involved while teaching speaking and develop some exercises for the same. 8.2
Objectives

| 100% | **MATCHING BLOCK 28/83** | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

After going through this unit, the learners will be able to: a. Appreciate the

need for teaching spoken English b. Understand the difficulties learners have with pronunciation c. Design strategies and materials to suit the needs to the learners. Let us begin with a few questions. The first question relates to why should we teach spoken English, and the second one is an offshoot of the first, how do we teach spoken English. Let us try and answer these questions. Before looking at the answers we want to provide, we would like to have your views. Task 1: Please note down your points in the space given below: Your response: When we learn a language, we need to learn to speak it well. There are certain norms that we need to follow. Take for example, your mother tongue, Bangla. This language has several rounded vowels and fewer flat vowels. This is not easy for everyone to master. Therefore, a non-native Banglaspeaker, when he comes to Kolkata and learns
NSOU l PGEL - 1&2 105 to speak the language, his pronunciation is markedly different. When you listen to the person speaking, you may not make fun of him, but you will realize how far he is from speaking authentic Bangla. This is true of all languages. Each language has its peculiarity (nuances) and theseneed to be mastered. English is no exception. This roughly answers our first question. To help our learners speak English in an acceptable manner, in a manner that they are intelligible to others is the reason, we should teach spoken English. The second question on how to teach is spread across this unit. In the course of discussing, how, we will further elaborate the reasons why we should learn a little more. To answer the question, how to teach spoken English, we need to know the elements of spoken English. In the previous unit, you have looked at an analysis of this, (you will get to know more of it in CC3), and let us reiterate it for you here. We should remember one thing, teaching spoken English depends a lot on developing good listening skills. Listening and speaking are complementary skills, and one cannot be learnt without the other. One who is able to listen properly, and distinguish one speech sound from the other will also be able speak properly. This is evident from the fact, that most people who are mute (dumb) are also deaf. 8.3 Strategies for Teaching Spoken English While teaching spoken English, the first major focus will be on developing pronunciation. Teaching pronunciation is a complex process for it can begin with discrete phonemes to complex connected speech. We shall look at some strategies here. a. Teaching phonemes: Phoneme is defined as the '

| 50% | **MATCHING BLOCK 29/83** | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

minimal distinctive unit of speech'. There are two operational words here – minimal and distinctive. Something that is minimal cannot be divided any further (

like an atom) and if something is distinctive, it is unique and cannot be replaced by another sound. To teach phonemes, one of the tested methods has been to use what we call minimal pairs. Minimal pair stands for two words that are similar in all aspects except for one phoneme replacing the other. Take a look at some of these words: i. Pin Bin ii. Pin Pen iii. Pin Pit

We have three pairs of words. In each pair the first word has remained the same. The second word in each pair differs from the first word in just one aspect. In the first pair, /p/ is replaced by /b/; in the second pair /i/ is replaced by /e/; and in the last pair /n/ is replaced by /t/. By replacing these elements, we have arrived at new words and also the meaning of these words has changed. Any single sound replacement in a pairing word, bringing about a change in the word and its meaning is called a minimal pair. In looking at these six words we have identified that /p/ and /b/ are different phonemes (in Arabic they are not), though they are pronounced almost the same way. Similarly, we find /i/ and /e/ are different phonemes (in some languages these two vowels are not different) and so are /n/ and /t/. [/n/ and /t/ do not need a minimal pair to prove they are distinct phonemes. They are different in terms of manner of articulation] We do not need to think of minimal pairs for each phoneme in English. Where there is confusion, and learners pronounce one for the other (especially under the influence of mother tongue) we may need to use minimal pairs. Speakers of Bangla learning English have problems with certain English sounds – the distinction between /v/ and /b/ is lost. Sometimes, /s/ and /ʃ/ is also lost. As teachers of English, we need to be sensitive to the sound system of our language as well as the sound system of English. We should be able to find the difficult speech sounds for our learners and focus our exercises based on those problem sounds. Task 2: Make a list of English speech sounds that are difficult for you. Your response: When you have identified the problem sounds, take a look at the English sounds, their place and manner of articulation. Without describing these, try and device ways of helping your students overcome their defects. e.g. while pronouncing /f/ a fricative, if your students produce a sound [p h] which is bilabial, you can ask them to bite their lips lightly while producing /f/. /s/ and /ʃ/ can also be taught using a few simple techniques. Take a word like /best/. While pronouncing this word, the position of the tongue can be easily felt. If the tongue can be as front as possible we will produce the word properly. But if the tongue is slightly withdrawn the word gets pronounced wrongly with /ʃ/ sound in it. This should give you an idea on how you can use strategies to help your students with proper pronunciation. You get lists of words which are minimal pairs in books on phonetics. You can create your own lists with little difficulty.

Be sensitive to sounds, create these word lists, and help your learners with their pronunciation. i. You can also use certain other types of exercises. Provide a list of words which have just one sound in common in all of them. Ask your students to identify the sound and add a few more words to the list with the same sound in it. e.g.(/ʃ/)If we are testing the learners' ability to identify this sound in its various spellings, we can give a task of the following type: Here is a list of words: fish, dish, shirt, relish, portion, medication, shoulder, shower, charade, and chauffeur. There is one sound that is common in all these words. Identify the sound and write five more words which have the same sound in them. ii. This can also be done with a few variations, by providing a set of three or four words where one of the words does not include the sound in question. e.g. (/h/) Task 3: Look at the following words. There is one word which does not include the sound that is present in other words. Identify the word. Later add a few more words with the sound you have identified. horse, honour, hose, house One word among these is different. Identify the word. Task 4: Write ten more words with the sound in the other three words. Now we will move to word stress and sentence stress, and conclude the unit with social etiquette. 8.4 Strategies for Teaching Word Stress Word stress is not a difficult concept to teach. Begin with single syllable words that have /p/, /b/ or /k/ at the beginning. In English these words are pronounced with an aspiration when these three sounds occur at the beginning of a stressed syllable. (You can make the students understand the concept of aspiration using the Sanskrit alphabet system. The consonants are classified into five classes which are indicated below.

108 NSOU l PGEL - 1&2 These are five classes of consonants. Look at the second and fourth member in each class, and you will find that it is an aspirated version of the first and third members of the same class. In Sanskrit these letters are called mahaprana – or consonants pronounced with additional breath force. This is true in a few other Indian languages as well.) Words like Pen, Pin, Ten, Tin, Cat, Kit etc. have the initial sound aspirated or pronounced as mahaprana. Practising these words and many other single syllable words beginning with these three sounds helps learners understand the concept of stress in English. Words with more than one syllable (two – disyllabic, three or more – polysyllabic) take stress only on one syllable. For example the word 'pencil' is pronounced as PEN-cil and not as pen-CIL. A dictionary helps you identify the number of syllables in a word and also the syllable that receives the stress. You should become familiar with the conventions followed in the dictionary, and also sensitise your students to it. Polysyllabic words are stressed depending on their spelling, especially the word endings. These have been discussed in detail in CC3. You may look for exercises as well as rules in CC3. Having looked at Word Stress, we will move further to discuss what sentence stress is. When you listen to news in English on Television channels, do you find some of the speakers (e.g. Prannoy Roy) speaking English a little differently. In each utterance, certain words are almost not heard, while some words are said more loudly than others. Take a look at the following sentence. The teachers are demanding a rise in salary for the last two years. This utterance has thirteen words and seventeen syllables. You actually hear only five stressed syllables and the other twelve syllables are said quickly and softly to maintain the rhythm. Further depending on the meaning to be conveyed, one syllable 'rise' perhaps gets uttered the loudest, and this is the syllable that receives the sentence stress.

NSOU l PGEL - 1&2 109 Such a syllable is called a 'tonic' syllable. It is important to note this for it is the tonic syllable that also determines the place where the tone of the sentence begins to either fall or rise depending on the type of utterance. To help your students get to practice sentence stress, choose simple sentences with no more than five or six words and with just one word that is important. Here are a few sentences for you to consider and think of more sentences on similar lines. a. You are a teacher. b. We are all students. c. We love reading. d. We enjoy reading a poem. e. Stories are interesting too. Mark the word you think is most important in these sentences, and help your students read these sentences properly. You add a few more sentences to this list. It is not enough if you know where the tonic syllable is. You also need to understand the tone of the sentence or the intonation. There are three tones, the rising, the falling and the falling rising tone in English. These are also rule bound, and you will find the relevant rules and examples in CC3. Next, we shall discuss some general principles of teaching speaking skills. Speaking is not learning how to utter isolated sentences. Speaking involves what is called 'connected speech' which includes quite a few varieties. Giving a sustained talk for a couple of minutes, narrating an incident, describing something, holding a conversation, turn taking, being polite, ability to ask a question properly, ability to respond to a question are some of the events one needs to participate in by learning how to speak. 8.5 Principles of teaching Speaking Skills While speaking, politeness and body language form two important aspects. Politeness does not mean being submissive. We should be able to talk to someone without hurting the person. You may need to reprimand a person, you may need to show your displeasure towards someone, yet you can do this very politely. Take a look at some of these sentences: a. You are a useless fellow fit for nothing. b. You have spoilt the entire evening. c. Don't show me your face. These are offensive utterances, and the listener is likely to feel hurt. These utterances can be reworded as follows: a. You need to learn much more before you become eligible for this work.

b. If only you had come a little early, we could enjoy this evening. c. You better leave me alone now. Task 5: Compare and contrast the two sets of sentences and see how they affect the listener. Task 6: You may consider a couple of situations where you have been angry and used the language in an impolite manner. Now that you are not angry, can you recollect those utterances and redraft them in a less offending manner? Your response: Politeness principles also involve the loudness of your speech, (pitch) and the right type of intonation you use. We are likely to be influenced by our mother tongue in both these aspects. While learning a new language like English, we need to be sensitive to these factors. Along with loudness of the voice, the pace at which we speak also matters. English (the British variety) is spoken at around 90 to 95 words per minute. Quite a few of the Indian languages are spoken much faster than this pace, and hence we tend to speak English faster than the British do. This causes for unintelligible speaking. Besides pace, the rhythm of English is difficult to capture. The English has stress timed rhythm while the Indian languages are marked by syllable timed rhythm. One way of practising stress timed rhythm is to understand how the popular nursery rhymes are sung, and to speak English exactly the same way. This may appear a little difficult to begin with, but in due course of time, it is possible to get to the rhythm of English speech. In order to provide practice in good connected speech it is easy to use group and pair work. You may use some scripted or semi-scripted dialogues for the purpose. It is also possible to rewrite some of the stories in the textbooks as short plays (skits) and ask the students to enact them. Such practice provides the learner with a feel of the real language. Body language includes aspects such as the way we sit while talking, the way we stand, the gestures we use with our hands, the way we cross our legs, the distance we maintain between the speaker and listener matter. In India, the distance we maintain between two people is far too close compared to the British culture. Going close to a person and whispering is often considered a sign of impoliteness. There are quite a few books on body language and we can learn a lot from these books. This brings us to the close of speaking skills and listening skills. Before we conclude, let us summarise the unit and leave you with a task and a list of books to refer to.

NSOU l PGEL - 1&2 111 8.6 Summary In this Unit we began with a quick revision of Unit 7 and provided the outline of the present unit. We discussed how isolated speech sounds can be taught and followed it up with teaching of word and sentence stress. Finally, we discussed the need for practising connected speech. For each of these we have provided sample exercises. Task 7: Here is a task for you. A role play is also called simulation exercise. Have a group of four students, and provide them with a situation related to problem solving. Ask them to discuss and arrive at a solution. While choosing the problem, take care to choose something the learners are familiar with. It is best to imagine a situation and create the problem solving task yourself. With this we conclude the unit and the module. Here is a list of books for your use. 8.7 Review Questions 1. With your understanding of the unit, mention some teaching technique you have learnt for teaching speaking skills? How will you modify these in your class? 2. Comment on the importance of teaching spoken English in today's India from a sociological point of view? 3. Identify some of the typical problem sounds for Bangla speakers of English. How do you rectify these errors? 4. How can we use poems to teach spoken English? In what specific manner are poems useful? Explain with a few examples. 5. Does Bangla have a stress-timed rhythm or a syllable-timed rhythm? How will you explain this to a student in class VIII who is learning English for the first time? 8.8 References a. Barman, Binoy. To do this, let us begin with recalling our understanding of the importance of reading as a language skill. Indeed, the awareness of reading as a language skill needs to be raised among the second language learners. Module -3 p Teaching Literature -1

NSOU l PGEL - 1&2 113 9.2

Objectives

After going through this unit we will be able to: l Understand the

fundamental difference between oral and silent reading l Understand the procedural aspects of teaching oral reading l Evaluate some important concepts in silent reading l Understand the pedagogical implications of teaching silent reading

9.3. The Importance of Reading as a Skill The importance of reading includes the following: l Reading leads to learning; where there is little reading, there is little learning. l Reading is a professional requirement as professional competence depends on it; it is only by reading that the students can acquire the speed and skills (sub-skills) needed in real life situations. l Higher education is largely dependent upon the quantity and quality of reading. l In the current age of information boom, one cannot but be aware of the explosion of knowledge and information, the acquisition of which depends primarily on reading. l Literature is an integral part of the heritage of any society and the appreciation of the same requires reading extensively. Thus, we should note that we cannot produce well-read youth unless we teach them how to learn to read and how to read in order to learn. Therefore, we must make sure that – l We do not neglect reading in the scheme of language education right from the elementary to the tertiary level; · We do not stop learners from enjoying the act ofreading; indeed, we require to develop the habit of reading among them so that they may not stop reading altogether after they leave school. 9.4. Reading: Understanding its Nature William S. Gray, in his book, History and Philosophy of Reading Instruction has technically defined reading thus: "Reading is the process of recognising printed or written symbols, involving such habits as accuracy in recognising the words that make up a passage, span of recognition (i.e.

the number of words, usually forming a sense group, that are taken in at a glance), rate at which words and phrases are recognised, rhythmical progress of perception along the lines and accurate return sweep of the eye from the end of one line to the beginning of the next"; and Dr West describes reading as a "process of sight-sound sense". Reading involves the recognition of the important elements of meaning and their relationship that contributes to accuracy and thoroughness in comprehension. It is more than seeing words or pronouncing them or recognising their meaning in isolation. It requires one to think, feel and imagine in a set of relationship. It is an activity which involves the interpretation of ideas signified by written or printed language. 9.5. Oral and Silent Reading Here, we need to distinguish between two types of reading : oral and silent reading. In oral reading, a child reads out every word or print. As he does so, he has to get the phonemes, their combinations, and the stress and intonation patterns correctly. In the early stages children are taught the mechanics of reading (i.e. making sounds appropriate to the symbols and understanding their relationship). They are taught to read from the board before they are allowed to use their books. Much later they are introduced to silent reading. Initial training in oral reading is an essential step to silent reading. It not only helps children to pronounce the words correctly but to group them into 'meaningful mouthfuls' (i.e. words forming sense groups that are said at one go without a pause). Oral reading should start at the earliest possible opportunity, preferably in the fourth and fifth month of instruction in English. Reading instruction in most of our primary and secondary schools has been instruction in oral reading in spite of the fact that reading in actual life is mostly silent. Thus, researchers have emphasised the need for silent reading for the following reasons: l Most reading outside the curriculum is silent reading. l Silent reading emphasises meaning rather than sound; psychologists of various schools are concerned with the ways in which meaning is conveyed more than anything else. We have already learnt that fundamental reading skills are mastered through oral reading which helps silent reading later on. It is noteworthy here that some of the difficulties in silent reading that can be diagnosed through oral reading are: i) Omission of words or phrases ii) Insertion of words iii) Substitution of letters, words or phrases

iv) Skipping lines v) Repeating lines vi) Inaccurate grouping of words that interfere with thought-getting and interpretation of ideas 9.6. Methods of Teaching Oral Reading Now we will discuss the various methods we can employ to teach reading English script. However, first, we need to teach the learners how to recognise letters and words. The main methods of teaching English script include the following: 9.6.1. Alphabetic method : In this method children are taught the names of the letters of the alphabet – a "ay", b "bee", c "see", etc. – and when they see a new or unfamiliar word, e.g. 'bag,' they repeat the letter names – "bee ay gee". It is thought that this "spelling" of the word helps the child to recognise it. By constant repetition of letter – names, the learner becomes familiar not only with the form and name of individual letters but also encounter certain letters – strings and letter – clusters which are component parts of many words. The method relies heavily on the conditioning aspect of the learning process. However, it is necessary for the learners to differentiate between the different letters of the alphabet as well as between the capital and small letters. Therefore, children need plenty of experience in playing with the letter forms, so as to become familiar with their shape and learn the correct orientation i.e. which way is their correct position. 9.6.2. Phonic method: In this method children are taught to recognise the relationship between letters and sounds. They are taught the sounds which the letters of the alphabet represent, and then try to build up the sound of a new or unfamiliar word by saying it one sound at a time. This is based on the observation that letter sounds are never produced singly but in the context of words, and that usually the positioning of the letter determines its particulars. The phonic method uses the following steps: a) The learner first learns the sounds most often represented by the various vowel and consonant letters. Generally, the learners are introduced to a consonant – vowel combination since consonants cannot be accurately sounded except with a vowel; e.g. c – at or ca – t. b) Words of various patterns are then introduced; l Cat, bat, rat, mat l Tin, bin, shin, fin, pint

c) Some common look-and-say (i.e. looking at the word as a whole and saying what it is, without noticing each letter in the word) non-phonic words are taught; e.g. I, he, to, the d) Sentences are formed with words already learnt; e.g. the cat is fat, it is on the mat e) Digraphs (i.e. units of two letters representing one sound) are taught; e.g. sh, ch, ng, ck f) Sentences using digraphs are then introduced; e.g. there is a toy ship in the shop g) Certain rules regarding spelling-sound relationship can also be taught; e.g. the use of final 'e' in the words like gate, kite, nose, rule We should note that all words cannot be taught by this method as the English language is not completely phonetic in nature. 9.6.3. Word Method: In this method children are taught to recognise whole words rather than letter-names (as in the alphabetic method) or sounds (as in the phonic method). This method emphasises the shape or the configuration of a word. The Gestalt theory of learning has been used here as the theoretical basis for learning. The basic idea is the importance of the whole, the total form, and the word-pattern. If whole words are presented to the children, they will see the difference between words on the basis of length and the shape or configuration of words and then easily be able to recognise words using such clues. 9.6.4. Sentence Method: This method uses the sentence as the unit of utterance. Every sentence chosen contains a complete unit of thought and presents a definite image. It extends and supports the vocabulary already learnt orally by the learners. Hence, the sentences are mostly drawn from the children's own experiences of their homes and school life. These sentences are presented along with suitable pictures on sentence cards. For example,

The learners are first encouraged to talk about the pictures; if possible, the teacher weaves a story around them. The teacher then reads out the sentences. The cards are then passed round for individual reading practice. The children are discouraged from pointing to the words. They read the sentence as a whole. When a number of sentences have thus been practised exercises in quick recognition are given. Through this practice, they are encouraged to recognise at 'a single glance' a familiar word or a short, easily understood sentence. It is considered that the use of continuous prose leads the children to reading more fluently and rapidly. 9.6.5. Story Method: In this method the whole story is the starting point. The teacher narrates stories supported by illustrations. At the end of the narration the learners are encouraged to reproduce the story in groups and individually. The written story is then recognised as a whole and a story chart is developed. The learners are given the various sentences orally and the teacher writes on the board. After initial reading of a few stories off the board, the teacher introduces the printed text. The teacher reads each story aloud and the learners follow his/her reading with the books open. This is followed by a discussion of the story to help the learners understand it. Only after such oral preparation are the learners asked to read the story aloud. One problem with this method is that it is dependent on the memory of the learners to an extent. 9.6.6. Teaching Principles: In teaching reading aloud, we need to keep the following principles in mind: a) Giving a model reading at the beginning of the lesson. b) Explaining the meaning of unfamiliar or new words and phrases before the learners are asked to read aloud. c) Training the learners in correct phrasing and in laying emphasis on right words (i.e. the use of appropriate supra-segmental features). d) Keeping a close watch against mumbling and producing defective sounds and utterances. e) Not laying stress on the speed at the cost of the accuracy of pronunciation. f) Encouraging the learners to avoid finger-reading g) Taking care that the reading aloud does not become meaningless and mechanical; it should be supported by board work and question-and-answer session.

Oral reading, however, has its limitations. It cannot be done by everyone in the class at the same time. The sessions cannot be carried out for a long time either. However, there may be a little reading aloud by three or four students in each period. In spite of its limitations, we should note that reading aloud is useful in teaching literary pieces especially in teaching poems. Also at the end of each unit of a prose lesson, a little reading aloud can be of great help in getting hold of the narrative style of the prose piece. As an enrichment programme the learners can be asked to read plays, conversations and dialogues with good expression and ease. Reading aloud is a special skill and very much depends on the excellence of the teacher's competence of reading aloud. 9.7. Silent Reading Now let us shift our attention to silent reading which involves all the psycho-physical processes as reading aloud; but, in silent reading the learners do not need to pay equal attention to all the words as it is needed in oral reading. Thus, skimming or getting the essential ideas from a reading matter is an important factor in silent reading. At the initial stage we should aim at teaching the learners reading aloud; but, as soon as they have acquired minimum ability to read aloud, attempt should be made to develop the skill of silent reading in them. In this connection, we should keep in mind that oral reading helps silent reading to a great extent and the efficiency in oral reading is the minimum condition for the cultivation of silent reading. In "silent reading", observe Thompson and Wyatt, "the eye does not proceed steadily along the line of print, but stops from time to time possibly four or five times in a line. Then there is a rapid movement from the end of one line to the beginning of the next. During the movement of the eyes there is no perception. We read only during the pauses, when the eyes are not moving, the number of fixation in a line is affected by the difficulty of the matter, but not its grammatical structure. The eyes of the practised reader move over the lines with steady rhythm, but not so in the case of the unpractised reader. With him there are frequent irregular fixations with a turning back to what has just been read. But with practice rapid movement is observable as regards speed." It is noteworthy here that when we read silently, our eyes move in a swift and well-co- ordinated way sending signals to the brain. Hence, understanding the following psycho-ocular aspects of silent reading is crucial: l Fixation: It refers to the brief periods when the eyeball is resting and during which the visual input required for reading takes place. The eyeball makes a series of fixations, jumping from place to place on the printed page. The jumps are exceedingly

rapid. The jump from one ûxation point to another is known as a saccade. It is important to note that the fixations occur when our eyes come to rest. Most of these fixations are actually on or close to the line of print. But unless one reads quite slowly, one cannot easily control or predict where the eyes will fixate. The fixations are quite short in duration: each one lasts about one quarter of a second and the amount of printed text that a person can perceive within a single fixation pause is called Reading SpanorPerception Spanwhich is usually described as being between seven and ten letter spaces. Thus, a good reader will not read like : The book is on the table. but as: (The book) (is on the table) The longer the reading span, the more rapidly will the reader be able to read. The reading span of a good reader is comparatively wide. Now, let us consider the issue of the instant word recognition. Words are recognised on the basis of their shapes and appearance. This is called Pattern Perception. For example, in reading the word 'women', we would barely notice that the 'o' in the first syllable is pronounced,as 'i' as in 'whim'. The printed word 'women' is a gestalt-like total stimulus that immediately calls to mind the spoken word that corresponds to it. Such 'sight' recognition is co-related rather highly with the frequency of use. Word-perception is a skill that depends upon large amount of practice and exposure. Besides, the number of fixations or pauses per line depends on the difficulty of the material that is given for reading, age and the maturity of the reader. l Word Discrimination: Reading involves the ability to discriminate letters and recognise words. This depends upon: a) The type of letters: Projecting (like t, p, f, l, d) and non-projecting (like a, o, u) letters. Words containing the former type of letters are more easily recognised than words containing non-projecting letters. b) The shape of words: Words similar in shape like receive, deceive; did, bid; etc. may often confuse the beginner. c) The range of learners' experience: Words which are associated with objects and ideas within the learner's experience, and also words which the learners have already heard or practised in speech, are easily recognised.

120 NSOU l PGEL - 1&2 l Association: It is the mental link formed between visual signs (letters, words) and the speech sounds and which they represent. Association implies the ability to recall sounds and meaning immediately on sight of group of letters. l Regression: It refers to the backward movement of the eye along a line of print when reading. Poor readers tend to make more regressions than good readers. In reading aloud, a regression is the repetition of a syllable, word, or phrase that has already been read. l Reading Speed: It refers to the speed at which a person reads. It depends on a) the type of reading material (e.g. ûction or non-ûction) b) the reader's purpose (e.g. to gain information, to ûnd the main ideas in a passage) c) the level of comprehension required (e.g. to extract the main ideas or to gain complete understanding) d) the reader's individual reading skills. The following are typical reading speeds: It is noteworthy here that our talking speed is between 150 – 200 words per minute (w.p.m.). If we read saying each word to ourselves, our speed gets slowed down to less than the talking speed. Also in normal speaking situations, we do not need to think too long for words as the words we use are all in our active vocabulary. But when we read an unseen passage, we may come across new and difficult words which make us hesitate and pause for a while. These words act as stumbling-blocks and hinder our reading speed. Our eyes refuse to move forward with ease unless we are sure of the words we Speed Slow Average Fast Purpose study reading, used whenmaterial is difficult and/ or highcomprehension is required. used for everyday reading ofmagazines, newspapers, etc. skimming, used when highestspeed is required, comprehension is intentionally lower Good reader 200-300 words perminute (wpm); 80-90% comprehension 250-500 wpm; 70% comprehension 800 plus wpm; 50% comprehension

NSOU l PGEL - 1&2 121 read. Sometimes, we go back to difficult words and spend some time decoding their meaning. This regression is one of the major factors that cut down speed in silent reading. Also sub-vocalisation or saying each word while reading or passing the finger under the lines of print is considered a hindrance to efficient reading. These acts do not allow the eyes to make quick jumps; on the other hand they drag the eyes along slowly in undesirable ways and this retards the speed. 9.7.1 Teaching Principles: In teaching silent reading, we should consider the following procedural principles: a) The perception of the form of words should be instantaneous; attempts need to made to increase the recognition of number of words at the single pause. b) The teacher should keep a close watch that the learners do not engage in regression and sub-vocalisation while reading. c) The teacher should ensure that the leaners do not sway their heads right and left as they proceed with the lines. d) The teacher should make all attempts to increase the reading speed but without impairing the comprehension of the content. e) In order to increase the reading speed, the teacher should attempt to reduce the number of fixations; training in eye movements has been a challenge to psychologists and teachers. The simplest way is to get the learners to make three or even fewer regular fixations per line by giving him/her oral instructions and providing him/ her with some usual clues such as: columnal reading, reading in chunks or blocks, underlying key words in a passage, etc. The learners may also be guided not to look at the extreme left of a line but at the second word. f) The teacher should help the learners to stretch their eye span as far as they can and widen their fixation span. We should note that the duration of fixations, as distinguished from their number is not closely dependent on the difficulty on the material. The average time needed for switching from one fixation point to another is about 250 M.Sc. which can be reduced to 168 M.Sc. by systematic training. g) For effective reading teachers may adopt the 'language-experience' approach. It may be noted that some learners may face another kind of difficulty in silent reading. Their eyes refuse to move forward when they come to a 'blind spot' in a line of print. This may be due to the unfamiliarity of the word they have to read next. This results from the lack of language experience on the part of the learners. Hence, at the initial stages the teacher may not present any material which the learners

have not spoken or heard about. Thus, in adopting a passage from a prescribed text the first step should be good oral preparation. Unfamiliar words should be presented in meaningful situations. Difficult words should be written on the board and the learners should be allowed to look at them and read them orally. This language experience would help the learners to read these words used in the reading text. h) There is another difficulty which some learners may face in the early stages. They get reverse images of words or mistake one word for another which look almost similar, e.g. was become saw, no becomes on, and so on. Such words could be listed and presented on flashcards. i) The teacher should ensure comprehension and interpretation of the reading input through various tasks and activities. j) Development of various sub-skills of reading should be targeted by the teacher at intermediate and advanced levels in order to make the learners competent readers (refer to the list of sub-skills in CC1 Mod 1 Unit 4.5.1). k) The teacher should also try to exploit the 'schemata' of the learners to the extent possible. l) The learners are to be given varied experience in both intensive & extensive reading through various kinds of authentic text materials. A detailed discussion on the procedural aspects of the development of various sub- skills of reading including the types of tasks and texts has been included in CC1 Mod 3 Unit 10. 9.8 Check Your Progress 1. Discuss the different methods of teaching oral reading. .... 2. How is oral reading related to silent reading? .... 3. What is 'fixation' and 'reading speed' in silent reading? How can 'reading speed' be increased?

NSOU l PGEL - 1&2 123 .... 4. What are some of the principles you would consider as a teacher while teaching silent reading? .... 9.9. Summary In this unit we have studied the following: l Reading involves not just the physical recognition of words but the interpretation of the message they convey. l Speed in reading depends on the eye span and the accurate return sweep to the next line. l Reading can be oral and silent; both these kinds are to be practised in English classrooms. l Initial training has to be oral; oral reading helps children not only to pronounce words but to group them meaningfully. l Most reading in real life situation is silent. l There are five methods of teaching oral reading at the initial stage: Alphabetic method, Phonic method, Word method, Sentence method, Story method; a combination of these will be advantageous. l Reading aloud is useful in teaching literary pieces especially in teaching poems; reading plays, conversations, skits, stories can be an enjoyable experience for learners. l Silent reading constitutes a complex set of sub-skills. l While reading silently, the eyes of an individual do not sweep across the line of print smoothly and steadily but move in jerks from one fixation point to another. l The number of fixations or pauses per line depends on the difficulty of the material that is given for reading, age and the maturity of the reader. l Regression, sub-vocalisation andfinger reading are considered asobstacles to efficient reading as these practices retard the speed. l Comprehension and interpretation of the reading input through various tasks and activities should be ensured. l At intermediate and advanced levels development of the reading sub-skills to be targeted by the teacher alongside giving exposure to intensive and extensive reading practices.

124 NSOU l PGEL - 1&2 9.10. Review Questions 1. How many types of reading can we promote among our learners? 2. Why is silent reading better than oral reading or reading aloud? 3. How can we develop faster reading habits among our learners? Why should we do it? 4. What are some of the habits that reduce the speed of our reading? How can we gain from reduced speed of reading? 5. How many types of comprehension tasks can we apply in our school classes? Describe at least one of them in detail. 6. Discuss some procedural principles in teaching silent reading. 7. Assess the methods of teaching oral reading at the initial stage. 8. Reading involves the ability to discriminate letters and recognise words. Write a note on the steps of developing this ability. 9. What do you understand by the words "Oral Reading" ? Write an essay on the methods of Teaching Oral Reading. 10. What are the difficulties a language teacher is likely to face in teaching Reading as a Skill? 9.10 References Bajwa, B. (Ed.). (2009). The key word here is 'comprehension' which refers to the identiûcation of the intended meaning of written communication. Contemporary theories of comprehension emphasise that it is an active process drawing both on information contained in the message (bottom-up processing) as well as background knowledge, i.e. information from the context and from the reader's purposes or intentions (top-down processing). Gray (1967) suggests that when we read something we understand it at three levels: "first, the purely literal responding to the graphic signals only with little depth of understanding, the second level at which the reader recognises the author's meaning, and the third level where the reader's own personal experiences and judgements influence his response to the text." These three levels can be summarised as 'reading the lines, reading between the lines and reading beyond the lines'.
NSOU l
PGEL - 1&2 127 10.2 Objectives After going through this unit you will be able to:
l Understand the
concept of '
reading comprehension' l List the different types of comprehension l Examine some important concepts in teaching reading comprehension l Understand the pedagogical implications of teaching reading comprehension l Understand the teaching objectives and principles underlying reading comprehension tasks and activities l Specify the various sub-skills and abilities involved in reading and understanding l Explore some classroom exercises, tasks and activities to develop reading competence l Specify the different stages of a reading lesson along with the teacher's role in each stage 10.3. Reading For Comprehension Different types of reading comprehension are often distinguished according to the reader's purposes in reading and the type of reading used. The following are commonly referred to: a) Literal comprehension: Reading in order to understand, remember, or recall the information explicitly contained in a passage. b) Inferential comprehension: Reading in order to ûnd information which is not explicitly stated in a passage, using the reader's experience and intuition, and by inferring c) Critical or evaluative comprehension: Reading in order to compare information in a passage with the reader's own knowledge and values d) Appreciative comprehension: Reading in order to gain an emotional or other kind of valued response from a passage. It is noteworthy here that we need not comprehend everything in a text. Comprehension or understanding is not 'all or nothing' process, and from it follows that reading is not an 'all or nothing process' either. Thus, although reading is a process whereby one looks at and understands what has been written, the reader does not necessarily need to look at everything in a given piece of writing. The reader actively works on the text and is able to arrive at understanding it without looking at every letter and word.

10.4. Reading Comprehension: Teaching Implications While teaching reading comprehension the teachers should aim at developing the skills and imparting those strategies that would promote comprehension. Let us take note of the important characteristics of 'comprehension' and their implications for teaching: A) All readers bring something with them to a text in terms of a general stock of knowledge referred to as the 'schemata'. The teacher should, thus, try to exploit the 'schemata' in the best possible way for better understanding of the text. Schemata is congenial for predicting and aids in deeper understanding of the text. B) One can understand something better if one puzzles out things for oneself. True learning involves a large element of personal discovery. The same is true for reading comprehension. The teacher should make learners work out things for themselves and avoid such practices like explaining the meaning of a passage or a word. Rather, such tasks and activities should be devised that learners are required to find out the information themselves or deduce the meaning going through the 'discovery procedure'. C) Understanding something will be deeper and will last longer if one does something with the information one has just acquired. This is equally true for reading. There should be such tasks and exercises that make the learners use the newfound knowledge and information. D) For understanding something the focus and the concentration is restricted to its content while other aspects is paid less attention. In reading for comprehension, too, the focus on the content is required. The teacher needs to encourage silent reading and must not use the reading text for teaching pronunciation. E) Reading is not an 'all or nothing' process. The teacher should not aim at 'total comprehension' of every single word, sentence and item of content of a passage. F) Reading comprehension is based on the competency of a set of sub-skills. The teacher should use a reading input as a vehicle for developing the sub-skills that the learner needs to exploit in comprehension of other passages. G) Like many other activities in life reading involves a variety of purposes, styles and types. The teacher should arrange such reading programmes that the learners are exposed to a variety of reading styles and types viz. intensive and extensive reading.

H) Real life reading is not an isolated activity. Often readers require to respond to the text by means of writing or speaking. While keeping the focus on developing reading skill, the teacher should try to integrate the productive skills through certain tasks and exercises based on the reading input. 10.5. Check Your Progress - 1 What do you understand by term 'reading comprehension'? What are its different types?
....
.... Discuss some of the pedagogical implications of teaching reading comprehension. ....
.... 10.6. Teaching Reading Let us now focus on the procedural aspects of teaching reading.We should note that our job as a teacher is to train the learners in the skills, sub-skills and strategies they will need for the understanding of texts. Hence, the teacher would require to consider the following factors of teaching procedure: A) The reading inputs B) The comprehension tasks and exercises C) The teaching stages 10.6.1 The Reading Input The course books play a significant role in developing reading skills. Most school curricula and language courses have prescribed course books containing a selection of texts in their reading skills section. It is a common experience for teachers that many textbooks are simply a collection of prose passages and poems. Often these texts have descriptive passages on different themes. Very often the subject matter is found to be uninteresting for the learners and do not relate to the learners' real life experience. The textbooks may not even contain a variety of text types and no while-reading activities for the learners. At the most, there a few questions, often of the long-answer type, to test the learners' understanding of the passage. Our role, as teachers, is crucial in this context. We need

to devise such questions and activities which will make the learners read the text. Attempt should be made at cognitive engagement of the learners through suitable reading input. However, there are some textbooks which give a lot of support to the teacher and the learners. There is often a built-in-teacher in the materials with variety of tasks and exercises. The teacher, here, needs to act as a facilitator. The teacher needs to only check whether the texts along with the exercises are pitched at the level of the learners or whether the learners are able to adapt to the given text varieties and the tasks. If not the teacher would require to devise a new set of activities matching the learners' needs and competencies. However, current practices in ELT have stressed more on the use of authentic texts which refer to those texts and materials that have not been originally developed for pedagogical purposes, such as articles, newspaper reports, advertisements, company reports, etc. Such texts are often thought to contain more realistic and natural examples of language use than those found in textbooks and other specially developed teaching materials.Grellet observes, "authenticity means that nothing of the original text is changed and also that its presentation and layout are retained." Planning a reading lesson begins with the reading text, no matter, whatever be the type. The reading texts included in a course book are of varying lengths with some being long pieces while some short. Usually, a text has a number of paragraphs, especially longer texts. So the first job of a teacher is to break the longer texts into smaller manageable units (though in some course books the unit division is pre-designed as in BLISS, NCERT, CBSE textbooks, etc.). A convenient approach to unit division is to allot a certain number of paragraphs which could be completed in one period, considering the total time available for completing the particular lesson. However, the teacher should not make the split arbitrarily, causing a division in ideas or themes; rather, he / she should look for natural boundaries in the text and ensure that each unit is a self-contained unit. One advantage of this approach is that the learners would be motivated to read and work with shorter texts. Moreover, each unit will have its own learning potentials and the teacher can vary their approaches and strategies more easily. Finally, handling a text in units can lead to effective learning as it helps the learners to relate the parts of the text to the whole and see how these contribute to make the total meaning. 10.6.2. Comprehension Tasks and Activities Let us now move on to study some of the tasks and exercises that can be utilised to develop reading skill. But before we move on to the detailed discussion let us first study some of the principles of designing reading tasks and exercises:

NSOU l PGEL - 1&2 131 · The tasks and exercises should be suited to the texts. An exercise should never be imposed on the

| 100% | **MATCHING BLOCK 32/83** | **SA** | Communicative Language Teaching-44.doc (D13748560) |

text. It is better to allow the text to suggest what exercises are most appropriate to it.

In the words of Grellet, 'the text...should be the starting point for determining why one would normally read it, how it, would be read, how it might relate to other information.'. l Tasks must also be suited to the learners' purposes and types of reading i.e. intensive and extensive. l The tasks and activities should be varied in order to – (a) to sustain interest in the lesson (b) to prevent anticipating the question type and thus prevent rote-learning (c) to cater to different levels of learners in a heterogeneous class l The tasks and exercises should be targeted at the development of various sub- skills of reading; attempts should be made to cover as many sub-skills as possible as listed by Brown (1994) or Munby (1978). While Brown's list has already been discussed in CC-1,Mod-1, Unit-4.5.1, Munby's list of reading sub-skills are given below for reference: i. Recognizing the script of a language ii. Deducing the meaning and use of unfamiliar lexical items iii. Understanding explicitly stated information iv. Understanding information when not explicitly stated v. Understanding conceptual meaning vi. Understanding the communicative value (function) of sentences and utterances vii. Understanding relations within the sentence viii. Understanding relations between the parts of a text through lexical cohesion devices ix. Understanding cohesion between/among parts of a text through grammatical cohesion devices x. Interpreting text by going outside it xi. Recognizing indicators in discourse Identifying the main point or important information in a piece of discourse xii. Distinguishing the main idea from supporting details xiii. Extracting salient points to summarise (the text, an idea etc.) xiv. Selective extraction of relevant points from a text xv. Basic reference skills xvi. Skimming xvii. Scanning to locate specifically required information

xviii.Transcoding information to diagrammatic display · However, there should not be a plethora of tasks; too many tasks and exercises may spoil the pleasure of reading. A balance need to be struck between leaving the learners without any help on one hand, and on the other, 'squeezing the text dry'. · Learners may be allowed to see the questions they are going to answer before reading the text. This will enable them to opt for the right strategy of reading i.e. they would read in the required way. For example, they would scan the text to extract specific information while skim to understand the theme of a particular text as per the demand of the task Let us now proceed to our discussion on the different kinds of comprehension exercises which can be effectively used to develop reading skills. Broadly, comprehension exercises can be of two kinds: a) Comprehension questions and b) Comprehension tasks and activities and the teacher should present a careful mix of both the types for developing better comprehension competency. a) Comprehension questions: Comprehension questions can be further classified into Fixed Response Items and Free Response Items. Fixed response items include MCQs, True/False statements with justification or supporting statement, matching exercises, fill in the blanks, and sentence completion with information from the text, etc. MCQs consist of a stem which poses the problem followed by four or five options, one of which is the correct or the best answer. The alternatives are known as distractors. They are plausible answers designed to deceive the weaker learners. The stem may be in the form of a direct question, and incomplete statement or a word or a phrase. True-False exercises present a statement. A learner has to decide whether it is true or false in accordance with the text. It should be noted that if the answer is available explicitly in the text then they are less effective as they pose no challenge to the student. The answer should be implicit, requiring inference and deduction which are key sub-skills of reading. In case of 'false' statement the learners should be made to state the correct statement, while for 'true' statements they should be asked to provide the supporting statement or relevant extract from the text. Thus, guess work may be avoided. Matching exercise involves two columns of words or statements in which the items in the first column do not correspond with those in the second column. The learners are required to match.

NSOU l PGEL - 1&2 133 All the above items along with fill in the blanks and sentence completion are ideal for developing the sub-skills of scanning, inference, etc.Besides these, cloze exercises (wherein words are deleted from a reading passage at regular intervals leaving blanks) may be introduced involving grammar and vocabulary items, however, these should be comparatively few in number as the focus need to be primarily on comprehension of the text. Free Response Items: These are the conventional 'Wh-questions' requiring the learners to write a short or a long answer. Thus along with comprehension, these require certain competency in the productive skill of writing. The different types of free response items include: a) Questions of literal comprehension: These are questions whose answers are directly and explicitly available in the text. The learners are free to answer in the words of the text itself, though this is not desirable. These questions are essential preliminaries to serious works on the text, because unless the learner has grasped the plain meaning of the text, the in-depth questions will be of no use. b) Questions of inference: These questions make the learners 'read between the lines', consider what is implied, but not stated explicitly. The difficulty is more of cognitive in nature rather than linguistic in most cases and the learners need to assimilate and synthesise in his/her mind pieces of information that are scattered in the text, so that their joint implication can be recognised. c) Questions of evaluation: Evaluative questions involve the reader in making a considered judgement about the text in terms of what the writer is trying to do and how far he has achieved it. These questions often include literary appreciation and are more appropriate at advanced levels. Through these questions we must ensure that the learner not merely responds but can analyse his/her responses and measure it against the presumed intention of the writer. d) Questions of personal response: Of all the types of questions the answer to this type depends upon the reader and least on the writer. Here, the learners are asked to record their impressions and reactions based on textual evidence. So the learners go beyond their role as readers and essentially get involved with the writer. Nuttall's (1982) observations in respect of the quality and type of questions are important in this connection. His observations can be summed up as follows: Firstly, there should be a repertoire of comprehension questions which will cover the full potential of the text. Questions should go beyond simple recall and recognition to the higher levels of cognitive activity. Thus, the complete reading programme should begin with questions which establish the purpose of reading and then demand information to be verified from the text.

134 NSOU l PGEL - 1&2 Secondly, good questions should be like sign-posts. Signpost Questions (SPQ) are questions which provide directions to the learner for discovering where the meaning or information is to be found. Their purpose is to guide the students when they read, directing attention to the important parts in the text, preventing them from going off the track. SPQs draw attention to that learning point and stimulate thought and exploration. Thirdly, good questions should stimulate interpretation. A subjective response usually results in alternative judgements. If questions generate discussion, exercise the learners' mental skills, lead to defence of arguments or constructive criticism on the basis of textual evidence, them much of the teacher's aim is achieved. Fourthly, all good questions should help the learners in comprehension by engaging the learners in active struggle with the text. If the learners are able to give the answer by merely guessing, then these questions become valueless. Hence, the questions must probe the evidences students use to arrive at the answer. Paradoxically, it is when the students give a wrong answer (due to misreading of the text and not on ignorance) that the real work of developing understanding can begin. Thus, comprehension questions must be followed by process questions like 'how do you know?', 'in which line / passage did you get the answer?', etc. Finally, it must be noted, that although a student may learn to react appropriately to all questions, they are but a means to an end. Reading is a solitary activity. In real life reading experiences learners will not be aided by any external stimulus to focus his/her thinking. Thus, the primary aim of all questions should be to stimulate the learner to develop the art of self-posed questions. However, provocative questions they are, they can never fully cover the special needs and difficulties peculiar to each individual. Thus, from the earlier stages, learners should be encouraged in to ask questions as they read. Such training is useful in teaching them how to read in general. b) Comprehension Activities Different kinds of texts offer opportunities for different kinds of exploitation. Traditionally, texts have been exploited by means of questions. Current practices, however, have adopted more flexible and adventurous methods. Various kinds of activities have been devised to supplement (and not to replace) questions. Different types of such comprehension tasks and activities include: a) Outcomes involving non-linguistic responses: l Drawing figures (geometric, portraits) from a set of written instructions l Plotting a route on a map l Constructing a map from given description / instruction in a text l Marking the correct option from a set of alternatives as in MCQs

NSOU l PGEL - 1&2 135 l Numbering as per sequence l Underlining words / parts of a text b) Outcomes involving linguistic responses (spoken and written) l Suggesting a title to indicate global comprehension l Dramatization of the given text and role play l Debate based on issues given in the text l Discussions based on issues given in the text l Short talk / giving opinion on issues in the text l Designing advertisements / posters for objects described in the text l Writing synonyms / antonyms and framing meaningful sentences l Writing a script / skit based on the text l Writing summary l Writing critical appreciation l Composing text-generated reports, letters, notices, etc. l Information-transfer task l Constructing tables, graphs, charts, flow-charts, from given information in the text 10.6.3 The Teaching Stages Having chosen the text and decided broadly on the tasks and exercises, the next important job of the teacher is to chalk out a plan on how to conduct the entire lesson in a phased manner so that he/she can achieve the targeted broad and specific objectives. We shall now discuss the various stages of a reading session. The receptive model, as also in listening, has three basic

| 71% | MATCHING BLOCK 34/83 | W |

stages: a) Pre-reading stage b) While reading stage c) Post reading stage a) Pre-reading

stage: This stage is called 'preparation', 'introduction' or 'lead-in'. Here the teacher prepares the students, puts them in proper mental frame to receive the text. Some of the teaching objectives and teacher activities may include the following: Teaching Objectives l To prepare the learners to receive the text l To arouse interest and curiosity in the content l To encourage them to predict / anticipate the reading content l To give them motivating purposes for reading

136 NSOU l PGEL - 1&2 l To exploit their 'schemata' or their existing knowledge regarding the reading content thereby establishing a cognitive link between their knowledge and the content to be read Teacher Activities l Exploiting illustrations to stimulate hypothesis about the content / plot / theme etc. l Showing pictures to introduce the content l Asking few general and topic related questions to the class as a whole and making the learners respond l Organise brief discussions about the theme / content l Clarifying few difficult key words / culturally alien words which may pose difficulty in global comprehension b) While reading stage: This stage is the 'presentation' stage where the students actually read to find out all the information the text has to offer. The learners in this stage are required to engage in different ways for negotiating for potential meaning. The teaching objectives and teacher activity can be summed up as under: Teaching Objectives l To help understand the writer's purpose l To help understand the organisation of the text l To help comprehend and the interpret the meaning / message conveyed in the text l To develop the various sub-skills of reading l To make the learners work on a variety of comprehension exercises, tasks and activities l To help the learners devise their strategy of reading as per the need l To improve on the learners' reading speed and instil good reading practices Teacher Activities l Introducing the reading text / input; the learners may be asked to read twice or thrice considering the difficulty level of the text l Introducing the while reading tasks and exercises; the learners may be asked to work out in phased manner if needed l Managing the class effectively through pair / group work or individual activity l Encouraging time bound reading to improve the reading speed l Broadly acting as the facilitator of the reading process l Conducting task end assessment and evaluation

NSOU l PGEL - 1&2 137 In general, while reading work begins with a general or global understanding of the text, and then move to the smaller units such as paragraphs, sentences and words. c) Post reading stage: This is the 'follow-up' stage wherein the teacher needs to move away from the text to the inner thoughts and feelings of the learners. In this stage the questions of evaluation and personal response can be assigned. Skill integration is another aspect of this stage. Many of the follow-up activities can be done orally, like group discussion, oral presentation of personal views, debate, short talk, etc. Similarly, written work can be a natural culmination of the content in the text. The teaching objectives and teacher activity can be summed up as under: Teaching Objectives l To develop certain sub-skills of reading like extra-integration, etc. l To help the learners relate the text to their own knowledge, interests or views l To consolidate and reflect upon what has been read l To trace the development of thought and opinion l To suggest practical application of theories / principles / concepts / arguments read in the text l To integrate reading skill with other productive skills Teacher Activities l Organising pair / group discussions, debate l Arranging for dramatizing and role-play activities l Writing summary and critical appreciation l Writing notes / reports l Help learners find out parallel texts in English or any other known language l Broadly acting as an observer and facilitator as post reading stage is free production stage beyond error correction 10.7. Extensive Reading In our preceding discussion we have primarily dealt with the principles and procedural aspects that a teacher should keep in mind while planning and executing an intensive reading session. However, as stated earlier, the teacher should also focus on conducting extensive reading sessions or programmes. Extensive reading involves reading in quantity without bothering to check every unknown word or structure, meaning and message of

138 NSOU l PGEL - 1&2 the content. Global comprehension and interpretation is the primary target. The primary purpose is to train the learners to read fluently in English for their own enjoyment and without the aid of a teacher. Learners are encouraged to read widely on subjects in which they find interest (art, politics, sports, social, scientific, etc.) and share what they have enjoyed with their classmates. They are expected to be able to discuss not only the content but the implications of what they read. Reading, thus, becomes a technique, not an end in itself, and language becomes a vehicle, a tool, and a model. Thus, the teacher should consider the following principles while conducting an extensive reading session: l Although extensive reading involves a lot of reading out of class, some class time has to be devoted to it both to maintain the learners' interest in it and to train them how to cope with longer texts. Learners who have not acquired the reading habit are often put off by the long books usually prescribed for supplementary reading. Necessary guidance and encouragement need to be given through an organised extensive reading programme. l The material that the learners are encouraged to read should be more easily and readily accessible in language and content than that which is studied intensively. The aim of an extensive reading programme is to establish the habit of reading among the learners. It is not difficult to create this habit if the books are well chosen. When the teacher chooses books for extensive reading, thecriterion of readability (i.e., suiting the linguistic level of the reader) and suitability of content are even more important than when the teacher chooses atext for intensivereading, because it is expected that the learners will read the bookson their own. Extensive reading materials should, therefore, be: a) Easy: The language must be easier than that found in the coursebook because the guidance of the teacher or the task is absent for the learner. To develop fluent reading it is far more useful to read a lot of easy materials than a few difficult ones. b) Short: The length of the book must not be daunting. Elementary level learners need slim books so that they can finish quickly without a sense of strain and without getting bored. c) Appealing: The book will be appealing if it is attractive in appearance, well-printed and with good coloured illustrations - more illustrations and bigger print for more elementary learners. d) Varied: There must be a wide choice of books to suit the varying needs and wants of the learners in terms of content, language, and intellectual and emotional maturity.

NSOU l PGEL - 1&2 139 In most school curricula, 'literature readers' are meant for extensive reading at secondary and senior secondary levels. l It is noteworthy that the three-phase teaching procedure along with many of the tasks and activities, specifically the while-reading stage and its associated tasks, as discussed in the preceding section are not applicable to extensive reading. Hence, the teacher should ascertain to conduct some activities (if not tasks) to keep track of the learners' reading alongside developing some of the sub-skills. Typical extensive reading tasks and activates may include: summary writing, writing critical appreciation and reviews, peer / group discussion on the theme and issues dealt with in the text, maintaining a study journal which would include their reflections on various aspects of the text as they proceed with the reading, oral or written presentation of chapter or part summary, etc. For further details and samples of reading texts, tasks and activities please refer to CC-1 Mod-4, Unit-15. 10.8 Check Your Progress - 2 Discuss some examples of tasks and exercises involving 'linguistic' and 'non-linguistic' responses.

....
.... What are some of the factors we should keep in mind while selecting a reading text? ....
.... What would be your role as a teacher in the while reading stage? ....
.... In which stage would you like to integrate productive skills with reading and how? Give examples.

140 NSOU l PGEL - 1&2 10.9. Summary In this unit we have studied the following: l Most reading in real life situation is silent involving 'comprehension' l Comprehension is an active process drawing both on information contained in the message (bottom-up processing) as well as background knowledge, i.e. information from the context and from the reader's purposes or intentions (top-down processing). l Reading comprehension can be of basically four types : Literal, Inferential, Critical or Evaluative and Appreciative comprehension l A teacher would require to consider the following factors of teaching procedure: the reading input, the comprehension tasks and exercises, the teaching stages l Reading input may include texts from prescribed course books or 'authentic' texts l The reading text may be suitably divided into smaller units for better comprehension l Reading comprehension exercises include 'Free Response' and 'Fixed Response' items; Fixed Response items include tasks like MCQs, matching, etc. while Free Response items include long and short questions of inference, literal comprehension, evaluation and personal response l Comprehension tasks and exercises include items of 'linguistic' and 'non-linguistic' responses; items involving non-linguistic response include marking, underlining, etc., linguistic responses call for spoken or written work. l Teaching reading involves three stages: Pre-reading, while reading and post- reading l Pre-reading is the warm up stage where the teacher motivates the students, puts them in proper mental frame to receive the text. l In the while reading stage the students actually read to find out all the information provided in the text and develops an understanding of the text working out certain tasks and exercises; the teacher attempts to develop various sub-skills of reading in this stage l Post-reading stage attempts at integrating reading skill with speaking or writing skill. l Conducting extensive reading programmes and sessions are equally important to make the learners fluent readers.

NSOU l PGEL - 1&2 141 10.10 Review Questions 1. How many types of comprehension have been discussed in this unit? What are some of the subtle differences? 2. What strategies can we use to facilitate easier comprehension for our students? 3. Do all texts lend themselves to information transfer exercises? Give some examples. 4. What are the different stages of teaching in a reading lesson? 5. How can we promote extensive reading in our learners? 6. Which factors should a language teacher stress in particular in the teaching procedure of reading comprehension? 7. Enumerate the salient principles while conducting an extensive reading session. 8. Write your appraisal of teacher activitiesin the pre-reading stage. 9. Sum up teacher activitiesin the reading stage. How best can a teacher help a learner out of probable reading difficulties? 10. How should a teacher conduct himself ideally in post reading 'follow-up' stage? 10.11. References Bajwa, B. (Ed.). (2009). A Handbook of Teaching English. New Delhi. Orient Black Swan. Bowen, J. D. Unit - 11 p Writing Skills - 1 Structure 11.1 Introduction 11.2 Objectives 11.3 Teaching Writing 11.4 The Approaches to Teaching Writing 11.4.1 The Controlled-to-Free Writing Approach 11.4.2 The Free-Writing Approach 11.4.3 The Paragraph—Pattern Approach 11.4.4 The Grammar-Syntax-Organization Approach 11.4.5 The Communicative Approach 11.4.6 The Process Approach 11.5 The Principles of Teaching Writing 11.6 The Sub-Skills of Writing 11.7 Levels and Stages of the Writing Process 11.7.1 The Beginners Level or Stage 1 11.7.2 Intermediate Level or Stage 2 11.7.3 The Advanced Level or Stage 3 11.8 The difference between Skilled and Unskilled Writers 11.9 Summary 11.10 Review Questions 11.11 References 11.1 Introduction Let us now focus on writing skills which is considered to be the most difficult of all the skills. As Rosen (1981) points out, the writer is denied a wide range of expressive possibilities that are available to a speaker. In his words, '…the writer is a lonely figure cut off from the stimulus and corrective of listeners. He must be a predictor of reactions and act on his predictions. He writes with one hand tied behind his back, being robbed of gesture. He is robbed too of the tone of his voice and the aid of clues the environment provides. He is condemned to monologue, there is no one to help out, to fill the silences,

144 NSOU l PGEL - 1&2 put words in his mouth, or make encouraging noises'. From this observation we can make out how difficult it is for the learner to emerge as a competent writer unless properly guided. Let us look back to our school days. Do we have sweet and pleasant memories of our writing classes?Perhaps not, with most of us. We have always regarded them as a 'necessary evil' or an activity that has to be gone through. Tricia Hedge points out, "… many students and teachers would recognise, if ruefully, the characterisation of writing periods as times of sighing, pencil chewing, foot-shuffling agony" (1988). Our experience as teachers of composition does not present writing as a very interesting and enjoyable activity. It has often been the practice to convert composition classes into prose, poetry or grammar classes as it is felt that "there is no need to teach writing". While the writing skill is thus dismissed or ignored, it is paradoxical to find that the examination tests only the skill of writing continuously for two to three hours. It is generally assumed that writing is not 'taught' but is usually 'caught'. However, it is to be noted that writing is a learned skill and not an acquired one. It requires training in the art of writing i.e. both how to write words and how to create meanings. Thus, as teachers, first we need to consider the various nuances of writing systematically which in turn will help us to grasp the nature of the skill better, and consequently identify the optimal ways that we should adopt to teach it. 11.2 Objectives

After going through this unit you will be able to: l Understand the

need and importance of teaching writing l Examine some of the theoretical concepts and approaches to teaching writing l Understand the pedagogical implications of teaching writing l Specify the various sub-skills and abilities involved in writing l Differentiate between skilled and unskilled writers 11.3. Teaching Writing As teachers let us now determine some of the objectives of teaching writing. Chastain (1976), in this regard observes: "The goal in writing is twofold. Psychologically students are more impressed by exercises that are to be written and handed in than by those that are to be learned. Realistically, the teacher knows that writing homework exercises and

NSOU l PGEL - 1&2 145 other written activities help the students to acquire the vocabulary and the grammar of the lesson. Practically, the students' minimum contact with the language in the classroom must be expanded as much as possible. The overall objective then will be to help the learners express their ideas in written form." Thus, Donn Byrne (1979) suggests the following objectives of teaching writing: l The introduction and practice of some form of writing enables the teachers to provide for different learning style and needs. Some learners especially those who do not learn easily through oral practice, feel more secure if they are allowed to read and write in the language. For such students, writing is likely to be an aid to retention, if only because they feel more at ease and relaxed. l Writing is often needed for formal and informal testing. l The exposure to a foreign language through more than one medium is likely to be more effective than relying on a single medium alone. Writing also provides variety in classroom activities; serving as a break from oral work and

| 100% | MATCHING BLOCK 39/83 | SA | Communicative Language Teaching-44.doc (D13748560) |

increases the amount of language contact through work that can be set out of class.

Additional objectives of a teacher in conducting writing classes may include the following: l Reinforcing learning; writing helps to reinforce learning as the close relationship between writing and thinking makes it a valuable part of any language course. l Generating interest and motivating the learners for taking up writing assignments shedding all inhibitions l Giving exposure to a variety of academic and non-academic real life writing practices. All through the learning years, a learner needs to write various types academic write ups like long and short answers, essays, amplifications, substance, precis, literary appreciation, dialogues, academic papers and articles, dissertation, thesis. Non-academic writings may include literary and creative writings, diaries, reviews etc. along with various professional writings like official letters, business letters, reports, proposals, notice, etc. · Developing the sub-skills that goes into efficient writing. Check Your Progress 1 Based on the above discussion state some of the objective statements that you would consider before conducting a writing class. You may begin your statements in the following manner: 'to develop…', 'to introduce…' and so on. ....

....

146 NSOU l PGEL - 1&2 11.4. The Approaches to Teaching Writing An understanding of the various approaches that have been adopted and practiced or experimented with over the years by second or foreign language teachers and researchers across the globe is essential before we justifiably decide on our approach and principles of teaching writing. Ann Raimes (1983) has basically identified six types of approaches: The controlled-to-free writing approach, the free writing approach, the paragraph-pattern approach, the grammar-syntax-organisation approach, the communicative approach and the process approach. We would now try to understand the assumptions and pedagogical applications of each of these approaches in details. 11.4.1 The Controlled-to-Free Writing Approach During the 1950s and early 1960s the audio-lingual method dominated the second language teaching approach wherein speech was considered primary and writing served to reinforce speech in that it stressed mastery of grammatical and syntactic forms. ESL teachers developed techniques to move learners towards this mastery through the controlled-to- free writing approach. The controlled-to-free writing approach is sequential: students are first given sentence exercises, then paragraphs to copy or manipulate grammatically by, for instance, changing questions to statements, present to past, or plural to singular. They may also require to transform or combine sentences. They work on given material and perform strictly prescribed operations on it. With these controlled compositions, it is relatively easy for students to write a great deal yet avoid errors. Only after reaching a high intermediate or advanced level of proficiency are learners allowed to try some free compositions, in which they express their own ideas. This approach focuses on accuracy rather than fluency or originality. 11.4.2 The Free-Writing Approach Teachers and researchers have often stressed on the quantity of writing rather than quality. They adopted the approach of teaching writing by assigning vast amounts of free writing on given topics, with only minimal correction of error. The emphasis in this approach is that intermediate-level students should put content and fluency first and not worry about form. Once ideas are down on page, grammatical accuracy, organisation, and the rest will gradually follow. Concern for 'audience' and 'content' are seen as important in this approach, especially since the free writings often revolve around subjects that the students are interested in, and those subjects then become the basis for other more focused writing tasks.

NSOU l PGEL - 1&2 147 11.4.3 The Paragraph–Pattern Approach This approach is also called the model based approach wherein students copy paragraphs, analyse the form of model paragraphs, and imitate model passages. They put scrambled sentences into paragraph order, they identify general and specific statements, they choose or invent an appropriate topic sentence, they insert or delete sentences. This approach is based on the assumption that in different cultures people construct and organise their communication with each other in different ways. So even if learners organise their ideas well in their first language, they still need to see, analyse, and practice the particularly 'English' features of a piece of writing. Though, this approach lacks creativity and originality on the part of the writer, it is very helpful for the weaker learners, they do not know how to write on their own, and the models provide them good support. It is noteworthy here that this approach is the most popular approach in teaching writing in India and is widely practiced by teachers across all levels largely because of the ease of implementation specifically in dealing with large classes and also due to lack of awareness of the emerging trends. However, this approach can be made more challenging for the learners by adopting the following procedure: Specify Let learners Study Model Compare with Revise task write what learner's writing they can The presentation of the model, in the context of the learner's own writing, especially after his/her initial struggle is sure to be much more meaningful and useful for the learner. 11.4.4 The Grammar-Syntax-Organisation Approach Many teachers and researchers have stressed on the need to work simultaneously on more than one compositional skills. Writing, as per this approach, cannot be seen as composed of separate skills which are learned one by one in isolation. Hence, teachers have devised writing tasks that lead learners to pay attention to organisation while they also work on the necessary grammar and syntax. For instance, to write a clear set of instruction on how to operate a PC, the writer needs more than the appropriate vocabulary; he/she needs the simple forms of verbs, an organisational plan based on functional sequence, sequence words like 'first', 'then', etc. and even sentence structures like 'when…., then….'. This is a sort of whole language approach to teaching writing.

11.4.2 The Communicative Approach The communicative approach stresses the purpose of a piece of writing and the audience for it. Learners are encouraged to behave like writers in real life and to ask themselves the crucial questions about the purpose and audience – who am I writing for? Who will read it? Traditionally, the teacher alone has been the audience for learner writings. But advocates of communicative approach to language teaching have asserted that writers do their best when writing is a truly communicative act, with a writer writing for a real reader. Hence, teachers using the communicative approach to writing have extended the readership. They extend it to the other students in the class, who not only read the piece but actually do something with it, such as respond, rewrite in another form, summarise, or make comments – but not correct. Teachers may also specify readers outside the classroom, thus, providing the learners with a context in which they would require to select appropriate language, content and levels of formality. An ideal writing task in this approach can be thus: 'You are participating in a student exchange programme with another school. Students will exchange schools and homes for three months. A dyslexic student whom you have never written to before will be coming to your house and occupying your room. Write a letter describing the room in detail so that the student can almost visualise it and have a clear picture of your room.' 11.4.3 The Process Approach Emerging trends in ELT have shifted focus from the written product to the process involved in writing. When concentrating on the product teachers are only interested in the aim of a task and in the end product. However, those who advocate a process approach pay attention to the various stages that any piece of writing goes through. Teachers spend time with the learners during pre-writing phases, editing, redrafting and finally 'publishing' their work; the process approach aims to get to the heart of the various sub- skills that should be employed when writing. Ron White and Valerie Arndt (1991) have stressed that 'writing is re-writing; that revision – seeing with new eyes – has central role to play in the act of creating text'. In their model, process writing is an interrelated set of recursive stages which include: l Drafting l Structuring (ordering information, experimenting with arrangements, etc.) l Reviewing (checking context, connections, assessing impact, editing) l Focusing (that is making sure one is getting the message across he/she wants to get across)

l Generating ideas and evaluation (accessing the draft and/or subsequent drafts) White and Arndt's model can be represented diagrammatically in the figure given below: Fig. 11.1 : White and Arndt's process writing model Teachers who use the process approach require to give their learners two crucial supports: time for the learners to try out ideas and feedback on the content of what they write in their drafts. The writing process, thus, becomes a process of discovery for the learners: discovery of new ideas and new language forms to express those ideas. Apart from the aforesaid approaches as identified by Raimes, there are some other approaches that have been proposed by researchers and ELT practitioners. One such approach is the Genre Approach. In terms of writing in a second language, the genre approach has been defined as "a framework instruction". The term 'genre' has been defined as a communicative event and members of each subclass share some communicative functions such as, film reviews containing analysis of movies, editorial columns giving ideas and suggestions, book reviews analysing content of a book, product manuals describing the mode of operation and a set of trouble shooting strategies that writers should know, business letters accomplishing various business purposes like sales, complaint, etc. Thus, each genre intends to fulfil the expectations of an imagined community of readers of that genre. Therefore, each genre constitutes specific communicative features, organisational

structure and linguistic features. In genre approach to writing the leaners need to study sample texts in the genre they are going to be writing before they embark on their own writing. They need to consider certain factors like the knowledge of the topic, the conventions and style of the genre, and the context in which their writing will be read, and by whom. The genre approach is especially appropriate for learners of ESP at the advanced level, however, it may be adopted at the intermediate level too considering some of the genres suitable for that level. Another approach that has been experimented with, specifically in India, is the 'Interactive' approach to teaching writing. As a result of extensive research and experimentation, the Central Board of Secondary Education (CBSE) and the Council for the Indian School Certificate Examinations (CISCE) inducted the interactive approach. The main objective of the interactive approach is accomplishment of language skills (including writing) in an interactive situation. Some of the salient features of this approach are as follows: l This approach involves the actual usage of the language in speech and writing. l It emphasises the eliciting response of the students rather than providing information to the students. l It is an activity-based approach; it is an interaction between the student and the teacher; interaction is made to teach the students. l This approach involves students in different activities such as understanding the text, identifying the main points of the text, pointing out the central idea, selection and extraction of information from the text for specific purposes and engaging in practical activities such as writing. We may note that all of the approaches mentioned above overlap. We may not even restrict our tasks and classroom teaching strategies to a single approach excluding all others. We may adopt the communicative or process approach and may still use techniques drawn from other approaches as the learners need them – model paragraphs, controlled compositions, free writing, etc. It is advisable to adopt an 'eclectic' approach as per need of the learners. NSOU l PGEL - 1&2 151 Discuss the process approach to writing in details. How do you plan to implement the process approach in your writing classes? ....

.... 11.5 The Principles of Teaching "Writing" Let us now focus on the various principles of teaching 'writing' that we, as teachers, should consider while planning and executing a writing session: 1. Meaning-focused Input : l We should arrange our class in a manner that the learners are able to bring experience and knowledge into their writing; writing is most likely to be successful and meaningful for the learners if they are well prepared for what they are going to write. l We can ensure the preparation through the choice of topic, or through previous work done on the topic either in the ûrst or second language. l We should then make the learners actively 'brainstorm' for ideas and points to write on the selected/given topic. 2. Meaning-focused Output: l We should always engage the learners in doing lots of writing and lots of diûerent kinds of writing. There are many elements of the writing skill which are peculiar to writing and so time spent in writing provides useful practice for these elements. Diûerent genres use diûerent writing conventions and draw on diûerent language features and so we should make sure that learners are getting writing practice in the range of genres that they will have to write in. l We should make the learners write with a message-focused purpose; most writing should be done with the aim of communicating a message to the reader and the learner/writer should have a reader in mind when writing. l We should also take care that writing should interest learners and draw on their interests and that the learners experience a feeling of success in most of their writing. l Learners should use writing to increase their language knowledge - lexical, syntactic or compositional. 3. Language-focused Learning: l We should let the learners know about the parts / phases of the writing process and ensure that the learners are able to discuss them in relation to their own and others' writing.

152 NSOU l PGEL - 1&2 l We must note that the learners are able to adopt conscious strategies for dealing with parts of the writing process. l Where the L1 uses a diûerent script, as in India, the learners should give attention to clarity and ûuency in producing the form of the written script in L2 i.e. English. l Spelling should be given an appropriate amount of deliberate attention largely separated from feedback on writing. l We should provide and arrange for feedback that encourages and improves writing. l We should make the learners aware of the ethical issues involved in writing and they should be encouraged to reflect originality. 4. Skill-focused learning: l We should attempt to develop all the sub-skills of writing and the learners should be made aware of each of the sub-skills that he/she is required to employ as he/she proceeds through the writing task. A range of sub-skills as proposed by Raimes and Munby has been discussed in Unit 11.6. l We should also make students aware of the various styles and strategies that he/ she needs to adopt in producing an impressive write-up viz. identifying the purpose of writing, writing for the reader or the audience, the tone, the style - humorous or satiric, etc. 5. Fluency Development: l We should take care that the learners are able to increase their writing speed gradually so that they can write very simple material at a reasonable speed with proper reflection of their thoughts. l We need to note that fluency development in writing can occur through repetitive activities and through working with easy, familiar material. Check Your Progress 3 What are some of the major principles of teaching writing? How do you plan to ensure that the principles are reflected in your teaching?

....

.... 11.6. The Sub-Skills of Writing We are now aware that being a productive skill writing involves the employment of certain sub-skills, the co-ordinated involvement of which produces a good write up. Raimes's (1983) proposition (as discussed in CC-1, Mod-1, Unit-4.6.2) in this regard is NSOU l PGEL - 1&2 153 immensely helpful for any teacher. Additionally, we may also refer to the list of Munby's writing sub-skills as given below for further guidance and planning writing classes: A. Manipulating the script of a language · forming the shapes of letters l using the spelling system l using punctuation B. Expressing information explicitly C. Expressing information implicitly through l inference l figurative language D. Expressing the communicative value of sentences and utterances E. Expressing relations within a sentence using l elements of sentence structure l modal auxiliaries l intra-sentential connectors F. Establishing relations between different parts of a text through lexical cohesion devices G. Establishing relations between different parts of a text through grammatical cohesion devices H. Using indicators in discourse for l introducing an idea l developing an idea l transition to another idea l concluding an idea l emphasising a point l explanation of point already made l anticipating an objection I. Reducing the text through avoiding irrelevant information (adapted from John Munby: 1983: A Taxonomy of Language Skills) We should take care that the learners are consciously made to employ all the sub-skills in producing a write-up. Check Your Progress 4 Discuss the sub-skills of writing in details. What strategies would you adopt to develop the sub-skills?

154 NSOU l PGEL - 1&2 ....

.... 11.7. Levels and Stages of the Writing Process Let us now try to understand the various levels and stages that the learners are required to go through as they go on to master the skills and sub-skills of writing. 11.7.1.The Beginners Level or Stage-1 The first level of basic writing focuses on such writing skills as: legibility, orientation of alphabet, shapes and cursive styles, neatness of handwriting, knowledge of the building blocks of English letters, discerning and arranging the English alphabet in order, etc. Learners are also engaged in identifying, naming and spelling out words to be copied, recognition and production of written form: vowels, consonants and blends, words and syllables, upper and lower case letters, basic spelling patterns, rhyming words, punctuation, phrases and sentences. When learners are able to write words from memory, they are required to: make a detailed and itemized list of objects in pictures, draw and label their own pictures, make personalized linguistic arrangements by creating a personal letterhead, design a monthly calendar or birthday card for a classmate and draw a picture map of the neighborhood in another familiar area. At the basic level of writing, alphabetizing tasks provide writing practice. These tasks include the following: Ø Listing words beginning with a particular alphabet or having a particular sound. Ø Rearrangement of a group of words in alphabetical order Ø Recognition of consonant sounds in the names of classmates. Ø Recalling objects (used in daily situations) whose names begin with a particular sound As the beginner's knowledge of English increases through speaking and listening and reading aloud, new words, phrases, and sentences will be generated, and the learners may then be required to do the following: Ø prepare a list of topical words Ø prepare associational pairs or groups of words Ø prepare a flowchart of antonyms Ø prepare a mind map of synonyms

NSOU l PGEL - 1&2 155 Ø prepare familiar structures of daily usage like names of days and seasons Ø prepare personal lists, grocery lists, food menus, and even stationery lists From words, learners can proceed to short word groups such as phrases, and then they extend their linguistic skills from phrase writing into sentence writing. This is an extended writing exercise. While doing this, they will be engaged in sentence combining, paragraph assembly, paragraph completion, controlled composition (such as rewriting the paragraph in a different tense, modification of names and pronouns, etc.), guided composition (which provides some tips or ideas and the students write short sentences and paragraphs on a topic based on items provided), and questions and answers. 11.7.2.Intermediate Level or Stage Two Next, at the intermediate level, the focus changes to writing with a purpose and learners acquire a plethora words and start writing English for specific usages. They continue to have flawed and erroneous writing. However, at the same time they begin to focus on the use of pronoun links, connecting words for the coherent expression and flow of thoughts expressed, and the use of specific grammatical strategies such as conditional clause and double negatives, modals, tense, etc. Punctuation, arrangement of sentences within a paragraph, transformation of one sentence type into another with or without change in the meaning, stylistic improvements, summarising the ideas found in a passage in their own sentences, completion of sentences and paragraphs to match the ideas contained therein or they want to express, writing with the appropriate tone, style and organisation for the topic focused upon, are some of the things which are important in the instructional design of the intermediate level. This cannot be achieved without supervised practice in which learners are instructed to arrange their ideas in three main ways: Ø Take subjective content or self-gathered information and cast it into a logical format. Ø Analyse a prescribed or suggested (by the teacher) prose model, reconstruct its outline, and use the outline as a model for writing another passage, using parallel or analogous information. Ø Follow an outline prepared by someone else, e.g., teacher or textbook. At the intermediate level, there should be some focus on writing faster, in the same way there would be some focus on reading faster and better. If the students are too slow in writing, it will become increasingly difficult for them to match the speed of their thoughts with their writing speed. It is important that the teacher gives dictation exercises progressively increasing their speed. It is also important that one gives one's students timed writing on given topics. Yet another way to increase speed in writing is to ask

156 NSOU l PGEL - 1&2 them to perform some close exercises. Bowen (1985) describes, "Students copy an incomplete short passage and then complete it in their own words. The objective is not to increase the number of words per minute, but to increase the speed of organizing thought in a second language and of judging and producing in a style that will be compatible with the first part of the passage." 11.7.3. The Advanced Level or Stage Three Students enter the advanced level with a good knowledge of sentence structure, vocabulary, and idiom. They are already exposed to a variety of forms of writing. They can meet almost every need at the end of the intermediate level. However, they may not have much exposure to the specialised literature. They may not have much acquaintance with the specialist vocabulary in English from their fields of specialisation. Thus, at the advanced level of writing in English, the focus is more on English for specific purposes. Writers at the advanced level are also required write routine informal and some formal correspondence, as well as narratives, descriptions, and summaries of a factual nature. They can narrate and describe in the major time frames of past, present, and future, using paraphrasing and elaboration to provide clarity. Advanced-level writers produce connected discourse of paragraph length and structure. At this level, writers show good control of the most frequently used structures and generic vocabulary. Advanced writers are able to write about a variety of topics with significant precision and detail. They can handle informal and formal correspondence according to appropriate conventions. They can write summaries and reports of a factual nature. They can also write extensively about topics relating to particular interests and special areas of competence, although their writing tends to emphasise the concrete aspects of such topics. 11.8.The Difference Between Skilled and Unskilled Writers Let us now study the difference between a skilled writer and an unskilled writer so that we can make our learners aware of the skills requirements and train them accordingly. Less skilled writers tend to focus on the mechanics of writing and are inhibited by their concern for formal correctness. They are also less able to anticipate the likely problems of the reader. In process terms, skilled writers are much more aware of writing as a recursive activity involving revisions of successive drafts of one's texts, during which one's ideas might change, necessitating the rewriting of whole chunk of text. Unskilled writers, on the other hand, tend to limit themselves to teacher-generated rules and modifications of lexis.

Further, in the pre-writing stage, skilled writers spend more time planning the task, while unskilled writers spend little time in planning and, in consequence, remain confused what to write when they begin. In the drafting stage, skilled writers write quickly and fluently, spend time in reviewing what they write, and do most of their reviewing at the sentence and paragraph level. Unskilled writers spend little time reviewing what they have written, review only short sentences of text, and are concerned principally with vocabulary and sentence formation. Finally, at the revision stage, skilled writers revise at all levels of lexis, sentence and discourse, review and revise throughout the composing process, and use revisions to clarify meaning. Unskilled writers, on the other hand, do not make major revisions in the direction or focus of the text, make most revisions only during the first draft and focus primarily on the mechanics of grammar, spelling, punctuation and vocabulary. Check Your Progress 5 How will you identify an unskilled writer? How will you guide him to make him a skilled writer?

....

.... 11.9. Summary In this unit we have studied the following: l Writing as a skill is largely ignored in most school curricula. l Learners especially those who do not learn easily through oral practice, feel more secure if they are allowed to read and write in the language. l For many students writing is an aid to retention. l Writing reinforces learning. l There are basically six types of approaches to teaching writing: The controlled-to- free writing approach, the free writing approach, the paragraph-pattern approach, the grammar-syntax-organisation approach, the communicative approach and the process approach. l Emerging trends in ELT have laid focus on the Process approach to teaching writing. l The process approach entails that writing is a recursive activity involving, planning, writing first draft, reviewing, editing, re-drafting, revising at lexical and organisational levels.

158 NSOU l PGEL - 1&2 l Teachers may however adopt an eclectic approach as per the need of their learners. l Writing is a complex set of sub-skills and abilities which requires intensive practice. l While considering the factors for teaching writing, the teacher should focus on: meaning-focused input, meaning-focused output, language-focused learning, skill- focused learning and fluency development. l The levels and stages of writing include beginners, intermediate and advanced levels. l Skilled writers engage themselves in a series of activities while attempting to write which aids them in producing a good write up. 11.10. Review Questions 1. How do you define writing skill? 2. What are some of the sub-skills of writing that make it complex? 3. What are the different stages of a writing lesson? 4. What different strategies can we adopt to teach writing? 5. How do we grade different tasks for use in a range from the lower classes to advanced ones? 6. How would you distinguish between the Skilled and the Unskilled Writers? 7. Summarise the various principles of teaching 'writing' that a language teachers, should give primacy to while planning and executing a writing session? 8. What are the chief requirements for the first level of basic writing skill development? 9. Which approach has been defined as 'a framework instruction'? Write your appraisal of this approach. 10. Discuss White and Arndt's model and its relevance in the teaching of writing skills. 11.11 References Bajwa, B. (Ed.). (2009). A Handbook of Teaching English. New Delhi. Orient Black Swan. Bowen, J. Teaching Critical Writing 12.6. Teaching Creative Writing 12.7 Summary 12.8 Review Questions 12.9 References 12.1 Introduction We are now aware that the act of writing is only one part of the whole skill. Physical writing is preceded by mental composing. This is the stage of concept formation. Without concepts, ideas and thoughts in one's mind, one cannot write for there would be nothing to write. It is only when one has a mental scheme that one proceeds to transfer his/her ideas on paper in the medium of written language. 12.2

Objectives

After going through this unit you will be able to: l Understand the

basics of

teaching the English script

NSOU l PGEL - 1&2 161 l Understand the procedure for teaching the composing skills l Understand the various stages of a writing lesson l Specify the roles of a teacher in the various stages of a writing lesson l Understand the various types of writing tasks and activities l Understand the principles of teaching critical and creative writing 12.3 Developing Writing Skills: Teaching Procedure Based on our studyof the different sub-skills involved in writing in the preceding units as conceptualised by Raimes, Munby or White and Arndt, we may broadly classify the entire set of sub-skills into two types (as in Fig. 12.1 below) for our convenience of understanding and classroom implementation. Writing Skill Composing skills Crafting skills l Generating ideas l Constructing grammatically correct sentences l Organising ideas l selecting appropriate vocabulary l using cohesive devices l linking text or parts of a text with suitable linkers l using appropriate layout l spelling correctly l using legible handwriting Fig. 12.1 In order to develop writing competence, the learners would require training in both these skills. Hence, we will now attempt to understand the practical aspects of teaching both these skills. Let us now focus on the most important aspect i.e. the steps we need to follow in teaching writing at various levels. Teaching writing skills begins with teaching the letters of the alphabet at the elementary level which is followed by teaching the skills of composing.

162 NSOU l PGEL - 1&2 12.3.1 Teaching the English Script Our teaching of writing begins with teaching the English script. We should note that writing in English requires very fine control of the small muscles of the fingers and the wrist requiring training in writing (penmanship), and hence, it should proceed through certain easy steps. These are called psychomotor skills, and are used commonly while writing almost all the Indian languages. a) Fairly Large Movements: We should advise learners to draw lines of various lengths in different directions. The lines must be large enough so that the wrist movement can be watched by us. Some illustrations are given below: b) Selection of letters: Small letters should be taught first because they are more frequently used in writing than capital letters. After the learners have mastered the small letters, capital letters may be introduced. At this stage all letters must be large in size. c) Spacing of letters: Spacing of letters is important for neat appearance of the write up. We must guide that in forming words, letters must be as close as possible without touching each other and the space between words should be equal, each space must be large enough for a capital 'O' to be fitted into the gap. The principle – 'letters close, words apart' – to be taught at this stage. d) Comparison of letters: While teaching the letters of the English alphabet we need to take decisionon how to group the symbols for effective practice. The features which allow comparisons and contrast must be taken into account. For example, the letter 'n' may be compared with the letter 'm'; the letters 'b' and 'd' must be contrasted. e) Grouping of letters: For the purpose of teaching the new symbols, we need to identify groups of letters which can be effectively and conveniently taught together. Seward (1972) makes eight groups, each identified by a key letter for the lower case symbols.

NSOU l PGEL - 1&2 163 i. e group : e, i, u, t ii. c group ; c, d, a iii. o group : o, w iv. n group : n, m, v, x v. r group : r, s vi. l group : l, h, k, f, b vii. j group : j, p, y viii. z group : z, g, q For capital letters he makes nine groups: i. C group : C, O, Q, A, E ii. N group : N, M. K, H iii. U group : U, V, W, X iv. P group : P, R, B v. D group : D, L vi. T group : T, F vii. I group : I, J viii. S group : S, G ix. Y group : Y, Z The position of the body, arm, head and paper must be carefully observed. They must be upright and parallel to the desk; head must be bent, eyes at least 12" off the paper. f) Position of the script: We should make the students aware that English scripts are usually set on the line and extend upwards and downwards; while, there are scripts like the Devanagari script which 'hang' from the line. Check Your Progress : 1 What are some of the factors that are to be considered while teaching the English script?

....

.... 12.3.2. Teaching the Composing and Crafting Skills We are now aware that in order to be efficient writers, the students must practice both the mental and executing activities of writing. Hence, in this section we will focus on the various aspects of teaching composing skills. In this regard, we need to consider

certain aspects of conducting writing lessons like – the stages of a writing lesson and his/her corresponding role along with classroom management strategy and the various types of writing tasks and activities that could be conducted. 12.3.3. The Stages of a Writing Lesson As teachers we should take note that a writing lesson usually proceeds through four distinct stages. They are: i) Planning and preparation ii) Writing the first draft iii) Revising and editing iv) Writing the final draft i) Planning and preparation: In this stage we are required to prepare the learners for the writing task. After assigning the topic we may ask the following questions to the learners: l Why do you think you are writing the text? l Who will read your text? Who are your readers? l What is the message of the text? l What should be its style – formal or informal? These questions will help the learners decide on the goals for writing, the organisation of the text and select appropriate structures and vocabulary. The basic objective is to make the learners identify such factors like the audience and the purpose of writing which would guide them in composing their write up. Next we move on to the planning stage, which is also called the 'brainstorming' session. It includes two steps – generating ideas and organising them. Once the scope of the text is finalised the learners need to collect all relevant information, points and ideas related to the topic. Ideas may be generated from the learners' own information and supplemented by information from outside sources.The basic objective of this stage is to exploit their content schema alongside generating new ideas. We can encourage idea generation in the following ways: Thinking : memory search, imagining Reading for : text books, reference books, articles, newspapers, magazines, Information etc. Discussion : classmates, friends, relations, teachers, parents, etc. Viewing : films, TV, pictures, objects, advertisements, etc.

After the ideas have been generated they need to be organised. This refers to the overall arrangement of the collected inputs. It is to be noted that there are no fixed rules for organisation. The purpose of the writer, the expectations of the reader, and most of all, the nature of the content will determine organisation. The ideas elicited from the learners may then be represented by the teacher on the board adopting various ways or forms (tables, lists, spider grams, web charts,semantic maps, flow-charts, etc.). Learners understand ideas when they can visualise them. Hence, the teacher should 'map' the ideas on the board. Mapping here refers to the graphical representation of the relationship among the facts, ideas or events of a piece of writing. Thus, through these stages i.e. setting goals for writing, generating ideas and organising ideas and materials the mental scheme is prepared. ii) Writing First Draft: Actual writing begins in this stage wherein the learners put all their ideas and information on paper. They get involved with sentence structure, grammar, appropriate vocabulary, punctuation, spelling, layout and so on. We should make the learners sit in groups of three or four and the members consult and discuss with one another the best way of expressing they have planned. Group activity, in this regard, allows the weaker students to benefit from the brighter ones. Thus, we must compose the groups carefully to include representation of different levels of ability. The role of the teacher during group writing is that of a supervisor and a resource person. Hence, as a supervisor we must select and arrange group formation and check whether all members are participating equally. It is in this stage that we should target the development of crafting skills. Also as a resource person we must be available for consultation on the correct structure, an appropriate layout or a suitable word, the use of cohesive devices, linking parts of a text, etc.We should also provide guidance on the development of such crafting skills like avoiding repetitions of points and words, adopting the suitable style matching the topic, legibility, etc. iii) Revising and Editing: In this stage the focus is on identification of syntactic and semantic errors and correcting them along with revision of the content and organisation of the composition at all linguistic levels. We must encourage the learners to go through their write ups repeatedly and look for errors grammatical, semantic, discourse, spelling or punctuation errors. The learners should also be asked to rethink and rearrange the presentation of points and information, if necessary. The teacher can adopt certain ways of conducting

166 NSOU l PGEL - 1&2 the revision exercise. The teacher can put up a list of items on the board (relevance of ideas, logical organisation, correctness of structures, tenses, preposition, sub- verb agreement, etc.) and instruct the groups to revise their drafts on the basis of these issues. Occasionally, the groups may be asked to exchange their drafts and give feedback on the paper they go through. We can also ask one group to read its draft aloud while we suggestsuitable corrections and modifications which are noted down by the learners. The teacher may also write out the piece with necessary modifications. This procedure is called 'reformulation'. The learners can revise and rewrite their draft on the basis of the reformulated points. We should keep in mind that this stage remains a learner-centric stage and the teacher must not focus much on teacher-guided correction as the basic objective of this stage is to develop the learners' sub-skills of editing and revising and encouraging improvisation. iv) Writing the Final Draft: When the revision is complete and all error corrections have been made, the learners can write the final draft in legible handwriting. The final draft needs to be written individually. Post writing we should collect all the drafts for final correction and comments. We may adopt several approaches for correction of script. The most usual approach is that the teacher does the entire correction and puts his/her comments or grade them. However, Brumfit (1980) suggests a useful technique wherein errors and mistakes are indicated but not corrected. We may underline or mark the mistakes only leaving the learners to identify the nature of the mistakes and correct them accordingly. This is aimed at reinforced learning through self-correction. Another technique suggested is that the teacher collects ten or twelve scripts out of the entire bunch in a random manner and does the necessary correction. Then he/she discusses the errors in the class wherein all the learners pay attention to those errors in their write ups as it has been found that many of these errors are common in all the scripts. Hence, learning takes place through such remedial discussions. It is noteworthy that the approach to script correction should adopted considering the class / level of the learners as well as the competency level of the writers. The fourth stage may be supplemented with a 'follow-up' stage wherein a similar kind of writing task is assigned as home assignment in order to reinforce the learners' learning and skill development. We may also adopt the 'skill-integration' approach wherein we engage the learners in group discussion, debate, role-play, etc. as an

NSOU l PGEL - 1&2 167 oral activity based on the writing topic or input thereby integrating the writing skill with the speaking skill. Check Your Progress : 2 Discuss the different stages of a writing lesson in details with special reference to the role the teacher in each stage. ....
.... 12.3.4. Types of Writing Tasks and Activities Let us now discuss the various types of writing tasks and activities that a teacher can make use of, in writing classes; though, the choice of the types largely depends on the class / level and focuses on the 'what' (content) and 'how' (manner of presentation) of writing. These two factors are crucial in teaching writing in a classroom. Basically writing tasks can be of the following types: l Controlled writing l Semi-controlled writing l Guided writing l Free writing a Controlled Writing: In controlled writing tasks much of the ideas as well as the requisite language are supplied in the task to provide support and guidance to the early learners. The learners require to manipulate the given words and structures in order to compose the text. Controlled tasks can be of different types – blank- filling exercise, multiple-choice task, matching task, re-arrange, etc. For example, Task a) Use words from the list and complete the following paragraph: pointed whiskers gleam black round stripes catch grey colours A cat is a domestic animal. It has a _____ head, small _____ ears and set of stiff _____. Its eyes are _____ and they _____ at night. The colour of its fur may be white or _____ or _____. Some cats have _____ while some have patches of different _____. They _____ mice and small birds.

Task b) Arrange the following sentences in proper order: Squeeze the orange to extract juice /Add water and sugar / Select and wash the oranges / Serve cold / Strain the juice b) Semi-controlled writing: In semi-controlled tasks learners are allowed some freedom to use their own language. Here the teacher controls the idea but decontrols the language. The objective is to encourage the learners to rely more on their own linguistic resources. Thus here the production of the learners will be unpredictable because they will write according to their own linguistic capacity. These tasks may be of several types – information-transfer exercise, expanding an outline, developing notes, etc. For example: Task: Based on the following pattern, make five sentences using the clues given below: He introduced the guests to his wife. explain / difficulty / to / friends —— congratulate / winner / on / performance —— spend money / on / child's clothes —— compare / book / with / own / latest novel — give / cheque / for / birthday celebrations This exercise is meant for giving practice in a particular structure, as in this case the pattern - NP-Verb-NP-Prep PH, or the 'how' aspect of writing. The 'given' factor is the content. While the learner tries out this form in five sentences, he/she is using the content of the sentences only to make sense of the form. There is no need to try to think of what to say, the learner only has to think of how to say it. The structure or form or the how of writing is controlled by the task, and the learner is given a chance to actually write. This is a kind of substitution table, which was very popular with the structuralist approach, which upheld practice and repetition. c) Guided Writing: It is obvious to us that there is a relationship between the 'what' and 'how' of writing. Our learners need help and training in both these areas. It is advisable to help learners to tackle one area at a time, especially if they are at the beginner's level or very weak in English. We may give them practice in the 'how' or structuring of language, with the given content, or the 'what' of writing with the how or structuring elements as given. This basically describes what is called guided writing. It is really the kind of writing that is largely required in schools and colleges in the second language writing contexts as in India. For example, Task: Study the details of Tiyasha Banerjee from the following form and write a paragraph describing her.

Name : Tiyasha Banerjee Age : 12 years School : Modern Girls' High School Class : VII Favourite Subjects : Biology, geography, literature Special interests : environment, music, dance, science fiction Hobbies : travelling, meeting people d) Freewriting: Freewriting, popularised by Peter Elbow (1973), draws on the perception that, when presented too early, concerns about audience, aims, organisation, and structure can inhibit writers from fully exploring potential ideas and meanings for topics. Freewriting is intended to force writers to set such concerns aside while they consider potential ideas. The main goal is to discover things to say about a topic rather than to plan the write up. This technique involves writing nonstop for five, ten, or fifteen minutes. During this period, learners keep generating words, even if they cannot think of anything meaningful to say. The rationale is that, eventually,theywillbeginproducingideasthattheycandeveloplaterintoan effective composition. Sometimes we may combine freewriting with an activity called 'looping', in which learners stop freewriting after five minutes and reread what they've produced. If they find a good idea on the page, they use it as the basis for another freewriting period, repeating the process for about fifteen minutes. Apart from the aforesaid four types another type of pre-writing task or activity that has been experimented with is the 'Talk-Write' activity which is somewhat akin to the 'interactive' approach to teaching writing. It isbasedontheperception that speaking, listening, reading, writing, and thinking are intimately related and mutually reinforcing. It is also based on the idea that if learners can explain a concept or an operation to someone they probably understand it pretty well. Talk- write involves asking learners to construct a plan mentally and to deliver an oral composition to the class. The goal is to have learners develop a plan that is as complete as possible, with minimal relianceonwriting.Generally,theyhaveashort span oftimeforplanning— about twenty minutes.Theymayjotdownafew points in the form ofnotesinitially,butwhentheydeliver the oral composition, they must do so without using any notes. After their presentation, the peersprovide suggestions and comments designed to help improve and elaborate the plan. The next step is for students to begin writing, using what they learned from their presentation to

develop a first draft of the assignment. An advantage of talk-write as an invention activity is that it forces learners to develop fairly elaborate plans very quickly and to internalise their details. The writing itself is usually easier as a result, and it also tends to be more successful. Check Your Progress : 3 How would you differentiate between guided and freewriting? ....

.... 12.4. Teaching Punctuation Teaching punctuation is an important aspect of teaching writing. We all know that punctuation is the process of using accepted symbols and protocols to turn a collection of words into a logical, structured piece of writing to be read, and understood by a universal audience. It refers to the set of marks that are used to regulate and clarify meaning and rhythm within a text. Punctuation helps to make the meaning of a text clear by linking or separating words, phrases, clauses, and sentences. There are approximately fourteen different types of punctuation marks commonly used in English: period or full stop, question mark, exclamation mark, comma, semicolon, colon, apostrophe, hyphen, dash, parentheses, brackets, quotation marks, braces & ellipsis. While the basic punctuation marks like the full-stop and comma need to be introduced in the beginners' level, the use of other punctuation may be introduced in the intermediate level. In respect of teaching, we should note that simply explaining the rules for using various punctuation marks is unlikely to be the most successful approach for teaching punctuation. Punctuation is all about context and it is best to employ written examples to explain how each punctuation mark is correctly used. We may adopt the following strategy forteaching punctuation effectively: 12.4.1 Teaching Grammar To use punctuation correctly the learners would require a good understanding of English grammar and be comfortable using terms such as introductory phrases, dependent and independent clauses, coordinating and subordinating conjunctions etc. Things like 'use a comma when you need a short pause and a period when you need a longer one' or 'a period marks the end of a thought', may serve some purpose for beginning writers, but these explanations fail to explain adequately the mechanics of how things work. Only grammar does this adequately. NSOU l PGEL - 1&2 171 12.4.2 Referring to examples and context The punctuation and grammatical explanations should always be accompanied by examples from authentic written texts and materials so that the explanations are visibly clear to the learners. We should also avoid giving examples and references of discrete sentences. Instead a cluster of meaningfully inter-linked sentences carrying a context should be referred to as it would exemplify the conventions of using punctuation based on meaning of the text. 12.4.3 Stressing communication We should take note that teaching grammar and focus on punctuation should not hinder the free flow of communication. We are aware that as per the current communicative approach the focus is more on 'meaning' and not on 'form' and 'accuracy'. Hence, when in doubt, we should advise students to abandon long grammatically complex sentences and use shorter, simpler sentences that are easier to punctuate correctly. 12.4.4.Proof reading and editing Being a necessary sub-skill of writing, we should advise learners to focus on punctuation too along with the other elements during the proofreading and editing process. As learners read through their work on completion, they can revise the punctuation they have used to ensure it accurately conveys the meaning they were attempting to express. Check Your Progress : 4 What strategy would you adopt in teaching punctuation? ....

.... 12.5.Teaching Critical Writing Let us now study in brief the nuances of teaching critical writing in second language at the advanced level which can be quite a matter of challenge for a teacher. Critical writing can be both professional or literary. In professional critical writing analytical reports, commercial reports, datasheet analysis and comparative studies can be included; while, in critical writing of a literary type, one can include summaries, stylistic analysis, reviews, identification of rhetorical figures and genre analysis. This is especially useful in the appreciation of unseen prose and poetic passages and / or extracts in the language and literature classrooms of English. Apart from considering the approach to teach critical writing (genre, process or communicative), the teacher needs to make the learners proceed through the different stages of writing thereby developing the basic sub-skills of writing

as discussed above. Additionally, to write a potent critical work the teacher must enable the learners to: l Think objectively assessing and embracing multiple perspectives and avoiding bias l Organise their flow of thoughts coherently and cogently to present both sides of a picture l Chart a sequence of short, concise and yet powerful assertions that can effectively convey unambiguous meaning l Create a statement of fact and opinion substantiated by reference to the context of the content l Conclude objectively by summation. In this way, critical writing can be taught to ESP and advanced learners and which will enable them to acquire the vital life skills of communication and analysis. 12.6. Teaching Creative Writing The term 'creative writing' suggests imaginative tasks such as writing poetry, stories, and plays. Such activities have a number of features to recommend them. Chief amongst these is that the end result is often felt to be some kind of achievement, and that 'most people feel pride in their work and want it to be read', observes Penny Ur (1996). Creative writing involves self-discovery and this promotes effective learning. When teachers set up imaginative writing tasks so that their learners are thoroughly engaged, those learners frequently strive harder than usual to produce a greater variety of correct and appropriate language than they might for more routine assignments. While attempting a simple poem about someone they care about, or while they are trying to construct a narrative or tell stories of their childhood, for example, they are tapping into their own experiences. This provides powerful motivation to find the right words to express such experiences. Further, these genres embody fundamental elements such as narrative sequence, a plot, conflict and resolution, as well as morality, without which any writing, expressive or imaginative, lacks focus and purpose. Developing awareness of such elements, within the context of creative writing, will lead the learners to acquire concepts that can be transferred to other writing. Teachers may try out various methods, strategies and techniques as per suitability for teaching creative writing. One innovative method that is relevant and effective for both intermediate and advanced learners is the art of sentence stretching. In this exercise, a simple sentence is embellished with detail to make it both interesting and meaningful.

This becomes both a languageacquisition as well as a language enhancement exercise simplifying the process of learning the art of writing correctly and yet creatively. Given below is a simple sentence: "The man went to the big city." This is a very uninteresting and basic sentence that gives minimal information, viz. that a man went to a big city. To change this sentence into one that gives more and detailed information, the student can try to add adjectives to the subject (the man) and then to the object (the city) and also extend the verb (went). To try sentence stretching the learners can do the following: l Start with the word "man." What words could be used in place of "man"? Who is this man? What kind of man was he? Is he a police officer? Teacher? Professor? Plumber? Businessman? Who is this man? What kind or type of man is he? Learners can find some adjectives to describe him. l Next is the word "city." One can describe the city or name a big city (Kolkata, Mumbai, Bengaluru), or give better description (the big, dirty city, the historical city.) l Finally, the verb "went" can be made stronger and more effective by detailing. How did the man get to Kolkata and from where? Did he hitchhike or drive or fly or ride a bus or cab? This detailing will be adequate to replace the verb once the learner has engaged his imagination and decided. l The final sentence may be framed thus: The absent-minded professor travelled by train from Kolkata to New Delhi. In this way creative writing can be taught by transforming a sentence that gave virtually no information to one that enhances a character with details, embellished facts and adds character to a lifeless figure. Check Your Progress : 5 What strategy would you adopt in teaching creative writing? ....

.... 12.7. Summary In this unit we have studied the following: l Writing constitutescomposing and crafting skills l Teaching the English script at the elementary level should proceed through certain easy steps viz. selection of letters, spacing of letters, grouping of letters, comparison of letters, positioning the script.

174 NSOU l PGEL - 1&2 l A writing lesson usually proceeds through four distinct stages: Planning and preparation, writing the first draft, revising and editing, writing the final draft. l In the preparation stage the teacher is required to prepare the learners for the writing task; while, the planning stage, also called the 'brainstorming' includes two steps – generating ideas and organising them. l Learners' actual writing begins in the first draft stage wherein the leaners put all their ideas and information on paper. l The revising and editing stage focuses on identification of syntactic and semantic errors and correcting them along with revision of the content and organisation of the composition at all linguistic levels. l The fourth stage i.e. the final draft stage may be supplemented with a 'follow-up' stage wherein a similar kind of writing task is assigned as home assignment in order to reinforce the learners' learning and skill development. l The different types of writing tasks include: Controlled writing, Semi-controlled writing, Guided writing & Free writing. l In order to teach punctuation effectively the teacher may adopt the following strategy: teaching the English grammar well, referring to examples and context, stressing on communication and proofreading and editing. l At advanced levels the teacher may consider teaching critical and creative writing. 12.8. Review Questions 1. What are the skills that a learner needs to be trained in, to develop writing skill as a whole? 2. In this unit we have discussed three different stages: 'planning' in 'planning and preparation' and 'writing the first draft'. What are the differences in these stages? 3. What is reformulation? Why is it necessary? 4. 'Creative Writing is about self-discovery and it promotes effective learning'- do you agree? Justify. 5. What are the different roles of a teacher in a 'writing lesson'? 6. How would you define 'sentence stretching'? How effective is it in the teaching of writing skill?

NSOU l PGEL - 1&2 175 7. Sum up the types of writing tasks and activities that a teacher can make use of, in writing classes. 8. What are the requisites in writing the Final Draft? 9. How should the 'Talk-Write' activity be effectively carried out by teacher in classroom? Comment on the benefits of this activity for developing writing skill. 10. How important is teaching the rules and uses of Punctuation in developing writing skill or proficiency? Discuss. 12.9 References Bajwa, B. (Ed.). (2009). A Handbook of Teaching English. New Delhi. Unit - 13 p Activities for listening Skills

Structure

13.1 Introduction

13.2 Objectives

13.3 Exercise, Activity and Task

13.4 Listening Activities

13.5 Learning to Listen

13.6 Micro-level activities

13.7 Contextualizing Listening

13.8 Reflection guide on Activities for Listening

13.9 Summary

13.10 Review Questions

13.1 Introduction

Implementation of universal education required language educators to redefine the role of English language teaching. Therefore, ELT specialists and language teachers systematically studied the effectiveness of different methods of teaching English. In the process, they relied initially on the field linguistics (a scientific study of the spoken and written form of language which includes its syntax, grammar, and sound system). Subsequently, ELT practitioners, broadening the scope of language education beyond linguistics, took into consideration field experiments conducted on the psychology of language use andsocio-economic background of people (sociology). These disciplines have significantly influenced our understanding of what constitutes a language, learning and teaching. Modern ELT recognizes the value of comprehensively defining the notion of language learning. It emphasizes the need to encourage learners to actively take part in their language learning through activities that provide exposure to various forms of input and offer opportunities to participate in language production. The success or the failure of a task, apart from task administration, depends on a set of context-bound factors. It is important that we understand our teaching-learning context before we administer the activity. The factors include

l Complexity of the topic (known to the learner or unknown; the content of the subjects such as physics, history, and psychology) l Linguistic complexity (use of grammar and vocabulary) l Discourse type (descriptive or argumentative) l Situation (face-to-face or distance/telemediated) l Formality (informal or formal) In addition, we must also consider the nature of the input (monologue or dialogue or interaction among more than two; native varieties or non-native varieties), response type (select an answer type, short response such as true or false/yes or no, long speech, discussion, written production) among other.

13.2 Objectives

This module focuses on different teaching ideas or activitiesthat we can use to teach English.In the language classroom,textbooks or course materials are the primary sources of activities. When we understand that our predesigned materials supplied by the school/ college need to be supplemented with more suitable activities,we attempt to design activitieswhich help us achieve our objectives.We must keep in mind that, in addition to providing us with clear instructions or procedures, the activities we use need tomotivate and engage our students. In this module you will be introduced to a range of activity types that help you meet specific learning objectives for your students.Before we learn about different activities, let us understand how an activity is different from other types of classroom materials.

13.3. Exercise, activity and task

In ELT we use specific terms to refer to different types of activities. While some activities are useful as gap fillers, otherscan be used to supplement the existing teaching materials. Thus, it is importantto know what exactly it means to use the term 'activity', and how activities are different from 'exercises' and 'tasks'. Jack C Richards defines an activity as ... any kind of purposeful classroom procedure that involves learners doing something that relates to the goals of the course. For example, singing a song, playing a game, taking part in a debate, having a group discussion, are all different kinds of teaching activities. In other words, an activity is a pedagogic procedure which is directed towards achieving alearning objective. Therefore, we can interchangeably and loosely use the term 'activity'

NSOU l PGEL - 1&2 179 to refer to both exercises (which mostly focus onproviding learners with 'practice') andtasks (which often require students to use specific language resources to achieve specific learning objectives). In the traditional teacher centred present-practice-produce model (PPP model) we often use different types of exercises:listening for specific information in the form of drills, cloze activities, or comprehension passage with multiple choice questions. Having taught a specific grammatical structure (present progressive, articles),the teacher usually guides thelearners through the language aspect or sub-skill in focus. This guided and controlled practice(the application of the rule or a strategysuch as bottom-up reading, listening for specific information across newcontexts) reinforces the aspect being taught, and it is believed that, these exercises help students internalize the practiced aspects. While tasks generally aim at'meaning making', i.e., achieving a communicative goal such as exchanging information to reach a place or reading through a map to understand the location of a place, they also encourage students to use specific grammatical structures (forms) which areneeded to perform a specific language task.In other words, we can design and use guided-form-focusedexercises as well as meaning-focused communicative activities. In both conditions, the learner is required to use his language resources to accomplish a communicative goal.We will now look at the different activities one can useto teach listening skills. 13.4 Listening Activities Day to day real life listening situations have become complex. Electronic media (internet- driven computers, smart phones), state-of-the art classrooms, different varieties of English (American, British, Australian and other non-native varieties)are now extensively used to provide input (which includes more than one mode of input such as visual, textual and speech)to learners. Our learners should learn to cope with these forms of multi- modalinput, because this type of input is pervasive in real life listening contexts. Learners will have to attend to more than one mode of input at the same time, andperform certain real-life communicative activities. How can we ensure that our learners comprehend such input successfully? What kinds of activities promote listening comprehension? These are some questions we always think about before teaching listening skills. Activity 1:Look at the following list of situations or listening experienceswhich require our learners to listen and act.Think of more situations where listening is crucial and write them down in the space provided.

180 NSOU l PGEL - 1&2 Academic lectures Watching Hollywood/English films (Netflix series) Talking to a receptionist at a hotel Job interviews Stand-up comedy shows Teacher counselling sessions Telephonic conversations Directions from a stranger in a new place Talking to a native speaker in a conference BBC news hour/NDTV English news TED Talks Each of the situations abovehas its content (the subject or topic matter being shared or communicated), purpose (s) (the reasons such aseducatingthe class about a specific theory, reporting an event, making people understand the importance of higher education, for instance) and mode(s) of presentation (monologues with visuals as in BBC News, dialogue as in Interviews, life experiences of various characters as in films).We can identify a set of characteristics which our learnerscan focus on. Activity 2: Look at the following characteristics of real-life listening situations andrelate them to the situations given above. Spoken discourse Listener expectations and purpose Looking as well as listening On-going, purposeful listener response Speaker intention Pronunciation, choice of words, grammar (use of clauses rather than phrases), external noise, repetition (casual speech) /non-repetition (as in films) Listener has purposes (to learn from, to have fun, to fill a form, to reach a specific place) The listener may be attending to other forms of input as well (images, sub-titles, graphs) Listener may have to take part in the speech event(dialogic) or only listen to the speaker (s) Whether or not the speaker has tuned or directed his speech to address the listener requirements, or the speaker is following set of rules and is not concerned about the listener

Your observations can be organized in the following manner. Some of the contexts above are formal (conference presentations, job interviews) and some others informal (English films or Netflix series); some use everyday vocabulary and others opt for context-specific vocabulary (academic lectures); some are free from external noise (TED Talks) while some otherscan't avoid it. Each of these genresalso has specific features which can affect comprehension:Speakers' English pronunciationmay be comprehensible, but require a prior knowledge of the context of language use(academic lectures); or the concepts may be familiar, but the pronunciation of the speaker(s)is incomprehensible for a non-native speaker (BBC News/ English Films with native speakers).The speaker(s) often does not tune her speech to the audience (Netflix English series or English films), rather the characters tend to actively perform their roles as per the script. They may probably offer the audience the sub-titles to follow. 13.5 Learning to listen While delivering a listening sessionmany English teachers would typically sequence theirlessons in the following manner. a. Introduce or pre-teach the vocabulary the students may encounter in the listening b. Play the recording/read aloud a text and ask students to complete an activity (gap- filling, organizing ideas in chronological order, identifying the correct option/ MCQ) c. Replay the recording/re-read the text aloudand ask students to verify their answers d. Either ask students to verify answers with each other or show the correct answers Do you think thistask is effective in teaching listening skills? According to Christine Goh, a researcher in listening,this activity does not teach students how to listen to a passage, rather it tests students' comprehension. Shestates that these activities (b, c, and d) train the students to look for correct answers ignoring the cognitive processes (identifying, guessing, analysing) involved in understanding the content of listening. The teachers using these activities usually assume 'listening as a product' and disregard the complexities involved in the processes, which are crucial for understanding a text. Therefore, the kind of activities we choose or design should help learners not only find correct answers but also make them use strategies. 13.6 Micro-level activities The proponents of the process-approach,notably John Field and Christine Goh, have suggested some useful activities that can help students become good listeners. During

the listening, according to these experts, the learners are required to "actively engage in thinking and talking about their own listening."They believe, when the learners engage in such self-talk, they tend to become aware of the gaps, and consciously try to overcome themthrough the use ofstrategies. John Field identified a set of processes (bottom-up where you work from the phonemic/ sound level and gradually progress towardstext level, and top-downwhere you utilize the background knowledge of context and content to understand the text)and devised "micro-listening-exercises" for listening.The following are some of the processes we can keep in mind while using specific exercises It is not necessary that we use all the micro-exercises in our listening classes. For instance, when we understand that our students have difficulty with comprehending the contractions ('ve,andn't) in native speaker speech, we devise or usephonemic (sound level) and word level exercises that help students notice contractions and word-ending syllables. On the other hand, if we find that our students are unable to relate the pronouns with their reference (denotation), we devisebackward and forward reference exercises in which the listener has to specifically focus on the pre-selected pronouns, which are already mentioned in the listening. 13.7 Contextualizing Listening Depending on the context of input and the purpose of listening (listening for information or listening for language learning) we need to design our activities. If we need our Bottom-up processes/decoding processes a. Phonemic (basic unit of the sound) b. Syllable (cluster of sounds that make a syllable such as able, ism, ment) c. Word (word clusters such as phrases, chunks) d. Syntactic level (clause or sentence level) e. Stress and Intonation (the way the words and sentences are pronounced or produced) Top-down processes/meaning building processes a. Word meaning(meanings of the word in context) b. Syntactic meaning (understanding sentence structure with reference to its context of use) c. Intonation meaning d. Using contextual knowledge (using the knowledge of the situation or topic) e. Using schematic knowledge (using one's background knowledge to understand the text) (There are more meaning building processes)

NSOU l PGEL - 1&2 183 students to understand academic lectures in English, we can focus on a variety of characteristics of academic lectures.While designing activities for listening, we can control some of the factors (accent, gestures, facial expressions, visuals, speech rate) and give importance to other factors such as topic specific vocabulary, logical organization of content, key pointers among others. The more aspects we control, the easier it becomes for the learners to process the input. Whether our focus is one or more than one aspect, we need to consider the following findings before designing/choosing our activities. Activity 3: ELT research findings for listening teachers Read the following findings of research on second or foreign language listening, and reflect on your experiences of using various activities for teaching listening. Write down your reflections in the space provided below. 1. In ESL contexts, exposing students to clear and slow authentic listening input can ensure that the students notice vocabulary and grammar structures. Also, slowing down the pace will put less pressure on students' working memory. (Richard Schmidt on Attention) 2. Learners must be exposed to language across situations and functions— transactional, interactional, and imaginative. Lopsided exposure can affect students' ability to comprehend texts. (Brown and George Yule) 3. Longer video or audio input can be tedious and demotivating for weaker learners as it is difficult for them to process it. (John Field) 4. Before administering an activity, we need to inform the learners about the nature of the activity: how the listening activity is structured, what is expected from the learners, how should she approach the listening. (John Field) 5. For a beginner learner unplanned speech which is typified by false starts, repetitions and omissions can be challenging; using planned speech (minimum number of false starts, evenly paced and sequenced contexts) can help them notice and understand listening better (Andrew Cohen) 6. Small-scale exercises that focus on individual processes of listening (guessing the meaning of words) are useful in the listening classrooms (John Field) 7. During a complex listening comprehension task, students tend to give importance to lexical knowledge rather than grammatical knowledge. (Van Patten) 8. Conscious attention to form in the input competes with conscious attention to meaning… only when input is easily understood can learners attend to form as part of the intake process (Van Patten and Rod Ellis) 9. Usually in ESL listening contexts listeners focus on meaning bearing content words (focus, intention, strategy, competent) rather than on grammar words (and, of, the) (John Field) 10. If the task to be accomplished is beyond the contextual and linguistic knowledge of the learners, the task should include mini-activities that facilitate the process of listening.

184 NSOU l PGEL - 1&2 13.8 Reflection guide on Activities for Listening What was the purpose of the activity? (to help students notice specific sounds; guess the meaning of vocabulary; to understand the thought in action…) What kind of a text/listening input did you use? (fast paced/slow paced; authentic/ contrived; interactional/informative; too long/less than 3 minutes; academic/non- academic…) What did the learner do? (filled in blanks on a page; wrote down key words; identified the key ideas; looked up the dictionary for unknown words; drew a picture/diagram) Penny Ur proposes a classification of activities based on the nature and complexity of response they elicit. She clarifies that it is not always necessary that we expect our learners to produce responses pre/post listening. Sometimes, allowing the learners to experience the language with no specific intent will be equally beneficial for their learning. Thus the response type could be anything between "no overt response" to "producing extended discourses". No over response activities,according to Penny Ur,are activities designed to elicit no specific responses from learners; they mainly aim at exposing learners to the target language. Although on the surface no overt response activities do not pressurize learners to produce any response, carefully selected or designed listening can motivate the learners towards understanding and learning the language. Songs, online podcasts from BBC, and YouTube videos are some excellent resources that not only provide learners with motivating content, but also with contexts that are culturally and linguistically appropriate for language learning. It is important that we expose our young learners to comprehensible input (Stephen Krashen), especially the input which is rich in terms of visual content and appeals to the learner. Much of the content on YouTube makes use of this No response activities Short response activities Longer response activities Extended activities

NSOU l PGEL - 1&2 185 strategy of presenting both the visual and oral input that can be easily understood by anyone. Short response activiessuch as tick off items, cloze, skimming and scanning, and true or false require learners to produce short responses. Some responses are as short as selecting word level options while others require very limited, probably sentence level, information. These activities tend to focus on eliciting, mostly, fixed responses from learners. For instance, word recognition activities and gap filling activities are very commonly used by teachers. In addition, teachers can also design activities that enable the learners understand the intentions and the tone (requesting, warning, ordering) of the interlocutors. In other words, the short response activities can elicit deeper level understanding of the listening passages as well. Longer responses usually require the learners to produce, mostly in writing, responses beyond a sentence length. For instance, listening to lectures and taking notes is one such activity. The purpose of these activities to encourage learners to produce comprehensive responses based on the listening passages. Activities such as answering questions based on the listening, listening to lectures and taking down notes, and long-gap filling activities can be used. Usually, long response activities, where learners learner are required to produce answers in their own words, are administered once the learners have achieved a threshold level competence in English. Extended response activities are 'combined skill' activities that require the listeners to perform or produce language in either spoken or written medium. One type of problem- solution activities, for example, require listeners to listen to carefully to a passage(s) and take down the notes. Having taken the notes, the learner may then be required to take part in a group discussion. In the process, note-taking and group discussion play a vital role in solving the problem. Donn Byrne has recommended some useful 'interactive activities' for developing good listening skills. Interactive activities tend to integrate other skills such as writing and speaking and create a purpose for listening. a. Predictive listening activities: students will listen to a text read aloud by either a peer or the teacher and try to interpret and predict what may follow. b. Dictation: it requires the students to carefully listen to and understand a sequence of sentences and reproduce them in writing. These activities can focus on minimal pairs in specific sentences such as Does this shop sell salt and pepper?

186 NSOU l PGEL - 1&2 Does this shop sell salt and paper? also on using punctuation appropriately. 13.9 Summary Depending on the focus of the class, teachers can design or utilize different types of activities. While administering listening activities one must consider the different external and internal factors (noise in and outside, access to the listening passage, course needs, time available for the activity) which can affect their outcome. Because it is becoming complex day-by-day thatthe listener is needed to comprehend simultaneously various other forms of input (images, texts and gestures),and because One's mind is constantly engaged in multiple processes (bottom-up or top-down processes) which often exclude or include pieces of information crucial for comprehension, listening becomes a complex skill to practice and learn. However, it is important that use a range of activities that help our learners become good listeners. A good listener is always a good speaker! 13.10 Review Questions 1. How do you distinguish between an activity, task and an exercise? Give examples 2. How important is it to understand the sub-skills while designing a task? 3. Can tasks be built across the skills? Is it possible to use one task for developing more than one skill? 4. How are bottom-up and top-down processes different? Which is better, and why? 5. If a task has multiple correct responses, does it cause problems of assessment?

NSOU l PGEL - 1&2 187 Unit - 14 p Activities on Speaking Skills Structure 14.1 Introduction 14.2 Objectives 14.3 Spoken vsWritten Language 14.4 Integrated Activities 14.5 Language awareness activities 14.6 Group-based activities 14.7 Opinion gap activity 14.8 The Pyramid activities 14.9 Small talk activities 14.10 Conclusion 14.11 Review Questions 14.1 Introduction The purpose of a speaking activity is either to make our learners use the language they have internalized or to provide them with opportunities to express themselves. Researchers believe, the ability to speak a language effectively increases only when the person produces it. Therefore, we should think of designing and using those activities that offer opportunities for our learners to produce the language. Recall from your memory some activities you have either taken part in or used in the classroom. Does your list include the following activities? Add more activities to the list. Brainstorming activities: In groups or in pairs students discuss an idea or a problem and try to gather as many points or views. Usually, this activity is followed by a reading of a specific text or a lecture. Role pla\Respond to a text: students listen to or read a text to share their views and ideas (either ina group or a class). This activity is the most frequently used in content-oriented classes, flipped classes. 14.2 Objectives

| 100% | **MATCHING BLOCK 37/83** | **SA** | PGELT 5 _ 6 (1-400).pdf (D165254851) |

At the end of going through this unit, the learners will be able to: a.

Understand the
nature of spoken language

b. Organize speaking activities in pairs and groups c. Understand the intricacies of speaking in different contexts d. Contextualize language use Generally, when we use a speaking activity, we aim at three major aspects of speech: fluency, accuracy and complexity.When we prioritize meaning over form, we expect our students to fluently produce meaningful speech (brainstorming activity and respond to a text activity) that helps them accomplish a task (finding a solution to a problem, giving instructions to a person).Similarly, when we want our students to take fuller control of the elements of language that they have internalized, we focus on accuracy (using question tags effectively in a conversation; using passive voice to impersonalize the findings in a presentation). Complexity, on the other hand, requires our learners to produce elaborated and challenging language (using context specific vocabulary or grammar). In each condition, the focus of the activity is different, and requires the learners to be familiar with the context of language use.Thus, when teaching speaking skills we need to be sure about the aspect of speech we want to focus on. In Modern ELT research some experts argue that it is good to use accuracy-based activities with the beginner level students fluency-based activities with the advanced students.However, depending on the requirements of the course—to provide speaking opportunities for students, toprepare the students ask questions—and dependingon the motivation levels of the students teachers can organize their speaking activities. 14.3 Spoken vsWritten Language It is important that we understand the nature of spoken language before we teach speaking. For instance, a study of authentic speech samples (real life examples of English use in different contexts)that covered a wide range of genres and registers by Douglas Biberand his associates helped us understand the complexity of speech in terms of word choices, grammar, and genres. The findings of these studiescan be considered while designing speaking activities. Take a careful look at the following findings of Biber's research and discuss with your peer your observations about how speech differs from writing. a. While nouns and adjectives are more frequent in the expository or 'information giving' genres such as academic writing, verbs and adverbs are more frequent in conversations.

b. While lexical verbs such asrun, eat, think are more common in conversations and fiction primary verbs such as be, have, and do are frequently used in formal academic writing. c. There are twelve lexical verbs that are extremely common in conversation.They can be divided into three types: activity verbs: get, go, make, come, take, give; mental verbs: know, think, see, want, mean; communication verb: say. On the other hand, written registers use a wide range of verbs. d. Speakers often tend touse combinations of words (collocations) rather than individual words (Paul Nation's research). Teaching speaking is a challenging task. Prior to making someone speak we must provide them with necessary resources such as vocabulary, grammar and content. It is important we guide the learners through different stages. For instance, for a learner to fluently produce a coherent speech he must be good at using the most frequently used 2000 words (for example, the General Service List of English Words, GSL by Michael West) of the language. Also, he must have a fair knowledge of the way the grammatical rules function in the language. If these concerns are not addressed, learners tend to face some problems. According to Penny Ur, the following are some problems the students face in the speaking class, if they are not adequately prepared for the activity. a. Worried about making mistakes and fearful of criticism they shy away from speaking b. Unfamiliarity with the content can even force them to give up on participating in the activity c. They tend to switch to their mother tongue to respond to the prompts or the activity d. They talk very less as opposed to the activity requirements Task 1: Did you ever face a situation where the outcome of the activity was poor? What did you do to ensure that the students participated in the activity? Your answer: Working in pairs or in groups can facilitate language learning. Collaborative classroom activities which promote peer interaction will also help the tongue-tides to overcome their fears of participation.Visually stimulating topics, cognitively less demanding conversations, contextually appropriate to the learners' schema/background knowledge

190 NSOU l PGEL - 1&2 (familiar topics related to local folk-literature, festivals...) can help students produce meaningful discourses. 14.4 Integrated activities In order for the activities to be productive, we also need to provide students with the stimulus such as a reading or a listening text that not only functions as a model text but also as a source of information and language.These integrated skills activities, by providing the learners with natural language learning contexts, promote engagement and interaction. During an integrated skills activity, learners produce the desired outcome (making a structured in-class presentation, finding out solutions to a problem) not by directly answering a question but through responding to various texts. In Donn Byrne' words "the students talk, read or write in order to get something done"(text was originally italicized by the writer). We can also use the following strategies by Donn Byrne and CLT pedagogues to make our learners produce the desired outcome. • Before administering a speaking activity related to the input, prepare your learners to understand the input through minimal response type activities (completion- type activities, finding differences, identifying mistakes, yes or no /true or false activities, and follow the instructions and draw a picture). Minimal response type activities need to emphasize careful listening/reading. • Since retention of information is difficult for the beginner or lower-intermediate level learners, provide simplified input (listening or reading) for longer than is natural and provide as much contextual support as you can. • Try as much as possible to bring input for classroom practice from the natural spoken language rooted in the spoken models of English use (Carter & McCarthy, 1997) • Ensure, if possible, that you providewitty and engaging with visual stimuli for the learners • During the speech practice emphasize more on meaning making and correct only those grammatical errors that affect the process of meaning making. • Promote learner-centerednessrather than teacher-centeredness; and assess student performance in relation to the motivation and other affective factors that influence individual performance.

NSOU l PGEL - 1&2 191 • Encourage the use of chunks (prefabricated units of meaning such as I feel much better, it's interesting, I agree with you...). A speaking activity, whether intended toelicit meaningful utterances or to facilitate the use of specific language structures or items, as mentioned above, should consider the contextual barriers that affect studentoutput before judging his/herperformance against the norms. As Chafe and Danielewicz (1987) put it "Speaker are so strongly constrained by their need to produce language rapidly and by their inability to edit, that they are unable to imitate the lexical richness and explicitness of writing..." Some of the following communicative activities can be effective in promoting speaking skills 14.5 Language awareness activities Corpus studies in spoken grammar and corpus-based discourses analysis have introduced an innovative method of developing speaking skills. Unlike the traditional spoken class where the input is modelled by the coursebook writers on a specific function, in language awareness activities we use "real speakers in real interactions and in socially and culturally diverse situations"(Hughes & Reed, 2017). For instance, the following instances drawn from Michigan Corpus of Academic Spoken English (MICASE) can help us understand the visual and structural appeal of the input for speaking.This text was produced in a university context and topic of discussion/lecture specific to an academic discipline. The interaction/lecture is decoded and organized into "turn-taking patterns" for each of the speakers involved, and it is given away to a group of advanced studentsfor analysis. This language analysis task of can also be accompanied by the original source listening.During the activity the students go through every instance and analyse the way the discourses has progressed: how people interrupted each other, how they got their doubts cleared, how they added or disagreed with the other speakers, what words they used to communicate the ideas etc., These texts make an excellent resources for raising the awareness of different aspects of speech. Advanced learners interested in understanding the nature of communication in the universities will benefit from the analysis.

192 NSOU l PGEL - 1&2 Figure: An excerpt from MICASE Title : Intro to Groundwater Hydrology Lecture Transcript ID: LES205JG124 Academic Division: Physical Sciences and Engineering Publisher: Michigan Corpus of Academic Spoken English, English Language Institute, University of Michigan Interactivity Rating: Mixed

NSOU l PGEL - 1&2 193 14.6 Group-based activities Unlike other skills, speaking skills generally require students to collaborate and share their views, perceptions and ideas. However, often we notice that some students take control of the activity and let others remain passive throughout the activity. In order to prevent that from happening, we can use some group activities that require all the students to participate in the meaning-making process.Information gap activities are a good way to engage all the students in speaking. During this activity, a. the teacher selects and distributes in parts to a group of students a chronologically organized text (story/experience), where each part is a mandatory to complete the text. b. each student is given an event/a part which naturallyhas to be related the other event. c. upon receiving his part the student is expected to memorize it and return it to the teacher. d. together as a class/group the students has to reconstruct the whole narrative without losing any information. During the process of collecting information, the teacher can insist, the students should ask specific questions or interact in a specific manner. 14.7 Opinion gap activity These activities appreciate individual positions and perspectives with reference to a (controversial) text. The students are encouraged to share their opinions freely and confidently. For instance, ranking activities require students to rank order their preferences based specific criteria, and thestudents need to defend their order of preference. They can be designed for both beginner and advanced learners. In case of beginner the choice of items/ideas to be ranked could be drawn from simple, familiar and local contexts, and in the case of latter it could be based onabstract and highly academic contexts such as readings from specific subjects.Even simple changes in 'number' like selecting two ideas/items/viewsas opposed to three could make a significant impact on student cognition, and reduce/increase the complexity of the task. It is important that we understand the key aspects of a speaking activities—level, text/genre type, time allocated for the activity, number participants,expected outcome—class before administering them. 14.8 The Pyramid activities When texts are overloaded in terms of content and language, it is important that we put them into smaller groups and share specific parts of a larger text with each group, rather

194 NSOU l PGEL - 1&2 than consider the whole text. Each group will read their part of the text, and together they reconstruct the whole text by gathering ideas of each part from different groups. In integrated learning activities, listening to a text or reading a text gives students necessary language and conceptual resources to produce their opinions and views. Students could gather ideas and language to be able to express their views. Subsequently, they could also practice the use of specific language items that are usually found in specific discourses. 14.9 Small talk activities Small talk activities tend to create a stress-free speaking conditions where the students take fuller control of their speech. However, the 'talks' are led by one of their own classmates. During the speech event the students are provided with necessary language resources such as vocabulary and question prompts to initiate and discuss the topics given by the leader. At the end of discussion, the students report on their conversation to the whole class.According to James Hunter (Hunter, 2012)if we allow students "use their communicative ability in conversation without intervening" it can help students improve fluency, accuracy as well as complexity during the activity, a. pre-appoint a student leader who will chose a topic for the class, b. provide questions and relevant vocabulary to further the discussion, c. put classmates into small groups d. allocate time to engage in the conversation, and e. lead a check-in session in the end (each group reports to the whole class on their conversation) Although the teacher does not intervene into the process directly, he/she will offer the feedback at the end of the discussions.

NSOU l PGEL - 1&2 195 Finally, we must acknowledge the fact speaking alone does not adequately prepare the students become autonomous users of language. The chain of events we organize to facilitate speech production must above all consider what David Crabbe(Crabbe, 2007) calls "learning opportunities. Figure source: (Crabbe, 2007) Opportunity category Input Output Interaction Feedback Rehearsal Language understanding Learning understanding Learning activity covered by the concept Listening to and reading monologues or dialogue that can be understood with limited difficulty. Producing meaningful utterances in written or spoken form, either as a monologues or in the context of interaction. Speaking and writing with one or more interlocutors in real or simulated communication situations. Receiving information relating to one's own performance as a second language user. This may include indirect feedback (for example, that one has not been understood)or direct feedback (for example,that one has made a specific error). Deliberately,repeating specific aspects of performance including experimentation with pronunciation,memorization of words or word patterns, and repeated role-play of a piece of communication. Consciously attending to facts of language usage or use in order to be able to explain, describe or gloss an aspect of grammar or sociolinguistics conventions. Consciously attending to the process of one's own language learning in order to establish better metacognitive control over that learning. This would include a detail representation of the overall task of language learning, ananalysis of the specific difficulties encountered in performance and an awareness of strategies to overcome the difficulties.

196 NSOU l PGEL - 1&2 14.10 Conclusion The language learning opportunities should encourage learners to consciously pay attention to different aspects of performance. At every stage of a learning activity the learner should try to take control of the activity and aim at achieving the goals of the task. As he utilizes his opportunities, he develops a positive sense of his own learning. 14.11 Review Questions 1. What are some of the sub-skills of speaking we need to remember? 2. What strategies are best used for teaching speaking skills? 3. How important is vocabulary learning, especially in terms of stress and meaning? 4. How are pair and group activities better suited for developing speaking skills? 5. What are the major problems a teacher can face while teaching speaking?

NSOU l PGEL - 1&2 197 Unit - 15 p Activities on Reading Skills Structure 15.1 Introduction 15.2 Objectives 15.3 Aspects of Reading comprehension 15.4 Language Input: Reading Materials 15.5 Strategies and Reading Activities 15.5.1 Intensive Reading Activities 15.5.2 Summarizing Strategies 15.5.3 Creating or asking questions 15.5.4 Student-set questions 15.5.5 Rewriting Activities 15.5.6 Elaborative interrogation 15.5.7 Comprehension Questions 15.5.8 Collaborative think aloud activities 15.6 Activating the background knowledge of the student 15.7 Recognizing the structure of the text 15.7.1 Discourse and Genre Approaches to Reading 15.7.2 Genre Approach to Reading - CARS model activities (Advanced Level) 15.7.3 Critical reading activities 15.8 Transcribing Text into Visuals 15.9 Dictionary use 15.10 Guided Activities 15.11 What does research say about reading comprehension? 15.12 Extensive Reading 15.12.1 e-books 15.13 Conclusion 15.14 Review Questions 15.15 References

198 NSOU l PGEL - 1&2 15.1 Introduction When we think about reading skills texts, we must not restrict it to the printed word on a page. Reading materials are of various types. We can read pictures, graphs, charts, and maps. Therefore, when we teach the primary school children in India, we must keep in mind that many of them learn to read for the first time only in the schools. Their reading skills, unlike listening and speaking skills, are learnt consciously, step-by-step. Therefore, we need to ensure that they receive appropriate and adequate instruction for reading. As mentioned above, we must provide them with 'comprehensible' input, which not only introduces them to the letters and words of the language, but also helps them to relate those sound and symbols they learn with their respective concepts. So, whenever we choose materials, we must always consider the nature of help the materials offer to students. If the reading materials do not have any support in the form of pictures or diagrams, you need to consider providing them that support. 15.2 Objectives

reading different types of texts l Identify different types of texts and read them appropriately l Read and comprehend a text according to the purpose of reading l Appreciate the need for background knowledge in understanding the text l Create alternate texts both linguistically and non-linguistically l Use reference materials in understanding a text l Read for pleasure and enjoyment. 15.3 Aspects of Reading comprehension Paul Nation(Nation, 2009)describes a balanced course as something which has a mix of activities, and focus on various strands of language proficiency. For reading skills, this meanswe should focus oncomprehensible input and extensive reading, intensive reading (language focussed reading), and speed reading (fluency development). All three strands overlap and are important in a reading course.However, these terms mean differently to different learners. For example, children who are learning the English alphabet try to make sense of the 'input' (picture books) by combining letters (a-p-p-l-e, b-a-l-l) and by relating the sounds and symbols with images. Comprehensible input here is both symbols

NSOU l PGEL - 1&2 199 and their associative images. Without the pictures, the symbols or letter will not make sense. At a later stage, once the child acquires the ability to put letters together to make words, perhaps, we can give reading materials (rhymes, sentences, and stories) with more words. Once the child acquiresthe basic knowledge of the most frequently used words (spelling and pronunciation and meanings) in the language (around 800 words), they can be given some 'graded readers' such as 'reading cards', and texts that are written in simple language (both in terms of grammar and vocabulary) for extensive reading.As children attempt to read extensively, they acquire a natural speed in reading, which is called fluency development

200 NSOU l PGEL - 1&2 Task 1 Text is crucial factor in reading. If the texts we give to our students arechallenging, students' will give up. In the language classes we have to choose or design reading materials that are both interesting and understandable. If we increase the complexity of the text, by excluding pictures and glosses, students will find them difficult to understand. What kind of texts have you been using in your reading classes? Are they suitable for your learners? At a later stage, as mentioned, we can give students purposeful reading materials which introduce them to both language and the contexts. Reading these texts—stories, newspaper reports, menus, notices, emails—students become aware of how the real world is presented in different contexts and formsthrough the printed word. So, we have reading materials which help students learn the language, and we have materials which make students act on their reading.We must consider several factors in selecting or writing reading materials, however. Task 2 When you select reading materials, what criteria do you use? Type of the Text narrative or exportory Student Competence Student Competence Familiarity of the context in the text Course requirements Students Skills Language difficulty in terms of vocabulary and grammar

NSOU l PGEL - 1&2 201 Starting from notice-board circulars to restaurant menus to WhatsApp messages, everything can be used to teach reading skills. However, while teaching reading skills, we consider two important aspects: language input in terms of the criteria mentioned in the diagram and how we make the students process that input. In this module we focus on these aspects of reading comprehension. 15.4 Language Input: Reading Materials Among other aspects, texts (materials) and the way we choose to use them (methods) constitute crucial components of reading courses. Jeremy Harmer (Harmer, 1996) simplifies this notion of reading materials and their authenticity within an educational context. Similar to what some notable applied linguists have said, Harmer believes that teachers should plan integrated reading sequences in which every reading text is preceded and followed by a set of practice activities which enable the students to remember what they have read and practiced. We will look at the activities later in the module; we now look at texts for reading. Task 3 Before you read Harmer's views about reading materials, reflect on your experiences of using different reading texts. What kind of texts did you use? (novels, textbook readings, poems, stories, newspaper articles…) Did you write them yourself or extractthem from other sources? Read Jeremy Harmer's views about reading texts. The reading texts which we give students to work with must appear to some degree authentic, even if they are specially written for students. And they must be at a level which the students can cope with, even if they do not understand every single word. Just about any kind of reading material is usable in the English teaching classroom. Students can be shown menus and timetables, application forms and E-mails. They can read poems and narratives, newspaper articles and advertisements, letters and postcards. What the teacher chooses to show the students will depend on four things: the students' future needs, the students' interests, the teacher's interests and the textbook they are using.

202 NSOU l PGEL - 1&2 Many a time we succeed in finding linguistically rich texts—variety of grammatical structures, rich illustrations, idioms, and phrasal verbs, but those text might fail to engage our students' attention.We also come across texts with less content and more visuals; when we use such materials, interestingly, we notice that our students' inferences go beyond the visuals, into the real world. On other occasions, we use texts which are within the proficiency range of students but fail to generate curiosity and discussion. What should we do? When we choose reading materials, we must apply some criteria. In the diagram above three important characteristics of reading texts are given: authenticity, register, and genre. For some authenticity is not an intrinsic quality of a text.However, for many it means, texts that are not exclusively designed to teach language skills, but drawn from real-life contexts for teaching purposes. In our context, we can understand this notion in a different manner. When we establish a purpose for a reading course, we keep in mind the needs and expectations of the students andset targets for the course. This target text is the "authentic text". We can either choose to use, if we are confident, the authentic text from the beginning or progress gradually through other texts to that level.For example, if our aim is to make a student read and understand a novel from the Victorian age (Dickens or Hardy), we can use some short-stories which usesimilar storyline, characterization, linguistic devices and rhetorical paragraphs, or make the students read the target texts from the beginning. Henry Widdowson argues, we must use texts which are comprehensible and make the students engage with the text. If the authentic or

NSOU l PGEL - 1&2 203 target text is challenging, then we must think about what Widdowson is proposing: use texts within the learning range of the student. Some academic purpose and specific purpose English courses demand us, the teachers, to use specific registers (situations such as academic essays, research papers). In these contexts, we cannot choose any text. If the course demands us to choose specific texts from specific registers (professional, academic, conversational), we must use those texts since the course objectives require the students to learn the language of those registers. Similarly, genres are "structures" how the registers are organized into specific moves (for more details look below at Discourse and Genre Approach to reading) As Jeremy Harmer mentioned, any text is suitable for language teaching provided we know how to use them in the classroom. It can be a picture with no language input or a graph with less language support.Arousing the curiosity of learners through various strategies is important. There are various strategies to do that: asking questions, showing pictures, narrating events. What we need to do is to give students specific instructions as to what they should do during the process (pre-reading, while reading, and post reading). Task 4 While identifying a text is one important aspect of reading instruction, enabling the students to use various strategies is crucial. We can guide student learning effectively, only when we establish a purpose for why they should read and what they should look for. Think about some strategies you have encouraged your students to use. Before exploring different strategies, we focus on two key terms that are important for any reading practice: Skimming and Scanning.Skimming a kind of fast reading. When we read the text faster, we aim at general understanding. We ask questions like 'what is this text all about?', 'what kind of a text is it? narrative or a persuasive text.' On the contrary, when we scan through the text, we look for specific information, probably for facts such as years and names or any specific example or evidence. Whether we choose questioning strategy or the strategy of activating background, when we read text werely on these two ways of reading: either we look for general information or specific information. We will now look at some of the strategies that most reading teachers use in their classes.

204 NSOU l PGEL - 1&2 15.5 Strategies and Reading Activities Each of the activities we design or choose need to direct students' attention to using specific cognitive processes such as noticing, identifying and analysing. In other words, in our teaching we use the external stimuli (texts) and instructions to affect the internal cognitive processes of students.By administering sequences of activities we can guide their attention. The primary focus of teaching methods can be to help students, for example, identify key arguments/opinions, notice bias, predict the effects of a phenomenon, compare and contrast ideas/objects/places among others. This can be demonstrated through an example. To process a map (text/materials), a student should know how to read it (method). He should understand different cues used to refer to different modes of transportation, boundaries, places, landmarks etc. As he reads the map, he also needs to understand and apply various 'cognitive strategies' such as analysing the map, comparing different routes, and evaluating consequences taking specific routes. In this context, language as input is relatively simple; however, the task of reading the map and arriving at a specific travel plan and discussing that plan with peers or teacher involve a wide range of cognitive problem-solving strategies. The example above is an intensive reading activity, which requires students to understand the input and act on it. Acting on the input could be in the form of creating a route map, writing a set of instructions using imperatives or sharing their observations with the peers orally. Several such "communicative reading activities" we can design for our learners. Task 5 How did you use the reading texts in your class? (asked students to read first and ask comprehension questions, read the title and guess what the text is all about, look at the picture(s) and figure out what the content is...) Read what Jeremy Harmer says about the methodology of teaching reading. It is much more likely that students will be engaged if the teacher has aroused their curiosity about what they are going to see through provocative statements or questions, looking at pictures or predicting. One way of getting students to predict is to let them look at the text but not read it. Does it have a headline? Then it's probably from a newspaper/magazine. Is there a picture? What does that tell

NSOU l PGEL - 1&2 205 you about the subject matter? The subject is 'Sleep': what would you expect to find in the article? Then, when the students start reading, curious to see if their predictions are right, they are engaged at least at some level. Lastly, and most importantly, teachers have to tell students how to read. Explain that 'you don't have to understand every word; just try to get a general picture of what the writer is saying', if that is what you want the students to do. Tell them to only look for the specific information they need if you want to give them scanning practice. 15.5.1 Intensive ReadingActivities While designing intensive reading activities,it is important we establish a reading purpose and devise activities with a focus on comprehension strategies.Simply, we need to guide our students toward using the strategies mentioned below. Whether the purpose of teaching-reading is general (newspaper or magazine reading) or specific (reading a research paper), or for pleasure, we need to always remember that we approach texts with a purpose. Purposeful reading motivates us to use a variety of strategies. Reading Purposes to learn new words to answer questions to make a choice to look for alternatives to analyse a situation to create a new model to understand punctuation to solve a problem to prepare a summary, and to share an opinion Effective reading comprehension strategies summarising forming questions answering questions and elaborative interrogation activating prior knowledge monitoring comprehension using text-structure awareness using visual graphics and graphic organisers, and inferencing

Task 6 Think about an activity you have frequently used in your reading class. What was the purpose of that activity? Did you focus on any of the strategies mentioned in the list? How did you introduce these strategies? We will now closely examine some of the effective reading strategies that research has endorsed. Some of the ideas given below are endorsed by the renowned reading specialists William Grabe. 15.5.2 Summarizing strategy It is common we summarize information we read or listen to. Most of the classroom reading in schools give importance to this strategy. The teachers generally ask students to present a brief account of the reading orally or in the written form. In these contexts, our focus is on the key ideas and a few supporting points. Also, a wide range of everyday encounters with people demands this skill. For example, we are asked to summarize a movie we have watched, share the gist of a novel we have read, ornarrate an event. Researchers state that this is an effective reading strategy as it helps readers identify selectively those pieces of information which are important while providing information about their understanding. If the student can generate a good summary, it is an evidence of how much he has understood from the text. 15.5.3 Creating or asking questions Most reading lessons rely on questioning. Usually, teachers plan pre- and post-reading questions to stimulate interest among students and to check their level of comprehension. Questioning is an important skill. Through questions students can make sense of the content and evaluate the effects of it beyond the written word. However, unlike conventional reading classes, where the teacher takes the initiative to ask the questions, here the teacher will ask students to make specific questions based on the reading. He will only support their process of making effective questions. Furthermore, the teacher can encourage students to make questions in pairs as a collaborative activity. During the collaboration students tend to discuss the content of the text deeply and make questions that can be used for in-class quizzes by the teacher.

15.5.4 Student-set questions During pre-reading phase, as Harmer said, we can guide student attention to the title, pictures, sub-headings and ask them to guess what they are going to read in the text. As they predict, we ask them to formulate questions for which they wish to find answers in the reading. This task, in fact, creates an authentic learning context for the students as well as a purpose for the reading lesson. 15.5.5 Rewriting activities We do not always have to design comprehension questions to check the level of understanding of a text. Rewriting activities requires learners to make changes to the text. Depending on the proficiency level of the students we can increase and decrease the complexity of the activity. For example, we can ask our learners to change the tense of the text or ask them to rewrite it from first person point of view to second person point of view (Roberts, 2014). While changing the personal pronouns warrant changes in terms of verbs and their inflections (you – are/do; he – is/does), changing the tense might just affect the tense of the verb (do-did-has done). 15.5.6 Elaborative interrogation Understanding and interpretation meaning(s) is not a straightforward process. In order to comprehend a text, the student has to answer several questions. While answering fact-based questions is relatively easy, to infer meanings that are appropriate to the context of reading is deeper and require the students to answer "why" questions. Teachers can intervene in the process of text understanding by asking students specific questions. As mentioned, critical reading is not straightforward; the teacher canask students to justify and elaborate their answers, which can be done through "why" questions. During the process of elaboration and justification students tend to look into the text/information deeper. In other words, teacher asks students not only confirmatory questions of the passage, but also questions which require them to justify and explain their answers with reference to the reading. 15.5.7 Comprehension Questions One of the time-tested activities we usually administer in our reading classes is the multiple-choice items (MCQ), which precede or follow the reading. For example, course materials such as textbooks and workbooks as well as other renowned testing services

such as IELTS administer MCQs. The focus of MCQ items is usually on skimming and scanning, on guessing the meaning of words in context. AnatShapira(Shapira, 2007) suggested an effective way to conduct a reading class using Bloom's taxonomy and the principle of 'reading in phases'. This principle requires teachers to administer reading questions in several phases. Instead of giving away all the questions in one go, we give students sets of graded questions—"beginning with knowledge questions and going through comprehension, application, analysis and synthesis, up to evaluation". After we share questions (around 4 items) with students, we give students ample time to figure out the answers. In the meantime, we walk up to the weak learners and check their progress. Finally, we identify students to answer the questions. Very often, we realize that the reading comprehension questions cover only a few parts or the whole reading texts. Sometimes, we wish to have more questions/statements or item types (yes/no type, true/false type, fill in the blank type). 15.5.8 Collaborative think aloud activities Often while reading alone we miss out on some details crucial for the understanding of the text. In collaborative activities, where each individual student reads the text in his/ her own way, there is ample scope to read and discuss the text together. In this process, they discuss the main ideas, identify problems related to unknown words and try to guess their meanings, provide different perspectives etc., If the teacher wants to increase the complexity of reading, he/she can focus on 'critical dispositions'. Students can be asked to not only to explore the logical connections within the text, but also to study the author's dispositions such as empathy towards other views,

NSOU l PGEL - 1&2 209 scepticism towards ambiguity and motives of the writer. In this context, for example, teachers can ask students to analyse the use of specific reporting verbs such as state, say, claim, and suggest that report the critical position of the writer. Also, teachers can ask students to examine in the reading text both adverbs and adjectives which usually signal the attitude of the writer. 15.6 Activating the background knowledge of the student While bottom-up reading strategies of going from letters to syllables, syllables to words, words to phrases, from phrases to clauses and clauses to text would be very useful for students who are below the threshold level of proficiency, when we are training students to cope with challenging reading tasks, and when the reading texts are unknown to readers and include low frequency vocabulary items, we need to help our students to use their background knowledge in understanding the meaning potential of the texts. Students bring to class their real-life experiences. Their world knowledge is particularly useful in understanding a reading text. In top-down process approaches to reading, a student's background knowledge helps him to predict or guess the content beforehand. It is also important, in formal reading contexts, we help the student activate this knowledge before he reads the text. Furthermore, this prior knowledge enables the reader to read longer texts in shorter time.Helping students to predictthe meanings of unknown words through context, to guess what comes next in the reading text, and to analyse the key words of the text, ease the process of understanding. We can use questioning as a strategy here to guide the students activate their knowledge about the context. 15.7 Recognizing the structure of the text Text is more than information packed into paragraphs. Texts are communicativeevents. When people desire to communicate their ideas, they follow certain conventions of organizing them; and each communicative event is different from the other in terms of content, context, relationship between people, and modality (written or spoken). However, each text organizes information in a manner that is appropriate to the context. We call them genres. Genres are the ways we structure information. When we produce "instances" of a particular genre (novel, short story, email message, cover letter, research paper), we tend to organize the information in specific moves. For example, a narrative generally involves the following "moves"(Moves from SuzzaneEggins' Introduction to SFL) Orientation: indicating a narrative is about to be told Setting: giving the time and place of the event Action: events leading up to the main action 210 NSOU l PGEL - 1&2 Complicating Action: the pivotal drama of the story Resolution: the outcome of the drama Evaluation: reactions to the story Coda: wrapping up and finishing off When students understand the organization of the moves or stages, they understand how much they have read and what is left. They will also be able to connect the various steps in the text to get a coherent picture of it. Our reading texts can have different organization structures: narration, order of importance, chronological, problem-solution, cause-effect, and advantage-disadvantage. And once the students understand these structures, their ability to analyse and understand texts gets better. 15.7.1 Discourse and Genre Approaches to Reading John Swales in the early 1970s produced a series of activities which required the students to analyse a series of reading passages/paragraphs. As the students analyse the passages they needed to identify the purposes of both the paragraphs and the sentences that constituted the passage. This approach was popular among the teachers teaching in technological institutions (English for Science and Technology). Task 7: Read the passage and the analysis given below. A water tap is a device for turning on and off a flow of water. Its most important parts are a rod with a handle on the top and a washer which is fixed to the bottom of the rod, the metal parts of a water tap are usually made of brass because brass resists corrosion. The washer is made of flexible materials such as rubber or plastic. (water tap diagram) When the handle is turned the rod either rises or descends because of the spiral thread. The column descends until the washer fits firmly in its 'seat'. (this position is shown in the diagram) The tap is now closed and water can flow out of the pipe. Exercise: Cross out the wrong alternatives (S = sentence) 1. the description consists of 1/2/8 paragraphs. 2. The first paragraph describes a tap/explains how it works. 3. The second paragraph describes a tap/ explains how it works. 4. The first sentence is / is not a definition. 5. S2 describes the main moving parts of a tap/ the main fixed parts.

211 d you notice how different the text and methodology in this activity was? This 'specific purpose' (could be general academic, specific academic, or professional purpose reading) reading materials or activities aim at helping students understand and produce language in a specific manner. The underlying objectives of the activities not only focus on text understanding but also on enriching the knowledge of vocabulary knowledge (context- specific words, technical vocabulary, collocations, context-specific meaning senses) grammatical structures appropriate to the content and context, and the presentation and organization of the ideas within a text. Activities that specifically enrich learner reading within specific academic and professional contexts (English for business purposes, emails, reading PPTs, reading research articles) require the students to be familiar with the context and content knowledge: why do some people write or communicate the way they communicate. This knowledge about the texts (move structure in genres) helps students comprehend the texts easily. 15.7.2Genre Approach to Reading - CARS model activities (Advanced Level) Similar to the example cited above we can introduce our students to model/authentic texts where each move or step (a functional, not a formal, unit) has a specific purpose. For example to help understand the "introductions" of research articles in Social Sciences (SS), John M Swales introduced a 4 move-sequence Move 1 Establishing the Field Move 2 Summarizing Previous Research Move 3 Preparing for Present Research Move 4 Introducing Present Research It is expected that any writer who is producing research papers for SS should adhere to the above conventions, with a few exceptions. In other words, the writers who produce these scholarly articles generally include information related to these four steps in their introductions. While designing RC activities we can focus on these four moves and design items (comprehension check, jigsaw, critical reading...). This process can be captured in the following diagram

212 NSOU l PGEL - 1&2 15.7.3 Critical reading activities The complexity of the task can also be determined by the focus. In top-down and bottom- up processing models of reading, the strategies used are usually text-centric. The reader, in a classroom situation, is generally asked to decipher, understand or explicate the intended meaning of the writer whereas in a reflective-critical approach to reading, the readers is asked to "respond to the text critically". While in both contexts reader's background knowledge plays a crucial role in comprehending text, the goal of reading goes beyond skimming and scanning to critical evaluation of the text. In this process of critical reading, according to Wallace, the reader is asked to explore the various socio- political dimensions of the text. For example, the activities will: a. question the existing the inequalities in society and how the text represented those inequalities, b. extend the scope of reading to other similar or related contexts or view points c. observe and critique the gaps in the text (which can be interpreted from certain theoretical perspectives, for example, analysing GT method and its drawbacks from the point of view of TBLT) The activities we design generally consider texts which are socially relevant and open up for multiple viewpoints and arguments. Controversial and debatable topics are more appropriate than narratives which describe and present a series of events. This brings us to the next aspect of reading: texts and genres. 15.8 Transcribing Text into Visuals Understanding means to process and retain information in different forms. Even a narrative can be transcribed or presented in the form of a chart or a picture. When students translate their understanding into pictures, graphs, and diagrams they are giving it a new shape. This process of analysing and organizing a text in the form of visuals needs students to Identify the Text to be Read by students Design questions/ items relatd to the move structure/content Ask students to identify the genre and key views/arguments Ask students to compare their move structure analysis with others Discuss the critical aspects (linguistic choices, use of adverbs, stance markers...)

NSOU l PGEL - 1&2 213 comprehend the text thoroughly. Once the student transfers information into a diagram such as Venn diagram, a pie chart or a flow chart, he remembers it longer. 15.9 Dictionary use When students read authentic texts, which often contain words from different levels of frequency, it is challenging to understand them. Sometimes, authentic texts are lexically dense (too many content words) and pose comprehension challenges. Dictionaries are extremely useful tools here. However, using a dictionary itself is a skill to be mastered. For example, many high frequency words such as take, get, make, gain, givewhen used with specific prepositions take on specific meanings. Similarly, some texts use highly technical words—schemata, plosives, discourse, codify—which are usually found in specific fields, which need to be understood. Effective dictionary use enables the students to become independent readers. Various dictionary activities that focus on the spelling, meanings, grammar, collocations, and examples of word can be used. For more activities on dictionary skilllook up Adrian Underhill's website on pronunciation and vocabulary (https://www.adrianunderhill.com/ pronunciation-resources-links-resources/) Task 8 While focusing on strategies is important at the macro level text comprehension, we need to extend our focus to help students learn the micro level aspects. Some guided activities are very useful. Have you ever used such exercises? 15.10 Guided activities Sometimes, asking students skimming (for general information) and scanning (specific details) questions won't help them to navigate through the texts. We may have to exercise some additional effort in channelling their thinking processes. It means, we may have to use a series of small-tasks or exercises that guide their path of learningthroughguided activities such as: getting students to guess about someone/something (meanings of unknown words), narrating real events to generate opinions, questioning or asking students to figure out which of the options would best fit in, blanking out some sentences and adding a distractor to the options,

214 NSOU l PGEL - 1&2 inserting appropriate linkers, and asking students choose the appropriate supporting detail/ thesis statement from options. In a 60-minutereading class where the students have to understand a daunting quantum of reading material,it is practically unproductive to use a long text (1000-wordtexts) for intensive reading practice. If you desire to use longer texts, it is important you bring contexts and texts that, to a large extent, are familiar to students. Newspapers are everyday contextsthat cover a wide range of social-cultural contexts that most of our learners are familiar with; also, they are usually written in a style accessible to common literatereaders. In terms of length,they provide us with a range-paragraph to a few thousand words. While lead articles, written by expert writers such as doctors, lawyers, and political analysts, range between 800 to 2000 words, the regular reports of events are between 50 to 500 words.Moreover, they are authentic and use a range of vocabulary and grammatical structures-reporting verbs, defining and non-defining relative clauses, concession adverbials among others. An advantage is that the texts are supported by photographs and other visual media-charts, graphs, maps-that facilitate reading. Put simply, we choose texts from specific sources or we write texts in a specific style not only because we want to expose our students to rich language in context, but also because they engage reader's attention, they are relatable, and, more importantly, they guide thereading processes effectively. Task 9 While discrete activities with a focus on specific aspects of reading can be useful once we establish the purpose of a reading lesson. However, we need to understand the fact that we teach reading skills within a course and within a program. While designing activities for courses, we need to consider what the research says about reading skills. Can you make a guess what are some reading research findings? 15.11 What does research say about reading comprehension? We can accomplish our reading instruction goals effectively if we understand our dilemmas and conceptualize our plans accordingly. William Grabe and Fredricka L. Stoller's(Grabe & Stoller, 2011)conceptual map highlights some factors that can guide our approaches to developing effective reading materials. While some aspects refer to external aspects of reading (text length, choice of vocabulary, genre type, themes), some indicate to

NSOU l PGEL - 1&2 215 internal aspects (background knowledge of the reader, recognition vocabulary, metacognitive strategies (knowledge about how knowledge is constructed), motivation levels). a. We need to thoroughly understand the context factors such as students' background knowledge and his/her ability to read in L1 and L2 (proficiency) before designingactivities. b. Whether or not the students have achieved a degree of automaticity in processing spellings, words and phrases and structures(reading fluency and rate of speed). c. We also need to understand what strategies our studentsare able to apply while reading different texts: l previewing texts, l paying attention to text structures or genres, l using discourse markers to check internal cohesion and overall coherence of the texts, l identifying the frequently occurring linguistic expressions and their general meaning potential (negative or positive) d. It is believed that to comprehend a reading text effectively one must be familiar with at least 90-95% of the words used in the text. If you want your students to be fluent readers,you should give texts which are within the range or competence of the students. Competence here refers to one's receptive knowledge of vocabulary (how many words does she/her know in English), grammatical structures, and awareness of the genre structures. e. Attitude and motivation levels of learners is another aspect that affects our reading tasks f. Before we design a reading activity, we need to understand our "purpose of reading". William Grabe identifies several reading purposes such as reading to skim, to learn, to integrate information, to write, to critique, and for general comprehension. g. Once we identify the purpose, we can direct the focus of the activity to any one or more purposes through instructional practices such as: vocabulary building, strategy training, teacher modelling, extensive reading, and content-based instruction. 15.12 Extensive Reading Extensive reading is an approach to teaching reading. It's goal to let the students read texts for pleasure and understanding. There are generally no intensive language practice

216 NSOU l PGEL - 1&2 activities that evaluate your level of comprehension. Stephen Krashen's notion of comprehensible, however, can help us identify the type of text that best help our students with extensive reading practice. According to his theory, we must encourage our students to read texts that are within his proficiency range. If the text is too difficult, the student may not fully benefit from reading it; moreover, complex texts affect reading fluency. Paul Nation's website has a good number of reading texts for extensive reading. Please look up his website for downloadable e-books for level-specific extensive reading practice. Paul Nation/ I. S. P. Nation (https://www.wgtn.ac.nz/lals/about/staff/paul-nation) 15.12.1 e-books An e-book is a computer file of a book or a text.Ever since computer and mobile technology has taken over the physical copies of the books, several websites are sharing for free books in the e-format. Interestingly, many e-books on devices such as Kindle help the readers with difficult vocabulary by supplying the meanings of words. All we need to do is to click on the word, it throws up its definition. Also, e-books can help you navigate through pages quickly and easily. Students with vision problems can magnify or enhance the print size almost double the size. In fact, e-copies are cheaper than the physical copies, while they are also permanent. Some of the useful websites for e-books are given below Electronic Teacher Tap: http://eduscapes.com/tap/topic93.htm Scholastic: http://teacherexpress.scholastic.com/ Internet Archive http://archive.org/about/about.php Project Gutenberg http://www.gutenberg.org/ Ebooks: http://www.ebooks.com/ 15.13 Conclusion Reading is an interactive process and depends largely on why someone is reading something (image, text, symbols...). It also depends on the purpose of teaching reading, as Harmer rightly said. If you are teaching a reading course which is designed to develop the reading comprehension skills of students (helping students to move from intermediate to advanced reading) you have tasks that can help you; if your focus is specific purpose reading such as reading for academics, where the texts are specific characteristics conventionally practices, we have activities for that as well. Also, if you are trying to motivate students to read for pleasure, which some researchers believe, will improve both the breadth and

NSOU l PGEL - 1&2 217 depth of language knowledge, you have different activities (extensive reading, using graded readers such as the ones Paul Nation has designed). Designing reading activities should, above all, consider the learners and their needs. An activity that was successful in one context may not work in the other. Therefore, one must always rely on strategies or small activities that help achieve the goals of reading. 15.14 Review Questions 1. Create your own definition of reading and justify it with reasons. 2. Having gone through the strategies of reading for different purposes, what strategies would you recommend for a student in Class X in a Bangla-medium school? He/ she is preparing for the examinations. 3. You have taught an interesting story to students in Class VIII. Other than asking comprehension questions, what alternate strategies can you use to assess their understanding? 4. How many types of reading are you familiar with? If you are asked to teach a novel how would you teach it and what skills of reading will it promote? 5. How do you help your students cope with difficulties in vocabulary without affecting their fluency in reading? 15.15 References Grabe, W., & Stoller, F. L. (2011). Teaching and Researching Reading. 218 NSOU l PGEL - 1&2 Unit - 16 p Activities for Writing Skills Structure 16.1 Introduction 16.2 Objectives 16.3 The Basic Units for Teaching Writing 16.4 Aspects of Writing 16.5 Materials and Activities for Teaching Writing 16.6 e-genres and Writing 16.7 Genre-based Writing Activities 16.8 Feedback Activities 16.9 Conclusion 16.10 Review Questions 16.11 References 16.1 Introduction For many students in English as Second Language (ESL) contexts, writing is a challenging task. Because the exposure to the printed English word outside the formal schooling is minimal, many of them are deprived of adequate practice. It has been found that only 10-15% of Indians can use English fluently in India. In other words, schools have to take up this responsibility of improving the writing skills (literacy skills) of all young people in our nation. Task 1 Although speaking and writing are called production skills, they are different in many ways. What do you think are the major similarities and differences between speaking and writing skills? 16.2 Objectives After going through the unit, learners will be able to: a. Know how writing skills can be learnt

NSOU l PGEL - 1&2 219 b. Understand how to teach the basic units of writing c. Understand the different aspects for developing writing 16.3 The Basic Units for Teaching Writing Unlike speaking skills, which can be mastered throughconsistent and qualitative exposure to various forms of spoken input such as television and other internet-basedmedia, writing skills require the students to consciously put in a lot of effort. Students' have to master, among other aspects such as spelling and word-formation, a range of other additional skills (notetaking/note making, dictionary use, reading the printed page). Writing therefore is not a mere representation of speech.For example, while sharing our views orally with friends, family and colleagues, wethink and act spontaneously;however, while writing down something (an essay, a short story, a report, or even a grocery list),we tend tonot only translateour speech sounds into visible 'graphemes' (letters and words), but also follow certain conventions in organizing those graphemes into words, phrases, clauses and sentences, and genres. Like a skilled mason, we put our wordstogether and cement theminto texts appropriate for the purpose. In addition, to convey meanings effectively, we use punctuation marks (colon, comma, question mark) and specific organization patterns (grocery list is organized vertically in terms of nouns and measuring expressions while the essays are written horizontally into paragraphs). Many of these aspects of writingare absent in speaking. Therefore, we must distribute our focus equally on all the key aspects to help our students master the skill. Use of punctuation marks changes the meaning of the sentences. The policeman said the boy broke the window. The policeman, said the boy, broke the window. The policeman, said the boy broke the window. The policeman said the boy, broke the window. Source: (Hyon, 2018) For many students,both understanding the printed word and producing writtentexts,followingcertain conventions (wording with punctuation marks, paragraphing, using appropriate grammatical structures, indentation and referencing), are important.For the students to produce written texts, they must first learn the basic units that constitute writing

220 NSOU l PGEL - 1&2 Alphabet Syllables/WordsWord-formation Lexico-grammar Text When we are developing writing courses, we need to organize our activities aroundspecific writing needs of the students based on their level of proficiency. If the learner is an adult who has started learning English, we need to focus on the system of English first (letters, words, word-formation); however, if the learner is admitted to an undergraduate programme in a university, we design activitiesfor academic language needs (essay writing and term-paper writing). Depending on the course requirements and learner proficiency, we design our activities. Teacher's beliefs about language teaching usually interfere with the teaching. Some teachers believe in the view teaching writing means teaching grammar and vocabulary; some others believe both meaning and form are equally important.However, research indicates to the view both meaning (writing purposes) and formare equally important. We must not forget the fact that writing is a skill that only develops through conscious learning; it cannot be acquired, without practice, naturally like the way we acquire our mother tongue speech. Task 2 Did your teachers, in school or college, make you write in the classroom? What kind of writing did you practice? (Writing short notes, answering questions at the end of each lesson, writing in the examinations, writing letters/e-mails). Whether it was an English class or a History class, we all had responded to teacher's prompts in writing. Some of our responses were in the form of 'answering questions after a reading passage' or 'filling the blanks with appropriate words'. Sometimes we would also practise writing short notes/phrases or sentences, and occasionally paragraphs. Sporadically, we wouldalso focus on spelling and punctuation while other times we wrote longer texts such as stories or speech presentations. Task 3 Do you consider this 'writing practice' in the form of short notes or responses useful for writing development? What kind of writing activities helped you learn 'writing' better?

NSOU l PGEL - 1&2 221 16.4 Aspects of Writing Whether we write short notes or long essays, every single attempt helps us understand and practise an aspect of writing. However, it is important that we should know what constitutes good writing. To understand that, we must look at some good writing courses.If we consider a proper writing course, all the aspects are embedded and well-organizedinto several unitsacross the textbook/ course materials.While some courses emphasize moreonsentence structures (grammar)such as simple, complex, and compound sentences, some courses encourage students to write freely. The latter is a model of writing that is popular in countries like America, where English is the mother tongue of students. In many non-native contexts (ESL and EFL writing), however, teachers encourage students to go through a series of steps before they write independently. They call itstep-by-step writing. There are also courses, at an advanced level, which teach writing through model texts (see below genre-based writing). By analysingand emulating model texts or expert texts, the students practice and learn their writing. Although different models of writing exist, most writing courses focus on at least five important aspects of writing. These five major aspects of writing help us devise pedagogical activities. We can integrate all the five aspects in one "process approach" activity, which requires the students to produce drafts of writing, or we can also design separate activities for each aspect. For example, if our focus is on mechanics, we can design activities exclusively on using appropriate punctuation marks, using numbers in writing, or on using capitalization. In this module, we will look at these activities from different perspectives.

Task 4 Although we have various activity types available to address specific writing concerns of our students, before we start teaching a writing course, we need to be aware of the needs of our students. Think about three questions you would ask to understand the needs of your students. Asteachers of English, the first question we usually ask in a writing class is "who are my students?"(Kindergarten or preschool, primary, secondary/high school, or college going students.)This question helps us to understand our learners, their entry-level proficiency in the language and their language background (whether they can write anything). Once we size up the class and understand their strengths and weaknesses, we then closely examine the writing syllabus we are required to teach. This examination of a writing syllabus will help us with the focus: what has to be taught on the course (writing words or the alphabet, writing simple sentences, writing paragraphs, writing stories, writing essays or writing research papers...). As Amy Lightfoot (Lightfoot, 2010)puts it, we should focus on some questions about student needs: l What are the learning outcomes that the course will need to address? l What are the students' current strengths and weaknesses? l What type of language or skills do they need to learn? Task 5 Once you read through the syllabus for writing instruction, you would generally think about materials to teach the skills. What kind of materials/activities did your teachers use to give you practice in writing skills? Which activities you think helped you with your writing skills? 16.5 Materials and Activities for Teaching Writing The focus of instructional activities can be classified into two major purposes: writing to learn and writing to write.Writing to learn activities focuses on helping students practice specific aspects of writing, such as the use of tenses and use of punctuation. Writing to write, however,gives importance to the audience, who will be reading the

text you produce. In other words, writing to write is purpose-driven that the activities focus more on the authentic (real-life writing) contexts to be written by the students. Any writing teacher is expected to strike a balance between these two purposes to make students achieve the writing objectives. For example, if the writing syllabus of a course requires students to write effectively a five-paragraph essay, you need to first define the nature of a five-paragraph essay (the aspects of writing which constitute the production of a five-paragraph essay: a thesis statement, writing examples, using data to support the claims, writing an appropriate conclusion etc.,). Once you define the basic focus of writing, you then design or choose those activities that focus on the different aspects. To understand this idea, let us now take a look at some activities. Task 6 Take a look at the following 'writing to learn' activities and explain to yourself what their focus/purpose in terms of writing. a. Fill in the blanks in the following passage with words used in the reading text 1 on "Health Benefits of Meditation".Yoga pose has lots of health benefits that we can take _____. It calms our mind and body which is beneficial to those individuals who are disturbed. When you are disturbed, both your mind and body experiences _____. Your thinking triggers reaction on your body. So, a pleasant or not so pleasant ____ is just a result of the content of your thoughts. b. Rewrite the composition, in the present tense. Your first sentence will read: Minu, the monkey lives in a small village with her big family.Minu, the monkey lived in a small village with her big family. She was different from the other monkeys in her clan. While the other monkeys snatched and stole food from passers-by, Minu sat outside the grocer's shop waiting for children to give her pieces of sweet or salty snacks of their own free will. Minu knew there was something missing in her life, but she didn't know what it was until the grocer's daughter, Pinky started school. The grocer's house was behind the shop. c. Picture Description: Take a look at the picture and write at least 5 sentences using be-forms (am, is are) or in the present tense. (supported by a picture) For example: There are/There is... in the line.

These activities are modelled on the principle of controlled composition. If you use controlled composition activities, you will be guiding students through a series of independent steps which, when mastered, can lead them to the overall mastery of the skill. These activities focus on 'accuracy' aspects (being grammatically correct) through 'text manipulation'. For example, in the preparation stage of the lesson, you teach the students 'tense consistency' or 'writing stories in the past tense or in the present tense'; in the practice stage, you provide students with hands-on practice through / controlled practiceexercises. Guided activities, instead of asking the students to create a new text, make them "manipulate or convert" a given text, let's say from simple present to simple past. While working on the activity, the students do not have to create, for example, any characters, events, logic, or storyline. They need to simply follow the rules of grammar and change the tense of the verbs (example b). In order to reduce or increase the difficulty level of the activity, the teacher or the textbook- writer 'controls' some aspects (choice of words, punctuation marks, grammar) of the input. For example, the teacher may use only singular third person pronouns (he, she, it) to ease the process of conversion (activity b), or she might provide example model sentences, as in the activity a, and ask students to make similar sentences. In all these activities, there is a greater amount of control exerted on what the students will be writing. Task 7 Do you think these controlled or guided activities, which focus more on the grammar and vocabulary aspects, constitute a comprehensive writing course? Or do you think, every writing activity should include a social purpose as well? We certainly need activities that help us 'study writing'. Because writing skills include a range of conventions such as capitalization, use of pronouns (referencing), paragraphing, and using transitions, and teachingthemisimportant. So, asking students to: a. join two clauses (one dependent and one independent) using a comma; b. read a text and identify the words that have to be capitalized; c. use appropriate pronouns to refer to specific nouns/noun phrases within the text (endophoric reference); d. change the tense of an event; help them with the conventions or the basics of writing skills.

We can have different types of exercises where a degree of flexibility in terms of student writing is possible. For example, Sharwood-Smith's experimental formats of exercises describe an activity which encourages the students to creatively supply "sentence sequences" or fill in the blanks. Unlike the mechanical drills that only require students to replace a word or tense with another word or tense, here students can come up with responses appropriate at the text level. An activitySharwood-Smith suggested is given below. Exercise 1 INSTRUCTIONS: Fill in each of the following blanks with a full sentence. Make sure it fits into the story as a whole. Do not repeat words unnecessarily as in *The wind was strong. I fought against the wind. Write: _____ I fought against it. "It was a typical winter morning._____ We had to have the lights on in the classroom._____ The teacher was two or three minutes late. Suddenly Tomek said: "_____ " We all agreed to ask the teacher._____ He looked pale and tired. _____ He thought for a moment about her suggestion. _____ Seeing our faces he smiled and then said with a note of apology: "_____"We all protested in vain. _____ "If you really want to invite me to coffee, we can go when the lesson is over."_____ !" Teaching the conventionsof writing alone won't be enough if our aim is to make them write socially relevant texts: e-mails, reports, essays, andresearch papers. Real- life writingshould besituationallyrelevant. Relevance here refers to achieving asocialpurpose: to purchase a product, to entertain a reader, to share one's feelings or emotions, or to report an event. Tasks such as writing an email, writing an academic essay for a course, writing examinations, and writing a story for publicationare called "writing for writing".

Task 8 Take a look at the following activity designed by Sandra L McKay and compare the context of the activity, input (the language choices), and the expected outcome of it with the a, b, and c guided activities above. a. Situation: The Traffic Officer You are a traffic officer. As part of your job you have to file a report of the accidents you cover while on duty. Yesterday you were on the scene of a car accident which took place on a single lane country road. You now need to file a report of that accident.Activity: Write a report of the accident. The following information what you scratched down in your notepad. Use this information to write your report of what happened yesterday. Be certain to make clear the sequence of events. Time: 7.20 a.m. April 14 th Place: highway 652, two miles south of the city an overturned Volkswagen on the shoulder of the southbound lane skid marks leading from the southbound lane to Volkswagen a pickup truck blocking the north bound lane of traffic... This activity is different from a, b and cactivities that it does not ask the student to produce any 'random' sentences that confirm to grammar rules only. It requires students to write sentences'appropriately' within a context (writing an accident report); it has a specificcommunicative purpose. What do we mean by writing sentences appropriately? Being appropriate refers to the notion of 'readers' who will read the text. So, when a student, who was a witness to an accident, writes the report, it is important he/she writes the report in a style (formal or informal) that is accepted normally by people (may be police!) who read it. In other words, this writing involves the skill of knowing how to use language within a particular situation. Although this activity is in some sense controlled (in terms of input and expected output) in its nature, there is a degree of autonomy conferred on the writer. It does not explicitly demand the writer to use any specific grammatical structure although it indirectly guides the writer to report an event that had already occurred.The writer enjoys a degree of freedom in organizing the sequence of ideas, events or arguments (schematic structure of what goes into every stage or part of the text)to achieve the goal of writing. Similar activities (with a little more input) include:

Write an email to your teacher requesting an extension for the submission of the assignment. l For a newspaper review, compare the latest mobile phone series from Appleand make recommendations to prospective buyers. In these activities you are required to provide the students with guidance as to what the context is, who the text is addressed to, what ideas to be included, and what language choices to be used (vocabulary and grammar). For advanced level students, we can focus on how writers achieve coherence and cohesion in longer essays. While coherence in writing refers to the way the clauses or sentences relate to the context, cohesion refers to the text internal aspects, i.e., the way we relate or tie together bits of our text, says Michael Halliday.For example, to teach text cohesion, we can ask students to analyse how the writers organize different pieces of information using different adverbials (however, therefore, consequently, on the other hand) and conjunctions (although, if, and, or, so). 16.6 e-genres and Writing Conventionally, writing activities focused on certain genres such as story writing, essay writing and email writing. Our textbooks generally opt for tasks or activities which give importance to writing sentences, paragraphs, and essays. Students are encouraged to write appropriate and concise thesis statements and support them with relevant details in the form of examples and explanations. These days, however, the nature of writing has evolved. A wide range of tech or internet-based e-genres have become increasingly popular. Blog writing (personal and professional), web posting, online reviews, messages, and chats (on the social media such as Twitter and Facebook) are predominantly used written genres. These genres too have specific goals (requesting someone for detailed information as in email messages, describing something that has impressed you as in blog writing, and sharing your opinion about an event, idea or a person as in Tweeting). Much of the internet-based writing is interactive and synchronous. For example,real- time interactive writing on WhatsApp requires the writers to be spontaneous and appropriate.Adrian Doff calls this type of writing as 'write then write interactive activities.'Similar to real-time chat, students in these activities are assigned specific roles. Working in pairs, students prepare a message—news item, email, plan—and send it across to another pair. The other pair has to now work together and write a response to the message. As a follow up, we canhaveskill-integration activities. When we use writing activities which require students to spend a considerable chunk of time (about 30-50 minutes), it is challenging for them to sustain their motivation to

228 NSOU l PGEL - 1&2 write. Especially, in contexts where students' proficiency and the skills of writing are weak, the task of writing a complete text, even if it is short in length, will be difficult. However, when we know that students should be able to write a specific type of text, we tend to integrate the writing component with other skills. In some of these integrated interactive/communicative activities, we consider writing skills, not only as an end product or the goal of the activity, but as a means to achieve other goals: making a classroom presentation (speaking),making/taking notes for future reference, collecting ideas from a group for an oral presentation,andwriting out answers to reading. Some activities for writing Aspect Activities Content Peer-discussion or brainstorming activities which encourage students to discuss and explore ideas relevant for the writingFlipped reading that is relevant for the writing task. Students read a text at home and discuss their analysis with peers before they identify ideas; Organization Cohesion and coherence activities: can focus exclusively on specific aspects Coherence Generic coherence: rhetorical structure (jumbled sentences; jig saw exercises; write the correct topic sentences; identify the appropriate evidence to support the thesis statement from the options; delete the odd sentence from the passage CohesionTextual cohesion: use of transition words appropriately (fill in the blanks or MCQ type or CLOZE)Grammatical cohesion: Use of parallel structures in writing; use of appropriate pronouns (referencing— anaphoric and cataphoric) Grammar Cross comparison of genres: Take two different genres (one spoken and one written) and compare the use of grammar structures throughout; Explicit grammar practice through multiple examples (example to rule); Complete the blanks with appropriate clauses Vocabulary Word-formation exercises (syllabification, use of prefixes and suffixes); use of collocations (fill in the blank with suitable words); MCQ (what does the word in bold mean?) Mechanics Read the text above and use punctuate its summary; Rewrite the jumbled words into meaningful sentences using punctuation marks; Read the text and capitalize the words that are given in lower case

NSOU l PGEL - 1&2 229 16.7 Genre-based Writing Activities Genre: Genre is a staged, goal-oriented, purposeful activity, or genre are how things get done, when language is used to accomplish them(Hyon, 2018). There are a range of written genres: literary genres (novels, sonnets, short-stories), popular written genres (newspaper articles, recipes, magazine reports), educational genres (lectures, examinations, essays), and e-genres (blogs, WhatsApp chats, emails). And these genres have specific purposes: tell stories, exchange opinions, and chat with friends.While achieving their communicative goals,people/writers use language in a manner that is appropriate to the context, similar to the example given below. If someone has the purpose of sharing a recipe, he knows its purpose: to instruct the people who might be interested in preparing the dish. Once he is aware of his goal, he should also be aware of the way the purpose is realized in terms of the genre or the 'schematic structure' of organizing information in stages. Generally, the schematic structure or the stages of a recipe includes: a. Title (Purpose: to differentiate individual recipes from each other) b. Enticement (purpose: to tell why you should bother to make this dish) c. List of ingredients (purpose: to tell what you need to add) d. Method (purpose: how to make the dish) e. Serving quantity (purpose: to tell how many the dish will feed) Stage Lexico-grammatical patterns Title A nominal group or a noun phraseBenganbartha Enticement A complete sentence with positive attitudinal wordsThe traditional dish of Indian origin offers an easy to cook delicious vegetarian meal List of ingredients Nominal group or noun phrases of numbers and measuring words500 grams of eggplant Method Clauses in the imperative mood (expressed as orders)Cut the bengan to small pieces.Boil two spoons of mustard oil in a skillet.Use of action-oriented verbs (heat, wash, slice...) Serving quantity An elliptical declarativeThis dish serves 4.

230 NSOU l PGEL - 1&2 The content for the schematic structure is drawn from SuzzaneEggins' work of Systemic Functional Linguistics. If the writer is aware of the 'broad shape the text takes' prior to writing it, along with the language choices such as vocabulary and grammar, it makes the process of writing easier. Tony Lynch states it is important to be aware of the product, its social purpose, and the order in which this purpose is achieved, prior to the process of writing. Knowledge of how and in what order people communicate isparticularly important. Language-awareness activities, which focus on'how the context of writing shapes a piece of writing' can help learners with writing. Task 9 If texts have specific social purposes and use specific linguistic choices such as vocabulary and grammar to realize these purposes, how do we go about teaching specific genres? Once the student analyses the genre of an expert text, it then becomes clearer as to what should be done.In other words, the student should become a discourse-analyst first before he produces the text. So, in order to apply the genre-approach the teacher can think about organizing instruction in the following stages. \ Model text-analysis can provide novice writers with models from authentic contexts— well-known cookbooks, newspaper articlesandblogposts. Writers of these texts tend to use specific lexical and grammatical choicestocoherently organize their texts. When our students analyse them, they become aware of how language is in the production of texts, which serve specific purposes. For example, Douglas Biber shows us how different text types or registers make use of specific features in realizing their goals of writing. He shows how the language of the textbook differs from other genres(Biber et al., 1999; Shin, 2016). Model/expert text genre analysis by the learner The process of writing Final product and

a. Impersonal voice b. Uses weak verbs with minimal lexical meaning (have, is, be) c. Long and complex noun phrases (the attitudes of the persons in charge of the internal control system) d. Academic vocabulary (significant, analysis, concept, provide) Some texts such as feature articles published in newspapers or magazines are similar to what we generally come across in academic contexts; theyhave multiple stages and include variety of goals: description, narration, compare and contrast, analysis and more importantly persuasion. To persuade the readers, for example, the writers subscribe to a variety of devices such as humour, puns, dialogues, satire, and metaphors.Each of these devices can be the focus of genre-based instruction. In other words, our activities and materials can focus on three distinct aspects(Chiu, 2013; Morgan, 2012)of the genres.

Activities Compare and contrast activities: Students will be given two different texts which have the same purpose. For example, sales promotion letter and Job application cover- letter. Both the textsare part professional registers and are instances of 'promotional genre'. They both share the communicative purpose and their participants have similar role-relationships; however, the way they realize their purposelinguisticallyis different. Student, either working in pairs or groups, compare the texts for its moves/schematic structure and linguistic choices. Once they identify the following structure, they compare each other's analysis for the aspects mentioned in the diagram above. According to Vijay K Bhatia, the schematic structure of both the text types is similar(Bhatia, 1993). 1. Establishing the credentials 2. Introducing the offer 3. Offering incentives 4. Enclosing documents 5. Soliciting response 6. Using pressure tactics, and 7. Ending politely Theme-focussed activities: Theme-focussed activities are organized around a theme. For example, different registers—magazines, blogs, and research article—which deal with the same theme could be analysed by the students. Themes such as obesity and health risks, education and technology,andfood and culture can be considered for genre analysis. In theme-based activities, there can be greater variation in terms of genres. It means, the purposes as well as genres can be different, although the topics are the same. When students analyse two texts on the same theme/prompt, they will be able to understand the variations in terms of role-relationships between the participants, nature of examples and evidence, style of definitions, and formality of the registers with reference to the genres. Rhetorical device/creative writing activities: Sometimes the writers have the freedom, within specific genres such as creative writing and journalistic writing, to present their ideas in a unique manner. They use literary devices such as metaphors and similes. Some awareness-raising activities can exclusively ask students to identify such uses of linguistic devices in writing.

Rhetorical consciousness-raising activities can also focus on text organization. Once the students analyse an authentic expert text, the teacher can reinforce text-analysis with text-organization tasks such as jig-saw activities. A text (preferably longer than a paragraph) can be cut into pieces (moves). The students will be asked to assemble the text and justify the order. Once the students develop 'genre analysis' skills, they will be able to write better essays. Although text/genre analysis helps students understand the moves, sometimes students need some language support to produce similar genres. Customized feedback can be especially useful in these contexts. 16.8 Feedback activities The correction of students' work is an important part of a teacher's job. However, teachers can make the students become autonomous through peer-feedback activities. These peer- feedback activities can be classified into meaning-focussed and form-focussed. In meaning focussed activities, the reviewer or the peer verifies the text for its content (appropriacy of the content or ideas, thesis statement, use of appropriate supporting ideas such as statistics and examples, and text-organization or moves); in the form-focussed activities they look -grammatical choices and the use ofwritten codes (V for vocabulary, Sp for spelling, G for grammar, etc.). 16.9 Conclusion The nature and scope of writing activities have evolved over decades from being grammar- centric to purpose-centric. In the past, we believed teaching grammar would directly affect students' writing skills. In this module, we have shown how different activities can help students with different aspects of writing. When we teach writing, we need to ensure that we use a range of activities, which not only teach students the language, but also make them understand use the language appropriately. Similarly, while teaching writing, we must also consider how different registers and genres achieve specific social purposes through writing. Student needs, writing styles, course requirements, textbooks, resource materials, and time are only a few aspects that affect the design and implementation of a good writing course. However, if we desire to improve students writing, we must include a variety of activities that cater to different styles of learning. We may have to provide grammar practice, share vocabulary appropriate to the context, offer feedback both on grammar

234 NSOU l PGEL - 1&2 and content, and perhaps, we give students an assessment rubric to crosscheck their writing quality. Teaching writing skills require us to do a lot more than just assigning a topic prompt and awarding grades for writing. 16.10 Review Questions 1. How is writing different from speech, though both are productive activities? Give some examples based on your experience with your mother tongue. 2. You have seen several activities in this unit. How many of these can you use in your class? If you cannot use a few, can you give reasons for the same? 3. Look at the report writing exercise (policeman reporting an accident). If you were to use this with your students in Class X, what changes will you make to it? 4. If you are teaching writing to a group of intermediate students, how much of grammar support will you give? How do you choose these items of grammar? 5. What are some of the rhetorical devices? How does an understanding of these make our writing better? Give an example. 16.11 References Bhatia, V. K. It is metaphorically an apt description. During the Middle Ages, grammar was often used to describe learning in general, including the magical, occult practices popular among the scholars of the day. People in Scotland pronounced grammar as "glam-our," and extended this association to meaning magical beauty. In the 19th century, the two versions of the word went their separate ways, so that our study of English grammar today may not be quite as glamorous as it used to be. In any language, grammar signifies:

240 NSOU l PGEL - 1&2 Ø the systematic study and description of a language (as compared with usage). Ø a set of rules and examples dealing with the syntax and word structures (morphology) of a language. Cutting across all its ramifications or varieties, the term grammar at its basics signifies the gamut of principles and rules, that governs the structure of language, given that the word 'structure' encompasses phrasing, grammatical collocation, morphological formulation according as the placement of a word demands syntax and sentence, elliptical or finished. Intensive reading of and listening to a second or foreign language are the most comprehensible accesses to the sense of grammar. Grammar seems to be the expressive or communicative sense in a coherent manner rather than cramming a set of rules, which slips through the fingers like a fluid when it comes to speaking or writing L2 or FL. Therefore, it is highly recommended that L2 learners get themselves exposed to and familiar with conversational and reading sessions rather than get glued to a grammar book. 1.2 Objectives When we just start learning a second language, here obviously it is English, we need to know some basic rules of the language. Developing a good awareness of how grammar works in the English language not only helps us create our own sentences correctly but also make it easier to improve our communication skills in both spoken and written English. [Here we might have written 'start to learn' and 'help us to create...'; but these expressions are ungrammatical and contrary to usage as well. Yet these expressions are getting into vogue these days, and in course of time they will be accepted grammatically.] We study, learn and practise grammar in order Ø To build up an elementary sense of phrasal and sentential form and their meanings or significations in speech performances or discourse settings, be they academic or professional, or dialogical Ø To identify and understand grammatical structures in text and speech and how these structures moderate meanings and their effects on readers or audience Ø To suggest corrections and modifications in grammatically faulty expressions

NSOU l PGEL - 1&2 241 Ø To variegate the form of expression without affecting meaning, in other words, to compress or expand an expression according as the context warrants with none of ungrammatical forms that may intrude for lack of attention to grammar and may produce an adverse impression on the discerning readers or listeners Ø To integrate syntax and semantics, in other words, to harmonize word-order and intended meaning Ø To achieve a sense of confidence in handling words and organizing them into a flexible, lucid and easy-to-understand structure; we must understand that 'language performance' is largely psychological. For a better understanding of grammar in its quintessential sense we may take David Crystal's extremely pertinent and incisive view into our account for a think over it and proceed to study grammar to make the most of its application to comprehending and speaking/contextualising language: Two steps can usually be distinguished in the study of grammar. The first step is to identify units in the stream of speech (or writing, or signing) – units such as 'wordand 'sentence'. The second step is to analyse the patterns into which these units fall, and the relationships of meaning that these patterns convey. Depending upon which units we recognize at the beginning of the study, so the definition of grammar alters. Most approaches begin by recognizing the 'sentence', and grammar is thus most widely defined as 'the study of sentence structure'. A grammar of a language, from this point of view, is an account of the language's possible sentence structures, organized according to certain general principles. (Crystal, 88) 1.3 Types of Grammar Within the broad spectrum of grammar study, there are two distinct applications of the term 'grammar', one specific and the other general (Crystal, 88). In the specific sense of grammar, it is a subject related to the analytical study of the structure of language, traditionally followed in the teaching of school boys, with special emphasis on syntax and morphology. The comprehensive and general sense of grammar was popularized by Chomsky. Chomsky's concept includes within the ambit of grammar an interactive and mutually subservient study of phonology, morphology, syntax and semantics. In the general sense of grammar, emphasis is laid on vocabulary and usage problems as well,

242 NSOU l PGEL - 1&2 which are admittedly important segments of semantics. In any case, across the wide variety of approaches to English grammar, common focuses are on how to use a particular structure and how errors are to be avoided. In the brief compass of this module on grammar, correlated issues such as 'formality, 'slang', nature of Standard English and dialects are not addressed. But it is advisable for the advanced ELT students to study and be aware of these areas alongside grammar. Linguists are ever ready to remind us that there are different types of grammar, that is, there is a variety of ways for conceptualizing and analysing the functions and structures of language. Basic types of grammar discourse are six in number, in David Crystal's view: 1. Descriptive Grammar 2. Pedagogical Grammar 3. Prescriptive Grammar 4. Reference Grammar 5. Theoretical Grammar 6. Traditional Grammar On top of these six basic types, one easy-to-understand approach to grammar is Practical/ Functional/Communicative Grammar, which is our focus in this Module.This particular approach is the combination of all the different approaches in grammatology, and is in tandem with the patterns and forms of usage. L2 learners may look up a good book on the practical aspects of grammar titled Practical English Usage by Michael Swan, (Fully Revised International Edition, 2017). It is in place to mention here that through the expansion of linguistic studies over the last few decades several variants of grammar studies have developed, viz., Comparative Grammar, Generative Grammar, Mental Grammar, Transformational Grammar, Performance Grammar, Case Grammar, Relational Grammar, X-bar Theoretical Grammar, Montague Grammar, Phrase Structure Grammar, Realistic Grammar, Systemic Grammar, Universal Grammar and Network Grammar. Predictably more approaches to grammar studies are in the offing.

NSOU l PGEL - 1&2 243 1.4. Definitions of the Basic Types a. Descriptive Grammar: It studies and presents constructions that are grammatically correct vis-à-vis incorrect in an objective manner without any prescriptive suggestions or judgements. The standard norm of Descriptive Grammar is to investigate and describe in detail the patterns adopted in a corpus of materials, written and spoken. b. Pedagogical Grammar: Pedagogical Grammar is specifically designed for teaching and learning a second or foreign language. This type of grammar is popular in school level teaching, and textually mediated to L2 learners through setpiece lesson plans and testing. c. Prescriptive Grammar: Prescriptive Grammar is a manual of prescriptive rules for socially accepted usage of language, and was a major influence in the academies throughout the whole of Europe and America in the 18 th and 19 th centuries. It survives in our contemporary times in the form of handbooks for practical usages and their governing rules in such books as A Dictionary of Modern English usage by Henry Watson Fowler (1926) and Practical English Usage by Michael Swan, (Fully Revised International Edition, 2016). d. Reference Grammar: Reference Grammar is self-explanatory in the sense that any clarification of grammaticality of phrasing, usage, syntax or sentence structure is consulted or looked up in a comprehensive grammar book that covers all features and facets of grammar between its two flaps. It is used in the same way a dictionary of words, rather a book of 'reference lexicon' is used by one interested in the grammatical correctness of language. e. Theoretical Grammar: Theoretical Grammar is concerned with the linguistic universals that are not confined to any particular language but characteristic of all human languages or dialects, spoken or written. It is more an analytical and scientific approach to language study as a set of principles manifested in speech and textual mechanism, a phenomenon underscored by an innate rational organisation as in any other phenomenon of natural growth or constructs. "Theoretical grammar or syntax is concerned with making completely explicit the formalisms of grammar, and in providing scientific arguments or explanations in favour of one account of grammar rather than another, in terms of a general theory of human language." (Antoinette Renouf and Andrew Kehoe, 2009)

244 NSOU l PGEL - 1&2 f. Traditional Grammar: Traditional Grammar refers to the entire historical gamut of grammar studies originating from the classical Greek and Latin works of grammar and intensifying through the Renaissance epochs and reaching its apogee in 18 th century prescriptive grammar books and manuals. 1.5. Modern Concepts and Values in Grammar Study Let us consider the word interface. A descriptive grammarian would have observed, among other things, that the word is a mix of the prefix (inter-) and a stem word (face) and that it can be used as both a noun and a verb. The prescriptive grammarian, however, would be more interested in deciding whether or not it is "correct" to use interface as a verb. The study of grammar provides us with a clearer understanding of how language works. It helps us with greater control over the way we shape words into sentences and sentences into paragraphs. Descriptive grammarians generally advise us not to be overly concerned with matters of correctness: language, they say, is neither good nor bad; it simply is. As the history of the glamorous word grammar demonstrates, the English language is a living stream of communication, a dynamic and evolving phenomenon. Within a generation or two, words and phrases come into fashion and fall out again. Over centuries, word endings and entire sentence structures can change or disappear. Prescriptive grammarians prefer giving restrictive advice as to using language in all possible correctness. They dish out hard and fast rules to preserve the grammatical sanctity of language by avoiding errors. They view grammar as the mover of language. It would simply make no sense without grammar. Language users must function in a fixed system in order to understand one another. In other words, a language without grammar is like a pile of bricks without mortar to hold them together. The British linguist David Crystal tells us that ''grammar is the study of all the contrasts of meaning that it is possible to make within sentences. The 'rules' of grammar tell us how. By one count, there are some 3,500 such rules in English." Even though we do not know all the lexicographical terms and pedantic minutiae involved in the study of grammar, we may take a whiff of hope from the noted novelist and essayist Joan Didion: "What I know about grammar is its infinite power. To shift the structure of a sentence alters the meaning of that sentence." Grammar is actually something all of us begin to learn in our

NSOU l PGEL - 1&2 245 first days and weeks of life, through interaction with others. From the moment we are born, language—and the grammar that makes up that language—is all around us. We start learning it as soon as we hear it spoken around us, even if we do not fully comprehend its meaning yet. Although a baby does not have a clue to the terminology, they begin to pick up and assimilate how sentences are put together (syntax), as well as figure out the pieces that go into making those sentences work (morphology). "A pre-schooler's tacit knowledge of grammar is more sophisticated than the thickest style manual," explains cognitive psychologist, linguist, and popular science author Steven Pinker. "[Grammar should not] be confused with the guidelines for how one 'ought' to speak." 1.6 Real-World Uses of Grammar Of course, anyone who wants to be an efficient speaker or writer must have at least a basic grasp of grammar. The further beyond the basics we go, the more effectively and clearly we will communicate in any situation. "There are several applications of grammatical study in modern-day language schools: (a) A recognition of grammatical structures is often essential for punctuation. (b) A study of one's native grammar is helpful when one studies the grammar of a foreign language. (c) A knowledge of grammar is a help in the interpretation of literary as well as non- literary texts, since the interpretation of a passage sometimes depends crucially on grammatical analysis. (d) A study of the grammatical resources of English is useful in composition, in particular. It can help us evaluate the choices available when we come to revising an earlier written draft."[An Introduction to English Grammar by Sidney Greenbaum and Gerald Nelson] In a professional setting, advanced knowledge of grammar can help us interact efficiently and easily with our colleagues, subordinates, and superiors. Whether it is giving directions, getting feedback from seniors or juniors, discussing the goals of a project, creating marketing potential for merchandise, an ability to communicate effectively and correctly is extremely important.

246 NSOU l PGEL - 1&2 1.7.Grammar Studies for ELT Teachers generally hang on a course of pedagogical grammar while instructing English language learners. Students still in our academies have to deal with the nuts-and-bolts of prescriptive and traditional grammar (such as making sure verbs and subjects agree and to put commas at the right places in a sentence), linguists keep on focussing on the infinitely more complex aspects of language. They study how people acquire language and debate whether every child is born with a concept of universal grammar, examining everything from how different languages compare to each other (comparative grammar) to the variety of permutations within a single language (descriptive grammar) to the way in which words and usage interrelate to create meaning (lexicogrammar). ELT students are advised to explore and put to uses while teaching L2 learners the following approaches to grammar: • Case grammar • Cognitive grammar • Construction grammar • Generative grammar • Lexical-functional grammar (LFG) • Mental grammar • Theoretical grammar • Transformational grammar Here follows a brief discussion on the different approaches to grammar studies. In linguistics, generative grammar is the set of language rules that indicates the structure and interpretation of sentences that native speakers of a language accept as belonging to their language. Adopting the term generative from mathematics, linguist Noam Chomsky introduced the concept of generative grammar in the 1950s. This theory is also known as transformational grammar, a term still used today. In Linguistics for Non-Linguists: A Primer With Exercises, Frank Parker and Kathryn Riley argue that generative grammar is a kind of unconscious knowledge that allows a person, no matter what language she speaks, to form "correct" sentences. They continue:

"Simply put, a generative grammar is a theory of competence: a model of the psychological system of unconscious knowledge that underlies a speaker's ability to produce and interpret utterances in a language … A good way of trying to understand Noam Chomsky's point is to think of a generative grammar as essentially a definition of competence: a set of criteria that linguistic structures must meet to be judged acceptable," (Parker and Riley 2009). l Generative grammar is a theory of grammar, first developed by Noam Chomsky in the 1950s, that is based on the idea that all humans have an innate language capacity. l Linguists who study generative grammar are not interested in prescriptive rules; rather, they are interested in uncovering the foundational principles that guide all language production.• Generative grammar accepts as a basic premise that native speakers of a language will find certain sentences grammatical or ungrammatical and that these judgments give insight into the rules governing the use of that language. Principles of Generative Grammar Proponents of the universal grammar believe that children, when they are very young, are not exposed to enough linguistic information to learn the rules of grammar. That children do in fact learn the rules of grammar is proof, according to some linguists, that there is an innate language capability that allows them to overcome the "poverty of the stimulus." Generative grammar is a "theory of competence," and is concerned with what is called grammaticality judgment task. The main principle of generative grammar is that all humans are born with an innate capacity for language and that this capacity shapes the rules for what is considered "correct" grammar in a language. The idea of an innate language capacity or a "universal grammar" is not accepted by all linguists. Some believe, to the contrary, that all languages are learned and, therefore, based on certain constraints. This involves presenting a native speaker with a series of sentences and encouraging them to decide whether the sentences are grammatical (acceptable) or ungrammatical (unacceptable). For example: "Man is a mortal being" vis-à-vis "Mortal man is a being". A native speaker would judge the first sentence to be acceptable and the second to be unacceptable. From this, we can make certain assumptions about the rules governing how parts of speech are ordered in English sentences. For instance, a linking 'Be-verb'

that links the subject [a noun] to a subject complement [be it just an adjective] must follow the subject and precede the subject complement in an assertive form. Generative grammar includes the rules determining the structure and interpretation of sentences that speakers accept as belonging to the language. "Simply put, a generative grammar is a theory of competence: a model of the psychological system of unconscious knowledge that underlies a speaker's ability to produce and interpret utterances in a language" (F. Parker and K. Riley, Linguistics for Non-Linguists. Allyn and Bacon, 1994). Mental Grammar is the generative grammar stored in the brain that allows a speaker produce language that other speakers feel quick to understand, is mental grammar. "All humans are born with the capacity for constructing a Mental Grammar, given linguistic experience; this capacity for language is called the Language Faculty (Chomsky, 1965). A grammar formulated by a linguist is an idealized description of this Mental Grammar" (Culicover, 2003). Pedagogical Grammar is the analysis and instruction designed for L2 learners. Pedagogical grammar is a slippery concept. The term is commonly used to denote (1) pedagogical process—the explicit treatment of elements of the target language systems as part of language teaching methodology; (2) pedagogical content—reference sources of one kind or another that present information about the target language system; and (3) combinations of process and content" (D. Little, "Words and Their Properties: Arguments for a Lexical Approach to Pedagogical Grammar." (Odlin, 1994). Performance Grammar is the description of the syntax of English as it is actually used by speakers in dialogues. "Performance grammar . . . centres attention on language production; it is my belief that the problem of production must be dealt with before problems of reception and comprehension can properly be investigated" [Carroll, 1985]. Reference Grammar is the description of the grammar of a language, with explanations of the principles governing the construction of words, phrases, clauses, and sentences. Examples of contemporary reference grammars in English include A Comprehensive Grammar of the English Language, by Randolph Quirk et al. (1985), the Longman Grammar of Spoken and Written English (1999), and The Cambridge Grammar of the English Language (2002). Theoretical Grammar is the study of the essential components of any human language. "Theoretical grammar or syntax is concerned with making completely explicit the

NSOU l PGEL - 1&2 249 formalisms of grammar, and in providing scientific arguments or explanations in favour of one account of grammar rather than another, in terms of a general theory of human language" (Renouf and Kehoe, 2003). Traditional Grammar is the collection of prescriptive rules and concepts about the structure of the language. "We say that traditional grammar is prescriptive because it focuses on the distinction between what some people do with language and what they ought to do with it, according to a pre-established standard. . . . The chief goal of traditional grammar, therefore, is perpetuating a historical model of what supposedly constitutes proper language" (Williams, 2005). Transformational Grammar is a theory of grammar that accounts for the constructions of a language by linguistic transformations and phrase structures. "In transformational grammar, the term 'rule' is used not for a precept set down by an external authority but for a principle that is unconsciously yet regularly followed in the production and interpretation of sentences. A rule is a direction for forming a sentence or a part of a sentence, which has been internalized by the native speaker" (Bornstein,1984). 1.8. Traditional Grammar vs. Theoretical Grammar "What generative linguists mean by 'grammar' should not be confused, in the first instance, with what ordinary persons or non-linguists might refer to by that term: namely, a traditional or pedagogical grammar such as the kind used to teach language to children in 'grammar school.' A pedagogical grammar typically provides paradigms of regular constructions, lists of prominent exceptions to these constructions (irregular verbs, etc.), and descriptive commentary at various levels of detail and generality about the form and meaning of expressions in a language (Chomsky 1986a: 6). By contrast, a theoretical grammar, in Chomsky's framework, is a scientific theory: it seeks to provide a complete theoretical characterization of the speaker-hearer's knowledge of her language, where this knowledge is interpreted to refer to a particular set of mental states and structures. 1.9. Descriptive Grammar vs. Theoretical Grammar "A descriptive grammar (or reference grammar) catalogues the facts of a language, whereas a theoretical grammar uses some theory about the nature of language to explain why the language contains certain forms and not others." (Baker, Hardie, and McEnery, 2006)
250 NSOU l PGEL - 1&2 1.10. Lexicogrammar Lexicogrammar, also called lexical grammar, is a term used in systemic functional linguistics (SFL) to emphasize the interdependence of vocabulary (lexis) and syntax (grammar). The term, introduced by M.A.K. Halliday, is an amalgamation of the words "lexicon" and "grammar." Adjectival derivation is lexico-grammatical. "The advent of corpus linguistics," notes Michael Pearce, "has made the identification of lexico-grammatical patterns much easier than it once was," (Pearce 2007). Lexicogrammar is not simply a combination of two fields of study but a spectrum that contains aspects of lexical studies and aspects of grammatical studies. "According to systemic functional theory, lexicogrammar is diversified into a metafunctional spectrum, extended in delicacy from grammar to lexis, and ordered into a series of ranked units," (Halliday 2013). What M.A.K. Halliday and John Sinclair want us to understand is that in lexicogrammar, grammar and lexical patterns do not carry the same weight. "Lexico-grammar is now very fashionable, but it does not integrate the two types of patterns as its name might suggest—it is fundamentally grammar with a certain amount of attention to lexical patterns within the grammatical frameworks; it is not in any sense an attempt to build together a grammar and lexis on an equal basis … Lexico-grammar is still firmly a kind of grammar, laced, or perhaps spiked with some lexis," (Sinclair 2004). Lexicogrammar is still just grammar. Halliday, goes on to further explain why, if lexicogrammar can really just be considered a branch of grammar and vocabulary isnot as significant as syntax; he gave it a new name. "The heart of language is the abstract level of coding that is the lexicogrammar. "I see no reason why we should not retain the term 'grammar' in this, its traditional sense; the purpose of introducing the more cumbersome term lexicogrammar is simply to make explicit the point that vocabulary is also a part of it, along with syntax and morphology." (Language of Early Childhood. Halliday 2006). 1.11. How Words and Grammar Are Interdependent The flexibility of verbs, Michael Pearce suggests, proves that grammar and vocabulary are mutually dependent. "Vocabulary and grammatical structures are interdependent; so much so that it is possible to say with some justification that words have their own

NSOU l PGEL - 1&2 251 grammar. This interdependency of lexis and grammar is evident everywhere in language. For example, lexical verbs have valency patterns: some verbs can be used with a direct object (I made some oven gloves), or with both a direct object and an indirect object (The government awarded them a pay rise), others need no object at all (The Colonel was laughing)." (Pearce 2007). 1.11.1 Lexicogrammar and Semantics Lexicogrammar captures the big picture of language better than the study of grammar or lexicon alone. And in so doing, it also provides a stronger understanding of meaning- making in communication, otherwise known as semantics. "Just as lexis and grammar are considered to form a single stratum, Halliday considers that the lexicogrammar is not a separate system or 'module' apart from semantics, but is rather an underlying component of the meaning-making system of a language. The stratum of semantics is thus not thought of as an abstract or logical structure, but rather as the medium through which humans use language to interact in their social and cultural context. A consequence of this is that the language, and in particular the lexicogrammar, is structured by the expressive and communicative functions it has evolved to convey," (Gledhill 2011). 1.12. Lexicogrammar and Corpus Linguistics Researching the role of lexicogrammar in the formation of language is only so useful when we ignore considering how language is actually used rather than just how it's used in theories and models. This is where corpus linguistics, the study of real-world language, comes in, and what author of The Lexicogrammar of Adjectives: A Systemic Functional Approach to Lexis Gordon Tucker advocates for. "Generalizations on the structure of language tell us little about how people actually use the language, and consequently how a language really is. The patterns of structural and lexical behaviour are not revealed by the linguist's introspection or from a few examples chosen to fit the pattern. This is the conclusion that increasingly is being drawn from a growing body of linguistic research on large computer corpora or databases. It is only when we come to investigate a language from samples of millions of words of running text that we can really begin to understand how words and structures behave and interact...

252 NSOU l PGEL - 1&2 A theory of language or a model of a particular language ... has to account for use as attested by corpus linguistic research. If such a theory purports to give rise to language description, it must have the potential to incorporate the vagaries and idiosyncrasies of lexico-grammatical behaviour and the cryptotypical phenomena which are uncovered by the observation of language use on a significantly larger scale," (Tucker 1999). 1.12.1 Universal Grammar Universal Grammar is a comprehensive system of categories, operations, and principles shared by all human languages and considered to be innate. "Taken together, the linguistic principles of Universal Grammar constitute a theory of the organization of the initial state of the mind/brain of the language learner, that is, a theory of the human faculty for language" (Crain and Thornton, 2000). Languages are fluid systems and in all likeliness newer grammar approaches are emerging all the time. There's word grammar, for instance. And relational grammar. Not to mention case grammar, cognitive grammar, construction grammar, lexical functional grammar, lexicogrammar, head-driven phrase structure grammar and many more, more in the queue up over the coming year. But no single grammar approach can possibly ever encompass the whole of language as an evolving flux. The system of categories, operations, and principles shared by all human languages is considered to be innate. "Taken together, the linguistic principles of Universal Grammar constitute a theory of the organization of the initial state of the mind/brain of the language learner—that is, a theory of the human faculty for language" (S. Crain and R. Thornton, 2000). 1.13 Summary In conclusion, it may be said that a strong grounding in grammar sense is a necessity for L2 learners as well as teachers, of course more importantly, to identify that a 'form' is 'correct' or 'incorrect'. For examples, it is a common practice in the English of the L2 speakers/writers to say or write, 'You have been nominated/elected/selected/ appointed as a member of this committee', or less people instead of fewer people, or Ihavemet him yesterday instead of I met him yesterday or We should stress on/emphasize on the fact...

instead of We should stress/emphasize the fact... They are prone to using 'double negatives' or forms like ain't, which do not occur in standard language. Knowing grammar helps us tide over these slips and mistakes. [In the US variant of English, we would have used '...helps us to tide over these slips and mistakes'.] 1.14 Review Questions a. How do we define grammar and what is its role in language learning? b. How many types of grammar are you aware of? Are there any differences between and among these types? c. What are some of the modern concepts in grammar that you have become aware of? Do they disturb you? Explain. d. What is Lexicogrammar? How does this branch account for word grammar? e. What are the major differences between traditional grammar and modern grammar? f. 'Through the expansion of linguistic studies over the last few decades several variants of grammar studies have developed'. Mention these variants. g. 'A strong grounding in grammar sense is a necessity for L2 learners as well as teachers'. Justify. h. Summarize the scope of Universal Grammar. i. 'Words do have their own grammar'. How would you justify this statement? h. Alongside semantics or study of word-meaning, mention two other studies that may effectively contribute to the second language acquisition. 1.15 References 1. Unit - 2 p Communicative / Functional Grammar Structure 2.1 Introduction 2.2 Objectives 2.3 Sentence 2.4 Clausal Classification of Sentence 2.5 Three Kinds of Dependent or Subordinate Clauses 2.6 Secondary Types of Sentence 2.7 Parts of Speech or Word Classes 2.8 Structure Words 2.9 Basic Components of Sentence 2.10 Forms of Subjects 2.11 Understanding Structures of Sentences 2.12 Duality of Sentences: Values 2.13 Summary 2.14 Review Questions 2.1. Introduction Communicative / Functional Grammar as we look at the subject, presents a set of theoretical aspects as well as demonstrative/illustrative aspects. Theoretically it is part of Systemic Functional Grammar (SFG). It is a form of grammatical discourse that owes its origin to Michael Halliday. It is a development out of a social semiotic approach to language called systemic functional linguistics. The term systemic refers to the view of language as "a network of systems, or interrelated sets of options for making meaning" (Halliday, M.A.K. 1994. Introduction to Functional Grammar, 2nd ed. London: Edward Arnold. p. 15). The term functional refers to Halliday's view that language is as it has been shaping itself through its evolution. Halliday refers to the multidimensionality of language. Language "reflects the multidimensional nature of human experience and interpersonal relations." (Halliday, 1994). 2.2. Objectives By going through this unit we will come to know a) how grammar operates rationally in a flexible, more flexible way b) explore content words, structure words and c) about formation of sentences from a describable set of options.

256 NSOU l PGEL - 1&2 2.3. Sentence Let us, at this point, review what a grammatically complete sentence stands for or signifies. A sentence is a meaningful, ordered string of words that forms a statement, question, command, request, feeling, abstraction or ideation, condition or/and hypothesis. To put it more adequately, a sentence is not a random grouping of words but a meaningful structure of word classes, governed by the laws of agreement among its different components at syntactical levels and giving expression to the whole gamut of human emotions at the syntactic levels. Naturally, the sentence is not homogeneous and static in type. It is a variable verbal arrangement or system. Its structural character may be Simple, Complex and Compound or a mix of Complex-compound. But as a unit of expression it is still more various and polytypic. The range of sentences is spread over many types to accommodate the entire scale of human responses in verbal or lexical medium. Primary Types of Sentence Assertive or Declarative [Expressing a statement] Examples: He lived a happy life till the end and breathed his last peacefully. Interrogative [Verb + subject type or Wh-type] [Asking questions for answer to come to the rest of affirmation] Examples: Are you happy with what you have? Who did you meet yesterday? Exclamatory [Expressing strong feeling] Examples: What a piece of work it is! Lo and behold, the sun set is marvellous. Imperative [Expressing command, advice, request] Examples: Please help me out of the situation. Get me my bow of burning gold. Subjunctive or Optative [Hypothesis, Condition with wish verbs 'had', 'were'] Examples: I wish I had this car. I wish I were a king. Sl. No. 1 2 3 4 5 End-marker/sign . [Full-stop/Period] ? [Question mark] ! [Exclamation mark] . [Full-stop/Period] . ! [Period/Exclamation] Semantic Value Positive [+] Negative[-] or Positive [+] Positive [+] Positive [+] Positive [+]

NSOU l PGEL - 1&2 257 2.4. Clausal Classification of Sentence Simple Sentence: is a unitary construction of sentence with only one subject and a matching verb with or without any phrasal extension that may include object, object complement, subject complement and/or adverbials. Example: My father has been living a sedentary life after his retirement from service. Complex Sentence is a sentence split into a principal or independent clause that has the nature of simple sentence, but upon it there has to be one or more dependent/subordinate clause – dependent on the principal clause for meaning. Example: My father has been living a sedentary life after/since he retired from service. Or, After his retirement from service my father has been living a life which is sedentary. Compound Sentence is a sentence that must have at least two independent clauses connected by a conjunction like 'and', 'or', 'but' and 'otherwise' with or without any subordinate clause(s). Example: My father retired from service and since then he has been living a sedentary life. Complex-Compound Sentence is a sentence which must have at least two principal clauses with at least a subordinate clause or more. Example: My father retired from service and since then he has been living a life which is sedentary. [Italicized parts indicate principal or independent clauses] 2.5. Three Kinds of Dependent or Subordinate Clauses: 1. Relative/Adjective Clause: indicative of the qualifying property of an Adjective 2. Adverbial Clause: indicative of the modifying property of an Adverb 3. Noun Clause: indicative of the Noun/Nominal property of a NP. It is also called 'that-clause'. ELT students may profit from reading the chapter on clause analysis in any standard grammar book

258 NSOU l PGEL - 1&2 2.6. Secondary Types of Sentence 1. Formulaic: Greetings 2. Block: Specific Communicative purpose 3. Passive: Stress on the thing done rather than the doer with BE + Past Participle + By/ With/To as in differing contexts. 4. Quasi-passive: Stress on the thing done rather than the doer in intransitive use of Verb. Defining the Secondary types FORMULAICS: A nucleic focus is maintained and projected. The sentence is truncated to a point of focus to make cryptic and catchy reference to a particular information, idea, or activity. These elliptical formulaic expressions serve the specific purposes of Responses, Greetings and Farewell messages, Approval and Disapproval, Encouragement etc. These structures do not follow the normal pattern and sequence of subject and predicate. Examples: Formulaic response type Ø No room, please. Ø Only for the asking. Ø May I help. Ø Sorry, can't. Ø Take a seat Ø Here you are Formulaic greetings type: Ø Hello[formal] or Hi[informal]! Ø Good day. Ø See you. Ø Bye. Approval and Disapproval type: Ø Yes, you can.

NSOU l PGEL - 1&2 259 Ø Okay. Ø Thanks. Ø Well done. Ø Damn it. Ø To hell with it. Encouragement type: Ø Buck up. Ø Three Cheers. Ø Thumbs up. Blocks:Blocks are set-piece expressions. Ø Stolen idol recovered. Ø A silent war against AIDS. Ø Massacre that wounded peace. Ø Tender for survey of gas pockets. 2.7. Parts of Speech or Word Classes Across both the primary and secondary types of sentence, as we understood them from the definitions already given, certain components or constituent parts of sentences are necessarily to be there to frame a sentence of any type. They are popularly called Parts Of Speech or Word-Classes. The traditional and long-standing popularity of the Parts of Speech in classroom teaching and L2 courses can be gauged from the Rhyme cited below: It is a rhyme written by David B. Tower & Benjamin F. Tweed, that teachers used in earlier days to help students learn the parts of speech. Why the song leaves out the pronouns is a mystery. Maybe, as proxies of Nouns, Pronouns are dismissed from this song. A writer from Richland, Washington, suggests "A pronoun replaces any noun: / he, she, it, and you are found. It has been set to music, but we'll leave that to you to discover or create for yourself":

260 NSOU l PGEL - 1&2 Three little words you often see Are ARTICLES: a, an, and the. A NOUN's the name of anything, As: school or garden, toy, or swing. ADJECTIVES tell the kind of noun, As: great, small, pretty, white, or brown. VERBS tell of something being done: To read, write, count, sing, jump, or run. How things are done the ADVERBS tell, As: slowly, quickly, badly, well. CONJUNCTIONS join the words together, As: men and women, wind or weather. The PREPOSITION stands before A noun as: in or through a door. The INTERJECTION shows surprise As: Oh, how pretty! Ah! how wise! The whole are called the PARTS of SPEECH, 2.8. Structure Words RELATION WORDS FOR PROVIDING STRUCTURE

NSOU l PGEL - 1&2 261 Structure words have no word-equivalents or lexical definitions unlike content words. Some of the structure words are: I, THE, AT, AND, CAN. So dictionaries give meanings for 'content words' and uses for 'structure words'. Content words have 'a substance of meaning' representable by other words or even by pictures, whereas structure words are marked by definitive uses. If structure words produce any meanings, they come from relationships with content words, indicating Reference, Association, Particularity, Time of action, and in the process transmuting the meanings of content words. An Example : I will never go abroad. With the removal of the structure words – 'I' and 'will', the meaning of the sentence is transmuted into something quite different: 'never go abroad'. So the totality of the sentence-meaning or sentential meaning emerges from the combination of content words and structure words. In other words, the meaning of a sentence comes from the interpenetration and dovetailing of 'lexical item' and 'structure item'. 2.9. Basic Components of Sentence A sentence in order to be grammatically a complete sentence must have an ensemble of two parts: Subject and Predicate. A Predicate may be a single lexical verb with not necessarily any post-verb adjunct whatsoever, or a lexical transitive* verb necessarily with object (one object in case of Mono-transitives, two objects, one Direct Object and the other Indirect in case of Di-transitives, and one Object and one Object Complement in case of Complex Transitives) or a Lexical/Non-lexical Link Verbwith necessarily a Subject Complement. A Predicate may spill beyond a mere verb, depending on the nature of the Verb and add on to other components like Complements, Objects of any types, Adverbials and Apposite. It again hinges on the nature of the Verb used, that is, whether the Verb-in-use allows for such additions if wanted by the speaker or writer. For this structural importance of verb, English is called a predominantly Verb-based language. In this part of the Module on Grammar, different uses and forms of Verbs will be treated in a separate segment. But in point of the axial relationship between Subject and Verb, a cursory view of which can be grammatically entitled to forming the Subject Component of a sentence may be expedient, and conducive to our understanding of Sentence.

262 NSOU l PGEL - 1&2 2.10. Forms of Subjects 2.10.1 NOUN PHRASE [NP] as Subject 2.10.2.ING-Subject[Gerundial Subject] denoting the presentness of action implied in subject Examples: Smoking is injurious; please quit it. l Here 'smoking' is not futurity, but a present reality. Swimming is all-out exercise; good that you are doing it. 2.10.3.To-infinitive Subject denoting the futurity of action and advice implied in subject Example: To smoke is injurious; never take to it. l Here 'To smoke' is a future probability, and it is an advice. To swim is an all-out exercise; try it. Here 'To swim' is a future probability, and it is an advice 2.10.4.WH-Subject: denoting a suggestion or suspicion as subject

NSOU l PGEL - 1&2 263 Examples: Who did the mischief is an open secret. Why he married into an upstart family is none of our concerns. 2.10.5.Verbal Noun as Subject denoting subject as process or performance being done Examples: Nationalization of banks was a good step towards economic betterment. Corporatization seems to be shrinking private space in an individual's life. 2.10.6.That-Clause or Noun Clause as Subject Examples: That elegy is a formal type of the lyric should be known to a student of literature. That corruption is mounting drains away the economic benefit of this welfare scheme. 2.11. Understanding Structures of Sentences: How they are formed: Looking at the Components of Sentences in English As we are going to comprehend the intricacies of grammar, we may choose a quick-to-understand tabular orm of approach. And to do that we need to be familiar with a few abbreviations ofSentential Components. List of Abbreviations of Sentential Components for the Tables of Sentence Structures: 1. NP-S = Subject [NP and any other of the subject components as listed in 1.4] 2. AV = Auxiliary Verb as predicate opener/ subject-quantifier 3. LMV = Lexical Main Verb as meaningful agent of work, further broken down into: 4. ILV = Intransitive Lexical Verb, requiring no object at all. 5. MTLV = Mono-transitive Lexical Verb requiring an object to follow. 6. DTLV = Di-transitive Lexical Verb, requiring Indirect Object [IO] and Direct Object [DO]to make a complete meaningful sentence. 7. CTLV = Complex Lexical Verb, requiring an Object and Object Complement to make a complete meaningful sentence.

264 NSOU l PGEL - 1&2 8. P AV = Primary Auxiliary Verb that takes the dual roles of Auxiliary and Lexical Main verbs [AV + LMV] 9. MAV = Marginal Auxiliary Verb that denotes tense, aspect, number of Subject to ensure agreement between Subject and Verb 10. MOV = Modal Auxiliary to Main Verb, denoting the mode and tone of speech/ speaker 11. LV = Link Verb [both lexical and non-lexical/functional] between Subject and Subject Complement 12. AOE = Adverb or Adverbial(s) as verb-modifier/intensifier of adjective or any other adverb as Optional Extension 13. NP = Noun, Pronoun, Noun Phrase [Noun, Pronoun, Adj+ Noun/ Article+ Adj+Noun/ Article+Adv+Adj+Noun] 14. ADJ = Adjectives as attributive (prenominal) or predicative (postnominal) qualifier/ modifier/quantifier 15. ADV = Adverb, free-floating qualifier/modifier/intensifier/quantifier; always non- additive attribute to Noun/Pronoun 16. ADVL = Adverbials, lexical chunk performing as Adverb 17. G = Verb-ing used as Subject or Object, as Gerund 18. TI = To-infinitive as To + Stem Verb in Present tense, used as both Subject and Extension Predicate to Verb. 19. O = Stem Object: DO = Direct Object: IO = Indirect Object [all subject components can be used as the components of object; only in the uses of pronouns, Cases of Pronouns change from the Nominative to the Objective. i, e. from 'I' to me, from 'she' to 'her', from 'he' to 'him', from 'they'to 'them', from 'you'to 'you'. 20. SC = Subject Complement[an adjective only or a NP or ING or To-infinitive or Past Participle] 21. OC = Object Complement [an adjective only or a NP or ING or To-infinitive or Past Participle] 22. N = Negatives as 'No'/'Not'/'Never'/'Hardly'/'Scarcely'/ 'Seldom' As Halliday says so wisely that language is a free-choice system as far as its functionality and meta-functions are concerned, we will now study in tabular forms a few of the systems that operate in language. But as a prelude to the table forms of complete sentences, we take into account the multidimensional uses of ING-FORM of verbs in phrasing and sentences. Only a selective few are being discussed here. If we say, learning grammar

NSOU l PGEL - 1&2 265 is difficult, we are absolutely correct. Here the gerundial subject 'learning' takes its own object 'grammar' to make a NP-subject 'Learning grammar'. But the expressions such as 'Learning of grammar' or 'The learning grammar' should be wrong choices. There is another choice which is grammatical and correct: 'The learning of grammar is difficult'. We may now proceed for the tables of sentential forms, which again are not exhaustive. Unless we get familiar with the listed abbreviations above, we may not understand the Tables. So let us remember the abbreviations and get going with language system as presented in the following tables. Table 1

266 NSOU l PGEL - 1&2 Table 2 Note: S + LMV+ IO +DO is the general syntactical organization. IO is the recipient of action, and DO is the instrument of action. IO generally precedes DO. If and when their placements are inverted, that is, DO comes before IO, a relation word, usually the preposition 'to', at times 'for' is interposed between them. For examples, "He gave me a book..." will be "He gave a book to me". "He did me a great help" will turn into "He did a great help for me". Table 3

NSOU l PGEL - 1&2 267 2.12. Duality of Sentences: Values

268 NSOU l PGEL - 1&2 2.13 Summary Taking a cue from this way of looking at the different types of sentence we may conclude that every sentence in English is a dual entity, in terms of form and content rolled together. Indeed, we can and should study language as a natural phenomenon, and like any other natural phenomenon it has also an underlying logic or rationale beneath the surface. If we can grasp it, a large number of our problems with teaching and learning English as a second or foreign language will be effortlessly solved. 2.14 Review Questions a. Give the definition of a sentence and compare your answer with the several definitions given in the unit. How is your definition different? b. How many types of sentences do we have? Give an example for each and explain why you \have labelled it so. c. What are clauses, and why/how are these important in making different types ofsentences? d. What do you understand by parts of speech? Is this classification complete? Is there something missing when we mention eight parts of speech? e. What is the role of phrases in sentences? How many phrases are there in English? f. 'Every sentence in English is a dual entity.' Justify. g. Differentiate between 'to-infinitive subject' and 'gerundial subject. h. Compare the uses of Direct Object [DO] and Indirect Object [IO]. How should they be used in passivized form of sentences? i. Write a note on Adverb and Adverbials. j. Discuss the varieties of Noun Phrase. l. Give as many examples as possible of Verb Collocations. m. 'Language is a free-choice system as far as its functionality and meta-functions are concerned.' How would justify this observation? 2.15. References: 1. Halliday, M.A.K. (1994). "On the 'Architecture' of Human Language". in On Language and Linguistics, Volume 3

Exercises introduce the L2 learners to a process of imbibing a second/foreign language through drilling and repeating the problem areas and working them out through exercises. It is a kind drilling for mental grammar, without taking an elaborate stock-taking of the theoretical aspects of language. At a level, language becomes an automotive response pattern through a sustained activity or work-through in grammar exercises.

270 NSOU l PGEL - 1&2 Unit - 3 p Grammar Exercises - Types and Uses Structure 3.1 Introduction 3.2 Objectives 3.3 Verbs 3.4 -ING Forms 3.5 Interrogatives 3.6 Exercises on Sentence types 3.7 Exercises on Clause Analysis 3.8 Exercises on Phrases in Sentences 3.9 Summary 3.10 References 3.1. Introduction Grammar Exercises introduce the L2 learners to a process of imbibing a second/foreign language through drilling and repeating the problem areas and working them out through exercises. It is a kind of drilling for mental grammar, without taking an elaborate stock- taking of the theoretical aspects of language. At a level, language becomes an automotive response pattern through a sustained activity or work-through in grammar exercises. 3.1. Objectives The obvious objectives of Grammar Exercises are to master the target second/foreign language to the level of spontaneous linguistic reflexes and responses, without any significant departure from the grammar rules or patterns. This is achievable only through vigorous grammar exercises. Through practices of error-identification and knowing the linguistic logic behind the identified errors, gradually all individual eccentricities, assumptive uses and wrong impressions received earlier and nurtured over time are purged from the L2 learner's expressive idiom and vocabulary alongside structural command of the acquired second language. The prime objective of Grammar Exercises is to inculcate on the learners a high level of correctness in the spoken and written forms of the target language which is here English.

NSOU l PGEL - 1&2 271 3.2. Verbs Verbs are the central element in the English sentence. Let us begin with verbs. Basically, English verbs are of two types: lexical [having a meaning of its own] and non-lexical [functional for structuring a sentence, having had no meaning of its own]. For examples, in the sentence, "Mr John is a simple man" the linking be-verb "is" connects the subject "Mr John" to the subject complement 'a simple man'. It is working as a functional, non-lexical verb, while tempering the sentence with no meaning of its own. But, if we say, "Mr John seems a simple man", 'seems' presents itself as a Linking Lexical Do-verb tempering the sentence with its own meaning. The meaning becomes: Mr John is seemingly a simple man. Again between the two statements, there is a distinction: "She is beautiful" and "She looks beautiful". Let us find similar distinctions in the following: Exercise 1 : A. She hails from an elite class. She appears to have hailed/to be hailing/to hail from an elite class. B. He is angry. He seems angry. C. He is dead tired. He turns dead tired. Distinguish the three pairs of sentences given above in terms of structure and meaning. 3.4. -ING Form: -ING form of a verb in its present base form is variously used in English sentences. Let usreview this briefly in the following examples: a. -ING makes a continuous aspect of verb across present, past and future, with an aux. be-verb before it. For examples: 1. He is sleeping a deep sleep. 2. He has been sleeping a deep sleep. 3. He had been sleeping a deep sleep before he woke up, being disturbed by the noise.

272 NSOU l PGEL - 1&2 4. On taking this sleeping pill, he will be/must be/ should be/would be sleeping deeply. b. -ING makes a gerund, verbal noun, gerund, participle and play the roles for NP subject and Gerundial subject, attributive participial adjectives, verbal absolutes, nominative absolutesandadverbials also with a sense of contemporaneous action implied in it. Exercise Identify the grammatical uses of -ING in the following examples: 1. Drafting this letter is not easy. 2. The drafting of this letter is not easy. 3. Swimming is an all-out exercise of the body. 4. Is life only day-dreaming? 5. I want your joining the project. 6. She leapt down from the running bus singing a fascinating song, thus inciting her friend to mimic her and fall over on the road. 7. He will come out with flying colours. 8. The flying and fluttering flags on the barking borders show that humanity is falling apart. 9. The sun sinking/ having sunk, we hastened back to the hotel. 10. Arriving at the spot, the police lathicharged and dispersed the mob. 3.5. Interrogatives Interrogatives are tricky structures. The forms that we hear or see so frequently are Interrogatives opening with Prepositions, with a shifting pattern of verbs to follow. This happens particularly with Wh-questions. Exercise Do you think the following are grammatical? If not, reframe/reconstruct the correct forms. Answer and address each question from the viewpoint of syntax. 1. In which book did you read this story? 2. With whom did you discuss this topic yesterday? 3. In which form of poetry do we get tonal unity? 4. In which city was King Asoka born?

5. To what, doctors say, are you allergic? 6. In which place riots broke out over this incident? 7. With what is this name associated? 8. To which country Lal Bahadur Shastri travelled and died there? 9. At what time the sun sets in the month of July? 10. Is he a pleasing personality to talk and work? [Verb-led question] Answers to Exercise 3.5: Questions with deferred prepositions: 1. Which book did you read this story in? 2. Who did you discuss this topic with, yesterday? 3. Which form of poetry do we get tonal unity in? 4. Which city was King Asoka born in? 5. What, doctors say, are you allergic to? 6. Which place did riots break out in, over this incident? 7. What is this name associated with? 8. Which country did Lal Bahadur Shastri travel to and die there? 9. What time does the sun set at, in the month of July? 10. Is he a pleasing personality to talk to and work with? [Verb-led question] Appendage: The interrogatives that begin with prepositions are in popular usage and we may go with them in spoken English. But when it comes to textualization, it is better to avoid this 'Begin-with-Preposition' types of interrogation. For exhaustive Grammar Exercises, L2 learners may look up Michael Swan's Practical English Usage,Fully Revised International Edn. OUP, 2016. Important areas for grammar exercises are diverse forms of verb uses and verb collocations, uses of prepositions as relation words, uses of determiners and noun markers, uses of articles, varieties of passivization, uses of apposites [apposition], different uses of Auxiliaries – Modal, Primary and Marginal – and extensive applications of adverbials among other items. A study of Swan's Practical English Usage will effectively supplement the deficiency of our Grammar Exercise Studies in the short span of our Module. 3.6 Exercises on Sentence types 1. The north wind blows fiercely/ in a fierce manner.

Q. Identify the sentence type from all possible angles, and in every case nomenclature the components that form the sentence. Ans. Clues i. An affirmative and assertive sentence. ii. The wind:NP-subject[NP-S]. iii. Blows: Intransitive lexical verb [ILV]. iv. Fiercely: Adverb [ADV] of manner modifying the verb, 'blows'. Structure : v. In a fierce manner: Adverbial [ADVL] Q. Taking cue from the above, identify structural contents of the following: 1. I saw the tottering old man cross the road with the help of a traffic guard. 2. I saw the tottering old man crossing the road with the help of a traffic guard. 3. I saw the tottering old man to have crossed the road with the help of a traffic guard. 4. How would you distinguish the differences of meaning among the above three sentences? 1. I noticed him seated on the park bench lost in thought. 2. To just breathe and live is holy in the grand design of God. 3. A book twice carefully is better than reading two books in haste. 4. She came down the staircase humming a song. 5. Why did you not advise him on this matter in time 6. He gave me a good book on cosmology to read. 3.7 Exercises on ClauseAnalysis Q. Identify clausally/in clause segmentation the given sentences. Reframe each, then, into a different type without affecting meaning, be it simple, compound or a complex one. 1. I saw the tottering old man when he was crossing the road with the help of a traffic guard 2. I noticed him seated on the park bench and he was lost in thought. 3. To just breathe and live is holy as it is in the grand design of God. 4. To a book a book twice carefully is better than reading two books in haste. 5. She came down the staircase humming a song 6. Why did you not advise him on this matter in time? 7. He gave me a good book on cosmology to read. 8. Corona virus is aerosol turning out to be a pandemic affecting almost all continents.

9. Vocabulary study plays a large part in a second language acquisition 10. Rabeya was a simple and poor woman who used to sleep on a floor-mat with her head placed upon a brick as pillow. 3.8 Exercises on Phrases in sentences 2.9. Q. Write out ten different structures of sentence that should be syntactically correct and in your examples you are to identify the constituent parts and types of phrases keeping in viewthe list of phrases discussed in CC 2 Unit 2.9- Basic Components of Sentence, and abbreviations given in section 2.11 -Understanding Structures of Sentences. 1. ——————————————————————————————

276 NSOU l PGEL - 1&2 3.9 Summary This unit is a revision study of the structural components and variations in phrasing and collocations that go into the making of text and speech in the English language. This revision study purports to drill a prospective teacher or a learner of English as a second language by a systemic analysis and repetitive exercises. The appendage of the tail- ending review questions are meant to be a spur to activating learner-interest in richness and fluidity of English as a language of scholarly discourse and everyday communication that is globally accepted or acceptable. This unit has been arranged in an organized and well-orchestrated way to begin from sentence patterns/syntax and proceeding to a consummate perception of the constituent parts in terms of lexical chunks, phrases and differing sentential expressions, not excluding se-piece expressive idioms and formulaics that form an integral part of language study. 3.10 References 1. NSOU l PGEL - 1&2 277 Unit - 4 p Grammar Games and Activities Structure 4.1 Introduction 4.2 Objectives 4.3 Games for Grammar and Vocabulary Learning 4.4 Grammar Games for Adults 4.4.1. Would You Rather? 4.4.2. Taboo 4.4.3. Role Playing Grammar Games 4.4.4. Online Grammar Games 4.5 Grammar Games for Kids through VLS 4.6 Shape Names: Worksheets 4.7 Flashcards Worksheet: Missing Letters 4.8 Review Questions 4.8 References 4.1.Introduction Grammar seems a confusing subject, even for more advanced learners. Learning the basics with grammar games can make reading and writing lessons feel interesting. In the grammar games below, our students will explore parts of speech like nouns, verbs, and adjectives, and how to tell a complete sentence from a fragment sentence, and much more. Grammar should not look daunting when we break it down and learn how each part of a sentence works. With games suited for kids of all skill levels, our collection of grammar games will help our children strengthen their understanding of concepts they have learned, as well as challenge them to discover new ideas and push their writing to the next level. We can show our younger students the basic building blocks of sentences, like nouns and verbs, and let them see how descriptive adjectives and adverbs can add spice to their writing. For more advanced learners, let them experiment with using transition

278 NSOU l PGEL - 1&2 words and commas as road signs in stories, spot fragment sentences and build complete sentences of their own, and even master the tricky concept of subject-verb agreement. Grammar games help our learners develop 'tools' to make correct grammatical expressions with confidence and excitement for writing and speaking acts. A "grammar game", then, is essentially any technique for memorising or practising a particular aspect of grammar – be it verb conjugations, sentence structure, spelling and punctuation, or any other feature of the target language – with more fun than tedious memorisation. Grammatical game approach is the prompt emotional involvement of L2 leaners at primary specially to grasp the target language via "look, cover, write, check". The category could include group games to be played in a classroom or with a language partner. Grammar review games can be played online or on Android/i-phone systems. Grammar practice games can be played mentally in spare moments with a fictitious language exchange partner or tutor. 4.2. Objectives Generally a second language learning course is intimidating to the L2 learners, especially to the beginners. For them the native language interference is a barrier for imbibing a quite different tonal, phonological, morphological and syntactical pattern of expression or articulation. In order to tide over the psychological and verbal factors that distance the L2 learners grammar games are devised to make the learning of a second/foreign language attractive and interesting. The objective of this unit is to make the prospective language teacher aware of the types and patterns of grammar games that are likely to induce and induct the L2 learners into a fun way of learning the second language. 4.3. Games for Grammar and Vocabulary Learning 4.3.1. Sketching a Person Give everyone a piece of paper, and nominate one person to be the "describer" or "sketcher". It is their task to think of someone they know, or a famous person (it should be more interesting if they pick someone who is in the room), and then to word-sketch that person's appearance. At lower levels this helps practise simple adjectival phrases like "he is lanky " or "she has auburn hair", and the descriptions can get more suggestive and complex with practice.

NSOU l PGEL - 1&2 279 More advanced learners could describe what someone is wearing or what their personality and mannerisms are like. As the nominee gives more detail, everyone draws on their piece of paper what they think the person being described looks like. When they have been given enough detail, they are to try and guess who they have drawn. The word-sketcher then discloses who they have been thinking of, and all are to show their drawings to the rest of the class to see how well they have done it. This last step often produces huge laughter, since most of the drawings may appear ludicrous caricatures of the real person. 4.3.2. Twenty Questions This is a game that works as follows: Let one [key player] pick a celebrity or an object, and the other players have to figure out who or what it is. To gain information, they are allowed to ask "yes or no questions" (a maximum number of twenty, the key player can pick whatever arbitrary limit s/he likes) to try and narrow down the possibilities: "Are you male? Are you American? Are you an actor? A singer?", and so on. A variant on this game was made famous by the film Inglourious Basterds where it is played in a bar by Allied spies and an unwitting SS Officer (just watching the movie will make sense). In this version, everyone writes a celebrity's name on a piece of paper and passes it to the person on her or his left, who then sticks the paper to their own forehead so that everyone except him or her can see what it says. Now instead of the group asking questions to figure out who it looks like, the key player will ask the group questions to figure it out. Whichever version this game plays, it is a good way to practise forming and answering questions. To expand the range of potential grammar practised thus, the key player can permit questions that require more in-depth answers than mere "yes" or "no". S/he can also insist that the questions-answers exchangesbe dished out in full sentences each time – "Are you male?" "Yes, I'm male" – which helps the practice of switching between different forms of the same verb and closer. The round goes on until the key player replies to their questions with "it's dinner time!" and chases the players back to where they started. If Mister Wolf as the key player catches another player before thestarting line of the next round, that player becomes Mister Wolf for the next round of the game. This is just one classic game that children love and that has the side effect of teaching them a bit of grammar.

280 NSOU l PGEL - 1&2 There are plenty of other children's games we can improvise in this way. "Simon Says" is a game , for example, to deal withimperatives, while "I Spy" teaches us the sense ofspelling. Now that we have covered grammar games for kids, let us take a look at some grammar games for adults. 4.4. Grammar Games for Adults Some of the games might seem too simplistic, but grammar should not become boring just because we are adult learners.Here are some grammar games we may play as adults: 4.4.1. Would You Rather? This is a classic game that some of us have probably played before. One person poses an interesting and/or ridiculous choice between two options – would you rather fight 100 duck-sized horses or one horse-sized duck? Then each person in the group gives her or his respective answer and a corresponding brief explanation of why that choice is made. As well as it prompts some thoughtful discussion, these types of questions are a good way to practise some less commonly-used verb forms like the conditionals, and can be adapted to any language. 4.4.2. Taboo Taboo is a classic parlour game where we have to help our teammates correctly guess the word written on our card without saying the word itself or any of the other words on the card. For example our chosen word might be "car", but we are not allowed to say "car", "vehicle", "drive", "transport", "road", or "travel" or any other words associated with "car". Taboo is a great way to build vocabulary, not just because it represents exactly what we should say exactly when we need to say something in a foreign language but do not know the word: this is called stick within the target language and through this game we try to get our point across in other words, rather than immediately blurting it out in English and asking for a translation.

NSOU l PGEL - 1&2 281 As well as vocabulary, Taboo helps our grammar, because when the most obvious words are not available to us, the only alternative is often a winding, roundabout sentence with a complicated structure.Foe example, if we do not know the exact word, 'bicycle', we may refer to the bicycle as "It is a big metal thing we sit in/on and press the pedals with our feet to travel faster than walking from one place to another." 4.4.3. Role Playing Grammar Games Role-playing games with a language partner simulates a real-world encounter we are likely to face in real life. Some everyday situations might want us to practise while we check into a hotel, introduceourselves to new people, asking for directions, and ordering something over the telephone. We can think of many more situational set-piece expression called blocks and formulaics to cope with real-life communication problems. Role-playing game ideas are suggested below: l Fortune teller. One person is the fortune teller, and the other has come to get their fortune read. What does the fortune-teller see in their crystal ball? How does the other person feel about it? This is a good way of practising the future tense. l Alibi. The police suspect you for a crime, and they want to know if you do have an alibi. Where were you on Friday night? Who were you with? What were you doing? The suspect will not be able to talk his way out of this situation unless he has got a good grasp on the different types of past tense. l Late for work. One person is the boss, and the other is an employee who is just shown up late. What's their excuse? The boss should question the employee's story, pick holes into it, and try to figure out the possible causes of his delay. Or if he is simly lying. In the process, the boss practises asking different kinds of questions (why? how? when? who?), while the employee will practise answers and the past tense. 4.4.4. Online Grammar Games If we go to Google or to the Android or Apple App Stores, type in the name of our target language, we will probably find a zillion free grammar games (and lots of paid ones too). A detailed list of available games for every language uses are beyond the scope of this unit of a Module, but two digital resources are worth mentioning here:

282 NSOU l PGEL - 1&2 4.4.5. Duolingo Duolingo is one of the most popular language-learning downloadableApps, and it offers free courses in over 20 different languages. Duolingo gradually introduces you over time to new grammatical concepts and provides detailed explanations of how to use them. Duolingo is no substitute for real face-to-face speaking practice, but it can make a nice supplement. 4.4.6. Anki Anki is a proponent of using spaced repetition systems – more commonly known as "flashcards" – to learn languages, and the most popular digital SRS tool. Anki lets you create customisable flashcards on whatever topic you like (not just languages!), and if you do not feel like creating your own there is an enormous directory of pre-made contents on their website where you can download flashcards that other people have created.The most basic benefit of using SRS is to learn vocabulary; create flashcards with English words (or pictures) on one side and your target language's translation of those words on the other side. 4.5. Grammar Games for Kids through Visual Learning System [VLS] Common Shape Names:Visual Learning System [VLS] Note: This method is best suited to the needs of L2 learners at the primary/rudimentary stage. Lessons are to be projected to the beginners and young leaners in a lively, colourful picturesque and catchy manner in order to impress the lessons on their tender minds. This free downloadable worksheets include vocabulary for different shapes:

NSOU l PGEL - 1&2 297 Module -2 : ppppp Vocabulary Unit - 5 ppppp Vocabulary and its Importance Structure 5.1 Introduction 5.2 Objectives 5.3 What is Vocabulary? 5.4 Aspects of Vocabulary Knowledge 5.5 Criteria for Vocabulary Selection 5.5.1 Collocation 5.5.2 Familiarity 5.5.3 Range 5.5.4 Frequency 5.5.5 Learnability and coverage 5.6 How to work on developing vocabulary in a classroom? 5.6.1 Lesson plan 5.7 Conclusion 5.8 Review Questions 5.9 References 5.1 Introduction In your own language, there are many words that you use regularly when speaking or writing. These words are part of your active vocabulary. And then there are many words that you understand when you listen to them, on television for example, but do not use in your everyday speech or writing. These words are part of your passive vocabulary. In our own individual vocabulary, there is a difference between words that we understand and use (our active vocabulary), and the words that we understand but do not or cannot use (our passive vocabulary). This is true of native speakers as well as learners of a second language.

298 NSOU l PGEL - 1&2 5.2 Objectives This unit introduces the leaner to l Vocabulary and its importance l Vocabulary selection for SL Teaching l Aspects of vocabulary: form, meaning and use 5.3 What Is Vocabulary? As we begin learning vocabulary, let us stop to find the definition: Task 1 l My definition(s) of English vocabulary: Vocabulary can be defined

---

| 94% | **MATCHING BLOCK 42/83** | SA | R_RAMYA SRI_English_PhD.pdf (D154535646) |

as the words of a language, including single items and phrases or chunks of several words which convey a particular meaning, the way individual words do.

The noun vocabulary refers to the collection of words used in a language. The word vocabulary can have at least three different meanings: 1. All the words in a language. e.g. New words are constantly being added to the vocabulary of English. 2. Words used in a particular context. For example, If you want to do an MBA you need to improve your business vocabulary. My neighbour is a doctor, so he has an extensive medical vocabulary. I've just bought a book on the vocabulary of slang. 3. The words an individual person knows. e.g. The teacher says that my vocabulary is good.

When learning a foreign language, our individual vocabulary in that language is one of the most important components to develop. Of course, all other components like grammar, vocabulary and pronunciation are also important. But it is far more difficult to communicate with no vocabulary than with no grammar. 5.4 Aspects of Vocabulary Knowledge Vocabulary represents one of most important skills necessary for teaching and learning a foreign language. It is the basis for the development of all the other skills: reading comprehension, listening comprehension, speaking, writing, spelling and pronunciation. Vocabulary is the main tool for the students in their attempt to use English effectively. When confronted with a native English speaker, when watching a movie without subtitle or when listening to a favourite English song, when reading a text or when writing a letter to a friend, students will always need to operate with words. In what follows, the focus of this introductory unit is on why vocabulary is important, on what makes words difficult, on the main reasons for which students often forget the words they learn and on some techniques which help them remember the vocabulary. By the beginning of 1970s, there was a major change in teaching English. The focus turned from the Direct Method and Audio-lingualism to the Communicative Approach which emphasized the importance of teaching vocabulary. Students were exposed to diverse vocabulary and speaking activities. Many words began being introduced during such courses and students were encouraged to express themselves as much as possible. The concept of a word can be defined in various ways, but three significant aspects teachers need to be aware of and focus on are form, meaning, and use. According to Nation (2001), the form of a word involves its pronunciation (spoken form), spelling (written form), and any word parts that make up this particular item (such as a prefix, root, and suffix).An example for word parts can be seen with the word uncommunicative, where the prefix un- means negative or opposite, communicate is the root word, and '-ive' is a suffix denoting that someone or something is able to do something. Here, they all go together to refer to someone or something that is not able to communicate, therefore uncommunicative. Nation (2001) stated that meaning encompasses the way that form and meaning work together, in other words, the concept and what items it refers to, and the associations that come to mind when people think about a specific word or expression. Use, Nation noted, involves the grammatical functions of the word or phrase, collocations that normally go with it, and finally any constraints on its use, in terms of frequency,

level, and so forth. For form, meaning, and use, Nation (2001) declared there is both a receptive and productive dimension, so knowing these three aspects for each word or phrase actually involves 18 different types of lexical knowledge, as summarized in Table 1. Table 1. What Is Involved in Knowing a Word? Aspect Form Meaning Use Component Spoken Written Word parts Form and meaning Concepts and referents Associations Grammatical functions Collocations Constraints on use(register, frequency . . .) Receptive knowledge What does the word sound like? What does the word look like? What parts are recognizable in this word? What meaning does this word form signal? What is included in this concept? What other words does this make people think of? In what patterns does the word occur? What words or types of words occur with this one? Where, when, and how often would people expect to meet this word? Productive knowledge How is the word pronounced? How is the word written and spelled? What word parts are needed to express the meaning? What word form can be used to express this meaning? What items can the concept refer to? What other words could people use instead of this one? In what patterns must people use this word? What words or types of words must people use with this one? Where, when, and how often can people use this word? Source : Adapted from Nation (2001, p. 27)

When teachers teach vocabulary to build students' knowledge of words and phrases, helping them learn any and all of these different components assists them in enhancing their English vocabulary knowledge and use. Unfortunately, vocabulary teaching has not been enough responsive to such problems, and teachers have not recognized the tremendous importance of helping their students to develop an extensive vocabulary. If we look back in the past, we discover that for a long time, English used teaching approaches such as Audio-lingual approach which emphasized the primary importance of teaching grammatical structures. Since the accent was on grammar, few words were introduced in such courses and most often, they were limited and related to the grammar structures taught. After you have looked through Table 1, which is to consider your students' particular strengths and weaknesses with English in terms of these three aspects of vocabulary knowledge. Task 2 •Impression of students' strengths and weaknesses with English vocabulary: Strengths Weaknesses By the beginning of 1970s, there was a major change in teaching English. The focus turned from the Audio-lingual approach to the Communicative Approach which emphasized the importance of teaching vocabulary. Students were exposed to diverse vocabulary and speaking activities. Many words began being introduced during such courses and students were encouraged to express themselves as much as possible. Nowadays, there is more freedom in choosing the methods to be used during English classes. The English syllabus is organized around both vocabulary and grammar structures.

302 NSOU l PGEL - 1&2 Since there is a certain number of classes allotted for each item in the syllabus, teachers usually have the necessary time to insist on teaching and practising vocabulary. Vocabulary is no longer treated as an add-on and teachers become more aware of the importance of vocabulary and attention is paid to the grammar of words, to collocations and to word frequency. Nevertheless, students still have difficulties in expressing themselves fluently and still consider speaking tasks exhausting. 5.5 Criteria for Vocabulary Selection Teachers of foreign languages should be aware of the fact that teaching vocabulary is one of the most important and difficult aspects in teaching process. Even the choice of vocabulary which is to be taught to the learners does not belong to the simplest decisions. Most of classes are heterogeneous hence, every student is not the same. Essentially, teachers should accept that particular situations differ from each other and vocabulary components that are critical in some circumstances might be absolutely useless in other situations. However, one fact remains unaltered, namely, while selecting vocabulary the teacher should take account of several criteria. These benchmarks are frequency, need and level, cultural factors, expediency, and also an aspect of learnability and coverage (McCarthy 1990: 66). 5.5.1 Collocation This term means the words or types of words which co-occur with particular other words. According to experts, collocations "teach students expectations about which words go with which ones. Students will not go about reconstructing the language each time they want to say something". Taylor (1990, p. 2) says that collocation means knowing the syntactic behaviour associated with the word and also knowing the network of association between that word and other words in the language. It shows the relationship between words. For example, we can say heavy rain, but not heavy sun. 5.5.2 Familiarity How often some words are used? According to experts, it is better to start off with the words with which learners are familiar with in order to give the learners a basic set of tools for communication. For example, the words tardy, tardily and tardiness will hardly sound familiar to the learners because they are familiar with the synonym of tardy which means slow and not refined. The familiarity depends on how frequently a word occurs in our daily use of language.

NSOU l PGEL - 1&2 303 5.5.3 Range Range denotes the extent to which a word occurs in the different types of texts. Some words are relatively frequent but restricted in the range of situations or registers in which they are used. Words which are used in various situations are more useful, though often words of greater range also have greater frequency. 5.5.4 Frequency To start with, the educator should think about the number of occurrences of words in the target language. According to McCarthy (1990: 66), "[i]t seems self-evident that the most frequent words in any language will be the most useful ones for the learners of that language, and therefore, the best to start off with, in order to give the learner a basic set of tools for communication." The more iterated a word is, the more useful it becomes. Nation (1990: 18) suggests that word-frequency counts may help mentors and course designers in some ways. First and foremost, they may help the teacher build up a feeling about which words are valuable and should be given attention and which are uncommon. As a result, they can contribute to creating word lists for teaching, for designing vocabulary tests, and for preparing graded courses and reading texts. Unluckily, frequency does not always promise usefulness. That is to say, a word of low regularity may be essential if it is either hard to find its synonym or it is the only item that represents a specific semantic value. Very often useful and important words do no appear in the first or second 1000 words of frequency counts. It commonly happens that these words are concrete nouns, for example, a stomach, a bath, and stupid (Nation 1990: 20). 5.5.5 Learnability and coverage The last two aspects which should be taken into account while choosing vocabulary to be learnt in the classroom are learnability and coverage. According to McCarthy (1990: 86), learnability of vocabulary is not unconnected with the notion of frequency, hence, the most repeated words will presumably be absorbed and learnt because they occur routinely. However, words may be easy of difficult for a variety of other causes and also may need specific attention or focus in teaching. Next, the author describes the problems connected with learning new words. Firstly, he tells about spelling difficulties which may be troublesome even to native speakers of English. Secondly, words may present phonological problems, either because they consist of awkward clusters of sounds, or because spelling conflicts with perception of what the sound is. Additionally, some

304 NSOU l PGEL - 1&2 words may be perceived as very close in meaning by the student, and as a result, difficult to separate one from another. For instance, 'make' and 'do' are prominent in this respect of English (McCarthy 1990: 86). 5.6 How to work on developing vocabulary in a classroom? (Activity based) The three phases of applying tasks based on Willis, 1996, are: Pre-task Task cycle Post-task Practice l Introduction to task l Report l Analysis l Planning Let us take an example from Task-based technical vocabulary teaching in the experimental group. 5.6.1 Lesson plan Topic: Indian writing in English A sample lesson might be presented in this study as lesson 1: Indian writing in English. One of the objectives of this unit was to teach the students the technical vocabularies related to the topic in English using the Task-based approach. This lesson contains the pre-task, the task and the post-task phases. Pre-task 1. In pre-task phase in order to activate students' schemata the teacher asks questions based on the topic of the reading passage. For example: - Who can talk about the history of Indian Writing in English tradition? - Can anyone name some of the famous writers? - What was the style of these Indian English writers? 2. Look at the text and try to guess the meaning of the words. Don't worry if you do not understand them. Context will help you to understand the meaning of the word. The impact of western civilization, which began to affect life in India in the course of their stay, did not leave its literary tradition untouched. 3. Cooperative dictionary use: A group work based on trying to work out definitions of words. Students go through the new words in pairs and have dictionaries/e- dictionaries at their disposal to check meaning.

NSOU l PGEL - 1&2 305 During tasks 1. Negotiation of meaning: Divide the class into A and B groups of 5 students in a group. They sit facing each other. Each group has the word with definitions; they try to ask each other. A asks: what is the meaning of literary tradition? B replies: literary beliefs, customs, and styles A asks: what is the meaning of poetical expression? B replies: the way a poet uses to show his feelings, opinions 2. Information-gap task: Student A would have the vocabulary words written on strips of paper and student B would have the definitions of those words. Working together, they pair words and definitions to learn new vocabulary(the words used may not necessarily been adapted from any Indian Writing in English piece. Words used are only to understand). Student A Student B Adaptability The ability to adjust Wage To begin and carry on a war Genuine original, real 3. The teacher writes three new vocabularies on the board and then describes the meaning of one of them; students in group should guess which word is described and say aloud the correct one. 4. Guessing: What is it? After you hear the teacher's description, try to figure out what is described and write down on the paper. Then the teacher asks groups to check the correct answer. For example: Person acting as one's substitute or representative (deputy) 5. Matching: students work in groups. In the blank they should write the correct letter to match items on the right column. 1. Amateur ……. a. a very skilled person 2. Nationalism…… b. the roles of pattern and sound in poetry 3. Prosody…… c. the ability to change so as to be suitable 4. Court….. d. an artist who is not paid for his art 5. Prose…… e. love for one's own country 6. Adaptability….. f. poetical expression g. the official home of a king or queen h. written language in its usual form

306 NSOU l PGEL - 1&2 Post-task 1. Read the text again and find the vocabularies which seem problematic to you. Then ask the teacher for help. 2. The teacher considers students' performance on different types of tasks and finds problematic areas to be worked or practiced. 3. Fill in the blanks with words at the end. 1. The rules of pattern and sound in poetry are …………… 2. Although he is only an/a ………….. , he is a first class player. Lines, structure, prosody, constitution, intellectual, attitude, Amateur, waged, vicissitude, poem 3. Britain is governed with unwritten …………… . 4. A few of the Iranians ………….. participate in Persian literature Conference. 5. A battle was ………… against the enemy. 6. Literature has important role in political and social …………… of nation. 7. The ancient……………… of Persian literature was changed in the course of 19th century. 8. The writer composes ………….. . 9. Western civilization caused fundamental change in the ………… of the poet toward his art. 10. In court poetry, most of the poets works on traditional …………. . poetry, wage, vicissitude, innovatively, remarkable, constitution, poetically, western, attack, genuine, evolve, entirely. 5.7 Conclusion: English vocabulary is complex, with three main aspects related to form, meaning, and use, as well as layers of meaning connected to the roots of individual words (Nation & Meara, 2010). Teaching vocabulary is not just about words; it involves lexical phrases and knowledge of English vocabulary and how to go about learning and teaching it, which the next unit explores. 5.8 Review Questions A. Teaching Vocabulary Quiz You can do this quiz online or print it on paper. 1. The majority of vocabulary acquisition occurs a) independently by learners studying word lists b) incidentally through oral and written exposure

NSOU l PGEL - 1&2 307 c) intentionally through formal classroom instruction 2. Which of the following is NOT a word learning strategy? a) chunking b) choral reading c) contextual analysis 3. Vocabulary acquisition tends to happen more quickly when a student's L1 and L2 share a) inflection b) cognates c) diphthongs 4. Match this definition to the correct vocabulary teaching strategy: Students encounter the same word in a variety of contexts a) multiple exposure b) multisensory approach c) multiword verb introduction 5. In the word development the letters "-ment" form the a) root b) suffix c) prefix 6. Which sentence is an example of a figure of speech called "hyperbole"? a) I asked him a million times. b) Her voice is as sweet as candy. c) There was a deafening silence in the room. 7. When the direct object of a separable phrasal verb is a pronoun, it a) MUST go after the two parts b) MUST go between the two parts c) can go between or after the two parts 8. A group of words with a meaning not deducible from the individual words is called a) an idiom b) a proverb c) onomatopoeia 9. Phrases that help learners perform everyday tasks, such as giving advice or apologizing, are often called a) surviving language b) language c) self-access language 10. When a teacher uses language games to encourage students to acquire an interest in words, students are more likely to develop a) whole language b) vernacular style c) word consciousness B Review Question 1. What are some deliberate vocabulary learning activities that you do in the classroom? 2. Why do students have difficulty to describe the concepts in social studies courses? 3. What is the best way to learn new vocabulary with flash cards? 4. Which areas of vocabulary teaching do you prefer as more effective than others ? 5. Can you think of any studies that justify the inclusion of collocations (alongside single-word items) in L2 vocabulary lists? 6. How should a teacher activate students' schemata in the pre-task phase ?

308 NSOU l PGEL - 1&2 7. What are the different types of lexical knowledge ? 8. Define the terms with examples: a) inflection b) cognates c) diphthongs 9. Define the terms with examples: a) an idiom b) a proverb c) onomatopoeia 10. What is meant by'self-access language'? How best can it be acquired? C Illustrative questions(i.e. Questions followed by hints or short answers) 1. What is the effect of stories on adult learners' vocabulary retention? 2. What are the reasons of using stories to teach vocabulary? 3. How can we memorize new vocabulary? 4. How can we improve drafting skill with rich vocabulary? 5. What are the essential stages of teaching a vocabulary lesson ? Explain each stage briefly 6. Draw a lesson plan for vocabulary teaching. 7. Write a note on an effective learning strategy for vocabulary acquisition. 8. Write notes on the following: a) chunking b) choral reading c) contextual analysis. 9. Draw an 'activity-based' exerciseon developing vocabulary in a classroom? 10. What does the term, 'collocation 'signify ? How important is it in second language acquisition? 5.9 References 1) Essays, UK. (November 2018). The Importance Of Teaching And Learning Vocabulary English Language Essay. Word level grammar covers verbs and tenses, nouns, adverbs etc. Sentence level grammar covers phrases, clauses, reported speech etc. We will learn about them in this

| 96% | **MATCHING BLOCK 40/83** | SA | PGELT 9B PDF.pdf (D165254854) |

unit. 6.2 Objectives After going through this unit, the learners will be able to:

l Classify words according to their grammatical categories l Identify the word grammar based on their contextual use. l Associate meanings with their grammatical functions l Distinguish word grammar based on its pronunciation l Plan a lesson for teaching vocabulary in a comprehensive way.

6.3 Word-level Grammar These are the words that we use to make a sentence. The nine types of word-level grammar are: a) Verbs and Verb Tenses: Action verbs, express what is happening (do, work). State verbs express a situation (be, have). b) Nouns: Nouns represent people (teacher, Mary), places (town, Asia) and things (table, music). c) Adjectives: An adjective is a word that tells us more about a noun (big, red, expensive). d) Adverbs: Adverbs tell us more about verbs, adjectives or adverbs (loudly, really, extremely). e) Determiners: Determiners are words like the, an, this that start a noun phrase. f) Prepositions: A preposition expresses the relationship of a noun or pronoun to another word (at, in, from). g) Pronouns: Pronouns are small words like you, ours, some that can take the place of a noun. h) Conjunctions: Conjunctions join two parts of a sentence (and, but, though). i) Interjections: Short exclamations with no real grammatical value (ah, dear, er) 6.4 How to Identify Parts of Speech in Paragraphs Being able to identify parts of speech in paragraphs is an important tool that can help a student to better understand what he reads. Knowing which words are which parts of speech and which parts of speech should modify those words will also help a student to write clearly and correctly. There are eight parts of speech: verbs, nouns, pronouns, adjectives, adverbs, prepositions, conjunctions and interjections. The parts of speech are the foundation for all writing and reading, so it will benefit a student greatly to gain a strong grasp of the parts of speech. a) How to identify the verbs in the paragraph. Every sentence requires at least one verb. A verb is a word that expresses action, occurrence or being. Verbs have different tenses such as past, present and future. Verbs include "run," "see," "is,"

"bought," "came," and "drove." It is important to know that many words that are verbs can also be other parts of speech such as adverbs and nouns. The word "exit," for instance, can be a verb or a noun depending on its usage within the sentence: In the sentence, "Please exit through the back," "exit" is a verb. In the sentence, "We couldn't find the exit," "exit" is a noun. b) How to identify the nouns in the paragraph. A noun is a person, place, thing or idea. A noun usually acts as the subject of the sentence, but it can also act as a direct object, indirect object, appositive or complement. Some examples of nouns include "Peter," "China," "table," and "happiness." Nouns can be singular or plural. Note that every sentence will contain at least one noun because every sentence must have a subject. Identify the pronouns in the paragraph. Pronouns take the place of nouns and function just as nouns do. Examples of pronouns include "her," "I," "we," and "him." Note that "his" or "your" are considered possessive adjectives. c) How to identify the adjectives in the paragraph. Adjectives modify, qualify or describe nouns and pronouns in the sentence. Adjectives will answer the questions, "Which one?", "What kind?", and "How many?". Some examples of adjectives include "that," "blue" and "seven." d) How to identify the adverbs in the paragraph. Adverbs are words that modify verbs, adjectives and other adverbs. In the sentence, "She ran quickly," "quickly" is the adverb that modifies "ran." Note that not all sentences will contain an adverb. Other words that act as adverbs include "unfortunately," "therefore" and generally any word that ends in "-ly." e) How to identify the prepositions in the paragraph. A preposition links nouns, pronouns and phrases to other words in the sentence. Examples of prepositions include "of," s"in," "at," "from," "to," "since," "up" and "with." Prepositions generally indicate a spatial, temporal or logical relationship between the prepositional phrase and an object in the sentence. Note that not all sentences will contain prepositions. f) How to identify the conjunctions in the paragraph. Conjunctions are words that connect other words, phrases and clauses. The words "and," "but," "or," "for,"

"nor," "yet" and "so" are conjunctions. Note that not all sentences will contain conjunctions. Task 1 Parts of Speech Quiz Look at the following sentences and identify the category to which each word belongs: 1. I bought a beautiful dress at the mall. a) preposition b) adjective c) noun 2. What did she ask you to do? a) conjunction b) preposition c) pronoun 3. I left my shoes under the kitchen table. a) adjective b) preposition c) pronoun 4. If we finish our work quickly we can go to the movies. a) adverb b) conjunction c) verb 5. On Saturdays I work from nine to five. a) verb b) preposition c) adverb 6. I want to go to a university in the United States. a) adjective b) preposition c) noun 7. I'm sure I've met your girlfriend before. a) verb b) preposition c) interjection 8. Well, I don't think I'll be home before 6. a) interjection b) preposition c) pronoun 9. Andy knocked on the door but nobody answered. a) adverb b) adjective c) conjunction 10. After lunch let's go out for a coffee. a) pronoun b) preposition c) verb

6.5 Activities for teaching Sentence-level Grammar: Phrases (Phrases Quiz) 1. Phrases are grammatical units that consist of a) one or more words b) more than one word 2. A noun phrase with more than one word can consist of a noun and words that a) replace the noun b) qualify the noun 3. "The tour includes three Asian countries." Which is a noun phrase? a) The tour b) three Asian countries 4. A verb phrase consists of a main verb and its a) auxiliary verbs b) phrasal verbs 5. "She has been studying all day." Which is a verb phrase? a) studying all day b) has been studying 6. An adjective phrase can be a single adjective or a group of words built around a) an adjective b) a single noun 7. "Cats are playful pets, but dogs are very loyal as well." This sentence has a) one adjective phrase b) two adjective phrases 8. Which sentence has an adverb phrase? a) She sings very nicely. b) She sings very nice songs. 9. A prepositional phrase consists of a preposition and its a) object b) subject Your Score is: —————— 10. "We always play football after work." Which is a prepositional phrase? a) always play football b) after work

CORRECT ANSWERS: Task 2 Linking, Intransitive and Transitive Verbs Quiz 1. What do all verbs have? a) a subject b) an object 2. A linking verb connects a subject with a noun or adjective that tells you about a) the object b) the subject 3. In which sentence does a linking verb connect the subject to a noun? a) My daughter is a teacher. b) My daughter teaches English. 4. "Daniel looks tired." The linking verb connects the subject to a) an objective b) an adjective 5. Intransitive verbs don't have a) an object b) a subject 6. "Katy runs every morning." In this sentence "run" is a) an intransitive verb b) a transitive verb 7. In which sentence is "run" used as a transitive verb? a) She runs slowly. b) She runs a business. Your Score is:

NSOU l PGEL - 1&2 315 8. "They bought a new car." The verb is a) monotransitive b) ditransitive 9. "They bought their son a new car." The verb is a) monotransitive b) ditransitive 10. Which is a list of di-transitive verbs? a) give, show, tell, lend b) want, like, eat, kill CORRECT ANSWERS: To understand sentence construction, we need to know Direct Object. The direct object receives the action of the verb directly. Task : 3-Direct Object Quiz 1. The order of an English sentence is normally a) Subject Verb Object b) Subject Object Verb 2. Which performs the verb's action? a) the subject b) the object 3. Which receives the verb's action a) the subject b) the object 4. If the object receives the action directly from the subject, it's called a) an indirect object b) a direct object Your Score is:

316 NSOU l PGEL - 1&2 5. "David writes the best songs." The direct object is a) the best songs b) David 6. If a verb's action is directed at a direct object, it must be a) an intransitive verb b) a transitive verb 7. Which sentence has a transitive verb and a direct object? a) Maria came in and sat down.b)Then we watched a movie. 8. Which cannot be used with direct objects? a) linking verbs b) phrasal verbs 9. Pronouns that are direct objects must be in the objective case, as in a) Do you like I? b) Do you like me? Your score is: 10. A direct object can be a) a word, phrase or clauseb) a phrase or a clause CORRECT ANSWERS: Next we come to Indirect Object. The indirect object receives the direct object. Task - 4 Indirect Object Quiz 1. The indirect object is something or someone who receives a) the direct object b) the main verb 2. "Sue passed Ann the ball." The direct object is a) Ann b) the ball Your Score is:

NSOU l PGEL - 1&2 317 3. "Kelly sent her friend an email." The indirect object is a) an email b) her friend 4. The indirect object is always between the verb and a) the direct object b) the subject 5. If the indirect object is a noun phrase, it will contain a) one word b) one or more words 6. "She taught all her kids English." The indirect object is a) all her kids b) kids 7. An indirect object can be rephrased and repositioned as part of a) a noun phrase b) a prepositional phrase 8. "She taught English to all her kids." The prepositional phrase is a) to all her kids b) taught English to 9. To find the indirect object, ask yourself who or what received a) the direct object b) the subject 10. If you replace the indirect object "our friends" with a pronoun, it must be Your score is: a) they b) them CORRECT ANSWERS: Here is sthe structure that we use to "report" what another person has said. Your Score is:

318 NSOU l PGEL - 1&2 Task - 5 : Reported Speech Quiz 1. Which is a reporting verb? a) tell b) go c) be 2. He said that it was cold outside. Which word is optional? a) said b) that c) was 3. "I bought a car last week." Last week he said he had bought a car a) a week ago b) next week c) the week before 4. "Where is it?" said Mary. She a) said where it is b) asked where it was c) asked if it was there 5. Which of these is usually required with reported YES/NO questions? a) if b) do c) why 6. Ram asked me where I worked. His original words were a) "Do you work there?" b) "Where do I work?" c) "Where do you work?" 7. "Don't yell!" is a a) direct request b) direct order c) reported order 8. "Please wipe your feet." I asked them to wipe a) your feet nicely b) their feet nicely c) their feet 9. She always asks me not to burn the cookies. She always says a) "Not to burn the cookies!" b) "Please don't burn the cookies." c) "Do not burn the cookies." 10. Which structure is not used for reported orders? a) order somebody to b) tell somebody to c) ask somebody to

NSOU l PGEL - 1&2 319 Your score is: CORRECT ANSWERS: Parenthetical Expression is words added to a sentence without changing its meaning or grammar. Let us find out how this can be learnt from the following quiz. Task - 6 : Parenthetical Expression Quiz 1. A parenthetical expression is a word or words that a) add details to a sentence b) are essential to a sentence 2. A parenthetical expression doesn't change a sentence's basic a) punctuation or length b) structure or meaning 3. If a parenthetical expression is cut from a sentence, the sentence a) won't make sense b) will still make sense 4. "Global temperatures, as expected, are rising." The parenthetical expression is a) as expected b) are rising 5. In Question 4 above, which shows where the parenthetic begins and ends? a) a set of quotation marks b) a pair of commas 6. Which can separate a mid-sentence parenthetic from the rest of a sentence? a) commas, round brackets or long dashes b) commas, semi-colons or quotation marks Your Score is:

320 NSOU l PGEL - 1&2 7. Which sentence includes a parenthetical expression? a) The traffic's terrible, as usual. b) It isn't always this bad, is it? 8. "She likes him very much – or so it seems." Which is the parenthetical expression? a) very much b) or so it seems 9. Which includes a correctly-punctuated parenthetical expression? a) Rock music (or rock-n-roll) began in America. b) Rock music, or rock-n-roll – began in America. Your score is: CORRECT ANSWERS: Grammatical Category includes number, case, gender, tense, aspect etc. Task - 7 : Grammatical Category Quiz 1. Grammatical category is related to a) word indexation b) word agreement c) calligraphic form 2. Only _____ can be affected by the grammatical category known as "number". a) nouns b) adverbs c) adjectives 3. Possessive is a value of the grammatical category called a) number b) case c) gender Your Score is:

4. Modern English uses _____ gender. a) grammatical b) political c) natural 5. The grammatical category "person" is a property of pronouns and has _____ values. a) one b) two c) three 6. "Tense" is a grammatical category that applies to a) verbs b) adverbs c) adjectives 7. Continuous and perfect are examples of the grammatical category known as a) tense b) mood c) aspect 8. The subjunctive "mood" expresses _____ . a) a statement of fact b) unreality c) something desired 9. "Voice" is a grammatical category affecting a) transitive verbs b) intransitive verbs c) all verbs 10. _____ can be affected by the grammatical category known as "degree". a) gradable adverbs b) non-gradable adverbs c) all adjectives Your score is: CORRECT ANSWERS: Your Score is:

6.6. Components of the Lexicon An entry of a word in the mental lexicon includes its form and meaning. It means that, knowing a word needed to know its form and meaning which includes phonological form, orthographic form, morphological form, semantic knowledge and syntactic knowledge. Schreuder and Flores d'Arcais (1989) describe the mental lexicon to stand for the store of all our knowledge related to words. In other words, the mental lexicon could be regarded as internalized knowledge of the properties of words. 6.6.1 Meaning When a lexical item is retrieved from the mental lexicon (in the productive mode), this is done on the basis of its meaning, but in addition to the meaning, it contains syntactic, morphological, andphonological information (Levelt, 1989, p. 6). He believes that each item in the mental lexicon is a listing of four kinds of features. Thesearemeaning, syntactic properties, morphological specification of the item, and its phonology form.Besides that, systematic relations are existed in its meaning, syntactic properties, morphological specification and phonology form. In that case, there exist two kinds of internal organization in themental lexicon: one according to the meaning of items and the other one on the basis of their formproperties. According what has been discussed above, the word in the mental lexicon contains two main components: 1) form which includes phonological and morphological information, and 2) meaningwhich contains semantic and syntactic information. 6.6.2 Form Form includes phonological information, orthographic information and morphological information. To recognize a word, we need to know both phonological and orthographic form. However, given the fact that a speaker may have any one of a number of regional accents or that a written text may appear in any one of a number of different typefaces, there is existing variations of phonological and orthographic representations (Field, 2003, p. 12). Field (2003) regards the identification of a word as the result of a simple matching process. In other words, when encountering with the words in the speech, it is

required to match it to the phonological form of the word; when encountering with the words in reading process, it is required to match it with orthographic form of the word. Furthermore, the two are closely connected to the same unit of meaning. Besides the situation that different form sharing the same unit of meaning, there is still another kind of situation related to the homonymy. The same phonological form may have associated with different meanings. Take "way" for an example, it may mean a method, style or manner of doing something, or it may mean a route or road that you are taken in order to reach a place.Before considering precisely what it means to know a word, the question what constitute a lexical entry should be consider at first. It has been heated debated that all derived forms of a word should be regarded as an entry or as separate entries. According to Levelt (1989), the various inflections of a verb (e.g., eat, eats, ate, eaten, eating) are items belonging to the same lexical entry. The diacritic features for person, number, tense, mood, and aspect will take care of selecting the right item inflections (Levelt 2016). However, it is not the case for derivations; happy, unhappy, happiness, unhappiness, happily, etc. are different lexical entries (Field, 2003). Thus, an entry includes the base form of the word and its entire range of inflections. In the mental lexicon, therefore, a lexical entry, includes the base form of word and its inflections. If we knew a word, we need to know the base form and all the inflections. Take "take" for an instance, we would need to know "took", "takes", "taken", "taking". Besides the inflections, it is still needs to know the derivations. Take "act" for an example, it is still need to know "action", "activity", "actor" and so on. All in all, both inflections and derivational morphology of a word should be associated with the base form of the word and stored in the mental lexicon. 6.6.3. The Pedagogical Implication Ellis (1994) has proved that there are specialized modules, the input and output lexicons, which require the word forms and regularities of the surface form of language by implicit learning process. In other words, it means that the form of the mental lexicon seems to be learnt implicitly. And the learning of the form of the mental lexicon is related to the frequency, and regularity of the mental lexicon. According to the Ellis (1994), the meaning of the mental lexicon is likely to be learnt by explicit learning. Furthermore, it is heavily affected by depth of processing and elaborative integration with semantic and conceptual knowledge. The form is learnt implicitly. In contrast, the meaning is learnt explicitly,however,form-learning is heavily affected by its frequency.

Albrechtsen, Haastrup and Henriksen (2008) suggest that the language learner could via repeated language exposure to constantly establish internal links between the lexical items in the mental lexicon. The word, therefore, was required to be repeated and increase its exposure, which would enhance the memory. At the same time, form-learning is related to its frequency. Therefore, the word needed to be reviewed which would make the word more impressed. Furthermore, form-learning is connected with its regularity. So, words need to be learned and reviewed regularly. It would be an effective way to enhance memorization. According to the Nagy and Herman (1987), Vocabulary knowledge—knowledge about word meanings—is both subset of, and highly correlated with, general knowledge. It means that the specific word is highly related with other general words they have already known. Therefore, the learner should be encouraged to build systematic links with words they already know. The more links are established, the more likely that the word is going to be retained. When it comes to teaching, the instructions must aim at establishing explicit, deep, elaborative processing concerning semantic and conceptual representations that prevents the meaning of the word fading from memory .It would be much more effective for the vocabulary teaching, if the vocabulary instruction could contain:multiple exposures to instructed words, the establishment of ties between instructed words and students' own experience and prior knowledge. 6.7 Pronunciation Pronunciation is important, but it is also difficult both to teach and to learn. Perhaps that is why every ESL teacher should make it a part of what they teach their students. The International Phonetic Alphabet identifies approximately 25 consonant sounds and 18 vowel sounds that are used in the English language. The approximations are a result of the many different dialects of English including: i) American English, ii) British English, iii) Southern American English, iv) Cockney English, v) African American English and so on. Teaching pronunciation can be intimidating, especially if you are technically teaching other areas of the English language.In order to improve your English pronunciation, it is important to understand a number of terms and concepts. This article introduces the most important components from smallest—a unit of sound—to largest—sentence level stress and intonation. A short explanation is given for each concept with links to more resources to improve, as well as teach, English pronunciation skills.

a) Phoneme A phoneme is a unit of sound. Phonemes are expressed as phonetic symbols in the IPA (International Phonetic Alphabet). Some letters have one phoneme, others have two, such as the diphthong long "a" (eh - ee). Sometimes a phoneme may be a combination of two letters such as "ch" in "church," or "dge" in "judge." b) Letter There are twenty-six letters in the English alphabet. Some letters are pronounced differently depending on which letters they are with. For example, "c" can be pronounced like a hard /k/ or as an /s/ in the verb "cite." Letters are made up of consonants and vowels. Consonants can be voiced or voiceless depending on the sound (or phoneme). The difference between voiced and voiceless is explained below. c) Consonants Consonants are the sounds that interrupt vowel sounds. Consonants are combined with vowels to form a syllable. They include:

90%	**MATCHING BLOCK 47/83**	SA	bd thesis 210616 - FINAL.doc (D20931290)

b, c, d, f, g, h, j, k, l, m, n, p, q, r, s, t, v, w, x, z

Consonants can be voiced or voiceless. A voiced consonant is a consonant that is produced with the help of the vocal chords. A good way to tell if a consonant is voiced is to touch your fingers to your throat. If the consonant is voiced, you will feel a vibration. / b, d, g, j, l, m, n, r, v, w/ are voiced consonants. A voiceless consonant is a consonant that is produced without the help of the vocal chords. Place your fingers on your throat when speaking a voiceless consonant and you will only feel a rush of air through your throat. /c, f, h, k, q, s, t, x/ are voiceless consonants. d) Vowels Vowels are open sounds caused with the vibration of vocal sounds but without obstruction. Consonants interrupt vowels to form syllables. They include:a, e, i, o, u and sometimes y NOTE: "y" is a vowel when it sounds as /i/ such as in the word "city." "Y" is a consonant when it sounds as /j/ such as in the word "year." All vowels are voiced as they are produced using the vocal chords. e) Minimal Pairs Minimal pairs are pairs of words that differ in only one sound. For example: "ship" and "sheep" differ in only in the vowel sound. Minimal pairs are used to practice slight differences in sound.

f) Syllable A syllable is formed by a consonant sound combining with a vowel sound. Words can have one or more syllables. To test how many syllables a word has, put your hand under your chin and speak the word. Each time your jaw moves indicates another syllable. g) Syllable Stress Syllable stress refers to the syllable that receives the main stress in each word. Some two-syllable words are stressed on the first syllable: table, answer — other two syllable words are stressed on the second syllable: begin, return. There are a number of different word syllable stress patterns in English. h) Word Stress Word stress refers to which words are stressed in a sentence. Generally speaking, stress content words and glide over function words (explained below). i) Content Words Content words are words that convey meaning and include nouns, main verbs, adjectives, adverbs, and negatives. Content words are the focus of a sentence. Glide over function words to stress these content words to provide the rhythm of English. j) Function Words Function words are required for the grammar, but they provide little or no content. They include helping verbs, pronouns, prepositions, articles, etc. k) Stress-Timed Language When speaking about English we say that the language is stress-timed. In other words, the rhythm of English is created by word stress, rather than syllable stress as in syllabic languages. l) Word Groups Word groups are groups of words that are commonly grouped together and before or after which we pause. Word groups are often indicated by commas such as in complex or compound sentences. a) Rising Intonation Rising intonation occurs when the voice goes up in pitch. For example, we use rising intonation at the end of yes/no questions. We also use rising intonation with lists, separating each item with a short rise in the voice, before a final, falling intonation for the last item in a list. For example in the sentence:

I enjoy playing hockey, golf, tennis, and football. "Hockey," "golf," and "tennis" would rise in intonation, while "football" would fall. b) Falling Intonation Falling intonation is used with information sentences and, in general, at the end of statements. c) Reductions Reductions refers to the common practice of combing a number of words into a short unit. This generally occurs with function words. A few common reduction examples are: gonna -< going to and wanna -< want to d) Contractions Contractions are used when shortening the helping verb. In this way, two words such as "is not" become one "isn't" with only one vowel. 6.7.1 Teaching Pronunciation in ESL classes 1 Listening First It is virtually impossible for students to produce the right sounds for English words when they cannot hear and distinguish those sounds from one another first. So to teach pronunciation well means starting with teaching listening and making sure your students can distinguish the sounds they will soon be producing themselves. 2 The Phonetic Alphabet I am a firm believer that every ESL student should know the phonetic alphabet. Rather than depending on spelling, it is used to transcribe the exact sounds in English words. Students who know the phonetic alphabet and whose teachers use it get additional input when they are learning the correct pronunciation of words. They not only hear the correct pronunciation, but they see it, too. Phonetic transcriptions show students, even those who are struggling to hear the correct pronunciation, exactly how an English word is supposed to sound. 3 Teach Minimal Pairs Minimal pairs are words that differ in only one sound. When you teach English words in groups that point out differences as well as similarities, your students will be able to hear the differences and then produce the differences that distinguish words from one another. 4 Know Cultural Pronunciation Patterns Speakers of the same native language often have mispronunciation patterns that are recognizable and predictable. Spanish speakers often struggle with the difference

between the long and short i sounds such as those in city and seedy. Speakers of Japanese will often struggle to hear and produce the difference between /l/ and /r/ . If you know the common pronunciations your students are likely to struggle with, you can better prepare and instruct them in correct English pronunciation. 5 Let Your Students Look at Your Mouth I know this may be uncomfortable for you, especially if you have never done it before, but it is important. The reason is this: speakers of different languages actually hold and move the muscles of the mouth in different ways. For correct pronunciation, students will have to hold their mouth properly. Additionally, some students will not be able to produce a sound simply because they can hear and identify it. They will need the visual input that comes from looking closely at you while you produce certain sounds. Once you have let your students look at your mouth as you pronounce certain words and sounds, have them look at their own mouths. You can do this with mirrors or with the reverse camera on most smart phones. If students can see how your muscles move as you pronounce English sounds and words, they can see if they are moving their muscles in the same manner and can hear if they are producing the same sound as you. 6 Group Students by Native Language and against Native Language Grouping students with the same native language can be very helpful for correcting some of those predictable pronunciation struggles, so you should try it if you teach a class of internationals. They will often be able to help each other achieve more accurate pronunciation. It is also helpful to group students with speakers of different native languages. When students have to make themselves understood to someone not familiar with their accent, they will have to achieve more standard pronunciation to get their meaning across. So make sure when you group your students that you switch things up and sometimes group by native language and sometimes against it. 7 Let Them Mock You (and Others) Well, mock may not be the right word, but mimic is. Have your students listen to what you say and repeat it like a good younger brother loves to do to older siblings. Don't stop with your own speech, though. Have students copy the speech of newscasters, actors, and English speakers who are not also teachers. When they do, they will ingrain correct pronunciation and intonation into their own spoken English. 8 Combat Anxiety with Games

NSOU l PGEL - 1&2 329 Games make everything more fun, don't they? And you will want to make pronunciation instruction as fun for your students as possible. They will need it since working on correct pronunciation is stressful and can cause anxiety in even the best students. So make sure you have some great pronunciation games you can play as you work with your students. If you are stuck for ideas, Busy Teacher has lots of ideas to share. 9 Record and Re-record Your Students It may come slower than they would like, but your students will make progress in their pronunciation of English. You can give them clear cut evidence of their progress if you take the time to record them reading the same English passage at the beginning of your school year, in the middle, and again at the end. When you record your students' pronunciation, you can play the tapes one after another to show their progress. This is important for increasing your students' confidence and bolstering their self-esteem. If your students are like most language learners, they will need encouragement and boosts to keep going when it feels like they are making no progress at all. Your recordings can do just that. In addition, it gives you material on which to base their grade when it comes to their final evaluations on pronunciation. 10 Don't Get Hung up on Accent Teaching good pronunciation skills in English is not the same thing as eradicating a first language influenced accent. ESL teachers walk a fine line when addressing pronunciation issues of English. Ultimately, the goal is for your students to speak so they can be understood by native English speakers. For some students, they will be able to communicate clearly even if they retain part of their native accent, and your students may want it there. When the accent becomes too strong, however, it becomes a barrier to communication. So focus more on communication rather than perfect pronunciation, and you and your students will both be happy. 6.7.2 ESL Pronunciation Phonology Charts Students and teachers of English as a second language often find ESL pronunciation phonology charts helpful. Aside from the all-important semantic and syntactic aspects of language learning, it can be argued that the most crucial task for second language learners is to grasp proper English pronunciation. If students have mastered all the rules of English grammar, yet still speak with a heavy dialect influenced by their native language, much of their grammar proficiency will be overlooked in daily conversation.

It is common knowledge that not all languages spoken on Earth use the same sound systems. This can cause ESL students a great deal of difficulty when they are learning to phonetically navigate their new language. If English includes a sound that was not spoken in their native language, it can be very challenging for the students to learn how to produce the sound physically. Since the sound will remain foreign to them for some time, remembering how to create the sound while in the flow of typical conversations poses an even greater challenge. ELS pronunciation phonology charts work to give students a tool to keep on hand while they practice their mastery of English phonetics. The charts will phonetically transcribe familiar English words so the students are sure to know exactly how the words should sound. The phonetic transcriptions will give the student exact pronunciation tips to assist them in forming correct English words when they speak. Some of the resources may be more intuitive than others to you, so explore all the options and select those that you think will work the best for your needs. 6.7.3 Pronunciation Practice The first step in learning correct English pronunciation is to focus on individual sounds. These sounds are named "phonemes". Every word is made up of a number of "phonemes" or sounds. A good way to isolate these individual sounds is to use minimal pair exercises. To take your pronunciation to the next level, focus on stress on intonation. The following resources will help you improve your pronunciation by learning the "music" of English. Practice with Pronunciation Using English is a stress-timed language and, as such, good pronunciation depends a lot on the ability to accent the correct words and successfully use intonation to make sure you are understood. Simply put, spoken English stress the principal elements in a sentence - content words - and quickly glides over the less important words - function words. Nouns, principal verbs, adjectives and adverbs are all content words. Pronouns, articles, auxiliary verbs, prepositions, conjunctions are function words and are pronounced quickly moving towards the more important words. This quality of quickly gliding over less important words is also known as 'connected speech'. This feature takes a look at how intonation and stress influence the way English is spoken.

332 NSOU l PGEL - 1&2 6.8 Strategies for Use of Vocabulary in Language Teaching 1. How to remember

NSOU l PGEL - 1&2 333

334 NSOU l PGEL - 1&2

NSOU l PGEL - 1&2 335 6.9 Summary In this unit we have discussed in detail aspects of word grammar. Word grammar is explained in terms of the context in which a word appears and its importance in understanding the meaning. Along with the meaning, it is equally important to understand the stress the word receives which influences the grammar of the word. The unit also discusses strategies for teaching word grammar in terms of lexicon, pronunciation and meaning. Some help is given by including the phonetic chart and a few tasks for practising vocabulary. 6.10 Review Questions 1. How is grammar of a word related to its meaning? 2. How do we decide the parts of speech, a word belongs to, by reading the words in context? 3. Pronunciation is an important aspect of word and is related to grammar. Give some examples to prove this? 4. What are some of the strategies to teach words in different contexts? 5. Design two tasks to show how the same word can be used in different situations to bring out its differences in meaning and grammar. 6. "Pronunciation is difficult to teach and learn." Do you think so? Justify your answer. 7. Discuss the semantic and conceptual representation of five words which you may use while teaching vocabulary. 8. What are the differences between inflectional morphology and derivational morphology in adding new words? Give examples. 9. Discuss the strategies you feel would be suitable for the learnerswhile teaching vocabulary, . 10. Learning the use of vocabulary can follow certain strategy. Suggest your strategies as a learner.

NSOU l PGEL - 1&2 337 Unit - 7 p Teaching Vocabulary Structure 7.1 Introduction 7.2 Objectives 7.3 The Techniques in Teaching Vocabulary 7.4 Online Resources for Teaching Vocabulary 7.5 Developing a Love for Vocabulary Learning 7.6 Word Association 7.6.1 Word Association ESL Vocabulary Activity 7.6.2 ESL Travel and Holiday Activities 7.6.3 Future Activities for ESL/EFL 7.7 Summary 7.8 Review Questions 7.9 References 7.1 Introduction Commonly, there are several techniques concerning the teaching of vocabulary. However, there are a few things that have to be remembered by most English teachers if they want to present a new vocabulary or lexical items to their students. It means that the English teachers want students to remember new vocabulary, then, it needs to be learnt, practised, and revised to prevent students from forgetting. 7.2 Objectives The unit istroduces you to l Techniques used in presenting meanings and form of vocabulary l Investigating new techniques l Vocabulary resources and activities 7.3 The Techniques in Teaching Vocabulary Techniques employed by teachers depend on some factors, such as the content, time availability, and its value for the learners. This makes teachers have some reasons in

338 NSOU l PGEL - 1&2 employing certain techniques in presenting vocabulary. In presenting one planned vocabulary item, the teacher usually combined more than one technique, instead of employing one single technique. Teachers, furthermore, are suggested to employ planned vocabulary presentation as various as possible.Here are some techniques of teaching vocabulary. A. Using Objects Using this technique includes the use of realia, visual aids, and demonstration. They can function to help learners in remembering vocabulary better, because our memory for objects and pictures is very reliable and visual techniques can act as cues for remembering words (Takaè, 2008). In addition, Gairns&Redman(1986) statethat real objects technique is appropriately employed for beginners or young learners and when presenting concrete vocabulary.Objects can be used to show meanings when the vocabulary consist of concrete nouns.Introducing a new word by showing the real object often helps learners to memorize the word through visualization. Objects in the classroom or things brought to the classroom can be used. B. Drawing Objects can either be drawn on the blackboard or drawn on flash cards.The latter can be used again and again in different contexts if they are made with cards and covered in plastic.They can help young learners easilyunderstand and realize the main points that they have learned in the classroom. C. Using Illustrations and Pictures Pictures connect students' prior knowledge to a new story, and in the process, help them learn new words. There are plenty of vocabularies that can be introduced by using illustrations or pictures. They are excellent means of making the meaning of unknown words clear. They should be used as often aspossible. The list of pictures includes: posters,flashcards, wall charts, magazine pictures,board drawings, stick figures and photographs.Pictures for vocabulary teaching come from many sources. Apart fromthose drawn by the teacher or students, they are sets of colourful pictures intended for schools. Pictures cut out of newspapers and magazines are very useful as well. Nowadays many readers, vocabulary books and coursebooks contain a vast number of attractive pictures that present the meaning of basic words. The teacher can use learning materials provided by the school. They can also make their own visual aids or used pictures from magazines.

NSOU l PGEL - 1&2 339 Visual support helps learners understand the meaning and helps to make the word more memorable. D. Contrast Some words are easily explained to learners by contrasting it with its opposite, for instance,the word" good" contrasted with the word "bad". But some words are not. It is almost impossible to contrast the words whose opposite is the gradable one. When the word "white"iscontrasted with the word "black", there is an "in between" word" grey".Furthermore,verb "contrast" means to show a difference, like photos that reveal how much weight someone lost by contrasting the "before" and "after" shots .Many more studies have also shown that vocabulary is best acquired if it is similar to what is already learnt (e.g. Rudska et al., 1982, 1985), it is not surprising that learning synonyms is a way to expand our vocabulary. Learning about synonyms is important also because this is how dictionaries are organised. Putting bilingual dictionaries aside, mono-lingual dictionaries essentially use words to explain words, and in this process, synonyms are often used (Ilson, 1991). A. Enumeration An enumeration is a collection of items that is a complete, ordered listing of all of the items in that collection. It can be used to present meaning.. In other words, this technique helps when any word is difficult to explain visually. We can say"clothes" and explain this by enumerating or listing various items. Teacher may list a number of clothes e.g. a dress,askirt,trousersetc ,and then the meaning of the word "clothes" will became clear.The same is true of 'vegetable'or"furniture", 'for example(Harmer 1991). B. Mime, Expressions and Gestures Klippel (1994) implies that "mime or gesture is useful if it emphasizes the importance of gestures and facial expression on communication.At the essence it can not only be used to indicate the meaning of a word found in reading passage, but also in speaking activity as it stresses mostly on communication. Many words can be introduced through mime, expressions, and gestures. For example, adjectives: "sad" ," happy"; mime and taking a hat off your head to teach hat and so on. Several studies have emphasised the role of gestures in second language (L2) acquisition (Gullberg, 2008). Teachers tend to gesture a lot (Sime, 2001; Hauge, 1999), especially when addressing young learners and/or beginners. It is commonly acknowledged that

340 NSOU l PGEL - 1&2 "teachinggestures"capture attention and make the lesson more dynamic. Using analyses of video recordings of English lessons to French students, Tellier (2007) determined three main roles for teaching gestures: management of the class (to start/end an activity, to question students, request silence, etc.), evaluation (to show a mistake, to correct, to congratulate,etc.) and explanation to give indications on syntax, underline specific prosody, explain new vocabulary, etc.). Teaching gestures appear in various shapes: hand gestures, facial expressions, pantomime, body movements, etc. They can either mime or symbolize something and they help learners to infer the meaning of a spoken word or expression,providing that they are unambiguous and easy to understand. This teaching strategy is thus relevant for comprehension (Tellier, 2007). However, its utility may depend on the kind of gesture used by the teacher. It has been highlighted that foreign emblems, for instance, may lead to misunderstandings when it is not known by the learners (Hauge, 1999; Sime, 2001).In addition to supporting comprehension, teaching gestures may also be relevant for learners' memorisation process. Indeed, many second language teachers who use gestures as a teachingstrategy declare that they help learners in the process of memorising the second language lexicon.Many of them have noticed that learners can retrieve a word easily when the teacher produces the gesture associated with the lexical item during the lesson. Others have seen learners(especially young ones) spontaneously reproducing the gesture when saying the word. The effect of gestures on memorisation is thus something witnessed by many but hardly explored on a systematic and empirical basis(Tellier, 2008). C. Guessing from Context Guessing from context as a way of dealing with unfamiliar vocabulary in unedited selections has been suggested widely by L1 and L2 reading specialists (Dubin, 1993).Nation and Coady (1988) claim that

| 100% | MATCHING BLOCK 43/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

there are two types of contexts. The first type is the

context within the text,

| 91% | MATCHING BLOCK 44/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

which includes morphological,semantic and syntactic information in a specific text, while the second one is the

general context, or non-textual context,

| 100% | MATCHING BLOCK 45/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

which is the background knowledge the reader has about the subjects being

read. Williams (1985) agrees with Nation and Coady in considering the specific context as ''the other words and sentences that surround that word..... it follows that other words in the context of the unfamiliar word often 'throw light on' its meaning. These other words can be found in the sentence containing the unknown word or other sentences beyond the sentence of the unknown item. Similarly, McCarthy (1988) sees context as within the text itself NSOU l PGEL - 1&2 341 i.e. the morphological,syntactic, and discourse information, which can be classified and described in terms of general features.

| 100% | MATCHING BLOCK 46/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

Learning from context not only includes learning from extensive reading, but also learning from taking part in a conversation, and learning from listening to stories, films, television or the radio (

Nation, 2001).

| 100% | MATCHING BLOCK 48/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

In order to activate guessing in a written or spoken text, there should be

four elements available: the reader, the text, unknown words, and clues in the text including some knowledge about guessing. The absence

of one of these elements may affect the learner's ability to guess. Furthermore, this technique encourages learners to take risks and guess the meanings of words they do not know as much as possible. This will help them build up their self-confidence so that they can work out the meanings of words when they are on their own. There are many clues learners can use to establish meanings for themselves, such as illustrations, similarity of spelling or sound in the mother tongue, and general knowledge(Walters, 2004). The

Eliciting technique is more motivating and memorable by simply giving pupils a list of words to learn. D. Translation Even though translation does not create a need or motivation of the learners to think about word meaning (Cameron, 2001), in some situations translation could be effective for teachers, such as when dealing with incidental vocabulary (Thornbury, 2002), checking students' comprehension, and pointing out similarities or differences between first and second language, when these are likely to cause errors (Takaè, 2008). There are always some words that need to be translated and this technique can save a lot of time. 7.4 Online Resources for Teaching Vocabulary One resource that teachers may explore to model and teach English words and phrases is the Website, http://freerice.com/, which calls itself "the world's only vocabulary game that feeds the hungry." Through the World Food Programme (WFP), this site allows those with Internet access to check their vocabulary knowledge using multiple-choice questions. For every correct answer 10 grains of rice are donated through the WFP to help feed the hungry. Your students can even practice listening to target words by clicking on an icon, 7 Vocabulary and Its Importance in Language Learning which can help with hearing and repeating the spoken form. You might bookmark this site and share it with your students.

342 NSOU l PGEL - 1&2 Task 1 Explore other vocabulary resources matching your learner needs. 7.5 Developing a Love for Vocabulary Learning English vocabulary is challenging. As Ur (2012) aptly stated, unlike grammar, "lexical items . . .are an open set, constantly being added to (and lost, as archaic words gradually go out of use)" (p. 3). Perhaps this situation is most evident with computer-related vocabulary, such as the Internet, e-mail, and Web browser, which was not commonly used even 15 years ago. Now, though, everyone seems to know these items and how important such realities are to their lives and work. English vocabulary's expansion is exciting, but it also means that teachers and students alike need to be in the habit of learning vocabulary. People can expand their English vocabulary knowledge in many different ways. 7.6 Word Association

Word Association is an ESL vocabulary activity that can be used to introduce a new topic, lesson, theme, etc. You have to write a single relevant word in the middle of the board or paper and have students take turns adding as many words or images related to that word as possible.

This word association activity is an ideal way to help students activate prior knowledge that they might have about a topic. Or, you can use it at the end of a unit to show students how much they have learned!

NSOU l PGEL - 1&2 343

The key to having a happy ESL classroom is to mix things up in your classes. After all, nobody likes doing the same thing over and over again. Try out some new activities today...here's a simple vocabulary one you can start with 7.6.1

Word Association ESL Vocabulary Activity Skills: Reading/writing/speaking Age: UG level Materials Required: Worksheets or butcher paper and pens Word Association is an ESL vocabulary activity that can be used to introduce a new topic, lesson, theme, etc. You have to write a single relevant word in the middle of the board or paper and have students take turns adding as many words or images related to that word as possible. For example…the centre word could be "school." Some of the other branches could be subjects (Math, English, History, Gym, etc) while another branch could be school supplies (pen, paper, ruler, etc.) Finally, you might have one about recess or break time (play games, tag, climb, jump, swing set). And keep going with more associations from there. The subject or topic can be whatever you're teaching that day. Another topic it works well for is body parts. Check out some more parts of the body activities here. For large classes, have students work in groups with separate pieces of paper taped to the wall or the top of the table/ grouped desks. After a given amount of time (3-5 minutes, or when you see no one is adding anything new), discuss their answers.

Teaching Tips for This ESL Vocabulary Activity For large classes, butcher paper works best, so more students can write at one time. If that isn't possible, have 5-6 board markers available. If using butcher paper, prepare in advance, including taping to the wall, unless students will be working at their desks. Finally, if students will be working at their desks, write the word on each table's page in advance, but don't hand them out until you have given your instructions. This activity is often quite a fun way to start off a holiday themed class. For even more ideas, check out: ESL Christmas Activities and Games.

Warm-ups Travel and Holidays ESL Activities, Games, Worksheets can be used

344 NSOU l PGEL - 1&2 If you need some fresh, new ideas for the ESL travel and holiday unit that you can find in most textbooks, then you're in the right place. Here you find 15 ideas for games and activities, along with travel vocabulary, worksheets and lesson plans. 7.6.2 ESL Travel and Holiday Activities: Top 15 to try out with students. Activity 1: Plan a Trip Have your students plan a dream vacation in English! Instead of researching in their first language, use Google in English. In order to practice writing, keep notes only in English. Here is an example of how you might plan your trip using English. You can have your students add as little, or as much detail as you'd like. However, the point of the activity is to practice writing in point form which is useful when writing outlines for tests or essays. Day 1: Monday, January 1 Fly Seoul (3pm) — < Vancouver (7am) Rest, relax Day 2: Tuesday, January 2 Stay Hotel ABC Tour Stanley Park Eat Pub XYZ dinner Day 3: Wednesday, January 3 Check out Hotel ABC Rent car Budget 123, Drive Whistler Rent skis shop ABC, Go Skiing Lunch ski lodge Check in Hotel ABC Whistler Bed early Procedure: Give students time to do some Internet research about a place they want to go. It's helpful to specify the number of days. I generally make a rule that they must do this research in English. Suggest some helpful websites where they might like to start (Trip Advisor, Air Bus, etc.).

NSOU l PGEL - 1&2 345 Students can make a day-by-day itinerary of what they're trip is going to look like. They can share about their trip with the class or turn it in for a graded assignment. Activity 2: A-Z Alphabet Game If you know that your students already know a fair bit about holiday and travel, you may want to try this quick warm-up game. Or, you could consider using it as a review game at the end of a class. The way it works is that students, in pairs or small groups write down the alphabet on a piece of paper. Then, they have to think of one travel related word for each letter. It doesn't have to be done in order. For example: B: Beach F: Food H: Hotel P: Passport S: Sun The winner is the team with the most completed letters at the end of the allotted time. Do you want to find out more? Check this out: A-Z Alphabet Game ESL. Activity 3: Travel Word Association This is nice ESL activity to do if you know that your students have studied about travel and holidays before. They can shout out vocabulary words related to this and you can make a mind map or sorts on the board. Group similar things together. For example, articles of clothing. Activity 4: Postcards If you can get your hands on some cheap postcards or have some laying around your house or teacher's office, try out this fun writing activity. It may just be the novelty factor, but students seem to love it. This activity is ideal for working on common greetings, the past tense, using descriptive words, as well as using synonyms to avoid repetition. Distribute the postcards to the students. You can do one per student, or put the students into pairs. They have to look at the picture on the front of the postcard and imagine that they went on this vacation. Then, they can write about their trip to a friend or family member.

346 NSOU l PGEL - 1&2 Next, the students trade postcards with another student or group. After reading them, they can write a response back of at least a few sentences. Finally, you may want to display them around the class as they're colourful and fun and other students may enjoy reading them! Procedure: Give each student or pair a postcard. They look at the picture and imagine what they did on that vacation, and then pretend that they're writing to a friend or family member. Exchange postcards and another student or group has to write a response to what they read. Display the postcards around your classroom (optional). Activity 5: Travel or Holiday Videos I'm ALL about using videos with my ESL/EFL students. They're fun, engaging and a nice way to grab student's attention and introduce a topic. Of course, you can base an entire class around one too if you design the activities well. If you want to find out more about using them in your classes and some activities and games to do with them, you'll want to check this out: Using Videos for Teaching English. 7.6.3 Future Activities (FA) for ESL/EFL FA 1:

100%	MATCHING BLOCK 55/83	W

Future Tense Surveys I'm ALL about using surveys in my English classes. They are one of the most versatile ESL activities out there and can be used for a ton of different grammar points and topics. However, they lend themselves especially well to talking about the future. The questions you include can be related to the following: After class plans Vacation plans After graduation Marriage and kids

FA 2:

94%	MATCHING BLOCK 56/83	W

Just a Minute This is a fun ESL activity that gets students talking for one entire minute about a certain topic without stopping. You can turn it into a fun, interactive activity by putting students

NSOU l PGEL - 1&2 347

100%	MATCHING BLOCK 77/83	W

into groups of four and requiring that each student who was listening ask a follow-up question or two at the end of the minute. The key to using Just a Minute with the future tense is choosing good topics. Check the previous future activity for some ideas.

FA 3:

100%	MATCHING BLOCK 57/83	W

Future Sentences Activity- Videos I'm ALL about using YouTube or English Central videos in my classes. You can find one on literally every single topic, vocabulary set or grammar point under the sun. But, there's more to it than just popping the video on and chilling out. There are so many things you can do with the, pre and post-watching. Or, you may want to mix things up and let another teacher do the heavy lifting and explain the differences between the tenses. I mean, I'm sure my students get tired of hearing me talk sometimes!

FA 4:

100%	MATCHING BLOCK 58/83	W

Find Someone Who Bingo Usually I use this Bingo game as an icebreaker activity on the first day of class. However, you can very easily adapt it to make it an ideal exercises for future tenses. Instead of asking icebreaker questions related to hobbies, family, etc., you could make questions related to the future.

FA 5:

Is that Sentence Correct? If you're working on future forms and constructing grammatically correct sentences with your students, then you'll want to check out this activity. It's very simple and makes an ideal review at the end of a class, or beginning on the next one. The way it works is that you write a few sentences on the board using the future tense. Some of them will have errors that can relate to either form or meaning. Students have to work together to correct the errors.

FA 6:

Going to Activities: Dictogloss If you want to challenge your students' listening and writing skills, then you'll want to consider using Dictogloss. The way it works is that you find a passage of some kind at a slightly higher level than your students are at. Then, you read it at a normal pace and students have to work together to recreate the story.

FA 7:

Listen for One Specific Thing (Future Forms) If you do listening with your students, one really valuable thing you do is to get your students to listen for just one specific thing. In this case, it'd be examples of people talking about the future using will/going to/simple present or other future tense constructions. 348

NSOU l PGEL - 1&2

The best places to find listening passage related to what you're teaching are the textbook that you're probably using.

FA 8:

Picture Prompt for Making Future Predictions A fun way that you can get students using future tenses to make predictions is to find an interesting picture of some kind that lends itself well to different future possibilities. Then, students have to tell you (or a partner) what they think is going to happen.

FA 9:

Talking about the Future Exercises- Proof-Reading + Editing I sometimes think that if students only practice something by speaking, it never really becomes solid and gets to the level of actually "knowing." This is where written practice is ideal for an ESL/EFL class. And one of the ways to do is to get your students practicing some proofreading and editing. Find a passage (or write one yourself) with lots of examples of will/going to. But, make some mistakes and use them in the wrong situations, or make the grammatical construction wrong. Then, students have to go through the worksheet and find the mistakes.

FA 10: Yes/

No Question Games and Activities If you've taught your students about the future tense before, you'll probably notice that there are a lot of question/answer style of activities. That's because it's difficult to talk about the future without talking about future plans and of course, you'll need to have some questions for this in most cases.

FA 11:

Conversation Starters If you ask your students what they want to work on in your speaking or conversation classes, they'll often say "free-talking." This can be a little bit difficult when you just tell your students to, "Talk about the future!" It helps to give them something more concrete and specific. That's why I like to make some conversation starter questions that students can talk about. Some students will only make it to the first 1-2 questions, while others will make it through all 10 in the allotted time. The important thing is that students are talking in English!

FA 12:

Future Board Games I LOVE to play board games in real life, so like to introduce them into my classes too. However, if you want to target a specific language concept, you'll probably need to

NSOU l PGEL - 1&2 349

make your own. It's very easy to do this with future sentences. You can write some questions on the board game like the following: What are you going to do this summer? Where are you going to eat lunch today? Or, you may want to write some answers and students have to think of the question. I'm going to take an English class this summer. I will probably have dinner with my friend tonight.

FA 13:

My Future Plans In this simple activity, students write down a few of their future plans using the correct grammatical construction. I generally narrow it down to a more specific topic like weekends plans. Then, students have to give me all their papers with plans using future forms. Depending on the class size, I do one of two things. For smaller classes, I'll read out the papers and the entire class can guess who it is. For larger classes, I give each student one paper and they have to walk around asking questions to find out who it is.

FA 14:

Plan a Holiday One task based activity that I like to do with my students for the future tenses is to tell them that my parents are coming to visit their country for a week and that they have to plan a trip for them. Think about that—it's all future tenses, right? Then, they have to do a short presentation in front of the class and I choose the trip that my parents will like best!

FA 15:

Just One Question Survey Activity Try out this ESL survey activity to round up our unit on future plans. The way it works is that students work in pairs to think of one interesting question related to a future plan. Then, they have to survey their classmates, compile and report the results. It's interactive, engaging and lends itself well to using lots of future tense sentences!

FA 16: Future Forms Telepathy Game Check out this video on YouTube for a fun future sentences activity you can try out with your students today:

Future Will vs Going To: What's the Difference Between these Future Forms? 350

NSOU l PGEL - 1&2

Although when to use going to and will may seem complicated, it's actually not! Basically, here are the rules: You can use either will or going to when making predictions about the future with no difference in meaning (I think it's going to snow tonight/I think it will snow tonight). Will is used to express future actions decided at the moment of speaking (Who can turn off the lights? I will). Going to describes future plans decided before speaking (I'm going to go to the University of ABC next year). Will is used for a future fact (The sun will set tonight). Going to is useful for something that will happen right now (Hurry up! We're going to miss the bus). What about the Simple Present to Express the Future? Have you noticed some sentences that use the simple present to talk about the future? Here are some examples: The plane takes off at 7pm. The bus leaves at 2. Notice the similarity? The present simple is used to express a future time or schedule of some kind. 7.7

Summary In this unit we have focussed on some of the techniques that can be used fruitfully in our classroom to develop learner vocabulary. In doing this we have not only provided strategies of teaching, but also suggested ways of motivating the learners to develop an interest in building a good vocabulary. For this we have helped you with a bunch of activities that can be carried out in the class, which engage the learner and help them learn new words in a relaxed manner. Besides these, we have also provided sources, both offline and online, which can be exploited to learn new words. 7.8 Review Questions 1. What aspects of English vocabulary currently interest you?
NSOU l PGEL - 1&2 351 2. Which two or three strategies for learning English words and phrases do you model and teach? 3. How best can you use the net resources to develop your vocabulary? 4. Are you aware of any vocabulary games that you played as a child? Describe. 5. How can vocabulary games be used in the classroom? 6. Mention some sources of vocabulary games that you come across in newspapers and magazines. 7. Suggest ways of using vocabulary games from newspapers and magazines in your classroom. 8. What are the techniques of teaching vocabulary, that can be guessed from the context? 9. How does the first language contribute to learning vocabulary in ESL? 10. Describe a future activity of teaching vocabulary that you may want to utilise in your classroom? 7.9 References

NSOU l PGEL - 1&2 353 Unit - 8 p Vocabulary Exercises Structure 8.1 Introduction 8.2 Objectives 8.3 Word Formation Worksheets 8.4 Dictionary Skills 8.5 Idioms in ESL Learning 8.6 Tips for Teaching English Idioms Wisely 8.7 References 8.1 Introduction: In the previous unit you have learnt in detail the need for vocabulary and the ways in which we can develop our vocabulary. You have also been introduced to the strategies and activities that can be used for this purpose. This unit is a continuation of the same work, and is entirely devoted to providing you with several tasks and exercises. This will not only help you become familiar with tasks, but also enable you to design new tasks based on your knowledge of various types of items that can be used. 8.2

Objectives

At the end of this unit, the learners will be:

a. acquainted with a large number of tasks for teaching vocabulary b. able to analyse a task for its components and measure its strengths and weaknesses c. able to develop some tasks on their own for use in the classroom.

362 NSOU l PGEL - 1&2 8.5 Idioms in ESL Learning: Teaching Idioms Is Teaching Fluency Colourful language and powerful imagery make idioms a lot of fun for ESL learners. When you throw cats and dogs in a scene where they are falling from the sky, it's hard to know exactly what a phrase might mean. It's almost like a code-breaking game, where students must learn that when certain words come together in a phrase, they can mean something very different. It's important to not only teach the meaning of idioms, but to also teach how to use them correctly and effectively. When a non-native speaker uses an idiom correctly, he or she will sound very fluent. But, on the other hand, if they bumble the phrase, they will sound the exact opposite. Learning idioms is appropriate for intermediate to advanced students. If you teach an idiom lesson to beginners or low-intermediate learners, you may well be putting them in the bumbling category mentioned above. Teach idioms wisely and sparingly to ensure your students' success. 8.6 Tips for Teaching English Idioms Wisely Provide idioms in context, so students can fully understand the meaning. Be sure to provide a sample conversation around it. For example, take the following dialogue featuring the idiom "to be a chicken" when at a local amusement park. Jack: Ooh, wow. Look at that roller coaster, Jane! It goes upside-down! Jane: My stomach aches just looking at it. I will not ride that. Jack: Ah, come on. Don't be a chicken! Teach idioms in spoken form, not written, and explain to students how they are conversational, rather than formal. Have students practice the idioms in dialogue to help them understand they're used in spoken colloquial English. Be sure to explain how the individual words have different meanings from the whole idiom phrase. For example, how much does an arm and a leg actually cost? Who knows? Don't just hand out a long list of idioms. Be sure to provide a small selection of 5-10 idioms (or less!) and explain each one. If you provide too many examples, it'll simply turn into an introduction of what an idiom is, rather than how to actually remember the meaning and use one effectively in dialogue.

That brings us to just how important it is to help your students understand idiom usage. Easy as Pie: Everything You've Gotta Know to Teach English Idioms Effectively 4 Exercises to Help Your Students Understand Idioms 1. Teach idioms with pictures Provide a picture to explain the context. This works best if you show an image that humorously illustrates the literal meaning of the idiom. It will make students laugh, but also help them understand or guess what a phrase means. Idioms are full of colourful imagery, perfect for a flashcard or photo. Show the picture to your students and have them guess the meaning of the idiom. From there, give examples of when you would use it and how the words and the actual meaning of the idiom are different. Looking for a good resource? Check out this website for an example of great images to explain the meaning of idioms. And for some beautiful images depicting idioms, be sure to check out this site. 2. Use small groups to present dialogues Break your class into small groups and have each group look up two idioms. Dave's ESL Cafe has a great collection of idioms and their meanings for student reference. Before they look them up, have the students make an educated guess on what the idiom means, and then let them search for the real meaning. Have students explain the meaning to the rest of the class and use the idiom in a short sample dialogue. 3. Introduce Amelia Bedelia No, Amelia! You don't actually throw the tent into the woods! You don't have to be a kid to adore Amelia Bedelia and her literal mind. She's the perfect teacher for an idiom lesson. Visit the publisher's website for activities, book excerpts, worksheets and games. While the material is oriented for children, it's also a great way for older students to learn English idioms through a fun and quirky character! 4. Use a theme A great way to teach idioms is to use a theme. For example, you could use all weather- related idioms (see this great worksheet!). Or teach sports-related idioms with this helpful worksheet. By using a common theme to teach idioms, it's easier for students to grasp the meanings of the phrases, and see how similar words can mean very different things.

Some idioms to talk of: 1. (to be) A fish out of water Meaning: to feel awkward or uncomfortable, usually in a new situation Teaching tips: Start the lesson by talking to your students about feeling awkward. What makes them feel awkward? Give an example of what makes you feel awkward. Then, present the below dialogue. Sample dialogue: Sam: Gee, learning to rollerblade isn't easy. I keep falling down! Sarah: I know, it's so hard! I feel like a fish out of water. 2. To be broke Meaning: to be out of money, to have no money Teaching tips: Provide the students with two images. One image should be of a broken item (such as a broken pencil) and one should be an image of a person with no money

(this is a great one). Explain how both images mean "to be broke." Then, present the following dialogue and have the students match the correct image to the meaning of the idiom. Sample dialogue: Sam: I really want to buy that cool hat. But I'm completely broke. Sarah: Would you like to borrow some money? Sam: That'd be great. I promise, I'll pay you back later. 3. Rule of thumb Meaning: an unwritten but generally accepted guideline, policy or method of doing something Teaching tips: Talk with your students about laws of society. Which ones are actual legal laws? Which ones are social norms or generally accepted rules? Make a list of each. Then, introduce the "rule of thumb" idiom. Practice with the below dialogue. Sample dialogue: Sam: These potato chips are so delicious. Want some? Sarah: Sure, thanks. Sam: Ooh, sorry! I dropped that handful. Well, it's the 5-second rule. They were on the ground less than 5 seconds, so it's still okay to eat them. Sarah: What? Yuck. That doesn't sound like a good rule of thumb. Give me some that haven't dropped on the ground, please!

4. (to be) Up in the air Meaning: undecided or indefinite, usually because often because other matters should be decided first Teaching tips: Present this image, featuring the idiom "up in the air." Talk to the students about what it means, and then present the following dialogue. Afterward, talk about what your students are currently up in the air about. Then, have them come up with their own sample dialogue. Sample dialogue: Sarah: Hey, Sam! Remember, you need to let us know by tomorrow if you're going to go on the class trip with us. Sam: That's right. I'm still up in the air. I need to figure out my work schedule first and see if they'll let me have a few days off work. Sarah: I see. Well, let us know. I hope you can come! 5. (to be the) Devil's advocate Meaning: to present a counter argumen

Teaching tips: After explaining the meaning of this idiom and practicing the following dialogue, present the class with a debate exercise. Split the class into two groups, and have each side come up with a different argument to the same issue. (Choose an issue you think might be relevant to your students). Have them debate the issue, using the idiom when appropriate. Sample dialogue: Sam: I just can't understand why healthcare is so expensive in the United States. It just doesn't seem right. Sarah: Tell me about it. But, to be the devil's advocate, doctors get paid more in the US than any other country. And so that attracts the best doctors in the world who possibly provide some of the best care in the world. Sam: Well, maybe. But it still shouldn't be so expensive. 6. (to) Give someone the cold shoulder Meaning: to no interest in someone or something, to ignore Teaching tips: Provide the sample image and have the students guess what they think the idiom means. Ask the students if they've ever given someone the cold shoulder. Or, if they've ever received the cold shoulder. Practice below dialogue. Sample dialogue: Sarah: I ran into Sallie yesterday and we had a nice conversation at the coffee shop, catching up with each other. Sam: Oh, really? Last time I saw her, she gave me the cold shoulder. I couldn't figure out what I had done to make her angry.

368 NSOU l PGEL - 1&2 Sarah: Well, it probably doesn't help that you are dating her best friend. 7. Happy camper Meaning: a person who is happy and cheerful Teaching tips: Explain the idiom and practice the sample dialogue. Ask your students what makes them happy. Also, practice using the idiom in the negative. Such as, "I'm not a happy camper today." Sample dialogue: Sam: Sarah, why are you so happy today? Sarah: Well, I made a perfect score on my English test. I also won first prize in an English writing contest and received a $100 prize. So yes, I'm a happy camper today. Sam: Wow, congratulations! 8. (to) Sit tight Meaning: to stay where you are

NSOU l PGEL - 1&2 369 Teaching tips: Explain the definition of the idiom and practice the dialogue below. Have the students come up with scenarios where they could use this idiom in context. Sample dialogue: Sarah: Sam, are you okay? What happened?! Sam: I fell down the stairs and now my leg really hurts. Sarah: Sit tight! I'll go call 9-1-1. 9. (to be) Head over heels (in love) Meaning: to be really or completely in love with someone Teaching tips: Show this image explaining the idiom. Talk to the students about being in love. Ask which students are currently in love (guaranteed to elicit a few giggles from your students!). Practice the below dialogue. Sample dialogue: Sarah: Sam, what are you writing? Sam: I'm writing a letter to my new girlfriend. Sarah: Ooh, really? You just wrote to her yesterday. You must be head over heels! Sam: I really am. I want to marry her. 10. (to) Get the ball rolling

370 NSOU l PGEL - 1&2 Meaning: to get started Teaching tips: Write the idiom on the board in front of class. Have the students make guesses on what it means. Then, practice the below dialogue and have them guess again. Sample dialogue: Sam: Have you started the English class project yet? Sarah: No, not yet. I need to ask the teacher a few more questions first. Sam: You better get the ball rolling! The project is due next week! Sarah: Don't worry about me. I'll get it done. [Illustrative pictures used are adapted from Google Web Resources] 8.7 References: https://www.fluentu.com/blog/educator-english/teach-english-idioms/ 1. Takac V P (2008). In the earlier modules you have looked at some aspects Grammar and Vocabulary. In this module we shall take a look at how some of the literary pieces can be used for teaching language. This will be interesting and also a little challenging. So let us begin with a revision of what you have learnt in the first two modules. Quickly answer the following questions in your own words based on the understanding of earlier modules. a. What is the importance of learning grammar to learning language? b. How many types of grammar are you familiar with? c. What are some of the common types of exercises used for teaching grammar? d. How essential is it to have a large vocabulary? e. Do we use all the words we know? How do we classify words we know based on our use? f. How do we develop our own vocabulary?

NSOU l PGEL - 1&2 373 Your response: a. b. c. d. e. f. 9.2 Objectives

| 81% | MATCHING BLOCK 74/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

At the end of reading this unit, the learners will be able to: l Understand the

salient features of different genres of literature l Identify a given text as part of a specific genre l Find ways of using a literary text for teaching language skills. 9.3 Revision of Module 1 and Module 2 Let me give you some information regarding the previous modules. Grammar and language learning go hand in hand in a formal situation. That is, when we learn a new language under a tutor in a school, we learn it better when we become aware of grammar. (Mother tongue is learnt without the need for grammar.) Grammar helps us control the types of errors we make while using a language. There are quite a few types of grammar. They are broadly divided into two groups, the prescriptive grammars and descriptive grammars. Prescriptive grammars give us rules and ask us to follow the rules – e.g. Wren and Martin Grammar. Descriptive grammars tell us how language works or functions and guide us to analyse our own use of language. The modern day grammars, popularly known as Functional Grammars or Communicative Grammars are examples of this. Grammar is best learnt with practice. (This is similar to learning mathematics, you don't need to read, but do the sums and practice.) Similarly, grammar exercises help us gain competence in language. Some of the popular exercises are – blank filling, matching,

374 NSOU l PGEL - 1&2 sentence construction, transformation, spotting errors, etc. There are more types than what is mentioned here. Grammar provides us with knowledge of how to use language while the words help us capture the content of what to say. More important than grammar is knowledge of words. This is called vocabulary. We all know quite a few words in the languages we use. We do not use all of them in the same manner. Some words we understand when we read or listen to them. Such words are part of our passive vocabulary. There are other words which we not only understand, but also use it in our language to speak and write. Such words form part of our active vocabulary. In English, there are more than a million words (ten lakhs). Nobody who knows English knows all these words. We need just a few thousand words in our daily life to communicate with others. But this stock of vocabulary (called repertoire) keeps changing constantly. This means, we learn some new words and forget the words we already know. Thus the size of our vocabulary keeps changing constantly. How do we ensure we have good vocabulary? We need to keep reading. This is one of the best methods of learning new words, and retaining them in our memory. We also need to consciously use the words we come across, and this could be while reading or listening to someone. The larger the vocabulary one has, the better a communicator the person will be. This briefly summarises the previous two modules. Now we move to the present module on using literary texts. In this module, we have four units dealing with an introductory module talking about the importance of literature while the other three modules are pedagogic in their orientation. 9.4 Literature and its Genres Let us begin with a question. Do you know what literature is? How is it different from language? I am sure these words, literature and language are familiar to you, and let us quickly take a look at these two words. What is literature? A good dictionary defines it as 'a body of written work'. Literature is also something that lasts long (e.g. we still consider the works of Kalidasa and Shakespeare far beyond their age) and impacts the human life. Should literature be necessarily fiction or drama or poetry? Then what about terms like – medical literature, literature of science,

NSOU l PGEL - 1&2 375 literature of inventions, literature of historical facts, literature of music, etc. Literature can focus on any subject from medicine to music, engineering to ecology and science to social events. The canvass is really wide. What does this mean? In language teaching, we can use literature of various types and use them as texts for interpretation and language learning. However, for our purpose in this unit, we will look at literary texts and make references to other types of literature tangentially. There are quite a few definitions of literature available from noted authors. One of the definitions I personally like is 'Best words in the best order' by Coleridge. He used this definition with reference to poetry, but this is equally applicable to all genres of literature. If we accept this definition for our purposes of language teaching how useful is it? Language teaching has a focus on developing a learner's proficiency to use language. This is best done by exposing the learner to samples of good use, and literature is obviously one of the best forms of language expression. Hence it is certainly a valuable input to language teaching. Literature is perceived as different genres. What do we mean by genre? Would you like to respond? Your response: Genre means type. You must be familiar with the words 'genus' (singular) and 'genera' (plural). (You must be familiar with the term 'generic medicine' which is becoming popular these days). These words are taken from the science of biology and used while classifying animals and plants. Genus denotes a group of plants or animals which can have further smaller divisions called 'species'. Let us not go into those details. Literature is expressed in many types, and each type is called a 'genre'/ÈʹQnrY/ (this has a French origin, so check its pronunciation properly). We have novels (fiction), prose, poetry, drama, graphic novel, fantasy, science fiction, narrative, biographies, autobiographies, travelogues, diaries, and many more types. You may have read all these, or at least a few of these. You may in the space given below mention a work or two from each category. I will not give any examples. Recall the English textbooks you read in your higher secondary level or college days at the undergraduate level. You must have read a few essays, short stories which were anthologized. Similarly a few poems must have been put together in the form of an anthology. Along with these two, you must have read one or two novels and one or two plays. Do you remember the names of the novels and plays you studied? Can you mention those names in the space given below?

376 NSOU l PGEL - 1&2 a. Plays b. Novels c. Titles of some short stories d. Titles of some essays e. Titles of some poems. (If possible give a brief summary of each one of them. It is not compulsory though.) This task was to see how familiar you are with literature and the various genres that you have studied as an undergraduate student. How helpful was the study of literature in developing your language. The fact that you are able to read these lessons, understand them and also respond to the questions is a sign that you have learnt language reasonably well. But these uses need to be specified properly. Let us try and do this before concluding the unit. (Besides genres mentioned above, we also have other genres such as autobiography, biography, historical novels, fantasy, picaresque, science fiction, crime fiction, travelogue, and adventure stories.) Can you guess some of the benefits of using literature in language teaching? Note down your points here: Your response: 9.5 Roles of Literature in Language Teaching Literature has other roles to play in teaching language. If you recall your lessons in applied linguistics, one of the features of language is transmission of culture. Culture can best be taught using stories, exposing the learners to life in different parts of the world, and life sketches. All these form integral part of literature, and it becomes an excellent source for teaching appropriate language use in our society. Literature helps develop good reading skills. A literary text can be read independently (without the teacher's help) and this makes for developing good vocabulary as well as proper use of language. Good reading habits besides developing good comprehension skills also develop vocabulary and strengthen the writing skills of the learner. Plays which form an integral part of literature, help learners develop good spoken skills – expressions appropriate to context including various forms of addressing other people. The skills so developed can be harnessed to read and understand content subjects as well. This is the primary purpose of language teaching. Language, we should remember, is taught as a service subject in our schools and colleges.

NSOU l PGEL - 1&2 377 9.6 Summary Let us quickly recall what we have said so far in this unit. We began with a revision of what was learnt in the first two modules on Grammar and Vocabulary. Subsequently, we moved to defining literature and its uses. Finally, we looked at how using a literary text is useful in teaching learning language. Now you have some idea of why literature is used in language teaching. Here are a few books for you to read on this subject. 9.7 Review Questions a. How do we define literature and what are some of its features? b. What are the characteristics of good literature? c. Does literature become outdated with time? Give reasons d. How many genres of literature are you familiar with? Name them and given an example of each genre you have known. e. When were you introduced to the concept of genres in literature? f. What does a good anthology of prose include? Does it represent different genres? g. Is literature basically different from language? h. Do you think literature can be used for language teaching? i. What are some of the strategies for using literature in the language class? j. What are some of the literary texts you have read recently, and how do you think these have helped you learn language? k. What are some of the language skills that can be best developed using literature? l. Does teaching with a focus on language neglect literary studies? 9.8 References a. Lazar, Gillian. (1996). That was a general discussion, and in this unit, we shall take up one of the genres – the prose. In discussing teaching of prose, we will look at different types of prose texts we can have and illustrate each type with a small sample. Towards the end of the unit, we shall discuss in detail how a prose piece can be taught. 10.2 Objectives

| 80% | MATCHING BLOCK 75/83 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

After going through this unit, the students will be able to: l Understand the term

prose as a genre of literature. l Identify different types of prose texts. l Understand how a piece of prose can be analysed for teaching l Develop a lesson plan for teaching prose.

10.3 Prose and its forms Let us begin with an understanding of the term Prose. Perhaps, it is easier to define it using negative terms: It is not poetry, it is not drama. A piece of writing that is neither a poem nor a play can be called as prose. But this is not helpful. Let us go about it a little differently. As children, you must have listened to several stories. These stories must have been narrated by someone who was much older than you. (India had this excellent tradition of storytelling by the grandparents. Unfortunately, we are fast losing this practice due to the increasing number of nuclear families.) The stories that were narrated were oral. The same stories can be written down for many people to read. While writing the stories, we make some changes, for example, the long pauses, some repetitions, a few diversions, a few questions that make the story interactive are sacrificed. The story that is written will be a contiguous narrative which an individual can read and enjoy. The writing of a story in this manner is one form of prose. Read the last sentence of the previous paragraph once again. It says 'one form of prose', which means there are other forms as well. Yes, there are. Now you are familiar with one form of prose. Think of other pieces that look like a story, but are different in their purpose and make a list in the space given below: Your response: 10.4 Functions of Prose Forms Have you read an article in a newspaper? Do you receive letters on email or by post? Have you in your schools written science laboratory journals? Have you come across reports? And finally, what about the unit you are reading now? All these and many more examples constitute what we call 'prose'. Each piece has a different function to perform, and let us classify prose based on the functions they perform. 10.4.1 Narrative We began with a story. What type of language function is it? I am sure this is an easy question, and you know the answer to this. Yes, it is narration. A story is narrated. A story is a narrative. Stories can be of different length. Some stories are long, some are very short, some have a definite ending, some do not have any ending (open-ended stories) etc. A very long story is called a novel. You have read several novels in English

and perhaps in Bangla. You know how long a novel can be. Some novels are very long running into nearly a thousand pages. Some are hardly sixty to eighty pages. The length of a novel does not decide its quality, there are other factors, and to discuss that aspect is not within the scope of this unit. What are the features of a narrative? There is a narrator, or a person who tells the story or something which is in the form of an anecdote or an incident. Often the narrator can be the author. The narrative can be in the first person or the second person or the third person. More often than not, narratives are in first person. This is to ensure the involvement of the reader. Task: Can you mention some instances where narration is essential in our life? Your response: Normally children resort to narrating the day's happenings in the school as soon as they come back. We tend to recall the day and narrate some special incidents and share them with our friends and family members. We narrate the stories of movies we have watched and discuss them with friends. While writing we narrate some incidents when we write letters. Very short narrations related to life of a person are called 'anecdotes'. These are very popular, and you have several famous anecdotes about Akbar and Birbal, the conversations between Ramakrishna and Narendra (Vivekananda). 10.4.2 Descriptive The second type of prose is what we call a 'descriptive' piece. This provides for description of an object, or a place or a person or an event. In our classroom we may be asked to describe something – an animal, or a plant, or an object. (This was a common practice in early school days.) A description is objective and it needs to be systematic. When a person reads the description, he/she should be able to imagine the object. This often happens in your textbooks. A diagram is given, and the lesson describes what is there in the diagram – a picture describes something without words, and a paragraph draws something without lines. This is a good source of language exercises in our classrooms. We use descriptions in our letters, our reports, the answers we write in our examinations, and for several other purposes. Descriptions are also used in articles that you read in the newspapers, and these may relate to some incidents of the recent or distant past.

Task: Mention a few instances when you use descriptions in your writing? Your respnse: We often do this in our letters, reports, and complaints. Quite a lot of writing is descriptive in nature. 10.4.3 Explication This is the third type of prose which is also quite popular. Here we explain things. Generally, when concepts need to be presented to an outsider, explication becomes an essential feature. For example, I am using a mixture of narration and explication. Occasionally, I am also using a bit of description, but largely, this piece of writing is explication and narration. When you read books on science, or other content subjects, they have detailed explications. You may recall the lessons you have read in science, geography, social sciences and other subjects where concepts like transpiration (biology), savannah grasslands (geography), and parliamentary system of governance (social sciences) are explained. In life we resort to explaining things with children and youngsters to help them understand difficult concepts. To the categories mentioned so far, we can add terms like extrapolation, critical analysis, etc. We shall not discuss these things here. Having discussed what is prose and the types of prose texts that we have, let us now go to the main part of the unit. How to teach prose in our classrooms? How do we use a prose piece for teaching language in the classroom? What are the purposes of teaching prose? We also look at the reasons for teaching prose. 10.5 Teaching a Prose piece We know that language is a set of skills. One of the important skills of language is reading. To help someone develop this skill, we need materials in the form of written texts. Prose forms the best type of reading materials for us to use in the class. You must have had a look at several textbooks in use at the school and college levels. These books include more prose pieces than poems and plays. The reason for this is easy to understand, prose lends itself to reading more easily than poems and plays. (While reading poems and plays, we need to be careful with pronunciation, intonation, rhythm and other related factors. Prose can be read without paying too much attention to any of these factors.) Before we proceed, mention a few interesting reading lessons you have had in school. If possible, mention why you remember these lessons. Write your answers in the space given below:

Your response: Having understood one reason for teaching prose, let us take a look at one more use. Reading a prose text exposes us to good use of language. While going through the text, we come across several words and a few sentence structures. These get registered in our memory unconsciously and resurface when we use the language either for writing or speaking. In simple words, reading a text helps us develop our vocabulary as well as grammar. While focusing our attention on meaning, we learn these without our realizing it. In fact, this is a good process of learning a language. We are now sure of two reasons for using prose to teach language. The primary purpose is to develop reading comprehension (meaning focus) and the secondary purpose is to acquire words and grammatical structures. Both are equally important aspects of language use. Are there some more uses of prose in a language classroom? We will think about it a little later. Having looked at the major reasons, we will now move on to the question 'how' to teach a prose lesson. For this we will use a small piece of text (a story) and look at the steps to follow while teaching prose lesson. Here is the text, do not read it now. You may read a little later. The Appointment There was a merchant in Bagdad who sent his servant to market to buy provisions, and in a little while the servant came back, white and trembling, and said, "Master, just now when I was in the marketplace, I was jostled by a woman in the crowd, and when I turned I saw it was Death that jostled me. She looked at me and made a threatening gesture, now, lend me your horse, and I will ride away from this city and avoid my fate. I will go to Samarra and there Death will not find me." The merchant lent him his best horse, and the servant mounted it, and he dug his spurs in its flanks and as fast as the horse could gallop he went. Then the merchant went down to the marketplace and he saw me standing in the crowd and he came to me and said, "Why did you make a threating gesture to my servant when you saw him this morning?" "That was not a threatening gesture", I said, "It was only a start of surprise. I was astonished to see him here in Bagdad, for I have an appointment with him tonight in Samarra."

All reading lessons begin with a pre-task. The purpose of the pre-task is to motivate the learners to read the lesson. It can introduce the theme of the lesson, some important words that are used in it as well as the grammatical structures. For this small piece, let us think of a pre-task which also takes care of the uncommon (not difficult) words and the grammar focus. The pre-reading task could have a few questions related to the theme. For the text given above, you may ask questions like: Have you had any unusual experience in your life? Do you think supernatural creatures exist? Do you know any stories or instances involving supernatural elements? When you elicit answers, you may note down a few words and phrases the students use on the chalkboard. At the same time, you can draw their attention to terms used in horse riding – stirrups, flanks (sides), gallop, and a few words associated with fear – frightened, go white with fear, surprised, shocked, etc. As part of grammar, you may check their knowledge of reported speech as well as some prepositions and conjunctions. Having gone through the pre-reading task (the questions can be given the previous day to help the students think about the answers), which takes about six to seven minutes, provide a brief introduction to the passage – you will read a story about an unusual incident and write two pre-reading questions on the board. The questions could be: a. Do you really think the merchant liked his servant a lot? Give some evidence for this. b. Does the ending of the story surprise you? Did you expect the story would end this way? These questions will motivate them to read, or provide a purpose for reading the story. These questions are called lead questions – they lead the students to read. Having written these questions, allow the students to read the lesson silently. Allow them to pair up and discuss the story. Give adequate time to read it more than once. Once, all of them have read the story, ask a few questions (other than the two lead questions you have written on the board). The questions you ask now should elicit short answers and the same answer may be elicited by more than one question. Alternately, each question may elicit more than one answer depending on the students' understanding of the text. Don't ask an impossible question (something not given in the text e.g. How long was the servant working for the merchant?) Your questions could be inferential (take a look at the lead questions). Once you are sure the students are able to answer all the questions, provide a shadow summary. This is a summary with a few fact wrongly

stated, and check whether the students can locate the errors and correct them. Alternately, provide the summary with a few gaps in between and check whether the students can fill in the blanks to complete the summary. You may conclude the class by asking students to narrate the story in as many different ways as possible – narrate in first person, or third person, or in plural (a group experiencing this) or change the tense, or not use direct speech etc. The number of changes you can make are left to your imagination. This is just one way in which prose can be taught. There are many more ways, and you can gather more ways by looking at some good books suggested at the end of this unit. 10.6 Summary Let us now conclude this unit with a quick summary. We began with a summary of Unit 9 on what is literature, and established how prose is one form of literature. We looked at different types of prose available to us and how story is one popular form of prose included in our textbooks. We finally saw one way in which a small story can be taught to an intermediate class. In the next unit we shall look at how a poem can be taught. 10.7 Review Questions a. How is prose a distinct genre of literature? b. How many types of prose have been discussed in this unit? Can you give an example for each? c. Which is the most popular form of prose and why? d. Which form of prose do we use more often in our life? e.g. for writing letters etc. e. Are you familiar with any other form of prose than the three types mentioned here? Mention an example. f. What language skill can best be developed using prose as a source? g. What other aspects of language can also be taught using prose in the classroom? h. What are the steps one needs to follow while teaching reading?

i. How is pre-reading task relevant to teaching reading? Is this a classroom strategy or outside the classroom strategy? j. Are pre-reading questions the same as pre-reading tasks? k. What questions can you frame based on the story – The Appointment? l. How were you taught a story in your student days? Mention some of the features of that lesson. 10.8 References a.

In this unit we shall look at the term poetry for its various meanings, some of its characteristics, the varieties of poems we have in English literature, and finally discuss the reasons for teaching poetry as well as a plan for teaching it.
11.2
Objectives

90%	**MATCHING BLOCK 76/83**	**SA**	PGELT 5 _ 6 (1-400).pdf (D165254851)

After going through this unit, the learners will be able to: l Understand the term

poetry as it is used in literature l Identify different forms of poetry l Understand the reasons for teaching poetry and NSOU l PGEL - 1&2 387 l Teach a poem in the class. 11.3 Poem: Definition and Structure Before we start this unit, as usual, let us express our views on what a poem is. You have come across this term since your school days, and you must have read quite a few poems by now. You must have some broad idea of what a poem is, and write down your thoughts in the space below: Your response: We often say, 'a poem is a metrical composition'. This definition needs a bit of explanation. There are two words that need a proper understanding – metrical and composition. Let us take a look at these words. 'Metrical' comes from the word meter. (Not a term associated with the measurement of length) This word needs to be understood in terms of literary studies, especially a branch called Prosody. One of the topics dealt with while studying prosody is scansion. Scansion comes from the word 'scan' which means to take a quick but a comprehensive look at something. The scansion on the other hand, takes a close look at every line, in fact every syllable in a line in the poem. Let us understand this better. In your spoken English course, you have come across terms like – syllable, stressed syllable, word stress, sentence stress, intonation, and rhythm. These words are also used while analysing a poem especially to see the meter in which the lines are written. Words are made of syllables. Each word has one syllable that is stressed. A group of words strung together form a line in the poem. The number of syllables in every line of the poem remain the same and they also follow a pattern – e.g. unstressed syllable followed by a stressed syllable (Iambic); or stressed followed by unstressed (Trochaic); or stressed followed by another stressed (Spondaic); or unstressed, unstressed and stressed (Anapaestic); or stressed syllable followed by two unstressed syllables (Dactylic). Each of these combinations is called a foot, and depending on the number of feet, you have either a pentameter (five feet) or a tetrameter (four feet). The number of feet, decide the length of a line in a poem. When lines like these are organised in a meaningful manner, and can be based on a theme, we have a poem. To understand these concepts we need some examples. Go to a good anthology of poems, start reading the poems aloud and consciously, try to identify the pattern of each foot, and find out what meter the poem uses.
388 NSOU l PGEL - 1&2 Shall I compare thee to a summer's day(Shakespeare) You have five feet, each with an unstressed syllable followed by a stressed syllable. This is an example of Iambic Pentameter. I wandered lonely as a cloud(Wordsworth) Can you find out what meter this is? This is Iambic tetrameter. I have shown a way of indicating the stressed and unstressed syllables differently. You can use the same technique and analyse other poems. Here are a few lines from different poems for you to mark the stressed syllables and identify the number of feet in each line. a. One impulse from the vernal woods Can teach you more of men and mortals could. (Wordsworth) b. Curfew tolls the knell of parting day (Robert Burns) c. Thou still unravished bride of quietness. (John Keats) d. In the room women come and go (T S Eliot) e. I have spread my dreams under your feet (W B Yeats) I am sure you enjoyed doing this work. 11.4 Types of Poems Having looked at what poetry is we shall quickly take a look at the types of poems that are identified traditionally in English literature. You must be familiar with some names, and you may write those names in the space given below: Your response: We have quite a few types of poems in traditional English literature. Some of the popular ones are as follows: 11.4.1 Ballads These are some of the oldest form of poems we have. These are usually sung to the accompaniment of a stringed instrument, and they have a story to tell us. The story usually centres on some adventure or a romantic relation between two young people. Some of the best known ballads are Sir Patrick Spence, and La Belle Dame Sans Mercy. Christabel is also a ballad written by Coleridge.

NSOU l PGEL - 1&2 389 11.4.2 Sonnets These are short poems with just fourteen lines. There are two types of sonnets: the Petrarchan, and the Shakespearean. They have a fixed rhyme scheme and can be written as first eight lines separated by last six lines. They are also written as three stanzas with four lines each and conclude with a couplet. 11.4.3 Elegies Elegy is a poem written on the death of a person in his/her honour and memory. There are quite a few famous elegies,Lycidas by Milton is a well-known elegy. This brings out the pathos on the loss of a friend, and also glorifies the qualities of the departed person. 11.4.4 Odes An ode is a song based on a theme. Keats has written five odes which are famous and also beautiful – Ode on a Grecian Urn, Ode to a Nightingale, and Ode to Autumn are some of the best known odes. Dryden, Wordsworth and Shelley have also written some odes. 11.4.1 Free Verse This is a more recent variety. Here the poet does not stick to the meter, each line can have a different length and the poem could even read as a piece of refined prose. T S Eliot uses this style in his poems Love Song of Alfred J Prufrock and The Hollow Men. G M Hopkins used this style earlier in some of his poems. To these varieties, we can add Satire, and from the modern day versions we have Limericks and Haikus. We will not discuss these varieties here, you may look up a book on History of Literature and find more information. Before we proceed further, since you have read several poems to date, please give two examples for each variety explained above. Your response: 11.5 Uses of Poem for Teaching English Language So far you have looked at what is poetry, and how many types of poems we have. You have also provided examples of some poems. These need to be verified by you. We

390 NSOU l PGEL - 1&2 will now proceed to see, what the uses of learning a poem are and how it can be taught in a class. We know the reasons for using a prose lesson for teaching English language. We have stated them explicitly in the previous unit. Based on that understanding, can you mention some possible uses of using a poem in the language classroom? Your response: While we can use a prose lesson for teaching grammar, provide illustrations of language use, develop vocabulary, there are a few other reasons for teaching a poem. The language of poetry need not always be grammatical – a poet has a licence (freedom) to alter the rules for creating an effect. Such alterations are called stylistic devices, such as foregrounding, using imagery, coining a word etc. Look at the following examples: I caught this morning morning's minion, (Hopkins) This morning I caught the morning's minion (prose version) You can see how different the prose version reads in comparison with what Hopkins has said. He has just changed the order of words to bring a different effect on the readers. You must have come across several examples of this type. From this example, we find that while a poem may not be a very good source for teaching grammar, it can still help us build our vocabulary, it can help us express our ideas in a manner other than the conventional way e.g. A grief ago (Dylan Thomas). This is an enrichment activity. Besides this, we will understand the role of rhyme and rhythm in language. Rhyme scheme is easy to understand, while for rhythm I will give an example. Rhythm is the regular beat that one can keep while speaking or reading a poem. English language is characterised by stress timed rhythm (not syllable timed as it is in most Indian languages). To understand this concept, reciting the nursery rhymes is helpful. Most poems have a rhythm that approximates the English speech. Go back to the section where we have illustrated different types of feet and meter. Read those lines aloud with proper stress, and you will see the rhythm of English speech. A poem can be taught to develop vocabulary, sensitising us to rhyme scheme, understanding the rhythm of speech, and also use of stylistic devices such as imagery and symbolism. A poem necessarily needs to be read aloud and enjoyed. The meaning of a poem is revealed more through the use of imagery and symbolism rather than the surface meaning of the words. We shall look at this when we discuss how to teach a poem.

NSOU l PGEL - 1&2 391 11.6 Teaching a Poem In this last section, we shall look at a poem and see how it can be taught. Here is a poem, and just read it aloud a couple of times. A slumber did my spirit seal— I had no human fears. She seemed a thing that could not feel The touch of earthly years. No motion has she now, no force— She neither hears nor sees, Rolled round in earth's diurnal course With rocks and stones and trees. Can you guess who the poet is? What are your reasons for your guess? Please write your answers in the space given below: Your response: This poem is by William Wordsworth, and it is one of the five Lucy poems. He wrote these poems in her memory after she passed away. His sadness at her death forms the theme of all the Lucy poems. A lesson on teaching a poem can begin with a pre-reading task. This can help motivate the learners to appreciate the poem. For this poem, let us plan a pre-reading task: Have you ever been separated from a person you like a lot – a friend or a relative? Can you describe your feelings at the time of parting with your friend? What words express your feelings best? What do you call such emotions? These questions need not be asked in a bunch. You could space them, elicit responses and prompt your learners with a few expressions and finally consolidate all the responses and summarise them for the class. You could also choose one of the learners to consolidate and summarise. Alternatively, you could ask your students to meet a few people in the neighbourhood who are lonely and ask them about their past life and the people they had lived with earlier. Once you have done this, read the poem aloud to the learners. Let them not look at the poem (let them keep their books closed), but just listen to it for its rhyme and rhythm.

392 NSOU l PGEL - 1&2 Let the sound of the poem make an impact on them. Read the poem slowly and deliberately such that each word sinks into the learner to enjoy. Having read the poem, you may ask them to open the books, and read the poem a second time. This gives the learners an opportunity to relate the sounds they listen to the words as printed on the page. Their involvement in listening to the poem becomes greater and they enjoy the poem. Allow the learners to read the poem aloud for a while and draw their attention to unfamiliar words: slumber, human fears, diurnal etc. Some students may know the meanings of these words. Try and help them explore the meaning by creating contexts – slumber chamber; slumber effect, slumber shade, are the phrases you can use and illustrate these pictorially and help the students derive the meaning of the word. 'Human fears' is a philosophical expression. You can elicit responses on some of the common fears we have as human beings, from there you can extrapolate it to the fear of ageing and dying. The term diurnal can be explained using contrasting words. Check if they are familiar with the word 'nocturnal' and use this word in expressions like nocturnal animals, nocturnal habitat etc. Nocturnal refers to things associated with the night, and the term diurnal is the opposite of it. With this the learners will be able to arrive at the meaning of the word diurnal. The next step will deal with interpretation. You can begin with asking some questions. Obviously there are two stanzas of four lines each. How are they related to each other? Try and elicit answers by asking some prop questions. You may use questions like: a. What does line 1 of the poem talk about? Slumber of the spirit. b. What do you understand by this? I had become unaware of my surroundings, I was not conscious of what was happening around me. c. The second line talks about human fears. What are some of the common human fears? Fear of losing the present time, fear of getting old, etc. d. Can you now relate the two lines? Being young, and happy, I did not have any human fears. You can continue in this manner till you get to the end of the stanza. Later, you may elicit answers with the theme of the second stanza and show the relationship that exists between the two. The first stanza reflects the pride of the poet as a young man in love with his girl (Lucy) and thinks she is immortal. In the second stanza, we see that Lucy is dead and has

NSOU l PGEL - 1&2 393 become part of nature. Nature is eternal, and his idea of Lucy being immortal becomes a reality with her death. This is a strange relationship. This can be called harsh truth. The emotion is expressed using a figure of speech called irony. Now look at the rhyme scheme. Read out the last word in each line and help the learners arrive at the following rhyme scheme abab, in the first stanza and cdcd in the second stanza. Finally, ask them to read the poem once or twice and give a task. The task is to look for the rhyme scheme and ironical expressions in the following poem. The Rainy Day The day is cold, dark and dreary, It rains and the wind is never weary, The vine still clings to the mouldering wall, But at every gust the dead leaves fall, And the day is dark and dreary. My life is cold, dark, and dreary, It rains, and the wind is never weary, My thoughts still cling to the mouldering past, But the hopes of youth fall thick in the blast, And the days are dark and dreary. Be still, sad heart and cease repining, Behind the clouds is the Sun still shining, Thy fate is the common fate of all, Into each life some rain must fall, Some days must be dark and dreary. H W Longfellow Do you like this poem? Why do you like this poem? How is this different from Wordsworth's poem? Point out the rhyme scheme used in each stanza. Where do you find instances of irony?

394 NSOU l PGEL - 1&2 What other figure of speech you are aware of is used in this poem? Why does the poet call this poem 'The Rainy Day' and not 'A Rainy Day'? That brings us to the end of this unit. Let us quickly revise what we have discussed so far and go to the last unit of this module. 11.7 Summary We began the unit with a quick revision of the previous module which discusses the teaching of prose. We looked at some definitions of the term poetry and also understood some of its features. We became familiar with terms like foot and meter and saw a few examples of different types of feet and meter. Finally, we looked at a poem and saw how it can be taught in a school classroom. Remember, a poem is meant for reading aloud and enjoying it for its rhythm and rhyme scheme first. As you keep reading a poem, the meaning gets understood and your pleasure increases. Here are a few books you can read to look at how poems are analysed. 11.8 Review Questions a. What are some of the distinct features of a poem? b. How is a poem different from a prose? c. Can you define a meter? How many meters are there in English? d. How does the meter contribute to the length of a line in a poem? e. Define rhythm and differentiate it from rhyme. From the examples given in the unit illustrate these two terms. f. How many types of poems have been mentioned in this unit? Give an example for each type? g. Are you aware of other types of poems in your language? Mention one or two examples. e.g. Gazals in Urdu and Hindi h. What are some of the important reasons for teaching a poem in a language class? i. Why do we need to read a poem aloud and not silently?

NSOU l PGEL - 1&2 395 j. Can we use the term comprehension while teaching a poem? Give your reasons. k. How does a poem use a variety of figures of speech to convey meaning? l. Give some examples of symbolism, and irony. 11.9 References a. Forrester, Jean. (1968). Teaching Without Lecturing. Madras: Oxford University Press. b. Joan, Collie and Slater. (1988). 396 NSOU l PGEL - 1&2 Unit - 12 p Teaching Poetry Structure 12.1 Introduction 12.2 Objectives 12.3 Revision of Unit 10 and Unit 11 12.4 Classification of Literary Forms 12.4.1 Poem 12.4.2 Drama 12.4.3 Fiction 12.4.4 Non-fictional Prose 12.5 Conclusion 12.6 Review Questions 12.7 Reading List 12.1 Introduction The focus of this entire module has been on using literature for language teaching. In the first unit of this module (Unit 9) we looked at the definition of literature, and in discussing what literature is, we also mentioned terms like types of literature or genre /ÈˈQnrY/. We will recall some of it here and discuss different form of literature here. 12.2
Objectives

Become familiar with the names of different forms of literature b. Understand some features of each form c. Become familiar with some examples of each form d. Will be able to identify the form a book belongs to.
NSOU l PGEL - 1&2 397 Poetry Poems Sonnets Ballads Odes Lyrics Songs Couplets Haiku Limericks Drama Comedies Tragedies Tragicomedies Romance Farce Melodrama Absurd Poetic drama Fiction Novels Short Stories Tales Anecdotes Legends Myths Graphic novels Nonfiction Essays Biographies Autobiographies Diaries Speeches Descriptions Prospectus Instruction sheets Reports 12.3 Revision of Units 10 and 11 Before we proceed further, let us recall your learning in units 10 and 11. In these two units you have looked at two different genres of literature - prose and poetry. Now we shall look at a few more genres and the types of subdivisions each genre can have. What did you learn about prose and poetry? How are these two forms different? Mention briefly your understanding based on the reading of the two units. Your response: Prose inclues fiction and nonfiction. This forms the bulk of writing, and we come across prose more often than other forms of literature. This form of literature is best used for developing reading skills, and improving the vocabulary of the learner. Prose also provides good illustrations of grammatical structures. Poetry on the other hand helps us use language in a beautiful and pleasing manner. We read poetry aloud to enjoy its rhyme scheme and also the rhythm. That makes a brief answer the questions. 12.4 Classification of Literary Forms Look at the flow chart given below. Take a proper look and understand how the literary forms are classified. Try to describe this grid in your own words. Your response: Classification of Literary Forms (Genres)
398 NSOU l PGEL - 1&2 It is clear from this grid (classification table) that literary forms can be broadly divided into four categories. These are large categories and are confined to the variety we find in literary texts. Content writing can have other forms and these are not discussed here. The four categories mentioned are Poetry, Drama, Fiction and Nonfiction. Each of these categories has been sub-divided into the varieties of forms that they include. However, the varieties mentioned are not exhaustive, and more varieties can be added. We shall restrict ourselves to these varieties for our discussion. 12.4.1 Poetry This is a popular form of literature, and almost everyone is familiar with this form. Poetry comes naturally to language and we perceive this in the numerous folk songs that we hear in different languages. Folk songs are typical to each language and music is integrated into them. English is no exception. Ballads are in fact folk songs and are sung to the accompaniment of stringed instruments. We have listed eight varieties of poems in our grid. Let us look at some of these varieties and also provide names of one or two poems as illustrations. We will not provide the text of the poems, you can get these by browsing the net. The first of these varieties we have mentioned is called Poems. This is a generic term and does not specifically refer to one variety. The rest of the varieties are all poems. In English literature, the Romantic period (nineteenth century) is supposed to have produced the richest poetry. We had major poets like Wordsworth, Coleridge, Blake, Byron, Keats, Shelley, Browning and Burns during this period. Each one of them produced large volumes of poetry and they had variety in them. i. Sonnets: We will begin with sonnets. Sonnets are short poems of no more than fourteen lines. Very often they are said to be very personal and deal with an experience that touches the poet's life in an emotional way. These could have varied themes of love, dejection, sadness, wonder, philosophical outlook or humour. There are typically two types of sonnets – the Petrarchan (Italian) sonnets and the Shakespearean sonnets. The Petrarchan sonnets were divided into two parts – the first eight lines called the octave and the next six lines called the sestet. Sestet provided a solution to the problem raised in the octave. Both styles of sonnets are written to this

399 day. Besides Wordsworth and Keats, Elizabeth Barrett Browning wrote some of her sonnets in the Petrarchan style. Shakespearean sonnets had three stanzas of four lines each and the sonnet ended with a couplet. Shakespeare wrote more than one hundred fifty four sonnets in this style and made this form popular. All decent libraries have copies of complete works of Shakespeare which include all the sonnets. ii. Ballads: Having looked at what sonnets are, let us move to Ballads. These are quite ancient forms of poems that are available to us. These were popular even during the pre- Shakespearean day, and often the names of the poets are also lost to us. Ancient ballads were collected, curated and published in the form of a volume by Bishop Percy during early eighteenth century under the title Reliques of Ancient English Poetry. This is a valuable work that has been handed down to us. Some of the best known ballads Keats' 'La Belle Dame Sans Merci'; Yeats' 'Second Coming'; Tennyson's 'Lady of Shallot', Wordsworth's 'Solitary Reaper'; Coleridge's 'Rime of the Ancient Mariner' are some of the famous examples. iii. Odes: The third variety is the ode, which actually means a song to be sung. It is generally written in appreciation of a person or a thing. (Dryden's Alexander's Feast; Keats' Ode on a Grecian Urn) These originated in Greece, and are attributed to Pindar; in fact, the odes are called Pindaric Odes. Some of the best odes were written by Keats (the five famous odes), and Shelley's Ode to West wind are well known poems. iv. Lyrics and Songs: We will not discuss this here. These are stylistic variants and you will find examples of lyricism in the varieties discussed earlier. Ballads and odes are songs. v. Couplets: A few poets expressed their ideas crisply in two lines. Though the poem was longer than two lines, each couplet expressed one complete thought which was carried forward as part of the larger theme of the poem. Alexander Pope was one of the best known poets who popularised couplets –which are memorable. A story is popular about him

being chastised by his father for writing poems. When it was his turn to apologise, what he said came in the form of a couplet: 'Father, father, mercy take, I shall never verses make.' When Newton died, he was commissioned to write the epitaph which reads as follows: Nature and nature's laws all lay hid in night. God said, 'Let Newton be!', and then there was light.' Dryden was also known for his heroic couplets, and these were later picked up by several younger poets. Sanskrit literature is popular for its couplets based on providing value based lessons. vi. Haiku and Limericks: Haiku is a recent addition to the genre of poetry in English. This style of writing poems has been borrowed from Japanese poetry. Like a couplet (which is restricted to two lines), a Haiku is restricted to seventeen syllables arranged in three lines. The lines need not rhyme, but shouldconvey a complete meaning. Limericks like Haiku are also short poems of five lines each with a definite rhyming scheme. Often, limericks are bordered on humour, but not without a message. The authors of limericks are often not known. Take a look at this limerick There was a lady from Niger, Who went for a ride on a tiger. They returned from the ride, With the lady inside And a smile on the face of the tiger! I am sure you enjoyed reading this limerick, which has humour as well as caution on choosing a ride. Edward Lear has written some of the best limericks to date. This brings us to the close of discussion on different forms of poetry. We shall now proceed to look at Drama in the next section. 12.4.2 Drama Drama is a major genre which acquired popularity during the Elizabethan period with playwrights like Shakespeare and Marlow. Drama was a popular form of literature in

ancient India and Greece, and the English theatre has adopted the form from both these sources. Drama and Shakespeare have been synonymous. Shakespeare introduced quite a few types of plays – Tragedies, Comedies, Tragi-comedies, Historical plays, and Romances. These largely form the varieties and the characteristics of each one of them remain the same. A Drama portrays life of a person, period or a family. It could borrow themes from history, epics, popular legends, and day to day life. The technique of presenting a real life story accounts for the success of drama. Let us briefly look at some types and provide names of a couple of popular plays as illustrations. i. Tragedy This is a play which centres on the fall of a hero. Hero is a famous person, (a king, baron, queen, a brave soldier, a well-known merchant, or a wealthy lord). The hero has several good qualities, but also has a few weaknesses (hamartia) due to which he falls from grace. That fall accounts for the tragedy. (In the Indian plays, tragedies were not accepted, and most plays ended on a happy note. But Greek plays were profound tragedies – Oedipus Rex, Agamemnon, and Hippolytus). Shakespeare was known for his tragedies such as King Lear, Hamlet, Julius Ceaser, Macbeth, and Romeo and Juliet. Marlow a contemporary of Shakespeare also wrote some tragedies and the best known play of his is Doctor Faustus is a famous tragedy. ii. Comedies Comedies largely dealt with social issues based on the life of ordinary people. It could reflect the nuances as they existed in the society and it held a mirror to the society. There have been a large number of comedies across the ages in English literature. Shakespeare did write a few comedies such as Midsummer Night's Dream, Two Gentleman of Verona, The Merchant of Venice, and All's Well that Ends Well. Apart from this, immediately after the Elizabethan period (when Shakespeare wrote and produced his plays) the Restoration Drama became popular. Some of the comedies of this era are Rivals, School for Scandal, Way of the World and She Stoops to Conquer. Early twentieth century was marked by good comedies which were called Farce. George Bernard Shaw was a pioneer in the field and his plays like Arms and the Man, Candida, Major Barbara, and Doctor's Dilemma. Galsworthy, Oscar Wilde and other contemporaries of Shaw

402 NSOU l PGEL - 1&2 also wrote comedies. Around this time, theatre was popular in Europe and plays in English, French, Italian, Norwegian and German languages were popular. iii. Romances Romances were plays which glorified nature and the life of peasants in the country. There was no struggle, and it generally talked about young couple who got separated, pined for each other and finally got together with divine intervention (deu-ex-machina). AWinter's Tale by Shakespeare is an example of such plays. iv. Tragi-comedies Merchant of Venice is a good example of a tragi-comedy. This play recounts the story of a merchant who loses all his wealth due to a storm in the sea and is harassed by a Jew (money lender). His friend who assumes the role of a lawyer, saves him from the Jew and with divine intervention the wrecked ship reaches the shore. v. Absurd Plays These are a new generation plays that were experimented at the beginning of the last century. This movement began in France and soon caught the attention of playwrights in other parts of the continent. Today, we have absurd plays in Indian languages including Bangla. (BadalSarkar's plays EvamIndrajit, PaglaGhoda are some plays in this category). The best known playwrights in this category are Samuel Beckett and Edward Albee. Waiting for Godot by Beckett has made a history in the field of theatre. vi. Poetic Drama This is a variation in style that was ushered in during the twentieth century. Shakespeare used this technique but this has not been noticed. This form of using poetry in drama was also popular in ancient Indian literature and it was called ChampuKavya. T S Eliot was well known for his poetic play – Murder in the Cathedral. W B Yeats and J M Synge also wrote similar plays. Yeats is said to have been influenced by the Japanese theatre that staged Noh plays. This brings us to the close of discussion on drama. In the next section we will look at Fiction briefly. Before doing so, here is a small task for you. How well can you compare the poetry in English with the development of poetry in Bangla? Give examples and show the similarities and differences.

NSOU l PGEL - 1&2 403 Your response: 12.4.3 Fiction In the previous unit we looked at the teaching of prose. While discussing prose, we said, it constitutes the largest part of literature and several types of writing happen in prose. One major part of prose is Fiction (which means, an imaginary story) and this has several sub-categories within. We shall take a look at some of these for our understanding. i. Novels There are very few of us who are not familiar with the term novel. Novel means something new. It tells us a story with which we are familiar, but in a new way. Hence it is called a novel. Novel as a genre was first used in English literature during the seventeenth century. (English was influenced by novels in Spanish language Don Quixote). Most novels during this period described an adventure where the hero was an ardent traveller and met with new experiences in life. Some of the well-known novels are Robinson Crusoe, Gulliver's Travels, Joseph Andrews, and Pilgrims Progress. Later in the nineteenth century, the novel developed into a mature form and dealt with social problems and had a curative effect on the readers. Charles Dickens, Jane Austen, Bronte sisters were some of the famous authors. The tradition of writing novels has continued to this day and we have a variety of novels dealing with varied themes such as histories, adventure, social drama, scientific discoveries, fantasy, espionage, travel and political commentary. Indian authors have also contributed to the volume of fiction produced in the world. (The tradition of writing novels in ancient India began in sixth century with BanaBhatta'sKadambari and Dandi'sDasha Kumara Charita.) ii. Short stories, tales and anecdotes Short stories are miniaturised novels. They have a similar structure as a novel (a plot, characters, developments, struggle, resolving the struggle etc.). There are no strict guidelines on how short or long a story could be. There are stories that are hardly a sentence or two to some stories running to more than fifty pages. However, all stories have similar structure that binds them. The stories are also recognised as tales (which are largely oral in tradition) and sometimes anecdotes also pass off for stories. (Anecdotes are narration of some incidents which are personal.)Rabindranath Tagore is one of the best short story writers from India.

iii. Legends and Myths Legend is a term used in two senses. One of the meanings is assigned to an ancient story that has been handed down to us. The origins of such a story are not traceable. In India we have quite a few legends that have been handed down to us from our parents and grandparents. This is true of all cultures. In most languages, the proverbs we use have a legend to support them. You can think on these lines and collect some legends. When you visit certain religious places, or ancient monuments, you will get to hear of several legends – I am told there is a village in UttaraKhand where they hate Hanuman. This is because, he plucked a part of the Sanjivini Hills from the village and deprived them of the benefits that hill could give. This is a legend. (The second meaning, is a person who is famous for the good work he has done, and is remembered forever is called a legend. e.g. Gandhiji is a legend.) Myths are also stories which we believe in. There is an element of divinity associated with myths and some people dismiss some of the myths as superstitions. Read a book called Myth or Mythya by DevaduttPattanaik you will have a clearer idea. This brings us to the last part of the literary forms – the non-fictional prose. We will discuss this as one category without going into the details of each sub-category. 12.4.4 Non-fictional Prose In the previous section while discussing prose, we have mentioned how vast this particular category is. Fiction forms a large part of prose writing and the non-fictional writing is even larger and includes sub-categories such as Essays, biographies, autobiographies, diaries, speeches, descriptions etc. i. Essays Essay is a long continuous piece of writing based on a theme. It uses the techniques of analysis, description, explanation, argument and other strategies. The main aim of the essay is to convince the reader the viewpoint held by the authors. You must have seen a large number of articles that are published in newspapers every day. Each of these articles is an essay. The answers our students write in the examination are in the form of essays. Each unit in this book is an essay. Depending on the theme and style the essay acquires its name and importance.

ii. Biographies and Autobiographies These are life histories. Life history of a person can be written by someone else, or the person can write it himself/herself. Biographies have been an important part of literature and one of the best biographies that made history was the story of Samuel Johnson written by James Boswell. There are quite a few other biographies and in the recent days, this genre has become more popular. Several of the state leaders and politician have their biographies written. Some of the famous personalities have also written their own life stories and such works are called Autobiographies. There are quite a few well known autobiographies which you can find on the shelves of bookstalls. iii. Diaries Diary writing has been a disciplined habit by many people of prominence. Not all diaries are published, and some diaries are published as a matter of tribute to the person posthumously. The most famous diary that was published to understand the holocaust days of Nazi rule is by Anne Frank. Other famous diaries are by Gibson, and also Jawaharlal Nehru. iv. Speeches Like diaries, speeches of famous people are collected and published. Some of these make for good reading. Speeches of Vivekananda have been published by the Ramakrishna Mission. Like speeches, there has been a practice to publish the letters written by famous people. Letters of Keats, Bertrand Russell, Nehru, and others are available in print. 12.5 Conclusion In this module you have looked at two aspects of teaching - Literature and language teaching. Here we have attempted to show how the two are integrated and do not serve cross purposes. Literature is seen as a sample of good language use which can be offered to the learner to develop language proficiency. The only difference is seen in the approach to teaching literature. In a literature class, the focus is on analysis of the text to appreciate its composition, while in a language class we analyse the same text to exploit it for language use. This point needs to be understood clearly by all teachers of English.

12.5Review Questions a. What are the two new forms of literature discussed in this unit? b. Into how many categories can we divide literature? c. Today, new genres of literature have emerged. e.g. Graphic novels. Mention other genres you are aware of. d. Mention some of the early pieces of fiction produced in English by Indian authors – especially the ones who belonged to Bengal e. How many types of plays (drama) do we have? Can you name a few plays you have read? f. Give two examples of Absurd plays that are universally famous. Can you name plays of this genre from Bengali literature? (remember Badal Sarkar) g. What is the development of fiction in English literature? h. What type of fiction was the oldest and which is the most recent form of fiction? i. How popular is non-fiction among the students? Give reasons. j. Give examples of non-fiction that is available for reading every day. k. Have you changed your views on employability of literature for language teaching after going through this module? What are some of the changes in your thinking? l. Read this poem and analyse it for its meter and rhyme scheme: Rainbow My heart leaps when I behold A rainbow in the sky: So was it when my life began; So is it now I am a man; So be it when I grow old, Or let me die! The child is the father of the man; And I could wish my day to be Bound each to each by natural piety.

Here is a limerick for you to read and enjoy: There was an old man on the Border, Who lived in the utmost disorder; He danced with the Cat, And made tea in his Hat, Which vexed all the folks on the Border. 12.6Reading List Forrester, Jean. 408 NSOU l PGEL - 1&2 Module - 4 p Teaching Literature - 2 Unit : 13 p Teaching Skits and Plays Structure 13.1 Introduction 13.2 Objectives 13.3 Stepstowards the Implementation of Skits 13.4 Steps of Pre-Skit Monitoring 13.5 Cross-Cultural Polite Speaking [CCPS] 13.6 Non-Verbal Communication 13.6.1 Pronunciation Lessons 13.7 Defining Unfamiliar Words and Terms 13.8 Demonstrating Appropriate Cultural Behaviour 13.9 Learners' Skit Theatre [LST] 13.9.1 Variation on LST 13.9.2 Key Components of Reader's Theatre 13.9.3 Skits as Reader's Theatre 13.10 A Sample of Skits Resource 13.11 Summary 13.12 Review Questions 13.13 References 13.1 Introduction The term'skit' refers to: a] a satirical/humorous/burlesque/comic sketch in a dramatic performance such as a revue; b] a short serious dramatic piece especially one done by amateurs; c] a short comedy sketch or piece of humorous writing, especially a parody. It has synonyms, such as parody, pastiche, burlesque, satire, informal spoof, takeoff, and stand-up. In its essential sense skit means a short piece of humorous writing or a performance that makes fun of something by copying it.

NSOU l PGEL - 1&2 409 Teachers use skits in the classroom to impress upon the learners a message that cuts deep into their minds, especially if it is dished out in a humorous manner. Skits dealing with serious issues like drug abuse or addictions may come up but need to be handled in a sensitive way. Humorously written skits impress the youngsters, as messages are presented in a light-hearted way. A variant of skits is already there in our kindergartens. Children enjoy it acted out in nursery rhymes, such as Jack and Jill, or in role-plays in open house stage plays, as in birthday parties. In this Unit we will go infor reinterpretingskits asLearner's SkitTheatre 13.2 Objectives This Unit introduces the learner to: l The ways of interpreting skits l The use of skits methodology in classroom teaching. l Learner's Skit Theatre l Reader's Theatre 13.3 Steps towards the Implementation of Skits Ø To decide how many skits we think fit to enact, and accordingly to split the class into groups or allow the students choose their own group members, though this may lead to cronyism or someone being left out. Ø To have the students work on the skits together, including every member of their groups in the process, either as actors, directors, or writers. Ø To explain to the students the responsibility of each role. Students can certainly have their choices to play more than one role. All group members will most likely contribute to the writing of the skit, with one member taking notes as needed. Ø A formal director may or may not be needed for short skits; group consensus can decide on the action and timing of the skit. Ø To decide a particular day and time for presenting the skits. The acting-out can take place on the same day or during the same class-period. If more elaborate or more difficult skits are planned, it is necessary to give a few minutes for practice/ rehearsal for two or three daysbefore the designated day of presentation. At the appointed time an area inside or outside the classroom is to be provided to the students to perform the skits.

410 NSOU l PGEL - 1&2 Ø To hand out a printed sheet with the directions for each skit and to choose groups to act out each skit. Ø To say to the participating members/groups the following: I will choose one group at a time to act out its assigned skit. When the group has finished, we will discuss what was demonstrated.Thematic, motivic and linguistic features involved and developed through Classroom Skits are to be discussed and evaluated. 13.4 Steps of Pre-Skit Monitoring For monitoring over skit programmes, the concerned teacher has to ensure a step-up process of assigning duties and responsibilities to the students about to participate in skit programmes. Let us identify these roles of the students before their role-plays in skits, giving to each pre-skit role an acronym: a) Accountability Students [AS] are those who are assigned the responsibility for a specific part of the skit production and for contribution to other parts if needed. They are the key performers in a given skit. b) Co-ordination Students[CS] are assigned the task of organizing and coordinating with all members to produce a skit. Each student may have a specific job, but the CS must communicate with one another, and eventually the participating students must pull their parts together: to read the play, rehearse the parts, set up the props, and put on the production. A single student is not held responsible for the entire skit production. c) Socialization Students[SS] are to work for socializing the members, that is, pulling the participants together in a one-to-one meet and letting them spend time together. d) Interaction Students[IS] are to work as a group to develop a skit. They are to talk to one another in respect of the individual participant's role to play, and to enact the roles before production in front of one another. e) Open Communication Students[OCS] must talk openly to one another and discuss their ideas for the skit, problems they are facing, and oversee the progress of practice as to the final production. Open communication among the role players builds a sense of mutual trust and securityas an individual given to enact a particular part needs feeling confident and safe in order to express his or her ideas and opinions.

NSOU l PGEL - 1&2 411 f) Shared Goals Students [SGS] are to work together on one project. Each member has his or her own part, yet each job is a small part of a larger project. All students should share the same end goal of putting up a skit for their class. 13.5 Cross-CulturalPolite Speaking [CCPS] A teacher is supposed put the students into groups of three or four or five, preferably students from various cultures, and then let them have a discussion on the following questions. Ø When should you be polite? Ø What happens if you are not polite? Ø What instructions would you give someone about being polite in your speech and attitude? When students discuss these questions, they are likely to hit on some interesting topics, such as:is it important to show politeness to our eldersor superiors in any cultural hierarchy? Different cultural attitudes and values will emerge out of these discussions and a teacher is supposed to assign role-plays to the students, taking into account their respective cultural values and behaviour patterns. One or more interactive sessions between the teacher and the students hailing from diverse social strata may effectively bridge the cultural and behavioural gaps pre-existent among the students. For example, a lesson on how to be polite in speaking and how to avoid slangs in open social conversation may be taken before inducting them into a skit. At this point we are going in for a little more elaboration onpolite speaking. Impolite speech starts with a negative attitude towards a situation or a person. The first step towards the students' acting politely is for the teacher to look after, by showing politeness in speaking to the students. A person can learn a lot about how someone else feels by looking at his or her facial expressions on listening to the delivered words and tone of voice. If the listener's face is tense, eyebrows are drawn together, or lips are pressed together tightly, that person is probably upset. Other body languages can indicate fear, irritation, annoyance, anger, discomfort, boredom, confusion and disbelief. These are negative features of response via bodily expressions. There are as well positive body expressions. The American Behaviourist School and the German Gestalt School are pioneers in the study of human behaviours and physical

412 NSOU l PGEL - 1&2 expressions as indicative of the happenings inwardly in man. A teacher engaged in skit method of teaching is to be conversant with the findings of these two Schools in order to moderate the gestures, articulations and behaviours of the skit-players in an academic class. For example,using a loud voice or forceful speech is considered impolite among the native English speakers. When role-playing as part of skit-programme, a student- participant must be made aware of the normative vocalization in speech as accepted in the English-speaking societies. So, a teacher is supposed to help his or her students understand the proper volume and tone of voice at which to speak. Using an inappropriate voice volume may make a situation worse rather than better in a skit production, and may send forth wrong signals to the audience of co-learners. Using forceful gestures, pointing up and hitting are all considered aggressive behaviour in a conversation. A teacher is supposed to help the students understand just how much is too muchwhen it comes to using their bodies while they speak. This is in point to address personal space. We generally leave about two feet between us and the persons we are speaking to, and we do this without even realizing this space gap. Standing too close to a person or too far from him or her, and shouting may send the wrong message in a conversation. Answering someone with sarcasm, insults, dismissive gestures or a lack of seriousness is another way to send the wrong message to someone we are speaking to. Although these responses are sometimes acceptable in specific situations, our students would do better to follow this rule: if in doubt, shy away from such situations. Insulting a conversation partner may do so much damage that the person to converse with may get unwilling to continue any conversation. A teacher is to tell the students that avoiding the negative responses is the safest strategy. Native speakers sometimes struggle with this polite conversation guidelines. Our grandmothers used to tell us to think before we speak. Reacting and responding are not the same thing in a conversation, and sometimes saying the first thing that comes to mind can be very damaging. Taking a moment to think about what we want to say, making sure that it is appropriate and kind, can make the difference between a relationship deepened and a relationship destroyed by conversation. Depending on the home cultures of our ESL students, they may have a very different understanding of eye contact than do native speakers of English usually have. In some

cultures, it is impolite to make eye contact with a superior. This gesture is seen as threatening, challenging or rude. Native English speakers, however, interpret a lack of eye contact not as a sign of humility and respect, but as a sign of guilt, the inability to trust the speaker, or lack of intelligence. We are to encourage our students to make eye contact as they are speaking, and to help them understand that eye contact while listening shows that you are paying attention and care to what the other person says. We are to encourage them to try and appreciate eye-line catches of conversation as normative and standard societal behaviour. This summary activity will encourage creativity and sense of humour in our students. As teachers we have to have groups of four or five to work together to write a skit about a situation The selected students should choose a situation from the master list compiled by the teacherin consultation with the students in a class. Each group will write and perform two skits about the selected situation. In the first skit, they will show how NOT to act in their situation. In this version, they should not follow the polite speech guidelines. They should also write a second skit about the same situation. In this skit, students should show how to speak politely following the six polite conversation guidelines. Each group should perform both skits for their class, and the viewers are sure to have as much fun as the performers when they watch their classmates being intentionally rude in a conversation. Acting in and watching skits will help the students remember what it means to speak politely. 13.6 Non-Verbal Communication More than anything else, our students should understand that body language is important.It can aid communication, set the mood for a conversation or help accomplish a discourse goal. Being aware of theirown body language as well as that of their listeners can make all the difference in an important conversation. Talking about body language across cultures may be unusual, but it will ultimately help the students become better English communicators.While words may be our main focus as ESL teachers, for the student who truly wishes to communicate with ease, we have to go deeper. Body language and nonverbal clues are extremely important in communication. 60-90% of our communication comes from paralinguistics that is,communication beyond the words we speak, and Body language includes posture, gestures, facial expressions and suggestive limb movements, and like so many other things, does not necessarily translate from one culture to another. Though linguistic fluency is probably number one

priority in ESL class as it should be,students will find it worthwhile taking a moment or two to talk about body language.Intentionally or unintentionally, we mimic the body language that we see. Mirroring body language can put a speaker at ease. For students learning English as a second language, mirroring in conversation is important. Many people will wrongly assume a non-native speaker cannot understand even the simplest of conversations. Students, who learn to mirror their conversation partners, may earn themselves more credit in a conversation test. This technique is particularly useful during professional conversations, such as job interviews, where the speaker is trying to make a strong first impression. 13.6.1 Pronunciation Lessons A lot of struggle with pronunciation comes from the first language and the sounds that compose it. The best way to learn speaking a second language is to listen to and mimic the tonal speech of a native speaker. Showing them how we position our mouth and how we move the muscles in articulation can make them understand the difference between ignorance and understanding. If we teach them the anatomy of the mouth and how it plays in English pronunciation, and show our students the motions we are going through when we articulate English speech or make certain sounds, they are likely to imbibe all they need in order to correctly produce the sounds by themselves. 13.7Defining Unfamiliar Words and Terms What is the best way to help students understand the difference between strolling and marching? We are to act it out for them. Perhaps the most common context under which ESL teachers should act out is for defining new vocabulary. For most nouns, a picture is a great way to help students understand what we are talking about. But for verbs, it is a different story. We can try and put an action into a picture, but a lot of times the drawing just falls flat. It is much more effective to just show our students what the action looks like. Charades is a good help for the students, and we often use the game to review words before a test or at the end of a unit. 13.8 Demonstrating Appropriate Cultural Behaviour Body language seldom crosses cultural borders. What is perfectly acceptable in one culture may cause great offence in another. Culture is important because even though most people cannot define their own culture, it is deeply ingrained in their cultural inheritance. Inappropriate cultural behaviour, even when it is unintentional, can cause

NSOU l PGEL - 1&2 415 problems. A teacher must show the students the standardized appropriate way to speak, respond, react and act in a normative society, beyond their respective cultural trappings. Falling short of standard and normative language behaviour may create ludicrous and laughable effects. Sheridan's restoration comedy The Rival presents the character of Mrs Malapropos engaging in inappropriate but bombastic words to show off her cultural superiority. For example, she would have used 'pineapple' instead of 'pinnacle'. This phenomenon is called Malapropism. Our students should be made aware of the comic effects of malapropism. . 13.9 Learners'Skit Theatre [LST] The term 'skit' may coextend to Learner's theatre, an activity in which students are asked to adapt a text and act it out orally in the form of a play. In Learner's theatre, students read out from literary works,often without costumes and sets, and letting their voices convey the emotion and situations of the characters taken up. Skits as part of teaching and learning techniques score over conventional one-way method in which the learners are rendered passive recipients and can hardly have any scope to actively participate in the contents of teaching and generate meanings and a proper expressive presentation of the same. Learners' or Readers' Theatre is as an oral presentation of drama, prose or poetry by two or more readers. It is a form of dramatic reading in which a play, narrative or the dramatic scrap of a work is performed for an audience. The actors first read a story and then transform it into a script involving several characters. Learners' theatre, frequently defined as theatre of the mind or minimal theatreor readers' theatre, is, to quote Aaron Shepard, a convenient and effective means to present literary works in dramatic forms. In Learners' Theatre, individuals read out chunks from literary works, most often without costumes and sets, but letting their voices convey the emotion and situations of the various characters. Learners' Theatre always involves a group reading aloud a text from visible scripts with an authentic communicative purpose. The emphasis is on the oral reading of the text, the print coming alive through reading speed, intonation and stress.Learners' Theatre is a holistic method that integrates reading, speaking, listening and thinking. It is especially useful for struggling readers as it provides them with a meaningful context to enhance their skills, interest and confidence.

416 NSOU l PGEL - 1&2 A wide range of texts can be harnessed for Learners' Theatre purposes. These maybe fictional texts, such as narratives, short stories, folk tales, myths and extracts from novels, or non-fiction texts, such as biographies and autobiographies, diaries, speeches, letters, newspaper articles and historical documents. 13.9.1 Variation on LST Shepard (2004) distinguishes between two main models of Learners' Theatre. First, in the 'traditional model' readers have relatively fixed positions, for example sitting or standing in a row or semi-circle. The text is splitamong the readers so that, for example, each reader in a group reads the part of a character in a story. Alternatively, the reading may be shared by narrators, each providing background information, and reading dialoguesof characters. Another alternative is for the text to be shared randomly by the readers irrespective of whether it is narrative or character's dialogue. Secondly, in the developed modelReaders'orLearners' Theatre, in contrast,several or all of the readers are mobile. In Shepard's own adaptation of Reader's Theatre those reading the roles of characters are mobile, while the narrators are stationary. For example four narrators will be there, one in each corner of a room. If students are totally unfamiliar with Reader's Theatre,the teacher normally introduces the concept to them, informs them of what kind of script they will be working with and how long the process will take. The next step is to assign roles. 13.9.2 Key Components of Reader's Theatre Scripted Reading Unlike conventional theatre or drama, Reader's Theatre is an uncomplicated classroom activity because it does not require full costumes, stage sets and memorization of scripts. To implement Reader's Theatre in the classroom, students first read a story, and then transform the story into a script through negotiations with other group members. The students then rehearse their scripts by reading aloud their lines, paying attention to the way they articulate the words in the script, varying their tone and projecting their voice. They finally perform for an audience by reading aloud from their hand-held scripts. Reader's Theatre is particularly important in developing reading and oral skills. Scripted dialogues provide EFL students with an opportunity to express their thoughts and ideas

NSOU l PGEL - 1&2 417 (Adams, 2003). In addition, scripted dialogues have often been used in the language classroom to enable students to acquire the vocabulary, idioms, grammar and syntax of English speech (Berlinger, 2000). As they involve all aspects of language use, scripts that are rehearsed in class can offer students an authentic communicative context to practise spoken English. 13.9.3 Skits as Reader's Theatre Variations will enable students to spring the script into a living performance. They must not too much depend on the script. They can express broader and wider ideas based on their interpretations.The use of drama, in the traditional sense, promotes 'talk' in the classroom. Jordan and Harrell (2000) recognized LST as an effective drama activity for providing authentic speech practice.Theatre Variation inspires the students to be more active in speaking. Through this technique, the students may act out to balance with the story script. It also can build the students' confidence. Interpretative Reading LST is important for learners to be able to interpret and respond appropriately to nonverbal clues such as the speaker's facial expressions and the speaker's tone of voice. Sloyer (1982) viewed it asa specific interpretative reading activity. LST is a strategy that showcases the power of language. It is an interpretative reading activity in which readers bring characters, story, and even content area or textbook material to life through their voice, actions, and words. Learners'Theatre provides an oral interpretation of literature, becoming an integrated language event in the classroom. Students may adapt and present self-selected material. A story, poem, scene from a play, song, or even material from a textbook, newspaper, historical document, or biography can provide ingredients for a script. Learners'Theatremakes a unique contribution to the language study through its integration with thinking, reading, writing, speaking, listening, and viewing experiences. For a teacher it is important to evaluate the learner's language acquisition in terms of skit performance, and this can be done through Skit Evaluation Rubric. An example of Skit Evaluation Rubric is given below:

418 NSOU l PGEL - 1&2 Performance Criteria Preparedness Adequacy and Relevance of Content Facial Expression, Body Language and Energy Level Excellent Students are well prepared and they have done rehearsals sufficiently There is a plethora of information and the correlation of each point to the topic is very well explained by the students The facial expressions, body language and energy- level of the performers are strongly appealing and conducive to invoking audience- interest in the topic. Good Students are prepared but they seem to be little lacking on rehearsals There is sufficient information and the correlation of most of the points to the topic is clearly explained by the students Students have paid attention to create audience interest in the topic by using appropriate facial expression and body language. However the energy level dips at some point during the performance. Satisfactory The students are prepared, but they clearly needed few more rehearsals There is a lot of information but its connection to the topic is not well explained Students seem to have paid attention to create audience interest in the topic by using appropriate facial expression and body language. However the energy level frequently dips during the performance. Fair Students are under- prepared and they did not rehearse adequately Insufficient information on the topic is provided by the students Insufficient attention is paid towards facial expression and body language in the presentation. The energy level and enthusiasm is generally low during the presentation. Poor Students did not prepare and rehearse at all There is a clear lacunae in presentation of relevant information and demonstration of its connection to the topic Very little attention is paid towards facial expression and body language in the presentation. The energy level and enthusiasm is also very less.

NSOU l PGEL - 1&2 419 Performance Criteria Acting and Dialogue Delivery Audience Engagement Excellent The students use appropriate voice modulation, facial expression and gestures to make the characters alive on-stage. Points are presented in an innovative ways so as to ensure active engagement of audience- attention throughout Good There is a clear effort from the students to make the characters alive on-stage but the voice modulation, pitch, expressions and gestures are not consistently appropriate throughout the performance. The performance includes some interesting points and is able to retain audience- attention for most of the time Satisfactory TThe students seem to make an effort to make the characters alive on stage but their voice modulation, expressions and gestures are often inappropriate. Though some relevant points have been made but the presentation of the points is done in slipshod manner. Fair The students make insufficient effort to use appropriate voice modulation, facial expression and gestures to make the characters alive on- stage. The performance is incoherent and rambling and as a result audience frequently lose interest. Poor The students tell the story but do not use voice modulation, facial expression and body movements/ gestures to make the characters alive on stage. The performance is incoherent and irrelevant to the topic. The audience seem to be totally disengaged during the presentation. Skit Evaluation Rubric Generally, skits require minimally four characters or role-plays to be enacted. However, Chekhov's A Marriage Proposal is a fund of resources for building skits with three major characters, Chubukov, Lomov and Natalia. We may go into this play to frame Skits and Reader's theatres. The entire play is cited below, and our L2 learners are advised to squeeze out of the play as many skits as possible involving the social meet between Chubukov, and Lomov , between Lomov and Natalia and the two incidents of quarrels among them leading to the comic finale of Chubukov's celebration of Lomov's marriage proposal.

420 NSOU l PGEL - 1&2 13.10 A Sample of Skits Resource A Marriage Proposal: Play by Anton Chekhov [A Marriage Proposal is a one-act farce by Anton Chekhov, written in 1888–1889 and first performed in 1890. It is a fast-paced play of dialogue-based action and situational humour.] The scene is laid at CHUBUKOV's country-house A drawing-room in CHUBUKOV'S house. [LOMOV enters, wearing a dress-jacket and white gloves. CHUBUKOV rises to meet him.] CHUBUKOV: My dear fellow, whom do I see! Ivan Vassilevitch! I am extremely glad! [Squeezes his hand] Now this is a surprise, my darling... How are you? LOMOV: Thank you. And how may you be getting on? CHUBUKOV: We just get along somehow, my angel, to your prayers, and so on. Sit down, please do.... Now, you know, you shouldn't forget all about your neighbours, my darling. My dear fellow, why are you so formal in your get-up? Evening dress, gloves, and so on. Can you be going anywhere, my treasure? LOMOV:No, I've come only to see you, honoured StepanStepanovitch. CHUBUKOV: Then why are you in evening dress, my precious? As if you're paying a New Year's Eve visit! LOMOV: Well, you see, it's like this. [Takes his arm] I've come to you, honoured StepanStepanovitch, to trouble you with a request. Not once or twice have I already had the privilege of applying to you for help, and you have always, so to speak... I must ask your pardon, I am getting excited. I shall drink some water, honoured StepanStepanovitch. [Drinks.] CHUBUKOV: [Aside] He's come to borrow money! Shan't give him any! [Aloud] What is it, my beauty? LOMOV: You see, Honour Stepanitch... I beg pardon, Stepan Honouritch... I mean, I'm awfully excited, as you will please notice.... In short, you alone can help me, though I don't deserve it, of course... and haven't any right to count on your assistance....

NSOU l PGEL - 1&2 421 CHUBUKOV: Oh, don't go round and round it, darling! Spit it out! Well? LOMOV: One moment... this very minute. The fact is, I've come to ask the hand of your daughter, Natalya Stepanovna, in marriage. CHUBUKOV: [Joyfully] By Jove! Ivan Vassilevitch! Say it again—I didn't hear it all! LOMOV: I have the honour to ask... CHUBUKOV: [Interrupting] My dear fellow... I'm so glad, and so on.... Yes, indeed, and all that sort of thing. [Embraces and kisses LOMOV] I've been hoping for it for a long time. It's been my continual desire. [Sheds a tear] And I've always loved you, my angel, as if you were my own son. May God give you both His help and His love and so on, and I did so much hope... What am I behaving in this idiotic way for? I'm off my balance with joy, absolutely off my balance! Oh, with all my soul... I'll go and call Natasha, and all that. LOMOV: [Greatly moved] Honoured StepanStepanovitch, do you think I may count on her consent? CHUBUKOV: Why, of course, my darling, and... as if she won't consent! She's in love; egad, she's like a love-sick cat, and so on.... Shan't be long! [Exit.] LOMOV: It's cold... I'm trembling all over, just as if I'd got an examination before me. The great thing is, I must have my mind made up. If I give myself time to think, to hesitate, to talk a lot, to look for an ideal, or for real love, then I'll never get married.... Brr!... It's cold! Natalya Stepanovna is an excellent housekeeper, not bad-looking, well-educated.... What more do I want? But I'm getting a noise in my ears from excitement. [Drinks] And it's impossible for me not to marry.... In the first place, I'm already 35—a critical age, so to speak. In the second place, I ought to lead a quiet and regular life.... I suffer from palpitations, I'm excitable and always getting awfully upset.... At this very moment my lips are trembling, and there's a twitch in my right eyebrow.... But the very worst of all is the way I sleep. I no sooner get into bed and begin to go off when suddenly something in my left side—gives a pull, and I can feel it in my shoulder and head.... I jump up like a lunatic, walk about a bit, and lie down again, but as soon as I begin to get off to sleep there's another pull! And this may happen twenty times....

422 NSOU l PGEL - 1&2 [NATALY A STEPANOVNA comes in.] NATALYA STEPANOVNA: Well, there! It's you, and papa said, "Go; there's a merchant come for his goods." How do you do, Ivan Vassilevitch! LOMOV: How do you do, honoured Natalya Stepanovna? NATALYA STEPANOVNA: You must excuse my apron and négligé... we're shelling peas for drying. Why haven't you been here for such a long time? Sit down. [They seat themselves] Won't you have some lunch? LOMOV: No, thank you, I've had some already. NATALYA STEPANOVNA: Then smoke.... Here are the matches.... The weather is splendid now, but yesterday it was so wet that the workmen didn't do anything all day. How much hay have you stacked? Just think, I felt greedy and had a whole field cut, and now I'm not at all pleased about it because I'm afraid my hay may rot. I ought to have waited a bit. But what's this? Why, you're in evening dress! Well, I never! Are you going to a ball, or what?—though I must say you look better. Tell me, why are you got up like that? LOMOV: [Excited] You see, honoured Natalya Stepanovna... the fact is, I've made up my mind to ask you to hear me out.... Of course you'll be surprised and perhaps even angry, but a... [Aside] It's awfully cold! NATALYA STEPANOVNA: What's the matter? [Pause] Well? LOMOV: I shall try to be brief. You must know, honoured Natalya Stepanovna, that I have long, since my childhood, in fact, had the privilege of knowing your family. My late aunt and her husband, from whom, as you know, I inherited my land, always had the greatest respect for your father and your late mother. The Lomovs and the Chubukovs have always had the most friendly, and I might almost say the most affectionate, regard for each other. And, as you know, my land is a near neighbour of yours. You will remember that my Oxen Meadows touch your birchwoods. NATALYA STEPANOVNA: Excuse my interrupting you. You say, "my Oxen Meadows...." But are they yours? LOMOV: Yes, mine.

NATALY A STEPANOVNA: What are you talking about? Oxen Meadows are ours, not yours! LOMOV: No, mine, honoured Natalya Stepanovna. NATALYA STEPANOVNA: Well, I never knew that before. How do you make that out? LOMOV: How? I'm speaking of those Oxen Meadows which are wedged in between your birchwoods and the Burnt Marsh. NATALYA STEPANOVNA: Yes, yes.... They're ours. LOMOV: No, you're mistaken, honoured Natalya Stepanovna, they're mine. NATALYA STEPANOVNA: Just think, Ivan Vassilevitch! How long have they been yours? LOMOV: How long? As long as I can remember NATALYA STEPANOVNA: Really, you won't get me to believe that! LOMOV: But you can see from the documents, honoured Natalya Stepanovna. Oxen Meadows, it's true, were once the subject of dispute, but now everybody knows that they are mine. There's nothing to argue about. You see, my aunt's grandmother gave the free use of these Meadows in perpetuity to the peasants of your father's grandfather, in return for which they were to make bricks for her. The peasants belonging to your father's grandfather had the free use of the Meadows for forty years, and had got into the habit of regarding them as their own, when it happened that... NATALYA STEPANOVNA: No, it isn't at all like that! Both my grandfather and great- grandfather reckoned that their land extended to Burnt Marsh—which means that Oxen Meadows were ours. I don't see what there is to argue about. It's simply silly! LOMOV: I'll show you the documents, Natalya Stepanovna! NATALYA STEPANOVNA: No, you're simply joking, or making fun of me.... What a surprise! We've had the land for nearly three hundred years, and then we're suddenly told that it isn't ours! Ivan Vassilevitch, I can hardly believe my own ears.... These Meadows aren't worth much to me. They only come to five dessiatins [Note: 13.5 acres], and are worth perhaps 300 roubles [Note: £30.], but I can't stand unfairness. Say what you will, but I can't stand unfairness.

LOMOV: Hear me out, I implore you! The peasants of your father's grandfather, as I have already had the honour of explaining to you, used to bake bricks for my aunt's grandmother. Now my aunt's grandmother, wishing to make them a pleasant... NATALYA STEPANOVNA: I can't make head or tail of all this about aunts and grandfathers and grandmothers! The Meadows are ours, and that's all. LOMOV. Mine. NATALYA STEPANOVNA: Ours! You can go on proving it for two days on end, you can go and put on fifteen dress-jackets, but I tell you they're ours, ours, ours! I don't want anything of yours and I don't want to give up anything of mine. So there! LOMOV: Natalya Ivanovna, I don't want the Meadows, but I am acting on principle. If you like, I'll make you a present of them. NATALYA STEPANOVNA: I can make you a present of them myself, because they're mine! Your behaviour, Ivan Vassilevitch, is strange, to say the least! Up to this we have always thought of you as a good neighbour, a friend: last year we lent you our threshing-machine, although on that account we had to put off our own threshing till November, but you behave to us as if we were gipsies. Giving me my own land, indeed! No, really, that's not at all neighbourly! In my opinion, it's even impudent, if you want to know.... LOMOV: Then you make out that I'm a land-grabber? Madam, never in my life have I grabbed anybody else's land, and I shan't allow anybody to accuse me of having done so.... [Quickly steps to the carafe and drinks more water] Oxen Meadows are mine! NATALYA STEPANOVNA: It's not true, they're ours! LOMOV: Mine! NATALYA STEPANOVNA: It's not true! I'll prove it! I'll send my mowers out to the Meadows this very day! LOMOV: What? NATALYA STEPANOVNA: My mowers will be there this very day! LOMOV: I'll give it to them in the neck!

NATALY A STEPANOVNA: You dare! LOMOV: [Clutches at his heart] Oxen Meadows are mine! You understand? Mine! NATALYA STEPANOVNA: Please don't shout! You can shout yourself hoarse in your own house, but here I must ask you to restrain yourself! LOMOV: If it wasn't, madam, for this awful, excruciating palpitation, if my whole inside wasn't upset, I'd talk to you in a different way! [Yells] Oxen Meadows are mine! NATALYA STEPANOVNA: Ours! LOMOV: Mine! NATALYA STEPANOVNA: Ours! LOMOV: Mine! [Enter CHUBUKOV.] CHUBUKOV: What's the matter? What are you shouting at? NATALYA STEPANOVNA: Papa, please tell to this gentleman who owns Oxen Meadows, we or he? CHUBUKOV: [To LOMOV] Darling, the Meadows are ours! LOMOV: But, please, StepanStepanitch, how can they be yours? Do be a reasonable man! My aunt's grandmother gave the Meadows for the temporary and free use of your grandfather's peasants. The peasants used the land for forty years and got as accustomed to it as if it was their own, when it happened that... CHUBUKOV: Excuse me, my precious.... You forget just this, that the peasants didn't pay your grandmother and all that, because the Meadows were in dispute, and so on. And now everybody knows that they're ours. It means that you haven't seen the plan. LOMOV: I'll prove to you that they're mine! CHUBUKOV: You won't prove it, my darling. LOMOV: I shall! CHUBUKOV: Dear one, why yell like that? You won't prove anything just by yelling. I don't want anything of yours, and don't intend to give up what I have. Why should

l? And you know, my beloved, that if you propose to go on arguing about it, I'd much sooner give up the meadows to the peasants than to you. There! LOMOV: I don't understand! How have you the right to give away somebody else's property? CHUBUKOV: You may take it that I know whether I have the right or not. Because, young man, I'm not used to being spoken to in that tone of voice, and so on: l, young man, am twice your age, and ask you to speak to me without agitating yourself, and all that. LOMOV: No, you just think I'm a fool and want to have me on! You call my land yours, and then you want me to talk to you calmly and politely! Good neighbours don't behave like that, StepanStepanitch! You're not a neighbour, you're a grabber! CHUBUKOV: What's that? What did you say? NATALYA STEPANOVNA: Papa, send the mowers out to the Meadows at once! CHUBUKOV: What did you say, sir? NATALYA STEPANOVNA: Oxen Meadows are ours, and I shan't give them up, shan't give them up, shan't give them up! LOMOV: We'll see! I'll have the matter taken to court, and then I'll show you! CHUBUKOV: To court? You can take it to court, and all that! You can! I know you; you're just on the look-out for a chance to go to court, and all that…. You pettifogger! All your people were like that! All of them! LOMOV: Never mind about my people! The LOMOV have all been honourable people, and not one has ever been tried for embezzlement, like your grandfather! CHUBUKOV: You LOMOV have had lunacy in your family, all of you! NATALYA STEPANOVNA: All, all, all! CHUBUKOV: Your grandfather was a drunkard, and your younger aunt, NastasyaMihailovna, ran away with an architect, and so on. LOMOV: And your mother was hump-backed. [Clutches at his heart] Something pulling in my side…. My head…. Help! Water! CHUBUKOV: Your father was a guzzling gambler!

NATALY A STEPANOVNA: And there haven't been many backbiters to equal your aunt! LOMOV: My left foot has gone to sleep…. You're an intriguer…. Oh, my heart!… And it's an open secret that before the last elections you bri… I can see stars…. Where's my hat? NATALYA STEPANOVNA: It's low! It's dishonest! It's mean! CHUBUKOV: And you're just a malicious, double-faced intriguer! Yes! LOMOV: Here's my hat…. My heart!… Which way? Where's the door? Oh!… I think I'm dying…. My foot's quite numb…. [Goes to the door.] CHUBUKOV: [Following him] And don't set foot in my house again! NATALYA STEPANOVNA: Take it to court! We'll see! [LOMOVstaggers out.] CHUBUKOV: Devil take him! [Walks about in excitement] NATALYA STEPANOVNA: What a rascal! What trust can one have in one's neighbours after that! CHUBUKOV: The villain! The scarecrow! NATALYA STEPANOVNA: The monster! First he takes our land and then he has the impudence to abuse us. CHUBUKOV: And that blind hen, yes, that turnip-ghost has the confounded cheek to make a proposal, and so on! What? A proposal! NATALYA STEPANOVNA: What proposal? CHUBUKOV: Why, he came here so as to propose to you. NATALYA STEPANOVNA: To propose?To me? Why didn't you tell me so before? CHUBUKOV: So he dresses up in evening clothes. The stuffed sausage! The wizen- faced frump! NATALYA STEPANOVNA: To propose to me? Ah! [Falls into an easy-chair and wails] Bring him back! Back! Ah! Bring him here. CHUBUKOV: Bring whom here?

NATALY A STEPANOVNA: Quick, quick! I'm ill! Fetch him! [Hysterics] CHUBUKOV: What's that? What's the matter with you? [Clutches at his head] Oh, unhappy man that I am! I'll shoot myself! I'll hang myself! We've done for her! NATALYA STEPANOVNA: I'm dying! Fetch him! CHUBUKOV: Tfoo! At once. Don't yell! [Runs out.A pause. NATALYA STEPANOVNA wails.] NATALYA STEPANOVNA: What have they done to me! Fetch him back! Fetch him! [A pause.] [CHUBUKOV runs in.] CHUBUKOV: He's coming, and so on, devil take him! Ouf! Talk to him yourself; I don't want to…. NATALYA STEPANOVNA: [Wails] Fetch him! CHUBUKOV: [Yells] He's coming, I tell you. Oh, what a burden, Lord, to be the father of a grown-up daughter! I'll cut my throat! I will, indeed! We cursed him, abused him, drove him out, and it's all you… you! NATALYA STEPANOVNA: No, it was you! CHUBUKOV: I tell you it's not my fault. [LOMOVappears at the door] Now you talk to him yourself [Exit.] [LOMOVenters, exhausted.] LOMOV: My heart's palpitating awfully…. My foot's gone to sleep…. There's something keeps pulling in my side. NATALYA STEPANOVNA: Forgive us, Ivan Vassilevitch, we were all a little heated…. I remember now: Oxen Meadows really are yours. LOMOV: My heart's beating awfully…. My Meadows…. My eyebrows are both twitching…. NATALYA STEPANOVNA: The Meadows are yours, yes, yours…. Do sit down…. [They sit] We were wrong…. LOMOV: I did it on principle…. My land is worth little to me, but the principle…

NATALY A STEPANOVNA. Yes, the principle, just so…. Now let's talk of something else. LOMOV: The more so as I have evidence. My aunt's grandmother gave the land to your father's grandfather's peasants… NATALYA STEPANOVNA: Yes, yes, let that pass…. [Aside] I wish I knew how to get him started…. [Aloud] Are you going to start shooting soon? LOMOV: I'm thinking of having a go at the blackcock, honoured Natalya Stepanovna, after the harvest. Oh, have you heard? Just think, what a misfortune I've had! My dog Guess, whom you know, has gone lame. NATALYA STEPANOVNA: What a pity! Why? LOMOV: I don't know…. Must have got twisted, or bitten by some other dog…. [Sighs] My very best dog, to say nothing of the expense. I gave Mironov 125 roubles for him. NATALYA STEPANOVNA: It was too much, Ivan Vassilevitch. LOMOV: I think it was very cheap. He's a first-rate dog. NATALYA STEPANOVNA: Papa gave 85 roubles for his Squeezer, and Squeezer is heaps better than Guess! LOMOV: Squeezer better than. Guess? What an idea! [Laughs] Squeezer better than Guess! NATALYA STEPANOVNA: Of course he's better! Of course, Squeezer is young, he may develop a bit, but on points and pedigree he's better than anything that even Volchanetsky has got. LOMOV: Excuse me, Natalya Stepanovna, but you forget that he is overshot, and an overshot always means the dog is a bad hunter! NATALYA STEPANOVNA: Overshot, is he? The first time I hear it! LOMOV: I assure you that his lower jaw is shorter than the upper. NATALYA STEPANOVNA: Have you measured? LOMOV: Yes. He's all right at following, of course, but if you want him to get hold of anything…

NATALY A STEPANOVNA: In the first place, our Squeezer is a thoroughbred animal, the son of Harness and Chisels, while there's no getting at the pedigree of your dog at all…. He's old and as ugly as a worn-out cab-horse. LOMOV: He is old, but I wouldn't take five Squeezers for him…. Why, how can you?… Guess is a dog; as for Squeezer, well, it's too funny to argue…. Anybody you like has a dog as good as Squeezer… you may find them under every bush almost. Twenty-five roubles would be a handsome price to pay for him. NATALYA STEPANOVNA: There's some demon of contradiction in you to-day, Ivan Vassilevitch. First you pretend that the Meadows are yours; now, that Guess is better than Squeezer. I don't like people who don't say what they mean, because you know perfectly well that Squeezer is a hundred times better than your silly Guess. Why do you want to say it isn't? LOMOV: I see, Natalya Stepanovna, that you consider me either blind or a fool. You must realize that Squeezer is overshot! NATALYA STEPANOVNA: It's not true. LOMOV: He is! NATALYA STEPANOVNA: It's not true! LOMOV: Why shout, madam? NATALYA STEPANOVNA: Why talk rot? It's awful! It's time your Guess was shot, and you compare him with Squeezer! LOMOV: Excuse me; I cannot continue this discussion: my heart is palpitating. NATALYA STEPANOVNA: I've noticed that those hunters argue most who know least. LOMOV: Madam, please be silent…. My heart is going to pieces…. [Shouts] Shut up! NATALYA STEPANOVNA: I shan't shut up until you acknowledge that Squeezer is a hundred times better than your Guess! LOMOV: A hundred times worse! Be hanged to your Squeezer! His head… eyes… shoulder… NATALYA STEPANOVNA: There's no need to hang your silly Guess; he's half-dead already! LOMOV:[Weeps] Shut up! My heart's bursting!

NATALY A STEPANOVNA: I shan't shut up. [Enter CHUBUKOV.] CHUBUKOV: What's the matter now? NATALYA STEPANOVNA.: Papa, tell us truly, which is the better dog, our Squeezer or his Guess. LOMOV: StepanStepanovitch, I implore you to tell me just one thing: is your Squeezer overshot or not? Yes or no? CHUBUKOV: And suppose he is? What does it matter? He's the best dog in the district for all that, and so on. LOMOV: But isn't my Guess better? Really, now? CHUBUKOV: Don't excite yourself, my precious one…. Allow me…. Your Guess certainly has his good points…. He's pure-bred, firm on his feet, has well-sprung ribs, and all that. But, my dear man, if you want to know the truth, that dog has two defects: he's old and he's short in the muzzle. LOMOV:Excuse me, my heart…. Let's take the facts…. You will remember that on the Marusinsky hunt my Guess ran neck-and-neck with the Count's dog, while your Squeezer was left a whole verst behind CHUBUKOV: He got left behind because the Count's whipper-in hit him with his whip. LOMOV: And with good reason. The dogs are running after a fox, when Squeezer goes and starts worrying a sheep! CHUBUKOV: It's not true!… My dear fellow, I'm very liable to lose my temper, and so, just because of that, let's stop arguing. You started because everybody is always jealous of everybody else's dogs. Yes, we're all like that! You too, sir, aren't blameless! You no sooner notice that some dog is better than your Guess than you begin with this, that… and the other… and all that…. I remember everything! LOMOV: I remember too! CHUBUKOV: [Teasing him] I remember, too…. What do you remember? LOMOV: My heart… my foot's gone to sleep…. I can't…

NATALY A STEPANOVNA: [Teasing] My heart.... What sort of a hunter are you? You ought to go and lie on the kitchen oven and catch blackbeetles, not go after foxes! My heart! CHUBUKOV: Yes really, what sort of a hunter are you, anyway? You ought to sit at home with your palpitations, and not go tracking animals. You could go hunting, but you only go to argue with people and interfere with their dogs and so on. Let's change the subject in case I lose my temper. You're not a hunter at all, anyway! LOMOV:And are you a hunter? You only go hunting to get in with the Count and to intrigue.... Oh, my heart!... You're an intriguer! CHUBUKOV: What? I, an intriguer? [Shouts] Shut up! LOMOV: Intriguer! CHUBUKOV: Boy! Pup! LOMOV: Old rat! Jesuit! CHUBUKOV: Shut up or I'll shoot you like a partridge! You fool! Lomov: Everybody knows that—oh my heart!—your late wife used to beat you.... My feet... temples... sparks.... I fall, I fall! CHUBUKOV: And you're under the slipper of your housekeeper! Lomov:There, there, there... my heart's burst! My shoulder's come off.... Where is my shoulder? I die. [Falls into an armchair] A doctor! [Faints.] CHUBUKOV: Boy! Milksop! Fool! I'm sick! [Drinks water] Sick! NATALYA STEPANOVNA. What sort of a hunter are you? You can't even sit on a horse! [To her father] Papa, what's the matter with him? Papa! Look, papa! [Screams] Ivan Vassilevitch! He's dead! CHUBUKOV: I'm sick!... I can't breathe!... Air! NATALYA STEPANOVNA:He's dead. [Pulls LOMOV'S sleeve] Ivan Vassilevitch! Ivan Vassilevitch! What have you done to me? He's dead. [Falls into an armchair] A doctor, a doctor! [Hysterics.] CHUBUKOV: Oh!... What is it? What's the matter?

NATALY A STEPANOVNA: [Wails] He's dead... dead! CHUBUKOV: Who's dead? [Looks at LOMOV] So he is! My word! Water! A doctor! [Lifts a tumbler to LOMOV'S mouth] Drink this!... No, he doesn't drink.... It means he's dead, and all that.... I'm the mostunhappy of men! Why don't I put a bullet into my brain? Why haven't I cut my throat yet? What am I waiting for? Give me a knife! Give me a pistol! [LOMOV moves] He seems to be coming round.... Drink some water! That's right.... LOMOV: I see stars... mist.... Where am I? CHUBUKOV: Hurry up and get married and—well, to the devil with you! She's willing! [He puts LOMOV'S hand into his daughter's] She's willing and all that. I give you my blessing and so on. Only leave me in peace! LOMOV: [Getting up] Eh? What? To whom? CHUBUKOV: She's willing! Well? Kiss and be damned to you! NATALYA STEPANOVNA: [Wails] He's alive... Yes, yes, I'm willing.... CHUBUKOV: Kiss each other! LOMOV:Eh? Kiss whom? [They kiss] Very nice, too. Excuse me, what's it all about? Oh, now I understand... my heart... stars... I'm happy. Natalya Stepanovna.... [Kisses her hand] My foot's gone to sleep.... NATALYA STEPANOVNA: I... I'm happy too.... CHUBUKOV: What a weight off my shoulders.... Ouf! NATALYA STEPANOVNA: But... still you will admit now that Guess is worse than Squeezer. LOMOV: Better! NATALYA STEPANOVNA: Worse! CHUBUKOV: Well, that's a way to start your family bliss! Have some champagne! LOMOV:He's better! NATALYA STEPANOVNA: Worse! worse! worse! CHUBUKOV: [Trying to shout her down] Champagne! Champagne! Curtain.

13.11 Summary Using Teaching Skits is an impressive method to make students learn from one another without recourse to listening to lectures or reading a text passively. Students can role- play different characters and situations, and those watching can respond creatively or critically. A teacher can make use of skits in the classroom to address current social issues like care for the underprivileged, outreach to the marginal communities such as the slum-dwellers, and the effects of a self-oriented society on an individual's life or the up and coming trend to push the older members of family to old age homes. Prior to assigning the skits, we could create a handout (checklist) featuring suggestions on what the students should consider as of prime importance in developing their skits and what they should watchin particular while viewing the skits. 13.12 Review Questions 1. What is the literal meaning of the term 'skit'? Attempt a comprehensive definition of skits as far as they apply to English Language Teaching. 2. How far is it justified to call 'skits' as Readers' Theatre? 3. Discuss the various advantages of skit-performances in the development or advancement of the L2 learners' knowledge about a second/foreign language. 4. 'A teacher can make use of skits in the classroom to address current social issues.' Discuss the issue of relating skits to social issues in the classroom. 5. Write a note on Interpretative Reading. 6. Frame or develop a model evaluation rubric for skit performances of the students. 7. What are the pre-skit preparations? 8. Shepard (2004) distinguishes between two main models of Learners' Theatre. Discuss. 9. Demonstrating appropriate cultural behaviour is one of the purposes of skits. How would you explain this viewpoint? 10. Develop three sets of skit(s) from Chekhov's humorous one-act play, A Marriage Proposal, as cited in this unit with skit-clues.

Novel Structure and Elements 14.4.1 Dividing Up the Story 14.4.2 Timelines and Points of View 14.4.3 Three-Act Structure 14.5 Summary 14.6 Review Questions 14.7 References 14.1Introduction Unlike epic poetry or ballads or metrical romances, a novel tells, or in cases such as stream-of-consciousness novel, shows forth its story using prose rather than verse; unlike short stories, it tells a longish narrative, as long as a trilogy or the so-called river novel, rather than a brief slice of human experience of life, presented in taut focus in a

NSOU l PGEL - 1&2 437 short story. There are, however, other characteristic elements that set the novel apart as a literary genre. In everyday usage, the novel has come to be associated closely with fiction, as opposed to nonfiction. For the most part, that association stands thus: not all fiction is novels, but all novels are fiction, even historical novel. A non-fiction prose work that is of the same length as a novel could fall into several other categories, such as historiography, biography, and so on. Although a novel is typically a work of fiction, many novels do weave in real human history. This can range from full-fledged novels of historical fiction, which focus on a specific history or present quasi-fictional narrative about real historical persons, to works of fiction that simply exist as 'displaced narrative duplication the "real" world. There also are early modern works of historical nonfiction that were embellished with made- up speeches for dramatic effect. Despite this, for most purposes we can assume that, when we talk about novels, we refer to works of narrative fiction or prose fiction in epical span, with elaborate plotlines and progression of a long story through interplay of character and plot. Henry James, the celebrated American novelists puts it aptly: what is character but an illustration of plot; what is plot but an illustration of character. Narratologically, novel is a complex genre. It ranges over a whole gamut of narrative techniques that range from a bland description of brute realities to an intricate, subtle and suggestive showing forth of the character's inner drama or conscious stream that cuts across temporal and spatial sequence. Joyce's is breakthrough in telescoping the consciousness of twenty-four hours in a non-coherent syntax reflecting the multidimensionality of consciousness. From the experiential crude realities outside a critical self to the dark areas of mind the narrative techniques encompass an incurving hierarchy: 1. Third-person omniscient God narration; the God-narrator knows and permeates all his/her characters and all incidents, being himself or herself above and beneath the story, and nowhere is visible. 2. Third-person intrusive narration, in which the omniscient author-narrator frequently suspends the story to intrude with reader-guiding commentaries on all characters, on all incidents. 3. Free indirect discourse narration or erlebteRedeornarrated monologue: a method in which the third-person narrator informs the consciousness of the characters, and a presents a narrative that is close to the consciousnesses of the characters.

438 NSOU l PGEL - 1&2 4. First-person narration or fallible/unreliable narration in which the narrator is a character within the narrative frame, and mediating the story from his/her limited observation and perspective. 5. Multi-personal narration in which each character tells his or her story from a limited personal experience and as result a manyvoiced story emerges. Joseph Conrad excelled in this form of 'developing sequence' from multi-personal points of view. 6. Monologue interior or spoken soliloquy in which the characters assume their own first-person voices rendering the resonance of their conscious streams. To put it in other word, it is their-person rendering of 7. Simulated stream of narration that orchestrates with the psychic flux of the characters, with incessant metaphoric echoes, tonal jostles, suggestive ellipsis, saliences of silence and assortment of random images that overrides the coherence of syntax and grammar. James Joyce stormed into the arena of novelistic literature with his epitomic epic of simulated stream of consciousness in his Ulysses. Key Takeaways Ø A novel is a work of prose fiction that tells a narrative over an extended length of time and a gallery of characters. Ø Novels date as far back as 1010's Tale of Genji by MurasakiShikibu; European novels first appeared in the early seventeenth century. The first complete English novel is Daniel Defoe's Robinson Crusoe. Ø Novels overtook epic poetry and chivalric/metrical romances as the most popular mode of storytelling, with an emphasis on the personal reading experience. Ø Today, novels come in a wide variety of subgenres 14.2 Objectives Novel is a literary offshoot of realism in literature. So it often earns a definitive description as 'realistic prose narrative'. By going through this Module we will come to know how novel and its sub-generic mutations portray the experiential and circumambient realities that the humans come to grapple with. An effective and in-depth study of the novelistic literature equips the reader with a better understanding of human life, its complexities

NSOU l PGEL - 1&2 439 and vagaries and man's existential position not only in the spectrum and matrix of socio-economic and political conditions, but also in the whole of a cosmic situation. 14.3. Types of Novels Novels come in all styles imaginable, with every author bringing his or her own unique voice to the table. Within its broad framework, the genre of the novel has encompassed an extensive range of types and styles: picaresque, epistolary, Gothic, romantic, realist, historical, stream of consciousness novel—to name only some of the more important ones. The novel is a genre of fiction, and fiction may be defined as a craft of contriving, through the written representations of human life that instruct or divert or both. The various forms that fiction may take on, are best seen less as a number of separate categories than as a continuum or, more accurately, a cline, with the briefest form as anecdote at one end of the scale and the longest conceivable novel like a trilogy or river novel at the other. When any piece of fiction is long enough to constitute a whole book, as opposed to a mere part of a book, it may be said to have achieved novelhood. But this concept of novelhood admits of its own quantitative categories, so that a relatively brief novel may be termed a novella (or, if the insubstantiality of the content matches its brevity, a novelette), and a very long novel that overflows the banks of a single volume, and becomes a roman- fleuve or river novel. MAJOR TYPES OF NOVELS 14.3.1 Epistolary Novel Epistolary[adjective form of the noun, epistle'] novel is a type of novel told through the medium of letters written by one or more of the characters. Originating from Samuel Richardson's Pamela; or, Virtue Rewarded (1740), the story of a servant girl's victorious struggle against her master's attempts to seduce her, it considered one of the earliest forms of epistolary novel to have developed and remained one of the most popular up to the 19th century. The epistolary novel's reliance on subjective points of view makes it the forerunner of the modern psychological novel.The advantages of the novel in letter form are that it presents objectively and with dramatic immediacy an intimate view of the character's thoughts and feelings without author intrusion into the narrative. Presentation of events from several points of view, technically known as multipersonal points of

view, lends the story an element of verisimilitude. Although the method was most often a vehicle for sentimental novels, it was not limited to them. Of the outstanding examples of the form, Richardson's Clarissa (1748) has a tragic intensity, Tobias Smollett's Humphry Clinker (1771) is a picaresque comedy and social commentary, and Fanny Burney's Evelina (1778) is a novel of manners. Jean-Jacques Rousseau used the form as a vehicle for his ideas on marriage and education in La Nouvelle Héloïse (1761). The letter-novelof Pierre Choderlos de Laclos, Les Liaisons dangereuses (1782; Dangerous Acquaintances), is a work of penetrating and realistic psychology under the veneer of epistolary gorm Some disadvantages of the form are apparent in epistolary novel. Dependent on the letter writer's need to confess to virtue, vice, or powerlessness, such confessions were susceptible to suspicion or come within the ambit of unreliable or fallible narration.The servant girl Pamela's remarkable literary acumen and her propensity for writing on all occasions were burlesqued in Henry Fielding's Shamela (1741), which pictures his heroine in bed scribbling,however, epistolary novel was popular novelistic entertainment paving the path to modem psychological novel. 14.3.2 Mystery Novel Mystery novels revolve around a crime, and the suspense-ridden plotline hooks the reader on to the detection of the crime, often a murder if not always. The traditional format will have a detective—either professional or amateur—as the protagonist, surrounded by a group of characters who help solve the crime,and characters who are suspects. Over the course of the story, the detective will sift through clues, including false leads and red herrings, to solve the case. Some of the best-known novels of all time fall into the mystery genre, including the Nancy Drew and Hardy Boys series, Sir Arthur Conan Doyle's Sherlock Holmes novels, and Agatha Christie's novels. Christie's And Then There Were None is the world's best-selling mystery novel. 14.3.3. Gothic Novel Gothic Novel is spun around macabre horror and suspense elements in a supernatural setting that scares the wits out of readers. Beginning from Hugh Walpole's The Castle of Otranto(1764) the typical setting of a gothic novel is replete with dark, secret passages, faintly lit dungeons, and an eerie atmosphere frequently stirred by the shrieks of bats. Ann Radcliffe's The Mysteries of Udolpho(1794) sets the gothic novelistic tradition of

a suspense tale centring round a beautiful heroine beset with ominous shadows, strange noises and a candle that keeps blowing out now and then. Matthew Lewis stretched the tradition in his The Monk(1796) to extreme horror effects by invoking ghosts, and other supernatural stock-in-trade. Gothic Novel retained its popularity throughout Europe up to the 1830s. It resurfaced in the 20 th century in diverse forms of horror film. 14.3.4. Historical Novel Historical novel uses a historical era or backdrop for its story with a fusion of history and fiction. Sir Walter Scott fathered the fashion of historical novel on the Scottish history. His American counterpart, James Fennimore Cooper, wrote Leather Stocking Tales (1823-41) to have won worldwide fame. 19 th century masters of the Historical novel were Victor Hugo (Notre Dame de Paris, 1831) and Alexander Dumas (The Three Musketeers, 1844). In the 20 th century Historical novel continues to be popular, as exemplified by Margaret Mitchell's Gone with the Wind (1936), Toni Morrison's Beloved (1987) or William Styron's The Confession of Nat Turner (1967).Iconic works of historical fiction include Ivanhoe, A Tale of Two Cities, Gone with the Wind, and The Hunchback of Notre Dame. 14.3.5. Picaresque Novel Picaresque novel is a type of novel that recounts the adventure of a picaro(Spanish picaro means 'knave or rogue'). The picaro moves from one master to another, and finally finds himself in the centre of society. It is the autobiography of a rogue who knows by the hard raps of reality the value of money in moving from the margin to the centre of society. Thematically, it is the picaro'sstory of upward social mobility through a travelling career. Structurally, it is episodic and rambling. The picaresque is a fictive response to social and cultural clashes that affected Spain and the rest of Western Europe in the turmoil of a shift from feudal system to monarchical society in the 16 th century. The prototype is the anonymous Lazarillo de Tormes (1554) to present a first-person narrator, who relates his adventures with different situations, and his witty oeuvres to survive and carve his place in polite society at last. Dickens's Oliver Twist is the type of an anti-picaresque in that he remains incorruptibly good despite his diverse untoward experiences in a shifting narrative in first-person voice. 14.3.6. Bildungsroman or Aurobigraphical Novel Bildungsroman which is in a sense also Education novel is a German term for a fictional form that narrates, in a homo-diegetic or first-person mode, the development or evolution

442 NSOU l PGEL - 1&2 of a character moving from childhood to maturity. Often called Coming of Age Novel, this type of novel presents the archetypal theme of initiation or a character's movement from innocence to knowledge. Remarkable instances are: Goethe's The Sorrows of Young Werther (1774), Dickens' David Copperfield (1849-50), James Joyce's Portrait of the Artist as a Young Man (1916), and Gunter Grass's The Tin Drum (1959). 14.3.7. Science Fiction and Fantasy Novel One of the more popular genres of novels is science fiction and fantasy, which both deal with speculative world building. The lines between the two are often blurred, but in general, science fiction tends to imagine a world that's different because of technology, while fantasy imagines a world with magic. Early science fiction included the works of Jules Verne and continued on through George Orwell's seminal classics such as 1984; contemporary science fiction is a highly popular genre. Some of the best-known novels in Western literature are fantasy novels, including the Lord of the Rings series, The Chronicles of Narnia, and Harry Potter; they owe their debt to European epic literature. 14.3.8. Romance Novel Romance novels of the present day have some things in common with "romances" of the past: the idea of romantic love as an end goal, the occasional scandal, intense emotions at the centre of it all. Today's romances, however, are more specifically focused on telling a story of a romantic and/or sexual love between characters. They often follow highly specific structures and are all but required to have an optimistic or 'happy' resolution. Romance is currently the most popular novel genre in the United States. 14.3.9. Realist Novel Realist fiction is, quite simply, fiction that eschews heightened or spectacular genres or styles to attempt to tell a story that "could" take place in the world as we know it. The focus is on representing things truthfully, without romanticization or artistic flourishes. Some of the best-known realist authors include Mark Twain, John Steinbeck, Honoré de Balzac, Anton Chekov, and George Eliot. 14.3.10. Psychological Novel or Stream of Consciousness Novel Psychological novel or Stream of consciousness novel (too frequently interchangeably used) is more a narratological term than generic. It refers to a type of fiction that verbally simulates the multidimensional consciousness of a character in a telescopic spot of time NSOU l PGEL - 1&2 443 and space. Interior Monologue is its most dominant form. The best known example of interior monologue is Molly Bloom's soliloquy, in the closing section of Joyce's novel, Ulysses (1922). Other examples featuring this close first-person rendering of a character's conscious flux are: John Dos Passos'sManhattan Transfer (1925), and William Faulkner's The Sound and the Fury (1929) and As I Lay Dying (1930). 14.4. Novel Structure and Elements A novel can be structured in myriad ways. Most commonly, novels are structured chronologically, in a coherent linear plotline, with story segments split into chapters. However, this is not the only structural option for authors. As in Joyce's strem technique, the narrative is non-linear and incoherent, overlapping the states of consciousness, and baffles the Aristotelian concept of beginning , middle and an end. It is a free-floating flux corresponding to the random workings of the characters' mind, 14.4.1 Splitting Up the Story Chapters tend to revolve around some small portion of the novel that is unified by a character, theme, or piece of plot. In larger novels, chapters may be grouped together into even larger sections, perhaps grouped by time period or an overarching portion of the story. The division into smaller "chunks" of story is one of the defining elements of a novel; a story that is short enough to not need such divisions is likely not lengthy enough to qualify as a full-lengthy novel. 14.4.2 Timelines and Points of View Authors may choose to structure novels in a variety of different ways. Instead of telling a story chronologically, for instance, the story may toggle between different time periods in order to maintain suspense or make a thematic point. Novels may also switch between the perspectives of multiple characters, rather than focusing on a single character as the sole protagonist. A novel may be told in the first person (narrated by a character) or in the third person (narrated by an outside "voice" with varying degrees of knowledge). 14.4.3 Three-Act Structure Regardless of the time frame, a novel's plot will often follow what is known as the three-act structure. The opening chapters will be concerned with acquainting readers with the main cast of characters and the world of the story, before a specific incident, typically referred to as the "inciting incident," shakes up the status quo and launches the

444 NSOU l PGEL - 1&2 "real" story. From that point, the story (now in "Act 2") will enter a series of complications as the protagonist pursues some goal, encountering obstacles and smaller goals along the way. At the midpoint of the story, there will often be some major shift that raises the stakes, all leading up to the emotional and narrative climax towards the end of the novel. "Act 3" concerns itself with this finale and the fallout. Literary analysis looks critically at a work of fiction in order to understand how the parts contribute to the whole. When analyzing a novel or short story, we need to consider elements such as the context, setting, characters, plot, literary devices, and themes. We have to remember that a literary analysis is not merely a summary or review, but rather an interpretation of the work and an argument about it based on the text. Depending on our assignment, we may argue about the work's meaning or why it causes certain reader reactions. 14.5. Summary In this unit we have discussed the most popular of genres called 'fiction' or novels. In doing this, we have discussed the origin of this genre in the European tradition which was later adopted in the English language. The English novel has grown as a tradition through different ages and also has shown a variety. Each of the types of novels has been discussed with a brief description of its characteristic features and exemplified with some popular titles. We have laid emphasis on some of the developments in the recent days for your study. 14.6Review Questions 1. Write a critical note on the different narrative techniques that evolved through the history of novel as a literary genre. 2. Comment on the structural aspects of novel as a form of art 3.. Novel as a realistic prose narrative diversified itself into subclasses. Discuss. 4. Write notes on a] Bildungsroman and Picaresque novel; 5. Assess Stream-of-consciousnessNovel as a random recapture of the characters' thought process. 6. HOW would distinguish between history and Historical novel?

NSOU l PGEL - 1&2 445 7. Set up a study of distinction between Realist[ic] novel Romance novel. 8. Write a brief review of narratological techniques in the novel as an art form. 9. What is multipersonal points of view in a novel. What are its advantages and disadvantages? 10. Basically novel is a realistic prose narrative, distinct from romance. 14.7References l Burgess, Anthony. "Novel." His works inspired ideas and motivated people to change the world in terms of social culture and attitude to life. He is of the opinion that our increasing acquaintance with the brilliant essays across literary epochs and eras can make us learn the exact word for our feeling which alone can uplift our social and cultural world. Different literary forms have been designated by the common name Essay. In strictness, it is to Montaigne that we owe the name and the thing. His Essais, excellently translated

NSOU l PGEL - 1&2 447 by John Florio in 1583, were popular in England, and Bacon, fourteen years later, borrowed the title for his famous bundles of apothegm. The influence of the Essais, continuing into the next century, increased with the liking for all things French after the Restoration, and is attested by Cotton's New Translation in 1680. They evidently furnished the model for those charming discursive papers by Cowley, Halifax, and Temple, which closely resemble some of the best works of Hazlitt, de Quincey or Lamb of the 19th century. Essay as such now invades all journalistic fields, and continues to the chief stuff of communication via journal articles and media-centric communiques. The essay is perhaps one of the most flexible genres: long or short, personal or analytical, exploring the extraordinary and the mundane. The first collection of personal essays is credited to Michel de Montaigne; his Essais was first published in 1580. The word essay comes from the French verb essayer, which means, 'to try'. Dr Johnson defines the essay as 'a loose sally of the mind'. A. C. Benson, in his essay, "The Art of the Essayist" identifies two basic features of a non-fictional prose tract, known as the essay: as lyrically subjective and self-expressive, and thematically all-permeable. Before the word itself was coined in the 16th century by Montaigne and Bacon, what came to be called an essay was called a treatise, and its attempt to treat a serious theme with consistency deprived it of the seductive charm relished in the later examples of this form of literature. In this sense, the word "essay" would hardly fit the didactic tone of Aristotle's Rhetoric or his Metaphysics. There were, however, ancient masters of an early form of the essay, such as Cicero discoursing on the pleasantness of old age or on the art of 'divination'; Seneca, on anger or clemency; and Plutarch, more superficially and casually, on the passing of oracles. The relentless desire to analyse one's own contradictions, especially among Christians, who, like Saint Paul, were aware of their duality and of 'doing the evil which they would not', also contributed to the emergence of the essay. But Christian writing tended to be highly didactic, as may be seen in the work of Saint Augustine of the 5th century, or of the 12th-century theologian Abélard, or even in the Latin writings on "the solitary life" or on "the scorn of the world" by the 14th-century Italian poet Petrarch. Not until the Renaissance, with its increasing assertion of self-deification, the flexible and deliberately nonchalant and versatile form of the essay was perfected by Montaigne. Montaigne, who established the term essay, left his mark on almost every essayist who came after him in continental Europe, and perhaps even more in English-speaking countries.

448 NSOU l PGEL - 1&2 Emerson made him one of his six Representative Men along with others of the stature of Plato, Shakespeare, and Goethe. Hazlitt lauded Montaigne's qualities as precisely those that "we consider in great measure English," and another English romantic writer, Leigh Hunt, saw him as "the first man who had the courage to say as an author what he felt as a man." And the 20th-century poet T.S. Eliot declared him to be the most important writer to study for an insight into the literature of France. With Montaigne, the essay achieved for the first time what it can achieve better than any other form of writing, except perhaps the epistolary one: a means of self-discovery. It gave the writer a way of reaching the secret springs of his behaviour, of seizing the man and the author at once in his contradictions, in his profound disunity, and in his mobility. The essay was symbolic of man's new attitude toward himself, revelling in change, and hence in growth, and forsaking his age-old dream of achieving an underlying steadfastness that might make him invulnerable and similar to the gods. He would portray his foibles and unworthiness, hoping to rise above his own mediocrity, or, at the other extreme, he would exalt himself in the hope that he might become the man he depicted. Montaigne in his essays pursued an ethical purpose, but with no pompousness or rhetoric. He offered an ideal that was adopted by his successors for centuries: perfecting man as a tolerant, non-dogmatic, urbane social being. 15.2

Objectives After going through this unit, the learners will be able to: l Understand the

salient features of the genre non-fictional prose l Appreciate the development of this genre through the ages l Understand how this genre is a precursor to journalism l Realise the need for exercising restraints in language use to achieve coherence, and precision of expression. 15.3 The Eighteenth Century Periodical Essay In the eighteenth century British periodical literature underwent significant developments in terms of form, content, and audience. Several factors contributed to these changes. Prior to 1700 the English popular press was in its infancy. The first British newspaper,

NSOU l PGEL - 1&2 449 The Oxford Gazette, was introduced in 1645. Two years later the Licensing Act of 1647 established government control of the press by granting the Gazette a strictly enforced monopoly on printed news. As a result, other late seventeenth-century periodicals, including The Observer (1681) and The Athenian Gazette (1691), either supplemented the news with varied content, such as political commentary, reviews, and literary works, or provided specialized material targeting a specific readership. During this time, printing press technology was improving. Newer presses were so simple to use that individuals could produce printed material themselves. British society was in transition as well. The burgeoning commercial class created an audience with the means, education, and leisure time to engage the public in reading. When the Licensing Act expired in 1694, publications sprang up, not just in London, but all across England and its colonies. Joseph Addison and Richard Steele are generally regarded as the most significant figures in the development of the eighteenth-century periodicals. Together they produced three publications: The Tatler (1709-11), The Spectator (1711-12), and The Guardian (1713). In addition, Addison published The Free-Holder (1715-16), and Steele, who had been the editor of The London Gazette (the former Oxford Gazette) from 1707 to 1710, produced a number of other periodicals, including The Englishman (1713-14), Town-Talk (1715-16), and The Plebeian (1719). The three periodicals Addison and Steele produced together were great successes. None ceased publication because of poor sales or other financial reasons, or by the choice of their editors. Beginning in the eighteenth century and continuing to the present day, there has been continuing debate among the critics and scholars over the contributions of Addison and Steele to the development of prose. Addison has been generally seen as the more eloquent writer, while Steele has been regarded as the better editor and organizer. Periodicals in the eighteenth century included social and moral commentary, and literary and dramatic criticism, as well as short literary works. They also saw the advent of serialized stories, which Charles Dickens, among others, would later perfect. One of the most important outgrowths of the eighteenth-century periodical, however, was the topical, or periodical, essay. Although novelist Daniel Defoe made some contributions to its evolution with his Review of the Affairs of France (1704-13), Addison and Steele are credited with bringing the periodical essay to maturity. Appealing to an educated audience, the periodical essay as developed by Addison and Steele was not scholarly, but casual in tone, concise, and adaptable to a number of subjects, including daily life, ethics, religion, science, economics, and social and political issues.

450 NSOU l PGEL - 1&2 15.4 The Impact of Periodicals The impact of periodicals was both immediate and on-going. Throughout the eighteenth century and beyond there were many imitators of Addison and Steele's publications. These successors, which arose not just in England, but in countries throughout Europe and in the United States as well, modelled their style, content, and editorial policies on those of The Tatler, The Spectator, and The Guardian. Some imitators, such as The Female Spectator (1744), were targeted specifically at women. Addison and Steele's periodicals achieved a broader influence when they were translated and reprinted in collected editions for use throughout the century. The epistolary exchanges, short fiction, and serialized stories included in the periodicals had an important influence on the development of the novel. In addition, celebrated figures from Benjamin Franklin and Jean-Jacques Rousseau to Mark Twain have acknowledged the impact of the eighteenth- century periodical, particularly The Spectator, on their development as writers and thinkers. 15.4.1. The Form and Content of the Periodical Essay The periodical essay of the eighteenth century invited men of the Age of Reason to pour into it their talent and thought. It was a form in which they could make their points briefly and effectively. It was flexible, and was eventually familiar enough to be well received. The form itself reflected the common-sense view about life, restraint and moderation that the periodical writers advocated. If a writer had a pet idea or philosophy, he was given a medium for fixing it firmly in his reader's mind by repeating his thought at irregular intervals. The moral issues, periodical writers dealt with, had a "cumulative" impact on a number of papers. The periodical essay differed from a newspaper in that the newspaper was concerned with matters of the moment brought as soon as possible before the public, and the essay could proceed on a more leisurely and contemplative course. Both the essay and the newspaper used the same format and addressed essentially the same audience - the middle and upper middle classes. The periodical essay dealt with matters that were contemporary but not immediate-with manners and morals, with tendencies of the time rather than actual events. 15.4.2. The Coffee House Culture The chief outlets for the periodicals and the soil on which the essays took root and sprouted were the coffee houses, the intellectual and social hubs of the eighteenth century. Coffee had been brought into England about the middle of the preceding century and by

the early 1700's it became an institution. Coffee houses were the chief gathering places for men of letters and were the natural centres for the dissemination of ideas and information. Each coffee house had its own clientele, and discussion was on topics of interest and import to the particular trade or social group that belonged there. In the coffee houses circles were formed to mull over the matters of the day. The opinions of the coffee houses became the criteria for pronouncing judgment on ideas and events of the times. The give and take of conversation was an important feature of London life and influenced it in many ways. Men's ideas were moulded and refined through contact with others' thoughts, and conversation became clearer and more polished. The coffee houses had a direct effect on the literary style of the periodicals.As the papers were circulated and discussed in these centres, their writing styles needed to be as clear and colloquial as conversational. The coffee houses were an admirable part of eighteenth century life.But other facets of the times were less pleasant. The unpleasant aspects of the century - the prevalence of violence and crime in the poorly lighted London streets, the cruel punishments of criminals, the quackery of "medical" men, the extreme poverty of the lower classes - bypassed the upper class morals and manners. It was in this atmosphere that the periodical essay developed and did more, perhaps, than any other institution towards improving social conditions. As the age cried out to be educated, to be instructed in a sane living, the periodicals answered with their sage and reasoned advice. The best, most readable of these advisors of the age were Richard Steele's The Tatler, Joseph Addison's The Spectator, Samuel Johnson's The Rambler, and Oliver Goldsmith's collection of essays, The Citizen of the World. 15.5 The Romantic Essays/Non-Fiction Prose Alongside the tide of romanticism in poetry, mostly lyrical poetry, during the period (1798 – 1830) of the Romantic Revival appeared in this period an array of prose-writers- Lamb, Hazlitt and De Quincey among a host of minor prose writers.Interestingly, by this time a change had taken place in the prose-style also. Many eighteenth century prose-writers depended on assumptions about the suitability of various prose styles, which they shared with their relatively small but sophisticated public.Writers in the Romantic period were rather more concerned with subject matter and emotional expression than with appropriate style. They wrote for an ever-increasing audience which was less homogeneous in its interest and education than that of their predecessors. There was also an indication of a growing distrust of the sharp distinction between matter and

manner which was made in the eighteenth century, and of a Romantic preference for spontaneity rather than formality and contrivance. There was a decline of the grandorheroic style and of contrived architectural prose written for the educated urbane public or for didactic purposes. Though some Romantic poets- Coleridge, Shelley, Keats, Byron-wrote excellent prose in their critical writings, letters and journals, and some of the novelists like Scott and Jane Austen were masters of prose-style, those who wrote prose for its own sake in the form of the essays and attained excellence in the art of prose-writing were Lamb, Hazlitt and De Quincey. 15.6 Charles Lamb (1775-1834): Charles Lamb is one of the most lovable personalities among the English essayists. He lived a very humble, honest, and self-sacrificing life. He never married, but devoted himself to the care of his sister Mary, ten years his senior, who was subject to seasonal mental disorder.In one of her frenzied fits she had fatally wounded her mother. In his Essays of Elia (1823) and Last Essays (1833)Lamb laid bare the wealth of his family affections, taking the readers into confidence about himself, his quaint whims and experiences, and the cheerful and heroic struggle that he bore quietly against misfortunes. Born in a lower class family, Lamb came in contact with Coleridge. He started his career as a poet but could not succeed. From 1820 to 1833, essay writing was his main occupation. He wrote under the pseudonym of Elia. His first essay appeared in the London Magazine in 1820. The first volume of his essays was published in 1823 as Essays OfElia and the second as the Last Essays OfElia in 1833. In the essays of Lamb we find a fine fusion of wit, fancy, anecdote and reflection. InCazamian's view, Lamb is 'above all an artist'. 15.6.1. Personal and Autobiographical Element Lamb's essays are personal and autobiographical. They reflect the tenderness of his soul, his empathetic nature, his simplicity, his geniality and his charity. Lamb talks about his relatives, friends and acquaintances in his essays. But he is silent about the murder of his mother for the sake of his sister. It was she who killed Lamb's mother. He often changes the name of his relations and mystifies the character by blending facts with fiction. Such deviations do not alter the truth. He is friendly and intimate with the reader. He takes him into his confidence on private affairs. He frankly tells us about his

NSOU l PGEL - 1&2 453 childhood, his boyhood and his manhood. Throughout his essays he remains uniquely personal and autobiographical. His humanity is visible everywhere. Lamb's essays exhibit infinite variety. Here is God's plenty. His essays satisfy the appetite of every taste. In his essays Lamb reveals himself. He is a visualiser of memories. His essays give a glimpse into his life and thought. The essay 'Dream Children' is noted for its autobiographical description. It is a reverie. The reason behind the creation of this essay is the death of his brother John. It unveils the author's soul. It is full of pathos. In "A Bachelor's Complaint" Lamb describes various oddities of the married couples. 15.6.2. Humour and Pathos As a humourist Lamb is unsurpassable in English prose. There is no humourist more original than Lamb. He often interrupted a serious discussion with a light jest. His essays are marked with all shades of humour and delicate irony. Puns, absurd details, funny situations and boisterous laughter usually occur in his essays. There are even harmless strokes of fun at pen-portraits coming up in his essays. The element of humour is balanced with a tinge of sadness and a vein of reflectiveness. Pathos is an essential aspect of his humour. It is a consciousness of the pathetic aspects of life that made him laugh away them with a twitch in his heart. He laughed to save himself from weeping. Nostalgia and wistful longing often underlie his laughter. In short, Lamb's humour is a blend of jest and tears. "The Dream Children" is remarkable for its blend of humour and pathos. 15.6.3. Lamb's Style However, Lamb does not typify the familiar prose style advocated by Hazlitt in his essay, "on Familiar Style". The typical Lambian style is long, convoluted sentences, often laden with archaism or obsolete Latinized words. Yet there other appealing aspects of Lamb's prose style. His essays have the charm of lyrical mellifluence. Conversational ease, epigrammatic depth, emotional flexibility, reminiscent allusiveness mark the essays of Elia. Lamb's style is remarkably influenced by the 17th century writers like Brown, Burton and Fuller. He often quotes from the old writers to express his feelings. Lamb makes frequent use of irony and pun. J. C. Powys writes,' Elia's style is the only thing in English prose that can be called absolutely perfect.' De Quincey was considered one of the greatest prose stylists of the English Romantic era, otherwise best known for poetic, imaginative, convoluted prose style, best exemplified in "Confessions of an English Opium Eater". In a great variety of prose works that were

454 NSOU l PGEL - 1&2 widely read in 19th-century England and America, he anticipated later literary radicals such as American mystery pioneer and experimentalist Edgar Allan Poe and the French poet Charles Baudelaire. William Hazlitt is one of the greatest English romantic essayists. He was eager to inquire into human life with all its variety. He wrote of a vast range of topics. He was keenly interested in a vast variety of things-books of all kinds, politics, sports, stage etc. Hazlitt's essays are grave in nature, serious and thought-provoking. They show his philosophic bent of mind. A large number of his essays are on abstract ideas such as Egotism, Reason, Imagination, and the fear of Death. He is more interested in the idea than in the essay as a form. He does not indulge in moralizing. In his hands essay became a means of self-expression. He often glides into the past. He weaves the texture of his essays by the threads of memory. He thus reveals his life and mind. Whateverbe the theme of his essays, each of them is a reflection on human nature. They are the reflections of a man who lived and loved life. He observes life with penetrating sympathy and feelings. He wrote with convictions that were deep and firm. He gave more attention to the idea than to the expression. He wrote with a spontaneity and involvement that verged on frenzy. He wrote with an aim at communicating with his readers. Hazlitt's "On Actors and Acting-I" is a beautiful essay, in praise of actors and acting. Here the essayist is highly allusive. His mood is philosophical and nostalgic. Hazlitt has a style of his own. It has been called the familiar style. He does not use archaic, irrelevant and superfluous words. He frequently uses figures of speech to emphasize his point of view. His essays are replete with vivid descriptions. His sentences are brief and abrupt, vigorous and direct. He often writes balanced, antithetical sentences to present the contrasting ideas. He is also praised for the use of epigrams and paradoxes. Essay or non-fiction prose with all its ramifications continues through the 20 th century to dominate the academic and literary world alongside social, economic and political journalism. 15.7. Victorian Non-Fiction Prose/Essay While the prose of Romantic Movement was highly imaginative, written for the sole purpose of describing personal experiences, that of the Victorian Age explored intellectual debates on contemporary problems of religion, philosophy, politics and arts. Coming

NSOU l PGEL - 1&2 455 down to the history of English Literature from the Romantic Age of Idealism to the Victorian era of Realism, one experiences the feeling of a shift from solitude to society, from nature to industry, from concepts to issues, from spiritualism to pragmatism, from optimism to agnosticism, from lyricism to criticism and from organic structure to compromise. A large part of the complex changes that comes about in the English Literature as it moves from the early 19th century to the later 19th century can be measured from the kind of the changes as we pass from Byron to Arnold. The movement of Realism is generally a minor movement in the later 19th century, which began in France and was later, followed by England. Whereas, the Romantics could afford to withdraw from the town in the initial stages of the Industrialisation, the Victorians, facing the flowering of the Industrial Revolution had no such soft option available to them. Therefore rather than living in solitude, writers of the Victorian Age had to cope with the process of change in which the old agrarian way of life had to yield to the new industrial civilization. Against the chain of thinkers, including Newman, Arnold, and Ruskin, who were essentially religious, was the formidable force of utilitarian thinkers like J.S. Mill and agnostic scientists like Darwin, Spencer, Huxley among others. Although utilitarianism was propounded by Jeremy Bentham, the philosophy came into wide acceptance during the Victorian era. Both the state and the industry came under the influence of a mechanical approach to life. The celebrated principle, "the greatest good for the greatest number" was the governing rule of the utilitarian thought on morals, law, politics, and administration. This pragmatic view of life shaped the moralistic prose of Victorian era, represented chiefly by Arnold, Carlyle, Ruskin and Newman. Agnosticism that was an offshoot of Victorian doubt and despair, is defined as the belief, "that nothing is known or can be known of immaterial things, especially of existence or nature of God". The term "agnostic" was coined by T.H. Huxley in 1869 A.D. The realization that God's existence is neither observable nor provable drove society into a state of uncertainty. People of the Victorian Era sought to explore and understand questions about the metaphysical world, but ultimately found no answers and were left in doubt. Agnosticism was a means of identifying the scepticism that stemmed from the inability to logically support the existence of spiritual beings. In the looming shadow of despair

456 NSOU l PGEL - 1&2 and disenchantment with industrialism, Victorian non-fiction prose took on a protesting moral tone and was laden with the language of rhetorical argument. The mellifluence of the Lillian prose was far off from the prose styles of Newman, Ruskin, Arnold or Carlyle, who were all moralists using the essay form as the vehicle of their pragmatic and humane perspectives on the debasement of human life vis-à-vis the furious progress of industrialization. Like the Victorian Novels, typically, prose compositions of the Victorian era are unusually long, argumentative and persuasive unlike those of the Augustan or the periods. The prose writings of the period are either treatises or thesis of book size or essay of unusual length. The typical prose of the period is at best a voiced-forth unorganised composition, with an overtly moral tone. Like the Victorian Novel, the compositions are not formally or even consciously organized. They are strung together only by the argument contained therein, not by any formal design or pattern. Ruskin's Unto This Last and Mill's On Liberty are, strictly speaking, not the works of Literature. However, since they advocate the humane view of life, as against the political, economic or biological, they are allied to literature. Besides, they wrote in a language and style, which if not truly literary, approximates the style of literature. 15.8. Summary In this unit we have discusseda genre of literature which is called the non-fictional prose, and this is popular as essay in the general parlour. We have looked at the importance of this genre through different ages and the types of development there was leading to journalistic writings. We have also familiarised you with well-known essayists in different periods and left you with a few questions to keep pondering on how these have a great influence on our teaching language today. There is also an attempt to provide a comparative account of different types and compare this genre with other genres of literature. 15.9. Review Questions 1. Trace the development of non-fiction prose through the 18 th century? 2. Assess the contribution of 18 th century periodicals to the development of English prose?

NSOU l PGEL - 1&2 457 3. There was a palpable distinction between the Romantic essays and the Victorian essays. Discuss. 4. Discuss the individual traits of the following essayists: Lamb; de Quincey, and William Hazlitt. 5. Dr, Johnson describes the genre, 'essay' as 'a loose sally of the mind'. How far is this description valid? 6. who do you credit with the introduction and popularization of essay as a subjective prose tract? 7. Develop an essay on Victorian Non-Fiction Prose/Essay 8. Consider the contribution of 18 th periodical to the development of essay as an artform. 9. write a short review of the Coffee House Culture in the development essay as distinctive Genre 10. How has this genre influenced the modern day journalism? 15.10. References 1. History of English Literature by Legouis and Cazamian 2. 458 NSOU l PGEL - 1&2 Unit- 16 p Revision on Literary forms and Extension Structure 16.1 Introduction 16.2 Objectives 16.3 Definition and expanse 16.4 Role of literature in language teaching 16.5 Classification of literary genres 16.6 Conclusion 16.7 Review Questions 16.8 References and Reading List 16.1 Introduction Let us begin with a question. Do you know what is literature? How is it different from language? I am sure both these words, literature and language are familiar to you, and let us quickly take a look at these two words. What is literature? A good dictionary defines it as 'a body of written work'. Literature is also something that lasts long (e.g. we still consider the works of Kalidasa and Shakespeare far beyond their age) and impacts the human life. Should literature be necessarily fiction or drama or poetry? Then what about terms like – medical literature, literature of science, literature of inventions, literature of historical facts, literature of music, etc. Literature can focus on any subject from medicine to music, engineering to ecology and science to social events. The canvass is really wide. What does this mean? In language teaching, we can use literature of various types and use them as texts for interpretation and language learning. However, for our purpose in this unit, we will look at literary texts and make references to other types of literature tangentially. 16.2 Objectives

| 88% | **MATCHING BLOCK 82/83** | **SA** | PGELT 5 _ 6 (1-400).pdf (D165254851) |

At the end of reading this unit, the learners will be able to:

i. Get a comprehensive view of the spread of literature ii. Understand the different genres as components of literature NSOU l PGEL - 1&2 459 iii. Understand the development of literature across the ages iv. Enjoy and experience illustrations given for each genre. 16.3. Definition and Expanse There are quite a few definitions of literature available from noted authors. One of the definitions I personally like is 'Best words in the best order' by Coleridge. He used this definition with reference to poetry, but this is equally applicable to all genres of literature. If we accept this definition for our purposes of language teaching how useful is it? Language teaching has a focus on developing a learner's proficiency to use language. This is best done by exposing the learner to samples of good use, and literature is obviously one of the best forms of language expression. Hence it is certainly a valuable input to language teaching. Literature is perceived as different genres. What do we mean by genre? Would you like to respond? Your response: Genre means type. You must be familiar with the words 'genus' (singular) and 'genera' (plural). These words are taken from the science of biology and used while classifying animals and plants. Genus denotes a group of plants or animals which can have further smaller divisions called 'species'. Let us not go into those details. Literature is expressed in many types, and each type is called a 'genre' /ˈɒnrʏ/ (this has a French origin, so check its pronunciation properly). We have novels (fiction), prose, poetry, drama, graphic novel, fantasy, science fiction, narrative, biographies, autobiographies, travelogues, diaries, and many more types. You may have read all these, or at least a few of these. You may in the space given below mention a work or two from each category. I will not give any examples. 16.4. Role of literature in language teaching Recall the English textbooks you read in your higher secondary level or college days at the undergraduate level. You must have read a few essays, short stories which were anthologized. Similarly a few poems must have been put together in the form of an anthology. Along with these two, you must have read one or two novels and one or two plays. Do you remember the names of the novels and plays you studied? Can you mention those names in the space given below?
460 NSOU l PGEL - 1&2 a. Plays b. Novels c. Titles of some short stories d. Titles of some essays e. Titles of some poems. (If possible give a brief summary of each one of them. It is not compulsory though.) This task was to see how familiar you are with literature and the various genres that you have studied as an undergraduate student. How helpful was the study of literature in developing your language. The fact that you are able to read these lessons, understand them and also respond to the questions is a sign that you have learnt language reasonably well. But these uses need to be specified properly. Let us try and do this before concluding the unit. Can you guess some of the benefits of using literature in language teaching? Note down your points here: Your response: Literature has other roles to play in teaching language. If you recall your lessons in applied linguistics, one of the features of language is transmission of culture. Culture can best be taught using stories, exposing the learners to life in different parts of the world, and life sketches. All these form integral part of literature, and it becomes an excellent source for teaching appropriate language use in our society. Literature helps develop good reading skills. A literary text can be read independently (without the teacher's help) and this makes for developing good vocabulary as well as proper use of language. Good reading habits besides developing good comprehension skills also develop vocabulary and strengthen the writing skills of the learner. Plays which form an integral part of literature, help learners develop good spoken skills – expressions appropriate to context including various forms of addressing other people. The skills so developed can be harnessed to read and understand content subjects as well. This is the primary purpose of language teaching. Language, we should remember, is taught as a service subject in our schools and colleges.

Let us quickly recall what we have said so far in this unit. We began with a revision of what was learnt in the first two modules on Grammar and Vocabulary. Subsequently, we moved to defining literature and its uses. Finally, we looked at how using a literary text is useful in teaching and learning language. 16.5. Classification of literary genres Look at the flow chart given below. Take a proper look and understand how the literary forms are classified. Try to describe this grid in your own words. Classification of Literary Forms (Genres) It is clear from this grid (classification table) that literary forms can be broadly divided into four categories. These are large categories and are confined to the variety we find in literary texts. Content writing can have other forms and these are not discussed here. The four categories mentioned are Poetry, Drama, Fiction and Nonfiction. Each of these categories has been sub-divided into the varieties of forms that they include. However, the varieties mentioned are not exhaustive, and more varieties can be added. We shall restrict ourselves to these varieties for our discussion. A. Poetry: This is a popular form of literature, and almost everyone is familiar with this form. Poetry comes naturally to language and we perceive this in the numerous folk Poetry Poems Sonnets Ballads Odes Lyrics Songs Couplets Haiku Limericks Drama Comedies Tragedies Tragicomedies Romance Farce Melodrama Absurd Poetic drama Fiction Novels Short Stories Tales Anecdotes Legends Myths Graphic novels Nonfiction Essays Biographies Autobiographies Diaries Speeches Descriptions Prospectus Instruction sheets Reports

songs that we hear in different languages. Folk songs are typical to each language and music is integrated into them. English is no exception. Ballads are in fact folk songs and are sung to the accompaniment of stringed instruments. We have listed eight varieties of poems in our grid. Let us look at some of these varieties and also provide names of one or two poems as illustrations. We will not provide the text of the poems, you can get these by browsing the net. The first of these varieties we have mentioned is called Poems. This is a generic term and does not specifically refer to one variety. The rest of the varieties are all poems. In English literature, the Romantic period (nineteenth century) is supposed to have produced the richest poetry. We had major poets like Wordsworth, Coleridge, Blake, Byron, Keats, Shelley, Browning and Burns during this period. Each one of them produced large volumes of poetry and they had variety in them. i. Sonnets: We will begin with sonnets. Sonnets are short poems of no more than fourteen lines. Very often they are said to be very personal and deal with an experience that touches the poet's life in an emotional way. These could have varied themes of love, dejection, sadness, wonder, philosophical outlook or humour. There are typically two types of sonnets – the Petrarchan (Italian) sonnets and the Shakespearean sonnets. The Petrarchan sonnets were divided into two parts – the first eight lines called the octave and the next six lines called the sestet. Sestet provided a solution to the problem raised in the octave. Both styles of sonnets are written to this day. Besides Wordsworth and Keats, Elizabeth Barrett Browning wrote some of her sonnets in the Petrarchan style. Shakespearean sonnets had three stanzas of four lines each and the sonnet ended with a couplet. Shakespeare wrote more than one hundred fifty four sonnets in this style and made this form popular. All decent libraries have copies of complete works of Shakespeare which include all the sonnets. ii. Ballads: Having looked at what sonnets are, let us move to Ballads. These are quite ancient forms of poems that are available to us. These were popular even during the pre-

Shakespearean day, and often the names of the poets are also lost to us. Ancient ballads were collected, curated and published in the form of a volume by Bishop Percy during early eighteenth century under the title Reliques of Ancient English Poetry. This is a valuable work that has been handed down to us. Some of the best known ballads Keats' 'La Belle Dame Sans Merci'; Yeats' 'Second Coming'; Tennyson's 'Lady of Shallot', Wordsworth's 'Solitary Reaper'; Coleridge's 'Rime of the Ancient Mariner' are some of the famous examples. iii. Odes: The third variety is the ode, which actually means a song to be sung. It is generally written in appreciation of a person or a thing. (Dryden's Alexander's Feast; Keats' Ode on a Grecian Urn) These originated in Greece, and are attributed to Pindar; in fact, the odes are called Pindaric Odes. Some of the best odes were written by Keats (the five famous odes), and Shelley's Ode to West wind are well known poems. iv. Lyrics and Songs: We will not discuss this here. These are stylistic variants and you will find examples of lyricism in the varieties discussed earlier. Ballads and odes are songs. v. Couplets: A few poets expressed their ideas crisply in two lines. Though the poem was longer than two lines, each couplet expressed one complete thought which was carried forward as part of the larger theme of the poem. Alexander Pope was one of the best known poets who popularised couplets – which are memorable. A story is popular about him being chastised by his father for writing poems. When it was his turn to apologise, what he said came in the form of a couplet: 'Father, father, mercy take, I shall never verses make.' When Newton died, he was commissioned to write the epitaph which reads as follows: Nature and nature's laws all lay hid in the night. God said, 'Let Newton be', then there was light.'

464 NSOU l PGEL - 1&2 Dryden was also known for his heroic couplets, and these were later picked up by several younger poets. Sanskrit literature is popular for its couplets based on providing value based lessons. vi. Haiku and Limericks: Haiku is a recent addition to the genre of poetry in English. This style of writing poems has been borrowed from Japanese poetry. Like a couplet (which is restricted to two lines), a Haiku is restricted to seventeen syllables arranged in three lines. The lines need not rhyme, but should convey a complete meaning. Autumn moonlight- a worm digs silently into the chestnut. Limericks like Haiku are also short poems of five lines each with a definite rhyming scheme. Often, limericks are bordered on humour, but not without a message. The authors of limericks are often not known. Take a look at this limerick There was a lady from Niger, Who went for a ride on a tiger. They returned from the ride, With the lady inside And a smile on the face of the tiger! I am sure you enjoyed reading this limerick, which has humour as well as caution on choosing a ride. Edward Lear has written some of the best limericks to date. This brings us to the close of our discussion on different forms of poetry. We shall now proceed to look at Drama in the next section. B. Drama: Drama is a major genre which acquired popularity during the Elizabethan period with playwrights like Shakespeare and Marlow. Drama was a popular form of literature in ancient India and Greece, and the English theatre has adopted the form from both these sources.

NSOU l PGEL - 1&2 465 Drama and Shakespeare have been synonymous. Shakespeare introduced quite a few types of plays – Tragedies, Comedies, Tragi-comedies, Historical plays, and Romances. These largely form the varieties and the characteristics of each one of them remain the same. A Drama portrays life of a person, period or a family. It could borrow themes from history, epics, popular legends, and day to day life. The technique of presenting a real life story accounts for the success of drama. Let us briefly look at some types and provide names of a couple of popular plays as illustrations. i. Tragedy: This is a play which centres on the fall of a hero. Hero is a famous person, (a king, baron, queen, a brave soldier, a well-known merchant, or a wealthy lord). The hero has several good qualities, but also has a few weaknesses (hamartia) due to which he falls from grace. That fall accounts for the tragedy. (In the Indian plays, tragedies were not accepted, and most plays ended on a happy note. But Greek plays were profound tragedies – Oedipus Rex, Agamemnon, and Hippolytus). Shakespeare was known for his tragedies such as King Lear, Hamlet, Julius Ceaser, Macbeth, and Romeo and Juliet. Marlow a contemporary of Shakespeare also wrote some tragedies and the best known play of his is Doctor Faustus is a famous tragedy. ii. Comedies: Comedies largely dealt with social issues based on the life of ordinary people. It could reflect the nuances as they existed in the society and it held a mirror to the society. There have been a large number of comedies across the ages in English literature. Shakespeare did write a few comedies such as Midsummer Night's Dream, Two Gentleman of Verona, The Merchant of Venice, and All's Well that Ends Well. Apart from this, immediately after the Elizabethan period (when Shakespeare wrote and produced his plays) the Restoration Drama became popular. Some of the comedies of this era are Rivals, School for Scandal, Way of the World and She Stoops to Conquer. Early twentieth century was marked by good comedies which were called Farce. George Bernard Shaw was a pioneer in the field and his plays like Arms and the Man, Candida, Major Barbara, and Doctor's Dilemma. Galsworthy, Oscar Wilde and other contemporaries of Shaw also wrote comedies. Around this time, theatre was popular in Europe and plays in English, French, Italian, Norwegian and German languages were popular.

466 NSOU l PGEL - 1&2 iii. Romances: Romances were plays which glorified nature and the life of peasants in the country. There was no struggle, and it generally talked about young couple who got separated, pined for each other and finally got together with divine intervention (deus-ex-machina). AWinter's Tale by Shakespeare is an example of such plays. iv. Tragi-comedies: Merchant of Venice is a good example of a tragi-comedy. This play recounts the story of a merchant who loses all his wealth due to a storm in the sea and is harassed by a Jew (money lender). His friend who assumes the role of a lawyer, saves him from the Jew and with divine intervention the wrecked ship reaches the shore. v. Absurd Plays: These are a new generation plays that were experimented at the beginning of the last century. This movement began in France and soon caught the attention of playwrights in other parts of the continent. Today, we have absurd plays in Indian languages including Bangla. (BadalSarkar's plays EvamIndrajit, PaglaGhoda are some plays in this category). The best known playwrights in this category are Samuel Beckett and Edward Albee. Waiting for Godot by Beckett has made a history in the field of theatre. vi. Poetic Drama: This is a variation in style that was ushered in during the twentieth century. Shakespeare used this technique but this has not been noticed. This form of using poetry in drama was also popular in ancient Indian literature and it was called Champu Kavya. T S Eliot was well known for his poetic play – Murder in the Cathedral. W B Yeats and J M Synge also wrote similar plays. Yeats is said to have been influenced by the Japanese theatre that staged Noh plays. This brings us to the close of our discussion on drama. In the next section we will look at Fiction briefly. Before doing so, here is a small task for you. How well can you compare the poetry in English with the development of poetry in Bangla? Give examples and show the similarities and differences. Your response: C. Fiction: In the previous unit we looked at the teaching of prose. While discussing prose, we said, it constitutes the largest part of literature and several types of writing happen in prose. One major part of prose is Fiction (which means, an imaginary story) and this

NSOU l PGEL - 1&2 467 has several sub-categories within. We shall take a look at some of these for our understanding. i. Novels: There are very few of us who are not familiar with the term novel. Novel means something new. It tells us a story with which we are familiar, but in a new way. Hence it is called a novel. Novel as a genre was first used in English literature during the seventeenth century. (English was influenced by novels in Spanish language Don Quixote). Most novels during this period described an adventure where the hero was an ardent traveller and met with new experiences in life. Some of the well-known novels are Robinson Crusoe, Gulliver's Travels, Joseph Andrews, and Pilgrims Progress. Later in the nineteenth century, the novel developed into a mature form and dealt with social problems and had a curative effect on the readers. Charles Dickens, Jane Austen, Bronte sisters were some of the famous authors. The tradition of writing novels has continued to this day and we have a variety of novels dealing with varied themes such as histories, adventure, social drama, scientific discoveries, fantasy, espionage, travel and political commentary. Indian authors have also contributed to the volume of fiction produced in the world. (The tradition of writing novels in ancient India began in sixth century with BanaBhatta'sKadambari and Dandi'sDasha Kumara Charita.) ii. Short stories, tales and anecdotes: Short stories are miniaturised novels. They have a similar structure as a novel (a plot, characters, developments, struggle, resolving the struggle etc.). There are no strict guidelines on how short or long a story could be. There are stories that are hardly a sentence or two to some stories running to more than fifty pages. However, all stories have similar structure that binds them. The stories are also recognised as tales (which are largely oral in tradition) and sometimes anecdotes also pass off for stories. (Anecdotes are narration of some incidents which are personal.) Rabindranath Tagore is one of the best short story writers from India. iii. Legends and Myths: Legend is a term used in two senses. One of the meanings is assigned to an ancient story that has been handed down to us. The origins of such a story are not traceable. In India we have quite a few legends that have been handed down to us from our parents and grandparents. This is true of all cultures. In most languages, the proverbs we use have a legend to support them. You can 468 NSOU l PGEL - 1&2 think on these lines and collect some legends. When you visit certain religious places, or ancient monuments, you will get to hear of several legends – I am told there is a village in UttaraKhand where they hate Hanuman. This is because, he plucked a part of the Sanjivini Hills from the village and deprived them of the benefits that hill could give. This is a legend. (The second meaning, is a person who is famous for the good work he has done, and is remembered forever is called a legend. e.g. Gandhiji is a legend.) Myths are also stories which we believe in. There is an element of divinity associated with myths and some people dismiss some of the myths as superstitions. Read a book called Myth or Mythya by DevaduttPattanaik you will have a clearer idea. This brings us to the last part of the literary forms – the non-fictional prose. We will discuss this as one category without going into the details of each sub-category. D. Non-fictional Prose: In the previous section while discussing prose, we have mentioned how vast this particular category is. Fiction forms a large part of prose writing and the non-fictional writing is even larger and includes sub-categories such as Essays, biographies, autobiographies, diaries, speeches, descriptions etc. i. Essays: Essay is a long continuous piece of writing based on a theme. It uses the techniques of analysis, description, explanation, argument and other strategies. The main aim of the essay is to convince the reader the viewpoint held by the authors. You must have seen a large number of articles that are published in newspapers every day. Each of these articles is an essay. The answers our students write in the examination are in the form of essays. Each unit in this book is an essay. Depending on the theme and style the essay acquires its name and importance. ii. Biographies and Autobiographies: These are life histories. Life history of a person can be written by someone else, or the person can write it himself/herself. Biographies have been an important part of literature and one of the best biographies that made history was the story of Samuel Johnson written by James Boswell. There are quite a few other biographies and in the recent days, this genre has become more popular. Several of the state leaders and politician have their biographies written. Some of the famous personalities have also written their own life stories and such works are called Autobiographies. There are quite a few well known autobiographies which you can find on the shelves of bookstalls.

NSOU l PGEL - 1&2 469 iii. Diaries: Diary writing has been a disciplined habit by many people of prominence. Not all diaries are published, and some diaries are published as a matter of tribute to the person posthumously. The most famous diary that was published to understand the holocaust days of Nazi rule is by Anne Frank. Other famous diaries are by Gibson, and also Jawaharlal Nehru. iv. Speeches: Like diaries, speeches of famous people are collected and published. Some of these make for good reading. Speeches of Vivekananda have been published by the Ramakrishna Mission. Like speeches, there has been a practice to publish the letters written by famous people. Letters of Keats, Bertrand Russell, Nehru, and others are available in print. 16.6 Conclusion: In this module you have looked at two aspects of teaching - Literature and language teaching. Here we have attempted to show how the two are integrated and do not serve cross purposes. Literature is seen as a sample of good language use which can be offered to the learner to develop language proficiency. The only difference is seen in the approach to teaching literature. In a literature class, the focus is on analysis of the text to appreciate its composition, while in a language class we analyse the same text to exploit it for language use. This point needs to be understood clearly by all teachers of English. Here is a limerick for you to read and enjoy: There was an old man on the Border, Who lived in the utmost disorder; He danced with the Cat, And made tea in his Hat, Which vexed all the folks on the Border. With this we come to the close of a discussion on literary forms. We hope you enjoyed going through this module. There are no review questions, except to ask you to read as many texts as have been mentioned in the module. Now you have some idea of why literature is used in language teaching. Here are a few books for you to read on this subject. 16.7. Review Questions 1. How helpful is literature in language teaching?

470 NSOU l PGEL - 1&2 2. What are some of the definitions of literature given in the unit? Can you add a few more as you have known? 3. How is poetry as a genre divided further into sub-categories? Can we use these for language teaching? 4. What are some of the recent innovations to the genre of drama? Has there been any contribution from India? 5. What makes novels (fiction) the most popular form of literature? Give your reasons with an example of a fiction you have read. 6. Narrowing our focus on the novel as a major literary genre, name as many sub- genres of novel as possible for you. 7. There are different narrative techniques for the novelists. Name and define these techniques. How should you explain them to the students the simplest possible manner? 8. Coming to poetry how would classify their varieties and the differences among them? 9. For understanding literature a minimalistic approach to literally hundreds of literary terms is necessary for the beginners. How should you concentrate on screening or selecting the terms that can best serve the target learners' purpose? 10. What is the conceptual difference between terms and types? In a language teaching session do you think they should be reconciled in a manner that become complementary? 16.8 References and Reading List a. Lazar, Gillian. (1996). Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analyses. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing and devising of proper lay-out of the materials. Practically speaking, their role amounts to an involvement in invisible teaching. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great part of these efforts is still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these

Word Association ESL Vocabulary Activity Skills: Reading/writing/speaking Age: UG level Materials Required: Worksheets or butcher paper and pens Word Association is an ESL vocabulary activity that can be used to introduce a new topic, lesson, theme, etc. You have to write a single relevant word in the middle of the board or paper and have students take turns adding as many words or images related to that word as possible. For example...the centre word could be "school." Some of the other branches could be subjects (Math, English, History, Gym, etc) while another branch could be school supplies (pen, paper, ruler, etc.) Finally, you might have one about recess or break time (play games, tag, climb, jump, swing set). And keep going with more associations from there. The subject or topic can be whatever you're teaching that day. Another topic it works well for is body parts. Check out some more parts of the body activities here. For large classes, have students work in groups with separate pieces of paper taped to the wall or the top of the table/ grouped desks. After a given amount of time (3-5 minutes, or when you see no one is adding anything new), discuss their answers.

Teaching Tips for This ESL Vocabulary Activity For large classes, butcher paper works best, so more students can write at one time. If that isn't possible, have 5-6 board markers available. If using butcher paper, prepare in advance, including taping to the wall, unless students will be working at their desks. Finally, if students will be working at their desks, write the word on each table's page in advance, but don't hand them out until you have given your instructions. This activity is often quite a fun way to start off a holiday themed class. For even more ideas, check out: ESL Christmas Activities and Games.

Conversation Starters If you ask your students what they want to work on in your speaking or conversation classes, they'll often say "free-talking." This can be a little bit difficult when you just tell your students to, "Talk about the future!" It helps to give them something more concrete and specific. That's why I like to make some conversation starter questions that students can talk about. Some students will only make it to the first 1-2 questions, while others will make it through all 10 in the allotted time. The important thing is that students are talking in English!

W   https://www.eslactivity.org/future-forms-esl-activities/1.

Future Board Games I LOVE to play board games in real life, so like to introduce them into my classes too. However, if you want to target a specific language concept, you'll probably need to

W   https://www.eslactivity.org/future-forms-esl-activities/1.

make your own. It's very easy to do this with future sentences. You can write some questions on the board game like the following: What are you going to do this summer? Where are you going to eat lunch today? Or, you may want to write some answers and students have to think of the question. I'm going to take an English class this summer. I will probably have dinner with my friend tonight.

W   https://www.eslactivity.org/future-forms-esl-activities/1.

My Future Plans In this simple activity, students write down a few of their future plans using the correct grammatical construction. I generally narrow it down to a more specific topic like weekends plans. Then, students have to give me all their papers with plans using future forms. Depending on the class size, I do one of two things. For smaller classes, I'll read out the papers and the entire class can guess who it is. For larger classes, I give each student one paper and they have to walk around asking questions to find out who it is.

W   https://www.eslactivity.org/future-forms-esl-activities/1.

Plan a Holiday One task based activity that I like to do with my students for the future tenses is to tell them that my parents are coming to visit their country for a week and that they have to plan a trip for them. Think about that—it's all future tenses, right? Then, they have to do a short presentation in front of the class and I choose the trip that my parents will like best!

Although when to use going to and will may seem complicated, it's actually not! Basically, here are the rules: You can use either will or going to when making predictions about the future with no difference in meaning (I think it's going to snow tonight/I think it will snow tonight). Will is used to express future actions decided at the moment of speaking (Who can turn off the lights? I will). Going to describes future plans decided before speaking (I'm going to go to the University of ABC next year). Will is used for a future fact (The sun will set tonight). Going to is useful for something that will happen right now (Hurry up! We're going to miss the bus). What about the Simple Present to Express the Future? Have you noticed some sentences that use the simple present to talk about the future? Here are some examples: The plane takes off at 7pm. The bus leaves at 2. Notice the similarity? The present simple is used to express a future time or schedule of some kind. 7.7

Entire Document

PREFACE In the curricular structure introduced by the University for the students of Post Graduate degree programme, the opportunity to pursue post Graduate course in a subject is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that this University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post Graduate level in different subjects are prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholarship is indispensible for a work on this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing and devising of a proper layout of the materials. Practically speaking, their role amounts to an all-out involvement in layout of the materials and an involvement in 'invisible teaching', as well. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier will it be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms throughout the counseling sessions regularly available at the network of study centers set up by the University. Needless to add, a great deal of these efforts is still experimental-in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

NSOU PGEL-3 8

NSOU PGEL-3 9 Module 1 : General Phonetics Unit 1 The Nature of Spoken English 1.1 Introduction 1.2 Objectives 1.3 Speech is Primary; Writing is Secondary 1.4 Nature of Spoken English (Speech) 1.5 Phonetics: An Introduction 1.6 Phonology 1.7 Classification of English Phonemes 1.8 English RP 1.9 Summary 1.10 Review Questions 1.11 References and Reading List 1.1 Introduction We use language to express our thoughts by means of spoken or written words. English is also used for the same purpose, that is, to communicate our thoughts in different contexts, and is used by a majority of people all over the world as a first, second or foreign language. Spoken English has a number of sounds that form words, and words create sentences. When we say English words and sentences, we use typical English stress and intonation patterns to create our meaning. Our spoken language consists of a succession of speech sounds that are produced voluntarily with the help of organs of speech. The organs of speech move in certain definite ways to produce the appropriate language for communication. In connected speech, the succession of sounds is produced through transitions from one segment to the other in quick succession. The transitions occur in a natural manner in speech contexts. We hope you have gone through different features of spoken English in your previous units. Here, at the beginning of Unit - 1, we have summed up the features for your reading and assimilation. We would like you to go through this unit with this 9

NSOU PGEL-3 10 awareness. Some activities and tasks have been designed for you to check your knowledge and proficiency in this regard. 1.2 Objectives After going through the unit, you will learn about: a) the origin and the development of speech and its place in communication b) the different features of English phonetics and phonology c) classification of phonemes d) the segmental and supra-segmental features e) English RP 1.3 Speech is Primary; Writing is Secondary One of the important features of modern linguistics is the priority of the spoken language over the written language. Though the traditional grammarians tended to assume that the spoken language is inferior to and in some respect dependent upon the standard written language, modern linguists maintain that the spoken language is primary as we can produce speech with our speech organs. Writing is largely a means of representing speech through another medium. The main reasons cited by linguists for considering speech as primary are related to the origin and functions of language. As speech is older and more widespread than written language, this priority has been conferred upon spoken language. Language serves the communicative needs of a speech community and the spoken language provides the basis of all systems of writing. There are different units of language in its spoken form such as; sound, syllable, words, and sentences. [Note: Alphabet system is an evolved system and uses distinct symbols. The syllabic system depends on the speech sounds the language has, and each sound is represented by a letter or symbol which in itself is a syllable.] Task 1 Look at the following words given in the box: cast, called, sale, band, woman, village, what Now, tell us which letter is common in the spelling of all the words? Is that letter pronounced the same in all these words? Go through the words again from the pronouncing dictionary to find it out. Your answer:

NSOU PGEL-3 11 Task 2 : Look at the following of words: though tough cough through rough bought thorough bough Which letters in spelling are common to all the words? Do you think, these letters represent the same sound in all the words? If not, write down the sounds for each word? Your answer: The ideographic system is based on ideas or concepts. No writing system is capable of representing all the significant variations of pitch, stress and intonation. In case of speech, the linguistic communication is verbal and sound-based in which all the supra-segmental variations can easily be incorporated. Speech is more spontaneous form of communication; it has more scope of variations than the written form. Furthermore, in case of speech, any face-to-face interaction between the speaker and listener, the verbal message is reinforced by non-verbal gestures and even with pre- verbal sounds. Writing requires writing materials whereas speech can be used without any medium or materials for effective communication. Speech and writing are two modes of communication or expression. Both the mediums are capable of carrying the same linguistic information. This paradigm shift from traditional grammar-based study of written language to a more scientific and objective study of spoken English has opened this vast field of study called English Phonetics and English Phonology. Students of ELT (English Language Teaching) and other professionals concerned with Verbal communication such as speech therapists or BPO call centre pronunciation trainers are required to have a basic knowledge of the segmental and supra-segmental features of verbal sound. Even speech therapists and trainers of English language for special purpose such as the hospitality and tourism industry and medical transcription require knowledge of English speech sounds, of their production, properties, transmission and reception. Student of ELT need to know about the organs of speech and the mental processes that are involved in speech production. As English in India is mainly taught as a second language, the students are required to learn about the English language and its production as possessed by the native speakers of English. This unit on the nature of spoken English will help you to become familiar with the nature of spoken English language.

NSOU PGEL-3 12 Task 3: Look at the following of words: Song, scent, descend, brass, assume, cement, fancy, pace, exercise Tax, psychology All the words above, contains one common consonant sound. Can you identify that sound? Which letter stands for that sound in each word? Your answer: Task 4: Look at the following sets of words: Bead, weep, seize, believe, piece, peace, theme, people, police, key, ski, Quay, aesthetic All the words above possess a common vowel sound. The vowel sound that we find in the word 'bee' is common to all the words. Which letters in each word represent that sound? Your answer: 1.4 Nature of Spoken English (Speech) English language, like any other modern language, is a highly structured speech-based form of verbal communication. English phonetics and phonology deal with the nature of spoken language along with the segmental and supra-segmental features of the spoken language. On an average the people who use English language use it mostly in its spoken form without any knowledge of the sound system, classification and sound structure. Spoken English is a highly structured, rule-governed, and creative transformation of thought into linguistic communication. According to Ulrike Gut: ...speakers use several thousand speech sounds every day to communicate their feelings, wishes and intentions and encounter equally many speech sounds when listening to the feelings, wishes and intentions of others. Yet, almost none of the speakers are aware of what they do when they produce or perceive speech. While for written communication in English, 26 letters (5 vowels and 21 consonants) along with some diacritical marks are used, for the purpose of spoken English, speech sounds (44 phonemes) are used along with the supra-segmental features

NSOU ? PGEL-3 13 features like stress and intonation for linguistic communication. Spoken English is highly structured and rule-governed. The Standard English that is used internationally for spoken English is modelled on the English RP (Received Pronunciation), that means the Standard English language spoken by the educated gentry, especially living in the south of London, which happens to be the seat of power. The segmental features of English with all the supra-segmental features like pitch, stress and intonation are all based on the British RP. In the Anglophonic world, that includes the Commonwealth countries under Great Britain, the United States of America, and the erstwhile colonies of the British Empire, English is spoken in various forms and ways. There are segmental and supra-segmental variations in the spoken English used worldwide. Nowadays the use of International English for internet and information communication technology (ICT) has emerged more popular than any particular form of spoken English like American English or Indian English. Any study of the nature of spoken English therefore involves a scientific and synchronic study of language rather than a historical or diachronic study of language. Ferdinand de Saussure, in A Course in General Linguistics, pointed out that la langue (the language) is a theoretical object of study abstracted from the structures of specific languages. La parole (speech) is called the "executive side" or the concrete "utterances" that constitute all acts of language. The linguistic sigh is made of a signifier (sound image) and a signified (concept). So, the concept or thought (la langue) is given a material shape or existence through concrete speech utterance. Linguistic "signs are combined like links in a chain to form the line of language according to two relations: the syntagmatic (all units present in their articulation) and the associative (all related units present in the mind but absent from the actual sequence)" (Leitch 959). For Saussure, the spoken form of language might include certain phrases that are practiced by the speaker like a parrot to perform concrete language or speech. Saussure defined "Language as organized thought coupled with sound" and states: Language can be compared with a sheet of paper: thought is the front and the sound the back; one cannot cut the front without cutting the back at the same time; likewise in language, one can neither divide sound from thought nor thought from sound; the division could be accomplished only abstractedly, and the result would be either pure psychology or pure phonology. (967) Structural linguistics deals with the form and structure of concrete utterance and undertakes a synchronic study of language instead of a historical or philological study of the evolution of words and language. The minimal and indivisible component of

NSOU PGEL-3 14 spoken English is phoneme that needs production, transmission, reception, and classification. In the next section, we will learn about the Structuralist analysis of English phonemes. Task 5: Look at the following sets of words: i) question, quite, quiet, square, squash ii) excuse, excite, box, exercise iii) exact, examine, exist, exert iv) until, use(n.) utilize, university In each set of words one of the letters represents a combination of two sounds. Now identify the letter and associated sounds in each case. Your answer: 1.5 Phonetics: An Introduction As a systematic study of human speech sounds, phonetics provides means of describing and classifying all sounds that can be produced by organs of speech. Henry Sweet in 1877 described the "importance of phonetics as the indispensable foundation of all study of language" - whether that study be purely theoretical, or practical as well - is now generally admitted. Phonetics is a branch of linguistics concerned with describing the physical properties of speech from its production to reception. According to Henry Rogers: "Phonetics is concerned with the sounds we make in speech: how we produce them, how these sounds are transferred from the speaker to the hearer as sound waves, and how we hear and perceive them." (2013,1) Phonetics is an objective and scientific analysis of producing human speech sounds. Phonetics, according to T. Balasubramanian, "deals with the production, transmission and reception of the sounds of human speech". Phonetics provides a scientific method for the analysis, description, classification and transcription of speech sounds or phonemes. These methods of analysis in phonetics are equally valid for all human speech sounds, regardless of the language or speaker. This branch of linguistics is often referred to as General Phonetics. Phonetics, as a branch of linguistics, divides, or segments, concrete utterances into individual speech sounds or phonemes and analyses the phonemes in the following ways:

NSOU PGEL-3 15 (1) Articulatory phonetics describes in detail how the organs of speech are used to produce, or articulate, speech sounds. (2) Acoustic phonetics studies the physical properties of speech sounds and the transmission of the phonemes from speaker to listener, the duration, frequency, intensity, and quality of the sounds. (3) Auditory phonetics analyses the reception of speech sounds by the listener, the transmission of the sounds from ear to the brain, and how the sounds are processed. Some phoneticians are interested in describing the production of different sounds that occur in English language; some are concerned with speech and in teaching communicative English. Nowadays, computers are being programmed to recognize speech of individuals and convert it into text. The application of phonetics in both verbal and written communication is extensive (Ladefoged). The following are some of the uses of phonetics: a) Pedagogic: teaching English as a first, second, third or as foreign language, b) Pronunciation error analysis, rectification and training, c) Identification of orthographic problems related to spelling and pronunciation, d) Speech pathologists can understand how the vocal apparatus works, e) Speech scientists working in the field of ICT based communication for developing speech recognition software and for conversion of speech to text and vice versa, f) Speech therapy, g) Use of English for special purposes like medical transcription, BPO call centres, hospital and tourism industry, internet and web technologies, media and advertisement, phonemic translation in dubbing, etc. Following are the two broad areas of work in phonetics: (a) general studies of the articulation, acoustics or perception of speech, (b) studies of the phonetic properties of specific languages. In this latter sense, it is evident that a further dimension will be required, in order to study how the sounds are used within the pronunciation system of a language (Crystal 364). With the foundation of International Phonetic Association (IPA) in 1886 by a group of European phoneticians such as Paul Passy, phonetics emerged as an independent area of study under linguistics. In 1889 IPA published the International

NSOU PGEL-3 16 Phonetic Alphabet also called IPA. In its modified and expanded form, IPA is today the most widely used system for transcribing the sounds of any language. Task 6: Go through the following pairs of words. Do you find same pronunciation in them? If so, write 'S' in the brackets provided against each pair; if not so write 'D' for the different. i) write, right ( ) ii) tear, tier ( ) iii) heard, hard ( ) iv) hurt, heart ( ) v) let, late, ( ) vi) get, gate ( ) Your answer: 1.6 Phonology The study of phonology can be traced to Greece in third century BC in the works of ancient Greek grammarians who analysed the sound patterns of Greek and Latin in Europe. In India, phonological description of Sanskrit language was developed by Panini in his Ashtadyayi. John Hart, Orthographie (1569) and William Bullokar in Brooke at Large (1580) were concerned with the spelling and pronunciation of English during sixteenth century. The stress pattern of English language, now known as supra- segmental phonology, was studied by Charles Butler in The English Grammar (1634). According to David Crystal, Phonology is

| 100% | **MATCHING BLOCK 2/23** | SA | Ali Mirzavand_A PHONOLOGICAL STUDY OF ENGLISH ... (D15063759) |

a "branch of linguistics which studies the sound systems of languages" (365).

Phonemes are the basic unit of speech sound produced by the human vocal apparatus. The sounds, studied by phonetics, used in different languages, are "organized into a system of contrasts, which are analysed in terms of phonemes, distinctive features or other such phonological units, according to the theory used" (ibid) The following are the aims of English phonology, as identified by David Crystal in A Dictionary of Linguistics and Phonetics (2008): (a) to demonstrate the patterns of distinctive sounds found in English language (b) to make as general statements as possible about the nature of sound systems in English language (c) to analyse

| 75% | **MATCHING BLOCK 3/23** | SA | Ali Mirzavand_A PHONOLOGICAL STUDY OF ENGLISH ... (D15063759) |

the range and function of sounds in English languages (d) to show the types of phonetic relationships that relate and contrast words and other linguistic units.

According to Crystal, "in linguistic theories, phonology is seen in one of two main ways:

NSOU PGEL-3 17 (a) as a level of linguistic organization, contrasted with the levels of phonetics, grammar and semantics in the first instance, (b) as a component of a generative grammar (the phonological component), contrasted with various other components (e.g. syntactic/semantic in early generative grammar; covert in the minimalist programme). Two broad categories under which the features of English language are studied are segmental and supra-segmental features. Segmental phonology analyses the phonemes, i.e., the minimal, indivisible unit of speech sounds. In English R.P. there are 44 phonemes that are classified according to the position of the vocal cords, the manner of articulation, and the place of articulation. Supra-segmental phonology that is also called non-segmental phonology analyses those features which extend over more than one segment, such as pitch, tone groups, intonation variation, accent pattern, etc. Distinction has also been made between diachronic and synchronic phonology. Diachronic study involves an analysis of sound change in the history of language, as is done in philology. Synchronic study involves an analysis of sound patterns irrespective of the historical changes that affect pronunciation. Task: 7: Based on your reading of the previous section, answer the following questions: a. Is Spelling in English is closely connected to its pronunciation? b. When did the grammarians begin to see dissimilarities between spelling and pronunciation? c. Is Sanskrit a Phonetic language? d. How do we represent the various speech sounds in English? e. Is it enough to learn how to produce individual speech sounds to acquire fluency in speaking? Phonetics in an objective manner deals with the production of phonemes, the properties and perception of such speech sounds of English language. Phonology, according to Ulrike Gut, "is concerned with how these speech sounds form patterns" in English language". Phonologists investigate, for example, which function a sound has in a language and which sounds can be combined - follow each other - and which cannot." Thus, in segmental phonology, the classification of the English speech sound according to the position of vocal cords, manner and place of articulation, has been made. Supra-segmental phonology deals with larger units such as clusters, syllables, accent and intonation. Segmental phonology deals with the classification and description of phonemes as stated in the next section.

NSOU ? PGEL-3 18 Task 8: Go through the following words find out the exact number of sounds in each word: i) thumb ii) mango iii) pleasure iv) third v) scissors vi) psychology vii) journal viii) mother ix) eye x) through Your answer: Task 9 I hope you have successfully done the Task 7. Now write down the initial sound of each word and make word with the same initial sound. One is done for you. Example - i) thumb→/ θ /→ thigh Your answer: 1.7 Classification of English Phonemes Phonology deals with the basic unit of sound or phoneme. The phoneme is the smallest unit of sound that is distinct, cannot be broken further and minimal. The sound of phoneme allows the differentiation of words or lexical distinctions. As a basic unit of sound in a language, every phoneme has a separate symbol. Although there are only 26 letters of the alphabet for writing English language, there are 44 distinctive phonemes in English language. In several words beginning with the same letter, different phonemes or sounds are used in the initial position. English phonemes are classified according to the phonetic features like articulatory process, acoustic qualities and auditory reception. English phonemes are all produced with the help of pulmonic [respiratory] egressive [releasing out] air stream mechanism. The air stream that passes through a pair of vocal cords located in the larynx [Adam's apple] or the phonatory system is regulated by the approximation of the cords. When these vocal cords are loosely held together the air stream can pass freely to produce nine (9) voiceless consonants in English R.P. When the vocal cords are tightly held together the air stream is accompanied by a buzzing sound and such phonemes are called voiced. All the vowels (20) along with fifteen (15) consonants are voiced phonemes in English R.P. English phonemes are primarily classified into vowels and consonants. There are twenty (20) vowels in English R.P. These vowels are further classified according to the position of the tongue that acts as active articulator into monophthongs

NSOU PGEL-3 19 and diphthongs. There are twelve (12) monophthongs in English R.P. that are further classified according to their length into two types: short and long. The tongue takes one particular position and seven (7) short vowels are produced and when the sound is elongated, five (5) long vowels are produced. These vowels are further classified according to the place of articulation in to Front vowels, Central vowels and Back vowels. Apart from these twelve monophthongs there are eight (8) diphthongs in English R.P. classified according to the glide of tongue from one place to another place. There are twenty-four (24) consonants in English R.P. that are classified according to the position of the vocal cords, their manner and place of articulation. Task 10 Can you cite two different words which have only one sound and that is a vowel glide. Write down those words and cite the glide : 1. _____, 2. _____ = / / 1.8 English RP Received Pronunciation or RP of English language is the name given to the regionally neutral accent in British English. RP of English is historically derived from the speech used in the Court, House of Lords, and people living in the urban locations of south England and the public schools of England. Social factors rather than linguistic factors are responsible for the prestige attached to this dominant accent in British English. The superiority of RP is not based on the fact that it is associated with the better- educated, elite users of English language. It has become a norm for the description of British English. RP was adopted by BBC and popularised as a form of pronunciation understood by the people of Great Britain. British RP was also used in the colonies and the Commonwealth countries and later became synonymous with "BBC English" or "Queen's English." Regional variations in English were not considered and the accent was mainly used in media communications, academics and official discourse. Although RP no longer has the prestigious social position it once held, it is widely used for teaching English as a Second Language (ESL) or as a foreign language. Younger net-savvy generation prefer colloquial forms of accent that are marked by regional variations. International English nowadays contain several such regional variations in accent pattern. Modern linguistics, however, stresses on accent as something "broad" that may be markedly different from RP.

NSOU PGEL-3 20 1.9 Summary Through this discussion you are made familiar with the nature of spoken English. The analysis of the origin and development of speech, English phonetics, phonemes, classification of English Phonemes and English RP has been made. We will learn more on Pronunciation in the following units. Here are a set of Review Questions to test your comprehension on the unit. 1.10 Review Questions 1. Write a note on the nature of spoken English. 2. Discuss the difference between Phonetics and Phonology. 3. Write a note on English Phonology. 4. What are the different areas of phonetics? Discuss the interdisciplinary nature of phonetics as a branch of modern linguistics. 5. Would you subscribe to the view that speech is primary and writing / typing secondary? Justify. 6. Write short notes on the following: a) Phonemes b) English RP / Queen's English / BBC English c) Aims of English Phonology d) Segmental phonology e) Classification of English phonemes 7. Fill in the blanks with words that are pronounced the same but have different spelling :- i) write .... ii) straight .... iii) mite .... iv) Sun .... v) bear .... vi) bow (verb) .... vii) tail .... viii) cast .... ix) sight .... x) roll .... 8. Look at the following words in two columns and match the words with the same vowel sound.
NSOU PGEL-3 21 Flirt Card Chirp Ship Furl Hard Heart Word Heard Skirt guard thirst 9. Produce three words with each of the initial sounds of the following English words. i) father _____ v) sound _____ ii) sugar _____ vi) very _____ iii) zoo _____ vii) thanks _____ iv) sun _____ viii) there _____ 10. Does your L1 (Mother Tongue) also have all these word final sounds? Which of them are different? 1.11 References and Reading List Balasubramaniam, T. (1981). NSOU PGEL-3 23 Unit 2 Place of Phonetics in Communication 2.1 Introduction 2.2 Objectives 2.3 Phonetics and Communication 2.4 Articulatory Phonetics 2.5 Use of Phonetics in Communication 2.6 Phonetics and Spoken English 2.7 Accent Training 2.8 Use of Phonetics in Communicative English for Special Purposes 2.9 Summary 2.10 Review Questions 2.11 References and Reading List 2.1 Introduction The basic function of a language is communication. English is no exception. People generally convey their messages among themselves in order to communicate their views with each other on particular subjects. Their mode of communication is sometimes in writing or through speaking and listening. Spoken words are the most frequent as well as the most important means of communication among the people. As far as spoken language is concerned, pronunciation, rather use of sounds really matters a lot. In this case messages are communicated or transmitted through sounds or audible means. That is why for the purpose of verbal communication what is necessary is proper pronunciation— appropriate handling of sounds. Since Phonetics, the important branch of Linguistics, deals mainly with the pronunciation skills as well as ways of speaking, it has a major role to play in the field of communication. English as a language is well spread across the world and also in India. It has the status of associate official language, and often is helpful in inter-state communication e.g. a person from Bengal speaking to another person from Kerala finds it easy to communicate through English. It is for this reason, English has acquired the sobriquet 'lingua franca' and this holds good across the world. Though language manifests itself as four distinct skills, and both speaking and writing are common modes of 23

NSOU PGEL-3 24 communication, the more frequent means is the spoken form rather than the written form. It is in this context that learning phonetics gains importance. Knowledge of phonetics makes our speech intelligible to a reasonably large section of the population in the world. 2.2 Objectives The unit introduces you to— a) Different features of English phonetics and its application in communication b) Articulatory phonetics with reference to communicative English c) Accent training in the BPOs and KPOs d) Use of phonetics in English Language Teaching for Special Purposes 2.3 Phonetics and Communication As stated in the previous unit, there are two fields in modern linguistics that are concerned with verbal sound and pronunciation: phonetics and phonology. The study of both phonetics and phonology helps in improving listening and speaking skills. For both native speakers whose mother tongue is English or non-native speakers who are learning English as a second language or as a foreign language, the importance of phonetics in verbal communication is immense. For effective English Language Teaching, proper instruction in pronunciation, accent and intonation is essential. This can be adequately addressed through an understanding of phonetics and phonology. Nowadays we hear many types of English pronunciation around us. Knowledge of the production process of speech sound along with application of these sounds in verbal communication can help us to learn and teach English better. These fields describe and analyse speech from a different perspective. Of these two fields, phonetics deals with three different areas: the production of speech, the transmission, and the reception. These three sub-disciplines belong to different branches of studies. In ELT, we are primarily concerned with articulatory phonetics that analyses the production of different phonemes or speech sounds by organs of speech, using the respiratory, phonatory and articulatory systems. For the purpose of English Language Teaching (ELT), Articulatory Phonetics is considered more useful than acoustic phonetics or auditory phonetics. English phoneticians describe the production of speech sound and analyse the use of speech sounds in English language in an objective way. Phonetics mainly focuses on the production of speech sound, classification of speech sound and the segmental or

NSOU PGEL-3 25 supra-segmental features of speech sounds. The production of speech sounds or phonemes depends on the organs of speech located in the respiratory, phonatory and articulatory systems. The stream of air is modified by the articulators and in case of English phonemes is pulmonic egressive air stream mechanism. The release of air stream is regulated by the phonatory system that contains a pair of vocal cords. The releasing air stream is then modified by the articulators present in the articulatory system. Phonetics identifies and describes the manner and place of articulation of phonemes, and then classifies the phonemes according to the position of the vocal cords, manner of articulation, place of articulation, and the articulators involved in production of speech sounds. According to Richard Ogden, phonetics is the "study of the sounds of speech" while phonology is "the study of sound systems". The use of phonetics in effective verbal communication is widespread: in the field of ELT (English Language Teaching), speech therapy, BPO/KPO call centre training, and in spoken English institutes. Basic knowledge of the segmental and supra-segmental features of English phonemes is essential for communication training. English in India is mainly taught as a second language and four basic skills - Listening, Speaking, Reading and Writing - are taught in both formal and informal educational sectors. Knowledge of English phonetics is very important in developing listening and speaking skills of the learners. English language is a highly structured speech-based form of verbal communication. On an average, people who use English language use it mostly in its spoken form. Knowledge of the sound system, classification of sounds and sound structure, helps English language teachers a lot in the teaching / learning process. Task 1 Go through the following list of countries. Against the name of each country a set of brackets attached. Write 1, 2, and F inside the brackets according to the status of English [1st, 2nd, and Foreign]. i) Ireland ( ) ii) France ( ) iii) Myanmar ( ) iv) New Zealand ( ) v) Egypt ( ) vi) Scotland ( ) vii) West Indies ( ) viii) China ( ) ix) Namibia ( ) x) Nepal ( ) Task 2 Participant, have you ever gone through any such experience that you came to visit a state in India where you can use neither your mother tongue nor Hindi. How

NSOU PGEL-3 26 did you communicate with the people there, especially in the market? Can you share that experience with us? _____

_____ 2.4 Articulatory Phonetics Articulatory phonetics deals with the physical process of production of speech sounds. Phonemes are produced by the flow of air stream and the organs of speech and the production process involves the following: a) The air stream mechanism b) The respiratory system c) The phonatory system d) The state of velum or the soft palate e) The articulators In Articulatory phonetics, according to J. C. Catford, the following phases of speech production are covered: 1) Neuro-linguistic programming: the selection, sequencing, and timing of what follows. 2) Neuromuscular phase: transmission of outbound (motor) neural impulses and the contraction of individual muscles. 3) Organic phase: postures and movements of whole organs. 4) Aerodynamic phase: dilation, compression, and flow of air in and through the vocal tract. This is followed by the transmission of the speech as sound waves that fall under

NSOU PGEL-3 27 Acoustic phonetics: 5) Acoustic phase: propagation of sound waves from speaker's vocal tract. And, finally the reception of the phonemes by the auditory organs that falls under the phase of Auditory phonetics: 6) Neuro-receptive phase: peripheral auditory stimulation and transmission of inbound neural impulses. 7) Neuro-linguistic identification: potential or actual identification of incoming signals as specific speech-sounds. Thus, the speech sounds are produced, transmitted and received. Articulatory phonetics is a branch of phonetics which studies the way in which speech sounds are produced and 'articulated' by the organs of speech. It deals with the basic anatomy and physiology of speech; the production of different kinds of speech sounds; and characteristic features of these speech sounds. Articulatory phonetics derives much of its descriptive terminology from the fields of biological sciences like anatomy and physiology. Articulatory phonetics is also called physiological phonetics. According to David Crystal: "In recent years, there has been much progress in the development of instrumental techniques for observing and measuring such factors as tongue, lip, palate and vocal fold movement; examples include the palatograph, which displays tongue contact with the palate; the electro-aerometer, which measures the relative flow of air from mouth and nose; the articulometer, which tracks simultaneously the movements of several articulators; and electromyography, for the measurement of muscular movement while speaking. Using such techniques, a far more detailed understanding of articulation is possible than using traditional visual and kinaesthetic methods." English phonemes are classified according to the phonetic features like articulatory process, acoustic qualities and auditory reception. English phonemes are all produced with the help of pulmonic [respiratory] egressive [releasing out] air stream mechanism. The air stream that passes through a pair of vocal cords located in the larynx [Adam's apple, visible in men only] or the phonatory system is regulated by the approximation of the vocal cords. When these vocal cords are loosely held together the air stream can pass freely to produce nine (9) voiceless consonants in English such as /p/, /t/ , /k/, /f/, /tʃ/, /s/, /ʃ/, /θ/, and /h/ When the vocal cords are tightly held together the air stream is accompanied by a buzzing sound and such phonemes are called voiced sounds. All the vowels (20) along with fifteen (15) consonants are voiced phonemes in English. English phonemes are primarily classified into vowels and consonants.

NSOU PGEL-3 28 There are twenty (20) vowels in English. These vowels are further classified according to the position of the tongue that acts as active articulator into monophthongs and diphthongs. There are twelve (12) monophthongs in English that are further classified according to their length into two types: short and long. When the tongue takes one particular position seven (7) short vowels are produced and when the sound is elongated five (5) long vowels are produced. These vowels are further classified according to the place of articulation into Front vowels, Central vowels and Back vowels. Apart from these twelve monophthongs there are eight (8) diphthongs in English classified according to the glide of tongue from one place to another place. There are twenty- four (24) consonants in English. that are classified according to the position of the vocal cords, their manner and place of articulation. We will learn more on this in the next module. Task 3 Suppose you teach in a school where instructions are given in English. You teach English language. Now monitor your own speech in a day and list the situations in which you used spoken language and the situations in which you used the written language. Spoken Language: _____ _____ _____ _____ _____ _____ Written language: _____ _____ _____ _____ _____ _____

Task 4 If you find yourself using spoken English, can you list your reasons for teaching/ learning English pronunciation? Teaching : 1. _____ 2. _____ 3. _____ 4. _____ Learning: 1. _____ 2. _____ 3. _____ 4. _____

2.5 Use of Phonetics in Communication

Three functions of speech have been identified by J. D. O' Connor: creative function, forwarding function and hearing function, corresponding to the articulatory, acoustic and auditory process. In oral communication we heavily depend on the articulation of sounds, pauses, the accent pattern, pitch and intonation. The production of speech sounds by the organs of speech and articulators is a complex process. Human speech carries more linguistic information than other forms of written communication. Communication refers to the proper production, transmission and reception of linguistic information as an oral message. This message is exchanged between a speaker and a listener. Proper communication depends on the production, transmission and reception of information by the members of the same speech community. Phonetics plays a pivotal role in human communication. The scientific study of all aspects of communication is sometimes called communication science and the domain includes linguistics and phonetics. Although both verbal and non-verbal communications are important for the exchange of information, linguistic information depends mostly on the production, transmission and reception of sounds or verbal signs. The use of phonetics in this domain is primarily related to the proper production of sounds. In English alphabetic system there are only twenty-six letters. The entire spelling

system depends on these twenty-six letters. On the other hand, there are forty-four phonemes used by the speakers of English. All these sounds are used in oral communication. Without knowledge of phonetics, it is very difficult to explain the relationship between spelling and pronunciation. A single vowel letter like [a] can produce different sounds in the following words: and/æ/; ago/∂/; arms /a:/. English pronunciation system is based on RP or Received Pronunciation and 5 letters that are designated as vowels are capable of producing 20 distinctive vowel sounds in English. The creative function of speech is primarily based on a proper production of speech sounds by the organs of speech. The pulmonic egressive air-stream is regulated by a pair of vocal cords and then through the pharynx reaches the mouth. The soft palate regulates the movement of the air through the oral or nasal passage. The active articulator moves towards the passive articulator to modify the air stream and produce speech sounds or phonemes. The basis of communication is this process of production of phonemes by the articulators. Phonemes are all distinct, indivisible and minimal units of speech. Phonemes are classified according to the airstream, position of the vocal cords, the position of the velum or soft palate, the manner of articulation, articulators involved and the place of articulation. Task 5 'Bear' and 'bare' are spelt differently but they are pronounced the same, /be ∂/. Make a list of five other pairs of words which are spelt differently but pronounced the same way. The phonemes of English are joined together to produce, syllables, sound clusters and words. Sounds become meaningful when they replicate meaningful words. The pronunciation of these words depends on both the segmental and supra-segmental features. Knowledge of phonetics helps the English language teacher to identify, instruct, rectify the errors and guide the learner the proper way to use language for oral communication. English words follow a prescribed accent pattern and longer words sometimes receive both primary and secondary accent. The accentual pattern is rule governed and prescriptive in nature and only with the help of phonetics one can explain the morphophonemic changes that often take place in English pronunciation. Connected speech in English follows the accent and stress pattern. English language is Isochronous, i.e., there is an equal time gap between two stress syllables in connected speech. Furthermore, according to the punctuation, the language is spoken with pauses and intonation variations. These supra-segmental features contribute a lot in effective communication.

Task 6 Read out the following words and underline the vowel sounds in the following words:- important remember alphabet London correct English particular pronunciation language necessary letter property rumour repertoire lotus caravan father brother cattle between. Task 7 Find words to match the following words with a minimum difference only in the vowel sound. One is done for you :- i) bend/band; ii) knit _____; iii) tale _____; iv) broke _____; v) force _____; vi) dawn _____; vii) sill _____; viii) win _____; ix) ten _____; x) cat _____; xi) car _____; xii) back _____ ; 2.6 Phonetics and Spoken English From the viewpoint of phonetics, speech is seen as the primary medium of transmission for language. The spoken or phonic substance of language is the most important factor of verbal communication. Even speech and hearing science deals with the production, transmission and reception of speech, but phonetics is also related to the performance of language or communication. In any speech community sharing the same linguistic system, the speech act is the main activity meant for human communication. Every speech act depends on speech event or spoken interaction where the members of any speech community engage themselves in discourse of verbal exchanges. Phonetics, sociolinguistics and psycholinguistics provide analytical tools for the assessment of speech production, speech transmission and speech perception. While the speech production involves coding of linguistic items, speech perception involves decoding of speech by the listeners. Linguistic communication is the exchange of such codes and their decoding. According to Ferdinand de Saussure and Andrea Rocci "verbal communication is arguably the most pervasive form of communication in human societies" (3). The importance of "speech" in verbal communication "played a crucial role in the birth of

the Communication discipline in the United States", according to Craig. "In the early years of the 20th Century teachers of public speaking in American universities broke away from English departments and founded departments of Speech, later to become departments of Speech Communication (ibid 6). Although verbal forms of communication include both the written and the spoken forms, communication primarily depends on the spoken form. Even the visually decoded written communication is decoded on the basis of sound and pronunciation. Communication has its own internal structure or organisation: starting from the smallest unit phonemes to morphemes, syntax, semantics and pragmatics. Even analysis of prosody, rhetoric and discourse is based on the spoken form of the language. Phonetics plays a crucial role in such analysis of verbal communication. Task 8 Make at least four words with each of the following diphthong sounds: /eI/ _____ _____ _____ /aI/ _____ _____ _____ /∂ʊ/ _____ _____ _____ /aʊ/ _____ _____ _____ /]I/ _____ _____ _____ 2.7 Accent Training In the Foreword to the second edition of Better English Pronunciation J. D. O' Connor states: Millions of foreign students want to learn English as well as they can; for some it is only a matter of reading and writing it, and they will find no help here. But many students want to be able to speak English well, with a pronunciation which can be easily understood both by their fellow-students and by English people, and it is for them that this book is specially intended. (ix) In the institutions that teach spoken English, greater emphasis is placed on oral communication. Listening and speaking skills are developed through a systematic training that begins with accent neutralisation and proper pronunciation of the English phonemes, syllables, clusters and words. Audio-lingual method of ELT is often employed along with Direct method or Functional Communicative approach for training in spoken English. J. D. O' Connor proposes the following guidelines for better English pronunciation:

a) listen carefully and accurately b) know what the English words and sentences sound like c) compare the sounds that come out of your mouth with the sounds that you have in your sound memory d) try to match your sounds exactly with the sounds that you have listened to e) make use of a tape-recorder [audio recording] f) record on the tape-recorder a sentence or a longer passage, then listen to it, closely and carefully g) match what you say with your sound-memory of English h) your aim must be to acquire a perfect English pronunciation (4-5) In order to reduce the interference of mother tongue or first language, accent neutralisation training is given and the learners are required to listen carefully the sound of different phonemes and use these in words and connected speech. As English accentual pattern in connected speech is isochronous or stress-timed, the learners are taught proper way to accent the words. In connected speech the accent pattern is further modified by intonation. Task 10 Try to pronounce the following words and put the pure vowels or diphthongs in the space provided :- try - / / boil -- / / suite -- / / Cord -- / / put -- / / fool -- / / town -- / / stand -- / / clerk -- / / budge -- / / starch -- / / wind -- / / court -- / / pear -- / / point -- / / poor -- / / 2.8 Use of Phonetics in Communicative English for Special Purposes In several sectors where communication plays an important role, training in communicative English is based on phonetics. For example, in the field of medical

34 transcription in which the audio files of medical reports and prescriptions are sent to the BPO centres for transcription into typed format, a knowledge of the speech sounds, pronunciation, accent and intonation is necessary. Within the context of multilingual and cross-cultural communication, the job of the transcriptionist is more difficult and may lead to misunderstanding. Audio or video recordings of interaction are used for the training of transcriptionists, in order to familiarise them with variations in pronunciation, accent pattern, use of pauses, intonation and other features of oral communication. In different industrial and service sectors training in communicative English is based on phonetics so that context of speech performance such as hospital, hotel, reception counter, call centre, etc., is appropriated to the form of English. Several types of English have evolved for communicative purpose such as Business English, Technical English, English for Web technologies, English for Persons with Special Needs. Phonetics is broadly used for training purpose in industries and service sectors. Task 12 Give at least one example of each of the following consonants in initial, medial and final position :- Initial Medial Final A] /t/ _____ _____ _____ B] /θ / _____ _____ _____ C] /p/ _____ _____ _____ D] /tʃ/ _____ _____ _____ E] /k/ _____ _____ _____ F] / ®/ _____ _____ _____ 2.9 Summary Through this discussion the students are made familiar with the place of phonetics in communication. The analysis of English phonetics, articulatory phonetics, the use of

35 phonetics in communication, accent training and spoken English were in the discussion. There is usually a standard form of English used across the globe but as far as pronunciation in spoken language is concerned there are variations, even in those countries where English is used as the native language. For example, the accent used by the British people is quite different from that used by the Australians. Similarly in India, where English is spoken as a second language it has developed a variety of its own. For example, the speech of a Bengali speaker of English must differ evidently from that of a Telugu or Marathi or Oriya speaker. To solve these problems, while teaching spoken English, it is necessary to learn as well as teach Phonetics. There is a wide variation in accent. It is necessary to follow a particular standard as necessary for teaching Phonetics as well as spoken English. One native regional accent that has gained social prestige is the Received Pronunciation (RP) of England, as used in the South-East England. It is also a status symbol to use RP for the elite class of the society. It is considered as the correct and acceptable pronunciation of English. In many non-native speaking countries RP has been selected as a model. The teaching- learning of English pronunciation is concerned about the following:- 1. The sound system → segmental features— a) Vowels (Monophthongs, Diphthongs) & b) Consonants 2. Supra-segmental features → i) word accent, ii) rhythm, iii) intonation. 2.10 Review Questions 1. Write a note on the place of phonetics in English communication. 2. What are the different branches of phonetics? Which branch is related to linguistics and ELT? Discuss. 3. Write a note on the relationship between phonetics and spoken English. 4. Discuss the application of phonetics in different areas of communication studies and ESL (English as Second Language). 5. Would you subscribe to the view that phonetics is more important in communication than stylistics or semiotics? Justify. 6. Write short notes on the following: a) Use of English for Special purposes. b) Uses of phonetics c) Pulmonic air stream

36 d) Physical process of production of speech sound e) Phases of speech production f) Instrumental techniques 7. Write words with the following sounds: i) / h / _____ ii) / l / _____ iii) / m / _____ iv) / k / _____ v) / v / _____ vi) / d / _____ 8. Fill in the blanks with appropriate vowel sounds to make complete words :- 1. r _____ b (rob) r _____ b (rib) r _____ b(rub) 2. p _____tʃ(patch) p _____tʃ (pitch) p _____tʃ (porch) 3. f _____l (fill) f _____ l (feel) f _____ l (fall) 4. s _____ k (sick) s _____ k (suck) s _____ k (seek) 5. r _____ d (read) r _____ d (red) r _____ d (road) 6. w _____v (weave) w _____v (wove) w _____v (wave) 7. ® _____ (jar) ® _____ (jaw) ® _____ (jew) 8. b _____ (buy) b _____ (boy) b _____(bay) 9.θr _____ (three) θr _____ (threw) θr _____ (throw) 10. ð _____ (thy) ð _____ (they) ð _____ (though) 2.11 References and Reading List Balasubramaniam, T. NSOU PGEL-3 38 Unit 3 Variations in Pronunciation 3.1 Introduction 3.2 Objectives 3.3 Variations in Pronunciation: An Introduction 3.4 Types of Variations in Pronunciation 3.5 Variations in British English 3.6 Variations in Indian English 3.7 American English 3.8 International English 3.9 Use of English in Multilingual Speech Communities 3.10 Summary 3.11 Review Questions 3.12 Recommended Reading 3.1 Introduction This module is prepared to familiarise the students of Linguistics and English Language Teaching with variations in pronunciation of English. Such variations are mainly at the level of pronunciation and verbal communication. Variations in British English shall be discussed along with variations in pronunciation among the Anglophonic speakers in India, America, and other commonwealth countries. A synchronic study of variations in pronunciation will be done in this unit. The unit concludes with a list of questions, provided at the end along with list of recommended books. 3.2 Objectives At the end of going through this unit, the learners will be able to: a. Understand that a language can be spoken in a variety of ways b. Understand the reasons for variation c. Develop a tolerance to other varieties of spoken language other than our own. d. Realise the need for a standardised version for intelligibility 38

NSOU ? PGEL-3 39 e. Understand that monolingual societies are fewer than the multilingual societies. 3.3 Variations in Pronunciation: An Introduction Henry Sweet in A Handbook of Phonetics (1877), while pleading for reform in the spelling system of English, states: It is clear that as soon as spelling ceases to adapt itself to existing varieties of pronunciation - whether 'colloquialisms,' 'vulgarisms,' or 'provincialisms' - ceases to be phonetic. (193) He refers to the rigid spelling system of English as opposed to a more flexible variation in pronunciation prevalent among the users of English language across the globe. Even during that time, the English language was widely used across England and its colonies and, spoken with innumerable variations in pronunciation. Linguistic variety is a term used in sociolinguistics and stylistics to refer to any system of linguistic expression whose use is governed by situational variables. In some cases, the situational distinctiveness of the language may be easily stated, as in many regional and occupational varieties (e.g. London English, religious English); in other cases, as in studies of social class, the varieties are more difficult to define, involving the intersection of several variables(e.g. sex, age, occupation). (Crystal 509) In modern linguistics, phonology and sociolinguistics, several classifications of language varieties have been identified. In order to classify such variations in pronunciation, terms like sociolect, dialect, register variations along with the field, mode and medium of discourse are being used. In sociolinguists, the term "variety" is used in a more restricted sense:"as one kind of situational distinctive language or a specialized type of language used within a dialect, e.g. for occupational purposes" (ibid). In the context of twenty-first century the variations have increased with the expansion of English as a global language and the dominant language of computer, internet and web technologies. All English-speaking people do not speak the same English and such variations in pronunciation are becoming more audible. Even today such varieties of English are rampant. Any mainstream Hollywood movie made in English is now subtitled in English for the understanding of audience across the globe. According to Henry Sweet: When divergences of pronunciation increase to such a degree as to make a faithful phonetic representation of them unintelligible, or nearly so, to those acquainted only with the standard form of speech, it is certain that the spoken pronunciation itself will prove more difficult. (194)

NSOU PGEL-3 40 Such variations are more common because of the use of English either as a second language or as a foreign language. The interference of mother tongue especially in pronunciation is so widespread that even among the users of English in India the regional variations in pronunciation are there. Such variations in pronunciation can be studied taking into account both diachronic and synchronic variations. While through a diachronic or historical analysis one can study the ever-changing nature of spoken English and the evolution of English till the present day, through a synchronic study one can record and analyse such varieties of pronunciation in the present context. Such synchronic variations can be regional, dialectal, social, individual, and may be based on the field of discourse, manner of discourse and mode or medium of discourse. Such variations in pronunciation may also depend on the age and relationship of the users of the same language. Task 1 Give two words for each of the following words which differ in only one sound segment [one is done for you]: Chew - few : mew waste : _____ cat : _____ leisure : _____ try : _____ battle: _____ bought: _____ out : _____ gate : _____ Task 2 Write the following combinations as contractions (monosyllable, if possible), using the phonetic symbols (one is done for you) :- Example - she will = /ʃ‚w/l. a. I will g. I would b. You will h. You would c. He will i. She would d. It will j. It would e. We will k. We would f. They will l. They would 3.4 Types of Variations in Pronunciation Different types of pronunciation coexist in any Anglophonic speech community at any particular period of time. Such variations are analysed by both phoneticians and sociolinguists. According to writers of Practical phonetics and Phonology: a resource

NSOU PGEL-3 41 book for students: All languages typically exist in a number of different forms. For example, there may be several ways in which the language can be pronounced; these are termed accents.(3) Two major forms of linguistic variety, called by sociolinguists as "lect" are on phonological level. These variations in pronunciation are stated below: a) Regional variation, which involves differences that exist in pronunciation based on the geographical location of the speakers. These variations in pronunciation can be dialectal and based on words, syntax, accent and intonation. For example, English pronunciation of the people of south England along the river Thames is markedly different from that of the speakers in Liverpool, Bristol, or Edinburgh. Similarly, there are marked variation in pronunciation among speakers of New Orleans and New York, or Sydney and Johannesburg. In India, every state has a separate language and mother tongue interference produces a variety of English spoken in India. In England, there are great regional variations among the urban and rural population. b) Social variation, which refers to differences in the use of language between one social group and another. Sociolect, as opposed to regional variations, is a term used by some sociolinguists to refer to a linguistic variety defined on social grounds. Sociolect is associated with a particular social class or occupational group. Such variations in pronunciation called sociolects can be based on differences in gender, ethnicity, religion, age and, social class. Both accent and dialect are related to social position and profession. Local accents are termed basilects which are associated with the working-class and provincially educated persons. Variations like acrolects are found among wealthy, educated and elite people. Mesolects are varieties that come in between the elite and the proletariat classes. The following sociolinguistic pyramid of variations in pronunciation has been provided by the authors of Practical Phonetics and Phonology: a resource book for students (3):

NSOU PGEL-3 42 Some of these phonological variations are called registers by M. A. K. Halliday. Linguistics by Halliday, used extensively in stylistics and sociolinguistics, register refers to a variety of language defined according to its use in a social situation. The registeral variations are based on field, mode and manner of discourse. Registers are different than sociolects or regional variations and are not classified according to the characteristics of the users. Such variations in pronunciation can be seen in the registers used in literary, scientific, religious, and formal English. According to Halliday, these register variations in English language are based on these three areas: a) Field of discourse refers to a classification of registers in terms of subject-matter. These fields such as literature, theatre, media communications, and scientific subjects, etc., use phonological variations. b) Mode of discourse refers to the medium of the language activity which determines the role played by the language in a situation. These variations are based on the choice of mode or medium such as speech, writing, typing, telephonic conversation, chat, email, messaging, announcement, news reading, commentary, poetry. Such variations are phonological, lexical and syntactical. c) Manner or Style or Tenor of discourse refers to the relations among the participants in a language activity, especially the level of formality they adopt. Such variations in pronunciation depend on the speech act that is either

NSOU PGEL-3 43 formal or informal (colloquial). Variations in pronunciation are due to the loudness, pitch, tone, and pace of oral communication that depends on the relationship between the users of the language. For example, in formal classroom interaction there may be variations in pronunciation according to the age group of the learners. In informal communication such variations are more common. Task 3 Describe each of the following speech sound symbols using articulatory features : i) /n/ ii) /a/ iii) / ʊ / iv) /e/ v) /s/ vi) /h/ vii) /z/ viii) /g / ix) /m/ x) / ^ / Task 4 Examine the following data and state whether there can be variation in their utterance:- 1. Health = _____ 2. Comfort = _____ 3. Keep going = _____ 4. happen = _____ 3.5 Variations in British English One variety of English pronunciation has traditionally been dominant and popular among the privileged section of the population in Great Britain. Phoneticians have called it RP or Received Pronunciation. This variety of English has been regarded with high esteem by the users as well as by those who do not speak it. This prestige accent has long been associated with the educated, elite and urban population of England.This type of English is variously referred to as "Oxford English," "BBC English" and even "the Queen's English." During the Victorian period, this historically "received" pronunciation was socially acceptable even in both formal and informal discourse. The BBC originally adopted RP for its announcers because it was thought that the RP form of pronunciation would be nationally understood. It was also supposed

NSOU PGEL-3 44 that the language of the elite class would attract less criticism from the other regions of England. However, nowadays, the educated speech at large, throughout the Anglophonic world displays considerable regional variations. The term non-regional pronunciation or NRP with a large range of variations is used to represent pronunciation which cannot be pinned down to a specific area. Phoneticians do not prefer any form of graded inequality with reference to pronunciation and instead of RP they use the term "Standard Southern British English" or SSBE. There is an enormous variety of accents of English in addition to those of RP or "British English." Such variations in pronunciation are sometimes put under the label of "colloquialisms," "vulgarisms," or "provincialisms." Such variations in pronunciation among the people of England are found among users based on their dialects that are "local," "territorial," "rural" and "urban," on the micro level and "regional," on the macro level. The first question that comes to the mind of a person who wishes to learn an acceptable pronunciation of English: which of the various forms of pronunciation should we learn? No two persons belonging to same nationality pronounce their own language exactly alike. The difference may be due to the locality in which they live; social surroundings or early influences, and there may be individual peculiarities for which it is difficult or impossible to account. It is often noticed that the pronunciation of English among people brought up in Manchester is different from those from Exeter and both differ from the pronunciation of those brought up in Edinburgh or in London. Let's take an example. Differences of English pronunciation according to locality may be found in the treatment of letter 'r' in such word as 'part'. In Scotland it is pronounced as slightly flapped /r/ while /r/ is not pronounced until it is followed by vowel sound. So the pronunciation of 'part' is /pa:t/. According to their rule /r/ is not pronounced when it is in the final position of the word or when it is followed by a consonant sound. So the pronounce as /pa:t/ or /ka:/ (for 'car) but /ver I/ or sor I/ . In many parts of North and West of England /r/ appears as Retroflex. In southern England the vowel sounds in 'boot' and 'book' are different where as in Scotland a short closed /u/ is used for both the words. Pronunciation is also influenced by the differences in education. People with limited education in different parts of England omit /h/ and pronounce / elp / for the word 'help'. In London (Cockney) words like 'name' is pronounced with the diphthong, /a I/ or / æ I / instead of /e I/ and words like 'house' or 'about' are pronounced with NSOU ? PGEL-3 45 / æ u /, or sometimes / cbæut / or / cbæct /. In uneducated Yorkshire speech the vowels of 'put' /u/ and cut / / are labelled to a vowel intermediate between these two. Because of the so many variations it is really very difficult for the foreign learners to know which type of pronunciation should be learnt and which one should be accepted as the standard variety. But certainly the most useful type is the one which is based on the speech that is used in the southern England [where city of London is situated]. It is generally used by the people, educated at Public Schools and Preparatory Boarding Schools. It is easily intelligible in all parts of English - speaking countries. It is more widely understood than any other variety. The term Received Pronunciation (RP) is often used to designate this variety of pronunciation. Among several different styles of pronunciation notable ones are the rapid familiar style, the slower colloquial style, the natural style used while addressing an audience, the acquired style of the stage while acting and the acquired styles used in singing. Of these the slower colloquial style is perhaps the most suitable for beginners. Task 5 Write the speech sound symbol for the first sound in each of the following words: i) psychology vi) though ii) use vii) pneumonia iii) thought viii) cyberneticsa iv) cow ix) physics v) knowledge x) memory Task 6 Write the speech sound symbol for the last sound in each of the following words:- a) cats f) judge b) dogs g) rough c) bushes h) tongue d) sighed i) garage e) bleached j) climb v

3.6 Variations of Indian English The Indian subcontinent witnessed linguistic imperialism by the English traders and colonists since the arrival of the East India Company in the early seventeenth century. Beginning from the coastal towns of Gujarat, the Anglophonic traders and invaders gradually set their colonies on the Coromandel Coast, the Western Ghats and Bengal. Primarily used as a language for trade and commerce, English language became the language of judiciary, administration and education in India. Wherever the English colonists settled they created communicative functional English for serving their business and imperial purposes by mixing the local languages with English phonology, lexis and syntax. New variations in pronunciation developed through a process of pidginization and in later stage, creolisation. In the eighteenth century some prominent variations in English pronunciation were found among the uses in the three presidencies of Bombay, Madras and Bengal. The effect of prolonged linguistic hybridity and assimilation of different languages promoted newer forms of spoken English in these presidencies. Even with the introduction of English as a subject and later as a medium of instruction in the formal grant-in-aid schools, the parity in pronunciation could not be achieved because of the mother tongue interference and superior phonological power of regional languages like Marathi, Gujarati, Urdu, Hindi, Tamil and Bengali. Languages with more than fifty (50) phonemes each could not be appropriated to English language with just forty-four (44) RP phonemes. The variations in pronunciation that are still audible even after three centuries have created a phenomenon called General Indian English (GIE) and various hybrid forms of spoken English like Tamilish, Hinglish, Benglish, etc. According to T. Balasubramanian, "most educated Indians who speak English did not learn it from an RP speaker... that most Indians who learn English learn their own Indian language before they are exposed to English" (123). The variations are common among the users of English in all multilingual metropolitan cities. With the expansion of internet access and development of online app-based activities, there has been a tendency towards standardisation of Indian English. Regional variations are gradually being absorbed by the dominant urban English in India. Task 7 Write the following words using the phonetic symbols:- i) Water ii) splat iii) lit iv) tin

v) eaten v) beading vi) pull vi) beating vii) craft viii) online Task 8 Write the speech sound symbol for vowel sounds in each of the words. One is done for you: For the word 'fish' it is / w / and for 'fear' it is /wc/. i) mood ii) caught, iii) cot, iv) and, v) tree, vi) five, vii) bait, viii) toy, ix) said, x) soot 3.7 American English Apart from the United Kingdom or Great Britain, English is used as a first language in North America (USA and Canada) and Australasia (Australia and New Zealand) along with several commonwealth states all over the world. The European colonisation of North America left linguistic imprints of major European languages in the United States. Over the course of over three hundred years, a different variety of pronunciation of English developed through the entire continent which in nowadays referred to as General American (GA) English. The variations in pronunciation can be seen as an amalgamation of speech patterns of the north-eastern USA. The spoken forms of English of the Midwest of America, southern states of USA and East Coast cities such as New York and Boston are not similar. There are regional variations in pronunciation among the users of American English, Furthermore, the differences are also marked according to the dialects, sociolects, and regional variations in the use of English. Similarly, Canadian English that bears a strong resemblance to General American English has some differences in pronunciation that set it firmly apart from GA. Even the accent patterns of the southern states of America are different from mainstream GA English. In media culture, however, GA English is also called "Network American" and in the academic world the same General American is used by millions of students learning English as a second language. Even in Mexico and Latin American countries, GA is taught in both formal and informal educational sectors. Task 9 Nicholas, a 6-year old child used a creative spelling 'thingck' to spell the word 'think'. What assumptions on his part produced this spelling? In American English, /r/ is often one of the most difficult features of pronunciation for speakers of other languages to learn. Sometimes it is even difficult for the native

speakers themselves, being one of the last sounds the children acquire when they learn American English. It is also one of the sources of extreme dialectical variation, for example, it was evident in the pronunciation of the word 'fire' by Ted Kennedy, the US senator from Massachusetts or in that of a country music singer George Jones and Tom Brokaw /far/. Even when beginning students of Linguistics often transcribe the word fear, they often use the tense vowel /i/: --. /fir/. Here the vowel sounds higher than the lax vowel/ w / as in 'bid'. In reality the vowel in 'fear' lies between / w / and / i:/. Even though they admit that the /w/ sound here it does not seem quite as high as the tense vowel /i/ as in 'bead' as in /bwd/. Same thing can be seen in pronunciation of word like 'sir' as /swr/. These vowels are basically called r-coloured vowel that refers to English vocalic sounds that have an r-like quality. I hope, by this time you have understood, to some extent, the variation of pronunciation with respect to American variety of English. Now it is necessary to check to what extent you have perceived this variation. Let us engage ourselves in a relevant activity— Task 10 Transcribe the following words exhibiting vowels before /r/:- i) boor ii) bore iii) poor iv) care v) car vi) dear vii) fir viii) mire ix) sewer, x) mirror 3.8 International English The students of English as a Second Language (ESL) throughout the world usually use the British or English RP (Received Pronunciation). In Latin America, Japan, China and Philippines there is a trend towards General American (GA) English. In Ireland, Scotland or Wales, the number of RP speakers is relatively less. The RP accent, however, is held in high esteem throughout the world. In the commonwealth countries like Canada, Australia, New Zealand and South Africa, the traditional RP English is used in media culture and public telecast.Although the British RP is regarded as prestigious accent even in the United States, there is a general trend towards a more inclusive International English. In the Hollywood cinema of the 1980s the characters are heard speaking in a more stylised and accented manner, developing an artificial American type of pronunciation. The same accent pattern was copied in the Anglophonic cinema across the globe, especially in Hong Kong. In the twenty-first century the pure form of British or English RP is a minority form. Most English today is spoken outside the

NSOU ? PGEL-3 49 British Isles. In the USA, more than 220 million people use English as their first language. It is also used as the first language or an official language in countries like Canada, Australia, New Zealand, South Africa and Caribbean islands. Furthermore, English is used widely as a second language for communicative, academic and official purposes by millions of speakers, in Southern Asia, e.g. India, Pakistan, Sri Lanka, and in many countries across Africa. There are large second-language English speaking populations in Hong Kong, Malaysia, Indonesia, Thailand and Singapore. Along with nearly 330 million native speakers of English and an even greater number using English as a second language, International English has emerged the lingua franca of the entire world. The English language has two types of /l/ ---- dark l (/ /) and clear or normal l (/l/). The / / occurs in words like 'lark' and 'tail' and has a lower sound than /l/which occurs in the words like 'lead' or 'light'. Even dark /l/ or clear-l occurs in a word when it is preceded by bilabial sound like /p, b/. In English dark-l is basic. Its dark quality is due to a co-articulation effect caused by an accompanying raised and retracted tongue body. Clear-l is a positional variant occurring before front vowels such as / w / and / i: /. Before front vowels /l/ is not produced with a retracted tongue body and the body is more forward and thus the light variant is produced. An English speaker, learning French, Spanish or Germanmust learn to produce all of the 'l's in these languages as clear since none of them has / /. Task 11 In some of the following words the /l/s and /r/s are voiceless. Identify these words and try to establish the conditions under which /l/ and /r/ lose their voicing:- a) Alpo f) try b) archive g) splat c) black h) spread d) play i) leap e) dream j) read. 3.9 Use of English in Multilingual Speech Communities As discussed earlier, the common variations in pronunciation can be seen in the following among others: a) American English NSOU PGEL-3 50 b) Australian English c) Indian English d) Singaporean English e) Caribbean English f) Russian English g) Chinese English With the expansive networking and globalisation, the form of electronic verbal communication has also been affected. Several varieties of English which are now of global significance are those used in different platforms of web technologies. Within this context of multi-lingual speech communities using English as lingua franca, the growth of more flexible functional communicative English is visible. Even in localities like New Zealand, English has distinct types of pronunciation such as 'South Island' English and 'Broad Australian' English, 'General Australian' English and 'Cultivated Australian English.' With so many different world varieties of English used by speakers it is now convenient to use the form of English for international communication. This common ground has to be accepted especially, in multilingual societies like India that uses English as a second or other language. 3.10 Summary Through this discussion the students are made familiar with the varieties of English. The students of Linguistics and English Language Teaching are familiarized with variations in pronunciation of English. Variations in British English have been discussed along with variations in pronunciation among the Anglophonic speakers in India, America, and other commonwealth countries. The sample questions are provided below along with a list of recommended books. 3.11 Review Questions 1. Write a note on the variations in English pronunciation. 2. What are the different varieties of English? Select any two varieties and show the variations in pronunciation. 3. Write a note on the regional and social variations in English pronunciation. 4. Which variety of English pronunciation should be taught to the students of English as Second Language and why?

NSOU PGEL-3 51 5. Write a note on American English. 6. Write a note on variations in pronunciation in English used in India. 7. Write short notes on the following: a) Dialectal variations b) Register variations c) GIE d) Use of English in multilingual speech communities e) International English f) Variations in pronunciation in British English. 3.12 Recommended reading 1. NSOU PGEL-3 52 Unit 4 Features of RP (Received Pronunciation) 4.1 Introduction 4.2 Objectives 4.3 RP or Received Pronunciation: An Introduction 4.4 RP and BBC English 4.5 RP and its Universality 4.6 Use of RP in English Language Teaching 4.7 RP and English Phonemic Transcription 4.8 RP and International English 4.9 Summary 4.10 Review Questions 4.1 Introduction This module is prepared to familiarise the students of Linguistics and English Language Teaching with RP or Received Pronunciation. After a short introduction there is a discussion on BBC English and how BBC promoted the use of RP. The Queen's English and some other varieties of RP used in media and mass communication are also covered in this unit. Speculations on the future of RP in Britain and other countries are also discussed. Listening and speaking skills taught both in formal and informal language school across the globe mainly uses RP. English phonemic transcription is also done on the basis

| 50% | MATCHING BLOCK 9/23 | SA | ENG 122-Phonetics & phonological -draft module ... (D119416893) |

of RP. 4.2 Objectives At the end of this unit the learners will be able to: a. Understand the importance of RP b. Identify the

distinct features of RP c. Compare their own speech with RP and adopt ways to improve d. Understand the importance of phonemic transcription for learning English e. Appreciate the role played by RP is standardising English. 52

NSOU PGEL-3 53 4.3 RP or Received Pronunciation: An Introduction English is a modern language that has evolved through a close contact with native and European languages. Through a process of evolution through assimilation, hybridity, word-formation, etc., English has assumed various forms, especially in pronunciation. Variations in English pronunciation are dialectal, morphological, syntactical, accentual and intonation. The English spoken by the people of south England along the river Thames is markedly different from that of the speakers in Liverpool, Bristol, or Edinburgh. Similarly, there are marked variations in pronunciation among speakers of New Orleans and New York, or Sydney and Johannesburg. Even English spoken in India is not homogeneous. Variations are also based on differences in gender, ethnicity, religion, age and, social class. M.A.K. Halliday refers to a variety of language based on field, mode and manner of discourse. Among these, one variety of English pronunciation has traditionally been dominant and popular among the privileged section of the population in Great Britain.Daniel Jones in the second edition of English Pronouncing Dictionary (1926) revised the previous term "Public School Pronunciation" used by him in the 1917 edition of the book with "Received Pronunciation." According to Daniel Jones: The pronunciation represented in this book is that which I believe to be most usually heard in everyday speech in the families of Southern English people who have been educated at the public schools. (ix) Daniel Jones has stated that "[i]n day schools local pronunciations do not disappear nearly as readily as in the boarding-schools, because the pupils continually hear the local pronunciation used around them" (x). Since then phoneticians have used RP or Received Pronunciation as the equivalent for Standard Southern British accent. This variety of English has been regarded with high esteem by the users as well as by those who do not speak it. This prestige accent has long been associated with the educated, elite and urban population of England. In the public schools and colleges like Eton, Harrow, Winchester, Leeds, Oxford and Cambridge, RP is used normally. This type of English is variously referred to as "Oxford English," "BBC English" and even "the Queen's English." During the Victorian period, this historically "received" pronunciation was socially acceptable even in both formal and informal discourse. Thus, Received Pronunciation (RP) has emerged as the name applied to the regionally neutral accent in British English.

NSOU PGEL-3 54 4.4 RP and BBC English RP is sometimes referred to as "BBC Pronunciation." British Broadcasting Company Ltd., established in 1922 with an aim to "inform, educate and entertain," later became British Broadcasting Corporation in 1927, emphasised public service for a national audience. The BBC originally adopted RP for its announcers because it was thought that the RP form of pronunciation would be nationally understood. It was also supposed that the language of the elite class would attract less criticism from the other regions of England. However, nowadays, the educated speech at large, throughout the Anglophonic world displays considerable regional variations. The English RP has also lost its traditional prestigious social position. The younger generations of metropolitan users of the language prefer to pronounce English according to their local accentual patterns. Such regional variations are no longer considered as down market even by the academic or elite class. Originally, RP was not a regional but a social accent. However, many modified forms of RP exist (modified RP). As an official variety of pronunciation, it was to be heard all over England, though only a minority of English speakers used this for informal conversation. In and around London, however, the accent has remained popular. RP became popular in mass media and entertainment industry and was much used in the films, theatre and television. 4.5 RP and its Universality For Daniel Jones, "RP means merely 'widely understood pronunciation'" (x). It was not meant "as a standard which everyone is recommended to adopt" (x). The source of RP is of course the prestige speech used in the Parliament, the Court and the public schools of England. Although the prestige attributed to RP is the result of social factors, not linguistic ones, it has become the prescribed set of accents. Though RP is in no sense linguistically superior or inferior to other accents, it has become associated with formal education is often cited as a norm for the description of British English. RP has emerged as the standard form for teaching of English as a second or foreign language across the globe. Among the varieties of English in use worldwide, RP is perhaps the most widely understood variety. RP is "easily understood in South Africa, Australia, and New Zealand, and by English-speaking Canadians" according to Jones. While different varieties of English are spoken in the United States, Received Pronunciation "is fairly

NSOU PGEL-3 55 universally understood without difficulty" (Jones x). Even for pedagogic purposes RP is used as a suitable standard for teaching English both as a first language and second language throughout the Anglophonic world, especially in the schools of the erstwhile British colonies. 4.6 Use of RP in English Language Teaching The common problem faced by the educators of English language is related to the selection of the variety of English to teach the students in public schools. The debate in most technical and business schools is whether to employ British variety (RP) or American English in the classroom. Using audio-lingual method of ELT, audio recordings of different dialects of English are being played in the classroom, but the problem is related to selection of any particular variety of pronunciation. Nevertheless, both these varieties are regarded monolithic though neither the British nor the American variety of pronunciation is monolithic. Nowadays, however, other global varieties of pronunciation are commonly heard in academic and business platforms across the globe. The term non-regional pronunciation or NRP with a large range of variations is used to represent pronunciation which cannot be pinned down to a specific area. Phoneticians do not prefer any form of graded inequality with reference to pronunciation and instead of RP they use the term "Standard Southern British English" or SSBE. There is an enormous variety of accents of English in addition to those of RP or "British English." Bernard Shaw in Pygmalion (1912) refers to the variations in pronunciation of English through the characters drawn from London. Variations in spoken English used by Professor Higgins and Eliza, the flower seller, are remarkable. The play analyses the importance of pronunciation and language in social and personal relationship. Such variations in pronunciation are sometimes put under the label of "colloquialisms," "vulgarisms," or "provincialisms." The differences are mostly phonological. For example, in some English dialects, such as Cockney, the English RP alveolar plosives like /t/ and /d/ are pronounced as affricate plosives /t s / and /d z /. In Irish English the alveolar plosives /t/ and /d/ are pronounced as dental plosives /t ^ / and /d ^ /. Such variations in pronunciation among the people of England are found among users based on their dialects that are "local," "territorial," "rural" and "urban," on the micro level and "regional," on the macro level.

NSOU ? PGEL-3 56 In English Language Teaching there has always been an attempt to make the standardised version of spoken English more useful. RP has proved to be of more help because of its widespread use in the English medium public schools across the globe. Furthermore, the availability of study materials, such as pronunciation dictionaries, audio clips, and phonetic handbook, etc., have allowed RP to retain an important place among young learners and teachers of English language. Teachers, in countries where English is not the first language, face the problem of selecting the variety to teach English. Usually, the debate revolves around the use of British RP or American English in the classroom. But the fact remains that much of the instruction is likely to be imparted in the accent used by the teacher. However, materials are now readily available that can help in teaching pronunciation. According to the local linguistic profile of the teachers ELT is carried on. The curricula framework is mainly shaped on RP and the teaching materials are well-suited to impart RP than other varieties of English. 4.7 RP and English Phonemic Transcription For the convenience of the learners of English language, Daniel Jones compiled English Pronouncing Dictionary in 1917 for practical linguistic teaching. The phonemic transcription provided in the dictionary is meant for general users of English, the users of RP, the users of English as Second or Foreign language, and even for non- users of RP. Jones has used 44 English phonemes to give phonemic transcription of English words. The following symbols have been used by Daniel Jones: Vowels Phoneme Type Word Phonemic Transcription /w/ Short Pure Front Vowel ink /w k/ /æ/ Short Pure FrontVowel and /ænd/ / / Short Pure Central Vowel up / p/ /c/ Short Pure Central Vowel about /cba t /]/ Short Pure Back Vowel ox /]ks/ / / Short Pure Back Vowel pull /p l/ /i:/ Long Pure Front Centralised Vowel eel /i:l/ v v Ω Ω Ω

NSOU ? PGEL-3 57 /c:/ Long Pure Central Vowel earl /c:l/ /a:/ Long Pure Back Vowel arms /'a:mz/ / :/ Long Pure Back Centralised Vowel awe / :/ /u:/ Long Pure Back Vowel ooze /u:z/ /ew/ Diphthong aim /ewm/ /aw/ Diphthong ice /aws/ /]w/ Diphthong oyster /]wstc/ /c / Diphthong oath /c θ/ /a / Diphthong ouch /a t•/ /ec/ Diphthong air /ec/ /wc/ Diphthong ear /wc/ / c/ Diphthong rural /r crcl/ Task 1: Write the RP Vowels from the following words: a) Putt b) Part c) soul d) file e) tear Your answer: Consonants Phoneme Word Phonemic Three-term label Transcription Vocal Place Manner Cords /m/ more /m]:/ Voiced Bilabial Nasal /n/ not /n]t/ Voiced Alveolar Nasal /ŋ/ ring /rw / Voiced Velar Nasal c c Ω Ω Ω Ω Ω Ω

NSOU ? NSOU PGEL-3 59 e) Nine f) Loyal Your answer: Nowadays instead of RP, Standard British English and Standard American English are the most widely taught varieties of English in second language teaching across the globe. The term standard refers to the variety of English that has the highest prestige in a country. In case of the British Isles, the standard is variously called Received Pronunciation (RP), BBC English, Oxford English or Southern British Standard. Only about 5% of the population of Great Britain speak RP and the majority of RP speakers live in the south-east of England. The phonemes listed above are used by the speakers of RP and other varieties of English worldwide. 4.8 RP and International English Through a process of creolization and pidginization, English language across the globe has taken various forms. Major changes are on the phonological level due to mother tongue interference. For example, in South Asian countries like India, Nepal, Bhutan, Bangladesh, Pakistan, Sri Lanka, a large section of people uses English as a second language and speak in various ways. Even in countries like Hong Kong, Thailand, Malaysia, Indonesia and Singapore, people use English for business communication and tourism. Around 330 million speakers of English use the language as first language and even these speakers do not use English RP for informal conversation according to David Crystal. In the twenty-first century two major family trees of British and American varieties of English have developed. These are, however, gradually merging into a more universally acceptable International English that retain regional variations in pronunciation. However, along with English RP, different types of English, with their variations in pronunciation can be seen in these forms of English language: Indian, African American, American, Australian, Caribbean, Belfast, Cockney, New Zealand, Scottish, South African, among others. The students of English as a Second Language (ESL) throughout the world usually use the British or English RP (Received Pronunciation). Even in Ireland, Scotland or Wales, where the number of RP speakers is relatively less, the accent is held in high esteem. The commonwealth countries like Australia, New Zealand, Canada and South Africa use traditional RP in mass media and public announcements. In the

NSOU PGEL-3 60 USA, however, a special artificial type of English evolved out of English RP. The British RP is regarded as prestigious accent in the United States. In the Hollywood cinema of the 1980s the characters spoke in a more stylised and accented manner thereby developing an artificial American type of pronunciation. English RP is nowadays widely used in media and communication and in international conferences and seminars. Most of the public broadcast in the Anglophonic world uses the standards of pronunciation, accent and intonation set by RP. 4.9 Summary Through this discussion the students are made familiar with RP or Received Pronunciation. The contribution of Daniel Jones in the field of English pronunciation has been discussed. RP is now widely used in teaching of English as a first or second language throughout the world. English listening and speaking skills are mainly taught in language schools across the globe using RP. The symbols of English RP phonemes has been given with examples in phonemic transcription. While Indian English is historically derived from British English, recent influences from American English can be found to have created its own idiosyncrasies. For instance, it is common to both spellings "program" and "programme" being used in both formal and informal communications. >Here< is sometimes pronounced [hec(r)] (like in >hair< and >hare<) instead of [hwc(r)]. 4.10 Review Questions 1. Write a note on the place of RP in English Language Teaching (ELT). 2. What is Received Pronunciation (RP)? Discuss the evolution and usage of this term. 3. Write a note on the relationship between RP and BBC English. 4. What is the role of RP in English Language Teaching in countries where English is not used by the majority. 5. How many phonemes are there in English RP? Give a broad classification of these phonemes. 6. Write short notes on the following: a) ESL and use of RP.

NSOU PGEL-3 61 b) Phonemes in English RP c) Phonemic transcription and RP d) Use of RP in public schools 7. Write the word initial vowels for the following : a) elite b) across c) one d) other 8. What should be the objectives of pronunciation teaching? Suggest objectives from your own experiences and for your needs. 9. Suggest the ways of achieving the objectives you have mentioned in the answer to the question no. 4. 10. Give the three term label for the word initial consonants according to their utterances: a) methods b) cognitive c) teaching d) star e) psychology f) vision

NSOU PGEL-3 62 Module 2 : English Phonology Unit 5 Speech Production 5.1 Introduction 5.2 Objectives 5.3 The Sound System 5.4 Organs of Speech production 5.4.1 Description of speech organs 5.5 Some concepts related to speech production 5.6 Airstream Mechanism 5.7 Pulmonic Airstream Mechanism 5.8 Non-Pulmonic Airstream mechanism 5.9 Direction of the Air flow 5.10 Phonation 5.11 Summary 5.12 Review Questions 5.1 Introduction Generation of Speech or Speech Production is the prime means of communication which is an innate and inborn biological capability of man. This has made human as a distinct species from all other animals. Native speakers of each language community have this ability at birth and acquire the first language at a very early age in the post natal period unconsciously. But when a second language is assigned to them for learning after having acquired the competence in their mother tongue or first language, a conscious effort becomes necessary. 5.2 Objectives At the end of this unit, the learners will be able to: a. understand the mechanism of human speech production 62

NSOU PGEL-3 63 b. identify various speech organs and know their functions c. manipulate the speech organs for the production of new speech sounds 5.3 The Sound System The linguistic system of a language is composed of different structural levels or areas like sounds, generation and comprehension of sounds (phonetics), use of sounds and its functional behavior (phonology), words and its formation (morphology), use of words i.e. their order and intra-word relations (syntax), the meaning of words and sentence (semantics) etc. A speaker has to explore and practice all these knowledge areas for their linguistic competence in second language. The sound system constitutes the building block of a language. As a result the initial requirement in learning a language is the knowledge on the sound system. Each language has their own set of sounds with different patterns of articulation, combination as well as some exceptions and uniqueness. Therefore speech production invites certain areas of sound system like set sounds, method of generation of sounds, graphic representation of sounds and writing system etc. The learner should also remember that as a building block the sound units passes some extra information about the speaker, in built within the sound unit like age, sex, social status, state of mind, etc. i.e. physical, social and psychological aspect of the speaker. These are secondary properties in speech. Besides during speech, the speaker may also produce some gesture and posture by moving their head, body and eye etc. These are non-vocal behavior of speech, but are associated with it. The whole procedure becomes the part of 'speech production' in a wider sense. Of course inbuilt information and the non-vocal behavior are secondary matter in second language learning. The proper understanding of the verbal behavior of speech is the basic requirement and includes the movement of Organs of Speech. The relation between the movement of the speech organs and their corresponding generated sound units are the introductory part of second language learning. Phonetics deals with that. One point should be noted here that not all sounds produced by organs speech are the speech sounds of a language. The sounds which are used in a language are speech sounds of that language. A speaker produces a stream of sounds continuously. The hearer perceives effortlessly. It is only possible when both, the speaker and hearer, have the power of perceiving the whole string of sounds as the combination of segmented units. For example when anyone says 'come here' /k^mhi∂/, it is nothing but a stream of segmented

NSOU PGEL-3 64 sound units. This small sentence can be the part of a long 'speech'. This is an analogous stream of sounds to the hearer as it is produced continuously. But this string of sounds comprises of separate segmented units /k-^-m h-i-∂/'. Each one of this string is a unique sound unit. Each one has different articulatory pattern, complex physical properties like pitch or frequency, duration, loudness or intensity etc. Both the speaker and hearer have competence on these aspects of sound units. For learning any second language the knowledge on these areas is inevitable. Remember when we put the words in / / it indicates what a speaker produces exactly in speech. This type of transcription is known as narrow transcription. The scripts which have been used here to produce exact sounds are known as 'International Phonetic Alphabet' (IPA) which will be discussed latter. A few new symbols like '-^-, -∂- ...' will be used there. 'Phonetics' by definition is a part of language study, already introduced to you. It describes the speech sounds scientifically analyzing the method of production, classification and transcription in respect of the properties said above. It has three broad areas related to the generation of speech - Articulatory, Acoustic and Auditory Phonetics i.e. how the segmented sound units are produced by the speakers, what type of physical properties travels from speaker to hearer and how, and finally how the speaker perceives these physical properties or acoustic signals by receiving through the auditory organs. Out of these three areas, the Articulatory Phonetics is the primary need to any language learner as it gives a detail outline of speech articulation. 5.4 Organs of Speech production The organs of speech or vocal apparatus are the part of physiological structure and common to all human. The structural and functional knowledge on the Organs of Speech is the primary concern for articulatory description. The organs involved in speech are biologically gifted to the human limbic system. But in the early phase of evolution most of these organs were involved to maintain the physical activities only. Gradually during the course of evolution, according to the need for communication, the same organs started to be utilized for the generation of speech sounds. As a result these organs have two types of function - Primary and secondary functions. The primary functions maintain the functioning of physiological system of the body. But when any organ is used for other purposes beyond the primary function, it is known as secondary function. The function or speech of vocal apparatus is secondary function. These have been shaped as speech organs during the course of evolution to fulfill different external needs. For example the tongue was used to taste and move the food items within the oral cavity. That was the primary function of it. Gradually the sounds produced by the tongue was started to be used for communication at night or

NSOU PGEL-3 65 in the dark forest or from a distance etc. This is secondary function of it. The tongue creates the obstruction in the path of air flow of the respiratory system or changes the shape of oral cavity and assists to generate the sound. Similarly the vocal cords (larynx) are responsible mainly to control the respiratory system but these have been also used for generating the voicing features of speech by vibrating the vocal cords as a secondary function. 5.4.1 Description of speech organs The speech organs, also known also as 'vocal apparatus', are organized in a systematic manner as part of our limbic system. The organic existence, arrangement and coordination are the key factors for the creation of different speech sounds. The speaker manipulates these organs in different phases of speech production i.e. how these are used to initiate a speech, vibrate vocal cords, and controls the air passage to give a shape of sound unit. A small sketch of organs of speech is drawn below. 1. lungs 2. food pipe / esophagus 3. wind pipe / trachea 4. larynx 5. vocal cords 6. glottis 7. epiglottis 8. pharynx 9. nasal cavity 10. oral cavity 11. uvula 12. root of the tongue 13. back of the tongue 14. front of the tongue 15. blade 16. tip of the tongue 17. soft palate 18. hard palate 19. alveolar 20. lower teeth 21. upper teeth 22. upper lip 23. lower lip 24. lower jaw

NSOU PGEL-3 66 Lungs (1): Lung is the source of air to flow. In our respiratory system, human breathing is directly related to the lung. We breathe the air that goes directly to the lung from the atmosphere and then we breathe out. The air from the lungs passes outward. Both the dimension of airstream is manipulated by other vocal apparatus in the oral cavity to generate the sounds. Lung is physically arranged under the trachea or wind pipe (3) in two parts inside our chest. Esophagus (2): The Esophagus (2) or food pipe is placed beside the trachea which runs to the stomach for food. When we eat food it goes to the stomach through this directly. Epiglottis: And there is another organ to close the path of wind pipe and that is the epiglottis, above the larynx and below the root of the tongue. Larynx (4): Larynx is the part of respiratory system and placed above the wind pipe. It is a comprise of two cords known as vocal cords (5) and a few cartilages adjacent to these two cords. The function of these cords is to control the air flow from the lungs. Simultaneously it manipulates the speed of air flow to be vibrated to produce the audible sounds. Glottis (6): The gap between these two vocal cords is known as Glottis (6). The adjacent cartilages manipulate this gap. The air passes smoothly through this gap when both cords remain widely apart from each other. It happens during normal breathings. But for the generation of sounds these cords are abducted to reduce the space of glottis. Then the air flows with high speed and these two cords start to vibrate. The audible noise is produced then. The wave of that audible sounds or resonant moves towards the oral cavity and is shaped further there by the other apparatus before releasing to the atmosphere. The vibration of these two cords varies due to the variation in the space within the glottis. The different sounds are produced. Phonation in phonetics describes the voicing and voicelessness of speech sounds. Pharynx (8): Pharynx is a long tube just above the larynx and esophagus from which two cavities i.e. nasal cavity (9) and oral cavity (10) are formed separately. The region of pharynx is externally the throat region in human body. Nasal cavity (9): Nasal cavity is placed above the roof of the mouth and in between nostrils and the pharyngeal tube. During the production of nasal vowels or consonants, this cavity acts as resonating chamber to produce a nasal murmur along with the oral sounds. Uvula (11): Uvula or velum is uniquely placed above the pharyngeal tube dividing the path of oral and nasal cavity and remains in ganging position during normal

NSOU PGEL-3 67 breathing. It is the extreme end of soft palate. When the airflow passes towards oral cavity it touches the pharyngeal wall and blocks the airflow to the nasal cavity. The non-nasal sounds are produced. But it opens the path of nasal cavity during the speech it assists to produce the nasal sound. Tongue (12-16): Tongue is the most important articulator in the generation of speech. Structurally it is not flat though in the surface it seems like that. The inside shape is round like a ball and the flat portion is on the upper part of the ball. The major division of tongue relevant in speech production is 'root' (12), 'back (13)' and 'front (14)'. The 'blade'(15) and the 'tip' (16) of the tongue are two parts in the front. The tongue plays the major role to create an obstruction in the air path or change the shape of oral cavity. The airstream, either from the lungs or from outside to the oral cavity is functionally affected by this movement of tongue. The sounds are classified by considering this tongue movement in most of the languages. Palate (17-18): The roof of the oral cavity is known as the palate divided into two; soft palate (17) and hard palate (18). Different parts of the tongue touch different points on the palate and create obstruction in the air passage. The soft palate is at the end towards the pharyngeal tube. The back of the tongue against the soft palate produces sound like /k/, when these two closes the path of air passage. The area of the palate towards upper teeth is divided into hard palate and the alveolar (19). When the blade of tongue touches the front of hard palate, it produces palatal sounds and when the twisted tongue touches the hard plate, produces retroflex sounds. Alveolar (19): A raised sloppy reason at end of hard palate towards the upper teeth is known as alveolar. The tip of the tongue touches against the alveolar for another set of sounds known as alveolar like /t/. Teeth (20-21): Structurally teeth are arranged in two sets - lower teeth (20) and upper teeth (21). The root of the upper teeth is important when the tip of the tongue

NSOU PGEL-3 68 touches against it, produces a set of sounds known as dental, available in Bengali and other Indo Aryan Languages. Simultaneously the lower lip has a role when it touches the upper teeth, /f/ like sound is produced and known as labiodentals. A set of consonants is also produced when the tip of the tongue touches against the middle of the closed position of upper and lower teeth as it happens in the production of /ð/ in 'this'. These are known as inter-dental. Lips (22-23): The upper lip (22) is fixed in front of the upper teeth and used as the place of articulation against the lower lip (23) for bilabial sounds like /p/, and lower teeth for /f/ etc. It is the front gate of oral cavity. Lower lip is the external part of the front jaw used for the same set of sounds. Lower Jaw (24): Lower jaw is the lower part of mouth. The flexibility in the movement of this part is useful for opening and closing the oral cavity. Without this movement no vowel and most of the consonants with multiple characters cannot be produced for communication. Active and Passive articulator: According to the David Crystal 'Any specific part of the vocal apparatus involved in the production of a sound is called an articulator.' (Crystal, 2000, 27). The list of organs, mentioned above are the articulators used for the generation of speech sounds. Out of these articulators some organs move actively during the generation of speech like, tongue, lower lip, lower jaw etc. These are known as active articulators. Tongue is the most active among these articulators. The lower lip, two vocal cords, velum etc may be added in this list of active articulators as these organs also remain active during speech. In respect of the movement of the articulators like upper teeth and the roof of the mouth i.e alveolar, front and back parts of the palate remain relatively fixed. These are considered as passive articulators. 5.5 Some concepts related to speech production i) Airstream Mechanism ii) Phonation 5.6 Airstream Mechanism Initiation characterizes the types of airstream used in speech. In the respiratory system the air moves from the lungs towards the oral or nasal cavity or both and vice versa. But some exceptions are also there. According to David Crystal 'initiation' in

NSOU ? PGEL-3 69 phonetics determines the source of airstream in motion and the direction of airflow. The airstream mechanism describes the source of air in speech. In human speech there are two main types of the airstream mechanism: (i) Pulmonic Airstream Mechanism (ii)Non-Pulmonic Airstream Mechanism 5.7 Pulmonic Airstream Mechanism The initiator in this process makes clear the path of airflow from the lungs on the basis of respiratory system. The airstream available within the space between the lungs to lips is manipulated for the generation of speech sounds. Lung is the source of air and due to that it is known as pulmonic airstream mechanism. The whole region from below the larynx to the lips in the above figure indicates the source of air is lungs. 5.8 Non-Pulmonic Airstream mechanism Other than the pulmonic mechanism, two more types of mechanisms for the airstream manipulation are set by the process of initiation. In these cases, the source of air stream is not generated from the lungs. These are known as Non-Pulmonic Airstream mechanism. In both these cases the path of airflow from the lungs is blocked by the initiating process. New spaces are created to hold the air to flow. These two are Velaric and Glottal Airstream Mechanism. English has no speech sounds using these two mechanisms. However, some British (who speak Cockney) use glottal stops which are a result of Glottal air stream mechanism.

NSOU PGEL-3 70 5.9 Direction of the Air flow The direction of air flow characterizes the sound units. Two types of airflow - ingressive and egressive are noted in human speech. When the air pressure is high within the oral cavity than the atmosphere the air moves towards the outside. This is known as egressive airstream. The egressive pulmonic air stream mechanism is used by English speakers and most speech communities of the world. The ingressive airstream is the reverse process of egressive mechanism. When the air pressure is reduced by the movement of speech organs within the cavity, the atmospheric air flows into the empty space in the cavity, and with any available constriction point, the air gets released. This is known as the ingressive airstream. During this time the speech sounds are produced. Implosive and click sounds are produced by this process and are commonly found in many African languages. 5.10 Phonation Phonation has also the same common role for the generation of all vowels and some consonants which refer to the function of larynx in speech. It is the secondary function of larynx. In speech the function of larynx is relatively independent in respect of other vocal organs. When two vocal cords are put together the space of glottis is narrowed down in such a manner, both the cords start to vibrate when the air passes through it. This vibration produces audible noise and passes out through the pharyngeal and oral cavity. This activity of the larynx for the speech is known as phonation. The voiced, voiceless or unvoiced sound and whispering are also produced by this process. For the generation of vowels phonation is the main source of acoustic energy, but it has a role to characterize the consonants also known as voiced consonants. Phonation has two main types - Voicing and Voicelessness with some subtypes will be discussed as manner of articulation feature (see Unit 7).

NSOU PGEL-3 71 5.11 Summary We have discussed how speech is a distinctive feature of the human beings separating them from the rest of animal world. Speech which is a natural phenomenon is acquired at a younger age and is restricted to the mother tongue or the language of frequent exposure. However, learning to speak a second or a foreign language involves conscious effort. Such speech production demands producing certain unfamiliar sounds to do which knowledge of speech organs and their functions is essential. The speech production also depends on factors such as the type of airstream mechanism and voicing or devoicing the speech sounds. This knowledge helps you further to analyse the errors made during speaking (by your learners) and help them with possible remedies. 5.12 Review Questions 1. How is speech unique to human beings? 2. What is the primary function of speech organs? 3. How many types of air stream mechanisms do we have, and how are they useful? 4. How is a speech sound voiced? Describe in detail. 5. Which part of the tongue is used for the utterance of the following in speech sounds: /t/, /k/, /f/, /r/, /l/ 6. Which of the speech organs do not move? Name them and describe their function. 7. What does the term phonation mean? What is its significance? 8. What function do the lungs play in the production of speech? 9. What are ingressive sounds? Does English have any of them? 10. What role does the nasal cavity play in speech production? How many consonants are produced nasally? Name them and describe them.

NSOU ? PGEL-3 72 Unit 6 ? English Vowels 6.1 Introduction 6.2 Objectives 6.3 Common features of vowels and consonants 6.4 Vowels 6.4.1 Cardinal Vowels 6.4.2 English Vowels 6.4.3 Description of Vowels qualitatively 6.5 Close and open vowels 6.6 Lip movement: Rounded and unrounded vowels 6.7 English Diphthongs 6.7.1 Classification of English diphthongs 6.7.2 Triphthongs in English 6.7.3 What is to be remembered? 6.8 Summary 6.9 Review Questions 6.10 References and Reading List 6.1 Introduction All languages are made of speech sounds, and English has 44 basic sound units which are known as phonemes. These are distributed in two broad categories vowels and consonants. a) Vowel series: i: /I, ɛ, æ, a,]:, Z, , c, f:, ʊ, u:, ei, aw,]i, a , c , wc, c, ec./ (20) b) Consonant Series: /

| 50% | MATCHING BLOCK 10/23 | SA | Ali Mirzavand_A PHONOLOGICAL STUDY OF ENGLISH ... (D15063759) |

p, b, t, d, k, g, t•, d¦, m, n, , f v, θ, ð, s,• z,¦, h, l, r, j, w/. (24)

Phonetically each of these sound units has not only an articulatory pattern, each one has specific phonological behavior in the language. English sounds are not exception to such rules. The scientific classification of these units needs the detail phonetic 72 v Ω Ω Ω

NSOU PGEL-3 73 pattern based on the source of air, direction of air flow, role of articulators, shape of the cavity, nature of constriction on the air path etc. In this unit we will specifically focus on the vowel sounds, their production and description. 6.2 Objectives After going through this unit, the learners will be able to: a. Distinguish a vowel sound from a consonant sound b. Identify various vowel sounds which are absolute in nature c. Identify and describe vowel sounds in English language d. Classify the vowel sounds based on their quality and production e. Help learners who need remedy in the production of vowels 6.3 Common features of vowels and consonants In respect of articulation both these series have some common features in spite of unique aspect which have made these two series with separate identity. The generation of any speech sound has the source of airstream whether it is consonant or vowel does not differ much. Direction of the airflow or the state of glottis that is phonation etc are also common and present. Generally English sounds are produced by the pulmonic airstream mechanism which flows from Larynx to atmosphere, the egressive one. 6.4 Vowels By definition vowels are a set of speech units, which are produced by passing the pulmonic airstream freely and continuously without any constriction after shaping the oral cavity using the movement of tongue and lips. During this flow of air, the glottis is narrowed down. Both the vocal cords vibrate by generating audible noise. That audible noise is known as vowel. The different shape of the oral cavity makes the sound wave to resonate differently that produces vowels with different quality. From the above definition it is clear that the production of vowels have the following features of articulation. (i) Use of airstream mechanism, here pulmonic airstream mechanism based on the respiratory system. (ii) Direction of airflow from the lungs to the atmosphere, i.e. egressive. NSOU PGEL-3 74 (iii) No Constriction in the oral cavity or in the air path way from the larynx to lip. (iv) Shape of the glottis for vibrating the vocal cords producing systematic audible noise of voicing. (Vowels are voiced in general). (v) Changing the shape of oral cavity by placing the tongue and lip in different positions. (vi) Option to pass the airstream through both the cavities i.e. oral and nasal to produce the nasal vowels. (vii) Duration of the articulation. Task 1: State whether the following statements are true or false: 1. English vowels are produced with pulmonic eggressive air stream mechanism. 2. The shape of oral cavity during vowel articulation is controlled by the tongue only. 3. Vowels can be voiced or voiceless. 4. Vowels can be oral or nasal in English. 5. Vowels are usually uttered after consonants. 6.4.1 Cardinal Vowels The description of a vowel is difficult in respect of consonant. Place of articulation of consonant is observable. But the vowel has no such particular concrete reference point to place the articulators. For the production of a vowel a speaker has to imitate the sound only. It has a pattern of articulation. The problem is more complex during the second language teaching and learning. The articulators are placed in a particular pattern within the space of oral cavity. That has to be imitated. The concept of cardinal vowels was introduced for that. The idea of cardinal vowel is to define a model pattern of movement articulators as the standard reference irrespective of any particular language. "A set of standard reference points devised by the British Phonetician Daniel Jones to provide a precise means of identifying the vowel sounds of a language." (Crystal, 1980). Before the description of English vowels a preliminary idea of cardinal vowels was relevant here. When English vowels were taught to the foreign students, the need of such attempt was felt badly. The tongue position in the generation of vowels varies from language to language. The learners try to acquire the technique by hearing the sound

NSOU ? PGEL-3 75 only. Besides, another matter was also taken into consideration that how this vowel difference can be placed in writing. Jones noted that for the generation of vowels involves two types tongue movement which plays the major roles. He defines that different section of the tongue moves up to that extreme point in the cavity for the vowel after which it would produce the noise of friction. Similarly the lowest position of the tongue is another extreme point after which no vowel can be produced. If the front and back part of the tongue is placed in the cavity the following vowel quadrilateral may be shaped. The following diagram is nothing but the space within the oral cavity. Between two extreme points of the tongue movement he further devised two more reference points in the mid-level. When the tongue attains the highest position towards the roof of the mouth the shape of the cavity is supposed to be closed. The vowel produced in that shape will be known as close or high vowel. On the other hand a low or open vowel may be produced when the tongue is in the lowest position. Relatively two other positions in the mid-level have been suggested which are half-close or mid- high, little below the close or high position and a half-open vowel or open-mid above the lowest position. These four reference points are made considering the movement of the front of the tongue. He marked corresponding another four 'reference points' observing of the upward movement of back of the tongue. The vowels, produced in these eight points are treated as primary cardinal vowels or primary reference points for the description of vowels of any language. Jones had represented these eight primary vowels using the International Phonetic Alphabet like /i, e , ɛ, a, Y,], o, u/.

NSOU PGEL-3 76 He also added the rounded and unrounded features on these vowels. When the vowels in the back are produced, the shape of lips converts generally into the round shape. The vowels in the front are round in character which is unrounded or spread during the production of front vowels. These reference points, made by Jones here are irrespective of any language and will be treated as a scale for describing the vowels of any other language. See the distribution of cardinal vowels in the following diagram. The tentative lip positions in the four extreme point of the tongue movement is mentioned here, which gives an idea that the roundedness and the closing-opening related with the primary cardinal vowels, as listed in the description. Jones later has given ten more secondary reference points for the cardinal vowels which are known as secondary cardinal vowels Task 2: Complete the sentences. a) The various parts of the tongue are: b) The rounded vowels of English are: c) The high vowels of English are:

d) The back unrounded vowel is: e) The front vowels are: 6.4.2 English Vowels Phonologically the English phonemes have been identified two broad sound categories - vowels and consonants. Each category has a set of fixed number of phonemes, mentioned in previous sections. From the traditional grammar conventionally it is known that English has five vowel scripts like 'a, e, i, o, u'. According to the English sound system the vowel sounds are more in number. There is no one-to-one mapping between the sound unit and the corresponding alphabet. Same alphabet is articulated differently. The letter 'a' in English is produced as /æ/ in bat /bæt/, /a:/ in far /fa:/, /]/ in away /]wew/, /] / in watch /w]tʃ/ or/]:/in talk /t]:k/. /ɛ/in many /mɛnw/, /w/in village /vwlwdz/etc. Besides some consonant letters are also are pronounced as vowel in certain contexts. For example 'y' in syndicate /swndwkct/ is articulated as /w/. Orthography has such inconsistency in respect of sound. It is noted in most of living natural language which has writing system. Therefore the classification as well as characterization of vowel sounds is relevant to the language learners. After an exhaustive study, a phonetician described the English language with twenty vowel like sounds. Out of these, 12 are marked as pure vowels or monophthongs. These are i:, /w, e, æ, Y,]:, Z, , Bb, e:, ʊ/ and /u/:. Besides these, /ew, aw,]w, aʊ, cʊ, w], cʊ/ and /ec/ are eight more vowel like units which are compounded in structure and are known as diphthongs. 6.4.3 Description of Vowels qualitatively The vowels can be characterized qualitatively and quantitatively. The qualitative difference of vowel depends on the shape of the oral cavity, which varies by the movement of active articulator tongue with the coordination of the shape of lips. The change of the cavity shape modifies the flow of sound frequencies from the larynx and produces different vowels of unique quality. The vowel /w/ is different one from the /ʊ/ due to the variation in the position of articulators i.e. tongue and lip. Therefore vowels can be classified or grouped qualitatively according to the role of these articulators. The roles of the articulators have been attributed by providing names like front-back, high-low, open-closed, rounded-unrounded etc. As a result the vowels can be classified or studied on the basis of following parameter in general. 1) Movement of the part of the tongue like front, back and central. 2) Upward and downward Movement of the tongue like high or mid-high or Y

mid-low or low which are related to the closing and opening character as another quality. 3) Movement of the lips like spread or unrounded and rounded features. Other than three important features a vowel sound is related to two more aspects of articulation. These are: 4) Opening of the jaw which influences the most of the active articulators during the articulation of vowels. 5) Opening the path of nasal cavity for the nasal vowels. This is an optional part as nasal vowels are not available in all language. a) Tongue Movement : Front, Back and Central : Broadly the tongue is divided as front, back and central which moves from its neutral position towards the roof of the mouth, the passive articulator. The cavity space is changed by this movement of three different sections of tongue. Each of this broad division has sub sections. The 'front' has three sub sections like tip, center of the front and back or hinder part of the front. Like this central and back have also different sub sections within the broad area as mentioned. The impact of these subparts adds unique vowel quality. i) Sound produced by the movement of the front part of the tongue ii) Sound produced by the movement of the back of the tongue iii) Sound produced by the central part of the tongue (i) Sounds produced by the movement of the front part of the tongue: 1) Tongue moves in different directions within the oral cavity. From the neutral or rest position when the center of the front part of the tongue starts to move towards the front of the hard palate or alveo-palatal region a passage is created to pass the airstream with audible noise. A sound like /i:/ (1) is produced. The words like see /si:/, tree /tri:/, seen /si:n/, east /i:st/, meat /mi:t/, people /pi:pl/, complete /k]mpli:t, need /ni:d/ etc have such sound.

2) When the back of the front part of the tongue is raised against the front part of palate creating a space to flow the air with the audible noise but producing English /w/ (2) as in sit /swt/. Form the qualitative point of view these two i.e. /i:/ and /w/ are very close according the role of the articulators. But the duration of this sound is less than the word seat /si:t/. The duration is the cause of the difference in meaning. Such words are available in English like bill /bwl/, give /gwv/, milk /mwlk/, city /swtw/, exhibit /wgzwbwt/ etc. 3) The whole of the front part moves upwards and little back towards the hard palate by creating a space to produce the /e/ (3) sound, it is little back from the above two. The words get /get/, pen /pen/, seven /sevn/, text /tekst/ etc have this vowel sound. 4) By the use of the extended part of the whole front against the hard palate, the /æ/ (4) is produced when the airflow moves towards outside. The words like back /bæk/, mad /mæd/, cap /khæp/ damp /dæmp/, lamp /læmp/, glad /glæd/ etc are the carrier words of this sound. Front and Back of the tongue which was mentioned in the figure*. ii) Sounds produced by the movement of the front part of the tongue: The position of the back part is noted in the above picture. It is towards the velum at the end part of the oral cavity. The vowels produced by the back region are known as back vowels. 5) When the center of the back of the tongue moves towards the front part of the soft palate, a space between these two articulators helps to produce the sound /Y:/ (4) as in far /Y:/. The similar words are part /pY:t/, class /klY:s/, task /tY:sk/ etc.

6) The back of the tongue moves towards soft-palate and the airflow passes through that. The tip of the tongue during this articulation moves down from the level of lower teeth. The /Z/ (6) is produced. The words like dog/dZg/, cotton /kZtn/, hot /hZt/ etc preserve this sound. The duration of this sound is short. For the same sound Jones has used /]/ script. 7) The sound /]:/ (7) is produced by the back part of the tongue when it moves towards the soft palate which has long duration. The soft palate is also raised little high. The words caught /k]:t/, talk /t]:k/, door /d]:/ etc carry this sound. 8) The / / (8) is produced by placing the fore part of the back of the tongue in very high position and make free to move the airstream by producing the audible noise. The word full /f l/, good /g d/, could /k d/ etc carry this vowel during articulation. The duration of this vowel is short. 9) The vowel /u:/ (9) is produced by placing the back of the vowels in the highest position against the soft palate. The words cool /ku:l/, blue /blu:/ route /ru:t/, soup /su:p/ etc have this vowel, which takes little long duration than the / /. i) Central part of the tongue: In neutral position of the tongue the central part of the tongue is raised a little and brings a change in the shape of cavity. 10) The audible noise of the larynx passes freely through this unit and vowel /c/ (10) is produced. There is no particular corresponding alphabet for this sound. When an English speaker produces the words like attempt /ctempt/, melody / melcdw/, protect /prctekt/, collar /k]lc/, over /cʋvc/, centre /sentc/, manner / mæn∂/ etc /c/ is generated. The duration of this vowel is very short. As this vowel is produced by the central part of the tongue it is known as the central vowel. Certain type of this sound is also known as schwa or neutral vowel. 11) The vowel /f:/ is another sound produced by the same shape of the cavity formed for /c/ with the variation in the duration. The words like bird /bf:d, her /hf:/, turn /tf:n/ etc have this vowel . Jones has used /c:/ to represent this sound. 12) In the central region another vowel / / (12) is produced when the front part of the back of the tongue by keeping in the highest position creates a space against the roof in between hard and soft palate to flow the airstream. Such sounds are audible when the words like cut /k t/, love /l v/, done /d n/,

come /k m/, none /n n/, Monday /m ndw/, among /cm /, butter /b tc/ etc. b) Upward and downward Movement or High/close and Low/open vowels: The above description shows that the front, back or central parts of the tongue movement include the upward and downward movement. Such movement has also impact on the vowel quality. Both, the front and back part, have upward and downward movement. During the production of front vowels, the front part raises towards the roof of the mouth approximately by closing the cavity space. When the word see /si:/ is uttered, the vowel /i:/ is in the highest position in English. The cavity position is about to close. Then /w/ as in pit /pwt/ is in high range but little below the highest /i:/. Gradually the tongue moves downwards by producing /e/ /æ/ etc in a particular state. According to that the /e/ is in middle position where /æ/ is in close to the lowest position of the tongue. The back part of tongue has similar role. From the above figure it is noted that /Y:/ in the word cart /kY:t/ bears the lowest vowel using the back part. Then gradually the backpart moves upwards by producing /]/ as in got, /]:/ in saw in the mid level and then / / in pull and /u:/ in pool are produced one after another towards the high position. In the mid low or mid high region /c/ /f: (c:)/, /c/, and / :/ are produced where the height of the central part of the tongue is important. These are produced either mid-high or mid-low position. Task 3: Match the words with the vowels: a) City /c/ b) Went / / c

c) Put /w/ d) Above /e/ e) Fur /f/ 6.5 Close and open vowels By comparing the tongue height and the opening of the cavity it is noted that these two are inversely related with the closing and opening of the cavity space. When the height increases, either the front of back the cavity space is reduced and shaped as closed. The vowels produced in this phase are known as high or close vowels and near to the roof of the mouth. Vowels /i:/& /w/ in the front, / / & /u:/ come under this group. But in particular /i:/ /u:/ is nearly close and /i/ and /u/ are near to the half close. The /æ/ and /Y:/ are low or open vowels in general and these are at a long distance from the roof of the cavity. But /æ/ is in between half open and open i.e. in the lower level. Out of 12 pure vowels in English six vowels are produced either in mid high region and known as half close vowels. Similarly those are close to the lowest zone, known as mid low or half open vowels. The /e/ of the front is half close and half open. /Z (])/ is above the open. / /]:/ are two speech units are produced in the half open shaped by the back part of the tongue. Rest of the two that is /c/ and c: are in between half-close and half-open position. 6.6 Lip movement: Rounded and unrounded vowels Lip movement: The movements of vocal apparatus for vowels, described above, includes the lip movement also. It has impact on the vowel quality. Relatively physical

organs are independent. But it is noted that when the back of the tongue starts to rise from its neutral position, the shape of lips starts to be rounded. That process gradually changes more according to the height of the tongue. When the back of the tongue reaches in the highest position to generate the vowel /u:/, the high closed vowel the shape of the lips is changed in round shape. Due to this, during the generation of back vowels the lips are round in shape. On the other hand when the front part starts to increase the height from the neutral position, the lips starts to spread. In the generation of English high vowel /i:/ the lips are in spreaded position. As a result the front vowels are unrounded in general in respect to the back. Look at the following diagram to have an approximate idea for the roundness of the English Vowels. The relationship between back and roundness is not deterministic. In some languages the reverse system of lip shape is noted i.e. the speaker can produce the back vowels with unrounded shape of the lips. For example Germanic /ü/ is produced by the back of the tongue but the lips are unrounded. English has no such basic sounds units, Vowels in the frame of the vowel quadrilateral

84 Vowel quadrilateral within the cavity English Vowels in the vowel quadrilateral is framed according to the shape of the cavity. In the quadrilateral the scripts are not put in the line in some cases. The reason is that the frame of the quadrilateral refers the points for the cardinal vowels as described above. The standard shape of the tongue movement was considered as reference point. The vowels of each language can be measured based on these standard points of the quadrilateral in paper. For example the English /i:/ is little below of the standard point of high vowels. The position of English vowels as mentioned by the Daniel Jones in respect of the cardinal vowels.

85 The black dots are eight cardinal points to measure the tongue position of the vowels of the languages of the world. An approximate position of articulators for English vowels is mentioned here. 4) Jaw movement is related with the opening and closing of the cavity. It controls the movement of active articulators, lowering down the organs. For the high, the jaw is close to the normal position but gradually lowers down towards the open vowels. (5) Duration of articulation i.e. quantitative feature of a vowel: The Duration of a vowel is the quantitative property which characterizes some vowels as separate phonemic units. When the production of a vowel takes long time in respect of the production of other vowels it is known as long. Some are short in respect of that having approximately similar quality as in /i:/ and /w/, or /u:/ and / /. The heed and hid are two different words which are quantitatively different.. Qualitatively these are produced in same manner i.e. the articulatory properties and pattern are same but /i:/ of head /hi:d/ takes more time than in hid /hwd/. The first one is long and the second one is short. By hearing these two words one can identify these two as separate from each other and have different meaning. The use of /:/ after a vowel script is added to indicate that vowel as long. Like this one may get /u/ in look /l k/ and lose /lu:z/ as short and long respectively. The word garden is uttered as /gY:dn/ where /Y/ is a long one in duration. Similarly the difference between /]/ in not /n]t/ and talk /t]:k/ are different in duration. The word protect /pr]tekt/ and girl /gc:l/ shows the availability /c/ carries one more variation of time. English has five long vowels i.e. /i:,Y:,]:, u:,]:/ due to their long duration in articulation. Task 4: Label the following vowels: 1. /c:/ 2. /u/ 3. /Y/ 4. /c/ 5. /æ/ 6.7 English Diphthongs In English the words like gun /g^n/, push /p ʃ/, not /n]t/ etc shows the presence of pure vowels /]/, / /, /c/ etc, but /aw/, /a /, /uc/, /wc/ etc are available in high /aw/

86 now /na /, fear /fic/, time /t^im/ etc. The first set of vowels are simple and form a peak with single quality in articulation and also form a syllable but the second groups are complex in structure. In spite of similar functional quality by forming a single peak and a syllable, the manner of articulation differs from the pure vowels. From the articulatory point of view the first set has single noticeable vowel quality, whereas the other set is formed having more than one quality. The first set of vowels is known as monophthnong or pure vowels, which have already been discussed above. But the vowels which are composed of more than one vowel qualities are known as diphthongs. To generate the diphthongs the speech organs, especially the tongue, moves swiftly from its first position for first vowel to another continuously forming a single prominent structure. Such movement of the tongue is also known as gliding. Diphthong is nothing but a 'gliding vowel'. For the word loud, the tongue moves swiftly from the position of lowest level /a/ towards / / in the highest level. That movement produces /a / in /la d/. The /a/ and / / having two different qualities form a single unit and functions as a center or nucleus of a syllable. By character these vowels are also known as complex vowels, or vowel glides. 6.7.1 Classification of English diphthongs English has eight (8) diphthongs. These are ew, aw,]w, a , c , w], c, and ec which can be described in terms of the vowel quadrilateral in the following manner. These are made in terms of final element of the complex unit. i) Diphthongs /ew/, /aw/, /]w/ have the terminating high vowel /w/. The words game /gewm/, face /fews/, late /lewt/, neighbor /newb]/, table /tewbl/ etc have this sound. /e/ is the variety of /e/ and not mentioned in the pure vowel list. It has no role as an independent vowel to form a syllable in English. For the generation of /aw/, the tongue height for the initial vowel remains in low level but front part of the tongue is raised little. Then it moves towards the short high front unrounded vowel /w/. The shape of the lip is normal position. Words like guide

87 /gawd/ child /t•awld/, write /rawt/ etc have this vowel. Sometimes the second language learner use /a/ which is near to the back low vowel instead of /a/. The /]w/ is produced by placing the tongue near to the low position and raising the hinder part of the back and then placing the hinder or back part of the front swiftly. The words like point /p]wnt/ choice, /t•]ws/ loyal /l]wl/ etc have this diphthong. ii) Another set of diphthongs is available in English which has two units /c /, /au/. The final elements of which are short back high vowel / /. For /c / the tongue is nearer to half-close than half-open. The front part of the back is raised. The final element shows the presence of roundness. The words cold /kc ld/, know /nc /, hope /h∂up/ etc have this sound. The /au/ is formed initiating the height of the tongue in low position and rising the hinder part of the front ending with short back round vowel. The words town /ta n/, doubt /da t/, noun /na n/ etc have this sound unit. iii) The third group of diphthongs is formed in respect of the movement of the tongue from high to the central vowels as mentioned below. These are /w]/, / c/, and /ec/ The /ic/ is produced when the front of the tongue is moved from the front high to the mid-level and central part of the tongue remains close to the neutral position with half-close position. The final vowel is in falling position in respect of the tongue movement. The words like dear /dwc/ hear /hwc/, cheer /t•ic/ etc have such sound.

The / c/ is also a falling diphthong as the front part of the back of the tongue moves down and the center part is placed close to the neutral position this was produced. The words poor /p c/, tour /t c/, doer /d c/ etc have such sound. When the front part of the tongue is raised and tongue height is half-open the initial /e/ is produced and then the central part of the tongue like other falling diphthongs described above move towards the neutral position. The /ec, (ec)/ is formed. The words like care /kec/ tear /tec/ dare /dec/ etc carry this speech sound. Diphthongs are also named according to the final or ending vowels. The diphthongs ended with noted in central vowel /c/ are known as central diphthongs which are three in number. wc, ec and c are central diphthongs The number of closing diphthongs is five as these are ended with high closing vowels like /w/ and / /. These are ew, aw,]w, c and a . Task 5 : Write the diphthongs in the following words: a) Came, make, pay b) Noble, blow, road c) Noise, voice, point d) Fair, air, share e) Tour, during, sure Answers: a) /ew/, b) / c / c) /]w/ d) /ec/ e) / c/ 6.7.2 Triphthongs in English English has also some words which bear the three vowels in the place of a diphthongs as it is noted in the word like hour which should be produced as /a c/ or lower / lc c/ etc. These have particular pattern adding /c/ i.e. the central vowel after all closing diphthongs. English has five closing diphthongs ew, aw,]w, c and a . Now after adding the final /c/to all these diphthongs English has ewc, awc,]wc, c c and a c. Eg.ewc: mare /mewc/, awc: fire /faic/;]wc: royal /r]wcl/; c c: grower /grac c/ ; a c: power /pa c/ etc. In articulation especially in running speech the situation of tongue movements makes these units are produced as the glide as the active articulator changes the cavity frequently. 6.7.3 What is to be remembered? The foreign speaker faces difficulties to identify the difference between the vowel qualities of some English vowels during pronunciation. Sometimes mother tongue of

the speaker also functions as constraint. In Bengali the short /w/ and long /i/ difference is not available, the difference between two high front vowel is also absent. Similarly the difference between /Y:/ and / / is also another area of cause of ambiguity in articulation. One has to take care of these differences carefully. Besides the phonetic scripts, are used differently by different authors. Scripts used by Daniel Jones have been modified by later phoneticians. The learner should not be confused due to this. The consistency should be maintained. Use the later version, or a mixed presentation made here may be used. The technical term used for describing the vowels according to the articulatory pattern are defined below. i) Front: Front Part of the tongue. ii) Back: Back part of the tongue. iii) Central: Central part of the tongue. iv) High: Height of the tongue from its normal position. v) Mid-High: This attribute is imposed in respect of the High and mid-low. vi) Low: Lowest position of the tongue in respect of the neutral position. vii) Mid-Low: This attribute is imposed low and mid-high. viii) Rounded: Round Position of lips. ix) Unrounded: Lips are spread in respect of the neutral position. x) Close: Position of the tongue near to the roof of the mouth. xi) Half-close: Position of the tongue between close and half-open. xii) Open: Opening is the highest distant position of the tongue from the roof of the mouth. xiii) Half-Open: Opening position between half-close and opening position. xiv) Narrow, medium, narrow to medium, medium to wide and wide: These are based on the opening of the Jaw. xv) Short: Short duration of time. xvi) Long: Long duration of time.

Description of Vowel Sounds Phonetic alphabet used by Daniel Jones Phonetic alphabet used by Gimpson Script used in this article English Word word in phonetic Alphabet in this article 1. Front, unrounded (spread), high, close , narrow-to-medium long vowel i: i i: beat /bi:t/ 2. Front , unrounded, high, close, narrow-to-medium short vowel l w w bit /bwt/ 3. Front, half-close, unrounded, medium vowel e e e get /get/ 4. Front, half-open, unrounded , medium-to- wide vowel æ æ æ gas /gæs/ 5. Back, open, neutral, medium-to-wide, long vowel Y: a Y: hard /hY:d/ 6. Back, open, rounded, medium-to- wide vowel] Z] dog /d]g/ 7. Back , half-open, rounded, medium-to- fairly-wide vowel]:]: talk /t]:k/ 8. Back (fore part of Back), half open, spread, wide vowel *? ? ? gun /g? n/ 9. Central, half-open and half close, spread, narrow vowel ?: c: ?: turn [t?:n/ 10. Central, neutral, narrow, short vowel u ? ? doctor /d]kt?/ 11. Back (fore part of the back), just above half- close, close lip rounded, medium short vowels u ? ? look /l?k/ 12. Back, nearly close, close rounded, narrow-to- medium long vowels u: u u: noon /nu:n/ * Note : During the ' ' articulation the student should know that it is the short sounds of 'u' and 'o'. Foreign students replace this sound by /a / or /Y/. In the diagram it is between /c: / and /Y:/. c c

6.8 Summary In this unit, you have learnt in detail all about vowel sounds in English. To help you understand this concept, we have defined a vowel sound and contrasted it with a consonant sound. Subsequently, we have provided a diagram which clearly demarcates the extreme positions the tongue can take to produce what we call the ideal or Cardinal vowels. This helps you move your tongue appropriately to produce the required vowel sound. We have provided a classification of the vowels into two categories - the pure vowels and the diphthongs. We have given examples for each vowel sound as it occurs in different words to help you become aware of the pronunciation easily. Where possible, we have represented all these factors with pictorial illustrations. 6.9 Review Questions 1. How are vowel sounds different from consonant sounds? 2. How many vowel sounds are there in English? Name them and give an example for each one. 3. How are vowels classified? Does Bangla have a similar distinction? Give some examples. 4. What does a Triphthong mean? Are these commonly found in English? Give one or two examples? 5. What are some of the difficult vowel sounds for Bangla speakers of English? How can you rectify these errors? 6. How is a pure vowel different from a diphthong? 7. How many diphthongs are there in English? Give examples for each. 8. How are vowels classified based on the position of the tongue? 9. What are some of the characteristics of all vowels? Mention all the characteristics. 10. Can we have voiceless vowels? Why or why not? 6.10 References and Reading List 1. Abercombie, David. (1966). Elements of General Phonetics. Edinburgh: Edinburgh University Press.

NSOU PGEL-3 93 Unit 7 English Consonants 7.1 Introduction 7.2 Objectives 7.3 Consonants Phonemes 7.4 Initiation 7.5 Phonation 7.5.1 Voiced consonants 7.5.2 Voicelessness or Absence of Vibration 7.5.3 Voicelessness due to Breath phonation 7.5.4 Whispering 7.6 Articulation 7.7 Place of articulation 7.8 Points or place on the passive articulators 7.9 Description of English consonants based on the place of articulation 7.10 Manner of articulation 7.11 Distribution of consonant phoneme 7.12 Phonetic description of English consonants 7.13 Summary 7.14 Review Questions 7.15 Reading List 7.1 Introduction We have learnt about the speech mechanism and production of Vowels in previous units of this module. In this unit we will look at the production of consonant in English. Consonants are another set of speech sounds produced by the organs of speech. The respiratory system is also part of it. By definition consonants sounds are "made by a closure or narrowing in the vocal tract so that the airflow is either completely blocked or so restricted that an audible friction is produced" (Crystal, 2000). Traditionally it is known that consonants cannot be produced without the assistance of a vowel. Each language has its own set of consonants. But the number 93

NSOU PGEL-3 94 of consonants varies from language to language. Native speakers learn to use this set of sounds unconsciously by listening to them from the fellow members of the family or other neighbouring members of their speech community within a particular age of childhood. It happens due to their inherent power of learning a language endowed in every child. A second language learner has to learn the language consciously. 7.2 Objectives In this unit, you will get familiar with a) Articulation of consonants b) Different Places of Articulation c) Manner of articulation for consonant phonemes d) English Consonant Phonemes 7.3 Consonant Phonemes Phonetic distinctiveness of each consonant unit depends on the movement of vocal apparatus / speech organs, respiratory resistance, air stream mechanism etc. English has 24 consonants. These are/p/,/ b/, /t/, /d/, /k/, /g/, /t•/, /d¦/, /θ/, /ð/, /m/, /n/,/ /, /f/, /v/, /s/, /z/, /•/, /¦/ /h/, /l/, /r/, /j/, /w/ (24). Learners know that English has 26 letters of the alphabet including vowels, out of which 21 are consonant, but they represent more speech sounds. This is because, in an alphabetic system as English, there is no one-to-one coordination between the letter of the alphabet and the speech sound it represents. A set of special symbols are used to represent the speech sounds and are formulated by the International Phonetic Association or IPA. For this unit all sounds are represented using this script only. The distinctiveness of each consonantal segment depends on the pattern of articulation and this is discussed in three sub-sections -Initiation, Phonation and Articulation. 7.4 Initiation The process of initiation consists of two important components. These are: i. Type of airstream mechanism: Pulmonic airstream or Non-Pulmonic airstream and ii. Direction of air flow: Ingressive or Egressive.

NSOU PGEL-3 95 We have leant about them in the Unit 5. Let's try out some tasks on them. Task 1: Match the columns a) Pulmonic Air Stream i) Air flow is blocked by initiating process b) Velaric Air Stream ii) Lung is the source of air c) Glottal Air Stream iii) English has no sounds with the mechanism Initiation is initial mode of speech production and was introduced in the previous module. It deals with the selection of airstream mechanism and direction of airflow within the cavity. Native speakers of English use the Pulmonic airstream mechanism in general and the direction of airflow is Egressive, i.e. from the lungs toward the outside through oral or nasal cavity (Unit-5 also). All consonants have this feature. Both Pulmonic and Velaric airstream have the direction of air flow as ingressive. That is from outside towards the lungs. Glottal airstream is usually egressive. Task 2: Complete the following flow diagram: 7.5 Phonation Phonation tells about the state of glottis and vocal cords during the generation of a speech unit. Phonation deals with the voicing character of a unit. The presence and absence of voicing in English enrich the set of segmented units and the following types of consonants are available due to the role of phonation. 7.5.1 Voiced consonants All vowels are voiced by receiving the impact of phonation, but this is not true of all consonants. A group of consonants have this feature. Before the consonantal

NSOU PGEL-3 96 constriction or closing or when two vocal folds are held tight forming a particular narrowing state of glottis, the airflow causes both the cords to vibrate. The vibration is added in the onset position before the medial phase of constriction. Let us have a look. In general every consonant has three stages when it is articulated: onset phase, medial phase and offset phase. The voiced consonant has the audible vibration in the onset phase. Rest Position Onset phase Medial phase Offset phase Onset phase Medial phase Offset phase Silence Movement of active articulator for constriction Phase of constriction Phase of releasing Movement for next unit vowel Opening state Phase of closing Voicing feature b c Probable sketch for the production of consonant /b/ is given above. On the onset phase i.e. at the beginning of constriction or mute, phase of mute in middle position and then releasing phase are common to all consonants if it is produced in isolation. Vowel has also these three phases. The voicing vibration with an audible frequency is added at the onset position of a consonant. The consonants become voiced. This is the character of modal voicing. The articulation of /b/ is distinct one from /p/ due to presence of this voicing only in English. /b, d, g, d¦, ð, z, ¦, j, r, l, m, n, , v, w/ etc. receive this distinctness of modal voicing in English. Besides this modal voicing Creaky and Falsetto Phonation are two more types of voicing available in speech as paralinguistic or extra linguistic features. English speaker produces the creaky voice being bored and Falsetto voicing is used as a style of pop singing. But these are not relevant for describing basic units or like consonants and vowel phonemes in English. 7.5.2 Voiceless or unvoiced consonants Phonation becomes also the reason for voicelessness or unvoiced. It is the reverse process of voicing. During the production of unvoiced consonants a constriction will

NSOU ? PGEL-3 97 be generated, the airflow will be released after increasing the air pressure, but this flow of air comes from the lungs through the normal gap of glottis. In some description it is a type of nil phonation. No audible vibration is produced. Sounds like /p/ /t•/ /t/ /k/ /f/ /θ/ /s/ /•/ etc. are the resulted segmented units in English and these are voiceless or unvoiced. 7.5.3 Voicelessness or Absence of Vibration Besides the above voicelessness, another type of voicelessness is the absence of vibration is available if the glottis is closed completely. On the release of a short term glottal closure in a low input of glottal vibration is available. This is known as the 'glottal stop', represented by IPA /?/. Jones mentioned that "In forming the sound /?/ the glottis is closed completely by bringing the vocal cords into contact, the air is compressed by pressure from the lungs, and then the glottis is opened so that the air escapes suddenly. It is neither breathed nor voiced." An audible input is there to vocal tract. For example English bottle/bc?tl/ or fortnight /f]:?tnawt/ has such a unit which was produced by the sudden closer of glottis, though it is not an essential one. 7.5.4 Voicelessness due to Breath phonation The audible noise is created even when the vocal folds are widely kept apart. This phonation is breath phonation. A very gentle rustling sound is produced in this type of phonation in a particular state of glottis. According to Daniel Jones 'when the mouth is held in a vowel-position and air is emitted through the wide open glottis' the sound is produced. English /h/ in hat /hæt/or behind /bwhawnd/ has this type of noise. It is produced keeping mouth opening like a vowel by the higher speed of airflow. This is the situation of breath phonation and this consonant is known as breathed glottal fricative, generated by breath phonation. Laver says that the voicelessness is present in nil phonation and breath phonation. 7.5.5 Whispering Whispering is another type of voicelessness. It is not involved with the production of particular speech unit only, but an imposed paralinguistic feature on the running speech to express certain mode of speaker like, secrecy. During such imposition two cords are put together in such a state of glottis that those two will vibrate in a specific range of frequency creating an audible hissing noise. Whispering is generated. This is not the primary feature of English phoneme. To express the hissing in writing a dot is put under the voiced sounds as in bill [b . l . i .] for/bil/.

NSOU PGEL-3 98 7.6 Articulation Articulation or the role of other speech organs for English consonants: Articulation describes the role of active articulators along with corresponding passive counterpart. Beside the larynx, the functions of these vocal organs characterize consonants which can be classified into two sections. A) Place of articulation, and B) Manner of articulation. Place of articulation is identification of the point or place on passive articulators where the active articulator creates a constriction on the path of airflow. Ten places of articulation are discussed in section 7.9. Manner of articulation includes the following: Manner of articulation: a) Degrees and pattern of stricture or constriction and configuration of air path for the generation of different sounds like plosive, fricative, affricates, continuants etc. b) The state of air passage, which can be Central or lateral channel of oral cavity as well as Oral and nasal cavity shaped by the use of soft palate. The Velaric Air Stream Sounds emerge from the constriction of lowered velum. c) The state of the surface of movement of the tongue related for trilling flapping and tapping. This is not much important for English other than trilling. 7.7 Place of articulation The sounds used in speech are produced in two ways - by opening and closing the oral cavity. Vowel is produced without any closure in the air passage. A few vocal organs like tongue, lip or velum are used to shape oral and nasal cavities for different vowel qualities. But consonants are produced by closer or about to closing. When any of the active articulators come in contact with a stationary point or a passive articulator, the air passage is either completely shut or obstructed. The air pressure is created within the cavity in case of complete closure and this stricture is for the production of plosives. As soon as the constriction or closing is released the air passes with high speed through narrow space; an audible noise is produced which is useful in producing fricative sounds. The distinctiveness of the sound unit, due to this is defined by the name of stationary points on the passive articulator. It is noted that the quality of sounds varies when the point/place of articulation is changed. One of the major differences between /k/ and /t/ is due to the variation in the place of articulation. According to Crystal "the place of articulation means 'one of the main parameters,

NSOU PGEL-3 99 used in the phonetic classification of speech sounds, referring to where in the vocal apparatus a sound is produced." 7.8 Points or place on the passive articulators From lips to larynx is the articulatory zone of the passive articulators. Upper lip, upper teeth, alveolar, palate or hard palate, soft palate, uvula, pharynx and epiglottis are the various points of articulators. Besides the space between teeth and alveolar, alveolar and palate, known as denti-alveolar, post-alveolar or pre-palate respectively, are used according to the availability of language data. The movement of active articulator creates the constriction at these points. These are language specific and vary from language to language. Following diagram below will give a brief idea on the meeting point of active articulator on the roof of mouth. 7.9 Description of English consonants based on the place of articulation Like other languages consonants of English are characterized according to these places of articulation. Bilabial, Dental, inter-dental, alveolar, post-alveolar, palato- alveolar, velar, labiovelar, glottal are the main labels in use. i) Bilabial: Bilabial means sounds produced by two lips. The lower lip as active articulator touches the upper lip, a constriction is created. The sounds, produced after the release of constriction are bilabial. These are two types - voiceless and voiced. When the glottis is narrowed down, a voice murmur is added to the sound for a voiced bilabial. English Bilabials:/p,b,m/ NSOU PGEL-3 100 ii) Labio-Dental: For this sound lip and dental part have key role. When the lower lip touches the upper teeth producing a constriction, a labio-dental sound is produced after the release of it. If voicing is added a voiced labio-dental will be generated. English Labio-Dentals: /f,v/. Sounds using Tongue: Tongue is the most active organ in the speech production. Different parts of the tongue produce constriction at different points of passive articulator especially on the roof of the mouth. According to the practice of articulation, tongue is marked as 'tip', 'blade or lamina', 'root', 'front or dorsum', and 'back or radix' etc. Fig: Different parts of the tongue in speech articulation iii) Dental or Inter-Dental: Tongue and tooth play the key role. The tip of the tongue touches against the space between the upper and lower teeth and blocks the air passage and thereby produces speech units by releasing the air pressure after a short constriction. It is noted in English thin [θin]. Filipino and Nigerian languages have such sound units. These are also referred to as Dentals in some books. Voicing is also added in some cases. English Inter-dentals are /θ/ in//thin and / ð/ in /ðis/ this. In most of the modern Indo-Aryan languages have dental sounds like / tl, tl h , dl, .../ etc which are different from English inter-dental.

NSOU ? PGEL-3 101 iv) Alveolar: The sound produced in alveolar region is known as alveolar. It is just behind the upper teeth, the sloppy raising region in the front part of palate. Tip of the tongue touches this point and both the blades block the sides by attaching two sets of teeth in both sides. As soon as the air pressure is released /t/ in English is produced. In English /t/, /d/, /s/, /z/, and /n/ are Alveolar sounds. Other than English, Italian, Spanish and Vietnamese have this type of sounds. In Bengali /n/ is an alveolar sound. v) Post-Alveolar: The post-alveolar point is just behind the teeth-ridge i.e. the downward sloppy part towards palate. When the tip of tongue taps more than one time against the said region this sound is produced. In English the /r/ is a voiced post alveolar fricative consonant. But according to Daniel Jones this sound has also a frictionless form. He wrote that 'Many English speakers pronounce 'r' as frictionless continuant instead of as a fricative'. vi) Palato-Alveolar: The space between alveolar and hard palate is palate alveolar region in passive articulator. For a palato-alveolar sound, the blade of the tongue makes a constriction on the sloppy region of teeth-ridge and the air pressure is formed. In English, the /•/ of shine /• wn/ is produced by releasing the constriction slowly. /•¦/, /t•/, and /d¦/ are palato- alveolar fricative consonant in English. Modern Indian languages also have such sounds. Task 3 What are the upper articulators for the following phonemes? /m/_____ /f/_____ /t/_____ / ¦/_____ vii) Palatal: The blade or lamina or front of the tongue creates different types of constriction against the hard palate and then audible sounds are produced. All these

NSOU PGEL-3 102 sounds are known as palatal sound. For the generation of English palatal, the front of tongue is raised towards the hard palate and lips are in spread position. The air passage is narrowed down but not fully closed. When the air moves outside through this, an audible noise is produced. During the generation of this sound vocal cords vibrates and the path of nasal cavity remains closed. English /j/,is articulated in this way and known as unrounded palatal semivowel or frictionless continuant or approximant. Eg. yes /jes/. viii) Velar: Velar sound is produced in the back of the tongue. The root of the tongue creates a constriction against soft palate, the passive articulator. The velar sounds are produced after the release of airflow. /k/ /g/ and / / belong to the English velar series. Indian languages also have this series. Task 4: Mention the speech sounds produced by: i) Tip of the tongue _____ ii) Blade of the tongue _____ iii) Back of the tongue _____ ix) Labio-Velar or labial velar: Sometimes in the generation of sounds two constriction act as generation mechanism. Labio-Velar comes under this group. During the articulation labial and velar region are points of constriction. Back of the tongue and lower lip play the active role against soft palate and upper lip respectively. The sound, produced by this process is known as Labio-Velar. English /w/ as in wet is a

NSOU PGEL-3 103 labio-velar sound. Laver mentioned this sound is an example of double articulation, as constriction in two places. x) Glottal: This sound is produced in the larynx by the sudden closer of the two cords suddenly. /h/ of hen is a glottal sound discussed above. The glottal stop /?/ is a variation of /h/. Task 5 : State the place of articulation for the following consonant phonemes /s/ _____ /k/ _____

/g/_____ /ch/_____ /v/_____

/y/_____ Task 6 What is the lower articulator for the following: /w/_____

/j/_____ /g/_____ /n/ _____ 7.10 Manner of articulation Manner means a way the thing is done. Therefore Manner of articulation tells about the way sounds are produced in a particular place. The type of movement of speech organs adds some more features to shape the sounds with some other distinct character. The native speakers manipulate the degrees of constriction on the path of airflow, type of its release, shape of the space in the oral cavity, selection of air channel, pattern of the movement of the tongue etc. Each of these inputs produces new phonetic properties. These features come under three broader categories: Degrees of stricture, selection of air passage and the use of surface of the tongue. 1. Degrees of Stricture: In general consonants are produced by generating the stricture on the air path. The process of stricture like complete stricture or closing, process of closing and the opening process etc. are the major reasons to characterize the sound unit. The following features are available in English consonants. i) Plosive or stop: Both the articulators close completely the air path and then release by producing audible noise. This is known as Plosive/Mute sounds like /p/ NSOU PGEL-3 104 which is produced by the release of air after a complete closure using two lips. Similarly the other sounds /k/ /t/ are also treated as mute due to the complete closure. The role of model voicing is available with /b//d/ and /g/ producing voiced consonants. English stop: /p b t d k g/ etc. ii) Affricate: Affricate sound is produced by the complete closure followed by opening the stricture slowly which produces an audible friction by releasing air as it happens to 'ch' /t•/ in English choose. Initial closure is released by a friction /•/. The path of nasal passage remains closed. The tip of the tongue with the assistance of both sides of tongue blade closed the air passage first and then releases the air slowly. The similar phenomenon is available in other Indian languages also. The corresponding unit by adding the voicing the /d¦/ is produced as in judge /®•®/. English has two affricates. English Affricate: /t•/ /®/ iii) Fricatives: In respect of affricates, fricatives are different as the initial complete stricture or muteness remains absent here. The stricture is organized in such a manner that both articulators i.e. active and passive come very close approximation to each other but not touched. The nasal cavity is blocked. A friction is generated and that characterizes the unit. /θ/ in thin and /f/ in fan are such sounds and known as fricatives. For the generation of /θ/, the tip of the tongue comes close to dental or inter-dental region and the blades touch the teeth. The passing air produces friction. Same process is followed when the lower teeth comes closure to the upper lip for a constriction but not closed. The air passes by producing audible noises. In the same articulatory process /ð/ and /v/ are produced by adding voicing as separate phonemes. The /ð/ in this /ðws/ and /v/ in van /væn/ have the same feature of voicing. Sibilants: This is another type of fricative. The friction is produced here with higher amplitudes. In some descriptions these are known as sibilants due to more audible hissing sound. This sound is produced by

front is raised towards hard palate. The active and passive articulators come close together in such a way, through which the airstream passes with high speed producing a type of audible hissing frictions and continues some more time. The vocal cords remain open. English /s/ is produced in close to the alveolar region and known as voiceless alveolar fricatives. The /•/ is produced in little back towards palate or palate-alveolar region of the passive articulator. These two are voiceless segments available in sea /sw:/ and she /•w:/respectively. /•/ is known as voiceless palate-alveolar fricative.

The above articulatory movement for /s/ and /•/ produced two more sounds /z/ and /¦/ respectively by adding voicing. These are voiced alveolar and palate-alveolar fricatives. /z/ is available in zeal/zw:l/, against its voiceless counter part of /s/ in seal /sw:l/where as /¦/ in boys /b]w¦/ or vision /vi¦cn/. English fricatives: /f/, /v/ ,/θ/ and /ð/; /s/, /•/, /z/ and /¦/ iv) Frictionless continuant: This is also known as approximants. The distinctiveness of these sounds remains in between fricatives and vowels. These are non-syllabic. The other technical terms semivowels and glides also come under this for those sounds which are like vowel in articulation but cannot form a syllable. In English /r/ /j/ and /w/ come under this group. In British English /r/ has several allophones out of which one has this feature of approximants. During the production of this sound the nasal passage is closed and the tip of the tongue reaches near the teeth-ridge through which air passes without generating any friction. The presence of this sound is noted in the word red/red/. Its allophonic representation is [ed]. This /r/ is voiced post alveolar approximant. All the frictionless continuants are voiced. For the articulation of /j/ in yes /jes/ the position of the front part of the tongue is placed narrowing down the air passage like the generation of a vowel. The air passes freely without any obstacle. As the pattern of articulation is like vowel this sound is called as voiced palatal approximant or voiced palatal semi-vowel. The other frictionless continuant is /w/. The back of the tongue moves towards the soft palate like the back close vowel generation and the lips remain in round shape as in what /wZt]. During the generation of this sound the vocal cords vibrate. Phonetically this is voiced labio-velar approximant or semivowels. 2. Other aspect of manner of articulation: The aspects of articulation indicate the involvement of the airflow channels during the production of sounds. These are two types — Central and Lateral, Oral and Nasal. v) Lateral: The sounds discussed above are mostly central as the air passes through the central part of the oral channel within the cavity. But a few are there which are produced by releasing the airflow blocking the central part of air channel. The airflow is released through both the sides or a single side of the blade when the tip of the tongue blocked below the teeth-ridge. The sound /l/ in leaf /li:f/, label / lewb(c)l/ is the example of lateral. English has this sound. In use, this /l/ produces two types of allophone, known as clear [l] an dark [l]. It happens due to the phonetic environment of the word. When /l/ occurs before vowel and /j/ the clear [l] is produced but in all other cases the /l/ is a dark one. Eg. r

Clear [l] in along [cl]] and dark [l] in field [fw:ld]. vi) Nasal Oral and Nasal: The air-flow from the larynx has an option to move towards the outside of cavities in three ways - through oral cavity, nasal cavity or both the cavities. It is already discussed that the air passes for non-nasal vowels through oral cavity only and in case of nasal vowels through both the cavities. But for nasal consonants the air passes through nasal cavity only. To produce such sounds the soft palate is lowered the passage for the nasal cavity opens the path for airflow by which an audible nasal murmur is produced as part of the consonant when the oral cavity is blocked. English has three such nasal sounds: /m/ /n/ and / /. For the production of / m/ mother, the oral cavity is blocked by the two lips. The air pressure comes from the lungs through glottis moves towards the nasal cavity and is released through nose, producing nasal sound. The sound includes vocal cord vibration. This is voiced bilabial nasal consonant. For the generation of /n/ the tip of the tongue touches the alveolar and blades block both sides of teeth. The air passes through the nasal cavity the vocal cord vibration is added to this air flow. The /n/ in nine /nain/, not /n]t/ etc is the example of such voiced alveolar nasal consonants. The voiced velar nasal / / is produced by raising the back of tongue against the soft palate. The oral cavity is completely blocked. The airflow by adding the vocal cord vibration passes through nasal cavity and moves out through nostril. This is available in several words like sing /sw / hanger /hæ gc/ etc. 3. Other aspects of manner of articulation: Manner of articulation includes a few more aspectual phonetic features like tapping, flapping, trilling etc. These are formed by the role of active articulator tongue and its particular type of movement. English has trill sound only.

vii) Trill or rolled: Trill is not the phonemic feature of English, but a type of 'r' is available which is produced as trill. When tip of the tongue taps one time against the roof of the mouth rapidly, this sound is produced. This is like an allophone [r] of phoneme /r/ mentioned in the discussion of frictionless continuant. The word crowd [kra d/ has this trill sound. viii) Flap: Flap sounds are different from trill. In the production of such sound the active articulator tongue hits the alveolar region and moves to the front rapidly. English has no such sound but in Bengali has this sound / /as in /ba i/ 'house'. ix) Aspiration: Aspiration is an audible breath sometimes accompanies with the articulation of sound. In the list of basic units English has no aspirated sound. But the presence of aspiration can be noted in the production of some units. The mark of aspiration is [h]. For example the word pin is written with '/p/'. But the native speaker produces as [phwn] where /p/ has received the aspiration mark. This is important in consonant articulation. The cat is not /kæt/ but [khæt] in articulation. In some other languages like modern Indo Aryan languages the aspiration is phonemic. Task 7 Give the manner of articulation for the following consonants: /p/_____ /l/_____ /s/_____ /k/_____ /j/_____ /r/_____ 7.11 Distribution of consonant phoneme English Phonemes according to place and manner of articulation and voicing properties.

NSOU PGEL-3 110 7.13 Summary In this unit you have looked in great detail how the consonant sounds are produced in English. The speech organs responsible for production of consonant sounds have been clearly identified and labeled. Besides, a method of classifying the consonant sounds based on the place and manner of articulation is clearly described. The system used for labeling consonants takes into account the two factors mentioned above along with phonation which lends voice to some consonants and a few are breath sounds. The most important aspect of this unit is to help you not only produce consonants, but also describe them using three term labels. 7.14 Review Questions 1. How are consonants different from vowels? 2. How many consonants are there in English and how do you classify them? 3. Name the active and passive articulators. 4. What is the difference between passive and active articulators? 5. How many types of air-stream mechanism do we have? What are they? 6. Does English have any ingressive sounds? How are ingressive sounds articulated? 7. Discuss the air-stream mechanism for English sounds. 8. What do you understand by the terms Initiation, Phonation, and Articulation? How do these affect speech production? 9. State the place of articulation for: /f, d, n, z, ®, w/. 10. Discuss English semi-vowels. 7.15 Reading List Laver, John. (1994). Principles of Phonetics. Cambridge: Cambridge University Press.

NSOU PGEL-3 111 Unit 8 International Phonetic Alphabet and Transcription 8.1 Introduction 8.2 Objectives 8.3 Development of IPA 8.4 Some Principles for the development of IPA 8.5 The Phonetic Alphabet used in the table 8.6 Broad Transcription and Narrow Transcription and the Use of // and [ ] in IPA 8.7 Use of IPA in English 8.8 Examples of broad and narrow transcriptions 8.9 Summary 8.10 Review Questions 8.11 Reading List 8.1 Introduction The International Phonetic Alphabet or IPA is a planned alphabetic system, developed by the European Phonetician to provide the scripts for representing different segmental non-segmental or supra-segmental sounds available in natural language. The same IPA also represents the International Phonetic Association, which has developed and at present maintains this phonetic table. 8.2 Objectives At the end of this unit, the learners will be able to: a. Understand what is IPA b. Use IPA chart for transcription c. Differentiate between phonetic and phonemic transcription d. Use transcription for representing the correct pronunciation of a word e. Refer to dictionaries and other sources where IPA is used. 111

NSOU PGEL-3 112 8.3 Development of IPA Initially IPA was prepared to reform the English spelling; that was different from French using Romanic Alphabet. For instance, the letter 'c' of English was corresponding to the French 'ch', the sound of which was /•/ as in 'shame' /•ewm/. The scripts •, w etc. are not available in the English alphabet. These were coined by the phoneticians. This initial attempt for Western Europe was gradually shifted for one to one grapheme- phoneme mapping for any language. One symbol will represent only one sound. There will be no ambiguity between script and sound. The method is now used as a general principle for script-sound mapping for all natural languages throughout the globe. Even for the languages without any writing system the use of IPA method will assure to represent their sounds in writing systematically. This captures all possible speech sounds that can be produced by a human being. In 1877 Henry Sweet pointed out the variation of sound change in his Handbook of Phonetics. The pronunciation of a sound unit and its variation in different contexts were analytically defined by him. In most of the languages of the world which have orthography, i.e. the writing system the discrimination in articulation is a common factor. In most of the Indian Languages such discrimination is available. Later in 1886 an association was formed in France by the name of 'The Phonetic Teachers' Association. Paul Passy took initiative first, to publish such scripts. Then Otto Jespersen proposed the system for all world languages. In 1888 an alphabetic system for the languages of the world was published. In 1889 the organization was named as 'The phonetic Association of the Professors of Living Languages'. The importance of such system is increased and becoming more useful especially to the second language teaching and learning also. In 1897 the organization was renamed as International Phonetic Association and the association adopted certain principles for developing the new alphabetic system to produce one script against one sound applicable for all the languages of the world. This alphabetic system is modified from time to time by adding the phonetic inventories of the languages of the globe. The Association makes it acceptable for the International users. It is an ongoing process. Since the inception of this program the modification was done several times. In the year 1900, 1932, 1989, and 2005 the system was updated. The work of lexicographer, second language learners, philologists, speech scientists, dialectologists have become easy for these phonetic scripts. Recently the use IPA in the speech technology for automatic speech recognition (ASR) or text-to-speech (TTS) system has extended the inevitability of it.

NSOU ? PGEL-3 113 8.4 Some Principles for the development of IPA The developer has followed some principles during the preparation of this alphabetical system. According to them: a) One unique script for each distinctive sound unit, which can change the meaning of a word, i.e. the script should be phonemic. b) When a particular sound is used in several languages, the same sign should be assigned. The unit also can be used with similar shades of sound. c) The ordinary letters of the Roman alphabet should be used. A few new letters from other sources can be used if necessary. d) The assigning of values to the Roman letters should be recognized by their usage internationally. e) When new letters are suggested for the modification of the sounds they will bear a resemblance to the old one. (From The Principles of the International Phonetic Alphabet by Abramson Arthur S) 8.5 The Phonetic Alphabet used in the table At present the total number of symbol in IPA used in the table (which is given at the end of this section) 157. Out of this number 107 letters are for segmental sounds i.e. for consonants and vowels, 31 are diacritics and 19 signs are for supra-segmental qualities. No language of the world requires all these symbols and diacritics, but all the spoken units used in languages can be represented using these symbols successfully. How do we get all these characters? In IPA generally the lower case characters of Roman Alphabet are used, but English has only 26 lower cases. For the completion of the chart some other processes were adopted. The use of Latin scripts is one of them. The reverse use of Roman lower cases 'c, e, v, r' are used like /]/ /c/ / / and / / respectively. A few Greek letters are also used θ, β, e, χ etc. Besides by changing the shape of conventional letters some new symbols were formed. The scripts like , w, , „, †, Ω, , •, t, are the result of such work . For the non-pulmonic and ingressive sounds a set of symbols also have been devised and used. Diacritics are different from the said scripts. These are used as the secondary symbol along with the main symbols to express specific phonetic feature of sound unit. The use of diacritics like [>],[:],[V], or [j] are for marking devoicing, nasalization,

aspiration, palatalization respectively. If the vowel '/a/' is nasalized, the mark for nasalization to be added like [a:]. Similarly to mark the supra-segmental like stress, accent, intonation, or duration another set of diacritics are used. The use of such diacritics is not only relevant for the sound, it has grammatical role also.The word 'present' can be produced with stress mark in two different syllabic positions like / 'prezent/ and /pre'zent/. If the stress falls on in the initial syllable /'pre-zent/, it will be noun but when the word is used as verb the stress is on the second syllable like /pre-'zent/. 8.6 Broad Transcription and Narrow Transcription and the Use of // and [ ] in IPA In the discussion on consonant and vowels, it is noted that a phoneme may have more than one allophone. All these various forms are the members a particular phoneme.The phonemes are the basic sound units and bring a change in meaning producing a new word. For example the meaning variation of 'king'/kw / and 'sing'/sw / depends only on the initial sound for /k/ and /s/. These two are different basic sound units of English or phonemes. But when the words like keep /ki:p/, cool /ku:l/, call/k]:l/ are produced, the initial /k/ is presented not only by different letters, by different sounds also. If phonetically each of the /k/ is analyzed critically, the /k/ followed by '-ee- ' /i:/, -oo- /u:/ and -a- /]:/ changes its phonetic character. A minute change is there but phonetically each one is different from other. If anyone produces the first /k/ position of the tongue constriction will be in the hard palate, when call is produced the back of the tongue will touch the front part of the soft palate. This variation in the place of articulation shapes the /k/ differently in three ways, which are the member of /k/ family. One cannot be produced in the place of other. These variations are known as allophones of /k/ sounds. Even when the word back is produced the final -/k/ is different from the initial /k/- of a word as in the final /k/ the constriction is not released. Phonetically this one is also different. The IPA was basically developed for representing phonemes or basic units and due to that IPA is phonemic. For the phonemic representation the sound unit is placed within two parallel slant lines'//' as the /k/, /i:/ are written in the examples given. When a word, phrase or sentence is transcribed considering this approach it is known as Phonemic Transcription or the Broad Transcription. Initially it was like this, but in course of time, the allophonic presentation was also considered as another method of transcription, which is known as Narrow Transcription or phonetic transcriptions. For allophonic transcription the strings of sounds are placed within

'[]' using IPA as done above. For specific phonetic characters different diacritics are also used for palatalization, nasalization, devoicing, whispering etc. According to Daniel Jones, "A Transcription based on the principle 'one symbol per phoneme' is called a 'phonemic' or 'linguistically broad' transcription. A transcription which provides special sign for allophones is called 'allophonic' or 'linguistically narrow' transcription." The IPA users should be careful to present these two conventions for presenting the sound units, to avoid the overlapping. A word of any language, which has the script can be presented in different ways following the above principles: i) According to spelling using English alphabet : keel ii) Presentation using phonemes : /ki:l/ iii) Presentation using allophones [j] for palatalization: /kji:l/ iv) Besides when /p/, /t/, /k/ occur initially, the sound receives more aspiration [h]. The narrow transcription considers it as in cat [khæt]. But the word sky has no such feature of aspiration for its conjunct presentation. v) Likewise the final /k/, where the releasing feature is absent a specific diacritic [¬] is used in narrow transcription as in lake [lewk]. Several other diacritics are also used to represent the allophonic transcription from other languages. 8.7 Use of IPA in English The examples in different sections are given from English. Still for a clear understanding of the use of English alphabet in respect of IPA, some elaborations are relevant. It is already said like other languages the orthography and articulatory description of English vowels, diphthongs, consonants are not arranged in 'one to one grapheme-phoneme' principle, i.e. the scripts and sounds are not mapped one to one here. English has 44 basic sound units, out of which 12 are pure vowels, 8 diphthongs and 24 consonants whereas the language has 26 letters. The probability of mismatch is obvious here from this numeric mismatch. Several historical reasons are behind this discrimination. One of the reasons is the static nature of writing system in respect of the spoken form, which changes gradually in course of time. The impact of phonetic environment within a word, the process of borrowing and the nativisation of borrowed sounds might have played the crucial role. These are the common phenomena among natural language users, especially who

have a defined alphabetical system. English alphabetical system is not out of it. The sound-script diversities of English alphabets, described below will make it clear that how an alphabet is produced in different phonotactic contexts by producing different sound units. a) The 'a/Y' used in conventional spelling, produces number of different phonemic situations or allophones. Look at the presentation of 'a' in spelling and their corresponding sound units put in the // : /æ/ in bat /bæt/ /Y:/ in far /fY:/, part /pY:t//c/ in away /cwew/ /Z/ in watch /wZ+/ /]:/ in talk /t]:k/ /e/ in many /menw/ /w/ in village /vwlwdz/ /ei/ in baby /bewbw/ . b) When 'a/Y' used within an environment of more than one vowel scripts: ai< /ew/ bailey /bewlw/, au< /]:/ bauxite /b]:ksawt/, eau</c / beau /bc /, e-au< /u: /beauty /bju:tw/, ea< /wc/ bear /bec/, c) Similarly 'e' is produced as: /e/ in extra /ekstrc/ / w/ in explicit /wksplwswt/ /i:/ in seas /si:z/ /f:/ in expert /ekspf:t/ /wc/ in era /erc/ /Z/ in entrée /Zntrew/ d) Like this the consonants have also such variations. In the following use of /p/, the speaker produces different allophonic forms like [p], [ph] or silent etc. /p/ in speak /spi:k/ uttered as [spi:k], /pV/ in pin /pwn/ uttered as [pVwn] /p/ in top /t]:p/ uttered as [th]p?] /p/<0 in psychic /sawkwk/ uttered as [sawkwk] Finally at the end of a word /p/ takes [?] as in top/t]:p/ [tV]p?]. Even if this is available in coda position of a syllable, the same mark is used. The word optical [Zp? twkl] has this type of mark, but /p/ is different from word capacity [kc'pæsctw] etc.

NSOU r PGEL-3 117 8.8 Examples of broad and narrow transcriptions of English words using IPA The table below will give a brief idea about the script-sound mapping of English following the IPA alphabets. A few example of phoneme and their corresponding alphabet(s) have been listed in the second column. Both the transcriptions are used here. For the allophonic representation or Narrow Transcription, a few features have been added for example. i) The initial voiced plosive with the mark of devoicing [́]. ii) The initial unvoiced unaspirated plosives take the diacritic of aspiration [V]. iii) The final plosives does not have releasing quality which has been marked by the [q]. iv) The stress[́] is added when the word is not mono-syllabic. NSOU PGEL-3 122 [The information is gathered from An Outline of English Phonetics, Oxford dictionary and some are from the internet]. 8.9 Summary In this unit you have been introduced to a very important aspect of phonetics. We have given you adequate information on the formation of IPA (International Phonetic Association) as well as the forming of the script for transcription. Besides providing you with a table of 157 symbols we have also discussed how these are distributed across all the languages of the world. We have also attempted to familiarize you with the use of diacritics to represent narrow transcription. This captures the speech of a person as uttered by him or her. We have concluded the unit with a chart of different speech sounds in English and how they vary in their pronunciation depending on the environment in which they appear. / / -ea- -e- dear theatre here /d / /θ t / /h / [d ́] ['θ t] [h] / / -ai- -a- -ea(r)- pair care vary tear /p / /k / /v r / /t / [p?] [k?] ['v r] [t?] / / -ou- -oo- -u- -wer- tour poor pure fewer /t / /p / /pj / /fj / [t?] [p?] [p?j] [fj] / / -ou- -oa- course your roar /k s/ /j / /r / [k? s] [j] [r] /a / -io- -iro- violent iron /vai l nt/ /ai n/ [vai l nt] ['ai n] / / -oya- royal /r l/ [r l] /a / -ower- -ow- flower dowry /fla / /da r / [fla] [d ́a r] V V V V V V V

NSOU PGEL-3 123 8.10 Review Questions 1. What made the linguists to form the International Phonetic Association? 2. What is the major difference between narrow and broad transcription? 3. How many symbols are there in the IPA chart? Are all these symbols useful to us? 4. What are diacritics? What difference do they make to the transcription? 5. When you look up a dictionary, what type of transcription do you find? Give reasons. 6. Give the IPA symbols for the vowel sounds in the following words: /neighbour, champion, task, Sunday, heater, market/ 7. State the IPA symbols for the diphthongs in the following words: / leisure, maintain, rainy, day, tour/ 8. Mention the IPA symbols for the consonant sounds in the following words: /royal, mayor, chief, treasure, flower, handy/ 9. Transcribe the following words: / may, city, relation, park, verb, ark/ 10. Transcribe phonetically the sentences: a. The language of trade and commerce. b. The difference between narrow and broad transcriptions. c. Are you home? d. He would come in the mid-day. e. Take the receipt. 8.11 Reading List Gimson, A.C. (2014). Pronunciation of English. 8th edn. New York: Routledge. https://www.google.co.in/books/edition/Gimson_s_Pronunciation_of_English/ Jesperson, Otto. (1933). Essentials of English Grammar. Chapter II 'Sounds'. London: Routledge. https://www.google.co.in/books/edition/Essentials_of_English_Grammar/

NSOU PGEL-3 124

NSOU PGEL-3 125 Unit 9 Syllable structure and Word Stress 9.1 Introduction 9.2 Objectives 9.3 Revision of Module 2 9.4 Phonetics 9.5 Phonology 9.6 Syllable Structure 9.7 Word Stress 9.8 Structure of a Word 9.8.1 Monosyllabic words 9.8.2 Disyllabic words 9.8.3 Polysyllabic words 9.9 Summary 9.10 Review Questions 9.1 Introduction In Module 2 of this course you have learnt about speech production and the different speech sounds of English language. You have learnt in detail the classification of speech sounds, their production and description. It is important to remember these for a good understanding of this unit. 9.2 Objectives At the end of reading this unit, the learners will be able to: a. Understand the scope of studying phonetics b. Distinguish between the terms phonetics and phonology c. Understand the structure of a syllable and describe it d. Understand the system of placing stress on words Module 3 : Supra-segmental Features-1 125

NSOU PGEL-3 126 e. Describe the structure of a word based on the number of syllables it has. 9.3 Revision of Module 2 Let us quickly recap the module before proceeding to the new one. Answer these questions: Task 1 1. What is the type of air stream mechanism used for speech production in English? (clue: there are two types of air streams - eggressive - air issuing out of lungs and escaping through mouth: and ingressive- air from outside being drawn into the system through mouth for producing speech.) Your answer: 2. How many speech sounds are there in English? (clue: it is not the same as the number of letters in English. It is much more) Your answer: 3. What are the two divisions into which these sounds are divided? (clue: this is a simple answer, and is not different from the division you find in the letters of the alphabet. It is also common to all languages) Your answer: 4. If there are more sounds than letters, how are they represented? (clue: read Unit 8 of the previous module carefully) Your answer: (Correct answers: 1. Eggressive air stream mechanism;

NSOU PGEL-3 127 2. 44 - forty four speech sounds 3. Vowels and consonants (20 vowels and 24 consonant) 4. International Phonetic Alphabet has special symbols to represent all speech sounds produced by human beings.) This module discusses four topics which are related to the previous module. They deal with syllable and its structure, types of syllables, and word stress along with some nuances associated with syllable structure. We shall go about it in an interactive way. Please make sure to answer the questions asked before checking the answers provided elsewhere in the unit. Be honest about this. 9.4 Phonetics Let us begin with the title of the Course 'Phonetics and Phonology in English'. There are two operational words here - 'Phonetics' and 'Phonology'. Are these synonyms or do they differ in their meaning. Look up a dictionary and find out the differences and write them down here in the space below. Your answer: The dictionary is a good source of reference, and we will keep revisiting this topic often in this module. The meanings as given in the book, how helpful were these? You must appreciate the space constraints a dictionary has, so all the details could not be spelt out. Let us take a look at the meanings of these two words and see what they stand for with a few illustrations. Let us first understand that we are not talking about two words, but about two systems. Phonetics is a system that discusses the production and description of speech sounds. These sounds may belong to any language. Phonetics should be able to describe a speech sound and also help someone produce that sound. A system that is not specific to one language, but can describe any or all languages is called a 'Language Universal Phenomenon'. Phonetics should be able to describe the speech sounds in Bangla as well as Swahili spoken in East Africa, or Tagalog spoken in Philippines, or Bahasa spoken in Indonesia and Malaysia or any other language you can think of. To capture all these sounds and represent them graphically, a system has been created by phoneticians and this is called IPA - the International Phonetic Alphabet. How does a language choose its speech sounds? The best answer to this can be,

NSOU PGEL-3 128 the choice is arbitrary. An answer like this is not very helpful. To help us understand this, let us look at an anecdote from present day life. All of you have visited a supermarket which stocks all the items of grocery and essentials you need at home. You and your neighbour visit this store with your specific shopping lists, and go round the shop and buy things you need. Let us hypothetically say, the store has about 250 items on its shelves. On your list you have about 35 items that you require, and your friend has a list of 38 items that he/she requires. The two lists are not the same though they may have a few items (e.g. rice, oil, sugar, dal, wheat flour etc) which are common to both of you. Both of you buy things according to your needs and the needs of your family. From this supermarket let us get to the store that stocks speech sounds. All the speech sounds human beings can produce (read Unit 5) are stocked here in this store. There are about 150 sounds that a human being can produce with the given apparatus of speech organs. Into this store, the customers are languages. They pick and choose the sounds they need for their purpose and the environment they live in. (like the needs of your family). Similarly, no two languages may have the same set of speech sounds though all of them may have some common speech sounds (e.g. vowels, some bilabials etc.). A study of speech sounds that a language has is called phonetics. Phonetics also helps in describing these sounds and helping someone produce them as well. In English we have 44 speech sounds that are divided into 20 vowel sounds and 24 consonant sounds. You have studied this in Module 2. 9.5 Phonology Now, let us move on to Phonology. Phonetics talks about the sounds. This is a discrete study. This means, I know how to pronounce the sound /p/ and describe it as a voiceless, bilabial plosive. This description is true for any language that has / p/ sound in it. Phonology goes a little further than talking about individual speech sounds. Speech sounds cannot exist in isolation. They need to combine to form syllables and words. The speech sounds cannot combine randomly. They need to follow a set of rules. For example when you form a syllable in English, if the first sound is /p/ voiceless, bilabial plosive, the second sound cannot be /b/ or /d/ or /t/ or / s/ or /k/ or /g/ etc. In fact, /p/ as the initial sound will not have any plosive or fricative or an affricate as the second sound. Such combinations may be possible in other languages. Let us take a concrete example. In English the initial two sounds in a word can be /sp/ or /st/ or /sl/ in words like spirit, special, spoon, or street; straight,

NSOU PGEL-3 129 stand, or slant, sling, slang etc. Speakers of some languages in India do not have these combinations. Therefore they tend to add a vowel either between the two sounds or a vowel at the beginning. Accordingly, 'special' may be pronounced either as [ispecial] or [sapecial]. A study of how the sounds combine in a language to form consonant clusters and syllables is called phonology. We hope the difference between the two terms is clear now. We will repeat this once again later when you are familiar with a few more technical terms. 9.6 Syllable Structure The focus of the present unit is Syllable structure and a little bit of word stress: There are two aspects discussed here. The first one is syllable structure and the second one is word stress. Both these concepts are related to each other. We will take a look at each one separately. All of you know what a syllable is? You have come across this word many times earlier. Perhaps, your teacher in the school asked you to divide the word into its syllables, so that you could spell the word easily. Do you remember that? Task 2 Take a look at some of the words given below. You may not know some of these words, do not worry. Try and guess how many syllables there are in each word. a. Circumlocution b. Flannelette c. Inadvertently d. Personality e. Reprehensible You can answer these very easily. We will suggest a way out. Go to a dictionary and see how these words are entered in it. For example, you will find the word 'domineering' entered like this: dom-i-neer-ing. Do you notice that the spelling is split and small lines are inserted in between. These lines separate one syllable from the other. Similarly, you have to work out syllabification for the five words given. Think for a while, and reason out why we need to divide the word into syllables. What is so unique about a syllable? Would you like to share your views on this. Enter your comments in the space below before you read the next part.

NSOU PGEL-3 130 Definition of a syllable: In phonetics we define terms in their minimal unit form. For example 'a phoneme is a minimal distinct unit of a speech sound'. Similarly, a syllable which is a higher unit than a phoneme must also be a minimal unit. It is a minimal unit of utterance. What does this mean? When we pronounce a phoneme which is a consonant, without our being aware of it, we add a vowel to facilitate its pronunciation, so that we can utter it with ease. (In fact, it is not possible to utter some consonants in isolation.) Phonemes do not come together randomly to form a syllable, often they follow a rule. We shall look at some features of a syllable first and later look at the rules. You have identified the syllables in the list of words given above. Take a look at those syllables carefully and see if you find anything common in them? To do this, you may need to look at the dictionary once again, take a closer look at the transcription as well. Note your observation in the space below. Task 3: Now look at the transcription of the words given above: Cir-cum-lo-cu-tion /sf:k ml kju: n/ Flan-nel-ette/ flæn let/ In-ad-ver-tent-ly /in dvf:tentli/ Note: These transcriptions are Per-so-nal-ity /pf:snælti/ incomplete and need to be Rep-re-hen-si-ble /reprwhensbl/ completed. You may check your answers for the earlier task on the number of syllables you had identified. It is 5, 3, 5, 4 and 5 respectively. In this task we had asked you to find out what makes a syllable. You will have noticed that every syllable has just one vowel sound. There cannot be more than one vowel sound in a syllable. In other words, the presence of each vowel, marks the existence of a syllable. Please remember, the reference to vowel here is not in terms of spelling but a vowel sound. With this extended understanding of the word syllable, we may also redefine it. A syllable is a minimal unit of utterance with a single vowel. Two aspects of a syllable are clear - it is convenient unit of utterance, and there is only one vowel in the syllable. What about consonants? Consonants are essential in a syllable but they are also optional. We may have a syllable with just one vowel e.g. the first person pronoun 'I' is a syllable and a vowel. Similarly the indefinite article 'a' is a syllable and a vowel. These two syllables do not have any consonants. There are a few other syllables like this, but do not worry about them now. This is only to reinforce the fact, that a vowel is an important and obligatory part of a syllable.

9.7 Word Stress Having understood what a syllable is, let us look at some words which have just one syllable. Read these words to yourself and see whether they can be divided into further syllables: Ant, book, cat, dog, jay, key, lake, me, no, seal, tea, up, van, eat, feet, goat, high, I, put, queue, road, way, yacht, zoo. We are sure you can read them all very easily. Out of the twenty-six words given here, all but one have both a vowel and a consonant or two consonants. Look at the place of consonants. They can occur either before the vowel as in 'key' or after the vowel as in 'eat'. Some words may have a consonant before as well as after a vowel sound as in 'lake'. What does this mean to us? There is no definite position prescribed for placing a consonant or a vowel in a syllable. They can occur in any order. Does this make it difficult for you to identify a syllable? Don't worry, a syllable is such a small entity, that it can be easily recognized and its structure understood with some practice. We will do it. Here is a way to do it easily. Look up a dictionary (preferably Oxford Advanced Learner's Dictionary or Longman's Dictionary of Contemporary English) that provide transcription using the International Phonetic Alphabet (IPA). This will help you recognize the consonants and vowels in each of the words given above. You should transcribe more words and that will be helpful. Look at some of the words with a single syllable in their transcribed form and also look at their structure: Tea /tw/ consonant - vowel CV Way /wei/ consonant - vowel CV Eat /i:t/ vowel - consonant VC Book /b k/ consonant - vowel - consonant CVC Feet /fi:t/ consonant - vowel - consonant CVC Lake /leik/ consonant - vowel - consonant CVC Dog /dZg/ consonant - vowel - consonant CVC Best /best/ consonant-vowel-cons-cons CVCC

Plays /pleiz/ consonant - consonant - vowel - cons CCVC Text /tekst/ consonant - vowel - cons-cons-cons CVCCC Ant /ænt/ vowel - consonant - consonant VCC Spring /sprw / Con-con-con-vowel-con-con CCCVC This is just for the purpose of demonstrating the structure of a syllable. This is also to help you see the variety you can have within a syllable. You can have one or more consonants at the beginning of the syllable, similarly you can have one or more consonants at the end of the syllable or you may have no consonants either at the beginning or end. This makes the structure of a syllable easy and not complex. You only need to have a clear understanding of the presence of a vowel sound and the consonants occurring with it and their position. To represent the structure of a syllable we use two letters of the alphabet 'C' and 'V' to denote consonant and vowel sounds respectively. Using these two letters we can have a syllable as CV or VC or CVC or CVCC or CCVC or VCC or CCCVC etc. We have tried to provide examples for each one in the list above. If this is the structure of a single syllable, what can be maximum length of a syllable. How many consonants can it have at the beginning and how many at the end? Consonants can occur either singly or in groups before a vowel or after a vowel sound in a syllable. When there is more than one consonant, such groups of consonants are called 'consonant clusters'. Think of the longest single syllable words you have and try and make a guess. How many consonants can we have at the beginning of a syllable, and how many at the end? (Remember we cannot have medial consonants.) Your answer: Look at the following syllables to understand the longest syllable we can possibly have in English. Look at the word 'Spring'. This is a single syllable. We can transcribe it as/ spri /. The structure of this syllable is CCCVC. There are three consonants at the beginning of the syllable followed by a vowel and a consonant. Let us take a look at another word 'Texts'. This is also a single syllable word. We can transcribe it as /teksts/. The structure of this syllable is CVCCCC. There is a consonant before a vowel followed by four consonants at the end of the syllable.

Suppose we combine these two words to form a new (non-existent) word it may look like this: sprixts which can be transcribed as /spriksts/. The structure of this syllable will be CCCVCCCC. This is hypothetically the longest syllable we can have in English. You may think of more imaginary syllables like this, The sounds /s/, /p/ and /r/ or /l/ can come together at the beginning of many words in English. Task 4: Make a list of ten words in the space given below. Your answer: Task 5 Similarly, think of words that end with three or more consonants and list at least five of them in the space given below: Your answer: If you like to become familiar with the syllable and its structure, you may make a list of simple words you know, transcribe them with the help of a dictionary and write the structure of each syllable. Do this at a regular pace. This means, each day choose some twenty five words and transcribe them. This will help you become familiar both with symbols as well as syllables. Task 6 Let us check our understanding so far. Say whether the following sentences are true or false. i. We may not be able to pronounce all the syllables ii. Syllables are parts of a word iii. Syllables can have many consonants and vowels. iv. Syllables are only meant for helping us with spellings. v. Syllables have just one vowel. vi. There is no restriction on where the consonant should occur. vii. Consonants can occur either singly or in clusters.

NSOU PGEL-3 134 viii.There can be syllables without consonants. ix. There can be syllables without vowels. x. Syllables are not useful part of learning a language. (Look for answers at the end of this unit) 9.8 Structure of a Word Having discussed syllables in some detail, let us now move on to discuss the structure of a word. You have come across several words in your life both in your language as well as in English. What is your understanding of a word? Can you write a brief definition in your own words? Words are basic units of meaning and minimal units of grammatical analysis. They are made of one or more syllables. Depending on the number of syllables they have, they are divided into three groups as follows: 9.8.1 Monosyllabic words Words that have just one syllable are called monosyllabic words ('mono' single or one; 'syllabic' with syllables). Most of the simple words you know are monosyllabic. e.g. pen, pin, cat, mat, hat, hen, tin, pray, sky, speak, say, tell, hear etc. 9.8.2 Disyllabic words Words with two syllables are called disyllabic words ('di' two; and 'syllabic' with syllables). There are many common words that you are familiar with that belong to this group. e.g. pencil, cricket, party, mobile, content, import, hotel, cottage, village, student, teacher, classroom etc. 9.8.3 Polysyllabic words Words with three or more than three syllables are called polysyllabic words ('poly' many; 'syllabic' with syllables). These are a large group and here are some examples: primary, examination, institution, university, conqueror, electricity, democracy, brilliant, futuristic, graduate etc. Go to a dictionary and look for twenty five words from each category. Divide the disyllabic and polysyllabic words into syllables (as shown in the dictionary) and also transcribe them. In the transcription, underline each of the vowel sound that occurs in the words chosen. What is the importance of syllables in a word? Do they affect the meaning or

NSOU ? PGEL-3 135 pronunciation of the word? They do. In fact, the pronunciation of a word depends on the syllable in the word that receives the stress. If a word has more than one syllable, only one of them is stressed. What does this mean. One of the syllables is uttered at a higher pitch (more loudly) than other syllable. For example take a word like 'pencil'. This word has two syllables. 'pen' and 'cil'. In this word the first syllable takes the stress and hence pronounced more loudly than the second. We may write the word like this PEN-cil. Consider both these syllables to be pronounced as La. So the word Pencil can be rewritten as La- La and pronounced as LA-la and not as la-LA (pen-CIL). 9.9 Summary Let us summarise what we have said in the previous paragraph a little differently. Words take stress on a particular syllable. The stress on the right syllable determines how the word is pronounced. Obviously, there is only one correct or accepted way in which a word can be pronounced and this is determined by the number of syllables and the stress on a specific syllable. How do we know which syllable is stressed? Once again, a dictionary is a helpful resource in knowing which syllable in a word is stressed. The dictionary provides the word (headword), its syllabification, grammar and pronunciation using IPA symbols along with meaning, use and illustration. The transcription also captures the syllables as they are divided and the stressed syllable is marked with a vertical stroke on the top of it as shown in the example alongside /'pen-sil/. (Please note: stress on a word may differ in American English in comparison with standard British English. Therefore, we suggest, you refer to one of the two dictionaries we have suggested. These dictionaries provide both British and American variants of pronunciation. They also have a compact disc -CD which has the audio recording of the word in both variants.) Is dictionary the only source? Are there any rules that govern how a word needs to be pronounced? These are very good questions. Dictionary is not the only source. You may listen to people who speak with proper accent, e.g. English newscasters on many of the national channels are fairly good. You could listen to discussions on the radio and television and perhaps listen to English on your You Tube. There are rules that govern how a word is stressed. We shall look at some rules that help you understand the principle of stress. Let us now concentrate on the concept of stress. We will do this in the next Unit (Unit 10).

NSOU PGEL-3 136 Answers to true false statements: i. F; ii. T; iii. F; iv. F; v. T; vi. T; vii. T viii. T; ix. F x. F 9.10 Review Questions 1. What is the role of phonetics in language teaching? 2. How are these two terms different - Phonetics and Phonology? 3. What is the most characteristic feature of a syllable? 4. How does a dictionary enter a word to show the number of syllables? 5. How does one understand stress and how is it marked in a word? 6. What is a syllable? 7. What are the components of a syllable? 8. Can we have a syllable without a vowel sound? 9. How many syllables are there in a word? 10. When a word has more than one syllable, are both the syllables pronounced alike? 11. How do we teach stress in a word? 12. Based on the number of syllables, how are words classified? 13. What are some of the good sources for learning how a word is stressed? 14. Does the meaning of a word depend on the stress? 15. Does Bangla take stress on different syllables in a word?

NSOU PGEL-3 137 Unit 10 Disyllabic and Polysyllabic words 10.1 Introduction 10.2 Objectives 10.3 What is Stress? 10.4 Revision of Unit 9 10.5 Structure Words and Content Words 10.6 Stressed Syllables of Words 10.7 Stress and Suffixes 10.8 Summary 10.9 Review Questions 10.1 Introduction In the previous unit we have largely discussed three aspects. We have looked at the difference in the meaning of the terms Phonology and Phonetics. Phonology, which is language specific tells us how to speak a specific language. In understanding this, we looked at the definition and structure of a syllable. We helped you understand the concept of syllable and its structure with a large number of examples. Subsequently, we introduced you to the concept of stress as it occurs in English words. We illustrated this concept with a single example of how we pronounce the word /'pen-sil/. Now let us go ahead with a discussion of the concept of stress before moving on to words. 10.2 Objectives At the end of this unit, the learners will be able to: a. Understand the concept of stress in words. b. Classify words as mono-syllabic, di-syllabic and poly-syllabic words c. Understand the difference between structure and content words d. Divide words into head words and their affixes e. See the role of suffixes in understanding word stress. 10.3 What is stress? Take a look at some short words in your language. Write them down on a piece 137

of paper. Count the number of letters in the word. Each letter is a syllable. Read the word aloud. Did you pronounce some letters in the word more loudly? All the letters are pronounced with the same amount of loudness or breath. It is not like /'pen-sil/. This is the basic difference between English and Bangla and many other Indian languages. To understand stress, pick up a few words beginning with sounds /p/, /t/ and /k/. Is there anything common to these three sounds? Yes, they are all voiceless, plosives. They differ only in terms of their place of articulation - bilabial, alveolar and velar respectively. What words begin with these three sounds: pin, tin and kin. In all these three words, the initial sounds i.e. /p/ /t/ and /k/ are pronounced with aspiration. To help you understand this, recall the letters of alphabet in Hindi. These three sounds have two versions which are labelled alpa-prana and maha-prana. Maha-prana has a an additional breath force. This constitutes stress. In the three words given i.e. pin, tin, kin, pronounce the initial sound as maha-prana [p h in], [t h in], and [k h in]. Practice doing this with every word that begins with the sounds mentioned above if they are short single syllable words. Make a list of such words and practice them with a friend or your brother, sister, neighbour or anyone who cooperates with you. This will help such pronunciation become a natural part of your speech. There is something you should remember here, and this is very important. /p/, /t/ and /k/ are aspirated only when they occur at the beginning (initially) of a stressed syllable. For example look at the word 'paper'. This is transcribed as /'pei-p/. This word has two syllables. Both the syllables begin with /p/ sound. But the first syllable is stressed and hence only this /p/ is aspirated and not the second one. The pronunciation of this word will be [p h ei-p] with the first /p/ being aspirated. There are many words like this where the these sounds occur more than once in a word and pronounced differently. Look at some of these words and practice their pronunciation; /p/ /t/ /k/ Paper Tatter Cricket Puppet Tattoo Crocodile Pulpit Territorial Cockroach Precipitate Tentative Concordance Principal Tutorial Conclave Table 1: List of words where /p/, /t/ /k occur more than once.

Practice each of these words. If you have a problem, look up a dictionary and listen to how these words are pronounced using the CD-ROM and repeat to see if you can do it as well as recognise the stressed syllable. It is easy to understand stress when the word has just one syllable. In case of two syllables, the problem is a little more complex in deciding whether the stress is on the first or the second syllable. This needs to be discovered using a dictionary and the rules that we have are not very helpful in deciding which of the two syllables need to be stressed. We will just give two rules which are to some extent accepted universally. But these also have exceptions. 10.4 Revision of Unit 9 Let us now have a quick revision of the previous module which talked about the production of different speech sounds and the air stream mechanism that facilitates the production of speech. Later we looked at the following points: a. Syllable and its structure b. Place or importance of vowel in a syllable c. Words and their classification based on the number of syllables d. Place of consonants in a syllable e. A brief discussion on stress f. One syllable alone takes stress in a word. We will now continue our discussion on disyllabic and polysyllabic words, their structure and stress. 10.5 Structure Words and Content Words Word is an important part of language structure. Without words, we cannot have communication. And each language has millions of words. I am sure you know that there are more words in your mother tongue than you know. You have been using these words in your language and other languages you know for a long time. Can you define a word? Task 1 Try and write your understanding of a word in the space given below. Don't worry, there is no single correct answer, and there are no wrong answers to this question. So please try:

Here is how Oxford Advanced Learner's Dictionary defines 'word': 'a single unit of language which means something and can be either spoken or written.' Though this definition appears comprehensive, it is not really complete. Do we recognize words when we listen to someone speaking? Are we conscious of word boundaries when we speak? For both these questions, the answer is perhaps 'No'. Word is realised only in reading and writing because of the space that exists between each word. While speaking and listening these boundaries are lost. This is a little complex, and we will not discuss it now. (We will do it in your course on morphology.) We know for sure, a word is a unit of language. It has meaning. It has grammar. It can be recognized by native speakers/listeners of a language. It can be written using the accepted spelling, it can be used in a sentence etc. Words form a major bulk of language. If we have millions of words, we will be quite confused to study them. So we need to find ways of classifying them. We have two broad categories into which words can be divided - structure words and content words. Structure words represent grammar and their meaning is not very important. Words like conjunctions, prepositions, articles etc belong to this category. They are finite in number and hence are called a closed set. This simply means, we cannot add a new conjunction or a preposition to the language. The second category called the content words is a large group and is an open set. Words can be added to this category every day. Science, travel and tourism, entertainment, media and journalism have been adding words to this huge category. Think of words like television, multiplex, pizza, etc which did not exit a few decades ago. Now almost all of us know what these words mean. Words like nouns, adjectives, verbs and adverbs belong to this category. Are there other ways of classifying the words (other than dividing them into parts of speech.) Perhaps yes. Can you think of something and let us know. Write your suggestions in the space given below. (Do not worry about being wrong. In fact, this question cannot have wrong answers.) Now take a look at the words in the table and answer the questions below: Management Treatment Procurement Enhancement Compartment Nation Examination Prescription Comprehension Excursion Biology Heterology Archaeology Herpetology Topology Photograph Photography Geography Spectrograph Histography Photographic Photographical Photographically Geographic Geographical

Helpless Truthfulness Helplessness Goodness Kindness Cassette Brunette Omelette Flannelette Etiquette Engineer Career Cricketeer Mountaineer Pioneer Manager Teacher Fruiterer Planter Traveller Artist Dentist Manicurist Typist Flutist Gainful Painful Merciful Handful Insightful Musician Technician Electrician Academician Utilitarian Pious Conscious Porous Decorous Humongous Activity Productivity Creativity Temerity Tenacity Friendship Fellowship Comradeship Horsemanship Scholarship Collate Cognate Irritate Precipitate Decimate Active Productive Creative Invasive Extensive Inward Outward Sideward Downward backward Table 2: List of polysyllabic words. Task 2 Question 1: How many categories of words do you find in this table? Question 2: How did you arrive at the answer to question 1? Question 3: Mention the criteria adopted for categorising these words. Question 4: Add at least two more words to each category. (you may use a dictionary to answer question 4) This information is important for us to help us understand the concept of word stress and how polysyllabic words are stressed. We will come back to it after a while. 10.6 Stressed Syllables of Words Stress on words is an important aspect of English speech. A wrong stress may confuse the listeners and lead to misunderstanding. When a word has just one syllable, there is no problem about the choice of syllable to stress. But when a word has two syllables, things become a little complex in choosing which of the two syllables to stress. (We know we can stress only one syllable in a word.) Let us look at some more details. Are there rules for this? Yes, but rules also have exceptions, and you need to be aware of them as well. To begin with let us look at two syllable words that are stressed on the second

syllable. Generally, structure words are stressed on the second syllable. Please remember that this is not a rule but a broad generalisation. There are many content words with two syllables that are stressed on the second syllable. (e.g. Ho-TEL) (Structure words are those that have a grammatical function and meaning of these words is not important. Content words are words with meaning.) Look at the following list of words: A-bout, a-cross, a-long, a-round, al-though, Be-tween, be-yond, be-cause, be-hind, be-low, Des-pite, How-ever, In fact, etc. We have listed just a few words which can be classified as prepositions or conjunctions. Both these are finite sets (closed sets) and you may find a few more words. All the words in the given list are disyllabic and in none of the above examples, the first syllable is stressed. There are some disyllabic words which are stressed on either the first syllable or the second syllable. Depending on which syllable is stressed, the meaning of the word and the grammatical category to which it belongs change. Look at some of the examples given. CON-tent (noun) stress on the first syllable con-TENT (verb) stress on the second syllable IM-port (noun) EX-port im-PORT (verb) ex-PORT PRO-ject (noun) pro-JECT (verb) IN-ject (noun) in-JECT (verb) OB-ject (noun) SUB-ject ob-JECT (verb) sub-JECT

You can add to such list of words, but once again they are limited in number. Often, we do make an error while pronouncing these words and use one for the other. There are a host of disyllabic words other than what we have listed here. You know quite a few of them (as they are fairly frequently used words) and you can find out where to stress each word. You are already aware of this, and perhaps you are doing it right. Just verify and reconfirm you are part of those who speak good English. Task 3 In the space given below make a list of twenty five (25) disyllabic content words and transcribe them. Using a dictionary find out which syllable is stressed. This exercise will help you with three things - transcription, syllabification and pronunciation. Here are a few words to get you starting. You may transcribe these first and then make your list. Angle, able, baker, butter, cattle, current, decade, decide, eagle, earthy, father, feather, gather, goatee, hotel, halter, inter, include, jackal, juggle, kettle, kingdom, longer, leather, mother, matter, neither, neighbour, opera, opener, police, predict, quickly, quiver, rather, rougher, stronger, stammer, tatter, token, under, utter, vendor, Venice, water, weather, x-ray, xylem, yellow, younger, zero, zenith. With this we come to polysyllabic words or words with three or more than three syllables. These form the largest group of words and most of them are content words - that is words that carry meaning and can be categorised as Nouns, Verbs, Adjectives or Adverbs. In order to know how these words are pronounced, or understand which of the syllables is stressed, we need to frame some rules and follow them. Recall the words that you saw in Table 2 given earlier and the four questions you answered. We will make use of that knowledge now. Take a close look at the number of words you know in your language. Very often you use them properly. You are not very conscious of these words in terms of their grammar, pronunciation and spelling. But you are sure of their meaning and use. However, in English, you are more aware of their spelling, part of speech they belong to and their pronunciation. But often you are not aware of their meaning and use. Because you have this knowledge of English words, it is easy to classify them. (you may not able to do this in your mother tongue) Earlier we have talked about the content words as an open set. By this we mean new words can be added to this group. (this has been mentioned with examples) In

NSOU PGEL-3 144 the space given below, write five words from each of the four classes - Nouns, Adjectives, Verbs and Adverbs. Try and choose the lengthiest words that you know. You may use a dictionary for this. 10.7 Stress and Suffixes Do the words you have written belong to one of the categories that you saw in the table given earlier? They should. Now we will provide an explanation for the classification. Each row in the table represents a category and these are based on how the words are spelt. In each row, you find that the words take a specific suffix or word ending. This is an important factor to decide the syllable that takes the stress. Here is a figure that helps you see all the suffixes used for the words listed in Table 2. -ate; -age; -eer; -ette; -ful; -graph -ian; -ical/ically; -ious/ous; -ity; -ist; -ive; -less/ness; -logy; -ment; - ship; -sion/tion; -ward Figure 1 A list of suffixes. We will now look at one word from Table 2, find out the stressed syllable and also discuss a few terms to describe this in specific terms. The first word in the table is 'Management'. This word is entered in a dictionary as: man-age-ment. From this it is clear that the word has three syllables. 'ment' is a suffix and the last syllable. 'age' is the one before the suffix or the penultimate syllable. This is represented as -1. 'man' is the second syllable before the suffix or the ante-penultimate syllable. This is represented as -2. In this word the stress is on the first syllable. But while fixing stress, we always count the syllables from the end or the suffix. In that case 'man' becomes the ante- penultimate syllable or -2 or the second syllable from the suffix. Now look at other words that end with -ment. e.g. Predicament. This word has four syllables pre-di-ca-ment. As per the rules we have formed just now the stress should be on 'di'. Similarly, in the word bet-er-ment, the first syllable or the -2 gets stressed. You can look for more words and confirm the rule for yourself. There could be some exceptions and you will have to remember them. Now let us go about systematically framing the rules for each suffix as given in Figure 1 and also provide you with some examples.

NSOU r PGEL-3 145 No. Suffix Examples Rule i. -ate Curate, mandate, pirate, desiccate, predate All these words take

iii -eer Engineer, mountaineer pioneer, cricketeer, career This is also similar to the two suffixes illustrated before -ate and -age. The stress is on -1. iv -ette Gazette, brunette, omelette, cassette, silhouette The stress is on the suffix itself or the last syllable. v -ful Helpful, grateful, thankful, merciful The stress is on the ante-penultimate syllable or the second last from the suffix. (- 2) vi -graph Photograph, telegraph, spectrograph, sonograph

viii -ical -ically Electric/electrically Physical/physically Cyclic/cyclically Intrinsic/Intrinsically In the case of both these suffixes the stress is on -2. i.e. the second syllable from the suffix. e.g. /i-'lek-trI-kl/ ix -ious -ous Pious, generous, fictitious, dangerous The stress in these words is on the last but second syllabus (-2. x -ity Electricity, municipality, publicity, curiosity The stress on these words is on the last but second syllable (-2). xi -ist Activist, pessimist, pianist, terrorist, atheist The stress on these words is on the last but second syllable (-2) xii -ive Active, decisive, positive, creative

xiv -logy Biology, phonology, topology, morphology, The stress is on the syllable immediately preceding the suffix (-1) xv -man Postman, watchman, policeman, In these words, suffix -man is not stressed. The main word is stressed. xvi -ment Betterment, agreement, improvement, tenement

xviii -sion -tion Tension, examination, nation, persuasion

Table 3. A list of suffixes and the syllable that takes the stress in such words. [Please note: This table is not really comprehensive in two senses. Some suffixes may not have been included here for reasons of their frequency. Secondly, the rule quoted here is the most accepted general rule. There could be exceptions. Besides these, the American English follows a different set of rules to stress words and you need to find this out from a dictionary.] You now have a fairly good idea of the concept of stress and why it is important in speaking English. You have understood how words can be divided into several categories based on their spelling or the suffixes they take. Depending on this, it is possible to fix the stress on the word. In the next unit, we shall look at some more aspects of stress and see how the concept of stress contributes to the development of fluency in speech. We shall also look at some different types of syllables without vowels. 10.8 Summary Let us now recall the points discussed in this unit. NSOU PGEL-3 147 a. We began the unit with a very quick revision of Unit 9. b. We reiterated the concept of stress. c. We looked at the role of stress in disyllabic words. d. We discussed the concept of structure and content words. e. We looked at different ways of classifying polysyllabic words. f. We made an inventory of suffixes and had examples of words for each one of them. g. We looked at the stress rules for each of such words. We will take the discussion further in the next unit. 10.9 Review Questions 1. What techniques can be used to help the students understand the concept of stress in words? 2. How is stress determined in di-syllabic and poly-syllabic words? 3. Do we have different stress rules for content and structure words? 4. What is the meaning of shifting stress? Can you give some examples 5. What is the most important source of confirming stress on a word? 6. What do you understand by the term 'stress' in phonetics? 7. Do all words take stress? Are there exceptions? 8. How do you help learners become familiar with the concept of stress? 9. How are disyllabic words stressed? Give some examples. 10. How do we divide words according to their functions and meaning? 11. Which group of words are larger in number? 12. How many syllables can a word have? How are words classified according to the number of syllables? 13. Does meaning have a role to play in terms of stress? 14. How are polysyllabic words categorised? 15. How many syllables in a polysyllabic word can be stressed? 16. How do we determine stressed syllable in polysyllabic words?

NSOU PGEL-3 148 Unit 11 Vocoids and Contoids 11.1 Introduction 11.2 Objectives 11.3 Revision of Units 9 and 10 11.4 Phonetics and Phonology 11.5 Classification of the letters of the alphabet in English 11.6 Syllables without vowel sounds 11.7 Syllables without Consonant sounds 11.8 Summary 11.9 Review Questions 11.1 Introduction In the previous two units, you have learnt how words which are the most important components of language need to be pronounced in a specific manner. This depends on an aspect called stress, and we have provided adequate information on the concept of stress, syllable structure and the ways of determining stress in words. While discussing syllable structure we have emphasised the role played by the vowel sound. In this unit we will discuss the role of vowels and consonants and how these can vary to change the structure of a syllable. 11.2 Objectives After going through this unit, the learners will be able to: a. Understand further differences between the terms phonetics and phonology. b. Describe the structure of a syllable and also emphasise the role of a vowel in it. c. Identify the characteristic features of consonants and vowels and their relationship to orthography. d. Perceive the possibility of having a syllable without a vowel sound. e. Perceive the possibility of consonants taking up the role of vowels in a syllable. 148 NSOU PGEL-3 149 11.3 Revision of Units 9 and 10 Units 9 and 10 had a focus on syllable structure word stress and classification of words into monosyllabic, disyllabic and polysyllabic words. Here is a quick summary of the units to help you connect with the present module. a. Syllable is a basic unit of utterance. b. Each syllable has only one vowel sound. c. A syllable can have any number of consonants. d. Consonants can occur either at the beginning or the end of a syllable. e. We can have syllables without consonants, but not without a vowel. f. We cannot have a syllable without a vowel sound. g. /p/, /t/, and /k/ at the beginning of stressed syllables become aspirated. h. Words with more than one syllable take stress only on one syllable. i. Words with two syllables can take stress either on the first or the second syllable. j. There are certain disyllabic words that change in their meaning and grammar when the stress shifts. k. Polysyllabic words can be categorised on the suffix they carry with them. l. Depending on the suffix, the syllable to be stressed is determined. m. Good dictionaries are helpful in locating the stressed syllable and also practising pronunciation. Check if any point that was discussed has been left out. 11.4 Phonetics and Phonology At the beginning of Unit 9 we made an attempt to understand the difference between the two terms 'Phonetics' and 'Phonology'. Phonetics is universal and provides information on production and description of any speech sound in any language. It is highly discrete. This simply means that while describing one speech sound, it does not refer to any other speech sound. Phonetics uses a set of minimal pairs (pairs of words that differ in just one aspect) to establish phonemes in a language. Phonology, on the other hand discusses the functions of the speech sounds of a single language.

It tells us more about their behaviour. In other words, Phonetics is language universal whereas, phonology is language specific. Phonetics and phonology are two distinct systems or separate fields of study. The study of phonetics has been made easy by introducing a new script called the International Phonetic Alphabet. This gives us a list of symbols for each sound, the human speech organs can produce. There are nearly 150 symbols and one may access them from the Internet. We also know that no two languages are likely to have exactly the same set of speech sounds and the ways in which they combine. (we have looked at some examples earlier). In English we have 44 speech sounds that are divided into 20 vowel sounds and 24 consonant sounds. You have studied this in detail in Module 2. Phonology is not distinct, but integrated. It shows us how sounds can change their quality depending on the environment they exist. This is because, speech sounds cannot exist in isolation. They need to combine to form syllables and words. The speech sounds cannot combine randomly. They need to follow a set of rules. For example when you form a syllable in English, if the first sound is /p/ voiceless, bilabial plosive, the second sound cannot be another plosive or a fricative. This combination may be possible in other languages. In unit 9 we have given you some rules as well as examples to show why some of the Indian speakers of English have problems while pronouncing words like spirit, school, etc. Lastly, when syllables are formed, and they combine to form words, certain language like English take stress on specific syllables. A study to determine which syllable is stressed and provide a rationale is confined to the study of Phonology. Task 1 Answer a few questions to see whether what is said is clear: a. My language has thirty two sounds. I want to know how each one of them is produced. Which of these two studies help me? Phonetics/Phonology b. I have problems pronouncing certain speech sounds in English? How can I overcome these? c. I cannot pronounce certain words in English? What should I study to help myself? d. My friend has problem with stress on words. He is not able to decide which syllable to stress. Often, he pronounces every syllable with equal force. How can I help him?

Let us now begin the discussion on the present module. Here is a simple task for all of you to do. Task 2 In the space given below write about twenty five words that you are familiar with. Try and write down disyllabic or polysyllabic words. You may use a dictionary if you wish. Here are a few questions to answer: a. How many words were you able to write? b. Can you identify the number of syllables in each word? c. How did you do this? Take a close look at the words once again. Now try and answer these simple questions. The answers will help you understand the focus of this unit. Task 3 a. How many letters are there in the English alphabet? (very simple) b. Of these, how many letters are recognised as vowels? c. How many consonant letters do we have? d. Why are letters divided as vowels and consonants? e. Which of these letters is more important and why? f. Can you spell some words which do not have vowel letters in them? g. Do you have vowels and consonants in your language? h. How many vowels and consonants are there in Bangla? i. Do vowels and consonants behave the same way in your language? Answer as many questions as possible (the first three are compulsory). Check with someone in your neighbourhood and find out whether your answers are correct. (you may send your answers to us and we will give you the feedback). 11.5 Classification of the letters of the alphabet in English In English, we have twenty six letter of the alphabet. (Please don't say 'English has twenty six alphabets'. This is not acceptable. Alphabet is a system and it has letters

specific to each language it represents and used for writing. e.g. Letters of the English alphabet, letters of the Bangla alphabet, letters of the Hindi alphabet etc. Also note, 'alphabet' is always singular, you cannot add 's' to it and make it a plural.) These letters are divided into twenty one consonants and five vowels. A, E, I, O, and U are the vowel letters and the rest are consonants. Vowels are an integral part of the English spelling system and they help in forming the words. Generally we cannot have a word spelt without the help of a vowel letter. How far is this true? Take a look at the words in Table 1 below and see if there is something wrong with them. By Cry Crypt Cyst Dry Fly Fry Gym Gypsy Hymn Lynch Lynx My Myth Nymph Pygmy Rhythm Shy Sky Stymy Try Tryst Why Wry Wryly Table 1. Words spelt without the letters of alphabet Did you notice that none of these words uses the vowel a, e, i, o, or u in its spelling? How is this possible? Just now we mentioned that vowel letters form an integral part in spelling the words. So these are exceptions. So we have made a point. We can have some words in English which do not have vowel letters in their spelling. If this is the case, can we have a syllable without a vowel sound? The answer to this question is 'yes'. But we can have just a few words like this, and not many. We repeat, every syllable has a vowel. But there are a few syllables which are exceptional. Take a look at these words: Kettle, Cattle: Button, Cotton: Bottom, Rhythm We have taken just six words. Each one of these words has two syllables. Let us divide them into syllables: /ke - tl/ /b tn/ /b tm/ /k -tl/ /k tn/ /ri m/

Take a look at the second syllable in each of these words. These syllables do not have a vowel in them. Still it is possible for us to pronounce them. You must have observed that these syllables end with the sounds /l/, /n/, or /m/. These three sounds take up the role of vowels in these syllables. To indicate their special status, we place a dot below them while transcribing these words. These three sounds are pronounced as consonants, but acquire the function of a vowel only in specific environment as shown above. In such cases, we call these consonants 'syllabic consonants' or 'vocoids'. Now let us go back to the table and look at one more aspect of the English letters of alphabet and their use in spelling. Take a second look at the words in Table 1. Most of the words have either the letter 'w' or 'y' in them. In the letters of the English alphabet, we recognize these two letters as semi-vowels. This simply means, that they have the potential to work as vowels when necessary. Or they can substitute for a vowel when it is absent. This should also happen when these sounds become part of a syllable. 'w' is transcribed as /w/ and 'y' is transcribed as /j/. They are both voiced sounds like all vowels. Further, they are produced without any obstruction to the air stream issuing out of the mouth. They are called open approximants. They have all the qualities of a vowel. Therefore, in the normal course they should work as vowels. Let us look at just two words where these sounds occur and see whether they behave as vowels. The words are: 'Why' and 'yes' transcribed as /waw/ and /jes/ Let us analyse these two words. We know both these words are monosyllabic or have just one syllable. A syllable cannot have more than one vowel. This is a well- known fact. In the first word we have a diphthong /aw/. This is a vowel by classification. Hence the other sound has to be a consonant. In other words, /w/ in 'why' does not behave like a vowel, but remains a consonant. Similarly in the word 'yes' we have a pure vowel /e/ in the syllable. Again, going by its definition and structure, a syllable cannot have more than one vowel. Therefore, /j/ has to be a consonant though it is pronounced like a vowel. Now we need to think of new words to describe these sounds /l/, /m/, /n/, /w/ and /j/. 11.6 Syllables without vowel sounds /l/, /m/ and /n/ are normally consonants. But when they occur in certain syllables, they

assume the role of a vowel. They acquire the power of a vowel by giving the syllable the possibility of utterance. Hence these are called 'vocoids' or 'syllabic consonants'. If we retain the term vocoid, we will still be able to trace the structure of the syllable using letters C and V. /-tl/ in kettle or bottle can be described as CV. 11.7 Syllables without Consonant sounds /w/ and /j/ are open approximants or sounds that are produced with the stricture of a vowel sound. However, when they occur in a syllable, they behave like consonants. Therefore, we use a term called 'contoids' to describe them. The structure of the syllable /waw/ or /jes/ still remains CVC. Let us take a quick look at the points we have discussed in this unit. As usual, we began with a revision of what was learnt in Units 9 and 10. We began the unit by discussing the two terms phonetics and phonology a little further. Phonetics is a language universal phenomenon whereas phonology is language specific. Phonology discusses the behaviour of phonemes while their description and production is taken care of by Phonetics. Discussion on syllable structure, therefore, rightly belongs to the domain of phonology. We looked at the classification of the letters of the alphabet in English. We discovered that normally, it is not possible to have words spelt without taking help of vowel letters. However, there are exceptions to the rule, and we were able to look at a few words that do not have any vowels in them. Then we looked at syllables without vowel sounds. In such syllables, /l/,/ m/ and / n/ behave like vowels and acquire the name vocoids or syllabic consonants. Similarly, /w/ and /j/ which are articulated like vowels behave like consonants in syllables. Therefore these are called contoids. Using terms like vocoids and contoids does not disturb our description of syllable structure using the letters C and V. Answer the following questions to check your own understanding of the unit. Task 4 Answer the following questions to check your own understanding of the unit. Say whether the following statements are true or false based on your understanding of the unit. a. Letters of the alphabet are divided into consonants and vowels. b. Vowel letters are very important and we cannot have a word without a vowel in its spelling.

c. The vowel letters and vowel sounds correspond with each other in English d. Syllables always have a vowel in them. e. /l/, /n/ and /m/ always behave like syllables. f. /w/ and /j/ are actually vowels in English. g. Contoid is another name for vowels in English. h. Vocoids are actually consonants. i. There are a few syllables in English without obvious vowel sounds. j. We discuss the function of contoids and vocoids in phonetics. 11.8 Summary In the next and concluding unit in this module we will take a closer look at stress and its function in conveying the meaning. We shall also broach on the topic of stress and its impact on continuous speech. (answers: T, F, F, T, F, F, F, T, T, F) 11.9 Review Questions 1. How are the letters of the alphabet divided? 2. Do these categories play a role in the spelling system? 3. Do the vowel letters and the vowel sounds correspond with each other? 4. Is it possible to have words without vowel letters and syllables without vowel sounds? 5. Do the sounds /l/, /n/ and /m/ always behave like vowels? 6. Can we consider /w/ and /j/ as vowels in English? 7. Is Contoid another name for vowels in English? 8. What are Vocoids? How do they function in syllables? 9. Write at least ten words in English that do not use vowel letters, and transcribe them. 10. How is phonetics different from Phonology? 11. How do we distinguish between consonant and vowel sounds in a language?

12. Is there a one-to-one relation between the phonetic symbol and the letters of the alphabet in English? 13. What is the most important element in a syllable? Give some examples and mark the important element. 14. Can there be syllables without this important element mentioned in 'c'? If yes, how? Give some examples. 15. Can consonant sounds in some words act as vowels? What is the special name given to such consonants?

Unit 12 Stress and Meaning 12.1 Introduction 12.2 Objectives 12.3 Revision of Previous Units 12.4 Diphthongs of English 12.5 Stress and Compound words 12.6 Lexical Stress and Prosodic Stress 12.7 Summary 12.8 Answers to the Tasks 12.9 Review Questions 12.1 Introduction In the present unit on Stress and meaning, we will look at word stress in some more detail and show how meaning is closely associated with stress especially when it is in the context of a sentence. While discussing this, we shall look at some of the difficulties Indian speakers of English have in their spoken English. 12.2 Objectives At the end of this unit the learners will be able to: a. Understand further functions of stress in connected speech b. Produce diphthongs in English appropriately and also describe them c. Understand the placement of stress in compound words d. Understand the terms lexical stress and prosodic stress e. Appreciate the role of stress in teaching poetry lending to the rhythm 12.3 Revision of Previous Units In the previous units we have looked at different aspects of words with respect to their pronunciation. We began the module with a quick revision of the contents of 157

NSOU PGEL-3 158 the previous module which discussed speech production in detail. We had a recap of the forty four speech sounds that the English Language has and how these can get organized into syllables. Syllable being a technical term we spent a while discussing its definition and also its structure. The most important feature of the syllable is the presence of a single vowel in each syllable. There are no such restrictions on consonant sounds either in terms of their position or number. When more than one consonant occurs in a syllable without an intervening vowel, such group of consonants are known as consonant clusters. There is a restriction on the order in which consonants can come together. We moved on to the concept of stress and looked at monosyllabic words beginning with /p/, /t/ and /k/ which get aspirated in the initial position. These sounds get aspirated only when they are in the initial position of a stressed syllable. Stress is a unique concept to the English language. Words are formed either with one syllable, two syllables and three and more syllables. When a word has two or more syllables, only one syllable gets the stress, or is pronounced more loudly than the rest of the syllables. This can be acquired with practice. We looked at a large number of disyllabic and polysyllabic words to determine the syllable that is stressed in each word. We provided some easy ways of determining this by helping you with the spelling system of English. Subsequently, we made a distinction between the two terms 'phonetics' and 'phonology'. We mentioned that while phonetics is language universal, phonology is specific to one language. Each language can have its own phonology, but not phonetics. We discovered that while writing words using conventional spelling, we may have a few words without vowels. Similarly, it is possible to have syllables without vowel sounds. In such words there are certain consonants that take up the role of vowels. Such consonants are called 'vocoids'. Similarly, there are certain speech sounds that are open approximates like vowels. But they never behave like vowels when they occur in syllables. Such speech sounds are called 'contoids'. 12.4 Diphthongs of English We shall begin with a quick revision of the vowel sounds in English. English language operates with 20 vowels which are divided into two groups. Can you mention how these are divided? Your answer:

NSOU PGEL-3 159 We have two groups of vowel sounds. The first group has a set of twelve vowels which are pure vowels and the second group has eight diphthongs or two vowels in combination functioning as a single vowel. These are also called glides for the tongue moves from one position towards the position of another vowel during their production. Go back to unit 6 (Module 2) and revise your knowledge of vowels. For the present we shall concentrate only on the diphthong sounds. Often these cause problems for our learners. We tend to lengthen the vowel instead of using a diphthong. Let us take some common examples. Look at this word 'table'. This word has two syllables. The first syllable is often mispronounced by our learners. They lengthen the vowel /e/ instead of making it a diphthong /ew/. The word is pronounced as /tew-bl/ and not as [te:bl]. This is just one common example. Here is a list of twenty five words. Each one of these uses a diphthong and in many parts of India, these diphthongs are replaced with lengthened vowel sound. Look up a dictionary and find out how each of these words is pronounced. Transcribe these words and practice their pronunciation. Aid Asia Atheist Bake Boat Bolt Bowl Cage Coal Coast Caste Day Daily Deity Dough Fade Fold Fuel Gate Glaze Globe Go Grow Haste Home Table 1: Words with diphthongs These are just a few illustrations to point out the problems of pronunciation. You can find several other similar words. You may check on the pronunciation of your friends or ask one of them to check yours as the two of you interact with each other. We should learn to pronounce diphthongs properly in words. This helps in clarity of speech, and occasionally, it can also avoid miscommunication. We would like you to pay special attention to words like 'bowl' and 'caste' which when mispronounced can cause some embarrassment. We are sure you will do this task. 12.5 Stress and Compound words In the previous unit we also looked at some suffixes that determine the syllable to be

NSOU PGEL-3 160 stressed in polysyllabic words. We did not look at compound words. Let us take a look at some compound words here before moving on to another aspect of stress. Look at the words given in the table below: One word Without hyphen Hyphenated Cannot Ice cream Mass-produced Fireworks Real estate Mother-in-law Basketball Post office Merry-go-round Grandmother Attorney general Well-known Waterman Head master Three-day seminar Grasshopper Full moon Twenty-six Textbook Paper bag Self-restraint Sometimes Black bird Single-minded Moonlight Middle class Long-standing Table 2. List of compound words We have provided a list of thirty words. Each one is a compound word. These words are categorised into three columns. In the first column you have words that are formed by the coming together of two words. But both the words are written together without any space in between. In the second column you have words where the two words are always used together to suggest a noun - a thing, place, profession etc. In the last column you have two words that are brought together using a hyphen. When we have words like this, how do we pronounce them? Do we look for the syllable that takes the stress in each word, or do we stress one of the words? Let us see if we can have some principle based on which we can decide this. Words in the first column are all pronounced on the first word or the very first syllable. So we have CANnot, FIREworks, BASketball, GRANdmother etc. These words should not cause any problem as far as their pronunciation is concerned. In the second column, we have words where one of the words governs the meaning. Look at the word 'Ice cream'. Which of the two words do you think is more important. In this word, 'ice' is an adjective and 'cream' is the noun. You are interested in eating the cream (food) that has been cooled or chilled. The ruling word is 'cream' and hence it takes the stress. We pronounce it as 'ice CREAM'. Take one

NSOU PGEL-3 161 more example 'post office'. Here the word 'post' refers to a specific function the office performs. There are many offices. Office is a common place. 'Post' (the service) is the specific function and hence it takes the stress. We pronounce this word as POST office. When you have words like this, try and analyse their meaning. Find out which of the words is more important or carries the meaning with it. Stress that word and you will not be wrong. When you are in doubt, you have your friend, the dictionary. In the last column, we have words that are hyphenated. In these words, we once again go by the word that gives meaning to the word. Here is an example. 'mother- in-law'. Which of these three words is important. Obviously, 'mother'. A woman who is like a mother by marriage, for she is your spouse's mother. In this word we stress 'mother' and pronounce the word as 'MOTHER-in-law'. Let us look at one more example 'self-restraint' In this word, 'restraint' governs the meaning. The essential factor is to restrain (control) something. The control may be external or from within oneself. 'restraint' which is a verb carries the meaning of the word and is stressed on the appropriate syllable in the word. We pronounce this word as 'self-reSTRaint' It is difficult to provide all the examples in a course like this. Language learning happens best when one learns on one's own. We have provided you with a source - the dictionary. Use it extensively, and you will stand to gain. Task 2 Let us check our understanding of what is discussed so far. a. How is a diphthong described? (one word answer if possible) b. What problem do Indian speakers of English have with diphthongs? c. Can you mention some words which are commonly mispronounced? d. Transcribe the following words: serious, furious, curious, series. Underline the diphthongs used in each of these words (some words have more than one diphthong). Check how these are pronounced properly. e. How are compound words stressed? Give some examples. (don't repeat the examples already given in the book). f. How is the word 'dictionary' pronounced? Please check. (Check the answers at the end of the unit.) 12.6 Lexical Stress and Prosodic Stress Now we shall move into a new area. A syllable has one vowel, in a word only one

NSOU PGEL-3 162 syllable is stressed, and in a sentence, it is one word that takes the stress or carries the meaning. Now we are talking of two types of stress. Let us make a distinction between these two and also see if we can identify them using different labels. In a polysyllabic word, we stress only one syllable. This is confined to the word in isolation. Such stress is identified as 'Lexical Stress' in linguistics. Whatever we have discussed so far, refers only to lexical stress. (Note: in a word more than one syllable can take stress. There are varying degrees of stress called primary stress, secondary stress, tertiary stress etc. But we will not discuss these here at present.) When we utter a sentence in English, we do not utter all the words with same loudness. Some words are in fact, not heard. The words that are stressed are generally content words. Stressing the words in a sentence is called 'Prosodic Stress'. This is because, the stressed words occur at regular intervals and lend to the rhythm of English Speech. (you will learn more about rhythm of English speech later in Unit15). We will look at some examples and analyse them to understand words that take stress in a sentence, and how the meaning of the sentence is affected because of this. Here is a very popular illustration given by a linguist. TAKE my DOG for a WALK in the PARK This sentence has nine words. But only four words are stressed. Read this sentence aloud in such a manner that the time you take to move from Take to Dog and from Dog to Walk and from Walk to Park is the same. To make this simple, keep a beat (tal) and each time there is a beat you say either 'take' or 'dog' or 'walk' or 'park'. Analyse the sentence further. Take is a verb, My is a pronoun Dog is a noun For is a preposition A is an article Walk is a noun In is a preposition The is an article Park is a noun

NSOU PGEL-3 163 Out of nine words, we have three nouns, and a verb. The rest are all structure words and do not take stress. This sentence can be read in four different ways with emphasis on just one of the four words. Let us take a look at it quickly. a. TAKE my dog for a walk in the park. (This is an order. Somebody is asked to take the dog for a walk, but not feed it or wash it.) b. Take my DOG for a walk in the park. (Here the person speaking has more than one animal as a pet - perhaps a cat and a cow. It is only the dog that needs to be taken and not the cat or the cow.) c. Take my dog for WALK in the park. (Here is speaker emphasises the fact that the dog needs to be walked. It should not be made to run or just sit idly in the park.) d. Take my dog for a walk in the PARK. (Here the speaker wants the dog to be taken only to the park and not any other place, not to the sea shore or the river bank, but only to the park.) This should make it clear to you, how stress is important in conveying the meaning the speaker intends. You will learn more about all this in the next module. 12.7 Summary Let us stop here, with a quick revision of what is discussed here in this unit. We began the unit with a thorough revision of all the points made in the first three units of this module. Subsequently, we looked at the concept of diphthongs and their importance in pronouncing the words properly. We looked at some examples where Indian speakers often mispronounce the words. Having discussed this, we moved further and took a look at the stress in compound words with the help of several examples. We also saw the rationale for stressing a particular word in a compound word. Finally, we concluded the unit with a discussion on how word stress affects the meaning of a sentence and also lends to the rhythm of spoken English. With one illustration we saw why certain words are stressed in a sentence, and how the meaning of sentence varies with change in the stressed word. The next module will take you to sentences and their behaviour. Stress is not confined to syllables and words, but extends to sentences as well. How is sentence stress realised in speech is what the next module focuses on.

NSOU PGEL-3 164 12.8 Answers to the task on page a. Glide b. Use lengthened vowels instead of diphthongs. c. (no specific answer) d. /siri s/ /fjuri s/ /kjuri s/ /siri:s/ e. Based on the word that governs the meaning. f. /ˈdiknrw/ 12.9 Review Questions 1. What are diphthongs? How are they important in English? 2. How are compound words stressed? Give examples. 3. How are hyphenated words different from unhyphenated words? 4. How does a stressed word add to the rhythm of a spoken sentence? 5. Does stress have a role to play in conveying the meaning? 6. How complex is the role of stress in words? 7. Does stress affect the meaning always? 8. What are some of the problems we have by using wrong stress? 9. How are words stressed in Bangla? 10. Does meaning play a role in deciding the stress on compound words? 11. How is a pure vowel different from a diphthong? 12. What role does word stress have on the meaning of a sentence? 13. What are some of the best sources of learning word stress? 14. Does stress have any role other than conveying meaning? 15. How is the tone of a sentence determined by word stress?

NSOU PGEL-3 165 Module 4 : Supra-Segmental Features-2 Unit 13 Sentence Stress 13.1 Introduction 13.2 Objectives 13.3 Syllable, Accent and Stress 13.4 Stress and Connected Speech 13.5 Sentence Stress 13.6 Isochronism and Stress-timed rhythm 13.7 Accent and Intonation 13.8 Stress and Intonation 13.9 Summary 13.10 Review Questions 13.11 References and Reading List 13.1 Introduction This unit is prepared to familiarise you with supra-segmental features of English language, with special emphasis on accent and stress. While structural phonology deals with the phonemic and phonetic structure of English language, supra-segmental features include accentual or stress pattern of words. In connected speech, sentence stress, accent, rhythm and intonation play an important role. In modern linguistics, speech is regarded as primary and writing secondary. Sentence stress is an important feature of spoken English. The unit concludes with a summary followed by review questions provided at the end. 13.2 Objectives This unit introduces you to: a) Analysis of syllables b) Distinction between stressed and unstressed syllables 165

NSOU PGEL-3 166 c) Stress rules governing connected speech d) Intonation and its basic features 13.3 Syllable, Accent and Stress We have learnt about syllables and their structure in Module 3. Let us quickly revise some of the important points. The phonological system comprises the segmental and supra-segmental systems. Supra-segmental features in phonetics and phonology refer to a vocal effect which extends over more than one sound segment in an utterance. Such features include stress, rhythm and intonation. The basic unit of pronunciation in a connected speech is the syllable. A syllable is a unit of pronunciation typically larger than a single sound or phoneme and smaller than a di-syllabic word. A monosyllabic word may be pronounced as a single independent unit of utterance, while in case of polysyllabic words, syllable divisions are audible. Syllabification is the term which refers to the division of a word into syllables and through this division the stress-pattern is marked in speech. From a phonetic viewpoint, syllable is defined on the basis of the articulatory effort required in order to produce them. In English utterances, as R.H. Stetson (1892-1950) argued, each syllable corresponds to an increase in air pressure. The pulmonic egressive air-stream from the lungs is released as a series of chest pulses which can be felt and measured. In case of emphatic syllables, this increase in air-pressure is easy to detect. Every syllable has one vowel sound, but when two vowels occur simultaneously, as in showing, both the syllables are uttered with a single muscular effort. If we try to define syllable in auditory terms, we can realise that in a string of sounds, some syllables are intrinsically more audible than others and the sonority is located in the centre of a syllable, i.e., the vowel sound. Phonological analysis can reveal the ways sounds combine in English to produce connected speech. The syllabic structure of the words is represented by [V] and [C]. The basic structure of a syllable is [V] as in words like "I" or "a" and the structure may be one of the following: [CV] (to), [VC] (or), [CVC] (not), [CCVC] (spat), [CCCVCC] (string), [CCVCC] (thank), [CVCCC] (tenth), [CVCCCC] (tenths), [CCVCCCC] (twelfths). Syllable-division is marked with a hyphen. A consonant- vowel(CV) sequence is a common pattern and if a syllable ends with a vowel, it is called 'open syllable'. When a syllable ends with a consonant, it is called 'closed syllable'. A CVC pattern is very common in English. The following terminology is used in

phonology: the opening segment of a syllable is called the onset; the closing segment of the syllable is called the coda; and the central segment of the syllable is called the centre or nucleus. Some exceptional syllables can also be identified, such as those where certain consonants occur alone to form the syllable. The last consonant sound in such syllables is called a syllabic consonant. In words such as "button" [b tn] and "bottle" [b]tl], the last syllable formed without a vowel sound where/n/ or /l/ is a syllabic consonant. These rules of syllabification are essential for proper articulation and sentence stress. In prosodic morphology, the word is broken into syllables and stress rule is applied for pronunciation. Several languages, like Sanskrit, Hindi or Bengali, are syllable timed and the syllables are said to occur at regular intervals of time. In such languages the vowel sound in the syllable receives the accent. English, on the other hand, is an accentual- syllabic language and the pronunciation depends on the accent or occurrence of the stressed syllable. In Britain, for example, the neutral accent associated with a public- school education, is called "Queen's English," or "BBC English," or "Received Pronunciation" (RP). In the spoken form, all the syllables in English language are not accented. In any metrical composition there is a conscious patterning of accented and unaccented syllables. Accent is not solely a matter of loudness; it is also related to pitch and duration. Theory of stress covers the domain of syllable structure and phonological boundaries. Stress patterns in connected speech are related to both the word and the sentence stress. Metrical strength depends also on the weak and strong forms of the syllable or the word. Stress pattern also changes according to the grammatical use of the word. For example, in a word like "water" there are two syllables /w]:-tc/. This di-syllabic word can be used in a sentence as both noun and verb. When the word is used as noun the accent is placed on the first syllable. Similarly, the word "record" used as noun and verb receives stress on different syllables: "I have made a Record" (noun); "I am going to record my lecture" (verb). An exception is the word "water". It is always stressed on the first syllable, noun or verb, since the second syllable contains the schwa that can never carry stress. In scansion, an accent is a mark placed above the prominent syllable or the core phoneme. 13.4 Stress and Connected Speech As discussed above, stress is a term used in phonetics to refer to the degree of force used in producing a syllable. In the spoken form of the language, there is a notable

distinction between stressed and unstressed syllables. In case of stressed syllables there is more audible prominence, while in the unstressed syllables, there is a decreased loudness, pitch and length. Stress in connected speech may be equated with a notion of emphasis or strength attributed to the prominent syllables. In phonology, the main function of stress is to provide a means of distinguishing degrees of emphasis or contrast in sentences. Sentence stress is clearly audible. For example, in this sentence, stress is placed on the important words: "My HEART leaps UP when I beHOLD a RAINbow in the SKY" The degrees of stress, however, vary. In American English, the stressed syllables are easily identified because of the degree of stress given on the phonemes. Let us learn about the classification of these degrees of stress from strongest to weakest. The strongest stress is called primary stress; the next lower level of degree of stress is called secondary stress, followed by tertiary stress and weak stress. In British standard English / RP, the degrees of stress may be basically classified as stressed and unstressed, related to intonation and vowel quality. In phonology, the various degrees of stress are assigned to the syllables of words. Sentence stress is governed by stress rules. These stress rules may be categorised as lexical stress, stress based on compounding of words, and nuclear stress rules. In poetry or lyrical composition, the stress pattern may be governed by metrical rules. Distinction is made between linguistic contrasts involving loudness. Syllables that are more audible and longer than other syllables in a sentence are called stressed syllables. Some of these stressed syllables additionally involve pitch or accent, determined by the frequency with which the vocal cords vibrate during the production of syllables. The higher is the degree of vibration of the vocal cords, higher would be the pitch associated with the syllable. Some argue that variations in pitch and loudness are matters of accent, not stress. 13.5 Sentence Stress Stress pattern in a sentence is called sentence stress. English is a language that uses tone groups for connected speech. In English the stress-pattern is partly fixed and such fixed stress is referred to as accent. In English, we also find a free or movable stress or accent-pattern. (This is called shifting stress). In metrical compositions, stress-timed rhythm is based on fixed stress-rules as well as free stress shift. Usually in lyrical compositions, the stresses fall at roughly regular intervals in a line. Any line of a sonnet has ten syllables usually composed in a proper metrical pattern of five pairs of unstressed and stressed syllables. This pattern in prosody is called Iambic.

NSOU PGEL-3 169 Similarly, the Trochaic pattern in poetry refers to the pairing of stressed and unstressed syllables. In metrical phonology, a stress-foot refers to a string containing a stressed syllable as its first element, followed by unstressed syllables. The most prominent element in the stress foot is called the head. Therefore, foot-division is made to mark the underlying metrical division. In colloquial speech, language is spoken in such a way that a stressed syllable is more audible and the unstressed syllables are hardly audible. In connected speech, a sequence of syllables constituting a rhythmical unit, containing one primary stress, is known as a stress group. There are certain stress rules governing connected speech. 1. Words are classified into two broad groups: lexical category (typically nouns, verbs, adjectives and adverbs) and words of a functional, or grammatical, category (such as articles, conjunctions, prepositions and pronouns). Important words that contain independent meaning and function as nouns, verbs, adjectives and adverbs, usually receive stress, while the parts of speech that are functional and grammatically obligatory, such as pronouns, conjunctions, prepositions and interjections, used in sentences, receive no stress in connected speech. 2. The placement of primary stresses in English words is calculated by counting the syllables from the end of the word. The primary stress in a word falls on either the final syllable of the word, or on the penultimate syllable or on the antepenultimate syllable. Di-syllabic English words receive stress usually on the first syllable. However, some words that are used as both nouns and adjectives usually receive stress on the first syllable, while the same words used as verbs receive stress on the second syllable. 3. It is possible for English words to end with as many as four unstressed syllables, as in the word "GEN-tle-man-li-ness."However, English words do not begin with more than one unstressed syllable. We do not find any sequence of two or more unstressed syllables. 4. Stress shift is common in English language. For example, when we derive Japanese from Japan, the primary stress shifts from the final syllable of "Ja- PAN" onto the final syllable of "Ja-pa-NESE." We find a tendency to place the secondary stress on the syllable which had primary stress in the deriving word: "cha-RAC-ter" is changed to "cha-rac-TER-ize" and the primary stress shift in " 'cha-rac-te-ri-'ZA-tion." Similarly, primary accent shifts in the following words: "a-CA-de-my" - "a-ca-DE-mic" - "a-ca-de-MI-cian."

NSOU PGEL-3 170 5. Two adjacent stressed syllables are to be avoided in connected speech. Thus, the word Japanese is not articulated as "Ja/PA0 NESE."There are, of course, exceptions in words that receive two accents, one secondary and one primary as in the following verbs: "/RE0RUN" and "/SPON0DEE."Even words functioning as nouns and adjectives may sometimes receive two stresses as in "Burmese"[/BUR0MESE] and "Chinese" [/CHI0NESE]. 6. In most of the compound word in English RP, the primary accent falls on one of the two elements, usually on the first syllable, such as "0BOOK-shelf," " 0CROSS-word." However, there are compound words formed by "-ever" or "-self" in which the second element receives the primary accent, as in "how- 0E-ver" or "her-0SELF." 7. T. Balasubramanian (1981: 137-141), has listed the following useful rules for word-accentual patterns in English: a) Words with weak prefixes take the accent on the root. b) Inflexional suffixes like -ed, -es, and -ing do not affect the accent. c) Derivational suffixes like -age, -ance, -er, -ess, -ful, -hood, -ice, -ish, -ive, -ly, -ness, -or, -ship, -ter, -ure, and -zen do not normally affect the accent. d) Words ending in -ion/ -ian take the primary accent on the penultimate syllable. e)

55%   **MATCHING BLOCK 16/23**   Ⓦ

Words ending in -ic, -ical, -ically, -ious, -ial, -ially take the primary accent on the syllable preceding the suffix.

---

f) Words ending in -ity take the accent on the ante-penultimate syllable. 13.6 Isochronism and Stress-timed rhythm Isochronism or stress-timed rhythm in phonetics is used to characterize the pronunciation in which the stressed syllables recur at regular intervals of time. Irrespective of the number of intervening unstressed syllables, there is, more or less, an equal-time-gap between two stressed syllables in connected speech. This characteristic is referred to as isochronism or isochrony. In connected speech some words receive more force and loudness and stand out from the rest. For example, in the following sentences the words that stand out from the rest are marked with a vertical bar [0]: i) 0Ro-sy and 0Rock-y are 0friends. NSOU PGEL-3 171 ii) I 0lost my 0pair of 0shoes. iii) I 0want to 0buy a 0pair of 0scissors. iv) 'Ma-ry, 0sing a song'. In case of polysyllabic words used in connected speech, only that syllable of a polysyllabic word is made prominent which is prominent when the word is spoken in isolation, as in the following sentence: 0Ma-ry and 0Ro-sy have de-0ci-ded to 0vi-sit 0Lon-don. Stress-timed rhythm is maintained in connected speech irrespective of the number of intervening unstressed syllables. In some cases, the choice of the syllable receiving the primary accent depends on the meaning the speaker wants to convey. In such cases the stress-timed rhythm is carefully calibrated with intonation, a feature of connected speech and sentence stress that we will learn in the next section. 13.7 Accent and Intonation Intonation is a term used in the study of supra-segmental phonology. Intonation refers to the distinctive use of patterns of pitch, or melody. This study of intonation is called intonology and is applied to the study of sentence stress. There are several ways of analysing intonation. The basic components of intonology are the following: a) Stressed and unstressed syllables b) Primary and secondary accent c) Pitch patterns of phonemes and morphemes d) Tone units or tone groups and tonicity e) Three variables of pitch range, height and direction. In conversation, intonational phrasing is a structured hierarchy of the intonational constituents. In connected speech, an utterance-span is marked by tone-groups. Intonation performs the following functions in connected speech: a) as a signal of grammatical structure, where it performs a role similar to punctuation in writing, the marking of sentence, clause and other boundaries, b) as the contrast between some grammatical structures, such as, questions and statements, c) as the marker of emotive communication.

NSOU PGEL-3 172 The speakers of English inflect their speech, creating intonational contours. Intonation refers to the use of pitch variation in discourse. Pitch refers to the auditory impression created by variations in the rate of vibration of the vocal folds. Intonation refers to the use of pitch contours in connected speech which usually consist of more than one word. For example, in the sentence,"0Gita 0went to the 0doctor" there are three syllables with primary word stress. An additional pitch movement is placed on one of the primary-stressed syllables, 0DOC-tor. We can notice that this stressed syllable is more prominent than the other stressed syllables in the line. This syllable is longer in duration and louder than the other stressed syllables in the sentence. That syllable is said to be the tonic syllable. Tone can be initiated on any primary -stressed syllable. For example, in the sentences, It's 'green', What did you say?, there is primary stress on green and what. 13.8 Stress and Intonation Intonation and stress are interrelated. Tonic syllable denotes the stressed syllable where the tone falls. There is an extra pitch movement placed on the tonic syllable. There are various types of tones: a) Falling tone: the rate of vibration of the vocal folds decreases as the syllable is uttered, resulting in a transition from a higher to a lower pitch represented by the symbol . This kind of tone is typical of declarative utterances, in which the speaker is making a statement. b) Rising tone: the rate of vibration of the vocal folds increases as the syllable is uttered, resulting in a transition from a lower to a higher pitch represented by the symbol . This kind of tone is used in yes/no questions. c) Rise-fall tone: the rate of vibration of the vocal folds increases and then decreases as the syllable is uttered, resulting in a transition from a higher to a lower pitch represented by the symbol , as in the following dialogue: Wife: Have you been 0seeing Gita? Husband: No! The use of rise-fall tones conveys certainty, exclamation, conviction or feeling. The husband confidently saying that he has not been seeing Gita, and the intonation conveys a complete denial of the charges brought upon him by his wife. d) Fall-rise tone: the rate of vibration of the vocal folds decreases and then

NSOU PGEL-3 173 increases as the syllable is uttered, resulting in a transition from a lower to a higher pitch represented by the symbol , as in the following dialogue: Wife: Have you been 'seeing Gita? Husband: No! Here the pitch falls then rises to convey a sense of hesitation, lack of certainty or reservation on the part of the husband. He is less than clear and straight forward in his response. He is denying that he's been seeing Gita at least in the romantic sense. Intonation phrase may be defined as a stretch of discourse which contains a tonic syllable. This is also called intonation group. These are also called breath groups as the utterance requires a single unit of pulmonic egressive air-stream. When we give a pause, separating the tone group, we draw breath. We do this at the end of a tone group. Further, it is common for English speakers to pause at the end of every such unit. There are three main features of intonation: creating boundaries of tone groups; the placing of the tonic on one of the stressed syllables of that tone group; and the assignment of a specific tone on the tonic syllable. Usually, the tonic falls on the last lexical unit serving important function. In this sentence - "Rakesh gave it to her." - the pronouns "her" and "it" do not take the tonic and the penultimate preposition also fails to take the tonic. The tonic falls on "gave" that functions as verb. Intonation pattern refers to a sequence of pitch levels. 13.9 Summary Through this discussion, the students are made familiar with sentence stress in spoken English RP. Stress, accent, rhythm and intonation constitute the supra-segmental features of English language. Accentual or stress pattern of words in connected speech along with rhythm and intonation play an important role. 13.10 Review Questions Long Questions (270 words) 1. Write a note on the use of stress in English language. 2. What is intonation? Identify and explain different types of intonation in connected speech. 3. Write a note on the relationship between stress and intonation. 4. What are stress rules? Discuss with suitable examples.

NSOU PGEL-3 174 Medium Length Questions (180 words) 5. What are the basic components of intonology? 6. Define rise-fall tone with suitable examples. 7. How does the addition of suffix change the stress in syllables of a word? 8. Define a syllable. 9. What are the components of a syllable? 10. Show various types of syllabic structure of English words. 13.10 References and Reading List Balasubramaniam, T. A Textbook of English Phonetics for Indian Students. Delhi: Macmillan, 1981. NSOU PGEL-3 175 Unit 14 Supra-segmental Features 14.1 Introduction 14.2 Objectives 14.3 Supra-segmental Features 14.4 Syllable 14.5 Stress 14.6 Stress Rules 14.7 Pitch, Assimilation and Elision 14.8 Summary 14.9 Review Questions 14.10 References and Recommended Books for Study 14.1 Introduction In continuation to the previous unit, this unit will familiarise with supra-segmental features of English language, with special emphasis on accent and stress. While structural phonology deals with the phonemic and phonetic structure of English language, supra- segmental features include accentual or stress pattern of words. In connected speech, sentence stress, accent, rhythm and intonation play an important role. In modern linguistics, speech is regarded as primary and writing secondary. Sentence stress is an important feature of spoken English. The unit concludes with a summary followed by sample questions provided at the end along with list of recommended books. 14.2 Objectives At the end of this unit, you will be able to: a. Understand the role of supra-segmental features in pronunciation b. Decipher the supra-segmental features as marked on an utterance c. Understand different stress rules at the level of word and an utterance d. Understand the role of stress in deciding the intonation patterns in utterances e. Relate stress, pitch and rhythm as evidenced in intonation of an utterance 175

NSOU PGEL-3 176 14.3 Supra-segmental features The phonological system comprises the segmental and supra-segmental systems. In the spoken form of language, speech sounds or phonemes are part of larger construction. In speech these individual segments are not pronounced as individual units. These phonemes or segments that are studied under segmental phonology now become a part of larger constructions. Supra-segmental features refer to these distinctive elements that are added to the basic segmental features of phonemes. One such larger construction that phonemes can be combined together is the syllable, or the basic unit of supra-segmental features of language. Apart from the syllabic structure and the consonant clusters that contribute to the making of the syllable, some other supra-segmental features are also involved, such as stress, pitch, tone groups, intonation, rhythm, etc. Supra-segmental features in phonetics and phonology refer to a vocal effect which extends over more than one sound segment in an utterance. The basic unit of pronunciation in connected speech is the syllable. A syllable is the smallest unit of pronunciation typically larger than a single sound or phoneme and smaller than a di-syllabic word. A monosyllabic word may be pronounced at a time, while in case of polysyllabic word syllable divisions are audible. Supra-segmental analysis involves syllabification, the process of division of a word into syllables as through this division the stress-pattern is marked in speech. From a phonetic viewpoint, syllable is defined on the basis of the articulatory effort needed in order to produce them. When we pronounce any word, we do not articulate the segmental phonemes independently. Rather, we break the word into syllables and produce these syllables independently, as in a word like "examination" the articulation is done by identifying the separate components, broken into five syllables, "ex-am-i-NA-tion." Furthermore, all the syllables of the word do not receive same emphasis or stress. In connected speech, more supra-segmental features are visible like intonation and rhythm. 14.4 Syllable As stated above, when we use speech, we do not produce the segments of phonemes as individual items. One such combination of segments or phonemes is called a syllable. With our intuition, we can feel what a syllable is: we can say that "photo" has two syllables, "photograph" has three syllables, and "photography" has four syllables and so on. These syllables, one can easily observe are made up of different phonemes. Even the syllabic structure is different: "photo" has CV-CV structure, "photograph"

NSOU PGEL-3 177 has CV-CV-CCVC structure. While the numbers of consonants in a syllable vary, there is only one vowel in a syllable. When we have a sequence of syllables in a word, some syllables are stronger and more audible than others, i.e., some syllables carry more breath force than the others. These are stressed syllables and require more muscular effort, are louder and longer than unstressed syllables. In English the syllables differ in loudness and duration depending on the degree of stress they bear. If we try to define syllable in auditory terms, we can realise that in a string of sounds, some syllables are intrinsically more audible than others and the sonority is located in the centre of a syllable, i.e., the vowel sound. According to R.H. Stetson (1892-1950), each syllable corresponds to an increase in air pressure. In order to produce each syllable, a burst of muscular energy is involved. The pulmonic egressive air-stream from the lungs is released as a series of chest pulses which can be felt and measured. In case of emphatic syllables this increase in air-pressure is easily detectable. A syllable has one vowel sound, but when two vowels occur simultaneously, as in "water" two syllables are uttered with a single muscular effort. So the distinction on the basis of breath-release cannot be easily made. Phonological analysis can reveal how the phonemes combine in English to produce connected speech. The syllabic structure of the words is represented by the following symbols: [V] for vowels [C] for consonants. Every syllable has [V] at the core and this vowel is called the nucleus. These probable structures of syllables can be seen in the following words given in the table: Words Phonemic-structure Syllabic-structure Classification I Eye Oh! Ah! /ai/ /ai/ /cu/ /a:/ [V] Open syllable Be She So Go /bi:/ / w:/ /scu/ /gcu/ [CV] Open syllable Draw Grew Brow Sleigh /dr-]:/ /gru:/ /brau/ /slei/ [CCV] Open syllable

A vowel in a syllable is its central element. It is called the nucleus of a syllable. A syllable which ends in a vowel is called an open syllable. A syllable that ends in a consonant is called a closed syllable - a feature sometimes referred to as a 'free' syllable. The consonant that begins a syllable is called the releasing consonant. The consonant that comes at the end of a syllable is called the arresting consonant. The sequence of consonants at the beginning or end of a syllable is called a consonant cluster. In case of certain words where we get a sequence of consonants in the middle belonging to two distinct syllables, the consonants are called abutting consonants. For example, in a word like "stranger" the syllable division /streind-]/ shows a syllabic structure [CCCVCC-CV]. In the word "stranger," the /d/ is the arresting consonant of the first syllable and the / / is the releasing consonant of the second syllable. Stray Spree Screw Scree /strei/ /spri:/ /skru:/ /skri:/ [CCCV] Open syllable Come Some Gone Boat /k?m/ /s?m/ /g]n/ /b?ut/ [CVC] Closed syllable Am All Up And /æm/ /]:l/ /?p/ /ænd/ [VC] Closed syllable Spin State Plate School /spin/ /steit/ /pleit/ /sku:l/ [CCVC] Closed syllable Scream Stream Screen Spleen /skri:m/ /stri:m/ /skri:n/ /spli:n/ [CCCVC] Closed syllable Box Fox Band Bold /b]ks/ /f]ks/ /bænd/ /bculd/ [CVCC] Closed syllable Tempt Tents Bands Tenths /tempt/ /tents/ /bændz/ /tenθs/ [CVCCC] Closed syllable Tempts Texts /tempts/ /teksts/ [CVCCCC] Closed syllable c

Syllable-division is marked with a hyphen. A consonant-vowel (CV) sequence is a common pattern and if a syllable ends with a vowel, it is called open syllable. When a syllable ends with a consonant, it is called closed syllable. A CVC pattern is very common in English. The following terminology is used in phonology: the opening segment of a syllable is called the onset; the closing segment of the syllable is called the coda; and the central segment of the syllable is called the centre or nucleus. In most of the syllables, the central element is normally a vowel sound while the marginal elements are usually consonants. However, in some syllables the nucleus is a consonant, as in the following words: Words Phonemic- structure Phonemic- structure Syllabic-structure Classification Kettle Rattle Little Cattle Mutton Cotton Sudden Ridden /ke-tl/ /ræ-tl/ /li-tl/ /kæ-tl/ /m--tn/ /k--tn/ /s--dn/ /ri-dn/ [CV-CC] [CV-CC] [CV-CC] [CV-CC] [CV-CC] [CV-CC] [CV-CC] [CV-CC] [CV-CV] [CV-CV] [CV-CV] [CV-CV] [CV-CV] [CV-CV] [CV-CV] [CV-CV] Open syllable-Syllabic consonant As you can observe, the second syllables of these words have two phonemes: the first is either a voiceless or a voiced alveolar plosive, while the second phoneme is an /n/ or an /l/. Furthermore, there is no sound in the second syllables that can be classified as vowel. Both the consonants are produced with a stricture of close approximation whereas vowels are produced with a stricture of open approximation. Here the consonants occupy the central positions of syllables. These are called syllabic consonants. While marking syllable structure, the last phoneme has to be marked [V]. English consonants /l/, /m/, /n/, /r/ can occupy the V positions in some syllables. Among the supra-segmental features, syllabification is an essential component for proper articulation and sentence stress. 14.5 Stress Several Indian languages, like Sanskrit, Hindi or Bengali, are syllabic-timed and the syllables are said to occur at regular intervals of time. Almost equal emphasis is placed on the nucleus [V] of all the syllables. In these languages the nucleus [V]of the syllables receives stress. The pronunciation is timed according to the length of the syllables. English, on the other hand, is an accentual-syllabic language and the pronunciation depends on the stress-pattern of Received Pronunciation [RP]. However, m æ kc

in their spoken form, all the syllables in English language are not stressed. Stress is a term used in phonetics to refer to the degree of force used in producing a syllable. The stressed and unstressed syllables can easily be distinguished: the former being more prominent than the latter. In phonetic transcription the stressed syllable is marked with a raised vertical line [0]. In case of stressed syllables, the prominence is loud and more audible than in the unstressed syllables. The pitch and length of the syllable also contribute to the quality of stress. Stress in connected speech may be equated with a notion of emphasis or strength attributed to the prominent syllables. In phonology, the main function of stress is to provide a means of distinguishing degrees of emphasis or contrast in sentences, also referred to as sentence stress. As all the syllables in a sentence do not receive equal amount of stress, a term, contrastive stress is often used in supra-segmental phonology to describe this process of identification of stresses syllables. In Scansion, an accent is a mark placed above the prominent syllable or the core phoneme. Sentence stress is clearly audible. For example, in the following sentences, stress is placed on the emphatic syllables: "A SLUMB-er did my SPI-rit SEAL" "PUFFS, POW-der, PATCH-es, BI-ble, BI-llet DOUX" In prosodic morphology the word is broken into syllables and stress rule is applied for pronunciation. In metrical composition too there is a conscious patterning of stressed and unstressed syllables. Stress is not solely a matter of loudness; it is also related to pitch and duration. Strength of the syllable also depends also on the weak and strong form of the syllable or word. Stress variation, both lexical stress or word stress, as in the contrast between the following sentences: 1. An increase of GDP is expected this year. 2. The boss is going to increase his pay. In the first sentence, the word "increase" is used as a noun and the lexical stress is placed on the first syllable: /0i†-kri:s/. in the second sentence, the word "increase" is used as a verb and the lexical stress is placed on the second syllable /i†-0kri:s/. In the American Structuralist tradition, there are four such degrees of stress, analysed as stress phonemes, from strongest to weakest, namely, "primary," "secondary," "tertiary" and "weak." In English RP, the stress is classified as: (a) primary stress denoted by the symbol [0]

NSOU PGEL-3 181 (b) secondary stress denoted by the symbol [1] Word Phonetic Transcription Examination /wl-1zæ-mw-0new-•(c)t/ Comprehensible /1kcm-prw-0hen-sw-b(c)l/ Temperamental /1tcm-p(c)-rc-0men-t(c)l/ Sophistication /sc-1fws-tw-1kew-•(c)n/ Some analysts maintain that the distinction should be made on the basis of loudness which they refer to as "stress"; some maintain that the contrast should be made on the basis of pitch which they refer to as accent. Some languages have affixed stress or accent, e.g. Welsh; others, such as English, have a free or movable stress (accent). 14.6 Stress Rules Distinction is made between linguistic contrasts involving loudness. As noted above, syllables that are more audible and longer than other syllables in a sentence are called stressed syllables. Some of these stressed syllables additionally involve pitch or accent. Although some argue that variations in pitch and loudness are matters of accent, not stress, because contrasts in pitch variation are normally involved. The various degrees of stress are assigned to the syllables of words by means of the repeated application of rules. These stress rules may be categorised as lexical stress, stress based on compounding of words, and nuclear stress rules. In poetry or lyrical composition, the stress pattern may be governed by metrical rules. Stress is governed by the following stress rules: (a) "lexical" - stress rule based on the item and its grammatical function. However, some words that are used as both noun and adjectives usually receive stress on the first syllable, while the same words used as verbs receive stress on the second syllable. (b) "compound" - stress rule based on the process of compound word-formation. In most of the compound word in English RP, the primary accent falls on one of the two elements, usually on the first syllable, such as "0BOOK-shelf," "/ 0CROSS-word." However, there are compound words formed by "-ever" or "-self" in which the second element receives the primary accent, as in "how- 0E-ver" or "her-0SELF." (c) "nuclear" - stress rule based on the nuclear word. Words are classified into n

NSOU PGEL-3 182 two broad groupings: lexical category (typically nouns, verbs, adjectives and adverbs) and words of a functional, or grammatical, category (such as articles, conjunctions, prepositions and pronouns). Important words that contain independent meaning and function as noun, verb, adjective and adverb, usually receive stress, while the parts of speech that are functional and grammatically obligatory, such as pronoun, conjunction, preposition and interjection, used in sentences, receive no stress in connected speech. The placement of primary stresses in English words is calculated by counting from the end of the word. The primary stress in a word falls on either the final syllable of the word, the penultimate syllable or the antepenultimate syllable. Di-syllabic English words receive stress usually on the first syllable. (d) "metrical" - stress rule based on metre and rhythm in poetry or lyric. In metrical composition stress-timed rhythm is based on fixed stress-rules as well as free stress shift. Usually in lyrical compositions, the stresses fall at roughly regular intervals in a line. Any line of a sonnet has ten syllables usually composed in a proper metrical pattern of five pairs of unstressed and stressed syllables. This pattern in prosody is called Iambic. Similarly, the Trochaic pattern in poetry refers to the pairing of stressed and unstressed syllables. In metrical phonology a stress-foot refers to a string containing a stressed syllable as its first element, followed unstressed syllables. The most prominent element in the stress foot is called the head. Therefore, foot- division is made to mark the underlying metrical division. 14.7 Pitch, Assimilation and Elision Pitch refers to the auditory impression created by variations in the rate of vibration of the vocal folds. According to T. Balasubramanian: During normal speech, in case of an adult male, the vocal cords vibrate between 80 and 120 times a second and between 150 and 200 times a second in case of an adult female. The rate at which the vocal cords vibrate is called the frequency of vibration and this determines the pitch of the voice. The more rapidly the vocal cords vibrate, the higher will be the pitch. (151) [4] High fall - the pitch falls from very high to very low [6] Low fall - the pitch falls from mid to very low [3] High rise - the pitch rises from very low to very high [7] Low rise - the pitch rises from low to mid

NSOU ? PGEL-3 183 [7] Low rise - the pitch rises from low to mid [8] Rise-fall - the pitch rises from low to about mid and then falls again to low [9] Fall-rise - the pitch falls from about mid to low and then rises to mid It takes a considerable length of time to gain mastery over this supra-segmental aspect of spoken English. Another supra-segmental feature of connected speech is that of assimilation. Speech is a connected utterance and not just a stringing together of discrete units or phonemes. A sound may be 'affected' by the preceding or succeeding sound of the connected utterance. The way by which such sounds in connected speech influence each other is called assimilation. Such assimilatory changes may be allophonic or phonemic. It is defined as a process of replacing sound A by sound B under the influence of sound C. For example, "horse shoe" is pronounced as /]•-•u/ by replacing /s/ of "horse" with /•/ under the influence of /•/ of "shoe." In a sentence too such changes can be seen: "Who is there?" is pronounced as /huzðec/. In order to maintain the characteristic rhythm of English, an unaccented syllable is pronounced very fast. This omission of sounds in connected speech is called elision in phonetics and phonology. Through elision, both consonants and vowels may be affected. Sometimes, whole syllables may be elided. Unstressed grammatical words used in weak forms are particularly prone to be elided, such as and and of. Even in connected speech elision is marked, such as the dropping of /f/ in "cup of tea"/k p-c-ti:/. Similarly, complex consonant clusters are also often reduced through the process of elision:"twelfths" is pronounced as /twel›s/ or /twelfs/.In rhetorical terminology, an elision in word-initial position was known as aphaeresis or prosiopesis, ("he is" is pronounced as /hiz/); the elision in word-medial position is known as syncope ("cannot" as /kY:nt/); and the shortening of word-final position is called apocope ("cup of tea" as /k p-c-ti:/. 14.8 Summary Through this discussion you are made familiar with various supra-segmental features of English language such as syllable, stress, stress-rules, intonation, pitch, assimilation and elision. The unit also discusses their use and patterns of occurrence in connected speech. There are a set of review questions to test your comprehension of the unit.

NSOU PGEL-3 184 14.9 Review Questions Long Questions (270 words) 1. What do you understand by supra-segmental features of English language? Identify and explain any one such feature. 2. What intonation? Identify and explain different types of intonation in English connected speech. 3. What is pitch? How are pitch and rhythm inter-related? 4. What is stress? What are the types of stress rules? Discuss with suitable examples. 5. How would you define a syllable? Show various types of syllabic structure with suitable examples. Medium Length Questions (180 words) 1. What is assimilation? 2. Define elision with suitable examples. 3. What is stress-shift? 4. How does the affixation change the stress pattern in syllables of a word? 5. Give strong and weak forms of the following words: am, the, to, the, and, does. 6. Define open and closed syllable. 7. Show the syllabic structure of the following words: termination, kettle, nuisance, little, button. 14.10 References and Recommended Text for Study Balasubramaniam, T. NSOU PGEL-3 186 Unit 15 Rhythm in English 15.1 Introduction 15.2 Objectives 15.3 The Rhythm of English 15.4 Rhythm in English Poetry 15.5 Accent and Rhythm 15.6 Meter 15.7 Rhythm and Metrical Structure 15.8 Rhythm, Rhyme and Length 15.9 Summary 15.10 Sample Questions 15.11 References and Recommended Books for Study 15.1 Introduction This module is prepared to familiarise the students of Linguistics and English Language Teaching with rhythm, a supra-segmental feature of language based on accent, stress, phonetic structure, syllable-length, pitch and tonal pattern. As speech is regarded as primary and writing secondary in modern linguistics, analysis of conversational rhythm is an integral part of stylistics. These components that are related to rhythm are discussed in detail in this unit. The unit concludes with a summary and is followed by review questions provided at the end, along with a list of recommended books. 15.2 Objectives At the end of this unit, the learners will be able to: a. See the pattern of rhythm as it exists in English speech b. Contrast the rhythm of English speech with the rhythm of mother tongue c. Understand the role of rhythm in speech and poetry in English d. Relate rhythm with metrical composition of poems and read a poem properly e. Appreciate the terms Rhyme, Rhythm and Length as relational terms. 186 NSOU PGEL-3 187 15.3 The Rhythm of English The phonological system comprises the segmental and supra-segmental features. In the spoken form of language, speech sounds or phonemes are part of a larger construction. In speech these individual segments are not pronounced as individual units. These phonemes or segments that are studied under segmental phonology now become a part of larger constructions. Supra-segmental features are new distinctive elements that are added to the basic segmental features of phonemes. The supra- segmental features of English language include the following: stress, pitch, tone groups, intonation, and rhythm. In phonology, rhythm refers "to the perceived regularity of prominent units in speech" (Crystal 417). According to Geoffrey Leech, "versification is a question of the interplay between two planes of structure: the ideally regular, quasi-mathematical pattern called METRE, and the actual rhythm the language insists on, sometimes called the PROSE RHYTHM" (103).The prominent stressed syllables recur in a regular pattern, and the rhythm depends on the pattern of stressed and unstressed syllables, long and short syllables and high pitch and low pitch. These variables are also combined in a rhythmic pattern for greater rhythmicality, as seen in lyrical poetry. These supra-segmental features like stress, syllable-length and pitch are arranged in a schematised pattern in spoken language and contribute to the rhythmic effect. Rhythm is produced by the regularity of time-lapse between two stressed syllables and the emphatic sound of the stressed syllables. If we compare poetic composition to a musical composition, we can say that the utterances are divided into 'bars' or 'measures'. According to Geoffrey Leech: Stripped of all subtleties, conventional English metre is nothing more than rhythmic parallelism: a patterning of the succession of stressed and unstressed syllables with greater regularity than is necessary for spoken English in general. (111) These patterns of rhythm achieved through rhythmic parallelism organize themselves into speech utterances, especially verse lines. While in case of independent long polysyllabic words, there is an internal patterning of primary stress and secondary stress, in case of connected speech, the patterning of stressed syllables is more perceptible. According to Daniel Jones, "[t]here is a strong tendency in connected speech to make stressed syllables follow each other as far as possible at equal distances" (Jones 1922: 106). In one of the ways, rhythm is created when a syllable containing long vowel or diphthong is followed by unstressed syllables. There is more or less an equal time-gap between two stressed syllables in English

NSOU PGEL-3 188 language as the language is isochronous. The length of a vowel also depends on the rhythm of the sentence in connected speech. Most of the stressed syllables of a sentence follow each other as far as possible at equal distance of time and thus, English becomes an isochronous language. Daniel Jones cites the example of the series of numbers:" eighteen, nineteen, twenty /ei-ti:n-nain-ti:n-twen-ti/ eight, nine, ten /eit-nain-ten/ The musical note of these two lines will appear thus: (Jones 1922: 106) The stress falls on the vowels and if we pronounce the line at a proper speed, we can see that there is an equal time-gap between the vowels. In these lines, however, the length of the same vowel varies. The diphthong /ai/ in nineteen is shorter than the /ai/ in the word nine in the second line. In order to represent the rhythmic structure some symbols used in writing musical notes are also used in linguistics, such as: Symbol English American semibreve Whole note minim Half note crotchet Quarter note Quaver Eight note semiquaver Sixteenth note These symbols are used to denote the length of time between two consecutive stresses in musical notation.The rhythm of a line can be presented through the following note: (Leech 106) The length of the syllable and the length of time between the stressed syllables are determined by rhythm. Take for example the following sentence:

NSOU PGEL-3 189 "I could not start immediately as I was not ready." In this line, the long vowel /a:/ in the "start" takes more time than the long vowel /i:/ in "immediately." This elongation or shortening of the long vowels or diphthongs is due to the rhythm of the connected speech. The stress in an independent word is modified by rhythm in connected speech. Even in words with a single stress, rhythm may modify the stress in connected speech. 15.4 Rhythm in English Poetry Usually in any verse composition, rhythm is an essential component. In poems, the words are articulated as connected speech. The articulated lines of poetry can be heard as a sequence of syllables. In words of two or more syllables, one syllable is almost always given more emphasis than the other. Metrical pattern in poetry works on the schematised patterning or alternation between accentuated syllables and weak syllables. Rhythm refers to that repetition into a regular phrasing across a line of verse. Rhythm in poetry is a patterned movement of pulses in time which is defined both by periodicity as it occurs at regular time intervals and repetition as the same pulses occur again and again. Sri Aurobindo in his Letters on Poetry, Literature and Art has stated that "poetic effect" depends on "the magic of rhythm" (168). Phonological foregrounding becomes more effective and draws the attention of the audience to the rhymical pattern. Accent pattern can be effectively used to produce the desired rhythm.Through rhythmic parallelism, patterning of successive stressed and unstressed syllables, the poet can produce a desired rhythm. As stated above, English is a stress-timed language and there is almost an equal time-gap (isochronous) between two accented syllables in English language. According to Geffrey Leech, a line in poetic "language can be split into segments which are in some sense of equal duration.... although the rhythm of language is not isochronic in terms of crude physical measurement" (105). 15.5 Accent and Rhythm Rhythm refers to the perceived regularity of accented units in speech. This rhythmic regularity is seen in the patterns of stressed and unstressed syllables, long and short syllables, and high or low pitch. In poetry such regular rhythmic patten is found specially in metrical compositions. In the context of rhythm studies, the notion of a stress-timed language is another important supra-segmental component. In case of English, the stresses fall at roughly regular intervals within an utterance. This phenomenon is called isochronism or stress-timed rhythm in phonetics. NSOU PGEL-3 190 Isochronism is used to characterize the pronunciation in which the stressed syllables recur at regular intervals of time. Irrespective of the number of intervening unstressed syllables, there is equal-time-gap between two stressed syllables in connected speech. This characteristic is referred to as isochronism or isochrony. In connected speech some words receive more force and loudness and stand out from the rest. For example, in the following sentences the words that stand out from the rest are marked with a vertical bar [0]: i) 0Ro-nny and 0Joh-ny are 0friends. ii) I 0got my 0pair of 0spec-ta-cles. iii) I 0want to 0go to the 0mar-ket. iv) 0Ra-him, 0join me at the 0par-ty. In case of polysyllabic words used in connected speech, only that syllable of a polysyllabic word is made prominent which is prominent when the word is spoken in isolation, as in the following sentence: 0Ma-ry and 0Ro-sy have de-0ci-ded to 0vi-sit 0Lon-don. Stress-timed rhythm is maintained in connected speech irrespective of the number of intervening unstressed syllables. In some cases, the choice of the syllable receiving the primary accent depends on the meaning the speaker wants to convey. In such cases the stress-timed rhythm is carefully calibrated with intonation, a feature of connected speech and sentence stress that we will learn in the next section. English rhythm is also characterized by another supra-segmental feature, i.e., the use of weak forms and strong forms in case of several words. These changes, in both qualitative and quantitative patterns, depend upon whether the words are accented or not. Whenever these words are pronounced in isolation and accented, the strong forms of these words are used. When these words are used in connected speech and remain unaccented, the weak forms of these words are used. Given below are the most common words used in weak and strong forms: Words Strong Form Weak Form A /ei/ /ə/ An /æn/ /ən/ The /ði:/ /ði/ before a vowel /ðə/ before a consonant Am /æm/ /əm/, /m/ Are /Y:/ /ə/ Can /kæn/ /kən/

15.6 Metre

In phonology, the main function of stress is to provide a means of distinguishing degrees of emphasis or contrast in sentences, also referred to as sentence stress. As all the syllables in a sentence do not receive equal amount of stress, a term, contrastive stress is often used in supra-segmental phonology to describe this process of identification of stresses syllables. In Scansion, an accent is a mark placed above the prominent syllable or the core phoneme. Sentence stress is clearly audible. For example, in the following sentences, stress is placed on the emphatic syllables (shown in BLOCK letters): "A SLUMB-er did my SPI-rit SEAL" "PUFFS, POW-der, PATCH-es, BI-ble, BI-llet DOUX" In prosodic morphology, the word is broken into syllables and stress rules are applied for pronunciation. In metrical composition too there is a conscious patterning of stressed and unstressed syllables. Stress is not solely a matter of loudness; it is also related to pitch and duration. Strength of the syllable also depends also on the weak and strong form of the syllable or word. Stress pattern also changes according to the grammatical use of the word. For example, in a word like "water" there are two Could /kud/ /kəd/ Does /dʒz/ /dəz/, /z/, /s/ Do /du:/ /du/, /də/ Had /hæd/ /həd/, /əd/, /d/ Has /hæz/ /həz/, /əz/, /z/, /s/ Have /hæv/ /həv/, /əv/, /v/ Is /iz/ /z/, /s/ Must /mʌst/ /məst/, /məs/ Shall /ʃæl/ /ʃel/, /ʃl/ Was /wʌz/ /wʃz/ Were /wə:/ /wə/ Will /wil/ /l/ Would /wud/ /əd/, /d/ At /æt/ /ət/ To /tu:/ /tu/ before a vowel /tə/ before a consonant And /ænd/ /ənd/, /nd/, /ən/ But /bʌt/ /bət/

syllables /wʌ]:-tc/. This di-syllabic word can be used in a sentence as both noun and verb. When the word is used as noun the accent is placed on the first syllable; when the same word is used as verb, -ed or -ing has to be added to the root.

15.7 Rhythm and Metrical Structure

Various degrees of stress are assigned to the syllables of words by means of the repeated application of rules. These stress rules may be categorised as lexical stress, stress based on compounding of words, and nuclear stress rules. In poetry or lyrical composition, the stress pattern may be governed by metrical rules. Stress is governed by the following rules:(a) "lexical" - stress rule based on the item and its grammatical function; (b)"compound" - stress rule based on the process of compound word- formation; (c) "nuclear" - stress rule based on the nuclear word; (d) "metrical" - stress rule based on metre and rhythm in poetry or lyric. Words are classified into two broad groupings: lexical category (typically nouns, verbs, adjectives and adverbs) and words of a functional, or grammatical, category (such as articles, conjunctions, prepositions and pronouns). Important words that contain independent meaning and function as noun, verb, adjective and adverb, usually receive stress, while the parts of speech that are functional and grammatically obligatory, such as pronoun, conjunction, preposition and interjection, used in sentences, may receive contrastive stress and emphatic stress, as required in a context. The placement of primary stresses in English words is calculated by counting from the end of the word. The primary stress in a word falls on either the final syllable of the word, the penultimate syllable or the antepenultimate syllable. Di-syllabic English words receive stress usually on the first syllable. Rhythm in poetry is based on metrical stress. In metrical composition, stress- timed rhythm is based on fixed stress-rules as well as free stress shift based on the metrical requirement. Usually in lyrical compositions, the stresses fall at roughly regular intervals in a line. Any line of a sonnet has ten syllables usually composed in a proper metrical pattern of five pairs of unstressed and stressed syllables. This pattern in prosody is called lambic. Similarly, the Trochaic pattern in poetry refers to the pairing of stressed and unstressed syllables. In metrical phonology, a stress-foot refers to a string containing a stressed syllable as its first element, followed unstressed syllables. The most prominent element in the stress foot is called the head. Therefore, foot-division[|] is made to mark the underlying metrical division.

15.8 Rhythm, Rhyme and Length

In English verse we can often see an extensive sequence of unstressed syllables, while an optimal rhythmic structure has one strong syllable alternating with one weak syllable. Such optimal rhythmic structures are often referred to as eurhythmic structures. Foot structures with more than one weak syllable are less eurhythmic and less optimal. Metre and stress are inter-related. The length of the syllables in a line, however, depends on the rhythmic pattern. The rhythm and rhyme are interrelated and constitute an important stylistic technique in poems. For example, take the following lines: In the room the women come and go Talking of Michelangelo. In these lines of Eliot's poem, "The Love Song of J. Alfred Prufrock", the length of the vowels that form the nucleus of the syllables, vary according to the rhythm. ||in ðcru:m| ðcwi | -mink m| cngcu|| ||t]:ki | cvmai | -kcl-æn | - i-lcu|| The rhymed vowels at the end, forming the couplet, are longer than the phonemes at the end of unrhymed lines in the poem. In some cases, the metrical pattern influences the rhythm. Let us see the metrical pattern of a few lines of Eliot's poem "Gerontion": Hère I |àm, an |òldmàn | in a | drýmònth, Bèing | read tò |by abòy,| wàiting| for raìn. Ì was| nèither |àt the | hòtgàtes Nor fòught | in the | warm ràin Nor knèe |dèep in | the salt |màrsh, heàv| ing a |cùtlass. Bìtten| by flìes, |foùght. Although the dominant metre of "Gerontion" approximates a trochaic pentameter, the lines contain several instances of spondees and occasional pyrrhics, thereby manipulating the tone and rhythm.While the metrical pattern approximates a trochaic meter, the lines are interspersed with spondees. There is also a variation of foot-type and number of feet per line. This gives the lines a rhythm reflective of conversational tone or "conversational rhythm." The length of lines also contributes to the rhythm. Rhythm refers to the time-

NSOU PGEL-3 194 based distribution of elements or units of language. In several poems we find lines composed in dimeter, trimeter, tetrameter, pentameter and hexameter. While reading the poems, the readers develop a rhythm of speech according to the line length. In case of irregular line-length in any stanza, the rhythm is disrupted or modified, as in the last lines of each stanza of Keats's ballad "La Belle Dame Sans Merci": O what can ail thee, knight-at-arms, /z/=a [Iambic tetrameter] Alone and palely loitering? / /=b [Iambic tetrameter] The sedge has withered from the lake, /k/=c [Iambic tetrameter] And no birds sing. / /=b[Iambic dimeter] The first three lines of this passage approximate a tetrameter that allow the reader to fall into a fairly steady, conversational rhythm. When the reader reaches the fourth dimeter line, the short line breaks the rhythm, and there is a sense of abrupt ending. The emotional sterility and frozen desire are foregrounded through this rhythmic shift. 15.9 Summary Through this discussion you are made familiar with the rhythm of English - an important supra-segmental feature of English language and in English poetry. Accent, stress and rhythm are closely related as are metrical structure and rhythm. The relationship between the length of line in poetry, rhyme scheme and prosodic feet has also been analysed. 15.10 Review Questions Long Questions (270 words) 1. Write a note on the rhythm of English. 2. What are weak and strong forms of words? Give suitable examples. 3. What is metre? What is the relationship between rhyme and metre? 4. What is stress? How is stress related to rhythm? Discuss with suitable examples. 5. How would you define isochronism? Would you consider English rhythm influenced by isochronism? Medium Length Questions (180 words) 1. How is the length of the nucleus of a syllable related to the rhythm?

NSOU PGEL-3 195 2. Define rhyme. 8. What is Iambic foot? 9. How does the length of a syllable related to rhythm? 10. Give strong and weak forms of the following words: should, would, but, am, the, to, the, and, does. 15.11 References and Recommended Text for Study

NSOU PGEL-3 196 Unit 16 Strategies for Overcoming Speech Problems 16.1 Introduction 16.2 Objectives 16.3 Speech, Language and Listening 16.4 Identification of Speech and Listening Problems 16.5 Common Pronunciation Problems 16.6 Common Voice Problems 16.7 Speech and Language Disorder 16.8 Summary 16.9 Sample Questions 16.10 References and Recommended Books for Study 16.1 Introduction This unit covers an important aspect of Applied Linguistics and English Language Teaching that is related to strategies of overcoming speech problems. In modern linguistics, listening and speech are given more importance than reading and writing skills. Several problems of verbal communication have been identified in this unit. Speech problems include common pronunciation and voice problems.By understanding the origin and nature of these problems, some strategies for overcoming speech problems may be adopted. Such strategies for overcoming speech problems are discussed in detail in this unit. 16.2 Objectives At the end of going through this unit, the learners will be able to: a. Become aware of different types of speech problems learners may have b. Diagnose the problems and find their causes c. Help learners with speech problems to overcome the same d. Device learning strategies for normal learners to learn without encountering problems. 196

NSOU PGEL-3 197 16.3 Speech, Language and Listening According to Dorit Sasson, "acquiring speaking proficiency is one of the hardest things for ELL [English language learner] students to achieve" (24). Production of speech and reception of speech make effective verbal communication a possibility. Student of ESL are more challenged than the learners of English as first language as they are taught to achieve higher competencies in reading and writing skills, often neglecting listening and speaking skills. Spoken language should be the main area of competence in the language curriculum. The ESL learners gain proficiency in interpersonal communication but they need to learn the academic and disciplinary language too and gain linguistic proficiency. Auditory phonetics deals with listening skills, such as listening to speech sounds and speech perception. It is thus concerned with both segmental and supra-segmental aspects of speech. Proper recognition of the speech sound by the auditory organs is essential for effective listening. In English language learning sessions, dictation method is often used. Our ears are capable of registering audible sounds and proper reception of verbal sound is essential to follow classroom interaction. Usually, practical phonetic training is used as an essential foundation for proper reception of verbal sounds from the primary stage of language learning. Along with segmental features, emphasis is also placed on the supra-segmental features such as pitch, stress, intonation and rhythm. Students are made familiar with syllable division in order to learn the phonological structure of polysyllabic words. Morphophonemic changes are also there in English language, and in the spoken form English language does not always match with the alphabetic form of words. Listening skill is carefully orchestrated with speaking skills. Articulatory phonetics deals with the production and use of speech sound for verbal communication and involves both segmental and supra-segmental phonology. In the production of speech sounds, the organs of speech located in the respiratory, phonatory and articulatory systems are involved. Along with such physiological factors that transform the aerodynamic energy of the pulmonic egressive air-stream into acoustic energy in the form of articulation, some neurological aspects are also involved. As sounds are produced by expelling air from the lungs, the distinctive phonemes are produced by the movement of the active articulators toward the passive articulators. Any physiological challenge in the production of speech sounds is overcome by effective phonetic training.

NSOU PGEL-3 198 16.4 Identification of Speech and Listening Problems The problems of teaching the pronunciation of any second language, such as English, involve both phonetic and phonological approaches. In order to identify problems in listening and speaking, it is important to consider the following factors: biological, socio-cultural, pedagogical, personality trait, and the role of the native language. Once the problems are identified keeping these factors in mind, it is easier to adopt strategies to overcome these problems. Teaching pronunciation to ESL learners is done primarily through pronunciation drills. Yet it becomes difficult for the learners, especially of higher age-groups, to eradicate all traces of the learner's native tongue. Thus, by considering the above-mentioned linguistic factors, the acquisition of the sound system of any second language can be made easier. Let us first identify the problems in speech arising out of different factors. Language learning depends on biological factors such as the age of the learner. Languages are learnt differently by children and adult learners and linguistic competence depends on the maturation of the brain. While adult learners of English as a second language face difficulty in acquiring native-like pronunciation in English, the child learner has a better acquisition power and adaptability. However, the degree of pronunciation accuracy varies from individual to individual due to other factors as well. Certain socio-cultural factors determine the success-rate in achieving native-like pronunciation. It has been found that the more strongly the second language learners identify themselves with the culture of members of the second language, the more likely they are to learn proper pronunciation. In most cases, however, the learners seek to preserve their own linguistic and cultural identities. Any foreign accent is seen as a marker of foreign identity. Adult speakers of ESL rarely lose their native accent in order to preserve their socio-cultural identity. When native English accent is accepted positively by members of society in which the learners live, it becomes easier to acquire linguistic proficiency. ESL teachers must be aware of the way in which these socio-cultural factors influence their students in order to identify the root cause of speech problems. In order to make their English more comprehensible, the students may be influenced by these socio-cultural factors. The learners of ESL may not be necessarily be interested in sounding like native-speakers of English. It is therefore important to set realistic goals in ESL class and adopt appropriate strategies for overcoming speech problems. The personality of the learner may also affect the acquisition of the sound system of a second language. Learners who are more extroverts, out-spoken, confident, and willing to learn the language with greater motivation acquire linguistic speaking skills

NSOU PGEL-3 199 better than those for whom ESL is just a course of study. Some learners have more opportunities to practise their pronunciation of the second language while others may not have the opportunity to use English in daily life and interaction. The interference of the native language or mother tongue is another factor that determines proper acquisition of second language. Indian speakers of English are more familiar with the syllable-timed language that allows a stress pattern entirely different from a stress- timed language like English. All the syllables in English are not stressed and there is an equal time gap between stressed syllables in connected speech. Even Indian languages contain a larger inventory of sounds than English. The supra-segmental features, such as syllabic-structure, stress-pattern, intonation, pitch, etc., are also different. Identification of pronunciation errors of learners of English as a second language must take into account such linguistic features of the first language. 16.5 Common Pronunciation Problems Among the common problems of speech and pronunciation, some are related to the sound system of the native language. This interference, impact or influence of the mother tongue or first language may give rise to the following problems: a) Some difficulties an ESL learner encounters are speech sounds that are not part of the sound inventory of his/her native language (mother tongue). As the organs of speech and articulators are more attuned to produce the sounds of first language, the speaker may find it difficult to produce new sounds. b) Some difficulties may arise because in connected speech there are certain rules to combine the phonemes into words and the words into speech. The rule of combination may vary from language to language. This rarely happens when the rules of combination are same in both the languages. c) Some difficulties may arise due to differences in the supra-segmental features of two languages, such as stress-pattern, pitch, intonation, etc. these supra- segmental features contribute to the overall rhythm and melody of any language.The supra-segmental features of the native language may get transferred to English. This might affect the receptive and productive quality of speech sounds. d) Some difficulties may arise due to the differences in the spelling system and pronunciation in English, a feature that may not be present in the local or first language. Students repeat a mispronounced word and any forced rectification may prove futile.

NSOU PGEL-3 200 e) Some difficulties may arise when the words are heard through the sound system of the native language rather than through the actual sounds of English. A learner is able to hear the second language through a 'filter' of the sound system of the native language. There are other types of problems in developing the language skill of speaking, particularly in the areas of fluency. Second-language acquisition does not usually depend on natural language use. The ELLs are more inclined to learn the language through formal instruction and try to imitate a native speaker of English. In most cases classroom instructional strategies help the learners to develop fluency and accuracy. Teachers may introduce accuracy-aimed activities to enhance fluency and accuracy in speech. Other strategies may be adopted by the teacher to address speech problems. In CLT or Communicative Language Teaching most of these problems are addressed. One of the major obstacles and challenges that is related to Speaking skill is the identification of errors, error-analysis and error correction. Interactive sessions and activity-based learning may be encouraged for practice in conversation, elocution, group discussion or dialogues. Pair work may be encouraged and the students may be asked converse through role-playing. For, example, Student A may play the role of an interviewer and Student B may be asked to play the role of an interviewee. Interrogation sessions may be conducted and questions may be used to promote both fluency and accuracy in speech. Just a Minute (JAM), a language game, in which the participant is asked to speak in English on a given topic, without any pause, repetition of words, or using native language, for a minute, may be played for increasing fluency and accuracy. Students must be made aware of aspects of their pronunciation and given the opportunity to practice speaking in proper English. The learners should be encouraged to use English in everyday speech. 16.6 Common Voice Problems Some speech problems are also related to other supra-segmental features of phonology like stress, pitch, loudness, intonation and rhythm. Common voice problems faced by ESL learners are related to pitch, intonation and voice modulation. The tempo and speed of speech is different than the native speaker of English. Professional voice users, such as news broadcasters, RJs, radio announcers and public speakers train themselves by overcoming these speech problems. In some cases, even the perfectly normal pronunciations in everyday speech undergo certain changes in media communication. In some cases when the speaker gets irritated or angry, some sounds

NSOU PGEL-3 201 are left out. If proper voice modulation is not done, there may be lack of clarity of what is said. 16.7 Speech and Language Disorder The following chart identifies and describes major speech and language disorder and offers some remedial strategies to overcome these problems: Disorder Description How to Overcome the problem Apraxia Apraxia is a neurological speech disorder that affects a child's ability to plan, execute, and sequence the precise series of movements of the tongue, jaw, lips, and palate that are necessary for intelligible speech. This requires frequent and intensive one-on-one therapy in order to make speech automatic under the guidance of speech-language pathologist (SLP). Language drills include a lot of repetition of sounds, starting with syllables and then progressing to words and sentences, to improve the muscle coordination and sequencing necessary for speech. Articulation Disorders Articulation disorder is related to trouble with the physical production of individual speech sounds that depends on movement of the tongue, lips, and teeth. A speaker attempts to make the correct sound but pronounces it incorrectly. Speech therapy for articulation problems involves proper guidance to produce sounds correctly. Speech therapists help the speaker to approximate pronunciation of a word to the rectify pronunciation. Auditory Processing Disorder Auditory Processing Disorder (APD) refers to difficulty in listening and processing although the hearing faculty functions well. The problem includes receiving, analysing, organizing, storing, retrieving, and using information they hear. The brain is unable to process auditory information properly and APD impedes understanding speech and developing language. A Speech Therapist works on modification of the listening environment to reduce noise and enhance sound, tries to develop listening abilities such as decoding speech and improving auditory memory. In order to overcome APD problem, these strategies help the learner to address language processing problem.

NSOU PGEL-3 202 Dysarthria Dysarthria, a neurological speech disorder, limits a learner's ability to use the muscles required for speech, such as lips, tongue, soft palate, larynx, and face. Due to oral-motor weakness, the speech is slurred or mumbled. A speech-language pathologist works to strengthen the oral muscles. In severe case of speech intelligibly, an augmentative communication device may be required. Dysfluency or Stuttering Dysfluency or stuttering refers to a condition when the natural flow of speech is interrupted. Most of the speakers experience some degree of dysfluency as part of the normal developmental process of learning language, usually between two and five years of age. As children mature, they improve their communication skills. In some cases, muscles of lips, jaw, or neck become tense. There may be tremors of the lips, jaw, or tongue. Dysfluency increases in stressful situations. For overcoming this problem, a speech therapist may adopt indirect and direct strategies. In indirect therapy, the focus is on teaching the parents appropriate ways of interacting with their child so as to minimize any stuttering. Parents and teachers are advised to speak at a slow pace, to wait a few seconds for the learner to speak and allow their child to finish speaking without interruption. In direct therapy, treatment focuses on teaching language through easier speaking styles. Expressive Language Disorder or Receptive Language Disorder This disorder manifests itself in either expressive or receptive language difficulties. A speech pathologist adopts hands- on activities and practical word drills to create opportunities for the learner to listen and respond. An English teacher should design specific program to improve the skill of the learner. Phonological Disorders This phonological disorder is due to a child applying an incorrect rule of language. Students with this disorder are capable of pronouncing appropriate phonemes but they fail to fit the sounds together and unable to apply morphophonemic rules of proper articulation. They have a tendency to simplify words. An ELT expert or speech therapist tries to make the learner aware of the correct phonological rules and uses oral drill to address the problem. him with these patterns. For example, the learner is offered minimal pairs of rhyming or chiming words, like "stock/block"

NSOU PGEL-3 203 Semantic Pragmatic Language Disorder (SPD) This is a language disorder usually related to communication diffi- culties of learners with Asperger syndrome and autism. It is also sometimes related to nonverbal learning disability, a neuro- psychological disorder associated with difficulty in reading nonverbal communication. Semantics is related to understanding the meaning of words, phrases, and sentences and Pragmatics is related to the practical use of words in speech in a social setting for effective communication. Some supra-segmental features like the use of stress, appropriate tone of voice, intonation, etc., are also included in this type of speech problem. The learner struggles with the meaning of language in a social context, face difficulty in understanding the literal meaning of words and sentences, abstract concepts, words about emotions, idioms, and humour. The language teacher or speech therapist focuses on conversational skills by creating a realistic social situation for speech act. Sessions are moderated by the therapist to develop proficiency of using common vocabulary for ordinary conversation. Team work, pair- work, drama is used for helping the learners to read body language, interpret words and use words to express thought. among other crucial social skills. Attention Deficit or Hyperactivity Disorder Attention Deficit/Hyperactivity Disorder (ADHD) is a neurobiological disorder characterized by inattention, impulsivity, and hyperactivity. Speech problems are sometimes due to ADHD, such as poor auditory memory, lack of attention, logical sequencing of information, etc. The learners with ADHD fail to attend to the appropriate information, interrupt others, speak out of turn, struggle with the rules of social language, and face difficulty telling a story. Proper attention may be given and task- based language learning may be devised for the students. Group task, group discussion and drama may be included in the practical sessions.

NSOU PGEL-3 204 Autistic Spectrum Disorders Autism, a developmental disability, a neurological disorder that affects the normal functioning of the brain. Learners face difficulties in social interaction, verbal and nonverbal communication, and role playing. The problems in speech include delay in language processing, difficulty in understanding the meaning of words and using the words in speech with proper intonation. Other problems that are to be addressed include repetition of words, use of stock phrases, poor attention span, unresponsiveness, trouble with the rules of social language. In some cases, the learners are specially gifted with impressive vocabulary, fluency, articulation, but only in areas of their interest. Such problems are to be addressed on case-to-case basis by a trained speech therapist. Cognitive and Intellectual Disabilities Cognitive and intellectual disabilities include significant limitations in intellectual functioning and adaptive linguistic behaviour - the basic skill necessary for reception and expression of language. As the learners take longer to learn to speak and have trouble speaking, face difficulty in remembering things or understanding of social rules, special care should be taken by the speech therapist and language teacher. Down Syndrome Down syndrome, a genetic disorder, involves a combination of physical, intellectual, and developmental delays and difficulties. There may be a moderate hearing loss, delay in speech, receptive skills more developed than expressive skills, inhibition, language deficits and may face difficulty being understood by others. The learner might speak in a distinct, often hoarse-sounding, voice, or even speak with a stutter. A language teacher with proper training in special education or a qualified speech therapist is usually involved to address speech problems arising out of Down syndrome.

NSOU PGEL-3 205 Bilingualism Bilingualism refers to the use of two or more languages in speech through code-switching and code- mixing. Usually, learners in any multilingual society use bilingualism for verbal communication. There is no evidence that hearing more than one language impedes speech and language development. In ELT classroom bilingualism should be avoided in order to reduce interference of other languages in learning process. 16.8 Summary Through this discussion the students are made familiar with the definitions of speech, language and listening. The unit dealt with identification of speech and listening Problems faced by English Language Learners (ELL). The most common problem faced by the speakers is related to pronunciation. Other common voice problems have also been identified and discussed. English language Teaching for students with special need has also been covered. Major types of speech and language disorder have been identified, and some remedial strategies that are adopted by speech therapist have been discussed. 16.9 Sample Questions Long Questions 1. Write a note on problems of listening and speaking face by learners of English as Second Language (ESL). 2. What is speech? Identify different features of connected speech. 3. Write a note the common problems in language processing and speech. Suggest some remedial strategies to overcome these problems. 4. What is voice problem? Suggest some strategies to overcome voice problems. 5. Identify five major types of speech and language disorder and suggest some remedial measures for students with special needs. Medium Length Questions: 1. What are the basic components of speech? 2. Write a short note speech disorder. 3. What is stuttering? 4. Define voice disorders with suitable examples.

NSOU PGEL-3 206 10. Can bilingualism affect the process of language learning and cause speech problems? 11. What is articulatory disorder? Suggest some remedial measures. 16.10 References and Recommended Text for Study

PREFACE In the curricular structure introduced by the University for the students of Post Graduate degree programme, the opportunity to pursue post Graduate course in a subject is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that this University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post Graduate level in different subjects are prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholarship is indispensible for a work on this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing and devising of a proper layout of the materials. Practically speaking, their role amounts to an all-out involvement in layout of the materials and an involvement in 'invisible teaching', as well. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier will it be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms throughout the counseling sessions regularly available at the network of study centers set up by the University. Needless to add, a great deal of these efforts is still experimental-in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. PGEL-O4 Introduction to Linguistics
NSOU PGEL-4 208

NSOU PGEL-4 209 Module 1 : Principles of Language and Linguistics as Science-1 Unit 1 What is Language? 1.1 Introduction 1.2 Objectives 1.3 Language- How did it came into existence 1.4 Language and Speech 1.5 Language as a system 1.6 Functions of Language 1.7 Definitions of Language 1.8 Language Use 1.9 Summary 1.10 Review Questions 1.11 References and Reading List 1.1 Introduction Language is a finished product of organized combination of sounds in relation to the kind of object they refer to in a given situation. These sound systems and their combination, to produce a word or set of words into a phrase or a sentence, vary from one language to another. Humans possess certain physical features that have enabled them develop the capacity for speech, unlike, apes and/or other primates, who have social calls and grunts but, cannot produce speech. Human speech is unique to the species Homo sapiens. 1.2
Objectives

| 79% | **MATCHING BLOCK 3/74** | **SA** | PGELT 5 _ 6 (1-400).pdf (D165254851) |

At the end of this unit the learners would be able to Understand the nature of language

Compare and contrast the various forms of language Analyse a context and identify the purpose of language use Apply acquired knowledge in their own situations 209
NSOU PGEL-4 210 1.3 Language : How did it came into existence? Looking at the following images what idea/s strikes you? https://images.app.goo.gl/jpPWGnHTJpjkdP1k6 Fig 1.0 http://images.app.goo.gl/TxN9PepsiQ6CCTxJ9 Fig: 1.1 You have guessed it right. But, how did you get the things right or even how do others get a feel of your answers as acceptable one? Nothing is mentioned thereof yet, while communication took place. Figure 1.0 indicates that some exchange of information and/or ideas is going between two persons and that, they take place face-to-face. Nothing has been specified but some meanings are created. Figure 1.1 is indicative of a civilization that existed at a particular age and time. Even without the knowledge of the particularity of the civilization one can assume that the figure talks of some civilization that existed in some remote past. Thus, these figures are symbols and a sign which creates meaning to a reader and becomes a language of communication.
NSOU PGEL-4 211 Nothing is specified. But, then how is it understood? Ordering of speech sounds in an acceptable order gives rise to form phrases which further create a synergy to construct a final sentence. Language at this is the creation of an abstract system at the surface structure until it becomes a text and reaches to a reader when some interaction with the system takes place and meaning and/or interpretations are created; interpretations may vary from reader to reader which may not be or perhaps, will not be, alike to that of the original work (or ideas) of the writer. We then understand that there is a play of certain factors and their interrelation enables one to understand that an amount of information has been shared between people, or that conveyed by images. This conveying of information is what we generally term as the role of language in the creation of meaning from the exchanges of information between two or more people or the respective meaning created and/ or interpreted from any image by individuals in a given context. Task 1: How would it have been if there was no communication and hence, no language at all? Pause and think : 1. Do you think language has a role in the progress of human civilization? Support your view. Your views:
_____
_____ Ask any professional speaker or a writer, and they will confirm that language matters. Even in our day-to-day life we understand the relevance of language through various effects that it leaves on us at many crossroads of life. Vast stores of memorable lines from great speakers, orators and writers have left an indelible mark in our lives and/or guide us in many cases. Look at the following quotes: "Education is the manifestation of perfection already in man." Swami Vivekananda

NSOU PGEL-4 212 "The only thing we have to fear is fear itself." Franklin Delano Roosevelt How was the meaning created from the words which were mere signs and how did their philosophies influence us? Think of the famous speech by Swami Vivekananda that moulded the people of all religions gathered in Chicago or think of any speeches that may have influenced your action. Such is the effect of language on us. According to most religious beliefs, there appears to be a divine source that provides human with the gift of language to express themselves. On the other hand, studies reveal that spoken language developed between 100,000 and 50,000 years ago, much before the written language came into existence (5000 years ago). They remain, however, speculations. No direct evidence or artefacts can be found in relation to the origins of human speech of our distant ancestors. A quite interesting view of the beginnings of language could be traced back to the use of natural sounds by our ancestors to communicate with each other. Originally, they moved in smaller groups and supposedly, required limited number of signals (through sounds) for communication. These sounds may have represented various kinds of emotion and presumably, interjections like Ah!, Ooh!, Yuck! etc. or making a caw-caw sound looking at a flying creature, may have been the root cause of speech production in courses of time. 1.4 Language and Speech Before we proceed further, we need to make our understanding clear in relation to the use of the terms "language" and "speech". "Language" is the method to use the words in a structured way to create meaning from the interactions that take place between two or more people or between a person and the environment (or object) at a given place, and certain point of time. It is a human phenomenon that includes the entire human potential for speech and writing, both at mental and physical levels. Dictionary defines "Speech" as the ability to express thoughts and feelings by articulating sounds by using certain body mechanisms. It is the ability to speak and express one's thoughts. With the increase of groups their needs and activities also increased and thus, gradually the system of sounds (signals) became more complex. The need for vocal signals and man's instinctive response to external stimuli was realized. There are several speculations about the origin of language though, much could not be known about the origin of human language because of the absence of direct physical evidence.

NSOU PGEL-4 213 1.5 Language as a system Scientists have pointed out that language is connected with human brain. All the physical parts that enable sound production are in control of the human brain. The brain is divided into two parts - right and left hemispheres. Each of the two hemispheres have specialized functions. Functions that control motor movements in activities like speaking or using tools are largely left-hemisphere function. Language is a product of the process of evolution of a child's linguistic ability irrespective of whether the child is acquiring Bengali, Hindi or English language system. 'Bengali', 'Hindi' or 'English' are the various labels used to refer to abstractions. The actual manifestation of language that we see or hear in terms of individual utterances (or speaking) is called parole. And, the abstract system behind the manifestation shared by people in a society is called the langue. The abstract system does not exist all by itself but, is rather constructed from its manifestations. These manifestations take place through signs that could be spoken or written. Language as a system is exhibited by two types of relationships - linear arrangement or syntagmatic and vertical or paradigmatic arrangement. Syntagmatic arrangement is the single horizontal arrangement of sounds, letters, words, phrases, sentences. Paradigmatic arrangement is the vertical arrangement of sounds, letters, words etc. Word-classes like nouns, verbs, adjectives and adverbs form paradigms. However, it is not just a logical system but is also a psychological and social phenomenon. And, the meanings of an utterance (sentence, clause, phrase, word) do not depend entirely on its form but also on its function in a setting or context. The nature of this functioning in a setting is crucial in our understanding of language and its use. Various factors influence the use of language and its creation of meaning applicable in the concept of 'setting' for language use. 'Setting' in this sense could imply: Relationship of participants -between the speaker/s and the hearer/s, occupation, gender and the societal hierarchy associated with relationships, Participation mode - face-to-face, telephone, interview, group or individual, group type and group size, Role of participants, Location or setting - office, classroom, home, social event or gathering, Medium - spoken or written,

NSOU PGEL-4 214 Kind of discourse - political speech, reporting, conversation, Socio-cultural background, Individual differences - beliefs, world knowledge, Linguistic abilities - for comprehension and understanding of heard sentences or reading the written ones, Psychological factors. The concept of language embeds in itself: A purpose, Takes place in a given situation, Two or more people participate, Could be sign languages (Verbal/Non-verbal), Could be images, 'What' of language (language content), 'How' of language (way of articulation). 1.6 Functions of Language We will now quickly take a look through the basic functions of language. According to Geoffrey Leech (1974), there are five main functions of Language. These functions are: Informal functions, i.e., deliver messages, provide new information to the listeners, describe things, Expressive functions, i.e., expresses desires and feelings but do not give any new information, Directive functions, i.e., induce actions and reactions, Affective functions, i.e., power to influence others, and Phatic functions, i.e., maintain social relationships, begin or continue a conversation (desire to talk). The question that now arises is how meanings are assigned to words that are used in a language. To answer this, let us derive it deductively. Words consist of sounds (used orally in activities like speaking) and shapes (or signs and symbols) used in writing and the agreed-upon interdependence create meanings based in concepts,

NSOU PGEL-4 215 ideas. Again, this creation of meaning could be at two levels - denotative and connotative. Here, on a brief note, denotative means specific meaning associated with a word. E.g. the word 'evidence' has a meaning of its own. It means available facts or information which may be true or false. It does not signify any array of meanings. And, the term connotative means an idea suggested by or associated with a word. For example; the word 'class' can evoke many other ideas. It can reflect an array of signifiers, viz. a classroom, or social stratum, set or category and so on. In the context of post-structuralism, creation of meaning is not the sole jurisdiction of the speaker or the writer. The speaker or the writer arranges the signs and shapes and composes from their perspective and understanding of a situation while those who listen or read are significantly important in the creation of meaning of the piece of written text or verbal positioning of words. Language finds its expression in different ways: oral, written, audio-visual, non- verbal or Para language expressions and so on. Based on public or private setting meaning is created and/or derived. It thus talks of socio-cultural backdrop against which the language comes into play and exists. Sociolinguistics and Sociology of language are two different concepts in this regard. The focus of the two is different. The former is defined as the study of language in relation to society and the latter is defined as the study of society in relation to language. 1.7 Definitions of Language To define language in concrete terms would, perhaps, be a folly. The concept of language is a composite of many inbuilt sub-domains like signs, symbols, syntactic structures, semantic notions, words or gestures or the psychological, cultural perspectives and so on. It cannot be confined to a single definition nor could all the inherent domains be distinctly capsulated in a single definition. Language could be implying vocal or auditory or para-lingual or written means of expression of human behaviour. Language has life and is in a state of flux. It is in a state of continuous growth because the form of language or the response to a language that existed so long preceded the establishment of a new direction of thought and action. Expectantly, the future of the language form that exists today will likewise have newer dimensions. Consider the following epoch-making definitions of language in the context of their era: Aristotle's (384 BC) definition of language in the words of Richard McKeon (1946, 193-206), NSOU PGEL-4 216 "...on the background of these considerations of language as natural phenomenon and language as rational instrument, Aristotle analyses the arts of language in terms of symbolic properties and linguistic structures. Logic, rhetoric and poetic are none of them purely "verbal arts" in Aristotle's philosophy; are based on the natural properties of words, which are determined by physiological organs and physical medium, as well as on the conventional meanings which are determined by human reason and desire. They take into account the purposes for which men use language as reflected in the intentions of the speaker, the susceptibilities of the audience addressed, and the nature of the communications for which it is serves as medium, and they treat. Finally, of discourse in its various forms and relative to its proper parts. Language, as a natural phenomenon, is part of the subject matter of the sciences - theoretic, practical and productive." Noam Chomsky's definition of language (20th C) Language as conceived of by Chomsky is "a finite set with infinite possibilities" (Chomsky 1957:13). As he further claims, this holds true for all-natural languages since they have "a finite number of phonemes (or letters in its alphabet) and each sentence is representable as a finite sequence of these phonemes (or letters)" (ibid, 13). Thus, a grammar of a language should be thought of

| 100% | **MATCHING BLOCK 4/74** | W |

as "a device of some sort for producing the sentences of the language under analysis" (

ibid, 13). Saussure's definition of language (19th C) Saussure defines language as a structured system of signs and examines the relationship between speech and evolution of language because language, as he says,

| 65% | **MATCHING BLOCK 5/74** | W |

is the social manifestation of speech and it evolves from the activity of speech. Language is

considered to be a connecting link between human thought and sound and is expressed (spoken language) by means of sound. In order to be expressed in an organized pattern sounds have to be articulated for the language to occur and this requires the patterning of sounds in terms of some structure. This structure could be constituted as an abstract system of rules called langue and the expressions of thought or speech acts (the activity of speaking) or articulation of signs by writing called parole. Saussure further contended that language must be considered as a social phenomenon, a structured system that can be viewed synchronically (as it exists at any particular time) and diachronically (as it changes in the course of time). Further, language is not only a logical system: it is as much psychological as social because it operates in a situation at a given point of time to effectuate a purpose. It is thus context bound. In our next section we will take a quick look through the concept that language is context bound.

NSOU PGEL-4 217 Task 2 In this unit, we briefly discussed the notions of language and some definitions by linguists and scholars followed by a conceptual framework on language and context. 1. Look at the definitions of language in section 1.7. What differences do you notice in the definitions of language provided by the linguists and scholars? 2. Based on your understanding of the definitions covered in this unit, can you write the definition of language of your own and language functioning in a context? Your response: 1.8 Language Use Language is context bound Can you think of some situations or contexts where you use the language as in the: I.Scope of formal or semi-formal approach 1. 2. 3. 4. 5. II. Scope of informal approach 1. 2. 3. 4. 5. Now, having identified the situations above can you analyse the reasons that made you use the same language in different ways (formal or informal) and what is the need for doing so? State at least three reasons for your choices made above (for both I and II) in the space given below:

NSOU PGEL-4 218 Reasons for formal or semi-formal approach 1. 2. 3. Reasons for informal approach 1. 2. 3. We, now, fairly understand that language does not exist on its own. It needs a context or a situation to function as a form or as a response to the situation under which it operates. In this, it needs to be mentioned that the concept of language and its process of creation of meaning have also been changing with the changing time and civilization and its needs. What do we understand by 'context' of a language then? Let us therefore examine in some more detail how the notion of context of a language has been used. Language is the medium to express one's thoughts and feelings in a situation within a society and its agreed norms where the language would function. The very notion of 'context' suggests its relation to text, discourse and language use. Again, the 'context' could also refer to the 'linguistic context' also known as 'co-text', the 'physical context' or the 'social context' of the word, the sentences or the symbols used in a text or a discourse. The communicative and symbolic functions of language variation and use are fundamental to the understanding of human linguistic production and comprehension. Think of the word 'bank'. It is a homonym with more than one meaning: a) the land alongside or sloping down to a river or lake (as noun). b) heap (a substance) into a mass or mound (as verb). c) tilt or cause to tilt sideways in making a turn (as verb) It is, thus, the linguistic context (co-text) of the word. What then is the physical context and how do we interpret or make meaning out of the sign or word? If the same word 'bank' is written on the wall of a building, the physical location will influence our interpretation. The relevant context is our mental representation of those aspects of a thing which exists physically and that which we use in deriving a meaning or interpreting it. This becomes the physical context of a word. And, social

NSOU PGEL-4 219 context is the situation, at a particular time and place and with reference to the cultural belief, traditions and acceptable code of a specific community where we encounter linguistic expressions. Compare the concepts of Karnataka Bank to that of Bank of Maharashtra. They abide by RBI rules no doubt but, 'Maharashtra' and 'Karnataka' have some of their associated images which get involved in our interpretations. While trying to understand the notion of 'context' a brief focus on the much prided theory of context; Systematic Functional Linguistics (SFL) founded by M. A. K. Halliday is also essential. SFL studies language through its meaning or its function. For Halliday, language is not to be studied in terms of deep structure but, according to the actual sentences used for functional purposes. He was more interested in understanding the (writer's) purpose in writing the sentence. Contrarily, Chomsky was way ahead and was more interested into why the structure of a language exists the way it is. In short, Chomsky considered form (structure) as independent of function and meaning, whereas, Halliday believed that function and meaning helps shape the form (structure) of a language. In the other case, i.e. in oral communication, there are aspects of meaning that depend more on context and the communicative intentions used by speakers which shapes the form of the content. It is not solely based on the words or context but, also on the body language used (or produced) during (oral) communication. Our understanding of what we read or hear could also have a bearing of some pre-existing knowledge of the sign that the writer/speaker intends to communicate or be communicated from their reading or listening of the sign/s or word/s. Thus, we can understand the influence of 'context' and functioning of language in a context. 1.9 Summary Humankind is blessed with the gift of expressing through language and all other species also have their ways of communication. This leads us to the ideation of how are these two terms related to each other or, are they inclusive or exclusive of each other? Does language/communication function only through spoken medium? There are myriads of such age-old questions and curiosities to understand if the expression of language is a biological process or psychological or social. Associated with it are investigations on how and when were language and/or communication initiated on earth. All of these are cooperation networks and how do they function in a given society and how are meanings and responses created or have sustained through the ages or will they continue doing so? The unit attempts to look into some of these

NSOU PGEL-4 220 aspects with an analytical perspective and understand their functioning vis-à-vis-à-vis related determinants. As a reader you can pause and think on your own while reading, understand in your respective situation/s in accordance to your experiences gathered and actively participate in further development of ideas and raise questions that research aims at. 1.10 Review Questions Look at the following images and think critically on the questions that follow: 1 2 (A) (B) Discussion Topics: 1. What does the sign (A) mean? i. You may park your heated attendant here. ii. Parking will be carried out by an attendant who has been heated. iii. The garage is heated and parking is available. iv. Heated area with attendant. v. You may park here, an attendant is available and the parking garage is heated. 2. The meaning (sense) of a word is: i. What it refers to? ii. What it sounds like?

NSOU PGEL-4 221 iii. What it connotes? iv. What it co-occurs with? v. None of the above. 3. What are your views on how language originated? 4. Why do languages have different words in different languages for the same object? 5. What are the problems one faces in defining a language? 6. What are different aspects of language? 7. How do we understand Parole and Langue as opposed to Competence and Performance? 8. What are language functions? 9. What are other possible means of communication without using language? 10. Do you believe language is a divine gift to the human beings? 1.10 References and Reading List 1. Varshney, R

In this unit, we will know about the origin of language and how it has shaped human civilization based on our knowledge of the surroundings. In this unit, we will also learn some concepts used in language learning and language use. 2.2

| 82% | **MATCHING BLOCK 6/74** | SA | PGLT 3 Full Book Final Corrected.pdf (D165254858) |

Objectives At the end of this unit learners would be able to Understand the

probable sources of origin of human speech production, Develop an understanding of human speech mechanism to identify the process, Be familiar with the basic terms associated in the study of actual speech utterance, Enable the learners to estimate the need for the teaching of correct pronunciation. 223

NSOU PGEL-4 224 2.3 Origin of Language Human beings, unlike the other species, have the ability to use language for the purpose of communication in the society. In this it would be interesting to know how the human capacity for speech originated. Speech is a set of sound signals used via a language (the whole system) of a speech community. Peter F MacNeilage of the Department of Psychology in the University of Texas (1988), in one of his research works, has mentioned the mammalian activities like chewing, licking and sucking. In this unit, we will consider some of those speculations about the sources of human speech. 2.3.1Nature and the natural sounds As we all know, human civilization goes back to two million years when the primitive humans lived only on hunting and gathering. They could not speak or write at that time. But, how did they communicate then, specially, when these nomadic tribes shared spaces with other predators and larger animals. The suggestion is that the primitive men could have created alerts or tried to communicate with each other by means of imitating the sounds that they possibly heard in and around their surroundings. For example, the sounds created by the birds that flew or the snakes or the animals that existed at that point of time to refer to that kind of object. These were the naturally occurring sounds which the primitive men tried to echo and used it to refer to the thing (creature/animal) associated with the sound. This fact that 'all modern languages are production of combination of sounds' seems to support the above theory. This type of view has been called the 'Bow-Wow' theory (of origin of speech). Or, maybe so, it is true that the onomatopoeic words (word that phonetically imitates, resembles, or suggests the sound that it describes) simply echoed natural sounds. On a similar note, from the 'Yo-he-ho' theory we find human noises as another probable source of the origin of human speech. The idea is that in situations that involved several people and it required coordination, say, in lifting and carrying large logs of trees and so on, human sounds that were produced might have had some principled use as they were used within their social life (context) may have developed the capacity for speech. 2.3.2 Neanderthal A speculative theory that states human language emerged from instinctive noises made by humans during physical exertion or while involved in collective rhythmic NSOU PGEL-4 225 labour. They are archaic humans or 'archetypal caveman' with physical features distinct from other creatures that lived in Asia and Africa and were replaced, perhaps, around 24,000 years ago by early modern human population. The name Neanderthal is derived from the German Neander thal or tal or Neander Valley where the fossils of archaic humans were first found. They were characterised by a transition to an upright posture, reconstructed vocal tract, bi-pedal locomotion which are best thought of as partial adaptations and could be thought of as clues that a creature with the features mentioned above has the capacity for speech or may appear to be relevant for speech. However, these do not justify with cent percent accuracy that, they have led to speech production. Again, the positioning of human teeth, unlike those of apes, are better adapted for grinding and chewing and are helpful in making fricative sounds. Likewise, the closeness of the upper and lower lips and the resulting sounds so produced from their stricture are the bilabial sounds. Smaller, thicker or more muscular tongue or lips and upright positioning of teeth are used to shape a variety of sounds inside the oral cavity in the course of human speech production. Similarly, the larynx or human 'voice box' differ significantly from other primates like monkeys. It is considered advantageous in getting extra vocal power. The upright posture of humans moved the head above the spinal cord which led to the lowering of the larynx and creation of a greater cavity called pharynx, above the vocal cords, which enables increased range and clarity of sounds that are produced via the larynx. The human brain is lateralized and is specialized into two hemispheres - left and right - of which the motor movements that are involved in speaking or writing are largely activated by the left hemisphere in most cases. Human brain which is larger than human body is potentially involved in sound production. Language in any of its forms, including the sign language, requires combining and organizing of sounds or signs in specific order or arrangement which is done by the human brain, unlike other primates. A part of our brain could be developed and/or utilized in making these combinations and arrangements. Thus, in our understanding of the evolution of speech production, we find that these physical features might have proved potentially advantageous. 2.3.3. Adaptations The stages of physical development of a baby and the changes that take place both physically and in accordance, mentally have led the scholars over time to look beyond the physical adaptations of speech production. The first year of a child shows physical developments at a much faster rate. Physical development leads to the development of motor skills and the brain that helps babies learn to take control of

NSOU PGEL-4 226 their body movements like grasping object, holding hands, standing or sitting or roll over or see and recognize faces of its mother and/or people around it. The baby gradually starts babbling. The changes - biological, psychological, and social, occurring at this time (as well as throughout the rest of the life span) are interrelated. All these seem to point that the origin of speech production or the language capacity could be hard-wired in the new born, in human genetics because it is only the human offspring that are born with a special capacity for learning language. Task 1 Match the two columns 1. All modern languages are production of combination of sounds. a) Adaptations 2. Human offsprings are born with a special capacity for learning language. b) Bow-Wow Theory 3. Human language emerged from instinctive noises made by humans during physical exertion. c) Yo-he-ho Theory 4. Human sounds used within their social life (context) developed the capacity for speech. d) Speculative Theory Your answer: We will now take a look through the speech process and its different stages or mechanisms that will enable you to become familiarize with human speech mechanism. Let us revise on a few topics from Paper 3. 2.4 Human speech mechanism For the purpose of speech production, head to abdomen work in coordination. Three groups of bodily organs are used for the purpose and are categorised under three systems: 1. Respiratory system - organs used in this system lies in the trunk viz. lungs, trachea (wind pipe), and the bronchial tubes. 2. Phonatory system - organ group used in this system lies in the throat viz.

and the

vocal cords
by dint of their action can cause to
NSOU PGEL-4 227 happen a number of different states of glottis viz. Open state (voiceless sounds like /p/, /t/, /k/ are created at this state), Vibration state (produces voiced sounds like / b/, /d/, /g/ /z/, /m/, /n/, /r/ etc.), Closed state (produces sounds called 'glottal stop' for example, that occur for hiccups, coughs) and Narrowed state (produces soft hissing noise or whispering sounds). 3. Articulatory system - organ group used in this system lies in the head and controlled by the central nervous system viz. nose, lips, mouth (teeth, tongue) and ears as receptors. These three systems work together as a unified whole to produce speech. It includes a complicated series of events that take place. First, the speaker formulates a concept or idea in the brain (Psychological stage), the idea is then transmitted to the nervous system that transmits the concept (message) to the "the organs of speech" (see the figure below) of the speaker. This initiates some movements to produce sound patterns (Articulatory or physiological stage). This movement of organs of speech creates a commotion or disturbances in the air (Physical or acoustic stage) and leads to the end processes. The listener at this stage perceives vibrations in the air in their ear drum (Auditing) and final cognition of the message or concept formulated by the speaker (Decoding of the sounds). Task 2 Complete the following sentences. a) A concept or an idea is formulated in the .... stage. b) The movements initiating sound patterns are in .... stage. c) Commotion or disturbances in the air occur in .... stage. Thus, we find that air plays an important role in the production of speech because it either pushes out or pulls in air to produce sound. And, speech is the phonetic combination of vowel and consonant sounds and sounds are produced by vibrations caused in the air. We will now learn about air-stream mechanisms that are used in human speech production.
NSOU PGEL-4 228 Figure 1 Organs of speech [Source: English Phonetics; ilovephonetics.blogspot.com] 2.4.1 Air-stream mechanisms Three main types of air-streams are in use in human speech production. All three are used to push air out (egressive mechanism) or pull in air (ingressive mechanism). The three air stream mechanisms are: 1. Pulmonic air-stream mechanism -

To utter

in contact with the soft palate (velum). The Zulu language of Africa uses this velaric air-stream mechanism to produce sounds referred as 'clicks'. This air-stream mechanism is also used in smoking. 2.5 Speech Sounds in English Language There are a variety of differences in the way we use English both in terms of rules of grammar and its usage. Again, English is spoken as a native language, or as a

NSOU PGEL-4 229 foreign language or as a second language across the world. Here, we would confine our understandings in the context of use of English as a second language within India. Well, for your knowledge, English is used as a first (native) language in the U K, the USA, Canada, Australia, New Zealand whereas, in India, Sri Lanka, Pakistan or Nigeria English is used as a second language. Here, again it is to be understood that English has a variety of spoken versions. Not that it is possible to know and speak in all the versions. Hence, one such version has been accepted as the standard parameter in non-native English-speaking countries and the phonetic codes could be easily available in dictionaries, books and internet. This accepted standard of English is the one spoken by the British speakers in the South of England. The pronunciation standard and phonetic code used in this part is called the Received Pronunciation (RP). By "pronunciation", it refers to the sound system, word accent, rhythm and intonation. In our further discussions and descriptions, we would consider RP as the model for the purpose of our understanding of phonetics or learning and teaching of English. Let me propose to describe this variety in some detail. To transcribe English (RP), there is no one-to-one correspondence between the sounds and the letters of the English alphabet. For the purpose mentioned, we will follow the symbols explained in The Principles of International Phonetic Association. These symbols are known to us as the International Phonetic Alphabet (IPA) where one symbol represents only one sound and it can be used to transcribe the sounds of any language. Contrarily, the Hindi language is written in the same way it is pronounced. According to the IPA, 26 letters of English alphabet represent 44 sounds or phonemes in the Received Pronunciation (South of England). However, it is to be noted that, in the present situation, the use of English is not confined to RP and its standards; instead, 'world Englishes' has found its way in the regular mode and usage of communication. Note: Transcriptions could be phonemic or broad and phonetic or narrow. E.g.: Phonemic transcription of the word 'lot' is /l]t/- i.e. the interpretation of sounds; and a phonetic transcription is [1awt] - i.e. how sounds are pronounced. Of the 44 sounds, 24 are consonant sounds, 12 are vowel sounds and 8 are diphthongs (combination of two vowel sounds where one vowel sound glide into another). Take a look at the following phonemic chart:

NSOU PGEL-4 230 [Source: https://www.esl-lounge.com/student/extra/phonetic-chart.php] The branch of linguistics that deals with the study of speech sounds is called Phonetics, which could be sub-divided into articulatory phonetics (speech production), acoustics phonetics (sound waves and transmission) and auditory phonetics (reception and perception of sounds). Now, the next thought that, desirably, should guide us is which are the speech organs that help in articulation? Well, we need to understand that certain parts of speech organs play their respective roles to enable the process of articulation. These parts are distinctly classified as under: Resonating cavities or chambers - oral, nasal and pharyngeal chambers, Articulators - the lower lip, the tongue, the uvula and the lower jaw, Points of articulation - the upper lip, the upper teeth, the alveolar ridge, the palate and the velum. Furthermore, we can classify the articulators as active articulators and passive articulators. The lips, the various parts of the tongue and the vocal cords are the active articulators whereas, the upper front teeth, parts of mouth (like hard palate, soft palate) are considered as the passive articulators. However, in some cases, the soft palate could also function as an active articulator. Task 3: Write the IPA symbol for the word initial consonant or vowel sound. a. illuminate b. tender c. cat d. city

NSOU PGEL-4 231 e. auto f. other g. eight h. thanks Your answer: 2.6 Segmentals and Supra-segmentals In phonetics, we come across these two terms called Segmentals and Supra- segmentals. These are speech features imposed on utterance of speech. Vowels, Consonants and Diphthongs are considered as the segments of speech that together enable the utterance. The features like word stress, intonation, juncture, rhythm that occur in a continuous speech occurrence are termed as the supra-segmental features or the prosodic features. 2.7 Summary Humankind is gifted with a system called language through which they express themselves. Non-humans also have their ways of communication. It arouses our natural curiosity to dig into the sources from historical records and other evidences as to how and when this system called 'language' originated or, the process of communication begun. It is to be remembered here that language and communication, though embedded, are not same and similar concepts. It is equally interesting to understand how the system ('language') works through the biological functioning wings to enable the process a proper and desired outcome. The present unit has attempted to have a basic understanding on these parameters so mentioned. It also undertakes to provide an insight into the various features associated in the process and how language and sound connect (or, disconnect) in effectuating speech mechanism, which is different in different (Bengali/ Hindi/English/Tamil etc.) language systems. The unit also urges its readers to study them in details from other sources for better and more refined understanding. 2.8 Review Questions 1. From your reading of the text, what kind of evidence do you think is used to support the idea that language originated from certain natural sounds? 2. What is your understanding of the need for air stream mechanism in human speech production? 3. What is meant by a standard or an accepted code in using a language? 4. What are the differences be between the concepts 'native language' and a 'non-

NSOU PGEL-4 232 native language'? Would that make any influence/s in the learning and teaching of a language? 5. Do you agree if it is said that various shades of meaning are created and/or conveyed by intonation? Suffice with examples from your experiences. 6. Can you think of a few sentences in two different systems (or, languages) of your choice and identify the different features and their positions in the sentence? Find out how the communication would vary if the positions are changed in the two different systems? 7. Identify the sound differences while uttering a word in English language and check the vernacular influence in your respective case. Verify the native sound uttered for the word. 8. Let us look at our names. Identify the sounds involved in the name - vowel sound, consonant sound or a diphthong as the case may be. 9. By now you have identified the sounds in your name. Can you transcribe them by using the respective symbol of the sound/s involved? 10. How do you think society and language relate to each other? Pen them from your experiences in a classroom situation or any professional set-up. 2.9 References and Reading List 1. Hosali, Priya Parasher, S V. 2007. There are many perceived notions on the nature of language. In this unit, we will discuss some more features of the language. To be more specific, this 233
NSOU PGEL-4 234 unit will deal with the feature analysis of language as conducted by Charles Francis Hockett, the linguist and anthropologist, in 1960. 3.2 Objectives To enable you to Understand the unique features of human language Compare and relate the acquired knowledge in practical situations Encourage further thoughtful insights from their understanding of the newly gained knowledge 3.3 Language- The system of communication We understand that language is a distinguished capacity of communication uniquely associated with human beings to express complexity of ideas. Numerous studies have been conducted and is a continuum to understand the system of communication and its coding, encoding or decoding concepts expressed either through sound (speech), gestures or signs and symbols (written). The understanding of human communication is as complex as the process itself that led to the dissection of the system into its various components in order to understand the cosmic power of language and/or its expressions. Study the following chart. This is on the properties of language. Source: https://en.wikipedia.org/wiki/Hockett%27s_design_features#/media/File:Dfl.jpg

NSOU PGEL-4 235 At the outset, we need to know a little background of the development of the design features as provided by Hockett. Until the first half of twentieth century, the socio-behavioural context of understanding language study was predominant. In the second half of the twentieth century (Bechtel et al., 1998 1) the development of cognitive science along with the growing interest in evolutionary sciences led to an upsurge of studying the origin of language. (Christiansen and Kirby, 2003 2). It was Noam Chomsky's concept of 'universal grammar' that led Hockett to oppose the concept and develop the model of design features of language as suggestive of the nature of human language which, according to Hockett's beliefs, can be compared and contrasted with animal language. However, it needs mention here, that, the model has also been under scanner particularly, in the context of modern language evolution researches. Hockett described his model as "method modelled on that of the zoologist" 3 which means that all human languages 'look alike' if viewed from the perspective of a zoologist. In his model of design features, Hockett has listed 13 features that he felt share commonalities across the human languages that exist. Moreover, he adds, that these features are distinct from animal communication. While elaborating the idea of design features Hockett suggested that some of the features may appear 'trivial' but, "become worthy of mention only when it is realized that certain animal systems-and certain human systems other than language-lack them" (1960) 4 . It is to be mentioned here, that Hockett originally did not use the term 'design features' in his book A Course in Modern Linguistics that was meant for college students. Instead, he termed them "the key properties of language". The discussions on these features could be categorized under three distinct phases: I. The initial statement that occurred between 1958-1959 deals with a comparative approach to define language. II. The second phase as in "The Origin of Speech" and "Logical considerations in the study of animal communication" which deals with the thirteen 'properties' of human language. III. The later publications where he added three more features to the list of thirteen and in which his attention is more focused on the systematic 'properties' of language. Let us now look at the features of human language that are distinct from animal communication with a briefing on them.

NSOU PGEL-4 236 3.4 Features of Language 3.4.1 Arbitrariness The relationship that exists between a linguistic form and the meaning assigned to it is arbitrary. There is no natural connection or any obviousness between them unlike, animal communication. It may not be a real object or bear any 'iconic' resemblance to the object or the linguistic form (word) that it denotes. Or, for that matter, take any word or a sign in any language which may or may not be the same meaning in other languages. Even, the games that a child plays are shown to fit in the activity they indicate but, in actuality, it is only the arbitrariness of the meaning which is emphasized in human language use. The exceptions in this arbitrary use are the onomatopoeic sounds that replicate its meaning, or mimics the thing described. E.g., the booming sound, high speed bumps echo the sounds of their respective objects. However, in animal communication this does not hold good possibly, because of the finite communication structure unlike, human communication which is infinite and unlimited. In addition, animal communication takes place only at certain situations and not always. In human language the communication occurs at various levels - verbal, non-verbal and at random and at every situation. In human language, the meanings are assigned and conveyed by conventions. Think: Can you bring in here the concept of semiotics as propounded by Saussure? 3.4.2 Turn-taking or Inter-changeability Have you noticed the undercurrent during a conversation between one speaker and another? We have noticed that formal lectures and/or speeches are characterized by uninterrupted monologues or elaborate social discussions. Whatever the case be, these are clearly marked by turn takings maybe frequent or change in turns or single-turn NSOU PGEL-4 237 in intervals. There are clear indications of beginnings, middle or end. In cases of single-turn there may be indications of an active listener. These do not demand preparations to be involved in language use. Hockett, thus, calls this as another unique feature in human language. You must have noticed that these turn takings could also be visible in the babies who may have just begun to use single or double words or even in infants who take their turns by making noises. A mother and her baby interact by the use of sounds or simple words yet, exchange of information and/or meanings take place. 3.4.3 Rapid Fading or Transitoriness It is surprising that language signals are temporary and fade out the moment they are communicated. There is no trail of the communication made. It is when the speech sounds are required to be made the signals are sent and received (both by the speaker and the listener) at the time of the utterance but, there could be no recovery of the signals once transmitted. In this sense, it is transitory. It disappears instantly or fades our immediately once the utterance is over. 3.4.4 Displacement It suggests that human language use is not limited or bound by time and place (or space). https://www.ellenfinkelstein.com/pptblog/present-theres-time-prepare/ It can go beyond present and talk about an incident that happened in the past or is likely to take place in the future which is not possible in animal communication. This is because human language can refer to past and present tense or can calculate a time in future. There are time markers in any language not restricted to English alone, every language has time markers be it Bengali, Hindi and so on. For example: They went to the zoo (yesterday). Even without the use of yesterday

NSOU PGEL-4 238 the word 'went' is suggestive of past (tense marker). Or, They will go to the zoo (tomorrow). 'Will go' is the future time marker which by itself is sufficient to convey the sense of future and 'tomorrow' is not required. Let us take another example: They have come from Japan or they will go to Japan. Here, the word (or the preposition) 'from' or 'to' suggests beyond here and now. It is understood that, they do not belong to that place but, another place. Again, for instance: They will meet us at 6.00 pm on 31 January 2022. It embeds one concept of time into another (at 6p.m. (on 31 January 2022)). It also allows the users of human language to talk about things and places which are not real but, imaginary; e.g. Heaven, hell, fairies, angels, superman, batman, Santa Claus and so on. Thus, displacement in any utterances refers to language use that does not correspond with reality or may not be temporarily or physically present at the time of communication. Any human language has this displacement unlike animal communication because they cannot refer to things or events beyond the present moment. 3.4.5 Dual Structure (Duality of patterning) We have studied what is meant by language? Language receives its name as and when we assign some sound, signs and symbols, syntactic structure and so on that pertain to some language community say, English, Hindi, Bengali etc. Even, if you look at the word 'language' itself you will see that the sounds /l/, /g/ etc arranged in some order. Only then the word 'language' gets its shape. All these indicate that, all the discrete units are arranged in some pattern and they combine to create some meaning through their interrelation. Now, the question is how do they combine? This combination takes place at two levels - sound level and word level. At the sound level, the smallest unit of sound in a particular language is called a phoneme. Each phoneme (or sound) does not carry meaning in themselves (except 'I' which is the shortest possible word consisting of a single phoneme). For example, /p/, /i/, /n/are individual phonemes at the sound level. https://etestinc.com/acoustic.htm

NSOU PGEL-4 239 The word level, individual phonemes combine to form words which again combine to form phrases and larger grammatical units as in sentence structure. Example given, /p/, /i/, /n/ combines to form [pin]. This combination enables to create infinite set of words and phrases and the words/phrases combine to create infinite number of sentence structures with meanings of their own. These combinations can take place in a number of ways depending upon the purpose of sentence creation. 3.4.6 Discreteness Every language has its own set of sounds and signs. We know sounds (phonemes) combine to form words. Thus, words composed of several sounds combine in a particular order and create a different meaning. Each of these sounds is different from the rest and combines in different ways to form altogether different meaning. For example, the sounds /g/, / d / combine to form God which bears a particular meaning but, the same sounds when combine in dog has a completely different meaning. In this case, you can also make an observation that the same sounds were repeated but, combined differently to form a new meaning. Similarly, the sounds in 'but' and 'tub' are juxtaposed to form two different meanings. Thus, exchanging the discrete (separate) units in a language can form different meanings in that language use. This explains why infinite sentences (infinite thoughts) can be formed with limited linguistic symbols or signs. Moreover, language is context bound and as a result, the same sentence can differ widely in different contexts. Discreteness in human language use, thus works at various levels. Discreteness suggests boundary or segmentation between each linguistic symbol in a language. The linguistic symbols are discrete or separate from one another. Take an example: she has come. It states a fact. The discrete units can be segmented part by part into 'she' (subject), 'has' (auxiliary verb) and 'come' (main verb). But the same discrete units when placed interchangeably 'Has she come' become a question instead of a statement. The meaning in the latter case is totally different than the former. Again, the sounds in human language can be syncopated and used repeatedly unlike the animal communication which are continuous sounds and cannot be syncopated. 3.4.7 Semanticity Semantics, as the word suggests, signifies meanings ascribed to linguistic forms - words and/or sentences. The words are the signs and the meanings associated to them are 'relatively fixed'. It is to be understood here, that a single object can significantly vary in its meanings in the target language as much as it may vary in target language

NSOU PGEL-4 240 (say, English) to that of any other human language (say, French). For example, 'bank' could signify bank of a river or a financial institution; 'mole' could mean a mark on skin or a small animal. In the same (target) language, here, English, a word meaning varies considerably. Contrarily, the word 'mutton' in English has a different connotation than it has in its French origin; or, for that matter, in Indian context too, it signifies the meat of a sheep whereas, in some other language (outside US) it signifies living animal. Thus, we find that Semanticity is again arbitrarily or conventionally assigned. The use of the word 'school' is immediately associated with some ideas and related thoughts. Semanticity is the relationship between the real object (the school building) or the element and the arbitrary symbol expressed through words (morphemes or phonemes) or ideas (here, school suggests a place where education takes place, teacher, student, and so on). The associated ideas with a school assign a meaning to the linguistic form 'school'. https://www.iaspaper.net/school-life-short-essay-children/my-school-essay/ Food for thought: Can you jot down the ideas that you get associated looking at this image? 3.4.8 Productivity Creativity or openness are other terms associated with productivity. It is the capacity to produce the utterances or the ability to use the language and produce infinite number of newer utterances. It is this capacity that enables the development of utterances from simple to complex forms, or, using single vowels, double vowels, or, monosyllabic word to disyllabic word and so on through the various stages of child's growth and development. And every linguistic sign carries in themselves an array of associated or disjointed concepts. For example: the word 'book'. It could refer to a law book or Cantos of a poem or could also mean book a ticket. As meanings are arbitrarily assigned, infinite references can be made.

NSOU PGEL-4 241 Would you mind taking a quick look through: Speech development stages - babbling, cooing. It might be an aid to your understanding of the process of speech mechanism. You will learn on these in detail in the next semester. https://fr.dreamstime.com/illustration/id%C3%A9e.html 3.4.9 Vocal-Auditory Channel Human communication involves a speaker and a receiver. And, communication could be verbal or non-verbal or visual or written. Verbal communication involves speaker - one who speaks and a receiver - one who receives. The speaker uses vocal cords and other speech organs to produce patterns of sound or speech waves and the receiver (listener) receives the speech waves through the auditory channel (ear), and processes the speech waves to interpret the sound produced. The production of speech depends upon or is the result of a combined series of function

which is not applicable in case of animal communication. e.g., Traffic signal does not come to us to tell what to do; it only signals a particular sign that we interpret it in accordance to the context. Likewise, a mother signals by calling the name of her child (say, Sita) and Sita receives the sound waves of the phonemes /s/, /i:/, /t/, /a/ through the auditory channel (ears) to understand that she has been called by her mother and acts accordingly. 3.4.10 Specialization It is the wonder of human language use that it is solely used for the purpose of utterance and/or communication and not for any other biological functions like eating, sleeping and so on. We may express other activities through the language use but, language use is solely for communication. Eating, sleeping are other aspects or reciprocation of human behaviour. The specialization of human behaviour lies in the fact that, though there is no direct link of sound waves with human behaviour yet, NSOU PGEL-4 242 human behaviour is the result of transfer of sound waves or signals between the sender and receiver. 3.4.11 Broadcast transmission and Directional reception Have you ever witnessed a child or yourself trying to throw laser light in the sky but, it is scattered all around in the space and lost into oblivion? Likewise, have you ever thought the sound waves during a verbal communication come from a speaker as waveforms which too might be scattered in all directions yet, the listener responds? It is because of the fact that, human communication system broadcast sound waves and signals are transmitted in all directions of 'auditory space' through the transmission point or the mouth. The listener receives the waves and tries to locate the point of origin of the sound waves as emanating from a specific direction. The linguistic signals so transmitted could be picked up by anyone in the range of the wave signals. 3.4.12 Cultural transmission Apart from the innate ability to learn language and produce infinite sentences, humans can also transfer the linguistic system as specific to one's community to the succeeding generations as part of their culture. Language is not learnt in isolation (example, the famous case of Genie) but in a context and thus naturally inherited by the users of that language because the child lives and grows in a particular speech community. It may be in one's native community or could be non-native but lives in a society where it acquires the linguistic symbols in which it grows and listen the sounds constantly specific to the language in use. Language, here, the mother tongue, is transmitted from one generation to the succeeding. As offspring we acquire our first language in such transmissions. 3.4.13 Total feedback Have you ever noticed that whatever we say we hear it ourselves along with the listener? But, do we see the signals that come from our body movements? The answer is no. We do not see the signals that the various parts of our body sends time to time, that is to say, we receive the signals that we send (sender and receiver). We can thus monitor the output communication as and when we communicate. Thus, the cycle of communication becomes complete (total) with the feedback.

NSOU PGEL-4 243 3.5 Human Language To these features, Hockett in his later works adds three more features as unique to human language and different from animal communication. These are: Prevarication, Reflexiveness and Learnability. Prevarication: it is the capacity of human language to falsify the linguistic message or prove it untrue (simply meaning 'lie). Reflexiveness: it is the capacity to reflect on a language by using one's language. In the process, newer adoptions in meaning may/may not take place in the use of same or new words. Hence, the communication that occurs is reflexive or spontaneous. Learnability: it is the capacity of humans to learn a language be it their native language and/or other non-native languages. The sooner the language learning takes place better is the acquisition rate. 3.6 Uniqueness of Human Language In this context, the following features have also been discussed by the linguists that talk of uniqueness of human language in comparison to those of animal communication. Redundancy Dictionary defines it as that which is no longer in use or is needed. In language use too this could be implied. We understand that language use also has certain shortfalls. For example, in some cases, human tends to use more words and information than that is actually required. This involves more time and space to remember or make effective communication happen. In such cases it is worthwhile to cut short or trim the extra words or information that is not required. This is what we term redundancy in language use. In some other cases, we tend to repeat words that are not necessary; for e.g. repeat again, repeat in itself is suggestive of to be said more than once; or, take for instance, 'ask question', ask itself suggests to pose a question. Hence, using 'question' is superfluous. We often say, ATM machine where machine is inbuilt in the acronym ATM (automated teller machine). Here, machine becomes redundant. It only creates confusion to a reader in the creation of meaning and the superfluous words so used is an unnecessary attempt to pump in more sense but, it ultimately does not help. "If it is possible to cut a word out, always cut it out."- George Orwell

NSOU PGEL-4 244 Again, consider for example 'I am'. Although 'I' and 'am' have synonymous meaning yet, abiding by the grammar rules in English, we cannot say 'am Suman' because it doesn't allow dropping pronoun. But, the same could be said in Italian (Sono Suman). This again becomes a case of redundancy. It is to be understood here, that it is not only in the use of English language but, all languages have instances of redundancy. Spontaneous use Just as it is, sometimes, tough to stop humans from using language because that is spontaneous likewise, in some other cases, humans learn the use of language spontaneously from their environment. Not that always they are forced to use language or taught forcibly. It could be noticed in the teachers or the parents trying desperately to make their students/children stop talking continuously (here, the children are talking naturally and in spontaneous flow and not forced to use language) or vice versa, where children are pissed off with their adults speaking on and on. Have you come across a situation in some social gatherings where it is extremely noisy and/or chaotic because people are deeply engrossed in spontaneous conversations maybe needless? These are the cases of spontaneous language use. Also think of situations where the language is acquired and learnt spontaneously. They are not forced to acquire but, it happens spontaneously from their interaction with the environment they are exposed to. Hockett terms these as 'Spontaneous use' and 'Spontaneous acquisition' respectively.

http://me.hse.ru/knowledgebase/2018/04/19/how-to-have-more-fun-learning/ However, it is also to be understood that in spite of the fact, that, Hockett's concept of properties of human language have spearheaded and notably contributed to research in this field, yet, it is not beyond criticism. Hockett's concept has been criticized on grounds that it revolves around similarities/dissimilarities at the surface level; and, secondly, it deals with the uniqueness of human language based on assumed perspectives of the understandings of language and its aspects.

NSOU PGEL-4 245 3.7 Summary This unit has focussed on the features of human language as propounded by Charles Hockett and the nitty-gritty of their contexts under which a language function. The module has also highlighted the development and/or the ideational process of designing the features of human language. It is imperative on the part of the learners to understand the background for conceptual development. It is also strongly recommended that while understanding the concepts the learners too attempt a critical observation on them and reflect their own perspectives and nurture an inquisitive mind. The questions that are distributed through the unit intend to enable develop the critical thinking skills and a reasoning mind. 3.8 Review Questions 1. Can you think of situations where language is culturally transmitted? 2. Can you name the property of the language that enables us to think of future contexts? 3. Take a short

Unit 4 Language Variety—Dialects, Sociolects, Idiolects 4.1 Introduction 4.2 Objectives 4.3 Language Variety 4.4 Dialects 4.5 Sociolects 4.6 Registers 4.7 Summary 4.8 Review Questions 4.9 References and Reading List 4.1 Introduction In the previous units we have learnt about language, its various perspectives and the different sounds that are produced in English. We also learnt about how language is related to a given context. We know language functions in a given situation and does not exist outside a society which is based on human interaction. From your reading of this unit, you will know the various connotations of language. 4.2

96%	**MATCHING BLOCK 17/74**	**SA**	PGLT 3 Full Book Final Corrected.pdf (D165254858)

Objectives At the end of this unit the learners will be able to Understand the

concepts in language use Apply the acquired knowledge Know about the concepts in language variety 4.3 Language Variety Language is socio-cultural phenomenon and it cannot exist outside a social context in isolation. Language use is very much a human predominance and privilege. We talk about Bengali, Hindi, English, Tamil, Urdu and other languages. But, these are just the labels used to refer to a system of systems, abstraction of abstractions. In other 247

NSOU PGEL-4 248 words, each of them has a chain of varieties, that is to say, varieties of English, Tamil, Bengali or Hindi, etc. Language variety differs in accordance to the geographical region in which it is used, the context and the situation where it is to be used. Task 1: Take a little time to find out the total number of districts in West Bengal at present. Your answer: Almost, each district has a distinct variety of Bengali, perhaps, that is spoken. Think in your contexts; we talk of Bihari Hindi, Khariboli Hindi, and Bhojpuri Hindi. Likewise, we talk of British English, American English, Australian English, Canadian English, Indian English, and Singaporean English and so on. Human language, according to Ferdinand-de-Saussure, is composed of two aspects viz. Langue and parole. Langue is the abstract system of words, phrases, pronunciation, and a system specific to any language community in all its forms and manifestations but, not the speech performance. Parole is the actual speech performance or the actual act of speaking/performance. It is the set of all the systems put together to make the utterance happen in actuality. Parole is thus, the spoken part and langue is the composite of all the linguistic components. Langue is more a social phenomenon as it represents social manifestations appropriate to a particular social community. For example, the manifestations of language in Chinese would differ widely from that of the Japanese and so on. Langue (System) Parole (Actual utterance) Code Encoding of the message Social Individual adoptions Fixed Free Psychological Psycho-physical Source: R L Varshney and S K Verma As we have just mentioned, language (say English) is a sum of varieties of (English) languages available. Thus, it varies in terms of its patterns of formation in accordance to its geographical location. Variety of language in the words of Ferguson, Anybody of speech patterns which is sufficiently homogeneous to be analysed by available large repertory of elements and their arrangements or processes with broad enough semantic scope to function in all formal contexts of communication

NSOU ? PGEL-4 249 Thus, from this we can understand, that, a language indicates a speaker's origin and social identifiers like class, caste in some cases, religion, ethnicity and sense of decorum through the choice of words. Let us now take a look through the various concepts associated with language. 4.4 Dialects It refers to language variation and a single language is a combination of many dialects. When people in a particular community share same ways (what and how) of speaking it is called a dialect of that community. There are sentences spoken in American or British English that share the same meaning and may also look same in structure. Such may be an instance of using a standard form of English although may have different accent in speaking. For example, in both American and British English the sentence structure and meaning of 'How are you?' may be alike though, would differ in respective pronunciations. But, there could also be cases when sentences share the same meaning but, differ in structure as the case may be among different dialects of English or Bengali language. There could be differences in terms of pronunciation, or vocabulary or an altogether different grammatical structure. This is a case of one dialect of English (or, Bengali) language specific to a particular region. Let us take some examples of dialects of Bengali language:

NSOU PGEL-4 250 From your understanding of the table above, you may now, perhaps, relate to similar variations of dialects in English language. Dialects in English language too, may vary in structure, vocabulary or pronunciation because of regional variations although meaning may remain the same. This happens because of the specificity of a particular region or a geographical area. Let us also take a look through the variations in English language. American English -case of geographical variation British English - case of geographical Variation Regional dialects of English in England Regional dialects of English in the Great lakes region of America 1 You missed the show. It just ended. You've missed the show. It has just ended. 1. Yorkshire (dialectical variants could also be found in Yorkshire region in itself) 2. Received Pronunciation (RP) 3. Lancashire 4. Kentish 5. Sussex The Great lakes region of America includes: Eight U.S. states of Illinois, Indiana, Michigan, Minnesota, NewYork, Ohio, Pennsylvania and Wisconsin as well as the Canadian province of Ontario. Each of these states have their specific variations of dialects of English being spoken in North America. 2 I already visited that place. I have already visited that place. ------- ------- 3 Joy feels tired, he ate too much. Joy feels tired, he has eaten too much. ------- ------- Dialects could be regional or social. Let us understand these from our existing conceptions that we already have in our respective situations. For example, Khariboli is spoken in central India (Delhi, UP, Southern Uttara Khand) and Braj Bhasha of North-Central (Bihar, Gujarat, MP, WB) India are regional dialects of Hindi. Dialects are also classified or segmented based on rural and urban users. Or, to say, Hindi spoken in Benares and in Bihar are regional varieties. Again, dialects are also stratified on the basis of caste and class divisions of a society. In many cases, social stratification is identified or recognised by the use of vocabulary, accent and sentence structure. A dialect so based on social influences and stratification of a society is called Sociolect. Bengali too has its dialects. Suniti Kumar Chatterjee and Sukumar Sen have contributed substantially to the field of Bengali phonological study. According to their classification, Bengali dialects have been categorised into six main types: Rarhi, Bangali, Varendri, Manbhumi, Rajbanshi, Sundarbani dialects based on geographical regions where they are spoken -West Central dialects, Eastern dialects, South Bengal dialects, North Bengal dialects or Western border dialects.

NSOU PGEL-4 251 Likewise, the variety of English spoken in Yorkshire to that of English spoken in Scotland are the regional dialects of English. Scottish English, Irish English, English spoken in England, Wales are the regional dialects of English in Europe, or, say, English spoken in Canada, USA are the regional variations in North America. The English spoken in India, Singapore, and Bangladesh are the varieties of English spoken in Asia. Dialects are also classified on the basis of social standards like, in many communities the upper-class dialect of the Brahmins differ from those in the bottom-line or margins. Similarly, we talk about English being spoken by the educated speakers of England, Queen's English, and BBC English as the prestige dialects based on socio-political factors. These prestige dialects acquire the status of 'standard language'. The social stratification matters that some varieties become more prestigious. The political or the cultural milieu leads to the frequency of its use. It needs to be understood that none of the dialects could be compared to designate 'better' than the other. They are different from one another in linguistic terms. From the social point of view, dialects flourish also on the basis of its frequency of its use - spoken or literary. For example, we talk of 'cholit bhasha' (that which is in current use or colloquial) and 'sadhu bhasha' (prestigious use in written texts) but, not much in use now as we find language has taken many inclusions from day-to-day usages. A dialect differs from an idiolect in the sense that, each speaker of a dialect differs from other speakers of the same dialect in their individual way of pronouncing. The characteristic features of speaking vary from one person to another using the same dialect. This is called the idiolect of an individual. The study of dialects is known as dialectology. A dialect is identified accordingly. Task 2: Reflect on what you have understood: Answer the following questions: 1. How would you differentiate dialect from an idiolect? 2. From your understanding of social dialect and regional dialect can you justify the following statement? "If children move to an area before the age of nine, they are able to 'pick up' the local dialect which their parents cannot." Your answer:

NSOU PGEL-4 252 4.5 Sociolects The dialect spoken by the members of a particular class or a particular group is called Sociolect. It is otherwise known as social dialect. The formation of these dialects is governed by social factors like, socio-economic divisions, or divisions on the basis of religion. It clearly demarcates the members belonging to the strata of society. For example, English spoken by 'upper', 'middle' and 'lower' class in London are clearly stratified, just as, in our context we see such dialectal division by the Tamil speakers based on social stratification. The use of the verb "ain't" is more common with the working-class speech than in middle-class speech. It thus functions as a social marker. Another such marker could be dropping 'h' sound in certain class utterances. This is particularly noticed when the sound /h/ occurs in the initial position. It is an indication of educational level, profession and ethnicity of the respective class. The social dialects differ in terms of phonology, phonetics, morphology and syntax. A sociolect is directly linked with the speaker's social background. In this context, 'class' becomes a social variable and the pronunciation or the word becomes a 'linguistic variable'. The individuals who study sociolects are known as sociolinguists. Such studies enable a close analysis of social psychology, identifies attitudes and perceptions. 4.6 Registers We have learnt that dialects are based on language users. Likewise, registers are based on language use or the stylistic yet, functional varieties. On a narrow note, registers could be referred to as jargons used in respective domains that is appropriate in a specific context e.g., sports, fishing, linguistic, religious, legal, medical, advertising and other professions. There are registers that are associated with specific work or interest related to technical field e.g. engineering. Let us look at some of the registers associated with different types of profession and education:

Word/lexical item	Register
1 Slogan, commercials, buzz	Advertising
2 Blood pressure, stethoscope, heartbeat, pulse rate, prescription	Medical
3 Orthodox, pious, theist, atheist, prayer, worship	Religion

NSOU PGEL-4 253 4 Athletics, coach, club, dodge ball, referee, practice, victory, loser Sports 5 Books, teacher, student, attendance, class Education 6 Justice, adjournment, affidavit, appeal, court Legal Task 3: Can you now prepare a list of registers from fields of your choice and present understanding? Lexical items Register 1 2. 3. 4. 5. Again, the special use of words in a language as registers of that profession is different from the way the same word is used in general understanding. Like, the word mouse as a technical term is the register of Computer whereas the same word in general means a rodent, which is a pest. Halliday has pointed out that, three variables together make up a register. These are field, tenor and mode. Field is the subject matter of the text; tenor is defined as the relationship between the communicators and the mode is the medium of communication. If, English Language Teaching is the field then, student-teacher relationship is the tenor and the pedagogical styles or the way/ s of interaction in constructing the communication is the mode. A register may also be determined on the basis of speech and written use that is to say, the medium of expression. In this, we again find distinct differences in the usage of terms in respective cases of the medium of speech to that of writing. For example, in cases of formal and informal speech, conversation, talk, debate, and discussion they have particular registers associated to each of them. Likewise, in writing, we have different types of official letters, business letters, biography or an autobiography, a poem or an interview or a report. The text markers would differ from each other in accordance to their medium of expression as applicable. Consider the salutation in an official letter Dear Sir or the closing Yours sincerely to that of Hi Swati or Lovingly in a friendly letter. Or, in a speech occasion Hi Guys to that of Hello everyone. Thus, in the words of J Ellis: "By register, itself a linguistic, not situational category, is meant a division of

NSOU PGEL-4 254 idiolect, or what is common to dialects, distinguished by formal (and possibly substantial) features and correlated with types of situations of utterance (these distinguished by such components as those here enumerated)."[On Contextual Meaning, p. 83] Task 4: Identify texts of different domains and this may include real life conversations and/or reading of texts, advertisements. Take a copy of them or a cut out. Then locate the registers in each domain. You may think to repeat the same activity with your students in their respective context. 4.7 Summary The present unit of Paper 4 focussed on the proper usage of terminologies as applicable and needed to be understood as a language learner and facilitator. The subtle demarcations between the language registers would enable to grasp the concepts in a better way in relation to language learning. Linguistically, it enables to communicate in one's speech communities using same registers and thereby, the sociological perspective and basis also gains further importance. It functions as social identity markers and also, as unique features of a language spoken and/used in a particular region. Alongside, the cultural elements too connect globally. 4.8 Review Questions 1. Can you identify some dialects (or, language variations) in the language that you use? 2. Discuss how dialects differ from one another. 3. Give five reasons from your understanding of the concept/s in the present module on the importance of knowing about dialects. 4. Explain your considerations on any three social factors of your choice in the creation of social significance of a language. 5. Rethink on your considerations for answer to question number (4) and justify the basis of prioritising them (the three factors that you have chosen). 6. Attempt a critical appreciation of your own understanding of the concepts as read in this module as in how do they influence language learning. Do add your own perspectives. 7. What is an idiolect? Cite five examples from a language that you speak.

NSOU PGEL-4 255 8. Discuss field, tenor and mode. Illustrate with examples. 9. Cite two examples of registers from advertising. 10 Cite examples of the dialects of British English. 4.9 References and Reading List 1. Ellis, J. 1966."On Contextual Meaning". In Memory of J.R. NSOU PGEL-4 257 5.1 Introduction In this unit, we will introduce you to the notions of linguistics i.e. language and linguistic sign, the approach is to look at human languages with salient examples. We have used examples from Bangla, English, Hindi and other languages as required. The unit ends with a brief overview of various components of linguistics. You will learn more about these components in the next unit. 5.2 Objectives After going through this unit, you will learn: The basic concepts of linguistics, The prime objectives of Linguistics in understanding the nature of human languages, How to look at linguistic data and understand the metalanguage. 5.3 What is Linguistics? The first primordial question that comes to our mind is what is Linguistics? Linguistics, in a nutshell, is the scientific study of languages. This language can be a spoken language or a sign language used by the human beings. Besides, we can also study artificial languages such as Esperanto under linguistics.

95%	**MATCHING BLOCK 19/74**	W

According to Robins (1993), Linguistics is concerned with human language as a universal and recognizable part of the human behaviour and human faculties.

Let us try and understand the notions of language in terms of linguistics. 5.4 What is Language? According to Kracht

100%	**MATCHING BLOCK 21/74**	SA	Essay for English Linguistics.pdf (D47974981)

Languages are sets of signs. Signs combine an exponent (a sequence of letters or sounds) with a meaning.

As we know a sign comprises of a signifier (the form or the shape) and the signified (the meaning represented by the form or the concept), the idea was originally propagated by Ferdinand D. Saussure in a book posthumously published named 'A Course in General Linguistics'. (Course Generale de la Linguistica) Grammars are essentially considered

100%	**MATCHING BLOCK 22/74**	SA	Essay for English Linguistics.pdf (D47974981)

ways to generate signs from more basic signs. Signs combine a form and a meaning, and they are identical with neither their exponent nor with their meaning.

For example, the word for tree in Bangla is /gach/ which comprises of sounds g,
NSOU PGEL-4 258 a, ch and when someone puts them together it evokes an image of a tree but there is nothing inherent about those sounds that they must correspond to a tree all the time. This property is called arbitrariness which is one of the most important components of language. Language

100%	**MATCHING BLOCK 23/74**	SA	Essay for English Linguistics.pdf (D47974981)

is a semiotic system. By that, we simply mean that it is a set of signs.

83%	**MATCHING BLOCK 24/74**	SA	Essay for English Linguistics.pdf (D47974981)

For example, in English, the string /cat/ is a signifier, and its signified is, say, cathood, or the set of all

cats. Sign systems are largely ubiquitous in the sense consider the objects such as

100%	**MATCHING BLOCK 25/74**	SA	Essay for English Linguistics.pdf (D47974981)

clocks, road signs, pictograms. They all are parts of sign systems. Language differs from them only in its complexity. This explains why language signs have much more internal structure than ordinary signs.

Ordinary signs are largely iconic, language can talk about non-iconic entities.

82%	**MATCHING BLOCK 26/74**	SA	Essay for English Linguistics.pdf (D47974981)

Language allows expressing virtually every thought that we possess, and the number of signs that we can produce is literally

infinite. Is it not evident

that we are able to understand utterances that we have never heard before? Every

day, billions of sentences are uttered by speakers of natural languages yet most of these are novel except in case of repetition. This aspect of language is called recursion. Consider the example below which explains that language gives us infinite possibilities to generate sentences- i. John eats, ii. John eats an apple, iii. I know that John eats an apple, iv. I know you told me that John eats an apple. 5.5 The origins of language Modern man has existed for about 200,000 years albeit after 50,000 BC language had developed with all the structural properties, something, which can be considered as a fully developed sign system. Language is largely an evolutionary phenomenon which is adapted to the communicative needs of its speakers. The organs of speech are biologically secondary (for example tongue helps us swallowing the food) but their development has led to a specialized function such as language. It is argued that the flexibility of the tongue or the relatively deep larynx distinguishes humans from higher primates and they have helped in developing human languages. 5.5.1 Characteristics of Language Linguists vary in their definitions of language. However, all agree that language is a system of vocal signs with an internal structure. It is used for human communication.

NSOU PGEL-4 259 Language is a medium for carrying a social message. As we know that the relationship between signs and what is symbolized is arbitrary but fixed by social convention. The system is stimulus-free and non-random. Language demonstrates a duality of structure in having building blocks (phonemes) and units consisting of these (words). A large number of meaningful units can be formulated out of a small number of building blocks. Languages vary greatly in their form and this has led some linguists to imagine that one's native language determines the way one thinks. The famous Sapir-Whorf hypothesis is a linguistic theory which argues that the semantic structure of a language shapes or limits how a speaker conceptualizes the world. It came about in 1929. The theory is named after the American anthropological linguist Edward Sapir (1884- 1939) and his student Benjamin Whorf (1897-1941). It is also known as the theory of linguistic relativity, linguistic relativism. 5.5.2 How does language work? There is no doubt that we live in a world of languages. We talk to our friends, our associates, our spouses, our lovers, our teachers, our parents, our rivals, and even our enemies. We talk to vendors and total strangers. We talk face-to-face and over the skype, and everyone responds with more talk. Even in our dreams we talk and are talking to. We also talk when there is no one to answer. Some of us talk aloud in our sleep. We talk to our pets and sometimes to ourselves. The possession of language, perhaps more than any other attribute, distinguishes humans from other animals. We need to understand that language is the source of human life and power. "To some people of Africa, a newborn child is a kintu, a "thing," not yet a muntu, a "person." Only by the act of learning language does the child become a human being. According to this tradition, we all become "human" because we all know at least one language."- (Fromkin, Rodman, & Hyams, 2011). 5.6 The 'Design Features' of Language Let us revise on the features we have learnt in Module 1, from a linguists view point. Charles Hockett (1954), proposed a set of '

design features of language'. I Vocal-auditory channel It refers to the idea that speaking/hearing is the mode humans use for language. When Hockett first defined this feature, he did not take sign language into account.

This feature has since been modified to include other channels of language, such as tactile-visual or chemical-olfactory. NSOU PGEL-4 260 II. Broadcast transmission and directional reception Sounds get transmitted in all directions

usually when humans speak.

However, listeners perceive the direction from which the sounds are coming. Similarly, signers broadcast to potentially anyone within the line of sight, while watching who is signing. This is characteristic of most forms of human and animal communication. III. Transitoriness

It is also defined as rapid fading. Transitoriness refers to the idea of

the temporary quality of language. Sounds of human language exist for only a brief period of time, after which they are no longer perceived. Sound waves quickly disappear once

the

speaker stops speaking. This is also true of signs. In contrast, other forms of communication such as writing are more permanent. IV. Interchangeability Interchangeability refers to the idea that humans can give and receive identical linguistic signals; humans are not limited in the types of messages they can say/hear. One can say "I am a man" even if one is a woman. This is not to be confused with lying (prevarication).

Not all species possess this feature. For example, in order to communicate their status, queen ants produce chemical scents that no other ants can produce. V. Total feedback Speakers of a language can hear their speech. They can control and modify what they are saying as they say it. Similarly, signers see, realize and control their signing. VI. Specialization The purpose of linguistic signals is communication.

They are not produced for

some other biological function like bird calls. When humans speak or sign, it is generally intentional.

VII.

Semanticity Specific sound signals are directly tied to certain meanings.

Everyone loves someone - in this example, everyone and someone are quantifiers. Everyone is considered as universal quantifier and someone existential quantifier. VIII.

Arbitrariness Languages are generally made up of both arbitrary and iconic symbols. In spoken languages,

this takes the form of onomatopoeias. In Bangla "tapurtupur", in Mandarin "mǒo" (cat). In ASL "cup", "me" "up/down", etc.

There is no intrinsic or logical NSOU PGEL-4 261 connection between a sound form (signal) and

its meaning. This fact

is demonstrated by the fact that different languages attribute very different names to the same object.

IX.

Discreteness Linguistic representations can be broken down into small discrete units which combine with each other in rule-governed ways. They are perceived categorically, not continuously. For example, Bangla marks number with the plural morpheme /gulo/, which can be added to the end of any noun. The plural morpheme is perceived categorically, not continuously: we cannot express smaller or larger quantities by varying how loudly we pronounce the /-

gulo/. X. Displacement The term

displacement refers to the idea that humans can talk about things that are not physically present or that do not even exist. Speakers can talk about the past and the future, and can express hopes and dreams. This is certainly one of the features that separate human language from other forms of primate communication. XI. Productivity

It

refers to the idea that language-users can create and understand novel utterances.

Utterances they have never heard before.

Humans are able to produce an unlimited amount of propositions. Also related to productivity is the concept of grammatical patterning, which facilitates the use and comprehension of language. Language is a dynamic phenomenon. New idioms are created all the time and the meaning of signals can vary depending on the context and situation.

XII. Traditional transmission It is considered as cultural transmission.

While humans are born with innate language capabilities, language is learned after birth in a social setting.

Children

learn how to speak by interacting with experienced language users.

It can be further shaped by cultural settings. XIII. Duality of patterning You now realize that

meaningful messages are made up of distinct smaller meaningful units (words and morphemes) which themselves are made up of distinct smaller, meaningless units (phonemes). XIV. Prevarication

This design feature shows

the ability to lie or deceive. When using language, humans can make false or meaningless statements.

NSOU PGEL-4 262 XV. Reflexiveness Humans use language to talk about language. Something we have described as a metalanguage in section 5.9.2. XVI. Learnability The way speakers learn

a

Linguistic knowledge What does it mean to "know" a language? As mentioned previously, knowing the sounds and sound patterns in our language constitutes only a part of our linguistic knowledge. Getting knowledge of a language also indicates knowing that certain sequences of sounds express certain concepts or meanings. Speakers of Bangla know what kal means, and that it contrasts with the meaning of /khal/ or /bhejal/. This means when you know a language, you know words in that language, that is, which sequences of sounds are related to specific meanings and which are not. 5.7.1 Arbitrary Relation of Form and Meaning The moment we set eyes on an object we know what it is. We don't have to think twice; the right name comes out instantly. This goes true for computer or thakumar jhuli equally.

When you are acquiring or learning a language you have to learn that the sounds represented by the letters 'house' signify the concept; if you know French, this same meaning is represented by 'maison'; if you know Russian, by 'dom'; if you know Spanish, by 'casa'. Similarly, Bangla word 'hath' is represented by 'hand' in English, 'main' in French, 'nsa' in Twi, and 'ruka' in Russian. When you articulate a language (be it a sign or spoken), you can speak and be understood by others who speak the same language. The deaf people produce and understand sign languages just as hearing persons produce and understand spoken languages. The languages of the deaf are equally developed compared to spoken languages, differing only in their modality of expression.

NSOU PGEL-4 263 In this world, everyone knows at least one language. Five-year-old children become nearly as proficient at speaking and understanding as their parents. Yet the ability to carry out the simplest conversation requires profound knowledge that most speakers are unaware of. This makes human language unique and species-specific. This is true for speakers of all languages, from Bangla to Zulu. A speaker of Bangla can produce a sentence with a correlative clause without knowing what a correlative clause is, such as /je lokti kal asbe bole chilo aj se aste pareni/. However, the fact that we may know something unconsciously is not unique to human language. For example, a child can ride a bicycle without understanding or being able to explain the principles of balance and support or the neurophysiological control mechanisms that permit one to do so. What, then, do speakers of Chinese or Quechua or Swahili or Bangla or Arabic know? Let's discuss it in more detail here. 5.7.2 Knowledge of the Sound System When you know a language firstly, you know what sounds (or signs) are in that language and what sounds are not. One way this unconscious knowledge is revealed is by the way speakers of one language pronounce words from another language. If you speak only English, for example, you may substitute an English sound for a non- English sound when pronouncing "foreign" words like Bangla /til/ the word for 'mole'. If you pronounce it as the Bengalis do, you are going to use sounds outside the English sound system. Bangla people speaking English often pronounce words like 'pen' as phen and 'cat' khaeat as if they were spelt pen and kaet. The English sound represented by the initial letters p in these words is not part of the Bangla sound system. Knowing the sound system of a language includes more than knowing the inventory of sounds. It means also knowing which sounds may start a word, end a word, and follow each other. For example, English has a word 'school' that begins with a consonant cluster /sk/ but in many Indian languages, this clustering is not present word initially. This is the reason Bangla speakers without the knowledge of English pronounce it as /iskul/ and Punjabi Speakers call it /sakul/. Apart from knowing the sound system (phonology), language signs are constituted of three different levels, not just two: morphology, syntax and semantics. Semantics deals with the meanings (what is signified), while the other three are all concerned

NSOU PGEL-4 264 with the exponent. At the lowest level, we find that everything is composed of a small set of sounds or a set of gestures. For example, /sheep/ consists of five letters (and three sounds): /sh/, /i/ and /p/. In order not to confuse sounds (and sound sequences) with letters we denote the sounds by enclosing them in square brackets. So, the sounds that make up [sheep] are [sh], [i] and [p], in that order. What is important to note here is that sounds by themselves, in general, does not bear any meaning. On the other hand, words are not the smallest meaningful units of language. For example, /dogs/ is the plural of /dog/ and as such it is formed by a regular process, and if we only know the meaning of /dog/ we also know the meaning of /dogs/. Thus, we can divide /dogs/ into two parts: /dog/ and /-s/. The minimal units that correspond to meaning are called morphemes. Often, it is tacitly assumed that a morpheme is a part of a word; bigger chunks are called idioms as in /kick the bucket/, /keep tabs on someone/, and so on. The reason for this division is that while idioms are non-transparent as far as their meaning is concerned (if you die you do not kick a bucket), syntactically they often behave as if they are made of words (for example, they inflect: /John kicked the bucket/). So, a word such as 'dogs' has four manifestations: its meaning, its sound structure, its morphological structure and its syntactic structure. The part of linguistics that deals with how words are put together into sentences is called syntax. For example, if the subject is the third-person singular and the verb appears in Present tense then a morpheme -s/ -es is added. i. A dog barks ii. Dog barks iii. *A dog bark The knowledge of syntax determines that i) and ii) are grammatical sentences whereas iii) is unacceptable. For details related to the syntax you can refer to the modules written under Paper 7. 5.8 The goal of Linguistics The goal of linguistics is to observe, describe and analyse the structure of languages. Linguistic theory is concerned with establishing a coherent set of independent principles to explain phenomena in natural languages. There is no such thing as a correct language in any absolute sense. Language is neutral and should not be considered the object of value judgements. People tend to confuse language and attitudes to those who use language.

NSOU PGEL-4 265 Written language is secondary and derived from spoken language. It is only of less interest to the linguist. Linguists are more concerned with designing valid and general models of linguistic structure. Language consists largely of rules which determine its use. There are, however, many exceptions. Native speakers can deal with a large amount of irregularity which is stored in the mental lexicon. Knowledge of language refers to many abstract structures such as those of sentence types or systematic units such as phonemes or morphemes. The language would appear to be ordered modularly, i.e. to consist of a set of subsystems, which are labelled as 'levels of language', such as phonology, morphology or syntax. Most knowledge about language is unconscious and cannot be accessed directly. The task of the linguist is often to demonstrate the existence of this unconscious knowledge and to suggest methods of describing it. 5.9 Structural notions in linguistics Language can be observed at any given point in time - synchronic - or over a period of time considered as diachronic. ------------------< Time axis t1 t2 t3 The term synchronic indicates studying the language either at t1, or t2 or t3 whereas diachronic study can comprise of t1+t2+t3 or looking at the difference between t3 and t2 or t2 and t1. Language needs to be also distinguished between two levels - parole/performance - and the system of a language which can be seen as the abstract ability of the native speaker to speak his/her native language - competence - and linguistic knowledge - langue. The linear ordering of elements is called a syntagm and the vertical array of possible elements for a slot is a paradigm. Paradigm I have a cat You own a dog syntagm--------- The choice of lexical items in a given sentence is considered a syntagmatic choice. For the first sentence, syntagm is I, have, a and cat. We have replaced all three words with you, own and dog to get another utterance this is called paradigmatic choice. Linguistic units can be classified according to whether they are open, like the lexicon,

NSOU PGEL-4 266 and can take on new elements or closed, like phonetics and morphology, which cannot be expanded at will by speakers. 5.9.1 Characteristics of open vs closed classes Content words are called as open class or infinite set. We can and regularly add new words to these classes, such as Bollywood, blog, gherao, and 24/7, pronounced as "twenty-four seven." On the contrary, the closed class contains— Small number of units Polysemous and multi-functional words Speakers use them unconsciously Function words are called closed-class words or finite sets. It is difficult to think of any conjunctions, prepositions, or pronouns that have recently entered the language as these items are not productive in a language. The small set of personal pronouns such as I, me, mine, he, she, and so on are part of this class. Elements which are common in all languages are regarded as language universals. Every language has vowel sounds- it is argued as an absolute universal. Let us consider concrete examples in the next section. 5.9.2 Talking about language and linguistic data The language one uses to talk about language is termed as a metalanguage. For example, notions like pro-drop (in south Asian Languages subjects are dropped if they are pronoun) are used to describe the optionality of subjects. iv. (ami/amra) jacchi (Bangla) I/we going 'I/we is/are going'. In iv) the subject is optional as it can be understood from the context. However, in English subjects can never be dropped. We even require dummy subjects called the expletives. v. It rained. In v) 'it' is called an expletive or dummy subject. There are different methods of collecting object language data: one's own intuitions,

NSOU PGEL-4 267 elicitation from other native speakers or the use of a text corpus. We now turn to the core of grammatical constructions. 5.9.3 The grammatical core The core elements of language are formed in terms of the Words or lexical items. The major categories are nouns, verbs, adjectives and prepositions/postpositions in natural languages. The minor categories are called auxiliaries, case markers, number and gender features. Grammar is largely an autonomous system with its rules which need not come from by language external considerations; cf. the gender system of German or Hindi. There is some indirect evidence for the reality of rules. This comes mainly from language pathology and the area of speech errors. 5.10 Areas of linguistics We can talk about several areas within linguistics which interface between language and other cognitive functions such as writing and thinking. The history of linguistics comprises of various theories which have been proposed in the attempt at explaining the nature of the human language faculty. These theories can be grouped into four broad categories. non-theoretical studies before the 19th century historical linguistics 19th century structuralism first half of 20th century generative grammar second half of 20th century Theoretical linguistics develops models of language competence while applied linguistics deals with the uses to which linguistics can be put into applications such as language teaching or speech pathology. All languages are divided into levels which are the divisions made according to the status of elements - sounds (phonology), words (morphology), sentences (syntax) and (semantics) and language use (pragmatics). Areas of linguistics are concerned with the approach and scope of a linguistic study. This ranges from the social uses of language (sociolinguistics) to the process of learning language (language acquisition), and historical processes (language change) and natural language processing to Artificial Intelligence.

NSOU PGEL-4 268 Figure 1: http://www.middlebury.edu/media/view/462840/standard/tomeis_linguistics.jpg Various linguistic theories have been developed over the past two centuries. Three main schools can be classified as a) Neogrammarianism (late 19th century), b) structuralism (first half of 20th century), and c) generative grammar (second half of 20th century). 5.11 Summary In this module, we have discussed the main ideas pertaining to language, linguistics and their relation. Language is a system of vocal signs with an internal structure.

| **90%** | **MATCHING BLOCK 52/74** | **SA** | Essay for English Linguistics.pdf (D47974981) |

Signs combine an exponent (a sequence of letters or sounds) with a meaning. There are

certain elements which are common to all languages (despite a lot of dissimilarities) known as language universals. Linguists analyze languages at various levels such as phonology, morphology, syntax and semantics. 5.12 Review Questions 1. What is the principle of recursion? Describe its manifestation in one of the languages you speak.
NSOU PGEL-4 269 2. What is the iconicity of language? How do we distinguish traffic signals and human signs? 3. Give us four examples of language universals. 4. Do you observe any difference between langue and parole in terms of languages you know? 5. Explain the design features articulated by Hockett. Describe the difference between prevarication and reflexivity. 6. What is metalanguage? Do we need it to learn language? 7. How do you understand the terms 'syntagm' and paradigm'? 8. What are the various levels at which language operates? 9. How do we distinguish between content words and structure words? 10 Do all languages behave alike? Give some general principles of linguistics in support of your answer. 5.13 References and Reading List Fromkin, V., Rodman, R., & Hyams, N. (2011). An Introduction to language. Boston: Wadsworth. NSOU PGEL-4 271 6.1 Introduction In the previous unit, you have learnt the basic definitions related to language and linguistics and certain features which are unique to Human Language. Here let us first recapitulate some of the concepts I have already introduced. Linguistics is defined as the scientific study of language. From different viewpoints, linguistics can be divided into several branches: descriptive linguistics and historical/comparative linguistics, synchronic and diachronic linguistics (if it is based on its aspect of time). Languages are studied in terms of phonetics, phonology, morphology, syntax and semantics. It can also be looked at from sociolinguistic and psycholinguistic (if it is related to or combined with the disciplines of sociology and psychology respectively) perspectives. Here we will discuss the core components of Linguistics first and then move to the application side. 6.2

linguistics and its various branches, b. Identify various aspects of language and their details, c. Establish the link between different branches of language study, d. Understand why errors happen in language use and how to view them. 6.3 Phonetics and Phonology Phonetics is the study of human speech sounds and phonology is the classification of the sounds within the system of a particular language or languages. Phonetics is divided into three types according to the production (articulatory), transmission (acoustic) and perception (auditory) of sounds. Three categories of sounds must be recognized at the outset: phones (human speech sounds), phonemes (smallest units which distinguish meaning in a language), allophones (non-distinctive units). Sounds can be divided into consonant segments and vowel segments. The former can be characterized according to 1) place and 2) manner of articulation. Sounds can be distinguished in terms of aspiration as in [k] vs. [kh]. Consider more examples - 1) Place of articulation labial, labio-dental, dental, alveolar, palatal, velar, glottal

NSOU PGEL-4 272 2) Manner of articulation stops, fricatives, affricates, glides, vowels 3) Voice voiced or voiceless voicing feature e.g. [k] vs. [g] Phonotactics deals with the combinations of sounds possible and where sounds can occur in a syllable. The major structure for the organisation of sounds is the syllable. It consists of an onset (beginning), a rhyme (everything after the beginning) which can be sub-divided into a nucleus (vowel or vowel-like centre) and a coda. Syllable Onset Rhyme Nucleus Coda Prosody is concerned with features of words and sentences above the level of individual sounds, e.g. stress, pitch, intonation. Pitch movements The two most common pitch movements are: 1. Rising pitch yes 2. Falling pitch yes Stress is about which sounds we emphasize in words and sentences.
For example,

In sentences, we usually stress the most important, 'content' words. Rhythm is about how we use a combination of stressed and unstressed words in sentences. Sentences have strong beats (the stressed words) and weak beats (the unstressed words). Intonation is the way the pitch of a speaker's voice goes up or down as they speak. We use intonation to help get our message across.

NSOU PGEL-4 273 6.3.1 Consonant Chart 6.3.2 Cardinal Vowels In order to characterize vowels satisfactorily, the cardinal vowel system was introduced at the beginning of the 20th century by the English phonetician Daniel Jones. The basic principle is that extreme positions for the articulation of vowels are taken as reference points and all other possible vowel articulations are set in relation to them. The vowel quadrangle used for the representation of vowels is derived from a side view of the oral cavity with the face turned to the left, that is the position of / i/ is maximally high and front, the position of /u/ is maximally high and back while the low vowels /a/ and /Z/ are maximal low front and low back respectively.

NSOU PGEL-4 274 Note The left symbol of each is unrounded; the right one (other than the back open vowel) is rounded. There is a general correlation between unroundedness and frontness and roundedness and backness, i.e. these value combinations are much more common than their opposites. 6.3.3 Syllable structure S / \ onset rhyme Initial medial nucleus coda Example: pressed | onset | nucleus | coda | /p r e s t/ | vcl. stop liquid | vowel | vcl. fric. + stop | 6.4 Morphology The term morphology has its etymology is Greek: morph- means 'shape, form', and morphology is the study of form or forms. The emergence of Morphology as a component of linguistics was not until the 19th century. " Works of Bopp 1816 claimed that Sanskrit, Latin, Persian and Germanic languages have a common origin. Franz Bopp's Evidence was based on the grammatical endings of the words. " Between (1819-1837), Jacob Grimm published Deutsche Grammatike which emphasizes on the sound patterning and word-formation patters of the Germanic languages and their relation with other Indo European Languages. " Max Muller 1899 Oxford lectures noted that the evolution of words would express the processes involved in the evolution of languages just like Morphology in Biology. In linguistics, morphology refers to the mental system involved in word formation or to the branch of linguistics that deals with words, their internal structure, and how they are formed. The minimal unit is a morpheme. Morphologists study identification of morphemes, smallest linguistic units with a grammatical function. Morph is the

NSOU PGEL-4 275 phonological realization of the morpheme. English past tense markers have Allomorphs variants. For example, the English past tense morpheme that we spell -ed has three morphs. Jump'jumped ..the final sound /t/ after a voiceless, voiced /d/ in the presence of l repel-< repelled... change because of the environment, and /id/ as in batted after /t/ sound. Root -Stem-Affixes e.g.: Re-consider+ation A stem is a base unit to which another morphological piece is attached. The stem can be simple, made up of only one part, or complex. The root is like a stem in constituting the core of the word to which other pieces attach, but the term refers only to morphologically simple units. Elements that are attached to stem are called affixes. 6.5 Syntax Syntax studies the level of Language that lies between words and the meaning of utterances: sentences. It is the level that mediates between sounds that someone produces (organized into words) and what they intended to say. Early syntacticians distinguish between deep structure - the level on which the unambiguous semantic structure of a sentence is represented - and surface structure - the actual form of a sentence. Sentence structure is normally displayed employing a tree diagram (the so- called 'phrase structure') and by a system of rewrite rules, one can move from an initial unit (the entire sentence) to the individual elements (a so-called 'terminal string'). The term generation is used in linguistics to describe exhaustively the structure of sentences. Whether it also refers to how speakers produce sentences, from the moment of conceiving an idea of saying a sentence, has not been finally clarified yet. A transformation is a change in form between the deep and the surface and maintains the relatedness of semantically similar sentences such as active and passive ones. Generative grammar can be divided into three main periods -an early one, dating from Chomsky (1957), to a central one which was also initiated by Chomsky (1965) and a more recent one which reached its maturity in the 1980s with the development of the government and binding model. Universal grammar represents an attempt to specify what structural elements are present in all languages, i.e. what is the common core, and to derive means for describing these adequately. The language would appear to be organised modularly. Thus syntax is independent of phonology for instance, though there is an interface between these two levels of language.

NSOU PGEL-4 276 The purpose of analysing the internal structure of sentences is : 1) to reveal the hierarchy in the ordering of elements 2) to explain how surface ambiguities come about 3) to demonstrate the relatedness of certain sentences. To begin with, however, students should be aware of how syntax is acquired by young children. 6.5.1 Phrase structure grammar This is a basic type of grammar which attempts to show the structure which lies behind a sentence by breaking it down into its parts. It can be represented in the form of tree diagrams. Sentence — Noun Phrase + Verb Phrase Verb Phrase— Verb + Noun Phrase Noun Phrase— Determiner + Noun (determiner = articles, possessive pronouns, demonstrative pronouns, numerals, etc.) S / NP VP — | N VP NP | | Aux V DetAdjP N | | | | | | Peter has met the new boss S / NP VP / | NP S AUX V / | | Det N NP VP | | | | | | | | | | N V | | | | | | | | | The girl he liked has departed

NSOU PGEL-4 277 6.5.2 Deep and surface structure To indicate the nature of the structure which sentences have but which is not evident from their spoken form, one uses the term deep structure and surface structure. The term surface structure has an obvious meaning. This is the actual form which a sentence has when spoken. The deep structure, on the other hand, is a model of the structure necessary to account for the meaning of a sentence. As mentioned above this might correspond to a map of a real but unobservable mental structure, however, there is no direct proof of this. 6.5.3 Transformations A transformation alters a basic sentence structure into a derived one in deep structure. ACTIVE PASSIVE NP1 V NP2 NP2 be V -en by NP1 Mary ate the cake. The cake was eaten by Mary. S / NP VP | | | VP NP | | | | V Det N | | | | Mary ate the cake S / NP VP — | | | VP NP Det N | | | | Aux V Det N | | | | | | The cake was eaten by Mary 6.5.4 The standard theory Generative grammar has undergone several major revisions since its initial

NSOU PGEL-4 278 introduction by Noam Chomsky in 1957. The present term standard theory is used to refer to the model of generative grammar as expounded in the 1965 book by Chomsky Aspects of the Theory of Syntax. SYNTAX Lexicon ↓ Phrase-structure rules ↓ Filters ↓ Deep Structure [Logical form (deals with Semantics)] Transformations Surface structure [Phonetic form (comes from phonology)] The dominant theory of syntax is due to Noam Chomsky and his colleagues, starting in the mid-1950s and continuing to this day. This theory, which has had many different names through its development (Transformational Grammar (TG), Standard Theory, Extended Standard Theory, Government and Binding Theory (GB), Principles and Parameters approach (P&P) and Minimalism (MP)), is often given the blanket name Generative Grammar. Cook & Newson, (2007) have given the following order for the history of generative syntactic theories along with input from (MIT Department of Linguistics and Philosophy). 6.6 Semantics Semantics is concerned with the study of meaning and is related to both philosophy and logic. Semiotics is the study of communication systems in general. Sign language is a common means of communication among those who are deaf and can, if learned from childhood, approach natural language in terms of scope and flexibility. There are four recognisable types of meaning: lexical meaning, grammatical meaning, sentence meaning and utterance meaning which refer to the areas of derivational morphology, inflectional morphology, syntax and pragmatics respectively. External meaning relationships involve sense (relationships between words) and denotation (relationship of the word to what it signifies).

NSOU PGEL-4 279 There are various internal meaning relationships such as synonymy (sameness of meaning), antonymy (difference in meaning), hyponymy (hierarchical order of meaning). Different models for semantic analysis are available: prototype theory, where a central concept is taken as typical and less central ones are peripheral and componential analysis which seeks to break words down into their component semantic parts. 6.7 Pragmatics Pragmatics is the study of language from usage perspective. It has various sub- forms depending on the emphasis given by linguists, for instance, it can be investigated from a strictly linguistic stance or with regard to social factors. In the analysis of conversation various implicatures - 'rules' are applied. They refer to the quality, quantity, relevance and manner of conversation and are assumed to be almost universally valid. A speech act is a classifiable and structured utterance spoken in an actual communication situation. There are preconditions for speech acts such as felicity conditions which must be met for a speech act to be successful. Speech acts are classified according to their effect. Locutionary acts simple express sense or reference. Illocutionary acts express the intentions of the speaker whereas for perlocutionary acts the effect is of greatest importance. There are further subdivisions in type such as directives (commands for example) or commissives (promises for instance). An indirect speech act is one where the intended meaning of a sentence is different from the literal one. Deixis concerns the various types of pointing which is possible with language. This can be direct, with adverbs of direction, or indirect, for instance with different types of pronoun. Discourse analysis is concerned with the analysis of spoken language in sections larger than the sentence. The two main features for successful discourse are coherence (based on semantic transparency) and cohesion (achieved through formal mechanisms such as sentence connectors and anaphoric elements). 6.7.1 Types of Speech Acts Speech acts can be classified as follows 1) Locutionary acts express the sense or reference as in A cow is an animal or The earth is round. 2) By Illocutionary acts we indicate the intentions of the speaker are expressed by using a performative verb such as I acted like Mary.

NSOU PGEL-4 280 3) Perlocutionary acts deal with the effect of linguistic action is central. Perlocutionary acts include those which have a visible effect on the speaker, such as insulting or persuading someone. The second and third types above are concerned with intention and effect and are thus the more prototypical type of speech acts. 6.8 Sociolinguistics Sociolinguistics is a relatively recent discipline which investigates the use of language in society, particularly in order to determine what the possible reasons for language variation are and hence to understand more about the process of language changes. Various methods have been developed in sociolinguistics such as random and objective. The varieties of language examined by sociolinguists are usually urban and in particular take account of the factors class, age and sex. The central element in a sociolinguistic study is the linguistic variable - some item of language (phonological, morphological, syntactic or semantic) - which is suspected of varying systematically in correlation with the factors such mentioned. There are various kinds of a speech community depending on the linguistic configuration. Diglossia involves a division of languages according to function, whereas a bilingual community has two languages without such a functional distribution. The social development of a language can lead to split. This, in turn, may involve the question of language maintenance and preservation. If a language is discontinued by its entire community one speaks of language death. An important aspect of the social use of language involves the means of addressing others. German, like other European languages apart from English, has a pronominal distinction between acquaintances and strangers which is connected with the notions of power and solidarity expressed in language. 6.8.1 Language Variety studies A dialect is a regional form of a language. It frequently is part of a continuum of dialects. The term sociolect, or sometimes social dialect, is used for a recognisable form on a continuum determined by social class. The history of dialectology goes back to the last century and can be seen as an offshoot of Indo-European comparative philology and was understandably purely historical in its orientation. It used such techniques as the questionnaire and was interested in compiling linguistic maps, particularly those conserving older rural usage.

6.8.2 Corpus linguistics A corpus is a collection of language data which is compiled and analyzed linguistically. Such data can be synchronic or diachronic. In the latter case, it consists of texts, in the former it could also contain sound files or transcription of speech. The advantage of a corpus is that it can offer sufficient attestations of a structure or word to allow linguists to make statistically reliable statements. Equally, corpora can be used to disprove assumptions, e.g. about when a certain structure appeared, in what type of text, or with what author. A corpus can also be used for style analysis and may in some cases help to determine authorship by looking at recurrent patterns in the syntax or vocabulary of an author. For example, the Brown corpus is a corpus that contains the speech of present-day American English. 6.8.3 Language and gender The area of language and gender is concerned with many issues. There are two main views on language differences between the genders. One relies upon the difference between the two biological genders male and female, while the other stresses the fact that male dominance is the operative force. There have been many attempts to use gender neutrality in language by creating new generic forms such as chairperson or simply chair instead of chairman/chairwoman. The goal of such creations is to arrive at a neutral label. These words can be used for either genders or the third gender without highlighting any particular. In the area of written address, English has had considerable problems, e.g. the forms Mrs And Miss (which stress the marital status of the woman, but not of the man) are now regarded as antiquated and unacceptable. The use of Ms. shows some of the difficulties of the attempts to neutralize the language: the success depends on whether the new form is accepted in the society in question. 6.9 Language acquisition Language acquisition is the process whereby children learn their mother tongue. It consists of abstracting structural information from the language they hear around them and internalizing this information for later use. This phenomenon of language acquisition can explain why one can produce a theoretically unlimited set of sentences in one's native language. This position is considered as the nativist view and contrasts with an earlier empiricist view. There are fairly definite stages which a child goes through during early language acquisition. These form a progression from the babbling stage to that of the multi- NSOU PGEL-4 282 word sentence. The first comprehensible word is usually uttered between nine months and one year. By the age of 6 or 7, a child is expected to acquire all the structural features of his/her native language. Language acquisition is paralleled by other linguistic situations, notably by that of creolization where speakers with little or no linguistic input manage to create a new language is a very short period of time. It also argues that children need to get a linguistic environment within their puberty level without which they become incapable of speaking. This is called the critical age hypothesis. There are different models of second language acquisition which reflect the manner in which learners gain knowledge of the new language, either in a similar manner to their native language - hypothesis - or against the background of this - the interference hypothesis. There are also models which emphasize how a second language is produced (monitor model) or which stress the role of external factors (discourse and acculturation models). 6.10 Language and the brain Neurolinguistics is the study of all aspects of language directly related to the functioning of the brain. It is difficult to determine where the language faculty is located but at least two main areas (frontal lobes) have been identified in the brain: 1) Broca's area responsible for the production and 2) Wernicke's area which is involved in understanding language. Aphasia refers to any physically-based malfunctioning of language. The two main sources of this are lesions caused by accidents and brain disease resulting from cancerous tumours. There are various kinds of impairment which may involve production or comprehension or both. An individual with aphasia may have difficulty finding words or producing sounds or may show a lack of grammatical words. The tip of the tongue phenomenon can be seen with non-pathological speakers and is characterised by a sudden block in lexical retrieval and which is released again for no apparent reason. Slips of the tongue involve the involuntary and unintended switching of elements among words of a sentence. Normally the onset or rhyme of adjacent syllables is switched and this phenomenon offers firm evidence for the validity of the syllable as a phonological unit. 6.11 Contrastive linguistics Contrastive linguistics is a relatively recent sub-discipline in linguistics which is concerned with the comparison of at least two languages with the deliberate goal of

NSOU PGEL-4 283 indicating the pitfalls for language learners with the first language and a target language L2. In its orientation, contrastive linguistics is synchronic and does not consider possible genetic relationships between languages. There is a theoretical and an applied approach to the field which is concerned with outlining general principles and applying these in practical analyses respectively. The main phenomenon which is considered in contrastive linguistics is interference which represents the use of structural features from the outset language in the target one. While this by no means explains all mistakes in the target language it does account for a large number of systematic mistakes - technically termed errors. The simplest form of interference is substitution. Speakers also show over- and under-differentiation according to whether a feature, possible in the target language, is more or less frequent in the outset language and hence used more or less often by the second language speaker. Interference is found on all levels of language. For instance, on the sound level, it represents a foreign accent. On the lexical level, it is found in the many cases of false friends. In syntax, it can lead to a not inconsiderable amount of misunderstanding if the structures produced cannot be processed by native speakers of the target language. It can also be found on the level of pragmatics where differences in discourse strategies can lead to disconcerting effects in the target language. 6.12 Language change Language change is present in all languages at all stages and is largely regular. Speakers are not always conscious of this. However, if it involves elements of an open class, like the lexicon, then speakers usually notice it and may try to prevent it by prescriptive behaviour. Language change is not intentional but arises from the natural variation present in language at all times, e.g. that which occurs when speakers attempt to move upwards in society or when they demonstrate solidarity with the class to which they belong. There may be an internal motivation for change. This is mainly the case when the change leads to paradigmatic regularity, a so-called analogical change which results in more regular nominal or verbal forms. Speakers tend to overestimate the avoidance of homophony as a source for change and not to grasp long-term structural changes which are often connected with typological drift, the movement from one type to another over several centuries, e.g. from synthetic to analytic in the history of English. Change may lead to a shift in status for linguistic elements. For instance, transparent words may become opaque. Full lexical words may criticize (become temporarily attached to stems) and then appear as inflections (permanently attached). This process is known as

NSOU PGEL-4 284 grammaticalisation. At any one stage of a language, there will be remnants of former changes (such as umlaut in English). These remnants often appear as suppletive forms in paradigms. In historical linguistics, there are two main methods for gaining knowledge of earlier stages of a language: the comparative method which involves looking at forms common to two or more genetically related languages and the technique of internal reconstruction which uses information about the structure of a single language at different periods to gain knowledge about a very early stage. Language change is found on all levels of language, both in the past and in the present. Consult the above sections for examples from different spheres. 6.12.1 Language contact and language change Languages come into contact and they exchange morphological syntactic strategies. This gives rise to language contact situations and contact-induced varieties. This contact has also had some kind of effect on the form of the language involved. Here one must distinguish between direct contact when speakers of two or more languages intermingle, and indirect contact, when the second language is known only through the printed word or (nowadays) the non-print media. The latter type involves a language with sizeable prestige and results in cultural borrowings. The third type of situation can be termed delayed effect contact because the effect is only apparent some considerable time later. Such an effect is usually low-level; such as that on the level of phonetics; but may cause major changes over long periods if the morphology is affected. Stable contact situations may arise with bilingualism as a result. If the languages in contact are functionally distinguished then one calls the situation diglossia. Contact between dialects is also of importance as seen clearly in the history of English. Here many forms survive in the standards which have their origin outside of the east midland area around London which was the geographical source for early Standard English. Languages which are contained in a geographically well-delimited region can often form what is termed a linguistic area (a translation of German Sprachbund). These languages frequently come to share structural properties which diffuse throughout the area, irrespective of genetic affiliation. 6.13 Language typology Language typology involves the classification of languages according to their grammatical structure and not based on genetic affiliation.

NSOU PGEL-4 285 There are four basic types: analytic (little or no morphology), synthetic (portmanteau inflections), agglutinative (one to one correspondence between form and meaning), poly-synthetic/incorporating (Incorporated lexical and morphological forms). There would seem to be a typological cycle such that languages develop from analytic to synthetic, back to analytic and so on. The shift to a synthetic type occurs largely when word forms coalesce and grammaticalisation occurs. A language can become analytic when it loses inflections through phonetic attrition as has happened in the history of English. This cycle need not be so neat and simple: there are frequently conflicting forces operating in a language so that incorporation and analysis may arise concurrently. Typology also concerns the question of universals. These refer to features which are present in all or almost all the languages. Furthermore, some universals imply the existence of others and are thus called implicational universals, a term coined by Joseph Greenberg, a leading figure in contemporary typological study. 6.14 Summary The unit walks you through various branches/ components of linguistics. While the primary components of any language revolve around its phonology, morphology, syntax and semantics, Linguistics also interacts with society, history, culture, literature and many such facets of human life. 6.15 Review Questions 1. What is Linguistics? 2. How many branches of linguistics are discussed here? 3. What role does phonology play in linguistics? 4. How is phonology useful to the learners of a new language? 5. Are morphology and syntax related to each other? 6. What is the study of meaning called? 7. How many types of syntactic analysis are possible? 8. How are tree diagrams useful in understanding the structure of a sentence? 9. What is the role of contrastive linguistics?

NSOU PGEL-4 286 10. What do we mean by speech acts? How many speech acts are discussed? 11. What does typology of language refer to? 12. Is language change natural? Can we avoid it? 6.16 References and Reading List Cook, V. J. and Mewson, M. 2014. Chomsky's Universal Grammar : An Introduction. 3rd edn. New Delhi : Wiley India. NSOU PGEL-4 287 Unit 7 Learning Strategies and Styles 7.1 Introduction 7.2 Objectives 7.3 Learning Strategies vs. Learning Styles 7.4 Learning Styles 7.4.1 Role of the Teacher 7.5 Learning Strategy 7.6 Language Teaching Approaches 7.7 Summary 7.8 Review Questions 7.9 Reading List 7.1 Introduction In this unit, you will learn the basic concepts related to the strategies of learning and styles related to language learning. Often language poses a challenge in the case of learning. We will talk about certain strategies here. At the outset, we need to distinguish the differences between learning strategies and learning styles. The unit discusses the difference between learning and learning strategies. Whereas the former is unconscious the latter is developed by the learners. Since every student possesses his/her own style of learning, it gives rise to different learning styles. Students use cognitive to social strategies
to ease the difficulty of learning. 7.2 Objectives

77%	MATCHING BLOCK 51/74	SA	PGELT 5 _ 6 (1-400).pdf (D165254851)

After going through this unit, you will be able to: a. Understand the difference between learning strategy and style b.

Understand the role teacher plays in promoting learning c. Identify different approaches to teaching languages d. Identify learner and teacher qualities. 287

NSOU PGEL-4 288 7.3 Learning strategies vs. learning styles: Go through the table to understand the salient differences in learning strategy and style. Learning strategy Learning styles Rubin (1987) describes learning strategies are strategies which contribute to the development of the language system which the learner constructs and affect learning directly. Broadly speaking, learning styles can be defined as general approaches to language learning. Learning strategies are steps taken by students to enhance their learning. Strategies are especially important for language learning because they

87%	MATCHING BLOCK 53/74	SA	PGELT 5 _ 6 (1-400).pdf (D165254851)

are tools for active, self- directed involvement, which is essential for developing communicative competence. Appropriate language learning strategies result in

improved proficiency and greater self- confidence. Throughout history, the best language students have used strategies ranging from naturalistic language practice techniques to analytic, rule-based strategies. Learning style refers to the preferred ways which individuals use to solve problems confronted in their learning. The learners' learning styles are often not perceived or used consciously. Learning style plays an important role for everyone to learn, to obtain information, to communicate with others. Being conscious of their learning styles will help students to improve their language learning proficiency. The term "learning style" originates from psychology. It broadly refers to how a learner tries to learn something, based on individual characteristics, used unconsciously and not perceived. Everyone has a learning style, but each person is as unique as a signature. Each signature appears to be influenced by both nature and nurture.

NSOU PGEL-4 289 Classification of language learning strategies has primarily followed the theory of cognition (Macaro, 2001). Cognition refers to how the brain works for information processing and retrieval. Classification of strategies has many advantages. Learning strategies have been classified by many scholars (Wenden and Rubin, 1987; O'Malley et. al, 1985; Oxford, 1990; Stem, 1992; Ellis, 1994, etc.). Strategy subsets enable researchers to describe the correspondence between mental processes and strategic processes (O'Malley and Chamot, 1990). Strategy inventories may also serve as a valuable reference guide for educational instructors in the process of promoting autonomy in the language learner. Oxford's (1990) Strategy Inventory for Language Learning (SILL) is one such classification system linking groups through a series of self-report assessments and questionnaires. Oxford divides strategies into two major classes: direct and indirect. Keefe (1979: 4) defines learning style as "characteristic cognitive, affective, and physiological behaviours that serve as relatively stable indicators of how learners perceive, interact with and respond to the learning environment"; "Learning style is a consistent way of functioning that reflects underlying causes of behaviour". In 1987, Willing defines learning style as an inherent, pervasive set of characteristics related to how learners prefer to learn or to deal with new information. Reid (1995, 69) defines learning style as "an individual's natural, habitual, and preferred way(s) of absorbing, processing, and retaining new information and skills, and a pervasive quality in the learning strategy or the learning behaviour of an individual". Learning strategies are the behaviours and thought that a learner engages in during learning that is intended to influence the learner's encoding process.

NSOU PGEL-4 290 Now let us discuss the learning styles first and then we can proceed to learning strategies. The strategies a student uses to learn, depend greatly on his/her learning style. 7.4 Learning styles Each student possesses his/her style of learning. As a result, we observe different students with different learning styles in the classroom. Some of these are listed below: 1. Visual or spatial learners: Pupils need to see things to fully understand them. They learn best from visual objects such as diagrams, charts, etc. They prefer to write things down. 2. Auditory or musical learners: They learn mainly through listening so they learn best through discussions and talking. They benefit most from reading texts aloud and using a tape recorder. 3. Physical or kinesthetic or tactile learners: People learn by using their body, hands and sense of touch. They tend to use their muscles so they can be used well in playing, tidying, cleaning the board, collecting activity books, etc. They learn best through using their hands making things, fitting things together or taking them apart so hands-on activities are ideal to help those students learn best. 4. Social or interpersonal learners: They prefer to learn in groups or with other people. They can understand others' feelings and intentions. 5. Solitary or intrapersonal learners: Many prefer to work alone and use self-study as they can understand well the feelings, strengths and weaknesses. They tend to write a personal diary, achieve independent projects, discuss feelings about certain topics, express likes and dislikes, etc. 6. Verbal or linguistic learners: Some also prefer using words, both in speech and writing. 7. Logical or mathematical: Some students prefer using logic, reasoning and systems.

NSOU PGEL-4 291 In conclusion, we can say, one uses learning strategies automatically without being aware of them. 7.4.1 The role of the teacher The role of teachers here is to, first of all, recognize their students' learning strategies, and bring them to their attention and talk about them. Secondly, s/he should encourage students to use them in the classroom and use them more to make the learning process effective. We will discuss these issues more in section 7.5 and also in the next unit. 7.5 Learning strategy Students use the following learning strategies most often when learning a language: 1. Cognitive strategies enable the learner to manipulate the language material in indirect ways, e.g. through reasoning, analysis, note-taking, and synthesizing. 2. Metacognitive strategies are used to manage the learning process overall, e.g. identifying preferences and the need for planning, monitoring mistakes, and evaluating task success. 3. Memory-related strategies help the learners link an item or concept with another but do not necessarily involve deep understanding, e.g. using acronyms, sound similarities, images, keywords. 4. Compensatory strategies assist to know for missing knowledge, e.g. using gestures, miming or guessing the meaning from the context. 5. Affective strategies help us manage their emotions, such as identifying one's mood and anxiety level, talking about feelings, rewarding oneself, and using deep breathing or positive self-talk. 6. Social strategies enable you to learn via interaction with others and understand the target culture, e.g. asking questions, asking for clarification, asking for conversation help, talking with a native-speaking partner, and exploring cultural and social norms. Now, let us look at various teaching approaches which help in building learning strategies.

NSOU PGEL-4 292 7.6 Language Teaching Approaches Ricardo E. Schütz explains how in learning languages, "a distinction is usually made between mother tongues, second languages, and foreign languages. A mother tongue is the first language or languages one learns (or acquires) as a child. When immigrants come to a new country and learn the language of that country, they learn it as a second language. On the other hand, when English-speaking students in the United States learn French or Spanish in school, or when Brazilians study English in Brazil, they are learning a foreign language." The acronyms ESL and EFL denote learning of English as a Second and as a Foreign Language. Many theories about the learning and teaching of languages have been proposed. The study of these theories and how they influence language teaching methodology today is called applied linguistics. The grammar-translation method (18th, 19th and early 20th century), for example, is an early method based on the assumptions that language is primarily graphic. The main purpose of second language study is to build knowledge of the structure of the language either as a tool for literary research and translation or the development of the learner's logical powers, and that the process of second language learning must be deductive, requires effort, and must be carried out with constant reference to the learner's first language. The audio-lingual approach became popular from the 1940s through the 1960s. It is based on structural linguistics (structuralism) and behavioristic psychology (Skinner's behaviourism), and places heavy emphasis on spoken rather than written language, and the grammar of particular languages, stressing habit formation as a mode of learning. Rote memorization, role-playing and structure drilling are the predominant activities. Audio-lingual approaches do not depend so much on the instructor's creative ability and do not require excellent proficiency in the language.

NSOU PGEL-4 293 By the middle of the 20th-century cognitive psychologists like Vygotsky and Piaget came up with theories that helped to explain the limited effectiveness of the traditional prescriptive and mechanistic approaches to language teaching. These theories serve as a basis for the new natural-communicative approaches. Beginning in the 1950s, Noam Chomsky and his followers challenged previous assumptions about language structure and language learning. They introduced language as creative (not memorized), and rule-governed (not based on habit). The language also relies upon principles and parameters known as language universals. Most recently, there has also been a significant shift toward greater attention to reading and writing as a complement to listening and speaking, based on a new awareness of significant differences between spoken and written languages. It relies on the notion that dealing with language involves an interaction between the texts on the one hand, and the culturally-based world knowledge and experientially-based learning of the receiver on the other. We now emphasize individualized instruction, more humanistic approaches to language learning, a greater focus on the learner, and greater emphasis on the development of communicative competence, as opposed to merely linguistic competence. In addition to Chomsky's generativist approach, the advances in cognitive science and educational psychology put forth by Piaget and Vygotsky in the first half of the century strongly influenced language teaching theory in the 1960s and 70s. These new trends favouring more humanistic views and putting a greater focus on the learner and social interaction gave way to the Natural (USA) and Communicative (England) approaches. Psychologist Charles Curran's Community Language Learning, as well as Krashen and Terrell's Natural Approach (in the 1980s), are good examples of this latest trend in language teaching. Hammerly defines it as Communicative Acquisitions Naturalistic mega theory of language instruction. 7.7 Summary In this unit, we have examined the notions related to language learning and strategies. While articulating on the strategies we have briefed a summary of the teaching approaches. I have shown how it all began with cognition and teaching now tries to take a more humane approach. In Unit 8, you will get a comprehensive overview of language teaching.

NSOU PGEL-4 294 7.8 Review Questions 1. Adapting your speech to the listener can involve A. giving attention to register. B. making use of prompting. C. politely correcting. 2. A common feature of speech which is not fluent is A. hesitation. B. encouragement. C. turn-taking. 3. Interactive speaking involves A. developing a topic. B. using a variety of language patterns. C. exchanging ideas. 4. An example of self-correction is A. No, what I actually said was..... B. I mean coming down the stairs, sorry. C. That's right. In other words, a lot of people think that..... 5. Trying to help the listener can involve A. requesting clarification. B. interrupting. C. paraphrasing. 6. The speaker uses repetition to A. explain things more simply when communication has broken down. B. speed up the interaction process. C. clarify things for a listener who has not heard properly. 7. Write a brief note on generativist position on teaching 8. Try to differentiate the cognitive approaches with translation approach.

NSOU PGEL-4 295 9. How many learning styles are discussed? Are these important? 10. How can a teacher help by recognizing the learner's learning style? 11. How are learning strategies different from learning styles? 12. What method of teaching is used now? Who influenced this method? 7.9 Reading List Ellis, G. & B. Sinclair. (1989). Learning to Learn English. Cambridge: Cambridge University Press. O'Malley, J.M., & Chamot, A. (1990). Learning Strategies in Second Language Acquisition. Cambridge: Cambridge University Press. NSOU PGEL-4 296 Unit 8 Linguistics and ELT 8.1 Introduction 8.2 Objectives 8.3 English Language Teaching and the Importance of Linguistics 8.4 Thinking about language 8.5 Assessment 8.6 Role of Socialization 8.7 Role of Linguistics 8.8 Methods and methodologies 8.9 Summary 8.10 Review Questions 8.11 References 8.12 Reading List 8.1 Introduction In this unit, we will discuss an applied area of linguistics known as English language teaching. The scope for research in this area is quite open and dynamic. Linguistics is considered essential for language teaching because linguistics and language teaching can be likened to the relationship of knowledge about the engine and the skill in driving a car. It will be better for the driver to support himself with some knowledge about the car or the engine so that he can drive it well and know how to overcome some engine trouble in case he has to face it. In the same way, it will be better if a language teacher has some knowledge about, for instance, the characteristics of the language in general and the specific language he is teaching in particular. In this relation, he should know how language works and express meaning, and what structures are used in the particular language he is teaching. He should get familiar, for instance, with the theory about the general mechanism of producing speech sounds, so that he will be able to tackle any pronunciation problem his students may encounter. By studying linguistics he will have deeper insights into the nature of language and act accordingly in teaching the language. For instance, when he agrees that the use of language is a matter of habits and practice; in teaching it to his students he must implant the habit of using it for communication until it becomes deeply established. 296
NSOU PGEL-4 297 8.2 Objectives

100%	**MATCHING BLOCK 55/74**	**SA**	PGELT 5 _ 6 (1-400).pdf (D165254851)

After going through this unit, you will be able to: a. Understand the

role of
linguistics in language
teaching b. Identify the needs for teacher to be aware of language analysis c. Apply linguistic principles in language teaching d. Use proper methods of assessment while evaluating learner scripts. 8.3 English Language Teaching and the Importance of Linguistics The English language is the 3rd most popular languages in the world according to Ethnologue 2019. The demand for learning this language is ever increasing. As philosopher Franz Fanon once mentioned, "To speak a language is to take on a world, a culture." Undoubtedly there is a demand for gaining language proficiency. In this Unit, the objective will be to discuss the need for understanding of Linguistics for English Language teachers and learners. It is argued that English Teachers need to be well trained in Linguistics because when they are on duty, they work like correspondents, education specialists and assessors. They also work as educated human beings. Teachers are the forerunners of developing a sense of negotiators of socialization to their students. The teachers work like connectors as it is really important to develop good conversational skills to be able to communicate with students from varied backgrounds. Teachers and trainers should develop their communication strategies so that they know the way to structure the lessons and deliver them to the students. Students require to understand language for communicating productively in class and outside as well. Conversely, understanding the students also becomes crucial. Listening to the students carefully and responding to them is an important issue. It is because understanding and assessing what they know, indicates their ability to reflect. The students are a crucial part of assessment related to teaching techniques which the teachers must go through. Linguistics is really important for teachers to instill confidence in their work because lately, the model of education is innovating rapidly. The classrooms are getting diverse and there are more students with diverse socio-economic backgrounds and most importantly different levels of exposure to English. This shows that teachers, to a great extent, will have to face students whose first language is not NSOU PGEL-4 298 English. In this type of world of rapid innovation and diversity, a deeper knowledge of linguistics will assist teachers to notice that the speech forms they value are characteristics of their own culture and background. They are neither general nor characteristically more effective than other possible speech forms. If the teachers cannot identify the effectiveness of other ways of speaking, this can shake their student's self- esteem in their ability to communicate. Consider the awkward situation given by Smitherman (1977) through a conversation thread which is as follows: Student (excitedly): Miz Jones, you remember that show you tole us about? Well, me and my momma's nem? Teacher (interrupting with a "warm" smile): Bernadette, start again. I'm sorry, but I can't understand you. Student (confused): Well, it was that show, me and my momma! Teacher (interrupting again, still with that "warm" smile): Sorry, I still can't understand you. (Student, now silent, even more, confused than ever, looks at the floor, says nothing.) Teacher: Now Bernadette, first of all, it's Mrs Jones, not Miz Jones. And you know it was an exhibition, not a show. Now, haven't I explained to the class over and over again that you always put yourself last when you are talking about a group of people and yourself doing something? So, therefore, you should say what? Student: My momma and me? Teacher (exasperated): No! My mother and I. Now start again, this time right. Student: Aw, that's okay, it wasn't nothin. This is why it is really important to have Linguistic knowledge so that neither the child nor the teacher will be humiliated during communication in the class. This is how Linguistics can prepare the English Language teachers to work with students with varied cultural, social and linguistic backgrounds. Their understanding of the use of language would be probably different from the Native- Indian English speaker which is a key factor in teaching.

NSOU PGEL-4 299 Teachers work as educational specialists. They select educational materials for specific classes, grades and or levels for the children in that specific group. This involves a careful and thorough basis of student evaluation results and the capability to differentiate between flawed knowledge of English and cognitive learning obstacles. Language and linguistics play an essential role in the teaching process. It plays a serious developmental role throughout the school years without the student's cultural, social or linguistic differences. For this reason, teachers are frolicking a serious part in supporting language development. Language teachers utilize the important aspects of language associated with the academic syllabus of the different subject courses. These educationalists must fully instill the functions and systems of language operations for this will help them to be able to choose materials that help improve the students' linguistic awareness. This will help the teachers to come up with effective and innovative planning of educational materials of instructions which will give the students chance to apply new forms and modes of presentation to which they are being shown. This is why a basic knowledge of educational linguistics is also a requirement to endorse language progress with all of the students in classrooms currently as the teachers need to help the students become more conscious about the linguistic functions in various types of communication through the course. 8.4 Thinking about language The foremost important question here is to ask 'what do English language teachers teach and learners learn?' This seems rather illogical. The question seems to answer itself; it seems self-evident to note that what teachers teach and learners learn in ELT classrooms is language, specifically the English language. However, if we start to explain this common-sense understanding of ELT, what initially seems clear is revealed to be full of complexity, and raises several dilemmas that are embedded in the everyday practices of ELT teachers and their approach to teaching. For example, you need to ask the following: i) Is the language in the classroom addressed primarily as a system of grammatical rules or patterns, or as a system for expressing meaning and communicating, perhaps communicating to solve tasks or for learners to express their own identity? Of course, it is possible, perhaps likely, that a combination of these perspectives may be part of teachers' understandings of language and apparent in their classroom teaching.

NSOU PGEL-4 300 ii) If so, how can they be combined coherently? iii) Similarly, which language skills are of primary importance in the ELT classroom- 'spoken skills' (i.e., listening and speaking) or 'written skills' (i.e., reading and writing)? iv) Thus, what is meant by language knowledge (or knowledge of the language)? Are learners learning about language so they can consciously and explicitly describe how language operates, or is the focus more on how to use the language via implicit knowledge below the level of consciousness, perhaps with little or no explicit attention to 'rules'? And how might teachers balance these perspectives in practice? These are the questions that we will try to answer in the subsequent sections. 8.5 Assessment English Language teachers also need to work on a lot of assessment of assignments. Teachers assess students in terms of their academic and communicative progress. Do you realize the importance of feedback to students about their (students) own progress? It is really important as it affects their sense of "self-esteem" as learners to the more crucial decisions about reading group placement, promotion or referral for evaluation. Teachers need to invest a lot of focus on segregating the learners according to their capabilities at an as early age as possible. Usually, in several nursery schools, the students-to-be are tested with "Readiness Test," and according to the results of these tests, the students are segregated according to the performance they have shown in the test. To make a just decision about the students' capabilities, these educationalists need to know the different sources of variation in a community that speaks a vernacular variety of English, standard development for L2 learners of English, normal divergences from the matured standard that are allied with early development stages, or developmental malfunction. English Language teachers must be using up a lot of time understanding and instilling the educational linguistics in them so that misunderstanding a student could be prevented. 8.6 Role of socialization We consider teachers as the forerunners of developing a sense of negotiators of socialization to their students as well. They play a unique role in the field of socialization in the life of students. Socialization commences at home which continues at school and then later throughout the whole life. The students learn the daily routine, the

NSOU PGEL-4 301 moral beliefs and the means and manners of communication of their cultural communities through the assistance of teachers. From a linguistic and communicative point of view, students without knowledge of English who enter school are asked to learn the Second language as it is the medium of instruction of that particular institution. The students tend to grab the language very fast at a young age and so minimal help is required and due to this, the children can blend in with the other students socially and academically through communicating while they learn the new language. In this situation, the parents and teachers have to work hard so that children can learn the language effectively. If the parents don't know the English language, then, they must learn it as well so that their children can be guided at home as well as in school. The language should be spoken at home as well as in school to improve rapidly. We are not saying that the mother language should not be spoken at all but to improve both spoken and written English, rapid practice is required at home and outside the home. When there is a problem where the parents do not know English, teachers must give a little bit of extra attention to their children at the place that they can practice. Earlier in this unit, we have mentioned that English language teachers play a very important role in the students' linguistic and social life. Through the study of linguistics, teachers confidently approach the students and through knowing educational linguistics, the teachers can have the ability to understand the role of the first language (which is not English) in the students' lives and that of their own families and with proper care and without humiliating the student, a teacher can assist the student successfully regardless of what the culture of the child (ren) is.

NSOU PGEL-4 302 8.7 Role of Linguistics Teachers are expected to know the function of the language and the way it contributes to skillful reading and writing. Knowing Basic English indicates that an English teacher should know how to distinguish between the parts of speech like nouns, verbs, articles, consonants, adjectives and more such categories. The roles of some branches of linguistics e.g. phonetics, phonology, morphology, syntax, generative transformational grammar, semantics, pragmatics, sociolinguistics and psycholinguistics have been already discussed in Unit 6. There is another segment of linguistics which is called applied linguistics which studies the use and application of linguistic research in other domains. Among the subfields of linguistics mentioned in the above paragraph, the sociolinguistics and psycholinguistics are the branches of linguistics that are related to other specialised fields of study. Seeing this, it can be said that Linguistics is like a research-based field of studying any language. Thus, if a teacher undergoes the process of learning and understanding linguistics, he/she is a complete professional in teaching English Language and also English as a Second Language (ESL). The factors discussed in the unit are interconnected between the teachers, the academic and social life of students, the culture and ethnicity of both the students and teachers and also the linguistic issues. Under the applied linguistics a couple of basic positions are held in English language teaching: a) Form-focused teaching which emphasizes the teaching of the rules of grammar, structures, the development of vocabulary and the sounds of language; and b) Meaning-focused teaching which emphasizes language use, communication or fluency and appropriateness of expression in different situations. Language teaching came into existence as a profession in the early eighteenth century in Europe, whereas it existed in India nearly 3000 years ago. Its foundation was developed during the early part of the twentieth century, as applied linguists, with a focus on the fields of linguistics and psychology to support what was thought to be a more effective teaching methodology. Language teaching in the twentieth century was characterized by frequent changes, innovations and development of language teaching ideologies. Pit Corder argued that applied linguistics was a collection of applications of linguistics at various levels to determine precisely the constraints, or laws of language teaching operation, albeit of linguistics in a broad sense. Cook and Wei mentioned that applied linguistics is an interdisciplinary field of research and practice dealing with practical problems of language and by applying available theories, methods or

NSOU PGEL-4 303 results of Linguistics or by developing new theoretical and methodological frameworks in linguistics to work on these problems. Varshney defined applied linguistics as the collective term for the various applications of linguistic (and phonetic) scholarship to related practical fields-foreign language teaching, lexicography, translation, speech pathology and therapy, error analysis, etc. Applied linguistics in the widest sense, therefore, borders on other disciplines, for example, sociology, anthropology, psychology, biology, computational linguistics, stylistics, etc. The speech therapist, the literary critic, the translator, the communication engineer, the language teacher, the syllabus framer, the educational planner, the textbook writer, the dictionary-maker have found linguistics useful for their work. Finally, Contrastive Analysis deals with the problem of mother tongue interference; it is not enough to predict language teaching and to describe the best way of mistakes, what is needed is their correction; applications, instances of the human linguistic ability of different descriptions which are superficial and incomplete. Today, it is beyond any doubt that English is used as a world language for business, science and medicine. 8.8 Methods and methodologies According to Stern (1983) 'language educators sought to solve the problems of language teaching by focusing attention almost exclusively on Method' (Stern, 1983: 452), with methodologists (and presumably teachers) asking which method or approach was the most effective for English language teaching. Consider, for example, Audio- lingualism, the Silent Way or maybe Communicative Language Teaching. In recent years, however, the debate has developed around the Method, traditionally seen as a theoretically consistent set of teaching principles that would lead to the most effective learning outcomes if followed correctly (Richards and Rodgers, 2001). It fails in making English language teaching and learning more effective. Around twenty years ago, Prabhu (1990) proposed that any attempt to find a 'best' method was illogical given that teachers quite reasonably adapted and combined individual methods to accommodate contextual influences and their personal beliefs. At the same time, applied linguists such as Pennycook (1989) argued that traditional views of Method frustrated teachers who, in the real world, we're unable to implement them fully and consistently. Pennycook also argued that the idea of Method and the search for the best method maintained unequal power relationships within ELT between academics and researchers on the one hand and teachers in language classrooms on the other. As a result of this sustained criticism indeed, researchers such as

NSOU PGEL-4 304 Kumaravadivelu (1994, 2003,2006.) have noted that we are now in a 'Postmethod era', to the extent that this idea is now regularly discussed and examined in teacher training and development texts. (e.g., Thornbury, 2006; Harmer, 2007). Given these developments and the apparent move away from Method as a major focus within ELT, As Allwright and Hanks (2009: 37) put it, 'why should we care about language teaching methods?' Examining language teaching methods serves a clear purpose. If we are in a Post method era, 'methods can be studied not as prescriptions for how to teach but as a source of well-used practices, which teachers can adopt or implement based on their own needs' (Richards and Rodgers, 2001: 16). For example, the development, drilling and practising of dialogues in the classroom defined the audio-lingual era, yet drills are still used by many teachers today, whether they explicitly associate such techniques with Audio-lingualism or not. We know Bell (2007), had asked whether teachers think that methods are 'dead', finds that they offer a source of options and practical classroom interventions. Thus even, perhaps especially, in a Post method world of methodological eclecticism, knowledge of methods is useful. 8.9 Summary In conclusion, English language is a language when combined with a deeper understanding of Linguistics and is instilled in a teacher and if taught properly to students, the students, in turn, will have a proper form of linguistic awareness without any form of humiliation while speaking and writing in the English Language despite the nations' diverse social, ethnic and linguistic backgrounds. 8.10 Review Questions 1) From the conversation cited in section 8.1figure out the culture-specific linguistic constructions 2) Can you see mother tongue interference while speaking English by L2 Speakers? Do you consider them as a hindrance! Justify your answer by posting examples. 3) What are the principles of linguistic analysis? 4) How is linguistics a support to understand the learners' problems? 5) What methods of assessment can we adopt by knowing linguistics?

NSOU PGEL-4 305 6) How is a mother tongue of the learner an influencing factor in learning a second language? 7) What are the contributions made by Pennycook and Allwright in choosing the right method to teach? 8) What role do the parents play in the development of learners' second language? 9) Do social and ethnic backgrounds of the learners cause problems while teaching? 10) How does a knowledge of language become an important input in teacher education? 8.11 References Fromkin, V., Rodman, R., & Hyams, N. NSOU PGEL-4 306 Module 3 : Branches of Linguistics Unit 9 Psycholinguistics 9.1 Introduction 9.2 Objectives 9.3 Origin and Concept of Psycholinguistics 9.4 Sound Production and Human Brain 9.5 Branches of Psycholinguistics 9.6 Scope of Psycholinguistics 9.7 Summary 9.8 Review Questions 9.9 Reading List 9.1 Introduction In the previous units of Module 1, we have learnt about language, its various perspectives and the different sounds that are produced in English. In this unit, we will learn about the cognitive aspects involved in the use of language, its representations and processing. This unit also aims to discuss the interrelation between linguistic use and psychological process and/or influences involved. Recent developments in the field are increasingly generating as to how the interrelation influences language learning and its applications. 9.2

Objectives At the end of this unit, you will be able to: Understand

certain concepts in psychology that features and enables language use, Can apply the acquired knowledge in obtaining and analysing information of this kind, Develop greater awareness of psychological patterning of learners in their situation, that facilitates language learning and teaching and its uses based on their exposure to the concepts. 306

9.3 Origin and the concept of Psycholinguistics Isn't it very interesting to find out how we manage to speak and understand a language at the same time? From our earlier studies, we know that it is man alone who is gifted with the ability of the speech mechanism. And, it is the same mechanism that either creates or mars man to man relations in any given society be it at formal or informal fronts. It is also highly interesting that by the use of language we dig deeper to understand the same language. It has such vastness. It calls into action the different features of the human body to coordinate and cooperate for an effective and meaningful expression. The linguistic elements may be combined into 'n' number of syntactical arrangements but, it is a human mind that helps in processing the arrangements and derive some logical relation and construct meaning from the arrangements (reading and writing) as much as from the way it is being delivered (intonation, stress, mood, tone, expression etc.) and received by the users (speaking and listening). It can be well observed from the behavioural strategies applied by a newly born child that struggles to understand or get itself understood by people around. Minute skills are involved in the entire process of forming meaningful communication. Well, to understand how psychology and linguistics work hand-in-hand it is essential to take a look at the origin of the concept of psycholinguistics. Before we do so, let us take a look at an advertisement below as our starting example: A closer look will take you to the circled letter (inverted 'a'). Every single letter, image, or linguistic element included in the advertisement speaks and conveys a meaningful connotation. The arrangement of the linguistic elements, and the diction, trigger the thought process. At the sight of the advertisement, we derive some idea and comprehend what it intends to convey. Undoubtedly, it involves an arrangement of letters, words, phrases,

and images. Let us consider the case step by step. But, how do the thoughts get organized? What are those physical parts involved and how does psychology get connected, if that be so? Can you attempt writing them in the space provided below? --- According to a study conducted by Willem Levelt, Director Emeritus, Max Planck Institute for Psycholinguistics, The Netherlands, has mentioned that the study of empirical linguistics goes back to the end of the eighteenth century in contrast to the claim of the psycholinguists that consider the origin of 'psycholinguistics' with the Chomskian 'cognitive revolution' during the late 1950s and 1960s . However, there are several views concerning the coinage of the term. Some studies mention that the term 'psycholinguistics' was coined by psychologist Jacob

100%	**MATCHING BLOCK 57/74**	SA	BEGS-32- Final Copy.pdf (D163712610)

Robert Kantor in his book An Objective Psychology of Grammar (1936)

along with we also find mention that it was coined in the 1940s . After the publication of Charles E. Osgood and

95%	**MATCHING BLOCK 58/74**	W	

Thomas A. Sebeok's Psycholinguistics: A Survey of Theory and Research Problems (1954)

which reported the proceedings of a seminar sponsored in the United States by the Social Science Research Council's Committee on Linguistics and Psychology, the term was more into general use. Etymologically, it is of Greek origin. Linguistics, as we know, is the study of human language and related behaviour on one level and on the other level, psychology is the study of the human mind. It brings in close association and interrelation with one another. Psycholinguistics is a branch of study that deals with the acquisition, production and presentation of a language in a given context which is different as regards time, situation, culture and many other factors. It is not just confined within the arrangement of linguistic elements. The acquisition, production and perception of a native language are different from the acquisition, production and perception of learning a second or a third language. Psycholinguistics is essentially concerned with the development of theories on different aspects of language learning and provides an

NSOU PGEL-4 309 understanding of the psychological processes involved in the language producing skills, viz. speaking and writing and, the language perceiving skills like reading and listening. It identifies the complexities involved both bodily and psychological, that explains how human personality evolves across the stages of human lifespan and how language use is shaped through the stages of physical and psychological developments. Here, language is a term used as an all-inclusive concept applied in various contexts - could be the language of humans, or, the language of communication or computer language. The concept of Psycholinguistics is considered to have emerged in 1951. However, some views differ considering that study of psycholinguistics is traced back to the study of psychology. By building a link with neurolinguistics it has also been connected to the origin of psycholinguistics. However, it was in 1951, an interdisciplinary seminar at Cornell University was organized by the Social Science Research Council (SSRC) on language behaviour where the interaction between psychologists and linguists led to the systematic development of studies on psycholinguistics. The SSRC seminar brought together linguists like Thomas Seboek, Joseph Greenberg, Floyd Louncebury and psychologists like John Carroll, Charles Osgood, and George Miller. The publication of the report of the proceedings of the Seminar in the Journal of Abnormal and Social Psychology, entitled "Psycholinguistics" rapidly spread the concept of psycholinguistics for explorations by psychologists and linguists alike. The Sapir-Whorf Hypothesis and Noam Chomsky's Generative Linguistics launched during the 1950s, considered landmarks in the development of psycholinguistics, added fuel to the fire. 9.4 Sound Production and Human Brain However, it is to be understood here that sound production and the human brain are interrelated and the functioning of the human brain or its size is potentially connected in making the arrangements for the production of sound. Considering its importance and contribution it is important to understand that it was the anatomy of the human brain by Paul Broca, a French surgeon and German Doctor, Carl Wernicke's localization of a second region considered crucial in understanding human speech were the milestones in the understanding of speech mechanism and connections between language use and the brain. Broca's area so named after the surgeon is considered to credit the left hemisphere of the brain for language ability whereas Wernicke's area named after the German Doctor is considered crucial in the understanding of human speech. The breakthrough came from the works of Broca (1861) who came out with the fundamental discovery that the third frontal convolution of the left hemisphere of

NSOU PGEL-4 310 the brain is the source of language production and it was Wernicke who discovered the areas of the left hemisphere of the brain that is responsible for memory, for sound production and generating the image with the utterance of a word. The brain is a bundle of billions of neurons or nerve cells in varied shapes and sizes and other cells that nourish the nerve cells. These neurons when activated pass signals to one another that trigger the movement of some chemicals in and out of the neurons which generates a 'charge'. The central nervous system consists of the brain and the spinal cord and it is connected to the entire body through the peripheral nervous system. The innumerable neurons in the brain function differently in clusters or groups of neurons and the cortex of the brain are the seat of complex brain activities. Much before psycholinguistics came into the picture it was neurolinguistics that established the relationship between the brain and language use. Let us take a quick look related to the functioning of the various parts of the human brain: Hindbrain (including the cerebellum), and, Midbrain (along with pons and medulla in the hindbrain forms the brainstem) : controls balance, controls breathing, heartbeat and alertness Forebrain contains: the thalamus the hypothalamus the cerebrum contains the cerebral cortex : Relays the signals from the senses, Involved in eating and sexual responses, Responsible for perception, emotion and cognition. It is considered to be the biggest part of the brain and is divided into left and right hemispheres. The cerebral cortex is further divided into four lobes. Frontal lobes Involved in movement, emotional experiences and behaviour control Parietal lobes Involved in touch and taste sensation and registers the location of objects Occipital lobes Or, the visual cortex, analyses signals from eyes and visual pathways Temporal lobes : Processes auditory signals and language structure Left hemisphere : Dominant in many aspects of language use Right hemisphere Perception of the rhythm of speech or emotional expressions on the face. Psycholinguistics is an integration of psychology and linguistics, where the former is the study of the human mind and behaviour and the latter of human language. But, psycholinguistics is different from either of the two branches of study. This we have

NSOU PGEL-4 311 understood in our study on Saussure's distinction of la-langue and la-parole. Using a language has certain distinct ways that are different in different situations and are dependent on the structure of a language particular to that language system. Psycholinguistics is the branch of study that examines the processes of functioning of the human brain in its acquisition, perception and production of human language. It is a wider understanding of the 'psychology of language' that is extremely helpful in the domain of language learning and teaching. Task 1: List the functional regions of the brain and explain how they function concerning one another. You may take help from other sources of reading for further references to elaborate. Your answer: It would be interesting to understand some examples of the influence of the human brain in the use of language or its acquisition after birth, case studies on Genie, Oxana Malaya, Russian bird-boy are good sources and can be explored for more on them. Task 2: Once you have read the cases, pick up any one of them and write down your understandings of events like this. You can also include some of your references in case you have come across any of them. Your answer: 9.5 Branches of Psycholinguistics The study of Psycholinguistics has been further sub-divided under the following heads: 1. Clinical linguistics is an application in the field of speech disorders. It studies the linguistic features and movements involved in the production of speech and the disorders arising from damage caused to the brain. The study of clinical linguistics gained momentum during the 1970s and with the particular mention of David Crystal. He defined it as "the application of linguistic science to the study of communication disability, as encountered in clinical situations" . In more recent years, language use and/or communication which is seen as complex human interactions have become more convergent in the study and interrelation of linguistics, neuroscience, genetics and psychological workings. 2. Neurolinguistics analyses the process of working of the human brain and the

NSOU PGEL-4 312 production of human speech properly. It attempts an analysis of the structure of the brain and investigates the process of acquisition and language inputs and how it programs the language output. 3. Developmental psycholinguistics deals at large with the process of acquisition both of the first language and the second language. This branch of psycholinguistics tests adult representations and proposes to explain how these representations are developed. 9.6 Scope of psycholinguistics During the Summer Seminar in 1955, psycholinguistics was a new concept that has by now been studied from multiple perspectives and in various disciplinary contexts. The applications are many - be it in engineering, or, philosophy or language, psychology, sociology, the study of signs and so on. Understanding/s of psycholinguistics and its applications is a continuous field of thorough research. According to Diebold, the subject matter of psycholinguistics implicitly involves the following: The nature and function of language, Approaches to the study of language, Speech perception, The sequential organization of linguistic events, The scientific aspects of linguistic events, Language acquisition, bilingualism and language change, Pathologies of linguistic behaviour, Linguistic relativity and the relation of linguistic processes to perception and cognition. It all revolves around language use and the behavioural changes that take place during input, processing and output in the process of communication. These are specific to specific language systems and human biological features that enable sound production and brain function abilities. The process of communication takes into account the different kinds of behaviour involved in the entire transmission right from encoding to decoding. The language study involves intended behaviour during encoding and interpretative behaviour during decoding and the code transmitted as a message. The code or the message, in any form of communication, is either visible (series of signs and symbols in the form of reading or writing) or audible (sound in the form of listening or speaking) or tactile (touch sensations). The behaviour and/or the

NSOU PGEL-4 313 responses depend on the context of message transmission. The psychologists find their interest in the behavioural pattern of the communicators (sender, decoder and receiver), the linguists are curious about the system or the arrangement of the structural elements and the communication theorists are bent on knowing how well the code can be transmitted i.e. the accuracy of transmission. The study of behaviour by the psychologists involved with the use of language has been called the verbal context by Miller. The 57-pages report published as the output of the Cornell University Seminar in 1951 was a revolution by itself as it dealt at large the core issues in analyzing the process of communication. Shannon-Weaver's The Mathematical Theory (The Information Theory) was already there before the publication of the report which had largely spoken about the importance of the information theory. The Mathematical Theory of Communication came to be considered as the 'real science' pulling in linguists and psychologists for interdisciplinary endeavours. The report had also stressed the 'problem of meaning' and focussed on making clear 'terminological distinctions' and the Sapir-Whorf Hypothesis on the role of culture in language use. Psycholinguistics: A survey of theory and research problems became the "charter of psycholinguistics" (Diebold, 1965) in studying human verbal behaviour. Another important factor concerning the SSRC committee post-Cornell University Seminar in 1951 that deserves mention was the substantial funding received from Dale Carnegie Foundation and other major fundings including defence funding. The psycholinguistic theories so developed from studies are widely used in preparing audio-visual instructional materials as teaching-learning aids. It is considered that such instructional aids are more beneficial in teaching a foreign language. It is also of great aid in the understanding of bilingualism and language acquisition. 9.7 Summary The present unit has intended to discuss the advent of 'psycholinguistics' as a distinct field of study. The unit discusses the various concepts embedded into psycholinguistics. It attempts to provide an understanding of the role and influence of psychology and/or the human mind in enabling language acquisition and function. The discussion has also gleaned through the beginning of the concept and its existence at present. The importance of psycholinguistics is evident in the regular applications in the fields of engineering, medical, pathologies related to human behaviour and many more. The development of many theories in the field needs to be consulted and studied for a greater understanding of the unit.

NSOU PGEL-4 314 9.8 Review Questions 1. Psycholinguistics or the '

Explain from your reading of the text and references. 2. Psycholinguistics is interdisciplinary and is studied by people in one particular field. Do you agree? Justify your take on this. 3. One's language determines the ways one's mind construct categories. What would be your observation on this? 4. Do you think language influences culture or vice-versa? Substantiate. 5. Define the following: a) Language perception, b) language acquisition and c) language production. 6. Can you identify an application from the field of engineering where the concept of psycholinguistics has been applied in any of its forms? 7. Trace an application from the field of pathology studying human behaviour where the concept of psycholinguistics has been applied in any of its forms? 8. Analyze a write-up of yours, of any interest of your choice, and locate the influence of psychology in writing the same. 9. Study the 'Information Theory' and attempt writing a critical appreciation of the same. 10. Elaborate the importance of the Sapir-Whorf Hypothesis in the field of psycholinguistics in your own words. 9.9 Reading List Steinberg. D. and Natalia. S. (2006). Introduction to Psycholinguistics. NSOU PGEL-4 316 Unit 10 Sociolinguistics 10.1 Introduction 10.2 Objectives 10.3 Origin of the concept and its implications 10.4 What is society? 10.5 Social markers that connect language and society 10.5.1 Process of socialization 10.5.2 Background and Education 10.6 The Dialects 10.7 Social stratification 10.8 Summary 10.9 Review Questions 10.10References and Reading List 10.1 Introduction The focus of the unit is on language learners and language users in multiple contexts - socio-cultural, academic, personal, political and so on. In a multicultural and multilingual country like India, the challenges in language learning and its applications in society are many in which people are variously socialized, interactive and consequential. Looking at the system systematically is a challenge both for the language teacher and the learners from heterogeneous backgrounds. The dynamism and complexities of relationships, discourses and communication are in a more macro sense. In this unit, we will learn about the socio-cultural aspects involved in the use of language, its representations and processing. This unit also aims to learn the interrelation between linguistic use and psychological process and/or influences involved. Recent developments in the field are increasingly generating as to how the interrelation influences language learning and applications. 10.2

sociolinguistics and its applications, 316

NSOU PGEL-4 317 Identify the interrelation between language and society in different social groups, Analyze the social relevance of the linguistic features by the participants in a society that is different for different speech communities, Improve critical thinking skills of the learners and encourage them to apply their observations. 10.3 Origin of the concept and its implications We will begin by looking at the following visual illustrations in and around us. Take a look: It clicked! Immediately after the visual senses signalled the basic cognitive process started working. You noticed and ideas triggered in your minds. The contexts are different but they are understood by the members of a society of all backgrounds but at multiple interpretative levels. How?

NSOU PGEL-4 318 Task 1 1. What are the steps that you have followed in understanding the series of signs and symbols in the advertisements? Do you agree with what has been mentioned below as the initiation point? a. Visual stimuli initiated b. c. 2. Are the patterns of development of ideas and data processing the same in all the images? 3. Do you find any relation between the linguistic elements and socio-cultural aspects? Your answer: -- -- -- -------------------- The attention and interests in language use and its diversities are increasingly gaining attention and interests not only among the psychologists but across disciplines for insights into language use because language is the medium and basis of social relationships and indicator of membership in different social groups and speech communities. The question that naturally arises how does one identify oneself with the social groups and are there any specifications to be a member of that speech community? This is a broad area of investigation that had developed over the years and researchers are still trying to understand the nature and role of the relationship between language and society. The advent of the concept of 'sociolinguistics' is considered to date back to the 1960s and is largely associated with the name of William Labov in its conceptualization (Koerner 1991, 57). In a general sense, it is considered to study the relationship between language and society. But, it would be unjustified to confine it within such a narrow concept or to consider sociolinguistics deals with social questions. It has also been identified with social psychology with specific reference to how the groups function in terms of input behaviour and output behaviour in their mutual exchange of language. We can usefully highlight some relevant markers in the morphology of the word 'sociolinguistics'. Any and every language functions within a society, for the society and by the inhabitants of the society. From a rational point of view, it would be necessary to understand the concept of society and the scope of social interaction

NSOU PGEL-4 319 and social relevance to get into the understandings of the relation between language and society. 10.4 What is society? A society is a system and the wings through which it functions are the sub- systems/parts and all its parts are interconnected. Now, what is a system? It could be said to be an entity composed of numerous interconnected parts that gives a complete shape to it and any change in one of its parts would disbalance the overall structure. As the term 'system' suggests, it is something that is structured, organized and follows a pattern. The parts like the physiological parts of any living organism are exclusively interconnected and are in a patterned relationship so is the society and its parts. It would, perhaps, not be wrong to say, that, society is a living system and through role allocations and positioning the system runs. For example, educational institutions are one of its parts that enables the base of understanding one's society and relation to it, the pathways of civilization. And, the medium through which a society and its system function is communication in all its possible forms. It could be a series of written signs and symbols (literary texts, advertisements, etc.), verbal interactions, discourses, sartorial, ritual, cultural, formal and informal behaviour, age, sex, the hierarchy of social representations, music or any other manifestations are symbolically significant in communicating ideological possibilities. A series of communicative events take place in society because of the interaction of its members and things are communicated by the use of language among the homogeneous or the heterogeneous speech communities. Language has been considered as an abstract system that is different for different users and as a result, the system arrangements differ widely too. Naturally, this increases the range of understandings of its macro-micro scale of linguistic structuring to that of its interpretations per the context of use and cultural setup. Let us look at some examples. The book so cited below is suggested for close reading and understanding of how the language that functions within a society has been used to speak about the same society. Any work of art portrays a society and its cultural context within a time frame. The front cover itself appears so dynamic and vibrant with several contextual connotations. The signs and symbols, the choice of diction, the application of transferred

NSOU PGEL-4 320 epithets, the use of font cases, the use of colour sequences have purposes of their own. It takes discussion position one from the national level to that of the international state of affairs. A still from the silent comedy The Modern Times, written and directed by Charlie Chaplin in the early twentieth century. A creation appealing to all times so poignant and bubbling with ideological interpretations at multiple contexts. It is a brilliant example of the use of language as a tool of communication. Task 2 You too must have come across many such cross-references or situations with sociological implications. Attempt a brief explanation based on your understanding and discuss it with a partner. --------------------- -- -- ------------------------- --- 10.5 Social markers that connect language and society In attempting to analyze language from a social perspective the various connecting factors need to be understood that finds expression through the social markers that are of social relevance. Through the interaction of linguistics with several other academic disciplines, the differences and similarities are understood implicitly or explicitly. From among these social markers, we will select some dominant factors. Linguistics is studying a language with specific purposes - understanding the nature of the language to induct language theories and second, describing the language by using the theories. But, it is not, rather cannot be, studied in isolation as it is interconnected to the study of psychology, philosophy, sociology, physiology, semiotics, phonetics, biology or, for that matter study of paralanguage and other disciplines to get into the understandings of the language functions. 10.5.1Process of socialization A child after its birth is a biological identity with certain needs and instincts. How

NSOU PGEL-4 321 and when the process of socialization begins needs to be the guiding question? The child at this stage is unaware of any social realism or socialization. The process starts when the control and guidance by the adults are exerted on it be it for any biological function during its stages of growth or the pieces of training imparted for speech, walking or greetings (saying, 'Hello', 'Namaste' and such others) or showing talents in singing, dancing, recitation and the likes. The linguistic features are imbibed much before the child enters the formal process of education and along with the socio-cultural elements are internalized as part of 'enculturation' way ahead 'acculturation' finds its way. Simultaneously, the child also starts imbibing semiotic processes by becoming able to identify the objects around it and differentiate animate from the inanimate. This process of socialization could be classified as primary and secondary socialization where the primary socialization is initiated at home and through the family environment and secondary socialization starts with the formal process of education and other social engagements or socializing agents. However, there is a third categorization called anticipatory socialization which takes place concerning one's association with a particular group which may be a result of social mobility. 10.5.2Background and Education Education is a social process and is the base on which the super structure is to be founded. Society exists and is meaningful with the existence of its members - humans, animals, trees and so on. It starts preparing the individuals right after birth to enable them to lead a meaningful and harmonious co-existence. It initiates the process of socialization that paves the way for social mobility. Now, there is a difference between 'educated' and 'knowledgeable'. It is the representative use of the language through the individuals' knowledge, skills, attitude, dressing sense, the value system that defines both the individual and the society to which the individual belongs. As language learners, we have seen the term language in itself includes two important constituents - langue and parole. And, from Mehrabian's statistical analysis we know that it is around 93 per cent non-verbal part of our communication that is being exhibited and of it, 55 per cent is attributed to body language in the process of communication. It is through the application of the language be it through writing or deliberations that one's culture, values, world-views, psychological conditionings are reflected. Sociolinguists are increasingly interested to develop an analysis of how the active language users and their behavioural inputs are fitted in with the larger processes and changing conditions of a society. It involves an understanding of the complexities of social attitudes reflected in communicative developments based on internal and external factors that combine with characterizations of contemporary social life. The

NSOU PGEL-4 322 local factors like one's ethnicity, culture and community, upbringing environment, physiological conditions, individual differences, ego diet and external factors like socioeconomic status, exposure to the outside world, educational standards together shape the language use of the social participants. Much later, one's self-esteem and openness to development are also subject to socialization - a relatively free play of personality and sentiment irrespective of training received or prone to community adherence. However, that demands a deep-rooted understanding of the individual's stages in the development of the self and need appeasement. Thus, the capacities for the mind, self and society are intricately interwoven in the use of language both in input and output communicative functions in society. Adapting a speech style or mark a difference from the vernacular language has also been influential in shifting the linguistic features during applications. As language facilitators, we come across many classroom situations that open for us a plethora of learning opportunities as we are directly involved with the learners. Much in the same line, we too open 'n' number of analytical grounds of our personality as markers of personality by the use of language be it in written, verbal or tactile. For example, assessment and evaluation is a crucial part of the education process. As facilitators, we have moral and professional responsibility as an examiner or script checker. Consider the following sentence below: Q: "What is this? Did you understand the question? What did it ask you to do?" Task 3 After reading the example above, can you put your observations in a frame? [Hints to consider your observations: What do you think are the representations from the example above? Does it indicate any social relevance while dealing with the learners? Attempt framing the example from your perspective and observations stated.] Your answer: Task 4: Read the following conversation, guess the thematical context, and comment upon the sociolinguistic features involved in it. Situation: Two persons are conversing. They are in the age group 35 (say, X) and 65 (say, Y) respectively. Gender - could be any. The conversation goes like this: X: I love living in small and cosy apartments.

NSOU PGEL-4 323 Y: I cannot think of living in some match-box like apartments. We live in big houses. Your answer: 10.6 The dialects The study of dialects that prevail in society is categorically studied under the classifications into regional dialects and those of the towns and cities. They are further sub-divided as upper-class dialects and lower-class dialects. Now, what is a dialect? It refers to the specificities of the language used by a particular speech community. They are identified as belonging to the same speech group by the particular ways of using that language, its tones and modulations, grammatical usage, vocabulary and pronunciation. For example, when people from the districts of Purulia or Malda speak to themselves, or, users of BrajBhasha and Maithili, or, say, Brahmin Tamil and Iyengar Tamil have a unique dialect of their own. They have a socio-historical background of their own. It is also an attempt to understand the socio-economic context which might have influenced the language used by their predecessors. The effects of "language crossing" as a form of ideological contestation are of considerable influence in the present day context both from linguistic and socio-cultural perspectives. The patterning of sentences, the tonal quality, the psychological workings, the written texts, the sartorial manifestations, music, rituals or the customs talks about the language in use not only from the temporal point of view but the history and growth of the language concerned. In many cases, it is a demarcation between the social hierarchy and speaks volumes on social stratification that (might) have changed considering from the original settlements, geographic boundaries and area allocations on the use of dialects to that of (any) recent developments alongside the indicators in terms of age, gender and social status that one enjoys or is in line with the society. In this regard, it needs to mention some prominent theories of socialization that explain how social interaction and communication plays an important role in shaping an individual's personality and/or behaviour pattern. 10.7 Social stratification The more is said of the social arrangements of the groups of people the lesser it seems. Right from the creation of humans on earth this concept of stratification has been under the umbrella terms of 'haves' and 'have-nots'. If we analyze the concept by all its prevailing theories and phenomenal existences the root of demarcation remains the same. So long we had been talking about 'equality for all. Today much

NSOU PGEL-4 324 before we talk of 'equality' it is the question of 'equity' -access to the resources is a priority than actually enjoying it or getting closer to its reach. Society exists for people, by people and is of the people (all living). On the same plane, the stratification is also created by the people, for the people and of the people. But, to what extent it is justified or acceptable or rational that is highly debatable and has never been realised in the history of mankind. Functionalist theory, Marxist theory, Feminist theory, Weberian theory, Natural Superiority theory (also known as Darwinism) are some of the prominent theories that have dealt with social stratification in volumes. But, the fact remains that equality for all the members of a society is, perhaps, a myth and that is why after seventy-three years of independence we are struggling for 'access' at the minimum. History is a witness of many legalized or hereditary systems of stratification through ages. Yet, the rate of literacy, gender disparity ratio, gross enrolment ratio in primary school education that we witness from the Government statistics and Census is a clear indicator of political and economic relationships. Obvious then, the total area of linguistics, its applications, lexical items, semantics, phonology, semiotics, social exposure are Greek and Hebrew to a great majority as to them to meet the basic needs of food and clothing is a yell. Where one section of learners can afford posh institutional environment and education to some other of the same age group a new pen or a pencil or a notebook is a lucrative offer. The very fact that people stand at differences in the class system is highly complex to understand the differential allocation of income, status and privileges, opportunities for various social utilities and the educational achievement can impact a child or govern the social relationships. Examples of such kind, I am sure, all of us have met at some point or the other on different grounds maybe. Even when social mobility is facilitated in some situations yet, the predominant rule prevails of consciousness whether or not one could fit oneself in the transformation. It is likely to happen both at the individual level or social relationships that one come across in the changing phases. It is a tough fight. Instances are many to prove the case in point and exceptions to the rule could also be cited. Whatever be it, the ranking structure of a society is a predominant claim for the linguists, psychologists, sociolinguists, anthropologists or politologists or political philosophers to base their hair-splitting understandings and research on the influence of social stratification on social behaviour. Concludingly, we have considered a limited number of factors in the thematic context of understanding how language defines a society or to say, how society influences language use. But, many other factors contribute to the understanding of the relation between language, culture and society. Also, we may take into account

NSOU PGEL-4 325 the individual customs, rituals and traditions of any speech community, the registers or the jargons, or instances of tough-mindedness to stick to one's tradition and rejection to change as contributing factors that shape the sociolinguistic elements particular to a specific community contrary to instances of 'style-shifting - formal or informal, as a social feature of language use. Further, sartorial, cultural or educational indoctrinations are also among the other factors to be concentrated upon. Even from the standpoint of guided and controlled situations like classrooms, workplaces (again different for corporate, public or private sector), recreational atmospheres like clubs, playgrounds, grapevine communication channels also call for our attention to understand the interrelation between language and society. Task 5: From your understanding of the readings from Sociolinguistics write a critically appreciated essay on how language is influenced by a society that one lives in, based on your personal experiences. Your answer: 10.8 Summary The present unit focused on the concept of sociolinguistics and its coming into existence as a separate discipline. The unit discussed the embodiments of the linguistic features in a socio-cultural context and their implications. The relation between language and society is from the conception of society itself but, its manifestations through cultural contexts evolved gradually. The unit attempted to give an idea of how the various social stratifications are constructed in human society based on lingual, cultural demarcations. It also highlighted the multiple variations of language usage based on regional or local deviations called dialects. 10.9 Review Questions 1. Do you think language has ever been influenced by any society? Substantiate your points. 2. Is the language used by you, shaped by the society of your time? If yes, how do you think it has influenced you? 3. How do the applications of language differ from one situation to that of another? For example, use of language in a home atmosphere to that in a formal situation? 4. Can you identify some of the dialectical variations of the language used by you? Jot down some of the key features of variation as identified by you. This

NSOU PGEL-4 326 could help you to understand the cultural diversities that, perhaps, shaped the language use. 5. Identify the initiation steps and elaborate on the process of socialization of a child as observed by you from your understanding of the concept. You may consider selecting the context after a child's birth, or, early days of school education situation or, as you choose. 6. Explain the concept of stratification from your understanding. 7. Explain a few of the stratification dimensions and add your critical comments on them. 8. What does the Constitution of India say on the social stratification issue? What are the articles related to it? 9. How do you look at stratification issues in the context of present-day technological advancements? 10. How do you think you can educate the learners on the eradication, if not wholly, of stratification? Suggest a few measures. 10.10References and Reading List 1. Hymes, Dell. NSOU PGEL-4 327 Unit 11 Linguistics as a pedagogy 11.1 Introduction 11.2 Objectives 11.3 What is pedagogy? 11.4 Linguistc Standpoint 11.5 Linguistics as Peadagogy 11.6 Summary 11.7 Review Questions 11.8 References 11.9 Reading List 11.1 Introduction As a language teacher, at times it becomes a little worrying to connect the contents of the course to the world at large or connect with their real scopes of application. The learners of the Digital Age are far more open to contents through unlimited web resources across the corners. It is with one click of the mouse a gamut of information is open for access. Thus, the challenge is somewhere else. It is with the method of delivering the contents to them. It is, again, as a language teacher, the task is challenging as much as interesting. A language is used to understand the same language and also, make it understandable to the language users. It is all about how well and proper it is to use the language, and make it meaningful for the learners an enable for application in their respective situations. The learners are from various backgrounds and as a result, social contexts are wide and it involves intricate analyzing of the social meanings of the language used. It needs to be understood here, that the local contexts, in many cases, are more important for consideration than the society at large. 11.2 Objectives After reading

the contents

conceptual difference between the terms "linguistics" and "pedagogy", 327

NSOU PGEL-4 328 understand the importance to study these, enable them to apply the fundamental concepts in their teaching-learning situations with understanding, self-evaluate their level of thinking skill and diagnose the pathways for the betterment. https://www.readwritethink.org/classroom-resources/lesson-plans/using-science-texts-teach 11.3 What is Pedagogy? Language is used in many modes. It could be a series of signs and symbols as written communication, verbal mode or any forms of non-verbal communication. Thus, it becomes very important to have a clear understanding of the various units interconnected in the process of communication to make the teaching-learning process fruitful. It becomes essential that the knowledge of the units to the facilitator sound reliable, and authentic because it is a Herculean task to make the language used in the classroom by the language teachers to get connected outside the classroom for its applications by the learners. So, the entire process involves the following key questions to be answered or understood by the language teacher: 1. Who are the learners (or, listeners)? 2. What is their level of learning the language? 3. What is the background of the learners (listeners)?

NSOU PGEL-4 329 4. What are the objectives of language learning? 5. What are the objectives of teaching (specific as well as general)? 6. What is to be learnt/What is the message? 7. What is the quality of the materials to be used in the process? 8. How is that to be communicated to all the learners (listeners)? 9. What are the facilitating factors or the obstacles in the execution of the process? 10. What is the degree of the scope of exposure and practice? https://images.app.goo.gl/ksnByhyDDwZScC2v6 Etymologically, the term 'pedagogy' is Latin in origin from "paidagogos" referring to the slave who was in charge of taking children to and from school (from 'paid'- boy + 'agogos' - guide). More commonly, it suggests an approach to teaching. It is an art by itself. If we are to consider pedagogy as a guide or an approach to teaching then, along with the above mentioned ten questions are to be coupled with the technological advancements in recent years. The experience of language in the context of twenty- first-century teaching-learning experiences needs to include ICT-enabled exposure as part and parcel of the collective life both in terms of time and space. Behaviourism came out to be a pedagogical concept that opened up many vistas of observation. Skinner's 'Teaching Machine' may be considered one such example. It was followed by Friere's Liberationism. His book "The Pedagogy of the Oppressed"

NSOU PGEL-4 330 talks volumes on learner-centric education as an approach to the pedagogy of teaching. Vygotsky's "social constructivism" shifted the focus to the social aspects of learning as a pedagogical approach. The concept of pedagogy has changed with the changing demands and needs of teaching-learning behaviour. Of the recent developments, Piaget's 'cognitive constructivism', much in contrary to 'social constructivism', took us through the learner's internal process of cognitive developments for a teacher to be alert. However, it was Geroge Siemen's concept of "connectivism" (2005) that connected the teaching-learning approach in line with the technological advancements of the time which in no way can be ignored. In the twenty-first century, with the explosion of technological advancement, new pedagogical approaches are advancing faster. In fact, working in collaboration with technology is the need and demand of the time. Thus, it all directs the attention of the (language) teachers to make a conscious move towards guiding (not monopolising the teaching-learning environment) how to learn or how to search for knowledge, how to make use of the internet to extract the desired information or to navigate through the boundless sea of information. 11.4 Linguistics standpoint "FOR a small group of specialists", says Charles F. Hockett, "knowing about language is an end in itself. These specialists call themselves linguists and the organized body of information about language which their investigations produce is called linguistics." Most of the other definition of linguistics revolve around the same concept. On the other hand, many linguists are not willing to generalize the concept on the ground that studying about a few languages do not open the floor as a whole. The data is very limited and as a result, there can be no generalized conception of the word 'linguistics'. However, it cannot be denied that linguistics is a branch of study dealing with language or the sub-sections involved under the umbrella term. In attempting to define it we will look at some equivalent terms like 'Linguistics' (American) with French 'Linguistique' or German 'Sprachwissenschaft'. It has also been identified with 'linguistic science' by Edgar Sturtevant in his book An Introduction to Linguistic Science. Much later, it was synonymously used with 'philology' which was later confuted by the philologists Roland Kent and Edgar Sturtevant by their publication of the article "Linguistics Science and Classical Philology". Thus, it promotes to contradiction as well as to discussion on the scope and purview of 'linguistics'. Now, to build an appreciation and sensitivity towards the myriad of ways that construct the domain of linguistics is an uphill task for the

NSOU PGEL-4 331 language teacher and the students too. Much has been said about the sphere of linguistics. It is agreed upon that it has something to do with the study of language and all its intricate arrangements. So, the basic point of understanding is language, more specifically, human language. Therefore, we need to delve deeper into what is language? Language, again, can be looked at from multiple perspectives and is not confined to one fixed definition. It is all about human behaviour and the varied ways of manifestations. Topic for discussion Let us consider the following features. Read and then decide if you agree to include them within the broad category of what we call 'language'. Language is the special ability of humans and not of non-humans Language is the representation of the psychology of its user Language is a social identity Language is a social marker of hierarchy Language is a social condition Language is volatile Language is voluntary and involuntary Language is a name given to a system Language is systematic (follows special arrangements) Language is non-systematic (if we go by 'meanings are arbitrarily assigned) Language is defined by the society of its time (a social phenomenon) Language is an ideology Language is a tradition Language is breaking the rules and tradition (hence, ambiguous) Language is a biological process just as any other physiological parts function in the human body A combination of all the considerations mentioned above calls for our attention to understand the domain of linguistics or categorizing the spectrum of language. It constitutes a miniature angle. Vast observations, generalizations, predictions and assumptions, discussion and rejection are a continuum. Perhaps, so, linguists are

NSOU PGEL-4 332 unwilling to generalize its concept. Of all the 15 features mentioned above, even if we take any one of them it is in itself a macro concept. It draws from other disciplines and branches of study because language is the common medium to express thoughts as much as the tool to cross-section and experiment the expressed thoughts. Coming back to the concept of language again, on the one hand, it is about the creation of meaning, interpretation of the messages, the articulation of sound that includes voice modulation, pitch, intonation, stress, accent, the use of words in a patterned (or, unpatterned) way, about the mutual relation between the words or their positioning and also, the syllables in the words, that is to say, the syntactical arrangements and so on. On the other hand, it is about the use of punctuation, signs and symbols (considering each sign as a text to be interpreted), thematic arrangements (persona used), pictorial landscape, if any, text background, philosophical reflection, if that is a collective work (or from some corpora) where meanings have a sequel, the timeframe and the likes, set up different yet inter-related levels for study and analysis of the language. All these embrace the scope of linguistics. By now, it must be possible for us to make a good assumption of the vastness and the range of linguistics. And, all these are by themselves vast in their area. For example, 'meaning'. The subset is profound to be studied for its own sake. How one derives the meaning of a text or a sign or a symbol or even a tactile sensation concerns the understanding of psychology, sociology, economic factors, tradition and cultural aspects etc. It cannot be defined at a superficial level without digging into the root. Moreover, a 'signified' brings along with it an array of 'signifiers' and the process continues. At the same time, it also demands a contrastive study of the past to that of present developments and future assumptions. History can in no way be ignored to get an understanding of the present or to look forward to the future. The plethora of data so involved is, unquestionably, unlimited and arbitrary. Next comes, the execution or the application part which again involves multiple levels and sub-levels. This involves the 'core' part of language use that is to say, 'how' of language (la parole) which, according to Albert Mehrabian follows 7-38-55 rule adding to the interpretation and construction of meaning. Then, we have the local and global contexts of time and space as fundamental to the construction of meaning added by demographic, geographical, physiological, first or second or foreign language acquisition factors all to be considered for connotation and denotation of messages be it written or verbal or any other forms of communication e.g. ritualistic or sartorial communication. Again, we have demarcations like 'language of the rulers' to those of the ruled, language specific to social hierarchy or concepts like 'andro texts, 'gyno texts', 'neutral language' and such other social constructs.

NSOU PGEL-4 333 India, at present, has 22 official languages whereas there are many more beyond the count yet to be listed. Think of the situation worldwide, their diversity and macrocosmic stature. Perhaps so, the linguists are reluctant to generalize any concept under their purview. It is here the language teacher's job is highly complex and categorically striking at all levels. Added to these, the degree of success is also characterized by the support received from the external environment be it about acoustics or infrastructure or human resource or final resource. But, whatever be the level of support received or not received the onus is on the (language) teacher. Then, the prominent question that is to strike a language teacher is how real the language study had been for the learners and does it have a practical relevance? 11.5 Linguistics as a Pedagogy We have understood that pedagogy is an approach; an art of teaching or, going by its etymology, it is a language teacher's guide to the outputs from the inputs in a classroom. It helps improve the quality of teaching as much as it enables learning in an informed and meaningful way such that during application the learners can apply with understanding. Learners already have some amount of information with them - may be related or inapplicable to the given context. The new learning is to be constructed from the old or the existing knowledge. The language teachers with their dealing of the subject matter also widens the power of imagination of the learners. They are initiated to think beyond the delivered talk and start making a construction which is their own. With the use of the units of language to explain that same language in a given context, time frame and space, the process of restructuring or meaning-making happens. It is here, the (language) teacher decides to choose the resource materials to be used, how to use, the nature of the relationship or the interaction that is to take place between the teacher and the taught, plan and analyze a lesson into its constituent parts, the process of assessment to diagnose the errors made and provide proper feedback that it encourages them to improve and develop. Bloom's taxonomy or Anderson and Krathwohl's revised taxonomy could be a good tool to prepare a lesson unit towards their improvement. The assessment and evaluation process is not a subject-matter outside the teaching- learning process. Hence, the same taxonomy grids are equally, if not more, applicable to get the desired outcomes from the inputs in the classroom. The art of preparing question also adds to the entire process of language 'constructivism'. The questions need to be framed in such a way that the purpose of questioning and assessment is achieved, the failing of which lessens the authenticity and reliability of the entire process of teaching-learning. In this, it is often found that the comments by the

NSOU PGEL-4 334 language teacher as a mark of feedback (which is not the same) have an appealing or demotivating effect. As we are collaborating our efforts with that of the OERs we come across many such technological applications that encourage us. For example, while using Grammarly we received encouraging feedback to motivate us. Quick Task : Can we make use of this visual data for interpretation by the learners? http://images.app.goo.gl/UVqt2wbayXPFfVUn6 Caution! The teacher is to guide the learners on how to interpret without interpreting it. (Using the language to interpret the language). If linguistics ("study of language") is to be used as a pedagogy, the language to be used is to be studied first to understand how to use it and transfer the understandings to the learners such that they can be meaningfully applied. The ICT enabled learnings have already made things much easier than before when it comes to the minimal use of the language (He, English as L2). The software applications (mobile or computers) have in-built functions that are easy to understand and use. Moreover, by wide discussions and debates from the various platforms, the language teachers can cross- fertilize the functional strands and make a potential contribution to the development of language pedagogy. Just as a child after birth starts learning a language (sound) from simple to complex it is in much the same way in the formal system of education the steps and stages of implementing the subjects (or, courses) or the contents of the courses are introduced. The classroom situation is also likely to follow the same pattern where a learner is geared to develop the skills from simple to critical thinking skills and with understanding. Learning cannot take place at one go. It is a step-by-step process and

NSOU PGEL-4 335 requires repeated practice, particularly for second language learning. The impact and role of psychology in learning a language is time tested and continues to be explored further. An understanding of psychological development is extremely crucial in language acquisition and is governed by age-group. Bio-genetic and socio-genetic factors stand side by side in the development of personalities as an important consideration in language learning and development. It is to be kept in mind, that, the purpose of language learning is not the same for all. In some cases, it might be for specific functions and usages whereas with some others it may be for passion or profession. But, the learners are under one roof and, inevitably, the psychological gearing (interest) would vary just as the mental mechanisms would differ. It is also important to remember here that the child is learning a second language and that has a direct influence on its native language or vice-versa. The levels of thinking and development may be reflected in different ways with special mention of whether or not it is a conscious effort to learn. The accumulation of impressions in learning will accordingly impact eagerness. Other than these, there are physiological differences which apart from regular and usual functions can create a reverse order in one's mind and ability. Finally, it is more important to configure and map what the learner does with the course contents than what the language teacher does. The language teacher is free to mix and match the pedagogies that suit the different contents that are dealt vis-à-vis the different situations. The same strategy cannot, rather, ought not to be applied at the same level and pace for all the contents. In this, mind-mapping of the learners at the beginning of the session could be of much help in shaping the lesson plans. Motivation is the dress of the planning done. It is intrinsic as much as extrinsic. Rewards and reinforcements encourage us irrespective of age. Learners if motivated towards self-learning followed by a self-evaluation the learning is, perhaps, the strongest and directed towards the route of excellence. The learnings that happen in an automatic process from the various social environments do not require any language teacher. Given a classroom situation, the role of language teachers is tougher because they have to make the skills involved in language learning understandable and meaningful for future applications in their respective life situations. 11.6 Summary The language teacher needs to enable the learner to understand how to learn, unlearn and relearn as an active participant and with autonomy in self-learning but, not in isolation with the world outside. Learning in no way excludes other activities. Learning can happen anywhere and at any point in time. Alertness and eagerness are the conditions both internally and externally to make a good move towards pedagogy.

NSOU PGEL-4 336 After all, pedagogy cannot be defined by or confined to one specific way of thinking because it intertwines concepts and applications right on-field depending on all- pervading contexts. 11.7 Review Questions 1. What are your perspectives of pedagogy? Substantiate your perspective/s with references from your experience and/or knowledge. 2. How do you think pedagogy, learning and teaching triangulate in trying to achieve the desired outcomes? 3. Analyze the interrelation between linguistics and pedagogy from your understanding and referential works that you undertake. 4. "Language is a biological process just as any other physiological parts function in the human body." Express your views on this. 5. Share some of your experiences from your teaching situations where you shuffled the pedagogical style/s and identify the reasons that led you to make the changes. 6. Share some of your experiences from your learning situations where you shuffled the learning style/s and identify the reasons that led you to make the changes in the style of learning. 7. What is the contribution of linguistics to language teaching? 8. How are views of Piaget and Vygotsky similar yet different? 9. What was Skinner's contribution to the development of pedagogy? 10. Is visual or experiential support essential in the process of teaching-learning processes? 11.8 References 1. Verma, S K and Krishnaswamy, N. Modern Linguistics - An Introduction. OUP, 1989. 2. NSOU PGEL-4 338 Unit 12 Computational Linguistics 12.1 Introduction 12.2 Objectives 12.3 Man-Machine Interface 12.4 Concept and Scope of Computational Linguistics 12.5 Challenges in Computational Linguistics 12.6 Applications of computational linguistics 12.7 Summary 12.8 Review Questions 12.9 References 12.10Reading List 12.1 Introduction You must have noticed that, during our web-browsing, many times when we look for information a particular web-page opens and the language used is not understood by us and that calls for translation. Within seconds the page is translated into a language we are comfortable with. How is it happening? It is mathematical processing of the language input by us and conversion into machine-language and again converted to human language of understanding. The large scale of data is automatically calculated and/or translated abiding by the laws of mathematical calculations and then received by us. Thus, the human language is brought into conjunction with the machine language. The computers are programmed to process the human language. Here, the use of the term 'programming' a computer is indicative of formulating a formal language in mathematical terms to implement algorithms for the computers to produce meaningful information in respective contexts. You might be wondering why are we discussing computers here? Well, by the use of the word 'computational' we invite the world of computers. Etymologically, the term relates to computers and/or the process of mathematical computations or calculations. This unit will look into the concept of computational linguistics and its applications. This is, comparatively, a new domain in the field of linguistics in the context of twenty-first-century connecting man and machine through language. 338

NSOU PGEL-4 339 12.2 Objectives The study of this unit will enable you to: a) Understand the concept of 'computation' in the use of language, b) Understand the relationship between human language instruction and computational implementation by machines, c) Facilitate the interaction with machines by developing insights into the essential concepts related in the process, d) Develop self-competence in making effective use of language for the systems to perform better and to the desired needs, e) Be aware of the applications in the field. https://images.app.goo.gl/mcJyntHGnXMz4oMK8 12.3 Man-Machine Interface Happening right now! I am a human mind filled with emotions, ideas, concepts, data and information. But, a machine? It does not have human emotion but, it has data super loaded and is multiplying every nanosecond. How does it understand our language? How does it give us the information that we need? Right now, I am using the machine and it is giving me information that I look for or, that I am documenting for the purpose. How are we getting connected? Is there any language connection? I am sure, you too may have been haunted by these questions. Although by now, we know Sophia - a human resembling machine who can speak, participate in human talks, conduct or take part in live interview sessions. Would you like to meet her? Let us meet Sophia. Let us meet her co-performers:

NSOU PGEL-4 340 Let us meet her co-performers: https://www.geeksforgeeks.org/5-best-humanoid-robots-in-the-world The introduction of digitally programmable computers by Charles Babbage to, the world of human civilization was in itself a revolutionary invention. The journey started in the early nineteenth-century and today in the early years of twenty-first-century we have already met Sophia and her co-partners. What is there in store for us next? There are surely many more advancements beyond our knowledge and understanding. We hit the keypads and with one click the entire universe is let open to us for information sharing and knowledge gain. So what are we doing in the process? We are using human natural language input as utterances, sounds or typing words, phrases and sentences and the computer is analyzing these utterances following an algorithm to find out what connection (read information) is requested. The system operates automatically following the algorithm to produce the desired result and, if further information required, it consults the database available to provide the further set of information desired.

NSOU PGEL-4 341 12.4 Concept and Scope of Computational Linguistics "A Mathematical Theory of Communication" was an article published by the mathematician Claude E Shannon in 1948. The importance and significance of this ground-breaking publication or its contents were such that it led to a minute yet a striking change to rename it as "The Mathematical Theory of Communication" the next year. It paved the way for the blossoming of the 'information theory' and the study of human language and machine language as connectors. The development in the field of computer sciences led to an in-depth understanding of mathematics and linguistics. If the study of language is a domain of linguistics then the programming language using mathematical calculations is the sphere of mathematical linguistics. Not only computers, we largely use digital calculators that make extensive use of numerals as well as symbols for its purposes. It is the mathematical use of linguistic terms for the computer. The use of technical words, mathematical notations, logical symbols are the machine's linguistic elements that instruct computers. These are numeric instructions or algorithms created by human language for the computers to understand and function within a specific time. It is the realm of statistical measures, analysis and structural logic using mathematical tools and techniques. Computational linguistics is considered to be the sub-category of mathematical linguistics that deals with the "application of computers to linguistic problems and with the application of linguistics to computer problems" (Oettinger, 1965 : 147). Do you remember any such situation where you might have lost the most valuable document of yours while working on computers? What did you do then? You have taken the help of an expert or by yourself have retrieved the lost file using some retrieval systems. How was it retrieved? It was with the application of the programming language understood by the computer and mathematical measures and calculations applied by the user to get back the lost data, that is to say, specific commands and controls used for the specific purpose. This is the application of computational linguistics where the language understood and used by the computers (the 'artificial language') in the form of mathematical notations are used as instructions (algorithms) to interpret and translate the human language (the 'natural language'). Here, it needs to be understood that, how will a machine understand human language. Herein, we use a technology that enables the computers to understand human encoding and translate into machine codes. This technology is called the Natural Language Processing (NLP) which is a subfield of computer science and artificial intelligence. NLP aims to understand and decipher the coding used in the form of human language, spoken or written, design and build applications that enable human interaction with the computers

NSOU PGEL-4 342 and other related devices in a faster, easier and economic way. NLP uses features like question answering system, machine translation, speech recognition etc. Computational work on language began with machine translation in the 1950s. Initially, the researchers faced problems in developing the algorithms to instruct a computer, especially, to formulate data structures for grammar. Chomsky's "Three models" and "Syntactical structures" were highly influential in offering notational variations but, other models like "Dependency Grammar" offered more than the notational variations. Take the following example of a notation from Linguistics. n - noun, adj. - adjective, pr.- preposition are examples of linguistic notations. Likewise, we have musical, mathematical notations or those in the field of Chemistry, Biology and so on. https://images.app.goo.gl/KuPpj6Z5KPKesjVg8 Quick task Based on the level that you teach and, also as the would-be language teachers, can you look into the textbooks of language or for that matter any domain of your choice and find more on the applications of linguistic notations? Now, help your students to understand the same. The International Conference on Computational Linguistics in 1969 directed a significant concern with the role of semantics. The concern was more "with the formalization of the semantics of the natural language in terms of metalanguage " (Montgomery, 1970, Report).The research in this field flourished during the 1970s

NSOU PGEL-4 343 and went on expanding to other fields like Speech translation, architectural issues, AI- driven approaches, philosophy etc. However, it was during the 1980s that computational linguistics and natural processing system studies advanced without taking much from mainstream linguistics and relying more on corpus-based data and machine-enabled learning that escalated during the 1990s. It saw the rise of understanding human behaviour taking the help of machines. 12.5 Challenges in Computational Linguistics The inputs are the natural-language text by the humans which a computer automatically analyses the various representations in the form of content used as a natural-language input. The computer processes the analysis made of the representations by identifying the concepts involved and their mutual relations. It is here the role of semantics becomes crucial in the context of natural language processing. The accuracy in representation/s of the concepts serves the basis of computation. Hence, highly formalized semantic concepts are required. The extralinguistic concepts like the socio- cultural, economical, political or psychological issues involved in natural language utterances cannot be derived from linguistic elements. This calls for the formalized concepts in the use of semantic analysis for computation. At the same time, in the process of mathematical analysis (computation), the representation of semantic dependence between the concepts cannot be established keeping in mind the correlation between concepts introduced in a given context is not only grammatical but also semantically dependent on one another. For example, The honest man returned the money to the owner. Here, the concepts 'honest' and 'man' are grammatically (syntactically) interrelated but, the relation between 'man' and 'returned' is semantic that involves Chomskian developments of the actor (man) and the act (returned). The dependency of 'honest' as a concept is established with 'man' because it describes the latter and hence a part of 'man' but, the representation of the semantic relation poses a challenge in computation. Semantics has much been studied off late but, it calls for further insights to enable the process of computation more accurate and easier. Now, the question that may arise is why is this accuracy required? It will be a little difficult to answer in concrete terms but in a nutshell, it can be said, perhaps, that in the days of increased technology computational linguistics aims to make it a faster and easier reach for the language users and also for an ease-of-use. What happens in a linguistic interpretation? The words (or, the concepts) are interconnected and these interconnections lead to interlinking of the concepts for the

NSOU PGEL-4 344 development of newer ideas and direct towards newer purposes of the study. Much in a similar line, the unlimited data are interconnected and interlinked to form a new set of information that adds to the existing knowledge base. Newer contents develop. The interesting point here is how does computation function here to connect the dots and form new information. If we look around it is a chain and network of words that are interconnected to find the interlink to dig deeper insights. Considering that perspective, think of the amount of data and the array of signifieds attached to each sign and signifiers. It is a rich system multiplying every moment and directing to fresh new pathways. Take the following example: Kolkata is the capital of West Bengal. Narendranath Dutta was a Hindu monk from Kolkata. Now, the dots (read concepts) marked in italics are interconnected and during the computational process, they are interlinked by performing a set of natural-language- processing. This processing takes place by breaking the content into units - like name recognition (Kolkata, West Bengal, Narendranath Dutta), identify the parts-of-speech and link them to find the correlation. These identified concepts are now separated and processed separately. Let us, now, look into the concept with a little analytical perspective. Kolkata West Bengal \ Capital of West Bengal, Its State in India, Demography history, Population, Area, Population, Area Speech communities Narendranath Dutta https://www.youtube.com/watch?v=TLuM4E6IE5U#:~:text=Semantic%20 annotation %20is%20the%20process,by%20machines%20to%20refer%20to.

NSOU PGEL-4 345 It now gets associated with the new concept for further machine translation and computation. Extraction from the database directs towards new inferences as: Swami Vivekananda was a Hindu monk from West Bengal (1) Narendranath Dutta was a Hindu monk born in West Bengal (2) (1+2) = Swami Vivekananda is the same as monk Narendranath Dutta from West Bengal. You may, now, be able to identify your experiences while trying to find relevant information which also intelligently guides the pathways to related information during our web-browsing using the search engines. For example, We type what is discourse analysis*......you will be redirected to further concepts (like Discourse analysis examples, Discourse analysis research papers, Importance of discourse analysis), in a knowledge base that not only provides you with the written document but, aids with visuals like images, videos, related news etc. The machine analyses the content using statistical, logical, syntactical tools and techniques. The process of translation during NLP is also challenging to translate, in some cases, as the computers may have difficulties in understanding because the computers try to understand each word in the content than only the phrases or the sentence as a whole. Likewise, the human language code sent by the user may also be faulty.The accuracy of the computer to provide an answer is greatly dependent on the linguistic performance as an input of the user. Therefore, the human language requires to understand the careful use of words and how the concepts get connected to deliver the intended message so that NLP can function with disambiguation and apply algorithms to provide the desired feedback. Ambiguities are cases with words that bear multiple-meaning depending on parts of speech function (noun and/or verb form) or deviation from phrase structure rules concerning the language in use (here English). The syntactical structure in traditional linguistics is also a major concern of the designers of languages for computers. These differences in mainstream linguistics create problems for NLP. But, despite these difficulties, computers are improving their understanding of human language and its intricacies. This directs the computational linguists direct their understanding of interconnected concepts to traditional/mainstream linguistics. However, it is not wise to consider that simply providing bulk data to a computer it will internalize it and learn to reproduce-importance lies what is done with the data. It has to be prepared in such a way that the computer can locate patterns or the links

NSOU PGEL-4 346 and draw inferences. To draw correct inferences the annotation on the data needs to be relevant and connected to the input. This necessitates the greater hold on the annotation of the contents and clarity of ideas and images to receive the desired output from the computer. It is when the annotation done on the data is accurate and relevant to the task the algorithms will be effective for the machine to learn (understand) and perform efficiently the task that it is being asked to perform abiding the algorithms of NLP. 12.6 Applications of computational linguistics The recent developments in the field of computational linguistics could be seen in the prediction, analysis and interpretations of human behaviour using machine- enabled question answering or probing higher into psychological tests, or explain human intelligence, emotional quotient, test decision making and critical thinking abilities, medical diagnosis and its various interpretations involved and others that are genre-specific like grammar checkers, creation of dictionaries and its graphical representations or register-dependent variations. The search engine optimizations, text editor apps like the Grammarly, speech or face recognition applications, CALL (Computer Assisted Language Learning) are the applications of computational linguistics. Because of the complications involved with mainstream linguistics, the NLP at its first step involves the tagging of parts-of-speech because for word classification its role in the content is important to disambiguate. More recently, it is largely based on text-corpora to enable linguistic data more available and comparable with billions of texts. However, the concept of corpora started creating its way from the 1960s a time frame when there was the problem of data availability. The notion of corpora relates to millions of texts multiple sources specific to a genre like fiction, newspaper articles, music, travelogues, legal matters, blogs and diaries, spoken or written communication fields and so on and are based on real as well as imaginative communication setting. Penn Treebank, American National Corpus, British National Corpus, Sketch Engine are examples of text corpora used in NLP. This paved the way for corpus linguistics. Interactive Voice Responses (IVR), applications like Siri for iPhone, Cortona, Alexa are other examples of NLP that conjuncts human language and machine-readable language. Syntactic and semantic analysis are the main techniques employed in natural language processing for the computation tasks to be performed. The Natural Language Toolkit, Stanford NLP Group Software, CSLU Toolkit (for language recognition and facial recognition), Visual Text, Marketing Chatbots (introduced as early as in the 1960s) are some of the well-known natural language processing tools used in computational linguistics.

NSOU PGEL-4 347 Thus, the success and efficiency of computation depend on how successfully linguistic processing (NLP) can be employed and integrated to promote and maintain the efficiency of algorithms for the computers. However, natural language processing remains a complicated subject matter: computers have to process a huge amount of data on individual cases to get along with the language. For languages that are widely used are said to suffer from linguistic performance problems despite the developments in annotation and text corpora. than, think of the languages that are limited in use poses a greater challenge. Finally, for the extraction of information to be more precise, accurate and efficient the computers need to be made more enabling by correct input of the algorithms. 12.7 Summary Everything around us are transforming and technology has, perhaps, left no stone unturned to influence human lives - boon or bane, the way it has found its usage.. We see robots playing human roles to the extent of nurturing a child or, as a baby-sitter following our instructions. Or, in a fraction of second, Alexa, Cortona in digital world does so many work for us. But, have we ever thought how do the machines (or, robots as we say) play the roles or follow human instructions. It is after all using language to perform and execute. In this unit, an attempt was made to take you through an understanding of computational linguistics or the branch of study that deals with processing of human language into machine language. It will give you a basic understanding of the importance of algorithms and computation to derive the right set of instructions in accordance to the output expected of the humanoids. I am sure you would be interested to look more into it. 12.8 Review Questions 1. What has been your understanding of linguistics so far and is there any development on the perspective? Justify. 2. Can you explain the importance of computational skill in your day-to-day life and how do you think you have applied them so far? 3. Construct from your understanding of the unit and the references that you consulted the points on how linguistics cast an influence on computational linguistics. 4. In case of your experiences in teaching (any level or even at home front) or in any situation, have you ever faced issues of understanding the set of instructions to carry out a work? How do you think it can be errorneous or effective?

NSOU PGEL-4 348 5. Explain some of the barriers that may hinder the appropriacy in formulating algorithms. 6. Search and suggest a few applications of computational linguistics apart from those that are mentioned in the unit. 7. Study 'The Mathematical Theory of Information' and relate its relevance in the context of computational linguistics at its inception and the present day. 8. How does NLP function? What parameters are used in making NLP a possibility. 9. Is CALL a reality in India? How extensively is it used? 10. How does Artificial Intelligence (AI) play a part in NLP and other devices like Cortona and Alexa? 12.9 References 1. Oettinger, A. G. (1968). NSOU PGEL-4 350 Module 4 : Linguistic Analysis Unit 13 Textual Analysis 13.1 Introduction 13.2 Objectives 13.3 Analysis of a text 13.4 Linguistics features of a text 13.5 Purposes of textual analysis 13.6 Skills and Techniques in textual analysis 13.7 Summary 13.8 Review Questions 13.9 Reading List 13.1 Introduction The module is on Linguistics Analysis of a Text. Let us be familiar with the term 'Linguistic Analysis'. Linguistic analysis refers to scientific analysis of a piece of text as a sample. It is based on five branches of Linguistic study. They are phonology, morphology, syntax, semantics and pragmatics. Phonology includes analysis of speech sounds, morphology is for word analysis, syntax operates at the level of sentences, semantics is the area of meaning analysis and pragmatics is the analysis on the use of language for specific situations. 13.2 Objectives

| 88% | **MATCHING BLOCK 65/74** | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

After going through the unit, you will be able to a) Understand the

basic concepts in Linguistics analysis b) Know about linguistic features c) Understand what text analysis means d) Learn critical thinking skills 350

NSOU PGEL-4 351 13.3 Analysis of a text What does analysis of a text mean? Analysis is breaking down of a text into its component parts and then asking critical thinking questions 'Why' and 'How' to reach a conclusion. When a text is analysed, these individual components are examined. A text is a piece of written material or the written form of a speech, a play, or an article. In academic terms, text is anything that conveys a set of meanings to a person who examines it. In literary theory, text is any object that can be read. It may be a work of literature, or a street sign in the form of a single sentence or a short passage. Analysis of a text is a careful examination of the text in order to find out what it consists of. It is a detailed study to understand more about it. Let us take an example. 1. You can lead the horse to the water but you can't make it drink. This is a single sentence text which talks of showing people how to do things but cannot force them to act. From the structure, we can say that there are two clauses joined with the conjunction 'but'. The main clause 'you can lead the horse to the water' has a complementary clause 'you can't make it drink'. Now, lets us look at bigger texts. 2. I don't want anyone else and neither does She. The problem is I'm talking about her but she is not talking about Me. The nine lines poem by Ryan Hennessy is based on two characters 'she' and 'me'. The argument behind the poem is composed in the last five lines where the poet is talking of a problem. The lines are presented in two or three words so as to match with the single word sentences. 'is' and 'about' are repeated twice to rhyme the sentences. Let us work on few tasks to check our learning.

NSOU PGEL-4 352 Task 1: Analyse the following texts: a) Don't put off until tomorrow what you can do today. Your answer: b) 'Human beings have been speaking for many tens of thousands of years at least, and they may possibly have been singing for about as long. But writing is a rather recent development in human affairs. So far as we know, the first true writing system was invented by the Sumerians, in what is now Iraq, about 5,200 years ago. The use of writing spread out from there, and writing was much later independently invented in a few other places, including at least China and Mexico.' (Trask, 2004: 130). Your answer: Text (a) is a proverb with an embedded structure. The main clause is 'what you can do today' which is embedded with the clause 'Don't put off unit tomorrow'. The text talks of completing task in time to avoid unnecessary delay. Text (b) is a factual description on the emergence of writing. The phrase 'for many tens of thousands of years' and 'have been singing for about as long' plays the role of catching the reader's attention in a story telling mode. This sentence also de-stress the activity of reading heavy disciplinary discourse. You must be wondering are there any principles of text analysis? The following section discusses the linguistic features of text according to which we may analyse a text. 13.4 Linguistics features of a text A feature is a characteristic used for classifying a phoneme, morpheme, or word. Linguistics features are components that create language for communication. The five main components of a language are phonemes, morphemes, lexemes, syntax and context. Together with grammar, semantics, and pragmatics these enable meaningful communication. We are already familiar with the term phoneme. A Phoneme is a minimum distinctive unit which does not have any meaning of its own, but when replaced by another phoneme (in a similarly constructed word) can bring a change in meaning. Phonemes are language specific and are distinctive features of a language. The structure 'The fat cat in the hat' has a number of phonemes. When

NSOU PGEL-4 353 the phoneme /f/ in 'fat' is replaced by /k/ or /h/ we have new words like cat and hat. We will learn more on phonological analysis in Unit 14. Now, let us see what we know about morpheme. A morpheme is a minimum meaningful unit of a language while analysing the structure of a word. Unlike phonemes, morphemes are mutually exclusive. That is one morpheme cannot occur in the place of another morpheme. For example the structure 'gentlemanliness' has four morphemes, [gentle + man + li + ness] each having a meaning of its own and not divisible any further in form. A lexeme is a unit of lexical meaning which exists along with its different forms. Lexemes are a stream of characters which can be grouped together based on a specific pattern. The patterns are the description that a lexeme can represent or take. The words drink, drinks, drinking, drank, and drunk are forms of the lexeme Drink. They are in verb inflection pattern. The lexeme is always written in capital letters. Lexemes can be multiword. Phrasal and prepositional words, idioms and some compounds are multiword lexemes. For example 'fire station' and 'change of heart' are multiword lexemes. Learning a language includes the ability to create phrases and sentences out of morphemes and words. Arrangement of these structures and their formation is 'syntax'. Syntax is the study of sentence patterns in a language. For example, the sentence 'I saw a bird in a big tree.' has NP and VP structure. This is called parsing. You will learn more about parsing in Paper 7. The Context is the circumstances that forms the setting for a statement, or an idea in terms of which it can be understood. Examples of contexts are the words which surround the word 'time' in the sentences: a) I have saved a lot of time and the results were up to the mark. b) I can login at multiple sites at the same time without having to register. c) It is difficult for the first time users who do not know how to customize. d) Travel through space and time. For sentence (a) saving time indicates completing a task in a short time, whereas, for (b) 'same time' refers to the ability to access and use many tools and apps to accomplish multiple tasks in a parallel way. Sentence (c) is a statement on users who are working on a task for the first time to cope with specific functions (at the individual level) and (d) is referring to an indefinite continued progress of events across past, present and future.

NSOU PGEL-4 354 Context can be public or private, official or informal, factual or fictional, literary or non-literary, and prose or poetry. Task 2 : Analyse the context for the following text 1 . Digital learning apps are proving to be fun ways to educate children. They are offering an opportunity to strengthen the brain while learning. Moreover, it is proving to be a great way to keep students engaged. Access to such platforms is also enabling many students to assess, enhance and hone their attention skills. Your answer: The text is on the opportunities of digital learning apps, and the skills of the learner that they are strengthening. Though this is a generalized statement, it can have adverse effects in long time application. Task 3 : Analyse the lexemes from the following: A. Confidence allows one to communicate concisely with clarity. B. Throughout the world, it has been seen that effective communication is vital in the pursuit of a rewarding career. Your answer: The lexemes in the text are (a) communicate concisely with clarity,(b) throughout the world, effective communication, rewarding career. 13.5 Purposes of textual analysis The purpose of a text is the message the author wants to communicate. The purpose of analysis is to break the text into smaller simple topics in order to gain a better understanding of it. In the process it describes the content, structure and functions contained in the text. The purpose of textual analysis involves asking questions on four areas: Mode, Discourse, Lexis and Grammar. The mode covers the physical appearance and presentation of the text. The mode of a text can be written or spoken, spontaneous (conversation) or planned (lecture, essay). Discourse is the sense structure of a text. The purposes of the discourse are to introduce (a) the narrator/ author/ speaker, (b) the linguistic features of genres - newspaper article/ letter/ novel/ instruction manual etc., and, (c) the lexical and syntactical patterning.

NSOU PGEL-4 355 The lexis discusses the formal and informal types of expressions. Does the text draw on ambiguous words? Are there repetition of words and any other text specific words? We need to look for these answers in textual analysis. The grammar looks into the grammatical structures that organize the text. Task 4 : Analyse the following text according to mode, discourse, lexis and grammar. A little while ago I asked Mrs Z to give me a black marker pen. She understood what I said and gave me a blue marker. I put the pen in my folder and went to the class. I could not find the maker at first but in a minute I found it in my folder. Then I drew a picture of the speech organs on the board. I came back to the table and put the marker down. And you all drew it in your sheets. Your answer: The above text is a spontaneous discourse of a class teacher with many words in the past tense. The text also introduces irregular verbs. These words are in the italics. The lexical and syntactical patterning is focused on those grammatical points in the text. 13.6 Skills and Techniques in textual analysis When we read a text, in the first reading we are drawn to the text message and then we shift our focus to the text structure. When we are reading a story for example, we absorb ourselves into the story path, and its events and after the reading ponder on its characters and try to recapitulate a few times the situations which we appreciated the most and on the actions on which we want to reflect on. In the unconscious process, we revise on the language used in the story. If we are working on the text then in the second reading, we focus on its structure. So there are few steps involved here. First, choosing the text we want to read, then making notes of the elements in the text with 'why' and 'how' questions and answering those questions and finally drawing conclusions with reasonable support. Now, what are the language structures on which we need to focus for text analysis? You will discover them while working on the tasks and later on when you will learn to see text analysis elements in everything you read. This can be investigating how often certain words and phrases are repeated in social media posts or which colours are predominant in advertisements for certain products. The critical thinking skills are needed for textual analysis. They are analysis, inference, and interpretation. Task 5: Find the Key elements for text analysis.

NSOU PGEL-4 356 The chief difficulty in learning a new language is the trouble of changing from the sentence-pattern which you are used to in your own language to the sentence- patterns of the new language. Learning new words is easy, for that is only a question of simple memory and the building up of 'links'; but it is clearly necessary to teach the sentence patterns of English, and to make them a habit, as early as possible. 2 Your answer: It can be concluded that the above text is on pros and cons of learning a new language. Therefore the 'why' and 'how' questions for the text analysis are: why learning new a word is easy and how are sentence-patterns learnt. The key elements are: new words and sentence-patterns. Task 6 : Analyse the text 3 to identify the idea and technique. If you are an amateur conjurer one of your tricks would go down very well as an action-chain. I once saw a teacher make an action-chain by taking off his collar and tie and putting them on again. On another occasion, to give his class some practice in imperatives (and precise instructions), he took off his jacket and asked the class to tell him how to put it on again. When they said, "Put your arm in the sleeve," he put his left arm in the right armhole and had to be corrected, then he put it on back to front while they shouted further instructions, put it upside down, inside out, etc., until he almost strangled himself. The class was almost in hysterics. They probably learned a lot: at any rate they were not bored. Your answer: In the first reading of the text, you will find that the theme of the text is teaching precise instructions through an action chain. The learners come up with imperative constructions after viewing the context. The technique used in the teaching is performing and at the same time describing actions. 13.7 Summary Linguistic analysis of the text features is an area that has a few sub areas. The areas that are introduced here are in detailed discussion for the other units of the module as well as in other core courses. The aim of the unit is to introduce you to the linguistic analysis through a variety of tasks.

What is text analysis? 2. What are the processes for reading and analysing a text? 3. What are the lexemes? Give examples. 4. What are the purposes of text analysis? 5. What are linguistic features? 6. Arrange the following steps for processing a text. a. Making first round of basic notes. b. Reading a text third time to identify examples and techniques. c. Reading or viewing a text for ideas and themes. d. Reading a text second time to identify ideas and themes. 7. What skills are necessary for textual analysis? Discuss them with their applications. 8. Write and example of a text analysis on grammar. 9. Write an example from real life situation on mode analysis. 10 What are the skills necessary for text analysis? Justify your answer. 13.9 Reading list Carroll,

NSOU PGEL-4 358 Unit 14 Phonological Analysis 14.1 Introduction 14.2 Objectives 14.3 Identification of Phonemes 14.4 Identification of Allomorphs 14.5 Writing phonological rules 14.6 Summary 14.7 Review Questions 14.8 References 14.1 Introduction We are familiar with the terms phonetics and phonology which we discussed in Paper 3. Phonology is the study of sound systems of all languages. Phonological analysis is an analysis of the speech sounds of a particular language. The aim is to determine how differences of speech sounds are phonemic or help us identify distinct phonemes and those that are non-phonemic or allophones which are in free variation. 14.2 Objectives After reading and working on the activities from the unit you will be able to a) Understand the concepts of phonetics and phonology based on practical activities b) Undertake phonemic analysis of a given data c) Understand the principles of phonetic analysis d) Learn how to write phonological rules 14.3 Identification of Phonemes A phoneme is a class of minimal distinctive unit that features contrasting and mutually exclusive environment from all other distinctive sounds of a language. Phonemes of a language are identified from arranging, comparing, and combining the forms of utterances with the help of phonetic transcription. In identification process 358 NSOU PGEL-4 359 we need to find out whether the occurrence of any particular initial is limited by the following sounds. If it is limited, then it is an allophone. The variation of speech sounds which combine to form a phoneme are its allophones. Allophones are phonetically similar sounds in complementary distribution. This means, where one sound can occur, the other variant cannot occur. We will make this clear with some examples later. These phonetically similar sounds never occur in an identical environment. For example, [pV] in pin and [p] in spin are allophones, as they cannot distinguish words. They are not similar in sound quality. The first one is aspirated while the second one is unaspirated. In order to understand the position of a sound, we need to become familiar with the word 'environment' of a sound in a syllable. Take a look at these examples: [pVwn] and [spwn] In these words, the sound /p/ occurs in two places. [pV] occurs initially and is followed by a vowel sound. The sound is also the first sound in a stressed syllable. This environment can be represented as: - x v (where the initial - stands for blank, 'x' stands for the sound under discussion and 'v' for a vowel.). [p] is the second word is medial (not initial). It is the second sound in the syllable and is also followed by a vowel sound. The environment for this sound is represented as: c x v (where 'c' stands for a consonant, 'x' for the sound and 'v' for a vowel). Since the two sounds occur in different environments performing specific functions, they are said to be distributed in complementary distribution. This means, one sound completes the function of the other sound which it cannot perform. [ph] can occur only at the beginning of a stressed syllable. It cannot occupy a medial position, therefore this function is completed by [p] medially. Together, the two allophones perform the function of one phoneme. (There is one more allophonic variation of the phoneme /p/ which always occurs finally, and is called the unexploded variety, and is represented as shown [po]. You find this sound in a word like 'tip'. (Phonemes occur in contrastive distribution, i.e. they bring about a difference in meaning, when they occur in similar environment e.g. pin and bin. For each sound in a syllable, environment can be marked in a similar fashion to determine whether a sound is a phoneme or an allophone. Let us look at some activities to help you gain practice in such exercise. Activity 1 Sindhi Language: Compare the sounds [p] and [pV] from the data 1 . Do they exist in similar or contrastive environments? State why.

NSOU PGEL-4 360 [pcpu] leaf [tcu] bottom [dcu] door [ycju] opportunity [kVcto] sour [j e j u] judge [Seki] suspicious [bcju] run [pVcnu] snake food Your answer: From the data, [p] and [ph] are in contrastive distribution. Both occur in word initial positions as in 'leaf' and 'snake food'. Since there is a difference in meaning, it indicates that by replacing the sound, a new word is formed. Aspiration is phonemic in Sindhi as there are other aspirated stop sounds like [kh]. In phoneme identification, phonemes in initial clusters are identified in two ways. If different clusters contain a common member, and if all the members of a cluster occur alone as initials, then it is a phoneme or a distinct unit. For example, demonstrate has the cluster '-nstr-', the cluster 'str-' is also found in 'strategic' and 'illustrate'. The members of the cluster are [s], [t] and [r] occur as initial sounds in saga, tortoise and restaurant. Therefore we may conclude that /s, t, r/ are distinct phonemes of English. Activity 2 Japanese language 2 : Consider the sounds [t] and [t•]. Determine whether they are allophones of the same phoneme or two different phonemes. If they are allophones state the complementary distribution; if phonemes, state the contrast. What phonological process is illustrated here? [tatami] mat [tegami] letter [t•it•i] father [•ita] under [t•izu] map [koto] fact [ut•i] house [degut•i] exit Your answer: The sounds [t] and [t•] are two distinct phonemes and not allophones for the following reasons. a) /t / occurs at word initial position (mat, letter) and word medial position (fact, mat). b) /t•/ occurs word initially (map), word medially (father) and word finally (house, exit). The phonological process is word final vowels are high when they occur after fricative, affricate and nasal sounds.

NSOU PGEL-4 361 Activity : 3 Spanish Language: Analyse the data 3 below and find the phonemes of the Language. [t=] is voiceless retroflex stop, [d=] voiced retroflex stop. [pεθ] fish [bεθ] time [t=ia] aunt [d=ia] day [kat=a] tasting [gat=a] 'she-wolf' [pat=a] foot [papa] pope [t=oro] bull [koro] chorus [θima] peak [sima] abyss [fjεst=a] fiesta [sjεst=a] siesta[oxo] eye [oso] bear Your answer: The distinct phonemes are /p/, /b/, / t= /, /d=/, /k/, /g/, /θ/, /f/, /s/, /x/. They all occur in contrastive distribution, in mutually contrasting environments. For instance, the words, [pεθ] 'fish' and [bεθ] 'time' have similar environments '-εθ' with a different initial sound. Therefore they are minimal pairs and the initial sounds / p / and /b/ are two distinct phonemes. For the word 'siesta', /s/ is a phoneme (since 'abyss' and 'peak' occur as minimal pairs) therefore sj- is a cluster. Thus fj- is also a cluster of two phonemes Therefore, /f/ and /j/ are phonemes. 14.4 Identification of Allomorphs Allomorphs are variations of sounds of a single phoneme which occur in the same position but do not form new words. Thus they are phonetically similar sounds which never contrast with each other. If all the phonetically similar sounds in the question share a feature of articulation, absent in all other sounds in the environment, then they are classified as allophones of the same phoneme. Let us work on few activities on allophone identification. Activity : 4 Consider the data 4 from Greek, focusing on the following sounds: [x] voiceless velar fricative [c] voiceless palatal stop [k] voiceless velar stop [ç] voiceless palatal fricative [kano] 'do' [çeli] 'eel' [krima] 'shame' [xano] 'lose' [ceri] 'candle' [xufta] 'handful' [çino] 'pour' [çeri] 'hand' [kufeta] 'bonbons'

NSOU ? PGEL-4 362 [cino] 'move' [kori] 'daughter' [oçi] 'no' [kali] 'charms' [xori] 'dances' [xali] 'plight' [xrima] 'money' a) State the status of [x, k, c and ç]. b) Are they in complementary distribution or in contrastive distribution? c) Specify the occurrences of [k] and [x] sounds. Your answer: a) /k/ and /x/ are phonemes because they occur word initially creating two different words in the environment '___ ano'. /ç/ and /c/ are also phonemes because they too occur word initially creating two different words in the environment '___eri'. b) They are in contrastive distribution. c) /k/ and/x/ occur a single consonants word initially ad well as in word initial clusters as /kr-/ and /xr-/ combinations. Activity 5 Look at the transcriptions of a number of words in Scots. 5 a) Match the orthographic English gloss in the box below with the Scots transcription. (Hint: diphthongs in RP are usually lengthened monophthongs in Scots). b) Do you think the sounds mixture between /w/ and /h/ are phonemes, allophones or in free variation? Give reasons. (Voiceless labial velar approximant, a kind of [w] and [M].) Scots transcription English orthographic gloss Scots transcription English orthographic gloss Ma'e why Mwp Whip cwe: away wwt•wz witches Mwt• which weð rve:n weathervane Mec whale cM wt Awhile We: Way M wt White

NSOU ? PGEL-4 363 Með Λ r Whether We:t Wait Me: whey wcnt want we ł z Wales Your answer: /w/ and /M/ are phonemes because they occur as minimal pairs in: whey and way, weather and whether, whales and Wales. 14.5 Writing phonological rules Phonological rules are symbolic statements on the occurrences of sound segments (phonemes). The function of a phonological rule is to provide phonetic information necessary for pronunciation. There are two components of a rule. The left hand component segmented from the right hand component by a slash (/) . The left hand component specifies the sound segment in the analysis and its features. The right hand component specifies the environment in which it occurs, its preceding and following sounds. The word boundary is marked by a hash tag (#). For example the following is a phonological rule: C [Velar] → [Palatal] / _____ V [Front] This rule states that velar consonants transform to palatal consonants in the context before front vowels. Let us work out few activities. Activity 6 Bukusu is a language of the Bantu family spoken in Kenya. The nasal prefix / n-/ shows that the verb is in first person (I eat, go, sing etc.).Two different processes occur when /n/ occurs before another consonant. Analyse the words from the data6 and think what is happening. /β/, / / and /x/ are voiced bilabial fricative, palatal nasal and voiceless velar fricative. /i:/ is a long vowel. ndi:la 'I hold' d¦ina 'I scream' se:nda 'I move' suna 'I jump' d¦u: ga 'I watch' xala 'I cut' gaβa 'I divide' geta'I pour' mbi:ma 'I weigh' ndasa 'I add' xola 'I do' mbula 'I roam' mubuka 'I perish' ndula 'I trample' fuka 'I cook' fwa:ra 'I dress' funa 'I break' mbala 'I count'

NSOU PGEL-4 364 a) How does the nasal occur? Name the phonological processes. b) Write phonological rules on nasal prefix /n-/ in Bukusu. Your answer: a) There are four types of nasals in the data. These are: alveolar nasal /n /, palatal nasal / /, velar nasal / /and bilabial nasal /m /. These nasals are distributed in the following contexts: i) The alveolar nasal /n/ occurs word initially and medially before alveolar stop /d/ & before front back vowel/a/. ii) The palatal nasal / / occurs word initially before palatal affricate /®/. iii) The velar nasal / / occurs word initially and medially before voiced velar stop /g/. iv) The bilabial nasal /m/ occurs word initially before voiced bilabial stop /b/ and back high vowel /u/. b) Phonological rule for /n-/: i) C[+nasal] → [alveolar] / #____ C [+alveolar][+stop][+voiced] V [+front][+back] C. Now write the phonological rules for ii), iii) and iv). Your answer: Activity 7 Data 7 from

<table>
<tr><td>96%</td><td>**MATCHING BLOCK 72/74**</td><td>W</td></tr>
</table>

Italian. Focus on the phones [k] and [t]-do they contrast? What about their nasal counterparts [ ] and [n]? (['] means that the following syllable is stressed.) ['

ne:ro] black ['sta ko] tired ['tap:o] tap ['a ke]also ['fi:ne] end ['te go] I hold ['njente] nothing [fran't•jeze] French ['lu ggo] long ['u gja] claw ['ka:po] head ['li gwa] language ['onda] wave [in'vemo] winter
NSOU ? PGEL-4 365 Your answer: Distribution: /k/ and /t/ occurs in the minimal pairs 'tap' and 'head'. They are therefore phonemes. Their distribution is mentioned in the following rules. C → [+Velar, - voiced] / [+stressed] _____ [+long front vowel, CV] # C → [+dental, -voiced] / [+stressed] ____ VCV# /n/ and / / are allophones. They are not phonemes because they do not contrast each other. Their complementary distribution is stated in the following diagram. / / before velar stops /n/ /n/ elsewhere Activity 8 Look at the data from English. State the rule that specifies when /t/, /d/, /s/ and /z/ become palatalized as /t•/ , /®/, /•/ and /¦/. Nonpalatalized Palatalized hwt mi 'hit me' hwt• ju 'hit you' lwd him 'lead him' lw®ju 'lead you' pVæs s 'pass us' pVæs ju 'pass you' luzðem 'loose them' lu¦ju 'lose you' Your answer: Phonological rule: Palatalization occurs when they [t, d, s, z] are followed by a palatal glide. C → [palatal] / ____ C [palatal glide] 14.6 Summary The unit is a practical application of the knowledge introduced in paper 3. Most of the answers to the activities are discussed in the unit for the autonomous learning. Phonological analysis involves detailed examination of the phonemes in their environments. Here

<table>

are some review questions to check your comprehension on the unit.

NSOU PGEL-4 366 14.7 Review Questions 1. Hypothetical Language a) Consider the sounds [s] and [z] and determine whether they are allophones of the same phoneme, or represent two different phonemes. b) If the answer for (a) is allophone, then state the complementary distribution; if the answer for (a) is phoneme, then state the contrastive distribution. Argue for your answer. c) What phonological process is illustrated here? d) If the two sounds are allophones, write a rule that accounts for their distribution using feature notation. [seri] finger [idos] pot [mosta] sky [lize] top [tuga] pain [tiva] dog [sozi] light [mizas] loud 2. Phonological rule Using feature notations, write rules for expressing the following phonological processes. a. A vowel becomes short when it occurs before a consonant word-finally, or before a consonant cluster. b. Word-final consonants are deleted after an unstressed vowel. c. Word-final vowels are deleted when followed by a voiceless affricate consonant. 3. State in plain English what the following rules do. a. C [-sonorant] → [α voice] / _____ C[-sonorant][α voice] b. V → [+stress] / _____ Co# c. C [+sonorant] → [+syllabic] / C ____ # 14.8 References Bloch, Bernard and George L. Trager. 1972. Outlines of Linguistic Analysis. New Delhi: Oriental Books. NSOU PGEL-4 368 Unit 15 Semantic Analysis 15.1 Introduction 15.2 Objectives 15.3 Semantic relations 15.4 Semantic rules 15.5 Types of Meaning 15.6 Teaching Semantic Analysis 15.7 Summary 15.8 Review Questions 15.9 References and Reading List 15.1 Introduction In the previous unit you have learnt on relation between a sound and its environment. This unit is on Semantics. This is a discussion on the relationship between individual words, paragraphs and sentences in their particular contexts. Semantics aims to study meaning in a language. Semantics analyses the grammatical structures from sentences, paragraphs and whole texts and interprets them. In other words, it is about drawing meaning from texts. 15.2 Objectives

After reading the unit you will be able to a) Understand

the difference between semantic analysis and pragmatic analysis b) Differentiate between different types of meaning c) Learn how to teach semantic analysis d) Understand semantic relations 15.3 Semantic relations Semantic relationships or associations can be perceived at three levels: between words or at word level, between meanings of phrases and between meanings of sentences. What a word means depends on its relation with other words. The relations 368

NSOU PGEL-4 369 aspect is concerned with the semantic links that exists between pairs of words. The links are either of semantic differences or of semantic similarities. Let's us look at different semantic relations. Proximity is nearness in relationship. For example red versus scarlet and green versus emerald are graded in semantic proximity. Similarly, table and chair share the same semantic features of object, and pieces of furniture. Therefore they are grouped as nouns denoting pieces of furniture. Equivalence is similarity of meaning between two or more words or sentences. It is found more for the sentence level and rarely at the word level. For example the sentences: Jim swims well = Jim is good at swimming = Jim is a good swimmer. Opposition is the contrast of semantic that establishes semantic relations. Opposition is of two types; polar opposition and relative opposition. Examples of polar opposition are young-old, near-far, day-night etc. Relative opposition implies the relation between two words, either of which requires the other to explain it. For example, the verb 'to leave' implies moving away from a place and its opposite 'to arrive' indicate moving towards a place or destination. Let us take another example. In the two sentences: a) Nitin is taller than Manish and b) Manish is shorter than Nitin; There are two opposite words 'taller' and 'shorter' but the sentences are in equivalence relation. This is because the sentences have of exchanged Subject and Predicate. Inclusion is a semantic relation between two or more words where the meaning of a word is contained in the semantic features constituting the meaning of another word. For example: vehicle - tram, bus, auto, etc. Task 1: Match the semantic relation for the following sets of words: Equivalence Woman - female adult Opposition Animal - horse, cow, giraffe Proximity light-dark Inclusion ship-boat

NSOU ? PGEL-4 370 Red Scarlet Your Answer: Task 2: Name the semantic relations to the following diagrams. a) b) Ship Boat c) d) Your answer: a) b) c) d) 15.4 Semantic rules Semantic rules are ambiguities that make certain kinds of communication possible. They are ambiguities that people have agreed on to give meanings to and are based on certain symbols and words of a structure. They are also known as semantic fallacies. Semantic misunderstandings arise when different meanings are given to the same set of words and phrases. Learning on misunderstandings make us better communicators and help us to be effective communicators in all our relationships. The following are common semantic misunderstanding. Equivocation: a word or a phrase with two or more meanings can be misunderstood. Example: climbing the corporate ladder. The two different interpretations to this sentence are: finding success in a job, and getting into more responsibilities. The verb 'move' can mean change of place, push, pull or carry or stir something. 'Crash' can mean a vehicle collision, a drop in the Stock Market, ocean waves hitting the shore, to attend a party without being invited, and to strike cymbals together. This rule occurs when two or more meanings are drawn from the same word. Relative words: words that gain meaning from comparison and do not have Night Day Tree Oak Pine

NSOU PGEL-4 371 exact definition. They change depending on the context and are very subjective. A giraffe is big if compared to a human being, but a giraffe is small when compared to the earth. This is relative term. An individual's own ideas and concepts are relative, differing from other individuals. Let us take another example. Let's play the relative game. The word 'relative' can mean big, hard, stupid, free or heavy depending on the context. Abstraction: general language that represents ideas or concepts without physical references. For example, instead of 'thanks for washing the dishes' we prefer to say 'thanks for cleaning up'. Effects of abstraction may lead to misunderstandings and misinterpretations. This is illustrated in the following paragraph. A mother wants to visit to a grocery store. Before leaving, she calls her two daughters and says, 'The house is in a mess, so clean up the house by the time I'm back from the store'. The girls did what they were told. When the mother returned, she found that the dining and living space was still in mess. Then she ask her daughters, 'You haven't dusted or vacuumed?'. Her daughters replied you had told us to clean the mess, so we have cleaned our rooms'. The mother was vague in her communication with her daughters, and the girls had cleaned what they thought was mess in the house. The mother had to be more specific with her instruction, and that would have made the communication clear. With specific instructions the girls would have done the cleaning of the entire house. Task 3: Give the semantic rules for the following. 1. Let's talk about rights and left. You're right, so I left. 2. Time flies like an arrow, fruit flies like a banana. 3. The word 'create' can mean build, compose, imagine, make, construct or erect. Your answer: Task 4: Give the semantic rules for the following. A. That was a live frog - (having life) Do you live here - (to exist) B. Wind the clock - (to turn) The wind blew - (moving air) C. John records the number of repetitions he does on a piece of exercise equipment

NSOU PGEL-4 372 and turns his records to his coach at the end of the week. What are the two meanings of word 'record'? Your answer: 15.5 Types of Meaning Semantics is study of meaning. There are seven types of meaning. These seven types are: Conceptual meaning, Connotative meaning, Stylistic meaning, Affective meaning, Collocative meaning, Reflected meaning, and Thematic meaning. Conceptual meaning also synonymous with cognitive meaning or denotative meaning that comes to our mind as soon as we see a word in isolation. For example: when we read the word 'man' we specify its constituent meaning as human, adult and male. It is contrasted in its constituent meaning from another word 'girl' which is specified as human, not adult and female. Conceptual meaning is the base for all other types of meaning. Connotative meaning is the meaning which varies according to individual experience, age and culture. It conveys feelings and emotions related to the word. For example, 'white' has a connotation associated with light, purity and innocence. Stylistic meaning reflects the social situations of its utterance. For example, information on the Television does not sound the same when my best friend recaps the announcement. Words with same conceptual meaning and same stylistic meaning are rare. Affective meaning conveys the meaning expressed through conceptual or connotative content of words. It conveys individual's feelings and attitudes through politeness, sarcasm, irritation. Tone and intonation are essential elements of affective meaning. To express affective meaning we rely on mediation of other categories of meaning - conceptual, connotative and stylistic. Reflected meaning arises when there are multiple conceptual meanings. It arises when one sense of a word forms part of our response to another sense. Taboo words have reflected meaning. For example: Cock is substituted by rooster. Collocative meaning refers to word associations or partnerships that

81%	**MATCHING BLOCK 73/74**	**SA**	BEGS-32- Final Copy.pdf (D163712610)

a word acquires on account of the meanings which co-occur in its environment. For example,

pretty and handsome share the common ground 'good-looking'. Replacing a word
NSOU PGEL-4 373 with synonym affects the meaning. Other examples of Collocative pairs are 'right on time, fast on track, hard to crack, etc. Task 5: Discuss the meaning types from the following. a) Big business b) Home for a sailor/soldier c) Ex politician- Statesman d) A Needle is a thin sharp instrument Your answer: Task 6: Discuss the meaning types from the following. a) Fast reading/ fast colour/ fast friendship/ fast road/ fast car b) He is as cunning as a fox. c) /p/ is described as voiceless + bilabial + plosive d) Messing with money is like messing with monster. Your answer: Answers for Task 5: a) Collocative meaning, b) Affective meaning, c) Connotative meaning, d) Conceptual meaning 15.6 Teaching Semantic Analysis The semantics field has three basic concerns. These concerns are: a) the relations of words to the objects they denote, b) the relations of words as they are interpreted and c) the formal relations of signs to one another. The formal relation of signs to one another is symbolic logic. When we come across an unfamiliar word, how do you determine its meaning? First we try to find clues from the context and speculate on its meaning and then check it with a dictionary. For example when we read the sentence; "Applied linguistics is often said to be concerned with solving or at least ameliorating social problems involving language." we may wonder what the word ameliorating means. We might guess it speaks about trying to solve. When the word is checked in the dictionary it reveals that is about 'making better'. In the process, explanation clue is required for NSOU PGEL-4 374 the meaning of the unfamiliar word. Clues are of five types. a) Definition or explanation clue- it can be found in the explanation of the unfamiliar word found in the context immediately after its use. b) Restatement or synonym clue- which is a simple expression for a difficult word. In the above example, 'ameliorating' appears to be restatement of 'solving' and another expression for it. c) Contrast or antonym clue- sometimes meaning of the unfamiliar word is derived by contrasting it to the context. For example in the sentence 'Manika is gregarious, unlike her brother who is quiet and shy'. 'Gregarious' is a contrast to 'quiet and shy'. Thus it means Manika likes company or is social or excessively talkative. d) Inference or general clue- that is deriving the lexical form from its structure and then getting to its meaning. For example, 'ameliorating' appears to be verb from the word structure. e) Punctuation-for example (;) in the sentence, 'The speakers jokes were amusing and pertinent; they were directly related to points she made in her speech.' The punctuation clue suggests that the meaning of the word pertinent is explained in the context immediately after its use. Semantic clues are used to determine meaning in a context and understanding the clue from the structure is a strategy for semantic analysis. Teaching semantic analysis involves the other strategies we have discussed in this section. Let us revise on them. The first strategy is to state the general process that a reader uses to determine the meaning of unfamiliar words. There can be different ways depending on the reader choices. Some readers opt for checking words from e-dictionaries readily available on devices rather than opening dictionaries. The second strategy is understanding and identifying the type of clue is used in a given structure. The third strategy is recognizing multiple meanings of words from the context. Task 7: Identify the semantic clues from the following: A. Some people are gullible-easily cheated or tricked because they believe everything that others say. B. Unlike his quiet and low key family, Biswas is garrulous. C. My opponent's argument is fallacious, misleading- plain wrong. D. You don't need to worry about talking to Mr. Ben. He is an affable principal.

NSOU PGEL-4 375 E. Mr. Ben is an affable principal. He is pleasant and easy to approach and always friendly. Your answer: Task 8: Recognize and state the multiple meanings of word 'leave' for the following. a) May I take your leave. b) Can I leave a note. c) I left my purse here. d) You cannot speak without your leave e) My secretary has decided to leave. f) Leave the laundry- Jack will wash them later. g) Seven from twelve leaves five. h) Leave it with Mary. I am sure she will sort it out. i) She left her daughter a lot of money. j) She knew that she had left her childhood behind. Your answer: a) f) b) g) c) h) d) i) e) j)

NSOU PGEL-4 376 15.7 Summary Semantic analysis begins with the relationship between individual words. It is the field of studying meaning with references to how language works. Semantic analysis is crucial for effective communication and learning communicative skills. The unit includes a number of tasks following the theoretical inputs as self-check activities while reading. There are few review questions to check your comprehension of the unit. 15.8 Review questions 1. What are the different types of meaning? Discuss. 2. What is a semantic rule? 3. What is semantics? Illustrate with examples. 4. What are the different semantic fallacies in misunderstandings? 5. Cite ten multiple meanings for the word 'light'. 6. Cite ten examples of Collocative Meaning. 7. In what ways Affective meaning differ from Stylistic meaning? 8. What are the strategies for teaching semantics? 9. Design a classroom activity on semantics for high school students. 10. Design a lesson plan on teaching semantic analysis. 15.9 Reference and Reading list Goddard, Cliff. 2011. Semantic Analysis - A Practical Introduction. 2nd Ed. Oxford Text Books in Linguistics: Oxford University Press. Saeed, John. I. 2016. Semantics. 4th Ed. Sussex: Wiley Blackwell.

NSOU PGEL-4 377 Unit 16 Pragmatic Analysis 16.1 Introduction 16.2 Objectives 16.3 Difference between Pragmatics and Semantics 16.4 Pragmatic Function 16.5 Pragmatic Competence 16.6 Pragmatic Idioms 16.7 Summary 16.8 Review Questions 16.9 References 16.10Reading List 16.1 Introduction In the previous unit we have discussed Semantics as the study of meaning of words. Pragmatics is the study of how context contributes to this meaning. Both semantics and pragmatics are main branches of study in Linguistics. Pragmatics is the study of how people react to different symbols and words, their assumptions, purposes and goals in the intended meaning. For example: the utterance 'Have you got any cash on you?' has the deeper meaning implied by the speaker - can you lend me some money, I don't have much on me. The listener derives the purpose of the utterance and responds accordingly to the speaker. 16.2 Objectives

| 100% | MATCHING BLOCK 70/74 | SA | PGELT 5 _ 6 (1-400).pdf (D165254851) |

After reading the unit you will be able to a) Understand what

pragmatic competence is b) Learn the difference between semantic analysis and pragmatic analysis c) Develop pragmatic skills d) Work on pragmatic analysis of idioms and phrases 377

NSOU PGEL-4 378 16.3 Difference between Pragmatics and Semantics Semantics and pragmatics both study the meaning of speech communicated through language. Both semantics and pragmatics look into the ways in which words acquire extra meaning. But they act differently. The main difference between them is of word meaning and word meaning in contexts. We are already aware that semantics studies the meaning of words and their meanings within sentences. Pragmatics studies words and their meanings within their contexts. Pragmatics will also help you study speech acts, their relevance and implicature and conversations. (You will learn these in Unit 8 and in Paper 9B) In the previous unit we have looked at various aspects of meaning. Here we will analyse the processes by which native users of a language give interpretations to word strings and study how words are used. The study of the semantics and pragmatic interface can indicate the difference between what is said and what is communicated in the context. The focus of semantics is context independent meanings that are regulated by rules of grammar. The focus of pragmatics is context dependent language uses that are regulated by the principles of rhetoric and discourse. For example, in the sentence 'My dog chased a cat in the park,' since the utterance contains the pronoun 'my', part of the meaning implies that it was uttered by you. As you uttered it, 'my' refers to you. The semantic meaning is partly dependent on the context, the situation in which it was uttered, the time, the addresser and the addressee. Activity 1 Find the definitions - Semantics or Pragmatics? Is mainly concerned with a speaker's competence to use the language system in producing meaningful utterances and processing utterances produced by others. Is a person's ability to derive meanings from specific kinds of speech situations- to recognize what the speaker is referring to, to relate new information, to interpret, to infer. Activity 2 State whether the statements are true or false. Pragmatics Semantics

NSOU PGEL-4 379 A. Pragmatics

| 58% | MATCHING BLOCK 71/74 | W | |

is the study of intended meaning B. Semantics is the study of the meaning of single words

C. Pragmatics is context dependent, and Semantics is context independent. D. Both semantics and pragmatics are studies of intentions of the participants is conversational exchanges Your answer: A ( ) B ( ) C ( ) D ( ) Activity 3 Differentiate the implied meaning by the speaker and the inferred meaning by the listener from the following: a. S1: What is the time now? S2: The milk man has just arrived. b. S1: Can I borrow your Shakespeare? S2: Yeah. It is there on the table. c. S1: Remember there is no 'I' in team. S2: No. but there is a 'U' for people who do not understand the relationship between orthography and meaning. d. S1: 'Nice Day' S2: 'A lovely day' S1: 'That is not what I have in mind.' e. S1: What are you doing today?' S2: Today is Sunday. Your answer: In dialogue 'a.' speaker 2 has an indirect answer for the query of speaker 1. Speaker 2 has to infer the time of the day with the arrival time of the milk man. In the dialogue 'b.' speaker 1 has asked for a book, speaker 2 deduces the name of the book and guides speaker 1 to its location. In the dialogue 'c.' speaker 2 is referring to 'you' as 'u', as well as to the presence NSOU PGEL-4 380 of the others. The deeper meaning is co-operation and being a member of a team. In dialogue 'd.' Speaker 1 is not agreeing with speaker 2. Depending on S1's facial expression, tone of voice and the context, pragmatically it may mean exactly the opposite, 'This is not a nice day'. In dialogue 'e.' Sunday' may be semantically interpreted as the first day of the week. Pragmatically it may mean giving a suggestion or making an invitation depending on the context and intention of S2. 16.4 Pragmatic Function The meaning which a speaker intends to convey to the listener is the pragmatic function. There are two situations in which pragmatic function can be inferred. The first situation is when the speaker's intention is conveyed with the actual word meanings. The second situation is when the meaning crosses the individual words and conveys a different meaning to the listener than what the speaker had wished to convey. These are pragmatic implicatures.This happens due to contextual interpretation of individual words. For example, the two statements; 'I don't think' and 'I think - not' in the following exchange: Q: Will you come to the market? A 1: I don't think (the market is open today). A 2: 'I think -not' (coming). Both the answers to the question are in non-agreement, beginning with the same set of words but forming utterances with different meanings. A1 talks of it not being the marketing day. Thus it is implied that people will not go for marketing. This is the situation where the listener has to cross the meanings of the individual words to infer what the speaker wishes to convey. A2 is a direct response to the question, where the speaker's intention is conveyed by actual word meanings. Let us work on few activities. Activity 4 Identify the function of the pragmatic markers in the following exchanges; S1: Are you free to work on the garden this weekend? S2: Well, actually I'm pretty busy this week S1: What about next Wednesday?

NSOU PGEL-4 381 S2: Right, yeah that would work. Your answer: In the first response, the words 'well' and 'actually' denote the listeners thinking process. In the second response, the words 'right' and 'yeah' is assessment of the listener's utterances. The following chart is on pragmatic markers and their functions. Functions Examples Cognitive Denote thinking process Referential/ self-correction Elaboration/ hesitation Assessment of learner's knowledge about utterances Structural Opening and closing of topics Sequencing topic shifts Summarizing options Continuation of or return to topics Referential Cause/ contrast Consequence/ digression Interpersonal Mark shared knowledge Indicate speakers attitudes Show emotional response/ interest and back channel Well I think, I see, I believe, I say In other words, I mean It's like/ sort of well, just, kind of Right? Ok, right, well, now Anyway, so, then, next And, so, yeah Additionally, and so, and, plus Because/ but, although So/ anyway You see, you know Yes, of course, really, I agree, actually, hopefully Great, sure, ok, yeah

NSOU PGEL-4 382 Mean Words Indicate affective response and reaction to the discourse Gosh, wow, ouch Adapted and modified from Jennifer Ament & Júlia Barón Parés, 2017. Activity 5 Identify the pragmatic function A: Do you have weekends off? B: It's like work all seven days. Sort of well, work at home. A: Are you free on holidays? B: Yes, of course. Your answer: Activity 6 Identify the pragmatic function S1: Are you also annoyed with your boss like I am? S1: I mean how was your day? S2: Well, it was great. Your answer: Activity 7 Indicate where in the above table would you place the following pragmatic markers? 1. Actually 2. Moreover 3. Then 4. Almost 5. Kind of 6. Ah 7. If 8. Sort of Your answer:

NSOU PGEL-4 383 16.5 Pragmatic Competence Pragmatic competence is the ability to use effective language in a contextually appropriate manner. Pragmatic competence is fundamental to communicate our thoughts, ideas and feelings. The different aspects of pragmatic competence are: 1. a speaker's ability to use language for different purposes 2. a listener's ability to understand the speaker's intentions 3. a command of the rules by which the speaker and the listener interact with each other. Using language for different purposes: using language for daily interactions with others. It is the ability to know what to say, how to say it and when to say it to make our interaction appropriate in a given situation. These are classified as three major skills. a) Conversational skills: asking for, giving and responding to information, turn taking, eye contact, introducing and maintaining topics, making relevant contributions to a topic, asking questions, avoiding repetitions or irrelevant information, asking for clarification. b) Negotiating Skills: Adjusting language based on the situation or person; using language of a given peer group, using humour, using appropriate strategies for gaining attention and interrupting, asking for help or offering help appropriately, offering/ responding to expressions of affection appropriately, intonation of voice. c) Paralinguistic skills; facial expression, body language, body distance and personal space. Pragmatic Competence is the ability to understand speaker's intention from the listener's perspective. Speaker's intention is processed by the hearer simultaneously with the utterance or after it is uttered. The primary intention expressed in a particular context serves the function of guiding the conversation. Knowing the speaker's intention and attitudes creates a precognitive understanding of the ideas and this leads to successful transfer of information. Rules of interaction: There are certain rules by which the speaker and the listener interact with each other. The rules for the listener are: a) Paraphrasing what is heard. b) Repeating what is heard in one's own words and letting the speaker know

NSOU PGEL-4 384 that the listener has understood what is being said. c) Wait for the turn to ask questions. The rules of the speaker are: a. Communicate the message keeping three factors in mind: Perlocution (how the message is received by the listener), locution (the semantic or literal significance of the utterance) and illocution (the speaker's intention). You will learn more on these in the Unit on Discourse Analysis in Paper 9B. b. Co-ordinate the non-linguistic cues (paralinguistic aspects) with the linguistic component of the message. c) Choosing correct words for the intended communicative impact. Activity 8 Match the different shades of meaning for the word 'pragmatics'. a) There were pragmatic 1.Concentrating on results and facts inferences. rather than speculation and opinion. b) The decision was pragmatic 2.Adjust views to the state of the in nature. world. c) A sensible, pragmatic approach 3.Clear communication of was taken to public sector reform. thoughts and ideas. d) The writer takes an in-depth, 4.Practical and logical response. highly pragmatic approach e) The decision was pragmatic 5.Focused on reaching a goal. so that it could be easily extrapolated. Your answer: Activity 9 Identify the rules of interaction and components pragmatic competence from the following excerpts. i) Once, I asked this young lady why she didn't show up on our date, and she

NSOU PGEL-4 385 said looking everywhere except at me, 'I'm sorry, but I missed the train.' ii) The chicken is ready to eat. iii) Will you come out on a dinner date with me? Yes, I can come, but I won't tell you. Your answer: Answers for Activity 8: a) 3, b) 5, c) 1, d) 4, e) 2 Answers for Activity 9: i) paralinguistics, ii) choosing words for intended communication, iii) adjusting language based on situation or person. 16.6 Pragmatic Idioms An idiom is a sequence of words functioning as a single unit, whose meaning cannot be inferred from its parts. For example spill the beans is an idiom which means 'give away information deliberately or unintentionally'. Idioms can be analysed pragmatically when they are interpreted from their context. Pragmatic idioms are also called routines, social formulas or gambits. They have important roles in every day conversation and communication. Transparent idioms are free collocations which get the meaning from the constituent words. For example, wearing a pink shirt (stop bullying), break eggs to make an omlette (at the cost of something), cut wood (sleep/snore while sleeping), cutting corners (doing something poorly to save time or money). Semi-transparent phrases are metaphors with a literal interpretation. For example: add fuel to fire (cause a conflict or difficult situation), kill two birds with a stone (get two things done with a single action, reap more benefits than expected), it's a piece of cake (it is easy), let the cat out of the bag (give away a secret), a blessing in disguise (a good thing that seemed bad at first). Semi-opaque phrases are metaphor idioms which are not completely intelligible by themselves. For example: the shoe is on the other foot (change of situation to the opposite of what it was before), tarred by the same brush (to think that someone has the same bad qualities as another person), on the ball (doing a good job), the best of both worlds (an ideal situation), the elephant in the room (a major problem the people are avoiding), throw caution to the wind (take risk). Opaque phrases are expressions whose meanings cannot be derived from their component parts. For example, pass the buck (shift the responsibility for something NSOU PGEL-4 386 to someone else), from the horse's mouth (from the person who is involved), wrap your head around something (understand something complicated) your guess is as good as mine (I have no idea), take a rain check (postpone a plan, promise to do something at the next opportunity). Activity 10 Give the meanings of the following idioms a) No pain, no gain b) Better late than never c) Hang in there d) Under the weather e) A bird in hand is worth two in the bush Your answer: Activity 11 Identify the type of idiom from pragmatic analysis a) A perfect storm b) Break the ice c) Ignorance is bliss d) Once in blue moon e) A storm in a tea cup Your answer: Activity 12 State whether the following idioms can occur by themselves or as part of a sentence a) Come rain or shine (no matter what) b) Burn bridges (destroy relationships) c) As right as rain (perfect) d) Cut the mustard (do a good job) e) On cloud nine (very happy) Your answer: Activity 13 Find the idioms which are proverbs. a) Haste makes wastes

NSOU PGEL-4 387 b) Familiarity breeds contempt c) It takes two to tango d) Like riding a bicycle e) Run like the wind f) Snowed under g) We see eye to eye h) Waste not, want not Your answer: 16.7 Summary In the previous unit we had learnt a few aspects of Semantics. A section of this unit discusses the difference between semantics and pragmatics. The unit is a practical application of the theoretical discussions on pragmatic analysis on pragmatic function. This unit also introduces you to the skills of pragmatic competence. Pragmatic idioms can be analysed from their use and function. From your day-to-day conversation you are aware of the use of some them. Since there are no definite theories on pragmatic idioms, you may refer to the booklist for further studies on the topic. Applications of Pragmatic analysis in the language classroom are varied. As it examines meaning systematically in contexts it is useful in creation of meanings, figuring out meanings, in contexts of interactions. These are presented in the activities throughout the learning material. There are a few review questions to test your comprehension. 16.8 Review Questions 1. What is Pragmatics? 2. What is Semantics? 3. What is the major distinction between Semantics and Pragmatics? 4. Elaborate the term Pragmatic function. 5. What is pragmatic marker? What are their functions? 6. Discuss the Rules on interactions. 7. What is the difference between transparent and opaque idioms? 8. List ten idioms that you have come across and discuss their applications. 9. What is pragmatic competence? 10. Discuss two activities on developing pragmatic competence.

PREFACE In the curricular structure introduced by the University for the students of Post Graduate degree programme, the opportunity to pursue post Graduate course in a subject is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that this University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, the study materials of the Post Graduate level in different subjects are prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholarship is indispensible for a work on this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing and devising of a proper layout of the materials. Practically speaking, their role amounts to an all-out involvement in layout of the materials and an involvement in 'invisible teaching', as well. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials, the easier will it be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms throughout the counseling sessions regularly available at the network of study centers set up by the University. Needless to add, a great deal of these efforts is still experimental-in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. 9 MODULE - 1 : ORAL COMMUNICATION ? You have looked at the nature of spoken English language in your previous units. Here, in this module let us revise what we have learnt so far and test our knowledge of phonology. Language, is primarily an oral activity and when we speak, our spoken language consists of a succession of speech sounds that are produced with the help of the organs of speech. After going through the unit you will be able to: a) Recall the topics on phonology b) Work on a range of phonological activities c) Apply your knowledge from paper 3 in the activities d) Develop knowledge on spoken English Speech sounds are produced voluntarily. They require that organs of speech be moved in certain definite ways in order to produce the required language for communication. The succession of sounds is composed of proper speech sounds and glides. The speaker has to go out of his way in order to make a glide as a glide that occur as natural and inevitable result of pronouncing two speech sounds one after another. Most of the glides are inaudible or hardly audible even to the most practiced ear. Now let us test up to what extent you people have developed the proficiency in

10 NSOU ?PGEL 5 & 6 pronunciation skill. Some activities and tasks have been designed to test your knowledge in this regard. English has twelve pure vowel sounds. A vowel sound is produced with an open vocal tract with open jaws, and adjusting the height of the tongue. There are front, back and central vowels depending on the part of the tongue that is used in the articulation. There are also low (open)and high (close) vowels uttered according to the height of the tongue. Two vowels have long and short representations depending on the breadth of air used in their utterance. Let us work on the following activities on vowel sounds. Look at the following list of words:- Cast, called, sale band, woman, village, what Now, tell us which letter of the alphabet is common to all the words? Does that letter 'sound' the same in all the words? Go through the words again and again to find out. Your answer: Answer key: /a/. No it has 7 kinds of different sounds. Look at the following list of words :- though tough cough through rough bought thorough bough hiccough Which letters of the alphabet are common to all the words? Do you think, these letters represent the same sound in all the word? If not, write down the sounds produced by this group of letter in each word. Your answer: Answer Key This letter /o/ represents different sounds. Though - / /, Tough - /ʌ/, cough /ɑ/, Through - /u/, Rough - /ʌ/, bought /c:/, Thorough- /ʌ/ Bough- / / e e

11 NSOU ? PGEL 5 & 6 Look at the following sets of words:- Bead, weep, seize, believe, piece, peace, theme, people, police, key, ski, Quay, aesthetic Each set of these words above possesses a common vowel sound. The vowel sound that we find in the word 'bee' is common to all the words. Which letters in each word represent that sound? Your answer: Answer key: bead, weep, seize, believe, piece, peace, theme, people, police, key, ski. Look at the following words and find out words having different vowel sound. Circle those words. flirt chirp skirt furl heart heard thirst first hard word guard card Answer Key: chirp, hard, guard, card English has 24 consonant sounds produced in nine different places of articulation and seven manners of articulation (stricture). The consonants are voiced or voiceless depending the movements in the vocal cords and can be aspirated due to presence of breadth during articulation. Consonants have lower articulator (moveable) and upper articulator (fixed or unmovable) for their utterance. Let us work on the following activities. Look at the following list of words:- Song, scent, descend, brass, assume, cement, fancy, pace, exercise Tax, psychology All the words above, contains one common consonant sound. Can you identify that very sound? Which letter stands for that sound in each word?

12 NSOU ?PGEL 5 & 6 Your answer: Answer Key: /s/ Look at the following sets of words:- i) question, quite, quiet, square, squash ii) excuse, excite, box, exercise iii) exact, examine, exist, exert iv) unity, use (n.) (n.) utilize, university In each set of words one of the letters represents a combination of two sounds. Now identify the letter and associated sounds in each case. Your answer: Answer key: i) q-/kw/, ii) x- /ks/, iii) e- /jg/ iv) u-/ju:/ Go through the following pairs of words. Do you find same pronunciation in them? If so write S on the brackets provided against each pair; if not write D for the different . i) write, right ( ) ii) tear, tier ( ) iii) heard, hard ( ) iv) hurt, heart ( ) v) let, late, ( ) vi) get, gate ( ) Go through the following words find out the exact number of sounds in each word. The first one is done for you. i) thumb- Three sounds as shown: /th-u-m/ (b is silent) ii) mango iii) pleasure iv) third v) scissors vi) psychology

13 NSOU ? PGEL 5 & 6 vii) journal viii) mother ix) eye x) through I hope you have successfully done the Activity No. – VIII. Now write down the initial sound of each word and make word with the same sound in the initial position. One is done for you. Example – i) thumb → / θ /→ thigh Your answer: ii) iii) iv) v) vi) vii) viii) ix) x) Produce the initial sounds of the following English words and say whether they are voiced or voiceless. i) father _____ v) sound _____ ii) sugar _____ vi) very _____ iii) zoo _____ vii) thanks _____ iv) sun _____ viii) there _____ Answer key: Voiced /z, v/, voiceless /f, s, th/ English has 8 glides. A glide is a combination of two vowel sounds occurring together. They are produced in a quick succession that the two sounds tend to merge and produce a different sound. The utterance of a glide begins at the position of the first vowel articulation and moves towards the position of the articulation of the

14 NSOU ?PGEL 5 & 6 second vowel. The second vowel is more in prominence. Can you cite two different words which have only one sound and that is a vowel glide? Write down those words and cite the glide:- For example might and right have 'i' which becomes /aI/ glide in utterance. Now cite another example. 1. _____, 2. _____ = / / / Write three words for each of the glides of English. Your Answer: /eI/ ……………………………., ……………………………., ……………………………., ……………………………., /cI/ ……………………………., ……………………………., ……………………………., /eΩ/ ……………………………., ……………………………., ……………………………., /aΩ/ ……………………………., ……………………………., ……………………………., /e / ……………………………., ……………………………., ……………………………., Fill in the blanks with words that are pronounced the same but have different spelling:- i) write …………… ii) straight …………. iii) mite …………… iv) Sun …………… v) bear ……………… vi) bow(verb) …………… vii) tail …………. viii) cast …………… ix) sight ……………… x) roll …………… In this unit we have looked at different speech sounds that are represented using graphics or letters of the alphabet. We have discovered that the same sound can be represented by different spellings, and similarly one spelling can be used to represent a variety of sounds. However all these are rule bound and such rules will be discussed later in specialised courses on phonology. The unit also provides a large number of activities to help you practice different aspects of phonology.

? The basic function of a language is communication. English is no exception. People generally convey their messages among themselves in order to communicate their views with each other on matters of specific interest to them. Sometimes, they communicate in writing and at other times through speaking and listening. Spoken words are the most frequent as well as the most important means of communication among the people. As far as spoken language is concerned, pronunciation, rather use of speech sounds appropriately really matters a lot. In this case, messages are communicated or transmitted through sounds or audible means. That is why for the purpose of verbal communication what is necessary is proper pronunciation— appropriate handling of sounds. Since Phonetics, an important branch of Linguistics, deals mainly with the pronunciation skills as well as ways of speaking, it has a major role to play in the field of communication. The objectives of the unit are: a) Revision exercises on phonetics b) Understanding the practical aspects of phonetics c) Learning how to teach phonetics 16

17 NSOU ? PGEL 5 & 6 English is a widely spoken language and it has different status in different parts of the world. In a multilingual set up like India, one of the major languages in use is English. For example, if a Bengali speaker is left in a city in Kerala or Mizoram or vice versa s/he cannot communicate to the people of that city unless s/he uses English. Besides, the same scenario can be seen across the globe. The English plays the role of or a link language. In the countries like the UK, the USA, Australia, South-Africa, Canada and other places, English is considered as the native or the first language while in the countries like India, Bangladesh, Pakistan, Sri Lanka, Nigeria, Tanzania, etc. its status is that of a non-native or second language (used as associate-official, educational, social, media, interpersonal language) and in countries like China, Japan, Germany, and Russia it is considered as a foreign language, used only for international purpose and it is not mandatory to learn this language. Whatever is the status of English — First, Second or Foreign — the proficiency in all the four skills — Listening, Speaking, Reading or Writing — is essential so far as communication is concerned. Though the language acquisition in a first language context is natural, in this situation the child has constant exposure from the environment, s/he belongs to, and such an opportunity is highly lacking while learning the second language. Here the language is mainly learnt through classroom instruction and it entails a conscious analytical effort. Since second language is not acquired through the natural process rather learnt later in life. The conscious teaching of pronunciation becomes necessary; there is every possibility of the interference of child's mother tongue what s/he has already mastered. We believe, one is over- burdened with various thoughts by this time and finds it difficult to cope with the nuances of a new language. Let us quickly sum up what we have discussed so far. We have delineated the importance of correct pronunciation while communicating, especially in a new language we are learning. English in this case is the language in question, and we have discussed the various statuses it has in different parts of the world. Finally, we have mentioned some reasons why acquiring proper pronunciation becomes difficult while learning English. Here are two activities to help you recall the points we have made so far. Go through the following list of various countries. Note that with each and every country name there is one first bracket attached to it. Write 1, 2, and F inside the brackets according to the status of English [1 st ,2 nd , and Foreign] in the corresponding

18 NSOU ?PGEL 5 & 6 countries: i. Ireland ( ) vi. Scotland ( ) ii. France ( ) vii.West Indies ( ) iii. Myanmar ( ) viii. China ( ) iv. New Zealand ( ) ix. Namibia ( ) v. Egypt ( ) .x. Nepal ( ) We hope you could get this activity easily. You may check your answers with the Google. Have you ever visited a state in India where you could use neither your mother tongue nor Hindi? What strategies do you use to communicate in such a situation? Here are some suggestions, list the weaknesses or drawbacks of these strategies: a. You will use gestures and sign languages: b. You will take a dictionary with you and keep referring to it. c. You will take a friend with you wherever you go d. Any other: (please mention) These are not proper strategies. Gestures and sign languages may be helpful up to a point. But there is always the danger of sign language being mistaken. Sign language is culture bound and is not uniform in all parts of the country. You may even land yourself in trouble if you use some sensitive gestures without your knowledge. Carrying a dictionary and referring to it each time is quite cumbersome and it is also time consuming. Dictionary provides a literal meaning and often this may make no sense in real communication. Though dictionary is a good source for knowing the meanings of words in isolation, it is not good for communication. Taking a friend along with you each time you go out may be a good idea. But you are imposing yourself on your friend's personal time. He/she may not be available for you always, and it is a matter of obligation, and how long can you survive like this. It is difficult. By rejecting these three situations and the other reasons you may possibly have, we are establishing the fact that a link language is essential for communication between people of two communities speaking different languages. In India, English has been serving this purpose eminently, and hence it is given a lot of importance in our education programmes. Our job is to make our learners learn this language properly, and learning good pronunciation is one aspect of such teaching.

19 NSOU ? PGEL 5 & 6 Our behaviour in the classroom is called 'classroom dynamics'. This is a complex phenomenon and includes our behaviour (how we control the class, how we read the lesson, how we stand in front of the students, how we use the chalk board, how do we ask questions, how do we encourage the students, how well we make them involve in the learning process, etc.). During this process, we often tend to switch from speaking to writing and back to speaking. You know how the chalkboard or ppt slides are used in the class and for what purpose. Speaking and writing reinforce each other. Suppose I use a word penchant % % [pa: a:] and pronounce it the way British do it, many of my students will neither get the word nor its spelling. It is at such times, writing becomes necessary. There are various other occasions, and I have cited just one. You are aware of many situations where you keep switching from speaking to writing and vice versa. In the next activity, we would like you tell your reasons for doing so. You are a teacher of the English language. In your class, you obviously use English. You speak in English as well as write a few things on the board. Make a list of situations for each of these activities in the space given below:

_____
_____
_____
_____
_____
_____ At the beginning of this unit, we found English is used differently in different parts of the world. It is not only the label, but its pronunciation and use also varies from place to place. However, there is one way in which English pronunciation is fixed as the standard. It is better to be aware of this pronunciation for purposes of teaching and also measuring the progress of our students. For example, the accent used by the British people is quite different from that used by the Americans or the Australians.

20 NSOU ?PGEL 5 & 6 Similarly in India, where English is spoken as a second language it has developed a distinct variety. But within this variety, there are further variations, for example, the speech of a Bengali speaker of English differs sharply from that of a Telugu or Marathi or Punjabi speakers of English. To solve this problem, while teaching spoken English, it is necessary to be aware of Phonetics to describe the types of errors in our speech. It is necessary to follow a particular standard for teaching Phonetics as well as spoken English. One native regional accent that has gained social prestige is the Received Pronunciation (RP) of England, as used in the southern part of England. It is also a status symbol to use RP for the elite class of the society. It is considered as the correct pronunciation of English. In many non-native speaking countries RP has been selected as a model. The teaching-learning of English pronunciation focuses on the following aspects: a. The sound system or the segmental features. These include the forty four speech sounds consisting of 24 consonant sounds, 12 pure vowel sounds, 8 diphthongs and occasionally a triphthong. b. Supra-segmental features include the combination of individual sounds to produce syllables, words, clauses or utterances. These become meaningful with stress, rhythm and intonation. You would have noticed that there are several words in English that are pronounced alike, but spelt differently, and conversely, we also have words that are spelt alike but pronounced differently. You have come across several examples of such words in your daily life. Here is an activity for you to show your awareness of such words. 1] ' ' and ' ' are spelt differently but they are pronounced the same, / be ∂ /. Make a list of five other pairs of words which are spelt differently but pronounced in the same way. Your answer: 2] Read out the following words and transcribe them using a dictionary. Learn to pronounce them correctly:- remember language lotus alphabet necessary caravan London letter father correct property brother English rumour cattle particular repertoire between pronunciation important

21 NSOU ? PGEL 5 & 6 Now we will introduce to you a new concept called the 'minimal pairs'. Minimal pairs are a set of words which differ from each other in a single phoneme. For example look at the words 'tag' and 'bag'. They are minimal pairs because they differ in the initial phoneme 't-' and 'b-'. Similarly, 'sit' and 'sat' are minimal pairs as they differ in the vowel sound '-i-' and '-æ-'. We use minimal pairs to establish that a particular sound is a phoneme. This is required especially with sounds that have similar qualities. For example /p/ and /b/ are similar in all aspects. Both are bilabial sounds and both are plosives. The only difference is that /p/ is voiceless whereas /b/ is voiced. In many languages these sounds are not separate (e.g. Malayalam). To establish /p/ as different from /b/ we need a minimal pair. Look at these words that bring about a contrast in the words: pin and bin; pit and bit; pat and bat; pail and bail; pall and ball; pill and bill; I can go on giving many examples for other sounds also. Here is an activity for you which helps you look for such words and also makes your understanding of the concept of minimal pairs clear to you. 3] Find words to match the following words with a minimum difference only in the vowel sound. One is done for you:- i) bend/band; v) force _____; ix) ten _____; ii) knit _____; vi) dawn _____; x) cat _____; iii) tale _____; vii) sill _____; xi) car _____; iv) broke _____; viii) win _____; xii) back _____; Give at least three minimal pairs to distinguish between the following sets of English vowel sounds: For each set, one example has been given. /e/ /æ/ _set____ ___sat_____ _____ _____ _____ /i:/ / I / beat_____ bit_____ _____ _____ _____ _____

22 NSOU ?PGEL 5 & 6 / / / :/ cot_____ caught_____ _____ _____ _____ _____ /3: / / ʌ/ curd_____ cup_____ _____ _____ _____ _____ You have already learnt about phonemes in your earlier courses. Let us quickly revise it for you. Phoneme is defined as a minimal distinctive unit of speech sound. There are three operational words here: minimal, distinctive and unit. Minimal is the smallest part which cannot be divided further, distinct because it is unique – the qualities it has are not possessed by other phonemes and it is a unit which means it is independent and can combine with other units based on a set of rules (phonological rules). Phonemes can be consonants, or vowels. Among vowels, we have pure vowels and diphthongs. In the next few activity, we like you to use your knowledge of phonetics, the transcription and complete the activities by writing words or symbols, etc. Identify the diphthong for each of the following words and add three more words to the list. The first one is done for you. / eI / came, make, face, samedaisy, play, great / / neither, idle, high, light / / home, post, shoulder, soap / / how, house, doubt, flower / / noise, soil, coin Try to pronounce the following words and write the pure vowels or diphthongs in the space provided :- try — / / boil — / / suite — / / Cord — / / put — / / fool — / /

23 NSOU ? PGEL 5 & 6 town — / / stand — / / clerk — / / budge — / / starch — / / wind — / / court — / / pear — / / point — / / poor — / / measure —/ / party — / / Fill in the blanks with appropriate vowel sounds to make complete words:- 1. r ___ b (rob), r ___ b (rib), r ___ b(rub) 2. p ____t ò (patch), p ____t ò (pitch), p ___t òò (porch) 3. f _____ l (fill), f _____ l (feel), f _____l(fall) 4. s ___ k (sick), s ____ k (suck), s ____ k (seek) 5. r ___ d (read), r ____ d (red), r _____d (road) 6. w ___v(weave), w ___v(wove), w ___ v (wave) 7. d ʒ _____ (jar), d ʒ ____ (jaw), d ʒ _____ (jew) 8. b _____ (buy), b ___ ___(boy), b ____(bay) 9.θr ___ (three), θr _____ (threw), θr ____ (throw) 10. ð ____ (thy), ð _____ (they), ð _____ (though) The phoneme /d/ occurs in initial, medial and final position for the words: daughter, holiday and bed. Give at least one example of each of the following consonants in initial, medial and final position. Initial Medial Final A] /t/ _____ _____ _____ B] /θ / _____ _____ _____ C]/p/ _____ _____ _____ D] /t ò / _____ _____ _____ E]/k / _____ _____ _____ F]/ ʒ / _____ _____ _____ In English, /p/ is a voiceless, bilabial stop.Give three term label of the following consonants:- i) / z / ii) h /

24 NSOU ?PGEL 5 & 6 iii) / l / iv) /ƒ/ v) / d ʒ / vi) / m / vii) / k / viii) / v / ix) / d / x) /ŋ/ Phonemic transcription or broad transcription represents each speech sounds (44 in all) with a unique symbol. In other words, these unique symbols are for each phoneme of a language. We have learnt about Phonetic Transcription and the International Phonetic Alphabet (IPA) in paper3 Module 2 Unit 8. Let us revise on that learning in the following activities. b) Give phonetic symbols to match the following descriptions of consonant sounds. The first one is done for you. i)voiced post-alveolar frictionless continuant / r / ii) voiceless palato-alveolar affricate / / iii) voiced alveolar nasal / / iv) voiced labio-velar semi-vowel / / v) voiceless alveolar fricative / / vi) voiced velar plosive / / vii) voiceless dental fricative / / viii) voiced bilabial plosive / / ix) voiceless labio-dental fricative / / x) voiced palato-alveolar fricative / /

In this unit, we have looked at the variety of ways in which a language can be spoken. In this context we have taken the example of English and demonstrated how it enjoys different statuses and also spoken differently in different places. It is therefore necessary to understand the structure of standard English and while teaching English as second language and be aware of it. In order to drive home these concepts, we have provided you with several activities that provide practice in understanding the pronunciation of words, transcribing words, identifying similar sounding words and many other aspects related to spoken English. We have revised your knowledge of phonetics course which you studied last semester and this unit will help you cope with the demands of the next units in this module. 1. Akmajian, Adrian., et at., (2017). . Cambridge: Cambridge University Press. 2. Balasubramaniam. T., (2001). Chennai: Macmillan India Pvt Ltd. 3. Hockett, C.F., (1958). New York: The Macmillan Company. 4. Katamba. F., (1989). London and New York: Longman Linguistics Library. 5. Roach, Peter., (2009). . Cambridge: Cambridge University Press.

? ł The first question that comes to the mind of a person who wishes to learn an acceptable pronunciation of English is, which of the various forms of pronunciation should we learn? No two persons belonging to same nationality pronounce their own language exactly alike. The difference may be due to the locality in which they live; social surroundings or early influences, and there may be individual peculiarities for which it is difficult or impossible to account. After reading and working on the unit you will be able to: a) Have an idea on the extent to which pronunciation can vary b) Identify the reasons of variation c) Learn on the processes of variation d) Understand grapheme–phoneme correspondences It is often noticed that the pronunciation of English among people brought up in 26

Manchester is different from those from Exeter and both differ from the pronunciation of those brought up in Edinburgh or in London. Let's take an example. Differences of English pronunciation according to locality may be found in the treatment of letter 'r' in such word as 'part'. In Scotland it is pronounced as slightly flapped while /r/ is not pronounced until it is followed by vowel sound. So the pronunciation of 'part' is According to their rule /r/ is not pronounced when it is in the final position of the word or when it is followed by a consonant sound. So they pronounce as (for 'car') but In many parts of North and West of England /r/ appears as In southern England the vowel sounds in 'boot' and 'book' are different where as in Scotland a short closed /u/ is used for both the words. Pronunciation is also influenced by the difference of education. People of limited education in different parts of England omit / / and pronounce for the word 'help'. In London (Cockney) words like 'name' is pronounced with the diphthong, / aI/ or / æI / instead of /eI/ and words like 'house' or 'about' are pronounced with / æ u /, or sometimes / ∂bæut / In uneducated Yorkshire speech the vowels of 'put' /u/ and cut / ʌ / are labeled to a vowel intermediate between these two. Because of the so many variations it is really very difficult for the foreign learners to know which types of pronunciation should be learnt and which one should be accepted as the standard variety. But certainly the most useful type is the one which is based on the speech that is used in the southern England [where city of London is situated]. It is generally used by the people, educated at Public Schools and Preparatory Boarding Schools. It is easily legible in all parts of English – speaking countries. It is more widely understood than any other variety. The term Received Pronunciation (RP) is often used to designate this type of pronunciation. Among several different styles of pronunciation notable ones are the rapid familiar style, the slower colloquial style, the natural style used while addressing an audience, the acquired style of the stage while acting and the acquired styles used in singing. Of these the slower colloquial style is perhaps the most suitable for beginners. Contracted forms are a distinct feature of English. They are found in written conversations, in the spoken form of the language. They maintain rhythm in connected speech. Many words have more than one contracted form. Write the following combinations as contractions(monosyllable, if possible), using the phonetic symbols(one is done for you):- Example – she will = ò l .

a. I will _____ g. I would _____ b. You will _____ h. You would _____ c. He will _____ i. She would _____ d. It will_____ j. It would _____ e. We will _____ k. we would _____ f. They will _____ l. They would _____ Nicholas, a 6-year old child used a creative spelling to spell the word . What assumptions on his part produced this spelling? In American English, /r/ is often one of the most difficult features of pronunciation for speakers of other languages to learn. Sometimes it is even difficult for the native speakers themselves, being one of the last sounds the children acquire when they learn American English. It is also one of the sources of extreme dialectical variation, for example, it was evident in the pronunciation of ' ' by Ted Kennedy, the US senator from Massachusetts or in that of a country music singer George Jones and Tom Brokaw /far/. Even when beginning students of Linguistics often transcribe the word , they often use the tense vowel /i: —. /fir/ Here the vowel sounds higher than the lax vowel /j/ as in 'bid'. In reality the vowel in 'fear' lies between /j / and / i:/ Even though they admit that it does not seem quite as high as the tense vowel /i/ as in 'bead' as in /bId/ Same thing can be seen in pronunciation of word like 'sir' as /sIr/ These vowels are basically called r-coloured vowel that refers to English vocalic sounds that have an r-like quality. I hope, by this time you have understood, to some extent, the variation of pronunciation with respect to American dialectic English. Now it is necessary to test up to what extent you have perceived this variation. Let us engage in a relevant activity. Transcribe the following words exhibiting vowels before /r/:- i) boor ii) bore iii) poor iv) care v) car vi) dear vii) fir viii) mire ix) sewer x)mirror ł The English language has two types of /l/ —— dark l (/ł /) and light or normal l (/l/). The /ł / occurs in words like 'lark' and 'tail' and has a lower sound than /l/

29 NSOU ? PGEL 5 & 6 which occurs in the words like 'lead' or 'light'. Even /l/ or light /l/ occurs in a word when it is preceded by bilabial sound like /p, b/. In English dark-/l/ is basic. Its dark quality is due to a co-articulation effect caused by an accompanying raised and retracted tongue body. Light-l is a positional variant occurring before front vowels such as / I / and / i: /. Before front vowels /l/ is not produced with a retracted tongue body and the body is more forward and thus the light variant is produced. An English speaker, learning French, Spanish or German must learn to produce all of the 'l's in these languages as light since none of them has / ɫ /. Write the lateral: clear or dark /l/ for the following words: Love ball Live able Light pillow Language doll house Answer: for the left hand column it is clear /l/ and for the right hand column it is dark/l/. In English phonology, a strange behaviour is seen among some of the voiced consonants. Depending on where they occur, sometimes, they become voiceless. This is due to the influence of the environment. E.g. Take a word like 'absolute' – the second consonant /b/ is voiced in normal circumstances. In this word, since it is followed by /s/ which is a voiceless sound, /b/ tends to lose its voice quality and is pronounced as /p/. This is just one example, and you may find similar occurrences in different words. Here is an activity to help you understand this better. In some of the following words the /l/s and /r/s are voiceless. Identify these words and try to establish the conditions under which /l/ and /r/ lose their voicing:- (You may use a dictionary to do this activity.) a) Alpo f) try b) archive g) splat c) black h) spread d) play i) leap e) dream j) read.

30 NSOU ?PGEL 5 & 6 A grapheme is the unit of written language, and we know that the unit of spoken language is a phoneme. From our background knowledge we know that a single grapheme can have more than one sound. For example, a grapheme [f] has its phonemic correspondences in the utterances of the words; family, laugh, philosophy, different, etc. We all had learnt the spellings of words in English and their pronunciation at the same time. We had to learn the ways words are spelt and the ways they are said. This was phonological awareness. Phonological awareness is one of the critical skills of becoming a good reader. Let us work on few activities on phonological awareness. Write the following words using the phonetic symbols:- i) Water ii) splat iii) lit iv) tin v) eaten v) beading vi) pull vi) beating vii) craft viii) knight Now check your answers using a dictionary. Write the speech sound symbol for vowel sounds in each of the words. One is done for you:- For the word 'fish' it is/ I / and for 'fear' it is /Iə/. i) mood ii) caught iii) cot iv) and v) tree vi) five vii) bait viii) toy ix) said x) soot Write the speech sound symbol for the first sound in each of the following words:- i) psychology vi) though ii) use vii) pneumonia iii) thought viii) cyberneticsa iv) cow ix) physics v) knowledge x) memory Write the speech sound symbol for the last sound in each of the following words:- a) cats f) judge

31 NSOU ? PGEL 5 & 6 b) dogs g) rough c) bushes h) tongue d) sighed i) garage e) bleached j) climb Describe each of the following speech sound symbols using articulatory features:- i) /n/ ii) /a/ iii) /l/ iv) /e/ v) /s/ vi) /h/ vii) /z/ viii) /a / ix) /m/ x) /ʌ/ A sound change is a replacement of one sound by another. There are two types of sound changes; Phonetic change or change in a single phonetic feature and Phonological change or merging of two sound units to the creation of a new word. The reason behind a sound change is ease of pronunciation. There are three kinds of phonological processes in English, assimilation, deletion, and addition. Assimilation is changing to similar phonetic features and dissimilation is change to dissimilar phonetic features. Progressive assimilation happens when the preceding sound influences the following sound. In English this happens in continuous speech. For example: 'understand the' /ʌndə 1 stændə/ becomes /ʌndə 1 stænd/. The final sound of the first word /d/ (alveolar stop) influences the first sound of the second word /ð/ (dental fricative) and turns it into /d/. Regressive assimilation occurs when the following sound influences the preceding sound. For example: 'with this' /wiθðjs/ becomes /wiððls/ when uttered together. That is the dental voiced fricative / ð / of the following word influences and dental voiceless fricative /è/ of the preceding word and makes it voiced. Deletion of a sound is 'cope'. Syncope, Apocope, and procope are deletions. Deletion or elision is omission of one or more consonant, vowel or a syllable from a word or phrase. Apocope is deletion of the final sound segment. For example 'first light' is often pronounced f3:slaɪt.The final /t/ is deleted if it is followed by a consonant. Another example of deletion is 'Just don't'd3ʌsdeJ nt is uttered as /d3ʌsdeeJ nt Similarly, deletion of an initial segment (([k]nie→fnaif)) is procope and deletion of medial segment is syncope (chocolate '→ choclate, restaurant '→ restrant).

32 NSOU ?PGEL 5 & 6 Addition of a sound is 'thesis'. Prothesis (special→especial), epithesis ('blue' [blu]→/bəlu/, are additions. Metathesis is switching of places. For example 'ask' becomes /aks/. Examine the following data and state whether it is progressive and regressive assimilation:- 1. Health = _____ 2. Comfort = _____ 3. Keep going = _____ 4. happen = _____ Examine the following examples and tell whether they are apocope or syncope :- i) Just for fun / d3ʌstfəfʌn / ii) Abhor / əbhɔ:/ ? /əbɔ:/ iii) Hand bag / hændbæg?hænbæg/ ?/hæmbæg / iv) White pepper /waɪt 'pepə/ →/waəp' pepə / In morphology structural zero or null morpheme is a morpheme that has no phonetic form, indicating that the derived form is same as the stem. For example, sheep + plural morpheme is also sheep. When there is a contrast in the phonemes or in the order of phonemes then we have overt formal difference or process morpheme. For example 'foot' /fut/ and 'feet' /fiyt/. We will learn more on morpholosy in Paper 6. Identify the forms which have a structural zero and those which illustrate process morphemes:- i) ran ii) hit iii) met iv) cut v) split vi) spat vii) sang viii) bought ix) deer

33 NSOU ? PGEL 5 & 6 Give two words for each of the following words which differ in only one sound segment [one is done for you]: few : mew waste : _____ cat : _____ leisure : _____ try : _____ Chew _____ battle : _____ bought: _____ out :_____ gate : _____ The unit is designed as a revision on earlier units on Phonetics and Phonology along with theoretical inputs in variations in Phonology. This is spread over a vast area, covering phonetic changes in phonology, morphology, grapheme-phoneme correspondences, sound changes in phonological processes, and variations due to style and location. Here are few review questions at the end of the unit to check your comprehension. 1. What is sound change? Illustrate with examples of deletion in English 2. Cite five examples each for Metathesis and prothesis in English. 3. Explain Structural Zero and Process Morphemes with examples. 4. Distinguish between clear /l/ and dark /ɫ /. 5. Compare variation in pronunciation due to location in English and your first language. 6. Discuss variation in pronunciation due to style from your first language and English. 7. What is assimilation? Discuss different types of assimilation in English. 8. Give the phoneme-grapheme correspondences: a) off, enough, photography, different b) machine, ashamed, station, wish c) closure, provision, garage, usual 9. Mention the common vowels in the following sets and their grapheme correspondences. a) earth, world, bird, her, turn

34 NSOU ?PGEL 5 & 6 b) daughter, horse, yawn, tall, paw c) pat, trash, exact, damp, lamb 10. Mention the common diphthongs in the following sets and their grapheme correspondences. a) air, mare, there, chair, rare b) cable, may, great, same, weigh c) road, sole, sow, bureau, soul 1. Akmajian, Adrian., et at., (2017). . Cambridge: Cambridge University Press. 2. Balasubramaniam. T., (2001). Chennai: Macmillan India Pvt Ltd. 3. Hockett, C.F., (1958). New York: The Macmillan Company. 4. Katamba. F., (1989). London and New York: Longman Linguistics Library. 5. Roach, Peter., (2009). . Cambridge: Cambridge University Press. 6. Verma. S. K., and N Krishnaswamy. (1997). Chennai: OUP.

? The English are particularly sensitive to variations in the pronunciation of their language. Such extreme sensitivity may make the people claim that modern speech is becoming more and more slovenly, full of 'mumbling and mangled vowels' and 'missing consonants'. There is, however, little evidence to show that English is spoken in a more 'slovenly' manner now, than it was a few centuries ago. However, what is more significant, socially as well as linguistically is the attitude that considers a certain set of sound values as more acceptable or 'more beautiful', than another. The factor suggests that there definitely exists a standard for comparison although it is never explicitly imposed by any official body. Let us judge the English pronunciation style or stress pattern in the historical perspective. After reading the unit you will be able to a) Learn how to teach Pronunciation b) Distinguish features of RP and GIE c) Design a pronunciation syllabus for your class 35

36 NSOU ?PGEL 5 & 6 d) Understand spelling-pronunciation relationship The introduction of the term Received Pronunciation is usually credited to Daniel Jones after his comment in 1917 "In what follows, I call it Received Pronunciation (abbreviation RP), for want of a better term." However, the expression had actually been used much earlier by Alexander Ellis in 1869 and Peter DuPonceau in 1818 (the term used by Henry C. K. Wyld in 1927 was "received standard"). According to Fowler's Modern English Usage (1965), the correct term is "the Received Pronunciation". The word received conveys its original meaning of accepted or approved – as in "received wisdom". The reference to this pronunciation as Oxford English is because it was traditionally the common speech of Oxford University; the production of dictionaries gave Oxford University prestige in matters of language. The extended versions of the Oxford English Dictionary give Received Pronunciation guidelines for each word. RP is sometimes known as the Queen's English, but recordings show that even Queen Elizabeth II has changed her pronunciation over the past 50 years. RP is an accent (a form of pronunciation), rather than a dialect (a form of vocabulary and grammar as well as pronunciation). It may show a great deal about the social and educational background of a person who uses English. Anyone using RP will typically speak Standard English although the reverse is not necessarily true (e.g. the standard language may be pronounced with a regional accent, such as a Yorkshire accent; but it is very unlikely that someone speaking RP would use it to speak Scots). RP is often believed to be based on the Southern accents of England, but it actually has most in common with the Early Modern English dialects of the East Midlands. This was the most populated and most prosperous area of England during the 14th and 15th centuries. By the end of the 15th century, "Standard English" was established in the City of London. A mixture of London speech with elements from East Midlands, Middlesex and Essex, became known as RP. However, the notion that one variety of pronunciation was socially more acceptable than others has existed in England. For reasons of politics, commerce and presence of the Royal Court, the pronunciation of south-east of England, and more particularly that of London region became more prestigious. Even the Public Schools of the nineteenth century also helped in the dissemination of the speech of the ruling class. With the spread of education a bulk of educated people whether belonging to the upper class or not, and those who heartily aspired for the social advancement, changed their accent to sound more like the socially accepted standard. 37 NSOU ? PGEL 5 & 6 Like all accents, RP has changed with time. For example, sound recordings and films from the first half of the 20th century demonstrate that it was usual for speakers of RP to pronounce the /æ/ sound, as in , with a vowel close to [ɛ], so that would sound similar to a present-day pronunciation of . Figure – 7 [A comparison of the values of /i: æ ɑːɔːʊ u:/ / for older (black) and younger (light blue) RP speakers (Fromde Jong et al,2007:1814)] The 1993 Oxford Dictionary changed three main things in its description of modern RP, although these features can still be heard amongst old speakers of RP. Firstly, words such as , , , were pronounced with /ɔ:/ (as in General American) instead of / /, so that sounded close to . The Queen still uses the older pronunciations, but it is rare to hear them on the BBC any more. Secondly, there was a distinction between horse and hoarse with an extra diphthong /ɔ:/ appearing in words like , , and . Thirdly, final 'y' on a word is now represented as an /i/ - a symbol to cover either the traditional /I/ or the more modern /i:/, the latter of which has been common in the south of England for some time. Before World War II, the vowel of was a back vowel close to [ʌ] but has since shifted forward to a central position so that [ ] is more accurate; phonetic transcription of this vowel as ‹ʌ› is common partly for historical reasons. In the 1960s the transcription /∂ʊ / started to be used for the "GOAT" vowel

38 NSOU ?PGEL 5 & 6 instead of Daniel Jones's /oJ /, reflecting a change in pronunciation since the beginning of the century. Joseph Wright's work suggests that, during the early 20th century, words such as cure, fewer, pure, etc. were pronounced with a triphthong/iu∂/ rather than the more modern /ju∂/. The change in RP may even be observed in the home of "BBC English". The BBC accent of the 1950s was distinctly different from today's. A news report from the 1950s is recognizable as such, and a mock-1950s BBC voice is used for comic effect in programmes wishing to satirize 1950s social attitudes such as the Harry Enfield Showand its "Mr. Cholmondley-Warner" sketches. There are several words where the traditional RP pronunciation is now considered archaic: for example, "medicine" was originally said /medsIn/ and "tissue" was originally said /tIsju:/. All should agree that pronunciation is an important part of foreign/second language learning. For many learners, again, it creates impediments on the way of learning a language. Naturally, a relevant question arises: when should we start teaching pronunciation and how? – Should we begin teaching with phonic drills even before teaching grammar or vocabulary? Or should we start it in the early age considering that the children are the better adapters than the adult learners? – Or should pronunciation be taught overtly or should it be introduced gradually or unobtrusively? Should one teach stress and intonation relatively earlier in the course or when the sound pattern along with vocabulary and grammar has been already mastered? Answers to these questions, although varying in nature, still now evolves with the development of linguistics to which phonetics and phonology belong to. In the 1940's and 50's when a systematic approach to phonology based on the concept of the phoneme was introduced into structural and audio-lingual language teaching, it was believed that the information gathered from the contrastive study of speech sounds across languages (in order to identify the similarities and dissimilarities between target and original languages) would systematically help learners to overcome the phonological impediments presented by the new language. The trend as established in 1960's is still being followed. It emphasizes the teaching of segmental phonemes, phonemic contrast and contrastive analysis using a variety of practical exercises. It also recognizes the importance of the supra-segmental features and offers practice in stress and intonation. Most training takes place early in a course and pronunciation is introduced more gradually and unobtrusively. The emphasis, then, is shifted to the global listening, speaking activities and grammar teaching and so on.

39 NSOU ? PGEL 5 & 6 Another method advocates mimicking and imitating the teacher without offering any explanation. Specific exercises are used to deal with particular pronunciation problems as and when they arise. Phonetic or phonological explanations may be offered if none of the above procedures work. It is said that in 1980's, with the introduction of the communicative language teaching, the sufficient exposure is not given in pronunciation teaching and this type of negligence creates obstacles for the learners to communicate effectively. It is important to note the changes that the socio-linguistic view of language has brought about in the definition of objectives in teaching pronunciation. , it is now accepted that acquisition of a native-like pronunciation is no longer necessary. The most important consideration is that the learners' pronunciation should be intelligible to the native speakers. , attention is paid mostly to the acceptability of the pronunciation (may be considered a social criteria). It means that learners should avoid any sort of feature(s) of pronunciation that might in any case be very offensive as well as irritating to the native listeners. It is, therefore, advisable that learners should be taught to articulate clearly using a neutral pronunciation avoiding strictly local characteristics. , greater attention is now paid to the teaching of rhythm, stress and intonation. It is especially important to keep in mind that the changes in pronunciation occur when we utter larger units of speech than when we utter isolated words or sentences out of context. This is the area where discourse analysis has particularly influenced teaching pronunciation. In this context you should have a fair concept of General Indian English [GIE] because you are supposed to interact those students who are already influenced by the Indian version of the RP pronunciation thereby creating a severe communication gap. Let's explore the vowel sounds of GIE first:- Key words GIE Key words GIE feel, bead, beak, beat, heat i: shoe, boo, boot, hoot u: tin, bid, bit, hit I about, buck, but, come ∂ bake, bait, bay, came e: bike, bite, buy, height aI bed, bet e boy, toy ɔI man, bad, back, bat æ bout, bow aʊ par calm a: peer, stir, clear, rear I∂

40 NSOU ?PGEL 5 & 6 cot, hot, lot, nod pair, fair, rare, chair e∂ boat, go, pour o: poor, tour, sure Ω∂ book, look, put, suit ʊ Give the GIE symbols for the vowels in the following words. i) exact / / ii) what / / iii) new / / iv) suppose / / v) four / / vi) free / / vii) sea / / viii) city / / ix) should / / x) fruit / / Give the GIE symbols for the diphthongs in the following words. i) either / / ii) coin / / iii) town / / iv) cheer / / v) there / / vi) moor / / vii) steward / / viii) wear / / ix) loyal / / x) night / / In general, Indian English has fewer peculiarities in its vowel sounds than the consonants, especially as spoken by native speakers of languages like Hindi, which in fact has a vowel phonology very similar to that of English. Among the distinctive features of the vowel-sounds employed by some Indian English speakers are discussed in the following paragraphs. Many Indian languages (with the exception Western Hindi and Punjabi do not natively possess a separate phoneme /æ/ (as in >trap<). Thus, many speakers do not differentiate between the vowel sounds /ϵ/ (as in "dress") and /æ/ (as in >trap<), except in cases where a such as >bed</>bad< exists in the vocabulary of the speaker. Such a speaker might pronounce "tax" like the first syllable of "Texas". Speakers of Southern languages and , who do differentiate /ϵ/ and /æ/, do not have difficulty making this distinction. Eastern languages, notably Bengali does have the /∂e/ sound for both the vowels â: (hâñcco—the sneezing sound—pronounced as hæñcco)and /e/: (henglâ—greedy—pronounced as h∂engla). The vowel has two sound values in Bengali: as au in ro ('more') and (K likâtâ). It lacks the short vowel value for (p râthâ). Chiefly in Punjab and Haryana states, the short ϵ becomes lengthened and higher to long making >pen< sound like >paenn<. When a long vowel is followed by "r", some speakers of Indian English usually use a monopthong, instead of the diphthong used for many such words in many other accents. Thus "fear" is pronounced [fir] instead of [fi∂] Indian English often uses strong vowels where other accents would have unstressed syllables or words. Thus "cottage" may be pronounced [k ted3] rather than [kɑtId3].

41 NSOU ? PGEL 5 & 6 A word such as "was" in the phrase "I was going" will be pronounced [u∂z] or [uɑs] in Indian English: in most other accents it would receive the unstressed realization [wɒz]. Another example is that many Indian English speakers often pronounce >the< as /∂i:/, irrespective of whether the definite article comes before a vowel or a consonant, or whether it is stressed or not. In native varieties of English, >the< is pronounced as [ð] when it is unstressed and lies before a consonant, and as [ði:] when it is before a vowel or when stressed even before a consonant. Continuing the above point, the indefinite article >a< is often pronounced by many Indian English speakers as [e:], irrespective of whether it is stressed or unstressed. In native varieties of English, >a< is pronounced as [∂] when unstressed and as [eI] when stressed. The RP vowels /ʌ/, /∂/ and /\3:/ might be realized as /∂/ in Indian English. Bengalis often pronounce all these vowels as a, including the >r<-colored versions of these vowels. Thus, >firm< may be pronounced the same as [farm]. "Van" as bhan etc. General Indian English realizes /eI/ (as in >face<) and /oʊ/ (as in >goat<) as long monophthongs[e:] [o:] Many Indian English speakers do not make a clear distinction between / / and /ɔ:/ In English, some Indian speakers don't pronounce the rounded /ɑ/ or /ɔ:/, and substitute /a/ instead. This makes >not< sound as [nat]. The phoneme /ɔ:/, if used, is only semi-rounded at the lips. Similarly in North India "coffee" will be kaafi, "Copy" will be kaapi etc. Words such as >class<, >staff< and >last< would be pronounced with a back >a< as in British English but unlike American English, i.e., [kla:s], [sta:f] and [la:st] rather than American [klæs], [stæf] and [læst] and in South of India "Parent" is pa:rent. Most Indians have the of Those who don't, are usually influenced by American accents. Not using the trap-bath split is often popularly construed as attempting to imitate an American accent.

42 NSOU ?PGEL 5 & 6 Key wordssymbol Key words symbol Key words symbol Key words symbol Give the GIE symbols for the fricative and affricate sounds in the following words. i) half / / ii) view / / iii) heathy / / iv) than / / v) almost / / vi) school / / vii) ship / / viii) revision / / ix) rich / / x) age / / Put the GIE symbols for the consonant sounds. i) heap / / ii) buy / / iii) tea / / iv) dear / / v) car / / vi) ago / / vii) my / / viii) any / / ix) singer / / x) learn / / xi) yet / / xii) why/ / Most pronunciations of Indian English are rhotic, but many speakers with higher education are non-rhotic. Standard Hindi and most other vernaculars (except Punjabi & Bengali) do not differentiate between /v/) and /w/). Instead, many Indians use a frictionless approximant [ʊ] for words with either sound, possibly in free variation with [v] and/or [w]. So and are homophones. Because of the previous characteristic many Indians pronounce words such as >flower< as [fla:(r)] instead of [flaJ ∂(r)], and >our< as [a:(r)] instead of [aJ ∂(r)]. symbol symbol symbol symbol /p/ /b/ /t/ /d/ /k/ /g/ /ct/ Key words Key words Key words Key words pin jam /d3/ Them /dd/ ram /r/ bin mat /m/ Sun /s/ yes /j/ tin nose /n/ Zoo /z/ water /w/ dam song /ŋ/ sheep /ʃ/ kite fan /f/ garage /ʒ/ get van /v/ Hen /h/ chat think /ʈh/ Leaf / ò / / ʒ /

43 NSOU ? PGEL 5 & 6 The voiceless plosives /p/, /t/, /k/ are always unaspirated in Indian English, whereas in RP, General American and most other English accents they are aspirated in word- initial or stressed syllables. Thus "pin" is pronounced [pIn] in Indian English but [p h jn] in most other accents. In native Indian languages (except Tamil), the distinction between aspirated and unaspirated plosives is phonemic, and the English stops are equated with the unaspirated rather than the aspirated phonemes of the local languages The same is true of the voiceless post alveolarafficate/t ò /. The stops English /d/, /t/ are often [d], [t], especially in the South of India. In Indian languages there are two entirely distinct sets of coronal plosives: one and the other retroflex. To the Indian ears, the English alveolar plosives sound more retroflex than dental. In the Devanagari script of Hindi, all alveolar plosives of English are transcribed as their retroflex counterparts. One good reason for this is that unlike most other native Indian languages, Hindi does not have retroflex plosives. The so-called retroflexes in Hindi are actually articulated as apical plosives, sometimes even with a tendency to come down to the alveolar region. So a Hindi speaker normally cannot distinguish the difference between their own apical post-alveolar plosives and English's alveolar plosives. However, languages such as Tamil have retroflex plosives, wherein the articulation is done with the tongue curved upwards and backwards at the . This also causes (in parts of Uttar Pradesh and Madhya Pradesh) the /s/ preceding alveolar / t/ to allophonically change to [ò] (>stop</stɑp/ → / ò tap/). Mostly in south India, some speakers allophonically further change the voiced retroflex plosive to voiced and the nasal /n/ to a nasalized retroflex flap. Many Indians speaking English lack the (/3/), the same as their native languages. Typically, /z/ or /d3/ is substituted, e.g. / tr ʒ :z∂:r/, and in the south Indian variants, with /ʃ/ as in >"sh'"ore<, All major native languages of India lack the dental fricatives (/θ/ and /ð/; spelled with). Usually, the [t h] is substituted for /θ/ and the unaspirated [d*], or possibly the aspirated version [d h ±]. is substituted for /ð/ For example, "thin" would be realized as [t h In] instead of /θIn/. South Indians tend to curl the tongue (retroflex accentuation) more for /l/ and /n/. Most Indian languages (except Urdu) lack the /z/. While they do have its nearest equivalent: the unvoiced /s/, strangely, it is not used in substitution. Instead, /z/ is substituted with the voiced palatal affricate (or post alveolar) /d3/, just as with a Korean accent. This makes words such as >zero< and >rosy< sound as [dzi:ro] and [ro:dzi:]. This replacement is equally true for Persian and Arabic loanwords into Hindi. The probable reason is the confusion created by the use of the grapheme >:< (for /dz/) with a dot beneath it to represent the loaned / z/ (as >::<). This is common among people without formal English education.

44 NSOU ?PGEL 5 & 6 Many Indians with lower exposure to English also may pronounce / f / as aspirated [p h]. Again note that in Hindi (devanagari) the loaned / f / from Persian and Arabic is written by putting a dot beneath the grapheme for native [p h] >:<: >::<. This substitution is rarer than that for [z], and in fact in many Hindi- speaking areas /f/ is replacing /p h / even in its native words. Inability to pronounce certain (especially word-initial) by people of rural backgrounds. This is usually dealt with by . e.g., /is.ku:l/, similar to Spanish. Sometimes, Indian speakers interchange /s/ and /z/, especially when plurals are being formed. Whereas in international varieties of English, [s] is used for pluralization of a word ending in a voiceless consonant, [z] for that ending in a voiced consonant or vowel, and [hiz] for that ending in a sibilant. Again, in dialects like all instances of / ò / are spoken like [s], a phenomenon which is also apparent in their English. Exactly the opposite is seen for many . In case of the post alveolar affricates /t ò //d3/, native languages like Hindi have corresponding affricates articulated from the palatal region, rather than postalveolar, and they have more of a stop component than fricative; this is reflected in the English of Hindi Speakers. While retaining /ɔ/ in the final position, Indian speakers usually include the [a] after it. Hence /riŋ.iŋ/→ riŋ.giŋg) /l/, /m/ and /n/ are usually replaced by the VC clusters [∂], [∂m] and [∂n] (as in /but.t∂n/), or if a precedes, by [il] (as in /lit.til/). Syllable nuclei in words with the spelling (a in RP and an r-colored schwa in GIE) are also replaced VC clusters. e.g., , /mi:t∂r/ → /mi:t∂r/. Indian English uses clear [l] in all instances like Irish English whereas other varieties use clear [l] in syllable-initial positions and dark [l] (velarized-L) in coda and syllabic positions. A number of distinctive features of Indian English are due to "the vagaries of English spelling" Most Indian languages have a very phonetic pronunciation with respect to their script, and unlike

---

76% **MATCHING BLOCK 2/46** W

English, the spelling of a word is a highly reliable guide to its

---

modern pronunciation. In words where the digraph >gh< represents a voiced velar plosive (/g/) in other accents, some Indian English speakers supply a murmured version [g 4], for example >ghost<[g h o:st]. No other accent of English admits this voiced aspiration. Similarly, the digraph >wh< may be aspirated as [v h] or [w h], resulting in realizations

45 NSOU ? PGEL 5 & 6 such as >which<[v h It ò], found in no other English accent (except in certain parts of Scotland). In unstressed syllables, native English varieties will mostly use the schwa while Indian English would use the spelling vowel, making >sanity< sound as [sæ.ni.ti] instead of [sæ.n∂.ti].Similarly, >above< and >ago< can be heard as [e.b∧v] and [e.go] instead of [∂.b∧v] and [∂.go]. English words ending in grapheme > a < almost always have the > a < being pronounced as schwa /∂/ in native varieties (exceptions include words such as >spa<). But in Indian English, the ending > a < is pronounced as the long open central unrounded vowel/a:/ (as in >spa<) instead of schwa. So, >India< is pronounced as / In.dI.a:/ instead of /In.dI.a/, and >sofa< as /so:.fa:/ instead of /sou.f∂/ The word "of" is usually pronounced with a /f/ instead of a /v/ as in most other accents Use of [d] instead of [t] for the "-ed" ending of the past tense after voiceless consonants, for example "developed" may be [dɛvl∂pd] instead of RP /dIvɛl∂pt/. Use of [s] instead of [z] for the "-s" ending of the plural after voiced consonants, for example >dogs< may be [dɑgs] instead of [dɑgs] Pronunciation of >house< as [hauz] in both the noun and the verb, instead of [haus] as noun and [hauz] as verb. The digraph >tz< is pronounced as [tz] or [td3] instead of [ts] (voicing may be assimilated in the stop too), making >Switzerland< sound like [sʊit.z∂r.lænd] instead of [swIt.s∂.l∂nd]. In RP, /r/ occurs only before a vowel. But many speakers of Indian English use / r/ in almost all positions in words as dictated by the spellings. The allophone used is a mild trill or a tap. Indian speakers do not typically use the retroflex approximant/ cl/ for >r<, which is common for American English speakers All consonants are distinctly doubled (lengthened) in General Indian English wherever the spelling suggests so. e.g., >drilling</dril.liŋg/. >Here< is sometimes pronounced [he∂(r)] (like in >hair< and >hare<) instead of [hI∂(r)]. English pronunciation of the grapheme > i < varies from [I] to [aI] depending upon the dialect or accent. Indian English will invariably use the British dialect for it. Thus, >tensile< would be pronounced as [tɛn.saIl] like the British, rather than [tɛn.sIl] like theAmerican; >anti< would be pronounced as [æn.ti] like the British, rather than [æn.taI] like American. While Indian English is historically derived from British English, recent influences from American English can be found to have created their own idiosyncrasies. For instance, it is common to both spellings "program" and "programme" being used in both formal and informal communications.(Two examples from Indian newspapers providing both spellings are provided here)

46 NSOU ?PGEL 5 & 6 In this unit we have discussed in detail, the peculiarities associated with the English language, and attempts made to standardize the pronunciation. Though there had been concerted efforts put in by many scholars, it was formalized by Daniel Jones and came to be called Received Pronunciation. This is largely restricted in use and even this model has undergone changes over the years. This standard is compared with the General Indian English and an attempt has been made to contrast both the vowels and consonants in both the systems. Adequate illustrations are provided to make these discussions clear. Finally, the role spelling has in determining the pronunciation is discussed. 1. What should you consider when you choose a standard pronunciation to teach? 2. Write a brief note on the changing trends of pronunciation teaching from the 1940's through the 90's. 3. Identify at least two problem zones in the consonant features that students find difficult to master. How would you alleviate these problems? 4. Suggest ten exercises for alleviating problems with consonant features. 5. Identify at least three problem zones with vowel sound features that are difficult to master. How would you alleviate these problems? 6. Suggest ten exercises for alleviating problems with vowel features. 7. What should be the objectives of pronunciation teaching? Suggest objectives from your own experiences and for your needs. 8. Suggest five examples for each of ten consonants with varied spelling pronunciation. 9. What would you consider a useful and workable syllabus for your students while teaching pronunciation? 10. What are the variations in RP and GIE for the fricatives of English? 1. Gimson, A.C. 1972. Edward Arnold. 2. Stern. H.H. 1972. (ed. Patrick Allen and Birgit Harley), Oxford India Press. 3. Strevens, P.D. 1977. Oxford India Press.

? This module has a focus on Language Functions and the various ramifications it can have in the process of communication. In this module we shall look at four of these aspects in some detail. The features being discussed here are situations and meanings that language facilitates, as well as form and discourse that is employed for conveying the ideas. We will provide you with as many examples as possible and keep the theoretical discussion to the minimum possible level. This is to help you infer the principles and concepts on your own. 'Language Functions as Situations'— Look at the title of the unit. Of the four words included two are called operative words. We are sure, you are able to guess which two are operational or carry the meaning to be conveyed. Please enter these two words in the space below: Your response: We have discussed in detail what language is, and its salient features in Paper 4. (Take a look at Module I of Paper 4.) Since we know enough of what language is, 47 MODULE - 2 : VOCABULARY STUDIES

48 NSOU ?PGEL 5 & 6 this word cannot be an operational word in our present context. The third word in the title is a preposition or a structure word. Therefore, this cannot be an operational word either. That leaves us with two more words 'functions' and 'situations'. These are new to us. These are our operational words. We are sure while choosing your answer, all these thoughts passed in your mind and you arrived at the correct answer. Let us go forward. After going through this unit, the learners will be able to: a. Understand the term language function properly, b. Appreciate the role language plays in making functions operational, c. Identify various language functions from our daily life, d. Use materials and strategies for using language functions in the classroom. Language is abstract. This means, we cannot see it or feel it, but can use it. If something is as abstract as air, how can it perform any function? And how can such function have a variety of operations? Did you think of these questions? If 'yes' we are happy. They are the right questions to ask to clear our doubts and make progress. In order to understand the concept of function, we need to revise a bit of our previous lessons, especially module 1 of Paper 4. We learnt that language is living, it was born long time ago, it was one of the inventions of human beings to help them live in comfort, it varies according to space and time and it is something unique to human beings. Some linguists also say language is life. What do they mean by this? Is this a tall claim? They say that it is impossible for human beings to live without language? Do you agree with this? State your response. Your answer:

49 NSOU ? PGEL 5 & 6 We do a variety of things in our life. Perhaps each of the things we do is connected with language. To understand this, let us make a list of things we normally do every day since the time of getting up from bed to retiring at the end of the day. Here is a possible list – freshen ourselves up, have tea, bath, dress, breakfast, go to school/office, work, lunch, meet friends, get back home, shop around, dinner, watch television, get into bed. There may be a few additions or deletions, the order may change, but you would agree most of us go through this routine day after day. How many of these jobs are done in silence without any use of language. Take for example your bath – do you talk to yourself (be honest), while eating or having tea though there is no need to talk, the food and tea will not taste the same when you have it alone in silence. So is your work in office, and the conversation with your dear ones while watching television etc. Language is intricately woven into our life and the two cannot be separated. Therefore, some linguists rightly say 'language is life'. We hope you agree with this, and perhaps begin to believe that language is life or it is very important in our life to be happy. We have largely agreed on the fact that language is life. But we are yet to look at the operational words in our title – 'function' and 'situation'. Let us now turn to each one of these individually. Let us begin with function. In life we do several things as you saw it previously. Let us look at life a little differently now. Here is a list of some action verbs. Take a close look at them and then complete the grid that we have provided based on your own experience. The list of action verbs is as follows: making requests, introducing friends, apologizing, enquiring, giving directions, giving instructions, offering advice, thanking someone, accepting a proposal, refusing a suggestion, quarrelling, bargaining etc. Have you involved yourself in doing one or more of these things at some time or the other almost everyday of your life? The frequency may vary. Based on your experience, fill in the following grid. The first column has the action verb, in the second column you need to say either 'yes' or 'no' and in the third column give the frequency that is probably true of you. You may choose one of these options – everyday, once a week, once a month, occasionally, rarely, never. Here is the grid. The first item has been completed as an example. The last three rows are vacant for you to fill more verbs of your own choice.

50 NSOU ?PGEL 5 & 6 Making a request Yes Almost every day. Introducing someone Apologising Bargaining Thanking Enquiring Arguing Accepting (a proposal) Refusing (a proposal) Giving advice Giving instructions Giving directions Persuading Getting angry Explaining Narrating a story/anecdote Sharing a joke Take a close look at the words in column 1. Each of these denotes a function. Now you should be able to see the relation between language and function. Each action of ours is in some way associated with language and it is the language that performs the function – for example can you scold someone in silence or ask for something you need in silence?(Of course, one may use what is called 'mime', but this is severely restricted and needs a lot of talent on the part of the communicator. And not all may understand the mime the same way.)

51 NSOU ? PGEL 5 & 6 We have now established that language can perform functions. We need to be more specific. How does language perform these functions, or what aspects of language do we need in order to perform these functions? That makes our understanding of language as performing functions much more clear. Let us take a few examples from the above list and analyse them so that we understand the role of language in performing a function. Let us begin with a very basic function – Introducing someone. Look at the conversation given below: There are three people A, B and C. A and B are friends. A and C are also friends. But B and C do not know each other. A introduces B to C in this conversation. Akbar: Hello, Bhaskar, how are you? It is a long time since we have met. Bhaskar: Hello, Akbar. So nice to meet you here. I was not in town for the last six months. I was deputed to Darjeeling on a project. Akbar: I hope you enjoyed being there. It is a beautiful place, cool and nice. Bhaskar: I am afraid not. It is a good tourist place, but not good enough to stay there for long. It is pretty expensive. Caroline: Hello Akbar. What have you been doing here? Who is this young man with you? Akbar: Good afternoon, Ms Caroline. I came out here for a stroll and a good cup of tea with some buttered scones. Why don't you join us? Caroline: Thank you, but I have an appointment with my dentist. I will join you some other time. Incidentally, who is this young man? Akbar: I am sorry Ms Caroline, I forgot to introduce my friend Bhaskar. He works for Tata Tea Estates. He is a renowned tea taster. We did our schooling together. Caroline: Hello, Mr. Bhaskar. Nice meeting you. Akbar: Bhaskar, meet my teacher, Ms Caroline. She teaches English at the Xavier University. I was her student in my M A Class. She is a well- known author and a critic. Bhaskar: Pleasure meeting you madam. I hope to keep in touch with you. Caroline: It is my pleasure. I will be in touch and we will all meet some time for a good cup of tea and butter scones. Bye for now.

52 NSOU ?PGEL 5 & 6 Akbar: Bye, madam. See you soon. Bhaskar: Bhaskar: Akbar, I may need to leave immediately after tea, I have to meet a few clients down the lane. Akbar: Sure Bhaskar, do come home some time. My parents often remember you. Bhaskar: Sure, I will. I miss the Id party in your house. Bye for now. Read this conversation a few times and make a note of some of the structures Here is a quick analysis: a. It begins with a few polite expressions – 'Hello' and 'How are you' These expressions do not carry any meaning, except helping in building a rapport. These are essential in most conversations at the beginning. b. We meet a new person Ms Caroline. The way Akbar addresses her indicates that she is a senior person. (Is there any other clue that suggests she is older and senior to Akbar and Bhaskar?) c. Akbar introduces Bhaskar to his teacher. This is part of the etiquette. Younger people to be introduced to the senior people. Men to women and not the other way around. d. Look at some more expressions: 'meet my teacher'; 'he is my friend; 'nice meeting you'; 'pleasure meeting you'; 'he works for'; 'he/she is'; 'we were'; 'tea taster'; 'teacher'; 'keep in touch' etc. Do these phrases indicate the presence of any grammar? We call them formula expressions. They are used on occasions like introducing people and we hardly use them in other contexts. It is polite to use these expressions as a matter of courtesy and etiquette. However, introduction is not without grammar. We generally use simple present tense: 'he is a tea taster' 'she teaches English' etc. We also use adjectives such as 'a renowned tea taster'; 'a well-known author/critic' etc. While introducing people, we need the following: a. Familiarity with formula expressions which are polite. b. Use of simple present tense, c. Adjectives to qualify people, d. Names of professions,

53 NSOU ? PGEL 5 & 6 Let us take a look at one more function and analyse it in a similar way. This time we will take up the function of bargaining. Obviously, we need to have two people for this function – a seller and a buyer. The goods sold should be worth being bargained. So let us think of someone buying a second hand bicycle. The buyer is a student (St) studying in IIT Kharagpur and the seller is a cycle repairer (Cr). Here is the conversation. St: Hi, Abdulla. Do you have some cycles to sell? Cr: Oh, Navin, yes, of course. They are over there. St: (Looking at a few bicycles): This one seems good. How much is this? Cr: You have chosen a good bicycle. This is a Raleigh bicycle and it is just three years old. Quite new! I will sell it for Rs 1,200. This is a special price for you. St: That is too much for an old bicycle. Make it Rs. 750/- Cr: Sorry, I cannot reduce the price so much. I may reduce it by Rs 100/- St: No, that is too much. I will have to change the seat cover, fix a carrier; I have more expenses to meet after buying. Give me your last price. Cr: Rs.1050/- and nothing less. St: No, make it Rs.900/- and with a new seat cover and a carrier, I will pay you Rs 1,000/- Cr: It is a loss to me. But since I know you, take it. St: Here, take these Rs.500/-. Clean the bicycle thoroughly, fix the seat cover and the carrier and also oil all the parts. I will come back in the evening. Cr: Bring the rest of the money, I don't want you to hear you say, 'I will pay the rest later'. St: No, Abdulla, I will pay the rest in the evening and take the bicycle. But remember to keep it ready. Cr: Thank you, Navin, you can trust me for that. Bye. Read this dialogue a couple of times and identify some of the grammar items. Let us analyse this and find out. a. The two people in conversation know each other. How do we know this fact? They address each other by their name. Their relationship is not formal, therefore, greetings like 'Hi' and "Oh' are used. The conversation begins with a greeting. This is always a good sign and helps to establish a rapport.

54 NSOU ?PGEL 5 & 6 b. There are questions beginning with 'Do you have. .?' Navin is making enquiry about the availability of bicycles. The question can be answered with 'yes' or 'no'. c. Suppose Navin were buying sugar in a grocery store, he would still ask the same question. But there is a difference between sugar and bicycles. Sugar is quantity noun (uncount) while bicycles is countable. d. Do we have different types of questions with these two types of nouns? Yes, 'How much' for uncount and 'How many' for count nouns. e. Look at the bargaining part. Was it a tough bargain? In Navin's place, how much would you have paid for an old bicycle? Look at terms like – No, last price, reduce, add something, etc. You must be familiar with all these words and expressions. While bargaining we need: a. Greetings – either formal or informal depending on our relationships. b. We need to have good vocabulary and familiarity with nouns or names of different things we need to buy or parts of the object we want to buy. c. We should know to frame questions with 'Do you. .' of 'Can I have. .' and also 'How much. .' and 'How many. .' d. We should be familiar with expressions for suggesting alternatives – 'not this, but. .' 'a little different' ' in a different size or colour' e. We should be familiar with formula expressions like 'Here you are'; 'You are welcome' etc. We have given you a description of two language functions and the type of grammar and vocabulary you need to transact these functions. Go back to the grid and choose two more functions and analyse them in a similar way. It may be easy, if you think of a conversation that takes place between the two people involved. For this we can use cue cards, and in the next part we will talk about cue cards. Before we proceed, let us take a quick look at what we have discussed so far. Would you like to write a brief summary? Please do so, before reading the next part of the unit. Your response: In this unit, so far we have looked at the following.

55 NSOU ? PGEL 5 & 6 a. We have tried to establish how language is very important in our life and that it can be considered a synonym for life. b. We have made an analysis of our daily life using a set of action verbs. c. We have demonstrated that each of these action verbs is also a life function and involves language use. d. Since language and life are synonymous, life functions can be considered as language functions. e. We have looked at a few language functions and checked how frequently we use them in our life. f. We have elaborated on two language functions with the help of simple conversations and also looked at the language inputs. We shall now look at the materials to develop good conversations among our learners with the help of cue cards. Are you familiar with the word 'cue'? Just refer to a dictionary and note down the meaning as it is given there. Your response: defines the word cue as follows: cue Here are four meanings of the word cue. When we say, 'cue cards' this word becomes an adjective qualifying the cards which carry cues. There is some information on the card which provides a cue to the persons who has to do or say something. Take a look at these cue cards. Remember, cue cards always occur in pairs. Therefore, this is well suited for use in pairs. Take care to see that each pair partner has a different card, and does not get to see the card the other person has. This is important to maintain the principle of

56 NSOU ?PGEL 5 & 6 information gap. (We have discussed this during the last semester in our lessons on communication strategies.) Once you have looked at the cards, we will discuss how to use them in the class and also provide a model response. A: Greet B B A: _____ B: _____ B: Respond A: Make a request B: _____ A: _____ A: Rephrase your request B: Don't understand B: _____ A: _____ A: Accept the condition B: Put a condition B: _____ A: _____ A: Thank B close conversation B: Agree to help B: _____ A: _____ B:Close conversation These cue cards can be used fruitfully to involve the class in a conversation based on a set of functions. The present one serves the functions of making a request, and accepting the same between two friends. How do we use it in our class? Here is a step wise procedure. 1. Divide the class into pairs. 2. Give instructions about the cue cards. 3. Distribute the cue cards to each pair. 4. Allot a fixed time within which they need to complete the task of writing the conversation. Make sure nobody gets any extra time. 5. Ask some of the pairs and to come to the front of the class and enact their roles. 6. Ask the rest of the class to listen and suggest improvements. 7. Provide your feedback. We have suggested seven steps of classroom procedure. Are you sure how to go about these? We will briefly discuss each step in the next part and then arrive at a model dialogue.

57 NSOU ? PGEL 5 & 6 1. Divide the class into pairs. This is a simple activity. You may use a variety of strategies to do this. You can ask the class to form pairs on their own choice or you may allot partners randomly. There are other strategies which you can learn from your books on methods of teaching. 2. Instructions: The instructions you give should be very clear. Ask the pair partners not to show their cards to the other member. They should read the cue and develop an utterance based on this cue. 3. Distribution. Make sure the two members in the pair have different cards which are complementary. 4. Time: Depending on the function specified in the cue card, the time may be allotted suitably. The time allotted should be adequate enough to allow the participants to think, note down their utterances, correct them, check with each other and arrive at the final dialogue. Make sure nobody exceeds the time allotted. 5. Reporting: Pick a few pairs of students randomly to report to the class or present their dialogues. 6. Ask other students to listen carefully, take notes and give feedback. 7. Listen to all the pairs making their presentation and also listen to the comments from other students. Make notes and provide feedback. Point out the weaknesses without mentioning the student who made the error. Let the errors be the errors of the class rather than being errors made by an individual. This cycle can repeat with other cards. Finally, before concluding the unit, we will look at the possible dialogue that can be developed based on the cue cards given here as a sample. The cards say A and B are friends. Therefore, the conversation needs to be less formal. A: Hello Bashir, how are you? B: Hello, Andrew, fine thank you, and how are you? A: Bashir, I am in some trouble, I need some money, could you lend me a thousand rupees. B: Beg your pardon.

58 NSOU ?PGEL 5 & 6 A: You see, my mother is in hospital. I need to deposit some money, the banks are all closed. I need money urgently, could you lend me a thousand rupees. B: I do have the money, but I need it for paying my rent which is due the day after tomorrow. If you promise to return it tomorrow as soon as the banks open, I will part with this. A: Certainly. You can trust me for that. B: Here is your money. A: Thank you so much, Bashir, I will see you tomorrow. B: See you. Take care. Here is a small task for you. Rewrite this dialogue slightly differently. What type of conversation will happen if A and B are strangers and not friends. (A need not ask only for money). If A and B are relatives, or friends but who have had a quarrel recently. Your response: We will conclude this unit with a brief summary. Language is closely related to life and it is difficult for us to live without language. In our life, we need to perform a variety of functions, and these demand the use of language. Therefore, the functions assigned to life become functions of the language. There can be a variety of functions which we are compelled to fulfil every day using language. We need to sensitise our learners to these functions and there are a variety of ways of doing it. One very easy way of doing it is to use cue cards. Any teacher can prepare cue cards with a little bit of imagination and practice. In the next unit we will look at we will look at the relation that exists between these functions and situations on the one hand and meaning on the other. We will introduce some new concepts in the next unit. Bye till then.

59 NSOU ? PGEL 5 & 6 a How is language defined here? b. Do you agree with the definition? Give reasons, c. Are language functions the same as life functions? d. Give some examples of language functions? e. Mention a few language functions you use commonly. f. Mention some language functions that are not common. g. How is grammar related the language function? h. Do all language functions have the same grammar? i. What materials can be used to teach language functions? j. Why is pair work a useful strategy for teaching language functions?

? This unit is a continuation of the previous unit which discussed the close relationship that exists between language and life and how language is an inseparable aid to fulfil life functions. In the previous unit we looked at the functions a language can perform in isolation. In this unit we will try and discuss how these language functions can be bunched together as situations and the specific meanings they can be assigned. At the end of this unit, the learners will be able to: a. Understand the concept of language functions in greater detail, b. Bunch a few language functions based on contexts/situations. c. Understand how the complexity of functions vary with situations, d. Understand the concept of block grading for purposes of teaching, In this unit let us attempt to explore the meaning of the two words 'situation' and 'meaning'. The word 'situation' is commonly used, and often you must have uttered 'In my situation, you would not behave like this.' Though we say this fairly frequently, what do we mean by such an utterance? The second word is 'meaning' which is 60

61 NSOU ? PGEL 5 & 6 equally common. Both these words have intricate interpretations, and this unit helps you gain some understanding of these two words in the context of language use. To begin with let us look at the various definitions of these two words provided in situation /sIt ò uel ò (ə)n/ Out of these three meanings, the first one is more common than the other two. We can rephrase the first meaning as 'context' for our purposes and relate it to life and language. In our everyday life we pass through a variety of contexts or situations and let us make a list of these to begin with. Perhaps you can make one and later compare it with what is given. Your response: Please note down your list here: This is called a remembering exercise. Recollect the routine in your daily life and think of the various contexts you need to pass through (or negotiate). Some of the contexts can be as follows: a. Eating b. Travelling c. Shopping d. Banking e. Coping with job f. Attending a function/wedding, etc. g. Playing (as a member of team) h. Organising an event such as a conference, get together, etc. Look at these situations from a different angle by rephrasing them slightly

62 NSOU ?PGEL 5 & 6 We have provided about eight situations, but this list can grow endlessly and we are sure your list is longer and better than what we have given. Good job, keep it up. We need to look at these situations in some more detail and see how language use is unique to each one of them. Before getting to that, let us also look at the word 'meaning' and how it is used in the context of a situation. provides the following definitions for the word meaning. meaning mi:nIŋ/ There are five meanings which are all equally important. For our present purposes, let us take definitions 2, 3 and 5. What do they convey to us? How are they related to the word 'situation' and in turn to language use? These are some questions you can ponder on and note down your responses below. Your response:

63 NSOU ? PGEL 5 & 6 We need to take up a situation, look at it carefully and see how many meanings it can lend itself to. Once we do this, then, it will be possible for us to delve into the question of language use. We shall do it now with some examples. Let us choose a situation to begin with. In the previous unit you have looked at the term function, and looked at the illustration for a function like bargaining. Suppose we want to locate it in a situation, where would it fit best? Perhaps in the Supermarket or in a vegetable market (at the green grocer) or it could be a saree shop etc. Bargaining is a function, and shopping is the situation. A language function though it is independent, is often situated in a context, and depending on it, the language use can vary. Let us elaborate this point a little more. Imagine the situations where you bargain – very often in a vegetable market (fish market) and perhaps a store that sells sundry things like items of grocery in small quantity, some small household items. Depending on how important the item you want to buy, the urgency with which you want to have it, and depending on the time of the day when you are bargaining, the language use is likely to vary. (Recall your bargaining with a vegetable vendor in the morning and evening and on prices for different types of vegetables.) In the previous paragraph, while elaborating a situation, we used terms like: quantity, urgency, time of the day, mood of the person, etc. Along with these, you can add terms like age of the customer, seller, gender etc. These factors also constitute meaning in relation to the situation. Now do a remembering exercise of a different kind. Try and enact buying selling function in a specific situation. You need to find a partner for this who understands the situation. Let this be a purely thinking exercise and not a writing exercise for the present. In order to participate in this role play, you need to remember the following. Read these lines from a poem written by Kipling: I KEEP six honest serving-men (They taught me all I knew); Their names are What and Why and When And How and Where and Who. I send them over land and sea, I send them east and west; But after they have worked for me, give them all a rest.

64 NSOU ?PGEL 5 & 6 We are sure you are already familiar with this poem. What is its significance? Take a second look, and find out the names of six people who are poet's serving- men? Write down their names below: Your response: You got six words as your response – What, Why, When, How, Where and Who. What do these words suggest? They all occur at the beginning of a question, and so they are called question words or 'Wh_' words since all of them begin with these two letters. (In 'how' you still have these two letters, but not in the same order, and hence qualify to be in this group.) These six question words are very important while speaking to someone. What do these words signify? Take a look and in our discussion, we will change the order of words for their priority. : This word signifies the relationship that exists between the speaker and the listener. The relationship can vary widely from intimate to formal to unknown stranger. Within this, we can also have hierarchy as follows: ? Friends – close old, new, acquaintance etc. ? Relatives – siblings, parents, in-laws, grandparents, children, elders, youngsters etc. ? Workplace: teachers, boss, subordinate, helper, colleague, visitor, client etc. ? Strangers: people we meet on street, fellow travellers on train/bus etc. at the reservation counter, officials in different offices etc. (In speaking to each one of these persons, the language we use varies because of the relationship we have with them.) This word signifies the topic of discussion. The topic could be serious, light-hearted, casual, personal, gossip etc. Depending on the seriousness of the talk, the language we use gets modified. This word signifies the location or place where we talk to each other. You must have realised this as a student or a teacher. A teacher uses a language that is very formal in the class, and as soon as he walks out, if you have a question to ask he responds in a very informal manner. This is true of conversations that happen in the office, at home, on a picnic, while travelling

65 NSOU ? PGEL 5 & 6 etc. The language we use is governed by the location where the conversation takes place. This word signifies the time and duration of the talk. The point of time when you meet and speak to a person is very important. Equally important is the duration – if you can convey something in five minutes how well do you do it and the impact it has on the listener. On the other hand, if you need to convey a longer message which might take half an hour or more, the impact on the listener could be different. To make your message meaningful, you choose language appropriately. This word signifies the purpose. We need to speak in order to explain or describe something, convince a person, plead or request a person, or admonish someone. In each of these cases the language we use cannot be the same. This word signifies the mode of communication. We may not always communicate by speaking face to face. It could be a telephonic talk, a video talk, a broadcast (as in the case of newscasters), or it could be through writing in various forms such as a hand-written letter, email, text message, or an informal note scribbled on a piece of paper. In each of these cases the language we use varies. These six aspects are closely related to each other and they do not exist in isolation. The following diagram shows how closely they are connected with each other. This should help you understand the complexity of our speech and how we make a number of adjustments in the language we use depending on various factors. This indicates, we are gradually attempting to relate situation and meaning and we have also referred to variation in language use without providing examples. In the next

66 NSOU ?PGEL 5 & 6 part of this unit let us look at some examples and later analyse the language used. Look at the following situation and the five possible sentences you may get to hear. At a party, the friends have gathered in a room. The host appears there and needs to ask them to vacate the room and move elsewhere. Here are the expressions and their meaning. a. I am afraid this room is needed for something else. Do you mind moving to the first floor please? (Frozen/very formal. The host feels a sense of hesitation in uttering these words. Perhaps, the friends are rather senior people and his relationship with them is not intimate.) b. We need this room, and I want you all to move upstairs. (Formal, but not frozen like the previous one. The host knows the people he is talking to fairly well, yet he uses polite expression.) c. Hey, you all, move upstairs, we need this place. (Informal. The host is very friendly with the people he addresses) d. Up you go, all of you. (Intimate. – the host need not observe any rules of formality, he relates to the people he is talking to very closely.) (Adopted from Pit Corder) These relations can be shown by developing different types of dialogues as illustrations. Rather than create dialogues, we will provide you situations and also the meanings with some grammar items that can go into each one of them. That will lead us to discuss one more aspect—gradation in language teaching. In the illustration provided above, you saw one situation in four different meanings. The meanings are in terms of frozen, formal, informal, and intimate. Between any two of these relations, there could be degrees of variation. You do speak formally to your boss and also to your father. But the degree of formality is different between the two. This is also true of the way in which you talk to your father and mother. With mother you tend to be less formal bordering on intimate. You would have perhaps observed this. Next time when you engage yourself in a conversation with someone, be conscious and make a note of the following: your relationship, the context, time of speaking, place of conversation, reason and the mode. That will help you understand this unit better.

67 NSOU ? PGEL 5 & 6 Let us also take one more familiar example and help you understand the concept of grading. In the previous unit we looked at the function of buying, selling. Let us analyse this in a little more detail with shopping as the situation in different contexts or meanings. Meaning 1: A young boy of five years, gets Rs. 20/- as his birthday gift. He is allowed to spend it all by himself. There is a shop in front of his house, the shopkeeper knows him. The boy runs to the shop, places the Rs 20/ note on the counter and shouts (he is excited), "Uncle, biscuits and chocolates". The uncle helpfully places on the counter some biscuits and chocolates and the boy runs back. Meaning 2: The same boy grows up and in ten years' time is studying in the final year of his school. His father gives him Rs 2000/- and asks him to buy a bicycle to cope with his heavy schedule of attending school, tuitions and other chores. The boy is happy, goes to a shop that sells bicycles. Now he has a longer conversation with the shopkeeper (not just uncle, a bicycle seller). He cares to choose a bicycle of his choice with proper saddle, a designer handle, proper pedal covers, a carrier etc. He also bargains on the price and finalises the deal before paying the money. Meaning 3: The same boy a few years later has completed his education and has found a job for himself. He is getting ready to marry. He goes to a shop to buy his wedding clothes with a larger sum of money. The transaction here is much more complex in terms of choice of colours, design, fabric, size, price and many more factors. And if in this situation, it was a girl and bride to be, the complexity would be more severe. Meaning 4: The boy is now nearly forty years old. He is well settled and he and his wife plan to buy a house. They go to a builder who has a few houses to sell and the transaction goes on for days before settling the deal. You can imagine the conversation that takes place in each of the above situations. The grammar involved is not very different in each of these cases. The following items of grammar are necessary but with different degrees of complexity. One needs to be familiar with nouns, their variety (count or uncount), ability to frame questions with 'do you. .' or 'can I.. .' responses with yes/no and formulas like 'here you are' and some greetings. These vary with each transaction and there is an increase in complexity. As the meaning changes and makes way for more complex expressions, we move to the next level of grading. We call this block grading. We will discuss this in greater detail in your course on curriculum and materials. Let us now conclude the unit with a quick summary of what we have discussed.

68 NSOU ?PGEL 5 & 6 We began with a revision of the previous unit where we discussed the relationship between language and life. If life has functions, these functions are performed by language. Then we began with an outline of this unit where we looked at the dictionary definition for the two operational terms 'situation' and 'meaning'. We modified these to suit our purposes and made a list of various situations and how these alter in different contexts. Each context provides a meaning to the situation thus governing the form of language to be used in each case. We looked at some examples. We also became familiar with the six question words and their meanings in the context of our speech and how it is essential for us to observe etiquette in our conversation with others. We finally looked at some explanation that helps us to develop dialogues on our own. In the next unit we shall look at function and form and while doing so we will help you recall the grammar you have studied earlier. a. What are language functions? (Look at the previous unit) b. Are language functions bound by situations? c. How do you define a situation? d. What is the difference between situation and meaning? e. How do you understand the term context? f. What are Wh words? Mention all of them g. How do the Wh words determine our speech? h. How does our speech vary from situation to situation? Illustrate. i. What type of language do you use with your mother? j. How important are these in social communication? 1. Corder, P. (1973). Hammondsworth: Penguin. 2. Deuter, M. et.al. (Eds). (2015) (Ninth Edition). Oxford. OUP. 3. Kipling, R (1902). Oxford: OUP (for the poem 'I Keep Six Honest serving-men')

? In the previous two units we looked at language as an integral part of life performing various functions in different situations. The functions vary according to the context lending meaning to them. We guard ourselves in negotiating these functions by observing rules of etiquette dictated by society or among members of a particular group or profession. After going through this unit, the learners will be able to: a. See how language functions are closely associated with forms, b. Understand the modified structure of a syllabus, c. Appreciate the functions as can be derived from a structural syllabus, d. Relate the items on a functional syllabus with necessary forms. In this unit, we will continue the discussion on language functions in relation to the form. So we need to have an understanding of the term 'form' to begin with and see 69

70 NSOU ?PGEL 5 & 6 how this relates itself to language. While discussing these aspects, we may need to bring in certain aspects of syllabus design to enhance our understanding. We have provided a tentative list of language functions and forms for you to peruse and add your own items to the list. These lists are put together from reflecting on life and a few sources. These can be modified according to our local contexts. However, the forms largely remain unaltered for they are drawn from authentic sources i.e. grammar books. ? Explaining ? Interpreting ? Summarising ? Arguing, agreeing with someone ? Sequencing ? Hypothesising (predicting) ? Generalising ? Expressing likes and dislikes ? Defending ? Narrating, retelling ? Persuading ? Enquiring, probing, seeking information ? Analysing ? Evaluating ? Defining ? Drawing conclusion (cause and effect) ? Nouns in subject, object position e.g. (sub) is a (obj). ? Nouns showing agreement with verb, pronouns. e.g. (N) (V) a teacher, he(pro) works very hard ? Adjectives, their order and relevance e.g. six beautiful red roses. ? Phrases – prepositional phrases e.g. Children playing ? Verbs and their different forms – tense and aspect e.g. go, went, gone; go, going, gone. ? Modals e.g. will, shall, can, may. ? Adverbs e.g. quickly, lazily, etc. ? Questions – polar and content e.g. Are you a teacher? Who is a teacher? ? Sentence types e.g. Assertive, interrogative, imperative, exclamatory. ? Degrees of comparison e.g. good, better, best. ? Complex sentences e.g. Having practiced well, the child won the prize.

71 NSOU ? PGEL 5 & 6 You have had a look at such lists earlier when you were studying in schools. You must have tried to establish a relation between the two. If not take a close look at the two lists and see if there is any relation between the two, and write your response below. Your response: The form and function are in fact, closely related to each other. A long time ago, while teaching English, the emphasis was on learning the form in isolation. This was found to be not very helpful, and hence, syllabus framers changed their strategies and introduced new types of syllabuses where forms were taught along with functions. The first approach was called the Structural Approach while the second one is known by several names – The Situational Approach, Notional-Functional Approach, Communicative Approach etc. Names do not matter for us now. We are interested in seen how language functions are realised by using appropriate forms. Let us briefly familiarise you with the concept of a syllabus and types of syllabuses we have in ELT. Later, let us look at a small portion of the syllabus to see how closely form and function are related to each other. All of you are familiar with the term syllabus. You have had syllabus to study as students and as teachers you were conscious of the topics included in the syllabus to help you cope with your work. Given this experience, would you like to define a syllabus. Please write your response here: Your response: A syllabus is a document that is produced by a few personnel in the department of education. Many of them are teachers who work under the supervision of an administrator to produce this document. What does this document do? Any guess?

72 NSOU ?PGEL 5 & 6 Write your views on what does the syllabus do? The syllabus as a document provides a checklist to the teacher. It specifies the topics to be taught, the sequence in which the topics need to be taught and also the time it takes to teach each of the topics on the syllabus. What is being said here should give you some idea of whether your views are right or not so. Let us define a syllabus in a broad sense. A syllabus has topics that need to be taught. Therefore the syllabus becomes a list of topics. But can a list of any topics become a syllabus. Perhaps not. It needs to be further refined. The list needs to be specific. That is a good development. Specific to what or who? It has to be specific to the course of study and also the level of the learners. Let us understand this with an example. English is taught in almost all the classes in school curriculum. Class VI children have a course in English. Class VII children also have a course in English. Though both classes have a course in English (subject is the same, but levels are not) the two classes have to have two different lists of topics to be taught, in other words, the two syllabuses are different. Similarly, class VI children study English using syllabus for class VI English. They also learn another language like Bengali (Bangla). Can the syllabus (list of topics) in English be used for teaching Bangla? The answer is 'no'. This shows that syllabus has a specific list of topics according to the course of study or subject being taught. Thus in class VI we have a syllabus to teach English, and other syllabuses to teach Bangla, Mathematics, Social Studies, Science, Hindi/Sanskrit and whatever other subject that they may have. This makes the point on the list of teaching items being specific in two different ways. Now let us replace the word topics with the term 'teaching items'. Now our definition will read as follows: 'A syllabus is a specific list of teaching items for use by the teacher.' This is reasonably a good working definition of the syllabus. This document which is produced by the authorities or a committee has to take care of certain aspects. We will not look at all aspects (except the contents) in some detail.

73 NSOU ? PGEL 5 & 6 A syllabus should begin with a description of the learners for whom the syllabus is meant. While describing the learners the following factors need to be addressed. The age of the learner, the socio-economic background, and the academic background (capability). This is essential entering behaviour. Secondly, the syllabus should provide a clear statement of objectives or what it proposes to achieve in terms of leaners learning output. This will have to be stated very clearly that the learning outcome can be observed, measured by the teacher and demonstrated by the learner. The third aspect of the syllabus deals with the contents. It clearly delineates the materials that can be used to achieve the objectives stated earlier. (We will discuss this with an example to show the form function interphase.) The fourth aspect deals with the methodology – it suggests how the materials or the content provided in the third part can be transacted in the class. This section also helps the teacher understand the flexibility in terms of sequencing the teaching items and the time that needs to be spent on teaching each item. The syllabus concludes with a note on evaluation. This section helps the teacher understand the inherent weaknesses in the syllabus and suggests ways of modifying the syllabus for better utilization with a set of new learners. Now let us look at sample extract from a structural syllabus and see how this shows the relation that exists between the form and function. Sl No Item Illustration Remarks 6 Simple present I get up at six in the Revise all the action (Habitual) morning verbs associated Do you get up at six in the with daily habits or morning? routine activities. 74 NSOU ?PGEL 5 & 6 10 Simple past I went to market yesterday. Introduce verbs and Where did you go their past forms. yesterday? Teach both regular I went to market yesterday. and irregular verbs. Did you go to market Provide illustrations yesterday? for assertive, Yes, I went to market negative and yesterday. interrogative forms. Did you go to post office yesterday? No, I did not go to post office yesterday. 15 Past continuous I was going to market when you called me. Let us look at the above illustration. This is not an authentic sample, but something construed to illustrate to help you understand the present discussion. This is a typical structural syllabus which is form focussed or deals with explicit grammar. This syllabus can be used in class VIII of a regional medium school. There are two items illustrated (not two immediate items as is evident from the serial numbers). The items are mentioned in column 2 followed by illustrations in column 3. There are five illustrations and represent three different uses – use in an assertive sentence, an interrogative sentence and a negative sentence. Such illustration is said to be comprehensive. The fourth column helps the teacher understand the related items and some classroom strategies to be adopted. The focus is heavily on form and not on function. Let us now modify this to include a function and see how a functional syllabus looks.

75 NSOU ? PGEL 5 & 6 https://www.netlanguages.com/blog/index.php/2017/08/28/what-is-functional- language/ (accessed on 27 th November 2019) Before we say something, would you like to take a close look at the two different syllabuses and comment on their similarities and differences? Please write your response below: Your response: There are quite a few similarities between the structural syllabus and the functional syllabus. Both syllabuses depend on language structures. The structural syllabus does not explicitly create a context for meaningful use of the structure. The functional syllabus on the other hand provides a lot of context and also includes more than one grammar item supported by vocabulary. It elaborates on different ways in which the

76 NSOU ?PGEL 5 & 6 items can be exploited for developing all the four skills. The topic suggested in the second column is not a grammatical item but a language function. Here the language function is 'Helping People'. In order to do this, we need language. We may need to request someone. So look at the words in column 3 Think of sentences with these words e.g. Can you lend me a hand? (This box is too heavy for me to carry.) There are more words and phrases given. In the same column under grammar certain structures are suggested and these will help us frame appropriate sentences which can be used in conversations as well as in writing. This is followed by some hints on pronunciation. Column four has a focus on all the skills and tasks; for each skill is specified and the last column suggests the types of reading passages that can be used in the class to help learners grasp the function. The second syllabus clearly illustrates to you how a language function cannot be performed without learning the structures. However, while teaching the focus should be on the function and by participating in the classroom activity, the learners will use and practice the structures without being aware of it. (This reiterates Prabhu's hypothesis 'meaning is best learnt when the focus is on meaning'. Sem 1, Paper 10, Module 2, Unit 8) Before we conclude this unit, we would like to make one more point clear. This is in fact a repetition of what we have said earlier. While discussing functions, we cannot restrict ourselves to one item of grammar or one structure. The structures need to be bunched together to perform a function. (For example, while giving directions, you need to be familiar with prepositions largely spatial terms to denote distance, signposting terms, imperatives, caution and warning, some adjectives to qualify places etc.). Structures bunched together in this manner can express themselves at different levels of complexity e.g. giving directions to reach a nearby place, giving directions to travel to a different town, city or country, giving directions to negotiate a difficult terrain such as mountain, river bed or a jungle (as is done in the army) etc. Though the complexity increases, the bunch of structures remain largely the same with some modifications. Such modifications account for grading or selecting tasks suitable to our learners. We cannot ask our students in class IX to give directions to scale an unknown mountain or negotiate a forest to destroy enemy ambush. The increase in complexity and grading is known as block grading in a functional syllabus. We will close this unit here with a quick recapitulation of the points discussed. We looked at the language function in relation to the form. Form has been the traditional

77 NSOU ? PGEL 5 & 6 input in language teaching. But form alone cannot help a learner pick up the language unless a context or meaning is provided to the form. This is why we take resort to teaching language using functions without ignoring form. To illustrate this we have looked at two sample pieces of syllabuses and compared them to establish the need for fusing form with function. In the next unit we will look at an entirely new concept called the discourse. We will introduce this topic and later you will learn more about discourse in your courses on sociolinguistics. a How are language functions still form based? b. What are some of the language functions you are familiar with? c. What is the meaning of form? d. How useful is learning form helpful in communication? e. How do we modify the teaching of form to make it more useful? f. What is a syllabus? g. How is the term 'specific' understood in terms of syllabus? h. How many types of syllabuses are you familiar with? i. What is the type of syllabus you use in your class? j. How is meaning of a structure made clear in a syllabus?

? This is the last unit of this module and discusses a different aspect of language function which is popularly called discourse. To understand this we need a little bit of background knowledge. You are familiar with language analysis. We have already introduced you to subjects like phonology, morphology and syntax. Phonology deals with analysis of language in terms of its speech sounds. The minimal unit of analysis here is a phoneme, which is defined as the minimal distinctive unit of speech. In morphology, we look at morphemes as minimal units of analysis. A morpheme is a syllable or a group of syllables that carry meaning. For example, a word like management, has two morphemes – 'manage' and 'ment'. These are classified as independent morpheme (manage) and bound morpheme (ment). A bound morpheme needs the help of another morpheme to express itself. In syntax, the minimal unit of analysis is a clause (sentence). This has a definite structure which cannot be normally violated. But language often has units larger than clauses or sentences. In our daily 78

79 NSOU ? PGEL 5 & 6 life, we do not usually speak in isolated sentences. Most of these have a context and are in the form of a response or addition to what is already said or exists. So we have longer units for analysis in the form of conversations, speeches and written texts (passages) which need to be analysed using a different system. Such system of analysis is called Discourse. At the end of this unit, the learners will be able to understand the: a. term discourse, b. nature of speech acts, c. terms coherence and cohesion, d. use of cohesive devices, Let us begin with a definition of discourse and then look at the entire aspect historically which provides us with the essential background knowledge. Discourse analysis can be defined in simple terms as analysis beyond sentence level. This definition is certainly not adequate. So let us look at what discourse analysis does in some detail with a few examples. This will perhaps help us get an idea of this topic. The field that studies discourse is called 'discourse analysis'. This is a relatively new field and discusses how while using language either in spoken or written form is guarded by a few social and linguistic factors. Since this involves broader analysis, the unit of analysis is a longer text such as passages (referred to as texts) or conversations and speeches. The context in which the language is used forms an important part of the analysis. Let us look at a few examples: Look at the following conversation which has just one turn: A: Hi. What's wrong? No television. B: Match washed out, heavy rains. Having gone through this, answer the following questions: a. What do you think is the relationship between A and B? b. What is the emotion expressed by A? (Anger, disappointment, surprise, annoyance, etc.) c. Give reasons for your choice of answer to question 'b'. d. If B's response was not preceded by A's question, how would you understand it?

e. What mood is B in? (disappointed, bored, annoyed, etc.) f. Give reasons for your choice of answer to question 'e'. Write your responses here: a. b c. d. e. f. It is not difficult to answer these questions. Besides, there are no definite or single answers to these questions. Your answer depends on your understanding of the conversation in terms of your understanding of the culture as well as the context. You may be able to justify your answer accordingly. When you come across a text, and you start analysing it from aspects as mentioned here, you are involved in discourse analysis. This is just one example and such analysis can become more complex. Now let us look at a bit of history. About seventy years ago, in 60s of the last century, two language philosophers Austin and Searle looked at the language as a performative entity. Austin wrote a book What was the premise that motivated Austin to write this book? Look at the following sentences: a. I declare you man and wife. (A priest in a church wedding) b. I name this ship Queen Elizabeth. (Launching a ship) c. Your time starts now. (A quiz master) d. Ready, steady, go. (A referee in athletics) e. I declare the session closed. (Chairperson in a meeting)

These sentences are utterances by different people, and the context is provided in the brackets. We would like you to take a second look at these sentences once again. Do they remain just sentences or do they perform an action. When the priest says 'I declare you man and wife', from the moment, the two young people get united in a holy wedlock. They are no longer single. The utterance enacts the beginning of a married life for the couple. Similarly, a vessel without a name acquires an identity as the Queen Elizabeth. Rest of the sentences also indicate the beginning or the end of an action. These are but a few examples, and there could be many more similar sentences. Austin and Searle were interested in such expressions. Austin used three different labels to identify such utterances – locution, illocution and perlocution. What do these three labels mean? Let us take a look. a. Locution: Locution comes from the root word 'Loque' (Latin) which means to speak. Locution or locutionary act refers to the actual words spoken by the speaker. These are understood without any context or they mean what each word in the utterance denotes. In this act, the listener does not attach much importance to what the speaker has been saying. b. Illocutionary act: When a speaker adds emphasis to what he says by using certain words like – request, ask, order, command, etc. the utterance acquires some force. This is understood as illocution. Such sentences can warn people, criticize or appreciate them, or assure them of something or express regret. Let us look at an example for each one of these. , there is a snake hiding under the bag.(caution) ii. I want you to by this evening. (order) iii. I thought ! (comment) iv. I what you have written. (appreciation) v. I to meet you tomorrow in the morning. (commitment) vi. I am , I forgot to get your book. (apology) c. Perlocutionary act: This refers to the listeners' response to the illocutionary act of the speaker. This depends on how the listener understands the words of the speaker and expresses it either verbally or non-verbally. For example look at sentence 'iv' above. It is an appreciation of somebody's work. The listener obviously should be pleased to have this remark and express happiness with a smile or a 'thank you'. However, caution needs to be observed in that there may be lack of consonance between illocutionary act and the perlocutionary act.

Let us take one utterance and see what its import is in all three acts. A is visiting B in his house and the two are casually chatting. A tells B "I am thirsty". Locutionary: B does not react. He simply hears what A said. Illocutionary: Understands it as a request, but does not budge. Perlocutionary: B does not say anything, but gets up and goes to the kitchen to fetch a glass of water. The three aspects provided by Austin in 1962, were further refined by Searle and categorised into five classes of speech acts. These are: Representative, Directive, Commissive, Expressive and Declarative. Let us look at the definitions of each one of these and also illustrate them to help us in our understanding of the concepts. 1. Representative: This is also known as Assertive. Utterances pertaining to making a promise, expressing a belief, or concluding a talk. It could also extend to reporting events and denying something. Following examples illustrate Representative acts. a. I am told you are on the lookout for a new house. b. Finally, the deal is fixed, and we may now sign the document. c. The Prime Minister came on the television to declare the lockout. d. There is no truth in the statement that India is a poor country. 2. Directives: This is an act where the speaker largely uses a set of imperatives suggesting to the listener to act accordingly. The utterances could be in the form of requests, commands, insistence, plead, or even implore. Here are some illustrations to make the point clear. a. Could I ask you to type this letter for me? b. I would like you to finish this work before the end of the day. c. You better do it now. d. This is urgent, and you should understand and start working right away. e. Please, I need this to make my presentation, why don't you help me. 3. Commissive: These utterances suggest that the speaker is committed or decided to act in a particular manner. The speaker may swear or promise to do something or express his intention. a. The Government promises to provide shelter to all the people. b. The policeman swore to arrest the thief before the sun set. c. The president expressed his wish to visit all parts of the country to personally

inspect the progress made. 4. Expressive: The speaker expresses his feelings about something. This could relate to happiness, sorrow, pain, pleasure, likes dislikes, etc. Here are a few illustrations a. I am delighted to see such a beautiful garden. b. I am sorry to hear about your bereavement. c. I like these cakes very much. They are delicious. d. I am happy that you graduated. My heartiest congratulations. e. Thank you for the lovely message you sent on my birthday. f. Ouch, I sprained my ankle while getting off the stairs. g. I completely forgot to visit you last evening. My apologies. 5. Declarative: The speaker brings about a change in the status of something or somebody by uttering these expressions. These are the real performatives and here are a few illustrations. a. I declare the conference open. b. I name the baby Anand. c. I declare the man dead. d. You are dismissed. This has become a long piece of writing without giving you a chance to interact with us. Now is the time for some questions. If you are doing a discourse analysis of this piece of writing, what functions would you assign such writing? Your response: Here is a small task. You have looked at three Speech Acts and a little later the same reorganised as five speech acts. Each of these has been illustrated by us. Take a close look at each one of these, and provide at least one additional illustration for each of the categories. i. Locutions: ii. Illocution: iii. Perlocution: iv. Representative: v. Directive:

84 NSOU ?PGEL 5 & 6 vi. Commissive: vii. Expressive: viii. Declarative: Now let us look at the further uses of discourse analysis. We have begun this unit with a statement that discourse is beyond a sentence. Therefore, discourse analysis takes into account some continuous text which is either spoken or written. What are some of the features of such texts? Think of what we can call narrative discourse. You are familiar with stories which can either be narrated or written. When we narrate, we use some supplementary techniques like, voice modulation, acting, gestures, etc. and we do this especially when we are narrating a story to young audience. While writing some of these aspects may be lost, but can be captured using illustrations. Both oral and written texts have some common features. Let us call the first feature . We shall try and understand what unity means in the following section. Unity is a simple word and all of you know its meaning. The word suggests coming together and staying together. We are now discussing language texts. These texts are made of sentences, and discourse makes sure that these sentences are held together using some mechanism. What is this mechanism? We will introduce two words and show how this unity can be achieved in our language texts. The first word is 'coherence' and the second 'cohesion'. Have you come across these words? Do you know their meaning? Look up a dictionary and write their meanings in the space given below: Your response: Coherence: Cohesion: Did the dictionary meaning help you understand the qualities suggested by these two words. Let us try and understand the two terms by looking at some examples. Coherence in simple words can be said to be a feature of good writing that makes it easy to read. The author should take care to introduce the topic properly at the

85 NSOU ? PGEL 5 & 6 beginning. This introduction should help the reader anticipate what is to follow. Subsequently, the author should develop each of the points in a logical manner. Adequate examples or illustrations should be provided to help the reader understand each concept. Finally, the author should summarise the points so that the reader has a clear idea about what is read. I am sure you have experienced this while reading some books. Some books are easy to read, and you feel you can understand them easily. They exhibit good qualities of coherence. There are some books which appear to be difficult to read. We are sure you have read both types of books in your life. Next time you read a book, try and see what qualities make it easy for you to read it. Now let us look at the word 'cohesion'. Coherence works at the level of a paragraph while cohesion works at the level of a sentence. A sentence (or an utterance in case of speaking) is made of words. These words need to follow a certain order which is governed by rules of grammar and logic. Take a look at these sentences and try and figure out what is incorrect: a. She is a tall boy. (Very easy for you) b. We bought this bicycle a new tyre. (What did you buy – bicycle or the tyre) c. The girl in the car needs water. (Who needs water, the girl or the car) d. Here is the pen that writes well and was presented to me on my birthday. (What is more important – the quality of writing or presentation or the occasion when it was presented.) We can go on constructing more sentences like this. (You may look up some books in modern grammar for more examples.) Both Coherence and Cohesion bring about a unity in our writing, but they do so at different levels. The term unity is defined by different people in different ways. The one I like most is from George Bernard Shaw and here it is for you: This captures the sense of unity or these three phrases can be translated as introduction, development and conclusion. Unity or coherence and cohesion are achieved by using what are called cohesive devices. These are simple words that can glue two words, sentences (ideas) and even paragraphs. Let us see what these cohesive devices are and conclude the unit.

86 NSOU ?PGEL 5 & 6 There are five categories of words that can work as cohesive devices. These are: i. Ordinals ii. Prepositions iii. Conjunctions iv. Pronouns v. Adverbs Let us look at them with some examples. are words that suggest the order in which the events occur. You must have come across words like These words suggest a sequence of events. Here is how you can describe making tea. First take a glass of water. Pour it into a vessel and put it on the stove to heat. As it is getting hot, add a spoon of tea leaves. Allow it to boil. Then remove the vessel from the stove, and cover it. Leave it aside for awhile to brew. Next, take a cup and strain the hot liquid into the cup using a strainer. Finally, add a little hot milk and a spoon of sugar. Sip your tea and enjoy it. In describing how to make tea, five steps are used. You could use terms like firstly, secondly, thirdly, fourthly and fifthly. Alternately, you can use terms like then, next, finally, etc. to make the passage read a little better. You could now describe a process using ordinals. Describe how to use the ATM to withdraw money. Your response:

87 NSOU ? PGEL 5 & 6 There are two types of prepositions – the spatial and temporal. Spatial prepositions refer to showing relationship across space while temporal prepositions establish relationship across time. Look at this example: I will meet you at the theatre at six o'clock. In this sentence, 'at' is used as spatial first and later as temporal. These prepositions bring about a sense of unity in the sentence. It will connect the two major nous 'I' and 'you'. It also joins other nouns 'theatre' and time 'six o'clock'. Further, the two sets of nous mentioned earlier also get connected because of these prepositions. Such bringing together of words to provide meaning is called cohesion. Choose a short passage from a story, or your notes and mark all the prepositions. See how they bring about a unity of thought or meaning in the sentences. Your response: It is the tacit function of conjunctions to bring about a unity between two words or phrases that belong to the same clause. You are aware of this. There are a few conjunctions that can bring about a unity between paragraphs. Here are a few conjunctions – although, because, whenever, wherever, in order to, no sooner, as much as, etc. The examples cited are either subordinating conjunctions (such as after, although, as, because, if, that, etc.) or correlative conjunctions (neither … nor, both...and, not only) . You can look up some passages and see how these conjunctions bring about a unity in the passage. These are very important words in English. They replace a noun and make a passage more readable by making it less monotonous. Look at the following Pronouns and see how they work in a passage. Adverbs like , do the same job as prepositions and conjunctions described above. We have not exhausted the list of words you can use in any of the categories cited above. There are other cohesive devices that bring about unity in a paragraph. We may discuss this later in a different course on sociolinguistics. Before we conclude let us summarise the unit quickly.

88 NSOU ?PGEL 5 & 6 We began with a discussion of the term 'discourse'. We did not offer any definition of the term, but we explained it using a variety of examples. Subsequently, we moved to look at speech acts as discussed by two language philosophers Austin and Searle. For each of the speech acts we also looked at some illustrations. Finally, we looked at two terms called coherence and cohesion. We discussed some aspects of these two terms in connected speech as well as written texts. We also mentioned how cohesive devices are responsible in bringing about coherence in thought and expression. a. What is the basic unit of analysis in grammar? b. How important is discourse in using language appropriately? c. Is a sentence (clause/utterance) a unit for discourse analysis? d. What do we mean by speech acts? e. Give examples of the speech acts as mentioned by Austin? f. What changes did Searle make to Austin's classification? g. What do you understand by the terms cohesion and coherence? h. What are cohesive devices? i. Give examples of how a pronoun can be a cohesive device. j. What happens to a text without cohesion? 1. Austin, J.L., (1962). Boston: Harvard University Press. 2. Cook, G. (1992). Oxford: Oxford University Press. 3. Krishnaswamy. N. (2009). Chennai: Laxmi Publications. 4. Searle, J.R. (1969). Cambridge: Cambridge University Press.

? Most of our waking time is spent in interacting or communicating with others around us. Communication can be through writing and through speaking. Research studies tell us that we use speaking skills to communicate with others more than through writing. In this unit you will learn what is meant by 'Presentation Skills' and in what ways does it help you in communicating with people effectively and the various situations you need to make presentations. You will also learn features of an effective presentation and the do's and don'ts you have to take care of while making a presentation. The entire Module is presented in two parts: making short and long presentations. Then there are two units on how to teach speaking skills. After reading the unit you will be able to a) Understand what is meant by 'presentation,' b) Learn on Presentation Skills, c) Develop communication skills. 89 MODULE - 3 : TEACHING SPEAKING SKILLS

90 NSOU ?PGEL 5 & 6 You have already learnt in Paper 3 what is meant by phonetics, phonology, how important stress and intonation are in speaking English, how to develop speaking skills and how to remedy some speech problems. You have also learnt language functions, language form and meaning as well as what is meant by discourse. In this module we will proceed further and understand the nuances of presentation skills and how to teach speaking skills. But before that, answer these two questions: 1. Why do you think stress and intonation are important when we speak English? (Clue: think of the features of a speech and how do these two aspects help attain clarity) Your answer: 2. What do you understand by language function and how is it different from form? (Clue: think of grammar and use of language) Your answer: What is discourse? (Clue: go to unit 2 and read the features of a discourse) Your answer: 91 NSOU ? PGEL 5 & 6 Let us first take up Presentation skills. Let us understand what is meant by presentation. If we understand language as communication, we should also know the different situations in which we communicate with each other. Basically there are four contexts in which we communicate: i. One-to-one communication where we are engaged in conversation. Debates take place in formal contexts where there are two parties or two individuals. ii. Many-to-one communication which is in the context of interviews. Here a group of people ask questions to one person and get the responses. iii. Many-to-many in the context of a meeting and also group discussions where a group is engaged in discussing a topic or problem. iv. One-to-many in the context of presentation. The context is one person addressing a group of people. Each context and the way communication takes place have their own features and principles. Each of these contexts needs specific skills. In each case one has to be a good listener as well as an engaging speaker. Some people are called 'good conversationalists' while some are called good debaters. Yet some others take part in discussions very efficiently. Public speaking and presentation is done in the context in which one person speaks to a group of people. This means, you have to keep a group of people pay attention to you for a specific time. Now, reflect on your abilities and decide in which contexts are you best at. Question: What are the different modes of communication? Your answer: Let us focus on the presentation skills. Since this is a context in which you have to keep a group of people or an audience engaged for a while you have more responsibility as the speaker to communicate your ideas clearly. As the rule goes, the onus of making the listener understand depends on the speaker. Does that make you feel a little nervous? In fact, many people feel uncomfortable speaking to an audience. But actually there is no need to be so if you keep a few points in mind. In this unit we will discuss these points which are common for short presentations as well as longer presentations.

92 NSOU ?PGEL 5 & 6 Let us now understand what we mean by Presentation. Presentation is the art of packaging an idea and effectively, delivering it to an audience to achieve an objective. In professional and business world effective presentation is important, because an idea, however brilliant it may be, may not be accepted if it is not 'presented' effectively. Learning presentation skills is therefore very essential in our professional career. We make presentations on various occasions. Presentations can mainly be classified as formal and informal. Depending on its nature, we can say whether it is public or closed door presentation. Again, the type of audience determines whether it is a presentation for experts or for laymen, whether it is to introduce or update knowledge of the audience. The subject also can determine the type of presentation, whether it is a Project proposal, or reporting the progress, or about the completion of the project. Oral presentation involves essentially three factors: i. The presenter, ii. The medium/ materials, iii. The target audience. In the first place when you make an oral presentation you have to remember the three P's. in that order. When you plan and prepare for a presentation you must ask yourself the following questions. These questions will give you a clear concept of the three aspects of presentation mentioned earlier. It is said that a well-planned job is as good as the job half done. Planning and preparation for the presentation will give you confidence that you can perform well. While planning you should keep in mind the 6Ws: – the audience, their profile. – the subject you are dealing with. – is it a formal occasion or an informal one; whether it is a public place or a closed door meeting? – is it an after-dinner speech, are you one of the speakers, and if so when is your turn and who are the other speakers and how much time do you have to make the presentation?

93 NSOU ? PGEL 5 & 6 – what is the purpose? Is it to motivate the audience, or to give new information, or to update their knowledge? – the most important point is how to convey the message to the audience. These days, we can add one more dimension – is it face to face or online mode of presentation. For planning a presentation it is essential that you know the topic well in advance, the target audience for who the presentation will be delivered, and the time at your disposal. Depending on these factors, you can plan the limitations of the points you can deal with. Then, you should decide how much time it would take to collect the materials and where and how the materials can be gathered. You can plan a time frame for preparation at this stage. Thorough preparation is a guaranteed way to produce a good presentation. Very experienced and senior professionals may give the most appalling presentations because of lack of preparation, while a junior and less experienced executive who is honest and worked hard to prepare well might give a brilliant performance. If you are well prepared for the presentation you may say that you have won half the battle. Now, how do you prepare for the presentation? Keep the following points in mind when you prepare for a presentation. ? Once the topic and the time given to you are understood, if the subject needs some reading, then, get the books and journals that are relevant. Make notes while you read. ? Take down quotations within quotation marks; cite names, illustrations and references. If you are using someone else's materials, acknowledge the source. ? Sequence the points. Wherever necessary add illustrations and examples. Prepare audio visual materials to support your presentation. Even if you are planning a simple chalk and board presentation, work carefully. ? You may like to refer to your notes when you are presenting. Write down only the points in large letters on 3x 5 inch cards. Indicate the places where you want to show the audio visuals. Do not overcrowd the cards. Number the cards as per the sequence of points and stack them in order so that you may refer to them when making the presentation. ? Make sure of the infrastructure, equipment and power connection at the place of presentation. These days it has become very common to make presentations using the power point slides. A Power Point slide is a visual support to oral presentation. It helps you to remember all the points as well as helps the audience understand the presentation better. You prepare the slides to support your presentation. Therefore it is important

94 NSOU ?PGEL 5 & 6 to carefully prepare the slides. Now, try and answer the following questions to check if you have understood what you have read so far. Question 1: What are the three essential factors in making presentations? Question 2: What are the six points the presenter has to keep in mind and why? In the first place write down the presentation. Then take the main points to prepare the slides. The first slide could show the title and the points you are going to deal with as an introduction. Each slide should deal with one thought or concept or idea. Remember they are points. So don't write sentences. Make them into bullet points. Keep them simple. Don't clutter the slides with too many points. Each slide should have only four or five bullet points. It is better to use short bulleted phrases. As far as possible avoid punctuations. Now let us look at how the layout of the slides should be. In the first place, you must take care of the font size. Choose a size which is visible to the audience in the last row. Normally for an audience comprising fifty people for the title, the font size 38 to 44 is used and nothing smaller than 28 for the text. Choose the background and colour of the letters carefully. Choose two or at the most three colours. Avoid yellow as it is not very much visible. Red is too harsh to the eye. Contrast the template and the font colours. While preparing you may choose animation so that one point appears at a time. Choose simple animation. Normally in academic presentations we don't use sound effects. Use pictures, cartoons, graphs and maps wherever relevant. Once the slides are prepared, go through them, check the facts, and edit the content, spelling and lay out. Pay attention to spelling and grammar errors on your slides as they look very glaring once the slides are projected and create a poor impression on the audience. A very important point you should remember is that you should decide on the number of slides depending on the time given for your presentation. If the presentation is short don't use too many slides. After you plan and prepare the materials for your presentation, run through the entire material once. In this unit you have learnt what is meant by presentation skills, the various contexts in which you make presentations, types of presentations, the factors involved in making presentations and planning and preparing, the two stages involved in making presentations.

95 NSOU ? PGEL 5 & 6 Once you plan and prepare your presentation, you are ready to make the actual presentation to the audience. You will read about it in the next unit. 1. What do we mean by a good presentation? 2. How many types of presentations are discussed here? 3. Is there a difference between presenting, and communicating? 4. What are some of the important features to keep in mind while presenting? 5. How important is planning a presentation? 6. What are the six important aspects of planning? 7. What are the responsibilities of a presenter? 8. What does preparation involve? 9. How has technology made presentations easier? 10. What are some of the features of a slide used for presentation? 11. Prepare two slides about what you have read on 'preparing slides'. Remember to use bullet points only. Mohanraj, J. et.al. (2012). Hyderabad: Orient BlackSwan (ISBN 1978 81 250 4665 3)

? In the previous unit you have learnt that we make presentations in various contexts. In fact, we make many informal presentations in our professions as well as in the world outside our institution or place of work. For example, when guiding a new colleague through the basic office procedures, reporting some investigation in a departmental meeting, giving an overview of a new product to the board members, presenting yourself when you are asked in an interview to talk about yourself, are occasions you make formal presentations. If you look at each of them carefully, you will realize that the approach in each presentation is different. In all these contexts we are communicating and make an effort to communicate effectively. In the interview context when you present yourself you have to think of the most important skill you have relevant to the job to talk about. When selling a product you don't talk about the price first but about the benefits the product will give to the client in a particular field. Similarly, in academic contexts like presenting a project report your focus will be different. 96

97 NSOU ? PGEL 5 & 6 After going through this unit, the learners will be able to: a. Appreciate the various occasions when one needs to make a presentation. b. Differentiate between a formal and an informal presentation. c. Plan and deliver a good presentation suitable to the context. When it comes to personal life too we make presentations. For example, when the son wants to buy a higher grade mobile phone which is expensive, he has to tell the parent why he needs it and what the advantages are etc. to justify the cost. When the parents ask the children to do a particular chore they need to explain to their children and they need to present the matter in a convincing way. You must have realized by now that whatever we have discussed so far about making a presentation corroborates with the questions we said we should ask in the section on Preparation. (Recall the six questions that we have highlighted in the previous unit.) Once we are sure of the target audience, the purpose of our talk and have a grip over the subject, we can be confident of our presentation. Whatever be the subject and context of the presentation it should be done in a systematic manner. You have to structure your presentation carefully. As said earlier, in the context of presentation there are three main factors – the presenter, the audience and the subject. The onus of making the subject interesting and easy to understand for the audience lies with the presenter. So you can see how huge a responsibility lies on the shoulders of the presenter. However, it is a skill you can achieve if you work towards it. Before we proceed further, we should understand that sometimes we make short presentations, for example, JAM or 'Just A Minute' speeches in the academic contexts or in the context of some recruitment procedures. While everything else remains the same whether it is a long or short presentation, in case of planning and preparation we have to be more careful in the case of short presentations. Someone has said, 'if you want me to speak for one minute-allow me two weeks to prepare, if it is for half- an-hour give me a week; if it is for an hour, ask me and I can do it now.' What he meant was that if it is a limited time given for presentation the presenter has to make

98 NSOU ?PGEL 5 & 6 careful consideration of how to begin, how many points to deal with and the right sequence of the points and also the conclusion to make the entire speech effective. Making presentations involves three factors: i. the contents, ii. the manner, iii. the personality (of the presenter). Earlier we said that while preparing we should pay attention to the subject and should think of what we are going to present. So, when we are making the actual presentation also we should be alert and focus on the contents. The contents should be relevant and adequate points have to be dealt with within the given time. Do not try to cram your presentation with too many points if the time given is short. Deal with only the essential points in such cases. of the content depends on is given. The presentation should be well structured. It should have a beginning, a logical development of points, and an effective conclusion or summing up. This is very well expressed by someone who said, 'when making a presentation you tell the audience what you are going to tell them, then tell them, and finally tell them what you have told them and why.' Secondly, remember to break the subjects into smaller chunks so that it is easier for the audience to absorb the subject in small doses. Choose the illustrations and examples appropriate to the topic and also level of the audience. Whatever is the subject/topic of presentation, however heavy and technical the topic is, some people make it very interesting and easy for the audience to understand. It is important you present the topic. Let us discuss how to make a presentation effective. We already said that the presentation should have an 'introduction'. Now let us see what your introduction should be like. In the first place remember that your introduction should catch the attention of the audience. There are several effective ways in which you may introduce a topic. You can begin the talk with a famous quotation. Choose

99 NSOU ? PGEL 5 & 6 a quotation relevant to the topic. Choose to quote someone who has credibility with your audience. If the audience is of scientific temperament take a quotation from a scientist, if it is a general talk and you want to present some general truth you may choose to say 'Once Mahatma Gandhi said..., or 'Once Winston Churchill said....., or 'Dr. Abdul Kalam always said....'and so on. Another way of catching the attention of the audience is to start your talk with humour. Wit and humour puts the audience in a relaxed mood and they become receptive to the talk. A witty presenter is anytime a favourite of the audience. A third way of introducing a topic is to ask a question. Asking a question is a good way of letting the audience know what you want to communicate with them. It makes them instinctively get in what you are going to say. It is better to ask a question which does not make them think very hard and also structure the question in a way that they can answer with a 'yes/no'. Yet another effective way of beginning the talk is showing the audience an interesting picture relevant to your topic. This will them to receive your talk. For example, if your topic is on communication skills you may show them a picture with people in conversation. Then you could ask them a couple of questions on what they the people are talking about. Let us have another example. There is a picture or a cartoon of a group of people just rolling over each other with laughter and then the next one is a person entering the room and one of them tells the new entrant 'Oh we were just talking about you'. Let the audience have a look at the picture and then ask them a series of two or three questions about the picture. You must have noticed that in this example you are combining two strategies of introducing the topic; that of showing a picture and asking questions. Actually you have combined a third aspect of humour because you are using a cartoon. The next aspect of the content is 'development of the points'. In the section on Preparation we have learnt that the points we want to convey need to be developed logically. We should remember that the points should be arranged sequentially and in a logical manner. Now, what is sequence and logic? It means the points need to be arranged in such a way that one point should 'lead' to the next. They should in no way be presented in a 'disjointed' way. This takes away the effectiveness of the presentation even if all the points you are making are very important. You should also know that some points need more elaboration then some others. So, do not devote too much time on points which need no elaboration and 'gloss over' more important ones. The third aspect of the content is the conclusion. We normally 'wrap up' our presentation with a conclusion. The conclusion should actually be a summary of the presentation. It should give the audience a comprehensive view of the entire

100 NSOU ?PGEL 5 & 6 presentation. So, even if they forget a couple of points during the course of the presentation the conclusion may act as a recapitulation of those points. This is all the more important in a long presentation. In case of short presentations, it is enough to mention the few points you have made in a sentence or two. While we are presenting is an important aspect, we convey the subject is all the more important. The manner in which we make our presentation either sustains or mars the interest of the audience. What you say in the introduction should establish a rapport with the audience. As said earlier, begin your presentation well to attract the attention of the audience. The attention span of the audience is just about 20 minutes. So you have to use strategies to sustain their attention for longer periods if your presentation is not brief. A long talk can be monotonous. Therefore you may make it interactive. You may also ask them a question intermittently. But remember to frame the question in such a way that they do not feel that you are testing their comprehension but getting a feedback from them. If it is a long presentation, use a combination of strategies using audio, visuals and also varying your tone. In the first place, remember that your voice should reach the last person among the audience. Modulate your voice according to the size of the audience. What does this mean? This means if the size of the audience is large speak louder. If you are provided with a microphone, don't shout into the microphone. Similarly, if the audience size is small and you do not need to speak into a microphone, avoid it. Another important factor you should remember is to use a language appropriate to the level of the audience. For example, if it is a technical subject and the audience is well versed with the technical field you can use the technical jargon. But if you are explaining a technical subject to laymen it is best to avoid jargon and put the information in as simple a language as possible. As far as possible, use short and simple sentences. Remember the acronym KISS (Keep It Short and Simple) when constructing sentences. The nature of the visual aids and the manner in which you use them assume a lot of importance in making presentations. Integrate the aid with the matter you are presenting orally when you reach the point. Make sure that everyone in the audience is able to see clearly what is projected. Do not stand between the screen and audience and create a shadow play. Use a pointer or cursor when you want to draw their attention to a specific point. Talk to the audience and do not read from the screen. If you are using a chalkboard, write down quickly and legibly on the board. Do not speak to the audience turning to the chalkboard. We have said earlier that the onus of presentation lies on the presenter. Hence the personality of the presenter assumes a lot of significance. We should understand that

101 NSOU ? PGEL 5 & 6 in a face-to-face situation the general bearing of the presenter, i.e., the facial expression, gestures, the voice, the dress and the appearance help in effective communication. So keep the following points in mind while making a presentation. In the first place, relax before presentation. It is but natural for the beginners and inexperienced to feel nervous when speaking to an audience. Even if you are well prepared, a little bit of nervousness is natural. So take a deep breath and walk with confidence to the podium of stage in front of the audience. Remember to have a good look at the audience before you begin. Adopt a posture which looks relaxed and friendly. Give them a smile. A smile certainly wins over people. A smile lights up a smile in those you are looking at and will in turn give you confidence. Eye contact establishes a rapport with the audience. It is important then, that you maintain eye contact with the whole of your audience during your presentation. A key element that ensures a dynamic eye contact is the 'aura effect'. This means, when you are actually looking at one friendly face in the middle of the audience at least three people behind the person would think you are looking at them. If you are looking at a person in the last row at least four-five people sitting in the audience would believe you are looking at them. This is because the field of your vision appears to 'fan out' as it gets farther away, extending to the sides, in front of or behind the person you are actually looking at. You need not look at everybody nor do you need to keep your gaze on a person for too long. But remember to keep eye contact with people sitting at different places in the audience to give them a feeling of 'inclusiveness'. It also gets you feedback from the audience. You will know whether they are 'with' you or are distracted. As said earlier, the voice quality is important. Your voice should be modulated depending on the size of the audience. It should be clear enough to reach all the members of the audience. Vary the pitch to avoid monotonous tone. Secondly, pronounce the words clearly. If you are not sure of the pronunciation of any word, refer to the dictionary and learn the correct pronunciation. Another factor you should remember is to maintain pauses at appropriate places. Do not hurry through your presentation. Fluency does not mean speaking rapidly, but keeping to normal speed and maintaining pauses for comfortable listening. Keep your note cards with you. They should be numbered and kept in right sequence so that you don't get confused. Refer to your notes if you forget a point. But do not read from the notes. At the end of your presentations invite questions. Listen to the questions carefully, understand them properly and give an answer sincerely. Do not dismiss any question even if it is a trivial one. If you do not know the answer, admit it.

102 NSOU ?PGEL 5 & 6 Above all, the attitude of the presenter is of great importance. Have a positive attitude towards your audience and respect their intelligence. You should be flexible enough to change your approach if they do not feel involved. This is essential to sustain the interest of the audience in your presentation. In this unit you have learnt many factors about presentation skills. You learnt that making short presentations require more careful preparation than long presentations because of the time limit. You have also learnt that there are three stages in acquiring presentation skills: planning, preparation and actual presentation. In each stage you have to follow a few principles and strategies. 1.How many types of presentations are discussed here? 2. What do you understand by JAM? 3. Give reasons why it is difficult to prepare for a short presentation. 4. How is content organisation an important aspect of presentation? 5. What are the three 'Ps' of a presentation? 6. What care needs to be taken during the presentation? 7. In how many ways can you introduce a topic? 8. What are the presentation strategies discussed here? 9. What does 'aura effect' mean? 10. What role do visuals play in a presentation? 11. How can the presenter sustain listener interest during a long presentation? 12. How are the points developed logically in a presentation? 13. How important is a good conclusion to a presentation? 14. What relevance does the question answer session have in a presentation? 15. What care should the presenter take while answering the questions? 16. What role does the presenter's dress and appearance have in a presentation? Theobald, T. (2019). California: Kogan Page.

? In the earlier units you have learnt certain aspects of spoken English like what is phonetics, what is phonology, what is stress and intonation etc. Knowledge of these helps us become better speakers of English. In this unit and the following unit you will learn factors pertaining to how to teach spoken English. In this unit, in particular you will learn the various approaches to spoken English, theories related to speaking, importance of teaching pronunciation and other aspects of English speech. Besides these you will also learn how to select an appropriate variety of English. You will also learn about native and non-native speakers of English, the importance of teacher competence, and how to select materials for teaching spoken English. We know that in the globalized world communication in English is possible across the world. Today, even those countries like Japan and Germany and the Arab countries, where English has not been used for communication within the country and only a limited number of people learnt English for specific purposes of communicating with other countries for trade and commerce, have started teaching English increasingly. Therefore, we can understand that for greater outreach and effectiveness, learning to speak English with clarity and confidence is imminent. 103

104 NSOU ?PGEL 5 & 6 After going through this unit, you will be able to: a. Appreciate the spread of English as a global language. b. Understand the need to teach spoken English properly. c. Learn about how to teach spoken English. d. Differentiate different approaches to teaching spoken English. If it is important to know the various aspects of spoken English in order to learn as well as teach speaking skills, it is all the more important to know the various approaches to teaching spoken English. So, let us have a historical perspective of teaching spoken English. Looking at the history of teaching English we can understand that the place and approach to teaching spoken English has changed significantly over the years. The emphasis has shifted from teaching accurate production of individual speech sounds and teaching discrete items of pronunciation to broader communicative aspects of connected speech. In the years when Grammar and Translation Method was prevalent very little systematic attention was paid to teaching spoken English. The Direct Method advocated intensive oral communication skills in a carefully graded progression in terms of question and answer between the teacher and the student. The Structural Approach aimed at the aural-oral training in the form of listen and repeat drills. Here accuracy was emphasized and language laboratories became popular. When we look at the Oral Approach and Situational Language Teaching, we find teaching begins with spoken English. Oral practice of controlled sentence patterns is given in specific situations. Emphasis moves to presentation of brief dialogue and a gradual movement from guided to free communication is seen in the Notional/Functional Approach. When the Communicative Approach made its advent, emphasis shifted from accuracy to fluency, and in the Natural Approach we find that the learner is not put under any anxiety, and speech is allowed to 'emerge' gradually. Emphasis on communication continues in the Post Method era. Over the centuries as the teaching of English underwent various changes in terms of Approaches to language learning and teaching, we see an evolution of different

105 NSOU ? PGEL 5 & 6 theories of teaching speaking. Among the theories the most prominent ones are the Behaviourist, Innate and Interactionist theories. Up to 1960s the Behaviourist approach gave prominence to speaking since it was assumed that language was primarily an oral-aural phenomenon. So the teaching and learning of language followed a stimulus- response-reinforcement pattern involving constant practice and formation of habit. Teaching of speaking skills involved imitation, repetition and memorization of the input given to the learners. The audio-lingual approach emphasized the process of teaching in the order of listening-speaking-reading-writing. Later, with Chomsky's assumption that every child is born with an innate capacity to acquire language the Innate Theory evolved. The belief was once the basic grammar was provided learners become active and creative in their use of language. In the 1970s and 1980s the Interactionists propounded that providing a linguistic environment for interaction was necessary for efficient language learning. It was thought that for production of speech the messages need to be 'planned'. This plan should have a basis of four major processes like conceptualization, formulation, articulation and monitoring. For example, if the child has to understand the use of past tense, she/he has to understand the concept of time, and, that the action is over, and, then how this concept is expressed. Once this becomes clear the child would be able to form the past with regular or verb in the irregular form of the verb. This allows the child to articulate sentences using the correct form, may be after a few errors and corrections monitored by adults. The functionalists viewed speaking in a contextualized process where the context of culture and context played an important role in the language use. Bloom B.S. is known for his (1965) has identified three domains of educational activities: a) Cognitive(deals with knowledge) b) Affective(deals with feelings and attitude) c) Psychomotor(deals with manual or physical). He also identified levels within the cognitive domain ranging from simple recall or recognition of facts to the highest order of evaluation. The levels are; knowledge; understanding; application; analysis synthesis; and evaluation. It is assumed that a good use of Bloom's Taxonomy would help both teaching and learning. In teaching spoken English moving from the simple level to the complex level gradually would create a relaxed atmosphere for the learners and they would learn to speak with increasing confidence. So the learner should be made familiar with the grammar and vocabulary of the language, understand the meaning and apply the gained knowledge in various contexts, analyze as well as compare and contrast and judge their own thought and ideas. All these pertain to the cognitive domain. They should also have a positive attitude towards the language and learn it willingly. This pertains to the Affective domain. In the psychomotor domain tasks could be provided that need some physical activity like miming and performing. Humanistic Theory propounded by Carl Rogers and Abraham Maslow, Constructivist

106 NSOU ?PGEL 5 & 6 Theory made popular by Jean Piaget, Socio-cultural Theory propounded by Vygotsky belong to the field of Educational Psychology, have influenced educational methods, goals and objectives and are relevant in teaching speaking. You need to know two other names: Krashen and Lenneberg. Krashen's monitor theory also known as Input Hypothesis and Lenneberg's Critical period Hypothesis influenced the teaching methods and brought in many changes in the classroom methodology. All these theories mentioned here have their influence in teaching listening and speaking skills. We understand that that over the decades the teaching and learning of English have acquired new dimensions. Given this background, many issues and questions arise in teaching spoken English. Some questions that we need to ask are: ? What is the status of pronunciation? When and how should we teach pronunciation? ? At what level should segmental features be taught? Is drilling of individual sounds and pattern practice effective? ? Do learners transfer the accurate sounds to connected speech? ? Can we really 'teach' the more subtle features like rhythm and intonation? ? How much of the mother tongue influence is acceptable? A large number of these questions are addressed by researchers and experts in teaching language. We know that teaching of pronunciation assumes importance in any language, more so in English. There is no one to one correlation between spelling and pronunciation unlike in the Indian languages. Therefore teachers need to make an extra effort in terms of pronunciation and of words in English. Pronunciation and stress at word level lend accuracy which contributes to intelligibility. Therefore, teaching pronunciation is crucial to teaching spoken English. Having said that let us understand that the 'when' and 'how' of teaching pronunciation depends on the situation and the target students. If the target students are adults, concepts and the articulation could be explained and if they are young then imitation and repetition including gestures and action oriented teaching. As teachers we know that learning is more effective if teaching is contextualized. So setting contexts which involve stress and intonation, and explaining the change in meaning if stress at the word and sentence level is changed would help. Practice in word stress and intonation in meaningful contexts could be given. For example, take
107 NSOU ? PGEL 5 & 6 the case of the words like 'present' and 'object'. We have learnt that if

| 52% | **MATCHING BLOCK 3/46** | SA | B. A. III Eng. P. 11 _ 16 Lang and Ling all.PDF (D142214959) |

the stress is on the first syllable it is a noun and if it is on the second syllable

it is a verb. A simple sentence like 'I to so many unnecessary lying all over the floor' or 'All the delegates invited are today and all of them are going to their reports' would go a long way in making the meaning of the word as noun and verb very clear. You may make the learners acquire a basic knowledge in phonology of English. Opportunities to understand the sound pattern and language structure and a scope for self-reflection could give a better understanding of the spoken form. Another important aspect of teaching in the non-native context is to make them understand and diagnose the problem areas in the target language. The problem areas are mostly for the second language learners of English. In India there are learners of English belonging to more than 22 major languages. Hence the problem areas differ depending on their mother tongue. For example a word like 'school' could have different problem areas in pronunciation or, for some speakers there may not be any problem at all pronouncing the word. Another important feature of English is the contractions and reductions. A word in isolation is carefully pronounced. But in connected speech the sounds of certain words are changed and they sound different from what they are like when pronounced in isolation. For example 'will not' becomes 'won't'. Again, in a sentence articles and prepositions are not stressed normally. As teachers we need to draw the learners' attention to such characteristic features of English. We understand that English is spoken by those who have learnt it as their mother tongue and those who have some other language as their mother tongue but learn English also. People who speak a language as their mother tongue are called 'native speakers' of the language, and those who speak the language which is not their mother tongue are called 'non-native speakers'. These learners are called the second language learners. The non-native speakers learn the language based on the native speakers as model. In case of English, there are at least three major varieties of native versions of English to choose from: British, American and Australian apart from the notional standard Received Pronunciation. The second language learner may also have a choice of not sounding like any of the native speakers of English and retain their own cultural and social identity. The choice depends on the needs of the learners, why they learn to speak English, and to what use they want their competence to be put to use. Those who want to interact

108 NSOU ?PGEL 5 & 6 at international level for business and profession will have different use of English from those who want to use English only to communicate with the non-native speakers of English. Whatever be the reason, there is one factor which is very important, which is intelligibility or clarity of speech. When non- native speakers learn to speak English it is natural that they have the influence of their mother tongue in articulating the sounds in English. Native-like speech in second language learning situation takes time, and often it cannot be achieved easily. In fact, very few can achieve native-like pronunciation in another language. Non-native speakers, even if they pronounce words and sentences very well, problems with stress and intonation and other phonological nuances may still cause misunderstandings or even communication break-down. Therefore it is better to focus on global aspects of English. What is required of the learners is that they try and erase the gross mother tongue features which 'interfere' with the English sounds and make them sound different from what they should be. Then we can say that the learner has attained a 'neutral' variety of English which is universally understood. This is possible with practice. For this we can choose the RP or Received Pronunciation as reference point. The advantage is that RP is well described variety and internationally acknowledged. Standard dictionaries indicate this pronunciation and also display the British and American variants separately. What the second language learners of English should remember is, that it is near impossible to achieve native-like pronunciation nor is it really necessary. What is important is clarity and global intelligibility of speech. If an African speaks English and he is intelligible to an Indian, an Indian is intelligible to a Russian and when a Russian speaks English and a German understands, we can say that we are moving towards global English. Teacher competence in the area of spoken English is of crucial importance in the second language teaching context. A competent teacher goes a long way in making learners attain reasonable proficiency in English. This is because the learners primarily learn to speak by emulating the teacher. When it comes to teaching spoken English, for a long time the non-native speaking world preferred to employ native speakers of English even if they were not trained as teachers, because they spoke English with authority as they owned the language. However, with the changing perspectives and needs of the learners this attitude has changed. 'In today's complex and globalized world, well-trained, multilingual and culturally sophisticated teachers are needed to teach learners of English. It is time for those involved in the ELT profession to resist

109 NSOU ? PGEL 5 & 6 the employment of untrained native speaker teachers.' (Graddol 2007, p.121). Teachers who have acquired speaking skills as second language can use their experience to understand their learners' needs. Of course, teachers themselves should be aware of the nuances of English pronunciation and should be able to speak neutral variety of English for the learners to emulate. Teachers who do not develop 'neutral' variety or do not work towards 'global intelligibility' are not received well by the learners. A competent teacher of English would use strategies effective for the learners to practice speaking. The materials used should be familiar and easy to use. This would reduce the learning anxiety. We can use authentic materials like newspaper clippings of advertisements, headlines, pictures, hoardings seen posted in different parts of the city, Railway tickets, instructions written in hospitals and other places, and many more materials available around us to motivate learners to speak in English. Again, as a teacher you should focus on achievable goals instead of focusing on elements which are out of control of the learners. We should understand that the thinking in teaching pronunciation has shifted from 'what is convenient for the teacher to teach?' to 'what is effective for the learners to learn?' Some fine native-like features in the phonology which do not come in the way of intelligibility could take a secondary place in the pedagogy. Certain phonological features which cause intelligibility problems for listeners need to be identified and more emphasis could be given in learning these features accurately. A common phonological core for Indian speakers of English has been identified as Indian English by R. K. Bansal and various other researchers. We as teachers of English need to be aware of this. As teachers of Spoken English we also should be able to identify appropriate materials for practice. The materials should be familiar and easily accessible for the learners. Materials should take care of all the aspects of spoken English from articulation of sounds, pronunciation of words, stress at word as well as sentence levels. We should also give practice to the learners in terms of attaining fluency. 'Since speaking involves two people, materials could have activities involving two or more learners and make them more communicative and closer to real-life situations. Above all, the learners' needs and the use they will put the language to should be kept in view while designing materials for them.' (Jayashree Mohanraj 2015).In the next unit we will see a number of tasks for practising various aspects of spoken English and also learn how to use them in the classroom. Let us now check if we remember what we have read so far. Answer the following questions.

110 NSOU ?PGEL 5 & 6 1. What is the importance of spoken English? 2. How important is good pronunciation? 3. What are the finer aspects of good pronunciation in English? 4. What are some of the changes that have taken place in the teaching of spoken English? 5. How is Bloom's taxonomy useful in teaching spoken English? 6. What are the major varieties of spoken English seen around the world? 7. Which model is normally recommended as standard? 8. What do we mean by 'global English'? 9. Why should a teacher be competent to teach spoken English? 10. Can a second language learner achieve native speaker competence? Is it essential? Bloom. B. J., (1965). New York: Longman Higher Education. Graddoll. D. (2007). London: The British Council. Krashen, S. (1988). Massachusetts: Prentice-Hall International. Maslow, A. H. (1970). New York: Harper and Row. Mohanraj. J. (2015). Hyderabad: Orient BlackSwan. Vygotsky. L. (1970). Cambridge, Massachusetts: MIT Press.

? In the previous unit we learnt what are native and non-native varieties of English, how to select the model for learning to speak English as second language learners, and the various aspects of teaching spoken English. We must remember that a fair number of tasks developing speaking skills, include developing listening skills. In fact listening is like a springboard to speaking. Careful listening helps in not only articulating sounds accurately but also in understanding the nuances in pronunciation and stress and intonation. So, practically, teaching of listening and speaking go hand in hand. At the end of going through this unit, the learners will be able to: a. Prepare tasks for different aspects of teaching spoken English, b. Understand the concept of spellings in English, 111

112 NSOU ?PGEL 5 & 6 c. Identify the stressed syllable in a polysyllabic word, d. Understand the nuances of speaking on phone, e. Understand the etiquette for participating in group discussions and other social conversations. Now, let us look at some tasks that can be used to teach spoken English. These tasks are arranged in a graded manner of teaching segmental features, supra-segmental features as well as fluency. You will also have some sample tasks which will develop communication skills in English. Each task is accompanied by a brief account of at what level the task can be used and what materials are used and also how much time would the task take approximately. The market is full of books which give practice in spoken English. However, what we should learn from them is to develop or modify the tasks for our learners. Now, let us look at the sample tasks one by one. This task is to help learners become aware of the accurate pronunciation of words with the sounds which pose a problem to them. The material used is a list of words prepared by the teacher. Take a list of ten pairs of words which are minimal pairs like: Dictate the words to learners. Ask them to write down the words in pairs as they hear. Ask each of them to read out what they have written in the same order. This will ensure what sounds they have listened to and how they pronounce the words. If the teacher finds there is a problem in their articulating the sounds in the words, more practice could be given. They could even be made aware of how to articulate the specific sounds by explaining the position of the lips, tongue etc. This activity can be given to learners as beginners. Time that can be allotted could be 20-30 minutes. You may think of modifying, extending this task by asking the learners to think of similar pairs of words and exchanging the list with their partners in the class to

113 NSOU ? PGEL 5 & 6 pronounce the words. Another modification, which is slightly more challenging, is to make them use the words in meaningful sentences and speak them aloud with the correct pronunciation. This will ensure their articulating the sounds correctly in connected speech. To make them understand the spelling-sound relationship in English. The material required is a list of words. Give learners a list of words which are homophones i.e. sound the same but spelt differently. For example: Jumble the words up and ask them to put them in order and then pronounce the words. This task can be given to the beginners. 15 minutes may be allotted for this task. As modification and extension of the task you can give the learners to prepare another such list of words. They could use the dictionary to look up for such words. This will, to some extent, help them develop dictionary-skills. These lists could be shared with other learners in the class. You may ask them to write and read aloud sentences using these words with distinct meanings. Generally, second language learners in India feel a little intimidated when they encounter long words in English. This in turn affects their levels of confidence while speaking. If they are taught to break the words in terms of syllables, they will be able to handle any long words. The following task is an example. In the first place show the learners how to break a word into syllables. For example: Institution can be broken as in-sti-tu-tion for convenience of articulation. Then write a reasonably long word on the chalk-board. Pronounce the word yourself showing the syllabification. Ask the learners to repeat. The third step could be presenting longer words like and Then ask them to pronounce the word using the strategy of syllabification. This task can be used for high school/intermediate level of learners. The purpose is to enhance their confidence in pronouncing words in English. The task may take about 15 minutes.

114 NSOU ?PGEL 5 & 6 Stress at the word as well as sentence level plays a very important role in intelligibility. A second language learner should try to learn to maintain stress at the proper syllable and word when speaking English. When we speak Indian languages we stress every word as there is no significance attached to stress in normal speech. The task involves a list of words, a couple of suitable pictures as suggested here and a poem or a few sentences. We may begin to make them repeat words with two syllables with stress on first syllable and then the second as learnt earlier in words like and The second step could be to draw a picture like a tree or cloud and fill up the picture with words, phrases related to that picture and ask the learners to read them out. The third step in the task could be to ask the learners write down the sentences within the picture. For example, you may draw a picture of an urn and within that you may write a stanza of Keat's Ode to a Grecian Urn and ask the learners to recite it aloud with proper stress on words to make the reading rhythmic. This task could be given to Intermediate level learners. The task may take 20-25 minutes. Using pictures to motivate the learners to speak is found to be effective. You may use an interesting action oriented picture or even a picture with just two characters. You may give a few questions about the picture like: who are the people in the picture?; Do you think it is a special occasion?; Do you think the two people in the picture are happy?; Do you think the two people are related? The questions vary depending on the picture. If the learners are a little advanced you may take the task from controlled to free and more challenging task by not giving any leading questions but ask the learners to interpret the picture. Another idea is to use a series of three or four pictures which stand for a story. Don Byrne used picture stories to motivate learners to narrate a sequence of events. A third variation is to project a set of six to eight characters in front of the class and ask one of the learners to describe one picture and the rest of the group to guess the character that is being described. This works as a good guessing game which is interesting for the learners. Yet another idea of using pictures is to give a pair of learners a cartoon strip with the speech bubbles empty. The learners have to guess what the characters are saying and speak out. This activity makes them think, guess and also can be fun. These tasks with the variations mentioned can be used in elementary to intermediate levels. The task should take 15- 20 minutes.

115 NSOU ? PGEL 5 & 6 For advanced level learners what is required is an opportunity to speak. We can create this opportunity by making the task purposeful. Role-play gives this purpose. You may begin with conversation. Conversation is open-ended and may develop further. For elementary level you may prepare cue cards and make it a pair work task. A typical set of cue cards for elementary learners may look like this: A B A: Hello . A:——————— B: ————— B: Hi. A: Are you free this evening? A: ———————— B: ————————— B: Hm, I guess so. A: Shall we go for a movie? A: ———————— B: ————————— B: Great idea! I'd love it.. A: Fine. Let's meet at A: ————————— Grand theater at 6 then. B: Alright. B: ————————— A: —————— A: See you. B: Bye. Each learner in the pair gets one card and reads out his part. As a teacher you will have to give proper instructions like they need to take turns in speaking. The same task could be made more challenging and may look like this: A B A: Greet B A: ——————————— B: ———————- B: Reciprocate A's greeting. A: Ask what B is doing in A:——————————— the evening. B: Say you are free. B: ——————————— A: ————————— A: Suggest you go for a movie. B: Accept with pleasure. B: ——————————— A: ————————— A: Arrange to meet at B: Alright. ...... theater at .... A: ———————— B: ————————— B: Respond.

116 NSOU ?PGEL 5 & 6 This activity can be used with learners at various levels of learning depending on how challenging it is made. It may take about 20 minutes. Telephone conversation assumes a lot of importance in today's context. Create a situation for the learners where you can give them practice speaking on telephone. Before assigning the task make them aware of the telephone etiquette like speaking softly and not shouting into the phone, introducing yourself first if you are the person calling, speaking clearly and precisely because your body language does not aid the receiver of the call, putting expression in the voice and so on. Then give the task with clear instructions to follow when working out the task. One such task could be as follows: The task requires you to prepare a small advertisement for rentals. The task is: You are looking out for an accommodation. Here is an advertisement. Call the number given in the advertisement and have a telephone talk with the landlord/lady. Work in pairs. Available. Two bedroom apartment Fully furnished. Good location. Small family preferred. Telephone: 11012345 You may simulate the situation by asking them to sit at two different corners in the class facing away from each other. If necessary give a few cues to carry out the conversation. Repeat the task with different situations for different pairs. The task will take about 20-25 minutes. You may give topics for the learners or ask them to choose any topic they like and ask them to come prepared for a one-minute speech. You may even give them a topic like ' Give them guidelines before they prepare. Tell them to choose only limited number of points, to have an introduction and a conclusion. While they are speaking observe them, take down notes discretely and after everyone finishes, give your feedback. Give general feedback, and if any specific point needs to be made about a particular speaker, tell them. But remember

117 NSOU ? PGEL 5 & 6 not to interrupt their speech and also not to dwell on negative points. Encourage them to speak. This activity can be followed up and made a little more challenging after you feel that the learners have gained confidence speaking to an audience. Fish-bowl is a very suitable activity. Write down various topics on strips of papers and place them in a bowl. Each learner picks up one strip and speaks on the topic assigned there for one minute. You may give them five minutes to prepare before they speak. This task takes about 30 minutes of the classroom time if there are 20 learners in the class. It is important to give intermediate and advanced learners practice in speaking independently in debates and group discussion contexts. A task for debate could be as follows: Divide the entire class into two groups. Give a topic like . Ask each group to take a stand for or against the topic. Pair them taking one from each group to speak. Set time limit of two minutes for each speaker. Give them about ten minute's preparation time. This task may take more than 30 minutes depending on the number of learners. Modification to this task could be forming another smaller third group or pair who can act as observers and give comments on the overall performance of each group. This is more challenging and can be tried with an advanced group. A simple task for group discussion may be given to initiate the class for more serious problem-solving exercises. Some relevant topic could be given to them for discussion. For example: You are planning an educational tour to a historical place. As a group plan the details. You may discuss the following points: suitable date and time of travel, duration of the tour mode of travel like train, bus etc., things to carry, place of stay, how to keep notes, division of responsibilities and other details. The total time for this task could be 30-40 minutes. The initial 10 minutes for the teacher to give instructions. Then the actual discussion of 20 minutes and then the teacher's feedback of the discussion may take about 10 minutes. Create some situation for discussion and assign roles to a group of learners. Form groups to assume roles of members involved in the situation for discussion. Before

118 NSOU ?PGEL 5 & 6 you assign tasks explain how each member of the group needs to get a chance to speak, and also the politeness principles to be observed by members respecting each other's views and so on. A sample of one such task is given here: You are students of Institution for Excellence. Your institution has won awards for clean and green environment for the past five years. However, of late a small mound of garbage has been accumulating close to your institution because of the placement of the garbage bin. You have observed that people have started dumping garbage in and around the bin which gives rise to a stink, inconveniencing the students in the Institution. An emergency meeting has been called by the principal to discuss the problem. You want to submit a memorandum to the Municipal Commissioner to get the Bin relocated. Members attending the meeting: Principal, 2 Members of the Faculty, 2 Student Representatives, 1 Municipality Ward Member, 1 Member of Society for Protection of Environment and Quality Life (SPEQL), 2 Journalists of local newspaper (Special Invitees). This task will take about 50 minutes. 20 minutes could be given for instructions and time for the group to assume roles and prepare for discussion. The actual discussion may take 20 minutes and the teacher's feedback another 10 minutes. You may think of several such situations for problem solving tasks. In advanced levels of learning, presentation skills assume importance. Hence learners need to be initiated to make presentations to a group of audience. For this relevant topics can be chosen and some preparation time be given for the learners to make their presentations. The learners need to be instructed how to prepare materials like slides, and how to present themselves before the audience and then be given the topics. A couple of such topics as cases for presentation are given here: i. You are an officer deputed by the Municipal Corporation of your city to convince a group of residents about rain water harvesting in their residential complex. Present the process, benefits and their responsibility etc. ii. You are a student volunteer who has taken the responsibility of bringing awareness in a close-by residential complex about the harmfulness of plastic. Explain the hazards of plastic use and suggest alternatives to plastic on various situations.

For this task, the topic may be given to the learners on the previous day. Guidelines and help need to be given to them. They may even be guided to the sources for collection of materials and points to speak about. Each learner may be given about 10-15 minutes to make presentation. You may have to prepare several such topics depending on the number of learners. It is a good idea to have a repository of such relevant topics collected over a period of time. Such tasks help the learners use language in real life situations too. In this unit we have discussed a few sample tasks in developing different aspects of speaking skills at various levels. The list is not exhaustive. Each sample task should be able to generate several ideas in you to be used in different situations in different levels. The main objective of these tasks is to give confidence in speaking English. These tasks give practice to the learners not in a clinical environment of a language laboratory but, in a real life-like situation simulated in the classroom. Thereby they help the learners perform reasonably well with confidence when encountered by a demand to speak English in life. Your experience in learning the various aspects communication in English should help you develop several such tasks when you need to teach in a class. 1. What is the best technique to teach pronunciation of individual sounds? 2. How are pairs of words with similar sounding words helpful in classroom teaching? 3. What is the easiest way to help students understand the concept of stress? 4. What exercises can be used to show the relationship between spelling and pronunciation? 5. How do we help our students to learn the spellings of longer words? 6. Is syllabification an easy process? 7. What method can be used to teach natural conversation? 8. Prepare a set of Cue-cards based on the model provided? 9. How is group discussion a good activity? 10. Suggest two topics for group discussion and debates. Ref: Graddol, David (2007) English Next, UK, British Council. Jayashree Mohanraj (2015) Let Us Hear Them Speak, new Delhi, Sage Publishers.

? This Unit initiates you to the scope and potential of the Lexi-grammatical axis of Collocation-Idiom-Phrase in acquiring a to the point of mastery or command of English as it should be spoken and written with native fluency. As lexeme or morpheme a word is a bi-referential signifier: it refers to itself as a visual and aural/ articulate entity, lending itself to texting and articulation in a coherent and communicable structure. Language can enhance, restructure and undercut phenomenal reality by the force of self-reference, that is, how the words sound in a speech and look like in a script, how much they touch and evoke our sense-impressions, and how much they transmit data and information with the least possible distortion and refraction mediated by the user in the act of speaking and writing. Therefore, viewing language from the other side, each word literally in itself and variably, with figurative charges in a set of relationships, is a referent to an object or ideation outside itself. At the end of this unit, the learners will be: ? Familiar with a range of vocabulary items, ? Able to use the words learnt appropriately, ? Able to spell the words correctly and use them in their own language, ? Pronounce the words as per the norms of English language, 120 MODULE - 4 : TEACHING VOCABULARY

121 NSOU ? PGEL 5 & 6 ? Able to use the words in appropriate contexts and combinations. Language of all varieties, in all possible ramifications, is associative, collocative and additive, stretching beyond letters of the alphabet and phonemes (articulatory unit or speech sound). What is interesting is that a lexeme or word has a natural tendency to gravitate to or attract another or at places a chunk of other words in order to convey proper meaning in both spoken and written forms This phenomenon of linguistic intra-compatibility between two words or among a number of words generates from long-term and widely accepted usage by the native speakers. In this, even though grammatically permissible and syntactically correct, a sequence of words may appear strange and ludicrous to the native speakers, to the point of incomprehension at times. Therefore, Collocation is important for L2 or FL learners (Second Language Learners or Foreign Language Learners), so much so that knowing Collocation and Mis-collocation (Rayan, 2016) and Collocational Clash may adequately compensate for the paucity of learning the rules and intricacies of grammar. The term Collocation is a noun, by inflectional morphing of the prefix-compounded lexical stem verb, 'locate' [co + locate]: collocate, meaning 'go together' or 'co- occur'. In all Collocations cutting across its several types there has to be at least two parts: The syntax of a given sentence determines the positioning of the collocation in spoken part or in a grammatically complete written sentence. Lewis (1993) coined the term 'collocation' as the key focus of lexical approach to a second/foreign language teaching/learning while emphasizing the fact that vocabulary should be the centre of any language teaching because every language should focus primarily on lexis, instead of grammar. He states that vocabulary should be the key feature in teaching English. The lexical approach is based on the assumption that "an important part of language acquisition is the ability to produce lexical phrases as chunks and that these chunks become the raw data by which learners perceive patterns of language traditionally thought of as grammar" (Lewis, 1993, p.1). Lexical word combinations or chunks contribute significantly to L2 vocabulary development. The teaching of vocabulary is usually confined to learning a unique word and its usage. Axiomatically, knowledge of collocations should develop in tandem with their knowledge of single items in their vocabulary. Achieving proficiency

122 NSOU ?PGEL 5 & 6 in SLA is more complex than simply learning individual words and their literal meanings. Knowing the rules of grammar is not adequate enough as 'guidance for acceptable combinations of words (O'Dell & McCarthy, 2008)'. Teaching collocations, however, provides a rationale for focusing on chunks and their applications (Lewis and Conzett, 2000) as an easy pathway to SLA or Second Language Acquisition. The collocations presented in this Unit throughout are largely selected from the CANCODE corpus of spoken English, developed at the University of Nottingham in association with Cambridge University Press, and the Cambridge International Corpus of written and spoken English (now known as the Cambridge English Corpus). A collocation is "usually described as the tendency of certain linguistic items to habitually co-occur with certain others" (Firth, 1957). The level of occurrence of phrases and words is high and sounds correct for native speakers, for example, rather than . A collocate/collocator is a word which usually occurs with a specific word. For example, and Here and are collocates/ collocators. A base/node refers to a specific word or phrase. Most of the time the node is generally introduced with another word, for instance in or , food is a node(O'Dell & McCarthy, 2008). Linguists by and large come to the conceptual consensus that the term 'collocation' means established by the use of native speakers. Collocation has its roots in the Latin verb which means to place together (Deignan, 1999). Léon (2007) defines collocations as an abstraction at the syntagmatic level. For instance, one of the meanings of constitutes its collocability with and of with In fact, appropriacy and reciprocity are two aspects of collocation. Nesselhauf (2004) defines a collocation as a regular arrangement between/among lexical items, and their intrinsic tendency to closely associate or co-occur in speech and text. Celce-Murcia (cited in Mongkolchai, 2008) defines collocations as the co-occurrence of lexical units in a fixed, strong or weak combination, with variations in frequency or acceptability.Words that collocate with each other are generally habitual and popular irrespective of any :

123 NSOU ? PGEL 5 & 6 For instances, ... and so on. Incidentally Shakespeare's works are a rich source of collocations which have passed into popular usage, and a native English speaker may frequently use a Shakespearean collocation with a (another collocation) of its root in a play or a sonnet of Shakespeare. The character, Jacques alone in Shakespeare's romantic comedy, is springing a fusillade of beautiful collocations that are now established in native and fluent English. Smadja and McKeown (1990) define collocations as a marked tendency of certain words to co-occur with frequent regularity in a specific language. Lewis (1993) defines collocations as a subcategory of multi-word chunk comprising individual words which tend to go together in speaking and writing acts.Therefore, the term 'collocation' signifies a predictable combination of words e.g. , , , so on and so forth. Woolard (cited by in Mongkolchai, 2008) defines collocations as "the co-occurrence of words which are statistically much more likely to appear together than random chance suggests" (p. 29). McCarthy and O'Dell (2006), state that a collocation is used to refer to several words that appear together, either because they always occur together like "run a risk" or because the group meaning is far too obvious from the meaning of its parts, as in 'by the way'. According to the Oxford Collocations Dictionary (2002), collocation is a way of combining words within a language in order to produce natural-sounding speaking and writing. Inappropriate combinations like or do not sound natural in the English language. Benson and Ilson (cited by in Bahns and Eldaw, 1993) point out the inherent incapacity of an L2 learner or the learner of English as a Second/Foreign Language to cope at par with the fluency of collocations that naturally goes with the native speaker of English:

124 NSOU ?PGEL 5 & 6 To sum up, 'collocation' as viewed and defined by linguists and ELT scholars funnel to a focal point that 'collocation' signifies a pair or group of words that normally appear proximate or close to , when in a or when in a in a way that sounds natural to native speakers of the given language. [As Grammatical collocation applies to a pair, but applies a group more than two.] There are several ways to identify the attributes of and categorize collocations, which is often confusing among the learners and teachers as well, of ELT(Lopez, 2016). Bahns (1993) pinpoints the keytraits of collocations as follows: i) Collocations retain the meanings of their constituent parts (unlike idioms) ii) They are spoken and written frequently and with fluency, springing to mind readily, iii) They are psychologically salient (unlike free combinations). There are, however, 'transitional areas' (Cruse, 2000: 41) between free collocational combinations and collocational idioms. : Identify the traits of the Collocations from the following: while I get you something to drink. b) I and smiled. c) We came to as we were passing through d) I'll at the website and let you know what I think. e) You must learn to in skating. Your answer: Boonyasaquan (cited by in Mongkolchai, 2008) clusters the characteristics of collocations as follows: They are co-occurrences of terms allowing no space for an additional word to come in between them. For instance, in there is no provision for a new word to settle between them, even though it is syntactically possible to insert words between them. For example, . Here the insertion of is normally a misfit Interestingly, is a valid collocation. The rationale for collocation in terms of the rules of grammar is blurred. Their components are not replaceable by a synonym. For instance, but not It is , but not, . In both

125 NSOU ? PGEL 5 & 6 the cases, the replaced order will be treated as unique, pejoratively a deviation from the normative language. It may be noted this kind of collocational deviations may be pampered by a poet or creative writer for special figurative effect left willingly to the inference or interpretation of the listener or reader. They are no-interchangeable binomials. The order of the collocation's terms is fixed, for example, but not but not but not but not . Generally collocations are predictable chunks of lexemes, handed down to their users. Factors that generate the range of collocations are as follows (Callow and Kopesec,1981) : A certain level of specificity vis-à-vis generality: "the more general a word is, the broader is its collocational range, the more specific it is, the more restricted is its collocational range" (p. 50). For example, the verb has a wider collocational range than . The word has a wider range of collocation than For instance, in the collocation, 'go' means 'vogue' or fashion. This colour of the shirt will not my blue trouser: here signifies 'match'. Like 'do', 'go' enjoys a wider generality in collocational forms, often with idiomatic overtones. The senses a particular word evokes, are multiple and variable. The Structuralists like Ferdinand de Saussure points out that a word has, even literally, no unalterable, intrinsic authority of meaning. Most words lend themselves to a contextual reformulation of signification, in a changed set of relationships. In this sense collocation is downscaled to free and open combinations. For example the word can make a [but not] of free collocations, each with a different sense or meaning, such as Words like this goes with other words in yielding a [but not] of meanings. For example, collocates with different adverbial particles to produce a variety of meanings. If it is possible to say ' goes with words like ' . However, in the sense of , it goes with words like . Collocations generally have specific characteristics and their recurrent co-occurrences are perceived as constant and, therefore, cannot change, with the exceptions of transformational collocation where collocation spills itself to be transfigured into idiomatic, metaphoric and figural collocations, in transitional areas of lexical collocations. 126 NSOU ?PGEL 5 & 6 : Discuss the characteristics of the following collocation a. I can't with it any longer To write any valuable or breakable objects To apply for something c. He was trying to a serious point To tolerate d. Try to a little bit each week To clean up, to tidy e. Never until tomorrow what you can do today To explain something clearly f. She a new pair of cotton socks To delay your name in capitals To save money h. It took two hours to the fire To wear i. I decided to for a job as a manager To connect with the phone j. He asked to be to the front office To stop burning Your answer: Herbst (1996) explains that there are as given in the figure below: Open collocations deal with nodes capable to cluster with a wide variety of words e.g. a , an , a , etc. On the other hand, restricted collocations deal with clusters already fixed like idioms e.g. rain . Further, Fan (2009) focuses on lexical collocations and adopts Herbst's (1996) categorizations as follows:

127 NSOU ? PGEL 5 & 6 Free combinations, which refer to a combination where the meaning comes from the literal meaning of each element, for example, . Restricted combinations, which is used in a specific context, and the number of collocations is few, like . Figurative idiomatic collocations which refer to a metaphorical meaning that can somehow be derived from a literal interpretation, for instance, . Idioms, where there is a unitary meaning, totally unpredictable based on the literal meaning of its elements e.g. . Yet at another level Boriskina (2009) and Lewis (2000) categorize collocations in the following manner: Unique collocations which refer to fixed and irreplaceable collocations, such , among others. Strong collocations, which are very strong but not unique, such as among others. Another example of strong collocation is the participle ' '. It almost always collocates with or ; it rarely collocates with any other word. Although she was found guilty, the jury felt there were .(O'Dell & McCarthy, 2008) A few other examples: is very formal. (meaning: unpleasant weather) collocates almost exclusively with weather. She has auburn hair. Auburn collocates only with words connected with hair (e.g. curls, tresses, locks). I felt .(meaning: extremely happy) is strongly associated with , but not used with , etc. The chairperson .(meaning: is very strongly associated with and . (O'Dell & McCarthy, 2008) Fixed collocations: All are Fixed collocations are collocations so strong that they cannot be changed in any way. For example, we can say (meaning I was walking in one

128 NSOU ?PGEL 5 & 6 direction and then in the opposite direction, a repeated number of times). No other words can replace or in this collocation. It is completely fixed. The meaning of some fixed collocations cannot be guessed from the individual words. These collocations are called idioms. Elaborate lists of idioms are made available to the language users in Mobile downloadable applications. L2 learners can make use of these applications on their Mobile devices. Weak collocations, which comprise a number of co-occurrences that are descriptive and literally meaningful, and easily inferred, such as a etc. Medium-strength collocations, which can be weak, such as, or , Latinate Collocations:This subcategory of collocation is highly formal, and infuses a tone of gravity into the expression. For example: this is a problem- social, economic and political. This is a . This is . Milton spoke of writing his pastoral elegy with ' '. Poets like Milton and Wordsworth preferred this type of Latinate Collocations to add a note of poignancy or seriousness to their poetic texts: we find in both the poets' works a bristling use of with Noun as Base followed by adjectival collocates or in cases, placement of a Noun between two adjectives; for example, in Wordsworth's poem, The Solitary Reaper; in Milton's Lycidas, a pastoral elegy. In fine, Benson and Ilson (1986) separate collocations into two principal categories: grammatical collocations and lexical collocations. Grammatical collocations are content words, such as a noun, a verb or an adjective plus the infinitive or a preposition. Lexical collocations do not contain infinitives and prepositions : State whether the following collocations are restricted or open a. A brave soldier b. Pretty girl c. Job market d. Express admiration e. Close friends Your answer: The constituents of the two groups in their basic patterns- and are as follows:

129 NSOU ? PGEL 5 & 6 Grammatical Collocations Lexical Collocations Noun + Preposition Noun + Noun Adjective + Preposition Verb + Adverb Preposition + Noun Verb + Noun Grammatical Collocations Examples: Noun + Preposition: extend to, abide by, consultation with Adjective + Preposition: good at, Preposition + Noun: at night, by the morning, from dawn till dusk Lexical Collocations Examples: Noun + Noun: a bit of advice, a flock of sheep, a bouquet of flowers Verb + Adverb: Appreciate sincerely, participate whole heartedly Verb + Noun: reject an appeal, withdraw a plan : Say whether the following are Grammatical collocation or Lexical collocation? a) Chair a meeting b) Argue heartedly c) Close a deal d) Draw a conclusion e) In advance f) Come to the point g) By accident h) Dismiss an offer Your answer: : Identify the collocation from the following sentences and mention the type. They are angry at the children They are hungry for the news : Mention the patterns for the following lexical collocations a) Deeply absorbed b) An article of clothing c) Best regards d) Strong tea

130 NSOU ?PGEL 5 & 6 e) To be afraid that Your answer: To conclude, we have seen that there are several ways to classify collocations. Nevertheless, the most frequently applied classifications use the construct of lexical and grammatical collocations, followed by a taxonomy of unique, strong and weak collocations and their ramifications as set up by the linguists. 1. What is Collocation? 2. What are the varieties of Collocation? 3. Write a note on the significance of Collocation. 4. What is a lexical Collocation? 5. What is a grammatical collocation? 6. How are these two different? 7. Give two examples of strong collocations 8. Why do we call some collocations weak? 9. Can we call idioms as collocations? 10. What is the difference between a collocation and an idiom? 11. Collocation is important for L2 or FL learners (Second Language Learners or Foreign Language Learners). Give reasons to justify this statement. 12. All Idioms are Fixed Collocations. Explain with examples. 13. What are the differences between Lexical Collocation and Grammatical Collocation? 14. Compare and contrast 0pen and Restricted Collocation with suitable examples. 15. Collocations are arbitrary and non-predictable. How would you look at the statement. Do you support this view? 16. Write a note on Latinate Collocation. 17. Define the following terms and provide examples of their usages: a. Collocate or Collocators; b. Base or Node.

131 NSOU ? PGEL 5 & 6 Lee. (2002). Oxford: Oxford University Press Lewis. M, (1993). London: Cengage ELT. Mac Carthy, M and F. O'Dell, (2017). Cambridge: Cambridge University Press Oxford Collocations Dictionary 2002.
? We have already learnt that a collocation is a frequently occurring combination of two or more words which sounds natural and is tonally consonant with the native flair and competence of speaking and writing in English . If someone says, 'she's got yellow hair', they would probably be understood, but it is not what would ordinarily be said in English. We should rather say, 'She's got blond hair' or simply, 'She is a blond.' In other words, yellow does not collocate with hair in everyday English. Yellow collocates with, say, flowers or paint. Collocations are not just a matter of how adjectives combine with nouns. They can refer to any kind of typical word combinations, for example, verb + noun (e.g. arouse someone's interest, lead a seminar), adverb + adjective (e.g. fundamentally different), adverb + verb (e.g. flatly deny/contradict), noun + noun (e.g. a lick of paint, a team of experts, words of wisdom). There is much more about different grammatical types of collocation. Identify the V+ N structures from the following. a. Keep the change b. Keep clam c. Keep in touch d. Keep a secret e. Keep someone's place 132

133 NSOU ? PGEL 5 & 6 Your answer: At the end of the Unit, learners will be ? Familiar with different types of collocations, ? Able to use these collocations in their writing, ? Able to appreciate the aesthetic value of collocations in their speech. and learning, Collocations contribute to Collocations make the Second Language Learners [L2] aware of used by native speakers in speech and writing. An English teacher's common experience is that learners have difficulties with both lexical and grammatical collocations in their speaking and writing. In language courses, if teaching the collocations is underplayed, what is most likely to happen is: 1. Complex ideas will take long involute expressions rather than being put simply and precisely. 2. The fewer are the collocations made known to the L2 learners, the more are they compelled to use longer expressions and run into the pitfalls of grammatical errors and unusual phrasing [to communicate responses and information that a native speaker would have expressed with a felicity of precise lexical phrase and correspondingly little grammatical mistakes. Collocation errors abound in the writings and utterances of English language learners. Two major factors that contribute to miscollocations are learners' lack of exposure to the English language and the interference of their mother tongue (such as subject verb agreement with number and person). Collocation errors are of different types, with Lexical miscollocation and prepositional miscollocation being the two common types. The term 'lexicon' refers to the words used in a language. A collocation, by definition, is the co-occurrence of lexical items, the base and the collocate. In the case of , food is the base and fast is the collocate. Similarly, in , rain is the base and heavy is the collocate. The use of the collocate in a collocation

134 NSOU ?PGEL 5 & 6 is restricted by the base. Here are some common lexical collocation errors: In British English, some verbs that collocate with the base are and in American English, the verbs that collocate with the base are It is said that mastering prepositions is a challenge for the non-native speakers of English. In traditional approaches to grammar the appropriacy of prepositions to the base word is grouped under the title: APPROPRIATE PREPOSITIONS. O'Dell and McCarthy refer to certain examples given below: Evelyn Waugh(O'Dell & McCarthy, 2008). This is presented in the tabular form; Acceptable Not acceptable Deprived of: Denied from: The employees are deprived of their freedom Denied of: Deprived from: Prisoners were denied of their rights by the jail warden Suffer from: Suffer with: The Cambridge Learner Corpus, a corpus of language for students shows which kinds of collocation errors learners, especially L2 learners tend to make. These corpora show that there are many thousands of collocations in English, and many more miscollocations in speech and writing of the L2 learners.

135 NSOU ? PGEL 5 & 6 Error analysis in collocation may serve as an effective tool to improve L2 writing proficiency. Recent studies indicate that the sense of as well as its implications for teaching strategies for the L2 learners can be a compensating and moderating factor in SLA. For example, Richards (1971) claims that error analysis is a technique to identify the sources and causes of the learners' errors and to access information on general problems in language learning as an aid to language teaching. Lewis does not entirely reject grammar. He offers the importance of vocabulary in Lexical Approach. In his view, grammar is important in so far as it consolidates the lexical approach in teaching. Therefore, it is not the case to substitute grammar teaching with vocabulary teaching, but that both should be present in teaching a foreign language. A proper synthesis of lexical and grammatical approaches is conducive to learning English for the L2 learners or for SLA. Lewis (1997) holds that lexical approach is not simply a shift of emphasis from grammar to vocabulary teaching, as 'language consists not of traditional grammar and vocabulary, but often of multi-word prefabricated chunks'. Chunks include collocations, fixed and semi-fixed expressions and idioms, which in his view, occupy a crucial role in facilitating language production, being the key to fluency. Smith (2007) contends that remembering and using vocabulary is easier in the form of collocations. As Lewis (2000) points out, knowing a word is much more a case of knowing and than He exemplifies ' ' and ' ', the difference being only their collocational range, for example ' ' but not . Gitsaki (1996) underscores the importance of the study of collocation in tandem with grammar. At a deeper level of language lexis and grammar cannot be separated. They are intertwined.Consequently, the two categories - lexical and grammatical collocations - represent two distinctive but related aspects of one phenomenon. Grammatical collocations usually consist of a noun, an adjective or a verb plus a preposition or a grammatical structure such as 'to+infinitive' or 'that-clause', e.g etc. Lexical collocations do not contain grammatical elements, but are combinations of nouns, adjectives, verbs, adverbs such as (Bahns, 1993). A grammatical collocation, in contrast to a lexical collocation, is a phrase that consists of a noun, an adjective, or a verb plus a preposition or grammatical structure such as an infinitive or clause (Benson et al., 1986). Generally, , collocations that do not have translation equivalents in L1 have been demonstrated to present more difficulty for learners than which have L1 equivalents. Kaur and Hegelheimer (2005)

136 NSOU ?PGEL 5 & 6 examine whether the use of an online together with an by the advanced second language learners is useful in the transfer of word knowledge to an academic writing task. Their experiments and results indicate that there is statistically a significant transfer of vocabulary knowledge to the writing task. They state that formal writing in an academic setting required by the L2 learners to have a strong linguistic foundation, including a vast range of lexical skills. They call attention to the fact that the L2 learners do not have as much exposure to the target language as native speakers do. So they have a more limited command of the language as well as of vocabulary. Native speakers of English learn new words all their lives through interactions with other speakers and exposure to the language in formal and informal situations, but the L2 learners' exposure to and use of the target language is often limited. Miscollocation It is [shit] 1. It is . [dung] 2. Our company registered a in profit [steep/sharp/ high; last] 3. You will face a there. 4. Market leaders hope the new policies will .[stimulate/ promote] 5. He loves me . [deeply/passionately] 6. It is a in temperature. [marginal/slight] 7. Exports are now four times imports. [higher/greater] 8. We are gradually of the negative effects of climate change. [becoming] 9. My friend takes of the matter. [view] In the examples given above, grammar in terms of syntax and morphology, except in example 5, has not been sacrificed. Yet they are Miscollocation as they do not meet the native speaker/writer's usage and style. They sound awkward or unnatural or even amusing to the native speaker, although they may be understood. and provide the meanings of stem/entry words alongside illustrating each word'susage and collocations. Databases of language, known as , are used to correlate speech and text to identification of the most frequent collocations. It is a prudent approach to pick collocations from looking up word-entries in these dictionaries for a L2 or Second Language Learner.

137 NSOU ? PGEL 5 & 6 So, an awareness of collocation is if we intend to impress people with our natural and competent use of language and to score more credits in English examinations. [Following the standard collocation pattern, it is or not 'severely recommended'.] Collocational errors that the L2 learners are likely to commit are the transferences of L1 elements in their native language combinations which unfortunately are not always acceptable collocations in the target language. The L2 learners' lack of knowledge of collocational patterns of lexical items makes them prone to all sorts of collocational errors, which can be more disruptive in communication than grammatical errors From the traditional points of view of psychologists, linguists, and language teachers, in importance for successful language learning and treated as separate from grammar. While vocabulary studies are often back-seated, the value of vocabulary acquisition has been recently recognized (Allen, 1983;Laufer, 1986; Coady, 1997; Zimmerman, 1997, &Shand, 1999, Lewis (1993), as of prime importance in second language acquisition. Lewis (1993), one of the foremost scholars of ELT, shook the entire ELT world by stressing the importance of vocabulary in a broader area called . According to this approach, an essential part of language acquisition is the ability to comprehend and produce lexical patterns and phrases as chunks; these chunks become the raw data by which learners perceive patterns of language traditionally thought of as grammar (Lewis, 1993). Certainly, this approach distinguishes between groups of individual words with fixed meanings and lexis which refer to word combinations that are stored in our mental lexicon. Accordingly, the lexical approach has redirected our attention to institutionalized utterances and expressions including collocations which are necessary to acquire native-like competence in the second language. Identify wrongly used Collocations and mention the correct forms a) She insisted me that I take a few days off from my work. b) We explained the client the situation. c) The interview was broadcasted live over the internet. d) Never before had I seen something quite like that. e) She is trying to concentrate herself on finishing her degree. Identify common mistakes in emails and correct them. a) Thank you for bringing this to our notice. b) As asked for, I have added a purchase order. c) Please let me know if you require any extra assistance.

138 NSOU ?PGEL 5 & 6 d) Thank you for your fast response. Your answer: Answers for Task 2 a. She insisted that I take a few days off from my work. b. We explained the situation to the client. c. The interview was broadcast live over the internet. d. Never before I had seen something quite like that. e. She is trying to concentrate on finishing her degree. Answers for Task 3 a. Thank you for bring this to our attention. b. As requested I have added a purchase order. c. Please let me know if you require any additional assistance. d. Thank you for your prompt response. It is a synthetic approach to viewing collocations without any bias to their grammatical and lexical configurations. Studying different types of grammatical and lexical collocations provide insight into the order and pattern of their development in second language learning. By doing a systematic study and analysis of grammatical and lexical collocations, a second language learner can comprehend how collocations form an essential part of language as spoken and written. The following tables include all possible variations of collocations (O'Dell & McCarthy, 2008) Noun + noun collocations are descriptive Noun Phrases usually signifying a group or set or cluster of something. It may also refer to quantity, as Examples: from the angry audience • Noun + noun collocations are also used with uncountable nouns:

139 NSOU ? PGEL 5 & 6 drew up a contract Our agent drew up a contract for us pass up chance She does not want to pass up the chance of take advantage I failed to of works medicine No medicine works to arrest the growth of the tumor. arrest growth opportunity arose An opportunity arose for me to Ph. D courses at IIT feel; have fallen/slipped People feel educational have fallen/slipped OTHER EXAMPLES: hardboiled egg Hardboiled egg is not little girl This little girl is small machine This small machine will not / OTHER EXAMPLES: etc. vale profound "O listen! for the Vale profound Is overflowing with the sound"[Wordsworth: The Solitary Reaper] meadows trim with daisies pied" [Milton: L'Allegro]

140 NSOU ?PGEL 5 & 6 Intensely; personal;attractive; Lyric proper is an intensely personal stunningly; highly; inflammable; sick; account of the writer's severely; improved [past relationship with his sons.She is a technologically. participle form] stunningly attractive . highly inflammable; severely sick; technologically improved etc. miserably Whenever I tried to recklessly write a poem, I failed into singing/into a song miserably. into an accident Never drive recklessly, if you don't want to run into an accident. Looking at the moon-blanched seashore, she burst into singing/a song The dog is foaming at the mouth; I apprehend [not expect] that it will not survive.

141 NSOU ? PGEL 5 & 6 forced Fingers rude I come to pluck your ,And with forc'd fingers rude [Milton:] sad Occasion Dear Bitter constraint and sad occasion dear Compels me to disturb your [Milton:] : Don't be upset over what has happened; . It's time you and look to the future. Identify the adjective noun collocations from the following: a) The names are listed in alphabetical order. b) Success depends on a clear understanding of the problem. c) Beyond this close circle are more distant relatives and casual friends. d) I couldn't see familiar faces in the room. e) For the spoken language, students are taught by the native speakers. Your answer: [Except the simple present and simple past all collocating verbs are of the tenses] : Do-Verb

142 NSOU ?PGEL 5 & 6 Is done Have done Will do Should do Are done Has done Should be done Is being done Has been done Shall do Should have done Are being done Have to do Will be done Should have been Is to be done Has to do Shall be done done Have to be done Would do Has to be done Would have done Will be doing Would have been Shall be doing done Had done Will have to do Could do Had been done Shall have to do Could be done [italicized verb- Could have done collocations in this Could have been group are obsolete] done Might do Might be done Might have done Might have been done Identify the verb collocations a) 'You and me, today we are going to break a record,' he said. b) The committee had made serious objections to that plan. c) It is easy to make a mistake. d) The old man is going to go crazy. e) You get wet in the rain. Your answer: It is not easy to separate from Both items form an important part of the vocabulary studies. Logically compounds are to be considered a type of collocation which is fixed and hyphenated in case of repeated letters in the coalescing two parts of a compound, that is, the last letter of

143 NSOU ? PGEL 5 & 6 the constituent first part and the initial letter of the second part. For example, the word co-occurrence is a compound,with a hyphen between co and occurrence. If it is , the same rule applies to it. but if it is , no hyphen comes between co and existence. In the US variant of English compound as an extension of collocation, this law of hyphenation in compound is not followed. We have to keep it in mind that natural lexical collocations are not always logical. They have taken shape through popular native use. (O'Dell & McCarthy, 2008) Questions are a galore in any incisive and comprehensive study of vocabulary in terms of the parentheses of Collocation, Idiom and Phrase. In the next two units will unfold the myriad facets of these Lexi-grammatical categories of collocations. The collocations presented in this Module are selected largely from those identified as significant by the CANCODE corpus of spoken English, developed at the University of Nottingham in association with Cambridge University Press, and the Cambridge International Corpus of written and spoken English (now known as the Cambridge English Corpus). In discussing the problems and aspects of collocations, idioms and phrases in a continuum, we have to take into consideration the following questions: ? ? We need to be familiar with collocations because, 1. They help us speak and write English in a natural and appropriate way. We are not supposed to use,"I was held up or stranded in this morning, although it communicates in some way the intended meaning but our language sounds unnatural to the point of confusing the listener. 2. Learning collocations will also help us increase our range of English vocabulary.

144 NSOU ?PGEL 5 & 6 For example, we will come up with a set of vocabulary to avoid words like or or or , and pick a word that fits the context better and has a more precise meaning. 3. This is particularly useful if we go in for a written examination in English and want to make a good impression on the examiners. In advanced level examinations, marks are often specifically awarded for the appropriate handling of collocations. 4. Skilled users of the language may choose to create effects by varying the normal patterns of collocation, with the aim of either startling or amusing their audience. This technique is particularly popular with poets, journalists and advertisers. From an appreciation of the way in which creative writers play with language, we may then even want to move on to use words in more original and creative ways ourselves. We are more likely to be able to do this effectively if we have assimilated the standard patterns of language use. In this unit we have looked at collocations and their place in language use. We have shown how collocations add to the flavour of the language we use. However, learning collocations is a conscious effort and this is demonstrated by illustrating a few miscollocations that we often slip upon. Collocations are words that bind together and their relationship cannot be ignored. Further, we have classified the collocations into various groups based on their composition and stability. Based on stability, we have two types: strong and weak collocations. These help us in honing our ability to write and speak better. 1. Collocations play a centrally important role in second language acquisition: Justify. 2. What are the metaphoric, symbolic and transfigural overtones of collocation? 3. What are the difficulties faced by the second language learners in choosing the right and appropriate collocations? 4. Distinguish between lexical miscollocations and grammatical miscollocations. . Complete the collocations using the words in the box. Adjourn | auburn| broad| deliriously | inclement | mitigating | picturesque [some words may be used more than once]

145 NSOU ? PGEL 5 & 6 a. an.......accent b. in........agreement c. ....circumstances d. ....factors e. ....hair f. ....happy g. ....a smile h. ....a location i. ....a meeting j. ....a town k. ....a trial l. ....weather 6. Rewrite each sentence using a collocation from 1. a. Melissa has quite a strong . b. led to the cancellation of the President's garden party. c. We were all very happy when we heard we'd . d. Their new home was in a very . e. Because there were that made the theft less serious, the judge let him off with a warning. f. I think we should now and continue it tomorrow. g. She had a on her face when she arrived. h. She has lovely . i. I think we're generally as to what should be done. Think of as many collocations as you can for each word. 7. Choose an English-language text that you have worked on recently. Underline five collocations in it. Are these collocations weak, strong or fixed? 8. Choose any ten collocations that are most important to you and make sentences with them. 9. Choose from the given text and underline five collocations in it. Are these collocations weak, strong or fixed? 'There is, for example, no obvious reason why we say making friends rather than getting friends or heavy rain, not strong rain. Learners also need to know when specific collocations are appropriate. This is usually referred to by linguists as knowing which register to use. Alight from a bus is a formal collocation used in notices and other official contexts. In everyday situations we would, of course, always talk about getting off a bus.' 10. How would you distinguish between and ? Vocabulary as part of a content is considered a critical aspect of foreign language learners. A limited range of vocabulary in a second language impedes the flow of communication. Lexical knowledge is central to communicative competence and to the acquisition of a second language. The correlation between vocabulary knowledge and language practice is complementary. Knowledge of vocabulary enables [ALC] and the use of language expands the horizon of vocabulary stock. Therefore, there is a symbiotic relationship between possessing good vocabulary and language competence. At the end of this unit, the learners will: a. Understand the importance of learning vocabulary, b. Become familiar with some strategies to learn vocabulary, c. Understand the differences between collocations, idioms and phrases, d. Understand the importance of collocations, idioms and phrases in learning vocabulary. 146

147 NSOU ? PGEL 5 & 6 In classroom, the gifted learners possess both the appropriacy and the sufficiency of vocabulary. Researchers such as Laufer and Nation (1997); Maximo (2000); Read (2000; 2004); Marion (2008); Susanto (2016); and Nation (2001) among others hold that the acquisition of vocabulary is more essential than grammar learning for achieving competence in the use of foreign language as spoken and written by the native users. Learning vocabulary plays a crucial role in all language skills, e.g. listening, speaking, reading, and writing. The acquisition of an adequate vocabulary is essential for successful foreign language use because without an extensive vocabulary, a language learner will be unable to use the structures and functions that go into the production of intelligible communication. The lack of vocabulary knowledge is the largest barrier to readers to manage the production and comprehension of English as a second/foreign language. When language learners travel, they do not carry grammar books, but dictionaries. Many researchers argue that vocabulary is one of the most important components in learning a foreign language. A second language curriculum should necessarily reflect a due weight on vocabulary studies. There is not much value in being able to produce grammatical sentences if one runs short of expressive vocabulary needed to convey what one wishes to say. Without grammar very little can be conveyed, without vocabulary nothing can be conveyed. Maximo (2000) states a number of reasons for directing our attention to vocabulary. ? First, a large vocabulary is, of course, essential for masteryof a language. ? Secondly, language acquirers know this; they carry dictionaries with them, not grammar books, and regularly report that the lack of vocabulary is a major problem. ? Thirdly, vocabulary has been acknowledged as the language learners' greatest single cause of problems (Meara, 1980). An open-endedness of is a necessity in teaching and learning the second/foreign language. Vocabulary is by far the most sizeable segment of SLA to cope with in examinations as well as in everyday communications across the borders. ? Fourthly, unlike syntax or phonology, vocabulary does not have a set of rules for the language learners to follow in order to acquire and develop their knowledge. In other words, it is not clear in vocabulary learning which rules apply or which vocabulary items should be learned first. Although, many

148 NSOU ?PGEL 5 & 6 experiments have been conducted to select and grade vocabulary to be learnt, since 1905. Vocabulary learning management [VLM] also poses a challenge to the L2 learners of any language, because of different and diverse meanings that may go with a single word-item. Despite these difficulties, vocabulary has traditionally been one of the language components measured in language tests. Furthermore, many learners see second language acquisition [SLA] as essentially a matter of learning vocabulary and therefore the second language learners spend a great deal of time on memorizing lists of words and rely on their bilingual dictionaries as a basic communicative resource. It may be safely concluded that language teachers and applied linguists now generally recognize the importance of vocabulary learning and are exploring ways of promoting it more effectively. - There are two types of contexts. The first type is the , which includes morphological, semantic and syntactic information in a specific text. The second one is the , or , which is the background knowledge the reader has about the subjects being studied. Learning from context not only includes learning from extensive reading, but also learning from taking part in a conversation, and learning from listening to stories, films, television or the radio. In order to activate guessing in a written or spoken text, there should be available:

149 NSOU ? PGEL 5 & 6 The absence of word annotations or glossaries appended to the given text is of one of these elements that may adversely affect the learner's ability to guess. Moreover, this technique encourages learners to take risks and guess the meanings of words they do not know as much as possible. This helps them build up their self-confidence so that they can work out the meanings of words when they are on their own. There are many clues learners can use to establish meanings for themselves, such as contextuality, illustrations, similarity of spelling or sound in the mother tongue, and general knowledge. :State the type of context clues from the following: a) Is/ are known as/ are called/ are defined as Restatement b) In other words, that is to say Definition c) For instance, like, especially, such as Contrast d) Yet, however, whereas, but Cause and effect e) Because, therefore, so, because, Example f) My neighbour is so affluent that he can afford Inference expensive sports car each year. Your answer: : Name the content clues from the examples: a. After a year in India, she ran out of money. So she had to look for a job. b. Hari loves reading fiction but Manish despises it. c. She was bored of the vapid discussions. d. During the day, we sometimes saw animals such as elephants and foxes. e. A pseudonym or penname is used to hide the identity of the writer. f. Pragmatics is the study of how people use language in social situations. Your answer: Answers for Task 1: a-definition, b-restatement, c-example, d-contrast, e-cause effect, f-inference. Answers for Task 2: a-cause effect, b-contrast, c-inference, d-example, e-restatement, f-definition Strategies are communicative procedures that learners use in order to learn and use language. Strategies also involve mental reactions and assumptions in the learning process. Learning strategies are the thoughts and actions that individuals use to accomplish a Subekti and Lawson (2007) plead for the effectiveness

150 NSOU ?PGEL 5 & 6 of the application of certain vocabulary learning strategies that provide empirical evidence of the role of AAVin mastering new words by a second language learner. Oxford (2003) more specifically states that learning strategies are tools for active, self-directed involvement, which is essential for developing communicative competence. An appropriate language learning strategy should result in a greater self-confidence of the second language learner. Producing academic essays is different from writing personal accounts because the former requires transforming knowledge. The L2 learners have to be aware of how to process information and transfer it by using effective vocabulary. Therefore, if the learners do not have a broad range of productive and academic vocabulary knowledge, they are not expected to produce the types of writings required from them in an academic set-up.Granger (1998), Howarth (1998), and Nesselhauf (2003) also conducted studies in which they analysed the writings of the advanced L2 learners. They identified deficiencies in learners' writing production. It is noteworthy that only Howarth was dealing specifically with academic vocabulary collocations. However, researchers and scholars in the field of ELT conclude that the learners' lack of knowledge of collocations affect the learners' writing competence. These scholars' researches funnel to the point that learners across all levels of L2 face difficulty in collocating words. Indeed, there exists a strong linear correlation between writing proficiency and using collocations.The development of the L2 learners' collocational competence contributes to the improvement not only of communicative competence but also of their writing abilities. : Select the verbs that collocate with the following paradigms: Clue- come, take, make, break, keep, and have. A promise A mistake An exam A promise Prepared A lecture A record An offer A vacation In touch On time A dream Someone's A decision A decision A journal To power A discussion heart Up An effort A chance In mind Early In mind Down Payment Care Safe To a stop A break Even A choice Advice Away To an end A party A leg Clear A picture Records close A meeting Your answer:

151 NSOU ? PGEL 5 & 6 We need a notebook or file to write down the collocations that we find or hear from all possible sources that include prescribed texts, web-resources, tutors, audio- visual aids, books and journal articles alongside a good usage-illustrative dictionary like the or or At the level of grammar and lexis, are also types within the ambit of collocation. As mentioned earlier, when a particular collocation generates meaning beyond the literal frame, it becomes an idiom or phrase with extra-literal, metaphoric or figural meaning. There is only a semantic difference of meaning between collocation and idiom or phrase. In other words, when Collocation eclipses its literal frame of meaning to take on extra-literal idiomatic, metaphoric and figural charges, we enter the transformational arena of collocation in terms of idiom and verbal phrase. To begin with, we may refer to Wordsworth's use of 'see into' in one of the very suggestive lines in his poem, . He says: With an eye made quiet by the power of harmony/ we the life of things. At the level of grammar, placement of after the transitive verb 'see' is not permissible. Seeing is done by the eye. So addition of 'an eye' to is apparently a flaw of redundancy. Yet Wordsworth makes an excellent innovative, poetic and figural use of SEE INTO in the context this collocation appears breaking the established and antecedent rules of grammar. Wordsworth collocates in order to signify the pantheist vision of or insight into the spirit of a trans-singular, absolute oneness that permeates the contraries and diversities of the universe. This Wordsworthian collocation is not necessarily a poet's exclusive prerogative while it may coextend to any creative user of language without affecting the of language. Let us review a few phrasal verbs and compound nouns as types of collocation. O'Dell and McCarthy provide some very apposite examples we cite here. They are: Phrasal verbs such as and compound nouns such as . As to the formation of these types of phrasal verbs and compounds there is no rationale as admitted by the foremost scholars and linguists.

152 NSOU ?PGEL 5 & 6 (O'Dell & McCarthy, 2008) : Give the meanings for the following idioms: a. Hit the sack b. Buy a lemon c. Eat crow d. Down-to-earth e. Pull yourself together Your answer: Task 5: Identify- noun+ noun combination or compound noun? a. Homework b. Password c. Air conditioner d. Orange juice e. Cheese burger f. Runner-up Your answer: Answer for Task 4: a) go to bed. b) to buy something that doesn't work well, c) to have to admit that you made a mistake, d) sensible and realistic, e) clam down This unit focuses on developing the vocabulary skills of L2 learners, that is, the learners of English as the second language. It also introduces you to the lexical orientation of language learning for the L2 learners rather than the traditional grammatical tilt.

153 NSOU ? PGEL 5 & 6 (O'Dell & McCarthy, 2008) 1. Match the two parts: BASE and COLLOCATE of the following. (O'Dell & McCarthy, 2008) 1. adhere to.......................................rain 2. arouse..different 3. blond... of wisdom 4. come up with...............................your principles 5. flatly... an economy drive 6. fundamentally...............................a seminar 7. go on ....someone's interest 8. heavy... contradict 9. lead... hair 10. a lick... the stock market 11. play... of paint 12. words....................................... a suggestion 2. Write F (formal), I (informal) or N (neutral) in the brackets at the end of each sentence. In each pair of sentences, there is one neutral sentence and one formal / informal sentence. Underline the collocations that are noticeably formal or informal. 1. a. Passengers must not alight from the bus while it is in motion. (¨formal/¨ informal) b. Passengers must not get off the bus while it is moving. (¨formal/¨ informal) 2. a. Let's grab a bite before we get down to work. (¨ formal/¨ informal) b. Let's have something to eat before we start work. (¨ formal/ ¨ informal) 3. a. SFTS has the right to bring the agreement to an end with three months' notice. (¨formal/ ¨ informal)

154 NSOU ?PGEL 5 & 6 b. SFTS reserves the right to terminate the agreement with three months' notice. (¨formal/ ¨ informal) 4. a. She thinks her boyfriend is planning to pop the question tonight. (¨formal/¨ informal) b. She thinks her boyfriend is planning to ask her to marry him tonight. (¨formal/¨ informal) 3. Choose which collocations are most important to you and make sentences with them. Choose an English-language text that you have worked on recently. Underline five collocations in it. Are these collocations weak, strong or fixed? 4. How would you justify that idioms, phrasal verbs and compound nouns are also subtypes within the ambit of Collocation. 5. 'There exists a strong linear correlation between writing proficiency and using collocations.' Discuss. 6. Discuss the difference between and . 7. Write a note on . 8. What are the factors that may adversely affect the learner's ability to guess or effectively assume meaning from a given text? 9. In vocabulary study how effective is the Assumptive Acquirement of Vocabulary [AAV]- teaching vocabulary through guessing from context? 10.List down a number of reasons for directing our attention to vocabulary study. 11.Do you think that the lexical orientation of language learning for the L2 learners rather than the traditional grammatical tilt is more important? If so, state the reasons. 1. Felicity O'Dell &Michael McCarthy, 2008. : . Cambridge: Cambridge University Press. 2. Thornbury Scott. – London: Pearson Longman. 2002 3. Nation I S P (2005). In Hinkel, E Abingdon; Routledge ? Goose Egg Idioms Both idioms and phrasal verbs are collocational transfiguration/ displaced duplication of the constituent words from their literal or dictionary meanings to non-literal signification. In other words, idioms and phrasal verbs are figurative word combinations. Therefore the range of idioms and phrasal verbs are enormous. It is advisable to directly access the rich store of idioms and phrasal verbs though several mobile applications. The objective of unit 16 is to introduce the learner to: ? review idioms and verbal phrases in the backdrop of Collocations, 155

156 NSOU ?PGEL 5 & 6 ? MWEs ( ), ? the terms of references to idioms, ? the terms of references to verbal phrase. Language as we experience on a daily basis is largely 'formulaic', or 'prefabricated', rather than completely or , word-by- word. In English, we tend to wish someone a , rather than other plausible possibilities, such as a . Despite the potentially infinite creativity of language, a large number of words tend to co- occur with some particular words more often than with other words, seemingly synonymous ones, and those combinations and re-combinations often appear to be in the native speaker's mental lexicon. These recurrent and preponderant word combinations – which we usually call Collocations – are essentially multi-word expressions (MWEs). MWEs can be defined as semi-fixed, recurrent phrases, such as collocations (strong tea), binomials (black and white), multi-word verbs (put up with), idioms (spill the beans), proverbs (better late than never), speech formulae (What's up), lexical bundles (in the middle of), and other types. MWEs are combinations of words that co-occur more often than would be expected by chance alone (Manning and Schutze 1999).Crucially, MWEs are pervasive in language. Identify the multiword expressions 1. Safe and sound 2. In the context of 3. Sick and tired 4. A number of studies 5. Wait and see 6. All's well that ends well 7. Pros and Cons Your answer:

157 NSOU ? PGEL 5 & 6 There are many dimensions of idiomaticity. Attempts to provide categorical, single- criterion definitions of idioms are always to some degree misleading. In linguistic discourses and lexicographical practices, 'idiom' is applied to a category defined on the one hand by the prototypical examples like , and on the other by implicit opposition to related categories like formulae, fixed phrases, collocations, clichés, sayings, proverbs, and allusions— terms which, like 'idiom' itself, inhabit the intermediate realm between meta-language and the theoretical terminology of linguistics. By virtue of these oppositions, idioms occupy a region in a multidimensional lexical space, characterized by a number of distinct properties: semantic, syntactic, discursive, and rhetorical. When we say that an expression like or is a prototypical idiom, for example, we are probably making that judgment on the basis of a number of more-or-less of the phrase. Among them more remarkable are these: : Idioms are conventionalized: their meaning or use cannot be predicted, or at least entirely predicted, on the basis of knowledge of the independent conventions that determine the use of their constituents when they appear in isolation from one another. : Idioms typically appear only in a limited number of syntactic frames or constructions, unlike freely composed expressions (e.g. *the breeze was shot, *the breeze is hard to shoot, etc.). : Idioms typically involve metaphors (, metonymies ( ), hyperboles ( ), or other kinds of figuration. Of course speakers may not always perceive the precise motive for the figure involved—why should be used to mean 'chat', for example, or to mean 'die'—but they generally perceive that some form of figuration is involved, at least to the extent of being able to assign to the idiom a ' meaning'. C.F. Hockett explains, Every language retains idioms with the specialized features in linguistic forms. Idiom is functional and is one of the manifold figurative speeches in linguistics. It is commonly being used by the people of a particular region or country for informal and formal, spoken and written purposes. And yet, while trying to define the idiom, it still remains to be complicated and tough to debate upon a precise scope or limitation of it even today.

158 NSOU ?PGEL 5 & 6 According to Hockett, " ". Interestingly, all idioms dislocate the constituent words from their localized literal meaning. Given any such novelty, either of expression or of circumstances or of both, the event or context of their origin " ." : Analyse the following idioms according to their characteristics: a. Up in the air b. Break a leg c. Kill two birds with one stone d. Two to tango e. On cloud nine Your answer: a. The meaning of the idiom is partly reflected from its constituents. This idiom means that the situation being planned is still undecided, and that everything is still uncertain or unsure. This has rhetoric features. b. This is an idiom that can freely occur with expressions. Break a leg is a wish of good luck to theatre performers before going on stage, due to the belief amongst those in theatre that being wished "good luck" is a curse. The meaning is total opposite for what it seems to mean. This has discursive characteristics. c. When you kill two birds with one stone, a single action knocks out two tasks or responsibilities— accomplish two different things at the same time. The meaning is flexible as it can occur with unlimited expressions. d. The idiom is a figuration, where the meaning is predicted from its constituents. It literally does take two to tango. You can't dance the tango unless you have a partner. But this idiom means that if there's a suspicious situation, then there's more than one culprit. e. If you are in cloud nine you are very happy. For example, I was in cloud nine after receiving the news of my promotion. This is a conventional idiom as the meaning is derived from the individual words.

159 NSOU ? PGEL 5 & 6 Idiom is the transfiguration of Collocation — words commonly used in a group — that through usage changes the literal and semantic definition of each of the words that exists within its lexical parenthesis. The collocated/collocating words develop an accepted socialized meaning as a whole and an idiom is born. John Saeed defines " ." (Saeed, 2003). According to the detailed introduction of the (the rest: ODEI), " pure idioms word-combinations ." Idiom is generally known by the common specialized form which is different from the literal meaning in a sentence. However, an etymological analysis is preferable to begin with the definition of idioms. Thus ' -' and '- ' are two parts of the word 'idiom'. The former denotes one's own, separate, or distinct ENTITY; the latterforming a noun is a substantive suffix indicating the result of verbal action. The term IDIOM, therefore, denotes 'peculiarity', especially 'peculiarity in language'. It was originally derived from Greek ' -' and ' ' and then Latin word ' '. At last it was derived directly from the French word ' ' in late 16th century. Roodbergen defines "idioms as a technical term for any complex formation, word, phrase or sentence whose meaning cannot be explained on the basis of its constituents." The introduction in ODEI sheds light on this issue, "The best known approach to the definition of idiomaticity, and one which linguists as well as dictionary-makers have helped to popularize, fastens on the difficulty of interpreting idioms in terms of the meanings of their constituent words. Definitions such as the following are representative of this approach: ? Groups of words with set meaning that cannot be calculated by adding up the separate meanings of the parts. ? Peculiarity of phraseology having meaning not deducible from those of the separate words. In addition, Radha Madhab states "idioms-formation in a spoken language indicates a lively way of expressing the specific ideas under specific environs. And these idiomatic expressions, be they semantically excellent or structurally peculiar ones with inordinate audio-effect on the hearers, constitute the idiomatic character of a given expression." In the parallel manner, Ramachandrudu comments, "an idiom is defined as a form of

160 NSOU ?PGEL 5 & 6 expression, construction, phrase etc., peculiar to a language, a peculiarity of phraseology approved by usage and often having a meaning other than its grammatical or logical one." The following Five significant definitions more or less cover different views on the definition of idioms: 1. The language or dialect of a people, region, and class are indicative of culture and local colour etc. 2. The usual way in which the words of a language are joined to gether toexpress thought. 3. An accepted phrase, construction or expression contrary to the usual patterns of the language or having a meaning different from the literal. 4. The style of expression that is characteristic of an individual; such as the idiom of Carlyle. 5. A characteristic style as in art or music. 1. Corpus linguistics 2. Usage-illustrative dictionaries like The Cambridge International Dictionary; Advanced learners Dictionary; Mobile Apps of Vocabulary, Idioms and Phrases. A phrasal verb is a verb that is made up of a together with an adverbial or a preposition, or both. Typically, their meaning is not obvious from the meanings of the individual words themselves. For example: looked down on broke out see to put off spelled out For instance, in the first example, the phrasal verb 'to look down on someone' doesn't mean that you are looking down from a higher place at someone who is below you; it means that you think that you are better than someone. : Identify the Phrasal Verb and its constituents a. They had to Account For all the money that had gone missing. b. The rest of the staff Backed her Up when she complained about working conditions.

161 NSOU ? PGEL 5 & 6 c. She Breezed Through her exams. d. I'm going home to Catch Up On my sleep. e. I really Dropped him In It when I told them what he'd done. Your answer: Phrasal verbs can be of two types as showed in the figure below: Examples of intransitive verbs (verbs with no object): broke up . set off . pulled up . Examples of transitive verbs (verbs which can have an object): break up sets off pulled down The verb and adverb elements/ particles which make up intransitive phrasal verbs are never separated: ? broke up . ? broke up. The consecutive placement of the constituentsis different with transitive verbs,

162 NSOU ?PGEL 5 & 6 however. If the direct object is a noun, you may say: ? pulled down. [direct object] ? pulled down But there is a difference between two uses. When the object is sandwiched between the verb and the particle/adverbial, the effect of the expression is emphatic. This is technically called . We often prefer split phrasal verb for emphasis of meaning. If the object is a (such), grammatically the object always comes between the verb and the adverb: ? pulled down. [direct object] ? pulled down As said earlier, a phrasal verb is a verb that comprises together with . Typically, their meanings do not conform to the literal meaning from meanings of the constituent individual words themselves. looked down on broke out see to put off spelled out In the first example, the phrasal verb 'turn off' means 'switch off'. 'to look down on someone' does not mean that we look down from a higher place at someone who is below ; it means that we feel that we are better than someone, or rather we despise someone. We can hone almost an inexhaustible store of idioms and phrases from Internet sources to enrich ourselves with exposure to idioms and phrasal verbs. : Transitive or Intransitive?

163 NSOU ? PGEL 5 & 6 What a pretty dress! Why don't you try it on? You're doing really well, so carry on like this. (continue) He started a university course but dropped out after one year. (left/stop participating) If you've got a good idea, bring it up at the meeting. My colleague and I get on really well. (have a good relationship) Pete and Sue had an argument but they've made up now. (reconcile) Did you get the tickets? No, they'd sold out. (sell all those available) Your Answer: two peas in a pod Practically identical in appearance. Those boys could be twins; they are like two peas in a pod. fan the flames Make a bad situation even worse. The president's racist comments are really going to fan the flames of hatred among the crowd. a hard nut to crack A problem that is difficult to solve. She's such a tough nut to crack. Nobody seems to be able to get through to her. turn against To change from supporting something to opposing it. A section of his supporters turned against him when they heard his latest speech on immigration.

164 NSOU ?PGEL 5 & 6 fight tooth and nail To fight very fiercely. I want this job so I'm going to fight tooth and nail for it. herculean task A task requiring huge amounts of physical strength. It will be a herculean task to get through to the quarter-finals, but this untested team is up for the challenge. call of duty Something you must do or feel compelled to do. Both of my grandfathers felt it was their call of duty to enlist immediately for active service when the war broke out. knotty problem Difficult or complex problem. The accountant always found the end of the tax year to be a knotty problem. when life gives you lemons Make the best out of a difficult situation. She tried to live by the motto 'when life gives you lemons, make lemonade.' topsy-turvy With the top at the bottom. Everything has been topsy-turvy since we moved in. I can't find anything until I unpack properly. ? zero ? nothing

165 NSOU ? PGEL 5 & 6 ? no score in a game ? lump appearing after a blow (usually on the head) ? swelling from being struck ? lay an egg ? We had a good game, but the score was goose egg. ? He answered every question wrong in the quiz and got a goose egg. ? The cricket ball hit him in the back of the head and an egg popped up immediately. ? The crowd were devastated that the game was a goose egg after 90 minutes. ? He could still see the egg on his forehead even though he'd brushed his hair over it. ? Last month's revenue for the company was a big goose egg. ? She was crying and replied that we had a goose egg in the project. ? Lots of companies laid goose eggs in 2020 due to the pandemic. ? My son scored 5 out of 10. Well, it's better than a goose egg. ? The teacher has given a big goose egg to Mathew in the test result. ? Is there anything you know when we search, and google returns Goose Egg Idioms The phrase is an American version of a British saying "duck egg" and it is widely used in the sports world. the earliest record of the phrase was most likely to be in the period between 1350 to 1400. In the US (American English) this is a late 19 th century, slang term for zero score in a sporting event or game. A is the failure of a team to score any points or goals. The phrase is derived from the shape of a goose egg looking like a zero. In a sentence it replaces the word zero. Before that, the British used or just to describe a lump or swelling that appears after a blow or hit, most often to the head. any large lump that has this shape is called an egg.

166 NSOU ?PGEL 5 & 6 In this unit we have looked at a variety of idioms and multi word expressions. The difference that exists between the two is clearly explained with examples. Further we have looked at idioms where the meaning of the component words changes sharply and a new meaning gets generated. Finally, we have examined a few phrasal verbs both in their transitive and intransitive forms. The unit concludes with a list of rich examples of some the idioms. 1. What are idioms? 2. How are idioms different from multi-word-expressions? 3. Give examples of some commonly used multi-word-expression. 4. Are there idioms in your language? 5. Compare five idioms from Bangla with their possible equivalents in English 6. What are collocations? 7. Do collocations offer special meaning like the idioms? 8. What strategies can we adopt to learn idioms, and collocations? 9. What are phrases? How many types of phrases do we have? 10. Give five examples of each type of phrase? 11. Can we split all the phrases? Give examples of phrases that can be split. Aghbar, A., 1990. s.l., s.n. Bahardoust, M. & Moeini, M. R., 2012. 170 NSOU ?PGEL 5 & 6

? Morphology in English will primarily focus on the basic norms and strategies of English word formation. Like all other modern languages English language is shown as a dynamic process of morphological construction, combination and linguistic mutation and permutation. This module will also focus upon the English words and their relationship with other foreign words and the words of the same language across the chronological paradigm. The central focus of the Module is upon the English word structures. The words have been analysed into parts and particles as different morphemes in contrast to the formation and functional aspects of the majority of English words. Subsequently, English word structures are demonstrated as word stems, root words, prefixes, infixes and suffixes so that ELT experts and trainees can easily solve linguistic problems associated with English morphology. English Language Teaching reached its watershed during the twentieth century with the impetus it got from the study of Applied Linguistics 1 . It has been observed that recent experiments and changes in teaching methods of ELT have contributed to the growing importance of 'Morphology' and 'Phonology' in ELT classroom. You know that morphology (mɔ:r 1 fɑled3i)/ is the scientific study of formation of words. The study of 'morphology' emphasizes on the following paradigms of of English Language: i. How the English words are formed; 173 MODULE - 1 : MORPHOLOGY

174 NSOU ?PGEL 5 & 6 ii. How the English words are related to other words of the same language. iii. How the English word structures are analysed in parts and particles of different English words, iv. How the English word structures are re-structured such as word stems, root words, prefixes, and suffixes. The study of 'morphology' emphasizes on the following paradigms of of English Language: i. How the parts of a sentence / speech are arranged in English Language. ii. How the intonation and stress patterns are maintained in English Language. iii. How a different context can change the pronunciation and meaning of English words. In this unit we shall discuss its relevance in English vocabulary level and in English sentence level. At the end of this Module you should be able to: • identify those features of English words that account for special status in

175 NSOU ? PGEL 5 & 6 English Language; • distinguish Phonological and morphological ways in which ' English words' can be analyzed; • understand the nature of English words; • make a critical evaluation of the existing linguistic definitions of 'word'; • understand the notion of 'morpheme' 'and the 'phoneme'; • distinguish between word and morpheme and • appreciate the nature of the relationship between 'morpheme' and other particles of a word. You might have noticed how a which you have always taken for granted and whose meaning you are quite confident you know very well turns out on closer scrutiny to be something else. One such word is the English word itself. If you look up 'word' (N) in the O E D 2 you will first be surprised to see its meaning and usage taking up two large columns, very closely printed in very fine print. You will notice that the meanings and usage are classified into two major categories. In the first category are those uses of this word in which it stands for verbal expression in general and is by extension used for such meanings as ' ', ' , ' of a song', ', 'a tion' 'a ', and so on. In the second category are included its uses as 'an , a , or one such , used to express , 'a character or set and so on. In this sense, 'word' can refer to a , , idea, , a , and so on. You will find these and many more senses of the word ' ' listed and exemplified in detail, altogether eleven sense-groups in the first category and seven in the second. In this course, our aim is to study words in the sense in which they represent 'elements of speech', i.e. in the second, and the technical, sense of the word. In fact, more recent dictionaries, which are not written on historical principles (unlike the OED is), place this definition first. Let us look at and compare a select few of such definitions, beginning with the Oxford definition in full: '

A combination of vocal sounds, or one such sound, used in a language to express an idea (e.g., to denote a thing, attribute, or relation), and constituting an ultimate minimal element of speech having a meaning as such.' (1989) 176 NSOU ?PGEL 5 & 6 'One of the units of speech or writing that native speakers of a language usually regard as the smallest isolable meaningful element of the language, although linguists would analyze these farther into morphemes,' (1986) '

A sound or a combination of sounds, or its representation in writing or printing, that symbolizes or communicates a meaning and may consist

of a single morpheme or of a'combination of morphemes' (1985) '

A speech sound or series of speech sounds that symbolizes and communicates a meaning without being divisible into smaller units, capable of independent use' (1984) Let us now try to set up a critical understanding of the English word 'WORD' by analyzing and extracting various features from the above definitions. It would appear from these definitions that we can apply the word 'word' to an entity' that possesses the following characteristics: a) A word is made of a sound, or a series of speech sounds 3 . We may also apply it to describe representations 4 of these in writing. b) A word is a unit of speech (presumably when it is a sound or a series of sounds) or writing (presumably when it is a representation of the sound/series of sounds in writing). c) The above definitions do not seem to agree on whether or not the word is the of speech/writing. Definition 4 5 implies that it is, since it says that it is not 'divisible into smaller units capable of independent use'. d) Definition 3 6 states that a word may consist of a single or a combination of , thereby implying that the smallest unit is . e) Definition 2 7 makes a further refinement by saying that native speakers of a language regard it as the smallest element but linguists do not comply to this narrow understanding. f) The linguists analyze it further into morphemes and define as the smallest unit. Another kind of refinement is made in definition1. It states that it is the ultimate minimal element having a meaning. This would allow the possibility of there being smaller elements, or units, but they would not bear meaning. If morphemes are smaller than word, then they are presumably not meaning-bearing elements. g) All the above-mentioned definitions seem to agree on the point that words are meaningful elements. Definitions 1 and 2 8 above in addition also suggest that they may be the smallest elements having meaning.

177 NSOU ? PGEL 5 & 6 h) Definition4 above puts forward an additional idea that a word cannot be broken down into smaller units 'capable of independent use'. Here 'use' must be taken to be different from 'meaning'. While there may be some common sense support for the idea that a word cannot be broken down into smaller units with independent meaning. 9 i) The idea that the smaller units also lack independent use may be difficult to sustain, as we shall see under the Advent of English vocabulary 10 . You must have found from the above discussion that the English word ' ' has historically not always been comprehended in this way. In fact, according to one linguistic school of thought there was no notion of the word at all till writing systems emerged. Earlier 'word' was taken to be synonymous with a written word, or verbal expression in general, which may account for the first category of meaning ascribed to 'word' by the Oxford English Dictionary. According to this school of thought even today a word is not distinguished from an utterance when a language is in dialect

178 NSOU ?PGEL 5 & 6 form. Just as a child who has not yet learned to read is unable to distinguish between word boundaries it is argued that when alphabetic writing first started, it also had to face the question of where to draw word boundaries. In some cases the indeterminacy regarding word boundaries continued till a very late stage. For example, the English word ' is originated from a proto form which is reflected in the Arabic or the Persian 11 When the word was absorbed into Middle English (ME), it occurred with the indefinite article , but soon the word boundary came to be drawn after 'n' rather than before it, and gave us rather . In this case, the boundary line was clearly dictated, by the 'an before a noun beginning with a vowel' analogy. Other similar factors must also have decided where the line was drawn. What this school regards as certain is that words came to be established after the advent of literacy', when the need arose to write in units separated by spaces. This view is disputed by other schools of thought. Lyons (1968:199) has correctly commented 12 : words often include multiple As we stated earlier, in the majority of cases of complex and compound words 13 that are realized as words can be identified as separate elements called in the phonological and orthographic representations. This makes it easier to refer to the morphemes when talking about the rules which govern their occurrence. are building blocks of extensive English vocabulary and are basic elements of word formation. can take the form of a when it is used before a . Common prefixes include un-, dis- and ex-. . can be used as when it is attached after the . Example: –ish; –ity; –ize and so on. can be used as when it is attached and . There are two sub types of infix:

179 NSOU ? PGEL 5 & 6 ? ? Let us introduce the distinctive characteristics of Derivational affixes and Inflectional affixes 16 that serve as key components of English word formation. a. Free morphemes may emerge as English words. Examples: toe; teach; learn; b. Most of the English words have foreign roots, foreign prefixes and foreign suffixes or root and affixes. Example: technai (Latin Root) + -logy (Latin Suffix) ? technology. c. Affixations are very important in English word formation. Affixes include and infix. See above for examples of English affixes. in English are all suffixes, but derivational affixes come both as prefixes and suffixes. are attached to lexical words to create new lexical words. As lexical words, these new words are also subject to the same kind of treatment in the language as all lexical words, e.g., they make their grammatical paradigms like other words. In their grammatical category, they can serve as stems for other derivational affixes, and so on.

180 NSOU ?PGEL 5 & 6 modify the meanings of the stems but not in a regular and fixed way as do inflectional affixes. The effect a derivational affix will have on the meaning of the stem cannot be predicted with exceptional regularity, though subsets of stems may show partial regularities. g. In a complex word containing both derivational and inflectional affixes, derivational affixes are attached first, inflectional affixes last. Once an inflectional affix has been attached to a stem, no derivational affixes can be attached to it. h. Unlike , often change the grammatical category of the stem to which they are attached. Thus the addition of a derivational suffix may turn a verb into a noun, a noun into an adjective, an adjective into a verb, and so on. This cannot happen with inflectional affixes. When we pay closer attention to the English derivational affixes, we find a few more characteristics worth mentioning. They are: i. As compared to , the number of derivational affixes is quite large. j. While a bound grammatical morpheme (or, loosely, an) occurs with all the members of a grammatical class, or subclass, without exception, a bound lexical morpheme (loosely, a derivational affix) may occur with only a few members of a class and not with others. k. As we need to point out the occurrence of bound grammatical morphemes is determined by grammatical rules, which apply without exception, whereas the occurrence of bound lexical morphemes is not so determined. For example, the bound grammatical morpheme occurs with all the members of the Count subclass of the class of Common Nouns, but the bound lexical morpheme , though it occurs with adjectives, cannot occur with all the adjectives. l. An does not occur with all the members of a given class, it occurs only with specific members of that class and not with the members of any other class. Derivational affixes, on the other hand, can sometimes occur with members of more than one class. In the context of the relationship between the word, and English language literacy, it remains a fact that in all literate language communities there exists a notion of 'word', even if the way its nature is apprehended is not the same. For example, there are languages in which the entire English utterance consisting of three words ' may be expressed, by a single 'word'. In Bengali, expressions like 'kheycho and are apprehended as single words but their English equivalents require three words each: Have you eaten?/ I have eaten. Languages may differ in the amounts of meaning they pour into individual words, but that does not effect the fundamental nature of words.

181 NSOU ? PGEL 5 & 6 Every speaker of a language has an intuitive apprehension of 'word'. If asked, a native speaker is able to identify the stretch of sound which constitutes one word. This ability is strengthened by literacy since in writing words have to be separated by spaces. Linguists have defined 'word' as 'a minimum free form'. The definition identifies word as the unit which cannot be broken down further into independently occurring units. The word is thus identified as the smallest 'positionally mobile' and 'internally stable' unit of language. This traditional definition faces difficulty with compound words and applies only to the phonological word. Though languages differ in the way they codify meanings into words, every language does have the unit 'word'. The notion of word can be analysed into four types depending on the way it is apprehended on different occasions: phonological, orthographic, lexical and grammatical. When we use 'word' to refer to a stretch of spoken speech, the reference is to the phonological word. When we use 'word' to refer to a stretch of written or printed symbols, we refer to the orthographic word. An inflectional affix does not occur with all the members of a given class, it occurs only with specific members of that class and not with the members of any other class. Derivational affixes, on the other hand, can sometimes occur with members of more than one class. a What does the field of morphology deal with? b Is there much truth when we say 'word' is a minimal unit? c. How can we divide a word into smaller parts? d. What are morphemes? e. How many types of affixes do we have? f. Do the affixes change the meaning of the word? g. Do the affixes change the grammar of the word? h. What is an inflexion? i. Can we see words as distinct units in an utterance or speech? j. When was word recognised as a unit? What were the reasons for it?

as the smallest isolable meaningful element of the language, although linguists would analyze these farther into morphemes. 8

Vocabulary is all about words i.e. the words in a language or a special set of words people are trying to learn. The term was first used in the 1500s to mean a list of words with explanations. The noun vocabulary came to refer to the "range of language of a person or group" from the seventeenth century. 11 From which the Hindi word 12 "...the ability to break utterances up in words is not only characteristic of educated and literate speakers of a language. Sapir tells us that uneducated American-Indian speakers, with no experience of writing any language at all, when asked to do so, were perfectly capable of dictating to him texts in their own language 'word by word', and had little difficulty in isolating words from utterances and repeating them to him as units. Whatever else we may say about the word as a linguistic unit, we must reject the view ... that 'primitive languages' do not have words. The habit of reading and writing ... may well reinforce the native speaker's consciousness of the word as an element of his language ... but it certainly does not create his ability to break utterances up into words in the first place." 13 i.e. the free and bound morphemes in combination 14 (o) got deleted by the effect of the Doctrine of Apocope. 15 (ai) got deleted by the effect of the Doctrine of Apocope. 16 See unit 5 under Paper 6 Module 2 for details.

? The words still remain a potent means of expression in English. Whatever can be expressed in a language using a set of words can more or less be expressed in another language using another set of words. It could be possible that some languages use more words to express an idea that can expressed by just one word in some other languages. This need not be consistent with all concepts and reversal are also possible. All languages have simple words and complex words. Formal and informal words, new and old words and all languages have similar or near-similar processes of . And this is what is more important than the fact that the sets and processes are not the same. In this unit, let us try to understand the fundamental nature of the English word before turning to the specific manifestations of word-classes and word- formation processes. After going through this unit, you will be able to: a. Understand what a morpheme is, b. See how morphemes are closely associated with meaning, c. Identify the changes in morphemes (allomorphs), d. Analyse a word for its morphemes and see how it is formed. 184

185 NSOU ? PGEL 5 & 6 From the above discussion you have understood that there may be different types of English words. The most prominent types are: • Lexeme (Semantic words) • Grammareme (Functional/ grammatical words) • Phoneme 1 (phonological words) • Morpheme (orthographic words) If you look for Definition 1 and 2 above 2 you will observe that these are captured by the notions of phonological and orthographic words. Definition 4 3 says that words are meaningful elements and it is captured by the notion of the lexical word, or . The status of Definitions 3 and 4, which are about the 'analyzability' of the word into smaller units, remains unclear. The questions remain: A. Is the word the smallest unit? B. Can a word be further broken down into smaller units? C. D. E. These are the kinds of questions that arise when we probe Definitions 3 and 4 further. These questions actually arise from the linguists' attempts to define a word scientifically. Linguistics claims to be a science and since the word is one of the basic units of language, a scientific definition of 'word' is a prerequisite for this science of language. Several attempts have been made to define ' ' in Linguistics. The dictionary definitions given above are actually derived from these definitions. The most well- known of these definitions is the one by Bloomfield who defined the word as ' . The two crucial words here are 'free' and 'minimum'. 'Free' means 'those which can occur alone as whole utterances'. For example, are free forms since they can occur as whole utterances in response to questions like: Q1 :'Was the visitor young or old? Q 2: 'Do you consider use of force to settle disputes right or wrong?'

186 NSOU ?PGEL 5 & 6 'Minimum' of course means 'the smallest' or 'that which cannot be broken down further into smaller parts'. None of the forms cited above can be broken down into smaller parts. Thus they meet both conditions set out by Bloomfield and are words according to his definition. So are the forms like etc., since they too are minimum free forms. We can break them down into parts like and and etc., but and are morphemes, not free forms; they cannot occur as utterances alone. Bloomfield's definition faces problems with forms like 'a', 'the', 'because' which are traditionally regarded as words but cannot occur alone as utterances, and linguists have tried to extend and elaborate the meaning of 'free' to take care of this problem. These linguists argue that 'linguistic freedom' or free flow 4 here means: . The term refers to the fact that the word is the smallest unit which can be moved around in the sentence. For example, look at the following sentences where the form 'surely' has been moved around; a) Alice does not deny that . Alice does not deny that. c) Alice does not deny that

187 NSOU ? PGEL 5 & 6 Here we cannot move around 'sure' by itself, or '-ly' by itself, the way we can move around 'surely'. Sometimes longer forms can be moved around. Example: a) People were all keen to see . , people were all keen to see. In the above example 'the young Indian back from Chicago' shows the same kind of positional mobility as the word 'surely'in the earlier example. But 'the young Indian back from Chicago' is not a minimum form as it contains smaller forms (words) capable of occurring independently. In earlier words, this form is a free form but it consists of more free forms and is therefore not a minimum form. Therefore it does not qualify as a word. Such forms are actually called (group of words). The term refers to the internal cohesion of the word. As we have seen, a word can also be broken down into smaller (bound) elements (e.g., surely = sure + ly), but the order of these elements in a word is strictly fixed and cannot be changed. In other words, while a word has so far its elements are kept intact. Despite this additional support, the definition of word as a minimum free form is not quite free from trouble. Another difficulty is observed with word compounds. Compounds are words like which are made up of two smaller words. By this definition, they would not be called words as they are not minimum forms, even though they are free. However experts agree to the fact that compounds are indeed the result of Even if we were to accept Bloomfield's definition of 'word' despite all these problems the question remains: What kind of 'word', among the four kinds that we have identified above, would it apply to? It is obvious that it could not apply to either the kind of word. Why? These kinds of words are mere abstractions not physical shapes. Bloomfield's definition attributes to words qualities like 'size' and 'occurrence as an utterances'. Lexical and grammatical words do not have size and they do not occur as utterances, since they are abstract entities. The orthographic word, though it can be said to have measurable size, also cannot occur as an utterance. Hence, Bloomfield's definition can apply only to the , and is therefore of limited use in our attempt to understand the morphological / orthographic nature of the word. Bloomfield's definition of the word as 'a minimum free form' addresses only the formal properties of the word i.e. It makes no reference to meaning. Yet the entire dictionary definitions of 'word' given at the beginning of this unit make reference to

188 NSOU ?PGEL 5 & 6 meaning. Perhaps a definition of the word based on meaning may work where one based on formal properties alone doesn't. The problem is not with forms like these but with word forms like and Let us start with the phrase 'the smallest isolable meaningful element' which, in the opinion of Collins English Dictionary, is the way in which native speakers apprehend a word, though linguists do not agree with this. Why do the linguists disagree? After all, forms like and are all meaningful elements and they are also all unbreakable into smaller parts. We know that in each of the above cases the first element is a meaningful one i.e. lexical word. If the second one can also be shown to be meaningful, then the definition of 'word' as 'the smallest isolable meaningful element' will have to be revised. Otherwise these forms ( ), not being the smallest meaningful elements, would not be regarded as words. forms can be broken into smaller parts, as we saw earlier. In each of these forms we can isolate smaller elements as shown in the diagram below:

189 NSOU ? PGEL 5 & 6 There cannot be any doubt that elements like and are meaningful suffixes 8 : added to certain word root as shown above, produces the meaning 'more , while Adj. + produces the meaning 'most '; , added to a noun (, produces the meaning 'of, concerning, pertaining to that . As these elements have fixed meanings that we are able to add them to other forms to derive precisely the meanings we want. It must be quite clear by now that what we are looking for is a definition of 'word' that will agree with the native speaker's intuitive understanding of this concept. Since Bloomfield's definition does not, it will not do, There are elements which are isolable, and which are meaningful, but which the native speaker does not intuitively recognize as words (e.g.). We must find a definition which will conform to the native speaker's intuition about words. Can we revise the definition so that it takes care of these possible problems? Perhaps we can, but we must first do something about the smallest meaningful elements which are not words, which we have just discovered. We must recognize them, give them some status and define their relationship with words. When we analyze the form national into the elements nation and , we have a feeling that we have now two elements one of which is a bound form and cannot occur independently. We have a similar kind of feeling about forms like and which we can respectively analyze into and . There is, however, a difference between suffix forms like on the one hand, and , and on the other. You can associate some kind of meaning with affixes like as we did above, but it is difficult to associate such meanings with affixes 9 of the latter set. For example, there is no specific way in which the meaning of the word 'run' in the sentence 'I ran' can be said to be different from the meaning of 'runs' in the sentence 'He runs'. It is the third person subject that requires the presence of the suffix in the verb in the latter sentence. In other words, the suffix , here signifies the presence of a third person singular subject, in addition to signaling, in common with the word 'ran' of the former sentence, the presence of the simple present tense. Affixes like and derive their significance not from meaning but from use, or from the functions they perform. As we have stated earlier, the suffix performs the function of signaling , that of signaling the continuous tense, and so on. In other words, such affixes perform . In this respect, they are rather like articles ( ) or auxiliaries (which also have no dictionary-based lexical type meanings but certain types of grammatical functions.

190 NSOU ?PGEL 5 & 6 Let us ask the following question: a) Whether the affixes 10 are meaning-bearing affixes like - , , or affixes with grammatical functions like as the latter elements cannot occur indepen dently? The Webster's definition quoted above expresses this fact by excluding from the definition of 'word' forms 'divisible into smaller units capable of independent use.' In other words, word forms like are included in the definition of words, because, though they are divisible into two smaller parts, the second parts are not capable of use. Only the first part is capable of use. You must have observed that word forms like are indeed words as they are 'the smallest isolable meaningful elements' that are '(in) divisible into smaller units capable of independent use'. We must remember that this definition still excludes word compounds 11 from the definition of the word. Now the questions remain: i. What is the status of the smaller elements into which the above words can be broken down? ii. What is the status of the meaningful elements like and that are excluded, from the status of being recognized as word for their inability of being used independently? Linguists set up the category of "morpheme" to solve the problem of basic understanding of word in general and English word in particular. Morphemes are defined as the smallest elements that have meaning, or that perform a grammatical function. It is now clear that this definition will include a large number of forms so far defined as words like 'old', 'young', 'sweet', ' 'the', 'was', 'can', 'may' and so on. Though the category 'morpheme' was obviously not necessitated by and affixes like which are the smallest elements 12 that have meaning (-al) or perform a grammatical function (the rest).

191 NSOU ? PGEL 5 & 6 You must have noted the definiton of morpheme that morpheme is free from the condition, that the words be able to occur independently. It was this condition that has disqualified elements like and from being called words. So these forms are automatically included in the category of morphemes. But so also are all independent—ly occurring forms which are not made up of smaller independently occurring forms. This is because the definition of morpheme includes all 'smallest' elements, irrespective of whether they can occur independently or not. With a morpheme defined in this way, words and morphemes necessarily enter into a particular kind of relationship. Let us define this relationship as that of 'composition': i. e., a word is 'composed' of one or more than one morpheme. Words like are called mono morphemic 13 whereas dimorphic 14 words like are composed of two morphemes each. Of the two morphemes that make up each of the words in the second list, the first one is a free morpheme 15 , and the second one is a bound morpheme 16 . You can easily guess what the free morphemes are. As they also occur as mono- morphemic words (viz.); the suffixes) are all bound morphemes in the list of words, mentioned above. However, it is also possible for a word to be composed of two free morphemes, e.g., postman, blackboard, and goalkeeper. In other words, by setting up the category of 'morpheme' we are able to solve the problem the Bloomfield's definition of word as 'minimum free form' faced with compounds. You will recall that compound words were excluded from the category words by the Bloomfieldian definition as they were not minimum free forms: they were free but not minimum, as they consisted of

192 NSOU ?PGEL 5 & 6 smaller forms (like post, man, black, board, etc,). With the setting up of the morpheme category, this problem no longer exists, as the smaller forms are now labelled as'morphemes'. They can either occur as mono-morphemic words, or can combine as free morphemes to form a compound.

A 'morph 17 ' is a morphological string (of phonemes) that cannot be broken down into smaller constituents that have a lexico-grammatical function. In some sense it corresponds to a word-form. An is a morph that has a unique set of grammatical or lexical features.

100%	**MATCHING BLOCK 15/46**	**SA**	Aspects of Language for plagiarism check (1).docx (D117827147)

For example, the plural in English has three different morphs, making plural an allomorph, because there are alternatives.

Other Examples are: Any of the phonological representations of a single morpheme: For , the final /s/ and / z/ sounds of bets and beds are of the English noun-plural morpheme. While orthography preserves the differences in written letters it fails to show the difference of utterances of the same in different phonological environment, phonology preserves them. The plural suffix is written as '-s' in the case of all the three words , and , the suffix is pronounced as in 'cats'; in 'dogs', it is pronounced ; and 'horses' it is pronounced / Let us discuss why this is so. But this has nothing to do with syncretism 18 as these differences (and the parallel similarity in the orthographic shapes) occur within each grammatical category and not across categories. Despite tine phonological difference, each shape still realizes the same bound grammatical morpheme, the plural number bound morpheme. To deal with this situation, where the same grammatical morpheme may be realized by two or more different phonological shapes, morphology has set up the concept of the . As mentioned above, any physical shape that realizes a morpheme (grammatical or lexical) is called a . If two or more morphs realize the same morpheme they are said to be of that morpheme. Thus, and are all of the plural morpheme in the number paradigm of the English count noun. The allomorphs of a morpheme are mostly phonetically conditioned. In other words the reason for the existence of the different phonological realizations of the same morpheme lies in the phonetic context of the given word. In our example, the reason why the plural morpheme is realized as the with is the voicelessness of the immediately preceding sound. In dog, the immediately preceding sound /g/ is , so the suffix too becomes the voiced counterpart of and becomes With the word, , the phonetic environment is different. The word, 'horse' ends in a sibilant or a hissing

193 NSOU ? PGEL 5 & 6 sound. The plural suffixes and are also sibilants and two sibilant sounds cannot be pronounced together in close succession. Therefore, a vowel sound is inserted between them to make the suffix pronounceable. As is a voiced sound, the voiced suffix is the natural choice. Therefore the suffix /iz/ and /iz/ are not only of the plural morpheme but also of the Possessive morpheme. In fact, as we will see below, they are also the allomorphs of the Third Person Singular morpheme which combines with a verb when its subject is a third person singular subject. In a similar way, the verb takes a past tense by addition of −ed. This is realised as /t/ or /d/ or /id/ in different contexts. Any verb that ends with a voiceless consonant takes /t/. For example, checked, missed, brushed, etc. are verbs that end with a voiceless consonant /k/ /s/ and /ʃ/ and hence −ed is pronounced as /t/. When we have verbs that end with a voiced consonant, the −ed is realised as /d/ in words like bagged, saddled, groomed etc. These words end with voiced consonants /g/ /l/ and /m/ and hence the −ed is realised as /d/. When verbs end with either /t/ or /d/ sound the −ed is realised as /id/. Take a look at words like padded, batted, etc. These words end with /d/ and /t/ respectively and the final −ed is realised as /id/. Another good example of can be given by referring to the indefinite article morpheme in English. This has two allomorphs: 'a' ∂ and 'an', /∂n/. Their phonetic conditioning is known to every English student: 'a' occurs before words beginning with a consonant, 'an' before words beginning with a vowel. It should be noted that, being phonetically conditioned, the of a morpheme are always in . This means that no two allomorphs can occur in the same context: where one occurs, the other cannot, obviously because they are conditioned to occur in mutually exclusive contexts. The relationship between the phonological and the orthographic word may be one- to-one, one-to-many or many- to- one. When the relationship is one-to-many (/mi:t/ ? meet\meat) we have a case of homophony: when it is many-to one (/li:d/, /led/? 'lead), we call it'homoghraphy'.) The abstract word which is realised in different grammatical forms is called the lexical word or the lexeme. In this sense, the word focuses on meaning. The headwords in a dictionary; represent lexemes. Though most lexemes are realized by single words, some lexemes can be realized by a sequence of words (e.g., idioms). If the same word-shape belongs to two different lexemes (i.e. it has two unrelated meanings) we have a case of homonymy. If the meanings are

194 NSOU ?PGEL 5 & 6 related, i.e. if one meaning can be derived from another by metaphorical or figurative extension, we get the case of polysemy. When a grammatical rule is applied to a lexical word, we get a grammatical word. Like the lexical word, the grammatical word too is abstract. To get a physical shape, the word has to be realized as a phonological or an orthographic word. The grammatical word or grammareme represents the grammatical properties of a word. 1. What is a morpheme? 2. Can we have a single morpheme as a word? 3. How many types of morphemes do we have? 4. What is the characteristic feature of bound morphemes? 5. What do we mean positional mobility and positional stability? 6. Can a single morpheme have both these features? 7. What are allomorphs? 8. How many allomorphs have been discussed here? 9. What are some of the features of allomorphs? 10.Are morphemes grammatical units? Give reasons. 1. Bloomfield. L.(1933). London: Allen &Unwin 2. Hocket. C.F. (1958). ? The characteristics of English word ' extracted from dictionary definitions, seem to indicate that there are actually more than one kind of 'word'. Since a word can either be a or a that makes one kind of word: let us call it the The moment you represent a by writing it in orthographic form or in phonetic transcription you get . You may also use 'word' to refer to the written, or orthographic, representation of the phonological word, so that you obtain orthographic word. We shall represent orthographic word by writing it in small letters. We can try and explore the relationships between these two kinds of words. The orthographic representation of a phonological word is never a straightforward, one-to-one, representation. Sometimes two or more phonological words are represented by the same orthographic word, For example, the orthographic English word ' ' represents the two phonological words /ri:d/ (v. present) and /red/(v. past and v. past participle). Again, the orthographic English word, ' represents /li:d/(v. present) and /led//(v. past and v. past participle). Such cases are known as . After going through this unit, you will be able to: a. Define a word in its various ramifications, 196

197 NSOU ? PGEL 5 & 6 b. Distinguish between the term phonological and morphological forms of a word, c. Understand the difference between a lexeme, grammareme and a morpheme, d. Understand how homonyms can be understood based on contexts. Sometimes one phonological word (e.g., ⊃ may be represented by two or more orthographic words: (and ; and . Such cases are called . An exploration of these relationships for languages will help us to banish such popular myths as the following one: *Certain Indian languages (e.g., Hindi and Bengali) have 'phonetic' writing systems while others (e.g., English) have unphonetic, and therefore 'unscientific', systems of writing. Phonological and morphological or orthographic words are thus regarded as purely physical shapes made up of and respectively. When words are regarded as purely physical shapes, two shapes differing even slightly are treated as two different words. For example, the five words contained in the following box, when seen as phonological or orthographic shapes, will be regarded as five different words: Eat eats ate eaten eating

198 NSOU ?PGEL 5 & 6 Grammatically speaking, these five words are said to be of the 'same' root word 'eat' (v. present). In fact, that is how traditional grammarians treat them. They claim that there is an abstract word 'eat' which is 'realized' by these five forms in the grammatical paradigm of English language. By a 'grammatical paradigm' we mean a set of forms derived by the application of a particular rule of grammar. The above set of forms is derived by the application of the of English language as shown below: Let us demonstrate the usage of this common with reference to Tense- specific use. When the is applied to the abstract word we get 'eat' in the first and second persons singular and plural and in the third person plural, ' ' in the third person singular, when the is applied we get ' in all persons and numbers; when we apply that we get ' , and when we apply the we get ' . But the underlying word is the same as shown by the fact that the basic meaning of all the four forms is identical. It is only modified in certain fixed ways to refer to different points of time, or to duration. In this abstract sense, a word is different from a or an word which is its concrete form. For one thing, the word in this sense has meaning, i.e. it denotes something in the external world, an idea, or object, or action or state. This time the word is an abstract entity as it is not merely a physical shape at all. The abstract idea of ' that occurs in all the five forms as shown above is actually a , a name of an action. There is an orthographic shape 'eat' and a phonological shape /i:t/ which 'realize' or 'represent' Tense in Use Person Number Form 1. Simple Present Ist Singular\Plural 'eat' Tense Formation 2nd Singular\ Plural 'eat' 3rd Singular 'eats' Tense in Use Person Number Form 1. Simple Present 3 rd Plural 'eat' 2. Simple Past Tense Formation Ist/ 2nd, 3rd Singular\ Plural 'ate' 3. Past Participle Formation Ist/ 2nd, 3rd Singular\ Plural 'eaten' 4. Present Participle Formation Ist/ 2nd, 3rd Singular\ Plural 'eating'

199 NSOU ? PGEL 5 & 6 this idea. When the grammatical paradigm of the abstract word is to be constructed, grammatical rules appropriate to the category of the word are applied, producing grammatical words, which we discuss below. These grammatical words are in turn realized by phonological and orthographic words (also collectively called word-shapes). In this first of the two abstract senses in which it is used, in which we focus on its meaning, the word is called by different names, the most common one being . Other names are ' , ' and ' ' item. We will use the terms and and interchange them freely. We will differentiate the lexeme from word in the other senses by writing it in capital letters. Here are the characteristics that distinguish a lexeme from the other kinds of word discussed so far: A. A is viewed in relation to its meaning, i.e. in relation to things, actions, states, etc. in the world. Accordingly, lexemes fall into grammatical categories like noun, verb, adjective and adverb. B. Depending on its grammatical category, each lexeme may be realized by a set of forms in its grammatical paradigm, e.g., a noun may have singular, plural and possessive forms (e.g., boy, boys, boy's), an adjective may have positive, compar ative and superlative forms (e.g. nice, nicer, nicest), a verb may have present, past, and participle forms, as exemplified in the Table above. These forms are given physical realizations by linguistic processes like , , , acting upon the and words which represent the . C. Words occurring as in a dictionary are lexemes. For example, a dictionary' does not list eat, ate, eaten and eating as four separate words: eat alone is listed once. D. The term lexeme also includes items which consist of more than one word shape, e.g., multi word verbs like 'to catch up on', phrasal verbs like 'to drop in', and idioms like 'to kick the bucket'. Accordingly, they also find separate entries in the dictionary, though for ease of reference they are included under the entry for a key word occurring in them (e.g., kick the bucket will be found under the entry for kick). The relationship between lexemes or lexical words on the one hand, and phonological or orthographic word shapes on the other, is quite complex but it also accounts for a lot of creative uses to which English language is put in literature, advertising and

200 NSOU ?PGEL 5 & 6 in mass communication. Let us first look at those cases where the same word-shape (i.e. phonological or orthographic word) belongs to two or more different lexemes. Some of the simplest examples of this kind are word forms like bank, bat, ear, and port. Each of these word forms belongs to two lexemes. Examples: The word, 'bank' may mean 5 ' or 6 ; The word, 'bat 'may mean 7 or 8 ; The word, 'ear' may mean 9 or 10 . These cases, are known as that show a one-to-many relationship between and the . Cases of must be distinguished from cases of . In homonymy two or more lexemes are involved; as a result, the to each other. In polysemy, on the other hand, the meanings are closely related: there is only one lexeme that is involved but its meaning is figuratively extended. Thus, for example, the word is related to the same lexeme ' in both the following uses: i) 'the child's mouth' and ii) 'the mouth of the river' Dictionaries usually reflect this distinction by having separate entries for the lexemes involved in cases of homonymy. A lot of word-play in literature and more recently, in the language of advertising and jokes exploits , or . For example, Siegfried Sassoon, a famous War poet, exploits the homonymy of base (noun meaning) and base (adjective meaning 'reprehensible''cowardly', etc.) in his poem ' to parody cowardly generals who themselves stay at the base while sending young soldiers to their deaths at the front. An Advertisement Hoarding of , Kolkata reads thus: sound sound This is needless to say that the above piece of advertisement has explored the of (Adjective) meaning ' and and (Noun)

201 NSOU ? PGEL 5 & 6 and (Verb) as in 'the sound of music') refers to homophones, which are cases of homonymy with respect to the only. Thus Belloc's epigram on his Books exploits the homophony of (past tense of the verb ') and the adjective : "When I am dead, I hope it may be said: 'His sins 11 were red 12 but his books were read." We have now distinguished three kinds of word: phonological, orthographic and lexical. It will be apparent that the three kinds are not distinguished by a common criterion: the first two are distinguished from each other by the criterion of the (or substance) in which the Sounds or spellings- or through spoken (oral) channel or written channel — but the last kind is identified on the basis of meaning or content. is usually contrasted with form, where 'form' refers not only to the but to . For example, a sentence has a meaning and it has an outer form, or or the . Now the questions remain: content/meaning sense Perhaps you have observed that the 13 of a lexical word may remain the same but you find different packed in the deep structure of the same lexeme. For example let us try to interpret the following excerpt from Julius Caesar Act 1 Scene 1: cobbler, cobbler awl

202 NSOU ?PGEL 5 & 6 The and the words represent, as we have observed earlier, not only the 'physical ' of the words but refer to the or the in which they are realized. In this sense form, like meaning, appears to be an abstract entity: it is not to be confused with substance; or . In order to give recognition to this criterion of vs. , we must recognize another kind of word which underlies both the as well as structure but is meta-lingual in application. We can call it the 14 or grammatical lexeme. Grammatical words are words that occur in a grammatical paradigm, e.g., the forms of eat cited above: eat, eats, ate, eaten, eating. Each of these words has a phonological form, an orthographic form, and a grammatical form which underlies both. Thus eating is the phonological word /i:tiŋ/), the orthographic word , and corresponds to the grammatical word 'present participle form of eat'. The grammatical word represents the grammatical properties of the word i.e. the properties which determine how it is to be used in a sentence. For example, the form eating has certain properties which determine its use in a sentence which are different from the properties (which determine the use) of eat, eats, ate and eaten. To cite just one property, for eating to occur in a sentence it must be preceded by a form of the verb be; is, am, was, are, were or be; it may not be preceded by a form of have, which is necessary if eaten is to occur in a sentence. Properties of this kind, which determine how a word combines with other words in a sentence, are called the grammatical properties of a word, and when we conceive of the word as embodying these properties we call it the grammatical

203 NSOU ? PGEL 5 & 6 word. Actually it is quite important that we set up a category of grammatical word, because the grammatical word is quite distinct from both the lexical word (which focuses on meaning) and the phonological\orthographic word (which focus on substance), and because the relationships between them can be quite complex. We saw above that eat, ate and eaten are three different grammatical words, though they are the same lexical word. This is because their grammatical properties are different. In traditional grammar, these forms are called the present, past and past participle forms of the lexical word' respectively. Let us now look at the corresponding forms of some other verbs: ate /et/ ŋ ŋ ∧ ∧ ∧ You have noticed that there is a one-to-one correspondence between the grammatical forms on the one hand and the phonological and orthographic words on the other in the case of and ; no two grammatical words are realized by the same phonological or orthographic word. In the case of , there is a many-one relationship between the grammatical words and the orthographic word, as all the three grammatical words (for now, we refer to them as the present tense

respectively) share the same orthographic form 'read'. All the three words form the grammatical paradigm of an English lexical verb, which in the case of and have different orthographic realizations, have a common orthographic realization 15 in this case. The relationship between the grammatical words and the phonological words is also many to one in the case of the past and past participle forms: both forms are realized as \red\, In the case of , the grammatical forms for past and past participle are in many-to-one relationship with both the phonological and the orthographic forms i.e. both grammatical forms correspond to a single orthographic and a single phonological word-shape (and respectively). In the case of this situation obtains with regard to all the three grammatical forms. The phenomenon of the realization of distinct grammatical words by the same

204 NSOU ?PGEL 5 & 6 word-shape is known in linguistics as syncretism. Syncretism is the evidence that we need to make a distinction between the word as a grammatical unit and the word as a lexical phonological or orthographic unit. In English, syncretism occurs widely, and not with verbs alone. Here are some examples which will farther clarify the notion of syncretism 16 . I a song. I a song. I have a song. I Samba 17 . I Samba. 1 have Samba. I my finger. I my finger. I have my finger. The tiger killed a . The tiger killed three cows. The tiger killed a . The tiger killed three deer. This is the man's room. This is the men's/menz/room. This is the boy's school. This is the boys' /boiz/school The reverse case of a one-to-many relationship between the grammatical word and the phonological or orthographic word, though less common, is not entirely absent. For example, the grammatical word 'past participle, of ' is realized either by or by . In American English, the grammatical word 'past tense of 'dive' corresponds to two phonological and orthographic words each: and ∂ . Also included in the category of grammatical words are classes of words like , , , conjunctions and prepositions. These words are also sometimes called ' . If at all listed in a dictionary they are defined in terms of the grammatical functions they perform rather than in terms of their meanings as they do not carry lexical meanings in the sense in which a l does, therefore, they do not correspond to lexical words 18 .

205 NSOU ? PGEL 5 & 6 As grammatical words, however, they are all capable of abstract characterization and also display syncretism. For example, the two pronouns, second person singular and plural, correspond to the same phonological and orthographic word-shape 'you' and thus display syncretism. Similarly, four present tense auxiliary' forms, and the four corresponding past tense forms; the first person plural, the second person singular and plural, and the third person plural, are all syncretized to single phonological/orthographic forms 'are' and 'were' respectively. Function words (articles, pronouns, auxiliaries, prepositions) occur only as grammatical words. The relationship between a grammatical word and a phonological word may be one-to-one, one-to-many or many-to-one. The same relationship is true of the relationship between a grammatical word and an orthographic word. When two or more distinct grammatical words are realized by the same phonological\orthographic word, we have the syncretism. The grammaremes do not correspond to any lexical words.

1. How is a word defined? 2. How many concrete forms of words can exist? 3. What is a lexeme? 4. What is a head-word in a dictionary? Can you call this a lexeme? 5. How is grammareme different from lexeme? 6. Is a phonological form of the word same as the morphological form? 7. What are homonyms? 8. How many types of homonymy can you find in English? 9. Can we have functional words exhibiting homonymy? 10. What is syncretism? 1. Carter, R. (1987) : . London: Allen Unwin 2. Dey, S.K. (2014). , New Delhi, Pearson Education. 3. Hocket. C.F. (1958). New York; The Macmillan Company. 4. Katamba. F. (1994). London: Routledge. 5. Lyons, J. (1968). Cambridge: The University' Press. 6. Lyons, J. (1977). Vols. I & 2, Cambridge; The university Press. 1 Phonological word is used in spoken variety of English. 2 Morphological word is used in written variety of English. 3 A has a morphological form, semantic content (or) and a syntactic category. is basically an abstract notion used in linguistic morphology, the concrete realization of which is a word. 4 Word that has already been listed in a dictionary or lexicography. 5 i.e. the financial institution 6 sloping river side 7 the bird known for its shrill sound

8 the cricketing bat 9 the body part 10 part of a cereal plant 11 Pun effect of the word, 'scenes' a metonym of dramas or plays. 12 Scarlet red i.e. highly offensive and Pun of the past participle of the word 'read'; understood as well.... 13 Structure of word and or sentence which is available on the surface. 14 Lexeme sub type that serves grammatical functions based on inflections and conversions. 15 The word, ' ' is written as ' ' in Verb Present, Verb Past as well as in Past Participle application. 16 Phenomenon of the realization of distinct grammaremes without any change in the surface structure of a word. 17 Brazilian lively and rhythmical Dance Style. 18 Words that are semantically processed and compiled for the sake of meaningful communication.

? In Unit 2 and 3 you have noticed that you might have had some confusion with, in understanding the differences. The lower level is known as the which consists of the smallest meaningful elements. The elements of this level i.e. morphemes make up the word forms at the next higher level i.e. the level of English word. This relation of 'making up', or 'composition' is obvious only in those cases where two or more morphemes are combined together to form a word. It is not so obvious in the case of words, where one morpheme makes up one word. In such cases, it appears that it would be more appropriate to speak of phonemic or morphophonemic ' rather than ' . We could thus say that the form 'young' at the level of morpheme is 'realized' as the form 'young' at the level of word; though at first this appears to be a vacuous thing to say. In other words, the relationship of 'realization' appears to be empty of any substance. But a linguistic consideration shows that it is essential to postulate this relationship between the two levels, even for those cases where words are made up of balanced combination of two or more morphemes. In morphological studies it is not enough to posit a relationship of 'combination' between the two levels but to go beyond the physical combination and to search for meaningful combination of . 208

After going through this unit you will be able to: a. Understand the difference between a morpheme and phoneme, b. Define a morpheme appropriately, c. Divide the words into morphemes, d. Show the relationship as it exists among different morphemes in a word. You have already noted that ' and ' are now theoretically two different levels. Elements of two theoretically different levels cannot be joined together by the relationship of composition only. A combination of morphemes remains a combination of morphemes till it is, by some process, transformed into a word and acquires all the properties of a word as described in earlier units of Paper 6 Module 1 Unit 1. To give an analogous example, it may be possible to analyze morphemes into phonemes, or sounds, but it is not possible to say that morphemes are 'made up of phonemes and the relationship between 1 and 2 is one of composition only. Then, the following questions remain unanswered: It would be safe to say that a combination of phonemes may be ' as a morpheme, which is a preexisting meaningful unit represented in written form. Therefore, when a combination of phonemes is realized as a morpheme, it automatically acquires meaning. We must remember that not all combinations of phonemes are realized as only those which acquire meaning are realized as 3 . Similarly not all combinations of morphemes are realized as words; only those morphemes which acquire the properties of a word, are realized as words. Another reason for postulating the relationship of realization between the levels of morpheme and word is that this enables us to account for those cases in which the morpheme, a meaningful element, has no phonological or orthographic 4 manifestation. To illustrate, in the following words we are able to associate distinct phonological and orthographic fragments with the two morphemes that make up each word.

Orthographic Phonological ∂ The morphemic analysis of these words will yield the following morphemes: Orthographic Phonological /kil/, /-d/; /teik/ /-n/; /h∂:s/, /iz/ This morphemic analysis is based on the assumption that specific meanings or grammatical functions are associated with each of the forms. The meanings associated with the free morphemes kill, take and horse are specified in the dictionary, while the grammar of English assigns the past tense formation function, the past participle formation function and the plural noun formation function to the bound morphemes are -ed, -en and -s respectively. Thus, each of the morphemes (the smallest meaningful elements) has a clearly identifiable phonological and orthographic representation. This makes it possible for us to say that the word killed is 'made up' of the morphemes or / , the word taken is made up of the morphemes or and so on. However, this situation does not occur in the following forms: Orthographic Phonological ʌŋ ò Here we do not have clearly identifiable orthographic and phonological segments to represent the morphemes, though we know that the same bound morphemes (past tense, past participle tense, plural number) are also present here. We cannot say that • the word 'took' is made up of * • the word ' is made up of * • the word ' is made up * • We find in the first two cases and in the last case.

211 NSOU ? PGEL 5 & 6 It now appears that it was a mistake to identify a morpheme with its phonological or orthographic representation. In order to take advantage of the notion of morpheme to bring on par regular and irregular verbs, regular and irregular nouns, and regular and irregular forms of a language in general, we should perhaps treat a morpheme as an abstract entity, just as we treated lexical and grammatical words as abstract entities. We could now say that the word 'took' has the morpheme combination where and are abstract morphemes representing meanings and not any phonological or orthographic entities. Similarly, the word ' would be said to have the morphemes and the word ' (plural) is the combination of known as However, in order to specify the relationship more accurately, we would have to resort to the relationship of realization, as the relationship of composition ('made up of') implies a more physical relationship. We can now say that the combination at the morpheme level the form ' at the word level, the combination is realized as ' , and so on. By doing this, we free the morpheme from the constraint of a compulsory physical manifestation and thus Increase the utility of this concept considerably. We are now able to show that, despite the lack of any phonological and orthographic indication, forms have the morpheme in them in common with the forms etc. The relationship of realization also allows for the same phonological or orthographic shape to realize different morphemic combinations, or a many-one relationship between orthographic- phonological words on the one hand and the grammatical word on the other. Thus, the phonological form /hit/ and the orthographic form realize the three morpheme combinations , and . In other words, with this concept of a morpheme as art abstract entity, with 'realization' replacing 'composition' as the relationship between morphemes and words, we can expand the definition of the word to include the grammatical word, Bloomfield's definition of word as the minimum free form, as we saw, applied only to the phonological word. This was because the minimum free forms were seen to be 'made up of' other forms which included some bound forms. When we redefine the grammatical word as an abstract realization of a combination of morphemes 5 , we are not obliged to look for stretches of sounds corresponding to the morphemes, but only for such morphophonemic 6 combinations as might be possibly realizable in the language as words. For example while combinations like and may be realized by words, combinations like are never realizable in English. What combinations of morphemes are or are not realizable as words, is

212 NSOU ?PGEL 5 & 6 established by the full grammar of English language. The grammar specifies which combinations are possible and, using the criteria of positional mobility and positional stability described in Unit 1 above goes on to describe which combinations are actually realized. This distinction between realizable vs. non-realizable on the one hand, and between realizable vs. actually realized on the other is an important one. The morpheme combination is an illegitimate combination, and is therefore unrealizable as a word. Such a combination will not be produced by the rules of the grammar. On the other hand, is a possible morphemic combination but one that is not realized in the form of a grammatical word in English. This can be seen from the fact that is a possible and realized morphemic combination in English. In the sentence, " (The word, 'run' realizes . .

213 NSOU ? PGEL 5 & 6 The framework for the study of words that we have developed in this unit can now be diagrammatically shown as follows: The smallest meaningful units are morphemes. Morphemes combine to make higher meaningful units. Some of these combinations may be realized as grammatical words. These grammatical words are then represented or manifested by phonological and orthographic words. This diagram show's only the formal aspect of the study of words, which is what we shall be concerned with in the following units. The aspect of meaning does not concern us in these units. That is the reason why the lexeme does not find a place in the above diagram. Commonly a word is identified as the smallest meaningful unit of language, but linguists believe that the word can be divided into smaller meaningful parts called morphemes. Some of these smaller units can also occur by themselves as words, others can never do that. The former type is called free morpheme and the latter type is called bound morpheme. Some morphemes signal a grammatical function rather

214 NSOU ?PGEL 5 & 6 than meaning. Such grammatical morphemes can also be free or bound. Morphemes are often, but not always, represented by clearly identifiable phonological or orthographic representations. Hence they are best treated as abstract rather than concrete entities. The relationship between morphemes and words is therefore seen as one of realization and not composition. Combinations of two or more morphemes may be realized as a single word. 1. An Introduction to Language and Communication, Cambridge, Mass,:MIT PressPrentice- Hall of India 1996. 2. Bloomfield. L. (1933). London: Allen &Unwin. 3. Carter, R (1987). London: Allen Unwin. 4. Dey, S.K. (2014). New Delhi, Pearson Education. 5. Hocket. C.F. (1958). New York; The Macmillan Company. 6. Lyons, J. (1968). Cambridge: The University' Press. 7. Lyons, J. (1977). Vols. I & 2, Cambridge; The university Press. A morpheme which must combine with a free morpheme to be realized as a word (cf.). A relationship between the units of two levels of structure in which the units of the higher level are made up of, and analyzable into, clearly identifiable units of the lower level. A morpheme which can be realized as a word by itself (cf.). Words belonging to the categories of articles, pronouns, auxiliaries, conjunctions and prepositions, which have no lexical meaning but can only perform grammatical functions. They are included in the category of grammatical words. When two or more phonological words are represented by the same orthographic word (= same spelling, different pronunciation), we get homographs.

A word apprehended as a grammatical unit, i.e., as a unit resulting from the application of some grammatical rule to a lexical word. The term also covers function words. When two or same or orthographic word (= same pronunciation, same spelling but quite different meanings), we get homonyms. When two or more orthographic words are represented by the same phonological word (different spelling, same pronunciation), we get homophones. Signifies a characteristic of the unit word: the internal elements of a word are in a stable arrangement and cannot be moved around. The word considered as an abstract meaning-bearing unit, independent of the various grammatical forms it acquires when subjected to the rules of grammar. Bloomfield's definition of the word as the smallest independently occurring unit of language. Freedom includes positional mobility and internal stability. The smallest meaningful or grammatically functional unit of a language. The word conceived as a stretch of written or printed signs. The word conceived as stretch of spoken speech sounds. A lexical word is seen to have more than one meaning, and the additional meanings are seen as derived from the basic meaning of the word through metaphorical or figurative extension.We get words that are conditioned by the application of figure of speech in polysemy. The property that belongs to a word, and sometimes to a phrase, but never to a unit smaller than a word, of being moved around in a sentence. The relationship between the units of two levels of structure where the higher level unit, though it is seen to be related to the lower level units in a hierarchy, is independent of the lower level units and has properties of its own, not derivable from the lower level units. Cf. . When the same phonological\orthographic word realizes two or more distinct grammatical words, we have syncretism. 1. Have you come across expressions like - 'wanna', 'gonna', and 'wannabe, Howdy?'

2. In informal spoken American English what are these four expressions supposed to be contractions of? 3. In terms of word-types, how many Phonological Word (PW), Orthographic Word (OW), Grammatical Word (GW) and Lexical Word(LW) can you identify in these four expressions? 4. You know that compounds in English are written in three ways: as (e.g., bedroom, bulldog), as (e.g., red tape, money order) and (e.g. swim-suit kick-start). Look up a dictionary and find out ten compounds of each type. 5. Study any ten word compounds closely. Can you figure out any rational basis for the decision to write them the way they are written? 6. What consideration seems to guide the decision to write some compounds as one word and some as two words? 7. Identify and comment on the homonyms and homophones in the following passage from : Here the Red Queen began again. 'Can you answer useful questions?' she said. 'How is bread made?' 'I know that!' Alice cried eagerly. 'You take some flour…' 'Where do you pick the flower?' the White Queen asked, 'in a garden or in the hedges?' 'Well, it isn't picked at all,' Alice explained, 'It's ground…' 8. What kind of relationship between the phonological word and the lexical word is responsible for the humour in the following dialogue? serve shrimps serve size 9. Comment on the homonymy and the polysemy that makes the above joke possible. 10. Which of the following forms listed below are words according to the theory of word as 'a minimum free form' and why? boy's; boy; 's; girls; girl; s; cornflakes; footpath; taller; fall;er; Red Indian; childlike; I'm; its; it's. 11. Why the others are not words by this theory? 12. What difficulties do we face if we posit a composition relationship between

morphemes and words, i. e, if we say that words are made up of morphemes? 1 1 2 1 (want) 1 1 2 1(go) ((GOING) 1 1 3 1 (want) 1 1 4 1 (do:2nd) nd) .:Find more examples of English Compound words and make a tabular presentation. : Do yourself : Homophones and near-homonyms: 'flower' & 'flour' \flau \:one - many relationship between the phonological word \flau\ and the orthographic words 'flower' and 'flour'. Hence homophones. The same phonological word \flau∂\, but not the same orthographic word, belongs to two different lexemes, hence near-homonyms. 'ground' (noun) and 'ground' (past participle of 'grind'). One phonological and orthographic word belongs to two different lexemes: Ground and 'Grind'. The single phonological and orthographic word ' belongs to two different lexemes: a. The word 'shrimp' means 'small shellfish used for food.' And b. The word 'shrimp' means ' . There is a one-to-many relationship between the phonological word \ ò rimps \ and the lexical words that are inter-related. is involved in the use of the verb 'serve'. The two related meanings are: (I) 'to dish up food.' (2) 'to wait upon a person at table'. The joke partially depends upon the fact that the customer uses 'serve' in the first sense while the waiter uses it in the second sense. Partially, the joke depends on the two senses of the word, 'shrimps'. Words are;

These are words because they cannot be broken down into smaller free forms: they themselves are the minimum free forms. Some of them can be broken down into two smaller forms, e.g. the word { and ('s). As (is not a free form by itself, boy's stay the minimum form, though 'boy' is also a free form. Others are not words for different reasons: • are not words as they are not free forms. • are not minimum forms; each of them can be broken down into two smaller forms which occur freely. • 'I'm' and it's are not words because they are made up of two words each: • 'I and " here are not like ; in boy's; stands for 'I am'and " for is. The test of positional mobility shows that 'am' is not tied after I, though at first that is how it looks. We can also say ' We face two major problems: First, this means we treat both morphemes and words as physical entities and be able to demonstrate that every word is physically (i.e. phonologically and orthographically) composed of smaller physical units called morphemes. This is not possible as morphemes which are physically identifiable in many words are identifiable only by meaning in context in many others (e.g., the plural morpheme in plural nouns). Secondly, words have a number of 'emergent' properties or properties which are not derivable from their constituent morphemes. For example, words belong to grammatical classes like nouns and verbs and morphemes do not require categorical status. The grammatical class of a word cannot be predicted from knowledge of its 'constituent' morphemes 'Breakable' (adjective and 'breakage' (noun) both contain the morpheme break which is a verb as a word, while the morphemes -able and -age have no class properties by themselves. This shows that the property of belonging to a grammatical class is not derived from morphemes as morphemes are never judged by this property. 1 Written representations of phonemes. 2 Spoken representations of human speech sounds. 3 Phonemes that have acquired currency as onthographially available lexemes or grammareres. 4 Related representations of speech or narrative through written scripts. 5 Minimal minimum units of a word of English Language. 6 Related to combination of written morphemes and Speech Sounds of English. 7 Combined approach of considering phonological representation of a morpheme or morphological representation of a phonological utterance.

? The present Module will depend upon the basic understanding of the concepts already introduced in the previous Module. This Module will focus on improving Practical skills in linguistic and morphological analysis of English Lexical words and Functional words. It will emphasize on the Practical aspect of Inflectional and Derivational morphology of English words. This Module will analyze Semantico– syntactic structures of English morphology and deal with all the major and minor processes of Morphophonemic improvement of English Morphology and Phonology as well. In the previous Module we established certain basic principles of the formal study ofwords. The principles are: 1. Words are not the smallest units of language either in terms of meaning or form. 2. The smallest unit of language is the morpheme. It is the smallest unit of meaning as well as grammatical function. 3. Word and morpheme are the two lowest levels of structure in the grammar of English language. 4. The relationship between the levels in one of realization. Morpheme and morpheme combinations are realized as words. 219 MODULE - 2: AFFIXATION AND PHONOLOGICAL PROCESSES 220 NSOU ?PGEL 5 & 6 In this unit, we will look at mainly one class of morphemes, the bound grammatical morphemes, and see why it is desirable to analyze the grammatical word into constituent elements which include bound grammatical morphemes. We will then go on to describe the main types of bound grammatical morphemes in English and shall see the role they play in the formation, and the role of words belonging to the different parts of speech in English through the process of affixation 1 . After successful completion of this unit you would be able to: • distinguish between the inflectional and the derivational morphology of English, • to operate with concepts relevant to the morphology of English, e.g., stems, roots, affixes, etc., • see how the application of the principles of inflectional morphology to English words yields the paradigms of nouns, pronouns, adjectives, adverbs and verbs, and • make a distinction between regular and irregular forms in the paradigms. Among the distinctions we made in the previous module, these will be particularly relevant to the present and the following units. We shall therefore list and describe them in the context of as a process of word formation in English: A. Certain morphemes in English are such that they are realized at the word level into independently occurring word forms, while others are realized, only in combination with other morphemes into merged forms where their separate identity may not always be represented by phonological or orthographic means. In that case morphemes are realized as in the course of English word formation. B. The free morphemes like and occur at the level free morpheme 2 . The words, "boyish, bookish and reading" do enjoy the same status as English words.

221 NSOU ? PGEL 5 & 6 C. The last three words mentioned above (boyish, bookish, reading) are however and they contain two morphemes in each. The first two words contain the morpheme - while the last word contains ' . These morphemes occur only in combination with other free morphemes like and and are not realized as independent word forms. ' is actually the morpheme . It's convenient representation as here is based on the fact that it is orthographically realized as the , but this kind of opportunity is not available to us in all cases. For example, the morpheme , when combined with the morpheme , gives us the 'read' and the phonological form /red/, neither of which presents us with a convenient grasp on the morpheme. Therefore, morphemes like or of a verbal paradigm can only be treated as abstract entities. D. As we cannot regard some morphemes as abstract and others as concrete, all morphemes are treated as abstract. This, however, does not affect the division of morphemes into free and bound. Morphemes like , which are not realized as independently occurring words, are bound morphemes that are addable as . E. Lexemes were defined in the previous units as abstract entities which represent meanings. Meanings are based on references to external objects or concepts associated with external objects. However, not all language units we identify as words have meanings in this sense. For example, function words 3 do not refer to anything outside the language. They only help to relate words, or units

222 NSOU ?PGEL 5 & 6 made up of different combinations of morphemes to one another. In other words, they only have grammatical functions. F. Grammar is a collective name for the set of rules that describe how words in a language are combined together to produce well-formed sentences. As function words only play a role in producing grammatical combinations without contributing any meaning of their own, they are said to belong only to the category of grammatical words or grammaremes and never considered for their lexical properties. G. Forms of lexical words are derived by prior application of linguistic rules of morphology. H. As all English words are either or morpheme compounds before they are recognized as words, function words too can be seen as abstract grammatical morphemes before they are realized as words. I. Thus, the orthographic word ' ' can be seen as corresponding to the abstract grammatical morpheme . J. As opposed to grammatical morphemes, lexical morphemes are those morphemes which (individually or in combination with other lexical morphemes) are realized by lexical words at the word level. These include words belonging to the categories of nouns, adjectives, verbs and adverbs that are considered as in traditional School Grammar. K. Both grammatical and lexical morphemes can be free or bound. Articles, Pronouns and other Determiners 4 are examples of free grammatical morphemes as they are realized as freely occurring word forms. L. But morphemes like are not realized as freely occurring word forms but as modifications on other freely occurring lexical word forms. This is why they are called bound morphemes that can be added as in English. It is quite possible for some of these morphemes, if they occur in another language, to occur as free morphemes. M. Similarly, nouns, adjectives, verbs and adverbs, which are all realized as free- occurring lexical words, are free morphemes, while morphemes like , and are considered as suitable bound morphemes, to be used as in English. N. Unlike lexical morphemes, grammatical morphemes are never considered for content meaning. But it would be wrong to conclude that they make no contribution to the meaning of the sentence. However, their contribution to meaning is made not by adding their own independent meaning to the aggregate but by modifying the meanings of the lexical words in the sentence in certain fixed ways.

223 NSOU ? PGEL 5 & 6 O. Bound lexical morphemes) also make their contribution to meaning by modifying the meanings of the lexical morphemes with which they are combined, but there is an important difference there from the way in which bound grammatical morphemes make their contribution to meaning. P. Bound grammatical morphemes, usually realized as in the phonological forms, modify the meanings of the lexical morphemes to which they are joined in fixed and regular ways, e.g., the addition of the bound morpheme Plural always adds the meaning 'more than one.' Q. Bound lexical morphemes, on the other hand, may modify the meanings of different lexical morphemes in different ways. For example, the addition of the morpheme-suffix '-ize' to the noun symbol adds the meaning 'to act as a ... of; its addition to the noun 'hospital' contributes the meaning 'to put in a hospital for treatment'. Added to the noun 'diesel', the same suffix '-ize' contributes the meaning 'to convert to diesel engine power' and so on. In other words, while the morphological effects on meaning of the bound grammatical morphemes are predictable, those of bound lexical morphemes are not predictable semantically. We can present the information diagrammatically that emerges from the description made so far as follows: Much of what we have to say in this and the following unit has to do with the two classes of bound morphemes we have labelled as X Type and Y Type respectively in the diagram. As you can see, X Type is the class of bound lexical morphemes and Y Type is the class of bound grammatical morphemes. The question we will be dealing with is: Morphemes and Affixes 5 Lexical Grammatical Free Bound Free Bound Noun pre-; -ish Articles Tense Particles Adjectives un-; -al Pronouns Degree Particle Verbs en-; -ize Determiners Plural Particles Adverbs -ly conjunctions Category of X Type 6 Class of Y Type 7 Content Words Function Words

224 NSOU ?PGEL 5 & 6 Later on we shall be concerned with certain other processes of word formation, the processes which do not involve bound morphemes. One of the major characteristics of any human language is that one can always produce and understand new words. In fact, one of the reasons English vocabulary has got richer and richer is that English allows the manufacture of new words almost as a routine matter. Even a cursory look at a newspaper reveals many words which would not be found in a dictionary published only fifty years ago. Words like and were coined in the recent past, and one can now read words like and or too for that matter. Such words are coined according to certain fixed patterns and not at will. For example while one can produce and understand words like the ones just mentioned the new words like have yet to get currency Similarly, one can use a very recently coined noun, , as a verb and say I emailed a reminder to him, but one cannot do that with the quite old noun message to say . In other words, though word formation is a productive process, like all productive processes, it is governed by certain rules. It is our aim in this and the following units, to give you a brief account of the rules that account for the productive processes of word-formation in English. Words can be divided into simple, complex, compound and compound-complex types depending on whether they realize a single free morpheme, a free morpheme plus one or more bound morphemes, two or more free morphemes, or two or more free morphemes plus one or more bound morphemes respectively. See the table below for examples: Boy; sing; kind; write Boys; singing; kindness; writers Playboy; singsong; wannabe; gonna; howdy hot-bloodedness; writer-producer

225 NSOU ? PGEL 5 & 6 This neat picture is disturbed by a relatively small set of complex words which seem to realize as a combination of bound morphemes only. Consider, for example, the set of words . Because of the constancy of the root element 'loc' in all these forms, accompanied by a constancy of meaning (place), some linguists argue that 'loc' be recognized as a morpheme. However, since loc does not appear independently as a word, it must be recognized, as the realization of a bound morpheme. This further leads us to conclude that complex words could also be realizations of combinations of bound morphemes only, since all other morphemes in these words are bound too. Other candidates for complex words of this type could be words containing elements like – (as in); (as in); (as in sanctify, sanctum, sanctuary, sanctity); ' (as in and). The most productive processes of word-formation are seen to be in operation in the making of complex and compound words. The store of simple words, though it is by no means fixed for ever, enlarges by processes which are not always linguistically approved. When ever a new object, or process, or concept is discovered a word has to be found for it. The word can come from anywhere or from different foreign sources e.g. from an ancient language, from a foreign language, from the discoverer's imagination, and so on. Examples of recently invented words are , in Jack Kerouac's "I come splooshing to a no-good end" and googol, adapted from an infant's cooing noise by a mathematician at a loss for a word to describe the number ten raised to the power hundred. Sometimes the new word may be recycled from morphemes already existing in the language. If the new word is a simple one, i. e. if it is not a complex or compound word created from already existing morphemes, the store of simple words of the language is increased. Such words are always content words, as the store of function words is fixed forever. The new word will of course have a corresponding morpheme and this morpheme will then be subject to the same rules of combination and realization that apply to other morphemes of its class. Complex words are words that include multiple As we stated earlier, in the majority of cases of complex and compound words 9 that are realized as words can

226 NSOU ?PGEL 5 & 6 be identified as separate elements (called morphs) in the phonological and orthographic representations. This makes it easier to refer to the morphemes when talking about the rules which govern their occurrence. are building blocks of extensive English vocabulary and are basic elements of word formation. can take the form of a when it is used before a . Common prefixes include un-, dis- and ex-. . can be used as when it is attached after the . Example: -ish; -ity; -ize and so on. can be used as when it is attached and . There are two sub types of infix: ? Morphology is the branch of Linguistics that deals with the internal structure 11 of words. It has a set of terms to describe the various categories into which these morpheme elements 12 can be separated. The basic category-terms are The major affixes are of two types that are better known as and . Infix is an exceptional affix in English. As stated above can also be used as when it is attached and . There are two sub types of infix. See above for examples. A complex word, as stated above, realizes the combination of : i. One free morpheme and one or more than one bound morphemes; or ii. Two or more bound morphemes. Some examples of such combinations are as described below:

impenetrably im- Penetr(e) — - able -y declassifying de- class -i- -fy -ing rechargedly re- charg(e) — -ed -ly hopelessly —- hope — -less -ly hopefully —- hope — -ful(l) -ly deindustrializing de- industrial — -iz (e) -ing Most of these complex words have one free morpheme (e.g.,) and one or more than one bound morphemes (e.g., im-, de-, -able, -fy, etc.). We can call the element that represents the free morpheme in these words the of the complex word. The elements representing the bound morphemes are attached to this base, either at the front or at the end. This base is of course not always a free morpheme: in the case of a complex word it is made up of two or more bound morphemes, i.e. in words containing elements like and cited above, the base is a bound morpheme. In the first word in the above list, the base is ' ' a bound morpheme. Such bases are called bound bases. The bound morphemes that attach themselves to the beginning or to the end of the base are called . The most common

are of two types in English: that are attached at the beginning of the are called . that are attached to the end of the base are called .

Thus, and are prefixes while and are suffixes. When the affixes are thus factored out, in words containing elements like and these elements will turn out to be the bound bases. do not always attach themselves to bases realizing a single free or bound morpheme: often they attach themselves to bases which are combinations of free and bound morphemes. For example, in the word 'hopelessly', '-ly' is not attached to the free morpheme base 'hope' but to the combination 'hopeless' in which the bound morpheme '-less' is already attached to 'hope'. Similarly, in the word 'impenetrable', the prefix 'im-' is attached not to the bound base ' -' but to the adjective word 'penetrable' which realizes the combination, penetr + able of a free and a bound morpheme respectively. How do we know this? We know this because prefixing 'im-' to the bound base penetr- would give us a nonexistent from *'impenetr'. On the other hand, attaching the element '-able' to the

228 NSOU ?PGEL 5 & 6 base 'penetr-' gives us the form 'penetrable' which is a well-formed adjective to which the prefix 'im-' can now be attached to get the word 'impenetrable'. The steps in the formation of this word are therefore as detailed in and not as in : Serial Serial Number Number 1 *im + penetr 2 (*im + penetr) + able The bound morpheme element 'im-' is here attached not to the single morpheme base 'penetr(e)' but to the combination of a bound base with a bound morpheme which is realized as a suffix-. Im- is thus prefixed to a 'complex base'. Etymologically speaking, most of the English words have got foreign roots (free morphemes) that constitute the base of the word. For example ' ' (Latin) is the in the word 'technology'. The moment we want to understand the etymological construction of a bigger word we have to understand the function of a root. For example if we like to analyse the word 'technological' we must bring the concept of stem root. At first we have to break the word into two parts as shown below: ? ? ? ? ? ? ? ? The term is used in morphology to describe any element, or combination of elements, to which an affix is attached. It is thus synonymous with the term 'base'. In our first example above, 'hope' is the stem to which the suffix '-less' is attached, and 'hopeless, is the stem to which suffix 2 '-ly' is attached. In the second example, the suffix '-able' is attached to the stem'penetr(e)' and not to the stem 'impenetr(e)'; the prefix 'im-' is attached to the stem 'penetrable' and not to the stem 'penetr'. A can therefore consist of :

229 NSOU ? PGEL 5 & 6 i only a free morpheme base, as in 'hopeless', ii a bound morpheme base, as in 'penetrable', iii a base consisting of a free morpheme and one or more than one bound morphemes, as in 'deindustrialize' or 'anti- humanitarianism', iv a 'compound base' consisting of two or more free morphemes, as in 'flowerpots'. A (e,g 'human' in 'anti- humanitarianism'); one consisting of two free morphemes is said to have a compound root (e.g. 'flower + pot' in the word, 'flowerpots'). John Lyons 15 (1968) remarks that grammars written in the classical tradition of Greek and Latin were generally divided into three sections: these sections were respectively Accidence, Word-formation and Syntax. 'Accidence' was also called 'inflection' and 'word-formation'. Lyons also tells us that while these grammars devoted hundreds of pages to inflection and syntax, they devoted only half a dozen or so pages to derivation. The reason for this was that the classical grammarians did not really consider derivation to be a part of grammar. For them grammar was mainly inflection and syntax. Inflection refers to the changes made in the sentence. In classical grammar, this section included topics like the 'declensions' of nouns, adjectives and pronouns and the 'conjugation' of verbs. The section on derivation listed various processes

230 NSOU ?PGEL 5 & 6 whereby new words were formed from existing words, or 'roots', for example, adjectives from nouns, nouns from verbs, etc. The fact that these grammars never completely excluded this section from their grammars shows that they were aware of the regularities involved in derivation, yet they did not give the topic full treatment because they thought derivational forms belonged to dictionary and not to grammar. So the derivational forms were listed as distinct forms in the dictionary, but the inflectional forms 16 were not. They had to be derived by applying the rules given in the grammar. We can restate the inflection derivation distinction in terms of the three distinctions we have made in the discussion above refers to the ways in which bound grammatical morphemes (morphemes of Type)

100%   **MATCHING BLOCK 17/46**   SA   language and linguistics final-1.pdf (D109478087)

combine with stems to be realized as grammatical words. Derivation, on the other hand, describes the ways in which bound lexical morphemes 17 combine with stems to be realized as lexical words.

As we know, both lexical and grammatical words eventually surface as phonological and orthographic words, where these bound morphemes can be identified in most (though not all) cases as affixes. Accordingly, affixes which realize bound grammatical morphemes, and therefore perform only grammatical functions are called . Correspondingly, affixes which realize bound lexical morphemes and help to create new lexical words with distinct meanings are called .

Examples of inflectional affixes in English are the suffix on plural nouns, the suffix on third person, singular number verbs, the suffix "s" on possessive nouns, the suffix on past participle forms of verbs, and so on. In describing the inflectional morphology of English, we will need to describe the various bound grammatical morphemes these and other inflectional affixes of English realize, and various kinds of grammatical functions they perform.

We will also need to describe the forms these affixes take in the corresponding phonological and orthograpic words and any other irregularities that we may notice in this correspondence.

Examples of derivational affixes in English include all those prefixes and suffixes we have called bound lexical morphemes, e.g. and As these bound morphemes combine with other free lexical morphemes, or stems containing them, the derivational morphology of English will need to describe the grammatical category of the morphemes (
