PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper layout of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up by the University. Needless to add, a great deal of these efforts are still experimental—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Prof. (Dr.) Subha Sankar Sarkar Vice-Chancellor

social change and development, cohesion and the empowerment of people and communities. Social work practice exercises its perspective of human development, behavior and the social economic and cultural institutions and interactions. Social work

can be considered as a profession which intervene to solve social, economical, psychological, educational, political and environmental problem in three stages like : Individual (Micro), Group (Meso) and Community (Macro). Social work was primarily is a discipline and appeared as a profession during 19 th century. The roots of professional social work practice can be identified in voluntary and philanthropic activities mainly in the grassroots level. But it can be stated that, long before 19 th century various activities for responding towards social needs were carried out through public almshouses, private charities and religious organization. More specifically social work as a definite discipline emerged as an upshot of Industrial Revolution and the Great Depression of 1930s. (Dorrien, 2008). 1.3 Definition of Social Work The definition of social work can be divided into two parts. Some definitions are given by several organizations that are legal bodies to decide upon the trajectory of social work profession and other definitions have been penned down by different prominent authors. The following definition has been approved by IFSW (International Federation of Social Worker) General Meeting and the IASSW (International Association of School

knowledge of human development and behavior; of social and economic, and cultural institutions; and the interaction of all these factors." –National Association of Social Workers "

Social workers work with individuals and families to help improve outcomes in their lives. This may be helping to protect vulnerable people from harm or abuse or supporting people to live independently. Social workers support people, act as advocates and direct people to the services they may require. Social workers often work in multi-disciplinary teams alongside health and education professionals.” –British Association of Social Workers. The following definition has been approved by NAPSWI (National Associations of Professional Social Workers in India) in 6 th Indian Social Work Congress 2018 in Delhi. “Professional social work is based on democratic values, humanitarian philosophy with central focus on the human relationships and human dignity. In India, the profession of social work draws its strengths from indigenous wisdom, constitutional commitment for equality, social justice and human rights, and scientific knowledge base. Its professional practice contributes to macro level understanding and policy change while continuing to focus on people at individual, group and the community levels. As a practice-based profession its interactions enrich institutions and systems at all levels through culturally responsive interventions that aim at individual and social wellbeing. Its central concerns are empowerment of vulnerable, oppressed, and marginalized sections of our communities and as a practice it endeavors to partake in social change, sustainable development through participatory and collaborator processes with people in need, institutions and the state.” 1.3.3 Definition of social work by different author

100%	MATCHING BLOCK 13/180	W
Anderson (1943) stated, “Social work is a professional service rendered to the people for the purpose of assisting them, as individuals or in groups to attain satisfying relationships and standards of life in accordance with their particular wishes and capacities and in harmony with those of the community”.		

100%	MATCHING BLOCK 14/180	W
Friedlander (1951) defined , “Social work is a professional service, based on scientific knowledge and skill in human relations, which assists individuals, alone or in groups, to obtain social and personal satisfaction and independence”.		

According to

60%	MATCHING BLOCK 15/180	W
Indian Conference of Social work (1957) “Social work is a welfare activity based on humanitarian philosophy, scientific knowledge and technical skill PGSW- I ? NSOU 11 for helping individuals or community, to live		

a rich and full life.”

97%	MATCHING BLOCK 16/180	W
Mirza R. Ahmad (1969) said, “Social work is professional service based on the knowledge of human relations and skills in relationships and concerned with intra- personal and inter-personal adjustments resulting from unmet individual, group or community needs”. This definition has emphasized on role social work as professional practice to bring intra-personal (within the person) and inter-personal (between persons) adjustments. Pincus and		

96%	MATCHING BLOCK 17/180	W
Minahan (1978) combinedly gave a definition of social work saying, “Social work is concerned with the interaction between people and their environment which affects the ability of people to accomplish their life tasks, alleviate distress, and realize their aspirations and values”.		

The Social Work

Dictionary (1995) defines social work as “the applied science of helping people achieve an effective level of psychosocial functioning and effecting societal changes to enhance the well-being of all people.” (Nepal, 2020). 1.4 Objectives Objectives of social work in the words of Professor Clark are ? To help people, make such use of their own capacities and of environmental resources as well which result in personal satisfaction and adjustment. ? To help in the modification of the environment so that people will have few personal and social problems. According to Professor Fried Lander “Social work seeks to assist individuals, group and community to reach the highest possible degree of social, mental and physical well beings in life.”

94%

MATCHING BLOCK 18/180

W

Gordon Brown has given four objectives of social work such as: ? to provide physical or material support ? to help in social adjustment ? to help in solving the psychological problems and ? to make adequate opportunities for the individuals in problems for raising their standard of living which can prevent problems from intruding. Emerging objectives of Social Work:

NSOU ? PGSW- I 12 ? Material Security: Through economic and political organization that will assure every individual and every family the means of satisfying basic material needs. ? Emotional Security: Through personal and social adjustment. ? Social Achievement: Through collective effort. ? Spiritual power: Through philosophical and religious thoughts. Generally

65%

MATCHING BLOCK 21/180

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

Social work has following objectives: ? To solve psycho-social problem. ? To fulfill humanitarian needs. ? To solve adjust mental problems. ? To create self-sufficiency. ? To make and strengthen harmonious social relations. ? To make provision of corrective and recreational services. ? To develop democratic values. ? To provide opportunities for development and social programme. ? To change the environment in favor of individuals growth and development. ? To bring change in social system for social development.

If we analyze all the objectives mentioned above and try to combine them, we can come up with two statements which will provide core essence of the objectives of social work,

93%

MATCHING BLOCK 20/180

W

such as: ? Enabling the individual and his impaired being so as to make him fit to live a self sufficient and satisfied life and ? Modifying his social environment in his for so that it becomes conducive for him to live happy and adequate life. (Sahrwardi, 2014). 1.5 Scope of Social Work

Scope of social work entails the extent and also speaks about the specific field and areas of social work intervention through its methods, tools and techniques. The scope of social work has been changing with contemporary situation and day by day it is expanding. Consequently the range of social work intervention can be classified into three broad categories and they are 1)

91%

MATCHING BLOCK 22/180

W

The agencies-non-governmental, semi- governmental or governmental which render social work services; 2) The ways PGSW- I ? NSOU 13 (methods) through which they render services such as Case Work, Group Work, Community Organization, Social Action, Social Research, Social Welfare Administration etc and 3) The various types of services (fields of social work) that they render to different individuals, groups and communities keeping in mind the objectives, philosophy and values of social work. Social work

is considered as one of the most recent discipline and is gradually encompassing every aspect of human life within its premises and thus now a days

63%

MATCHING BLOCK 37/180

W

it deals with all most all the areas of society in the following ways : a) Public Assistance: It

refers to the help provided to meet the economic and social needs of the client. In India this type of intervention includes services provided

51%

MATCHING BLOCK 23/180

W

to elderly, blind, disabled and disadvantaged people. b) Social Insurance: Social insurance refers to fulfill certain contingencies like old age, unemployment, industrial accidents and occupational diseases etc.

c) Family Welfare Services: Family is considered as the oldest and most permanent social institution and as a association it plays an important role in

67%

MATCHING BLOCK 24/180

W

human development. Social work renders significant services in this sector like material assistance and counseling service to the family relating to marriage, health, economic problems and bringing up siblings.

d) Child Welfare Services: Another important area of social work intervention is child welfare where it provides

100%

MATCHING BLOCK 25/180

W

residential institutions for their care and protection, education and rehabilitation of socially handicapped children viz, orphans, destitute

and fondling children of unmarried mothers,

79%

MATCHING BLOCK 26/180

recreational and cultural facilities, holiday homes for the children of low income families etc. e) Community Welfare Service : Community is an important

place where the intervention of social work takes place through

97%

MATCHING BLOCK 27/180

W

establishment of urban community development centers dealing with the welfare aspects of slum improvement such as slum clearance, sanitation, health education and care, seeking employment for women, dormitories and night shelters for migrant homeless people, holiday home for children and community welfare service in rural areas etc f) Women Welfare Service: Women

Welfare is very important for a developed nation. So social work also intervenes in this sector through women specific programmes like safe motherhood, women protection, family counseling, marriage counseling, and income generation programme for women etc.

NSOU ? PGSW- I 14 g) Labour Welfare Service: The scope of social work also extends to labour welfare and its intervention

76%

MATCHING BLOCK 28/180

W

includes the activities such as family management counseling, counseling on safety maintenance, advocacy for labour rights, health education, value education etc. h) Welfare Services for the

Persons with Disability (PWDS), aged and Infirm :

80%

MATCHING BLOCK 29/180

W

The welfare service for differently able incorporates institution for the care and rehabilitation of physically and mentally retarded, hostels for the working handicapped, small production units for the differently able, special schools for mentally retarded children and orthopedically challenged and counseling service for mentally depressed etc.

100%

MATCHING BLOCK 30/180

W

The activities of social work for the aged and infirm include running old age home, recreational facilities, physical support, psychological

and support etc. i) School Social Work: In contemporary society , school has become an important premises where intervention is required urgently as now a days due to high competition, broken homes, addiction to electronic gadgets , several problems have been observed in the relationship among students

79%

MATCHING BLOCK 31/180

W

and teachers. The activities of social work intervention in schools range from counseling service to the children and their parents, to the

counseling of the teacher on the perspectives of the emerging problems, etc. j) Correctional Services: Social work has also expanded its services in correctional set up like Reformatory homes, probation home, parole home, juvenile shelters etc.

100%

MATCHING BLOCK 32/180

W

It includes recreational activities, counseling, vocational training for the unemployed criminals, after care service, rehabilitation etc.

k) Youth Welfare Service: Social work has a vast scope in the field of youth welfare as youth is considered as an important pillar of the society. Through different schemes like

100%

MATCHING BLOCK 33/180

W

Youth counseling service, Youth health service, National Fitness Corps, Services for poor students, National Physical efficacy Drive, National Employment Scheme

social work aims to ensure welfare of the youth. l) Welfare of the weaker section: In contemporary society social work also intervene in different unexplored areas and tend to provide unique services like services to weaker or marginalized sections of the society ((NAPSWI, 2016). 1.6 Functions of Social Work Function of social work implies the activities taken during intervention.

90%

MATCHING BLOCK 34/180

W

According to Prof. P.D. Mishra "social work operates to assist individuals in adjusting to the

MATCHING BLOCK 38/180

W

socio economic development such as education, recreational services, urban and rural development programmes and programmes of integration etc which are primarily concerned with the development of individuals, families, groups and communities. ((NAPSWI), 2016) The basic functions of social work can be divided in 3 broad interdependent and interrelated categories, viz; o Restoration of social functioning

o Provision of resources and o Prevention of social dysfunction 1.7 Philosophy of Social Work Philosophy can be defined as believes and principles underlying any department of knowledge. (Oxford Dictionary). As a specific discipline social work is also based upon certain believes and values which guide its application of knowledge as a profession and its activities. The philosophy of social work is mainly based on the belief that every human being has its own worth and dignity. Social work also focuses on social justice, equality and empowerment as its guiding principles. In

NSOU ? PGSW- I 16 short it believes in humanitarian philosophy. (S.Nayre, 2016). (Philosophy of social work Herbert Bisno and Chaya Patel). 1.8 Concept of Charity and Philanthropy Charity: Charity is considered as a humanitarian act and it refers to giving help to people who are in need. Charity is a voluntary act. The word charity originates in late Old English to mean a "Christian love of one's fellows" and until beginning of the 20 th century, this meaning remained synonymous with charity. In reality charity is etymologically connected with Christianity. But originally this word comes from French word *charité* , which was derived from the Latin "*caritas* ", a word commonly used in the Vulgate New Testament to translate the Greek word *agape* (ἀγάπη), a distinct form of " love " (Online Etymology Dictionary) But with time the meaning of charity has transformed from one of "Christian love" to that of "providing for those in need, generosity and giving." Charity giving refers to giving away money, food, goods or time to the disadvantaged section of the society who are generally termed as poor. This task can be carried out either directly or through any charitable trust due to some noble cause. Charitable giving is also termed as alms or alms giving as it is considered a religious act. The recipient of the charity mostly includes destitute people like widowed, orphaned, sick or disable etc. The famous phrase "charity begins at home "implies that some group of people practice charity by donating to the members of that particular group. But generally charity denotes providing services to those who are in need. In most cases doing charity implies providing basic necessities which are essential for survival like food, water, shelter, and health care but charity also includes activities like visiting the imprisoned or the homebound, ransoming captives, educating orphans, even social movements. Donations to causes that benefit the unfortunate indirectly, such as donations to fund cancer research, are also considered as charity. If the religious aspect of the charity is considered, it is stated that the recipient of charity may offer to pray for the patron. Like it is a much known ritual to feed the poor during funeral so that they can pray for peace of the deceased soul. Institutions may commemorate benefactors by displaying their names, up to naming buildings or even the institution itself after the benefactors. (Dunn, 2000) In the past, the activities in the charitable organization were carried out on the basis of a charitable model in which the donators donated to the organization and the

PGSW- I ? NSOU 17 organization distributed it among the beneficiaries, like "Make a Wish Foundation" and the "World Wildlife Fund". But in recent times the charitable organizations have adapted different approach, where people allowed donating online, through websites such as Just Giving. But originally charity means distributing goods to the recipient directly. Now most of the charities are not following the charitable model and have adopted more direct donator to recipient approach , like Global Giving (direct funding of community development projects in developing countries), Donors Choose (for US-based projects), Pure Charity, Kiva (funding loans administered by microfinance organizations in developing countries) and Zidisha funding individual microfinance borrowers directly. Many institutions evolved with time which aspires to support the poor and these institutions are known as charities provide the bulk of charitable giving today, in terms of monetary value. These types of institution allows people who have time and inclination for charity , to lend their helping hands towards destitute sections of the society either by providing monetary help or helping these institutions in their charitable activities . These institutions can also effectively filter the original needy from those who deceitfully claim charity .There is a strong connection between religion and charity as studies have found that "individuals who are religious are more likely to give money to charitable organizations" and they are also more likely to give more money than those who are not religious. " (Monsma, 2007) Philanthropy : Philanthropy consists of "private initiatives, for the public good, focusing on quality of life". Philanthropy contrasts with business initiatives, which are private initiatives for private good, focusing on material gain, and with government endeavors, which are public initiatives for public good, e.g., focusing on provision of public services. A person who practices philanthropy is a philanthropist. Philanthropy engrosses charitable giving for some noble causes on a large scale but it can be considered as something which is more than just charitable giving. It can be recognized as an effort of any individual or specific organization based on the aspiration to reduce human suffering and enhance human welfare. Sometimes affluent individuals set up some private foundations to facilitate their philanthropic efforts. Philanthropic social work is a professional social work intervention in the field of philanthropy. Philanthropy is the major area of professional social work in India. The word philanthropy originated from ancient Greek word "philanthropia". If we dissect this word then we get phil which means love or fond of and arthropos which means humankind or mankind. During second century AD, Plutarch used this concept

NSOU ? PGSW- I 18 to describe superiority of human beings. In Roman Catholic Middle Age the concept of "philanthropia" was outdated by the concept of Caritas charity which implied selfless love, value for salvation and escape from purgatory. And then during 1600s this specific concept was modernized by Sir Francis Bacon. According to Bacon the word philanthropia was synonymous with goodness and was associated with the Aristotelian perception of virtue. Samuel Johnson had generally defined philanthropy as "love of mankind or good nature". The root of philosophy can be found in ancient Greek society. The famous philosopher Plato in 347 B.C, instructed his nephew in his will to use the family earnings of the family farm for funding the academy that was established by Plato. The money was utilized to help students and faculty to keep the academy running. Approximately after 150 years Pliny and Younger bore one third cost of education for a Roman school for young boys with the aim to provide proper education to the young Romans within the country. (Hayes, 2021) Following are the main features of philanthropy: ? Philanthropy refers to charitable acts or other good works that help others or society as a whole. ? Philanthropy can include donating money to a worthy cause or volunteering time, effort, or other forms of altruism. ? The Greek philosopher Plato was a philanthropist, leaving funds in his will to help maintain the academy he had founded. ? Andrew Carnegie is one of America's most famous philanthropists, noted for the large scale of his charitable contributions, which included the building of more than 2,500 libraries worldwide. ? In modern times, philanthropy is often undertaken by those seeking tax breaks, in addition to feeling good and helping others. (Hayes, 2021) 1.8.1 Difference between Charity and philanthropy Although charity and philanthropy are quite dissimilar, but there is some overlap. These two concepts are sometimes used interchangeably, but the differences are as follows: Charity is a natural and poignant response to an immediate situation and it is mainly short term. Charity may occur in the form of monetary donations or volunteering. The main objective of charity is to alleviate the adverse effect of a particular social

PGSW- I ? NSOU 19 problem. But Philanthropy mainly addresses the root cause of a specific social problem and provides a more strategic and long term solution. In addition to giving money or volunteering, some philanthropists participate in advocacy work. Disaster relief is an area where both charity and philanthropy plays an important role. When some natural calamity or any disaster affects the humanity, then the charitable organizations and some individual are inclined to provide immediate monetary help or provide aid for basic necessities. On the other hand philanthropy addressed full disaster life cycle starting from prevention to preparedness to recover. Donors may focus on certain populations, such as the elderly or the poor, as part of their strategy or work directly with stakeholders to improve systems. The original meaning of charity – "Christian love of one's fellow," is rooted in Late Old English while philanthropy, or "the love of humanity," originated in Greek. Charity is strongly related with the process of donations, charitable giving, children, charity ratings and organizations. Whereas philanthropy correlates with processes like managing, creating, knowledge, research and organizations. Regardless of the issue area, the two terms – and practices – share one main thing in common: They're all about spreading the love and reducing human suffering. (Jope, 2019). 1.9 Conclusion From this unit, we developed an understanding about the basic concept of Social Work. This understanding will help us to know the real essence of this noble profession, and we may now carry out our professional with much more efficiency. 1.10 Exercises (i) What is

74%

MATCHING BLOCK 48/180

W

Social work principles are guiding declarations of statement which have evolved from experience and research. The most commonly discussed principles of social work are as follows: Principle of acceptance:

This specific principle enables social worker to accept the individual client

85%

MATCHING BLOCK 42/180

W

as he or she is with all his/her limitations. Social work believes that acceptance is the root of all help. Social worker should not feel hostile towards a client because his behavior deviates from the approved one. The principle of acceptance entails that social worker must perceive, acknowledge, receive and establish a relationship with the individual client as he actually is, not as social worker wishes him to be or think he should be. Principle of individualization: The principle of individualization is fundamental to effective social work practice. Social work believes that every individual is unique. Each individual is different from that of every other individual in nature

and behaviour.

100%

MATCHING BLOCK 43/180

W

As we know that individual is unique as his thumb print. The social worker views the problem of each client as specific and helps the client move forward finding the most satisfactory means

and resources

for client to deal with particular problem situation. Principle of Communications: Communication is a two way process most of the problem that give pain are precisely the problem of communication. When the communication is inadequate or insufficient the problems occurs either automatically or because of misunderstanding. The social worker should have enough skills to grasp the communication. The proper communication is crucial in social work relationship because the background of the client and worker may be different, the mental status of the client and the worker may vary. Therefore, the social worker should make all the efforts to see that communication between him and client is proper. The client should be made

to

and other agencies and individual & should be consulted only with the (

Client's)

98%

MATCHING BLOCK 47/180

W

consent. Principle of Self-Determination: The principle emphasizes client's right to self determination. Every individual client has the right to decide what is appropriate for him and decides the ways and strategies to accomplish it. In other words, social worker should not enforce decisions or solutions on the clients because the client has come to him for help. Therefore, social worker should support and guide the client to develop insight into his social situations in correct perspective and encourage and involve him to like decisions that are good and acceptable to him. Principle of Non-Judgmental Attitude: Principle of non-judgmental attitude presumes that the social worker should begin the professional relationship without any bias. He should not form opinion about the client, good or bad, worthy or unworthy. He has to treat the client as somebody who has come to him for help and he should be willing to help the client without being influenced by the opinions of other about the client or his situation. This enables the worker and the client feel free to develop understanding of each other. Principle of Controlled Emotional Involvement: This principle guides social work professional not to indulge too much personally in the client's difficult situation or being too objective. Therefore, the social worker should maintain a reasonable emotional distance even while sympathizing with the client social worker should indicate the understanding of the difficult situations of the client without showing pity or appearing to be indifference. (

H. 2020) 2.4 Values of Social Work Values are basic and fundamental beliefs that guide or motivate attitude, behavior or action. Values include moral ideas, general conceptions or orientation towards world or environment or sometimes it means simply interests, attitudes, preferences, needs, sentiments and depositions. The ethical principles based on six main values of social NSOU ? PGSW- I 24 work which reflects the mission of social work (NASW) and they are as follows: ? Service ? Social justice ? Dignity and worth of the individual ? Importance and centrality of human relationships ? Integrity ? Competence

98%

MATCHING BLOCK 49/180

W

Service ? Empowering individuals, families, and communities is a primary goal of all social workers. Service is the value from which all other social work values stem. Social workers regularly elevate the needs of their communities above their own personal interests and use their skills and knowledge (from education and experience) to enhance the wellbeing of others. In addition, social workers often volunteer their time or expertise above and beyond their professional commitments. ? For example, during the COVID-19 pandemic, many social workers coordinated material aid, community meals, and PPE drives. Social Justice ? Social workers advocate on behalf of the oppressed, the marginalized, and anyone who needs their voice amplified. They often focus on issues such as poverty, homelessness, discrimination, harassment, and other forms of injustice. Social workers provide information, help, and other resources to people seeking equality, and they educate people who may not directly experience discrimination about the struggles of others who may not have the same level of privileges in our society. ? Social workers' efforts to address injustices include examining their own biases and encouraging others to do the same. They work to create more equitable support systems and identify structural conditions that contribute to disparities in the health and well-being of individuals and communities. Dignity and Worth of the Person ? Social workers are mindful of individual differences in thinking and

PGSW- I ? NSOU 25 behaviour,

as well as cultural and ethnic diversity. Only by treating each person with dignity and respect can social workers promote their clients' capacity and opportunity to address their own needs and improve their personal situations. Social workers must be cognizant of their duties to both individual clients and to society as a whole, and seek solutions for their clients that also support society's broader interests. ? Social workers seek to eliminate factors that threaten the dignity and worth of individuals, but they do so with a decentred approach that respects differences and honors self-determination. Rather than imposing their own values, social workers leverage the values of their clients and the communities they serve. Importance of Human Relationships ? Social workers connect people who need assistance with organizations and individuals who can provide the appropriate help. Social workers recognize that facilitating human relationships can be a useful vehicle for creating change, and they excel at engaging potential partners who can create, maintain, and enhance the well-being of families, neighbourhoods, and whole communities. ? Challenging social conditions, such as those created by the COVID-19 pandemic, highlight the essential role of human relationships in supporting health and healing. Social workers not only build and maintain strong relationships with individuals and communities, they also help their clients identify relationships that are helpful to them. Integrity ? To facilitate these relationships and empower others to improve their lives, social workers must act in a way that engenders trust. Each social worker must be continually aware of the profession's mission, values, and ethical principles and standards, and set a good example of these components for their clients. By behaving honestly and demonstrating personal integrity, social workers can promote the organizations with which they are affiliated while also creating the most value for the populations they serve. ? One relevant trend in social work is the profession's use of and interest in social media. A study published by Social Sciences & Humanities Open in 2020 reports that the social work profession seeks to "regard data privacy NSOU ? PGSW- I 26 protection as a human and civil rights issue" and "support inclusion of social media information in social work." Competence ? Professional social workers often hold undergraduate or graduate degrees in social work, but a fair amount of their knowledge comes from gaining on- the-job experience. As part of the social work values outlined in the NASW Code of Ethics, each social worker must practice within their scope of competence and avoid misrepresenting skills or experience to potential clients. ? Social workers must constantly strive to expand their knowledge base and competence in order to make meaningful contributions to the profession and those they serve. Social work is a lifelong learning commitment, and continuing education can take the form of any activity that expands a social worker' knowledge and skill set, conducting personal study and research, attending webinars and conferences, or pursuing additional licences or degrees. (

University, 2021) 2.5 Ethical Principles Human Rights and Human Dignity: The core value of social work is to respect the inherent worth and dignity of every human being irrespective of their caste and creed and to protect the rights of every individual. A professional social worker should encourage people to make informed choices through active participation in the process of service providing and also should respect their values and decisions from client's perspective. It is the responsibility of the social worker to enhance and defend each person's physical, psychological, emotional and spiritual integrity and well-being through ? Respecting the right to self determination ? Promoting the right to participation ? Treating each person as a whole ? Identifying and developing strength Social Justice : A professional social worker bears the responsibility to ensure social justice for society and as well as for the people they are working for Social workers should always raise their voice against any kind of negative discrimination

on the basis of characteristics such as ability, age, culture, gender or sex, marital status, PGSW- I ? NSOU 27 socio-economic status, political opinions, skin color, racial or other physical characteristics, sexual orientation, or spiritual beliefs.

They should always aspire to challenge social exclusion, stigmatization and suppression and build an all inclusive society through ? Challenging negative discrimination ? Recognizing diversity ? Distributing resources equally ? Challenging unjust policies and practices ? Working in solidarity. Integrity and Belongingness: Social workers through their professional intervention should always exhibit and endorse qualities like honesty, reliability, impartiality, diligence and transparency etc. They should always follow a high level of professional conduct through their loyalty, accountability and promotion of professional values. They always should focus on openness and transparency in their professional life and should avoid any situation or relationships which can be a barrier to integrity and impartiality through, ? Being loyal and trustworthy ? Being professionally accountable and responsible ? Working with transparency Sustainability: The success of a project which aims to bring a change in any diverse situation depends on its sustainability and it is the responsibility of a professional social worker to make it sustainable by running even after withdrawal of donor's assistance. They should enhance their capacity to provide intended service, continue activities in local level and develop successor services over a period of time. They should ensure continuation of the programme in the future through ? Seeking people's participation ? Developing leadership ? Building capacity Services: Professional social workers should provide endless services not only to help people but also to assure that their issues and other social problems are addressed properly. They should put their every effort to pose a balance between needs of individual

NSOU ? PGSW- I 28 and his rights and freedom so that collective interest of distressed humanity can be served in a better way. A professional social worker is obliged to keep his personal interest aside while promoting individual development and serving whole society. Human Relations: As social worker mainly work with people, so they should be well versed with every dynamics of relationship between and among people as it is one of most significant determinants for social change. Social workers intend to fortify relations among people and community with a special purpose and that is

A code of ethics aspires to lay down the mission or values of a profession or organization and describe how professionals can address crisis, the ethical principles based on the organization's core value and the standards to which the professional is held. A code of ethics can be termed as an "ethical code" which incorporates issues like

NSOU ? PGSW- I 30 business ethics, a code of professional practice, and an employee code of conduct. Main features of code of ethics: ? A code of ethics pens down a profession's ethical guidelines and describe about best practices to maintain honesty, integrity and professionalism. ? If the professionals or members of the organization violate the code of ethics then it may lead to suspension or sometime termination. ? In some industries, including banking and finance, specific laws govern business conduct. In others, a code of ethics may be voluntarily adopted. ? Mainly there are three types of code of ethics which includes compliance- based code of ethics, a value-based code of ethics, and a code of ethics among professionals. 3.3 Code of Ethics by National Association of Social Workers Similarly social work as a profession also has a set of ethical guidelines to which all the professional social workers are beholden during their course of studies and have to undertake an oath to abide by its standards and principles throughout their careers. These are known as Social Work Code of Ethics or otherwise termed as The National Association of Social Workers (NASW) Code of Ethics. As a designated authority of social work NASW prepared the first draft of code of ethics during the month of October in 1960. Afterwards it has been amended several times but it maintains many

of the original principles. (NASW) 3.3.1 Purpose of the NASW Code of Ethics Professional ethics lies at the core of social work

and social work as a profession has a responsibility to preach and practice its basic values, ethical principles and ethical standards.

87%

MATCHING BLOCK 57/180

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

The Code is relevant to all social workers and social work students, regardless of their professional functions, the settings in which they work, or the populations they serve. This specific code of ethics has six purposes

as mentioned: ? To establish the core values upon which the social work profession is based. ? To create specific ethical standards that should guide social work practice and reflect the core values. ? To help social workers navigate professional considerations and obligations when ethical uncertainties arise. ? To provide ethical standards to which the social work profession can be PGSW- I ? NSOU 31 held accountable. ? To initiate new social workers to

100%

MATCHING BLOCK 55/180

W

the profession's mission, values, and ethical principles and standards. ?

To create standards by which the social work profession can assess if a social worker has engaged in unethical conduct. Social workers who pledge to abide by this code must cooperate with its implementation and disciplinary rulings based upon it. The code of ethics is based on six main values of social work which reflects the mission of social work and they are as follows: ? Service ? Social justice ? Dignity and worth of the individual ? Importance and centrality of human relationships ? Integrity ? Competence 3.3.2 Main ethical standards as per the NASW code of ethics The code is comprised of six thematic areas that outline a social worker's responsibility to clients, colleagues, employers, and

94%

MATCHING BLOCK 56/180

the profession in general. The following ethical standards are relevant to the professional activities of all social workers. These standards concern (1) Social workers' ethical responsibilities to clients, (2) Social workers' ethical responsibilities to colleagues, (3) Social workers' ethical responsibilities in practice settings, (4) Social workers' ethical responsibilities as professionals (5) Social workers' ethical responsibilities to the social work profession (6) Social workers' ethical responsibilities to the broader society. (

NASW) 3.4 Code of Ethics for Professional Social Workers in India In India the apex body dedicated towards promotion of standards and enhancement of the status of the social work profession is National Association of Professional Social Workers also known as NAPSWI. It is a national level professional

NSOU ? PGSW- I 32 organization and has engraved the code of ethics to be followed by the professional social workers in India. According to the preamble of Code of ethics as drafted by NAPSWI "A code of ethics is a statement which expresses the primary ethical values, obligations and goals of the profession. It is a commitment which serves to bear witness to our promise as a profession to uphold the values and ethical obligations expressed in the code. It gives definition to our commitment to practice in ethical terms. A code of ethics lays out clearly the profession's values and explains what they are in terms of what we ought to do in order to protect and promote the public good, and what we must avoid doing in order to prevent harm to the public". A code of ethics can be considered as a blueprint or set of guidelines which are scripted to set a standard of the behaviors expected from the members of a particular group, association or a profession. On one hand this code of ethics set a professional standard and on the other hand it also intends to boost up the confidence of the professionals as it ensures commitment and enthusiasm of the workforce. (NAPSWI, 2015). 3.4.1 Aims and Objective of Code of Ethics The main aim of this code of ethics is to articulate basic values, ethical principles and ethical standards of social work, in order to guide the conduct of social work professionals. The specific objectives are as follows: 1. Sets forth ethical guidelines to control professional conduct of social workers; 2. Provide

83%

MATCHING BLOCK 59/180

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

ethical standards to which the people can hold the social work profession

answerable; 3. Serves as a guideline for the development of ethically based professional conduct and helps social work professionals, especially new comers to take a stand on various issues and situations; 4. Stimulate ethical discourse between professionals in social work and social organizations, training and professional development institutions, other disciplines and professional organizations. 5. Strengthen the professional identity and self-conception of professionals, their networks and the organizations in which social work is practiced. 3.4.2 Scope and Coverage This specific Code of Ethics is applicable to entire fraternity of social work in India

PGSW- I ? NSOU 33 which incorporates educators, practitioners, employers and also students. It also encompasses all the professional social worker (under-graduates and post graduates) and the professional organizations practicing social work , institutions affiliated to the Universities recognized by the University Grants Commission (UGC) or through the specially established departments of social work functioning as a part of university system , training and professional development institutions, professionals in other occupations and disciplines with whom social work professionals cooperate and the people among whom social work professionals accomplish their tasks. 3.4.3 Ethical Principles Human Rights and Human Dignity: The core value of social work is to respect the inherent worth and dignity of every human being irrespective of their caste and creed and to protect the rights of every individual. A professional social worker should encourage people to make informed choices through active participation in the process of service providing and also should respect their values and decisions from client's perspective. It is the responsibility of the social worker to enhance and defend each person's physical, psychological, emotional and spiritual integrity and well-being through ? Respecting the right to self determination ? Promoting the right to participation ? Treating each person as a whole ? Identifying and developing strength Social Justice: A professional social worker bears the responsibility to ensure social justice for society and as well as for the people they are working for .Social workers should always raise their voice against any kind of negative discrimination

to promote, restore, maintain and enhance the well-being of individuals, families, social groups and communities. 3.4.4

Professional conduct NAPSWI as a member organization of IFSW and IASSW bears the responsibility of PGSW- I ? NSOU 35 developing and updating the code of ethics which should be compatible with the guidelines of IFSW and IASSW. As a national level organization, it is the commitment of NAPSWI to notify all the professional social workers and schools of social work about these codes or guideline. All the professional social worker should abide by these codes while practicing social worker in India. The general guidelines on professional conduct are as follows: ?

89%

MATCHING BLOCK 61/180

W

Social workers are expected to develop and maintain the required skills and competence to

do their job. ? Social workers should not allow their skills to be used for inhumane purposes. ? Social workers should act with integrity. This includes

85%**MATCHING BLOCK 62/180****W**

not abusing the relationship of trust with the people using their services, recognizing the boundaries between personal and professional life and not abusing their position for personal benefit or gain. ?

Social workers should act in relation to the people using their services with compassion, empathy and care. ? Social workers should not subordinate the needs or interests of people who use their services to their own needs or interests. ? Social workers have a duty to take necessary steps to care for themselves professionally and personally in the workplace and in society, in order to ensure that they are able to provide appropriate services. ? Social workers should maintain confidentiality regarding information about people who use their services. Exceptions to this may only be justified on the basis of a greater ethical requirement (such as the preservation of life). ? Social workers need to acknowledge that they are accountable for their actions to the users of their services, the people they work with, their colleagues, their employers, professional association and to the law and that these accountabilities may conflict. ?

81%**MATCHING BLOCK 66/180****W**

Social workers should be willing to collaborate with the schools of social work in order to support social work students to get practical training

of good quality and up to date practical knowledge. ?

85%**MATCHING BLOCK 63/180****W**

Social workers should foster and engage in ethical debate with their colleagues and employers

and take responsibility for making ethically informed decisions. ? Social workers should be prepared to state the reasons for their decisions

NSOU ? PGSW- I 36 based on ethical considerations and be accountable for their choices and actions. ? Social workers should work to create conditions in employing agencies and in their countries where the principles of this statement and those of their own national code (if applicable) are discussed, evaluated and upheld. 3.4.5 Ethical Responsibilities All the professional social workers in this country are expected to abide by the ethical responsibilities while delivering their services in the context of both education and practice .These responsibilities can be classified in various segments which are mentioned below : Towards Client ? Social workers should promote the wellbeing of clients and maintain the best interests of clients as a priority with due regard to the respective interests of other persons. In exceptional cases, the priority of clients' interests may be overshadowed by the interests of other persons or by legal requirements. ? Social workers should respect and promote the right of clients to self-determination and their autonomy, assist and enable them in their efforts to identify their goals. They should discuss with clients their rights and responsibilities and provide them with honest and accurate available information regarding: (a) Nature of the social work service being offered; (b) Recording of information and who will have access to such information; (c) Foreseeable potential risks and benefits of proposed courses of action; (d) Their right to obtain a second opinion or to refuse or cease service: and (e) Their rights of access to records and to avenues of complaint. ? Social workers should ensure that clients understand the sense of informed consent and the circumstances under which it may be required. In instances when clients lack the capacity to provide informed consent, social workers should protect clients' interests by seeking permission from an appropriate third party, informing clients consistent with the clients' level of understanding. ? Social workers should build up and sustain the professional relationships based on people's right to control their own lives and make their own choices and decisions. Such relationships should be based on people's rights to respect.

PGSW- I ? NSOU 37 ? Social workers should provide services and represent themselves as competent only within the boundaries of their education, training and relevant professional experience. ? Social workers should have a knowledge base of their clients' cultures and be able to its function in human society. For this purpose, they should obtain education and seek to understand the nature of social diversity and oppression with respect to race, ethnicity, national origin, color, gender identity or expression, age, marital status, political belief, religion, immigration status, and mental or physical disability. ? Social workers should be vigilant to and avoid conflicts of interest that interfere with the exercise of professional decision and impartial judgment. They should inform clients when a real or probable conflict of interest arises and take reasonable steps to resolve the issue in a manner that makes the clients' interests primary and protects clients' interests to the greatest extent possible. ? Social workers should respect clients' right to privacy. They should not solicit private information from clients unless it is essential to providing services. They may disclose confidential information when appropriate with valid consent from a client or a person authorized to consent on behalf of a client. Thus, social workers should protect the confidentiality of all information obtained in the course of social work assistance. ? Social workers should provide clients with reasonable access to records concerning to them. Those who think that clients' access to their records could cause serious misunderstanding or harm to the client should provide assistance in interpreting the records. They should limit clients' access to their records or portions of their records, only in exceptional circumstances when there is compelling evidence that such access would cause serious harm to the client. ? Social workers should use the authority of their role in a responsible, accountable and respectful manner. They should exercise such authority appropriately to safeguard people with whom they work and to ensure people have as much control over their lives as is consistent with the rights of others. ? Social workers should terminate their services to clients and professional relationships with them when such services and relationships are no longer required. They should take reasonable steps to avoid abandoning clients who are still in need of services.

NSOU ? PGSW- I 38 Towards Professional Colleagues: ? Social workers should treat their professional colleagues with respect and admire accurately and fairly their qualifications, views and obligations whenever needed. They should avoid criticism of colleagues in communications with other professionals and especially with the clients. They should cooperate with colleagues and with colleagues of other professions when such cooperation is essential for wellbeing of the clients. ? Social workers should respect confidential information shared by colleagues in the course of their professional relationships and transactions. They should ensure that such colleagues understand social workers' obligation to respect confidentiality and any exceptions related to it. ? Social workers who are members of team of professionals which is interdisciplinary in nature, should participate and contribute to decisions that affect the wellbeing of clients by drawing on the perspectives, values, and experiences of the social work profession. ? Social workers should not take any advantage of a dispute between a colleague and employer to obtain a position or otherwise advance the social workers' own interests. They should not drag their clients in disputes with colleagues or engage clients in any inappropriate discussion of conflicts between social workers and their colleagues. ? Social workers should seek the cooperation of colleagues and consult them whenever it is in the best interests of clients. They should keep themselves well informed about colleagues' areas of expertise and competencies. ? Social workers should refer clients to other professionals when their specialized knowledge or expertise is needed to serve clients fully or partially, when it is believed that they are not being effective or making reasonable progress with clients and that referral service is required. Social workers those who refer clients to other professionals should take appropriate steps to facilitate an orderly transfer of responsibility. ? Social workers who have direct knowledge of a professional colleague's impairment that is due to personal problems, psychosocial distress, substance abuse, or mental health difficulties and that interferes with practice effectiveness should consult with that colleague when feasible and assist the colleague in taking remedial action. ? Social workers should take adequate measures to discourage, prevent, expose, and correct the unethical conduct of colleagues. They should be

PGSW- I ? NSOU 39 knowledgeable about established policies and procedures for handling concerns about colleagues' unethical behavior. ? Social workers should contribute to the education and training of colleagues by sharing knowledge and practice wisdom. They should identify, develop, use and disseminate knowledge, theory and practice. Towards Practice Setting: ? Social workers should undertake to carry out their duties diligently according to the standards of the code of ethics and strive to ensure such are upheld, respected and complied with by the organizations for which they work. ? Social workers should address any potentially conflicting goals or ethical differences between themselves and the organization for which they work and try to find solutions to such problems in accordance with the code of ethics. ? Social workers should strive for working conditions within their organization satisfactory to all concerned that promote integrity and protect health, and for the continuous development and improvement of quality. ? Social workers who provide supervision or consultation should have the necessary knowledge and skills appropriately and should do so only within their areas of knowledge and competence. Those who provide supervision or consultation are responsible for setting clear, appropriate and culturally sensitive boundaries. ? Social worker should carefully consider the client's needs before agreeing to provide services, especially, when he/she is receiving services from another agency or colleague and contacts him for his/her services. They should discuss with potential clients the nature of the clients' current relationship with other service providers and the implications, including possible benefits or risks, of entering into a relationship with a new service provider in order to minimize the possible confusion and conflict. ? Social workers should take appropriate steps to ensure that documentation of records is accurate and reflects the services provided. They should include sufficient and timely documentation in records to facilitate the delivery of services and to ensure continuity of services provided to clients in the future. ? Social workers should adhere to commitments made to employers and employing organizations. They should work to improve employing agencies' policies and procedures and the efficiency and effectiveness of their services. They should also take appropriate steps to ensure that employers are aware

NSOU ? PGSW- I 40 of social workers' ethical obligations as set forth in the code of ethics for social work practice. ? Social workers should not allow an employing organization's policies, procedures, regulations, or administrative orders to interfere with their ethical practice of social work. ? Social workers should act to prevent and eliminate discrimination in the employing organization's work assignments and in its employment policies and practices. Towards Self-Employment: Social workers those who are self-employed should: ? Inform their clients regarding monetary charges and any other costs before commencing professional service and

70%

MATCHING BLOCK 64/180

W

charge only for hours and services contracted with them. ? Arrange appropriate temporary or substitute service for clients when unavailable or unable to continue practice. ?

Inform clients and offer suitable referral when their needs fall outside the practitioner's area of expertise or ability to provide services or resources. ? Not solicit the clients of either their colleagues or their place of self-employment. ? Maintain practice records in accordance with all relevant statutory requirements. ? Maintain adequate professional indemnity and public liability insurance coverage as a protection for clients. ? Ensure that when their services provided are funded by third parties, they have a prime responsibility for the welfare of their clients. ? Ensure that the services they provide are ethically and professionally appropriate while making negotiations to provide services to clients on behalf of an agency or funding source. Towards Education and Supervision/Instruction: Social workers who function as educators or field work supervisors/instructors of students should: ? Provide instruction only within their areas of knowledge and competence based on the most updated information and knowledge available in the profession.

PGSW- I ? NSOU 41 ? Assess and evaluate students' performance in a manner that is based on the scientific methodology and as per the institutional rules and regulations. ? Take reasonable steps to ensure that clients are routinely informed when services are being provided by students. ? Not engage in any dual or multiple relationships with students in which there is a risk of exploitation or probable harm to the students. Social work educators and field work supervisors of students are responsible for setting clear, appropriate, and culturally sensitive boundaries. ? Arrange student field work placements only in organizations that exercise fair personnel practices. Towards Research and Dissemination of its Findings: Social workers those who are engaged in research should ? Undertake specific ethical responsibilities and observe the conventions of ethical scholarly enquiry. ? Monitor and evaluate policies, the implementation of programs, and practice interventions. ? Promote and facilitate evaluation and research to contribute to the development of knowledge. ? Critically examine and keep up with current emerging knowledge relevant to social work and fully use evaluation and research evidence in their professional practice. ? Carefully consider possible consequences and should follow guidelines developed for the protection of evaluation and research participants. ? Obtain voluntary and written informed consent from participants, when appropriate, without any implied or actual deprivation or penalty for refusal to participate; without undue inducement to participate; and with due regard for participants' wellbeing, privacy, and dignity. ? Promote appropriate individual and community participation in research. ? Ensure that the research has merit and integrity by demonstrating its potential benefit, utilizing appropriate methods and basing it on a thorough review of the literature. ? Accurately and fully disseminate research findings. ? Bring research results that indicate or demonstrate social inequalities or injustices to the attention of the relevant bodies.

NSOU ? PGSW- I 42 ? Acknowledge and attribute fully the work of all other authors and contributors. ? Adhere to general policies on authorship and credit should be taken only for work actually performed. ? Educate themselves, their students, and their colleagues about responsible research practices. Towards Administration /Management of Social Work Services: ? Social work administrators should advocate within and outside their agencies for adequate resources to meet the needs of clients. ? Social work administrators should advocate for resource allocation procedures that are open and fair. When not all clients' needs can be met, an allocation procedure should be developed that is non-discriminatory and based on appropriate and consistently applied principles. ? Social work administrators should take appropriate steps to ensure that the working environment for which they are responsible is consistent with and encourages compliance with the code of ethics. ? Social work administrators should take appropriate steps to eliminate any conditions in their organizations that violate, interfere with or discourage compliance with the code of ethics. ? Social work administrators should take appropriate steps to provide or arrange for continuing development for all staff for whom they are responsible which should address updated knowledge and emerging trends related to social work practice. Towards Oneself of Being Professional ? Social workers should critically assess their own practice and be aware of their impact on others. They should recognize the limits of their practice and seek advice of other professionals if necessary in order to ensure that they work in a more effective manner. ? Social workers should strive to become and remain proficient in professional practice and the performance of professional functions. They should critically examine and keep current with emerging knowledge relevant to social work. They should also routinely review the professional literature and participate in continuing education relevant to social work practice and social work ethics. ? Social workers should base their practice on recognized knowledge, including empirically based knowledge, relevant to social work and social work ethics.

PGSW- I ? NSOU 43 ? Social workers should not allow their own personal problems, psychosocial distress, legal problems, substance abuse, or mental health difficulties to inter in to their professional performance. ? Social workers should not participate in, condone or be associated with dishonesty, fraud, or deception in any manner. ? Social workers should make clear distinctions between statements made and actions engaged in as a common individual and as a representative of the social work profession, a professional social work organization. ? Social workers should ensure that their representations to clients, agencies and the public of professional qualifications, credentials, education, competence, affiliations, services provided or results to be achieved are accurate. ?

62%

MATCHING BLOCK 65/180

W

Social workers must shoulder responsibility and credit, including authorship credit, only for the work they have actually performed and to which they have contributed.

They should honestly acknowledge the work of and the contributions made by others. Towards the Social Work Profession Itself: ? Social workers must work for the promotion and maintenance of high standards of education and practice. ? Social workers must uphold and advance the values, ethics, knowledge, mission and goals of the profession. They should protect, enhance and improve the integrity of the profession through appropriate measures-study, active discussions & deliberations and responsible criticism of the profession. ? Social workers should devote time and contribute professional expertise to activities that promote respect for the value, integrity, competence and recognition of the social work profession. These activities may include advocacy, teaching, research, consultation, service, legislative testimony, presentations in the community, and participation in their professional organizations. ? Social workers should contribute to the body of knowledge of social work and share with colleagues their own knowledge related to practice, research, and ethics. ? Social workers should seek to contribute to the profession's literature and to share their knowledge at conferences, seminars, workshops and professional meetings. ? Social workers must not indulge in and also act to prevent the unfair and

NSOU ? PGSW- I 44 non-professional practices of social work Towards the Society ? Social workers must work for the overall welfare of the society, from local to national levels, and the development of people, communities and environment. They must have faith in democratic values and uphold commitment to the constitution of the country. ? Social workers must advocate for the conditions advantageous to the fulfillment of basic human needs and should promote social, economic, political, and cultural values and institutions that are well-suited with the realization of social justice. ? Social workers should involve in social and political action that seeks to ensure that all people have equal access to the resources, employment opportunities and services they require to meet their basic human needs. ? Social workers must provide suitable professional services in public emergencies such as - natural and manmade disasters to the greatest extent possible. ? Social workers must respond upon expanding choices and opportunities for all, promoting people's participation with special reference to vulnerable, disadvantaged, oppressed, and exploited people and groups in order to empower them. ? Social workers within their capacities must respond to prevent and eradicate any type of injustice, exploitation and discrimination against any person, group, or class. They should expedite people participation for public opinion in shaping social policies and institutions. 3.5 Disciplinary Action While the code of professional conduct is for voluntary adoption, the Disciplinary Rules are equally applicable on all the members of NAPSWI. Its constitution also provides that the members should have faith and allegiance to aim and objectives and willing to submit him/her with rules and regulations of the NAPSWI. It is implied that those who do not have faith and allegiance to its constitution, may leave the organization or if knowingly violate may face disciplinary actions for corrective measures. The spirit of the Disciplinary Rules in any code of ethics is based on the minimum level of conduct below which no professional social worker

PGSW- I ? NSOU 45 can fall without being subject to disciplinary action. The disciplinary rules should be uniformly applied to all members, regardless of the nature of their professional activities. The provision of this Code of Ethics may be used for preventive education and interpretive guidance to resolve conflicts arising thereof. 3.6 Pledge A pledge is basically a formal promise that we accept to keep it at any cost. This pledge shall act as a guide in the journey of a professional social worker. NAPSWI has adopted the pledge to be administered to all professionals including to those who join the formal training in social work profession at any social work educational institution. It shall be endeavor of each professional social worker to internalize the pledge in professional conduct and behavior and also to share, publicize, and disseminate the same at all possible places. 3.7 Continuing Updating The code of ethics for professional social workers intends for entire social work fraternity including individuals, institutions and social work professional organizations in India. All the members of NAPSWI are expected to follow this while performing their task related to education, research and practice. Keeping in view that society's values and practices are changing constantly, NAPSWI has the responsibility to amend this code of ethics at the appropriate intervals and in accordance with the international and national mandate and to maintain its relevance for the social work profession in India. NAPSWI always comments and suggestions are always welcome for further improvement. 3.8 Conclusion In this unit our learners got a detailed idea about the code of ethics of social work profession. These code of ethics will help us to know our responsibilities towards our clients, colleagues, practice settings and society. 3.9 Exercises (i) What are the code of Ethics for professional social workers?

NSOU ? PGSW- I 46 (ii) Discuss ethical responsibilities? (iii) Briefly discuss ethical responsibilities towards professional colleagues and society. 3.10 References NAPSWI. (2015). References 4.1 Objective Learners will get acquaint with the terminologies or concept related to social work like Social change, Social Justice, Human Rights etc. 4.2 Introduction As a student of Social Work we must carefully understand some of the relevant terms that we may often come across in our professional life. In this unit we shall try to get acquainted with the following terms - ? Social Service ? Social Welfare' Social Development ? Social Change NSOU ? PGSW- I 48 ? Social Assistance ? Social Justice ? Social Security ? Human Rights 4.3 Social Service Social service in social work, is an integral part of this discipline, which is any of the numerous publicly or privately provided services, intended to aid the disadvantaged, distressed and vulnerable persons or groups. This term of social service also denotes the profession which is engaged in rendering such services to the community. Social services are a range of public services that are majorly intended to provide support and assistance towards particular groups, which commonly include the disadvantaged. They may be provided by individual actors, private and independent organisations, or administered by a government agency. Social services have a statutory obligation to safeguard and promote the welfare of vulnerable children and adults and can provide a wide range of services to children and their parents, usually within the own home environment and co-ordinated by a social worker. Social service interventions also may include concrete services such as income support or material aid, institutional placement, mental health services, in-home health services, supervision, education, transportation, housing, medical services, legal services, in-home assistance, socialization, nutrition, and child care and many others. A 'Service' is termed as 'Social' when it focuses on the enhancement of the welfare of the individual or the community either through personal effort or by collective action. Therefore, they are conceived as organised philanthropic actions to promote human welfare. In India, Social Services are generally interpreted as those activities which are meant for enhancing and furthering the people's welfare and betterment and these include education, public health activities, social security measures, social insurance, social assistance, child welfare, corrections, mental hygiene, recreation, labour protection, housing etc. Social services are also denoting programs, such as health care and education, that serve the general population, majorly like the "welfare services," denoting aid directed to vulnerable groups, such as the poor, the disabled, and the delinquent. There are also some remedial services which address the basic needs of individuals, who are in acute or chronic distress; like preventive services, which seek to reduce the pressures and obstacles that cause such distress; and also supportive services, which attempt through educational, health, employment, and other programs, to maintain and improve the functioning of individuals in society.

PGSW- I ? NSOU 49 Social welfare services originated as emergency measures that were applied when all other measures failed. They are regarded as a necessary function in any society and a means not only of rescuing the endangered but also of fostering a society's ongoing, corporate well-being. The majority of personal social services are rendered on an individual basis to people who are unable, whether temporarily or permanently, to cope with the problems of everyday living. Recipients of these services include families faced with loss of income, desertion, or illness; children and youths whose physical or moral welfare is at risk; the sick; the disabled; the frail elderly; and the unemployed. Social services generally place a high value on keeping families together in their local communities, organizing support from friends or neighbours when kinship ties are weak. Where necessary, the services provide substitute forms of home life or residential care, and play a key role in the care and control of juvenile delinquents and other socially deviant groups. 4.4 Social Welfare Social welfare systems provide assistance to individuals and communities through programs such as health care, food security, unemployment compensation, housing assistance, and child care assistance. Social welfare and social work both terms refer to the development and provision of public or private social services to promote social justice amongst individuals and groups of individuals. The term social welfare refers more generally to the well-being of groups and individuals as well as the system of social service delivery. The scientific study of social welfare involves the application of physical science, social science, and technology to the goals of informing social work practice and improving human well-being. According to

91%**MATCHING BLOCK 68/180****W**

Friedlander : "Social Welfare is the organized systems of social services and institutions designed to aid individuals and groups to attain satisfying standards of life and health , and personal and social relationships which permit them to develop their full capacities and to promote their well being in harmony with the needs of their families and the community.

Social Welfare is a condition; it refers to the programs in place to aide people in society.

100%

MATCHING BLOCK 69/180

is a system of laws, programs, benefits and services which strengthens or assures provisions for the wellbeing of the individuals. A social

welfare policy reflects clear choices and positions of a government or a non-governmental agency. Such choices are tied to and build on values, beliefs, and principles of the sponsoring group or entity. These choices directly impact the form and function of program with services ranging from minimal or limiting to comprehensive and wide ranging.

NSOU ? PGSW- I 50 4.5 Social Development The term 'development' is used and understood in terms of economic development. But it is more than purely economic and physical. It is directly related with satisfaction which may have little or nothing to do with objective statistical measures, such as GNP, GDP or per capita income. '

87%

MATCHING BLOCK 71/180

on the one hand and social policies and programmes on the other' (

Ahuja, 1993) It encompasses a wide range of issues—social and economic equality, universal education, health and food security, provision of housing and sanitation conditions, safeguarding environment, upliftment of weaker section of society, redistribution of wealth, moral development, etc. All these may be regarded as indicators of social development. Development cannot be understood in isolation. It is part of a more general process of social transformation. At no point in that process are we simply concerned with the attainment of economic goals or the creation of a new economic system. The goals and priorities, and the phasing of economic development, are deeply affected by overall social transformation requirement. An important aspect of development is that it is concerned with improving the overall welfare of human beings. It includes more than just increased productivity; it includes the resulting rise in the ability of people to consume the things they need to improve their level of living. Social development entails changes in everything at once to achieve the following: 1. Elimination of poverty. 2. High literacy. 3. Social justice—equal distribution of opportunities. 4. Improvement in social welfare amenities. 5. A safe environment. 6. Opportunity for personal growth. 7. Protection and improvement of health—security in old age. 8. Upliftment of weaker sections of the society. 9. Providing security against various contingencies of life. 10. Enrichment and access to goods and services beyond the absolute minimum to sustain life. 11. High expectation of life at birth and low fertility.

PGSW- I ? NSOU 51 12. Increase in level of employment—low proportion of labour engaged in agriculture. Social Development is majorly involved in assessing the needs of the people, introducing some structural changes in society such as discarding some old institutions and creating some new institutions, or changing some existing institutions, making institutions responsible to people and associating people with decision-making. Social development is about improving the well-being of every individual in society so they can reach their full potential. The success of society is linked to the well-being of each and every citizen. The functions of social work are to change individuals and institutions with respect to individual social welfare. Social development focuses on the institutions of society. It is regarded as a basic perspective of social work, cognate with social treatment. The task of conceptual integration of the various strands of social development, or "macro structural" practice, requires the identification and interrelationship of key elements of community organization, policy analysis, social planning, and administration. Further, the differences and similarities between social development and social treatment also need to be identified, for example, in terms of ideology, worker's qualification, "use of relationship," influence scientific method, and resource complexity and consent. 4.6 Social Change

97%

MATCHING BLOCK 74/180

W

Change is an ever-present phenomenon. It is the law of nature. Society is not at all a static phenomenon, but it is a dynamic entity. It is an ongoing process. The social structure is subject to incessant changes. Individuals may strive for stability, yet the fact remains that society is an every changing phenomenon; growing, decaying, renewing and accommodating itself to changing conditions. The human composition of societies changes over time, technologies expand, ideologies and values take on new components; institutional functions and structures undergo reshaping. Hence, no society remains complete static. Incessant changeability is very inherent nature of human society. A social structure is a nexus of present relationships. It exists because social beings seek to maintain it. It continues to exist because men demand its continuance. But the existing social structure is influenced by many factors and forces that inevitably cause it to change. Society is thus subject to continuous change. The change of man and society has been the central and quite dominant concern of sociology right from the time when it emerged as branch of learning. The concern for social change is of great importance not only in studying past changes but also in NSOU ? PGSW- I 52 investigating 'future' developments. Change implies all variations in human societies. When changes occur in the modes of living of individuals and social relation gets influenced, such changes are called social changes. Social change refers to the modifications which take place in life pattern of people. It occurs because all societies are in a constant state of disequilibrium. The word 'change' denotes a difference in anything observed over some period of time. Hence, social change would mean observable differences in any social phenomena over any period of time. Social change is the change in society and society is a web of social relationships. Hence, social change is a change in social relationships. Social relationships are social processes, social patterns and social interactions. These include the mutual activities and relations of the various parts of the society. Thus, the term 'social change' is used to describe variations of any aspect of social processes, social patterns, social interaction or social organization. Social change may be defined as changes in the social organization, that is, the structure and functions of the society. Whenever one finds that a large number of persons are engaged in activities that differ from those which their immediate forefathers were engaged in some time before, one finds a social change. Whenever human behaviour is in the process of modification, one finds that social change is occurring. Human society is constituted of human beings. Social change means human change, since men are human beings. Theorists of social change agree that in most concrete sense of the word 'change', every social system is changing all the time. The composition of the population changes through the life cycle and thus the occupation or roles changes; the members of society undergo physiological changes; the continuing interactions among member modify attitudes and expectations; new knowledge is constantly being gained and transmitted.

100%

MATCHING BLOCK 75/180

W

As Kingsley Davis says, "By Social change is meant only such alternations as occur in social organization – that is, the structure and functions of society". According to Maclver and Page, "Social change refers to a process responsive to many types of changes; to changes the man in made condition of life; to changes in the attitudes and beliefs of men, and to the changes that go beyond the human control to the biological and the physical nature of things". Morris Ginsberg defines, "By social change, I understand a change in social structure, e.g., the size of the society, the composition or the balance of its parts or the type of its organization".

96%

MATCHING BLOCK 76/180

W

By analyzing all the definitions mentioned above, we reach at the conclusion that the two type of changes should be treated as two facts of the same social phenomenon. Two type of changes are e.g. (i) changes in the structure of society, (ii) changes in the values and social norms which bind the people together and help to maintain PGSW- I ? NSOU 53 social order. These two type of changes should not, however, be treated separately because a change in one automatically induces changes in the other.

100%

MATCHING BLOCK 77/180

W

When change in social structure, social order, social values, certain customs and traditions, socio- cultural norms, code of conduct, way of conducting oneself in the society, standards, attitudes, customs and traditions of the society and related factors take place, it is said that there is social change. When there is social change, the process of socialization also changes accordingly. The individual who is an active member of the society becomes an agent and target of social change. He brings social changes and also is influenced by such changes. 4.7

Social Assistance Social assistance is defined as a benefit offered by the state (national or local) and usually provided on the basis of a means. Public support systems and social assistance schemes have not expanded sufficiently to compensate for the decline of traditional systems. Social assistance is material support are provided to those who are unable to support themselves and providing them with social security, including, if they are unable to support themselves and their dependents, appropriate social assistance. Social welfare systems provide assistance to individuals and families through programs such as health care, food security, unemployment compensation, housing assistance, and child care assistance. The National Social Assistance Programme (NSAP) is a welfare programme being administered by the Ministry of Rural Development. This programme is being implemented in rural areas as well as urban areas. NSAP represents a significant step towards the fulfilment of the

100%

MATCHING BLOCK 79/180

SA FYBA HISTORY SEMESTER- II (ENG).pdf (D123457142)

Directive Principles of State Policy enshrined in the Constitution of India

which enjoin upon the State to undertake within its means a number of welfare measures. These are intended to secure for the citizens adequate means of livelihood, raise the standard of living, improve public health, provide free and compulsory education for children etc. In particular, Article 41 of the Constitution of India directs the State to provide

100%

MATCHING BLOCK 78/180

W

public assistance to its citizens in case of unemployment, old age, sickness and disablement and in other cases of undeserved want

within the limit of its economic capacity and development. It is in accordance with these noble principles that the Government of India on 15th August 1995 included the National Social Assistance Programme in the Central Budget for 1995-96. The Prime Minister in his broadcast to the Nation on 28th July 1995 announced that the programme will come into effect from 15th August 1995. Accordingly the Govt. of India launched NSAP as a Centrally Sponsored Scheme w.e.f 15th August 1995 towards fulfilment of these principles. The National Social

NSOU ? PGSW- I 54 Assistance Programme (NSAP) then comprised of National Old Age Pension Scheme (NOAPS), National Family Benefit Scheme (NFBS) and National Maternity Benefit Scheme (NMBS). These programmes were meant for providing social assistance benefit to the aged, the BPL households in the case of death of the primary breadwinner and for maternity. These programmes were aimed to ensure minimum national standards in addition to the benefits that the States were then providing or would provide in future. The scale of benefit and eligibility for various schemes of NSAP when first started were as follows: I. National Old Age Pension Scheme (NOAPS): is provided to destitute above 65 years. The scheme covered destitute having little or no regular means of subsistence from his / her own sources of income or through financial support from family members or other sources. In order to determine destitution, the criteria, if any, currently in force in the State / UT Governments were adapted. The Government of India reserved the right to review these criteria and suggest appropriate revised criteria. II. National Family Benefit Scheme (NFBS): A grant of Rs 5000 in case of death due to natural causes and Rs 20,000 (2012) in case of accidental death of the primary breadwinner is provided to the bereaved household under this scheme. The primary breadwinner as specified in the scheme, whether male or female, had to be a member of the household whose earning contributed substantially to the total household income. The death of such a primary breadwinner occurring whilst he or she is in the age group of 18 to 59 years i.e., more than 18 years of age and less than 60 years of age, makes the family eligible to receive grants under the scheme. III. National Maternity Benefit Scheme (NMBS): Under the scheme, Rs 300 per pregnancy upto the first two live births is provided. The beneficiary should belong to a household Below the Poverty Line (BPL) according to the criteria prescribed by Government of India. In 1998, the amount of benefit under NFBS was raised to Rs 40,000 in case of death due to natural causes as well as accidental causes. The assistance under the National Maternity Benefit Scheme which was at Rs 300/-, was increased to Rs 500/- per pregnancy. The NSAP is implemented in the States/UTs in accordance with the general conditions applicable to all components of the NSAP as well as specific condition applicable to each component. The NSAP Schemes are mainly implemented by the Social Welfare Departments in the States. But NSAP is implemented by Rural Development Department in the States of Andhra

PGSW- I ? NSOU 55 Pradesh, Assam, Goa, Meghalaya and West Bengal; by the Department of Women & Child Development in Orissa and Puducherry; by the Revenue Department in Karnataka and Tamil Nadu and by the Department of Labour Employment & Training in Jharkhand. The NSAP extends to both the rural as well as urban areas. Though the implementation of various schemes under NSAP is not uniform across the country, the issues of implementation are regularly being discussed with the State Government officials in the Nodal Officers meetings and quarterly PRC meetings.

4.8 Social Justice Social justice is the view that everyone deserves equal economic, political and social rights and opportunities. Social workers aim to open the doors of access and opportunity for everyone, particularly those in greatest need. Social justice refers to the overall fairness of a society and the manner in which it divides its rewards and burdens upon groups of people. Working with marginalized groups, social justice agents or advocates are concerned with bringing equality within society. Historically and in theory, the idea of social justice is that all people should have equal access to wealth, health, well-being, justice, privileges, and opportunity regardless of their legal, political, economic, or other circumstances. Social justice principles are embedded in the very mission statement of today's social workers. The National Association of Social Workers Code of Ethics outlines the need for social workers to promote social justice in their work with others. Social justice is one of the six main values of the profession. Social justice examples in social work include making sure the children get equal opportunities, participation in decision making, and that they are provided with the basic necessities needed to thrive as members of society. By promoting social justice in social work, social workers also enhance the social welfare of their underage charges. For social justice, the ethical principle is "Social workers challenge social injustice." The Code of Ethics expands upon this principle:

100%

MATCHING BLOCK 81/180

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

Social workers strive to ensure access to needed information, services, and resources; equality of opportunity; and meaningful participation in decision making for all people.

Social workers empower individuals and groups to influence social policies and institutions and promote social justice. Social workers advocate for change to ensure that all people have equal access to the resources and opportunities required to meet basic needs and develop fully. Social workers may go about their advocacy work by lobbying elected officials, working within their own agencies to make change, or by building coalitions around particular issues in the community. Social workers empower communities to advocate

NSOU ? PGSW- I 56 for change and they also do some of the work themselves. Social justice promotes fairness and equity across many aspects of society. For example, it promotes equal economic, educational and workplace opportunities. It's also important to the safety and security of individuals and communities. The principles of social justice are an essential part of effective health promotion. There are four interrelated principles of social justice; equity, access, participation and rights. The aspiration for social justice, through which every working man and woman can claim freely and on the basis of equality of opportunity their fair share of the wealth that they have helped to generate, is as great today as it was when the ILO was created in 1919. Social justice in social work can be a crucial element of a social worker's daily duties. The principles of social justice are applied in social work with everyone from the disabled, poor, elderly and children. When social workers engage in social justice work with children, they do what they can to make sure the children receive what they need and are treated like human beings and with respect in the process. It can be difficult as a social worker to promote social justice in their social work with children, as their needs and desires can often be overlooked or considered unimportant. They must work hard to make sure their young charges' voices are heard amongst the din of bureaucratic noise. Working as hard to achieve social justice for children as for adults is part of a social worker's professional responsibility. Social workers must protect people from things such as oppression, negative discrimination, human rights violations, and economic injustice. They must ensure people get an appropriate degree of freedom for their age, personal privacy, access to quality education and health care, and a standard of living that promotes human dignity. They recognize the common thread between social work and social justice and incorporate these social justice principles into their work with children as well as adults. A dedicated social worker should see social justice in social work as necessary for the healthy physical and emotional development of their charges. Ever since its formal inauguration in the late 19th century, social work has always paid attention to social justice issues. Since its beginning, social workers have wrestled with the complex relationship between "case" and "cause" and between amelioration of individual suffering and social change that addresses the structural flaws and injustices in the broader society that foster the problems people experience.

PGSW- I ? NSOU 57 Social Work for Social Justice: Ten Principles Human Dignity Dignity of the human person is the ethical foundation of a moral society. The measure of every institution is whether it threatens or enhances the life

76%

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

and dignity of the human person. Social workers respect the inherent dignity and worth of all individuals. Social workers treat each person in a caring, respectful manner mindful of individual differences and cultural and ethnic diversity. Social workers

97%**MATCHING BLOCK 80/180****W**

seek to promote the responsiveness of organizations, communities and social institutions to individuals' needs and social problems.

81%**MATCHING BLOCK 82/180****W**

Social workers act to prevent and eliminate domination of, exploitation of, and discrimination against any person or group on any basis.

Community and the Common Good All individuals by virtue of their human nature have social needs. Human relationships enable people to meet their needs and provide an important vehicle for change. The family, in all its diverse forms, is the central social institution that must be supported and strengthened. The way in which society is organized – in education, economics, politics, government – directly affects human dignity and the common good. Social workers promote the general welfare and development of individuals, families and communities.

58%**MATCHING BLOCK 84/180****SA** INTRODUCTION - Copy 08.08.21.docx (D111002472)

Social workers seek to strengthen relationships among people at all levels to promote the well being of

all. Dignity of Work and the Rights of Workers In a marketplace where profit often takes precedence over the dignity and rights of workers, it is important to recognize that the economy must serve the people, not the other way around. If the dignity of work is to be protected, the basic rights of workers must be respected – the right to productive work, to decent and fair wages, to organize and join unions, to private property and to economic initiative. Social workers challenge injustice related to unemployment, workers' rights and inhumane labor practices. Social workers engage in organized action, including the formation of and participation in labor unions, to improve services to clients and working conditions. Solidarity We are our brother's and sister's keeper. We are one human family, whatever our national, racial, ethnic, economic, and ideological differences. An ethic of care acknowledging our interdependence belongs to every aspect of human experience including the family, community, society and global dimensions.

100%**MATCHING BLOCK 85/180****SA** INTRODUCTION - Copy 08.08.21.docx (D111002472)

Social workers understand that relationships between and among people are an important vehicle for change. Social workers engage people as partners in the helping process

and seek to strengthen relationships among people to promote well being at all levels.

NSOU ? PGSW- I 58 Rights and Responsibilities People have a right and a responsibility to participate in society and to work together toward the common good. Human dignity is protected and healthy community can be achieved only if human rights are protected and responsibilities are met. Accordingly, every person has a fundamental right to things necessary for human decency. Corresponding to these rights are responsibilities to family, community and society. Social workers, mindful of individual differences and diversity, respect and promote the right of all individuals to self- determination and personal growth and development. Social workers provide education and advocacy to protect human rights and end oppression. Social workers empower individuals/groups to function as effectively as possible. Priority for the Poor and Vulnerable A basic moral test of any community or society is the way in which the most vulnerable members are faring. In a society characterized by deepening divisions between rich and poor, the needs of those most at risk should be considered a priority. Social workers advocate for living conditions conducive to the fulfillment of basic human needs and to promote social, economic, political, and cultural values and institutions that are compatible with the realization of social justice. Social workers pursue change with and Stewardship It is incumbent upon us to recognize and protect the value of all people and all resources on our planet. While rights to personal property are recognized, these rights are not unconditional and are secondary to the best interest of the common good especially in relation to the right of all individuals to meet their basic needs. Stewardship of resources is important at all levels/settings: family, community, agency, community and society.

92%**MATCHING BLOCK 87/180****SA** INTRODUCTION - Copy 08.08.21.docx (D111002472)

Social workers strive to ensure access to needed information, services and resources; equality of opportunity; and meaningful participation for all people.

Social workers promote the general welfare of people and their environments. Governance/Principle of Subsidiarity Governance structures in all levels/ settings have an imperative to promote human dignity, protect human rights, and build the common good. While the principle of subsidiarity calls for the functions of government to be performed at the lowest level possible in order to insure for self-determination and empowerment, higher levels of government have the responsibility to provide leadership and set policy in the best interest of the common good. Social workers engage in social and PGSW- I ? NSOU 59 on behalf of vulnerable and oppressed individuals and groups to: address poverty, unemployment, discrimination and other forms of social injustice; expand choice and opportunity; and promote social justice. Participation All people have a right to participate in the economic, political and cultural life of society. Social justice and human dignity require that all people be assured a minimum level of participation in the community. It is the ultimate injustice for a person or a group to be excluded unfairly. Social workers strive to ensure access to equal opportunity and meaningful participation for all. Social workers empower individuals and groups to influence social policies and institutions and promote social justice. Social workers advocate for change to ensure that all people have equal access to the resources and opportunities required to meet basic needs, and develop fully. 4.9 Social Security Social Security is a concept that represents society's current answer to the problem of economic insecurity. It has evolved out of previous methods used to deal with the same problem. A number of text books have been written charting the slow evolution. However, story will instead be taken up from the 1930's because this period is important in the evolution of social security. The concept of Social security is essentially related to the high ideals of human dignity and social justice. In fact, it is the protection that a society provides and households to ensure access to health care and political action in order to promote equality, challenge injustice, expand opportunity and empower individuals, families and groups to participate in governance structures at all levels. Promotion of Peace In light of the human dignity and worth of all and the ethical imperatives of solidarity and stewardship, we are called to promote peace and non-violence at all levels – within families, communities, society and globally. Peace is the fruit of justice and is dependent upon the respect and cooperation between peoples and nations. Social workers promote peace and the general welfare of society from local to global levels. NSOU ? PGSW- I 60 to guarantee income security, particularly in cases of old age, sickness, maternity, work injury, unemployment, invalidity. According to Lord William Beveridge, the term 'Social Security' is used to denote the security of an income to take the place of earnings when they are interrupted by unemployment, sickness or accident, to provide for retirement through age, to provide against loss of support by death of another person and to meet exceptional expenditures, such as those concerned with birth, death and marriage. In the words of Maurice Stack, '

72%

MATCHING BLOCK 86/180

W

Social security' we understand a programme of protection provided by society against those contingencies of modern life – sickness, unemployment, old- age, dependency, industrial accidents, and invalidism- against which the individual cannot be expected to protect

himself and his family by his own ability or foresight. According to International Labour Organization, '

90%

MATCHING BLOCK 91/180

SA MSWS 11 Introduction to Social Work.docx (D117055407)

Social security is the security that society furnishes, through appropriate organization, against certain risks to which its members are exposed.

The risks are essentially contingencies against which the individual

100%

MATCHING BLOCK 88/180

W

of small means cannot effectively provide by his own ability or

foresight alone or even in private combination with his fellows. On the basis of these definitions, views of experts, and others the following features of social security can be listed: ? Social security is a measure of ensuring social justice. ? It is an essential part of public policy in a welfare state like India. ? Social security is a dynamic concept. Its change with the social and economic conditions obtaining in a particular country at a given point of time. ? The basic purpose this is to protect people of small means from risks or contingencies. ? Contingences under social security include sickness, old age, invalidity, maternity, death, unemployment, etc. The scope of social security is very wide though the social security programmes differ from country to country. Generally, social security schemes are of the following type: ? Social insurance - Under it, the Workers and employees make periodical contributions, with or without a subsidy from the Government. The funds so collected are used to provide benefits on the basis of the contribution record of the beneficiary without testing his financially position. Provident fund and group insurance are examples of these types. ? Social Assistance - Under this, the cost of the benefit provided is financed fully by he Government without any contributions from workers and employers. However, benefits are paid after judging the financial position of

PGSW- I ? NSOU 61 the beneficiary. Old age pension is an example. The Social Security (minimum standard) Convention No. 102 of the International Labour Organization prescribes the following components of social security. i. Medical care ii. Sickness benefit iii. Old age benefits or Retirement benefits iv. Employment injury benefit v. Family benefit vi. Maternity benefit vii. Invalidity benefit viii. Survivor's benefit India is a Welfare State and therefore, social security is an essential component of Government policy. According to the Constitution of India, "

86%

MATCHING BLOCK 89/180

W

the state shall within the limits of its economics capacity and development make effective provision securing the right to work to, to education and to public assistance in case of unemployment, old age, sickness and disablement

and other cases of unserved wants." 4.10 Human Rights After the Universal Declaration of Human Rights by the UN General Assembly on December 10, 1948, the concept of Human Rights assumed a significance of its own though earlier than this, International Labour Organisation in 1920 also initiated the Conventions on the rights of workers to form unions and organisations, abolition of forced labour and right to collective bargaining. The UN Charter in 1945 affirmed faith in the fundamental human rights and appointed a Commission on Human Rights under Mrs. E. Roosevelt. This declaration was the outcome of the latter's deliberations A.A. Said aptly remarked "The concept of Human Rights may be difficult to define but impossible to ignore". The Human Rights are concerned with the dignity of the individual—the level of self esteem that secures personal identity and promotes human community. The human rights as proclaimed by the UN Assembly find their origin in the concept of natural rights as espoused by political philosophers like Locke and Paine. Vincent holds "Human rights are the rights that everyone has and everyone equally by virtue of their very humanity. They are grounded in our appeal to human nature". NSOU ? PGSW- I 62 Characteristic Features of Human Rights: The Characteristic Features of the Concept of Human Rights are Enumerated Below: (i) They are essential for every human being. They cannot be categorized as the preserve of one particular nation but are in fact the possession of mankind as a whole. (ii) Just like that of

55%

MATCHING BLOCK 90/180

W

moral rights the element of their enforcement lies in the individual's conscience. (iii) They cover legal rights

which are safeguarded by the law of the land. They also comprise fundamental rights which are included in the constitution of a particular country. As such, they are accorded special treatment as regards their amendment and forms of rights—social, economic and political—which enable a person to lead a life of dignity and live in peace and security. (iv) The human rights are universal. They are provided to members of the human society as a whole whether or not some section of them is aware of them or not. The uncivilized Negroes of Somalia or LTTE of Sri Lanka who are always involved in civil war also cannot be deprived of them. (v) If human rights are infringed in any part of the world, besides persuasion, even force by alien powers—the votaries of the human rights is permissible, for their enforcement. The International Community, for example, was within its rights to restrain Saddam Hussain of Iraq from suppressing the rights of the Kurds. In the recent past, the International Community led by USA and UK (after 11th Sept. 2001 attack on World Trade Centre in New York) had determined to fight out terrorism to the end so that tormented humanity may no longer suffer at the hands of the terrorists and lose right to life and property. They must enjoy peaceful living—the genuine right, of every individual. (vi) The Human Rights are not unbridled. They are to be restricted in the interest of public peace, political security, morality and social decency. Each state has its own cultural standard and norms of civilization, in the light of which reasonable restrictions are indispensable. This shows that human rights are not limitless. They have to function within boundary of civilized norms and cultural legacy of a country.

PGSW- I ? NSOU 63 Universal Declaration of Human Rights Dec. 10, 1948: The famous Declaration of Human Rights contains an elaborate list of civil social, political, economic and cultural rights. We refer to a few such rights—equality before law; protection against arbitrary arrest and detention; right to a fair trial; freedom of thought and expression; freedom of peaceful assembly and association; freedom of conscience and religion, right to own property; right to residence and movement; right to family and marry; right to free education and free participation in cultural activities of the society to avail social security; prohibition of slavery and inhuman treatment; and finally prohibition of any activity against declaration of Human Rights. Thus the above Declaration was a sort of an informal instrument appended to the charter of the UN whose purpose is “to explain the contents of human rights, provisions of the charter and thus to be a preliminary formulation of the Fundamental Freedoms which needed recognition internationally by a series of binding commitments”. The concept of Human Rights is not the exclusive preserve of the Western countries. In India, the ancient concept of Dharma included the concepts of rights, freedoms and duties. However, the prevalence of caste system deprived a section of people the privilege of enjoying certain rights and freedoms on equitable and equal basis. Though the Hindu epics idealized the caste system, yet they also prescribed obligation of the rulers towards all sections of people. The Universal Declaration of Human Rights (December 10, 1945) had deep impact on the framing of the Indian Constitution. The Father of the Indian Constitution included a number of such rights in Part III of the Constitution. They related to equality, freedom of religion, non exploitation, education and culture, property and constitutional remedies. The Constitution empowered the Supreme Court and the High Courts to issue prerogative writs for the protection and enforcement of these rights termed as fundamental rights. Some of the rights which could not be included in the Fundamental Rights were included in Chapter IV—the Directive Principles of State Policy. However, the latter was not justiciable or mandatory. Though the succeeding governments could not ignore them, they served as beacons for the legislatures. 4.11 Conclusion In this unit learners got a clear conceptual clarity about the various concepts which are needed to be understood by a professional social worker. Thus they will also become aware about the differences as well as inter relation between these core concepts.

NSOU ? PGSW- I 64 4.12 Exercises (i) Explain the terms/concepts of Social Service, Social welfare, Social Development Social Justice. (ii) Discuss about the dissimilarities between Social Work and Social Service? (iii) What is Social Assistance of Social Security? (iv) Discuss about Human Rights in relation to Social Work. 4.13 References 1. Paul Chaney. social work can be traced in the earnest efforts of society put forward to deal with the problem of poverty and inequality.

The entire process of social work has been inspired by the ideas of charity work but social work should be comprehended in broader terms. The concept of charity work was quite popular from

61%

MATCHING BLOCK 93/180

SA

INTRODUCTION - Copy 08.08.21.docx (D111002472)

ancient time and the practice of helping the poor has its roots in all major global religions.

Before the evolution of modern states, mainly the Christian Church used to provide charitable services in the Mediterranean world. When Christianity was endorsed in the 4th Century, the newly legitimized church established burial societies, poor houses, homes for the aged, shelter for the homeless, hospitals, and orphanages in Roman

NSOU ? PGSW- I 66 empire. All these initiatives were partly funded by the grants from the empire. During the middle ages, the Christian Church had a huge impact on European society and Christians used to comprehend charity as a responsibility and a sign of one's piety. All these charitable works were expressed in form of direct relief like giving money, food or other material goods to alleviate a particular need, but it didn't try to identify or address the root causes of social ills. With the emergence of industrialization and urbanization this informal helping was replaced by social welfare services. The origin of practice of professional social work is relatively modern and scientific and mainly developed three strands. The first branch was individual case work which was pioneered by the Charity Organization Society in the mid 19th century. The second strand was social administration which consisted of various forms of poverty relief. Statewide poverty relief could be said to have its roots in the English Poor Laws of the 17th century, but was first systematized through the efforts of the Charity Organization Society. The third consisted of social action - rather than engaging in the resolution of immediate individual requirements, the emphasis was placed on political action working through the community and the group to improve their social conditions and thereby alleviate poverty. This approach was developed originally by the settlement house movement. This was accompanied by a less easily defined movement; the development of institutions to deal with the entire range of social problems. All had their most rapid growth during the nineteenth century, and laid the foundational basis for modern social work, both in theory and in practice.

96%

MATCHING BLOCK 96/180

SA INTRODUCTION - Copy 08.08.21.docx (D111002472)

Professional social work originated in 19th century England, and had its roots in the social and economic upheaval brought by the Industrial Revolution, in particular the societal struggle to deal with the resultant mass urban-based poverty and its related problems.

Because poverty was the main focus of early social work, it was intricately linked with the idea of charity work. As feudalism declined in 19th century in England, the poor people were considered as the threat to society. The Government took proper initiative to establish a proper poor relief system to care for the poor community as they were not associated to any particular feudal manor. The origins of the English Poor Law system can be traced as far back as late medieval statutes dealing with beggars and vagrancy but it was only during the Tudor period that the Poor Law system became codified. The first complete code of poor relief was made in the Act for the Relief of the Poor 1597 and some provision for the "deserving poor" was eventually made in the PGSW- I ? NSOU 67 Elizabethan Poor Law of 1601. The Poor Law Amendment Act completely refurbished the existing system in Britain and a Poor Law Commission was set up to oversee the national operation of the system. This included the forming together of small parishes into poor law unions and the building of workhouses in each union for the giving of poor relief. Although the Poor Law Amendment Act did not outlaw all forms of outdoor relief, it gave an order that no able-bodied person was to receive money or other help from the Poor Law authorities except in a workhouse. Conditions in workhouses were to be made harsh to discourage people from claiming. Workhouses were to be built in every rural community and, if parishes were too small, parishes could group together to form poor law unions. The Poor Law Commissioners were to be responsible for overseeing the implementation of the Act. During 19th century a surge was observed in the rate of migration to urban areas throughout the Western World as there was great leap forward in technological and scientific achievement. This accelerated the socially active, prosperous middle and upper classes to look for ways to restructure the physical and spiritual conditions of the poor under classes. This was coupled with a religious revival, and many Protestant mission

efforts (urban missions), attempted to resolve the problems inherent in large cities like poverty, prostitution, disease, and other afflictions.

100%

MATCHING BLOCK 95/180

W

A new philosophy of "scientific charity" emerged, which stated charity should be "secular, rational and empirical as opposed to sectarian, sentimental, and dogmatic.

During this period rescue societies were also established to provide appropriate means of self support for the women engaged in prostitution. State-built mental asylums were built from the 1840s to assist in taking care of the mentally challenged. According to many historians Helen Bosanquet and Octavia Hill established Charity organization society in London in 1869 which led the foundation of the social theory which formed the foundation for emergence of professional social work. COS had its main focus on individual casework. It supported the concept of self-help and limited government intervention to deal with the effects of poverty. The organization claimed to use "scientific principles to root out scroungers and target relief where it was most needed". The process of social action was highlighted during 1880s, which was pioneered by the Settlement house movement. This Movement (creating integrated mixed communities of rich and poor) was initiated directly out of Octavia Hill's work.

NSOU ? PGSW- I 68 Her colleagues Samuel and Henrietta Barnett, founded Toynbee Hall, Oxford House in 1884 in Bethnal Green as the first university-sponsored settlement. Another early organization was Mansfield House Settlement, also in east London. During 20th century, these different organizations with their diverse intellectual underpinnings were beginning to coalesce into modern social work. Foundations were established to examine the root causes of social problems such as poverty, and social workers became more professional and scientific in their methodology. 5.3 A trajectory of historical development of Social Work in UK 5.3.1 Role of the Church In Europe, in the early Christian era, the folk tradition continued and the faithful considered it a religious obligation to care for those members of the group who could not care for themselves. Religion provided the greatest motivation for charity. The church, especially the monasteries, became the centres for distributing food, medical aid and shelter. Alms were collected in the parish

and distributed by the parish priest and other clergymen who knew the individuals and their situation. 5.3.2

Welfare Becomes a State Responsibility The shift from church responsibility to government responsibility for relief is seen first in the restrictive legislation forbidding begging and vagrancy. In England between 1350 and 1530, a series of laws were enacted, known as the "Statutes of Labourers," designed to force the poor to work. The decreasing authority of the church and the increasing tendency to shift responsibility to governmental authorities gave rise in England to a series of measures which culminated in the famous Elizabethan Poor Law of 1601. 5.3.3 The Elizabethan Poor Law 1601 The Poor Law of 1601 was a codification of the preceding poor relief legislation. The statute represented the final form of poor law legislation in England after three generations of political, religious, and economic changes that required government action. The law distinguished three classes of the poor: 1)The able-bodied poor were called "sturdy beggars" and were forced to PGSW- I ? NSOU 69 work in the house of correction or workhouse. Those who refused to work in the house of correction were put in the stocks or in jail. 2)The impotent poor were people unable to work—the sick, the old, the blind, the deaf-mute, the lame, the demented and mothers with young children. They were placed in the almshouse where they were to help within the limits of their capacities. If they had a place to live, they were given "outdoor relief" in the form of food, clothes and fuel. 3)Dependent children were orphans and children who had been deserted by their parents or whose parents were so poor that they could not support them. Children of eight years and older able to do some domestic and other work were indentured with a townsman. The Poor Law of 1601 set the pattern of public relief under governmental responsibility for Great Britain for 300 years. It established the principle that the local community, namely the parish, had to organize and finance poor relief for its residents. The overseers of the poor administered the poor law in the parish. Their function was to receive the application of the poor person for relief, to investigate his or her condition, and to decide whether he or she was eligible for relief. 5.3.4 Influence of the Elizabethan Poor Law Though there were similar reform plans advocated in Europe; it is the Poor Law of 1601, , which was most influential in the development of public welfare and social work. There are several important principles in the English Poor Law, which continue to have a dominating influence on welfare legislation four centuries later. 1) The principle of the state's responsibility for relief is universally adopted and has never been seriously questioned. It is in tune with democratic philosophy as well as with the principle of the separation of church and state. 2) The principle of local responsibility for welfare enunciated in the Poor Law goes back to 1388 and is designed to discourage vagrancy. It stipulates that "sturdy beggars" to return to their birth places and there seek relief. 3) A third principle stipulated differential treatment of individuals according to categories: the deserving as against the undeserving poor, children, the aged, and the sick. This principle is based on the theory that certain types of unfortunate people have a greater claim on the community than other types. 4) The Poor Law also delineated family responsibility for aiding dependants.

NSOU ? PGSW- I 70 Children, grandchildren, parents, and grandparents were designated as "legally liable" relatives. The Elizabethan Poor Law was noteworthy and progressive when it was enacted. It has served as the basis for both English and American public welfare. 5.3.5 The Poor Law Revisions: 1834-1909 In 1834 a Parliamentary Commission presented a report which aimed to revise the Elizabethan and post- Elizabethan Poor Laws. Upon the basis of the committee's report legislation was enacted enunciating the following principles: (a) doctrine of least eligibility (b) re-establishment of the workhouse test, and (c) centralization of control. The doctrine of least eligibility meant that the condition of paupers shall in no case be so eligible as the condition of persons of the lowest class subsisting on the fruits of their own industry. In other words, no person receiving aid was to be as well off. According to the second principle, the able-bodied poor could apply for assistance in the public workhouse, but refusal to accept the lodging and fare of the workhouse debarred them from qualifying for any aid. Outdoor relief was reduced to an absolute minimum. As per the third principle, a central authority consisting of three Poor Law Commissioners had power to consolidate and coordinate poor law services throughout the land. Parishes were no longer to be the administrative units.

Between 1834 and 1909 there were numerous changes in Poor Law legislation, the cumulative effect of which was to veer the entire system away from the principles of 1834. The most important changes were those that began to develop specialized care for certain disadvantaged groups. For instance, for dependent children district schools and foster homes were provided and for the insane and feeble-minded specialized institutions were started. A more positive approach to the poor laws can be seen in The Poor Law Report of 1909. The report stressed curative treatment and rehabilitation rather than repression, and provision for all in the place of the selective workhouse test. If the principles of 1834 provided a 'framework of repression', those of 1909 may be termed as the 'framework of prevention'. 5.3.6 The Beveridge Report In 1942, Sir William Beveridge, chairman of the Inter-Departmental Committee on Social Insurance and Allied Services, presented the Committee's Report to the government. The report emphasized four major principles:

PGSW- I ? NSOU 71 1) Every citizen to be covered, 2) The major risks of loss of earning power — sickness, unemployment, accident, old age, widowhood, maternity— to be included in a single insurance, 3) A flat rate of contribution to be paid regardless of the contributor's income, and 4) A flat rate of benefit to be paid, also without regard to income, as a right to all who qualify. Beveridge emphasized that the underlying social philosophy of his plan was to secure the British against social evils. Everyone is entitled to benefits, which include maternity, sickness, unemployment, industrial injury, retirement and grant for widows. The related services are Family Allowances, National Health Services and National Assistance. The Beveridge Report of 1942 takes its place as one of the great documents in English Poor Law history — 1601, 1834, 1909, and 1942. The Report became the foundation of the modern social welfare legislation for UK. 5.3.7 Beginnings of the COS Movement and Settlement House Movement In England, where the problem of competing and overlapping social services in London had been increasing over the years, a group of public-spirited citizens founded in 1869 the London Charity Organization Society (COS). Octavia Hill and Samuel Barnett were two of these founders. In her work as housing reformer, Octavia Hill introduced a system of "friendly rent collecting" as a method of improving slum housing. Octavia Hill communicated to the volunteers certain principles or laws to be followed in their activities, through weekly meetings and 'Letters to Fellow Workers'. She stressed that 'each case and each situation must be individualised.' Everyone must be treated with respect for his or her privacy and independence. She advised her workers not to judge the tenants by their personal standards. She believed in the value of dignity of even the most degraded of her tenants. Samuel Augustus Barnett was the founder of Toynbee Hall, the first settlement house, in which wealthy Oxford students "settled" in an attempt to improve living conditions in the slums of White Chapel. The basic idea was to bring the educated in contact with the poor for their mutual benefit. Realization had dawned on the Christian Socialists that mere distribution of charity does not solve problems. In order to better understand the situation of poverty and underdevelopment, one needed to live with the poor and listen to their problems.

NSOU ? PGSW- I 72 5.4 Conclusion The learners became aware about the development of social work in UK. They also learnt about various important laws and report like- Elizabethan poor law 1601, Beveridge Report 1942. This unit also highlighted about the COS movement and Settlement Movement. 5.5 Exercises (i) Briefly discuss about historical development of Social Work Profession in UK. (ii) Write a note on Elizabethan Poor Law, 1601. (iii) Discuss Beveridge Report, 1942. 5.6 References Barker, R. L. (1999). Milestones in the Development of Social Work and Social Welfare. Social work is a practiced based profession and an academic discipline that promotes social change and development, social cohesion and the empowerment and liberation of people. Principles of social justice, human rights, collective responsibility and respect for diversities are central to social work. Underpinned by theories of social work, social sciences, humanities and indigenous knowledge, social work engages people and structures to address life challenge and enhance wellbeing." (

IFSW, 2014) Historical influences in different parts of the world have structured the specific nature of social welfare and social work. The concept of universal influences and specifically the cultural ones must be taken into account in forming the perception about social work profession. During the earlier period of 17th century a large population from Europe migrated to United States and established new settlement. The older settlement of US was inspired by European culture and civilization. In NSOU ? PGSW- I 74 the field of social welfare the American settlement followed Europe and specially England. Like England, United States of America also emphasized the private charity. However since 1935 a huge and revolutionary change could be observed in the development of social work as profession in America which left behind its development in England. The historical development of social work in America can be discussed in the light of early historical development of social work.

6.3 Early Historical Development of social work

It has been mentioned earlier that early settlers in American colonies migrated from different European countries especially from England carried their traditions, laws and perception of their institutions along with them. This crowd was deeply engaged in resettlement problem which compelled them to ponder over the troubles of the needy migrants. Actually they were inspired by their religious principles and consequently they could not turn their back on the religious obligation of helping people who are in need. The concept of social work and social welfare has been developed within a broader context which has been manipulated by global and historical influences in different societies. The origins of all these influencers can be traced in ancient societies of Asia and Europe during the period Before the Common Era (BCE). Robert. L. Barker provided a list of these influences along with significant dates and events which will represent the broadest possible chronology of social work history" and preceding major developments in the Americas include:

- ? B.C.E. 2500: The Books of the Dead, Egyptian papyrus scrolls, were placed in many pyramids ? Spelling out a king's duties, including care for the sick, hungry, and homeless. ?
- B.C.E. 1750: King Hammurabi, in Babylonia, issued a code of justice requiring that people help each other in times of need. ?
- B.C.E. 1200: In Israel, Jewish people are told that their faith requires them to help the poor, elderly, disadvantaged, widows, and orphans. ?
- B.C.E. 530: The Buddha, Siddhartha Gautama, teaches that love and charity for others leads to enlightenment. ?
- B.C.E. 500: Philanthropy, or "acts of love for humanity", is introduced in Greece, where citizens are encouraged to donate money for the public good. ?
- B.C.E. 300: In China, Confucius declares that humans are bound to each other by Jen, expressed through the social act of helping others in need. ?
- B.C.E. 300: Prince Asoka of India endows hospitals and shelters for both people and animals. ?
- B.C.E. 100: The Roman tradition wherein the wealthy provide free or low- cost grain to all citizens is well established. ?
- B. C.E. 30: Christian teachings emphasize the importance of giving to those who are less fortunate. ?
- 400: In India, hospitals, or facilities providing shelter for the poor and disabled, are established. ?
- 542: Hospitals similar to those in India are established throughout China and the Middle east, and spread to Europe. ?
- 650: Muslims are told that paying zakat (a "purification tax") to care for the poor is one of the Five Pillars (duties) of Islam. ?
- 1100: The Roman Church declares that rich people have a moral and legal obligation to support the poor. ?
- 1215: The Magna Carta, in England, establishes human rights, but only for the nobility (privileged class). ?
- 1348: Partly because of the bubonic plague, which killed nearly one-third of the population, European feudalism begins to break down, leaving the poor even more economically vulnerable. ?
- 1531: England's first legislation providing relief to the poor is issued, licensing older and disabled people to beg in their own neighborhoods. ?
- 1601: The Elizabethan Poor Law is established. Lasting for nearly 200 years, and providing a model on which colonial American laws were based, they taxed people to support basic needs of dependent people in their communities, and harshly punished the "able-bodied" poor. During different period of time and cultures, eventually it has become quite evident that different societies have struggled to admit the fact that all the members of the community cannot have equal access to all the resources or even to basic necessities of survival. Religious and spiritual influences have provided required pathways for responding to these needs, drawing on common principles recognizing the importance of sympathy for the disadvantaged and downtrodden. Many new ideas and strategies which have emerged in different societies of Asia and Europe have contributed effectively in structuring the developmental trajectory of social work and social welfare in the New World, where colonial influences faced a competition with indigenous people in the process of shaping of social order.

NSOU ? PGSW- I 76 6.4 Development of social work and social welfare in North America Within North America practices and strategies of social work and social welfare especially in United States and Canada have been shaped by social, political and economic practices derived from Europe and especially from United Kingdom. In Canada, French influences also were significant, and led to the development of diverse practices within a common national context. 6.4.1 United States of America: Social Work education in United States has been formalized just more than one century ago, when the first lecture was delivered to persons who had been working for the downtrodden at the School of Social Economics, in Chicago, Illinois. When Juino is the American colonies were established and began to prosper the problems related to social context became more complex. Bernard provided a brief which expressed the strategies of addressing these problems in the early history of the U.S. In the initial years the population was limited and the resources were plentiful and consequently poverty and dependency were viewed as both unusual and temporary. Almshouses and workhouses became shelter for all those who either could not or would not be productive. But eventually it became apparent that this was neither an effective nor a profitable solution. The concept of voluntary societies emerged from various religious group and they started working for the poor and unproductive. With very limited public provision, the number and variety of these voluntary organizations became extensive. Barker's Milestone (1999) highlighted some of the key steps in the evolution of social welfare and social work in the United States of America. ? 1624: Virginia Colony institutes laws providing for the needs of disabled soldiers and sailors. ? 1642: Plymouth Colony, based on the Elizabethan Poor Law, enacts the first such legislation in the "New World". ? 1650: The "Protestant Work Ethic", emphasizing self-discipline, frugality, and hard work becomes prominent, justifying those who adopted its view to look down upon people who are unemployed or dependent on others. ? 1692: Massachusetts introduces indentured servitude, providing that homeless children could be placed with other families who could require them to work for a period of time to pay for their care.

PGSW- I ? NSOU 77 ? 1776: The U.S. Declaration of Independence is signed, promoting freedom for everyone but the slaves. ? 1787: The U.S. Constitution is adopted to "promote the general welfare", moving social welfare into American political discourse. ? 1813: Child labor laws are passed in Connecticut, requiring that factory owners teach reading, writing, and arithmetic to children working for them. ? 1830: The National Negro Conventions meet to begin discussions about civil rights, health, and welfare for people of color and women. ? 1843: The New York Association for Improving the Condition of the Poor is established, and thereafter imitated its emphasis on abstaining from alcohol, becoming self-disciplined, and developing a work ethic as ways to end poverty. ? 1848: Feminists meet to begin establishment of women's rights to vote and receive equal opportunities for education and employment. ? 1870: Social Darwinism gains influence, supporting the view that poverty was a natural part of the human condition, and that helping the poor made them lazy. ? 1874: The first Charity Organization Society is established, at first giving only advice, and not direct financial aid to the needy. Charity Organization Societies: COSs were originally established to bring order and organization to the extensive private strategies to deal with the problems of the disadvantaged. The underlined philosophy was to give every disadvantaged person equal opportunity to be able to become self independent with those requesting aid being classified by the volunteers as either deserving or undeserving, based on whether they were judged as being willing to help them. ? 1886: The first US settlement house, modeled on earlier efforts in the UK, is established with a goal of eliminating the distance between socio economic classes by locating housing for the poor in working class neighborhoods. Settlement houses initially provided day nurseries for working mothers, health clinics, and classes in dance, drama, art, and sewing (Van Wormer, 2003). Eventually, they become more politicized and rather than looking down on the poor or assuming that by setting a superior example the problems of the poor would be resolved, they begin to focus on the needs and desires of those with whom they were working through advocacy and social change. ? 1895: Chicago's School of Social Economics, often recognized as the

NSOU ? PGSW- I 78 founding center for modern social work, and begins offering lectures to persons working with the poor. ? 1900: The term "social workers" is coined by Simon Patten, who disputes with Mary Richmond whether their major role should be social advocacy or the delivery of individual services. ? 1915: Abraham Flexner issues his report declaring that social work is not yet a profession because it lacks a written body of knowledge and educationally communicable techniques. ? 1917: Mary Richmond publishes Social Diagnosis, influenced by the work of Sigmund Freud, and emphasizes an approach to client problems based on understanding their inner lives and familial environments. ? 1933: U.S. President Franklin D. Roosevelt proclaims a "New Deal" for Americans, establishing major social welfare programs responding to poverty and unemployment. ? 1950: The Social Security Act of 1935 is amended to include children and relatives with whom needy children are living, and to aid permanently and totally disabled people. ? 1955: Rosa Parks, a black woman, refuses to move to the back of a bus in Montgomery, Alabama ? 1964: U.S. President Lyndon B. Johnson establishes the "Great Society" programs, and the Civil Rights Act makes racial discrimination in public places illegal. ? 1965: More "Great Society" programs, providing for medical care, the needs of older Americans, and children's education, are established. ? 1990: The Americans with Disabilities Act makes it illegal to discriminate against disabled people in any business employing more than 15 persons. ? 1990: The Ryan White Comprehensive AIDS Resources Emergency Act provides funding for prevention, intervention, treatment, and community planning in relation to the HIV/AIDS. ? 1996: President Clinton signs into law the Personal Responsibility and Work Opportunity Reconciliation Act, restricting or eliminating many entitlement programs for poor people, and replacing them with more temporary aid designed to promote independence. 6.4.2 Canada Canada also has many historical influences which have similarities with United States and its development has in many ways mirrored major events in its neighbor to the

PGSW- I ? NSOU 79 south. For Allen, Canadian welfare can be defined most simply as "payments to the poor, given as a last resort because they are poor". Canada has a long history of public welfare programs, jointly funded through public and private sources (Hopmeyer, Kimberly, & Hawkins, 1995). These include programs in health, personal and social service delivered through federal and provincial governments. ? 1840: Britain abolishes slavery in all its colonies in the Western Hemisphere. ? 1864: French sociologist P.G.F. Le Play completes the first scientific study on poverty – its extent, causes, consequences, and possible solutions. ? 1919: The 17 schools of social work in Canada and the US form the first organization promoting uniform standard for education and training (eventually named the Council on Social Work Education in 1952). ? 1926: The Canadian Association of Social Workers (CASW) is founded. ? 1935: The Canadian welfare state begins, in the height of the Great Depression, with passage of the first unemployment insurance legislation (becoming, in 1940, The Unemployment Insurance Act). ? 1943: The Marsh Report formalizes guidelines for the Canadian post-war welfare system. ? 1944: The National Housing Act is established. ? 1945: Family Allowances, a system of universal, non-taxable child benefits payable to the mother is passed. ? 1952: Old Age Security (OAS) is introduced, providing universal, non- taxable benefits to every senior over age 65 who meets residency requirements. ? 1965-66: Three key programs, the Canada Pension Plan (CPP), the Canada Assistance Plan (CAP), and Medicare set the "high water mark" for social welfare provision. ? 1985: The Canadian Health Act provides for universal comprehensive health care.

6.5 Development of social work and social welfare in South America The development of social work and social welfare in South America was largely influenced by various European countries like United Kingdom, France, Germany, Spain or Portugal . NSOU ? PGSW- I 80 ? 1494: Monarchs of Spain & Portugal accept the Pope's territorial division of the New World. ? 1925: The first South American school of social work is created in Santiago de Chile. ? 1930: The Argentine Social Museum approved a proposal creating the School of Social Service, offering the first professional social work curriculum. ? 1945: The First Pan-American Congress of Social Service was held in Chile, where curriculum standards were framed. ? 1976: Military rule ensues in Argentina, leading to the abduction, torture, and killing of more than 12,000 citizens. ? 1978: The Argentine Council on Social Service education is created. Since 1983, after many years of military repression and governmental control, social work has been able to gain professional and educational reorganization. Initially modeled on U.S. educational and professional practices, emphasizing casework, group work, and community organization, Latin American social work over time became free from these influences and put its step towards conceptualizations of indigenous social realities. Social work and social welfare continue to be at the core of tensions in creation and maintenance of just societies, and in the equitable distribution of resources to meet basic human needs.

6.6 Conclusion The history of social work and social welfare in America were largely shaped by European influences .These in turn arose in part in ancient Asian and middle Eastern traditions . On continents of the new world, colonial influences helped define the nature of well being and proscribed responses for inequalities that emerged in the distribution of social resources. The difference between "Have and Have nots" often involved judgments about the moral character or social status of persons in need and led to variations in remedies for their circumstances.

6.7 Exercises (i) Discuss or Illustrate the historical emergence of development of Social Work in U.S.A. (ii) What is C.O.S? (iii) Discuss the development of Social Work in South America.

Develop an understanding about historical development of Social Work in India considering the past & present. 7.2 Introduction India is one of the countries of the world that carries a rich social and cultural heritage which dates back to 3000 BC. The culture of Harappa and Mohenjo-Daro (now in Pakistan) is considered to be the oldest and finest culture as regards the quality of life the citizens of any state. The second oldest culture observed in Indian history is the Vedic period between 1700 and 600 BC when the Aryans came to India, probably from Persia speaking Indo-European language. During this period these nomadic tribes began the era of agricultural society settling at the Ganges valley. It is also assumed that the caste system based on the occupation emerged during this time. Sharing of resources among the members of the communities and the society at large came into being at this point of time, though there are agreements and disagreements among the historians. Vedas guided the social and cultural life of the people during this period. The Vedas, the Upanishad and the Gita the oldest

PGSW- I ? NSOU 83 epics controlled the people with an open and broad outlook, preaching the welfare of the poor with almsgiving including all other assistance to the people in need, accepting that all the human being as individuals possess dignity and worth. Tolerance was preferred than violence for maintaining peace and tranquility in society. The third oldest culture which developed in undivided India is as old as 300 to 500 BC when Gautama Buddha established the paths of life. In fact, many professional social workers consider Buddha as the first social worker in Indian and the world on the following logic. He left the place at young age and went for searching the knowledge on humankind and their sufferings. He moved around the communities and learned from his observation and made scientific analysis about the causes and effects relationships of suffering of the poor, downtrodden and the sick. Meditation after observation helped him to conceptualize the truth behind all kinds of sufferings creating a knowledge base on the life and living of people and the society in general. While living in the communities with the masses he got trained in building rapport and providing the services according to the needs of the individuals, groups and communities. His association with common and needy could be compared to a systematic training in providing social services. While conceptualizing the ways of happy life his eight paths were recognized as the right way of living life. This approach of service delivery got recognition from the people across the world. It won't be wrong to say that his teachings were spiritually and socially recognized everywhere. Finally, Buddhism is now an international organization serving the well off people spiritually and the downtrodden with the basic necessities of life with a concern for peace. Buddhist Monasteries are now professionally managed organizations of the world. In this sense Gautama Buddha is the first professional social worker in India which meets all the essential requirements of a profession. Buddha's teaching may be viewed as both a reaction against rigid, ritualistic Brahmanism and the loss of his status to Kshatriyas . Gore 1 (1966) in his article 'The Cultural Perspectives of Social Work in India' wrote that at least five approaches can be identified as the religious-traditional, the liberal-reformist, the secular- missionary, the ethical-revolutionary and the liberal professional. It's true that social service emerged from religious faith but some superstitious belief called for reform of the same with the initiatives of the reformers. The secular missionaries took the welfare and development of the social milieu a step further with their concern for humanism. The ethics that governed the conduct and behavior of the people traditionally in India inculcated the altruism among all human sect. The professional approach with rights and justice came much later with beginning of the formal training in social work in India. 1. Gore, M.S. Seminar paper presented at the conference organized by the Council of Social Work Education and The East West Center, February 21–March 4, 1966, Honolulu, Hawaii

NSOU ? PGSW- I 84 The culture of any country or society is based on; a. Religious belief b. Social norms and customs c. Economic policy d. Ethical and spiritual values e. Political environment 7.3 Religious belief The cultural tradition and social service in India is one of the oldest and were inbuilt in the social systems itself. Vedas prescriptions about the life and living of the people were based on natural laws that govern the universe. Live and let live was the basic policy. Give and take was the way of life. Lives of people were based on mutual help and assistance. The Gita and the Upanishad furthered the value laden society inculcating high levels of moral and ethical consideration. Happiness or the bliss is essential for everyone's life and living. This could be achieved by good deeds or pious act by offering food to the hungry poor, crippled, and any person in need of basic things for survival. This giving in the early Vedic period included cattle, land, female and male slaves, grain, clothes etc. Following the guidelines of the Vedas and the Upanishad the ultimate aim of life for any person living in a Hindu society was to acquire virtue which will pay them back in future including on their rebirth. Group and community living were then common in such state of mind of the people. Hindus believe in birth and re-birth of the immortal souls everybody wanted to achieve higher status in society by doing charity to the people as an act of merit. Guilds in ancient and medieval India were the corporate organization that provided a number of social and economic welfare programmes for the vulnerable populations. Later on, these guilds were considered as the part of the state. Buddhism emerged in line with Hinduism, though contradicting the Brahmanism and their supremacy, but accepted without much conflict with each other. In fact, cultural history show that there was minimum conflict among different religious groups of India till the medieval period beginning from 1000 BC until the Mughal invaded this land with a different culture 12 th century AD. The religious and social order was then controlled the behavior and conduct of the citizens in the country preventing war and conflict. Joint families and communities made provisions for the aged, the sick, and the 2. Pathak, Shankar, Social Work and Social Welfare, P- 35, Niruta Publications, 2012, Bangalore.

PGSW- I ? NSOU 85 person in distress including the unemployed. Suffering was considered as a temporary lapse due to individuals' inactiveness. According to the Hindu religion 'work is worship and nothing could be achieved without hard work'. As social harmony prevailed with high level of values among the people during the Vedic period, the tradition continued until the beginning of 12th century. During the 1st to 8th century AD the Mauryan rules the king was made responsible for the welfare of the subjects. The welfare activities since then became a state responsibility along with the religious and charitable institutions. During this period "the general population had few rights. Their duties not only specified in great detail for all aspects of their lives, but also strictly enforced. A close watch was kept on them through a comprehensive and efficient system of espionage. There was a huge bureaucracy running the highly centralized system of administration, which was supported by a large professional army. There was little freedom for the people." 2 The status of women during this period was somehow better as they had property rights, right to divorce and remarriage which were not sanctioned under Brahmanism, the state discouraged asceticism that were being popular following the Buddhist influence. In a caste layered society where occupation was decided by their status in families it was almost impossible to change their occupation. King Ashok followed the similar bureaucracy and wanted to expand his kingdom with his army. After Kalinga war when he was shocked by the bloodshed he adopted the paths of non-violence following Buddhism. Soon he became a benevolent king to due his concern for the welfare of his subjects. Most notable tradition he introduced was special care for the women appointing officials as Superintendent of Women. Taking the welfare further he appointed High Commissioners of Charity for organizing donations from the royal families and regulating all charity work in the state. Prison welfare was another area of intervention initiated by Ashok with Commissioners of equity. He made special provisions for development rural inhabitants as they were backward in all sense though they used to feed everyone with agricultural products. The ideology of the state of Ashok was based on humanism. As follower of Buddhism and his love for the common with strategic development plans is one of the pioneer works done in ancient period in India. The people of ancient India were more religious and spiritual in nature and compliance to religion developed the spirituality to the highest level leading to happiness in life. Social reform and social work can be traced at the beginning of the nineteenth century, especially to the time of Raja Rammohan Roy. Any reference made to earlier period mention reform activities of some Muslim or Maratha rulers. However, one comes across vague reference to social welfare activities in ancient India- mostly as a glorification of the past. For getting a bird's view about the ancient period, it has been classified into 2500 BC to AD 1000 as ancient period, AD1100 or 1200 to AD 1800 as the medieval period and the period from AD 1800 onwards as modern

NSOU ? PGSW- I 86 period. Specific attention in this section would be given to the ancient period, which is roughly eight-century AD or possibly a little earlier. One must take into account that this period covers a large span of almost three thousand years for which there is little historical evidence, especially about the social structure. So the chronological approach followed is in a broad sense - with the aim of giving a direction and glimpse of the development of social welfare concept. 7.4 Social Work in Ancient India Charity and religious devotion was the mainstay of the Indian culture in ancient period. The main characteristic was doing or initiating welfare and common good of all, the glimpses of which can be found in folk tales and legends in old literary works, Smritis or Dharmasastras.

The earliest mention to charity can be obtained from Rigveda

100%

MATCHING BLOCK 98/180

W

which encourages charity by saying "May the one who gives shine most". The

Arthasastras, ascribed to Kautilya is one of the oldest works in polity- that refers to the construction work for public good by joint efforts of villagers. It also mentions social work as care of children, old or invalid in case of no protectors. Special regulations were established for persons living in cities for common good. Collective charity was popular form of social work, of which progress of education or Ndyadana was an important one as one of the numerous Jatakas reflect. Other Upanashidas like Brihadarnayaka, Chhandogya and Taittiriya prescribes that every householder must practice charity. Next to education, reference may be made to religion, which took precedence over everything else to the people of ancient India. One of the popular methods of performing social activities hence was Yagnas. The main aim of yagnas was the common welfare of all, devoid of any personal benefit or profit. There were several Yagnashalas, which were like classrooms wherein students were instilled with the feeling of working without the egocentric desires. This learning and spirit transcended to the home, workplace and in the ordinary community life. The community was urged to move ahead as one entity and achieve progress. The communitarian structure of early Vedic period functioned like an extended family, where everybody catered to everybody's needs. Due to the simple nature of activities and relationships community welfare was a concern of everybody. With the gradual development of agrarian societies, private ownership of land and charity came into being. Charity or Dana became the instrument and virtue of the privileged sections to be dispensed voluntarily. By later vedic period Charity (dana) became institutionalized and became associated with religious ideology. It was extolled as a cherished virtue. The advent of Buddhism changed the character of the society to class based agrarian society. It's philosophy attempted to explain the class differences and emphasized

PGSW- I ? NSOU 87 upon the punya and dana (charity). Charity was not merely a means to ameliorate the conditions of the marginalized populace but also as the giving of gifts to Songs, which were centres of shelters and learning. Guilds, also arose as significant corporate body entrusted with political and economic functions during this period. These also provided social security to the downtrodden sections of the society, and parts of its funds were utilized for the relief of blind, destitute, invalid, infirm, orphan and widowed women. With the establishment of new political system in Magadha states, earliest attempts to establish administrative system were made. General welfare, construction of roads, agriculture etc. was given attention. Kautilya

W

welfare, rehabilitation of prisoners, rural development, free medical care, regulation of prostitution, provision of public

utility services etc. 7.5 Social Work in Medieval Period (1206-1706) The approach followed while mentioning the social reform activities during the medieval period would be to focus not on individual kings and their achievements but to the extent of their contribution to changes in social institutions and structure. The Muslim Sultanate who formed a significant phase of the medieval period were motivated and driven by the same spirit of social service in the fields of religion and education. Humayun was the pioneer amongst the Muslim rulers to make the efforts to prohibit Sati system. Akbar was an illustrious ruler who took initiatives in bringing reforms in Indian society by abolishing slavery in 1583. He introduced equality among people irrespective of class and religion, and established

66%

comprehensive system of poor relief which was of two types: granting relief in cash or kind to every needy person who

made requests for the same and the other was systematic and organized assistance provided regularly. Before the advent of the British, Indian practically lived in village. Thus the economy of the village was self-sufficient. But under the British rule, India was help as an agrarian country. Only Industries were allowed to develop which provided better opportunities for the investment of British capital. Further,

brought down the economic condition of Indians. All the problems are chiefly related with health, housing, child and woman welfare and labour, recreation, crime and social disorganization.

Due to these problems the need for organized social work was realized. British rule was main inspiration for social reform movement. Christian missionaries spread education, brought the theory of equality, which in turn helped the social reforms to attack the evil customs and inequality. There were no property

NSOU ? PGSW- I 88 rights for Indian women. Early marriage, inequality, caste system, widow remarriage, custom of Sati were the burning problems of Indian Society. In the Independent India the source of all welfare service are inherent in the constitution. Various schemes with regard to the welfare of women, children, youths and aged persons have been implemented. Government has realized the need of trained professional social workers to work in area of welfare and has also made statutory liabilities to welfare officers in Industries. These services are distinct from the general social services. In order to supervise the social welfare services, the central social welfare Board has been established. The board assists in the improvement and development of social welfare activities. Thus, in Indian social work is gradually emerging as a profession which will be dealt subsequently. 7.6 Social Work in Modern Period (AD 1800 onwards) The Indian society gradually underwent several major changes in the political, economic and social spheres during this period. Some of the major changes which reverberated the entire structure were new legal system based on western ideas of property rights, rule of law, judiciary and the emergence of market economy, development of railways and communications, and a new educational system which opened visions to ideals of liberty, justice, equality. These changes affected the family, kinship, marriage and caste. It influenced and led to the growth of an elite group of western liberal rational outlook that spearheaded the movement for social reform during the nineteenth century.

67%

MATCHING BLOCK 104/180

W

The genesis of social reform movement can be traced to the work of Rammohan Roy, who sowed the seeds of religious and social reforms. A number of reformers like Ishwar Chandra Vidyasagar, Jotirao Phule, Sasipada Banerjee, Gopal Krishna Gokahale, Swami Dayanand, Swami Vivekananda, Bal Shastri Jambhekar in different parts of the country for a period of almost a century concentrated their efforts on reforming certain features of Indian society like caste system, child marriage, sati, widowhood, idol worship. The ideals of justice, equality, liberties were underlying principles of these reform movements.

Several of them established schools and institutions to provide service to individuals affected with the harmful aspects of the Hindu society. They based their attack on

54%

MATCHING BLOCK 105/180

W

spreading education and propaganda encouraging the governments to pass legislation to eradicate these social practices. Some of the important organizations that played a key role in development of this movement are Brahmo Samaj, Arya Samaj, Theosophical Society, Ram Krishna Mission, Indian Social Conference, Servants

of India Society etc. However, this social reform movement confined to small elitist segment of the population mostly consisting of English speaking middle class. But with the advent of Gandhiji on the scene, the entire social reform and political independence movement took a turn.

PGSW- I ? NSOU 89 Significantly, Gandhiji linked political movement with the social movement and transformed this into a mass movement with the participation of all sections of population notably women and peasants and lower castes. After independence, the government shifted towards the welfare approach and took

41%

MATCHING BLOCK 106/180

W

several areas of social work under its purview. The establishment of the first school of social work, Sir Dorabji Tata Graduate School of Social Work, Bombay in 1936 marks a watershed in

training and education of social work profession. Gandhi linked political movement with the social movement and transformed this into a mass movement with the participation of all sections of population notably women and peasants and lower castes. 7.7 Conclusion This unit took us to a beautiful journey of social work in India right from the ancient period to the present period. We got an idea about how the traditional religious practice in India underwent a transformation. Finally, India after witnessing several social reform movements adopted a welfare approach after independence. 7.8 Exercises (i) Social Work in Ancient India – Discuss. Unit 8 Development of Social Work as a Profession and Education in India Structure 8.1 Objective 8.2 Introduction 8.3 Prospect for professional social workers in development sectors 8.4 Skills Required for a Professional Social Worker 8.5 Conclusion 8.6 Exercise 8.7 References 8.1 Objective Learner will learn about the development of Social Work as academic discipline India. 8.2 Introduction Social Work is a noble profession with the blend of scientific knowledge and humanistic practice. In India, during the last eight decades the professional Social Work has contributed drastically for the wellbeing of the poor and less privileged. When Professional Social Work entered in 1936, India was a colonial country. The profession of Social Work in India marked its platinum jubilee in the year 2012. Seventy-five years and more have been critical in the establishment of the profession as an independent helping profession, interdisciplinary in nature and based on a foundation of traditional Social Work methods and skills, values and ethics built around humanitarian principles with a combination of several religio-cultural philosophies rich to the nation. The Western legacy of professionalization of Social Work continues in several develop- ing countries that have adopted an American- Eurocentric model. The initiation of Social Work education in India was based on Western thought and pedagogy.

Professionalization of Social Work began with practice in Mumbai (erstwhile Bombay) in 1936 under the leadership of Sir Clifford Manshardt, an American missionary, at

PGSW- I ? NSOU 91 the Nagpada Neighbourhood House (settlement house for family welfare). He became the founder-director of the

It responds to crises and emergencies as well as to everyday personal and social problems. Social Work

as profession in India has already passed its infancy long back and in the last few decades it has emerged as one of the most demanding profession in India. In India a person – holding a Bachelor (BSW) or Master (M.A in Social Work/MSW) degree in Social Work – is generally considered a professional social worker. As far as Indian scenario is concerned professional social workers can be found in direct practice in administrative, management and policy planning positions in various Government and Non-Governmental Organizations (NGOs) as well as in government ministries. Both Governmental and Non-Governmental Organizations (NGOs) have a lot to offer, if you are willing to work hard and in any given conditions. International organizations too are socially aware and hence a number of opportunities are available in international social work. Industrial and commercial units too are looking to hire social workers. A degree or diploma in Social Work is creating a large number opportunities for the millions of Indian youth in various sectors. A very significant paradigm shift in social work curriculum was the move from a 'social problem perspective' to a 'developmental perspective' in the analysis of social issues. This was greatly influenced by the World Summit on Social Development in 1995 in Copenhagen that led to the United Nations focusing on key social development themes. Social work educators were thus influenced to integrate development concerns and issues in the curriculum. This perspective was also integrated in the National Social Work Curriculum (University Grants Commission 2001). Since the turn of the century, social work teachers have been joining hands with human rights groups to protect the rights of children, women, prisoners, activists, etc. Social work colleges in India too are gradually incorporating the human rights perspective in their curriculum, pioneering programs and policy change to protect the rights of the child, NSOU ? PGSW- 192 the girl child, women, and the right to education, health and livelihood. This is in keeping with the United Nations Human Development Reports (United Nations Development Programme 2007 and 2009) adopted by

65%

MATCHING BLOCK 114/180

W

the International Association of Schools of Social Work (IASSW) and the International Federation of Social Workers (IFSW). Education and training in the discipline of social work

is far more complex in view of its unique nature. To create a cadre of competent professional social workers requires competent teachers and practitioners who together form a pool of educators created from a praxis of reflections on theory and practice. Most social work educators are trained social work professionals who qualify through passing the UGC governed National Eligibility Test or the state governed State Level Eligibility Test (www.ugcnetonline.in) to teach at the college level. Giving priority to past or simultaneous practice experience is always an advantage. They further qualify with an MPhil or PhD in social work. Schools of social work are required to mandatorily employ such qualified personnel in the teaching profession. Faculties are also required to complete certain refresher courses for career advancement. A major challenge is the lack of faculty development programs or refresher courses tailored specifically for enhancing capacities of educators. Retaining competent faculty is a major challenge owing to the larger sociopolitical, financial and infrastructural constraints that draw them to more fulfilling and greener pastures, even outside the country. The need for a strong body or network of schools that weaves together the diversities in teaching and learning methodologies, and ensures high quality in the education and training patterns in the country, is apparent. The profession is not governed by an exclusive council or a body that oversees the areas of social work practice. Therefore, no rigid or clearly marked boundaries exist in the country. Social work practitioners do not require a license as would doctors, lawyers, nurses, etc. This has led to several other disciplines entering the domain of social work practice. Educational programs such as Human Rights, Development Studies, Health Management, Human Resource Management, Rural Management, Urban Studies etc. are becoming independent disciplines or professions, which were once an integral part of the domain of social work. The profession is going through the process of re-establishing a national association of social work educators in the country. Educators are spearheading this effort to create a credible body that will monitor and enhance the quality of social work education and practice in India. This effort has taken on a distinct and clear-cut structure in the recent past in the formation

PGSW- I ? NSOU 93 of a National Network of Schools of Social Work (Nadkarni & Desai 2012). In a recent consultation, a group of senior educators from the network met at Tata Institute of Social Sciences to launch the Indian Association of Social Work Education (IASWE). This association is expected to chart new pathways for enhancing the competency and visibility of the profession through its educational programs. With increasing focus on the services and manufacturing sector in India, there is today great demand for management skills in business and industry. In this era of an unregulated labour market, there is increasing need for human resource management and skills in project planning and development as well as monitoring and evaluation. The response of social work has been to cater to these capacity-building needs by initiating postgraduate degrees in these areas which have been the territory of management schools. In turn, management schools are also preparing managers and social entrepreneurs for the social sectors. Based on the need for a transformative paradigm for social work education, the National Network of Schools of Social Work members developed objectives to make social work education emancipator and transformative to create an inclusive and just society; set minimum required standards of curriculum, re-emphasizing its ethical foundations; created a universally accessible repository of high quality knowledge, resources, expertise and processes of sharing with schools across the country; achieve visibility for the profession through structures that engage state, civil society, and industry; established linkages and databases that connect and inform all responsible stakeholders; strived to improve standards through accreditation systems and periodic reviews; and created representative scientific associations to explore various facets of social work, taking responsibility for collective advocacy and action (Nadkarni 2012).

8.3 Prospect for professional social workers in development sectors

At present the development sector is largely controlled and managed by the welfare or Non-Governmental Organizations (NGOs)–who are doing the pioneer work towards the overall development of the society. A person with a degree (preferably a Master degree) in Social Work is highly preferred in developmental agencies and NGOs. In other words, it can be said that NGO sectors as well as the development sectors are being dominated by the professional social workers. As far as the salary of a professional social worker in development sector (in India) is concerned – it varies from organization to organization. Generally it is negotiated at the time of interview.

NSOU ? PGSW- I 94 As salary is negotiable in development sector, likewise flexibility also exists in the recruitment process. Sometimes it is also observed that a person gets recruitment in a particular position – though he/she has not fulfilled the minimum requirements. Percentage of marks in M.S.W hardly matters in recruitment-process of development sector; 50% to 55% marks in M.S.W is enough to get a good job in a reputed organization. What does matter – is relevant working experiences, possession of suitable technical skills of project management, sound knowledge managing NGO administration (see table 3) etc; sometimes the reputation of the academic institution – from where the applicant obtained the degree in Social Work – is taken into consideration by the recruiting organizations. Students completing M.S.W from institutes like TISS, XISS, Delhi University – are generally preferred and get higher salary at the beginning.

8.4 Skills Required for a Professional Social Worker ?

Preparing Project Proposal ? Preparing Management Information System (MIS) ? Preparing Project Implementation Plan (PIP) ? Managing and coordinating project at district/state/national level ? Program monitoring & evaluation ? Report writing and presentation ? Preparation of monthly plan and budget ? Coordinating and liaising with district and state administration, other stake holder and partner organizations ? Organizing training, workshops, seminars etc. ? Developing Information Education Communication (I.E.C) materials ? Documentation and case studies ? Team management ? Facilitation and people mobilization ? Doing long-hour field work and extensive travelling ? Managing and coordinating projects at state and district level ? Positive work attitude ? Integrity and honesty

PGSW- I ? NSOU 95 ? Doing long-hour field work in adverse situation ? Have interpersonal communication skills ? Have proficiency on the computer ? Knowledge of community resources etc. Most of International NGOs have a specified pay structure for different positions – For entering into these organizations – at least three to five years' prior working experiences in a reputed developmental organization is necessary. In the 1950s and 1960s several schools of Social Work started in other parts of the country with faculty who completed doctoral studies in the US. This was a major factor, particularly for the growth of postgraduate degrees in Social Work with specialisations in clinical and non-clinical Social Work. Social Work educators have written extensively on the urgent need to indigenise the curriculum. Writings of Gore (1965), Dasgupta (1968), Banerjee (1972), Desai (1985), Siddique (1987), Desai (2004), Saldanha (2008) and recently by Bodhi (2011) have strongly criticised the Western models and made emphatic deliberations on the need for a newer and relevant curriculum design for Social Work practice in India. Social welfare during the British period was predominantly controlled by religious beliefs adding up Christian Missionary and its activities in India. Reform movements that took place during the British regime were limited to voluntary initiatives by non-government organizations, faith based organizations who took the lead to care the poor and vulnerable sections of the society including those physically, mentally or otherwise challenged. Raja Ram Mohan Roy, founding 'Brahmo Samaj' in 1826 started agitating against the 'Sati', the burning of wife along with his husband's pyre and he persuaded till an act prohibiting 'Sati' as illegal practice in 1928. The Hindu women and widows who were the victims of abandonment in many cases were being empowered by educationalist and activist like Iswar Chandra Vidyasagar creating opportunity to women to come up for higher education and opened up the avenue for re-marriage of the widows (1856) seems to converge with the philosophy and action by such great social reforms. Both Raja Ram Mohan Roy and Iswar Chandra Vidyasagar has to face tremendous opposition of the Hindu Orthodox Leaders and convince them with their logic for gender equity and need for ameliorating the status of women in our society. Dada Bhai Naoroji and Mahadev Govind Ranade was the pioneer in furthering the education for girls, religious reforms and women's education during the 6 th and 7 th

NSOU ? PGSW- I 96 decade of the 19 th century. 'Arya Samaj' founded by Dayananda Saraswati in 1875 mobilized the people to return to 'Vedas' and shape their lifestyle according to its guidelines. These activities are described social reform movement in India during the British period. Among other voluntary actions the most notable move was foundation of Ramakrishna Mission (RKM) by Swami Vivekananda in 1898 to strengthen and promote the poor, lower caste and socio-economically vulnerable sections of Indians. He chalked out a member of pro-active and scientific action in empowering the youth, men and women following the philosophy of his 'guru' Ramakrishna who was deeply moved by the sufferings of ignorant and poorer sections of the society. Gandhi, the father of nation and man of the century, a greatest ever humanist was shocked to observe the exploitation by employers and racial discrimination on the basis of caste and colour. While travelling in train by first class he was pulled out of the compartment because he was a black man. He raised his voice in unique way of drawing the attention of the exploiter and the divider of caste and colour with his sharp weapon called 'non-violence'. He dedicated his life to uplift the quality of life of the downtrodden by ensuring justice through individual and community participation, involvement and intervention by the state and the people whenever necessary. 'Love thy neighbor' as preached by Jesus was and is the 'mantra' for the Hindus in India. The 'Mughals' who invaded and settled in India during the 13 th century ruled the country till British took over its administration in the eighteenth century. The medieval period India, can be termed as the age of turmoil due to foreign invasion and the period of conflict and war against the foreigners. In United Kingdom the relief available in plenty had demolished the will of the poor to earn as they could obtain food, clothes and shelters from religious institutions as well as the well to do persons including state. The United States of America has passed through the crisis of manpower to exploit its natural resources and called people to come and settle to work for the country. The golden ages with regard to social services to the needy differed from country to country depending upon its need and available resources. Churches have significantly long heritage (2005 years) towards the service to mankind. The followers of Jesus Christ believe in service to the neighbourhood who suffers from any deficiency of life, as this is the original message from him. Responding to neighbour's call for help and assistance equals' service to self and others that is what Christianity advocates for. With the establishment of Indian National Congress in 1885 in Mumbai, the Leaders of the Society placed the prevalent and emerging social issues like women's

PGSW- I ? NSOU 97 empowerment and education, concern for child marriage, polygamy, caste differences and conflicts among the ethnic groups, status of widows, child labour etc. R. Raghunath Rao and Mahadeo Govind Ranade felt the need for separate platforms to take up the issues of social development with a true spirit holistic development. The Indian National Congress then were more interested in resolving political issues like freedom from British rule and self-rule by Indians leaving social issues on second priority. In 1887 the Indian National Social Conference (INSC) was established in Chennai to address the social and human issues as the primary concern. The INSC then contributed immensely towards the development of the attitude of the people by communicating across the country and draw attention of the people for preventive, promotional and corrective actions as an appropriate national forum of the responsible citizen. Contribution of Mahatma Gandhi for social development in India and abroad has to be recognized as universal principles to be applied to any social and economic situation. He believed that the justice could be made when the development is holistic in nature and spread across all sections of the society. While he began his movement against exploitation of workers by the employers in South Africa in a non-violent way showing the path to the people to resolve conflicts with greater amount of confidence, self-reliance and satisfaction without applying any violent method by any means. His philosophy of the rise of all 'Sarvodaya' (rise of all) and 'Swaraj' (Self- Governance) made him father of the nation as well as the man of the millennium. His basic approach towards human development has been accepted as a universal method of sustained development. The social work philosophy and principles rests on the pillars founded by Gandhiji in his thoughts like self-help and ideal self-governance. He was committed to eradicate the sufferings of the poor people through evolutionary process of uplifting the downtrodden, the vulnerable, the women and the child including the working class in the organized and unorganized sector of employment. He was opposed to any bloody revolution that may bring immediate change but may not have a long lasting effect and endanger the natural process of development with a human face. This paved the way to the development of social work, which too believe in the same principle of change and development in the society. He was very much concerned about the practice of untouchables in India on the basis of caste and creed. He also opposed the practiced of apartheid in South Africa while he practiced as a lawyer in that country. Inequality and the widening gulf between the rich and the poor, the blacks and the whites, upper caste and the lower caste pained him that prevailed in the world including India was the major concern for him hence he fought for the justice and promoted universal brotherhood. The ideals of self-governance or 'Swaraj',

NSOU ? PGSW- I 98 means taking over the social and economic administration of the people by the people themselves. Giving autonomy to the individuals and communities to run its system seemed to be more viable than directing people from the top. This is the core practice in social work today and is valued by the country and the world, which seeks to develop its people and the economy of the country. It is therefore, accepted by the government to work in line with thoughts of Mahatma and introduced Panchayati Raj System with autonomy in deciding the methods of overall improvement in the quality of life of the people, as the decisions are emerging from and within the people through the Panchayati Raj Institutions. Contributions of Rabindranath Tagore in rural reconstruction cannot be overlooked as a contemporary development emerged during the beginning of twentieth century in India. Rabindranath Tagore – a poet, novelist, music composer and synthesizer as well as a humanist was moved by the suffering of the rural communities, which he observed while working in the villages in connection with work of their ancestral land lordship in 'Seliadaha and Patisar' (presently in Bangladesh). He found people living in extreme poverty, having no access to education and minimum health care. They were not even making any effort to overcome the deplorable situations they faced in their day-to-day life. He was moved by the suffering and wished to experiment with a sustained method of rural reconstruction by 'bringing back the cultural tradition of the country, making the rural folk self-reliant and self-respectful, acquainted with the cultural tradition of their own and competent to make an efficient use of modern resources for their social, cultural and intellectual development. Thus he initiated the Sriniketan Experiment of Rural Reconstruction. Few other notable experiments in community development namely, the Gurgaon Project, Etawah Project, Marthandam and Nelokheri experiments must be recognized to have contributed towards the development of social work practice and education in India to a great extent. Formal Education

and training Social Work found its birth in India with the establishment of Sir Dorabji School of social work in

Mumbai in 1936 with his visionary, though he was an industrialist by profession. Subsequently, a number of schools of Social work were established in the country for imparting professional education to meet the increasing needs of the industry and social welfare organizations. It was then felt to have specialization in the training and education of social work to consolidate its foundation as a profession. The Tata Institute of Social Sciences then introduced the specialized education in Urban and Rural Community Development, Social Welfare administration, Family and Child

PGSW- I ? NSOU 99 Welfare, Medical and Psychiatric Social Work and Crime and Correctional Social Work. Labour Welfare, Personal Management and industrial relations being one of the fields of social work practiced has been totally separated from its course curriculum although some of the institutes are still offering the specialization and good numbers of trained social workers are finding employment as Welfare Officer and Personnel Officer in industrial establishments. The area of options within the generic curriculum of social work is also shifting according to the society, state and the organizations. The options available in generic social work course are: Health and Development, Disaster management, HIV/AIDS; Care and Management, Counseling Theory and Practice, Alcohol and Substance Abuse, Disability – Rehabilitation and Management, Entrepreneurship and Small Enterprise Development, Care for Elderly Citizens, Micro-Finance and Self-Help Group etc. The whole range of specialization is emerging due to the changing needs of the people, state and the society. Social Workers are placed to be one of the key stakeholders in socio-economic development of the target group. The liability of the workers engaged in development, therefore, is found to be inclining with higher expectations from the social workers. The knowledge, skills and attitude, which form the core competency of professionals, are constantly being updated focusing the need of the hour. Nevertheless, trained social workers today finds easy access to employment and practice in the area of his/ her interest if one accepts the challenge with a positive attitude to perform the task and achieve the desired goals in social development. This is sure that the professional social work have emerged following the western pattern of training and education but the traditional form of services to the needy was in existence in the pre-Christ era e.g. Lord Buddha, coming out of his princely comforts and joining the suffers to understand what suffering is and build up knowledge for service to the mankind. He then dedicates his life towards the service to the sick, the poor and other vulnerable people of the society including other living species of the planet. The knowledge he gained from his experiences is now, well recognized throughout the world and millions of people follow the path shown by Buddha with his heartfelt by practice and services to the needy. His exemplary service to the statesman is akin to social work theory and practice which is a century old profession. It is akin on the count that Buddha's suffering is the study and understanding through participatory observation, which is an essential part of education and training in social work. His scientific observations might have help to focus on the contemporary needs and aspirations and winning the love and respect of millions of the people,

NSOU ? PGSW- I 100 who follows him for peace and bliss everywhere. Through the spirituality he preached, changed the attitude of the people and sustainable lifestyle. Modern social work seeks attitudinal as well as socio-economic change that bridges the gap between the rich and the poor and ensures justice to all. An important aspect that is critical to envisioning a professional identity for the profession in India is to chart out a clear curriculum that emphasizes critical and analytical thinking to enable students to commit themselves in working towards development needs of the poor and marginalized people: the Dalits, the indigenous people, children, women, girls, the socially stigmatised and all groups that are increasingly deprived of social safety nets with the declining investment of the government in social sectors. Indian social work educators need to continuously tailor programs and update themselves on current knowledge frameworks in order to carry forward a professional approach in the plans for work, especially in the most poor and backward areas of the country. In doing so, the profession of social work will gain its rightful recognition and acceptance in Indian society. The task may be uphill but it will move towards the achievement of what social work definitions portend in all the major bodies of social work education in the world.

8.5 Conclusion This unit discussed elaborately about the development of social work as a profession in our nation. Contribution of eminent personalities who played crucial role in promoting Social Work Education in India was also discussed in this portion.

8.6 Exercises (i) Discuss Historical development of Social Work profession in India. (ii) Skills required for Social Work practitioner – Discuss. (iii) What are the prospects for professional social worker in development sectors.

Unit I-II Nationalism in India.pdf (D57912217)

The urgent need for social and religious reform that began to manifest itself from the early decades of the 19th century India arose in response to the contact with Western culture and education. The weakness and decay of Indian society was evident to educated Indians who started to work systematically for their removal. They were no longer willing to accept the traditions, beliefs and practices of Hindu society simply because they had been observed for centuries. The impact of Western ideas gave birth to new awakening. The change that took place in the Indian social scenario is popularly known as the Renaissance.

The humanistic ideals of social equality and the equal worth of all individuals which inspired the newly educated middle class had a major impact on the field of social reform. This enlightened section of society was disgusted with the prevailing social ills and inhuman social practices. 9.3 Reform Movements in India & Bengal 9.3.1 ARYA SAMAJ The Arya Samaj was an important movement during the last quarter of the 19th century which tried to reform the Hindu society. It was founded by Swami Dayanand Saraswati in 1875. It introduced and contributed to the following reforms in the Indian society: I. It vehemently opposed the caste system and propagated against the practice of Untouchability. II. It condemned the practice of 'Sati' and 'Child Marriage'. III. It prevented conversion of the Hindus to other religions. IV. It worked actively for the uplift of women and their education. V. It started a network of schools and colleges (known as the D.A.V. schools or colleges) for the spread of education. VI. It condemned idol worship and useless religious rites and repudiated the authority of the Brahmans. Indian nationalism emerged as a result of a conflict of interest: the interest of Britain to keep India politically and economically subjected to it, and the interest of

NSOU ? PGSW- I 104 the Indian people for a free political, economic and cultural evolution of Indian society unhindered by the British rule. The first popular reformer of this new age was Dayanand Saraswati, who carried the spirit of nationalism to the masses of northern India. His movement developed a new national consciousness among the Hindus. Arya Samaj was the first reform movement to bring nationalism in the country. The religious nationalism preached by this movement became successful to ward off to some extent the inferiority complex prevailing in the country. This movement, as Romain Roll says, "Prepared the way in 1905 for the revolt of Bengal". Arya Samaj as an institution did not play any direct role in the freedom struggle. But it produced persons like Lajpat Rai, Shradhanand and Bhai Parmanand who threw their heart and soul in the freedom struggle. Upto 1920 Arya Samaj remained a force in the country but when Gandhiji entered the Indian scene the influence of Arya Samaj leaders began to wane. Through Arya Samaj, Swami Dayanand Saraswati brought about a complete overhaul of the education system of India by introducing Anglo-Vedic schools to offer students an updated curriculum - imparting both the knowledge of the Vedas and contemporary English education. Swami Dayanand put emphasis on the Veda. He praised the culture of the Vedas in no uncertain terms. He gave the slogan— "Go back to the Vedas". He discerned how the Vedas contained the message of equality, parity and several reforms. The Vedas contain scientific knowledge, several reforms, philosophy and doctrines of morality. Although Dayanand immortalized the Vedas, however, he opposed idol worship. He raised voice against ritualistic religious practices. Those religious performances would lead to social, economic, political and religious degeneration of India. He also rejected the ideas contained in Indian mythology. He denounced polytheism or worship of God in different forms. He emphasized that this polytheism had brought the division in Hindu society. Dayanand spearheaded his crusade against Caste system and Untouchability. He reinterpreted the system of Varna mentioned in the Veda. It was meant for occupational purpose in the society. As per the doctrines of guna, karma and swabhava, the society was divided into different varnas like the Brahmins, Kshatriyas, Vaishyas and Sudras with their respective occupation like worship, protecting the country, carrying on trade and commerce and to serve the other three castes. These occupations were interchangeable. He emphasized the political need of this division of society. Dayanand was deeply moved by the conversion of the Hindus to the Christianity or Islam. He appeared as a saviour of Hinduism. He took steps to return back the Hindus into the fold of Hinduism those who had accepted Christianity or Islam due to adverse circumstances.

PGSW- I ? NSOU 105 Thus, he initiated a movement which was very famous as the 'Suddhi Movement'. By this he brought back the converted Hindus from Christianity or Islam to the fold of Hinduism again. For that he was vehemently opposed by others but he did not care it at all. The 'Suddhi Movement' of Dayanand mainly checked the attitudes of Christian Fathers who were converting the poorer section of the Hindus to their religion. This made the mind of the Hindus strings and checked its further deterioration. Thus, Dayanand appeared as a saviour of Hinduism. Arya Samaj had three types of workers. Firstly those like Shyamji and Lala Lajpat Rai who actually joined the nationalist movement and spearheaded it in the early years of the twentieth century. Secondly, those who opposed the national movement and joined the Hindu Mahasabha. Bhai Parmanand was one of the foremost workers of this kind. He took a keen part in Ghadr rebellion, but later became a staunch Hindu Mahasabhaite, and opposed Congress and Gandhiji. Thirdly, there was a group which never joined the Congress and kept itself confined to educational activities. Lala Hansraj was prominent among them. Not only did he not join the freedom struggle, but he also opposed Gandhiji when the latter went at Lahore to call on the students to strike. Arya Samaj opposed the demand for a separate Muslim homeland and held that the demand of Pakistan was fatal for the religious, cultural and political interests of the country. 9.3.2 THE BRAHMO SAMAJ Raja Ram Mohan Roy is regarded as Father of Modern India who founded the first religious reform organisation i.e. Brahmo Samaj in 1828. The two most prominent leader of the Brahmo Samaj were Debendranath Tagore and Keshab Chandra Sen. Beginning with the reform of certain aspects of religious and social life, this awakening, in course of time, affected every aspect of social, economic, cultural and political life

of the country. From the late 18th century, a number of European and Indian scholars began the study of ancient India's philosophy, science, religions and literature. This growing knowledge of India's past gave to the Indian people a sense of pride in their civilization. It also helped the reformers in their work of religious and social reforms. In their struggle against

social evils, superstitions and inhuman practices and customs, the reformers used the authority of the ancient texts. While doing so, most of them based themselves on reason rather than mere belief and faith. Thus, Indian religious and social reformers made use of their knowledge of western ideas as well as of ancient learning.

SA LIPIKA GHOSH -Complete PDF (1) (1).pdf (D162879069)

Roy realized that the practice of sati was due to the extremely low position of Hindu women. He

advocated the abolition of polygamy, and wanted women to be educated and given the right to inherit property. The influence of Brahma Samaj spread and branches of the Samaj were opened in different parts of the country. The two most prominent leaders of the Brahma Samaj were Debendranath Tagore and Keshab Chandra Sen. To spread the message of Brahma Samaj Keshab Chandra Sen travelled throughout Madras and Bombay presidencies and, later, the northern India. The Brahma Reform Movement in 19th Century Bengal was the mother movement to which almost all modernizing efforts at popular level owed their origin. Its contributions towards popular awakening outshone its ultimate eclipse. The movement progressed through four districts, through overlapping phases. The central figures of the first three phases were, one after another, Rammohan Roy, Debendranath Tagore and Keshab Chandra Sen. During the fourth phase—the phase of Sadharan Brahma Samaj - the incipient radical trend in the movement reached its high noon. The Brahma tradition of Raja Rammohun Roy was carried forward after 1843 by Debendranath Tagore, who also repudiated the doctrine that the Vedic scriptures were infallible and after 1866 by Keshab Chandra Sen. The Brahma Samaj made an effort to reform Hindu religion by removing abuses and basing it on the worship of one God and on the teachings of the Vedas and Upanishads even though it repudiated the doctrine of the infallibility of the Vedas. It also tried to incorporate the best aspects of modern Western thought. Most of all it based itself on human reason which was to be the ultimate criterion for deciding what was worthwhile and what was useless in the past or present religious principles and practices. In 1866, there was a split in the Brahma Samaj when Keshab Chandra Sen and his group held views which were more radical than those of the original Brahma Samajists. They proclaimed freedom from the bondage of caste and customs, and from the authority of scriptures. They advocated and performed inter-caste marriages and widow remarriages, opposed the custom of purdah and condemned caste divisions. They attacked caste rigidity, started taking their food with the people of the so-called lower castes and other religions, opposed restrictions about food and drink, devoted their life to the spread of education and condemned the old Hindu

PGSW- I ? NSOU 107 opposition to sea voyages. This movement influenced similar movements of reforms in other parts of the country. While this group rose in prominence, the influence of the other group, which showed little interest in social reforms, declined. 9.3.3 Henry Vivian Derozio and The Young Bengal movement

99%

MATCHING BLOCK 124/180

SA Unit I-II Nationalism in India.pdf (D57912217)

The establishment of the Hindu College in 1817 was a major event in the history of Bengal. It played an important role in carrying forward the reformist movement that had already emerged in the province. A radical movement for the reform of Hindu Society, known as the Young Bengal Movement, started in the college. Its leader was Henry Vivian Derozio, a teacher of the Hindu College. Derozio was born in 1809. He was of mixed parentage his father was Portuguese and his mother was Indian. In 1826, at the age of 17, he joined the Hindu College as a teacher and taught there till 1831. Derozio was deeply influenced by the revolutionary ideas of liberty, equality and fraternity. He was a brilliant teacher and within a short period

of time,

98%

MATCHING BLOCK 125/180

SA Unit I-II Nationalism in India.pdf (D57912217)

he drew around him a group of intelligent boys in the college. He inspired his students to think rationally and freely, to question authority, to love liberty, equality and freedom and to worship truth. By organising an association for debates and discussions on literature, philosophy, history and science, he spread radical ideas. The movement started by Derozio was called the Young Bengal Movement and his followers were known as the Derozians. They condemned religious rites and the rituals, and pleaded for eradication of social evils, female education and improvement in the condition of women. Derozio was a poet, teacher, reformer and a fiery journalist. He was perhaps the first nationalist poet of modern India. He was removed from the Hindu College because of his radicalism and died soon after at the age of 22. 9.3.4

Iswar Chandra Vidyasagar Iswar Chandra Vidyasagar, a towering personality of the mid- nineteenth century, was born in a poor Brahmin family of Bengal in 1820. He was a renowned Sanskrit scholar and became the Principal of the Sanskrit College in 1851. The Sanskrit College conferred on him the title of 'Vidyasagar' because of his profound knowledge of Sanskrit. Pandit Iswar Chandra Vidyasagar was both a scholar and a reformer. He was a great humanist and had deep sympathy for the poor and the oppressed. He dedicated his entire life to the cause of social reform which he thought was necessary for modernizing India. By admitting non-Brahmin students to the Sanskrit College, he dealt a severe blow to the prevalent caste system. Vidyasagar was a staunch supporter of women's education and helped Drinkwater Bethune to establish the Bethune School, the first Indian school for girls, in 1849. As Inspector of Schools, Vidyasagar opened a number of schools for girls in the districts under his charge. Vidyasagar's greatest contribution lies in the improvement of the condition of widows.

NSOU ? PGSW- I 108 Despite opposition, Vidyasagar openly advocated widow remarriage. Soon a powerful movement in favour of widow remarriage was started. At last, after prolonged struggle the Widow Remarriage Act was passed in 1856. Through his efforts, twenty-five widow remarriages took place. He also spoke vehemently against child marriage and polygamy. Vidyasagar contributed enormously to the growth of the Bengali language and contributed to the evolution of the modern prose style in Bengali. He wrote a Bengali primer, 'Varna Parichay', which is used even today. Through his writings, Vidyasagar made the people aware of the social problems and thus helped the growth of nationalism in India. 9.3.5 Sri Ramakrishna Paramhansa

100%

MATCHING BLOCK 126/180

SA Unit I-II Nationalism in India.pdf (D57912217)

Sri Ramakrishna Paramhansa was one of the greatest saints of modern India. Ramakrishna was born in a poor Brahmin family of Bengal. He showed a religious bent of mind from his childhood. He had no formal education but his discourses were full of wisdom. He was the chief priest of the Kali temple at Dakshineswar near Calcutta. People from all walks of life visited Dakshineswar to listen to his discourses. Ramakrishna Paramhansa was a man with a liberal outlook. He firmly believed that there was an underlying unity among all religions and that only the methods of worship were different. God could be approached by any form of worship as long as it was done with single- minded devotion.

He believed that service to man was

98%

MATCHING BLOCK 127/180

SA Unit I-II Nationalism in India.pdf (D57912217)

service to God, for man was the embodiment of God on earth. As man was the creation of God, man-made divisions made no sense to him. Ramakrishna Paramhansa was a great teacher who could express complicated philosophical ideas in a simple language for everyone to understand. He believed that religious salvation could be attained through renunciation, meditation and devotion. 9.3.6 Swami Vivekananda Narendra Nath Dutta, better known as Swami Vivekananda, was the most illustrious disciple of Sri Ramakrishna. He was born in Calcutta in January, 1863. He graduated from the Scottish Church College and was well-versed in Western philosophy. Vivekananda was a man of great intellect and possessed a critical and analytical mind. At the age of eighteen, Vivekananda met Sri Ramakrishna. This meeting transformed his life completely. After the death of Sri Ramakrishna, he became a 'sanyasi' and devoted his life to preaching and spreading Ramakrishna's message to the people. His religious message was put in a form that would suit the needs of contemporary Indian society. Vivekananda proclaimed the essential oneness of all religions. He condemned the caste- system, religious rituals, ceremonies and superstitions. He had a deep understanding of Hindu philosophy and travelled far and wide to spread its message. At the Parliament of World Religions in Chicago (1893), Vivekananda spoke about Hindu religion at length. His brilliant speech on Hindu philosophy was well received.

PGSW- I ? NSOU 109

99%**MATCHING BLOCK 128/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

In India, Vivekananda's main role was that of a social reformer rather than a religious leader. He propagated Ramakrishna's message of peace and brotherhood and emphasized the need for religious tolerance which would lead to the establishment of peace and harmony in the country. He believed that it was the social responsibility of the better placed people to take care of the downtrodden, or the 'daridra narayan'.

100%**MATCHING BLOCK 129/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

In 1896, Vivekananda founded the Ramakrishna Mission to propagate social welfare. It laid emphasis not on personal salvation but

on

100%**MATCHING BLOCK 130/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

social good and social service. The Ramakrishna Mission stood for religious and social reform based on the ancient culture of India. Emphasis was put on the essential spirit of Hinduism and not on rituals. Rendering social service was the primary aim of the Ramakrishna Mission. It believed that serving a human being was the same as worshipping God. The Mission opened a chain of schools, hospitals, orphanages and libraries throughout the country. It provided relief during famines, earthquakes and epidemics.

A

100%**MATCHING BLOCK 131/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

math or monastery was established in Belur near Calcutta. The Belur Math took care of the religious developments of the people. 9.3.7

Christian Missionaries In 1793 two English missionaries, William Carey and John Thomas, both Baptists, set out to India with the clear intention of starting a mission. In view of the ban on missionary activity they settled down in the Danish Colony of Serampore, north of Calcutta. William Carey, along with two other missionaries, Joshua Marshman and William Ward established the Serampore mission in 1792. These three missionaries who were to play a major role in the renaissance of Bengal were known as the 'Serampore Trio'. The Serampore missionaries were the first evangelical Baptist missionaries in India. They were followed later by other missionary groups belonging to different Protestant denominations. Before the arrival of the Serampore missionaries, several centuries earlier, there were Christian missions in the Portuguese territory of Goa, and also on the Malabar coast. The work of the earlier missionaries was limited both geographically and in terms of the number of conversions to Christianity. Thus the major attempt at proselytisation began during the nineteenth century with the establishment of the first Baptist mission in Serampore. The main aim of the missionaries was converting the native heathens to Christianity, which they considered as the nobler object. It was as an adjunct to this major activity that the missionaries began their work of social reform and social service. The main missionary attack against the native religions of Islam and Hinduism was aimed at a variety of superstitious religious practices. The criticism of the missionaries was particularly directed against the Hindus who believed in idol worship and in several gods and observed a variety of practices, some of which like the sati created a

NSOU ? PGSW- I 110 moral revulsion in the minds of the missionaries. The proselytisation work of the missionaries did not succeed much. Firstly, the preaching of Christianity was based on a negative approach. It involved crude and harsh criticism of the religious convictions, superstitions and practices of the local people. Secondly, the age-old resilience of Hinduism to adapt itself to changing times by first permitting protestant sects to emerge and then later absorbing these also was a major factor. The most remarkable among the missionary activities, is perhaps their contribution in pioneering modern education in India. During the early years of Company rule, the government followed a policy of encouraging the traditional system of education by establishing a madrasah for the Muslims in Calcutta and a Sanskrit Vidyalyaya for Hindus in Varanasi. These were to serve as centres of higher learning for the native population. However, the College of Fort William in Calcutta, which was established in 1800 by Governor-General Wellesley for the training of the Company's officers, became a centre for learning which contributed in many ways to the Bengal renaissance. It may be noted here that William Carey was appointed as a lecturer in the College of Fort William, which he used to advantage in furthering the causes that were dear to him and his colleagues. The Company government did little to provide modern education for the native population. For a long time, the provision of elementary school facilities to the native population, especially in the interiors for the lower castes and the poor people, was a responsibility willingly accepted by the Christian missionaries. The missionaries were even attacked by some Europeans in London and India for catering to the lower castes and ignoring the higher castes. This is indicative of the social conditions of the time and bears testimony to the contribution made by the early Christian missionaries to the education of the disadvantaged rural population in India. Following Macaulay's Note on the introduction of modern education in India, the Company established schools and thus began to provide educational facilities in Bengal during the 1930s. Even then, a major proportion of pupils continued to be in the missionary schools. Ingham observes: 'While legislative action might be the speediest remedy for the more blatant evils of Indian society, the missionaries soon became aware that education rather than legislation was necessary to make the Indians themselves desire reform. In this task of creating a strong desire among Indians for reform through modern education the missionaries succeeded very well. The emergence of an increasing number of new elites in the Indian society following the introduction of modern education contributed significantly to the birth of a number of indigenous movements of religious and social reforms. Perhaps, the greatest contribution of missionaries to the modernisation of India was that of a new ideology based on individualism.

PGSW- I ? NSOU 111 9.3.8 Jyotirao Govindrao Phule Jyotirao Govindrao Phule played a

100%

social reforms throughout the country. Ranade was also one of the founders of the Indian National Congress. 9.3.10

The Theosophical Society and Annie Besant

100%**MATCHING BLOCK 136/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

Many Europeans were attracted towards Hindu philosophy. In 1875, a Russian spiritualist named Madame Blavatsky and an American called Colonel Olcott founded the Theosophical Society in America. The society was greatly influenced by the Indian doctrine of karma. In 1886 they founded the Theosophical Society at Adyar near Madras. Annie Besant, an Irish woman who came to India in 1893, helped the Theosophist movement to gain strength. She propagated Vedic philosophy and urged Indians to take pride in their culture. The Theosophists stood for the revival of the ancient Indian religion and universal brotherhood. The uniqueness of the movement lay in the fact that it was spearheaded by foreigners who glorified Indian religious and philosophical traditions. Annie Besant was the founder of the Central Hindu College in Banaras, which later developed into the Banaras Hindu University. Annie Besant herself made India her permanent home and played a prominent role in Indian politics. In 1917, she was elected President of the Indian National Congress.

The most important socio-religious movement among the Muslims came to be known as the Aligarh Movement. It was organised by Syed Ahmad Khan(1817-1899), a man described as the most outstanding figure among the Muslims. Syed Ahmad Khan was born in 1817 into a Muslim noble family and had joined the service of the Company as a judicial officer. He realised that the Muslims had to adapt themselves to British rule. So Syed Ahmad advised Muslims to embrace Western education and take up government service. In 1862, he founded the Scientific Society to translate English books on science and other subjects into Urdu. He also started an English- Urdu journal through which he spread the ideas of social reform.

Through his initiative was

97%**MATCHING BLOCK 140/180****SA** Unit I-II Nationalism in India.pdf (D57912217)

established the Mohammedan Oriental College which later developed into the Aligarh Muslim University. It helped to develop a modern outlook among its students. This intellectual movement is called the Aligarh Movement. As a social reformer, Syed Ahmad Khan campaigned against the purdah system, polygamy and the Muslim system of divorce. He emphasized the need for removing irrational social customs while retaining the essence of Islam and encouraging a rational interpretation of the Koran. Syed Ahmad Khan believed that the interest of the Muslims would be best served through cooperation with the British Government. It was only through the guidance of the British that India could mature into a full-fledged nation. So he opposed the participation of the Muslims in the activities of the Indian National Congress. 9.5

Religious and social movements among the Sikhs were undertaken by various gurus who tried to bring about positive changes in the Sikh religion. Baba Dayal Das propagated the nirankar (formless) idea of God. By the end of the 19th century a new reform movement called the Akali Movement was launched to reform the corrupt management of Gurdwaras.

people. It was also used for promoting social reforms. The social reformers made valuable contributions to literature. Bharatendu Harish Chandra, Bankim Chandra Chattopadhyay and Rabindranath Tagore spread the ideas of social reform and condemned social injustice in Hindi and Bengali. Poets like Iqbal and Subramania Bharati inspired the masses. Premchand wrote about the sufferings of the poor and thus made the people aware of social injustice. Rabindranath Tagore composed the National Anthem. Bankim Chandra and Iqbal composed two other national songs Bande Mataram and Saare Jahan Se Achcha.

9.8 Conclusion The learners came to know about the various social reformers and their noble contribution in framing the nation and freeing the society from evil practices.

NSOU ? PGSW- I 116 10.2 Introduction 10.2.1 Social Movement A social movement can be defined as

100%

MATCHING BLOCK 149/180

W

a loosely organized effort by a large group of people

in order to accomplish specifically either social or political goal. Social movements are mainly carried out to initiate, resist or undo a social change or an existing situation. Social movements are mainly considered as a group action and both individual and or a particular organization can participate in this mass activity. Social movement can be explained

97%

MATCHING BLOCK 162/180

W

as "organizational structures and strategies that may empower oppressed populations to mount effective challenges and resist more powerful and advantaged elites" (

Webster's Online Dictionary). Actually in brief it can be articulated that social movements manifest a method of social change which emerge from the bottom sphere of society (Scott, 2009). Actually social movement cannot be considered neither as a political party or interest group which holds neither definite political power, nor it is an unorganized and momentary mass whim without any specific objectives. It lies somewhere in between. (Freeman & Johnson1999). Therefore, social movements can be enumerated as informal yet organized social entities that are involved in an extra-institutional conflict with some specific objectives (Christiansen, 2009). These movements either aim at a narrow or specific policy change or in broader spectrum towards cultural change. Some characteristics of social movement are as follows: ? Involved in divergent relations with clearly identified opponent. ? Are connected with dense informal networks. ? Share a distinct collective identity. 10.2.2 Definitions of Social Movement

100%

MATCHING BLOCK 150/180

W

Mario Diani argues that nearly all definitions share three criteria: "a network of informal interactions between a plurality of individuals, groups and/or organizations, engaged in a political or cultural conflict, on the basis of a shared collective identity" (

Diani, 1992).

100%

MATCHING BLOCK 151/180

W

Sociologist Charles Tilly defines social movements as a series of contentious performances, displays and campaigns by which ordinary people make collective claims on others. For Tilly, social movements are a major vehicle for ordinary people's participation in public politics (

Tilly, 2004).

100%

MATCHING BLOCK 152/180

W

He argues that there are three major elements to a social movement: 1. Campaigns : a sustained, organized public effort making collective claims of target authorities; 2. Repertoire (repertoire of contention): employment of combinations from among

PGSW- I ? NSOU 117

97%**MATCHING BLOCK 153/180****W**

the following forms of political action: creation of special-purpose associations and coalitions, public meetings, solemn processions, vigils, rallies, demonstrations, petition drives, statements to and in public media, and pamphleteering etc. 3. WUNC displays : participants' concerted public representation of worthiness, unity, numbers, and commitments on the part of themselves and/or their constituencies. Sidney Tarrow defines a social movement as "collective challenges (to elites, authorities, other groups or cultural codes) by people with common purposes and solidarity in sustained interactions with elites, opponents and authorities." He specifically distinguishes social movements from political parties and advocacy groups (Tarrow, 1994). The sociologists John McCarthy and Mayer Zald define a social movement as "a set of opinions and beliefs in a population which represents preferences for changing some elements of the social structure and/or reward distribution of a society" (

John McCarthy, 1977). 10.2.3 History

43%**MATCHING BLOCK 154/180****W**

The early growth of social movement can be traced in economic and political changes in England in the mid 18 th Century. It can be stated that first mass social movement emerged around

a controversial political figure John Wilkes, editor of a news paper, who strongly assailed and

100%**MATCHING BLOCK 155/180****W**

vigorously attacked the new administration of Lord Bute and the peace terms that the new government accepted at the 1763 Treaty of Paris at the end of the Seven Years' War (

Tilly C. , 1981). Later

84%**MATCHING BLOCK 156/180****W**

Wilkes became an Alderman of London and an activist group society for the supporters of the Bill of Rights started promoting his policies

and this was considered as first ever sustained social movement (Organization, 2016). After that a larger mass movement happened when anti-Catholic protest was prompted. There are several other political movements which took place in the late 18 th century like British abolitionist movement against slavery etc. From 1815, Britain observed

48%**MATCHING BLOCK 157/180****W**

a period of social turmoil characterized by growing numbers of social movements and special interest associations like Chartism was the first social mass movement of growing working class.

These types of labor and social movements are considered as prototypical social movements which gave birth to communist and social democratic parties and organization. During 1945 after winning Second World War, Britain observed an era of radical reform and change. In this post war period feminist movement, gay rights movement, peace movements, civil rights movements, anti nuclear movements, and environmental movement emerged as new age social movements (Westd, 2004). 10.2.4 Key processes It can be stated that some key processes work as a catalyst for these social movements. The first process is urbanization which facilitates gatherings of large number of people with

NSOU ? PGSW- I 118 similar goals and due to frequent social interaction between these people most of the social movements emerged in urban areas. Secondly Industrialization also played an important role in accelerating working class movement. Another significant stream of movement is student movement which originated in different universities, where the process of mass education brought likeminded young people together. As communication technology becomes more and more advance, carrying out activities of social movement became easier (Wikipedia).

10.2.5. Stages of Social Movement According to Herbert Blumer

the entire process of social movement is consisted of four stages .The four stages he described were social ferment, popular excitement, formalization and institutionalization. But after his early work these stages have been refined and reframed by different scholars, but the inherent themes have remained constant. In contemporary era four stages of social movements are as follows:

Emergence: The first stage of the cycle of the social movement is named as emergence. This is a very preliminary stage of social movement and in this stage the movements are not very organized. Instead this stage is characterized by a widespread discontent about any particular situation or policy among any individual or some potential movement participants. But in this stage these discontents are limited to discussion, media coverage or printed news in local news paper only. This unhappiness is not transformed in any type of strategic and collected actions during this stage. In this early stage, social movement may take a definite form within a specific social movement organization (SMO) which aspires to carry out tasks required for survival and success of a social movement. Now in emergence stage these SMOs and its members play the role of agitators who raise awareness among the related factors and help to develop the sense of restlessness among general mass.

Coalescence: In the second stage of the cycle social movements have to overcome some hindrances to become a mass movement. Sometimes many social movements cannot overcome all these obstacles like in a community people may be discontent about certain issues and they may discuss it within themselves, but they may not plan any definite action and social movement may not reach the next level. This second stage is characterized by a more vividly defined sense of discontent. It can be stated that in this level discontent is no longer unorganized and individual; but it becomes focalized and collective. At this juncture leadership materializes and the agitators become more organized and strategic to ensure success of the movement. Also in this stage one important feature of social movement is mass demonstrations which flaunt social movement's power and place clear demands.

Bureaucratization: Bureaucratization is the third stage of this particular cycle. This stage is characterized by higher level of organization and coalition based strategies. During this

PGSW- I ? NSOU 119 stage social movements can achieve a mass support through raising awareness. As obvious consequences during this phase the social movement organizations design coordinated strategies and for this they intend to rely on professional staff with specialized knowledge and they also bear the responsibility of running the day to day functions of these SMOs to accomplish objectives of the movements. Social movements in this phase do not rely only on mass demonstration and inspirational leaders for achieving desired success. In this stage the political power is greater than other stages. And in this stage many social movements may not succeed to bureaucratize in this way and end up fizzling out.

Decline: Finally the last stage of this cycle is decline. Decline does not mean failure of social movement but Miller (1999) spoke about four ways in which social movement can decline. They are as follows:

Repression: The first mode in which social movement can decline is repression. It takes place when authorities use measures even sometime violent measures to control or destroy social movements. This implies Government may pass laws to declare some movements or organization as illegal or unsafe for public interest. This type of repression makes it exceedingly difficult for social movements to carry out their activities and recruit new members.

Co-optation: Movement can also decline if the organizations are run by a centralized authority or by some charismatic leadership through co-optation. Co-optation occurs when movement leaders come to associate with authorities or movement targets more than with the social movement constituents.

Success: Some social movements decline because they became successful. Local movements which are organized in a small scale and share very specific goals often have better chance of success. Many social movements have goals that are much less clearly defined and many organize new campaigns once others are wrapping up either through success or compromise.

Failure: Failure of social movements due to organizational or strategic flaws is very common and can be considered as another way in which social movement can decline. Sometime organizations are not able to handle rapid expansion that took place because of their success and due to organizational stain. As an obvious consequence the organization and as well as social movement collapsed into different factions.

Establishment with Mainstream: Many scholars have noted that there is a fifth reason for decline of social movement and that happens when social movement organization becomes established in the mainstream. This implies that the goals and ideologies of any particular movement are approved and adapted by mainstream society and thus the need for any movement gradually evaporates (Jonathan Christiansen, 2009). Social movements can trace and the causes of social problems but it cannot always bring solution to every social problems. But social movement may bring social change and they

NSOU ? PGSW- I 120 do bring it. It can be stated that it is not a one way process. In some cases social change can also instigate social movement and accelerate further change or development. "In fact, Smeler has defined a social movement as an organized group effort to generate socio- cultural change (Rao, 2006). Now some important social movements have been illustrated below which will describe their origin, trajectory, consequences and their impact on development of society . 10.3 Dalit Movements Dalits in India are considered as a group of people belonging to lowest caste and are often termed as 'untouchable'. History depicts that Dalits were excluded from 'Four Varna' system that prevailed in Hindu Society in Vedic era. The term Dalit is a self applied term utilized to denote the "untouchable". According to Dr. B.R. Ambedkar the concept of untouchability originated in Indian Society around 400 CE as an upshot of conflict for establishing the supremacy between Buddhism and Brahmanism (Omvedt, 2003). In later period of 1880, the term Dalit was utilized by Mahatma Jotiba Phule to represent the outcast and untouchables who became the pray of violence and oppression for decades. Eventually Dalit has become a political identity. As an obvious consequence of this age long suppression, our society witnessed Dalit uprising during 1956 which was led by Dr. Ambedkar. Nearly half a million Dalit who were formerly considered as untouchables participated in this movement along with Dr. Ambedkar and converted to Navayana Buddhism. The main objective of this movement was to challenge the caste system and to promote the rights of the Dalit community. The movement also abandoned the traditional teaching process of Theravada, Mahayana and Vajrayana ideologies of Buddhism and took an oath to pursue a new form of engaged Buddhism as preached by Dr. Ambedkar (Skaria, 2015). If we excavate our historical traditions, it can be found that formation of caste system is the root cause behind all the oppressions of the marginalized section of the society especially of lower caste like Dalits. The inscription of Rig Veda in Vedic period strengthen the foundation of oppression of the people of Shudra Varna and later in 5 th century people from Shudra Varna were transformed into untouchable and this led to commencement of Brahmin domination along with Dalit exploitation . All these exploitations were based on two myths prompted by Vedic region and they said that ? Firstly, the Dalits should accept the exploitation done against them as the result of their own deeds of past birth. They should consider that they committed some misdeeds due to which they are facing such kind of oppression.

PGSW- I ? NSOU 121 ? Secondly, even if they are exploited in this birth, they should not protest, which will provide them a good life in the next birth. Deprivation of resources at every level of social, economic and political system, led the Dalit community towards a state of immense oppression and degradation. The Dalit movement can be considered as an upshot of constant barbaric brutality of the upper caste towards Dalit community. As the people from Shudra Varna were allotted the duties to serve the upper caste and they were not allowed the right to education. They were also denied any kind of social-economic and political status. A belief retained among the upper caste people that Dalits were impure since birth and their touch or presence could pollute them. That is why they were considered untouchables. For decades the Dalits were kept out from the mainstream society and they were forced to pursue unskilled occupation like cleaning dry latrines, sweeping, tanning or working as landless labour for meager daily wages. They used to work as bonded labour for cultivating the land and worked as scavengers. Due to the concept of untouchability, Dalits had to live a barbaric live in an inhuman condition. They were not allowed to enter the mainland and were prohibited to wear decent dress and ornaments. Dalit women were the worst affected and often they were turned into prostitute to fulfill the sexual needs of upper caste people. These atrocities were carried out in the name of religion and right to education was monopolized to retain the control over the lower caste people (Mani, 2005). As the Dalits were denied access to all types of material and intellectual resources, they decided to stop all these unequal practices and began struggle against oppression and exploitation. This specific movement aspired to achieve equal status in the society for the Dalits and to stop cruel practices against them. Although commenced in the Vedic era, Dalit movement gained its momentum in the post independence period. The Mukti movement was organized by a group of very poor Dalit. With the introduction of western language, and with the influence of the Christian missionaries, the Dalits began to come across the ideals of equality and liberty and thus began the Dalit Movement in modern times. Educated Dalits started protesting against the age old exploitation and atrocities and manipulated other illiterate Dalits to pursue the movement. Dalit movement gave birth to many writers, journalist and a group of thinkers. During 1970 Dalit Panther Movement began in Maharashtra as a consequence of repression and terror under which the oppressed Dalits continued to live in the rural area and it was led by a group of educated Mahars. During this movement when there was no means of communication to support Dalits, expressing their sufferings through writings was the only solution. When all media newspaper were controlled by the upper caste people, the Dalits started their own magazines and many Dalit writers started to write songs, poems, stories, autobiographies to express their distress and experience. All their feelings were bursting out in the form of writings. Writing

NSOU ? PGSW- I 122 is not simply writing, it is an act that reflects ones continuous fight against evil. Dalit literature, try to compare the past situation of Dalits to the present and future generation not to create hatred, but to make them aware of their pitiable condition. It is not caste literature but is associated with Dalit movement to bring about socioeconomic change, through a democratic social movement. Dalit movements can be considered as a social revolution aspired to bring social change and to replace the very old hierarchical caste system. But in modern society untouchability is eradicated but still the people from lower caste face discrimination. Today to wear good clothes is not forbidden. Education is the only remedy for such discrimination. Thus the Movement for social change will succeed only when all the Dalits unite together to fight for equality (India). 10.4 Tribal Movements A number of tribal revolution took place in India , beginning with one in Bihar during 1772 , followed by many insurgencies in Andhra Pradesh , Andaman and Nicobar Islands , Arunachal Pradesh , Assam , Mizoram and Nagaland etc . The Tribal population has been considered as quite conservative and was concerned in retaining their salient features and indigenous resources and ways of life. Besides fighting for their own rights and against oppression, they also aspired to take opportunity of this situation to eradicate social evils and ill tendencies from contemporary tribal society. The consciousness of the Tribal community is very firm and these movements were not only agrarian but also forest based. Some tribal movements were characterized by ethnicity as all these insurgencies were directed against zamindars, moneylenders and petty government officials who were not only their exploiters but aliens too. In some cases when the tribal community failed to repay their loan, the landlord seized their lands and the tribal people transformed into bonded labor in their own land. Police, revenue officer and other government employees instead of helping them, used these down-to-earth people for their work without any payment. The judicial system of the country also was ignorant about their plight. Certain factors like land alienation, forced labour, minimum wages, and land grabbing etc. forced many tribal community like Munda, Santhals, Kol, Bhils, Warli, to revolt in many regions. Another important factor behind tribal movement in this country was management of forest as in many regions forest remains the main source of livelihood for many tribal community. The British government had introduced certain legislations permitting merchants and contractors to cut the forests. These rules not only deprived the tribal of several forest products but also made them victims of harassment by the forest officials. All these factors led many tribal communities to accelerate revolt (Aggarwal).

PGSW- I ? NSOU 123 10.4.1 Tribal Movement before independence As soon as British expanded their sovereignty over Eastern India, tribal revolution was instigated to challenge alien rule. In the early years of colonialisation, no other community in India offered such heroic resistance to British rule or faced such tragic consequences as did the numerous Advise Communities of now Jharkhand, Chhattisgarh, Orissa and Bengal. In 1768 under the feudal king Krushna Bhanja of Ghumsar, the Kondha fought a pitched battle against the British and many lost their lives. The same year Raja Narayan Deb of Parlakhemundi fought another battle at Jalwara where 30 tribals died. In 1772 the Paharia revolt broke out which was followed by a five year uprising led by Tilka Manjhi who was hanged in Bhagalpur in 1785. In the next two decades, revolt took place in Singbhum, Gumla, Birbhum, Bankura Monbhoom and Palama, followed by the great Koi Rising of 1832 and Khewar and Bhum.j revolts (1832-34). The various uprising of the "Kondh meli" and the noteworthy militant struggle of the Khonds for a decade from 1846-56 under the leadership of Chakara Bisoi and the resistance to British exploitation by the Santhals of Orissa under the Murmu Brothers among many others will go down as momentous events in the history of India's struggle against the British. The rebellion of 1855-1857 was a great event in history of Santhal under leadership of Sidho and Kano. In 1855 the Santhals promoted wage war against the permanent settlement of Lord Cornwallis. The Santhal uprising (1855-1857) was an attempt to recover the tribal land which was steadily lost to the outsiders and to wipe out the non-tribals from their territory. Adivasis uprising in the Jharkhand belt were quelled by the British through massive deployment of troops across the region. The long struggles led by Birsa Munda were directed at British policies that allowed the Zamindars and money-lenders to harshly exploit the tribals. In 1914 Oraon started what is called Tana Bhagat movement. The Kolhas, Gonds, Santhals, Birjhals and Khonds joined hands with Surendra Sai in this first revolt for Independence. The insurgencies of the Munda under the leadership of Birsa Munda were another landmark. As the freedom movement became wide spread, the tribal community joined the struggle. Many landless and subjugated tribal communities joined in with upper- caste freedom fighters expecting that the defect of the British would usher in a new democratic era (Mondal). 10.4.2 Tribal Movements after independence Even after fifty years of independence, the tribal communities are least benefited community. The basic factors which set off tribal movement in India after independence are forest alienation training and job deprivation due to influx of the outsiders, cultural sub-mergence and unbalanced development. After independence, tribal movements may be classified into three groups (i) movement due to exploitation of outsider's (ii) movements due to economic deprivation (like those of

NSOU ? PGSW- I 124 Gonds in Madhya Pradesh and the Mahars in Andhra Pradesh (iii) movements due to separatist tendencies (like those of the Nagas and Mizos). The tribal movements may be classified on the basis of their orientation into four types: (i) forest-based movements, (ii) socio-religious movements or social-culture movements (iii) movements seeking political autonomy and formations of States (Nagas, Mizos, Jharkhand) and (iv) agrarian movement, Naxalban movement-1967 and Brisadal movement 1968-69. Reformatory movement was found among the Mundas under powerful leadership of Dharli Aba, who preached Hindu ideals of ritual purity, asceticism and criticized the worship of priests. The Naga revolution began in 1948 and continued upto 1972 when the new elected Government came to power and the Naga insurgency was controlled. The Naxalite movement of the tribal community in Bihar, West Bengal, Andhra Pradesh; the agrarian movements of the Gonds and Bhils in Madhya Pradesh and the forest-based movements of Gonds were mainly launched for liberation from oppression and discrimination, backwardness and a Government which was callous to the tribal plight marked by poverty, hunger, unemployment and exploitation. The movement against mining is popular among the tribes such as Bhuiyan, Juang, Munda, Santhal, and Kondh. The chief slogan of the movement against mining has been "Our lands, our minerals and our rights". The villager and tribal community of Rallagaruvu village in Vishakhapatnam district of Andhra Pradesh had put up a brave resistance against illegal mining by various companies in the last decades. Rise of tribal consciousness, tribal regionalism, frontier tribalism, etc. gained currency after the movements in North East Frontier areas. The tribal community must have equal access to proper education, health service, cultural and economic opportunities to reverse the effects of colonialisation and earlier injustice (Mondal).

10.5 Peasant Movement

Peasant movement is considered as a social movement which aspired to fight for the rights of the peasants and it also challenged existing agricultural policy. Peasant movement has a long history and in India it became prominent during British colonial period as economic policy of the British adversely affected the Indian peasants. This economic policy was drafted in the favor of the landlords and the money lenders and exploited the farmers. The economic policy also accelerated the process of ruining the traditional handicrafts leading to change of ownership, overcrowding of land, massive debt and impoverishment of peasantry. All these factors laid the foundation of farmer uprisings during the colonial period and peasant movements in the post colonial period (Priya).

PGSW- I ? NSOU 125 10.5.1 Peasant movement before Gandhian era

During 1859, the famous movement which shook the foundation of British sovereignty was Indigo movement. European planters compelled the poor farmers to cultivate indigo instead of food crops as it was a very profitable business. The farmers were totally unprotected from the indigo planters, who resorted to mortgages or destruction of their property if they were unwilling to obey them. Due to this severe oppression, the farmers resorted to revolt. During British rule some landlords used to collect high rents and land taxes from the poor peasants and also stopped the tenants from acquiring occupancy right under Act X of 1859. Due to very low production of jute the peasants experienced famine. But in the same time some landlords increased the land taxes and this triggered another peasant revolt in India. During 1875 a group of peasants from different districts like Pune, Satara, Ahmednagar from Maharashtra protested against enhanced agrarian distress. The agitators aspired to acquire and damage the bonds, decrees and other documents in the possession of the moneylenders (Priya).

10.5.2 Peasant movement during Gandhian era

One of the eminent farmer movements of India was Champaran Satyagraha of 1917. Actually the European planters had applied all sorts of illegal and barbaric methods to manipulate the farmers for indigo plantation. The local Zamindars also exploited the farmers in order to please their European lords. In this situation Gandhiji decided to fight for the rights of the peasants and the famous Champaran Satyagraha was initiated. Other famous peasant movements of India were Molpah movement which took place during 1921 in Malabar. The Molpah farmers revolted against the Hindu landlords and the British Government and they complained against security of tenure, high rents, renewal fees and other unfair demands of the landlords. Few other peasant movements which acquired significant position in India history like Kheda Peasant Struggle, Bardoli Movement in Gujarat, Peasant Revolt in Telangana, Tebhaga Movement in Bengal. All these movements were launched against oppressive British government and Zamindars.

10.5.3 Impact of these revolts ?

All these peasant movements aspired to obtain justice for the farmers and were initiated against atrocities of local zamindars and British government but it laid the foundation for revolt for uprooting British rule from India as they created awareness among mass. ? These movements helped the farmers to develop a strong awareness about their rights. ? The oppressed peasants realized the need to protest against all these illegal and inhuman behavior for a better life which would be free from exploitations.

NSOU ? PGSW- I 126 ? Through all these movements the peasant community emerged as the main force in agrarian movements and initiated the struggle for their own rights. ? As an obvious consequence the Government appointed an indigo commission to inquire into the problem of indigo cultivation. Based on its recommendations, the Government issued a notification in November 1860 that the farmers could not be compelled to grow indigo and that it would ensure that all disputes were settled by legal means. ? The Deccan Agriculturists Relief Act was passed and enacted in 1879. ? A number of Kisan Sabha was established to protest against the atrocities towards the farmers and raise voice to fulfill their demands in an organized way during Non Cooperation Movement. ? The Champaran Agrarian Act was consented by Governor-General of India on 1 st May,1918 . The ideology of non-violence had bestowed much strength upon the farmers who participated in the movement. The movement also contributed to the growth of nationalism. All these movements created a milieu for post-independence agrarian reforms like abolition of Zamindari system. These movements also contributed in erosion of landowner class, thus adding to the transformation of the agrarian structure (Priya).

10.6 Working Class Movement

During the beginning of the second half of the nineteenth century, India witnessed the entry of modern industry within the country. The emergence and development of railways, coal, and cotton and jute industries incubated modern working class as thousands of workers were employed in construction of railways. And later in the chronology the development of ancillary industry was accompanied by industrialization. Then the coal industry flourished and employed a large number of a people as working force. Then came cotton and jute industries and contributed in the development of Indian working class. The working class was an integral part of the capitalist economy which was introduced in India during 19 th century under colonial dispensation. It was an ironic situation where the organization of production was capitalistic whereas the labour market was not free (Mondal, Working Class Movement Against British Rule in India). But with time the Indian working class started suffering from several exploitations similar to those experienced by the working class in Europe and rest of the west during industrialization like low wages, long working hour, unhygienic and hazardous working conditions, employment of child labor and the lack of access towards basic amenities. It

PGSW- I ? NSOU 127 can be articulated that for the majority of workers in colonial India, the recruitment and working conditions were not as free as present in some other more capitalistically developed countries. All these factors accelerated the process of working class movement as it developed over the years. In addition to less developed economy, the colonial condition was also responsible for the labour movement. Moreover, the existence of colonialism made Indian working class movement distinct from other working class movement. The Indian working class had to deal with two basic antagonistic forces like an imperialist political rule and economic exploitation at the hands of both foreign and native capitalist classes. In these circumstances the Indian working class movement became entwined with the political struggle for freedom of the country. Although the plantations and mines contained a large number of workers who were heavily exploited, their conditions did not attract much attention in the initial period because they were far from the urban areas, away from the notice of early social reformers, journalists and public activists. But, despite this isolation, the plantation workers, on their own, registered their protests against the exploitation and oppression by the plantation owners and managers. Reports of such resistance are available since 1884. Individual and collective abstention from work and abandonment of the tea gardens were forms of passive resistance by the workers. More active forms of protests were expressed in individual and collective violence against the assaults by the plantation authorities. The workers in the cotton and jute industries and in the railways, on the other hand, were more in the public gaze. The early social workers and philanthropists were also involved with them. This facilitated better organizational work as well as better reporting and public support. Records of open resistance are available since the 1870s in Bombay. In 1884, the Bombay cotton mill workers held a big meeting and submitted their demands to the government for lesser hours of work. There were also reports of strikes among the mill workers. By the 1890s, the strikes became so frequent that the authorities spoke about a 'strike mania' among the workers. These strikes and protests increasingly began to involve more and more workers. The increasing duration of strikes and involvement of larger number of workers forced the Bombay Mill owners' Association to refer to the existence of a 'labour movement' in this country in 1913. In other industrial centres like Calcutta, Ahmedabad, Kanpur, Madras, Nagpur and Surat the situation was almost similar. The workers were slowly learning to protest and combine for the redress of their grievances. These combinations were increasingly growing bigger involving larger number of workers. Strike waves spread in other places and engulfed non- factory concerns like railways, plantations, mines, ports and docks, engineering workshops, oil installations, government mint and presses, tramways, gas and electricity supply undertakings and even the municipal workers.

NSOU ? PGSW- I 128 There were many people and organisations involved with these workers. In Bengal, Sasipada Banerjee initiated welfare activities among the workers since early 1870s. He tried to educate them and to voice their grievances. For this purpose, he founded the 'Working Men's Club' in 1870 and started publishing a monthly journal in Bengali entitled Bharat Shramjibi in 1874. The Brahmo Samaj formed the 'Working Men's Mission' in Bengal in 1878 to impart moral education among the workers. It also established the 'Working Men's Institution' in 1905. In Bombay, N.M. Lokhanday was actively involved in welfare and organizational activities among the cotton mill workers since the 1880s. In 1890, he established the 'Bombay Millhands' Association' and in 1898 he started publishing a journal entitled Dinbandhu in Marathi. Besides him, S.S. Bengali was also actively propagating for improving the conditions of the workers since 1878. Some other important organisations active among the Bombay workers were the Bombay Millhands Defence Association formed by Bal Gangadhar Tilak in 1908, the Kamgar Hitwardhak Sabha formed in 1909 and the Social Service League established in 1911. All these organizations mainly focused on welfare activities for the workers. During this period some organization was formed which can be treated as forebear of trade union. Amalgamated Society of Railway Servants of India and Burma formed in 1897, the Printers' Union in Calcutta and the Postal Union in Bombay were among these. But they could not maintain any continuity in their functioning and were in existence for a short period only (MOVEMENTS).

10.6.1 Formation of Trade Union On October 31, 1920, All India Trade Union Congress was founded. Lala Lajpat Rai was then became the first president and Dewan Chaman Lal was the first general secretary. Lala Lajpat Rai was the first person who linked capitalism with imperialism and gave the statement, 'Imperialism and militarism are the twin children of capitalism'. CR Das, Jawaharlal Nehru, Subhas Chandra Bose, CF Andrews, JM Sengupta, Satyamurthy, VV Giri and Sarojini Naidu supported the formation of trade union. In 1918, the Trade Union emerged as a pressure group in a capitalist society because during this year Gandhi helped to organize the Ahmedabad Textile Labour Association and their demand in wage hike which was arbitrated 35 percent instead of 27.5 percent. In 1926, British government came with the Trade Union Act to formalize the trade union as a legal association. It also laid down eligibility criteria for registration and regulation of trade union activities. This act not only secured the immunity for both civil and criminal from prosecution for the legitimate activities of the trade union act but also imposed restrictions on their political activities. The modern working class movement was a product of capitalist economy in India. Initially, most of the capital was British owned while certain industries, such as cotton textile and PGSW- I ? NSOU 129 iron and steel were Indian owned. And lakhs of workers were employed to run these concerns. Their exploitations and deprivations led to protest among the working class. Emergence of trade union manifested more organized struggle of the working class which resulted in the betterment of their condition (MOVEMENTS).

10.7 Naxalite Movements : Naxalite movements can be recognized as the revolt of oppressed peasants in West Bengal against the feudal landowners which was inspired by communist ideologies. It has been stated that the breeding ground for Naxalism was a small village of West Bengal (North) named as Naxalbari. It was all started in 1967, when a faction of Communist Party of India led by renowned leaders likes Charu Majumder, Kanu Sanayal and Jangal Santhal instigated an armed farmer uprising against land owners of the state. During this period, India was independent for last 20 years, but it hang on to the colonial land tenancy system. As an obvious consequence and as exhibited by census of 1971 around 60% population was landless and a lion's share of land was captured by the landlords. The landless farmers were forced to work as bonded labour in these land and they were immensely exploited. This exploitation led to one of the famous social movements – Naxalite Movement. The agitators were known as Naxals ((EFSAS, 2019) . On 18 th May, 1967 The Siliguri Kishan Sabha led by Jagan Santhal as president displayed their support towards Naxalite movements and its alacrity to continue with armed struggle with the objective of redistribution of land among the landless. In following week due to a land dispute a share cropper near Naxalbari village was assaulted by landlord's men. Then on 24 th May when a team of police arrived in the village to arrest peasant leaders, they were also attacked by a group of santhals led by Jagan Santhal and a police person was killed due to severe injury caused by their arrows. This event accelerated the Naxalite movement and many Santhaals along with other poor people joined the movement and started attacking the landlords. A large number of people belonging to urban elite class became inspired by this ideology, through the writing of Charu Majumder especially through 'Historic Eight Documents' which formed the foundation of Naxalite ideology. Practically the origin of all Naxalite groups can be traced to Communist Party of India , which was inspired by the Marxist ideology of classless society (PTI, 2011). But at its peak in 1969, Majumder officially split from the CPI-M by forming the Communist Party of India- Marxist Leninist (CPI-ML). Despite the name, Mazumdar was much more inspired by Maoist ideology than Marxist or Leninist Doctrine. The early 1970 witnessed the rapid spread of Naxalism in almost every state of India

NSOU ? PGSW- I 130 except Western India .During this period, this movement was disjointed in several disputing factions. It was projected that until 1980 30 Naxalite groups were active with approximately 30,000 memberships. Around 1971 the Naxalite movement was expanded and it took a form of radical student movement in Calcutta. Many brilliant students being inspired by this ideology sacrificed their glorious career to join Naxalite movement. Charu Majumdar to enroll more students in his organization articulated that revolutionary welfare was not limited to the rural areas, but it was extended everywhere spontaneously. In order to expand their base, the movement relied on these students to spread communist philosophy among the uneducated rural and working class communities. Thus Majumdar declared an "annihilation line", a dictum that Naxalites should assassinate individual "class enemies" (such as landlords, businessmen, university teachers, police officers, politicians of the right and left) and others. The chief minister, Siddhartha Shankar Ray of the Congress Party, instituted strong counter-measures against the Naxalites. The West Bengal police fought back to stop the Naxalite. Large sections of the Naxal movement began to question Majumdar's leadership. In 1971 the CPI (ML) was split, as Satyanarayan Singh revolted against Majumdar's leadership. In 1972 Majumdar was arrested by the police and died in Alipore Jail presumably as a result of torture. His death accelerated the fragmentation of the movement (PTI, 2011). The merger of the People's War Group and Maoist Communist Center in 2004 resulted in the creation of the Communist Party of India-Maoist (CPI-Maoist) and its armed wing, the People's Liberation Guerilla Army (PLGA), and an upsurge in Left Wing Extremism (LWE) related violence. This merger instigated an upsurge in aggression in many Indian states which prompted Manmohan Singh, the Prime Minister of India from 2004 to 2014, to declare that Naxalism was "the single biggest security challenge ever faced by our country" , in April 2006. During this time many people were killed due to Naxalite or Maoist activities. Maoist factions, to this day, continue operating in India's "Red Corridor" , which includes central and eastern states such as Andhra Pradesh, Bihar, Chhattisgarh, Jharkhand, Madhya Pradesh, Maharashtra, Odisha, Telangana, West Bengal and Uttar Pradesh. Pockets in these states have been riddled with poverty and underdevelopment for decades, which the Naxalites seek to exploit in order to achieve their aims. Since its beginning Naxalite movements aspired to seize land from the landlords and to redistribute it among the peasants, but in modern days the insurgency takes place against the State and development industries. History depicts that most social movements only survive by giving up armed struggle and joining mainstream politics. Both the CPI and the CPI-M started out with aims of revolutionary armed struggle, but eventually joined mainstream Indian politics and are today established, legitimate political parties ((EFSAS), 2019).

PGSW- I ? NSOU 131 10.8 Women's Movement Women's movement is often synonymous to feminist movement which refers to a series of political campaigns for challenging issues affecting women's life like, reproductive rights, domestic violence, maternity leave equal pay, women's suffrage, sexual harassment etc. The issues which have instigated women movement have varied in different nations and communities. These issues have ranged from opposition to female genital mutilation in one country to opposition against glass ceiling in another. Feminist movement is an integral part of Western culture and it is comprised of three waves. First wave of feminism took place within 19 th century and 20 th century throughout the world. This movement mainly formed around middle and upper class white women and main aspects were suffrage and political equality. In addition to this the first wave of feminist movement focused on legal issues and aspired to acquire voting rights for women. During first wave, the women's movement for their rights was strongly connected with slavery abolition movement as according to Frederick Douglass it was very significant for both the movements to work together to obtain true equality in regards to race and sex. The first women's rights convention was held in Seneca Falls, New York (now known as the Seneca Falls Convention) from July 19 to July 20, 1848 and advertised itself as "a convention to discuss the social, civil, and religious condition and rights of woman". While there, 68 women and 32 men—100 out of some 300 attendees, signed the Declaration of Sentiments, also known as the Declaration of Rights and Sentiments. Second wave of feminist movement occurred during early 1960s in the United States and gradually it expanded throughout the Western world and beyond. The second wave lasted for nearly 10years until 1980s. During second wave of feminist movement the issues addressed were like sexuality, family, workplace, reproductive rights, de facto inequalities and legal inequalities etc .These phase of movement also focused on domestic violence , marital rape issues , establishment of rape crisis and battered women's shelter and changes in custody and divorce law. During 1960, the Food and Drug Administration approved the combined oral contraceptive pill, which was marketed in 1961. Therefore, it became easier for women to pursue their carrier and women could avoid troubles related to unwanted pregnancy. The third wave of feminism is considered as a combination of diverse strain of feminist activity and study and it began in early 1990s and this wave is still continuing in the contemporary era. The movement arose partially as a response to the perceived failures of and backlash against initiatives and movements created by second-wave feminism during the 1960s, '70s, and '80s, and the perception that women are of "many colors, ethnicities, nationalities, religions, and cultural backgrounds" (Lumen).

NSOU ? PGSW- I 132 In India feminist or women's movement was introduced in mid-19 th century, when many reformers started raising their voice in favor of women's right in the context of education, customs related to women. Feminism in India is a set of movements aimed at defining, establishing and defending equal political, economic and social rights and opportunities for women in India. It is the pursuit of women's rights within the society of India. Women movement in India also focused on equal rights of women: the right to work for equal wages, the right to equal access to health and education and equal political rights. But specifically Indian feminist also had to fight against patriarchal society of India like law of inheritance. Indian women movement also experienced several challenges in a patriarchal society which is quite different from the Western society. Indian women negotiate survival through an array of oppressive patriarchal family structures: age, ordinal status, relationship to men through family of origin, marriage and procreation and patriarchal attributes. During 19 th century majority of women's issue attracted attention of people and reforms were initiated. It can be stated that much of the early reforms in India was carried out by men counterpart. The first phase of feminist movement of India occurred during 1850 to 1915. In this phase Indian reformers mainly men took initiative to uproot some social evil which not only violated women's dignity but also demanded their lives like abolition of Sati pratha, widow remarriage, eradication of child marriage, multiple marriage, reducing illiteracy among women. Besides this some women from upper caste Hindu protested against the constraints imposed on them by Brahmin traditions. However, efforts for improving the status of women in Indian society were somewhat thwarted by the late nineteenth century, as nationalist movements emerged in India. These movements resisted 'colonial interventions in gender relations' particularly in the areas of family relations (Napier, 1851). In the second phase of feminist movement in India, freedom struggle against colonial rule was accelerated. Gandhiji legitimized India's women movement by relating them to non violent civil disobedience movement .Peasant women played an important role in the rural satyagrahas of Borsad and Bardoli. Women-only organisations like All India Women's Conference (AIWC) and the National Federation of Indian Women (NFIW) emerged. Women were grappling with issues relating to the scope of women's political participation, women's franchise, communal awards, and leadership roles in political parties. During 1920, feminism prompted creation of several women association which raised their concern regarding women's education, developed livelihood strategies for working class women etc. Under leadership of Mahatma Gandhi AIWC participated in the freedom movement which made the mass mobilization of women an integral part of Indian nationalism (Kumar, 1998). Post independence feminists began to redefine the extent to which women were allowed to engage in the workforce. Prior to independence, most feminists accepted the sexual

PGSW- I ? NSOU 133 divide within the labour force. However, feminists in the 1970s challenged the inequalities that had been established and fought to reverse them. These inequalities included unequal wages for women, relegation of women to 'unskilled' spheres of work and restricting women as a reserve army for labour. In other words the feminists' aim was to abolish the free service of women who were essentially being used as cheap capital. In contemporary era Indian feminist movement has expanded its scope from fighting for treating women as useful members of society and a right to parity but also possessing the power to decide the course of their personal lives and the right of self-determination (Kumar, 1998).

10.9 Environmental Movement

An environmental movement can be defined as social or political movement for the conservation of environment or for the improvement of the state of the environment. According to Christopher Rootes "The environmental movements are conceived as broad networks of people and organizations engaged in collective action in the pursuit of environmental benefits. Environmental movements are understood to be very diverse and complex, their organizational forms ranging from highly organized and formally institutionalized to the radical informal, the spatial scope of their activities ranging from the local to the almost global, the nature of their concerns ranging from single issue to the full panoply of global environmental concerns. Such an inclusive conception is consistent with the usage of the term amongst environmental activists themselves and enables us to consider the linkages between the several levels and forms of what activists call 'the environmental movement'. In India the traditional practices of worshiping tress , plants ,forests and river manifests the natural and social domains and the ideology of tracing unity in the living and non-living world . The environmental movements in India encompasses different categories of caste, class, race , religion , nations and also diverse categories of the organic and inorganic world. The history of environmental movements in India is very diverse and full of unique incidents of dedication towards nature. In contemporary era the environmental movements in India concentrates on dams , displacement and resettlement and it has implied that the human consequences of tampering with the courses of natural resources has fueled the protest activities against the forces and agencies responsible for environmental degradation .A brief history of environmental movements are mentioned below:

Bishnoi Movement: Bishnoi is a religious sect found in the western Thar Desert and northern states of India. It was founded by Guru Maharaj Jambaji in 1485 AD in the Marwar (Jodhpur) desert region of western Rajasthan, India. It is non-violent community of nature worshippers. This movement was started by sage Sombaji around 1700 AD against deforestation. After that Amrita Devi forwarded the movement. The 363 people

NSOU ? PGSW- I 134 from the Bishnoi community were killed in the protest. When the king of this region came to know the protest and killing then he rushed to the village and apologized and declared the region as protected area. It is noteworthy that this legislation is still exists today. Chipko Movement: It was launched from Gopeshwar in Chamoli district, Uttarakhand in 1973. The movement was to prevent illegal cutting of trees in the Himalayan region (Uttarakhand). Sunderlal Bahuguna and Chandi Prasad Bhatt were the leaders of this movement. The most notable characteristics of this movement were the involvement of women. Appiko Movement: In 1983, on the lines of Chipko Movement, Pandurang Hegde launched a movement which is come to known as Appiko Movement in Karnataka. Its main objectives were afforestation as well as development, conservation and proper utilization of forests in the best manner. The meaning of "appiko" is to express one's affection for a tree by embracing it. Silent Valley Movement: It is an area of tropical evergreen forests in Kerala. It is very rich in biodiversity. The environmentalists and the local people strongly objected to the hydel power project being set up here in 1973. Under pressure, the government had to declare it the national reserve forests in 1985. Jungle Bachao Andola: The tribal community of Singhbhum district of Jharkhand (Previously, it was a district of India during the British Raj, part of the Chota Nagpur Division of the Bengal Presidency) agitated against the forest policy of the Government in 1982. The Government wanted to replace the natural soil, forests with the high-priced teak. Many environmentalists refer to this movement as "Greed Game Political Populism". Narmada Bachao Movement: The environmentalists and the local people started protest against the building of Dams on the Narmada river for the production of hydro-electricity since 1985 which was popularly known as Narmada Bachao Aandolan. Medha Patkar has been the leader of this aandolan who got support from the Arundhati Roy, Baba Amte and Aamir Khan. Tehri Dam Conflict: This movement was started by the local people around 1980s and 1990s because the dam project would constructed in the seismic sensitive region and people think that it causes submergence of forest areas along with Tehri town. Despite of protest, the construction of the dam is being carried out with police protection as Sunderlal Bahuguna is sitting on fast unto death. After assurance from the government to review the project, Bahuguna ended his fast but construction goes on though at a slower pace. Other movements : Apart from the movements discussed above, there are other movements which also shares strong environmental theme like Jharkhand Baster Belt Movement, Zahirili Gas Morcha in Bhopal , movement against Harihar Polyfibre Factory in Karnataka PGSW- I ? NSOU 135 , movement against the poisoning of Cheliyar river in Kerala, movement against Vishnuprayag Dam etc . Therefore, a number of grassroot environmental movements have been launched against the developmental activities that have endangered the ecological balance and they have been successful to some extent to bring changes in the public policy which become inclined towards the environment (Ashraf).

10.10 Conclusion This unit clarified the concept about social movement. We understood the need, process and stages of social movement. We also discussed the various social movement in detail in this unit. 10.11 Exercises (i) What is Social Movements? Give examples? (ii) Discuss Dalit Movements and Tribal Movements in India. (iii) What is working class movement? (iv) What is Naxalite Movements. (v) Discuss in detail about Women's Movement and Environmentd Movemnt.

100%

MATCHING BLOCK 159/180

W

Human rights are "commonly understood as inalienable fundamental rights to which a person is inherently entitled simply because she or he is a human being. Human rights are thus conceived as universal (applicable everywhere) and egalitarian (the same for everyone). These rights may exist as natural rights or as legal rights, in

local, regional, national, and international law.

Social Work is the professional activity of helping individuals, groups, or communities enhance or restore their capacity for social functioning and creating societal conditions favourable to this goal.

95%

MATCHING BLOCK 160/180

Social work in its various forms addresses the multiple, complex transactions between people and their environments. Its mission is to enable all people to develop their full potential, enrich their lives, and prevent dysfunction. Professional social work is focused on problem solving and change. 11.3

Human Rights & Social Work The term "human rights" refers to those rights that are considered universal to humanity, regardless of citizenship, residency status, ethnicity, gender, or other considerations. "

92%

MATCHING BLOCK 161/180

W

The social work profession promotes social change, problem solving in human relationships and the empowerment and liberation of people to enhance PGSW- I ? NSOU 139 well-being. Utilising theories of human behaviour and social systems, social work intervenes at the points where people interact with their environments. Principles of human rights and social justice are fundamental to social work". (

International Federation of Social workers, IFSW: 1982) "Social Workers respect the basic human rights of individuals and groups as expressed in the united nations universal declaration of human rights and other international conventions derived from that declaration" (IFSW:2000). Social workers should promote conditions that encourage respect for cultural and social diversity within the globe. Social workers should promote policies and practices that demonstrate respect for difference, support and expansion of cultural knowledge and resources, advocate for programmes and institutions that demonstrate cultural competence and promote policies that safeguard the rights and confirm equity and social justice for all people. (NASW, 1996: Page- 27) Social work practice based on human rights is no panacea for discrimination, inequality, poverty and other social problems, knowledge of human rights can help the profession better understand its role as a helping profession. The social work profession concerns itself with helping people. Human rights cover an entire range of political, economic and cultural needs required to form a human society. Based on established concepts and definitions of human rights, Social workers can readily identify a connection between human rights and their profession. Social work has to be conscious of its values and possess a solid knowledge base, least in the field of human rights, to guide it in many conflicting situations throughout its practice. While social workers through their actions may well reinforce the rights of clients, faulty judgment can lead them to jeopardize those rights. Viewing its work from a global human rights perspective helps the profession by providing a sense of unity and solidarity without losing sight of the local perspectives, conditions and needs which constitutes the framework within which social workers operate. Social Work works to meet the basic human needs of people. But nowadays it works for transform "Needs" in the "Rights" by practicing various consideration of human rights practice on organization principle. Working within different political systems social workers upholds and defend the rights of their individuals or collective clients while attempting to meet their needs. They do this while often employed by established, sanctioned by authority; and their position as agents of the state or employees of powerful institutions or agencies, has placed many in a precarious role. The situations where social workers face some of the most complex ethical dilemmas are where, for example, an intervention has to be considered that might result in a NSOU ? PGSW- I 140 person being detained in a mental health hospital for the safety of themselves or others, advice to a Court about whether society may need protection from an offender, or where a child and parent should live apart to prevent harm. An ethical dilemma is a predicament where a person must decide between two viable solutions that seem to have similar ethical value. An ethical dilemma can occur when a social worker has to take a moral course of action depending upon two different moral philosophies that conflict with each other. Human Rights are inseparable from Social work theory, values and ethics, and practice. Rights corresponding to human needs which have to upheld and fostered and they embody the justification and motivation for social work action. Advocacy of such rights must therefore be an integral part of social work, even if in countries living under authoritarian regimes such advocacy can have serious consequences for social work professionals. The social work profession shares a close relationship with human rights, because it adheres to values such as respect, dignity, and self-determination - values that are strongly embedded in the code of ethics for all practitioners. The client-social worker relationship has long been celebrated. The profession is highly regarded for challenging the inhumane treatment of vulnerable people, its commitment to challenge anti-oppressive practice, and most importantly, ensuring that vulnerable people are given a voice. Human rights are particularly important for social workers when making decisions that concern the future care needs of individuals. The most recent global definition of social work identifies human rights as one of the guiding values for social work, next to social justice, respect for diversities and collective responsibilities (IFSW, 2014; Ornellas et al., 2018). Since the emergence of the first public declaration of the International Federation of Social Work in 1988, human rights were recognised as an important value framework for social work. The framework stressed that social work was - and always will be - a human rights profession. In the meanwhile, this declaration led to a renewed and vital body of scholarship on the role of human rights for social work (Ife, 2001; Reischert, 2007; Wronka, 2008). McPherson et al. (2017), for example, made a plea for a human rights perspective in social work that helps shape understandings of who is disadvantaged and who is not, but also enables the social work community to identify macro-forces at work as well as the need for intervention on the macro-level. In that vein, Ife (2001) distinguishes between a top-down and a bottom-up approach to human rights in social work, referring to the discursive nature of human rights. This means that human rights are not fixed or static, and therefore they cannot only be fully defined but should also be seen as levers for marginalised groups to struggle

PGSW- I ? NSOU 141 for social justice (Lister, 2007). Human rights might thus have two interpretations in social work (Dean, 2015; Vandekinderen et al., 2019). In that sense, Ife (2001, p. 152) argues that social workers can position themselves as active participants in this discursive process in two specific ways, and distinguishes between a deductive and inductive approach to human rights which both require a democratic, participative process in which all stakeholders can have a role. On the one hand, the deductive approach starts from the formal rights of citizens who have a formal status as citizens in the nation state (Lister, 2007) and then asks: 'what does this mean for practice?' Also other authors address this function of formal rights, with reference to how equality of access to formal rights can guarantee that vulnerable groups are eligible for claiming and using their rights, case by case (Weiss-Gal & Gal, 2009). As such, many social workers are engaged in ensuring these rights on a daily basis. In that vein, Dean (2015) refers to the articulation of 'thin needs' through rights, related to what is required for human beings' bare survival, which 'may in part be met through the protections offered by formal or procedural rights, which guarantee equality of access and opportunity' (Dean, 2015, p. 21). A sole focus on this legally guaranteed function of rights is nonetheless not enough, as it entails the risk that rights are seen as a purely individual matter. As McPherson et al. (2017) argue, a human rights lens however goes beyond a legalistic understanding of human rights and engages with a socio-political interpretation of human rights, addressing the question: how can social work shape society in such a way that human rights and social justice are substantively realised? The inductive approach, on the other hand, thus starts from the realities and complexities emerging in everyday social work practice situations of citizens who experience a kind of second-class citizenship and then asks: what are the human rights issues at stake and how can they be realised? (Warming & Fahnoe, 2017). In this vein, Dean (2015, p. 21) argues that we should make sure that 'thick needs' are met through substantive rights, which ensures universal protection related to 'what is required for true fulfilment' of the right to human flourishing. A thicker understanding of human needs and rights embraces the social, political, historical and cultural context that sustains our human dignity and flourishing and is embedded in a citizenship discourse in which the aim of social policy and the welfare state is to promote and guarantee social justice and social equality (Dean, 2015). The socio-political function of human rights implies that social work reaches beyond the (re)mediating strategies in individual situations, but takes up a public mandate to reformulate personal troubles into public issues (Lorenz, 2008, 2016). For social workers, this encompasses attempts to intervene in the structural aspects of the living conditions of citizens and to provide and mobilise the available social resources in order to enable everyone to realise the right to NSOU ? PGSW- I 142 human flourishing (Dean, 2015; Lorenz, 2016). This public role and mandate of social work can be filled in differently, such as advocating for policy change but also developing innovative social work practices that raise the voice of excluded groups or that disturb the current social order. In other words, this political role of social work can't be limited to various types of policy practice and advocacy strategies at the macro level, but is also shaped in social work practice that investigates the vital significance of social work practice development in the realm of the 'lived citizenship' of people who are living on the edge of society (Warming & Fahnoe, 2017). The crisis of the welfare state and the current historical and social context in which social work is active raises questions about the stance of social work research towards the core values of human rights and social justice (Mullaly, 2007). As reflected in the global definition of social work, rather than being neutral, technical and value-free, social work research intrinsically has a normative value orientation, being in search of human rights and social justice (Shaw, Gredig & Sommerfeld 2012; Roose et al., 2016). However, to this day social work has always had an 'uneasy relationship' with research (Lorenz, 2008) and different understandings of the nature and purpose of social work research have evolved, reflecting diverse conceptions of the nature and purposes of social work itself (Shaw, Gredig & Sommerfeld, 2012; Parton & Kirk, 2010; Powell & Ramos, 2010). As we are crucially interested in how the European social work research community deals with this search for a disciplinary identity, we will mainly focus on the question whether – and how - social work researchers take a stance and have a constitutive commitment to pursue human rights and social justice. Human-rights-based approaches to social work are sometimes contrasted with needs-based approaches (Mapp, McPherson, Androff, & Gatenio Gabel, 2019). Needs-based approaches are associated with an individualistic, case-based orientation based on clinical or deficit models of practice. Needs-based approaches tend to characterise social workers as experts who intervene to promote the wellbeing of people in need. Rights-based approaches, on the other hand, emphasise the common humanity of social workers and service users. Rights-based approaches promote the dignity and worth of all people and encourage bottom-up practice that empowers individuals, families and collectives (Ife, 2012). Strength-based perspectives and partnership working is encouraged. From this point of view, people who use social work services are considered. Some social work roles might seem more directly related to human rights work than others. So, any social worker whose main activity concerns advocacy is almost certainly working in the domain of human rights. However, if we read the 29 articles of the Universal Declaration of Human Rights (and these should be on wall of the office of every social worker in PGSW- I ? NSOU 143 the country), it is hard to imagine any social work role that is not connected to the promotion and protection of human rights: the right to an education; the right to life, liberty and security; the right not to be subjected to torture or to cruel, inhuman or degrading treatment or punishment; full equality to a fair and public hearing by an independent and impartial tribunal; the right to work;

100%

MATCHING BLOCK 163/180

W

the right to a standard of living adequate for health and well-being, including food, clothing, housing

and medical care and many more. The intentions of those who drafted the Universal Declaration of Human Rights were to establish a benchmark for rights that were held to be universal —they belong to all of us, to everybody in the world; inalienable — they cannot be taken away from us; and indivisible and interdependent — that is, governments should not be able to pick and choose which are respected. Sadly, governments throughout the world routinely ignore and breach the human rights of their people that is why we need agreed statements of universal human rights, and human rights defenders—including social workers —who will take resolute action to promote and protect them. Human rights are as old as human civilization; but their use and relevance have been well defined during the recent years. It has gathered more importance in the post-second-world war period, particularly after the United Nation’s Declaration of Human Rights (UNDHR) in 1948. In a broader sense, the human rights are “those rights to which every man and woman inhabiting any part of the world should be deemed entitled by virtue of having been born a human being” (Kashyap). In other words, human rights are those rights which are essential for a dignified and a decent human living as well as human existence and adequate development of human personality. Human rights are held by all human beings and human rights exist as long as human beings exist. Both are inalienable and cannot be separated. Precisely, human rights imply availability of “Such conditions which are essential for the fullest development and realization of the innate characteristics which nature has bestowed him/her with, as a human being”. They are essential to ensure the dignity of every person as a human being’. Man is gregarious and he loves staying together. Every human being, as a social being, lives in a group in the society. As an individual, he has a right to life and right to a decent living. As a social being, and an inseparable part of the society/ community, he too has other rights, like: right to freedom of speech, expression, thought, belief and faith and right to move freely. Thus, human rights are essential for the development of the human personality in society, where he lives. The concept of human rights was further strengthened with the emergence of Magna Carta (1215) and Bill of Rights (England) 1689, following the glorious Revolution of 1688. Unlike Thomas Hobbes (1588-1679) and John Locke (1632-1704) talked of partial surrender

NSOU ? PGSW- I 144 of a few natural rights; Rights like right to life, liberty and property were never to be given up as those were inalienable rights. The basic concept of Lockes theory of natural rights was that the citizens have always a legitimate right to overthrow a Government if it failed to protect the citizens’ rights. From the ancient days India has been committed to the ideals and doctrine of human rights. In conformity with the UDHR, the Constitution of India, in Part III, provides for sue types of Fundamental Rights ensuring equality, justice and freedom to all citizens of India. The Part IV captioned “Directive Principles of State Policy” also ensure Socio- economic justice and rights. India’s fight for freedom from the clutches of the British rulers was also viewed as a struggle for human rights. Our six fundamental rights comprise both individual rights and social rights but emphasis has been put on individual’s right ‘to equality of opportunity for all including those belonging to the weaker and disadvantaged section of the ‘Society in the nature of ‘Protective discrimination’. Articles 14, 15, 16, 17, 29, 38, 46, 330, 332, 334 and 335 dealing elaborately with ‘protective discrimination’ ensure ‘an egalitarian social order’. Abolition of Untouchability has been given a constitutional sanctity under Art 17 of the Constitution and its practice in any form has been declared as a public offence. Art 15(4), Art 16(4) and Art 335 deal with reservation of seats for admission into educational institutions and reservation of posts for appointment to different services for the S.Cs and S.Ts as a mechanism to ensure and secure social economic justice. Seats in the Union and States Legislatures have been kept reserved for the S.Cs and STs. In the State of Orissa, 30% of seats have been kept reserved for women in the rural and urban local bodies. At the heart of social work, human rights are a set of interdependent guiding principles having implications for meta-macro (global), macro (whole population), mezzo (at risk), micro (clinical), meta-micro (everyday life), and research interventions to eradicate social malaises and promote well-being. They can be best understood vis-à-vis the UN Human Rights Triptych. This consists of the Universal Declaration of Human Rights, increasingly referred to as customary international law on the center panel; the guiding principles, declarations, and conventions following it, on the right panel—like the conventions on the Rights of the Child (CRC), Elimination of Racial Discrimination (CERD), and Elimination of Discrimination Against Women (CEDAW); and implementation mechanisms, on the left panel—like the filing of country reports on compliance to conventions, the Universal Periodic Review, thematic and country reports by special rapporteurs, and world conferences. Briefly, this powerful idea, which emerged from the ashes of World War II, emphasizes five crucial notions: human dignity; non-discrimination; civil and political rights;

PGSW- I ? NSOU 145 economic, social, and cultural rights; and solidarity rights. Whereas this article emphasizes issues pertaining to the United States, it touches upon other countries as appropriate, calling for a global vision in the hopes that every person, everywhere, will have their human rights realized. Only chosen values endure. The challenge, through open discussion and debate, is the creation of a human rights culture, which is a lived awareness of these principles in one’s mind, heart, and body, integrated dragged into our everyday lives. 11.4 Conclusion Learners got a detailed understanding about Humsan Rights and would now be able to relate the concept of Human Rights with Social Work and in the long run would learn to work by adopting a right based approach. 11.5 Exercises (i) What is Human Rights? Discuss its importance. (ii) Relation between Human Rights & Social Work. (iii) Discuss about the Universal Declaration of Human Rights. 11.6 References 1. Beddoe, L. (2019, August 17). As per other authors the term

75%**MATCHING BLOCK 165/180****W**

civil society is used in the sense of 1) the aggregate of non-governmental organizations and institutions that manifest PGSW- I ? NSOU 147 interests and will of citizens or 2) individuals and organizations in a society which are independent of the government (What is Civil Society, 2009). Sometimes the word civil society is also used in more general sense of "the elements such as freedom of speech, an independent judiciary, etc, that makes up a democratic society" (Collins English Dictionary).

The term civil society has been derived from Aristotle's phrase 'Koinonia Politike' from his book 'Politics' where he referred civil society as 'political community', which is synonymous to Greek 'city state' and was characterized "by a shared set of norms and ethos, in which free citizens on an equal footing lived under the rule of law (Jean L. Cohen, 1994) . The concept of civil society also

87%**MATCHING BLOCK 180/180****W**

was used by many Roman writers like Cicero, where it reflected the ancient notion of a republic (Blumenfeld, 2004). "It re-entered into Western political discourse following one of the late medieval translations of Aristotle's Politics into Latin by Leonardo Bruni who first translated koinōnia politik into societas civilis . With the rise of a distinction between monarchical autonomy and public law, the term then gained currency to denote the corporate estates (Ständestaat) of feudal elite of land-holders as opposed to the powers exercised by the prince" (

Jean L. Cohen, 1994). In post-modern society, the usage of civil society was first located in the writings of Aleksander Smolar in 1978-79 where it denoted the concept of political opposition (Powell, 2007). This specific term became trendy in several political and economic discussions during 1980s. From this time onwards civil society started to share same features with non- state movements that confronted authoritarian command, in different places of Central and Eastern Europe and Latin America. Civil society somehow retains power to manipulate the actions of elected policy makers and businesses. But it can also be stated that features and nature of civil society is continuously evolving with rapid technological developments and changes within society (Jezard, 2018). In contemporary era civil society has become core essence of all philanthropic and civic activity, but still this concept is difficult to define due to its inherent complications and its resistance to be interpreted through a solitary theoretical lens. In brief it can be articulated that this term on one hand progressively recommend how public life should function within and between societies and on other hand it also illustrate social action that takes place within the framework of voluntary associations or intermediary bodies. (Riesman and Glazer, 1950; Van Til, 2000).

NSOU ? PGSW- I 148 12.2. Definition According to the World Bank: "Civil society refers to a wide array of organizations: community groups, non-governmental organizations (NGOs), labour unions, indigenous groups, charitable organizations, faith-based organizations, professional associations, and foundations" (Jezard, 2018). Similarly Civil Society organization can be defined as non-state, not-for-profit, voluntary entities formed by people in the social sphere that are separate from the State and the market. CSOs represent a wide range of interests and ties. They can be community-based organizations as well as non-governmental organizations (NGOs). In the context of the UN Guiding Principles Reporting Framework, CSOs do not include business or for-profit associations. 12.2.3 History If we analyze the evolution of the concept of the civil society throughout the history, it can be observed that its meaning has changed twice with time from its original classic form. The first change occurred during French Revolution and during fall of communism in Europe its meaning had been changed for second time. Western Antiquity: In the pre-modern classical republican understanding of civil society, the essence of philosophy found in the Age of Enlightenment during 18 th century can be detected. '

to legitimize its democratic credentials. This led to the creation by the UN of a high level panel on civil society. In this era, with emergence of non-governmental organization and the new social movements on a large scale , civil society also has come out as a third sector which is now become a strategic action to build up an alternative social and world order. 12.2.4

Systems of civil society All the societies including civil societies are based on organized systems of collective human experience, including economic exchange, political governance, and social relationships. With addition to this system of economic exchanges also contributes in constructing civil societies which depends on sustainable availability and equitable use of natural and social resources required for satisfying life by present and future generations. The formation of civil society usually partners with an identifiable system of political

NSOU ? PGSW- I 150 governance, characterized by open, public decision-making for all community members through governmental structures that (1) permit legitimate access to and use of civic space and resources, and (2) maintain fairness within the existing political and judicial systems by promoting and protecting the welfare of the people, with particular concern for the disenfranchised. Social relationships within a civil society are characterized by strong, active, vibrant, diverse community-based groups and networks that (1) facilitate open, voluntary participation; (2) enable community stakeholders to hold economic and political actors accountable for outcomes of policy decisions; (3) provide a context for mutual benefit and exchange; and (4) seek to promote the "common good," with a particular concern for inclusion of those currently marginalized. 12.2.5 Principles of Civil Society The literature suggests that the three principles–participatory engagement, constitutional authority and moral responsibility–are found in all civil societies regardless of cultural context. Participatory engagement indicates that members of the society (1) enjoy access to and governance of resources used for the common good, (2) are free to be involved in civic action and social change, and (3) are free to participate in group affiliations that provide a sense of belonging on a community level. Constitutional authority protects the rights and privileges of citizens in a civil society. Under the rule of law, citizens and social groups are constitutionally legitimized and empowered to hold economic and political actors accountable for their work as community servants and trustees. Local and national decision-makers, motivated by the common good rather than self-interest are expected to design and implement public policies that strengthen the vitality and welfare of the community. Within this social context, all community members have moral responsibility to use their civil liberties in ways that do not violate the human rights of others. The practice of equity, justice, and reciprocity produces social order and stability. 12.2.6 Characteristics of Civil Society These three systems and three principles combine to articulate nine measurable characteristics of civil society. ? The Common Civil society is advanced when citizens share a social right of access to the commonwealth of resources produced, used, and exchanged through natural and

PGSW- I ? NSOU 151 social economies in a community and through a society. Access, in this context, includes the abilities both to contribute to the resources and to benefit from them. Broad, community-based civic engagement in economic activities occurs in the arena of what is historically called "the Commons," as in the Greek agora and the English market. As citizens participate in the open exchange of commonwealth resources, they can form and strengthen social connections and networks with others. ? Office Civil society is advanced when citizens can exercise their civic duty of self-governance by participating in political structures that exhibit decentralized power and authority. Community-based civic engagement in political governance exists when community members have the opportunity to hold positions or "offices" of public decision-making and leadership. ? Associations Civil society is advanced when citizens can openly and voluntarily participate in diverse social affiliations, groups, networks, and structures for self-governance and social transformation. "Association" refers to those social places where people gather and interact with others to exchange ideas, offer support, and receive a sense of belonging. Community-based civic engagement in systems of social exchange exists when diverse social groups and gatherings are present and permeable. ? Trusteeship Civil society is advanced when citizens hold decision-making power, work to strengthen and improve local and regional economies, and exercise sustainable and socially transparent stewardship of societal resources (e.g., human, social, material, and ecological) on behalf of the "common good." Community-based activities of civic responsibility in systems of economic development exist when citizens enjoy the legitimate authority of resource trusteeship. ? Sovereignty Civil society is advanced when citizens have the right to be involved in all aspects of political governance and the authority to make decisions and perform actions affecting all levels of public life, without the institutions of public life being "captured" by the interests of specific groups or individuals. The presence and legitimacy of community-based civic authority through systems of political governance increase the ability of citizens to exercise sovereignty over policies and programs that can positively affect their lives and the quality of life in their community.

NSOU ? PGWS- I 152 ? Accountability Civil society is advanced when citizens, acting through community-based groups and associations are able to use basic civic freedoms and rights (e.g., fair elections, free speech, a free press providing access to information, freedom to organize in groups) to hold economic and political actors responsible for the outcomes of policies, programs and patterns of resource distribution, and the exercise of political power. ? Equity Civil society is advanced when each citizen is given equitable access to and use of resources required for constructing a satisfying life. A moral condition of equity forms the foundation of activities that expand and strengthen economic conditions for all community members. Economic equity of resources is necessary for producing and sustaining an improved quality of life for all people, especially the poor. ? Justice Civil society is advanced when citizens pursue social justice by (1) consistently and compassionately using the "rule of law" in fulfillment of their civic obligations, and (2) advocating for those excluded from the political process and harmed by unjust laws. ? Reciprocity Civil society is advanced when citizens (1) pursue social transformation through reciprocal, mutually dependent collaboration with others, and (2) negotiate, mediate, and resolve conflict through peaceful, nonviolent means. The nature of civic environments requires that social relationships in communities be limited and conditional. Not everyone in a society is invariably viewed as a legitimate member and given equal access to its resources. The term reciprocity highlights two interrelated moral issues of social relationships: how people to treat one another, especially when conflict exists and how group boundaries are defined and transcended (Timothy J. Peterson, 2004).

12.2.7 Role and Importance of civil society Civil society is widely referred to as a space which excludes family market and space and in contemporary era it includes a broad spectrum of organized and organic group which includes nongovernmental organizations (NGOs) trade unions social movements and grassroots organizations, online networks and communities and faith groups. Civil society organizations (CSOs), groups and networks vary by size, structure and platform ranging from international non-governmental organizations (e.g. Oxfam) PGWS- I ? NSOU 153 and mass social movements (e.g. the Arab Spring) to small, local organizations (e.g. Coalition of Jakarta Residents Opposing Water Privatization) (Cooper, 2018). Civil society organizations bear the responsibility of advocating the people's right and wish of the people including but not limited to health, environment and economic right. On one hand they put important checks on the system of democracy and also create a balance within the system. Civil societies can persuade country's ruling government and can make them accountable for their actions. Therefore, it can be articulated that free and active civil societies reflects a healthy participatory democratic system. Civil society organizations also have accelerated positive social change throughout the world. Civil Society Organizations intend to serve the humanity through following roles, like ? Service provider (for example, running primary schools and providing basic community health care services) ? Advocate/Campaigner (for example, lobbying governments or business on issues including indigenous rights or the environment) ? Watchdog (for example, monitoring government compliance with human rights treaties) ? Building active citizenship (for example, motivating civic engagement at the local level and engagement with local, regional and national governance) ? Participating in global governance processes (for example, civil society organizations serve on the advisory board of the World Bank's Climate Investment Funds) (Cooper, 2018). Civil societies are mainly those organizations which are not associated with government like schools and universities, advocacy groups, professional associations, churches and cultural institutions. Civil societies have plethora of roles. On one hand they are significant resource who can provide important information to both government and citizens. These civil societies also set up a monitoring system for government policies and actions and can ask for explanation from the government. They are also involved in advocacy process and may recommend alternative strategies for government, private sector and other institutions. Civil societies also aspire to provide services towards disadvantaged group of societies. They also protect the citizen from violation of their basic rights and design activities to change and espouse unprejudiced social norms and behavior (Ingram, 2020).

NSOU ? PGSW- I 154 12.3 Role of Non-governmental Organization in developmental sector 12.3.1 Definition A non-governmental organization (NGO) is a legally constituted organization created by natural or legal persons that operates independently from any government and a term usually used by governments to refer to entities that have no government status. In some cases where NGOs are funded by government totally or partially can retain its status as non-governmental organization by not placing any government representatives in the board of the organization. NGOs share wider social aim that may contain political aspect, but they are not explicitly political organization. NGOs are defined by the World Bank as "private organizations that pursue activities to relieve suffering, promote the interests of the poor, protect the environment, provide basic social services or undertake community development". The term NGO stands for non-governmental organization and it includes a variety of organizations such as "private voluntary organizations," "civil society organizations," and "nonprofit organization" (McGann & Johnstone, 2006). The term NGO describes a range of groups and organizations from watchdog activist groups and aid agencies to development and policy organizations. Usually, NGOs are defined as organizations that pursue a public interest agenda, rather than commercial interests (Hall-Jones, 2006). It is believed that the first international NGO was probably the Anti-Slavery Society, formed in 1839. However, the term NGO originated at the end of World War II when the United Nations sought to distinguish between private organizations and intergovernmental specialized agencies (Hall-Jones, 2006). NGOs are a complex mixture comprised of alliances and rivalries; businesses and charities; conservatives and radicals. The funding comes from various sources and though NGOs are usually nonprofit organizations, there are some that operate for profit (Hall-Jones, 2006). NGOs originate from all over the world and have access to different levels of resources. Some organizations focus on a single policy objective of AIDS while others will aim at larger policy goals of poverty eradication (Hall-Jones, 2006).

PGSW- I ? NSOU 155 During 20 th century globalization takes place which enhance the importance of NGOs as it has become impossible to solve every problems within a nation. In this period several organizations centered their activities towards safeguarding the interest of capitalist enterprises. Now to counterbalance this trend, NGOs emerged to highlight humanitarian issues, developmental aid and sustainable development (Davies, 2014). 12.3.2 Types of NGO 12.3.2.1 NGOs can be classified by orientation and level of co-operation. NGO type by orientation: ? Charitable orientation; ? Service orientation; ? Participatory orientation; ? Empowering orientation; NGO type by level of co-operation ? Community Based Organization; ? City Wide Organization; ? National NGOs; ? International NGOs; Apart from "NGO", often alternative terms are used as for example: independent sector, volunteer sector, civil society, grassroots organizations, transnational social movement organizations, private voluntary organizations, self-help organizations and non-state actors (NSA's). Non-governmental organizations are a heterogeneous group. A long list of acronyms has developed around the term "NGO". These include: ? BINGO: short for business-friendly international NGO or big international NGO ? CSO: Civil Society Organization ? DONGO: Donor Organized NGO ? ENGO: environmental NGO, such as Greenpeace and WWF

NSOU ? PGSW- I 156 ? GONGOs are government-operated NGOs, which may have been set up by governments to look like NGOs in order to qualify for outside aid or promote the interests of the government in question. ? INGO stands for international NGO; Oxfam is an international NGO ? QUANGOs are quasi-autonomous non-governmental organizations, such as the International Organization for Standardization (ISO). ? TANGO: stands for technical assistance NGO ? TNGO: stands for transnational NGO ? GSO: Grassroots Support Organization ? MANGO: stands for Market Advocacy NGO There are also other classifications of NGO. According to World Bank there are two types of NGOs –Operational and Advocacy. The basic difference lies in their purpose. The main purpose of an operational NGO is to design and implement development related project. On the other hand the primary purpose of an advocacy NGO is to defend or promote a specific cause. 12.3.2.2 Role of NGOs in developmental Sector: There are four important roles of NGOs and they are as follows: a) Social Development : The most important role that a Non Governmental Organization play is to enhance the process of social development globally which eventually has helped to facilitate the process of human development as measured by the UN Human Development Index (HDI). The most significant positive feature of NGOs is their capacity to maintain institutional independence and their stand towards political neutrality. But in some cases NGOs may need to collaborate with Governmental agencies to provide required services to the deprived section of the society. If a Governmental agency claims political allegiance, then NGOs may face the dilemma of either infringing their neutral position or depriving the poor population from required services. Due to this reason sometime NGOs have to withdraw their project from politically troubled countries. NGOs have justified this role by introducing some important features like "flexibility, ability to innovate, and grassroots orientation, humanitarian versus commercial goal orientation, non-profit status, dedication and commitment, and recruitment philosophy". But there are also some disadvantages of NGOs which can adversely affect this specific role of NGOs. These disadvantages are like

PGSW- I ? NSOU 157 “over-zealousness, restricted local participation, inadequate feasibility studies, conflicts or misunderstandings with host partner, inflexibility in recruitment and procedures, turf wars, inadequately trained personnel, lack of funding to complete projects, lack of transparency, inability to replicate results, and cultural insensitivity”. b) Sustainable Community Development: NGOs have proved his leadership qualities in promoting community level development. The NGOs are driven by such ideology and values, so that they can spread their activities among the distressed sections of the society in order to accomplish their requirements. Due to some specific feature of the NGOs they can easily mobilize mass for spreading awareness about different social issues. They have pioneered in empowering these sections so that they can control certain factors to bring back their lives into mainstream. NGOs also bear the responsibility to strengthen local organizations at grassroots level. NGOs are also expert in implementing project at a very lower cost than government agencies and most significantly can facilitate sustainable community development. Sustainable community development has five salient features and they are as follows: ? Increasing local economic diversity ? Self reliance: development of local markets, local production, local processing, greater co-operation among local economic entities. ? Reduction in the use of energy combined with recycling and management of waste products. ? Protection and enhancement of biological diversity and stewardship of natural resources. ? Commitment of sustainable communities to social justice. (Bridger & Luloff, 1999) As NGOs engage professional social workers to reduce human suffering, they play a vital role in supporting women, men, households and community. The roles for such NGOs include “counseling and support service, awareness raising and advocacy, legal aid and microfinance” (Desai, 2005). These NGOs have aspired to accelerate sustainable community development through activities like capacity building and building self-reliance. In this process NGOs also involve themselves in funding projects, contributing to awareness and promoting self-organization of various group (Baccaro, 2001). It can be articulated that NGOs play an important role in promoting sustainable community development through three basic function: 1) service delivery (relief, NSOU ? PGSW- I 158 welfare) (2) education and (3) public policy advocacy (Stromquist, 2002). NGOs can accelerate sustainable community development through microfinance, capacity building and self reliance of the community. NGOs promote local products and local market, expand social capital and human resources, encourage people to participate in several activities designed for them and try to bridge the gap between community and system as network liaisons. In this manner, the long-run goal of sustainable community development would be achieved (Nikkhah & Redzuan, 2010). c) Sustainable Development: NGOs not only promote sustainable development at local community level, but also at international level. In contemporary era besides focusing on government activities, NGOs have expanded their scope of activities and they have started focusing on larger corporations. NGOs are involved in assessing social and environmental impacts of business activity, supported by advances in information and communication technology .Several multinational corporations have also become accountable to keep proper record of corporation’s labor, environmental and human rights record. As an obvious consequence now a days, many corporations are taking care of the impact of their business activity on customers, employees, communities and other interested group. These initiatives are manifested through several activities like highlighting social and environmental affairs , becoming accountable for their action and documenting about the impact of their activities and most importantly drafting management structure that incorporate sustainable development concerns (Hall-Jones, 2006). NGOs play an important role in creating these trends. Some NGOs monitor, publicize and critically analyze the failure of the companies to assess the impacts of their activity on the community. NGOs are willing to assign some of their resources towards corporate social responsibility (CSR). d) Sustainable consumption: Another important role of NGOs is manifested through its partnership with industries in promoting sustainable consumptions. Some of the instances where this partnership has been successful are in categories such as product development, sustainable housing, labeling, World Wildlife Fund (WWF), green purchasing, marine stewardship and so on. In different project, it has been manifested that NGOs are engaging business to promote sustainable consumption through different interesting approaches like: ? Using Strategic Means to Point Out Problems ? Assessing Environmental Impacts of Products ? Greening the Supply of Products and Services ? Focusing on Market Forces ? Forming Extensive Networks of Different Stakeholders.

PGSW- I ? NSOU 159 12.4 Conclusion There are numbers of NGOs worldwide and these organizations have played a significant role in social development, sustainable community development, and promoting sustainable consumption. Business corporations that wish to take care of the interest of their stakeholders can benefit from a productive relationship with NGOs. 12.5 Exercises (i) What is Civil Society? Role of Civil Society in development sectors. (ii) Discuss role of importance of NGO in development sectors. (iii) Characteristics of Civil Society. (iv) Define NGO. Discuss various types of NGOs. 12.6 References Blumenfeld, B. (2004).

consent. Principle of Self-Determination: The principle emphasizes client's right to self determination. Every individual client has the right to decide what is appropriate for him and decides the ways and strategies to accomplish it. In other words, social worker should not enforce decisions or solutions on the clients because the client has come to him for help. Therefore, social worker should support and guide the client to develop insight into his social situations in correct perspective and encourage and involve him to like decisions that are good and acceptable to him. Principle of Non-Judgmental Attitude: Principle of non-judgmental attitude presumes that the social worker should begin the professional relationship without any bias. He should not form opinion about the client, good or bad, worthy or unworthy. He has to treat the client as somebody who has come to him for help and he should be willing to help the client without being influenced by the opinions of other about the client or his situation. This enables the worker and the client feel free to develop understanding of each other. Principle of Controlled Emotional Involvement: This principle guides social work professional not to indulge too much personally in the client's difficult situation or being too objective. Therefore, the social worker should maintain a reasonable emotional distance even while sympathizing with the client social worker should indicate the understanding of the difficult situations of the client without showing pity or appearing to be indifference. (

Service ? Empowering individuals, families, and communities is a primary goal of all social workers. Service is the value from which all other social work values stem. Social workers regularly elevate the needs of their communities above their own personal interests and use their skills and knowledge (from education and experience) to enhance the wellbeing of others. In addition, social workers often volunteer their time or expertise above and beyond their professional commitments. ? For example, during the COVID-19 pandemic, many social workers coordinated material aid, community meals, and PPE drives. Social Justice ? Social workers advocate on behalf of the oppressed, the marginalized, and anyone who needs their voice amplified. They often focus on issues such as poverty, homelessness, discrimination, harassment, and other forms of injustice. Social workers provide information, help, and other resources to people seeking equality, and they educate people who may not directly experience discrimination about the struggles of others who may not have the same level of privileges in our society. ? Social workers' efforts to address injustices include examining their own biases and encouraging others to do the same. They work to create more equitable support systems and identify structural conditions that contribute to disparities in the health and well-being of individuals and communities. Dignity and Worth of the Person ? Social workers are mindful of individual differences in thinking and

Service Empowering individuals, families, and communities is a primary goal of all social workers. Service is the value from which all other social work values stem. Social workers regularly elevate the needs of their communities above their own personal interests and use their skills and knowledge (from education and experience) to enhance the wellbeing of others. In addition, social workers often volunteer their time or expertise above and beyond their professional commitments. For example, during the COVID-19 pandemic, many social workers coordinated mutual aid, community meals, and PPE drives. 2. Social Justice Social workers advocate on behalf of the oppressed, the marginalized, and anyone who needs their voice amplified. They often focus on issues such as poverty, homelessness, discrimination, harassment, and other forms of injustice. Social workers provide information, help, and other resources to people seeking equality, and they educate people who may not directly experience discrimination about the struggles of others who may not have the same level of privileges in our society. Social workers' efforts to address injustices includes examining their own biases and encouraging others to do the same. They work to create more equitable support systems and identify structural conditions that contribute to disparities in the health and well-being of individuals and communities. 3. Dignity and Worth of the Person Social workers are mindful of individual differences in thinking and

W <https://socialwork.tulane.edu/blog/social-work-values>

as well as cultural and ethnic diversity. Only by treating each person with dignity and respect can social workers promote their clients' capacity and opportunity to address their own needs and improve their personal situations. Social workers must be cognizant of their duties to both individual clients and to society as a whole, and seek solutions for their clients that also support society's broader interests. ? Social workers seek to eliminate factors that threaten the dignity and worth of individuals, but they do so with a decentred approach that respects differences and honors self-determination. Rather than imposing their own values, social workers leverage the values of their clients and the communities they serve.

Importance of Human Relationships ? Social workers connect people who need assistance with organizations and individuals who can provide the appropriate help. Social workers recognize that facilitating human relationships can be a useful vehicle for creating change, and they excel at engaging potential partners who can create, maintain, and enhance the well-being of families, neighbourhoods, and whole communities. ? Challenging social conditions, such as those created by the COVID-19 pandemic, highlight the essential role of human relationships in supporting health and healing. Social workers not only build and maintain strong relationships with individuals and communities, they also help their clients identify relationships that are helpful to them.

Integrity ? To facilitate these relationships and empower others to improve their lives, social workers must act in a way that engenders trust. Each social worker must be continually aware of the profession's mission, values, and ethical principles and standards, and set a good example of these components for their clients. By behaving honestly and demonstrating personal integrity, social workers can promote the organizations with which they are affiliated while also creating the most value for the populations they serve. ? One relevant trend in social work is the profession's use of and interest in social media. A study published by Social Sciences & Humanities Open in 2020 reports that the social work profession seeks to "regard data privacy NSOU ? PGSW- I 26 protection as a human and civil rights issue" and "support inclusion of social media information in social work."

Competence ? Professional social workers often hold undergraduate or graduate degrees in social work, but a fair amount of their knowledge comes from gaining on- the-job experience. As part of the social work values outlined in the NASW Code of Ethics, each social worker must practice within their scope of competence and avoid misrepresenting skills or experience to potential clients. ? Social workers must constantly strive to expand their knowledge base and competence in order to make meaningful contributions to the profession and those they serve. Social work is a lifelong learning commitment, and continuing education can take the form of any activity that expands a social worker' knowledge and skill set, conducting personal study and research, attending webinars and conferences, or pursuing additional licences or degrees. (

as well as cultural and ethnic diversity. Only by treating each person with dignity and respect can social workers promote their clients' capacity and opportunity to address their own needs and improve their personal situations. Social workers must be cognizant of their duties to both individual clients and to society as a whole, and seek solutions for their clients that also support society's broader interests. Social workers seek to eliminate factors that threaten the dignity and worth of individuals, but they do so with a decentered approach that respects differences and honors self-determination. Rather than imposing their own values, social workers leverage the values of their clients and the communities they serve. 4.

Importance of Human Relationships Social workers connect people who need assistance with organizations and individuals who can provide the appropriate help. Social workers recognize that facilitating human relationships can be a useful vehicle for creating change, and they excel at engaging potential partners who can create, maintain, and enhance the well-being of families, neighborhoods, and whole communities. Challenging social conditions, such as those created by the COVID-19 pandemic, highlight the essential role of human relationships in supporting health and healing. Social workers not only build and maintain strong relationships with individuals and communities, they also help their clients identify relationships that are helpful to them and let go of relationships that are not 5.

Integrity To facilitate these relationships and empower others to improve their lives, social workers must act in a way that engenders trust. Each social worker must be continually aware of the profession's mission, values, and ethical principles and standards, set a good example of these components for their clients. By behaving honestly and demonstrating personal integrity, social workers can promote the organizations with which they are affiliated while also creating the most value for the populations they serve. One relevant trend in social work is the profession's use of and interest in social media. A study published by Social Sciences & Humanities Open in 2020 reports that the social work profession seeks to "regard data privacy protection as a human and civil rights issue" and "support inclusion of social media information in social work."

6. Competence Professional social workers often hold undergraduate or graduate degrees in social work, but a fair amount of their knowledge comes from gaining on-the-job experience. As part of the social work values outlined in the NASW Code of Ethics, each social worker must practice within their scope of competence and avoid misrepresenting skills or experience to potential clients. Social workers must constantly strive to expand their knowledge base and competence in order to make meaningful contributions to the profession and those they serve. Change is an ever-present phenomenon. It is the law of nature. Society is not at all a static phenomenon, but it is a dynamic entity. It is an ongoing process. The social structure is subject to incessant changes. Individuals may strive for stability, yet the fact remains that society is an every changing phenomenon; growing, decaying, renewing and accommodating itself to changing conditions. The human composition of societies changes over time, technologies expand, ideologies and values take on new components; institutional functions and structures undergo reshaping. Hence, no society remains complete static. Incessant changeability is very inherent nature of human society. A social structure is a nexus of present relationships. It exists because social beings seek to maintain it. It continues to exist because men demand its continuance. But the existing social structure is influenced by many factors and forces that inevitably cause it to change. Society is thus subject to continuous change. The change of man and society has been the central and quite dominant concern of sociology right from the time when it emerged as branch of learning. The concern for social change is of great importance not only in studying past changes but also in NSOU ? PGSW- I 52 investigating 'future' developments. Change implies all variations in human societies. When changes occur in the modes of living of individuals and social relation gets influenced, such changes are called social changes. Social change refers to the modifications which take place in life pattern of people. It occurs because all societies are in a constant state of disequilibrium. The word 'change' denotes a difference in anything observed over some period of time. Hence, social change would mean observable differences in any social phenomena over any period of time. Social change is the change in society and society is a web of social relationships. Hence, social change is a change in social relationships. Social relationships are social processes, social patterns and social interactions. These include the mutual activities and relations of the various parts of the society. Thus, the term 'social change' is used to describe variations of any aspect of social processes, social patterns, social interaction or social organization. Social change may be defined as changes in the social organization, that is, the structure and functions of the society. Whenever one finds that a large number of persons are engaged in activities that differ from those which their immediate forefathers were engaged in some time before, one finds a social change. Whenever human behaviour is in the process of modification, one finds that social change is occurring. Human society is constituted of human beings. Social change means human change, since men are human beings. Theorists of social change agree that in most concrete sense of the word 'change', every social system is changing all the time. The composition of the population changes through the life cycle and thus the occupation or roles changes; the members of society undergo physiological changes; the continuing interactions among member modify attitudes and expectations; new knowledge is constantly being gained and transmitted.

Change is an ever-present phenomenon. It is the law of nature. Society is not at all a static phenomenon, but it is a dynamic entity. It is an ongoing process. The social structure is subject to incessant changes. Individuals may strive for stability, yet the fact remains that society is an every changing phenomenon; growing, decaying, renewing and accommodating itself to changing conditions. The human composition of societies changes over time, technologies expand, ideologies and values take on new components; institutional functions and structures undergo reshaping. Hence, no society remains complete static. Incessant changeability is very inherent nature of human society. A social structure is a nexus of present relationships. It exists because social beings seek to maintain it. It continues to exist because men demand its continuance. But the existing social structure is influenced by many factors and forces that inevitably cause it to change. Society is thus subject to continuous change. The change of man and society has been the central and quite dominant concern of sociology right from the time when it emerged as branch of learning. The concern for social change is of great importance not only in studying past changes but also in investigating 'future' developments. ADVERTISEMENTS: Meaning of Change: Change implies all variations in human societies. When changes occur in the modes of living of individuals and social relation gets influenced, such changes are called social changes. Social change refers to the modifications which take place in life pattern of people. It occurs because all societies are in a constant state of disequilibrium. The word 'change' denotes a difference in anything observed over some period of time. Hence, social change would mean observable differences in any social phenomena over any period of time. Social change is the change in society and society is a web of social relationships. Hence, social change is a change in social relationships. Social relationships are social processes, social patterns and social interactions. These include the mutual activities and relations of the various parts of the society. Thus, the term 'social change' is used to describe variations of any aspect of social processes, social patterns, social interaction or social organization. Social change may be defined as changes in the social organization, that is, the structure and functions of the society. Whenever one finds that a large number of persons are engaged in activities that differ from those which their immediate forefathers were engaged in some time before, one finds a social change. Whenever human behaviour is in the process of modification, one finds that social change is occurring. Human society is constituted of human beings. Social change means human change, since men are human beings. To change society, as says Davis, is to change man. Theorists of social change agree that in most concrete sense of the word 'change', every social system is changing all the time. The composition of the population changes through the life cycle and thus the occupation or roles changes; the members of society undergo physiological changes; the continuing interactions among member modify attitudes and expectations; new knowledge is constantly being gained and transmitted.

As Kingsley Davis says, "By Social change is meant only such alternations as occur in social organization – that is, the structure and functions of society". According to Maclver and Page, "Social change refers to a process responsive to many types of changes; to changes the man in made condition of life; to changes in the attitudes and beliefs of men, and to the changes that go beyond the human control to the biological and the physical nature of things". Morris Ginsberg defines, "By social change, I understand a change in social structure, e.g., the size of the society, the composition or the balance of its parts or the type of its organization".

By analyzing all the definitions mentioned above, we reach at the conclusion that the two type of changes should be treated as two facts of the same social phenomenon. Two type of changes are e.g. (i) changes in the structure of society, (ii) changes in the values and social norms which bind the people together and help to maintain PGSW- I ? NSOU 53 social order. These two type of changes should not, however, be treated separately because a change in one automatically induces changes in the other.

When change in social structure, social order, social values, certain customs and traditions, socio- cultural norms, code of conduct, way of conducting oneself in the society, standards, attitudes, customs and traditions of the society and related factors take place, it is said that there is social change. When there is social change, the process of socialization also changes accordingly. The individual who is an active member of the society becomes an agent and target of social change. He brings social changes and also is influenced by such changes. 4.7

<p>The urgent need for social and religious reform that began to manifest itself from the early decades of the 19th century India arose in response to the contact with Western culture and education. The weakness and decay of Indian society was evident to educated Indians who started to work systematically for their removal. They were no longer willing to accept the traditions, beliefs and practices of Hindu society simply because they had been observed for centuries. The impact of Western ideas gave birth to new awakening. The change that took place in the Indian social scenario is popularly known as the Renaissance.</p>

<p>The establishment of the Hindu College in 1817 was a major event in the history of Bengal. It played an important role in carrying forward the reformist movement that had already emerged in the province. A radical movement for the reform of Hindu Society, known as the Young Bengal Movement, started in the college. Its leader was Henry Vivian Derozio, a teacher of the Hindu College. Derozio was born in 1809. He was of mixed parentage his father was Portuguese and his mother was Indian. In 1826, at the age of 17, he joined the Hindu College as a teacher and taught there till 1831. Derozio was deeply influenced by the revolutionary ideas of liberty, equality and fraternity. He was a brilliant teacher and within a short period</p>

he drew around him a group of intelligent boys in the college. He inspired his students to think rationally and freely, to question authority, to love liberty, equality and freedom and to worship truth. By organising an association for debates and discussions on literature, philosophy, history and science, he spread radical ideas. The movement started by Derozio was called the Young Bengal Movement and his followers were known as the Derozians. They condemned religious rites and the rituals, and pleaded for eradication of social evils, female education and improvement in the condition of women. Derozio was a poet, teacher, reformer and a fiery journalist. He was perhaps the first nationalist poet of modern India. He was removed from the Hindu College because of his radicalism and died soon after at the age of 22. 9.3.4

Sri Ramakrishna Paramhansa was one of the greatest saints of modern India. Ramakrishna was born in a poor Brahmin family of Bengal. He showed a religious bent of mind from his childhood. He had no formal education but his discourses were full of wisdom. He was the chief priest of the Kali temple at Dakshineswar near Calcutta. People from all walks of life visited Dakshineswar to listen to his discourses. Ramakrishna Paramhansa was a man with a liberal outlook. He firmly believed that there was an underlying unity among all religions and that only the methods of worship were different. God could be approached by any form of worship as long as it was done with single- minded devotion.

service to God, for man was the embodiment of God on earth. As man was the creation of God, man-made divisions made no sense to him. Ramakrishna Paramhansa was a great teacher who could express complicated philosophical ideas in a simple language for everyone to understand. He believed that religious salvation could be attained through renunciation, meditation and devotion.

9.3.6 Swami Vivekananda Narendra Nath Dutta, better known as Swami Vivekananda, was the most illustrious disciple of Sri Ramakrishna. He was born in Calcutta in January, 1863. He graduated from the Scottish Church College and was well-versed in Western philosophy. Vivekananda was a man of great intellect and possessed a critical and analytical mind. At the age of eighteen, Vivekananda met Sri Ramakrishna. This meeting transformed his life completely. After the death of Sri Ramakrishna, he became a 'sanyasi' and devoted his life to preaching and spreading Ramakrishna's message to the people. His religious message was put in a form that would suit the needs of contemporary Indian society. Vivekananda proclaimed the essential oneness of all religions. He condemned the caste-system, religious rituals, ceremonies and superstitions. He had a deep understanding of Hindu philosophy and travelled far and wide to spread its message. At the Parliament of World Religions in Chicago (1893), Vivekananda spoke about Hindu religion at length. His brilliant speech on Hindu philosophy was well received.

In India, Vivekananda's main role was that of a social reformer rather than a religious leader. He propagated Ramakrishna's message of peace and brotherhood and emphasized the need for religious tolerance which would lead to the establishment of peace and harmony in the country. He believed that it was the social responsibility of the better placed people to take care of the downtrodden, or the 'daridra narayan'.

social good and social service. The Ramakrishna Mission stood for religious and social reform based on the ancient culture of India. Emphasis was put on the essential spirit of Hinduism and not on rituals. Rendering social service was the primary aim of the Ramakrishna Mission. It believed that serving a human being was the same as worshipping God. The Mission opened a chain of schools, hospitals, orphanages and libraries throughout the country. It provided relief during famines, earthquakes and epidemics.

The Prarthana Samaj In 1867, the Prarthana Samaj was started in Maharashtra with the aim of reforming Hinduism and preaching the worship of one God. Mahadev Govind Ranade and R.G. Bhandarkar were the two great leaders of the Samaj. The Prarthana Samaj did in Maharashtra what the Brahmo Samaj did in Bengal. It attacked the caste system and the predominance of the Brahmins, campaigned against child marriage and the purdah system, preached widow remarriage and emphasised female education.

Many Europeans were attracted towards Hindu philosophy. In 1875, a Russian spiritualist named Madame Blavatsky and an American called Colonel Olcott founded the Theosophical Society in America. The society was greatly influenced by the Indian doctrine of karma. In 1886 they founded the Theosophical Society at Adyar near Madras. Annie Besant, an Irish woman who came to India in 1893, helped the Theosophist movement to gain strength. She propagated Vedic philosophy and urged Indians to take pride in their culture. The Theosophists stood for the revival of the ancient Indian religion and universal brotherhood. The uniqueness of the movement lay in the fact that it was spearheaded by foreigners who glorified Indian religious and philosophical traditions. Annie Besant was the founder of the Central Hindu College in Banaras, which later developed into the Banaras Hindu University. Annie Besant herself made India her permanent home and played a prominent role in Indian politics. In 1917, she was elected President of the Indian National Congress.

During the first half of the 19th century only a handful of Muslims had accepted English education. The Muhammedan Literary Society, established by Nawab Abdul Latif in 1863, was one of the earliest institutions that attempted to spread modern education. Abdul Latif also tried to remove social abuses and promote Hindu- Muslim unity. 9.4.1

The most important socio-religious movement among the Muslims came to be known as the Aligarh Movement. It was organised by Syed Ahmad Khan(1817-1899), a man described as the most outstanding figure among the Muslims. Syed Ahmad Khan was born in 1817 into a Muslim noble family and had joined the service of the Company as a judicial officer. He realised that the Muslims had to adapt themselves to British rule. So Syed Ahmad advised Muslims to embrace Western education and take up government service. In 1862, he founded the Scientific Society to translate English books on science and other subjects into Urdu. He also started an English- Urdu journal through which he spread the ideas of social reform.

established the Mohammedan Oriental College which later developed into the Aligarh Muslim University. It helped to develop a modern outlook among its students. This intellectual movement is called the Aligarh Movement. As a social reformer, Syed Ahmad Khan campaigned against the purdah system, polygamy and the Muslim system of divorce. He emphasized the need for removing irrational social customs while retaining the essence of Islam and encouraging a rational interpretation of the Koran. Syed Ahmad Khan believed that the interest of the Muslims would be best served through cooperation with the British Government. It was only through the guidance of the British that India could mature into a full-fledged nation. So he opposed the participation of the Muslims in the activities of the Indian National Congress. 9.5

PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper lay-out of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up the University. Needless to add, a great deal of these efforts are still experiment—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

about the problems faced by individuals and families in their day to day life and

NSOU ? PGSW-II 8 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 8 PRINTTECH — 4th PROOF / 22.12.2021 the role of case worker in resolving the problem and finally. How the case work developed as a tool of dealing with individual in coming days. 1.2 Introduction Case Work is a primary method of professional social work. Elements of case work, have been present in every society from time immemorial. There has been a natural way of helping a person who have difficulties. This individualised help often taken the form of doing something for the individual as well as helping him/her by the wholesome influence which one individual can have upon another. This is a fact that psychologists and professional social workers are not the only ones who are able to influence others in a helpful way. Very often a family friend or a relative may have a great helpful influence on the individual, though none of them may be aware of the factors responsible for the same. Much of this influence is intuitive and neither person is aware of this factors at work in the relations help that exists. This method is being practiced by social workers across the globe. This is one of the primary methods that enhances the social functioning in individuals. It is a method which is based on one to one relationship.

A method is well understood to be an orderly way of procedure and therefore it is always carried out towards achievement of a specific aims. Case work is one such method that social workers use to help people of all ages and from various sections of society to enhance their social functioning and to cope more effectively with their problems.

When one talks of case work as a method one implies, that a scientific body of knowledge has developed regarding this particular individualised way of helping people and that this knowledge is transmissible. In other words it is a professional way of helping people with awareness of the factors involved in the help giving process. 1.3 Growth of Case Work in USA The focus of charity throughout the countries has always been that of services, care given by individual to an individual. This specific association of relief given with the idea of charity is of long duration.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 9 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 9 The individualisation of social case problems began almost wholly with individualising persons on relief situation. The work of st. Vencent de Paul in the 16th and 17th centuries and of Ozanam in the 19th century through the art of friendly visiting helped to individualised people at home; directed perhaps more to the control of mendicancy than to study of individuals, social conditions and on behaviour. Edward Denison, Sir Charles Loch, Octavian Hill, to name a few of the ENGLISH leaders, developed to a high point the theory and practice of personal service, personal responsibility, and in depth study of each case. Finally Mary Richmond set up the first rational and systematic approach to the analysis of individual social situations.

comparatively little consciousness or the analysis of factors about social relationship. At the same time it was probably through the efforts of friendly visitors that the concept of scientific charity evolved and

the seeds of social case work were sown. The

93%

MATCHING BLOCK 14/544

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

visitor found the problem of all poor people is not alike and they should not be treated in the same manner. 1.5 Friendly Visitors

Mary Richmond, who was intimately connected with the charity organisation movement, in her book on "Friendly visiting among the poor" published in 1899, made an interesting statement of the relationship of the friendly visitors with the poor family—friendly visiting meant intimate and continuous contact with the poor families knowing their joys and sorrows, opinion and entire outlook about life. Here again one sees the recognition of the principle of relationship as the most fundamental and important factor in treatment in modern case work. The terms friendly visitors was supplement by the terms "Paid Agents". There paid Agents developed to perform

98%

MATCHING BLOCK 15/544

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

their task. They collected data about the needy individuals and families and helped them after assessing their needs. Paid Agents also maintained records including personal data and the type of help given to the

clients. The collective experience of 'Friendly Visitors' affiliated the understanding of human behavior. With the development of schools of social work, friendly visitors received training and instruction about the method of investigation, diagnosis and treatment from experienced social workers. The first training programme for the case work

73%

MATCHING BLOCK 16/544

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

started at this time. Case work at this time was bared more on medical model. For sometime

case work

was only confined to sick persons, a sick person to be treated was the priority. The term "work with case" was used for the first time in national conference in USA. The first professional training programme especially for the case work was started in the form of summer training. The impact of this training programme resulted in the need for more substantial training and School of Social Work attached to the agencies come into existence. When

these schools attained a certain standing in the community, they were recognised as professional schools under the administrative authority of Universities.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 11 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 11 1.6 Socio-Economic Phase in Case Work Within a quarter of a century of the charity organisation movement in America two well defined divergent trends could be identified. First there were people who held that the major efforts of the charity organisation movement should be to correct the external factors in the social organisation responsible for poverty lack of opportunity and individual and family disorganisation, second, there were those who restricted their efforts to the individual client with the aim of effecting a change within the individual which would enable him to utilise to the full of his own potentialities. This latter group developed a more intensive approach to the individual client and gave shape to the specialisation of case work within the larger field of social work in the U.S.A. The social workers were concerned with improvement of social conditions and worked with individuals or families who sought assistance. Manipulation of situations and people was the accepted mode. The social worker individualised the family, studied its needs and gave a plan of treatment which the family was to follow. If a bread winner of the family lost his Job, it was regarded that the best way was to help the individual or his family by finding a job. If children were delinquent, they could be sent to the court, settlement house or church. Everything had its 'cause' and the cause so often lay in the environment. Thus removal of the cause meant changing the environment. Case work service was given in terms of a plan, brought out by the worker after studying the situation, which the client was to take up, even if it was not a plan evolved after discussion with the client. This period is spoken of generally as the sociological phase, because it embodied the conviction of students of society of that day that much of what people were as individuals was determined by the kind of social order in which they lived. 1.7 Mary Richmond's Contribution In Mary Richmond's book named "Social Diagnosis" social workers found for the first time a framework for carrying out case work services. The book emphasized the need for gaining a full knowledge of the individual and the family by an intensive

NSOU ? PGSW-II 12 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 12 PRINTTECH — 4th PROOF / 22.12.2021 inquiry into past history and the present situation. Investigation was to be carried on for the purpose of establishing facts of personality and the situation, upon which a diagnosis was to be made. The end of diagnosis was treatment, which consisted of a plan that took into consideration the entire social setting of two family. The investigation, diagnosis and treatment were to be on a friendly basis. Mary Richmond describe the processes or sequence of steps for making investigation. She set forth a method to replace indiscriminate investigation. There was an effort to arrive at an understanding of the social problem through an orderly and logical procedure. Even though Mary Richmond realised the necessity of studying the personality of the client in arriving at the diagnosis of a social situation, her focus, in diagnosis, was upon factors outside the client. There was less reliance on the participation of the client and more on social evidence from interested people as to what the facts were. Secondly, the client was brought into planning only when the social worker was in possession of all the relevant facts obtainable and decided upon a time of treatment which the client was asked to carry out or was carried out by the social worker on his behalf. To the workers of the prewar period the above summed up the casework philosophy and practice. 1.8 Psychological Phase in Case Work During World War-I the impact of new thinking in the field of psychiatry brought about a marked shift from study and treatment of social factors as the basis of the individuals mal adjustment to the study and treatment of psychological factors. Several decades of sociological and economic emphasis were thus followed by an era when workers became very receptive to the psycho analytic thinking as formulated by Sigmund Freud. Social case work has continued to be influenced by the followers of Freud. The psycho analytic orientation has helped case work to become more scientific in its approach. Charlotte Towle in her article, social case work in "Social work year Book". (USA), 1947 says "Since the capacity for scientific thinking is dependent in large part on recognition of bias and a capacity to control one's relationship to the information revealed and to the individuals concerned, Psycho analytic orientation made a contribution in giving the worker awareness of how identification and projection may defeat objectivity in each phase of case work—

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 13 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 13 investigation, diagnosis and treatment. Further more, psycho analysis, brought deeper insight into human behaviour, among which were an enriched concept of individual differences, heightened appreciation of the family as the unit of society and an understanding of the importance of the emotions in the motivation of human behaviour, together with a content of knowledge in this area. It also contributed new ways of working with people. Notable among these the value of catharsis, and the possibility of developing insight—through the free association implicit in this process. Notable also was the understanding it contributed to the worker-client relationship as a dominant element in the client's response to help. In all these areas, social case work had a body of knowledge which made for relatively rapid incorporation of psychoanalytic content. This integration is not complete nor has it occurred without lags and phases of distorted emphasis. There were periods of over-emphases for example, on the study and treatment of psychological factors to the exclusion of social factors as the basis of the individual's problems all social adjustment". 1.9 Case Work in India In India, development of case work has a variegated history. As stated before, elements of case work did exist in the "One to One" help giving process in this country as had been the case in other countries, long before professional practice of social case work method came into existence. It was in 1936 that the first step in the direction of importing professional training in social work was taken by the establishment of

66%**MATCHING BLOCK 18/544****SA**

480E1230-Social Work with Individuals (Final P ... (D165107502)

Sir Dorabji Tata Graduate School of social work in Bombay, now known as the Tata Institute of Social

Science. Case work was offered as one of the courses and the emphasis was on socio-economic factors being responsible for the causation of a problem. By 1950 i.e. after World War-II when new psychological thinking and in particular, psychoanalysis made much advance in the west and when some of the schools of social work in India, including the Tata Institute of Social Sciences, had on their staff teachers of social case work trained in the USA, Psychoanalytic orientation was gradually brought to this helping method of social case work. However since environmental factors, mainly loomed large in social problem in India, specially after the partition of the country in 1947, great emphasis in the

NSOU ? PGSW-II 14 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 14 PRINTTECH — 4th PROOF / 22.12.2021 practice of case work had to be laid on environmental factors, mainly economic factors. Procreancy was regarded as the main cause of varied problems and therefore, case workers tried to help their dainty by pooling together resources like institutions Orphanages, work centres, employment agencies etc. In order to gain acceptance in this country, where professional social work was of recent origin, case work practiced by trained workers in the beginning had to limit it self to environmental problems mostly as voluntary social work was going ahead first in this area. 1.10 Special Contribution Days and years are going on, however experience gained over a period of time, the case workers have been able to day more attention than before to psychological factors involved in a problematic situation. A certain section of the public also was been able to accepts of the problem on the part of a trained case worker as his special contribution— something which on untrained voluntary worker can not bring. There have been always in every society though in small numbers, people who were interested in helping others. There were individuals who were known to be receptive and responsive to the needs and the general term " Social Worker" is used irrespective of the specific method he or she in using. In India

73%**MATCHING BLOCK 19/544****W**

social service as a helping activity existed in one form or other through the ages.

Gouri Rani Banerjee, one of the pioneers in professional social work and social work education in India, has written lucidly about social welfare in ancient India and the various forms of service that were adopted to help the people in distress (1967). However even before the year 1936, Bombay city had short term training programme in Social work.

Case work figured both as a Theoretical course and as a method of practice in the academic programme from the year 1946. The other methods of social work were incorporated into the curriculum later

than Case work.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 15 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 15 It is being recognised more and more that case work is not limited to bring about a change in the outer conditions of the client (environmental Therapy), but tries to determine the influence of the personal attitude of the client and the changes in that attitude necessary for the solution of the problem. Agencies employing case workers are releasing that many social difficulties have releasing that many social difficulties have their emotional components which in daily practice are often overlooked and seldom effectively treated. Secondly a good interviewing technique and a capacity to diagnose are need to get a picture of the real causes of the difficulties as well as to make a good treatment plan. A worker without any training in case work in hardly aware of the influence of his own attitude on that of the client or of the fear of the client whether hidden behind some aggression or not. Such a worker can take what the client say or does mostly at its face value. Another important factories diagnostic capacity. It is not only necessary to carry on the interview in such a way as to give the client confidence and to let him disclose his real problems but it is important that the social worker be able also to interpret the psychological data disclosed in the interview. If a case worker does not have pychonalytic orientation he will often do a therapy of symptoms with an emphasis on environmental changes. Later he may realise (and then mostly with some resentment) that the client in his new environment has similar problems the consequences may be either that the case will be 'treated' endlessly or that the case be closed because of its being considered hopeless. During the last five decades,

91%

MATCHING BLOCK 23/544

W

social work as a profession and as an academic programme has been enlarged and enriched by new perspectives ideas and theories. Case work will continues to be taught in schools of social work and used as a method of social work in different

organisation. Conscious use of Relationship About the existence and the importance of the relation between the client and the social worker something was known in social work, but in modern case work this relationship is being used much more consciously, because it is exactly aware of emotional factors. It goes without saying that this conscious use will not be possible without deeper insight on the part of the case worker into the psychological processes involved. This insight the practitioner gain by under going class room trainers and supersized field work experience in Psycho analytically oriented case work in a recognized post graduate school of social work.

NSOU ? PGSW-II 16 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 16 PRINTTECH — 4th PROOF / 22.12.2021 Case should, however, be taken that case worker in India do not commit the same mistakes that were committed by the case workers in the west a few years back by over emphasizing the Psychological aspects and over looking the social one— mistakes which they have struggled to ratify to a great extent since. While pulling emphasis upon the client as an individual, case worker should not overlook his as a social being. Insight into individuality and personal characteristics and ability to use direct influence of mend should be inculcated by social workers but at the same time insight into the resources, dangers and influences of environment, which are a essential part of a sociological approach in case work, should also be increased. In short

83%

MATCHING BLOCK 25/544

63%**MATCHING BLOCK 28/544****W**

there is a general tendency towards conformity to group norm on the part of the people. Consequently the traditional case work situation, where the individuals adjustment to his reality is disturbed due to

internal or external strains, will be comparatively few. However case work service will be of value also in helping the individual, whose adjustment to his reality is not disturbed at all, to reach a new level of integration by introduction of

73%**MATCHING BLOCK 35/544****W**

new ideas and new ways of living. Case work should not be confined only to helping the client to adjust to the existing

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 17 PRINTTECH – 4th PROOF / 22.12.2021 NSOU ? PGSW-II 17 reality but also to become an active partner in the process of change for betterment of society. An Indian case worker should not be solely tied to the agency set up, but be instrumental in bringing about a change in the individual as well as in the society. He should play an increasing part in community life and be in contact with conditions that affect groups as well as individuals. Case work should be curative preventive and promotive. In India, development of case work perhaps be described later as an important method of social work processing a composed body of knowledge based on Principles drawn from the Psychology, Psychiatry, Psychoanalysis, sociology, biology and medicine etc. This method can be used to help people, individual by individual, when they experience some breakdown in their capacity to deal with their affairs by themselves (curative aspect) or when they need assistance for conservation of their inner strength to avoid a breakdown and to lead a socially and personally satisfying life (Preventive and promotive aspects). The help may be rendered by pooling together resources in the community and/or by enabling the person in need of help to make maximum use of his capacities, so that he can adjust better to his total or partial environment and/or modify the environment when necessary. In the context of development of case work therapy in India, it may be mentioned that in India people stay close to their family and the community. The case worker therefore, should not fail to work through friends or relatives of the client. It stands to reason that those whom the client accepts as friends or for whom he has respect or whom he regards as a member of his own social group have greater influence on him than the case worker coming in from outside can have. Therefore this resource has to be considered and should not be overlooked. Further, development of the working process with the community, it implies pooling together resources of the community like schools, employment exchanges, hospital, trusts, charities etc. to secure specific did like financial assistance or job or artificial limb, and developing new resources in the community to help the client to meet his unmet need. The case worker also tried to work to their best towards modifying community attitudes to enable the client to adjust better and often has to help the client to become an active partner in the process of change for the progress of the community.

Social Work with Indiv and Groups Block 1.pdf (D164882170)

the seven principles of case work and the practice of social case work in India

and the various fields of practice. 2.2 Introduction Many people have imagined that social case work and social work are co extensive, but they are to understand and look into its objectives. This enormous work can be encompassed into two major objectives i.e. improving physical quality of life that in socio-economic development and satisfying social relationship, social work profession aims at the social betterment of the society there by aspiring for the fulfillment of highest need of self-actualization. Social case work as a method of social work helps the individuals to solve their problem in the society to perform in a better way and to enhance their own capabilities. Social case work is indispensable as a foundation for social planning and social action. At the door of the agency a person with some problem (client) comes to seek help from a social worker to cope with the problem through a process.

86%**MATCHING BLOCK 52/544****W**

The case worker must not be a listener only but also an active agent in helping the client to

NSOU ? PGSW-II 22 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 22 PRINTTECH — 4th PROOF / 22.12.2021 communicate about his/her problem.

94%**MATCHING BLOCK 53/544****W**

Problem solving implies that both the case worker and his/her clients are simultaneously and consciously, though differently, engaged in problem solving from the beginning.

Diagnosis must result in a "design of action".

100%**MATCHING BLOCK 54/544****W**

Probably no process has been as troubling to case workers as diagnosis.

100%**MATCHING BLOCK 55/544****W**

Principles of case work are principles of action, based upon a fundamental which influences, guides and directs. The principles are also referred to as qualities or elements as they are present

as every case work is a part of relationship.
The relationship between

75%

MATCHING BLOCK 56/544

the case worker and the client is of utmost importance. In a case work relationship however, case worker is on the role of a professional helper while client is the person who needs help.

100%

MATCHING BLOCK 57/544

W

In the Indian context, the concept of self fulfillment and self-expression go hand in hand with the concept of conformity to the group norm. In

87%

MATCHING BLOCK 58/544

W

practice of social case work time and again, one see that the needs of the clients are not limited to their material needs only

but mental and emotional needs are there. An active approach can geared to suitable solutions. Case work is now practiced in a variety of agencies or human service organisations. 2.3 Place of Case Work in Social Work Profession The individual is the basic unit of the society. If the individuals are satisfied in their life and efforts are made to minimize the mal adjustments, then it leads to formation of peaceful society. Like any other profession, social work as a profession has developed a body of knowledge, which include methods, tools and terminology of its own. Social work profession aims at the social betterment of the society there by aspiring for the fulfillment of high need of self-actualisation. Esteemed goals of self-realization are embedded in the theory and practice of social work, exemplified by the traditional

social work method, social case work. Social case work as a method of social work

aims at helping individual to solve his/her problem in the society to perform better and to enhance his/her own capabilities. In the sphere of social work, case work as a method demands a dual orientation, firstly, orientation in human Psychology and secondly, orientation in knowing cultural force of the society in which he works. In organising it self to play a professional role in forwarding the above said objectives, social work has identified a set of methods to cater to mass needs, community needs, group needs, and individual needs. It is these individual needs that AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 23 PRINTTECH – 4th PROOF / 22.12.2021 NSOU ? PGSW-II 23 are being addressed by case work method. It becomes possible to arrive at a definition to social case work without confusing it with the total process of social work. Some of the criticism leveled at the case work in the past has been because the part was mistaken for the whole case work is indispensable as a foundation for social planning and social action. Case work is recognizable, according to Richmond, by its aim of social betterment and its method of differential treatment.

90%

MATCHING BLOCK 66/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

Case work is concerned with the release of resource in the immediate environment and capacities in the individual which may give him fuller and more satisfying life, both economic and

personal. The case worker deals with people and situations one by one. Case worker is a retailer and not a wholesaler. It is easy to underestimate the importance of what case workers know—Just homes, parents, children, school play and people at work—because every one has these experiences, but to have experiences does not mean to be aware of them in all their implications, and certainly having them does not necessarily translate them into the war of social programmes. In case work situations, one by one, can be found the needs of a complete educational process. Just as individual is the part of family, so the family is the part of the community and so outward into national and international fellowship. Society would wage no wars if it really remembered the individual and its family group. In the same way the unit personality has the power to socialize the community, for quality of attainment rests ultimately on the development of individual personality. So, case work makes no confession for being interested in the child at home or foster care, in the trouble adolescent, the transplanted alien, the disabled person or the frosted and abused housewife, but at the same time it makes no pretense that treating cases one by one is a substitute for changing the broad environmental systems which may fundamentally cause the mal adjustment. The idea that the case work always trying to convey is that differences and unlikeness must be considered in forming the pattern and changing the pattern. There is always a polarity in social planning—to look at society form the basis of whole and from the basis of the individual. Social institutions must be based on the relevant interconnections, which means that the properties of the things themselves must be understood. It is equally fallacious to think one can solve the problems of the social

NSOU ? PGSW-II 24 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 24 PRINTTECH — 4th PROOF / 22.12.2021 order by the case work method, or to think that one can solve the problems of an individual with mass formulas. The case method address itself to individual adjustments and the solutions that the meaning of these cases taken one by one may prove to be of for reaching significance. Social workers have begun to develop a differential approach to those socio- economic needs, which require control of the environment in a rational way and those needs which in any Socio-economic system will require individualised or so called case approach. For example it does not mean that one can divide cases into pure unemployment and personality cases but the cause of maladjustment, which are broadly socio-economic will be seen as such, while stress is which lead to more personal search and action whether or not the economic factor is involved, come within the case work objective. Case workers treat many people whose problems of social relationships have nothing to do with their financial status. 2.4 Components of Case Work Social case work is a phenomenon at once

parent in a child protection case) 4. Those who seek or use help as a means to reach their own goals or ends. 5. Those who seek help but for

in appropriate

90%**MATCHING BLOCK 81/544****W**

goals. Indication of clients type is the first step in the delivery of service, for the worker-client relationship and interaction will very depending on the types of client and the nature if help sought. Felix Briestic has identified seven needs of clients as they come to the helping situation : 1. To deal with as an individual rather than a type or category. 2. To express feelings both positive and negative. 3. To be accepted as a person of worth, a person with innate dignity. 4. Sympathetic understanding of and response to feelings expressed. 5. To be neither judged nor condemned for the difficulty in which the clients find himself. 6. To make own choices and decisions concerning one's own life. 7. To help keep confidential information self as secret as possible. The client is a person with both needs and problem(s). The problem may be related to a client. No one can ever knew, the whole of another person, though may sometimes delude himself/herself to that effect. The reason for this lies not only in the sublet disentions and interlocking of any personality but also in the shift and

NSOU ? PGSW-II 28 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 28 PRINTTECH — 4th PROOF / 22.12.2021 reorganisation

of new and old elements in the personality that take place continuously just because the person is alive in a live environment and is in interaction with it. Never the

less,

89%**MATCHING BLOCK 83/544****W**

the person is a whole in any moment of his/her living. He/She operates as a Physical/Psychological, social entity, whether on the problem of his/her neurotic anxieties or of his inadequate income. He/She is a product-in-process, so to speak of his/her constitutional make up, his/her physical and social environment, his/ her past environment, his/her experiences, his/her present perception and reactions, and even his/her future aspiration. It is this physical-psychological-social-past- present-future configuration that he/she brings to every life situation he/she encounters. The person's behaviour has this purpose and meaning to gain satisfaction, to avoid and dissolve frustration and to maintain his/her balance-in-movement. To understand a person, it is important to know his/her parts of personality that is Id (life forces of the individual), ego, (conscious, drivers gliding our personality forces) and superego (inconcions, ethical values and principles) which have an important role in governing his/her behaviour. Whether a person's behaviour is not effective in promoting his/her well-being depends in large part upon the functioning of his/her personality structure. The forces of the human personality combine in three major function. (1) The life energies that seek satisfactory outlets; (2) The check system automatic or voluntary, that halts, modifies or rechannel these drives to make their ends acceptable to their owner and his/her environment and (3) The organising and governing operations that controls the negotiations and balance within the person himself/herself, as between what he/ she wants and what he/she can and ought to do and between himself and his/her physical environment. Freud, Pychologist defined them as id, ego and superego. The harmonious concerted action of these forces in one make for personal and social balance and competence; their discord of faultiness is revealed in behaviour that is personality thwarting or socially unacceptable. A person at any stage of his/her life is not only "a product" of nature but is also and always "in process" of bringing the present and becoming in the future. What happens to the individual today may be as vital to him/her as what happened yesterday. Those physical, social and interpersonal situations he/she encounters in his/her operations today as worker, parent, spouse, student or client will have an

93%

MATCHING BLOCK 85/544

W

impact upon him/her and will respond that can affect his/her development either morbidly or benignly. The person "being and becoming" behaviour is both shaped and judged by the expectations he/she and his/her culture have invested in the status and the major social role he/she carries—a man may be a father, a son, an employee, a club member and a client of the case worker, all in the space of a few hours. His/Her social role consists of the major function he/she carries at a given time with broadly designated behaviour, responsibility and rewards. His/Her conflict may be caused by his recognition of what his role calls for and his emotional inability to meet it. The person who comes as client to a social agency is always under stress. Regardless of the client's reason for coming for help, the client brings much more than concerns, needs or problems to the helping situation. The client brings the total self as a biological, psychological, cultural and spiritual being. This includes the resources of self and the personal environment and also environmental constraints. What the client brings includes perceptions of self and the situations and patterns of coping with stress and patterns of interpersonal relationships. The client's present need and or/problem is affected in part by the developmental needs that have been met and by needs arising from the diverse aspect of the client's life-style and from the expectations of the client's environment. One of the major tasks of the worker is to understand the client as an unique person in a unique situation. There can never be total knowledge about a client. That is impossible. The worker seeks knowledge about the client that is needed for giving the service to be delivered. The client is the major source of the facts used to develop the understanding of the person in the situation. Before a person seeks help from a social agency, he or she has usually attempted to deal with a problem in a way that has worked with previous problems, commonly known as "coping". Coping results not only in solving problems but in the reductions of tension and anxiety. If the coping is not successful, a person may then turn to his/ her natural support system, that is friends, relatives, associates etc. Thus individuals often come to the agency after a period of unsuccessful attempts to deal with their

problem.

Social Work with Indiv and Groups Block 1.pdf (D164882170)

Problem : There is probably no problem in human being living that has not been brought to social workers in social agencies. Problems of hunger for food and

of hunger for love, of seeking shelter and of wanting to run away, of getting married and of staying married, of wanting a child and of wanting to get rid of a child, of needing money and of wasting money, of not wanting to live and of not wanting to die, of making enemies and of needing friends, of wanting and of not wanting medication, of loving and of being unloved, of hating and of being hated, of being unable to get a job and of being unable to hold a job, of feeling afraid, of feeling useless—all these, and many other problems of physical and emotional survival as a human being, come to the door of the social agency.

81%

MATCHING BLOCK 86/544

W

Problem, according to the America Heritage dictionary is a "question or situation that present uncertainty, perplexity or difficulty". This definition is rather inadequate with calibration for defining this unit. 1. When does a situation become problematic? 2. When does a problematic situation become appropriate for social work concern? Clarification of the term becomes somewhat easier if one looks at problem interns of both need and social functioning. Concern for all need of human systems is the basis of the social work response. When the need is seen is mitigating a block to social functioning, a problem

is

100%

MATCHING BLOCK 87/544

W

concern to social work is said to exist. This concern should be understood also to include potential blocks to human functioning so as to include preventive as well as ameliorative

concern. For problem solution, goals are related to need fulfillment. But even with in a given agency and within specific categories of problems, it is helpful to recognize that there are certain characteristics of human problems as viewed by case worker. The problem may be one of

100%

MATCHING BLOCK 88/544

W

some unmet needs—economic, medical, educational, recreational—which hampers or undermines a person's adequate living. Or it may be one of stress-Psychological. Social, physical-which causes the person to be

in effective or disturbed in carrying his social roles. Whether such needs and stress occur singly or in combination, it is the person's inability to master the means by which to maintain or achieve social

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 31 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 31 comfort and adequacy which brings the problem within the locus of case workers concern. The focus upon the problems a person is encountering in his social secureness and his functioning adequacy is one distinguishing mark of social case work. It implies that the primary focus of the social case workers help is upon the difficulties the person is having in behaving in socially accepted or constructive ways or upon the assaults he is expiring from circumstances impinging on him. The client of the case worker typically sees his problem's

W

in relation to the demands and expectation of the social role he

carries as spouse, parent, student, worker or he wants help in the readjustment of some parts of his social situation so that he can maintain or achieve the equilibrium necessary to his daily pursuits. The importance of case workers orientation to the clients problem as lying in his inability to function satisfactorily in one or more of his major roles or in his inability to meet the deprivations and assaults of his life-circumstances is that it helps the case workers chart his focus, his work plan and his goals. It means that he will constantly keep before how the need to enable his client to cope with the frustrations and gain the potential gratification in the day-by-day living. And, since the living takes place in dynamic interaction with other person's social circumstances, culturally determined expectation and permissions, the case worker will take full measure of these forces in each case in order to know how they need to be influenced and utilized in the interest of the client's best social adaptation. It is quite possible to understand the nature of a problem in the whole, but it is rarely possible to work on it in the whole. In case work as in any other problem-solving activity, the overt action must be partial, focussed, and sequential even though the mental comprehension and plan may be total. In part this is because perception is contained within the individual, but adaptation and overt action involve conditions and force outside the individual which complicate those tasks and in than selves pose problems. Therefore, faced with having to do something with his client about a problem, the case worker must ask and answer the question as to what part

NSOU ? PGSW-II 32 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 32 PRINTTECH — 4th PROOF / 22.12.2021 of the problem should be placed in the centre of attention—what comes first, what is the primary importance, what is most accessible to modification. The

81%

MATCHING BLOCK 91/544

W

main considerations enter into the choice-of-problem focus. What the client wants and needs, what the case workers professional judgements points to as possible and desirable solutions; and what the agency is for and can offer.

Each of these merits discussion. 1. The problem is the clients problem and his impetus is to get help with it as he sees and feels it. He may see it with perfect accuracy and he may see its solution possibilities clearly too. He may see it with clarity as one of a constellation of intimately related problems or as the end result of certain underlying problems, but he may be unready or unable to face up to it fully enough to want help with anything more than the resulting problem he presents. On the other hand, he may not see the problem correctly at all; that is, he may bring for help a situation which is really tangential or is secondary importance. This may happen when the real problem is too freshening to face or when the person is beset by so many difficulties at one time that, like a trapped creature, he seeks all and any exist. Sometimes the case worker is so clear in his own mind that the problem the client present is not "real" one or he is so eager to establish his own speculations about the problem's sources, that he start to focus upon the areas of his, rather than the clients interests. When this happens, he may find that he has gained full comprehension of the problem but has lost the person whose problem it is. 2. The leadership given by the case worker to help the client select and centre on one of his several problems or on some aspect of one of them is based and dependent upon his professional knowledge and judgement. Form the moment the case worker begins to relative a specific client, he views him in the light of his understanding of experience with personalities of this kind, with problems of this kind, with solutions or goals of his kind. Simultaneously, to be sure, he seeks to establish the uniqueness of this particular person in relation to his particular problem in relation to this particular form of help, but this judgement of specific qualities and his expectation of possible outcomes rise out of his professions accumulated experience who could get help in learning the first step in diabetic management.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 33 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 33 The case worker managed this gentle but from shift of focus in ways that need not be delineated here, the basis of this shift was the case worker's general knowledge and preliminary appraisal of the situation. We may assume he saw the situation something like this: The basic problem in Mrs. Redd's possibly a neurotic character disorder. This is not amenable to change by the case work process, not can any therapy notably affect it in less than years. The casual problem probably lies in Mrs Redd's old and current parental relationships. These can not be undone. The precipitating problem is the baby's illness and all the normal and neurotic fears if excites. This is a reality with which the mother will have to cope. The pressing problem is the child's imminent release from the hospital to a helpless mother. The problem-to-be solved is this mother's insecurity in relation to her immediate handling of her sick child. This, then, is the first focus into which the problem is cost. One further factor determined this case worker's focus, and that was the agency's function. The medical social work department of a hospital has as its purpose the helping of patients (or relatives) to deal with such social and emotional problems as interfere with medical treatment. This is its case workers directive. If, for example, Mrs. Redd had proved so upset as to have been unable to relate herself to her baby's need, referral to psychiatric help might have been necessary, with the focus shifted now to Mrs. Redd herself. Or, if Mrs. Redd had been able to mobilize herself to take the child home and meet the child's special physical needs with some competence and with gratification at the results and if, then, she had shifted her complaints to the conflict with her mother, the medical case worker might well have considered whether or not a family agency should have been the more appropriate place for work on the newly emerging problem of the interfamily conflict. Had a referral to the family agency take place, it would hopefully, have followed on Mrs. Redd's recognition that her problem had shifted to another area of her living, on her wantry to be helped with it, and on her understanding, through discussion with the case worker, of the special relevance of the family agency's services to her new problem-solving task.

NSOU ? PGSW-II 34 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 34 PRINTTECH — 4th PROOF / 22.12.2021 With this kind of person, problem, place and process. This is what enable the case worker to know better than the client not what problem seems most crucial or hurts most but what in general its significance is what in general can or can not be done about it. This is what justifies the case worker's taking responsibility to help his client more from, let us say, the peripheral problem he has put forth to its more vital care or, at other times, to more from what is a "hand care" problem to some outer aspect of it which in the case worker's judgement seems more mallcabli, in either case it is to give aid and direction to the client focussing on his problem. Except as the case worker helps to sort and select the problem to be worked on at a given time, the client may flounder endlessly among cause effect intricacies or the multitude of instances in which the problem is reflected but not taken hold of. 3. Each social agency or each social work section of another type of welfare agency (such as hospital) is set up to meet certain kinds of human problems and needs. Not only does an agency declare its special area of service in its name ("child guidance clinic", "family service agency", "Public assistance department", and so on) but in its interpretations of itself it makes its purpose explicit. Sometimes these purposes are quite specific and limited, such as those of a child placement agency that gives its help in relation to children who must leave their own homes. Sometimes purposes are more general, such as those of a family and child welfare agency where almost any problem which arises in family life might be considered for service, whether or not any agency in able to function in live with its avowed purpose depends upon whether it has the means, the services and resources, including skilled staff, by which to translate intent into action. A brief illustration may be seen in Mrs. Redd's problem. Her fifteen month old baby was hospitalized in a diabetic come, and when Mrs. Redd presented herself to the medical social worker several weeks later, referred by the child's physician, she was depressed and in a panic. She was having a recurrence of old and fearful symptoms of emotional disorder—sleeplessness, weight loss, neurodermatitis. She felt she could not face the prospect of endless years of a diabetic regimen. The case worker, however, helped her to shift this focus to herself.

social role. 2. The multifaceted and dynamic nature of the clients problem make necessary the selection by the case worker and client of some part of it as the unit of work. 3.

92%**MATCHING BLOCK 104/544****W**

Problems in any part of a human beings living tent to have "chair reaction". This is because while in the study of a person he/she may be compartmentalized and analyzed as a biological or psychological or social entity, a person lives a dynamic interrelated whole, reacting to and upon the dynamic whole of his/ her environment. Whatever hurts one parts of his/her living will have its impact in other parts. 4. Any problem which a person encounters has both an objective and subjective finance. A problem may be seen and understood by an outlooker; it is self by its carrier, and it is experienced with the particularity of individual difference.

to deal, with them, create internal problem in ourself case worker helps in problem solving, provide other things, an intervention which breaks or modifies the cause-effect chain of difficulties since this intervention may in itself prove problematic to the client, the said case worker must seek to understand his/her means and processes as astutely as is possible so that he/she may facilitate rather than complicate the clients problem solving efforts. The Place : The place is a social service agency or a social service department of another kind of human welfare agency. The place to which the person comes for help with his/her problem is known as social agency. The term "agency" has a misleading American sound, but it was used in British case work literature in the late nineteenth country. Present day usage refers to the institution with which the case worker practices

when such an agency gives services of material aid, situational change, counselling and psychological help or any combination of these on an individualized case-by-case basis it takes its designation from its working method. It is called a social case work agency.

relationships. This agency's purpose and function come to life in the person and professional performance of the case worker. Social case worker agencies differ one from the other in a number of ways, but there are three major factors that determine their classification : 1.

The

100%

MATCHING BLOCK 112/544

W

source of support—public taxation (child welfare, physical and mental health programmes etc.) or voluntary contribution.

Tax-supported agencies, called "public" agencies, include not only the great income-maintenance programmes such as Aid to department children, but also child welfare, correction and other health programmes. The so-called private agencies, private only in the sense that they are maintained through the voluntary contributions of individuals or groups, provide services of the same kinds. Both public and private agencies many use case work as the method by which their services are conveyed to the people who come to them. But their policies and procedures, and the range and flexibility of their programs and methods, will be affected in many ways by their sources of support. So for the voluntary agency—the sanction its supporting group, its charter, its discretionary rights, its applicant population and so on, all bind or release, shape and color, the kind of service it gives to whom and under what conditions. 2.

100%

MATCHING BLOCK 113/544

W

Their source of professional authority—primary agencies carry full authority and responsibility—for their social functions and secondary agencies derive their authority—and responsibility from the host agency.

A second factor that classifies case work agencies, whether public or private is the source of professional authority. Some agencies carry primary and full authority and responsibility for their social welfare functions; others, because they are part of another human welfare organization, derive their authority and responsibility from the host agency. The former may be called "primary" the later "secondary" social agencies. In the primary agency (family and child welfare agencies) the programme and resources available may be varied, ranging from those designed to cope with social maladjustments caused by physical and economic breakdowns to those AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 39 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 39 caused by personality disorder. Such agencies are manned by social workers, the identification of all the staff is with social welfare purposes of the agency and the basic method of giving help is by the case work process. Other professional persons are drawn into the primary agency on a temporary or permanent basis. Their services and skills are auxiliary or supplementary to these carried by the social workers. Other kinds of welfare organizations—hospitals, schools, clinics, courts, nurseries—frequently incorporation a social case work agency i.e., they may have a social work department or a single case worker as a part of their structure and function. Many social case work by these originations came about through the recognition of two facts. First, while a person's manifest problem may be one appropriately brought to the non-social work agency, as sickness is brought to the doctor or as truancy is brought to the school principal, the problem may be caused or affected by social or psychological circumstances which call for the particular knowledge and resources of the social worker. Secondly people are often unable to make use of the services that are available to them. Thus, the school child who is exposed to teaching but cannot learn, the hospital patient for whom bed rest has been prescribed but whose home does not permit this luxury—all these call for a function which will implement that for which the organization is set up. The implementing function has long been social worker's. It may be seen that what the social case worker will do—the range, focus and emphasis of his operations, the condition which may limit or enhance his service and the authority and responsibilities he carries—will be affected by whether his agency is primary or secondary as well as by whether it is supported by public or private fund. 3.

97%

MATCHING BLOCK 114/544

W

Their special function and area of concern—primary agencies both public and private, may define certain areas of social needs as the particular fielding in which they give services. Secondary case work help is related to the work of some other profession, such as medicine, education or law and to its specific knowledge and purpose.

The third characterizing feature of the social case work agency is the nature of its particular function. Primary agencies, both public and private, may

MATCHING BLOCK 115/544

W

define certain areas of social needs as the particular field in which they give

service and in which they develop expertness of knowledge and special problem-solving resources. Specialization in social case work occurs because in the secondary selling

100%

MATCHING BLOCK 116/544

W

case work help is related to the work of some other profession, such as medicine, education or law and to its specific knowledge and purpose.

Whether the agencies highly specialized or is multifunctional, however, the agency functions—what it is for, what it is set up to promote or prevent—will determine the case worker's focus and emphasis, the services he has to offer and the goals towards which he works. These three factors, then—the source of support, the professional authority and the particular function—are the determinates of major differences among case work agencies in regards to the clientele they give service, the services they offer, the goals they set and the conditions and direction of their helping process. Yet despite their differences, there are generic ways of thinking about all social case work agencies which may help the case worker to know his agency more surely and to use if more effectively in the service of his client. The characteristics of Agency according to Perlman : 1.

92%

MATCHING BLOCK 118/544

W

The social agency is an organization fashioned to express the will of a society or of same group in that society. An agency embodies a society's decision to protect its members against social breakdowns, to prevent their maladjustments and/or to promote the development of better or higher levels of human functioning. 2. Each social agency develops a programme to meet the particular areas if needed with which it sets out to deal. The agency programme consists of the aids and activities by which its intent is translated into provisions of help. The ways and means which an agency programme provides will convey its function effectively or not, depending as a number of factors; money the knowledge and competency of the agency staff; the interest, resources and support of the community; the consistency between ascertained needs and the proffered means. 3. The social agency has a structure by which it organizes and delegate its responsibilities and tasks and governing policies and procedures by which it stabilizes and systematizes its operation-structure, as it may be depicted on an

various functions in the total agency body. 4. The social agency is a living, adaptable organism susceptible to being understood and changed, much as other living

organism—it

93%

MATCHING BLOCK 121/544

W

agency structure may be seen as its anatomy, its operations may represent its physiology and the purpose, attitudes and goal directions of its personnel and board are its psychology. The circumstance of its inception, the person who nurtured it and the social situation if encounter will have affected the agency's present behaviour. 5. Every staff member in an agency speaks and acts for some part of the agency's function and the case worker, represents the agency in its individualized problem—solving help what a case worker can do with and for his client derives both from his professional commitment and skill and from the agency hires him/her. In order to represent the agency, he/she must be psychologically identified with the purpose and the policies of his/her agencies. Every social agency banks a fund of knowledge about the experience with the particular problems it has set out to solve. 6. The case worker while representing his/her agency is first and foremost a representative of his/her profession. The social case worker practices in the conviction that individual human welfare is the purpose and the test of social poling; that his/her attitude combine open enquiry with dedication to the people and the person he/she serves; that he/she maintains "social conscience" and that he/she conducts himself ethically in all his/her professional transactions. Social work is an agency based profession. The agencies provide environment of the worker-client interaction. This inter action often takes place in

the

MATCHING BLOCK 124/544

W

purview and guidelines. The manner in which the agency is structured and functions greatly influence the nature of the worker-client interaction. The agency also provides resources for both the worker and the client. The agencies are established to carry out broad social functions as healing and rehabilitation is case of hospitals, ensuring good parent all care in the case of children department of the local authority and soon. The worker is expected to contribute to these objectives and to clarify and develop his/her own function within his broad social purpose. Yet, the most important aspect

in

97%

MATCHING BLOCK 125/544

W

agency function is that it constitutes the meeting point of social worker and the client, it is what brings them together and gives meaning and sustenance to their continued contact. The community provides financial and other support and sanction for the agency; community attitudes impact the agency and its capacity to deliver services. It has also expectation for the nature and outcome of services. There are two kinds of expectation; the professional and the bureaucratic. The greater the organizations, the larger the differences. Bureaucratic expectation call for loyalty to the organization; acceptance of authority from

the

92%**MATCHING BLOCK 126/544****W**

achievement of goals, on specialization and efficiency. Professional expectations call for commitment to professional values and to the service of the client; ability to have a broad span of decision-making power, collegial relationship and an emphasis on meeting client need and allowing for client self-determination and individualization. Before a worker can effectively deliver service as a professional in a Bureaucratic organization, the worker must first understand the organization. The first task in understanding the agency is to define its boundaries. The second task is to determine environmental factors that influence the structure and functioning of the agency the third task is to understand the structure and functioning of the agency system. Social workers not only need to understand the agency in which they are employed but they also need to be able to understand other social agencies. This is important if the worker is to help the client in order to use the resources and services of other agencies. The Process : The

case work process is essentially a series of problem solving activity. Immediately it must be said that this idea does not imply that case work resolve the problem brought to it, nor does it imply that it is upon the problem as per the case worker bends his major efforts. It is an idea, that stems from a conception of human life as being in itself a problem-solving process, a continuous change and movement

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 43 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 43 in which the human being works on so adopting himself to external objects or them to himself as to achieve maximum satisfaction. This in the work in which every human being engages from the moment of birth to that of death. It is both unconscious and conscious. It is concerned with problems, some small, some large, of two kinds; of replacing dissatisfactions or discomforts with satisfaction or comfort and of seeking to achieve greater or more satisfactions. Here,

94%**MATCHING BLOCK 127/544****W**

the process, is a progressive transaction between the professional helper (the case worker) and the client. It consists of a series of problem solving operation carried out within a meaningful relationship. The end of these is contained in its means; to influence the client-person that he/she develops effectiveness in coping with his/her problem and/or to so influence the problem as to resolve it or reduce its effects. As the social worker develops skills in the problem solving process, thinking about the phenomena being confronted will begin to take place in orderly steps. These steps appear to be simple but are quite complex in application. Sal Hofslein states "process refers to the recurrent patterning of a sequence of change over time and in a particular direction. It is important to note three qualities of these process: 1) recurrent patterning or stages, 2) takes place over

a time and 3) in a particular direction (the process irreversible).

91%**MATCHING BLOCK 128/544****W**

Social work problems solving is finding a way through feeling, thinking and acting. It progresses, over time in a cyclical, irreversible manner that is focused on removing blocks to need fulfillment that individuals can not remove with their own resources. In order to understand what the case work process must include in its problem-solving help, it is necessary for the social case worker to take stock first of the kinds of blocking which occur in people's normal problem-solving effort. These six are among the most common :

1. A problem can not be solved if the necessary tangible means and resources are not available to the person. A client for instance, may see and assess his problem and its solution accurately and many lack only the material provision for it.

Social agencies contain and supply many of these provisions. Sometimes, however, the use of them or their very nature may present another problem and the client may need the case worker's help to adapt. Compromise and come to terms with the differences between his ideas and the reality of the means of solution.

94%**MATCHING BLOCK 129/544****W**

Sometimes people are unable to solve their problems simply out of ignorance or misapprehension about the facts of the problem or the facts of existing ways of meeting it.

The

father who looks on his son's suturing as just a bad habit or the youngster who believes that his masturbation will result in his insanity are examples of the former; the girl who finds herself pregnant and thinks only of a drastic way out or the women who recently widowed, thinks she must place her children so that she can go to work to support them are the simplest examples of the latter. Missing knowledge and facts, like missing pieces in a puzzle, may make problem impossible of solution. 3. A problem is difficult for resolution what the person who has it is

88%

MATCHING BLOCK 130/544

a person—emotions so strong that they over power his reason and deft his conscious controls. Sometimes these feelings are realistically called for, as

great grief at a death or great anxiety over serious illness. In other instances they may be "over reactions", caused by the problem's bringing to life old, dormant emotions that add their strength to the present one's. High and strong feeling disintegrates a person's capacities—"it pulls him to pieces", when the problem

MATCHING BLOCK 131/544

W

sets off a conflagration of feeling, a person's thought process, delicately alluned as they are to his emotion, become clouded and tumbled about.

In such instances the case worker needs both to relieve the person's feelings and to lessen the impact of the problem so that the person may begin, with case work sustainment, to try to "see straight", to analyze the situation in its effects upon him and his upon it, and to think of alternative adaptations.

MATCHING BLOCK 151/544

SA Social Case Work Block 2.pdf (D164874044)

Some people find problems difficult of solution because they have never developed systematic habits or orderly methods of thinking and planning.

Such persons, characteristically impulsive or products of life experiences that have kept than constandy "running to stay where they are", tend to see living as a series of unrelated episodes, as "happenstances". In some instances, these blindness have become ingrained in the personality (again, neurosis); in others, however the difficultilies

89%

MATCHING BLOCK 134/544

W

chiefly in the person's lack of experience in organizing his powers to grapple with problems. In the case work relationship, a constant medium is provided that is accepting, nurturing and supporting, at the sometime that the stimulus of

problems-

98%**MATCHING BLOCK 135/544****W**

solving work is injected to promote the client's effort to feel, to be or to act in the ways leading to his/her better social adjustment. The case work process sustains and fortifies the functions of the client's ego. The first part of the case work process, as in all problem-solving, is to ascertain and clarify the facts of the problem. The second aspect of case work problem-solving grows out of and interweaves with the

on going-

95%**MATCHING BLOCK 136/544****W**

eliciting of facts it is thinking through the facts. The conclusive phase of each problem-solving effort in case work is the making of some choice or decision. Stages of Problem solving process : 1. Preliminary statement of the problem. 2. Statement of the preliminary assumption about the nature of the problem. 3. Selection and collection of information 4. Analysis of information available 5. Development of a plan 6. Implementation of the plan, and 7. Evaluation of the plan.

NSOU ? PGSW-II 46 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 46 PRINTTECH — 4th PROOF / 22.12.2021 1.

96%**MATCHING BLOCK 137/544****W**

Preliminary statement of the Problem : A clear statement of the problem is necessary before processing to subsequent steps. Often, problem statement tends to be vague, global and lacking in precision. For example, school dropouts or unwed mothers are often referred to as problems. A more adequate formulation in the area of unwed mothers might be: lack of educational resources for teenage pregnant girls. In this statement the need of the individual and society is education. 2. Statement of

the

100%**MATCHING BLOCK 138/544****W**

Preliminary assumptions about the nature of the Problem : This step is necessary to help make explicit the type of information needed for understanding and planning. As the problem is stated, implicit assumptions are made about its nature and cause, which provide indications as to the need in the situation and as to the block to need fulfillment. 3. Selection and Collection of Information : Sources

of

93%**MATCHING BLOCK 139/544****W**

information should include a variety of perspectives that may be chosen historical, social, psychological, biological, economic, political, religions and ethical under stings. Both the facts of the problem itself and the meaning of the problem to those concerned are important. Skill in the collection of information also calls for skill in communication and social inter action with person who are sources of the information. The values of social work call for the client to be a primary source. There is a need to determine and accumulate relevant evidence about the situation and this evidence needs to be related to the salient features of the situation. 4. Analysis of Information Available : Analysis of information is influenced and directed by the purpose for which the analysis is to be used. Other purposes include determination of feasible goals and possible outcomes and of possible plan of action interpretation of the meaning of the information gathered and evaluation. The cyclical nature of the process becomes apparent, for one returns

of

100%**MATCHING BLOCK 140/544****W**

analysis as an ingredient of each step of the process. The carrying out of the process generates new information. 5. Development of a Plan : Information and its analysis lead to understanding of what can be done to remove obstacles blocking need fulfillment. A social worker uses assessment in developing a plan of action. Plans develop from a consideration of a variety of possible strategies and techniques. As a plan becomes more specific, the social worker will return to early steps in the process to gather and analyze new

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 47 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 47

94%**MATCHING BLOCK 141/544****W**

information needed for the specifics of planning. Consideration of a variety of plans is important in creative planning. 6. Implementation of the Plan : In social work, implementation involves interaction between people and is interventive in nature this action based on thinking that has its source in feelings about concern or head. In addition, it is action based on substantial knowledge from many sources that explains and predicts behaviour of persons in the situation. 7. Evaluation of the Plan : This step may result in redefinition of the problem, expanded information gathering and analysis, reformulation of the plan. If the goal has been reached, evaluation is an appropriate and necessary climax to the process. Regardless of the out come of the plan, evaluation of what happened can lead to an understanding that can be transferred to other situations and to more effective problem solving in those situations. The intent of the case work process is to engage the person himself/herself both in working on and in coping with the one or several problems that confront him/her and to do so by such means as may stand

his/

97%**MATCHING BLOCK 142/544****W**

her in good stead as he/she goes forward in living. These Therapeutic means are as follows : 1. The provision of a therapeutic relationship that sustains the client and effect the nature of his/her emotional relation to his/her problems. 2. The provision of systematic, though always flexible, way by which the client may discuss and work over the nature of his/her problem, his/her relation to it and its potential solutions; and 3. The provision of such opportunities and aids (those of communication and/ or resources) as will further exercise and implement the client's adaptive action upon his/her problem. Three essential operations of problem solving proccss are : 1. The facts that constitute and bear upon the problem must be ascertained and grasped. Such facts may be of objective reality and of subjective reaction, of cause and effect, of relatedness between the person and his/her problems, of the solution sought and of the actual means available. 2. The facts must be thought about. The facts must be played upon and organized by ideas-ideas springing from knowledge and experience and subject to the governing aim of problem solution.

NSOU ? PGSW-II 48 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 48 PRINTTECH — 4th PROOF / 22.12.2021 3.

85%**MATCHING BLOCK 143/544****W**

Some choice or decision must be made that is the end result of the consideration of the particular facts and that affects or intent of resolving the problem. The process can be conceptualized as having four major components, assessment, planning, action and termination. All though assessment proceeds planning, proceeds action and action proceeds termination the process is cyclical in nature.

94%**MATCHING BLOCK 144/544****W**

All four stages as well as the interactional process constitute intervention. All can influence changes in the transaction between clients and the systems in their environment. All can influence the social functioning of individuals and social system. The aim of case work process is to engage the client with his/her problem and his/her will to do some in a working relationship with the agency, its intentions and special means of helpfulness. The context of the process is a fairly constant one, and its method, a fairly systematic one—as constant and as systematic as a process keyed to living, feeling, changing human wings can be—while it yet remains fluid and flexible. Finally, for the solution or mitigation of many problems there must exist certain material means or accessible opportunities which are available to the

need full

100%**MATCHING BLOCK 145/544****W**

person and which he/she can be helped to use. Money, medical care, nursery

school, schoolship, shorts day with ones,

95%**MATCHING BLOCK 146/544****W**

recreational facilities—these are the kind of resources that person may need in order to resolve a given problem in his/her daily living. The case worker should know about these resources or know how to become informed of them. He/She should be able to pick the rightness imaginatively in their relation to the

clients problem. 2.5

82%**MATCHING BLOCK 147/544****W**

Principles of Case Work Principles are rule of action for guiding performance based upon a fundamental which influences, guides and directs. The principles are also referred to as qualities or elements as they are present in every good case work relationship and are the constitutive parts of the relationship (priestek). There are seven principles of the case work.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 49 PRINTTECH – 4th PROOF / 22.12.2021 NSOU ? PGSW-II 49 1.

76%**MATCHING BLOCK 148/544****W**

Principle of Individualization 2. Principle of purposeful expression of feelings 3. Principle of controlled emotional involvement 4. Principle of acceptance 5. Principle of non Judgemental attitude. 6. Principle of clients right to self-determination. 7. Principle of Confidentially. Let us discuss one by one and get a clear understanding on their application in the Indian context. 1. Principal of Individualization :

The first principle is that of individualization. Each client has to be perceived as a unique individual with a separate identity and not as one of a mass. Human beings are not born in a mass nor do they die in a mass, except in a catastrophe.

93%**MATCHING BLOCK 149/544****W**

Principle of individualization emanates from the basic recognition of each person as a unique entity. Individualization is one of the essential notes in the concept of a person who according to Bothus is "an individual substance of rational nature". Each person is individualized by his/her heredity, environment, innate intellectual capacity, strengths and limitation. Each person experiences unique life situation from birth, forms distinct interpersonal relationships. The thoughts, feelings, behaviours and capacities each individual are distinct and differ from each other.

100%**MATCHING BLOCK 150/544****W**

Case work help, therefore, must be differentiated to meet the particular needs of the individual clients and to help the clients use their abilities and resources for self help in order to work towards problem resolution.

92%**MATCHING BLOCK 154/544****W**

The client needs the workers undivided and individualized attention to discuss his/her problem by gaining worker's respect for his/her as an individual with rights and needs, the client feels understood. The success of helping relationship depends upon the individualization of each case by the worker, treating each person as a unique individual having social problem rather than being treated as a case/category/patient.

96%**MATCHING BLOCK 152/544****W**

Pre-Requisites for Application of Principle of Individualization ? An open and unbiased attitude : It is essential for the case worker to be aware of personal biases and prejudices and not to let them have an influence on the

NSOU ? PGSW-II 50 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 50 PRINTTECH – 4th PROOF / 22.12.2021

87%**MATCHING BLOCK 153/544****W**

case work relationship. Accurate assessment of the client's problem, his/her life situations requires the worker to be objective and free from pre conceived notions and Prejudices, if any. The Prejudices can pertain to diverse categories or groups like two caste, class or gender distinctions, destitute, drugabusers, alcoholize, criminals, sex workers, unwed mothers, people including in pre or extra marital relationships etc. A worker while handling cases must be honest and aware of personal feelings, needs and co-center transference tendencies. ? Knowledge of human behaviour :

A knowledge of the patterns of human behaviour is necessary, however, as a framework within which the individual is understood and helped. It guides the case worker

100%

MATCHING BLOCK 155/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

in securing the significant facts and in discovering the true situation.

A case worker's own life experiences are helped but inadequate for effectively understanding the various people who come to social agencies. "Common sense" is a tremendous asset, but in the professional day-to-day service to people in needs to be supplemented by

93%

MATCHING BLOCK 156/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

knowledge and insight derived from the sciences, principally from medicine, psychology, psychiatry, sociology and philosophy. ?
Ability to listen and to observe : Hearing and seeing

is one of

100%

MATCHING BLOCK 157/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

the principal avenues of learning the individual. The client needs to talk and the

case worker

91%

MATCHING BLOCK 158/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

needs to listen. The more the client is enabled to tell his story in his own way, to tell of his own feelings, the more the case worker learns. The worker gradually comes to see the person as he more about in his family and community relationships. He sees the wholeness of the social situation, together with the individuals feelings and problem relating to this whole. The client wants and needs someone to listen to him, not just in a friendly way, but in a competent, professional way. This means that the worker is expected,

to have. 1.

100%

MATCHING BLOCK 159/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

Thoughtfulness in details : Thoughtfulness in details, such as making appointment is an indication of individualization.

If the client is a mother of several small children and is asked for an appointment, hour would conflict with the map schedule or would see her to travel with the children in rush hours, she feels that his worker already understands her position to same context. If the client is a working man, he responds favourably to the worker who suggests a late afternoon or an evening appointment.

92%

MATCHING BLOCK 160/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

Privacy in interview : The place of interview is important as a means of giving the client the sense that his confidences are being respected and of giving the

case worker

100%

MATCHING BLOCK 164/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

the opportunity to devote full and undivided attention to him.

Privacy is the concrete manifestation of the agency's subscription

82%**MATCHING BLOCK 161/544****W**

to the principle of confidentiality. 3. Care in keeping appointment : As maintained earlier, appointments have to suit both the client and the case worker. Case worker must keep a diary and promptly keep the appointment. If at all the meetings have to be rescheduled due to an urgent work, client must be informed in advance. A promptly kept appointment gives a feeling of reassurance and importance to the client. 4. Preparation for interview : One of the best immediate preparation for individualizing the client to review the written case record. This helps in refreshing the details of the earlier discussion and enable the case worker to plan ahead for the next meeting. 5. Engaging the client : If the client becomes engaged according to his present capacity in the

study, diagnosis and treatment, he will feel secured that he is being dealt with as an individual. As he participates in presenting the necessary data, he can also be helped to understand the reason for the data and the fact that the data are collected purpose fully and in accordance with the clients problem or need.

94%**MATCHING BLOCK 162/544****W**

Enabling the client in selecting treatment goals and encouraging the person to make a choice stimulates client self confidence and demonstrate the principle of individualization. 6. Flexibility :

Although there is necessarily a certain degree of performance to the purpose of each case, there is also some change calling for flexibility. The treatment goals need to be modified with the constantly increasing knowledge of the client and his situation and of the continuous developments and changes in the clients life.

57%**MATCHING BLOCK 163/544****W**

The ability to adjust goals and methods calls for mature judgement. Objectivity, and the skill in the case worker. It is a specific way of individualizing the client

94%**MATCHING BLOCK 165/544****SA** 480E1230-Social Work with Individuals (Final P ... (D165107502)

to listen, but also to hear. The most vital concerns of the client may not be expressed loudly, explicitly and formally, but rather softly, hesitatingly and possibly hidden softly. Only careful listening to what the client is saying and to what he is not saying, can result in hearing the pertinent material.

NSOU ? PGSW-II 52 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 52 PRINTTECH – 4th PROOF / 22.12.2021 ?

88%**MATCHING BLOCK 166/544****SA** 470E1120-Social Work Practices with Individual ... (D165249726)

Ability to move at the clients pace : As the case worker sees each client, he must be able to begin where the client is and to proceed at the client's pace. This is a detail in individualization which can help the client participate fully in the study, diagnosis and treatment process; insensitivity to the clients pace can stave the entire helping process because the client feels that the case worker is "taking over". Correct pacing is the secret to the timing of every stage of the case work process, from the appointment for the intake interview to the terminating interview, it guides the fact gathering, the analysis and interpretation, the determination of the treatment goals and the use of resource pacing is the guide and the test of individualization. ? Ability to enter into the feelings of people : The feelings of the client are his most individual characteristics. Problems produce different feelings in different individuals. Individualization then requires a sensitivity and a response to these feelings. The principal quality of the response is warmth. "To be useful to another who is trying to change himself and his attitude, the social worker must have a gift for intimacy. He must be willing to enter into the feeling experience of the client, willing to listen to the view of his problem and of his experience, willing to go patiently along with him in his struggle for a solution". ? Ability to keep perspective : The emotional involvement, however, should be controlled and directed to the total situation, so that the

case worker

100%**MATCHING BLOCK 168/544****SA** 480E1230-Social Work with Individuals (Final P ... (D165107502)

constantly maintains a perspective. This perspective helps him to see the feelings as they are related to the objective situation and the individual as he is related to his family and social situation.

93%

MATCHING BLOCK 167/544

W

Having a holistic perspective helps the case worker to keep the focus on the client in his/her entirety and analyze the

inter stay of the psychosocial, conscious and unconscious factors affecting the client. Means of Individualizing : Although the internal conviction of the case worker that individualization is vital to effective helping and the real desire to live this principle in practice is paramount, individualizing can and should be externalized, so that the client can not fail to feel it.

94%

MATCHING BLOCK 173/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

The following list of suggestions is only illustrative, but if contains a few practical means for individualizing and for transmitting the individualization to the client.

Principle of purposeful expression of feelings : Man is rational cognition and volition, and he is animal, having drives, impulse, feelings and emotions. The emotions are an integrate part of man's nature and their

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 53 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 53

healthy development is necessary for the development of the total personality. One of

the greatest challenges in human living is to keep the emotions well ordered.

98%

MATCHING BLOCK 170/544

W

In the modern helping professions the importance of well ordered emotional life has been eminently recognized. Both psychology and psychiatry have studied the normal, healthy role of

emotional in the personality structure.

80%

MATCHING BLOCK 171/544

W

The need for expression and for sharing experiences has been singled by social

worker as a very

72%

MATCHING BLOCK 172/544

W

pertinent dynamic in case work relationship. Purposeful expression of feelings according to Biestek in the "recognition of the clients need to express the negative feelings. The case worker listen purpose fully, nieght there neither discouraging nor condemning the expression of these feelings, sometimes even actively stimulating and encouraging them when they are therapeutically useful as a part of the case work service". The clients expression of feelings

is not expression for expression's sake, but for a purpose. It is directly related to his need for

96%

MATCHING BLOCK 174/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

acceptance, to his need to be treated as an individual to help the client in seeking from the social agency, to the purpose of the client worker relationship and to his need to participate in the solution of his own problems.

Purposeful Expression :

91%

MATCHING BLOCK 175/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

The client's expression of feelings should of course serve a vital purpose in the case work process. The specific purpose in each interview may be single or multiple; it may change from case to case, from interview to interview and within the same interview. The following are some possible purposes. ?

Relieving Pressure : One purpose may be

91%

MATCHING BLOCK 176/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

to relieve pressure and tensions and thus to help the client see his problem more clearly and objectively.

Feelings are expressed not just "to let off steam" but to free client for positive, constructive action. ? Assessment of Problem : Another purpose may be

100%

MATCHING BLOCK 177/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

to understand more adequately the problem and the person of the client for more accurate study, diagnosis and treatment.

It helps the case worker form a more adequate evaluation of strengths and weaknesses. ? Psychological support : Listening to a persons feelings in relation to a problem is a form of psychological support. The client feels that he has shared his problem in a real way with the case worker and thus his burden has been lessened because he and the case worker are jointly carrying it. ? Working towards negative feelings : In some cases the negative feelings of the client may be the real problem. An expression of feelings, then brings them out into the open so that something can be done about them.
NSOU ? PGSW-II 54 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 54 PRINTTECH — 4th PROOF / 22.12.2021 ? Stengthening case work relationship : An important purpose may be to deepen the case work relationship. A deep relationship does not ordinarily happen suddenly; it must grow at an unforced pace, but its growth can be promoted by stimulating the expression of feelings that the client can comfortably and gradually express. The expression of feelings is a barometer of the depth of the relationship. Purposeful Limitations : Free association is not a case work technique; from the very first interview case work is focused upon the relation between the problem and the client, according to diagnostic thinking and treatment planning the focus is upon the purpose. This focusing means giving the interviews a direction and giving direction necessary mean operating with in constructive limitations. The limitations of the purposeful expression of feelings are as follows : 1. Agency constants :

91%

MATCHING BLOCK 182/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

Agency function limits the expression of feelings to those which can be treated within the agency. It is obvious that in an agency which is not equipped to use intensive, therapy in deeply disturbing emotional problems, the case worker should not encourage the release of such intense feeling. In such an instance the case worker should limit his help with feelings to the kind of service the agency is equipped to offer. 2.

Work Load : Work load

64%

MATCHING BLOCK 178/544

W

with the case worker determines the amount of time a case worker can devote its each case. For example, if a

case worker

74%

MATCHING BLOCK 179/544

W

is handling fifty cases apart from regular agency work he/she may not have enough time to encourage expression of deeper feelings which require more time in each interview. 3. Premature expression of deep feelings : Case worker needs to be cautious in the early interview about client's premature expression of deeper feelings. For example, talking about intimate details of having undergone through a rape by a victim in the very first meeting may not be desirable. This may inculcate feelings of guilt and hamper the case work relationship. Case worker has to structure the entire case work process and slowly work towards building a relationship based on trust rather than allowing ventilation of deeper feeling at a premature stage. 4. Client engagement : Clients may have the tending to put the total burden of conflict resolution on the

case worker.

100%

MATCHING BLOCK 180/544

W

Case worker must ensure engagement of the client in the helping process right from the beginning to avoid undue dependence on the worker.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 55 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 55
The role
of the case worker :

The function of the case worker is principally to create an environment in which the client will be comfortable in giving expression to

95%

MATCHING BLOCK 181/544

W

his feelings. This include gaining trust, confidence of the client. Most clients talk at a superficial level and do not disclose their inner feelings till they are sure of the worker's accepting and permissive attitude towards client as an individual. Secondly, the case workers real desire to help and feeling with the client has to be communicated to the client at the "feeling" level. Creation of a permissive environment is essential for purposeful expression of feelings. This may be done in the following ways. ? Relaxed attitude :

The case worker

100%

MATCHING BLOCK 185/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

should be relaxed in order to help the client feel

fairly and comfortable.

100%

MATCHING BLOCK 183/544

W

Ensuring privacy during interviews, having comfortable furniture in the room are some of the important steps to make the client feel comfortable and open up. ? Preparation :

Although good case work requires a certain amount of preparation for each interview and

90%

MATCHING BLOCK 184/544

W

prior to the interview, the case worker must go through the earlier case records. This would refresh the memory and prepare the worker in planning and structuring for the up coming interview. ? Listening :

Probably the most important element in creating the permissive attitude is the case worker'

100%

Unrealistic reassurance, too early interpretation and too much interpretation can block the client's expression of feelings.

These are pitfalls into which a case worker who tends to over identify with a client is apt to stumble.

86%

MATCHING BLOCK 192/544

W

The principle of purposeful expression of feelings aids in study and diagnosis in case work. This principle helps the case worker to gain invaluable material for study and gain a realistic understanding of the client and his/her progress in totality. This helps in seeking the problem clearly and working towards

the resolution.

93%

MATCHING BLOCK 196/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

PRINCIPLE OF CONTROLLED EMOTIONAL INVOLVEMENT : Every communicating is a two way process, when one person speaks directly to another person, he expects some kind of a response; silence would indicate a disinterest in communication and equivalently, a disinterest in the person. The content of the communication indicate the kind of response that is expected chorally speaking, the content can be classified into three categories; ideas only, feelings only, both ideas and feelings.

When a person approaches the information desk at a railway station and asks the clerk about the departure time of the next train for New York, he is communicating in ideas only. He is seeking information and is expecting a factual response. When an adult daughter, during the wake in a funeral parlor for her deceased mother, says to a relative. "It will be hard to get used to the fact that mother is gone", she is communicating her feelings primarily. Only a

78%

MATCHING BLOCK 194/544

W

feeling response would be appropriate. In case work interviews, the content of the communication most often is a combination of thought and feeling. The nature of content depends upon many things: the problem of the client, the function of the agency, the needs an feelings of the client in a particular interview, the changing moods of the client within an interview and the purpose of the case worker in the on going process of study, diagnosis and treatment. The social case worker needs the skill to communicate at both the thought and feeling levels. Case worker has to gain factual information and at the same time study client's ideas, thoughts and feelings. The element of controlled emotional involvement in a case work relationship according to Biestek, is the case worker's sensitivity to client's feelings and understanding of their meaning and a purposeful, appropriate response to the client's feelings. There are three components in demonstration of controlled emotional involvement;

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 57 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 57

93%

MATCHING BLOCK 195/544

W

a) Sensitivity b) Understanding c) Response a) Sensitivity : Sensitivity means seeing and listening to the feelings of the client. Many times clients are unable to express their feelings verbally or are ready to divulge personal details. With the knowledge of human behaviour, observation and analytical skills, the case worker has to observe the minutest of the details and draw an understanding by putting them in proper perspective, language or the non-verbal communication can be effectively used as clues and indices to identify and interpret client's feelings. For example, use of hands, arms, and legs, pace, tone of speech, posture, eye contact, silence, repetitive body actions are important indicators of client's non-verbal feelings. b) Understanding : As a professional helping person, the case worker needs to understand the meaning of the feelings in relation to the client

and his problems. He needs to know what he is doing, what is going on when he stimulates the client to express his feelings, and how this expression is contributing to the goals in the case. The understanding is a continuous process; in each interview the understanding should increase and grow, but in many cases the case worker may have to be satisfied temporarily with a partial understanding and continue to strive towards a fuller understanding.

c)

87%

MATCHING BLOCK 198/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

Response : Sensitivity and understanding are insufficient in themselves; they are means to the response. The case worker's response to the client on the feeling level is the most important psychological element in the case work relationship and it is perhaps the most difficult of the

case work skills.

If frightens the beginning case worker; if frequently mystifies and always intrigues the experienced practitioner because the response is individualized to each client and even to the changing moods of the client with in a single interview.

100%

MATCHING BLOCK 197/544

W

Essentially it is a response of attitude and feeling, guided by knowledge and purpose. It is primarily an internal response where the case worker consciously and purposefully identifies with the feelings of the client. It is a sharing of a warmly human professional person with fine sensitivities of another human being who needs help (Biestek, 1957). The response of the worker should reflect the skill to probe in order to gather factual as well as feeling information from the client while verbalizing understanding. It should convey warmth and empathy to the client.

100%

MATCHING BLOCK 200/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

PRINCIPLE OF ACCEPTANCE : One of the most commonly used terms in social work is "acceptance".

Everyone seems to agree upon its importance, especially as it is lived by case worker in the relationship with the client but it remains

83%

MATCHING BLOCK 199/544

W

one of the vaguest terms in our professional language. It is an important value in social work is that guides social workers to accept people as they are, with their strengths and limitation, potentialities and weakness, positive and negative feelings. In social work acceptance is related with "Quality of life" professional attitude, the central dynamic and a principle. According to Biestek (1957), action of acceptance is indicated as

the therapeutic understanding, respecting, loving, perceiving, acknowledging, helping and receiving. It would seem that

100%

MATCHING BLOCK 201/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

there are three steps in the action of acceptance : 1. Perceiving : The

case worker

83%

MATCHING BLOCK 206/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

must first see and see objectively what he is accepting; 2. Therapeutic understanding : The case worker must see the object of acceptance in relation to the causes which brought about the object, in relation to what is meant to this person, and in relation to the purpose of the case work process in each individual case. 3. Acknowledging : It as a pertinent reality. The purpose of acceptance

was said to be "to respect his integrity as a fellow human being", "to help (the person) in need or trouble", "to add something to the comfort and happiness of the other person", and "in helping the person to get well.....to regain control of his own life and conduct." The purpose of acceptance in case work, all seem to agree, in therapeutic to help the client with his problem and needs. It differs, therefore, from acceptance in other interpersonal relationships, such as the acceptance of a social companion or a professional colleague or

95%

MATCHING BLOCK 202/544

W

with spouse or siblings etc. Acceptance in case work process is therapeutic in nature as it aims at helping the client to deal with problems and needs. Distinction between Acceptance and Approval : An important standpoint in case work is the distinction between acceptance and approval. Acceptance does not mean concurrence with or approval of client's behaviour. To illustrate let us take an example of a man who committed a murder and now seeking help from a case worker. In this case, following the principle of acceptance would not apply that the worker's approval of the crime committed by the client. The worker would objectively

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 59 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 59

91%

MATCHING BLOCK 203/544

W

study the client and assess the problem reasons that led the man to commit such a crime case worker would accept the client as an individual possessing all his dignity and worth as an individual. However, the worker would disapprove of the murder committed by the client. The worker should not verbally praise or condemn the act and show empathic interest in getting to know the client and his life situation better.

100%

MATCHING BLOCK 204/544

W

It may be remembered that the client would not really be helped if his/her anti social behaviour (murder in this case) is apparently appreciated by the worker. The objective of acceptance is not the good, but the real.

81%

MATCHING BLOCK 205/544

W

The purpose is to free the client from using defense mechanism and enabling him/her see the reality and realistically deal with the problem. Thus principle of acceptance as defined by Biestek (1957) is as follows : Principle of acceptance is a principle where the case worker perceives and deals with the client as he/she really is, including strength and weakness, congenial and uncongenial qualities, positive and negative, contractive and decontractive, attitude and behaviour, maintaining all the while a sense of the client's innate dignity and personal worth. Understanding the client better : The client who come to the social agency with a problem

is essentially a person who is dissatisfied with some aspect of his present living, sees the need for change, but can not make the change unaided due to environmental pressure

88%

MATCHING BLOCK 207/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

or limitation within his personality. He is not happy about himself; or rather he is ambivalent himself.

It is

68%

MATCHING BLOCK 208/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

ambivalence extends to the case worker : he realizes that he must reveal some of his short comings to the

case worker in order to be helped, while at the sanction

89%**MATCHING BLOCK 218/544****SA** 480E1230-Social Work with Individuals (Final P ... (D165107502)

he fears that the case worker, seeing him as he is, may think less of him as a person. He fears disapproval. This fear may cause any one number of reactions, depending on the nature of the problem and the personality of the client. He feels the insecurity of approaching someone he has never met; he may fear that his request for help will be refused; he may feel resentment against the conditions that make it necessary for him to seek help; and he may fear the self-involvement with the case worker. Therefore, the client constructs defenses, behind which he tries to hide a part of himself. He feels that it is unsafe for him to manifest something which he knows need to be manifested because they are pertinent to his problem.

To deal with the

81%**MATCHING BLOCK 209/544****W**

insecurity, the client makes use of a defense mechanism that helps the client to hide anxieties and inner feelings from one's self and from the worker.

NSOU ? PGSW-II 60 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 60 PRINTTECH — 4th PROOF / 22.12.2021

87%**MATCHING BLOCK 210/544****W**

In such a situation by making the client feel accepted, showing interest and genuine concern, the worker helps the client in reducing the anxiety and lowering the defence mechanisms. The principle of acceptance is the case work process as the client begins to express feelings and open up to the case worker. However, the client constantly checks the reactions of the worker to his/her disclosure of feelings especially negative feelings. Demonstration of Principle of Acceptance : ? Giving the client focussed response, directed to the needs of the client rather than worker's needs; ? Releasing client's potential for self help and exercising professional responsibility for the promotion of the growth of the client; ? Giving response that contain the elements of both thoughts and feelings; and ? Providing agency specific help to the client. Limitations of Principle of Acceptance : ? Inadequate knowledge of human behaviour. ? Counter transference. ? Case worker being Judgemental about the client's situation; ? Case worker's personal biases and prejudices; ? Unrealistic assurance by the worker. ? Confusion between acceptance and approval. ? Lack of respect for the client. PRINCIPLE OF NON JUDGEMENTAL ATTITUDE : One of the most talked about principle of case work that is also a difficult to practice is the principle of non Judgemental attitude. According to Briestek (1957), principle of non Judgemental attitude is defined as "Quality for case work relationship, it is based on a conviction that the case work function excludes assigning guilt or innocence or degree of client responsibility for causations of the problem or needs, but does include making evaluation Judgemental about the attitudes, standards or action of the client: the attitude which involves both thoughts and feeling elements, is transmitted to the client." Case work is a helping process where judgement would imply blaming the client and make him/her responsible for causing problems in his/her life. Let us take an

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 61 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 61

92%**MATCHING BLOCK 211/544****W**

example of a woman who has approached a child guidance clinic to seek help for her daughter who is showing symptoms of depression. Being Judgemental in this case would imply blaming the mother for her daughter's condition. Similarly, passing a judgement on a HIV positive person would mean blaming the person for his/her physical condition and for contracting HIV. As mentioned earlier,

holistic understanding of the client and his/her life situation

100%**MATCHING BLOCK 212/544****W**

is necessary in the case work relationship. However, this does not give the case worker an authority to make Judgements about the clients. Understanding

91%**MATCHING BLOCK 213/544****W**

the client's perspective : Seeking outside support for conflict resolution is not an easy task. The necessity to seek help from an agency can itself produce a host of painful feelings. One of these feelings is the fear of being judged. In the initial interview, the client looks at the case worker as one of the members of the larger society which is often judgemental with fixed standards of Do's and Don'ts. The client fears of being labeled by the case worker, keeping in mind the preset standards of

the

95%

MATCHING BLOCK 214/544

W

right and wrong. As a result of these feelings the client adopts by using defense mechanisms and is hesitant to express inner thoughts and feelings. In such a scenario, demonstration of a non Judgemental attitude helps the client "feel" assured of the case worker's disinterest in making any kind of judgement, in praising or condemning the client. As the relationship gradually strengthens, the client grows in faith in the worker and begins to discuss needs and problems, develop objective analysis necessary for constructive change. Evaluation of Attitudes, standards and action of

the

88%

MATCHING BLOCK 215/544

W

client : There is a clear cut difference between being non judgemental towards the client and judging clients behaviour which may mood immoral. When the case worker refrains from judging the guilt or innocence of the client he/she objectively evaluates the attitudes standard and actions of the client. In order to understand this let us take the case of a women who is in a live-in relationship and seeking help to deal with problems with her lover. While dealing with such a case, the worker has no right to live the client a moral lecture on the grounds of her live in relationships, which is still not accepted in large parts of India. However the worker has to probe into her life situation in order to make evaluation of her behaviour. The purpose in this case would be to understand the client and this would aid in the treatment process. There are strong and valid reasons for practicing a non-judgemental attitude. The worker being a social worker is a member of the larger society and his/her function

NSOU ? PGSW-II 62 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 62 PRINTTECH – 4th PROOF / 22.12.2021 in the help of

92%

MATCHING BLOCK 216/544

W

the client (and not condemn) with in the low and basic values of society. If the case worker is oblivious towards delinquent and immoral behaviour/ attitude of the client, the client would not feel understood and may underrate the worker's ability to provide professional help. Moreover the case worker has every right to have his/her own social, moral and spiritual values. The worker must, however, ensure that his/her personal values, beliefs, opinions and code of ethics are not imposed on the client in any way. The workers have no right to judge the client by personal standards. Demonstration of Principle of Non-Judgemental Attitude : ? Encouraging the client to open up and express own thoughts and feelings. ? Being respectful and attentive to the client throughout the case work relationship. ? Being aware of personal biases and prejudices and not letting them influence the case work relationship. E.g. the worker might have been socialized to develop a dislike for certain castes/castes/categories like alcoholize, differently abled, sex workers schedule caste/tribes etc. while in case work relationship with such clients, worker must ensure not to let personal dislike interfere in the helping process. The worker must recognize and control personal biases and develop capacity to see people objectively and not subjectively. ? Treat the client as a unique person. Worker should refrain from making references to people who have faced similar

problem. ?

90%

MATCHING BLOCK 217/544

W

Understanding negative feelings of the client towards the worker should be related with the use of defense mechanism. PRINCIPLE OF SELF DETERMINATION :

Case worker is not philosopher by profession and seems to have little inclination in that direction. However, since they enter in peoples lives in a very practical and intimate way, they necessarily become involved in issues which have an inescapable connection with the philosophy of human living. Acknowledgment of the clients right to self determination is another principle in case work. Self determination refers to self direction and is a derivative of

90%

MATCHING BLOCK 219/544

SA 2.2 Principles and process of working with ind ... (D111349362)

the philosophical assumption on the dignity and worth of the human being. The principle states that an individual has the right of making decision about matters pertaining to his/her life and that other people's decision about directing his/her life should not be

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 63 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 63 imposed on him/her. In the case work situation, the social worker should not make decisions, choices or plans for the client. The client, however, can be guided and enabled to make her/his own decisions. Self determination like freedom, has its own limits. It is not an absolute right. The decision made by the client has to be within certain constraints imposed by the social obligation which states that the consequences of the decision should not be detrimental to others. Now should it be harmful to one self? Furthermore, the self determined act should be with in the socially acceptable standard of behaviour. In addition, every self-determined decision implies that the decision maker, the client, takes upon himself/herself the responsibility of carrying out the decision and handling the consequences. When the principle is viewed from this perspective, one can see that people vary in their capacity for self-determination. What follows in that the principle has to be exercised in accordance with the client's capacity for self-determination. Closely associated with the principle of self-determination is that of client's participation in the handling of the problems that he is confronted with. In a way, self-determination is a form of participation as it entails decision-making the client. The process of helping and being helped does not stop at the point of decision-making by the client, but it goes much further in terms of plan pursued and action taken. According to the principle, the client becomes the main actor in pursuing plans and taking action, where as, the social worker is only an enabler. PRINCIPLE

91%

MATCHING BLOCK 220/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

OF CONFIDENTIALITY : Social work touches human life more intimately in many ways than many of the other helping and healing professions. The case worker, either in a home visit or in an office interview, is frequently the observer and regularly the recipient of confidential information concerning the client and his family. It may be a series of facts, or situation in the client's life which he shares with the

case worker or allows the case worker

76%

MATCHING BLOCK 222/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

to observe, with the implicit or explicit understanding that the case worker preserve the information as a served trust. Confidentiality in social case work can be considered from two points of view; as an item in the professional code of either and as an element of the case work relationship. The

principle of confidentiality is very complex and difficult to apply concerned case work situation. Biestek (1957) has given the following definition of

NSOU ? PGSW-II 64 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 64 PRINTTECH — 4th PROOF / 22.12.2021 the

principle of confidentiality: " confidentiality

90%

MATCHING BLOCK 221/544

W

is the preservation of secret information concerning the client which is disclosed in the professional relationship. Confidentiality is based upon a basic right of the client. It is an ethical obligation of the case worker is necessary for effective case work service. The client's right, however is not absolute. Moreover the clients secrete is often discussed with other professional persons within the agency and in other agencies; the obligation then binds all

equality". Ethical Obligation of the case worker :

91%

MATCHING BLOCK 223/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

Confidential can be defined as a fact or a condition, or the knowledge thereof, pertaining to a person's private life which is normally hidden from the eyes of others. Biestek (1957) has given three classes of confidential information: the natural secret the promised secrete, and the entrusted secret. The Natural Secret is information which, if revealed, would defame, injure or unjustly sadden the person. The obligation to preserve natural secrets binds everyone, regardless of the nature of the relationship. It may have become know by a relative, a friend, a stranger, or a professional person.

It may have become known to a social worker in an unofficial manner, out side the professional relationship. The basis of the right to natural secrets is man's natural right to his reputation. The social worker, therefore, has the obligation to safe guard such information concerning the client even when the information become known to the social worker and private individual, provided of course that another person's right does not separate the client's right.

86%

MATCHING BLOCK 226/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

The promised secret is one in which the case worker gives an assurance, a promise, after he has learned the secret information, that he will not divulge it. The subject matter of the promised secret may include the defamatory facts of a natural secret or it may include non defamatory facts about the clients personal life which he does not want revealed. The entrusted Secret is information which is communicated to a client with the precious explicit or implicit understanding that the matter will not be revealed. The

subject matter may or may not include a natural secret.

The entrusted secret implies a contractual agreement between two persons which binds the confident to secrecy even when the matter is not of a defamatory nature.

88%

MATCHING BLOCK 224/544

W

In case work relationship confidentiality includes all three types of secrets. There is always a presumption that the case worker should be ethically bound to keep the confidence of the client. However, since the case worker works with in an agency setup, the personal information shared by the client does not confine to the individual

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 65 PRINTTECH – 4th PROOF / 22.12.2021 NSOU ? PGSW-II 65 worker but remains with in

86%

MATCHING BLOCK 225/544

W

the agency. The agency should not be able to, provide services unless the information is shared by the case worker with colleagues/team mates. The information also gets recorded in the case files of the client. However, all the persons in the agency are bound to guard the confidentiality of the client. Limitations of principle of confidentiality :

The human right is absolute. The clients

95%

MATCHING BLOCK 237/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

right to confidentiality is limited by (1) a higher duty to himself, (2) the rights of other individual, (3) the rights of the social worker, (4) the rights of the social agency and (5) the rights of the community.

Since the natural law is the source all rights and duties, there can be no real conflict between the client's right to confidentiality and the limiting duties and rights. The problem then, which is in some cases may be a very perplexing one, is to determine whether another right or duty is greater than the right to confidentiality or whether confidentiality supersedes then. In an actual case, however, the apparent conflict may be so extremely difficult to resolve that a consultation with persons specially qualified to assist in a solution would be necessary. These are the following discussion of five classes of possible conflicts in the practice of social work where general principles are involved. 1. Conflict within the client himself :

69%

MATCHING BLOCK 227/544

W

An apparent conflict may exist between the clients right to preserve his secret and another of his right or duties. The solution of

the conflict requires a weighting of the rights involved. Care must be taken not to ex-aggerate either side.

72%

MATCHING BLOCK 228/544

W

The presumption, however should always be that the right of confidentiality remains dominant untill clear evidence to the contrary appears. 2. Conflicts with the rights of another individual :

In some cases the client is so is tally connected with another person that preservation of the secret would continue a serious harm or damage to the other person. In other words, the preservation of the client's secret may appear to isolate unjustly the rights of an innocent person. Here again an examination and a weighting of both rights is necessary. 3. Conflict with the rights of the social worker : When the client communicates a secret to the social worker, the latter becomes aware of an obligation to keep the secret isolate.

83%**MATCHING BLOCK 229/544****W**

Occasionally by keeping the clients secret, the worker may forfeit his own personal rights, which may be more important than the client. The worker can not be expected to surrender his own rights in the performance of personal duty. 4. Conflict with the rights of the social agency : Every agency,

whether public or private, has been organized with a definite purpose; there by it has assumed some NSOU ? PGSW-II 66 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 66 PRINTTECH — 4th PROOF / 22.12.2021 very specific duties towards individuals, families and community generally. These duties are specified in agency by the kinds of services offered and the conditions under which they are offered. Corresponding to these duties are specific rights, which are the necessary means for fulfilling the duties. 5. Conflict with the rights of society as a whole : There is a conflict between the individual good and public good, between the individual right and the common welfare. Society has the duty of promoting the public good of maintaining peace and good order and of building programs which positively promote the physical, intellectual and moral welfare of the members of the community.

90%**MATCHING BLOCK 230/544****W**

The general principle is that the obligation of the entrusted secret cases when the preservation of the secret would constitute a real and a serious damage to the common good. 2.6

NSOU ? PGSW-II 68 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 68 PRINTTECH — 4th PROOF / 22.12.2021 3.3 Case Worker Client Relationship Lives can not be lived with out relationship to other people. All institutions are built around relationship. Institutions minus relationship have no existence. Help or troubles emanate from our relationship with the fellow human beings. Whether one is troubled or helped by some one, relationship exist between them. Thus relationship is an "emotional bond" between people who interact with each other. It can be said to be a "transmission belt" of communication, a set of attitudes and response between the interacting units. According to perlman (1957), "it is a condition in which two persons with same common interest between them, long term or temporary, interact with feelings. Relationship leaps from person to other at the moment when same kind of emotion moves between them".

social work literature is full of description of relationship from various angles only because of its great importance in a helping process. Richmond (1917), in her earliest work, has pleaded for an intensive study and use of social relationship in social case work. Social case workers focus should be on "skill in discovering the social relationship by which a given personality has been defined; an ability to get at the control core of the difficulty in these relationships; and power to utilize the direct action of mind upon mind in their adjustment." None can deny the utility and importance of human relationship in promoting change and development. When relationship is established and used by a social worker consciously, purpose fully and deliberately to help client(s), it is called professional relationship. It is characterized by "conscious purposiveness growing

Nature of relationship : According to Helen Harries Perlman (1957); Relationship is a human beings feeling or sense of emotional bonding with one another. It leaps into being like an electric current or it emerges and develop contiously when emotion is aroused by and invested in someone or something and that someone or something "connects back" responsively. We feel "related" when we feel at one with another (person or object) in some

heart felt way. Relationship

97%

MATCHING BLOCK 250/544

W

may be "good" or "bad", brief or enduring, complex and heart felt or superficial and skin deep, swift and spontaneous or carefully built. But whatever be its nature and substance its dynamics are the presence, recognition, deposit, relection and responsiveness of emotion between individuals or between a person and an object or activity by which he/she has been moved. The emotions felt and shared may be joy as well as anguish, gratification as well as deprivation, hope and despair, merriment and despondency rage and gracefulness, guilt and hostility and any or all of these. To illustrate, a child who is extremely attached to his/her parents, feels joyous on meeting them. On the other hand, an abandoned child would react in a different way on meeting the family. The emotions felt in the latter case may range from hatred, anger to resentment. In most mutually reciprocative relationships, there is a hunger for emotional bonding and dependency like in parent child

relationship.

100%**MATCHING BLOCK 251/544****W**

In the usual life of an adult, hunger for emotional bonding with others is gratified in

many ways—in love and friendship bonds, in marriage and in parenthood. The words used to describe a meaningful relationship are—warmth, love,

case,

96%**MATCHING BLOCK 253/544****W**

acceptance, responsiveness, concern and understanding. It may be remembered that any relationship that seeks to enable a person, child or adult to feel secure and more forward, to risk new learning and new experiences combines a warm acceptance of the person in his/ her uniqueness as a human being. Relationship in case work : Relationship is termed as the soul of social case work. The relationship between the case worker and the client is of utmost importance. It is the principal of life which vivifies. The process of study, diagnosis and treatment makes case work a living warmly human experience. Social

case

91%**MATCHING BLOCK 254/544****W**

work thrives in its belief in the basic worth and dignity of individuals and enhancing their capacities to reach their human potential to the fullest. Relationship between the case worker and the client is the medium through which the knowledge of human nature and of the individual is used. Knowledge alone, without skill in relationship is inadequate. Relationship is also the channel of the entire case work process; through it, flow of mobilization of the capacities of the

95%**MATCHING BLOCK 255/544****W**

individual and mobilization of the community resources; through it flow the skills in interviewing, study diagnosis and treatment (Biestek 1957). Uniqueness of case work client Relationship : Case work client relationship differs from other relationships that exist in society at large like the parent-child, teacher-pupil, friend-friend and colleague-colleague

relationship. The case work relationships differ from the

90%**MATCHING BLOCK 256/544****W**

other relationships on a number of points. One needs to analyze and compare other relationships with case work relationship keeping in mind the levels of equality, mutual benefit being derived, presence and the level of emotional involvement in the relationship. Firstly, it may be borne in mind that case work relationship is temporary in nature. It begins with the referral of the client to the case worker with a problem and terminates after the completion of the case work process and treatment. Parent-child relationship or relationship between siblings are life long relationships as they are tied by blood and kinship. Secondly, the emotional component in the case work relationship is not very deep and penetrating. This is unlike the relationships that exist between the spouses, parent-child or siblings. Though case work process is an emotionally charged one, it is operationalism in such a way that the expressing of emotions is controlled and purpose full, focusing towards achieving clear-cut goals of clients well being and treatment. Such an approach is missing in the relationship cited above. The third difference between

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 71 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 71

97%**MATCHING BLOCK 257/544****W**

case work relationship and others, is based on the levels of equality and mutuality. For example, friend-friend relationship is characterized by its equality, mutual help and sharing. The case worker and the client are fundamentally equal as human beings. In case work relationship however, case worker takes on the role of a professional helper while client is the person who needs help. Thus the grounds of equality are not uniform since in this relationship, case worker is the person having knowledge, skills and is assigned to help the client through a professional relationship.

91%

MATCHING BLOCK 259/544

W

Thus, this type of relationship is not based on mutual help and equality. One can also compare the case work relationship with that of a teacher-pupil relationships, which is more on an intellectual level.

92%

MATCHING BLOCK 260/544

W

However, in this relationship, there is hardly any intentional use of emotional involvement. If at all emotions do crop-up in the teacher-student relationship, they are accidental and more on the part of the pupils rather than the teachers. Case work relationships are through out highly charged with emotions in a purposeful manner. Case worker client relationship also differs from other professional relationships such as doctor-patient, Psychiatrist client. From an Indian perspective, health has become a serious area of concern. The medical sources available are insufficient and lack

of

92%

MATCHING BLOCK 261/544

W

adequate infrastructure, quality and maintenance doctor's is consider only next to god. It is not a custom to question the doctor about the nature of one's illness, leave aside inquiring about the line of treatment. Patients in most cases are the passive recipients of medical treatment being administrated by the doctor. This is in contrast to the case work client relationship where client is an equal partner in the treatment process and is encouraged to open up and express inner thought and feelings. The only relationship that case work is close to yet

destine of in its finer aspects an

94%

MATCHING BLOCK 262/544

Attributes of Case Work Relationship Case work client relationship goes much beyond merely a friendly relationship between the case worker and the client. Clients bring into the case work relationship,

NSOU ? PGSW-II 72 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 72 PRINTTECH — 4th PROOF / 22.12.2021

93%

MATCHING BLOCK 264/544

W

their feelings, attitudes and behaviour which they have experienced with others. The client therefore tends to react to the case worker situation in a manner derived from his/her personal experiences. Case work focuses on understanding the client, his/her psychological needs and making a "contact" to build the relationship. If this contact is to be of any value at all, the client must have confidence in the workers good faith and the worker must have respect for the client as an individual. It is the responsibility of the case worker to establish this relationship. This professional relationship is formed with the purpose of developing in the client a personally satisfying and serially useful life. It is the individualized purpose which is unique to every relationship and is set to be achieved in each case. The conscious purposive and deliberate efforts to develop a helping relationship comprises of the following attributes : 1. Warmth : Warmth connotes some positive, lively outgoing interest in another person (or object or actively), for reaching out to take in another with pleasure or compassion (Perlman : 1979). By exhibiting open "Warmth" attitude, case worker is able to convey to the client his/her openness and concern to understand the client's problem, client's attitudes and sharing of experiences. Warmth is demonstrated by the worker when he/she attends to the client with attention, listens patiently, give confidence and conveys an understanding of the client's problem. 2. Empathy :

Perlmen (1979) explain

94%

MATCHING BLOCK 265/544

SA MSWS-12 social work with individuals (Repaired ... (D117055443)

this as "feeling with and into another person, being able to get into his shoes". Thus, one tries to know what the client feels and experience without getting lost in the process. Rogers (1966) explain empathy as "the perceiving of the internal frame of reference of another with accuracy and with the emotional components which pertain

there to,

100%

MATCHING BLOCK 266/544

SA MSWS-12 social work with individuals (Repaired ... (D117055443)

as if one were the other person but without ever losing the "as if condition". Empathy communicates that the worker understands the depth of the feeling of the client and that he is with him. It requires an imaginative capacity. Comments like the following communicate empathy "I understand that you

an upset". It

94%

Formulates his responses in language that is most attentive to the helper. 4. Responds in a feeling tone similar to that communicated by the helper. 5. Is most responsive (interacts with the helper) 6. Having established an interchangeable base if communication, mores tentatively towards expanding end classifying the helpee's experiences at higher levels. 7. Concentrates upon what is not being expressed by the helpee (the deepest level if empathy involves feeling in what is missing rather than simply dealing with what is present), and 8. Employ the helpee's behaviour as the best guide line to assess the effectiveness of his response. 3.

91%

MATCHING BLOCK 269/544

SA MSWS-12 social work with individuals (Repaired ... (D117055443)

Genuineness : To be genuine and congruent, the worker relies on his moment to moment felt experiences in his relationship with the client. Genuineness should reflect from the workers behaviour and permeate his all interactions with the client. A genuine and congruent relationship consists of a consistent and honest openness and behavior matching with the verbalised intension and values of social work.

93%

MATCHING BLOCK 268/544

W

Genuineness is the product of life experiences that makes it possible to be self observant, self-aware and self accepting of strength and limitations (

Perlman 1979) :

95%

MATCHING BLOCK 270/544

SA MSWS-12 social work with individuals (Repaired ... (D117055443)

The worker should be consistent in his communications and behaviour towards the client. If he says that he is honest, he must accept it when he consists mistakes. Similarly, his claim to help the client must get expressed in his efforts. Congruence implies workers what he feels inside.

If we are genuinely entereded in the clients welfare, it is bound to

96%

MATCHING BLOCK 274/544

SA MSWS-12 social work with individuals (Repaired ... (D117055443)

show up properly. To be genuine and congruent, one must understand oneself in terms of one's capabilities, attitudes, prejudices, personal values, temperament, etc. Knowledge of agency and its policies, procedures, role, commitment to the clients welfare will facilitate being genuine. Rogers (1954) has emphasized this as one of the most important factors (others being empathy and positive regards) for effecting

change in the clients.

96%

MATCHING BLOCK 271/544

W

If possible, the worker may however, assure the client of making an effort to seek information about the agency and getting back to the client within a stipulated time. The worker must also then get back to the client or give a source of contact that may provide the requisite information. 4. Authority : Authority is an essential element of case worker client relationship. Authority has been referred to by Perlman (1979) as "ability" to be used for the

NSOU ? PGSW-II 74 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 74 PRINTTECH — 4th PROOF / 22.12.2021

MATCHING BLOCK 272/544

W

client and not over or against the client. Authority in a case work relationship does not mean domination or

with full

100%

MATCHING BLOCK 273/544

W

imposition. Client has the right to accept, reject or modify advice given by the worker. Authority rather conveys the meaning of carrying those rights and powers that are inherent in special knowledge and are vested in special functions (Perlman 1957).

Social workers have always been concerned with the use of authority as a tool to help clients who need protective kind of services and whose ego functioning is poor.

97%

MATCHING BLOCK 276/544

SA

Social Case Work Block 1.pdf (D164874043)

Authority is the power delegated to the practitioners by society (client and agency) because of his status and expertise in the field.

Power denotes the inherent ability or the admitted right to rule, govern or determine. Authority refers to the power because of rank or office to give commands, enforce obedience and make a decision. Herein, the worker (practitioner) occupying a certain position in the agency is perceived as having power to influence the client to move towards the desired goal of change and growth.

95%

MATCHING BLOCK 275/544

W

Having authority does not make the worker superior to the client. It rather implies that the case worker possesses the expertise in understanding, assessing and dealing with the problem faced by the client. Authority is that of knowledge and expertise. The client goes to a worker in need of help who has the authority of knowledge and skill, someone who knows more than him/her.

Authority is always present in the worker-client relationship and the worker can not be divested of the authority and power as he is the provider/ supplier of the services the client needs. This also means, therefore, that worker-client relationship can not be on equal terms. Power emanating authority becomes apparent when the worker gives appointment, includes other members of the family in the treatment process, explains him the dynamics of various situations and questions. 5. Transference and counter

94%

MATCHING BLOCK 277/544

SA

Social Work with Individ and Groups Block 1.pdf (D164882170)

Transference : Transference is the tendency in every human being to relate the emotions and attitudes that have developed during his growth to those people in his immediate environment.

The individual who brings to his object relationships his fantasied needs and who gives to the object fantasied qualities, is manifesting the phenomenon of transference.

90%

MATCHING BLOCK 290/544

SA

Social Work with Individ and Groups Block 1.pdf (D164882170)

This means that he is transferring to a real person's feelings, attitudes and fantasies which

come from his unconscious mind and which are residuals of his infantile experiences.

96%**MATCHING BLOCK 278/544****W**

The most frequently encountered necessity to "work" a relationship occurs with the phenomenon called transference or transference reactions. To any emotionally charged relationship, each of us bring conscious and unconscious feelings and attitudes that originally arose in or still belong to the earlier important relationship (Perlman 1957). For

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 75 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 75

100%**MATCHING BLOCK 279/544****W**

example, in case work with an adolescent girl to help her regarding her career options, the worker listens to the girl's aspirations and dilemmas. The worker helps her to draw a choice of careers helping her to keep in mind her aptitude as well as preferences and also arranges for her visit to a nearby vocational training centre. In such a case, what may

happens in

82%**MATCHING BLOCK 280/544****W**

that the girl may be coming to feel towards the worker as she felt towards her mother/grand mother when she was young. The degree of emotional satisfaction which the client gets from such a relationship

in for

beyond the realistic limits of the
case worker-client

97%**MATCHING BLOCK 281/544****W**

relationship. These transferred elements could be affection, attraction or repulsion yearning or defensiveness, liking or disliking and may occur at any point in the helping relationship. Transference is said to have taken place, when the client reacts inappropriately, with excessive or distorted feelings towards the case worker. As seen in many case work

relationship, clients often remark to the case

96%**MATCHING BLOCK 282/544****W**

worker, you are like a father/mother/sister to me or may say, let us be friends. Transference may also manifest itself in the way the client reacts towards the worker by being very obedient, helpless and approval seeking. The worker has to recognize these non verbal cues. The effort in the case work relationship is to maintain reality and to keep the client and the worker aware of their joint objective, their separate and realistic identities and their focus upon working some better adaptation between the client and his/her current problem. Transference manifestations needs to be recognized, identified and dealt with as they occur. Every effort has to be made to manage the case work relationship and to give minimum encouragement to transference (Perlman: 1957). The case worker may also be expected to

an

90%**MATCHING BLOCK 283/544****W**

unconsciously transfer into the professional relationship, certain positive or negative reactions that are realistically uncalled for, example, distrust and hostility or strong feelings of attachment. This phenomenon is called counter transference that is, transference on the part of the helping person. Any subjective involvement on the part of the case worker with the client or clients problem may be part of a real counter transference or it may represent only a single instance of loss of professional objectivity. To illustrate, let us take up the case of a medical social worker who worked at the emergency ward of the hospital and was handling a man who had brought his wife to the hospital in a critical condition from a road accident. The man was in a heightened state of emotional trauma while maintaining about the hope for his life and how the accident had taken place. The worker got so moved with the details of the case that she began to identify with the man and somehow related his life with her own. Finally when

NSOU ? PGSW-II 76 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 76 PRINTTECH — 4th PROOF / 22.12.2021

91%**MATCHING BLOCK 284/544****W**

his wife died, both the client as well as the worker sobbed. In this case, the worker got involved with his own personal feelings and lost the objectivity. She was unable to provide professional help that she ought to. The case worker must remain objective throughout the helping relationship and be aware of his/her own feelings. If at all, they do crop up, they must be handled and controlled. 3.5

Use of

89%**MATCHING BLOCK 285/544****W**

Case Work Practice Fields of case work practice needs to look at the setting where the client gets help for his/her concern. Case work is practiced in variety of agencies or human service organizations. Various human service agencies which offer case work services to help people in distress are, social service departments of hospitals and clinics. Family counselling centres, residential institutions for children and adults, social institutions and mental health settings.

97%**MATCHING BLOCK 286/544****W**

Though case work is a generic method, when it is combined with activities of other field or profession (other than social work), differences arise from the special contribution of that field be it medicine, psychiatry or criminology. The practice of case work is conditioned by the primary or major functions of a secondary setting for case work. For instance, one of the principles of the case work in that client should be helped to verbalize his difficulties, in medical setting which is a secondary setting for case work. This principle has to be modified

is

100%**MATCHING BLOCK 287/544****W**

certain cases e.g. the patient's condition may not be such that medically it would be advisable to make the client talk. Under such circumstances the case worker has to modify his/her approach and find out how best

with out coming

96%**MATCHING BLOCK 288/544****W**

into clash with the practice of another profession. A case worker has also to see how the practice of case work in collaboration with other professions can make both the profession more effective so far as human welfare is concerned.

95%**MATCHING BLOCK 289/544****W**

Case work practical in primary settings like family welfare agency, has the primary function to help people with social problems. In secondary settings like hospitals, schools, courts etc., the case work function is to facilitate people to make optimum use of the services and promotion of human welfare. Though case work is a generic method, which is combined with activities of other field or profession (other than social work), differences arise from the special contribution of that field be it medicine, psychiatry or criminology. The practice of case work is conditioned

Case work is practiced in the institutions proceeding mental health service for e.g. child guidance clinics, mental hospitals, psychiatric clinics, psychiatry departments in general hospitals and crisis intervention centres as a part of psychiatric case work. In this setting, psychiatrists and psychologists are the main professional group in charge of care and treatment of the mentally ill

and

95%**MATCHING BLOCK 299/544****W**

or emotionally disturbed persons. The patients may be attending ODPS, day care or may be hospitalized. The main task of the case worker are to maintain constant contact with the family of the patient, mediate between the doctors and the patient are his family, provide counselling to the patient assist in discharge of the patient in order to rehabilitate him/her back into the society to which he/she belongs. The worker also provides necessary support to the family and helps the family members to understand the needs of the mentally ill person. ? Social case work with chronically and terminally ill patients : The patients who are suffering from chronic illness like diabetes, asthma and heart disease need help in understanding their illness and the demands of the treatment and adjusting their life styles to the limitation imposed by condition. The families of the patients also need support and guidance in dealing with the patient's condition that may have long term implications for the entire family. In some cases, specially among those belonging to lower income groups, the financial burden may need to be eased out by identifying and mobilizing resources in the kinship network or the community at large. While working with the terminally ill patients, the first dilemma the worker faces is to inform the patient and his family about his/her illness. The patients suffering from a terminal illness like cancer, HIV/AIDs have additional stress factor. The stress is caused by the thought of death and the anxiety about the family after the death of the patient. The tasks of the case worker include : ? Ensuring palliative care to reduce the pain and discomfort. ? Taking about death and releasing the stress. ? Preparing and involving the patient in this future planning about the family after death and various unmet tasks. ? Providing opportunity and support to the family to accept the illness and talk about the consequences in the long run. ? Providing emotional and material support to the family.

work with institutionalized delinquents and criminals, the case worker has ready access to those who define the social role of inmate and who observe the

clients in their

91%**MATCHING BLOCK 304/544****W**

daily role performance. In such institutional settings, the case worker is part of the world to which he is trying help the client adapt more satisfactorily. ? Case work with children's homes : Children who are destitute, orphans, runaways, vulnerable to violence, abuse or moral danger are generally placed in children's homes. Most of these homes operate under the provisions of Juvenile Justice Act and therefore provide custodial care to children for specific time period. Social case worker is expected to help each inmate adjust to the life within the home and achieve psychological development. As the children have often gone through traumatic experiences before they are placed in homes it is very important for them to come to terms with their life, talk about it and get over the pain and the sense of betrayal. The worker is expected to provide pastoral care, liaison with schools where children go for education help, children develop positive relationship within the institution and prepare for life after their stay in the home is over. ? Case work in homes for the aged : The stresses of modernization and break down of joint family structures has led to adult children sending their aged parents to residential institutions. The residents to these homes need nursing, understanding and emotional support. The case workers in these institutions help the residents to cope up with loss of loved ones, illness, lack of energy, homeliness, loss of economic

Case work practice is very popular in the school setting. The school case worker, working with the pupil in trouble in school setting, goes through a similar course of study and assessments, usually knowing through a referral statement from a classroom teacher or principal what social expectations the child is failing to meet. Case work in such situations may involve direct work not only with the child but also with his parents. The child's performance of roles in extra familial settings is related theoretically to current experience and probably the past experience in the control role relationships between parents and children. The goal of the school social work is to re enforce the child's potential strengths and capacities for satisfying, effective and acceptable performance in the role of pupil. To achieve this goal in an institutional setting like the school, the case worker directly works with teacher and also with other school personnel, in an effort to help them understand some of what underlies the child's behaviour and to adjust their expectations for the

role

90%**MATCHING BLOCK 307/544****W**

of pupil, so that a given child's capacities for role adaptation to these standard may be understood and seen as falling

with in a some what broadened definition of acceptable behaviour for the pupil. ?

Offering services according to governmental provisions and special concessions. ? Advocacy to reduce

and

92%**MATCHING BLOCK 311/544****W**

remove social discrimination against differently abled; ? Facilitating the client's acceptance and understanding of his/her situation and also recognition of his/her potential. Giving support to the client (both emotional and action oriented) is an important intervention offered by the case worker. The case worker also works with the family of the client to cope them with the situation, to understand the needs of the client and to learn the home management of the client. ? Case work in organizations working with women : Social case workers are employed in family counselling centres, crime against women cells, legal aid cells, family courts and rape and crisis intervention centres. The role of the case worker is to help the victims to come out of the trauma and deal with the self confidence and self esteem of the client. They also work with the family so as to mobilize their support for the client so that the client can deal in a better manner with his/her problem. ? Case work in organizations working with victims of disaster : There is an increasing need for the individualized help for the victims of disaster—whether natural or man made. Some of the common experiences of most of the victims of the disaster are trauma, loss of loved ones, loss of livelihood or assets, homelessness, feeling of helplessness, anguish, hostility, lack of community feelings, sense of fatality and unrealistic expectations from the worker. In this situation, the client needs individualized care to overcome debilitating impact of the crisis. The first step of the case worker intervention is to bring them out of the trauma, then provide emotional support and build in them hope for a secure future. Once the client has emerged from the trauma, the case worker engages the client in the planning and implementation of the action plan to facilitate the rehabilitation process. ? In the field of labour welfare : There is a general need for introducing case work to deal with varied social problems of workers in industries, individual problem of absenteeism, alcoholism, depression, stress related disorders, drug addiction etc. among the factory workers are the concerns for the case workers.

NSOU ? PGSW-II 84 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 84 PRINTTECH — 4th PROOF / 22.12.2021 4.2 Introduction In the interaction of generalist social worker and client, the social worker is first a person with life experience, human needs, and a personal life style and value system. The worker is also a helping person with skills for interaction with individuals and groups and for developing relationship. The worker brings to the helping situation a knowledge base that provides understanding about persons in situation, knowledge of helping methods and of means for implementing those methods and knowledge gained from other helping situation. The worker also brings a value system based on professional values, agency and community values and his own personal values. In complex society with complex social problems and multiple human needs, it is sometimes advantageous for the worker to become part of a multi person helping system. A multi person helping consists of several workers who are involved in providing the needed service in a collaborative manner. Each worker has special knowledge or skill that is necessary for goal attainment. To explore the meaning of the concept of the worker, three topics will be considered : (1) The worker as a person or knowledge of self, (2) The helping person and (3) The multi person helping system. 4.3 Knowledge of Self It has been said that the most important tool a social worker possesses is herself. To use that tool skillfully and knowledgeably, a worker must have considerable self- knowledge. This calls for a kind of introspective stance that seeks to bring personal concerns, attitudes and values into the area of conscious thought. It calls for a continuous search for self-understanding and for a reasonable degree of comfort with the discovered self. Social workers develop this self knowledge in a variety of ways. The process of suppression or discussion of practice situation and problems with peers has always been an important means of developing self-knowledge. Others can often see how our unrecognized concerns, attitudes and values affect our interaction with others and

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 85 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 85 our helping capacity. Social worker need to be open to help from others as a means of developing self-understanding. Another way social workers develop self- understanding is through the study of human behaviour. Psychological, Sociological, thropological and biological knowledge that explain human functioning can be the source of considerable self understanding. It is important to recognize one's self as having imperfections, but it is equally important to keep such awareness within the limits of reality. Medical students tends to believe that they have the disease they are studying. Social work students sometimes believe that the dysfunctional situation they are studying are operational in their own functioning and see symptoms pathology or a deviance in than selves. If this identification is realistic it can be helpful to self-understanding. Care needs to be taken, however, not to become overly introspective and to assume dysfunction that is not really there. A balance needs to be reached in which introspection is sufficient to gain needed self- knowledge but not so much as to become overwhelming. Self-knowledge can not be developed all at once; it needs to grow over a period of time. It is also important to learn to deal with the recognition of one's imperfection in a manner that supports self worth and dignity. Another useful way for a beginning social worker to develop self-knowledge is to conduct organized self study. This entails thinking about one's life style and Philosophy of life, moral code and value system, rools, life experience, personal needs and personal functioning. Meaning and concept of Self : It is a reflective state of self-focused attention in which a person evaluates himself or herself and attempts to attain correct and consistency in beliefs and behaviour. Each individual has their own unique pattern of abilities, interests and personality traits. Self-understanding pinpoints the likes, dislikes, strengths and other traits that inspires personal growth by helping people define their identity. More over one's self concept is a collection of belief about one- self. Generally, self-concept embodies the answer to "who am I?" Self-concept is distinguishable from self-awareness, which refers to the extent to which self- knowledge is defined, consistent and currently applicable to one's attitude and dispositions.

NSOU ? PGSW-II 86 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 86 PRINTTECH — 4th PROOF / 22.12.2021 Definition of Self : A person's essential being that distinguishes them from others, especially considered as the object of introspection or reflexive action. "The self is an individual person as the object of its own reflective consciousness. Since the self is a reference by a subject to the same subject, this reference is necessarily subjective. The sense of having a self or self-hood-should, however, not be confused with subjectivity itself". [Wikipedia] 'Self is defined as the total being of a person awareness of the individual or qualities of the individual.' 4.4 Professional Self The professional self is that part of the social worker that is guided and informed by the values, ethics and principles of the social work profession. It represents a way of conducting one self as a social worker. The professional self aims to be trust worthy, reliable, responsible and accountable. What is professional use of self? The use of self means efficiently and rationally using the knowledge, skills and values of the social work profession to enhance the well-being of a client—whether individual, group, community or a society as a whole. Definition of professional self : Professional identity is one's self as perceived in relation to a profession and to one's membership of it. Professional identity is created through one's beliefs and attitudes, values, motives and experiences through which individuals define themselves, in their current or anticipated professional life. The use of self in social work practice is the combining of knowledge,, values and skills gained in social work education with aspects of one's personal self, including personality traits, belief system, life experiences and cultural heritage. (Dewane, 2006) Again the conscious use of self is the term. Used by social workers to describe the skill of purposefully and intentionally using "his her motivation and capacity to communicate and interact with others in ways that facilitate change". (Sheafor & Herijsi, 2003, P.69)

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 87 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 87 4.5 Life style and Philosophy of Life People are different because of both heredity and environment. Such differences affect the manner in which life is lived and how life's problems are dealt with. Some people are practical and matter of fact; others are sympathetic and friendly; others are enthusiastic and insightful, still others are logical and well organized. Some people prefer to deal with technical facts and objects; others prefer to give practical help and services to people, some like to understand and communicate with people; others like to deal with technical and theoretical developments. Some people are physically strong with no disabling handicaps; others may have limited sight or physical stamina or other disabilities, people differ according to gender, socio-economic class, cultural group and religious beliefs. People differ in the way they learn and in their capacity for learning. They have different energy levels. All these factors effect life style. Life style is the number in which we function in meeting our human needs, in interaction with others and in our patterns of work, play and rest. His important not only to describe life style but also to be aware of why a particular life style is preferred. A philosophy of life—which is related to life style in that life-style is affected by philosophy to life—is even more basic to self-understanding. One's philosophy of life includes beliefs about people and society and about human life, its purpose and how it should be lived. In identifying one's philosophy of life, some questions to be asked are: what are my beliefs about the nature of humanity? Is humanity innately good or evil? What should be the relationship between man and woman? What is the place of work, family and recreation in a person's life? When is dependence on another person acceptable? What responsibility does each person have for the well-being of his or her fellow human beings? What is the relationship of person's to a higher being to god? What is the relationship of persons to the natural world? One's philosophy of life affects all we are, feel, think and do. A philosophy of life is often strongly dependent on religious leaihings or beliefs to which a person has been exposed. The influence of these early beliefs can result in their rejection or in adherence or commitment to them. It is important that a philosophy of life be well thought out and reflect the person each of us is. One's philosophy of life changes with growth and experiences.

NSOU ? PGSW-II 88 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 88 PRINTTECH — 4th PROOF / 22.12.2021 Moral Code and value system : A moral code and value system are closely related to one's philosophy of life. A moral code is a specification to that which is considered to be the right or wrong in terms of behaviour. One's value system includes what is considered desirable/preferred. The actions and things we consider valuable are also prioritized so that a system of values exists. A person's moral code and value system are affected by cultural heritage, family influences, group affiliations (including religions affiliations) and personal and educational experience. For some people, the moral code is prescribed and fixed regardless of the situation. For others the moral code is determined by a set of principles that guides moral and value decisions but that allows for some degree of flexibility; for still others, these decisions are dependent on the situation. Florence Kluckholm and Fred Strodback have discussed value orientations and identified several dimensions along which people develop a value system : 1. Human nature : Is it evil, neutral, mixture of good and evil or good. 2. Relationship of individual to nature; should it be subjugation to nature, harmony with nature or mastery over nature. 3. Time orientation : Is the emphasis placed on past, present or future? 4. Actively : Should activity focus on being, in becoming or doing? 5. Relationship : Should its nature be one of lineality, collaborative or individuality. Identifying one's position on each of these five dimentions can give some indication of basic values—one's way of responding to needs and situations. For example : if a person sees people as basically evil, her response to behaviour she does not like may be to punish in order to exact "good" behaviour. Such a presupposition carries a belief that people's inclination is to be bad and punishment is needed to curb undesirable behaviour. On the other hand, seeing people as good carries a belief that people will try to do what is right, consider others and their needs and work for what is right. The stance that human nature is good seems more in keeping with social work values than the stance that human nature is bad. Family and cultural Roots : As a person thinks about life-style, philosophy of life, moral code and value system, the importance of roots—cultural and family back

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 89 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 89 ground—should become clear individuals have different reactions to their roots. Some feel comfortable continuing the traditions and life style of past generations; others reject all or a part of that way of life. Many become confused and are uncertain about what should be continued and what should be rejected; others find a balance between using the part of their roots they find useful and making adoptions and changes necessary to function in their present life situation. One method of gaining understanding about one's cultural heritage is to spend time studying that heritage. This can be done through formal causes; by reading books about people who belong to that culture or about cultural heritage; and by taking with family members about family customs, life style and beliefs. The genogram, a family tree that specifies significant information about each individual for at least three generation, is a useful tool for gaining understanding of one's family. From studying a genogram one can identify the effect of such things as death, size of family, birth position in family, naming patterns and major family behaviour patterns to name a few. This method of studying the family as a system can yield much previously unrecognized information and help person see not only the place she has filled in a family but also how she has been influenced by the family. There are other ways of considering family influence that aid in the quest for self-knowledge. The study of the family from a sociological and psychological point of view provides insight into the family. Discussion with family member about important events in the life of the family are another useful method for gaining deeper understanding about the family and its way of functioning. Life experiences : The study of family and cultural roots yields some understanding of experiences important in shaping the person. In addition to experiences with in the family, other experiences are important, including educational experience—The experience of learning, the knowledge learned and attitude towards learning. Other meaningful experiences include those with one's peers and those in one's community and neighbourhood and involve all kinds of people—those who are different because of age, race, enthic background and mental or physical disabilities. Experiences in organized group situations and in religions activities and experiences related to illness, disability poverty or abundance of economic resources are also important.

NSOU ? PGSW-II 90 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 90 PRINTTECH — 4th PROOF / 22.12.2021 Identification of life experiences that have significant personal impact is yet another way of developing self-knowledge. It is helpful to evaluate how each of these significant life experiences relates to other life experiences and how each affects ways of thinking, feeling and acting. Also to be considered is how an experience results from a particular set of previous life experiences. Personal needs : Another area of knowledge is understanding one's needs and how they are dealt with. This includes personal needs as related to common human needs, that result from human diversity and needs that arise from relationships with social system. In thinking about common human needs, the focus is on the need for food, clothing, shelter, care, safety, belongingness and opportunity for growth and learning. An understanding of personal need includes how needs are met and the adequacy of the need provision. It is also useful to consider personal development patterns in the area of physical development. An understanding of human development provides information about expected development at a specific age; it is important to consider the development expected in relation to preceding development. Also involved are biological needs, which encompass such issues as health and wellness, disease and disability, physical strength and limitation, changes in the body and its functioning due to ageing and the need for physical closeness. Identification of the current development stage is necessary before consideration can be given to the needs of individuals. For example during the period of rapid physical growth and development in early adolescence a person has a need for additional food to support the growing body. Eric Erikson and others have identified psychological need at various stages of human development. Identification of these needs give rise to developmental tasks that must be accomplished if psychological need during each stage is to be fulfilled. Another dimension of human functioning from which common human needs arise is the spiritual dimension. Spiritual development has often been considered a part of religions development. Carlton Cornett defined spirituality as "the individual's understanding of and response to meaning in life; time and morality; expectations regarding what, if any thing, follows death; and belief or non-belief in a higher

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 91 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 91 power." It follows than, that spiritual development is the process a person goes through in developing as a spiritual being. Although social work has paid little attention to these area, it in one that is extremely important in understanding the formation of a value system and philosophy of life. It is particularly important to the self-knowledge a social worker needs to develop a professional value base. A second area of personal need arises because of human diversity. Need because of diversity relates to how identification or affiliation with a particular group has affected the person. Diversity refers to differences related to age, class, gender, color, culture, disability, ethnicity, marital, family structure, race, national origin, religion, sex and sexual orientation. A third area of personal need raised because of each person's interrelatedness with other persons—his or her membership in social system. Systems such as the family, peer groups, institutions of work and education, organizations, the neighbourhood and community, and cultural groups all place expectations and responsibilities on their members. People have a need to respond to these expectations and responsibilities. Individuals can accept expectations and responsibilities and can negotiate with the system to modify expectations and responsibilities. Personal functioning : Self-knowledge includes identification and understanding of one's life style, philosophy of life, moral code, value system, roots, and personal needs. It also includes an understanding of how these factors affect day to day functioning. This involves identifying how one learns, how one shares self with others, how one responds to a variety of situation and how one's biases and prejudices play a role. Also important is how one feel about one self and this affect day to day functioning. Self knowledge includes understanding how one meets personal needs; how one deals with freedom and restrictions; how accepts change, both in on self and in one's environment; how one views one's responsibility towards the social system of which one is a part; and what one's role are in those system. Fundamental to self-knowledge is a healthy self image or a sense of positive self- worth or self-esteem. When the worker is able to achieve positive esteem, self- knowledge in the area mentioned about become more accessible. Negative self-worth leads to defensiveness and a greater like. That both self-image and one's view of

NSOU ? PGSW-II 92 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 92 PRINTTECH — 4th PROOF / 22.12.2021 others will be distorted. Positive self-worth is linked to the cardinal social work belief in the ingrate value and worth of all human beings. However, by making mistakes, we prove that we are human. Accepting one self as worth while in spite of one's flaws and mistakes allows one to view one self and others more genuinely. 4.6 Skills Skill is the practice component that brings knowledge and values together and converts them to action and need. A sociological definition of skill is also useful in understanding the meaning of the term; a complex organization of behaviour (physical or verbal) developed through learning and directed towards a particular goal or centered on a particular activity. The more recent literature seems to use the term skill rather than enterventive repolarize in discussing the action component of practice. Morales and see for state that "the skill of trial work requires both the appropriate selection of techniques for a particular situation and the ability to use techniques effectively." They discuss how this selection is based on a conscious use of knowledge and state that social work values filter this knowledge in determining appropriate skills for use in providing service. They believe that skill is needed both for the selection of appropriate techniques and for the ability to use techniques effectively. They define skill as the social worker's capacity to set in motion—"in a relationship with the client (individual, group, community)—guided psychosocial intervention process is of change based on social work values and knowledge in a specific situation relevant to the client. The change that beings to occur as the result of this skilled intervention is effected with the greatest degree of considerations for and use of the strengths and capacities of the client. This would seem to point to a consideration of how to enable the client to use these strengths and capacities not only in the helping situation but on other areas of human functioning. Social work does not have one skill but a wide variety of skills useful for many different situations. It would seem appropriate to use the term skill for the action component of practice and to use the term skillful in discussing the component manner in which skills are used.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 93 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 93 Several attempts have been made to identify the core, base or basic skills needed by all social worker. Betty Baer and Ronald Faderico have organized the skills component of practice into four areas; (i) information gathering and assessment, (ii) The development and use of the professional self, (iii) Practice activities with individuals, groups and communities and (iv) Evaluation they listed the needed skill cluster in each of these areas and translated these skills into ten competencies. Included in these competencies are skills in working with and on behalf of oppressed and disadvantaged population. This requires an appreciation for and valuing of diversity and an ability to see strengths in those who are different. Given the amount of prejudice in our society it takes a great deal of skills to overcome the barriers among various groups. This includes skill at recognizing barriers within ourselves as well as those our clients may bring with them. It means being open and creative in building bridges and tolerating complexity rather than seeking simplicity. So social workers need to develop skills in self-awareness, empathy, and relationships, especially as these relate to race, culture, gender, age, sexual orientation and disabilities. Based in part on this formulation as well as numerous other statements about the nature of social work practice, other formulations have been developed. Skillfulness develops over time as a result of practice in the use of various techniques and methodologies. The development of skillfulness involves not only the application of knowledge and the operationalization of values but also the use of the worker's individual attributes and the development of a personal style of work. A useful analogy in understanding the development of skillfulness (and thus competence and personal style) is the musician. Musicians develop their skills and competence only after long hours of practice. Practice that starts with learning such simple bases as fingering, note reading and time concepts over then progresses to more and more complex techniques and music. The musician's personal style develops in the interpretation of the music. Similarly, it is only the social worker learns to blend the cognitive and interactive skills that skillfulness develops.

4.7 Values Knowledge and values are often confused. It is important to distinguish between these two important component, in social work practice. Knowledge in atleast NSOU ? PGSW-II 94 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 94 PRINTTECH — 4th PROOF / 22.12.2021 proficiency probable; it is used to explain behaviour and to conceptualize practice. Values are not provable; they are that what is held to be desirable; they are used to identify what is preferred. This includes preferable assumptions about human behaviour and preferable ways of helping knowledge assumptions and value assumption are used to different ways in the helping unclear or several definition of the term value are useful for developing on understanding of the term. Mariel Pumphney had defined values as follows. "Values are formulation of preferred behaviour helped by individuals or social groups. They imply a usual preference for certain means, ends, and conditions of life, often being accompanied by strong feeling." A source from outside the field of social work is also useful in the search for understanding the terms value. The literature of value classification sees values as (1) guides to behaviour, (2) growing but of personal experiences, (3) modified as experiences accumulate and (4) evolving in nature. This literature provides additional understanding about the nature of values by noting that the conditions in which values operate often conflicting demands, that is, several, values are functioning in the same situation and each calls for conflicting modes of functioning or end states. Milton Rokeach defines value as "an enduring belief that a specific mode or end state of existence is personally or socially preferable to an opposite or converse mode or end state of existence". He goes on to state that values, rather than standing alone, exist in systems that is individual values are organized in such a manner that they have a relative importance to other values. Values are being relatively enduring as belief upon which persons act by preference and as modes of conduct or end state of existence. Value beliefs are conception of what is desirable. There is an emotion or feeling aspect of it and thus lead to action. Values originate in part from the society of which a person is a part. If individuals are thought of as evil it is difficult to believe that individuals have worth and dignity. Factors that influence the values individual hold include. (1) Their cultural heritage, (2) Values held by individuals and groups with which they are associated, (3) personal experience and (4) the views they hold about human beings and the nature of the human situation. Social workers have often ignored the importance of religious or spiritual values in the lives of people but religious beliefs and spiritual framework are important

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 95 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 95 sources for the development of beliefs. They strongly impact the value system of both individuals and culture groups Value conflicts develop as individuals are exposed to the differing value systems upon which they are expected to act. The social value system contains values generally held by the dominant segment of society. Social work practice is based on a set of values that is often expressed in such principles as the worth and dignity of the individual, the right to self-determination, and the right to confidentiality. Gordon expressed these values in the following manner. "He is good and desirable for man to fulfil his potential, to realize himself and to balance this with equal effort to help others fulfil their capacities and realize themselves." Aptekar has expressed these same ultimate values in a slightly different manner. Worth and dignity of a man as related to the well-being and integrity of the group.....progress and development of individual and society as related to the security of individual and the society". Armando Morales using Charles Levy's scheme for organizing values, have identified values held by the social work profession : Preferred conception of People 1. Social workers believe in inherent worth and dignity. 2. Each person has an inherent capacity and drive towards change that can make life more fulfilling. 3. Each person has responsibility for himself and his fellow human beings including society. 4. People needs to belong. 5. There are human needs common to each person, yet each person is unique and different from others. Code of ethics flow from values, they are values in action and as such they are preferred instrumentalities for dealing with people. Wermer Bochm has stated that values are behavioural expectation and preference in specific situations. Ethical codes specify what fought to be done in professional practice. Growth and change in the profession of social work as well as shortcomings in the old code made it desirable to develop this new code of ethics. 'The new code includes' issues such as use of electronic media and more specific guidelines for worker behaviour in relationships with client. It also ties ethical principles directly to social work values.

NSOU ? PGSW-II 96 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 96 PRINTTECH — 4th PROOF / 22.12.2021 Valuing is a common human experience. It allows person to identify what they hold on high esteem—the objects, instruments, experiences, conditions, qualities and objectives that are worthy of human effort and interest. It is particularly important for the social worker to engage in the process of valuing. Each worker has developed an individual value system that at least in part is related to the society and cultured value system of which he is a part. The social work values are also similar to the social value system in same respect, but there are differences. Social workers must recognize these differences and develop ways of dealing with the tensions and conflicts that result from them. They must be aware of their own values so that unexamined values do not influence their practice. 4.8

Accountability In recent years, more emphasis has been placed on accountability in the social welfare field. In its simplest form, accountability is a responsibility. However, the complexity of accountability begins to become apparent when one asks the question. Accountability to whom? The social worker is responsible to the client for upholding his part of any agreements for contacts and for providing the service agreed on. The social worker is also responsible to the profession for upholding social work values and the NASW code of ethics in delivering services. The social worker is responsible to the agency that employs the worker for delivering the service within guidelines, programmes and policies developed by the agency. Concept of Accountability : Accountability is an assurance that an individual or an organisation will be evaluated on their performance or behaviour related to something for which they are responsible—corporate accountability involves being answerable to all an organisations stake holders for all actions and results. Accountability is the means by which individuals and organisations report to a recognized authority or authorities and are held responsible for their actions. Accountability, in terms of ethics and governance, is equated with answerability, blame worthiness, liability and the expectation of account-giving. As an aspect of governance, it has control to discussion related to problems in the public sector, non- profit and private and individual context. Accountability is when an individual or

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 97 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 97 department experiences consequences for their performance or actions. Accountability is essential for an organisation or society. Without it, is difficult to get people to assume ownership of their own actions because they believe they will not face any consequences. Accountability definition : It is "The quality or state of being accountable, especially an obligation or willingness to accept responsibility or the account for one's action". Accountability is accepting responsibility and it can be personal or very public. A government has accountability for decisions and laws affecting. Accountability is an assurance that an individual or an organisation will be evaluated on their performance or behaviour related to something for which they assigned too. The objective of accountability is being accountable helps every one involved to learn from your current activities and work more effectively in the future. This is a very important aspect of accountability to beneficiaries, managers, trustees and donors. It is the engine that helps people improve how they work. Another objective of accountability programme (OAP) is a multi-phased process that creates a sustainable productivity culture in support of short and long term strategic in a plan period. Accountability eliminates the time and effort you spend on distracting activities and other unproductive behaviour. When you make people accountable for their action you're effectively teaching them to value their work. When does right, accountability can increase your team members skills and confidence. Accountability is good for business in other ways as well. When leaders can own up to the mistakes they make, they can more easily find a way to fix the problem and move forward. On the other hand, a leader who is in denial, a mistake likely would not be able to work though it as quickly. Effective accountability requires not only clearly defining it, but also performing the following orienting, emoting, engaging and communicating. Accountability across a team or organisation is impossible if people are not oriented properly on what they are to focus their attention and efforts on action. Accountability was self driven skill one that made you feel good, accomplished and without boundaries. People learn to trust themselves and they trust their own process of acquiring informations, learning to apply that information to their job and owning the result of their work. Responsibility—being accountable not

NSOU ? PGSW-II 98 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 98 PRINTTECH — 4th PROOF / 22.12.2021 only means responsible for something but also ultimately being answerable for action. Also accountability is something what hold a person to only after a task is done or not done. Accountability enables people to use their effort and time more constructively rather than focusing on unproductive actions. Accounting empowers people to be in control of their action in their personal and business life. People can create their own opportunities rather than availing any thing it is also empowers employees to not only recognize the critical gaps between current and derived results and take ownership for closing the same. It is important to establish a great level of trust at the work place. Records : One important area of accountability regards maintaining records and the use of information about the client, social work has always placed considerable emphasis or

90%

MATCHING BLOCK 315/544

SA 2.MSW18R5005 Social Group Work.pdf (D120284684)

recording. Process recording—a narrative report of all that happened during a client contact, including the worker's feelings and thinking about what has happened—

is a form that at one time received great emphasis and was frequently used in the educational and supervisory processes. In recent years it has not been used as often in part probably because it is extremely time consuming. Also, the intensive individual supervision of workers, which was once considered essential to social work and which made extensive use of recording important, is no longer considered desirable in many settings. Process recording, however is still a technique that has value for students as they and their field supervisors evaluate their work. Therefore, recording is important for Accountability. 4.9 Communication Our very social existence is dependent upon the skill of communication. One communicates in order to learn the socially approved ways of acting, to know what others think of him, what behaviour please or displeases those around him, and to exchange information and ideas with them. One relates, influences and develops mutual confidence only through various skills of communication. Definition and Principle of Communication : Communication is giving or receiving a message from to another individual with the

conscious intent of eliciting and evoking a response and checking out its meaning. Communication refers to all behaviour both verbal and non-verbal,

which occurs in a social context. Another

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 99 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 99 word for communication could be "interaction". Fabun (1960) puts it very simply, "The interactions between the happening" that is you and the 'happenings' that are not you, are the raw, basic stuff we try to communicate about." Communication therefore, can be through words, the way we stand, the tone of our voice, the way we look another i.e., any behaviour that we use to express what we are experiencing. There is a message in communication, it may be expressed verbally, non-verbally or through posture or body language. Basic elements involved in the process of communication by message can discerned as given below :- 1. The intentions, ideas, feelings of the sender, and the behaviour he selects to engage in, all of which lead to his sending a message which conveys some content. 2. The sender encoding his message by translating his ideas, feelings and intentions into a message appropriate for transmission. 3. The transmission of the message to the receiver. 4. The channel through which the message is transmitted. 5. The receiver decoding the message by taking the stimuli received and interpreting its meaning. 6. The receiver responding internally or externally to the interpretation of the message. There is always some amount of noise in these steps. All our communications pass through these processes though we are usually not aware of it. The principles discussed below speak about the nature of communication which if assimilated will facilitate our communication and sender it effectively. 1. Communication is an interaction situation wherein the participant are affected by each one's behaviour: Every message is simultaneously a stimulus to new behaviour and a response to prior behaviour of the receiver. No message should be isolated for what has occurred before between the communicants if we really want to understand the message. 2. One does communicate : We do communicate even when we are ignoring the message of another or maintaining complete silence. An easy way to NSOU ? PGSW-II 100 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 100 PRINTTECH — 4th PROOF / 22.12.2021 understand this would be to think what you would do with some one. You did not want to interact with passed a smile to you. Even by ignoring him, you will still be communicating. 3. The message received is not necessarily assessment : We usually retake to others as if there was only one reality the way we perceive the world. We all leaves as separate individuals with different experiences and different views of reality. How we interpret verbal or non-verbal messages may be quite different from the meaning intended by the speaker. 4. Communication occurs simultaneously at more than one level : We communicate on the level of the literal constant of the information being conveyed as well as on the relationship level. In other wards, we do not convey information to the receiver verbally only. We are telling the other person how we see our relationship with him, how we see for selves and how he should interpret our message. The effective communication is an impotant ingredient of the functioning action system. It is impotant for all social workers to develop good communication skills. Communication is the sending and gathering and receiving masseges between two persons. Effective communication occurs when the persons involved in a situation accurately perceive the messages of the other person and in which the messages are send in a way that allows the receiver to take action or respond to the sender in ways that facilitate. The purposes of communication in the social work interection include :- 1. Gathering information need for the helping endeavor including strengths and resources. 2. Exploring ideas, feeling and possible ways to meet need based on the strengths and resources with in the client and the eco system. 3. Expressing thoughts. 4. Structuring the work of the action system. 5. Providing support, informing, advising, encouraging and giving necessary direction.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 101 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 101 Communication is a process. The sender conceptualizes the message and through a transmitter (voice or visual production) sends the message through a channel (sensory and modern technological means) to a receiver that interprets the message cognitively and effectively. This results in response, another message and or/an action. The response may result on feedback, a means for the sender to evaluate the effectiveness of the message. One other factor of the process is interference or noise interference consist of those influences from outside the process that affect the message while it is in the channel and cause distortion of the message as it reaches the receiver. Each part of the process has a particular function and special problems that can interfere with the effectiveness of the communication. The sender must conceptualize the message in a way that is understandable to the receiver. This requires understanding how the receiver deals with and interprets ideas and information: The transmission of the message takes place not only through verbalization but also through non-verbal means. Non-verbal communication takes place through vocal tone and behaviours, such or gestures, facial expression etc. The motivation, needs feelings and attitudes of the sender influence the manner in which the message is transmitted. The message has content, the specific words used—and it has meaning—how the content is treated: The choice of words, the order of ideas and words, the use of human and silence all contribute to the quality of the message. Special attention needs to be paid to cultural and personal differences in the meaning of words. Different culture can have different attitudes, values and beliefs that influence how words are interpreted. Beyond the cultural aspect, each of us has unique and individual life experiences. For example, take the word 'mothers'. For some one who has had a warm, loving relationship with his mother, the world will evoke positive feelings. However if a person had experienced the death of his mother at an early age, the word 'mother' will probably be associated with grief and loss. Even siblings can have different ideas of their mother based on their individual perceptions.

NSOU ? PGSW-II 102 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 102 PRINTTECH — 4th PROOF / 22.12.2021 ? ? ? ? ? ? ? ? ? ?
 Conceptualization Transmission Receiving Interpretation of of channel of of message message message message Sender Receiver
 Receiving response Channel Sending response or action Feedback or action Communication As the message travel through the
 channel, the possibility of distortion is great. The recognition of distortion and noise is a recognition of the transitional nature of
 communication. The manner in which the message is received also influences the effectiveness of the message. The receiver may
 perceive or interpret the message in a manner different than the intention of the sender. The receiver may not comprehend the
 meaning of the message as intended or may receive only part of the message Feedback is the means ascertaining if the message
 received and the message intended by the sender are sufficiently similar to make the communication effective. Feedback is sending a
 message about a received message to the sender of that message. Effective communication is communication in which the out come
 is the accomplishment of the purpose intended by the sender. Message that have the best chance of being effective are those in
 which. 1. The verbal and non verbal messages are congruent. 2. The message is simple, specific and intelligible. 3. The receiver can
 understand what is meant by the sender. 4. There is sufficient repetition for the receiver to sense the importance of this message from
 among other messages being received simultaneously. 5. There has been sufficient reduction of both psychological and actual noise.
 6. Feedback has been solicited from the receiver and sufficient time taken to ensure that the original message was received.
 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 103 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 103 Effectiveness in
 communication is affected by the credibility and honesty of the sender of the message. The receiver who has reason to trust the
 competence and reliability of the sender will tend to be receptive to the message and its expectations. Effective communicators tune
 into and are sensitive to the feelings and situation of those they are communicating with. They are assertive with out being overly
 aggressive or confrontational. Often the one to one communication is not with the client but with other professionals with significant
 others in the client's environment or with people who may in same way be involved in situation that one blocking client need
 fulfillment. These relationship are particularly important when the focus is on organizational or community change. When social
 workers find them selves in situations where the view point of the other may be different from their own, clear communication is
 imperative. Sometimes the differences can resolved through clarification of messages, other times a clear understanding of the
 differences allows work to progress. Brett Seabury has identified several problems that confront social workers in their communication
 with clients and significant others. 1. Double messages—Two contradictory messages are received simultaneously or in close
 succession. 2. Ambiguous messages—There messages have little meaning or several possible messages for the receiver. 3. Referent
 confusion—The words have different meaning to each person, or they may be professional Jargon not understood by the other
 person involved in the communication. 4. Selective attention and interpretation—This causes distortion of the message or confusion
 as to meaning. 5. Overload—This is the receiving of more messages than a receiver can interpret and respond to at any one time. 6.
 Rilual or order incongruence—This is the failure of the message sequence to follow expected or habitual behavioural patterns. 7.
 Regulator incompatibility—The use of eye contact and pattern of speaking and listening that regulate the communication of one partly
 in the

NSOU ? PGSW-II 104 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 104 PRINTTECH — 4th PROOF / 22.12.2021 interchange are
 not known to, used by or are unacceptable to another partly in the interchange. Other barriers to effective communication are
 inattentiveness assuming the understanding of meanings and using the communication for purposes different than those of others in
 the interchange (having hidden agendas). Cross-cultural communication is particularly problematic because the structure of messages
 differs from culture to culture. Even if the same language used, words are used differently or have different meanings. Each culture has
 its own idioms and expression and the syntax (form) of the language may be different. The differences make it difficult to listen to the
 messages and make it likelihood of misunderstanding great. The social worker must overcome the barriers of effective
 communication it the action system is to function to reach its goals. In social work communication is dialogue. The worker and client
 openly talk together and seek mutual understanding. This is the essence of communication in its most effective form. This kind of
 communication adds vitality to, nourishes and sustain the process of working together, the interaction. 4.10 Relationship Lives can not
 be lived without relationship to other people. All institutions are built around relationship. Institutions minus relationship have no
 existence help or troubles emanate from our relationship with the fellow human beings whether one is troubled or helped by some
 one, relationship does exist between them. Thus relationship in an emotional bond between people who interact with each other. It
 can be said to be a 'transmission belt' of communication, a set of responses and attitude between the interacting units. According to
 northern (1969), relationship consist "primarily of emotional responses which ebb and flow from person to person as human
 behaviour evoke different affective reactions." According to Perlman (1951), "His a condition in which two persons with some common
 interest between them, long term or temporary, interact with feelings." Relationship leaps from one person to the other at the
 moment when some kind of emotion mores between them.

88%	MATCHING BLOCK 317/544	SA MSWS-12 social work with individuals (Repaired ... (D117055443)
Coyle (1948) considers relationship as" a desirable process by which people are connected to each other and around which the group takes its shape and from" while Biestek		

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 105 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 105 (1957)

considers it as "the dynamic interactions of attitudes and emotion." Thus relationship is a natural phenomenon occurring between person interacting with each other singly or in groups. Relationship can be then shaped, manipulated or developed as we intend it to be.

The social work relationship is both professional and a helping relationship. A professional relationship is the one in which there is an agreed on purpose, one that has a specific time; one in which the worker devotes self to the interests of the client; and one that carries the authority of specialized knowledge, a professional code of ethics and specialized skill. In addition a professional relationship is controlled in that the worker attempts to maintain objectivity towards the work at hand and to be aware and in charge of her own feelings, reactions, and impulses. The helping Relationship : A great deal has been written about the nature of helping relationship. The characteristics that appear are as follows. 1. Concern for other— An attitude that reflects warmth sincere liking friendliness, support and an interest in the client. It communicates a real desire to understand person in situation. 2. Commitment and Obligation— A sense of responsibility for the helping situation. Dependability and consistency are also involved. The worker must have a willingness to enter into the world of others, with its hurts and joys, its frustration and commitments. 3. Acceptance—A non judgemental, noncritical attitude on the part of the worker, as well as a realistic trust of the client and respect for the clients feelings. Belief that the client can handle her own problems and can take charge of her own life. 4. Empathy—An ability

to communicate to the client that the worker cares, has concern for the client's is hearing what the client is perceiving, wants to understand and is hearing and understanding. 5. Clear Communication—The capacity to communicate to the client

in ways that enable the client to fully understand the message being sent. 6. Genuineness—The worker is honest about self and his own feelings. An ability to separate the experiences and the feelings of the worker from NSOU ? PGSW-II 106 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 106 PRINTTECH — 4th PROOF / 22.12.2021 those of the client. Genuineness on the part of the worker allows the client to become what he wants to be. 7. Authority and Power—The expectation that the client will work to fulfil needs and responsibilities and will want to resolve the situation. This involves encouraging the client to go beyond the present level of functioning and providing guidance and resources so that the goals can be reached. It involves insistence that the client do what she can for herself. The worker's knowledge and skills are a base for authority and power. 8. Purpose—The helping relationship has a purpose known to and occupied by, both worker and client. According to Bewah Compton, this is the most important characteristics. There is some disagreement about the place of advice giving in helping. Advice is tangible evidence of help. If advice is given, it should be done selectively and as a result of mutual problem solving by worker and client. It should be presented in a non demanding manner as some thing that might be tried, leaving the final decision for its use to the client. Another characteristics of the helping situation is the help that can be given by the client to the worker. The client helps the worker understand the situation or culture or diversity. This is help and should be recognized as such. An interdependent relationship encourages growth rather than dependency and is more helpful to the client. 4.11 Summary We learnt about the key concept of social case work which are required to work efficiently. These ideas will help us to know about the needs & problems of the client, & thus develop skills to carryout our professional activities with lots of responsibility & accountability. 4.12 Exercises 1. Why knowledge of self is important to a case worker? 2. What do you mean by the term 'self'. AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 107 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 107 3. What is the meaning of professional self ? 4. What areas of Self-knowledge should you examine in order to develop greater helping capacity? 5. What is the difference between a philosophy of life and value system? 6. What are the 5 dimensions which people develop in value system? 7. What do you mean by the term "Skill"? 8. What is the useful manner in which you develop skills in your daily living? How can you use this method in learning social work skills? 9. What values do you hold about people and their relationship to each other? 10. How will your values affect the manner in which you work with clients and others in social work situation? 11. How do you deal with situation in which your values and societal values are different? 12. Define accountability. How do you consider that accountability is important in social work practice? 13. Define communication. Discuss the purpose of communication. 14. Do you consider communication plays an important role in the lives of human beings? How? 15. Do you consider relationship is the key note of all types of work? Discuss. 16. Discuss the characteristics of relationship. 4.13 References 1. Upadhyay, R.K. relations. Better family life, improved schools, better housing, more hospitals and medical care facilities, protected economic conditions and better relations between religious groups help the individual in his adjustment and development. But his adjustment and development depend on the use of these resources by him. Sometimes due to certain factors, internal or external, he fails to avail existing facilities. In such situations, social case worker helps him. Thus, in social case work one to one relationship works in helping the individual for his adjustment and development.

To do case work, one has to understand the case work process, its tools and techniques along with the skills and attitudes of a case worker. This particular unit will reflect the same. Before embark upon the case work process, it would not be irrelevant to gloss over very briefly the system and role theory which are the crux of social work practice vis-à-vis social case work practice. 5.2 System Theory System theory first came to the full attention of the scientific community in the 1960s. It is not in itself a body of knowledge, rather it is content-free and is highly abstract set of assumptions or rules that can be applied to many fields of study to understand systematic change. Bertalanffy was the founding father of system theory, offered the following definition of a system as follows : A system is defined as a complex of components in mutual interaction. Concepts and principles of system theory are not limited to material systems, but can be applied to any (whole) consisting of interacting (components). Every system has a unique, discernible structure. Structure refers to the pattern of stable relationships among the members in the system and is based on the functions that each person carries out. Every system has a sub-system (a component of a system that is a system of its own). A sub-system may be thought of as an entity that is simultaneously a part and a whole. It contributes to the understanding that system members operate or behave at more than one systems level. Subsystems are commonly formed in families by generation, by sex, by interest, and by function.

Role is the sum total of the cultural patterns associated with a particular status.

All the systems have two interrelated systems of roles—the instrumental, dealing

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 111 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 111 with socio-economic tasks, and the expressive, dealing with emotions. Members of a system play both the roles at different times in their life. The establishment of a hierarchy, or the ranking, power, and control of the various members of a system, is another property of a system. Energy is also another important property of a system, which deals with system's capacity to act, to maintain itself, and to effect change. All the systems have the attributes of morphostatic and morphogenic dimensions. Morphostatic refers to the disinclination towards accepting changes in the system, which is taking place in the environment. On the contrary morphogenic implies that systems are always open to change. These can also be termed as open and close system. Every system must maintain balance between change and maintenance. Homeostasis, the most commonly used term to describe a system's ability to achieve balance, is the inclination of a system to restore its balance when threatened. Equilibrium is a system's ability to maintain balance without input from the environment. Steady state, the most desirable term used when speaking about a system's balance, occurs when a whole system is in balance and is maintaining a viable relationship with its environment. Entropy, on the other hand, is the tendency of a system to run down or become disordered or disorganized. Adaptability of a system refers to the attainment of a dynamic steady state and demonstrates an innate capacity for growth and development. Adaptive system must manifest some degree of plasticity and irritability vis-à-vis its environment, to maintain an interchange, have a source of variety or a pool of potential response to meet the changing environment. Isomorphism also signifies another property of a system which speaks about when two systems resemble each other. It can be best exemplified when two families have same value system and cultural background. Some basic assumptions of system theory, which are very crucial for case worker to conceptualize are: 1. A social system comprises interrelated members who constitute a unit, or a whole. 2. A change in any one member of the social system affects the nature of the social system as a whole. NSOU ? PGSW-II 112 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 112 PRINTTECH — 4th PROOF / 22.12.2021 3. A social system is adaptive or globally oriented and purposive. 4. There is a high degree of interdependence and internal organization among members of a social system. 5. A system's environment is that which is defined as outside the system's boundaries. 6. All systems are subsystems of other (larger) systems. 7. Transactions or movements across a social system boundaries influence the social systems' functional capacity and internal make up. 8. There is interdependency and mutual interaction between and among social systems. 9. The organizational 'limits' of a social system are defined by its established or arbitrarily defined boundaries and identified membership. 10. Boundaries give the social system its identity and focus as a system, distinguishing it from other social systems with which it may interact. 11. Change within or from without the social system that moves the system to an imbalance in structure will result in an attempt by the system to re-establish that balance. 12. The life of a social system is more than just the sum of its participants' activities. Rather, a social system can be studied as a network of unique, interlocking relationships with discernible structural and communication pattern. It is always perceived that every case worker while interacting with people has to come with close contact distinctly with six systems : ? Client system ? Target system ? Action system ? Agency system ? Professional system ? Problem-identification system People may be considered to be a part of a client system when (a) they have either asked for or sanctioned the worker's services; (b) they are expected to benefit

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 113 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 113 from those services; (c) they have entered into an explicit or implicit contract with the worker. The change agents 'need to change or influence in order to accomplish their goals' is the target system. The target system and the client system often overlap when it is the client, or the client's part in an intersystem transaction, which needs to be changed. The term action system is used to describe those with whom the social worker interacts in a cooperative way to accomplish the purpose of the change effort. There are an endless number of different action system in which the worker may be engaged. Social workers may be viewed as agency system or change agents who are specifically employed for the purpose of planning and working with the six systems toward the planned change. The agency or organization that employs them or of which they are a part can be thought of as the change agent system. Professional system is made up of the professional associations of social workers, the educational system by which workers are prepared. The values and the culture of the professional system strongly influence both the required and the permitted actions of the worker as change agent. The problem-identification system is the system that acts to bring a potential client to the attention of the worker. At the initiation of its contact with the worker, or the change agent system, it might be considered the client system. 5.3 Role Theory The structure of a social system may be described as a network of roles. The term role refers to the socially expected behavior prescribed for a person occupying a particular social status or position in a social system. Social norms for the position provide guides for the attitudes, feelings, and behavior that are permitted, expected, or prohibited for the individual filling that role. These norms will differ from culture to culture. In other words, the cultural environment in which the system finds itself will set different norms and expectations for role occupants. For example, all culture have prescribed specific role behavior for a woman filling the role and status of mother within the family system. However, these prescribed attitudes and behavior may differ significantly depending upon the cultural environment of the particular family system. Three related concepts relating to role are the notions of role set, role complementarily, and role conflict.

NSOU ? PGSW-II 114 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 114 PRINTTECH — 4th PROOF / 22.12.2021 When a role is either ascribed or achieved it is often found that certain aspects of the self are developed and brought out and certain aspects are neglected and often very consciously repressed. However, the more rigid and circumscribed the notion or role behavior, and the more certain characteristics of the person are tied to role position, the more stress individuals may feel in being placed in, or even in self-selecting that role. Role incongruity, another construct in role theory, has been defined as a situation in which one's own perception of one's role is defined from the expectations of significant others in the system or the environment. The example of role incongruity is often found in the differing expectations for the behavior of the client system held by social worker and the client system, or conversely, the difference between the client's notion of the role of the worker and that held by the worker. To summarize, the following concepts from role theory are important to case workers who are intimately working with individual having various sets of problems. ? Certain behaviours are prescribed relative to our position within that system. ? Every role involves both our own expectations and abilities and one or more others. ? Social functioning may be seen as the sum of the roles performed by a human system. ? There are emotionally charged value judgments on how people carry out their roles both on the part of the person occupying the role position and others. ? The notion of the role expectation implies that there are certain social norms that set the outside limits for congruent, non conflicted interactions, and transaction between positions within the system and between systems. ? The concept of role, role functioning, role expectations, and role transactions may be used to increase the knowledge base used for the assessment of the problem situation. Role failure and/or role conflict will tend to follow such as, ? The loss or absence of resources necessary to a system's ability to perform a role well. ? When systems are thrust into new roles without knowing the role expectations.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 115 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 115 ? When there is a conflict in role expectation on the part of interacting system. ? When there is a conflict of role expectations within the cluster of roles carried by one system. ? When there is ambiguity on the part of other systems as to role expectations. ? When the individual as a system or as a member of a social system, is deficient or handicapped in physical, intellectual, or social capacities demanded by the role. ? When crisis situations suddenly and without warning disrupt previous role patterns. 5.4

intake worker). This phase requires a very skillful probing into the client's problem, mopping up all the relevant areas of the person-in-his-situation. During one or two skillfully conducted interviews with the would-be client, the caseworker is able to assess; (1) What are the needs/problems of applicant person, and (2) How and where his needs can be best met. This obviously requires that the intake worker finds out the nature of need, if it can be met in the present set-up of agency's p[olicies, procedures, services and personnel, and what sort of competence and provisions will be helpful and is required to tackle his problem. How does the worker view the person and his problems diagnostically is also important to be mentioned. If his agency cannot serve the client's needs, which agency and which type of service are required to tackle his problems, and the need for referral are also decided at this stage by the intake worker.

Study According to Richmond, the caseworker must secure all and every fact that taken together, through logical and inferential reasoning, would reveal the client's personality and his situation for appropriate intervention. An exhaustive collection of facts about the client and his situation is called study—the first step (process) in the continuum. Psycho-social study is an ongoing process which begins with the first knowledge of the case, takes place in every interview, and extends over the entire contact. It may be defined as that part of the casework process which brings together the facts about a case and is distinctly different from the assessment of the meaning of the facts. The study involves exploration, observation and documentation of both objective and subjective facts from a variety of sources. In casework, the primary source of information is the client. One must learn when to go beyond personal report and seek data from collaterals, experts, significant others. Documents (records), psychological tests, and so forth. One must be careful to carry out this search acting in full respect for the client, maintaining confidentiality, and without violating the right of the client to participate in, so far as it is possible.

95%**MATCHING BLOCK 333/544****SA** 470E1120-Social Work Practices with Individual ... (D165249726)

Mutual engagement in the process is essential. It provides the caseworker with the client's own view of the problem. It gives the client an opportunity to clarify the problem in its various aspects, permits him to air his feeling about his situation, and gives him a satisfaction that genuine efforts are being made to help him. While fact-gathering proceeds until the case is closed, there is usually an emphasis on study at the time a case is opened. The extent and the breadth of the study depends on the situation presented by the client, the purpose and goals in seeking help, the situation as perceived by the worker, the range of treatment modes available, treatment potential and motivation for treatment, and on the agency structure and function. One needs to learn to determine the kind of study to be carried out in relation to these factors. 5.6

95%**MATCHING BLOCK 332/544****W**

Diagnosis Perlman (1957) has described three types of diagnosis that is carried on in social case work process. These are: 1. Dynamic diagnosis 2. Clinical diagnosis 3. Etiological diagnosis Dynamic diagnosis It gives an understanding of the current problem of the client and the forces currently operating within the client, within social environment and between him/his environment. It gives the answers of the questions—what is trouble?, what psychological, physical and social factors are contributing to it?, what solution is sought? What are the means available within the client, his environment? What are organized services and resources by which the problem may be affected?. The nature of such diagnosis is changeable because it is the beginning phase of social case work practice. Clinical diagnosis Under clinical diagnosis, the case worker attempts to classify the client by the nature of his sickness/problem. He identifies certain forms and qualities of client's personality maladaptation and malfunctioning in his behavior. The clinical diagnosis describes both the nature of the problem and its relation to the client and the helping

NSOU ? PGSW-II 118 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 118 PRINTTECH — 4th PROOF / 22.12.2021 means and goals.

MATCHING BLOCK 343/544

SA Social Case Work Block 1.pdf (D164874043)

Such type of diagnosis is useful only when it becomes apparent that a disorder of personality accompanies the social disorder, creating and complicating it. Etiological diagnosis It is concerned with the explanation of the beginning and life-history of problem of the client, basically that problem lies in the client's personality make up or functioning. The history of his development as a problem encountering, problem- solving human being may provide the case worker with an understanding of what his client suffers from and what the extent of his coping ability is likely to be (Perlman, 1957). Etiological diagnosis is more useful in explaining or rigid reactions.

When
in spite of the

W

fact that the client's present problems are in the centre of attention, the client's responses are not in accordance with, the past history and its appraisal in the light of client's current capacities, goals and problems are used for the treatment. This type of diagnosis contributes to understanding the nature of the problem to be dealt with, the person who has the problem, and the ways and means that can be anticipated as helpful.

Methods of data collection

83%

MATCHING BLOCK 335/544

W

for diagnosis The data for diagnosis can be collected by at least three primary means : Interviews—Interview guides are used for collecting information. There are a number of guides prepared by psychologists having the categories of information: client's behavior during the interview and physical description; presenting problems, nature of problems, historical setting, events

etc.

Checklists and Inventories—The following inventories may be used: The Fear Survey Schedule , questionnaire on client's perception of himself , family functioning and marital functioning, sexual functioning and instruments for assessing environments. Direct observation—Observation in those situation in which the behavior actually occurs, e.g., home or place of work makes the work of diagnosing very easy. Steps in diagnosis The following steps are taken while diagnosing a problem : ? The worker begins to focus on problematic behavior. He begins with the survey of both functional and dysfunctional behavior in

the environment. He

the final step of the diagnosis. Concentration on one problem at one time makes treatment process more manageable and allows both client and worker to channel their energies into one area. It is the best of handling and proper use of available resources. 5.7 Treatment Social case work consists of those processes which develop personality through adjustments consciously affected between men and their social environment. Generally, two types of efforts are required for social adjustment-environmental modification and/or change in behaviour and attitudes. Early case work treatment was placed on modification through the environment. Later on the development of ego psychology helped case workers to use intensive and direct treatment techniques. Now the aim of social case work treatment is to restore the individual to social functioning or to help him develop

the

94%**MATCHING BLOCK 340/544****W**

capacity in order that he may achieve at one and at the same time his own and society's betterment. According to Hamilton, treatment is the sum total of all activities and services towards helping an individual with a problem. The focus is the relieving of the immediate problem and, if feasible, modify any basic objectives difficulties which precipitated it. The social case work treatment are as follows : ? To prevent social breakdown; ? To conserve client's strength;

NSOU ? PGSW-II 120 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 120 PRINTTECH — 4th PROOF / 22.12.2021 ?

Crisis Intervention Crisis Caplan has provided various definitions of crisis. He considers that a crisis is provoked when a person faces a problem for which he appears not to have an immediate solution and that is for a time insurmountable through the utilization of usual methods of problem solving. A period of upset and tension follows during which the person makes many attempts at the solution of the problem. Eventually, some kind of adaptation and equilibrium is achieved which may leave the person in a better or worse condition than prior to the crisis. Caplan suggests that the essential factor determining the occurrence of a crisis is an imbalance between the perceived difficulty and importance of the threatening situation and the resources immediately available to deal with it; the crisis refers to the person's emotional reaction not to the threatening situation itself. Caplan's crisis theory is grounded in the concept of homeostasis. According to him, the organism constantly endeavours to maintain a homeostatic balance with the outside environment. When this balance is disturbed either by physiological or psychological forces, the individual engages in problem solving activities designed to restore this homeostatic balance. A crisis is considered an upset of a steady or homeostatic state. Parad has also adopted Caplan's definition of crisis, but stresses the importance of the individual's perception of what constitutes a crisis. According to him, the crisis is characterized by the following phenomena :

NSOU ? PGSW-II 122 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 122 PRINTTECH — 4th PROOF / 22.12.2021 ? Specific and identifiable stressful event. ? Perception of that event as meaningful and threatening. ? The response to the event and ? Coping tasks involved in successful adaptation. The event precipitating the crisis must be perceived by the person as a stressful situation before it becomes a crisis. Sifneos has identified 4 components of a crisis which are : 1. The hazardous event that starts the chain of reactions which leads to the crisis. Sometimes it is a sudden unexpected event, while other times it can be a developmental change. 2. A vulnerable state of the individual which is essential for the crisis to develop. 3. The precipitating factor that is the final event or circumstance that makes the hazardous event unbearable and results in the crisis. 4. The state of active crisis. Baldwin had talked about six types of crisis : ? Dispositional crises produced by problematic situations that can be remediated through an appropriate management such as making a referral, providing information and/or education, making administrative change, etc. ? Crisis of anticipated life transitions that reflect normal life transitions over which the person may have little control. ? Psychiatric emergencies, in which general functioning is severely impaired. ? Crisis reflecting psychopathology, in which pre-existing or current psychopathology complicates their resolution. ? Crisis resulting from traumatic stress, which are precipitated by external stressors or situations that are unexpected, uncontrolled and emotionally overwhelming. ? Maturational/developmental crises, that results from attempts to deal with interpersonal situations that reflect internal unresolved problems.

Social Case Work Block 2.pdf (D164874044)

Lindemann, Caplan and other theorists have provided a firm theoretical basis for what has come to be known as crisis intervention.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 123 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 123 Butcher, Stelmachers and Maudal have discussed the historical origins of crisis intervention. The high incidence of traumatic neuroses in World War II created a great need for expanded psychological services: as a result of it, new treatment approaches were developed to meet the needs of the soldiers who experienced stress related neuroses. The treatment was given to them in the Unit as soon as possible after the breakdown and its aim was mainly to relieve the symptoms.

97%**MATCHING BLOCK 351/544****SA**

Social Case Work Block 2.pdf (D164874044)

Ewing has defined crisis intervention as the informed and planful application of techniques derived from the established principles of crisis theory, by persons qualified through training and experience to understand these principles, with the intention of assisting individuals or families to modify personal characteristics such as feelings, attitudes and behavior that are judged to be maladaptive or maladjustive.

Hafer and Peterson ,in a less formal definition, refer to crisis intervention as the kind of psychological first aid that

100%**MATCHING BLOCK 352/544****SA** Social Case Work Block 2.pdf (D164874044)

enables to help an individual or group experiencing a temporary loss of ability to cope with a problem or situation.

96%**MATCHING BLOCK 353/544****SA** Social Case Work Block 2.pdf (D164874044)

Levels of crisis treatment Jacobson, Strickler and Morley have discussed different levels of crisis treatment : Environmental manipulation—In this case the helper serves as a referral source, getting the client in touch with a resource person or facility. General support—It consists basically of active listening in a non threatening manner, allowing the person to speak in some detail about his problem without challenging him. Generic manipulation—It is helping the person resolve a crisis by accomplishing certain psychological tasks that are the same for all the people experiencing the same crisis regardless of individual differences. Individual approach—It focuses on the specific needs of the person in crisis and emphasizes the assessment of the psychological and psychosocial processes that are influencing the client. It looks at the specific psychological tasks and problem solving activities that each person must accomplish in resolving a particular crisis. These levels of intervention are not mutually exclusive although there is usually one that is predominantly used in the treatment process. Therefore, it is possible to use an environmental manipulation and at the same time use a generic or individual approach or other combinations of treatment strategies.

NSOU ? PGSW-II 124 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 124 PRINTTECH — 4th PROOF / 22.12.2021 Models of crisis intervention
 Re-compensation Model—It is a patient-oriented model, that is, it focuses on the patient exclusively. The main goal of the treatment intervention is to stop the decomposition, gets the symptoms under control and return the patient to his pre- crisis levels of functioning. The model does not aim at explaining the failure to cope nor at understanding the past dynamics of the person that led him to the crisis. Moreover, there is not much concern about the person's future adjustment. The military treatment of the traumatic neuroses is a typical example of the re-compensation approach to treatment. Stress-Oriented-Model—It takes into account the stress event. The goal of the intervention is to achieve successful resolution of the specific tasks posed by the stress event. It emphasizes the development of problem-solving strategies and coping skills and it is concerned with the future adjustment of the individual to other stressful situations. This model has been developed to great extent by Lindemann and Caplan. System-Oriented Model—It is one advocated by Langsley and Kaplan; it takes into account the social field in which the person deals with the crisis. It is based on the belief that not only the development but also the outcome of the crisis depend in part on the social field of the person in crisis, and therefore emphasizes the system approach to intervention. Family- Oriented crisis treatment is an important development of this model, which is based on the assumption that the symptoms of the family member who seeks treatment are usually an expression of family conflicts. These are the three basic models on which most of the crisis intervention strategies are based and the case worker has to adopt any one of these or combination of all. While all of them seek a resolution of the crisis state, they focus on different aspects, namely the individual, the stress event and the system, in their attempt to deal with the crisis situation. Goals of crisis intervention Although the goals of the crisis intervention have been stated in various ways by different authors, there seems to be some agreement with respect to the main focuses of the intervention. France (2005) states that restoring or improving the adjustment of the individual can be considered one of the main aims of crisis intervention. He
 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 125 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 125 points out that crisis is distressing timelimited episodes, which mean that they end with or without outside help. Crisis intervention aims at limiting the duration and severity of these episodes. Puryear defines the minimum goals of crisis intervention as alleviating the immediate pressure and restoring the individual to at least his pre-crisis level of functioning. He points out that ideally the resolution of the crisis should be a growth experience that leaves the person better equipped to cope with future difficulties. Rapoport has discussed 4 main goals for crisis intervention : ?

92%**MATCHING BLOCK 354/544****SA** 470E1120-Social Work Practices with Individual ... (D165249726)

Relief of symptoms. ? Restoration to the optimal level of functioning that existed before the present crisis. ? Understanding of the relevant precipitating events that contributed to the state of disequilibrium. ? Identification of remedial measures that can be taken by the client or family those are available through community resources.

The process of crisis intervention Various authors have attempted to describe the process of crisis intervention; some have focused in the succession of psychological tasks that the individual follows during the treatment, others on the problem-solving activities in which the person in crisis needs to be involved. Most authors cover to a certain extent the different functions of the crisis therapist during the treatment process : Lindemann states the following : 1. Accept the pain of bereavement. 2. Review his relationship with the deceased and become acquainted with the alterations in his own modes of emotional release. 3. Express sorrow and sense of loss. 4. Find an acceptable formulation of his future relation to the deceased. 5. Verbalize his feelings of guilt and find persons around him who he can use as primers for the acquisition of new patterns of conduct. According to Aguilera ; ? The client should be helped to gain an intellectual understanding of the crisis.

NSOU ? PGSW-II 126 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 126 PRINTTECH — 4th PROOF / 22.12.2021 ? The client is helped in expressing his present feelings towards the crisis. ? The client and the therapist explore alternative ways of coping with the crisis. ? Both of them work on anticipatory planning. According to Kalafat; ? Establish a therapeutic relationship with the client. ? Define the problem. ? Explore the feelings associated to it. ? Review previous attempts to resolve the problem. ? Explore the alternatives and develop a plan of action. Smith has also discussed about the tasks to accomplish during the process of treatment : ? Identify with the client the precipitating event. ? Discuss how the client feels about the crisis, allowing emotional catharsis. ? Explore with the client how he has tried to cope with the crisis that is the problem-solving activities and coping skills that he has used. ? Assess whether or not the client can be helped on an outpatient basis; this is particularly important in those crisis in which there is a suicidal and/or homicidal risk. ? Explain to the client why he is in a state of crisis. ? Discuss with the client tasks that he can accomplish in successfully resolving the crisis. According to Butcher; ? Offering emotional support. ? Providing opportunities for catharsis. ? Listening selectively for workable material. ? Providing factual information and clearing up misconceptions when necessary. ? Formulating the problem situation. ? Being empathic and to the point. ? Predicting future consequences if the patient follows his present course of action.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 127 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 127 ? Clarifying and reinforcing adaptive mechanisms. ? Working out a contract with the client. ? Follow-up of the client's progress after termination of treatment. Puryear and France have emphasized the focus on problem-solving during the treatment process. According to them problem-solving begins with the therapist recognizing the client's distressing emotions and seeking to clarify the reasons that led to the initial contact with the therapist. The release of tension is achieved through the client's share of feelings; relating them to conditions that influenced the development of their crisis, increases the emotional insight and control of the client. Considering the alternatives to the problem and developing an action plan that describes the behavior intended to alleviate the problem are the last steps of the problem-solving process. Technical characteristics of crisis intervention Promptness of intervention—It was pointed out the heightened susceptibility of a person to intervention during a crisis period. This has been one of the reasons for the emphasis on the immediate access to the person in a crisis. As Rapoport points out, that a little help rationally directed and purposively focused at a strategic time is more effective than more extensive help given at a time of less emotional accessibility. It is therefore important to take advantage of the person's readiness to work. The availability of crisis intervention within 24 hours of the client's initial contact has been regarded as optimal. Present centeredness—Crisis intervention is focused on the client's present problems, particularly those that precipitated his request for help. It is important to maintain this narrow focus in order to utilize the treatment more effectively. Butcher and Koss consider that the achievement and maintenance of focus is one of the most important technical aspects of crisis intervention. Time limits—It is important to set time limits on the treatment. As a result of the time constraints, the treatment goals are limited. Patterson and O' Sullivan have stated that the goals of most crisis intervention programmes can be achieved in 3012 sessions. The client's awareness of it enhances and maintains the client's motivation and speeds up their change process. Preventive emphasis —Crisis intervention seeks not only to resolve the present crisis and to relieve the symptoms, but also help the clients develop new problem-

NSOU ? PGSW-II 128 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 128 PRINTTECH — 4th PROOF / 22.12.2021 solving procedures and more adaptive mechanisms for coping with future problems and crisis. Sometimes crisis intervention may serve as a stepping stone to other therapeutic services, preparing the client for further treatment. Reality orientation—It is helpful to confront the client with the unrealistic or maladaptive nature of his beliefs or behaviours and to point out the possible negative consequences of the perseverance of current patterns. It is important to help the client develop and maintain clear and correct cognitive perceptions of his situation and problems. Family and community involvement—It has been noted that a crisis is usually also experienced to some extent by the family and social network of the referred person. Therefore it becomes very important to involve the family and the community in the treatment process as soon as possible, in order to facilitate not only the resolution of the crisis but also the post-crisis adaptation of the individual. Therapist role—The time limitation of crisis intervention forces the crisis therapist to be much more active and directive than he would be in 'traditional' psychotherapy. It has been noted that traditional attitudes of therapists such as objectivity, uninvolvement and non-directiveness are not appropriate in the crisis context. The therapist must be able to actively explore areas of interest and to direct the conversation toward those topics that might help in the resolution of the therapist's flexibility, ability to use various therapeutic techniques and adapt his intervention to meet the patient's needs. Therapeutic relationship —Developing a working relationship quickly becomes a critical aspect of the intervention due to the time limitation to the treatment. Therefore positive transference is essential in crisis intervention. The client should have at least a somewhat hopeful expectation that the therapist may be able to help him. Therapeutic tools—The use of reflection is often helpful at the initial stage of the intervention, since it communicates understanding, gives the client and opportunity to clarify his feelings and keeps the focus of the interaction on the client. Interpretations aimed at the achievement of insight can be pursued but with caution .Problem- solving techniques are some of the most important tools used in the intervention process. Analysis, advice or interrogation can also be used in appropriate circumstances.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 129 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 129 Selection of patients—France has noted that crisis intervention is most effective with essentially 'normal' people who are experiencing overburdening problems. Traditionally it has been considered that the clients' best suited for crisis intervention programmes were: those in whom the behavior problem is of acute onset, those whose previous adjustment has been good, those with good ability to relate and those with high initial motivation. Duration and the severity of the problem, diagnosis and motivation for treatment are the criteria as being most often used in the selection process. Lang 91974), however believes that crisis intervention can be used with chronic or deeply entrenched problems too. Use of lay therapists—There is a growing trend toward the use of para- professional and non-professionals as crisis therapists. While at one time their use was considered the answer to a critical manpower shortage, their contribution has proved to be extremely valuable. As McGee (2010) points out 80% of suicide prevention and crisis intervention centers are operating with non-professionals as their primary staff resource. Professional people are often used in the role of consultants. It is important to develop valid criteria for screening and evaluating the effectiveness of lay therapists in doing crisis work.

5.9 Assessment The first step in the generalist social work process is assessment, sometimes referred to as diagnosis. Interviews are a very important source of information in assessing the problem. The assessment phase of the social case work process also includes the study aspect of "study, diagnosis, and treatment" the classic description of the social case work process. Assessment is the phase being discussed when the term analysis is used. The development of understanding about individuals, families, small groups, agencies, and communities an important aspect of assessment. The same understanding about any system that are requisite for professional interaction with that system are the core of the assessment stage of the interventive or service process. A social study is an assessment. The content of group meetings is another important source of information. Observations of individual and group behavior in the community are also important sources. Questionnaires and other research tools are sometimes used to gather needed information as are various psychological tests.

NSOU ? PGSW-II 130 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 130 PRINTTECH — 4th PROOF / 22.12.2021 Assessment is an essential ingredients for the individualization of people and social systems. So, assessment can be

78%

MATCHING BLOCK 355/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

defined as a process and a product of understanding on which action is based.

It is the collection and analysis of information, the fitting together of available facts so they yield meaning. Barker (2003) said " Assessment is a process of determining the nature, cause, progression and prognosis of a problem and the personalities and situations involved therein: the social work function of acquiring an understanding of a problem what causes and what can be changed to minimize or resolve it. Assessment is a complex process at the core of the service process. The need for development of an understanding of clients, whether they are individuals, families, or small groups, and of the system in the client's environment in relation to the interactional process. These schemes are tools for gather information. They provide a structure for information gathering, but care must be taken that relevant information that falls outside the scheme is not overlooked. Assessment, although a creative process, is also scientific in that it is a manifestation of the problem solving process. Some of the important characteristics of assessment are : It is ongoing—It takes place throughout the life of the helping endeavour. During the early stage it is a primary focus. However, during later stage when the work of doing something about need, of solving the problem, of intervening into transactions among system takes place, assessment is also a concern. As the client and worker engage in their work together, new information becomes available and new understandings emerge. These then become a part of the ongoing assessment. The ongoing assessment process leads to greater understanding about persons and situations as the social case work process-the working together of worker and client- progresses. Assessment is twofold, focusing both on understanding the client in his situation and on providing a base for planning and action—Information must be gathered about the people and systems involved, about their interrelationship and their environment. Information should be collected about the need, block to need fulfillment, the problem, and the people and systems significant to the need and problem. It is also important to determine strengths, limitations, motivation for change, and resistance to change that are applicable to the persons and the systems involved. When dealing with larger system, it is important to gather information

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 131 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 131 about the demography of the situation and the problem being considered. Also it may be important to gather information about interagency relationships, coordination, and cooperation; funding and other resources available or potentially available; attitudes, values, and cultural factors that may affect the problem solving work. This information is gathered in many different ways. Of prime importance is the client's perception and feelings about the problem and the situation. The manner in which the client tells the story, including observation of nonverbal communication, provides important information. Judgments about the consistency of the story, pattern of interaction and behavior and the client's cognitive capacity, and coping mechanisms can develop from listening to the story. Other sources of information may be previous case records and reports, from other interested persons. When gathering information about large system such as community, both key persons in the community and those involved with the problem should be used as informants. The information being collected should always be connected to the problem being worked on. Assessment is a mutual process involving both client and worker—The client is involved in all aspects of assessment to the maximum of his or her capacity. The primary content to be assessed arises from the worker-client interaction in the interview or in group discussions. Content also arises from the information provided as the worker observes the client in the interview or in group discussions. It arises from observations of the client in life situation. The worker discusses observations and other information and knowledge with the client in establishing the meaning of the facts or the understanding of client in situation. The client's response is an important part of the information to be obtained. The client is also made aware of the relationship of the understanding and the interventive planning, possibilities and limitations. There is movement within the assessment process—The movement usually is from observation of parts of the service situation, to identification of information needed for understanding, to collect facts about parts of the service situation, to explanation of the meaning of the facts collected, to putting together facts and their meanings about various parts in order to understand the total situation. The initial observation is usually through the eyes of the client. As the client describes these observations to the worker, the worker adds additional observations. Together, the worker and the client identify the parts of the situation. The parts identified include

NSOU ? PGSW-II 132 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 132 PRINTTECH — 4th PROOF / 22.12.2021 those that are impacting on the situation in any significant way. The worker and client then identify the information they need to understand the situation. Both horizontal and vertical explorations are important—In early stages of assessment it is usually helpful to look at the situation horizontally; the situation is examined in breadth to identify all possible parts, interactions, and relationship. The purpose of this horizontal exploration is to determine the block to need fulfillment. Later, those parts identified as most important to the situation or to the solution of the problem are examined vertically or in depth. The information gathering process can move from horizontal to vertical and back to horizontal several times as the worker and client explore the need, problem, and the situation. The knowledge base is used in developing understanding—The worker uses his knowledge base as one means for developing understanding of the client in the situation. The understanding of an individual takes into consideration factors of human development and human diversity. The understanding of a family is related to what is known about family structure and family process. The understanding of an agency considers knowledge of bureaucratic structures. The understanding of community functioning calls for knowledge of economics and political science. The understanding of a family with a retarded child calls for knowledge about mental retarding and family reactions to having a mentally retarded family member. Assessment is individualized—Human situations are complex; no two are exactly the same. Each assessment is different and is related to the differential situation of the client. It takes into consideration the different parts of the situation and relates these to the unique whole that emerges. Assessment identifies in life situations, defines problems, and explains their meaning and pattern—Assessment makes use of the problem-solving process in specifying the need and what is blocking need fulfillment. Judgment is important—Many decisions must be made regarding each assessment. Decisions include what parts to consider, which part of the knowledge base to apply, how to involve the client, and how to define the problem. The kinds of decisions that are made greatly affect the content and interpretation of that content. There are limits to the understanding that can be developed—No assessment is ever complete. Not only is it impossible to gain complete understanding of any situation but it is also undesirable. Understanding takes time. Clients in need are

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 133 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 133 seeking help, and this help often must be given quickly. The worker must decide what understanding is necessary to give that help and then be aware of new understanding that develops in giving the help. The worker also must be comfortable with the uncertainty of limited understanding.

5.10 Problem Solving Process in Case Work The social case work process is carried out in interaction with individuals—worker, client, and significant others. The interaction may be person to person or may involve systems of people. Thus, it is important for the worker not only to have skill in the use of the process in her own thinking but also to be able to carry the process out in interaction with others. Indeed, her role is often to enable or teach others to participate in interactive problem solving. The outstanding characteristics of the problem solving process in social case work practice is the inclusion of the client as much as possible in the work at each step of the process. The client expresses the need of concern that is the source of the problem. The client also finds much of the information needed in the process, validated information sought from other sources, participates in developing the plan of action and in implementing and evaluating it, and develops problem-solving skills to use in coping with other life situations. Problem-solving, a creative and cognitive process is used by the worker to think about a social work situation in order to develop understanding of the client in the situation, identify the problem to be worked on, and formulate possible plans and ways of intervention. Problem solving process is used with clients and significant other persons with the capacity to affect a client's situation in an important way to move through study, assessment, planning, action, and termination. Interaction in nature, it complements the cognitive problem solving process. Further understanding of this process is gained by considering each step. Problem or concern brought to worker or agency—Usually the problem is not well specified when someone comes to an agency with a difficulty of their own or one about which they are concerned for someone else. Usually they are assigned to a worker to explore the concern, to identify the needs involved, to identify the blocks to need fulfillment, to formulate the problem to be worked on. Sometimes the concern is such that the worker goes out to a prospective client to determine if there

NSOU ? PGSW-II 134 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 134 PRINTTECH — 4th PROOF / 22.12.2021 is need and a willingness to explore it with the worker. Occasionally, the worker and client have a mandate from a legal body to work on a need or problem. Initial statement of problem and its possible causes by worker and client— At this point the worker begins to determine with the client if the client sees the need and problem in the same way that the worker does. The worker asks what is the problem? Why does the problem exist? The situation in which the problem takes place and the seriousness of the problems are discussed. Necessary clarification and modification occur to see if agreement can be reached. With at least some beginning agreement about the nature of the need and problem to be worked on, worker and client begin to explore together what might be causing the problem. The worker's preliminary assumptions are considered together with the client's thinking about the situation. The client is asked to give feedback on whether these assumptions might be valid. The worker shares with the client what might be happening in the situation. The worker uses his knowledge base to explain the situation and to identify the underlying factors related to the problem. Dealing with values is central to social case work practice. The social case worker must be concerned with both societal and personal values, with the client's and with her own. The worker also must function within the framework of social work values and ethics. The worker must be comfortable with discomfort as the search continues for congruence between believe and doing for resolution of conflict among values. This calls for tolerance and patience. When exploring causality, social workers look to the client's own behavior, the situation in which the client is functioning relative to the problems, and to environmental factors that may be contributing to the problem. Determination of desirability of continuation by worker and client—Worker and client discuss the kind of the worker also discusses with the client the kind of help available and the worker's recommendations. They discuss whether the agency and the worker are the appropriate source for help. Sometimes all a person needs is something to help formulate their problem or to design the steps to be taken to unblock need fulfillment. In such situation the client may decide not to continue. In other situations the client does not want to use the help offered, which the client can choose to refuse unless she is mandated to receive service. Sometimes the worker or agency may not be able to provide the service that is indicated. In which case the

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 135 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 135 worker would refer the client to an appropriate source of help? If no appropriate help is available, the worker may consider some means of resource development for the clients help the client or for future clients. Selection of information to be sought—If the worker and client decide to continue to work together, the worker discuss with the client the information he needs a an order to more fully understand the problem and the situation. The client is asked to suggest people who may be of help. Family and friends are involved if this is appropriate. The worker may also begin to obtain information about resources that may be useful in the given situation. The context of the problem is given particular attention. Problems arise in a particular context and must be solved in that context. Without a thorough understanding of the relationship of the context to the problem and how the context would affect any plan and its implementation, information of vital importance may be missed. Collection of information—Once the necessary information is identified, worker and client carry out the tasks needed to collect the information. Wherever possible, the client is used as the primary source for the information. Sometimes clients do not realize the importance of a piece of information so the worker must take responsibility to explore the situation with the client. It is often advisable to collect similar information from several sources so the validity can be checked. Assessment of person in situation by worker and client—After gathering necessary information, the worker uses her knowledge base to consider the meaning of the information, She compares information from various sources, considers the influence of values and biases that may be at work, and develops an explanation of what seems to be client's view of the situation given this assimilated information. Adjustments are made based on any new information the client may provide. The worker and client again determine the desirability of working together. Determination of goals, outcomes, and constraints of any plan by worker and client—If the decision is to continue to work together, the worker and client discuss what the outcome of their work together should be. The worker shares his thinking about what might be accomplished together, based upon the worker's cognitive problem solving. They discuss what should be accomplished and how much time and energy both the worker and the client can give to working together on the problem. Any other constraints that may be at work are identified and

NSOU ? PGSW-II 136 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 136 PRINTTECH — 4th PROOF / 22.12.2021 discussed. Preliminary goals for the work together are developed. A preliminary contract is also developed. Determination of possible plans of action by worker and client—The worker and client now begin to discuss ways in which they may go about reaching the goals. The worker again shares responsibilities based on her use of the cognitive problem-solving process. The worker's knowledge of possible strategies and resources that might be available is most important at this stage. The worker discusses implementation of the use of the various suggested plans. It is also important to be sure the means of the plans relate to the goals to consider ends before means. Worker and client consider together what they know of the context of the problem and how each of the plans might work in that context. The client expresses reactions to and preferences for the various suggested plans. Synthesis and choice of plan including development of detail tasks, techniques—Together the worker and client now decide on how they are going to proceed in working on the problem at hand. They specify what is to be done, with whom, and by when. Goals are modified if necessary. Usually the final plan is a synthesis of the suggested plans of both the worker and the client. Contract between worker and client—When agreement is reached between the worker and client, a contract may be written or a verbal agreement made./ The worker should be sure that the client understands the various parts of the contract, what the client can expect of the worker, and the client's own responsibilities in this situation. The worker should also explore any negative feelings that the client may have about the contract before it is finalized. Implementation of plan—The worker and the client now can proceed to do what it is that have contracted to do together. The worker only does for the client what the client cannot do for himself. The worker gives the client help, support, and direction in carrying out his tasks. Evaluation by worker and client—Whenever it seems appropriate the worker and client stop to see how their plan is working out. Are expected changes happening? If not, whether there is a need to change the plan or the contract? Are the goals feasible or appropriate? This evaluation is particularly important when the tasks laid out in the contract have been accomplished. In that case, the focus is on whether the goals have been reached.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 137 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 137 Return to appropriate step or termination—If the goals have been reached, it is time to move to the termination phase, unless there is some agreement that there are other problems to be worked on. If other problems remain, the process begins anew. If the goals have not been reached, consideration needs to be given as to why they have not been reached. The worker and the client determine together whether to return to some earlier step or to terminate at this point. 5.11 Termination The final stage of the case work process is termination, or the ending stage. Although ending the process is often slighted, it is nevertheless an important aspect of the social work endeavour. Termination is planned from the beginning of the work together of worker and client. A social work relationship that focuses on meeting the needs of the client terminates when those needs are met. The time line that is a part of the plan of action specifies the anticipated time for termination. The termination work can enhance the client's social functioning. It can also add to the understanding developed by both client and worker as they worked together. Any ending arouses feelings that may be strong. These feelings can be used as a means for growth, or they can be denied or suppressed, perhaps to arise and interfere with later social functioning. Handling a termination is an important skill for case workers to develop. Evaluation is closely related to termination. Evaluation takes place during the entire social work process, but it is an important aspect of any planned termination. In considering termination, two areas will be discussed : (a) the kinds of termination and the reasons for clients' and workers' terminating a helping relationship; (b) the content of the termination process-dealing with feelings, stabilizing change, and evaluating with clients. Termination is an aspect of social case work that is often given inadequate consideration. Endings are painful for workers as well as for clients. Workers sometimes make decisions about the desired goals of service that prolong the time of service beyond that which the client desires. This has resulted in many unplanned terminations. Many researches have shown that :

NSOU ? PGSW-II 138 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 138 PRINTTECH — 4th PROOF / 22.12.2021 ? Recipients of brief, time-limited treatment show at least as much durable improvement as recipients of long-term, open-ended treatment. ? Most of the improvement associated with long-term treatment occurs relatively soon after treatment has begun. ? Regardless of their intended length, most courses of treatment turn out to be relatively brief. In recent years an emphasis is given on short-term service. The service considers the client's desires and expectations in the planning to a greater extent than in long-term service. Plans are much more specific, with specific goals and time frame for reaching those goals. Goals are also measurable so it is much easier to know when the purpose of the service has been fulfilled, the goals met, and the contract fulfilled. The ending is more apt to be planned by the worker and the client rather than the client deciding that the worker's help is no longer needed. Termination can take place at any point in the process: when the goals set by the worker and client have been reached and the client feels comfortable in carrying out those goals without help from the worker; when clients feel that sufficient help has been given so they can meet the need or deal with the problem on their own; when it becomes apparent that no progress is being made or the potential for change is poor; or when a worker or an agency does not have the resources needed by the client or does not have the sanction of the agency to deliver the service needed. This last condition may result in a referral. Sometimes clients terminate because the systems upon which they are dependent are threatened by the possibility of change in the client and influence the client to terminate. If a worker is leaving an agency, termination activity results in transfer to another worker within an agency or referral to another agency for continued service. It may also result in a decision by the worker and the client to work on another goal or use another strategy in reaching an elusive goal and thus continue together with a new plan of action. Termination is an expectation discussed with clients from the beginning of the work together; it is planned for by the worker and the client together. When a worker senses that the client is not using the help being offered, or when the client is missing appointments or in other ways is indicating that termination may be advisable. It is

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 139 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 139 time to discuss possibility of termination. This is done to maximize the benefit that can come from a planned termination and to minimize feelings of anger and guilt that might interfere with seeking help in future. When the worker-client relationship is being terminated because the worker is ending employment or is being transferred to a new position, special consideration should be given to the client's feelings. In some cases this is also a good time for the client to terminate with the agency as well. At other times, the decision is to transfer the client to a new worker. The client may be angry because the worker is breaking a contract. The client may be feeling deserted or may have a reawakening of old feelings about previous separations. The worker may be experiencing feelings of guilt about leaving the client and breaking the contract. The worker also may be absorbed in plans for a new job or in the demands of a new situation. When a worker finds it necessary to engage in the termination process with a client because of his own plans to leave his current position, it is important to bring the client's feelings into open, however painful. Sometimes clients can also deal with previous painful separations through this. The worker should be prepared to accept the client's anger, and resentment and, whenever possible, should also help the client accept the new worker. Often a useful technique is for the worker to introduce the client to the new worker and for all three persons to discuss the work that has been done and the possibilities for future work. In order for a case worker to be effective in terminating with clients, she needs to be aware of some blocks to effective termination that arise because of her feelings and attitudes. There may be a tendency for the worker to hang on to clients. This may arise because of a reluctance to terminate a relationship in which the worker has been getting some of her own needs met. The hanging on may be because of a need to control others. Other reasons for hanging on may be that the worker expects more of the client or the situation than is warranted or that the worker is ambitious and is seeking 'the perfect case'. Sometimes a worker wants to compensate for what the client may have lost in relationships or otherwise. Awareness of these feelings and a focus on the client's needs and goals can prevent these blocks to effective termination. Another factor of the termination phase is the nature of the worker-client relationship. Anytime a close working relationship develops, both the worker and the

NSOU ? PGSW-II 140 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 140 PRINTTECH — 4th PROOF / 22.12.2021 client are apt to have strong reactions to termination. Where this is the case, more time must be allowed for the termination process so that feelings of loss can be handled properly. It should not, however, be assumed that all clients view termination as loss; some, especially those mandated to service, may view termination with relief. Other clients view the work together as a necessary interlude in their lives but are pleased because they have gained understanding and coping skills so they can get on with the business of living without further help from the worker. If worker and client have developed the habit of consciously terminating each session together, they have developed a good base on which to develop the termination of work together. Summarizing each session-what has been done and what is to be done-should give the client a good sense of the process and how much time there is before the work is completed and termination takes place. Planning termination should avoid a surprise ending and the feelings of desertion that go with such ending. Evaluating at the end of each session should give the worker an understanding of the client's sense of the work together and allow for corrections so that unplanned or precipitous termination does not take place. What has been done in a small way at the end of each session can then be done in a more complete manner at the end of the work together. Components of termination Disengagement—Endings bring about a cessation of relationships. If relationships have been meaningful, feelings are aroused and should be dealt with. An unplanned termination leaves the client to deal with these feelings on her own, which often results in a sense of unfinished business. It is assumed that the client is aware that termination will take place when goals have been reached. Nevertheless, when faced with actual termination, the client and the worker should face the reality of their feelings. The next reaction to termination is usually a period of emotional reaction. Feelings or emotions may arise from fear of loss or fear of the unknown. There may be feelings of sadness or of grief over the impending loss; there may be anger. There may be an arousal of feelings associated with old wounds from previous disappointments and separations. There may be regression to old patterns of behavior. Regression may be a client's attempt to say that she is not ready for termination. At

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 141 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 141 this stage it is important for the worker to accept the client's feelings and to help the client examine these feelings and the fears, anxieties, and past experiences that are the source of feelings. Acceptance and help in the examination of feelings enables a working through of the feelings. In a sense, the client is helped to go through a process of mourning and is enabled to disengage from the relationship in a helpful manner. Another means of dealing with disengagement is reminiscing about or reviving what has been done in the work together. Doing this can help clients see the positive aspects of the work together as well as help them to develop the understanding that growth often has pain associated with it. At this time, workers also should try and minimize any guilt the client may have about the work together. Clients sometimes regress when termination approaches; sometimes they also introduce new problems. The worker and client together need to examine why these new problems have been introduced and whether there is a valid reason for continuing the service with a focus on the new problems or whether the client can indeed work on these problems in other ways. The social case worker needs to develop skill in disengaging from relationships with clients. This needs to be done with consideration for, and sensitivity to, a client's feelings and needs. A useful technique for disengagement is to taper off involvement with the client as feelings are dealt with and other work of termination is completed. Appointments may be set further apart or more emphasis placed on what the client is to do for herself. The worker needs to develop self-awareness about his own reactions to separation and loss. If the worker has difficulty with these tasks, he is going to be less able to help the client deal with the tasks of separation. The worker may wonder how to react to the intense feelings of the client that may arise in the process of termination. These feelings may be related not only to loss or grief over loss but to dissatisfaction about what the worker and clients have been able to do together. Everyone tends to ignore or downplay that which is uncomfortable. If, because of their own discomfort, workers do not adequately reach for the client's feelings about termination and about their work together, they will fail to allow growth by the client in the management of feelings and in coping with life tasks. The work of disengagement then is reached not only to the particular social work situation but to past and future losses of the client and social worker. In helping the

NSOU ? PGSW-II 142 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 142 PRINTTECH — 4th PROOF / 22.12.2021 client disengage, the worker is sometimes helping the client deal with past losses and unresolved feelings about their losses. Also, the client is being provided with coping mechanisms for dealing with future loss, with understanding for dealing with grief and other experiences related to loss, which is, after all, a part of all human functioning. To bypass or minimize the disengagement process is to lose an opportunity for client growth. Stabilization of change—In helping a client deal with the feelings of termination and disengagement from the relationship, the client and the worker often review what has happened in the work together. This is also helpful in stabilizing the change that has taken place. It helps clients understand how they have grown and what has led to the growth. It also gives clients guidelines as to how future problems might be approached and dealt with. It gives clients the feeling that they have resources that can enable them to make it on their own and to know what those resources are. One way to work on stabilization of change is for the worker and the client to review what has happened as they worked together. The time together should be considered a part of the ongoing social functioning of the client. It should be seen as one step, an important step, of the growth that results in better coping with life tasks and in more adequate social functioning. This view implies there are other steps to be taken, not with the worker but through new relationships or in ongoing coping with life situations. Continued growth is one way of stabilizing the change that has taken place. Worker and client can discuss the next steps and how the client can go about taking these steps. They plan ways of obtaining needed supports and resources for the client to use in taking these steps. Stabilization can also be encouraged by discussing possible goals for future growth and resources that can be used to enable growth. This discussion can examine how change took place as the worker and client worked together. The problem solving processes that was used can be examined and the worker can maximize the client's understanding of this process. The worker can also make certain the client understands the dysfunctional patterns that caused the problem they have been working on. This is done so the client can spot potential problems at an earlier stage and attempt to bring about change before serious problems develop. Through the work of stabilizing the change, the worker gives the client realistic hope that the client can function without the worker's help. She attempts to establish

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 143 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 143 within the client a sense of accomplishment and a sense of competence. The client's fears are recognized, examined, and suggestions are made about how to deal with them. The stabilization of the change is an important stage in growth and change. Without conscious efforts to carry out the tasks involved in the stabilization, the client's capacity to sustain the desired change may be lessened. Evaluation—Third component of termination is evaluation. Evaluation does not take place only at termination but is an important ongoing part of the social work endeavour. It is, however, a particularly important component of the termination phase. As the worker and client engage in evaluation during termination, the major focus is on the goal or goals set as a part of the plan of action and on the client's need or needs as identified in the assessment process. The major question to be answered is: Did we accomplish what we set out to do? If the goal was achieved and the need met, then what has been determined to be the purpose of the service has been accomplished. If the goal was met but the need remains troublesome, then the goal may not have been the right goal or other goals must be met as well. When considering the outcome of service, it is useful to look at outcomes, not only from a behavioural point of view but also from the perspective of the attitudes involved or changed and the knowledge gained. It is also useful to look at the process of reaching the goal and to identify what has been useful and which parts of the process were not useful or might have been carried out differently. Any spinoffs or unexpected consequences of the work together should be noted. This aspect of evaluation is useful for both worker and client. It helps the client better understand how to cope with future problems and how to meet personal needs. It helps the worker gain greater understanding of the helping process and of means for working with clients. The worker's openness to evaluating what has happened involves a certain amount of risk because the worker's mistakes and limitations may come to light. The client may be overly critical or display undue satisfaction, which may be one way the client expresses negative feelings related to termination. The worker needs to accept these feelings without becoming defensive and, with the client, carefully examine the

NSOU ? PGSW-II 144 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 144 PRINTTECH — 4th PROOF / 22.12.2021 negative feelings and sort out reality from feelings of abandonment or unrealistic dissatisfaction. Perhaps one of the reasons workers have not put sufficient emphasis on the termination process is that it is indeed a time for examining the performance of the worker. This is a threatening experience, but one that is essential for good social work practice. The social case work endeavour is terminated through the intermingled activities aimed at disengagement, stabilization of change, and evaluation. Through these activities the client is helped to deal with feelings so that they will not inhibit future social functioning, and the client is readied to continue to grow and to cope with activities of living and with the environment and its expectations. 5.12 Evaluation As an ongoing part of the social case work process, evaluation is the means for determining if the goals and objectives of the social case work endeavour are being reached. It also involves looking at the means being used to reach goals and objectives. Evaluation identifies unexpected outcomes, both negative and positive from the helping activity. Evaluation should be continuous, but it becomes particularly important as each step is completed. Evaluation should occur after assessment to see that all needed information has been collected and that appropriate conclusions about the meaning of the information and about the client in the situation have been drawn. After planning, there should be evaluation to determine if the plan is complete and feasible. After action has been carried out, evaluation should be used to determine if the desired goals have been reached. Evaluation is also an important part of the termination process. Evaluation, then, is finding out what is expected to happen is really happening. It looks at completed work and determines which methods and strategies worked and why. It is an opportunity to check with clients and significant others to see how it is going from their viewpoint. Evaluation of one's work is a professional obligation for every social worker, and should be a continuous process. Programmes and agencies are obligated to carry out, on an ongoing basis, evaluation of the mission, purpose, and goals of the agency and its programmes. Evaluation is necessary if social case worker and the agencies for which they work are to be accountable to clients, support sources, and the general public.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 145 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 145 Accountability—In recent years, much emphasis has been placed on accountability in the social welfare field. In its simplest form, Accountability is responsibility. However, the complexity of accountability begins to become apparent when one asks the question: Accountability to Whom? The social case worker is responsible to the client for upholding his part of any agreements or contracts and for providing the services agreed upon. The social worker is also responsible to the profession for upholding social work values and the Code of Ethics in delivering services. The social case worker is responsible to the agency that employs the worker for delivering the service within guidelines, programmes, and policies developed by the agency. The agency, in turn, is responsible to the persons who provide support and sanction to the agency. This latter responsibility adds considerable complexity to accountability. Those who support the agency are a nebulous mass of individuals (e.g. taxpayers) who have no universally accepted goal for the service. The goals that do exist are often not congruent with the goals set by workers and clients. Accountability is complex because of the multiple constituency of the social agency and because of the systematic nature of persons in situations. It is very difficult if not impossible to identify cause-and-effect relationships or all variable that may be operating in any situation. Thus, adequate hard data are elusive. The complexity of social service organizations further adds to the complexity of accountability. In all its complexity, accountability becomes an ambiguous concept. Accountability has two components—efficiency and effectiveness. Efficiency refers to the cost of service. Because of the nature of human services, the counting of numbers of clients, time spent with clients, or cost of service in dollars and cents is not a sufficient way of accounting for work. Social costs also must be considered. This would include such things as how the service is impacting on the client's capacity to parent, or function in the work force. It would include how the service is affecting the functioning of systems in the client's immediate environment, or how the quality of life of the client, significant others, and the community in general is being affected. Effectiveness relates to whether the service leads to the goals for which it was intended. Because of the complexity of the human situation and many individuals with differing goals concerned about agency programmes, it is difficult to measure effectiveness. If goals that are measurable have been included in plans of action, however, it is possible to determine if those goals have been reached in a particular service situation. If agencies have well-defined purposes and goals, then evaluation and accountability have a sound base upon which to be carried out. The

NSOU ? PGSW-II 146 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 146 PRINTTECH — 4th PROOF / 22.12.2021 identification of goals and the evaluation of the service are key factors in accountability. Evaluation is not only important as a part of the social case work process but necessary for agency functioning in the contemporary social and political sense. There are a number of specific reasons for evaluation : ? To find out how effectively a programme is meeting its goals. ? To obtain information that will help restructure a programme or manage it more effectively. Perhaps the evaluator wants to see if a particular component should be eliminated or replaced. ? To identify models for others to follow, or to test a theory or an approach to a problem. ? To find out what staff members need in order to direct their programme effectively. ? To find out how well the programme is working from the client's point of view, and how to make it more effective. ? To improve public relations and funding efforts. ? To meet the requirements of a funding source. Kinds of evaluation—Planning for evaluation when developing a plan of action is one way of assuring that the plan of action is carried out in a way that yields maximum information to the worker, the client, and the agency. If the information to be used in evaluation is identified before the action of the social work process begins, there is a better chance that such information will be available for use in evaluation. In order to effectively and efficiently plan for evaluation, an understanding of the various kinds of evaluation and some of the means for carrying out the evaluation process is useful. Evaluation serves many purposes and takes a variety of forms. In its most simplified form, it is a worker thinking about what has happened and why it happened. Summative evaluation is concerned with outcomes and effectiveness. Formative evaluation is concerned with looking at the process of the work, at how the work during the various steps in the service influenced the final outcome of the work. Both types are important in social case work process, and so the evaluation process should have a balance of both types. A second classification is qualitative versus quantitative evaluation. The contemporary service delivery system has been highly influenced organizational

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 147 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 147 management trends and the use of a quantitative base for evaluation. Clinical practice has also been influenced by behavioural psychology and its emphasis on measuring behavior. The trend toward computerization of information and records also supports the push for quantitative data. However, most social case workers believe that not all information can be dealt with in a quantitative manner. They believe there is a qualitative factor in human functioning. While behavior can be measured, feelings and emotions cannot, and qualitative measures are a better mechanism for evaluating them. A third classification is that of clinical versus management evaluation. While this classification might be closely related to the quantitative-qualitative classification (management generally using quantitative data; clinical generally using qualitative data).Management evaluation is used to make internal staffing and programme decisions and to substantiate need for services and resources to support services. Clinical evaluation is limited to use by professional persons (worker and supervisor) and the client directly involved in the situation being evaluated. Hard line evaluation focuses on aims and objectives set before the implementation of programmes. Some degree of scientific objectivity is involved in this type of evaluation. Soft line evaluation is based on impressions and opinions. Each result yields quite different kinds of information. The worker needs to determine if hard line information will adequately provide for the evaluation needs and appropriately tell the necessary story. If not, then soft line information should be used either to tell the story or to supplement the hard line information. Each type of classification points out a different dimension of evaluation. Each evaluative effort can be classified along a continuum related to each of the four classifications. When choosing evaluating methods and techniques, it is important to consider the requirements of the situation being evaluated, keeping the possibilities of all four of the above classifications in mind, and to choose methods that provide for the requirements of that particular situation. Techniques for use in evaluating The process of evaluation makes use of the same methods and techniques as does assessment, such as looking at information collected about the work and determining what has happened in the social case work endeavour. The information may be gathered specifically for evaluative purpose or it may be information developed as part of the social case work process.

NSOU ? PGSW-II 148 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 148 PRINTTECH — 4th PROOF / 22.12.2021 There are, however, some special techniques used to facilitate the evaluative process. These include various kinds of recording and a variety of research techniques, related to recording and research is the use of computer, a new and growing influence on evaluation. When planning for evaluation, social workers should look at various methods and techniques for collecting the information and choose those that can provide the information needed in the most reliable and efficient manner. This requires the same kind of creative planning used in developing the plan of action. 5.13 Summary We learnt about the Systems & Role Theory and also understood about the various phases of Case Work Process. We also learnt about the various ways of Crisis Intervention. These learning will help us to enhance the problems solving process in case work. 5.14 Exercises 1. Discuss briefly about systems Theory. 2. What are the three types of diagnosis according to Perlman? Explain them. 3. Define treatment according to Hamilton. What are the principles of treatment? 4. What do we mean by Crisis Intervention? Discuss any two models of Crisis Intervention. 5. Explain the term Accountability and discuss about its two components. 5.15 References 1.

Tools of Social Case Work Structure 6.0 Objective 6.1 Introduction 6.2 Tools of Social Case Work 6.2.1 Skill of an interviewer 6.3 Summary 6.4 Exercises 6.5 References 6.0 Objective The learners will get an orientation about the various tools of social case work which they would require while carrying out social work in the field. These tools enables the professionals to work in a much more efficient manner. 6.1 Introduction To carry out Social Case Work with lot of professionalism, one must adopt correct tools to deeply understand the clients situation and note down every single details which may be used for reference later. Let us know about it. 6.2 Tools of Social Case Work Home visit—The importance of family has been well recognized by the personnel in social work, especially those in the mental health field. Study of the emotional, social and physical aspects of family life is necessary to plan the treatment effectively. It is also very important to gather sufficient details of information so that our prediction has less chance of being based on hunches or prejudices, and this is achieved easily and effectively through home visits.

NSOU ? PGSW-II 150 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 150 PRINTTECH — 4th PROOF / 22.12.2021 Home visits aim at therapeutic, sustaining and preventive measures as well. It is also recommended that home visits should be used for diagnostic purposes, as well as for treatment and supervision of long-term patients in their own homes.

88%

MATCHING BLOCK 357/544

W

By making home visits one sees the environment in which the patient lives, observes family and other relevant social interactions at first hand and develops a fuller diagnostic understanding of the patient for appropriate treatment planning. Home visit has thus become an

effective tool in total intervention programme. Active listening—It is a concept developed by Rogers (1966) in his 'client- centered therapy'. In active listening, we listen to what the person is saying, both the content and feelings expressed and we verbally acknowledge that we are hearing him. Our primary purpose is not to check out to see if we have received the intended message but rather to let him know that we are listening to and understanding what he is expressing. In active listening, we only rephrase the statements of the sender. We do not evaluate, give our own opinion, advice, or interpret. We continue active listening until the speaker indicates either verbally or non-verbally that he has stopped speaking for the time being. Active listening lets the sender know what I am hearing and that I am accepting his message and he is also encouraged to say more and more and to share his feelings. As he continues to talk and feel accepted and comfortable, he moves away from presenting problem to his deeper feelings. He becomes more aware of and gains new insights into his behavior and feelings. Active listening cannot be applied equally to all situations. For instance, if someone requests information about the location of a place etc., he probably will not appreciate if the response is like "you would really like to know where this place is?" It is up to the receiver to decide from verbal or non-verbal cues whether the person wants to pursue the subject or not. In a nutshell, we can be effective in communication when we learn and practice to (1) repeat the message, (2) use more than one channel, (3) specify and complete the messages, (4) own responsibility for our feelings, and (5) be congruent in our verbal and non-verbal communications. In all the helping professions, much of what we do is based on our ability to communicate effectively. An understanding of the basic premises of human communication and some of the common errors in sending or receiving of message is essential. Hopefully, through increasing our awareness of

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 151 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 151 ourselves, and of how we affect others, and by developing skills in interpreting what another is expressing to us, we can enhance our capacity to communicate in both our professional and day-to-day life. Observation-Observation is a method that employs vision as its means of information collection. It implies the use of eyes rather than of ears and the voice. It is accurate watching and noting of phenomena as they occur with regard to the cause and effect of mutual relations. It is watching other persons' behavior as it actually happens without controlling it. For example, watching bonded labours' life, or treatment of widows and their drudgery at home provides graphic description of their social life and sufferings. Observation is also defined as "a planned methodical watching that involves constraints to improve accuracy". Lindzey Gardener (1975) has defined it as "selection, provocation, recording and encoding of that set of behavior and settings concerning organisms 'in situ' (naturalistic settings or familiar surroundings) which are consistent with empirical aims". In this definition, selection means that there is a focus in observation and also editing before, during and after the observations are made. Provocation means that though observers do not destroy natural settings but they can make subtle changes in natural settings which increase clarity. Recording means that the observed incidents/events are recorded for subsequent analysis. Encoding involves simplification of records. Relationship—How relationship can and should be used to help persons with problem has been a serious concern of not only social work but of other professions too like that of psychiatry, psychology etc.

Interview—The interview is a primary tool of the case workers.

100%

MATCHING BLOCK 366/544

W

It is the structure for operationalizing the interaction between a worker and a client.

Each social worker develops her own interviewing style. Interviewing is an art and skill, and learning how to interview is learned by doing it. Some guides to interviewing can be helpful to the person learning to interview. These guides include preparing for interview, the stages of interview, and skills used by the worker during the interview. Each interview should have a specific purpose or goal. Generally, this purpose may be to obtain the information needed for carrying out some task or function, or to work together to meet a client's need or solve a client's problems. The purpose of a specific interview will depend upon the stage of work together, the agency function

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 153 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 153 and the method of service, and the client's needs and/or the nature of the problem or problems to be solved. In addition to purpose, several types of variables, listed below, affect the nature of the interview. 1. How the interview is initiated- Is it voluntary activity on the part of the client? Is it a formal, planned, regular interview or a walk-in request of the client? Or is it a life-space contact (one that takes place in the process of the client's daily activities)?. 2. Where the interview takes place- Does the interview take place in an office, at home, at hospital room, or some other setting? 3. The experience of the worker and client with each other- How this worker and this client had previous contact with each other? Is this encountering a part of a time-limited or long-term plan? Each interview will be

84%

MATCHING BLOCK 367/544

W

different. The worker needs to be flexible in structuring and guiding the interview, depending on the interview's purpose and the needs of the client. It should be carried out in a manner that encourages interaction and relationship. In preparing for any interview the worker has three tasks : ? Planning the environment for the interview ? Planning the content of the interview ? Tuning In The worker thinks about the physical conditions of the interview. For an example, if the interview takes place in an office,

the worker arranges the office so as to encourage the work together. This can be done by giving some thought to the placement of desk and chairs. An office that is comfortable and does not have too many distracting features is ideal.

93%

MATCHING BLOCK 368/544

MATCHING BLOCK 383/544

W

Points of stress— In cross-cultural systems, stress and conflict may indicate areas of inadequate knowledge about cultural aspects of the client's functioning. This may also indicate misunderstanding on the part of the client or areas of client's biasness or prejudice.

Listening skills—Of vital importance in any interview situation is listening- listening to what the client has to say and how the client responds to questions and responses. Beginning workers often place primary emphasis on the questions to be asked and on what they say. Good questioning does enable clients to provide necessary information, to consider alternatives, to work on the problem at hand. However, if the worker's listening skills are deficient; the full value of the interview will not be realized.

90%

MATCHING BLOCK 384/544

W

Active listening-being with the client in her struggle to deal with difficulties and problems-is

the appropriate response at many points in the interview. Another reason to develop listening skills is because social workers are often in communication with persons whose language expression is somewhat different from their own. In listening, it is important to try to understand what the words mean to the client.

94%

MATCHING BLOCK 385/544

W

Listening reflects an attitude of openness and acceptance, and it involves a sense of timing that allows the worker to focus on the client and what is being said

and

96%

MATCHING BLOCK 386/544

W

does not shut off the communication by premature evaluation or advice. Questioning skills-

A first category of questions includes open and close ended questions. A close- ended question calls for a specific answer. An example would be: "What is your age?". These are used to gain factual information. An open- ended question is one that enables the client to define, discuss, or answer the question in any way they choose. An example would be: "What do you think is the reason why your child is not going to school?" The open-ended question allows expression of feeling and gives the worker the client's perception of the subject at hand.

99%

MATCHING BLOCK 387/544

W

There are leading and responding questions. A leading question is used when it is desirable for a client to continue to explore the subject at hand. An example would be: "You have tried to cope with this problem, haven't you?" A responding question follows the lead of the client's response. An

example would be when a client has been discussing how he has tried to cope with a problem and the worker responds: "Tell me more about how you went about helping your child".

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 157 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 157

100%

MATCHING BLOCK 388/544

W

In an answer-and-agree question, the client is expected to answer in such a way as to agree with the worker.

An example would be: "you are feeling much better today, aren't you?" This is usually not a good form of questioning to use because it blocks discussion and imposes the worker's ideas on the client. With most clients, it is better to ask questions so they contain single, rather than several ideas. A question with a number of ideas might be used when the worker is attempting to help the client recognize connection between the ideas. Questioning is one of the means used by a case worker to enhance relationships and communication. Focusing, Guiding and Interpreting Skills This group of skills comprises those used by the worker to enable the action system to accomplish the tasks necessary to reach the agreed upon objectives. It includes the capacity to paraphrase and summarize what has been said, to reflect feelings and ideas, to confront, and to elaborate. The effective use of these skills includes a sense of timing as to when to focus, when to interpret, and when to direct. Paraphrasing and summarizing often clarify what has been said. Clarification and elaboration enhance understanding. With understanding of issues and facts, the work can progress as a truly joint effort.

96%

MATCHING BLOCK 389/544

W

It is worker's responsibility to direct the interview but not to control it. The worker

takes whatever material and expression of feeling is given by the client and,

100%

MATCHING BLOCK 390/544

W

by focusing, guiding and directing, enables the process of the

work together to proceed toward the desired outcome. Climate-Setting Skills Three attributes have been identified as characteristics of interpersonal situations that seem to produce understanding, openness and honesty, which are enabling factors in the work of the action system. These three characteristics

100%

MATCHING BLOCK 391/544

W

are empathy, genuineness, and non-possessive warmth. Empathy is the capacity to communicate to the client that the worker accepts and cares for the client.

Empathy communicates that at this point in time the client's welfare is to be considered before the worker's. Empathy is expressed by openly receiving and recognizing the feelings of the client, by accurately perceiving

NSOU ? PGSW-II 158 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 158 PRINTTECH — 4th PROOF / 22.12.2021 the client's messages, and by providing the client with concrete feedback about messages.

100%

MATCHING BLOCK 392/544

W

Genuineness is the capacity of the worker to communicate to the client that the worker is trustworthy.

It is expressed by being willing to let the client know the worker as a person in ways that meet the client's need for such information. It also expresses congruence between the workers' verbal and non verbal messages. In addition, genuineness involves informing the client when the worker disagrees with the client and when the client's behavior and communication are inconsistent. This skill calls for honesty, but honesty communicated in a manner that is sensitive

75%

MATCHING BLOCK 399/544

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

to the client's feelings and concerns. Nonpossessive warmth is the capacity to communicate to the client both a concern and a desire for an intimacy that allows the client to make decisions, to have feelings negative and positive, and to feel worthwhile.

It has qualities of nonblame, closeness, and nondefensiveness. A warmth that is nonpossessive is displayed through positive regard and respect for the client and through thoughtfulness and kindness as well as appreciation for, and pleasure at, the client's growth and well-being. Interviewing is just one form of communication. The skills used in the interview can also be used in the less formal social work interactions. They are the same skills that encourage relationships to form and to be used and maintained. In the social case work endeavour, in the one-to-one action system, it is the responsibility of the social worker to move toward the client so that relationships may form and a common ground for communication may be established. To do this the social worker must understand the client and be willing to work with the client in meeting the client's and in solving the client's social-functioning problems. 6.3 Summary The learners got an idea about the important tools of case works, like, Home visit, Active listening & Interviewing. To get an indepth knowledge about the client we must carefully adopt these tools and know all the minute detail about them.

NSOU ? PGSW-II 160 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 160 PRINTTECH — 4th PROOF / 22.12.2021 Unit 7 ? Techniques of Social Case Work Structure 7.1 Objective 7.2 Introduction 7.3 Main techniques of Case Work are the followings 7.4 Role played by the therapist/caseworker 7.5 Summary 7.6 Exercises 7.7 References 7.1 Objective The learners will get an idea about various techniques required while practicing social case work. They will be able to learn about the role of the case worker as a therapist. 7.2 Introduction Only by adopting good Techniques a Social Case Worker can augment the treatment procedure. Proper Referral, Advocacy, Counselling are some of the major techniques that a Case Workers may adopt to solve any problem. Let us now discuss these techniques elaborately. 7.3 Main techniques of Case Work are the followings 1. Referral—Sometimes, before termination, cases are referred to another caseworker or therapist like group worker in the same or to other agency for some important reasons. This is a process by which client is enabled to become aware of other services and use them. In referral,

92%

MATCHING BLOCK 393/544

W

the helping process does not end but it is the contact with a particular

caseworker which terminates. The client starts a new helping relationship with another therapist.

100%

MATCHING BLOCK 394/544

W

Referral is done for various considerations: (1) when a different type of

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 161 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 161

96%

MATCHING BLOCK 395/544

W

worker/therapy is required to achieve the finally formulated goals of treatment, and (2) when the worker and the client find it difficult to move to or assume new responsibility. The case may be referred to some other agency if, at some point, it

is

100%

MATCHING BLOCK 396/544

W

decided that the client cannot be helped in this agency for some

reason, like lack of required services, etc.

96%

MATCHING BLOCK 397/544

W

Referral involves preparation of a referral note which gives a very brief summary of the problem and the efforts undertaken to solve the problem along with psycho-social diagnosis. Preparation for referral should be done in the way preparation for termination is undertaken though referral stage is not the final stage. Preparation involves (1) explaining reasons

for

93%

MATCHING BLOCK 398/544

W

referral, (2) talking of the positive and negative feelings involved in referral process, (3) tackling separation anxiety in one or two sessions, (4) handling the questions factually, and (5) preparing the client for new contact. 2.

Summarizing—A preferred technique is to summarize briefly major issues or conclusions at the end of a client-caseworker interview. This serves as a review for interviewer and client (s), as a method of clarifying misunderstood points and as a place from where to begin the next interview. In terminating a series of contacts, summarizing is a tool to assess movement, growth and change. As such, it serves as a source of hope for the future. The client and the therapist should discuss the possibility of renewed contacts in the future if it should become necessary. This is important so that the client does not feel completely alone and if it becomes necessary, can re-initiate contacts without losing face. 3. Generalization—This technique is used to minimize guilt or anxiety feelings in the client by generalizing the nature of events or reactions; for example, one can say, "every child masturbates during adolescent period; we all feel the same way in the situation you are passing through". In effect it tells the client that his feelings and reactions are universal and normal to the situation, therefore, he need not feel guilty or anxious about these events and/or reactions. 4. Partialization—In the initial phase of case work practice one may try to focus on only one aspect of the total problem instead of tackling the whole problem. i.e., focusing on only one part of the problem. In choosing one part NSOU ? PGSW-II 162 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 162 PRINTTECH — 4th PROOF / 22.12.2021 of the problem, one should be careful to see that the part problem chosen is of immediate importance to him and can be solved with the available resources in the shortest possible time. Once his immediate worries are tackled, it

80%

MATCHING BLOCK 400/544

SA Social Case Work Block 1.pdf (D164874043)

will strengthen the relationship between the worker and client and increase the client'

s respect for the worker. 5.

99%

MATCHING BLOCK 401/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

Ventilation—The process of ventilation is the process of helping the client to air his feelings freely and to provide him with an atmosphere which makes free expression of the feelings easier. It frees the individual from fears, guilt feelings, and brings to light the hidden attitudes. The more intense the feelings, the better result through this process. This is usually used when the client is more tense or eager to come out with his inner feelings. This

ventilation process is also often called catharsis with minor differences.

97%

MATCHING BLOCK 415/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

This technique may be used in certain unpleasant situations which might have arises in between the interviews. Ventilation is not only therapeutic but also diagnostic. The therapist should explore intently and stimulate the client, by questioning or commenting, to tell more about his situation and its various aspects. Only towards the end of session, the caseworker may use generalization and logical discussion to lesson his guilt. In the initial stages one should not minimize the anxiety lest he stops coming out with relevant materials necessary to help him. The caseworker may choose either to be totally passive or actively participating and directing. The client must feel that the worker is uncritical, tolerant and is listening to him. One should not permit ventilation when it is used as a defense mechanism to avoid further exploration. In such situations, it is better to divert his attention and help him to discuss the relevant matters concerning his problem. It should be avoided or used with caution in case of psychotics etc. Ventilation is used sometimes by the client to seek attention and sympathy from the worker or a gratification from talking freely about self. The caseworker should be conscious in all such situations and direct the interviews accordingly. 6.

Advocacy—It is an activity by an individual or group which aims to influence decisions within political, economic, and social systems and institutions. Advocacy can include many activities that a person or organization undertakes including media campaigns, public speaking, commissioning (often by lobby groups) is a form of advocacy where a direct approach is

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 163 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 163 made to legislators on an issue which plays a significant role in modern politics. Advocacy in al, its forms seeks to ensure that people, particularly those who are most vulnerable in society, are able to- (1) have their voice heard on issues that are important to them, (2) defend and safeguard their rights, and (3) have their views and wishes genuinely considered when decisions are being made about their lives. Advocacy is a process of supporting and enabling people to— (1) express their views and concerns, (2) access information and services, (3) defend and promote their rights and responsibilities, and (4) explore choices and options. 7. Empathy—Empathetic communication involves the ability of the social caseworker to perceive accurately and sensitively the inner feelings of the client and to communicate his or her understanding of these feelings in language attuned to the client's experiencing of the moment. The first dimension of empathy, empathic recognition, is a precondition of the second dimension, demonstrating through accurate reflection of feelings that the caseworker comprehends the client's inner experiencing. Empathetic communication plays a vital role in nurturing and sustaining the helping relationship and in providing the vehicle through which the social caseworker becomes emotionally significant and influential in the client's life. In mandated circumstances in which involuntary clients are not seeking a helping relationship, conveying empathic understanding reduces the level of threat perceived by the client and mitigates his or her defensiveness, conveys interest and helpful intent, and creates an atmosphere conducive to behavior change. In addition, many clients live in environments that constrict resources and opportunities. Social worker's empathy with the social and economic context of problems is an important adjunct to empathy with personal experiencing. In responding to clients' feelings, social workers must avoid being misled by the conventional facades used to conceal emotions. As a consequence, the empathetic communicator responds to the feelings that underline such flippant messages as "Oh, no, it doesn't really matter" or "I don't need anyone" when the client is experiencing painful loneliness, or "I don't let anyone hurt me" when the client is finding rejection hard to bear. To enter the client's private world of practical experience, the social worker

NSOU ? PGSW-II 164 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 164 PRINTTECH — 4th PROOF / 22.12.2021 must also avoid making personal interpretations and judgments of the client's private logic and feelings that, in superficial contacts, might appear weak, foolish, or undesirable. Empathetic communication involves "stepping into the shoes of another", in the sense that the social worker attempts to perceive the client's world and experiences. When the client feels pressure from an involuntary referral, the empathetic social worker understands and is aware of that pressure and how it feels. At the same time, the social worker must remain outside of the client's world and avoid being overwhelmed by his or her fears, anger, joys, and hurts, even as the social worker deeply senses the meaning and significance of these feelings for the client. "Being with" the client means that the social worker focuses intensely on the client's affective state without losing perspective or taking on the emotions experienced by the client. 8. Limit-setting—This involves checking the behavior/activities of the client at a particular point because allowing him to act beyond that point will be detrimental to the client's interest. This can be achieved through use of authority or by shift of topics of discussion during the interview. Examples: "I think we have discussed this for long and now we will discuss...I don't think we can discuss this because...". 9. Reflection—People responds differently to their problems. They may express their feelings as fear, anger, anxiety or sadness about problems. E.g. depression may be expressed as short temper, irritable behavior, less interest in daily routine, inability to sleep, loss of weight and feeling of worthlessness and anxiety. Do not try to stop, let the person express his feelings, do not stop patient/ family members from crying. Do not take anger personally and try to stay calm. The case worker must recognize such feelings in a direct, unemotional way. The focus is kept on the emotions of the client and his/her subjective experiences in coping with the situation. Case worker reflects the contents and feeling of the other persons by responding back to the client and communicating a message though empathy, questioning or paraphrasing that conveys that case worker is listening and trying to understand case worker's circumstances.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 165 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 165 Reflecting is the process of paraphrasing and restating both the feelings and words of the speaker. The purposes of the reflecting are: ? To allow the speaker to 'hear' their own thoughts and to focus on what they say and feel. ? To encourage them to continue talking. ? To show the speaker that you are trying to perceive the world as they see it and that you are doing your best to understand his messages. Reflecting does not involve you asking questions, introducing a new topic or leading the conversation in another direction. Speakers are helped through reflecting as it not only allows them to feel understood, but it also gives them opportunity to focus their ideas. This in turn helps them to direct their thoughts and further encourages them to continue speaking. Two main techniques of reflecting are —(a) paraphrasing (already discussed) and (b) mirroring- it is a simple form of reflecting and involves repeating almost exactly what the speaker says. Mirroring should be short and simple. It is usually enough to just repeat key words or the last few words spoken. This shows you are trying to understand the speaker's terms of reference and acts as a prompt for him or her to continue. Be aware not to over mirror as this can become irritating and therefore a distraction from the message. Why you do it ? To show you understand how the person feels ? To reflect what you are observing rather than what you are hearing. ? To help the person evaluate their own feelings after hearing them expressed by someone else. How do you do it ? Listen to voice tone and watch for non-verbal cues that indicate feelings. ? Listen to what the person tells you about what they feel. ? State back your sense or hunch of what they are feeling. ? An active listener is already using aspects of this technique, but reflection requires taking even greater care in the following area. Regarding reflection restate what you believe the speaker has said to check for the accuracy of your understanding (e.g., "So you could not finish the assignment on

NSOU ? PGSW-II 166 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 166 PRINTTECH — 4th PROOF / 22.12.2021 time". "Then you think the time allotted was inadequate"). Even more importantly, reflect back the speaker's feelings as you have heard or inferred them (e.g., "You seem to feel anxious because you could not finish the assignment on time"). This interpretation of feelings is, of course, more tricky in that it often requires you to read between the lines, to infer feelings underlying what has been said (e.g., "You seem angry about the organization," rather than "So the department was recognized"). Thus you may want to use wording or voice tone make your inferences into questions, rather than statements (e.g., "So you feel anxious because you couldn't finish the assignment on time?" "Do you feel anxious because you could not finish the assignment on time?")

Guideline for reflecting ? Be natural. ? Restate what you have been told in simple terms. ? Listen for the basic message consider the content, feeling and meaning expressed by the speaker. ? Do not take the speaker's topic in a new direction. ? Always be non-directive and non-judgmental. ? Do not add to the speaker's meaning. ? Do not question the speaker unnecessarily. ? When restating, look for nonverbal as well as verbal cues that confirm or deny the accuracy of your paraphrasing. (Note that some speakers may pretend you have got it right because they feel unable to assert themselves and disagree with you).

10. Counselling—The traditional approach of defining the subject at the outset to help identify the scope of the field, while useful in a sense, may prove to be a stumbling block. Therefore, no attempt is made to define counselling at this stage, however from the point of view of social case work technique a working definition is given. 'Counselling', like the terms 'personality' and 'intelligence', has acquired different shades of meaning. This difficulty is due to the confusion between popular understanding of the term and technical and professional meanings of it. To counsel is to advise.

Individuals

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 167 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 167 seek advice in a variety of situations. It is evident that from the earliest times man has turned to his fellow beings for advice, encouragement, sympathy, comfort and understanding. He has been able to survive his hostile and hazardous environment only because of the innate concern of his fellow beings for him. The goal of counselling is to help individuals overcome many of their future problems. In recent times, a rapid social change caused by industrialization and urbanization has led to varied and perplexing problems. For most people the pace of change is simply too fast and creates serious problems of adjustment. This means that counselling should start early in school continue in order to enable individuals to meet vocational and personal problems of adjustment in later life. Naturally, counselling has to minister to a variety of problems, such as educational, vocational, marital, parental and personal.

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

Exploration—It starts with questions about age etc. and proceeds to explore the

client's feeling and experiences with open-ended questions. If the worker is uncertain as to why the client is emphasizing a particular thing, or taking a question, or making a request, complaint, accusation, and so forth, it is wise to make further inquiry as to just what the client has in mind, and why it is important to him. Exploring through questioning and commenting is also useful when the worker wants clients to look in more depth at a certain subject.

93%

MATCHING BLOCK 417/544

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

This helps in collecting relevant data for diagnostic purposes and may lead the client to think various unexplored areas of the problem, thus helping him to have insight into the problem. 12.

Initialization—

96%

MATCHING BLOCK 418/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

We all have experienced anxiety whosoever we had to ask for help from persons unknown or formally known to us. Similarly, questions about self from unknown or formally known persons also create anxiety in us. Apart from this, when the client approaches the caseworkers, he is naturally suffering from some anxiety caused by his problems/non-fulfillment of his needs. The anxiety is tackled and the client's interest in solving his problem is sustained. Sustaining process becomes more useful when anxiety is greater as it quickly reduces his anxiety, makes him comfortable and thus builds his confidence in caseworker. Techniques used in sustaining process to maintain his/her current social functioning and interest in casework treatment are conveying acceptance, reassurance and encouragement.

Here , it is very important to talk about the technique of direct influence in case work : ?

100%

MATCHING BLOCK 419/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

Underlining : This involves approving or emphasizing a course of action, the client himself is contemplating upon. Here, the worker may use the sentences like, "I think this is realistic for you to...", "I think you are doing the right thing and the action should be taken as quickly as possible".

NSOU ? PGSW-II 170 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 170 PRINTTECH — 4th PROOF / 22.12.2021 ?

98%

MATCHING BLOCK 420/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

Suggestion : Herein a solution is raised in the client's mind by the worker and it is up to the client to accept or reject the idea. Since the worker is not emphatic on this suggestion; the client is free to reject the idea. For example, worker may say, "You can utilize this leisure time for painting or kitchen- garden etc". In case the client uses his leisure time for walking or playing, he is free to do so without any fear of criticism from the worker. ? Advice : This involves stating an opinion or taking a stand concerning certain issues which must be acted upon by the client in his own interest and which if not taken will be harmful to the client's interest. Physicians advice drugs which should be taken by the client if he wants to get cured.

98%

MATCHING BLOCK 421/544

SA 470E1120-Social Work Practices with Individual ... (D165249726)

Similarly, the caseworker advises actions which should be adopted by the client to solve the problems. ? Advocating : This is one step beyond the advice, i.e., putting certain urgency behind the advice offered. Advice is re-emphasized. It is offered in term of :it is essential and that would be very unwise not to do so". This is indicated when there is a chance of severe loss because of the client's ill-considered or impulsive action, or when enough time is not available for discussing consequences of the action being contemplated by the client. Such situations may be like a mentally disturbed person sticking to the home, a person likely to commit suicide, or running away from homes, etc. In all such situations, advocating becomes more useful because it saves the client from the big loss he may suffer because of his ill-considered action. However, no attempt should be made to create guilt in the client, when he fails, by telling him that "I told you so". ? Actual intervention : Herein the caseworker takes action to prevent the client from taking inadequately considered action or sees that he acts in a particular (the desirable) way. Examples are removing the patient to a hospital, placing the child in a hostel, etc. Use of these technique demands that the worker be fully convinced that the step is factually justified and necessary community resources and support are available. His action should be firm and polite without communicating any anxiety to the people around. Direct influence techniques should be avoided unless it is really justified and it should be, wherever possible, used in conjunction with the producers for development of understanding. To start with, most gentle form of influence should be used. The

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 171 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 171

caseworker has to be very cautious and conscious of his own needs while suggesting and offering advice. 13.

Acceptance—Rogers (1961) attaches great importance to the principle of acceptance. The nature of a client-caseworker relationship is defined and set by this principle of the caseworker regarding the client unconditionally as a person of self-worth. Sometimes we have conditional acceptance which no social relationship can escape. The caseworker- client relationship is also a kind of social relationship and the parties, namely the caseworker and the client, may approach each other with different degrees of acceptance. This is not a healthy client-caseworker relationship. An ideal relationship is one in which acceptance is unconditional. Complete acceptance does not involve normative or judgmental attitudes. But it is deeply concerned with alleviating the misery of another person. A client-caseworker relationship reveals acceptance by words, gesture, posture and the client's as well as worker's experience of the feeling of being unconditionally liked, respected and understood. In this sense, acceptance is the essence of a client-caseworker relationship. 14. Confrontation—Herein the client is confronted with his own motor behavior, feelings, reactions etc. These are brought to his attention in its various aspects to help him to understand his own reactions to the situation/event/ person. This brings in insight necessary for effecting desirable change in his approach to deal with life situations. Examples: "You remember your eyes got red and your voice got raised when I... You remember you said 'No' when I requested you to see your hospitalized brother." 15. Role play—It refers to the spontaneous demonstration of the situation. It is a play enacted or character seen in real life consciously bringing out the feelings of the character brought into play. It is to uphold a particular phenomena or social issues through individual enactment. The purpose of the role playing are : ? Understand one-self and others. ? The role played by people in actual life. ? Examining personal attitude, feeling and behavior. ? Experimenting the new personal behavior. NSOU ? PGSW-II 172 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 172 PRINTTECH — 4th PROOF / 22.12.2021 ? Understanding the different aspects of a role and interaction between the roles. ? Asking the observers for their comments. ? Reflecting on and discussing the role play. Discovering insights and giving expression to them. ? Stopping the role play after 5-10 minutes or when the main points are over, ask for role players' own comments and experience. ? Briefly trying out the main roles. ? Intervening roles and their general characteristics. ? Selecting those who will be most effective in the roles. ? Choosing observers and briefing them as to what they should look for. ? Planning the role play and scenario in outline form by the main role players. ? Rehearsing and practicing for dealing with new situation. Discussing briefly the issue or problem or previous experience or relationship and deciding which are the important aspects to be included in the role play. ? Defining the purpose of a particular role play. ? Identifying roles and their general characteristics. 16. Modeling—Modeling is a technique in which a client's behavior is modified as a result of observing the appropriate and normal behavior of other people used as models. One may use modeling therapy for eliminating a child's fear of rabbits by making him observe that other children are playing with the rabbits without fear. Similarly, one's phobia of snakes may also be overcome through modeling therapy. Such patients may be made to observe both real and filmed incidents of people (models) and snakes in which people (models) may be seen approaching the snakes gradually with no signs of anxiety and fear. Modeling as a technique may also be used for learning more adaptable and desirable ways of personal and social adjustment. People may also be helped in the treatment of sexual dysfunctions by means of films or live models depicting practical techniques and normal sex behavior. 17. Reality therapy—RT is an approach to psychotherapy and counselling developed by Glasser (1960). RT differs from conventional psychiatry, AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 173 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 173 psychoanalysis and medical model schools of psychotherapy in that it focuses on what Glasser calls psychiatry's three Rs- realism, responsibility, and right-and-wrong, rather than symptoms of mental disorders. RT maintains that the individual is suffering from a socially universal human condition rather than a mental illness. It is in the unsuccessful attainment of basic needs that a person's behavior moves away from the norm. Since fulfilling essential needs is part of a person's present life, reality therapy does not concern itself with a client's past. Neither does this type of therapy deal with unconscious mental processes. In these ways reality therapy is very different from other forms of psychotherapy. The reality therapy approach to counselling and problem-solving focuses on the here-and-now actions of the client and the ability to create and choose a better future. Typically, clients seek to discover what they really want and how they are currently choosing to behave in order to achieve these goals. According to Glasser, the social component of psychological disorders has been highly overlooked in the rush to label the population as sick or mentally ill. Reality therapy attempts to separate the client from the behavior. Just because someone is experiencing distress resulting from a social problem does not make him sick; it just makes him out of sync with his psychological needs. 7.4 Role played by the therapist/caseworker Reality therapy seeks to treat patients who face difficulty in working out a relationship with others. So, the information of a connection of the patient with therapist is regarded as an important milestone at the start of the therapy. According to the therapists, bonding of the patients with their therapists is the most crucial dynamics that would facilitate the healing process. As soon as this bonding is stable, it can help to form a fulfilling connection outside the therapeutic environment. Patients receiving this kind of therapeutic treatment will learn various ways to strengthen relationships in the most suitable manner possible and that too in the absence of their therapists' safe relationship. Moreover, they will be able to use their newfound skills in their personal lives. Reality therapy says that when patients are able to use the skills, behaviours, actions and methods learned through the therapy in their personal lives, then they will

NSOU ? PGSW-II 174 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 174 PRINTTECH — 4th PROOF / 22.12.2021 be able to successfully work out external relationships as well. This will provide them with the satisfaction of leading a more fulfilling life. While traditional psycho-analysis and counselling often focus on past events, reality therapy and choice theory solutions lay in the present and the future. Practitioners of reality therapy may visit the past but never dwell on it. In reality therapy, the past is seen as the source of the client's wants and his or her ways of behaving, not as a cause. A client's "Quality World" is examined as to what this person wants in his life and it is realistic. Supposedly each person from birth has taken pictures or stored mental images that he wants in his Quality World. Also, each person strives to attain these things that have given pleasure in the past. Everyone's quality world is different, so naturally when people enter into a relationship their quality world most likely will not match up with their new partner. Principles used by the case worker while using reality therapy as a technique : ? Focus on the present and avoid discussing the past because all human problems are caused by unsatisfying present relationships. ? Understand the concept of total behavior, which means focus on what clients can directly act and think. ? Avoid discussing symptoms and complaints as much as possible since these are often the effective ways that clients choose to deal with unsatisfying relationships. ? Be patient and supportive but keep focusing on the source of the problem. ? Help them make specific, workable plans to reconnect with the people they need, and then follow through on what was planned by helping them evaluate their progress. Based on their experience, therapists may suggest plans, but should not give the message that there is only one plan. A plan is always open to revision or rejection by the client. ? Teach clients that legitimate or not, excuses stand directly in the way of their ability to make needed connections. ? Focus on specifics. Find out as soon as possible who clients are disconnected from and work to help them choose reconnecting behaviours. If they are completely disconnected, focus on helping them find a new connection.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 175 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 175 ? Remain non-judgmental and non-coercive, but encourage people to judge all they are doing by the Choice Theory Axiom. ? Avoid criticizing, blaming and/or complaining and help clients do the same. By doing this, they learn to avoid these extremely harmful external control behaviours that destroy relationships. ? Spend less time on what they cannot do directly such as changing their feelings and physiology. Feelings and physiology can be changed indirectly, but only if these is a change in the acting and thinking. 18. Family therapy—Family therapy has grown out of the realization that each member of a family is influenced by every other member. Usually, unhealthy intra familial relationships are responsible for the maladaptive abnormal behavior of a person. On the other hand, an abnormal person may prove a potent factor in turning the environment of family uncongenial and thus paving the way for making other members maladjusted and abnormal. A proper treatment procedure must care for the related factors in one's family along with his treatment. In order to bring about a desirable modification in the behavior of a person we have to take care of the interfamilial relationships within his or her family. If we attempt to change the person without changing the others in family, we may find family circumstances conspiring to keep him as he is. Family therapy is a challenging and promising approach. It helps the family members to discuss their attitudes with each other and acquire insight in the interfamilial relationship. It brings desirable changes in the whole family interaction, ensuring that changes in one person will not be counteracted by the behavior of others. This approach brings all or a large portion of the family under study and thus helps in maintaining the family's equilibrium and allows the family to work its adjustment problems as they occur. 19. Transference—It

94%

MATCHING BLOCK 423/544

SA

Social Work with Indiv and Groups Block 1.pdf (D164882170)

is the tendency in every human being to relate the emotions and attitudes that have developed during his growth to those people in his immediate environment.

The individual who brings to his object relationships his fantasized needs and who gives to the object fantasized qualities is manifesting the phenomenon of transference. This means that he

NSOU ? PGSW-II 176 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 176 PRINTTECH — 4th PROOF / 22.12.2021

100%

MATCHING BLOCK 428/544

SA

Social Work with Indiv and Groups Block 1.pdf (D164882170)

is transferring to a real person feelings, attitudes, and fantasies which

come from his unconscious mind and which are residual of his infantile experiences and conflicts. A patient's transference to the analyst is only that part of the patient's reaction to the analyst which repeats the patient's reactions to a person who has, at some previous time, played an important role in the patient's life. When a patient recounts free associations, he soon speaks of events or fantasies of vital interest to himself, and when these are told, the listener is gradually invested with some of the emotions which accompany them. The patient gradually begins to feel that the sympathetic listener is loved or hated, a friend or an enemy, one who is nice to him or one who frustrates his needs and punishes him. The feelings toward the listener become more and more like those felt toward the specific people the patient is talking about, or, more exactly, those his unconscious "is talking about". This special case of object displacement during psycho-analysis is called transference. Transference in case work—Transference was introduced into social work parlance by Jessie Taft in 1924 who described it as "an emotional relationship to the client". Hamilton defines transference as a carrying over of irrational elements from other relationships, particularly in the past, displaced on to the social worker, reflecting unconscious motivation. All relationships are based on previous experiences with people, however, the psycho-analytic term 'transference' referring to specific irrational responses of the client to the worker, as though the worker was some person in client's previous experience, is frequently used to refer any positive or negative feelings of the client for the worker. In this sense, the therapeutic relationship would be viewed as a transference relationship, as opposed to a real relationship, thus permitting the worker to insulate himself or herself from any true reactions and personally meaningful interactions with the client. A simple example of transference would be that of a client who came from a home where his father was an arrogant and domineering person. As a man the client has never been able to get along with his boss or any other figure of authority. In the case work situation, he transfers to the case worker hostile feelings of the type he originally felt toward his father and accuses the case worker of the same arrogant treatment at the hands of his father.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 177 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 177 Types of transference—It is of two types—positive and negative. If the parents of the client have been friendly and helpful, even though imperfectly or unsuccessfully but with the child's (client) interest at heart, he

87%

MATCHING BLOCK 424/544

W

will transfer a desire for help, friendship, guidance, emotional support and interest.

It is positive transference. If during client's early development the parents had not shown interest in him and were indifferent, then the client will transfer feeling of unfriendliness, suspicion and distrust. It is negative transference. If the transference is positive, help can be given more quickly and easily. When the transference is negative, then part of the work of the case worker is to help the client understand the origin of the negative feelings and work toward making them more positive. Use of transference—

88%

MATCHING BLOCK 425/544

W

There are three stages in dealing and using transference in social case work.

These stages are : 1.

91%

MATCHING BLOCK 426/544

W

Understanding the transference. 2. Utilizing the transference. 3. Interpreting the transference Understanding of the transference is essential for the worker as it helps to understand the behavior of the client and to recognize its significance in his development process. It also explains the present unconscious needs of the client. Understanding of the transference

gives an opportunity to the worker for the integration of factors i.e. the present behavior and problem, the environmental forces, the past experiences and earlier relationships.

Utilization of transference depends on the understanding of the social case work of the phenomena .It explains many cures or treatments of emotional disturbances by life situations and by fortunate relationship with other persons. The recognition of a transference need permits the establishment of a relationship between a case worker and a client which allows for the utilization of such techniques as suggestion, advice, counselling, and education. The interpretation of

the transference, that is,

96%

SA

Social Work with Indiv and Groups Block 1.pdf (D164882170)

confronting the individual with the awareness that his behavior is the repetition of a specific unconscious

infantile constellation is definitely part of psycho-analytical therapy and requires the preparation of the individual by the careful analysis of his unconscious defenses.

NSOU ? PGSW-II 178 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 178 PRINTTECH — 4th PROOF / 22.12.2021 Use of Transference in Diagnosis The person, who comes for help, knows external factors of his problem and has little resistance discussing them. In such cases a positive reality relationship is sufficient for diagnosis. When the emotional factors are involved in the problem, the client will not like to disclose them easily and most of the time will avoid on that particular issue. In such cases transference becomes necessary because apart from the resistance due to personal reasons involved in the problem, he is not fully aware about his existence in him. Transference diminishes these resistances to some extent and thus helps him to talk more freely and friendly. It is transference which gives clues by which social case worker infers the nature of his underlying difficulties. It also gives an insight into the client's personality and helps in identifying his weaknesses as well as his strengths and ego functioning. On the basis of the understanding of the ego strength, social case worker prepares treatment plan for the client. Use of Transference Treatment In case work, transference is developed in terms of psycho-social interaction to reveal specific relationship and situations rather than being held within the worker- client focus as such. Transference is designed to free the patient sufficiently so that he may think and feel more realistically about his behavior and relationships, to support him in great feelings of adequacy and confidence, and to mobilize him to express his powers creatively in social situation.

94%

MATCHING BLOCK 432/544

SA

Social Work with Indiv and Groups Block 1.pdf (D164882170)

Transference promotes a feeling on the part of the client that his problem is being shared and case worker is genuinely interested in his welfare. This feeling of the client makes him easy, calm; less burdened with anxiety and opens the road for fruitful solution.

The feeling of sharing of the client is his identifications with the worker who develops transference. Thus the transference helps in treatment in a number of ways. ? The client feels relaxed. ? The client starts abandoning resistances. ? He perceives the problem situation more realistically. ? The mature ego strengths of the worker serve to reinforce the weak ego strengths of the client. AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 179 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 179 ? The worker, when he does not respond neurotically, helps the client to see and bear the reality. ? Identification with the worker gradually helps the client to strengthen his ego power and capacity for reality testing and problem solving. 20. Counter transference—Relationship is a two way process. Social case worker has also unconscious tendency to transfer out the client. As in the case of transference, these counter transference feelings, both positive and negative, are unconscious but operate with force. Therefore, it is

96%

MATCHING BLOCK 430/544

W

the job of case worker to recognize his feelings and must control them. 21.

Clarification—This involves clarifying the reality as distinct and separate from fantasy. This seeks to correct distorted ideas that are unrealistic. This helps in developing awareness of unproductive repetitious behavior patterns and of the ego defenses operating in individual's such behavior patterns. Herein, the client is made aware of certain attitudes and feelings colouring his reality perception; once he is aware of it, he can see how his actions are against his own real interests. His awareness of his own attitudes and feelings helps him to see the situation objectively. He thus develops better control and takes decision according to his real needs and existing reality. Examples: How do you know that your father—in -law is angry with you? How can you say that college-going girls do not make good wives? Can you secure first division in the examination by studying for one hour daily only? 22. Interpretation—It is meaning (why) of the client's behavior in terms of the influence of his earlier experiences with parents and siblings on his current functioning. The current functioning is interpreted in terms of his experiences in childhood and he is made to realize that his own actions are against his own interest. Interpretation of the reaction of the client is done in terms of how (dynamic functioning) also, i.e., in terms of interaction between thinking and feeling, ego, id and superego, defense mechanisms and impulses etc. Examples: "Are you afraid of your boss because you were afraid of your father? Do you fulfill all the wishes of your wife irrespective of its cost because of your domineering sex urges". 23. Resource utilization— It is a very common technique of social caseworker which implies that all the resources available to the client, including

NSOU ? PGSW-II 180 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 180 PRINTTECH — 4th PROOF / 22.12.2021 interpersonal as well as community resources, are used to help the client and protect his legitimate interest. In this process, one can use the resources of friends, relatives, neighbours, public and private agencies, in addition to his own (client's) intelligence, psyche, education, talents etc., to help him to solve his problem and adjust to his environment. 24. Individualization—It is just opposite to generalization. Herein, the client is made to feel that the reactions/feelings are unique to the client and he should own responsibility for it if he is to solve his problem. This is required in those cases where the client avoids taking responsibility for his feelings/ reactions by generalizing it. One may say, for example, "I think, Mr.X, it you who feel like this. Others do not feel like this in such situations". 25. Paraphrasing— Paraphrasing has been regarded in professional literature as an influential reaction that greatly contributes to the process's progress. The counsellor rephrases the content of the client's message. This reaction encourages additional thoughts and new expressions which then aid the client in examining conflicts. Using paraphrasing during counselling also assists social case worker to clarify and brighten the client's expressions. ? Paraphrasing is rephrasing the main content of the client's message (usually in a shortened form) to clarify the essence of what he or she has just said. ? It is about stating thoughts from a different angle. ? It concentrates on immediate client statements. ? It is about taking what the client has said and repeating it back to them in one's own words BUT not necessarily using the same words. ? An accurate paraphrase would involve interchangeability of client's ideas. ? In summary, paraphrasing is simply just about condensing, capturing and stating in one's own words the important content message of what someone has just said. Paraphrasing is repetition of the jest of client's feelings by the counselor in their own words. For example, "You seem to be saying that you are afraid that your family is not going to take care of you". The clients might then agree with the interpretation. If not, the counselor can seek clarification by saying "will you please explain it with

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 181 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 181 more details". Utilizing this technique, the case worker attempts to give feed back to the client; the essence or content of what the client has just said and clarifies understanding of the client's world. Clarification helps the client to come to understand themselves better. When you ask the client to explain something in more details or in a different way; by doing this clients not only explore their own feelings further, but will also feel that you are trying hard to understand their situation. In the process, case workers also tell the client about the scientific facts known to them. A paraphrase reflects the essence of the verbal content; it expresses the facts of the situation but pares away details. For instance, newscasters often repeat in their own words what people said during interviews. Each of you has observed the use of the paraphrase and has probably used paraphrasing, perhaps without noticing it. When you take notes in a class, you probably paraphrase the instructor's lecture. When you send a telegram, you condense the message into as few words as possible- again, a form of paraphrase. When to use paraphrase ????? When you have an hypothesis about what's going on with the client. ????? When the client is in a decision making conflict. ????? When the client has presented a lot of material and you feel confused. It is helpful for the case worker to repeat the client's preferred words especially if the client uses a particular word rather frequently. This is highly useful as it helps the client feel a higher degree of rapport with the social worker. Also, when a client shares a particular insight, parroting might help the insight to sink in further. The paraphrase has three main functions : Verification of perception—A paraphrase acts as a perception check. To verify that you have understood what the other person has said. This is especially helpful if you are confused, or if you feel you may be identifying too closely with the person's situation. If you have heard correctly, the client may respond to your paraphrase by saying "Yes", "That's it", or "Right". Clarification—It may clarify what the person has said, especially if you pick up trends, set up dichotomies, or list priorities. As an active listener with some objectivity, you may see these trends and priorities more clearly than the speaker.

NSOU ? PGSW-II 182 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 182 PRINTTECH — 4th PROOF / 22.12.2021 Demonstration of accurate empathy—A good paraphrase can demonstrate that you have what Carl Rogers called accurate empathy. Accurate empathy is a non- judgmental reflection of another person's world view; it is "walking a mile in another's shoes". It is important that a paraphrase be brief. It should almost always be shorter than what was originally said. Standard openings for a paraphrase are: "In other words," or "So I hear you saying— —". Key points to remember while paraphrasing 1. When restating in your own words bear in mind that you have to show a manner where the content and meaning of what has been said remains the same without any change. In other words, the social worker should not add or alter the meaning of the client's statement. 2. Also, such rephrasing statements should be void of judgment. 3. In addition, paraphrasing statements should be presented without an attempt to problem-solving. 4. Always check the accuracy of your paraphrasing with your client through phrases such as "Is that right?" 5. A tip for helping students who have difficulties in paraphrasing would be to slow down the pace of the helping relationship so that they would have more time to think. 6. During this time, social workers should try to recall the key message and attend to it. Also, recall key points and try to reconstruct it you're your own words. Moreover, many people have this conception that paraphrasing is merely putting the other person's ideas in another way. However, effective paraphrasing comes from an attitude, a desire to know what the other person means. Hence, it is essential to communicate the meaning that their words convey to you. Social case workers should remember to state paraphrases in a tentative way so the clients can correct errors, confirm accuracy or provide more details. Also, a tentative paraphrase helps to pave the way for open discussions that might lead to deeper explorations. Examples of such tentative statements are "Correct me if I'm wrong, but I'm sensing... and "Would I be right to say that you feel...".

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 183 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 183 In the beginning stage, paraphrasing is especially important as the social case worker is just starting to understand how the client feels and thinks. The client has an opportunity to know that the social worker has been listening to them, is with them and is interested in what he or she has to say. Thus, paraphrasing has a powerful and positive effect as the client in turn would release their defense guard and would share more without fear. Sharing more would lead to new understanding or insights for client with respect to their feelings and problems. Through paraphrasing, client can also have an idea if the social worker has understood what he or she has said. If he or she feels that they have yet to be accurately understood by the social worker, then this provides them a chance to try to make the message clearer or correct the inaccuracy. Help the client by simplifying, focusing and crystallizing what they said. On the other hand, if the paraphrase is accurate, it engages the client more and makes them open up more. It may encourage the client to elaborate more. Paraphrasing is useful for confirming understanding such as confirming the social worker's perceptions. It provides a check on the accuracy of counsellor's perceptions. Paraphrasing helps in the process of sorting out important from less important information. This helps the client to not only focus on the content of his or her message but also aid them in organizing their disjointed thoughts. Lastly, it helps to highlight content when attention to feelings is too early or self-defeating. A good paraphrase : ? Captures the essence of what the person said; leaves out the details. ? Conveys the same meaning but usually uses different words. ? Is briefer than what the person said. ? Is tentative. ? Is clear and concise. Steps in paraphrasing Client, a 40-year old woman : "How can I tell my husband I want a divorce? He'll think I'm crazy. I guess I'm just afraid to tell him " ? Recall the message and restate it to yourself covertly. ? Identify the content part of the message..

NSOU ? PGSW-II 184 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 184 PRINTTECH — 4th PROOF / 22.12.2021 ? Wants divorce, but has not told husband because he will think she is crazy. ? Select an appropriate beginning: e.g., "It should like", "You think", "I hear you saying". ? Translate the key content into your own words: Want a divorce= break off, split; e.g., "It sounds like you have not found a way to tell your husband you want to end the relationship because of his possible reaction. Is that right?" ? Confirm the accuracy of the paraphrase. How it is done Restate basic ideas and facts in your own words. Introduce your paraphrase with such comments as : So, if I understand you right, you are saying.... (repeat what they just said in your own words)... Do I have it right? Let me see if I get what you mean. You are suggesting that... Is that it? Ok, your point is that....Correct? Use your paraphrasing to separate factual content from feelings by saying something like : - The factual situation is... (repeat their facts)... and the way you feel about that is... (Emphatically describe how you think they feel). Is that right? Move toward problem solving. - Client : I lost my job at the start of the year. On top of that I had marital problems with my husband. My children just don't seem to respect me. - Social case worker : The message I get is that you have had a number of serious things going wrong this year. - Client : I know it does not help my depression to sit around at home or stay in bed all day. - Social case worker : It sounds like you know you should avoid staying in bed or sitting around all day to help your depression. 26. Reassurance—It is used to allay unrealistic anxiety, guilts and apprehensions and create a sense of security in the client. The strength of reassurance depends upon the confidence the client has in the worker. The way the worker conducts himself in the situation can itself be reassuring to the client.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 185 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 185 His fantasies/irrational thinking can be discussed to show their baselessness, thus making the client comfortable and secure. For example, in the interview for jobs, the worker can explain the whole situation and thus make him believe that he had equal chance to be selected along with others and that his apprehensions about the interview board are baseless. Reassurance should be given only when the facts justify it. To cite an example, one may assure an anxious patient to be operated that there is every likelihood of its being successful. If someone tells him that the operation is bound to be successful, he is taking risk as one can never be fully sure of the operation's success. Insecure persons may seek unconditional reassurance, which should be avoided for obvious reasons. 27. Encouragement—It is done through expressing confidence in the client's abilities, recognizing his achievements and expressing pleasure in his success as we do when someone gets distinction in the examination or wins a match. It is useful with children and adults lacking self-confidence or with persons in critical situation. Like any other technique, encouragement should also be based on facts and not on false premises. False encouragement is detrimental to the growth of individual. Examples are congratulating someone when successful in some competition, or when something has been achieved. 28. Explaining—This technique is used for helping the client to understand the situation or events in its various aspects with possible implications for the clients. The worker tries to put all the aspects of the situation/event in detail and in proper sequence to enable the client to have better intellectual understanding and appreciation of the situation/event. This helps him to take proper decision and allays his apprehensions and corrects misconception. Sometimes one may take the help of theoretical knowledge also. 29. Catharsis—A catharsis is an emotional discharge through which one can achieve a state of moral or spiritual renewal or achieve a state of liberation from anxiety and stress. Catharsis is a Greek word and it means cleansing. In literature it is used for the cleansing of emotions of the characters. It can also be any other radical change that leads to emotional rejuvenation of a person. This technique is often used by the caseworker to elicit all pent up

NSOU ? PGSW-II 186 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 186 PRINTTECH — 4th PROOF / 22.12.2021 feelings from the client which facilitate to realize many dimensions of the problem the client is encountering. 7.5 Summary We learnt that why it is important to adopt the techniques while solving any client's problems. While going through this unit we came across several Social Work techniques and also learnt about the role of the Case Worker as a therapist. We must try to use these techniques in right situation to get the best result. 7.6 Exercises 1. Write any four techniques of Social Work with examples from your field work placement. 2. What is paraphrasing? Enumerate its key points. 3. Write a brief note on study, diagnosis and treatment. 4. Enumerate the principles used by case worker while using reality therapy. 5. Discuss the Differences between counselling & Case Work. 7.7 References 1. Holis, Florence (1953); "The Techniques of Case work" in Principles and Techniques of social Case Work (ed.) Skill is the capacity to perform a task or act in such a way that the objectives are realized effectively and within the shortest possible time. Skill development depends upon training, practice, experience and knowledge of human behavior.

Basically, there are four skills required for effective casework practice. a) Skill in relationship b) Skill in exploring problems in depth c) Skill in the use of the resources d) Skill in finding out alternative solutions It has been discussed earlier that casework treatment is carried through relationship between the client and caseworker. This needs creating an atmosphere of trust, confidence and mutual respect wherein the client feels comfortable to express himself and asks for help.

100%

MATCHING BLOCK 434/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

Skill lies in showing respect, and genuine interest in the client and his problems, respecting his opinions and values, and involving him in every stage of finding solution of his problems.

NSOU ? PGSW-II 188 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 188 PRINTTECH — 4th PROOF / 22.12.2021 The caseworker ought to possess skills in probing the details and developmental sequence of the problem. Caseworker's ability to help the client to tell his story and to identify his real problem

100%

MATCHING BLOCK 435/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

requires capacity to listen to, express interest and show respect to the

client's versions along with understanding of human behavior in different conditions, and of social conditions and human problems. Obviously, this requires capacity to empathize with the client. Very often, services and material resources are used as tools to help the client to solve

90%

MATCHING BLOCK 436/544

SA

Social Case Work Block 1.pdf (D164874043)

his problems. Therefore, caseworker needs capacity to tap all such resources either available in the friends circle or with the relatives or in the community of the client in general to help him.

Caseworker's

71%

MATCHING BLOCK 437/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

skill lies in locating and using these resources for helping the client in such a way that it does not damage his self-image, especially in out Indian settings. After having established a congenial relationship, explored his problems and tapped the needed resources, it is extremely important to discuss the possible approaches to solve the problem in

greater detail and with full clarity. Alternative courses of action need to be thrashed out vividly and concretely in terms of its advantages, disadvantages, implications for everyone likely to be affected by this decision.

94%

MATCHING BLOCK 438/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

Skill lies in helping the client to understand each alternative with its all implications and to decide for the best possible course of action in the situation.

The suggested actions have to be according to his capacity, status, resources and community norms. 8.2 Attitudes of Case Worker

67%

480E1230-Social Work with Individuals (Final P ... (D165107502)

she is an individual, a human being capable of contributing to the growth of the society. It is because of this attitude that social workers attend to every person's need without an consideration of class, caste or creed etc., and serve anyone and everyone without any discrimination. They recognize the fact that every member, whatever be his handicap, has worth; therefore, he deserves to be respected and he is a

dignified member of the society like anyone of the society. He had to be respected so that he can get all possible help and facilities to live a socially productive and personally gratifying life. 2. From this it follows that individual has right to self-determination, taking decisions about all the matters related to self as long as it does not interfere with the rights of others. One is considered to be capable of taking decisions about one's own future and the helper is only to tell him the pros and cons of his decisions to enable him to choose his own future course of action. 3. Every individual is the primary concern of society, has potential for and the right to growth and it is the responsibility of the society to provide equal opportunities to everyone to actualize his self. 4. Every individual in turn, has to contribute to the society's development by assuming his social responsibility, discharging his functions honestly and acting properly and adequately in his social roles. 5. The individual and society in which one lives are interdependent. Neither the individual nor the society can be conceived of without each other. 6. Basic human needs to be met by services which are not contingent upon conformity either to moral behavior or to race, nationality, religion, caste, etc. 7.

Man

86%

MATCHING BLOCK 442/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

is a bio-psycho-social who is in constant interaction with his environment. Social functioning

is determined by this interaction. When the child is born, he is nothing but a mere organism capable of bare minimum psychosocial processes. Mother starts training the child. She teaches the baby either to suck the bottle or mother. The training continues. The child learns where and when to pass faces, what to eat, what to put on, etc. It goes on further. He learns the language, how to address mother, father, guests, seniors, etc. This process of learning goes on and he becomes a person by learning the social manners, social customs, morals, laws, etc. He, as a member of the society, tries to establish his place in his group-family, neighbourhood, village, etc. So, he does not remain a mere organism but becomes a person through the process of socialization. What he is today, is the product of interaction of the organism with psychological, social and geographical factors. And, the social functioning (how does he act in relation to self and others) is the result of the interaction of man, who is a product of biological (physical), psychological NSOU ? PGSW-II 190 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 190 PRINTTECH — 4th PROOF / 22.12.2021 (thinking, feeling, perception, learning, memory etc.) and social (membership of the group which has its own norms, values, customs and a certain style of living) factors, with the environmental factors like the human beings, the living bodies, the climate, the amenities of life and the natural surroundings, etc. 8.

Every person is unique as well as similar to others. 9.

Man

100%

MATCHING BLOCK 444/544

SA

480E1230-Social Work with Individuals (Final P ... (D165107502)

can grow and change limited only by his inherent capacities and potentials.

This attitude implies that there is no limit to growth and development of an individual except the one imposed by our genetic potentialities inherited by us. For example, we cannot make a person with an I.Q. of 50 compete with a person of 100 I.Q. This attitude helps us plan our environment realistically and reduces our constraints involved in the process of helping others. 10. Within certain limits, man can be understood and helped. Man is, as discussed earlier, a product of a very subtle and complicated interaction process between bio-psycho-social (including environmental factors). Under no circumstances any one can understand this process to the fullest extent. Nobody can remember all that has happened to him during his earlier parts of life. This becomes more evident when we find that one invariably forgets what has happened to him even during one day. This is the human limitation. Hence, naturally, one can study and understand a person within certain limits only and thus the help to be given to him will be limited by the understanding of the man in question and the availability of various resources. 11. All problems in social functioning are psycho-social in nature and most are interpersonal as well. Social casework, to start with was more concerned with socio-psychological problems. With the advancement in the field, social casework has been described as a psychological process also dealing with psycho-social problems as well. The fact is that no unit of our functioning in the society, say any act is either purely psychological or social. It may originate in 'psyche' and get expressed in social (psycho-social) or it may originate in 'social' and get expressed through psyche (socio-psychological). For example, I think to present a pen to my child and I give it. This is psychosocial in nature. Similarly, when I see my teacher, I bow down and greet him, which is termed as a socio-psychological act. However, in all the AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 191 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 191 acts, we see both social and well as psychological components. Thinking takes place in a social context, and the why I think, has been patterned by the society. Our ideas, beliefs and attitudes have been learnt from the society and its culture. All the problems caseworkers deal with are psycho-social in nature, i.e. they have psychological as well as social components. (Here, psycho-social is used in terms of psychological and social and not in terms of which precedes the other one). The causative factors of the problem may be either in the psyche or in the social circumstances or in their interaction. Many a time, these problems have interpersonal components as well. 8.3 Summary To get the most effective result, it is important that the Case Workers must acquire some basic skills so that a meaningful relationship is established with the client, and their problems are explored & resolved. The case worker must also adopt a democratic attitude & give appropriate dignity to the client. 8.4 Exercises 1. Briefly elaborate the necessary skills of social case worker. 11. What should be the ideal attitudes of case worker? 8.5

of social case work. 9.2 Introduction Social Casework, a primary method of social work is concerned with the adjustment and development of the individual towards more satisfying human relations. But his/her adjustment and development depend on the use of available resources by him and within him. Sometimes due to certain factors, internal or external he/she fails to avail existing facilities. In such situation social caseworker by using different resources; both material and human helps the client. But before applying different techniques to the client in solving his/her psycho-social problems, he/she is required to know the theoretical framework of social casework practice. There are certain principles of social casework practice and these principles are the guidelines to work with client. Those principles have also been discussed here.

Diagnostic and functional schools of thought have been explained along with the difference between the two. Theories and models of working with the individuals have got its place in the present unit. 9.3 Principles of Social Casework Let us quickly once again revise the principles of social casework are applied in establishing close relationship between social caseworker and the client. Relationship is the medium through which changes are brought in the behaviour and personality of the client. The term relationship in social casework was used for the first time by Miss Virginia Robinson in her book, "A Changing Psychology in Social Case Work" in 1939. The social casework relationship is the dynamic interaction of attitudes and emotions between the social caseworker and the client with the purpose of helping the client to achieve a better adjustment between himself and his/her environment. Thus the purpose of establishing relationship is to help the client with his/her psycho- social needs and problems. The relationship between caseworker and client may be more strengthened by using certain principles. These principles are :

- Principle of individualization
- Principle of meaningful relationship
- Principle of acceptance
- Principle of communication
- Principle of expression of feelings
- Principle of controlled emotional involvement
- Principle of non-judgmental attitude
- Principle of client's self-determination
- Principle of worker's self-awareness
- Principle of social functioning
- Principle of tuning behaviour
- Principle of social learning
- Principle of confidentiality

NSOU ? PGSW-II 194 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 194 PRINTTECH — 4th PROOF / 22.12.2021 1)

99%**MATCHING BLOCK 449/544****W**

Principle of individualization No two persons are alike in all qualities and traits. Their problems may be the same but the cause of the problem, the perception towards the problem and ego strength differs in every individual. Therefore, each individual client should be treated as a separate entity and complete information is required to establish close relations in order to solve his/her problem from root. 2) Principle of meaningful relationship The purpose of establishing relationship in social casework is to change the behaviour of the client or to achieve adjustment in maladjusted situation. Meaningful relationship is developed in social casework by demonstrating the interests in client. He/she is convinced of the caseworker's warmth as an individual and conveys respect and caring for him/her. In return, the caseworker helps the client to trust in his/her objectivity and feel secured as worthwhile individual. 3) Principle of acceptance Social caseworker accepts the client as he is and with all his/her limitations. He/ she believes that acceptance is the crux of all help. It embraces two basic ideas — one negative and one positive. He/she does not condemn or feel hostile towards a client because his/her behaviour differs from the approved one. Later on, he/she tries to modify his/her behaviour step by step. 4) Principle of communication Communication is a two-way process. There must be proper communication between caseworker and the client, which helps, in proper understanding of each other. It is the road to the identification of the client's problem. The function of social caseworker is primarily to create an environment in which the client will feel comfortable in giving expression to his/her feelings. It depends on a proper communication. 5) Principle of expression of feelings Purposeful expression of feelings is the recognition of the client's need to express his/her feelings freely, especially his/her negative feelings. The caseworker listens purposefully, neither discouraging nor condemning the expression of those

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 195 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 195

98%**MATCHING BLOCK 450/544****W**

feelings. Sometimes he/ she even stimulate and encourage them when the expression is of therapeutic nature. 6) The Principle of controlled emotional involvement The social caseworker tries to understand the client's feelings and emotions but he/she himself/herself does not involved emotionally in his/her problems. 7) Principle of non-judgmental attitude The non-judgmental attitude is a quality of the casework relationship. The caseworker does not blame the client for his/her problem nor he assigns any responsibility for his/ her miseries. He/she only evaluates the attitudes, standards or action of the client. 8) Principle of client self-determination The client's self-determination is the practical recognition of the right and need of clients to freedom in making his/her own choices and decisions. But this right is limited by the client's capacity for positive and constructive decision making. 9) Principle of self-awareness It means that caseworker should know his/her own strengths and limitations in dealing with client's problems. If he/she feels that the problems of the client are beyond his/her capacity, the client should be transferred to the appropriate authority. 10) Principle of social functioning Social functioning means the functioning of the individual in his/her social roles and relationships, with emphasis on his/her relation to the environment. The caseworker tries to assess the roles of the client and his/her capacity to perform these roles. 11) Principle of tuning behaviour Man has body, mind and intellect as three instruments of experiences through which life constantly pulsates. These three instruments have their own distinct characteristics in each person. Hence each person has unique personality. There is need of tuning three instruments for right perception and thinking. The social caseworker does it. 12) Principle of social learning Social learning is a pre-requisite to the changes that are inevitably involved in problem solving. The social learning processes involves :

NSOU ? PGSW-II 196 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 196 PRINTTECH — 4th PROOF / 22.12.2021 (1)

Arousing and focusing attention and concern, (2) Organising and evaluating the problem and planning future action, (3) Searching for and acquiring new information, (4) Providing opportunities to the client for new experience. 13) Principle of confidentiality Confidentiality is the preservation of the secret information concerning the client, which is disclosed in the professional relationship only. 9.4 Schools of Social Casework In the beginning the aim of social work was to help but later on due to influence of psychology and psychiatry, personality and behaviour treatment have also been added as the objective of social casework. Basic orientation of social caseworkers are of different kinds and with the result diagnostic and functional schools appear in the practice of social casework. Diagnostic School The diagnostic school is basically founded on the Freudian theory of psychoanalysis. Mary Richmond gave shape to these thoughts in the form of a school. She wrote first book on social casework i.e. Social Diagnosis in 1917. The other contributors of this school were Marion Kenworthy (New York School of Social Work), Betsey Libbey (Family Society of Philadelphia), Gordon Hamilton, Bertha Reynolds, Charlotte Towle, Florence Day and Annette Garrett. The Diagnostic school is based on the following main foundations. Principles of Diagnosis Social casework help is based on the understanding of each client individually and his/ her problems. It is essential because it gives a realistic basis for differentiation, and a base for the improvement of the client's social situation and personal satisfaction and adjustment. The diagnosis is based on the following principles : 1) The diagnostic process consists of a critical study of a client and his/her situation and the trouble concerning which help is sought or needed for the purpose of understanding the nature of the difficulty with increasing details and accuracy.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 197 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 197 2)

100%**MATCHING BLOCK 452/544****W**

Diagnosis is based on the knowledge of the worker about the interplay of social and psychological factors affecting the client. 3) The knowledge of interaction between inner and outer forces influencing the client makes the process of diagnosis helpful and therapeutic. 4) Every problem of the individual should be understood in the light of multiple factors theory. 5) In the initial stage also, relieving of pressure of stresses and strains on the client, helps the caseworker to arrive at a proper diagnosis. 6) The initial appraisal of personality and motivations and their significance in the development of client's problem provides the basis for planning the treatment of the client's problems. 7) For the solution of the problem of the client, it is of utmost importance to gain some knowledge of his/her current capacity to work and to recognize the motivating forces in his/her behaviour. 8) The understanding of the psycho-dynamics and the pathological symptoms of the personality of the client provides the basis of determining the kind of help that can be appropriately offered. Principles of Treatment The main objective of the treatment is of alleviating the client's distress and decreasing the malfunctioning in the person situation system. The above objective is achieved by enhancing the adaptive skills of his/her ego and functioning of the person situation system. It is based on certain principles : 1) The forces of the discussion in the interview is centred on the problem and ways of resolving it. Attention is paid to know the obstacles both situational and behavioural that stand in the way of solution. 2) Nature and extent of both social and psychological factors differ in each situation. 3) Treatment goals and techniques are planned after a careful study of the particular needs of the client. 4) The success of the treatment programme is based on the utilization of the relationship purposefully. 5) Social therapy and psychotherapy are the two broad classifications of social casework treatment.

NSOU ? PGSW-II 198 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 198 PRINTTECH — 4th PROOF / 22.12.2021

100%**MATCHING BLOCK 453/544****W**

Use of Techniques The techniques include encouraging, emotional discharge, reassurance, support, suggestion, guidance and direction, provision of new experiences, clarification, interpretation, etc. Use of Relationship The relationship is the medium of treatment through which client is enabled to find new ways of perceiving his/her problems and of handling himself. Functional School The functional approach to social casework practice was developed by the Faculty Members of the School of the University of Pennsylvania. This approach is based on the personality theory of Otto Rank. According to Functional School social casework is a method of helping people through special services given by social agencies in such way that the experience of using such services may be psychologically constructive. Thus the functional school of social casework has two inseparable aspects : 1) Potentials for help to a person is inherent in the existence of service. In spite of the differences in the clients and ways of using of agencies services, the kind of service an agency gives and their purposes remain the same. 2) The use of agency service gives psychological experience that differs from the form of another kind of service regardless of the similarity of problem in the people using the two services. Diagnosis The diagnosis is most effective which is related to the need for some specific service and which is developed in the course of giving the service. This school does not recognize the significance of understanding the total situation of the client. Functional diagnosis recognizes that people cannot be categorized and a plan with a specific kind of service may deny potential growth and change. In establishing a diagnostic conclusion each individual makes his/her own diagnosis of

him/her.

100%**MATCHING BLOCK 454/544****W**

Diagnosis is a way of engaging in a human relationship process, which frees the help seeker to determine his/her own goal for himself/herself. The client is the centre for change capable of continuous growth and development.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 199 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 199

99%**MATCHING BLOCK 455/544****W**

Treatment Functional school prefers to use the term helping process, rather than treatment. Social Caseworker is not responsible for treating someone who is the passive recipient of treatment because the school believes that the centre for change resides in the client itself. Social Casework through the agency service seeks to release power for improved social functioning. The process of establishing and using a diagnosis serves as the part of casework helping. Total social casework process includes three stages or three time phases: beginning, middle and ending. In the beginning phase, the caseworker establishes relationship by removing all the hindrances that come in the way of understanding the client or by the client to the caseworker. He/she also tries to understand the client's needs, desires, motives, interests and hopes for future. He/she also divides the problem of the client and put them in order of priority. The client starts to take services from the agency. In the middle stage the responsibility of the client increases and the relation becomes closer. The last stage is of separation of client from the caseworker. It is a difficult process. Sometimes client does not like to terminate the service due to emotional touch with the worker. The social caseworker with all his/her abilities and capacities tries on one hand not to harm his/her feelings and on the other hand the client may go happily. Caseworker gives him/her a chance to become conscious of his/her readiness to leave, so that he/she can leave the agency without and fear. Difference between Diagnostic and Functional School 1) Diagnostic School follows the theory of personality developed by Sigmund Freud whereas functional school is based on the theory of 'will' developed by Otto Rank. 2) Diagnostic School believes that personality is a composite of many interacting forces, reacting not only in each other but also influences the social environment favourably or unfavourably. The strength and the nature of balance of these forces are the result of individual's experiences primarily of his/her relationship to parents and the other person. The functional school also believes that the process of development of personality takes place within the interaction of inner needs and environmental experiences, but such an interaction takes place and is directed by the human beings inborn will to individual development and autonomy.

NSOU ? PGSW-II 200 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 200 PRINTTECH — 4th PROOF / 22.12.2021 3)

99%**MATCHING BLOCK 456/544****W**

According to diagnostic school, the ego is the chief of psychic energy, the strength of which is determined largely by the favourable or unfavourable course of one's psycho-social environment. But according to functional school the ego (self) is the result of the creative use of inner and outer experience through the 'will' and is not the product of interaction of inner and outer forces. 4) In the diagnostic view, the goal of treatment is to increase the individual' ego capacity whereas functional school tends to direct his/her effort toward helping the client to release his/her inner capacity of feeling, organising and acting. 5) Total information about the client's ego functions, total personality, motivating forces, reality pressures and his/her current feelings is essential according to diagnostic view for enabling the client to take part in the therapeutic relationship. Functional school gives emphasis on the client's feelings in the immediate situation which includes both his/her problem and the casework relationship through which he/she may solve the problem, other information are secondary. 6) Diagnostic School believes in doing planned and goal directed help to the client — both psychological and social. Functional school gives full freedom to the client to give direction to his/her own process of change. Agency services are made available. 7) The Diagnostic School accepts responsibility for apprising client's capacities and weakness and for organising and arranging measures for self development. The functional school believes in the client's right for choices and goals because of the constructive value of the use of self. 9.5 Theories of Social Casework Theories or models give the direction to the caseworker to handle the client in a way which is suited according to the client's need and social conditions.

Psycho-social Theory Psycho-social theory was propounded by Hamilton. She published an article on "The Underlying Philosophy of Social Case Work" in 1941 in which the word 'diagnostic' was used to express psycho-social problems. In this approach, diagnosis and treatment are directed toward person in situation. The client is seen in the context of his/her interactions and transactions with the outer world. For proper diagnosis and treatment client's social context must be understood and mobilized. Treatment must be differentiated according to the need of the client. Three stages are involved in psycho-social approach. Psycho-social Study Social Caseworker starts his/her work with the knowledge of the needs of the client. He/she on the basis of the needs assesses what kind of help is his/her need. He/she also finds out the perception of the client about his/her own problem, and his/ her desires about the kind of assistance to be provided. He/she, then, himself/herself tries to arrive at his/her own understanding of what the client's trouble is, what factors contribute to it and what type of service is needed to improve his/her ego strength and adaptability. Diagnosis On the basis of the collected data and available material social caseworker tries to assess the nature of client's trouble contributing factors and where changes can be brought in his/her behaviour without much efforts. Treatment Social Caseworker gives much emphasis on indirect treatment or environmental modification. He/she intervenes actively in the environment and provides necessary concrete help to the client. He/she provides financial help by locating such agency, proper health care and also educational resources. Direct treatment is also provided for the ventilation of the client to accept concrete help. Psychological support, counselling, suggestions, etc. techniques are used to establish close relations with the client. II) Behaviour Modification Theory Behaviour modification theory is based upon the principles of learning and conditioning propounded by Pavlov and Thorndike. The researches of B.F. Skinner

NSOU ? PGSW-II 202 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 202 PRINTTECH — 4th PROOF / 22.12.2021

100%**MATCHING BLOCK 467/544****SA** Social Work with Indiv and Groups Block 1.pdf (D164882170)

helped to develop the behaviour modification approach further. The behaviouristic theory viewed problem as essentially the result of a failure to learn necessary adaptive behaviours and competencies and/or the learning of ineffective and maladaptive behaviours. It may happen due to conflicting situations that require the individual to make discriminations or decisions of which he/she feels incapable. The maladjusted person has learned faulty coping patterns, which are being maintained by some kind of reinforcement, and he/she has failed to learn needed competencies for coping with the problem of living. Techniques of Behaviour Modification The following techniques are used for behaviour modification: Simple Extinction In this technique, the reinforcement is removed to eliminate a maladaptive pattern of behaviour. This is especially helpful where maladaptive behaviour is being reinforced unknowingly by others. Through this technique, learned behaviour patterns are made weaker and disappear overtime. Systematic Desensitization It is a technique to deal with a wide variety of maladaptive emotional behaviours, particularly involving anxiety, irrational fears and phobias and other forms of dysfunctions i.e. neurotic tendencies. There are five basic steps in systematic desensitization :

a)

70%**MATCHING BLOCK 459/544****W**

assessment, b) construction of anxiety hierarchies, c) training in muscle relaxation, d) imaginary training, and

e)

100%**MATCHING BLOCK 460/544****W**

implementation. Impulsive Therapy In this technique, instead of banishing anxiety, the social caseworker attempts to elicit a massive flood of anxiety. With repeated exposure in a safe setting where no harm is felt by the client, the stimulus loses its strength to elicit anxiety. Assertive Therapy It is needed to develop more effective coping mechanism. In such therapy, the opportunity is given to the client for role-playing.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 203 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 203

99%**MATCHING BLOCK 461/544****W**

Aversion Therapy This technique is used for the modification of undesirable behaviour by the method of punishment. Punishment may involve either the removal of positive reinforcements or the use of aversive stimuli. **Family Therapy** Family is a system which is composed of three sub systems : marriage, parenthood and siblings. There are continuous interactions and transactions among these sub systems. It is quite often observed that sometimes relations may not be harmonious and at that time outside help is required to bring the family on proper track. Family therapy is based on the assumption that marital relationship system influences the family adjustment and therefore it is necessary to understand the nature of marriage. It is also true that the nature of the marital equilibrium affects all family members but its effect differs on each of the member. The development of children is affected also by the nature of the marital equilibrium because they interject the parents as models and guides. Further each developmental phase in the family has stressful situation which requires new relationship. Family therapy is significant because whenever one member of a family is in trouble, all are in trouble. Communication in the family is the channel through which members of the family interact. Whenever there is problem in the family communication become faulty or dysfunctional. In family therapy, the diagnosis is confirmed on the basis of various types of interviews with the client and family. The social caseworker tries to know family structure, and the processes in the family responsibilities, roles patterns of daily living, role performance, role relationship, dependency, separateness, independence level, capacity, tolerance and control of feelings, intimacy, anxiety, regression, taboo, etc. He/she records the family history and analyses its contents. The social caseworker uses most of the techniques in one to one treatment, such as guidance, advice, education, suggestion, clarification, and interpretations. **Self-control and Self Management Therapy** Helping clients to help themselves is an old casework phrase. Self-control refers to the ability of individuals to change behavioural patterns that they or others perceive as harmful. The role of social caseworker in this process is to help the client

NSOU ? PGSW-II 204 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 204 PRINTTECH — 4th PROOF / 22.12.2021

100%**MATCHING BLOCK 462/544****W**

to develop the knowledge about how, when and where to use strategies for change. The worker acts as an instigator and motivator to help the client to start the programme and have motivating force to complete it. A multi-step guide has been presented by Watson and Tharp to develop a self-control plan. 1. List a current dissatisfaction. 2. Select one particular problem of behaviour that occurs in a particular situation. 3. Describe the effect of problem on behaviour. 4. Be as precise as possible in stating the behaviour that occurs and the situation in which they occur. 5. Gather baseline data. Count every instance of target behaviour and keep a record of count. 6. Catalogue enforcements. Answer three questions for each potential reinforcer. (a) Is it a reinforcement or specially formed? (b) Is it a strong reinforcer? (c) Is it accessible? 7. List and attempt to verify through observation possible antecedents to problem behaviours. Devise a plan for intervention for altering antecedents. 8. Identify the emotional components of the problem and plan for desensitization. 9. Select one of the plans that you have developed. 10. Continue to collect data on the problem behaviour. Make a graph of the data to determine that the intervention plan is working. 11. If the plan is successful, consider termination of relationship. **The Problem Solving Theory** This theory was propounded by Helen Harris Perlman in the book "Social Case Work : A Problem Solving Process". This model stands firmly upon the recognition that life is an outgoing problem encountering — problem solving process. Every person is involved every time in coping with his/her problems. Sometimes he/she is capable of coping and sometimes fails to resolve the crisis situation. Through problem solving process individual or family is helped to cope with or resolve some difficulty that he/she is currently finding difficult to solve. Thus the primary goal of problem solving model is to help a person cope as effectively as possible with such problems in carrying social tasks.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 205 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 205

98%

MATCHING BLOCK 463/544**W**

In the initial phase the attempts are made to engage the client with his/her problems and to do something about it in a working relationship with the agency. The problem solving process starts at once, from the first movement with treating the person. The client is not treated for his/her problem but he is treated for the purpose of helping him/her to know himself/herself i.e. strength and weaknesses and how to remove those weaknesses. In short, the problem-solving casework process involves the following steps : a) It tries to release, energize and gives directions to the client's motivation for change. b) It tries to release and exercise the client's mental, emotional and action capacities for coping with the problem. c) It tries to find and make accessible to the client such aids and resources as are necessary to the solution of the problem. Role Theory Role is mainly behavioural concept. Role may be seen as a product of an interplay between (i) individual member's needs and resources, (ii) the solution in the social network, and (iii) the forces acting on the social network from the environment. When there are internal or external difficulties, which are beyond the capacity of an individual, he/she feels the problem and fails to perform his/her role. Social Caseworker with such clients suggests new ideas and ways of facing the problem and suggests solution for a difficulty that the external factors have encountered. He/she offers facts, which relate to his/her own experience for understanding the problem. He/ she gives suggestions in terms of examples, and tries to explain how suggestion would work if followed by the client. He/she mediates between other members, attempts to reconcile disagreements, and relieves tension in conflict situation. His/her efforts are also directed to keep communication channels open by encouraging others to participate in the business of the client. Rational Emotive Therapy This technique is used in the area of modifying irrational elements control over the self. Some of the irrational ideas at the core of emotional and behavioural problems are as under : 1. It is dire necessity for an adult to be loved by everyone for everything he/ she does.

NSOU ? PGSW-II 206 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 206 PRINTTECH — 4th PROOF / 22.12.2021 2.

97%

MATCHING BLOCK 464/544**W**

Certain acts are awful or wicked, and people who perform such acts should be severely punished. 3. It is horrible when things are not the way one would like them to be. 4. It is easier to avoid rather than face life's difficulties and self-responsibilities. 5. One needs something stronger or greater than one self on which to rely. 6. Human happiness can be achieved by inertia and inaction. 7. One has virtually no control over one's emotions and one can not help feeling certain things. Rational Emotive Therapy includes four stages : 1) Presentation of Rationale The worker attempts to elicit the problems or significance of self-statements in general without mentioning the client's problems. 2) Overview of Irrational Assumption The worker presents a number of irrational self-statements before the client and tries to make the client realize that his/her statements are irrational. 3) Analysis of Client's Problem in Rational Emotive Terms Client is made aware of his/her problem rationally and is provided with the knowledge of how he/she has labeled the event. 4) Teaching the Client to Modify Internal Statement In this stage the client is taught to change his/her opinions and attitudes which are anxiety provoking. 9.6 Summary In this unit we have examined the similarities and differences between social casework, counselling and psychotherapy because these three methods are used in providing services to the individual client. There are different principles, which are significant in the practice of social casework, have been analyzed here. If the social worker working with the individual follows these principles he/she will be more useful to the client and will be able to perform his/her job efficiently. There are two schools of approaches in social casework—diagnostic and functional — are practiced in social casework. These have been highlighted with their main features. Certain important theories or models of social casework practice have also been narrated in this

unit.

MATCHING BLOCK 465/544**W**

Key Words Counselling : It is a personal help directed toward the solution of a problem, which a person finds difficult to solve. It is always used for some particular purpose like marriage counselling, family counselling, etc. Therapeutic Interviewing : It is used where intra-psycho conflict is projected to the social environment. It is also used with neurotic patient or with behaviour disorders patient. For the analysis of the unconscious, techniques of free association, dream interpretation, analysis of resistance and transference are applied. Psychic Energy : It is an internal or psychological power of an individual, which gives him stimulus to work in the direction as required. It is determined largely by the favourable or unfavourable course of one's psycho-social development. Relationship : The relationship is the medium in social casework through which help is provided to the client. Communication : Communication is the medium through which an individual understands the personal and social environment of the client. When there is any fault in communication, problem arises. Social Diagnosis : Social diagnosis is the attempt to reach the exact definition of client's social problem. There are three types of diagnosis—dynamics, clinical and etiological. Social Treatment : Social treatment is the sum total of all activities and services directed towards helping a client with a problem. Three treatment methods are applied : (1) administration of public services, and (2) environmental modification, (3) direct treatment—counselling, therapeutic interviewing, insight development, psychological support, etc. 9.8

Exercises 1. List five principles of casework and analyse them. 2. Write three differences between diagnostic and functional schools. 3. Describe Systematic Desensitization Therapy.

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

Introduction Now that you have learnt about the concepts, process, and skills and techniques of Social Casework, it is time to look at how to apply these concepts and techniques (differential use), where will you apply them (location) and with whom (client groups). Social casework situation comes into existence when a person comes to a professional seeking help in connection with some concern / problem / issue which

NSOU ? PGSW-II 210 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 210 PRINTTECH — 4th PROOF / 22.12.2021

MATCHING BLOCK 471/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

he/she is not able to deal with himself. The professional, the social caseworker, views these concerns in the light of the person's total social environment. 10.3 Characteristics of

Social Casework Practice

97%

MATCHING BLOCK 472/544

SA

SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

All that you have learnt now needs to be applied to specific clients — in specific situations with similar or different problems and concerns — being served by different organisations. It will help you perform more effectively if you keep in mind the following features that characterize social casework practice, wherever you may be located: _ let me start by stressing the fact that casework help is not standardized. As we go along, we shall talk about different factors that may determine caseworker's differential response to a similar situation. ? The individual, the client, is seen as a whole — as a thinking, feeling, acting being — in continuous interaction with his total social environment. ? The Social Caseworker represents not only the agency which has employed, but also

his

82%**MATCHING BLOCK 473/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

profession — Social Work. That is, he/she has to practice (use knowledge and skills & techniques) within the professional value-system, ethics and principles but at the same time be responsible for achieving the goals of the employing agency. ? While the Case Worker generally work within the service delivery systems devised by the organisation, he/she has a commitment to performing the role of a change — agent in case these systems are dehumanizing or degrading for the clients. ?

Case Worker has to be constantly aware of his/her

94%**MATCHING BLOCK 474/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

personal self and make sure that it does not interfere in his/her social casework practice. ? It is all the more important in Social Casework because its clients' problems and concerns have heavy emotional component. ? Human problems of living are complex and multidimensional and require sensitive handling. ? Therefore, Social Casework practice may very often require interagency collaboration. ?

Social Case Worker

100%**MATCHING BLOCK 475/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

will very often be a part of a team of professionals. In primary settings,

he/she is likely to be the main professional for service

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 211 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 211 delivery, whereas, in secondary settings, he/she

97%**MATCHING BLOCK 476/544****W**

may have an ancillary status. It is important for him/her to communicate contribution as a social work professional to other professionals in the team. ? Social Casework service may be offered for prevention, promotion, cure/ remedy, rehabilitation, placement, reformation, palliative care, or for modification of social environment. 10.4 Determinants of Fields of Practice Fields of social casework practice are broad areas or settings in which casework method is utilized to help individuals and families. Various fields can be determined on the basis of the following components: a) Person-in-context—The context here includes the total social environment of the client a male adult with visual impairment, a middle-aged woman abandoned by her husband, an orphaned child in a Foundling Home. b) The concern or the problem requiring help—Destitution, chronic illness requiring major changes in life-style, drug dependence, rehabilitation, trauma caused by riots or serious accident, bereavement, role conflict, displacement. c) The human service organisations that provide the location for providing help, like, schools, hospitals, childcare institutions, short stay homes, institutions for the elderly and juvenile homes. The first two dimensions can be analyzed further from two perspectives : ? The needs perspective a) Common human needs—beside survival needs, every individual has needs for affection, for security, for achievement and for belonging (to a group). b) Special human needs—needs that arise because a person has a disabling impairment, is suffering from a chronic illness requiring major changes in life style, has deficit of coping or social skills, needs arising due to traumatic experiences like accident, riots, natural calamities or needs of very young or old persons. c) Societal caused needs—those that arise due to certain conditions in society itself, for example, discriminatory practices, oppression, deprivation, or displacements due to large developmental projects. The needs perspective helps the worker in understanding the source and extent of the problem as

NSOU ? PGSW-II 212 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 212 PRINTTECH — 4th PROOF / 22.12.2021

98%

MATCHING BLOCK 477/544

W

it applies in each case. It helps in knowing about the impact of the unfulfilled need of the client and his social environment. The worker is able to help the clients decide upon the action plan for dealing with their problematic situation by fulfilling the unmet needs. ? The life-span perspective An individual experiences a number of life changes as he/she goes through his life cycle, that is, from birth to death. She/he is seen as moving in life through a series of developmental stages, each stage requiring the individual to successfully complete some tasks before he/she moves on to the next one. In most cases, human beings move through this cycle without major unsettling stresses. But if the person is not able to achieve this transition smoothly, he/she may find life changes stressful and is thus unable to adapt to the new demands. A five-year-old child enters school, which is discipline-driven and formal, after the secure and free atmosphere of home. A young girl gets married, shifts to her matrimonial home and takes over the role of a wife and daughter-in-law. If she is not prepared for this transition, she may feel overwhelmed by the demands of her new situation and get depressed. A middle-aged man, gainfully employed, gets retired from his job. From a very busy life style with set routines, he/she now finds himself at loose ends, with a lot of time at his disposal. How well he/she is prepared to deal with the life changes will determine the level of his emotional well-being. d) The human service organisations: The mandate of these organisations is that of 'service', that is, to maintain and improve the general well-being and functioning of people. Examples of such organisations are schools, hospitals, correctional institutions, and social welfare and development agencies. Human Service Organisations are characterized by a) goals and objectives, b) specific client groups, c) personnel, d) programmes and services, e) service delivery systems, f) material resources and networks.

SA Social Case Work Block 1.pdf (D164874043)

Fields of Social Case Work Practice As we have already stated that any discussion of fields of casework practice needs to look at two components : client groups with some problem or concern and the setting where the clients get help with their concerns. Let us first describe in brief the client groups and some of their characteristics. The Individual Person and his/her interaction with social environment are influenced significantly by a number of factors. These factors determine as to how different clients react to a similar situation/problem/concern differently. Their expectations from the caseworker may also vary accordingly. Some of these factors are : ? Age : The needs and concerns, problems and difficulties faced by a child are invariably different from those of a young adult or an elderly person. Again, how the individual of any specific age group looks at the situation under study, feels about it and wants it to be handled may differ according to the age of the individual. ? Sex : The experiences and conditions of male and female persons in a given society are socially and culturally determined. The status in society (rights, privileges and power within the family and society at large), division of tasks, role expectation, role transitions, and role conflicts affect men and women differently. The stereotyping of image and roles tend to become oppressive and discriminatory for women specially. ? Caste : In Indian society, caste based discrimination affects individuals and families across age and sex divisions, although females suffer the most. The low status because of belonging to lower castes results in deprivation, oppression, and lack of opportunity, depression, apathy and inertia. ? Class : The income group an individual belongs to determine the life goals and motivation for striving for change. Outlook towards life and problems of living are likely to affect persons belonging to : a) lower income groups; b) middle income groups; c) affluent groups; or

99%

MATCHING BLOCK 479/544

SA 480E1230-Social Work with Individuals (Final P ... (D165107502)

d) Those who are below poverty line. ? Religion : In a pluralistic society like India, belonging to minority groups' religion has its own difficulties. Religion holds a very important place in an Indian person's upbringing. Understanding of religious beliefs, customs and moral values is essential in helping a person. ? Region : People belonging to rural, urban or tribal areas tend to demonstrate specific response patterns and preferences in life. Persons hailing from a small city, a village or a metro city, are exposed to different stimuli. Their life experiences will, therefore, be different from one another. Their needs and expression of concerns may also be different. 10.6 The Family Family is a special social group wherein members are bound to each other by blood or marriage. The main function of family is child rearing, growth and development of each member. Families fulfil their social responsibility by socializing children in the culture of the society. In fulfilling their functions, families interact with a large number of social systems and organisations like, kinship network, religious and economic institutions, schools, the work place, civic authorities, welfare and legal framework etc. Unique patterns of interaction within the family (among members), and with outsiders evolve overtime. Family is a system wherein the experience of any one member affects the other members. A drug dependent son, a physically or mentally challenged child, the main earning member having problems at the work place, an elderly father / mother—all affect the social functioning of the family as a whole. Sometimes, the problem faced by one member is an expression of a serious problem with the basic interpersonal relationships, interaction and communication patterns within the family. Families go through a life cycle. Marriage takes place and children are born. Children go to school or work. The first child gets married—the daughter goes away or the daughter-in-law joins. The married son may or may not stay with the parents. The parents grow old and die. The son continues with the family. With each change in the composition of

100%**MATCHING BLOCK 480/544****SA** 480E1230-Social Work with Individuals (Final P ... (D165107502)

the family and role transition, various stresses occur. Most often, families are able to cope with these normal transitions. But, some special situations cause a sense of inadequacy in the families and they are forced to seek professional help. Some of the problems, which put too much strain on family's coping mechanisms, are severe marital discord, domestic violence, child abuse, incest and redundancy (unemployment). Let us now discuss some of these settings in brief to get an idea of what are their main features, what kind of problems or concerns they deal with and the kind of professional interventions Caseworkers provide to their clients— individuals and families.

10.7 Hospitals Doctors are the main professional groups in the hospital, responsible for medical care of the patients. The recognition of psycho-social and cultural dimensions of illness and hospitalization has enabled employment of trained social workers in the hospitals. Social Casework is utilized in the OPDs (outpatient departments), the Wards, and Special Clinics. The heavy work load of doctors in large Govt. Hospitals generally leads to lack of clear communication between the medical staff and the patients and their families. In such a scenario, the main roles expected of social workers are those of mediator; enabler; coordinator of services; case manager; mobilization of family, community and hospital resources; and acting as a member of the team of professionals. Working with the patient and his/her family is a major task of the social worker. Therefore, Social Casework is a primary method in medical social work practice.

? Institutions Providing Mental Health Care The caseworker works as a member of the team of professionals including psychiatrists, psychologists and occupational therapists. Psychiatrists are the main professional group in charge of care and treatment of the mentally ill or emotionally disturbed persons. The patients may be attending OPDs, day care, or may be hospitalized. The main tasks of the caseworker are to maintain constant contact with the family of the patient; mediate between the doctors and the patient/family; provide

NSOU ? PGSW-II 216 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 216 PRINTTECH — 4th PROOF / 22.12.2021 counselling

100%**MATCHING BLOCK 482/544****SA** 480E1230-Social Work with Individuals (Final P ... (D165107502)

to the patient; assist in discharge and after care of the patient. The worker provides the necessary support to the family and helps the other family members understand the needs of the mentally ill person.

? Working with the Chronically/Terminally Ill The patients who are suffering from chronic illness, like diabetes, asthma, and heart disease, need help in understanding their illness and the demands of the treatment, and adjusting their life-styles to the limitations imposed by the condition. The families of the patients also need support and guidance in dealing with the patient's condition that may have long-term implications for the entire family. In some cases, especially among those belonging to lower income groups, the financial burden may need to be eased out by identifying and mobilizing resources in the kinship network or community at large. While working with the terminally ill patients, the first dilemma the worker faces is to inform the patient and his family about the illness. The patients suffering from a terminal illness, like cancer and AIDS, have additional stress factor—the thought of impending death and anxiety about the family after their death. The tasks of the caseworker include : a) ensuring palliative care to reduce pain and discomfort, b) talking about death, c) involving the patient in planning for the family after his/her death, d) providing opportunity to family members to talk about death and dying, e) providing support emotional and material to the patient family. In the case of AIDS, the caseworker will need to tackle the issue of stigma attached with contracting AIDS and the possibility of infection getting passed on the other family members.

? Schools Schools are institutions for formal education, with a fixed routine, set syllabus, and a well-established pattern of teaching and learning. Teachers are the main professional group and they spend the maximum time with students. Schools vary in size— from small single teacher schools in the villages and tribal areas to large bureaucratic organisations with thousands of students. Schools may offer primary, middle, secondary or senior secondary education. Again, some may be Government

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 217 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 217

schools/aided by the Govt. or fully private independent schools. Despite progressive and child-centred educational philosophy, schools are characterized by emphasis on syllabus (information content), formal examination system for evaluating achievements and formal teacher child relationships. In this context, the child very often is not able to get his basic human and educational needs fulfilled. This situation proves to be stressful to the child. Due to preoccupation with syllabus and maintaining discipline, teachers are unable to individualize the child's situation and there is a 'problem child' at hand. Hence, there is recognition of need for individualized. Social Casework service to help the child. School, however, offers an excellent opportunity to Caseworkers for offering preventive and promotive interventions beside remedial service. Transition of the child from entry to passing out from school coincides with the child's own maturation process. By anticipating the demands and stresses of a particular age group, appropriate interventions may be planned so as to avoid unnecessary emotional turmoil. By helping in the development of personality and life and social skills, the Social Caseworker can achieve the status of a partner in the educational process. Despite of its being a secondary setting of Social Casework practice, the Worker can easily demonstrate the vital contribution of Professional Social Work to fulfillment of educational goals of schools. The Social Caseworker works as a liaison between the family and the teacher. He/she acts as a mediator, enabler, teacher (giving necessary information), advocate (to highlight the negative impact of school norms and practices on the child), change- agent for the school's systems and procedures, and as a consultant for the staff of the school in matters regarding children's needs and well-being. ? Residential Institutions There are situations when individuals have to be removed from their natural environments and placed in residential institutions. Some of the institutions where social casework is practiced are as follows : a) Children's Homes : Children who are destitute, orphans, or have run away from home and cannot be sent back home; those who are violence, risk to health (e.g., healthy children of leprosy patients) or moral danger are generally placed in children's homes. Most of these Homes operate under the provisions of Juvenile Justice Act and, therefore, provide custodial care.

NSOU ? PGSW-II 218 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 218 PRINTTECH — 4th PROOF / 22.12.2021

Children are committed for specific periods. There is sometimes a feeling among inmates that they are under detention. Only in a small number of cases adoption and foster care services are or can be offered. Homes, run by the Govt. or voluntary organisations, are expected to provide custody and care to the children. Social Worker is an important professional here. Living arrangements may be dormitory or cottage types. Social Caseworker is expected to help each inmate adjust to the life within the Home and achieve psychosocial development. As the children have often gone through traumatic experiences before they are placed in Homes, it is very important for them to come to terms with their life, talk about it and get over the pain and the sense of betrayal. The worker is expected to provide pastoral care, liaison with schools where the children go for education, help children develop positive relationships within the institution, and prepare for life after the stay in the Home is over. b) Correctional Institutions : These include homes/ special schools for the delinquent, prisons, remand/observation homes, beggar homes etc. The main task of the Social Caseworker is to help those in conflict with law by enabling them to understand themselves and their relationship with others. They need to understand what is expected of them as members of society. The aim is to rehabilitate these persons—to help them in such a manner that they can engage in socially constructive activities once they go back to their homes. The worker helps the clients change /modify their values (so that they are in line with the social values); change their behaviour and response patterns. The residents of these institutions often have a feeling of hostility towards society or they suffer from a sense of inferiority and inadequacy. Social Casework aims at correcting these attitudes and feelings by modifying the clients' immediate environment, working with their families and maintaining a supportive professional relationship with them. The Caseworker works as a member of a team of professionals like, probation and parole officers, psychologists, psychiatrists, and vocational counsellors and educators. c) Homes for the Aged : The number of old age homes has been increasing in cities. The stresses and constraints of urban living have often led to adult children opting to send their aging parents or relatives to residential institutions.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 219 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 219

98%**MATCHING BLOCK 483/544****W**

The residents in these homes need nursing care, understanding and emotional support. The caseworkers in these institutions help the residents cope with loss of the loved ones, illness, lack of energy, loneliness, loss of economic independence and the thought of approaching death. The caseworker enables the client maintain his/her self-esteem. He/she also helps the family deal with suppressed or open feelings of guilt so as to encourage them to maintain cordial relation with the client. The worker needs to identify and mobilize community resources like motivating and orienting volunteers to spend time with the residents, talk to them and attend to their simple errands. d) Residential institutions for women : Short stay homes, rescue homes, nari nicketans, widow homes etc. are some of the settings where casework practice takes place. Most of the inmates are those women who are destitute, abandoned or battered by their husbands, widows with no relative to give them support, victims of crimes including prostitution or kidnapping. These residents need to build their skills—vocational and social—to become independent persons capable of taking care of their lives. The caseworkers try to bring about conciliation between the client and her family, if any. Where marriage is indicated, pre-marital counselling is provided. ? Organisations Working with the Differently Abled There are residential and non-residential organisations offering variety of services to the differently abled. The main task of the caseworker is to fulfill the objectives of the organizations such as a) Care, b) rehabilitation - vocational training, education (depending upon their capacity), employment; c) offering services according to governmental provisions and special concessions; d) advocacy to reduce or remove social discrimination against the differently abled; and e) facilitating the client's acceptance and understanding of his/her situation and also recognition of his/her potential. Giving support to the client—both emotional and action oriented—is an important

NSOU ? PGSW-II 220 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 220 PRINTTECH — 4th PROOF / 22.12.2021

99%**MATCHING BLOCK 484/544****W**

intervention offered by the caseworker. The caseworker also works with the family to help them cope with the situation, to understand the needs of the client, and to learn to take care of the client when he or she is at home. The worker very often acts as a broker, linking the client and or his/her family with the available community resources and networks of other organisations working in this area. ? Organisations Working with Victims of Disasters There is increasing recognition of the need for individualized help for the victims of disasters whether natural or man-made. Victims of natural calamities are victims of floods, earthquakes, and drought. Victims of man-made disasters include victims of communal violence (riots), serious accidents, mega projects of development etc. Some of the common experiences of most of the victims of disasters are trauma; loss of loved ones; loss of livelihood or assets; homelessness; feeling of helplessness; feeling of anguish or hostility (desire for revenge); loss of community feeling; despair and a sense of fatality or sometimes high/unrealistic expectations from the worker. Despite this commonness, the clients need individualized care to overcome debilitating impact of the crisis. Large-scale displacements due to mega projects like Dams lead to erosion of community and family life, absence of usual social control mechanisms, the tearing of the social fabric, and loss of livelihoods beside the problems of settling down in alien environments. Working with these persons is a big challenge for the Caseworker. It is not easy to win their trust as they have lost confidence in everyone around them. Very often, winning their trust is the first vital step towards taking them out of the traumatic experience. Beside offering them emotional support, the worker needs to build in them hope for a secure future. The worker enhances the client's resources by co-ordinating with various agencies—both governmental and voluntary. Giving information about the available services and provisions goes a long way towards instilling hope in the clients. The clients are helped in viewing their experiences rationally rather than emotionally. But, this can be done only after they have emerged from their trauma. Engaging the client in the planning and implementation of the action plan facilitates the client's rehabilitation and recovery from despair. ? Organisations Working with Women

480E1230-Social Work with Individuals (Final P ... (D165107502)

Social caseworkers are employed in family counselling centers, crime women cells, legal aid cells, family courts and women resource centers. The aim of the professional interventions is to enable women become empowered, confident, and independent and also utilizes available legal provisions and safeguards for her protection. There are increasing number of cases of rape victims. The worker has to help link the family with police, courts, hospitals, schools, and agencies working for

treatment and

94%**MATCHING BLOCK 486/544****W**

rehabilitation of these victims. Special techniques are used to help the victim come out from trauma, and restore her self-confidence and self-esteem. The family also needs understanding and support of the worker in dealing with this situation. The sensitivity towards the discrimination women face in families and society is vital in arriving at accurate assessment of the condition under study. For illustrating Social Casework Practice two cases are presented below. 10.8 Case 1 — Hospital Based Casework Referral The attending doctor refers a woman patient admitted in the female surgical ward to the medical social worker of a government hospital. She is reported to be unwilling to undergo operation, which she has postponed twice before. The Casework Process Study The social worker, Binita met the patient, Mrs. M. in the ward and told her about the doctor's referral. Binita learnt that Mrs. M was 35 years old married woman. Theirs was a nuclear family. She had three children, aged 14, 10 and 5 years. All the children went to a school nearby. Mrs. M. was a housewife. A part time maid servant helped with a few of household jobs. Her husband's job required him often to be away from home. Mr. M had brought his wife to the hospital because of severe pain in her knee. The doctor had advised surgery. Binita explored further to enquire the reasons for the client's resistance to surgery by interviewing the client in the ward and her husband, both in the ward and during a home visit. The worker also spoke to the nurse on duty in case the client had shared

NSOU ? PGSW-II 222 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 222 PRINTTECH — 4th PROOF / 22.12.2021

any of her concerns with the nurses (using the collateral sources for information). She spoke to the doctor concerned to understand the client's medical problem and the chances of the client's recovery. The worker considered the following probable reasons (there could be even more than the ones listed) : a) Was it because of her anxiety as to who would look after her children during her long period of hospitalization? b) Was she scared of the process of operation, as Binita , the medical social worker, knew from her experience that surgery very often created panic in the patients and even their relatives? c) What was her husband's reaction to the doctor's advice? Did he offer any support to her operation? d) Who will attend to her during the post-operative period, because, according to hospital rules, only female attendant is allowed in the female wards? Assessment Binita, the worker, shared with Mrs. M, her understanding of the likely reason(s) for the latter's anxiety about the operation. Binita believed that it was important that Mrs. M confirmed the worker's definition of the client's problem before some solution could be worked out. (Communicating empathy and ensuring client's participation in the process.) Depending on the reason/s, Binita and Mrs. M could consider one or more of the following solutions : 1) Giving Information Binita could explain the exact problem Mrs. M was suffering from. It was possible that the patient might not have felt free to ask the doctor or the doctor never explained the problem in detail. Worker could also explain the complete process of surgery and the chances of recovery. (Based on facts gathered from the doctor himself.) Here she performed the role of a mediator between the patient and the medical staff. 2) Identifying and Mobilizing Family Support System ? Some female relative could be requested to be with children during the period of hospitalization; ? Husband could apply for leave from his office;

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 223 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 223 ? Binita

could provide opportunity to Mr. M to express his anxiety. She could have sessions with

her

92%**MATCHING BLOCK 489/544****W**

husband and children to provide them emotional support. The family, then, could provide the necessary emotional support to the client. (Counselling sessions with the family members.) ? The eldest child could be helped to share some responsibility at home in the mother's absence. With the support of the worker, this experience could become a source of positive learning for children to learn to tackle difficult situations and to become independent. 3) Using Hospital Resources The medical social work department could arrange for an attendant for the client. 4) Any other Any other help that the client may need or any other suggestion that Mrs. M or Mr. M may now think of. Intervention The worker could assure the client that the surgery she was undergoing was well within the doctor's experience. (Based on facts gathered from the doctor himself, so that Binita could offer realistic assurance.) Following the principle of client's right to self determination, Binita could offer one or more of the interventions outlined earlier. Throughout the casework process, she communicated her availability to the client in case of need. Binita also worked as a member of the team of professionals responsible for the medical care of the patients being served by the hospital. Evaluation Mrs. M agrees to undergo surgery. The doctor who had referred the case acknowledges Binita's work and appreciates social work intervention in facilitating the patient's medical treatment. Termination The case is, therefore, formally closed. Binita describes the location of her office in the hospital and working hours and encourages them to meet her whenever they feel the need. They thank the worker for all that she had done for them. Follow-up Binita visits Mrs. M in the ward occasionally, before and after the operation. She seeks feedback about the client's recovery from the doctor and the nurses and passes it on to the family. She keeps in touch with Mr. M and enquires about the children.

NSOU ? PGSW-II 224 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 224 PRINTTECH — 4th PROOF / 22.12.2021

Meets the family at the time of discharge of the patient from the hospital. She ensures that the family is prepared to look after the patient at home during convalescence. In case, there is some unforeseen complication in the post-operative stage, Binita will have to initiate the casework process again. Activity-I Given the same case of the referral of a patient who is unwilling to undergo surgery, work out assessment in the following contexts/circumstances : 1. Patient is an office going male person. All other particulars are the same. 2. Patient is a woman from low-income family. Her husband is a construction site labourer. 3. The patient is a school going/non-school going child (male/female) aged 12 years. 4. The infection having become serious, the doctors may have to amputate the patient's leg above the knee. There is no risk to life on account of the operation. Select any of the family contexts discussed above. Write down your answers and discuss with your field instructor. 10.9 Case 2 — Family Work in the Community We shall now discuss a case where the social worker identified the client herself. The case also demonstrates proactive approach, that is, the worker did not wait for the client to seek help. Rather she offered her service to the client at the latter's own home. Referral Punam, a young trained social worker recently qualified, is working in a community-based organisation. She recently organised a women's group around weekly kirtan (Devotional music and worship day organised by women themselves. A Brahmin woman conducts the worship). The residents of the Basti belong to low- income groups, and mostly of lower castes. After one such session, Punam asked Mrs. P about her daughter-in-law Kala. Punam told Mrs. P that though Kala had arrived some time back, she had not been

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 225 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 225

MATCHING BLOCK 491/544

W

seen in the present group. Mrs. P invited Punam to visit their home and meet her daughter-in-law. During the home visit, Punam found that Kala was looking very ill, was obviously anaemic, and did not talk to Punam at all. Sensing Punam's concern, Mrs. P took Punam outside and started complaining about Kala. She informed Punam that Kala was very lazy, did not know how to cook or do other household work, and that Kala always pretended to be ill to escape work. Punam decided to take up the case to help the family. As the family had not asked the help, Punam had to explore the particulars of the family and gather other relevant information very slowly and discreetly (quietly) so that no member of the family felt offended. She learnt the following details about the family. The Social Casework Process Punam realized the importance of applying different principles of casework to be able to establish positive relationship not only with Kala, who Punam identified as her client, but also with Mrs. P and Mohan, Kala's husband. Only then could she hope to help Kala. She accepted Mrs. P Kala and Mohan; adopted a non judgemental attitude; created an atmosphere in which the persons concerned could share their experiences and feelings freely. (Principle of purposeful expression of feelings) She was careful not to allow her initial sympathetic attitude towards Kala and anger against Mrs. P to bias her and affect her exploration work. (Controlled emotional involvement) She had to keep an open mind to gather and interpret information. Study Punam interviewed Mrs. P in her shop. She visited Kala in the presence of Mrs. P and by involving both of them in conversation learnt various facts about their situations. Once or twice she met Mohan along with his mother to observe their interaction. (Using tools of interviewing and home Visit.) Mrs. P in late forties lost her husband when her two sons were still small. Her elder son had shifted, after marriage, to his own establishment in another Basti. Mrs. P owned the single room tenement, acquired by her as result of the slum clearance scheme of the City Government. She also owned a small shop near her home in which she sold simple items of daily needs. Her younger son Mohan, aged 20 years, worked as a worker in a factory nearby. He had left school after studying till class four. Mohan was under awe of his mother and obeyed her completely. Kala was 16 years old and belonged to a village in the district of Jhansi, in the State of

W

Uttar Pradesh. She had studied upto 7th Standard and had been forced to leave studies. Kala was not used to cooking on kerosene oil stove. In the village, they used Chullah, with wood and cow dung cakes as fuel. There was a big family with something going on all the time. She had been very scared in the City, very unsure of herself. Her mother-in-law never liked anything that she did. Her husband did not bother about her or her health problems. She had been feeling weak and sickly for quite sometime but had not been taken to the doctor. Kala had become depressed and lost her appetite. She never had any energy to do work fast or properly. Mrs. P did not agree with these observations. Assessment After reflecting on the facts (objective facts and feelings about those facts and experiences), Punam arrived at the following inferences tentatively: ? Kala was from a village and found living in the city stressful; ? She was perhaps not prepared for marriage, being quite young; ? Kala found herself under constant scrutiny of her mother-in-law, Mrs. G, their family consisting of only three members; ? Her sickness could be more due to depression than actual physical reasons (psychosomatic symptoms); ? In any case, it was advisable to get her medical care to eliminate any physical causes of sickness; ? Kala perhaps expected more support from her husband which was not there. Mohan just did not react to the situation; ? He did not want to be blamed or nagged by the mother for having supported the wife as had been the case with his older brother; ? Mrs. P had felt hurt when her older son had left her; ? She wished to keep her younger son and daughter in-law under her control; ? She felt insecure. After long widowhood and its associated problems, she felt that she had the right to demand obedience from her son and daughter-in-law; ? She wished to prove to the community people that she had full control over her household.

Plan of Action : Having achieved positive relationship with Mrs. P and Kala, Punam considered the following actions for initiating the process of helping the family : a) Medical Care 1) Convince Mrs. P to allow Kala to go to hospital for proper medical check-up. 2) To persuade Mohan to accompany Kala to the hospital, otherwise offer to escort Kala for medical check-up. This will also confirm whether Punam had really won the family's trust. b) Facilitating Role Transition 1) Help Kala accept her new roles of the daughter-in-law and that of wife. Provide her emotional support and an opportunity to express her feelings in a safe and encouraging professional relationship with Punam. c) Improving Interpersonal Relationships within the Family 1) Help Mrs. P understand difficulties of a young bride from a small village; 2) In a joint session, help Mrs. P spell out her expectations from Kala and let the latter express her anxieties; 3) Help the two women develop bonds of affection. d) Use of Social Intercourse for Kala's Resocialization 1) Persuade Mrs. P to let Kala join women's group to increase her interaction with the community people; 2) In case Mrs. P agreed to this suggestion of Punam, this had to be done very cautiously because women's curiosity and comments may create complications. That may undo all that. 3) Punam had accomplished. (Community pressures may have both positive and negative influence.) e) Assertiveness Training for Mohan 4) To try for a breakthrough with Mohan and help him to become more assertive without being disrespectful towards his mother (A tall order! Punam felt);

94%

MATCHING BLOCK 494/544

W

Mohan could be persuaded to join some group of men in the community or at his work place; 6) Help Mohan take on the role of husband and feel responsible for Kala. f) Use of Community Resources 1) Identify some woman in the community who was friendly with Mrs. P and could help in reducing Mrs. P's antagonistic attitude towards Kala; 2) Enlist help of such a contact by ensuring that this woman understands Punam's intentions. f) Professional Relationship as an Intervention Intervention How many of the tasks listed above would actually be done depended, of course, on the family members reaction to the first task decided upon. Punam could not take her rapport with Mrs. P for granted. She had to continuously work at maintaining relationship with all the members. Relationship itself could be therapeutic (healing). Evaluation Kala carried on the medical treatment prescribed. Kala started talking more with her mother-in-law and took pains to cook food according to the latter's instructions. Mohan went with Kala to the hospital couple of times and worked in his mother's shop to enable her to take rest. Kala attended the kirtan along with Mrs. P. Mrs. P showed off her daughter-in-law proudly in the women's group. Kala had a good voice and sang devotional songs in the group, which were appreciated by other women. Termination and Follow-up As the things were under control and interpersonal relationships within the family improved, Punam reduced her visits to the family. As she continued to work in the Basti, she would greet them occasionally but terminated the case. 10.10

needs professional intervention (problem), and the setting in which the worker is employed and where the client meets the worker (place). Study of 'Person' and 'Problem' has two dimensions: 1) Needs and 2) Life Span (Developmental tasks and social roles concepts) perspectives. Understanding goals, services and service delivery systems, and resources of human service organisations (Place), in which the worker is employed, is very necessary for the caseworker to utilize casework process for helping the clients. You have also gone through a brief description of different client groups and settings where these client groups receive casework services. The Process of Social Casework (Study, Assessment, Intervention, Evaluation, and Termination and Follow-up) has been illustrated through two cases. The illustration and the questions raised in the Assignments will help you in appreciating various factors that are likely to influence assessments you arrive at and interventions you may decide to offer. The illustrations also sensitize you towards use of some of the principles and the skills in the Social Casework Process. You have also been able to get some idea of settings and areas of social casework practice to understand and appreciate its scope and relevance. 10.11

Introduction In social casework practice, recording is defined as the process of writing down relevant information in a systematic manner about the person who has come to the agency seeking some help. The information is about the person, his or her problem, the social, economic, and health factors contributing to the situation of the person, the prognosis, the type of intervention, the progress of the intervention, and the procedures for termination or referral. Social casework practice involves many types of recording depending upon factors such as requirements of the agency, the theoretical perspective of the caseworker, the type of intervention, and so on. 11.2 Objectives ? To know the meaning of recording, ? To gain an insight into the purpose of recording,

NSOU ? PGSW-II 232 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 232 PRINTTECH — 4th PROOF / 22.12.2021 ?

100%**MATCHING BLOCK 502/544****W**

To understand the need for recording and its Principles, and ? To comprehend the different dimensions of recording. Recording is a written summary of the process of casework. The records of individuals are legally protected, except under special circumstances. Records allow case workers an opportunity to document their work with individuals and afford legal protection against suits, as they can show that caseworkers had followed an intervention plan based on an appropriate assessment. Recording is important as it publicizes the efficiency of the services. Facts have to be gathered, organized, and recorded for measurement of results. In the process of giving assistance to an individual there is also a need to record and document the proceedings for further follow-up and cross verification.

96%**MATCHING BLOCK 503/544****W**

What is a Case Record? A record literally means 'a formal writing of any fact or proceeding' and when used as a verb means 'to set down in writing or other permanent form'. Taking cue from this we can define case record as a written account of the casework proceedings. However, from the above statement one should not conclude that case recording is an easy, routine and simple task.

It is far from that because

100%**MATCHING BLOCK 508/544****W**

its a highly skilled and complex task. Recording is an important and integral part of casework procedure and is an output of the activity of the casework. The importance of recording lies both in the process as well as the product. For, an individual who is planning to become a caseworker, the art of record writing is worth striving to develop and perfect, not only because case recording is an essential part of good casework and is becoming a more important factor with the increasing complexity of social treatment, but also because the case record is fortunately or unfortunately often used as one of the important indexes of the caseworkers ability. A question often asked is, why do we need to write records? Do they really serve any purpose? The importance of case records can be ascertained when we look at their functions and the varied purposes they serve. Purpose of Recording According to experts, recording in social casework serves the following purposes : 1. It aids practice 2. It aids administration

Types of Recording From the literature available on casework recording no clear cut classification of records on the basis of their types is available. However, for our understanding we can give the following classification of recording. (a) Process (b) Summary (c) Verbatim (d) Non-Verbatim (i) Process Recording Process recording is a form of recording used frequently by the caseworker. In this type, the process of interview is reported and is a rather detailed description of what transpired with considerable paraphrasing. It preserves a sequence in which the various matters were discussed. It includes not only what both the worker and the client said but also significant reaction of the client and changes in mood and response. In this the interview and observation go hand-in-hand. It may be verbatim or non-verbatim reproduction. (ii) Summary Recording Summary is a good device for organising and analyzing facts. Summary points into meaning and relative importance of material gathered. A careful summary made at appropriate intervals reduces bulk, clarifies direction and saves the workers, time. Summary is commonly assumed to be a review or recapitulation of material that has already appeared in the record. It may be either topically arranged or may appear as condensed chronological narrative.

Types of Recording Process Summary Verbatim Non-Verbatim

98%**MATCHING BLOCK 507/544****W**

Mrs. Sheffield has defined summary in social casework recording as "A digest of significant facts in the client's history which has previously been recorded". Summary could be a diagnostic summary, periodic summary or closing summary. The closing summary is a summary made at the time the case is closed. To be most effective it should be written by the worker who was responsible for the case at the time of closing. The periodic summary is simply the summary of material previously recorded and is made at more or less regular intervals or at the end of more or less definite episodes in the family history. (iii) Verbatim Recording It is reproduction of factual data in the individual's own words. It is commonly used in casework because of its accuracy and objectivity. However, it should not become a mechanical reproduction of information because casework as an art requires an intelligent selection and rearrangement of material. As a part of training of the worker, verbatim recording may be of value in developing objectivity. Non-verbatim /narrative recording Narrative recording has been and still is a predominant style of recording. It is the style found in newspapers and magazines. It is the way we speak of the day's events, it is the way we write letters, and it is the ways we keep diaries. Narrative form of recording is preferred for reporting acts of practical helpfulness, events and most collateral visits or conferences. It may be used for the contents of the interview in all instances except when the process itself and use of relationship have special significance. 11.4

Need for recording

100%**MATCHING BLOCK 510/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

There are compelling reasons to keep good records. Recording is an important and integral part of the case work procedure and is an output of the activity of the case work. The importance of recording lies in both the process as well as the product. As recording and documentation is part of every profession, case work recording is an inevitable part of the case work process. The demands of recording go along with the pressing demands of accountability and documentation in any profession.

Principles of Recording There are some guiding principles for maintaining a good record

of
case work.**99%****MATCHING BLOCK 512/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

However there is no such thing as an ideal or model record. A record is a flexible instrument, which should be adapted to the needs of the case. Each case is different, the conditions of work have marked differences and the recording therefore rests not on following an outline, but in the mastery of certain component processes. ? Accuracy, objectivity, simplicity, clarity and brevity should be observed in writing records. ? Facts and their interpretation should be distinguished between, as that leads to real objectivity of the subject matter. The outcome should be drawn in a balanced manner without attempting to influence the judgment of the reader. For example, frequent fights between the husband and wife might lead the case worker to interpret that the wife dislikes or hates her husband. ? The record must be orderly in its arrangement. The caseworker should think in advance what should be included and then set the material out in a logical sequence. ? The case work records are not meant to be literary masterpieces, therefore they should be written in simple language and simple style. ? A verbatim quote can sometimes depict a situation much better than a narrative description. Therefore, wherever possible, the reactions of the individuals should be recorded in their own words. ? There should be a certain degree of uniformity and standardization as to the form of observation. ? A record should have readability and visibility and should contain a clear and concise presentation of the material. For example, content can be organised under topical eadings such as interviews, home visits, and contact contacts. ? To maintain clarity and accuracy, avoid using words that are ambiguous. ? Note-taking, as far as possible, should be done immediately at the end of the interview and not during the interview. ? It should always be made clear who are involved in the situation, who is addressing whom and what the sources of information are.

II 237 ? The details of every significant subject or situation should be given.

100%**MATCHING BLOCK 521/544****SA** SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

In social casework practice, recording is defined as the process of writing down relevant information in a systematic manner about the person who has come to the agency seeking some help. The information is about the person, his or her problem, the social, economic, and health factors contributing to the situation of the person, the prognosis, the type of intervention, the progress of the intervention, and the procedures for termination or referral. Social casework practice involves many types of recording depending upon factors such as requirements of the agency, the theoretical perspective of the caseworker, the type of intervention, and so on.

11.6

98%**MATCHING BLOCK 513/544****W**

Advantages of Record keeping ? The process of writing records enables the case worker to reflect systematically on what has occurred and plan for future sessions. In other words, the process of making records enhances the quality of the case work process. ? Records provide the case worker with details such as the names of the people mentioned by the individual. This frees the case worker to concentrate on issues raised by the individual rather than recalling the details from one session to another. ? Systematic record-keeping makes any changes in the individual's material over a series of sessions more apparent. The case worker can also show the individual the progress of the case work process with evidence. ? As case workers seek to be professional and credible, they need to develop the record-keeping practice that supports them in performing their role and meets the public expectations of quality of service and accountability of any professional. This is regarded as an increasingly significant reason, which probably explains why most of the case workers around the country have chosen to keep records. Maintaining records in the case work process is the universal norm. Nevertheless, there is a minority of case workers who prefer not to keep records at all or only keep records for some individuals, usually when seeing individuals in settings that require records. Although casework recording is a key element in the process of casework practice, some caseworkers perceive it as a tedious and time consuming task that gets

NSOU ? PGSW-II 238 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 238 PRINTTECH — 4th PROOF / 22.12.2021

98%**MATCHING BLOCK 514/544****W**

in the way of practice rather than enhancing it. They express the view that they spend too much time at their desk in writing the records. Some research into social caseworkers' attitude and experience of recording revealed the fact that the topic of recording has created many strong and ambivalent feelings. a) One needs to ensure that records are both secure and really confidential. For example, some case workers may work in settings where burglaries are so frequent that it is difficult to maintain secure records. Community-based services operating out of converted buses or other forms of mobile premises have to consider the possibility of the theft of the entire case work premises, including the records. b) Record-keeping may complicate trust-building with individuals. For example, case workers working with individuals who are vulnerable to legal prosecution, like female sex workers, illicit drug users and others, may have to take into account their clients' fear that the police or other authorities could seize any records. c) Record-keeping is time-consuming. d) Some case workers are opposed to the possibility of individuals acquiring a legal right to see records kept about them. Therefore, they prefer not to keep records. e) Some case workers have reservations about creating records which may be demanded by individuals for use outside the case work relationship in legal actions against others. They hope that an absence of records will enable them to concentrate on the therapeutic relationship without having to consider how that work would be viewed in a court of law. f) There is lack of training in the practice of recording. g) There are variable standards in recording practice. 11.7 Aspects of Good Recording ? Good recording is done with the participation of the person whose record it is. ? The views of the person whose record it is should be recorded including whether he or she has given permission to share information.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 239 PRINTTECH — 4th PROOF / 22.12.2021 NSOU ? PGSW-II 239 ?

MATCHING BLOCK 515/544

W

The record should be accurate up to date of the process of casework which can be reviewed periodically and summarized at the end. ? It should include the decisions taken during the process and the reasons for these decisions. ? The chronology of significant events should be included in the record. ? The facts should be recorded distinctively from the opinions. ? Whatever is recorded should be evidence-based and ethical. ? The record should mention the assessment as well as the risk assessment. ? It should depict a clear and complete picture of care and support given up to date and the ensuing plan of action towards solving the problem of the person. ? The personal profile of the individual should include details such as name, age, gender, religion, language, region, educational level, and disability, if any, of the person.

11.8 Records and their Preservation Data protection refers to the set of privacy laws, policies and procedures that aim to minimize intrusion into one’s privacy. Once it is decided to keep the records, the existence of the records and the level of security with which they are protected have to be made known to the individual . There is a strong ethical argument that the individuals need to know these facts in order to be in control of the information that they decide to disclose to the case worker. The minimum standards suggest that the individuals should be informed about the security of the records. There are different kinds of procedures adopted by the case workers for security. First of all, physical security of the records is of paramount importance. Locking records in a desk or in a cupboard will prevent casual inspection by anyone. If there is a foreseen risk of some unauthorized person wanting to access the records , then the records have to kept in a safe under lock and key.

11.9 Contents of Casework Records There are no fixed rules about what must be included in case work/interview records or how they ought to be written. Case work records that we see vary

NSOU ? PGSW-II 240 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 240 PRINTTECH – 4th PROOF / 22.12.2021

MATCHING BLOCK 516/544

W

considerably in style, from brief factual accounts which focus on what the individual reported to ones that include more of the case worker’s thoughts and responses. The guiding principle is that the type of record should be one that supports the therapy and enables it to be delivered with a reasonable standard of care. A good record is written as closely as possible in time to the events it records. Some case workers set aside ten minutes with individuals for this purpose. If there is any reason to think that a record might need to be produced for legal purposes, it is good to distinguish between what was directly observed, what the individual said and the case worker’s own response or thoughts. There is no single correct way of writing case work notes. It still appears to be a topic neglected in basic training. Each case worker has to develop a style that is sufficient to support the case work but without being excessive in what is recorded. There are some other items to be included in the record : ? Any written and signed consents to all interventions. ? Any written and signed contents to all passing of confidential information ? All appointments, including non-attendance by the individual ? Intervention contracts ? Up-to-date record of the case worker’s reasoning behind decisions about significant interventions and general strategies ? Consultations with anyone else about the individual ? Copies of any correspondence from the individual or relating to work with the individual ? Any instructions given to the individual and whether or not the individual acted on these. Matters not to be included in the process of Recording ? Records ought not to include anything that could disrupt the therapy if seen by an individual. ? Prejudice and abusive comments are to be avoided. ? Negative evaluations should only be included if they serve a therapeutic purpose, for ? example, a negative counter-transference would be justified if it is integral to the therapy and is a statement about the case worker’s internal processes, rather than directly ascribed to the individual.

W

Format of Casework Records and their Templates There are a few components written about how best to structure case work records. There can be two sections. The first section contains useful background information about the individual and the contractual terms that case worker and the individual have agreed upon. Individuals’ records need to be clearly identified so that there can be no confusion regarding identity, because in large agencies it is not unusual to find two individuals with the same name. The caseworker might include : ? Individual s family name ? Other names ? Date of birth ? Address ? Contact phone numbers Where hand-written records are kept, it can be an advantage to label each page of the individual record with the individual’s full name so that the possibility of pages being inadvertently placed in the wrong file is minimized. Additional demographic information about the individual, if available, such as Marital status, Name of the partner or spouse, Names and ages of children, Referral source, and so on could be added. The notes for each case work session may include Date of the session, Factual information given by the individual, Details of the individual’s problems, issues, or dilemmas, Notes on the process that occurred during the session, the outcome of the case work session, the intervention used by the case worker, any goals identified, any contract between the individual and the case worker, matters to be considered in subsequent sessions, the counselor’s own feeling about the individual and the case work process, and the case worker’s initials or signature. <p>or less standardized proforma which has blanks for entries to be made by the worker related to the identification data such as name, age, occupation, family profile and other such information. The purpose of the face sheet is to give in a convenient form the objective social facts or situation of the client of a permanent character to particularize the case. Genogram A family genogram is the graphic representation of one's family tree. It gives a pictorial representation of the members along with a chronological statement of significant events. It helps in assessing a person's psychosocial characteristics or the interactional patterns of the family. The caseworker organizing the information can make it brief or extensive depending on the purpose it is to serve. Eco-map Though family experiences are significant, people are also greatly affected by the social context in which they live. Our record will not be complete if we do not depict this social context. An eco-map is an effective tool for this purpose. An eco map is an extremely useful tool for portraying the social context, because it provides a diagrammatic representation of a person and social world</p>

100%	MATCHING BLOCK 523/544	W
<p>Responsibility of the caseworker related to informing the client about records and recording The agency needs to establish and maintain good practices for collection of information from individuals availing of the caseworker's service. In this situation, the caseworker needs to 1. Be clear about the agency's reasons for collecting the information and explain the rationale to the person. 2. Be ready, with no resistance or surprise, to answer specific queries from individuals about the details he or she asks for, any forms to be completed or notes he or she makes.</p>		

98% **MATCHING BLOCK 524/544** **W**

Deal with individuals' questions courteously, even if they ask in an abrupt or confrontational way. Individuals may feel uneasy about challenging the information systems and this unease can emerge in an apparently unfriendly way. 4. It is important that the agency commits to the view that individuals have the right to understand why information is requested. 5. Explain in a straightforward way how the person can access his or her own information, and the extent to which the information is available to others in the agency. In short, Social caseworkers should be open and honest with the person or his or her family where appropriate, from the beginning about why, what, how and with whom their information will, or could be shared. They must seek the person's agreement to share their information, unless it is unsafe or irrelevant to do so. 11.11 Summary In social casework practice, recording is defined as the process of writing down relevant information in a systematic manner about the person who has come to the agency seeking some help. Social casework practice involves many types of recording depending upon factors such as requirements of the agency, the theoretical perspective of the caseworker, the type of intervention, and so on. Recording is an important and integral part of the case work procedure and is an output of the activity of the case work. Although there is no such thing as an ideal or model record, there are some guiding principles for maintaining a good record. As case workers seek to be professional and credible, they need to develop the record-keeping practice that supports them in performing their role and meets the public expectations of quality of service and accountability of any professional. Some case workers have reservations about creating records which may be demanded by individuals for use outside the case work relationship in legal actions against others. They hope that an absence of records will enable them to concentrate on the therapeutic relationship without having to consider how that work would be viewed in a court of law.

98% **MATCHING BLOCK 525/544** **W**

Once it is decided to keep the records, the existence of the records and the level of security with which they are protected have to be made known to the individual. Case work records vary considerably in style, from brief factual accounts which focus on what the individual reported to ones that include more of the case worker's thoughts and responses. Records ought not to include anything that could disrupt the therapy if seen by an individual. Prejudice and abusive comments are to be avoided. The agency has to be clear about its reasons for collecting the information and explain the rationale to the client. The caseworker should explain in a straightforward way how the client can access his or her own information, and the extent to which the information is available to others in the agency. 11.12

entails studying information that has already been recorded and involves summarizing the data, subjecting it to appropriate statistical analysis and drawing inferences

In this unit we will learn how to review these records for our future requirements. 12.1 Introduction Recording

100% **MATCHING BLOCK 528/544** **W**

aims to support social workers and other social care staff to improve recording skills – how you write down what you have seen and done, your analysis of that, and what you plan to do as a result. It is based on the concept of PARTNERSHIP – that recording should be done, as much as possible, in conjunction with the person you are working with. The

importance of recording

100%**MATCHING BLOCK 544/544****W**

Recording is an integral and important part of social work and social care. It is not simply an administrative burden to go through as quickly as possible, but is central to good, person-centred support. Recording is vital: ? It supports good care and support ? It is a legal requirement and part of staff's professional duty ? It promotes continuity of care and communication with other agencies ? It is a tool to help identify themes and challenges in a person's life ? It is key to accountability – to people who use services, to managers, to inspections and audits ? It is evidence – for court, complaints and investigations It will enhance your practice and the support you can offer people if you can make good recording a central part of your work.

A "review of the Casework Records" is a classification and evaluation of what the case worker had already documented after interviewing a client. It is sometimes sufficient to browse the text quickly. We can not always trust our memory, we can never remember who said what, so it is better record everything and keep it handy for future review. A Case review consists of an overview, a summary, and an evaluation of the already available information. It may also include a discussion of methodological issues and suggestions for future reference.

100%**MATCHING BLOCK 529/544****W**

Record reviews, on the other hand, are based upon information that is already available in the form of records. If particular information is not recorded reliably, then it cannot be used for record reviews.

Reviewing the records lets us gain and demonstrate skills in two basic area- 1. Information seeking: The ability to scan the record efficiently, using manual and computerized methods. 2. Critical appraisal: The ability to identify unbiased and valid points from the case which has been reviewed. 12.2 Objective of Casework Record Review Record Review must be— a. Be organized around and related directly to the thesis or research question you are developing

Advantage and Disadvantages of Record Review 12.3.1 Advantages Conducting a record review has several advantages.

97%**MATCHING BLOCK 531/544****W**

It enables assessment of a large sample at limited cost. It enables easy collection of information which is routinely recorded. It minimizes recall bias for an event in the past. It also reduces the need for intrusion into clients' time for assessment as part of the study. For some types of data, record review may be the most feasible type of study. 12.3.2

100%**MATCHING BLOCK 532/544****W**

Disadvantages Variation in the manner in which data has been gathered and recorded in the charts limits the extraction and interpretation of the variables. Some records may be incomplete or lost in the course of time, leading to missing data. Also, records may not have been stored in an easily retrievable manner restricting the extent to which they could be utilized further.

AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 249 PRINTTECH – 4th PROOF / 22.12.2021 NSOU ? PGSW-II 249 12.4 Sources of Records

92%**MATCHING BLOCK 533/544****W**

A variety of data sources can be utilized to collect information for a record review. These sources could be in the form of hard copies of case notes and case files, manually entered registers, and computerized databases. Data sources can include case notes, clients case files, attendance registers, counselling records,

national demographic records and so on.

94%

MATCHING BLOCK 534/544

W

The national demographic databases (for events such as suicide, Rape etc) are reservoirs of information about a large population, and are representative of the community sample. But these extensive repositories require permissions and clearances before use for academic purposes. Also, sifting through such large databases may require extensive and dedicated computing time. The type of data source would determine the extent and type of information that can be gleaned from it. The selection of the data source is based upon both convenience as well as the requirements of the Caseworker. Certain extensive data sources may require significant resources and large organizational supports for processing. On the other hand smaller databases may provide information about a limited sample. Also, some data may be missing or become non-retrievable with any type of source, depending on the manner of recording and storage of data. Hence pragmatic and practical considerations quite often determine the usefulness of a data source for purposes of answering a clinical query. 12.5 Process of Record Review The process of clinical record review involves multiple step. The exact procedure and protocol needs to be modified in accordance with the type of study, nature of the data source and local constraints. Some of the basic and commonly followed steps are as discussed as

under:- 1. Identifying an appropriate data source. The identification of an appropriate

100%

MATCHING BLOCK 535/544

W

data source that can answer the clinical question is the next major step. Data sources can include clinical case records in the outpatient or inpatient service, registration entries, adverse event monitoring systems, investigation report filing systems and so on. Each type of data source has inherent

NSOU ? PGSW-II 250 AA(CD) A New Compose / MSW / P-II / B-2 (M-2) 250 PRINTTECH — 4th PROOF / 22.12.2021

98%

MATCHING BLOCK 536/544

W

strengths and weaknesses which should be evaluated before its selection. The data source should also be assessed for accuracy and completion, which will determine the usefulness and generalizability of the data. Ethical aspects of data usage should be given due consideration; and appropriate clearances should be obtained. 2. Devising a data extraction instrument. A well-designed instrument to extract data from the case records to answer the clinical query is of immense importance. It is necessary to agree upon which variables are to be extracted and how the coding is to be done before the data extraction occurs. A manual may be prepared defining the various terminologies and enumerating the operational definitions for the coding process. 3. Extraction of the data. Data extraction should be carried out in accordance with the instrument devised and the definitions agreed upon beforehand. The person/people in-charge of coding the data should be clearly specified. In case data is extracted from technical or subjective case notes, it should be ensured that the data extractors have sufficient expertise. Preferably, two raters can be used to extract the data, and it is advisable to present an estimate of the agreement among the raters. Some differences are likely to crop up when subjective data is being extracted by different raters. 4. Re-evaluating a small dataset. A small subsample (approximately 10% of the total sample) can be reassessed to check agreement with the previously coded data and to determine the pattern and extent of inaccuracies, if any. This is especially useful when dealing with large data sets where cumulative inaccuracies may translate into substantial absolute values of discrepancy and limit generalizability of results. 5. Statistical analysis. Analysis of the data should be conducted using appropriate statistical methods. Analysis can range in complexity from simple semi-quantitative measures for qualitative data to hierarchical multivariate analysis. Excellent statistical software programs are available for carrying out computations in minimal time. It is prudent to involve a trained statistician while dealing with large datasets and conducting complex statistical analysis 6. Dissemination of findings. After conducting the record review, it is

important

The effective use of record reviews for looking into specific clinical questions needs accurate planning and use of right data sources. Record reviews have several advantages but their results should be interpreted keeping in view their limitations. Ethical issues, particularly pertaining to maintaining confiden- tiality of records, need to be taken into consideration. Appropriately conducted record reviews can help in effectively expanding the scientific knowledge base, and can provide information which may not be available through other means. 12.8

Exercise 1. What is review of case work record ? What are its objectives? 2. What are the advantages and disadvantages of Review of record? 3. What are the different sources of Records? 4. Discus the procedure for Reviewing of Records 5. What are the common errors that we commit while review of records and how can we avoid it 12.9 Reference <https://www.scie.org.uk/social-work/recording> <https://www.smu.ca/webfiles/guidelitreviewbrief.pdf> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4225918/>

the person is a whole in any moment of his/her living. He/She operates as a Physical/Psychological, social entity, whether on the problem of his/her neurotic anxieties or of his inadequate income. He/She is a product-in-process, so to speak of his/her constitutional make up, his/her physical and social environment, his/ her past environment, his/her experiences, his/her present perception and reactions, and even his/her future aspiration. It is this physical-psychological-social-past- present-future configuration that he/she brings to every life situation he/she encounters. The person's behaviour has this purpose and meaning to gain satisfaction, to avoid and dissolve frustration and to maintain his/her balance-in-movement. To understand a person, it is important to know his/her parts of personality that is Id (life forces of the individual), ego, (conscious, drivers gliding our personality forces) and superego (inconcions, ethical values and principles) which have an important role in governing his/her behaviour. Whether a person's behaviour is not effective in promoting his/her well-being depends in large part upon the functioning of his/her personality structure. The forces of the human personality combine in three major function. (1) The life energies that seek satisfactory outlets; (2) The check system automatic or voluntary, that halts, modifies or rechannel these drives to make their ends acceptable to their owner and his/her environment and (3) The organising and governing operations that controls the negotiations and balance within the person himself/herself, as between what he/ she wants and what he/she can and ought to do and between himself and his/her physical environment. Freud, Pychologist defined them as id, ego and superego. The harmonious concerted action of these forces in one make for personal and social balance and competence; their discord of faultiness is revealed in behaviour that is personality thwarting or socially unacceptable. A person at any stage of his/her life is not only "a product" of nature but is also and always "in process" of bringing the present and becoming in the future. What happens to the individual today may be as vital to him/her as what happened yesterday. Those physical, social and interpersonal situations he/she encounters in his/her operations today as worker, parent, spouse, student or client will have an

impact upon him/her and will respond that can affect his/her development either morbidly or benignly. The person "being and becoming" behaviour is both shaped and judged by the expectations he/she and his/her culture have invested in the status and the major social role he/she carries—a man may be a father, a son, an employee, a club member and a client of the case worker, all in the space of a few hours. His/Her social role consists of the major function he/she carries at a given time with broadly designated behaviour, responsibility and rewards. His/Her conflict may be caused by his recognition of what his role calls for and his emotional inability to meet it. The person who comes as client to a social agency is always under stress. Regardless of the client's reason for coming for help, the client brings much more than concerns, needs or problems to the helping situation. The client brings the total self as a biological, psychological, cultural and spiritual being. This includes the resources of self and the personal environment and also environmental constraints. What the client brings includes perceptions of self and the situations and patterns of coping with stress and patterns of interpersonal relationships. The client's present need and or/problem is affected in part by the developmental needs that have been met and by needs arising from the diverse aspect of the client's life-style and from the expectations of the client's environment. One of the major tasks of the worker is to understand the client as a unique person in a unique situation. There can never be total knowledge about a client. That is impossible. The worker seeks knowledge about the client that is needed for giving the service to be delivered. The client is the major source of the facts used to develop the understanding of the person in the situation. Before a person seeks help from a social agency, he or she has usually attempted to deal with a problem in a way that has worked with previous problems, commonly known as "coping". Coping results not only in solving problems but in the reductions of tension and anxiety. If the coping is not successful, a person may then turn to his/ her natural support system, that is friends, relatives, associates etc. Thus individuals often come to the agency after a period of unsuccessful attempts to deal with their

The agency also provides resources for both the worker and the client. The agencies are established to carry out broad social functions as healing and rehabilitation in the case of hospitals, ensuring good parental care in the case of children's department of the local authority and so on. The worker is expected to contribute to these objectives and to clarify and develop his/her own function within this broad social purpose. Yet, the most important aspect</p>

<p>Ability to move at the clients pace : As the case worker sees each client, he must be abc to begin where the client is and to proceed at the client's pace. This is a detail in individualization which can help the client participate fully in the study, diagnosis and treatment process; insensitively to the clients pace can stace the entire helping process because the client feels that the case worker is "taking over". Correct pacing is the secret to the timing of every stage of the case work process, from the appointment for the intake interview to the terminating interview, it guides the fact gathering, the analysis and interpretation, the determination of the treatment goals and the use of resource pacing is the guide and the test of individualization. ? Ability to enter into the feelings of people : The feelings of the client are his most individual characteristics. Problems produce different feelings in different individuals. Individualization then requires a sensitively and a response to these feelings. The principal quality of the response is warmth. "To be useful to another who is trying to change himself and his attitude, the social worker must have a gift for intimacy. He must be willing to enter into the feeling experience of the client, willing to listen to the view of his problem and of his experience, willing to go patiently along with him in his struggle for a solution". ? Ability to keep perspective : The emotional involvement, however, should be controlled and directed to the total situation, so that the</p>

<p>feeling response would be appropriate. In case work interviews, the content of the communication most often is a combination of thought and feeling. The nature of content depends upon many things: the problem of the client, the function of the agency, the needs and feelings of the client in a particular interview, the changing moods of the client within an interview and the purpose of the case worker in the on going process of study, diagnosis and treatment. The social case worker needs the skill to communicate at both the thought and feeling levels. Case worker has to gain factual information and at the same time study client's ideas, thoughts and feelings. The element of controlled emotional involvement in a case work relationship according to Biestek, is the case worker's sensitivity to client's feelings and understanding of their meaning and a purposeful, appropriate response to the client's feelings. There are three components in demonstration of controlled emotional involvement;</p>		<p>feeling response would be appropriate. In case work interviews, the content of is most often a combination of thought and feeling (Biestek: 1957). The nature of content depends upon – problem of the client, function of the agency, needs and feelings of the client in particular interviews, changing moods of the client within an interview and the purposes of the case worker in the ongoing processes of study, diagnosis and treatment. The social case worker needs the skill to communicate at both the thought and feeling levels. 	<p>In such a situation by making the client feel accepted, showing interest and genuine concern, the worker helps the client in reducing the anxiety and lowering the defence mechanisms. The principle of acceptance is the case work process as the client begins to express feelings and open up to the case worker. However, the client constantly checks the reactions of the worker to his/her disclosure of feelings especially negative feelings. Demonstration of Principle of Acceptance : ? Giving the client focussed response, directed to the needs of the client rather than worker's needs; ? Releasing client's potential for self help and exercising professional responsibility for the promotion of the growth of the client; ? Giving response that contain the elements of both thoughts and feelings; and ? Providing agency specific help to the client. Limitations of Principle of Acceptance : ? Inadequate knowledge of human behaviour. ? Counter transference. ? Case worker being Judgemental about the client's situation; ? Case worker's personal biases and prejudices; ? Unrealistic assurance by the worker. ? Confusion between acceptance and approval. ? Lack of respect for the client. PINCIPL OF NON JUDGEMENTAL ATTITUDE : One of the most talked about principle of case work that is also a difficult to practice is the principle of non Judgemental attitude. According to Briestek (1957), principle of non Judgemental attitude is defined as "Quality fer case work relationship, it is based on a conviction that the case work function excluder assigning guilt or innocence or degree of client responsibility for causations of the problem or needs, but does include making evaluation Judgemental about the attitudes, standards or action of the client: the attitude which involver both thoughts and feeding elements, is transmitted to the client." <p>Confidential can be defined as a fact or a condition, or the knowledge thereof, pertaining to a person's private life which is normally hidden from the eyes of others. Biestek (1957) has given three classes of confidential information: the natural secret the promised secrete, and the entrusted secret. The Natural Secret is information which, if revealed, would defame, injure or unjustly sadden the person. The obligation to preserve natural secrets binds everyone, regardless of the nature of the relationship. It may have become know by a relative, a friend, a stranger, or a professional person.</p> <p>SA 480E1230-Social Work with Individuals (Final Proof 07.03.2023).doc (D165107502)</p>

<p>social work literature is full of description of relationship from various angles only because of its great importance in a helping process. Richmond (1917), in her earliest work, has pleaded for an intensive study and use of social relationship in social case work. Social case workers focus should be on "skill in discovering the social relationship by which a given personality has been defined; an ability to get at the control core of the difficulty in these relationships; and power to utilize the direct action of mind upon mind in their adjustment." None can deny the utility and importance of human relationship in promoting change and development. When relationship is established and used by a social worker consciously, purpose fully and deliberately to help client(s), it is called professional relationship. It is characterized by "conscious purposiveness growing</p>

<p>their feelings, attitudes and behaviour which they have experienced with others. The client therefore tends to react to the case worker situation in a manner derived from his/her personal experiences. Case work focuses on understanding the client, his/her psychological needs and making a "contact" to build the relationship. If this contact is to be of any value at all, the client must have confidence in the workers good faith and the worker must have respect for the client as an individual. It is the responsibility of the case worker to establish this relationship. This professional relationship is formed with the purpose of developing in the client a personally satisfying and serially useful life. It is the individualized purpose which is unique to every relationship and is set to be achieved in each case. The conscious purposive and deliberate efforts to develop a helping relationship comprises of the following attributes : 1. Warmth : Warmth connotes some positive, lively outgoing interest in another person (or object or actively), for reaching out to take in another with pleasure or compassion (Perlman : 1979). By exhibiting open "Warmth" attitude, case worker is able to convey to the client his/her openness and concern to understand the client's problem, client's attitudes and sharing of experiences. Warmth is demonstrated by the worker when he/she attends to the client with attention, listens patiently, give confidence and conveys an understanding of the client's problem. 2. Empathy :</p>		<p>their feelings, attitudes and behaviour which they have experienced with others. 	<p>or emotionally disturbed persons. The patients may be attending ODPS, day care or may be hospitalized. The main task of the case worker are to maintain constant contact with the family of the patient, mediate between the doctors and the patient are his family, provide counselling to the patient assist in discharge of the patient in order to rehabilitate him/her back into the society to which he/she belongs. The worker also provides necessary support to the family and helps the family members to understand the needs of the mentally ill person. ? Social case work with chronically and terminally ill patients : The patients who are suffering from chronic illness like diabetes, asthma and heart disease need help in understanding their illness and the demands of the treatment and adjusting their life styles to the limitation imposed by condition. The families of the patients also need support and guidance in dealing with the patient's condition that may have long term implications for the entire family. In some cases, specially among those belonging to lower income groups, the financial burden may need to be eased out by identifying and mobilizing resources in the kinship network or the community at large. While working with the terminally ill patients, the first dilemma the worker faces is to inform the patient and his family about his/her illness. The patients suffering from a terminal illness like cancer, HIV/AIDs have additional stress factor. The stress is caused by the thought of death and the anxiety about the family after the death of the patient. The tasks of the case worker include : ? Ensuring palliative care to reduce the pain and discomfort. ? Taking about death and releasing the stress. ? Preparing and involving the patient in this future planning about the family after death and various unmet tasks. ? Providing opportunity and support to the family to accept the illness and talk about the consequences in the long run. ? Providing emotional and material support to the family.</p>		<p>or emotionally disturbed persons. The patients may be attending day care or may be hospitalized. <p>remove social discrimination against differently abled; ? Facilitating the client's acceptance and understanding of his/her situation and also recognition of his/her potential. Giving support to the client (both emotional and action oriented) is an important intervention offered by the case worker. The case worker also works with the family of the client to cope them with the situation, to understand the needs of the client and to learn the home management of the client. ? Case work in organizations working with women : Social case workers are employed in family counselling centres, crime against women cells, legal aid cells, family courts and rape and crisis intervention centres. The role of the case worker is to help the victims to come out of the trauma and deal with the self confidence and self esteem of the client. They also work with the family so as to mobilize their support for the client so that the client can deal in a better manner with his/her problem. ? Case work in organizations working with victims of disaster : There is an increasing need for the individualized help for the victims of disaster—whether natural or man made. Some of the common experiences of most of the victims of the disaster are trauma, loss of loved ones, loss of livelihood or assets, homelessness, feeling of helplessness, aguish, hostility, lack of community feelings, sense of fatality and un realistic expectations from the worker. In this situation, the client needs individualized care to overcome debilitating impact of the crisis. The first step of the case worker intervention is to bring them out of the trauma, then provide emotional support and build in them hope for a secure future. Once the client has emerged from the trauma, the case worker engages the client in the planning and implementation of the action plan to facilitate the rehabilitation process. ? In the field of labour welfare : There is a general need for introducing case work to deal with varied social problems of workers in industries, individual problem of absenteeism, alcoholism, depression, stress related disorders, drug addiction etc. among the factory workers are the concerns for the case workers.</p>		<p>remove social discrimination against differently abled; ? intake worker). This phase requires a very skillful probing into the client's problem, mopping up all the relevant areas of the person- in-his-situation. During one or two skillfully conducted interviews with the would-be client, the caseworker is able to assess; (1) What are the needs/problems of applicant person, and (2) How and where his needs can be best met. This obviously requires that the intake worker finds out the nature of need, if it can be met in the present set-up of agency's p[olicies, procedures, services and personnel, and what sort of competence and provisions will be helpful and is required to tackle his problem. How does the worker view the person and his problems diagnostically is also important to be mentioned. If his agency cannot serve the client's needs, which agency and which type of service are required to tackle his problems, and the need for referral are also decided at this stage by the intake worker.

<p>Study According to Richmond, the caseworker must secure all and every fact that taken together, through logical and inferential reasoning, would reveal the client's personality and his situation for appropriate intervention. An exhaustive collection of facts about the client and his situation is called study—the first step (process) in the continuum. Psycho-social study is an ongoing process which begins with the first knowledge of the case, takes place in every interview, and extends over the entire contact. It may be defined as that part of the casework process which brings together the facts about a case and is distinctly different from the assessment of the meaning of the facts. The study involves exploration, observation and documentation of both objective and subjective facts from a variety of sources. In casework, the primary source of information is the client. One must learn when to go beyond personal report and seek data from collaterals, experts, significant others. Documents (records), psychological tests, and so forth. One must be careful to carry out this search acting in full respect for the client, maintaining confidentiality, and without violating the right of the client to participate in, so far as it is possible.</p>

Diagnosis Perlman (1957) has described three types of diagnosis that is carried on in social case work process. These are: 1. Dynamic diagnosis 2. Clinical diagnosis 3. Etiological diagnosis

Dynamic diagnosis It gives an understanding of the current problem of the client and the forces currently operating within the client, within social environment and between him/his environment. It gives the answers of the questions—what is trouble?, what psychological, physical and social factors are contributing to it?, what solution is sought? What are the means available within the client, his environment? What are organized services and resources by which the problem may be affected?. The nature of such diagnosis is changeable because it is the beginning phase of social case work practice.

Clinical diagnosis Under clinical diagnosis, the case worker attempts to classify the client by the nature of his sickness/problem. He identifies certain forms and qualities of client's personality maladaptation and malfunctioning in his behavior. The clinical diagnosis describes both the nature of the problem and its relation to the client and the helping

Diagnosis Perlman has described three types of diagnosis that is carried on in social case work process. These are: dynamic diagnosis, clinical diagnosis and etiological diagnosis. Diagnosis: Dynamic gives an understanding of the current problem of the client and the forces currently operating within the client, within social environment and between him/his environment. It gives the answers of the question – what is the trouble? What psychological, physical and social factors are contributing to it? What solution is sought? What are the means available within the client, his environment? What are organized services and resources by which the problem may be affected? The nature of such diagnosis is changeable because it is the beginning phase of social case work practice.

2. Clinical Diagnosis: Under clinical diagnosis, the case worker attempts to classify the client by the nature of his sickness/problem. He identifies certain forms and qualities of client's mal adaptation and malfunctioning in his behaviour. The clinical diagnosis describes both the nature of the problem and its relation to the client and the helping

Mutual engagement in the process is essential. It provides the caseworker with the client's own view of the problem. It gives the client an opportunity to clarify the problem in its various aspects, permits him to air his feeling about his situation, and gives him a satisfaction that genuine efforts are being made to help him. While fact-gathering proceeds until the case is closed, there is usually an emphasis on study at the time a case is opened. The extent and the breadth of the study depends on the situation presented by the client, the purpose and goals in seeking help, the situation as perceived by the worker, the range of treatment modes available, treatment potential and motivation for treatment, and on the agency structure and function. One needs to learn to determine the kind of study to be carried out in relation to these factors. 5.6

<p>Such type of diagnosis is useful only when it becomes apparent that a disorder of personality accompanies the social disorder, creating and complicating it. Etiological diagnosis It is concerned with the explanation of the beginning and life-history of problem of the client, basically that problem lies in the client's personality make up or functioning. The history of his development as a problem encountering, problem- solving human being may provide the case worker with an understanding of what his client suffers from and what the extent of his coping ability is likely to be (Perlman, 1957). Etiological diagnosis is more useful in explaining or rigid reactions.</p> <p>SA Social Case Work Block 1.pdf (D164874043)</p>

<p>Levels of crisis treatment Jacobson, Strickler and Morley have discussed different levels of crisis treatment : Environmental manipulation—In this case the helper serves as a referral source, getting the client in touch with a resource person or facility. General support—It consists basically of active listening in a non threatening manner, allowing the person to speak in some detail about his problem without challenging him. Generic manipulation—It is helping the person resolve a crisis by accomplishing certain psychological tasks that are the same for all the people experiencing the same crisis regardless of individual differences. Individual approach—It focuses on the specific needs of the person in crisis and emphasizes the assessment of the psychological and psychosocial processes that are influencing the client. It looks at the specific psychological tasks and problem solving activities that each person must accomplish in resolving a particular crisis. These levels of intervention are not mutually exclusive although there is usually one that is predominantly used in the treatment process. Therefore, it is possible to use an environmental manipulation and at the same time use a generic or individual approach or other combinations of treatment strategies.</p>

<p>This technique may be used in certain unpleasant situations which might have arisen in between the interviews. Ventilation is not only therapeutic but also diagnostic. The therapist should explore intently and stimulate the client, by questioning or commenting, to tell more about his situation and its various aspects. Only towards the end of session, the caseworker may use generalization and logical discussion to lessen his guilt. In the initial stages one should not minimize the anxiety lest he stops coming out with relevant materials necessary to help him. The caseworker may choose either to be totally passive or actively participating and directing. The client must feel that the worker is uncritical, tolerant and is listening to him. One should not permit ventilation when it is used as a defense mechanism to avoid further exploration. In such situations, it is better to divert his attention and help him to discuss the relevant matters concerning his problem. It should be avoided or used with caution in case of psychotics etc. Ventilation is used sometimes by the client to seek attention and sympathy from the worker or a gratification from talking freely about self. The caseworker should be conscious in all such situations and direct the interviews accordingly. 6.</p> <p>SA 470E1120-Social Work Practices with Individuals & Groups - Final ok - 03.09.21(ld 2656).docx (D165249726)</p>

<p>We all have experienced anxiety whosoever we had to ask for help from persons unknown or formally known to us. Similarly, questions about self from unknown or formally known persons also create anxiety in us. Apart from this, when the client approaches the caseworkers, he is naturally suffering from some anxiety caused by his problems/non-fulfillment of his needs. The anxiety is tackled and the client's interest in solving his problem is sustained. Sustaining process becomes more useful when anxiety is greater as it quickly reduces his anxiety, makes him comfortable and thus builds his confidence in caseworker. Techniques used in sustaining process to maintain his/her current social functioning and interest in casework treatment are conveying acceptance, reassurance and encouragement.</p> <p>SA 470E1120-Social Work Practices with Individuals & Groups - Final ok - 03.09.21(ld 2656).docx (D165249726)</p>

Suggestion : Herein a solution is raised in the client's mind by the worker and it is up to the client to accept or reject the idea. Since the worker is not emphatic on this suggestion; the client is free to reject the idea. For example, worker may say, "You can utilize this leisure time for painting or kitchen- garden etc". In case the client uses his leisure time for walking or playing, he is free to do so without any fear of criticism from the worker. ?
Advice : This involves stating an opinion or taking a stand concerning certain issues which must be acted upon by the client in his own interest and which if not taken will be harmful to the client's interest. Physicians advice drugs which should be taken by the client if he wants to get cured.

421/544	SUBMITTED TEXT	266 WORDS	98% MATCHING TEXT	266 WORDS
<p>Similarly, the caseworker advises actions which should be adopted by the client to solve the problems. ? Advocating : This is one step beyond the advice, i.e., putting certain urgency behind the advice offered. Advice is re-emphasized. It is offered in term of :it is essential and that would be very unwise not to do so". This is indicated when there is a chance of severe loss because of the client's ill-considered or impulsive action, or when enough time is not available for discussing consequences of the action being contemplated by the client. Such situations may be like a mentally disturbed person sticking to the home, a person likely to commit suicide, or running away from homes, etc. In all such situations, advocating becomes more useful because it saves the client from the big loss he may suffer because of his ill-considered action. However, no attempt should be made to create guilt in the client, when he fails, by telling him that "I told you so". ? Actual intervention : Herein the caseworker takes action to prevent the client from taking inadequately considered action or sees that he acts in a particular (the desirable) way. Examples are removing the patient to a hospital, placing the child in a hostel, etc. Use of these technique demands that the worker be fully convinced that the step is factually justified and necessary community resources and support are available. His action should be firm and polite without communicating any anxiety to the people around. Direct influence techniques should be avoided unless it is really justified and it should be, wherever possible, used in conjunction with the producers for development of understanding. To start with, most gentle form of influence should be used. The</p> <p>SA 470E1120-Social Work Practices with Individuals & Groups - Final ok - 03.09.21(Id 2656).docx (D165249726)</p>

<p>dignified member of the society like anyone of the society. He had to be respected so that he can get all possible help and facilities to live a socially productive and personally gratifying life. 2. From this it follows that individual has right to self-determination, taking decisions about all the matters related to self as long as it does not interfere with the rights of others. One is considered to be capable of taking decisions about one's own future and the helper is only to tell him the pros and cons of his decisions to enable him to choose his own future course of action. 3. Every individual is the primary concern of society, has potential for and the right to growth and it is the responsibility of the society to provide equal opportunities to everyone to actualize his self. 4. Every individual in turn, has to contribute to the society's development by assuming his social responsibility, discharging his functions honestly and acting properly and adequately in his social roles. 5. The individual and society in which one lives are interdependent. Neither the individual nor the society can be conceived of without each other. 6. Basic human needs to be met by services which are not contingent upon conformity either to moral behavior or to race, nationality, religion, caste, etc. 7.</p>

<p>Diagnostic and functional schools of thought have been explained along with the difference between the two. Theories and models of working with the individuals have got its place in the present unit. 9.3 Principles of Social Casework Letus quickly once again revise the principles of social casework are applied in establishing close relationship between social caseworker and the client. Relationship is the medium through which changes are brought in the behaviour and personality of the client. The term relationship in social casework was used for the first time by Miss Virginia Robinson in her book, "A Changing Psychology in Social Case Work" in 1939. The social casework relationship is the dynamic interaction of attitudes and emotions between the social caseworker and the client with the purpose of helping the client to achieve a better adjustment between himself and his/her environment. Thus the purpose of establishing relationship is to help the client with his/her psycho- social needs and problems. The relationship between caseworker and client may be more strengthened by using certain principles. These principles are : a) Principle of individualization b) Principle of meaningful relationship c) Principle of acceptance d) Principle of communication e) Principle of expression of feelings f) Principle of controlled emotional involvement g) Principle of non-judgmental attitude h) Principle of client's self-determination i) Principle of worker's self-awareness j) Principle of social functioning k) Principle of tuning behaviour l) Principle of social learning m) Principle of confidentiality</p>		<p>Diagnostic and functional schools of thought have been explained along with the difference between the two. <p>W https://egyankosh.ac.in/bitstream/123456789/17153/1/Unit-2.pdf</p>				

Principle of individualization No two persons are alike in all qualities and traits. Their problems may be the same but the cause of the problem, the perception towards the problem and ego strength differs in every individual. Therefore, each individual client should be treated as a separate entity and complete information is required to establish close relations in order to solve his/her problem from root. 2) Principle of meaningful relationship The purpose of establishing relationship in social casework is to change the behaviour of the client or to achieve adjustment in maladjusted situation. Meaningful relationship is developed in social casework by demonstrating the interests in client. He/she is convinced of the caseworker's warmth as an individual and conveys respect and caring for him/her. In return, the caseworker helps the client to trust in his/her objectivity and feel secured as worthwhile individual. 3) Principle of acceptance Social caseworker accepts the client as he is and with all his/her limitations. He/ she believes that acceptance is the crux of all help. It embraces two basic ideas – one negative and one positive. He/she does not condemn or feel hostile towards a client because his/her behaviour differs from the approved one. Later on, he/she tries to modify his/her behaviour step by step. 4) Principle of communication Communication is a two-way process. There must be proper communication between caseworker and the client, which helps, in proper understanding of each other. It is the road to the identification of the client's problem. The function of social caseworker is primarily to create an environment in which the client will feel comfortable in giving expression to his/her feelings. It depends on a proper communication. 5) Principle of expression of feelings Purposeful expression of feelings is the recognition of the client's need to express his/her feelings freely, especially his/her negative feelings. The caseworker listens purposefully, neither discouraging nor condemning the expression of those

feelings. Sometimes he/ she even stimulate and encourage them when the expression is of therapeutic nature. 6) The Principle of controlled emotional involvement The social caseworker tries to understand the client's feelings and emotions but he/she himself/herself does not involved emotionally in his/her problems. 7) Principle of non-judgmental attitude The non-judgmental attitude is a quality of the casework relationship. The caseworker does not blame the client for his/her problem nor he assigns any responsibility for his/ her miseries. He/she only evaluates the attitudes, standards or action of the client. 8) Principle of client self-determination The client's self-determination is the practical recognition of the right and need of clients to freedom in making his/her own choices and decisions. But this right is limited by the client's capacity for positive and constructive decision making. 9) Principle of self-awareness It means that caseworker should know his/her own strengths and limitations in dealing with client's problems. If he/she feels that the problems of the client are beyond his/her capacity, the client should be transferred to the appropriate authority. 10) Principle of social functioning Social functioning means the functioning of the individual in his/her social roles and relationships, with emphasis on his/her relation to the environment. The caseworker tries to assess the roles of the client and his/her capacity to perform these roles. 11) Principle of tuning behaviour Man has body, mind and intellect as three instruments of experiences through which life constantly pulsates. These three instruments have their own distinct characteristics in each person. Hence each person has unique personality. There is need of tuning three instruments for right perception and thinking. The social caseworker does it. 12) Principle of social learning Social learning is a pre-requisite to the changes that are inevitably involved in problem solving. The social learning processes involves :

feelings. Sometimes he/ she even stimulates and encourages them when the expression is of therapeutic nature. 6) The Principle of controlled emotional involvement The social caseworker tries to understand the client's feelings and emotions but he/she himself/herself does not involved emotionally in his/her problems. 7) Principle of non-judgmental attitude The non-judgmental attitude is a quality of the casework relationship. The caseworker does not blame the client for his/her problem nor he assigns any responsibility for his/ her miseries. He/she only evaluates the attitudes, standards or action of the client. 8) Principle of client self-determination The client's self-determination is the practical recognition of the right and need of clients to freedom in making his/her own choices and decisions. Arousing and focusing attention and concern, (2) Organising and evaluating the problem and planning future action, (3) Searching for and acquiring new information, (4) Providing opportunities to the client for new experience. 13) Principle of confidentiality Confidentiality is the preservation of the secret information concerning the client, which is disclosed in the professional relationship only. 9.4 Schools of Social Casework In the beginning the aim of social work was to help but later on due to influence of psychology and psychiatry, personality and behaviour treatment have also been added as the objective of social casework. Basic orientation of social caseworkers are of different kinds and with the result diagnostic and functional schools appear in the practice of social casework. Diagnostic School The diagnostic school is basically founded on the Freudian theory of psychoanalysis. Mary Richmond gave shape to these thoughts in the form of a school. She wrote first book on social casework i.e. Social Diagnosis in 1917. The other contributors of this school were Marion Kenworthy (New York School of Social Work), Betsey Libbey (Family Society of Philadelphia), Gordon Hamilton, Bertha Reynolds, Charlotte Towle, Florence Day and Annette Garrett. The Diagnostic school is based on the following main foundations. Principles of Diagnosis Social casework help is based on the understanding of each client individually and his/ her problems. It is essential because it gives a realistic basis for differentiation, and a base for the improvement of the client's social situation and personal satisfaction and adjustment. The diagnosis is based on the following principles : 1) The diagnostic process consists of a critical study of a client and his/her situation and the trouble concerning which help is sought or needed for the purpose of understanding the nature of the difficulty with increasing details and accuracy.

arousing and focusing attention and concern, (2) organising and evaluating the problem and planning future action, (3) searching for and acquiring new information, (4) providing opportunities to the client for new experience. 13) Principle of confidentiality Confidentiality is the preservation of the secret information concerning the client, which is disclosed in the professional relationship only. Schools of Social Casework In the beginning the aim of social work was to help but later on due to influence of psychology and psychiatry, personality and behaviour treatment have also been 30 Social Work Intervention with Individuals and Groups added as the objective of social casework. Basic orientation of social caseworkers are of different kinds and with the result diagnostic and functional schools appear in the practice of social casework. W <http://www.ignou.ac.in/upload/bswe-02-block1-unit-2-small-size.pdf>

Diagnosis is based on the knowledge of the worker about the interplay of social and psychological factors affecting the client. 3) The knowledge of interaction between inner and outer forces influencing the client makes the process of diagnosis helpful and therapeutic. 4) Every problem of the individual should be understood in the light of multiple factors theory. 5) In the initial stage also, relieving of pressure of stresses and strains on the client, helps the caseworker to arrive at a proper diagnosis. 6) The initial appraisal of personality and motivations and their significance in the development of client's problem provides the basis for planning the treatment of the client's problems. 7) For the solution of the problem of the client, it is of utmost importance to gain some knowledge of his/her current capacity to work and to recognize the motivating forces in his/her behaviour. 8) The understanding of the psycho-dynamics and the pathological symptoms of the personality of the client provides the basis of determining the kind of help that can be appropriately offered. Principles of Treatment The main objective of the treatment is of alleviating the client's distress and decreasing the malfunctioning in the person situation system. The above objective is achieved by enhancing the adaptive skills of his/her ego and functioning of the person situation system. It is based on certain principles : 1) The forces of the discussion in the interview is centred on the problem and ways of resolving it. Attention is paid to know the obstacles both situational and behavioural that stand in the way of solution. 2) Nature and extent of both social and psychological factors differ in each situation. 3) Treatment goals and techniques are planned after a careful study of the particular needs of the client. 4) The success of the treatment programme is based on the utilization of the relationship purposefully. 5) Social therapy and psychotherapy are the two broad classifications of social casework treatment.

Use of Techniques The techniques include encouraging, emotional discharge, reassurance, support, suggestion, guidance and direction, provision of new experiences, clarification, interpretation, etc. Use of Relationship The relationship is the medium of treatment through which client is enabled to find new ways of perceiving his/her problems and of handling himself. Functional School The functional approach to social casework practice was developed by the Faculty Members of the School of the University of Pennsylvania. This approach is based on the personality theory of Otto Rank. According to Functional School social casework is a method of helping people through special services given by social agencies in such way that the experience of using such services may be psychologically constructive. Thus the functional school of social casework has two inseparable aspects : 1) Potentials for help to a person is inherent in the existence of service. In spite of the differences in the clients and ways of using of agencies services, the kind of service an agency gives and their purposes remain the same. 2) The use of agency service gives psychological experience that differs from the form of another kind of service regardless of the similarity of problem in the people using the two services. Diagnosis The diagnosis is most effective which is related to the need for some specific service and which is developed in the course of giving the service. This school does not recognize the significance of understanding the total situation of the client. Functional diagnosis recognizes that people cannot be categorized and a plan with a specific kind of service may deny potential growth and change. In establishing a diagnostic conclusion each individual makes his/her own diagnosis of

According to Functional School social casework is a method of helping people through special services given by social agencies in such way that the experience of using such services may be psychologically constructive. Thus the functional school of social casework has two inseparable aspects: 1) Potentials for help to a person is inherent in the existence of service. In spite of the differences in the clients and ways of using of agencies services, the kind of service an agency gives and their purposes remain the same. 2) The use of agency service gives psychological experience that differs from the form of another kind of service regardless of the similarity of problem in the people using the two services. Diagnosis The diagnosis is most effective which is related to the need for some specific service and which is developed in the course of giving the service. This school does not recognize the significance of understanding the total situation of the client. Functional diagnosis recognizes that people cannot be categorized and a plan with a specific kind of service may deny potential growth and change. In establishing a diagnostic conclusion each individual makes his/her own diagnosis of

Diagnosis is a way of engaging in a human relationship process, which frees the help seeker to determine his/her own goal for himself/herself. The client is the centre for change capable of continuous growth and development.

Treatment Functional school prefers to use the term helping process, rather than treatment. Social Caseworker is not responsible for treating someone who is the passive recipient of treatment because the school believes that the centre for change resides in the client itself. Social Casework through the agency service seeks to release power for improved social functioning. The process of establishing and using a diagnosis serves as the part of casework helping. Total social casework process includes three stages or three time phases: beginning, middle and ending. In the beginning phase, the caseworker establishes relationship by removing all the hindrances that come in the way of understanding the client or by the client to the caseworker. He/she also tries to understand the client's needs, desires, motives, interests and hopes for future. He/she also divides the problem of the client and put them in order of priority. The client starts to take services from the agency. In the middle stage the responsibility of the client increases and the relation becomes closer. The last stage is of separation of client from the caseworker. It is a difficult process. Sometimes client does not like to terminate the service due to emotional touch with the worker. The social caseworker with all his/her abilities and capacities tries on one hand not to harm his/her feelings and on the other hand the client may go happily. Caseworker gives him/ her a chance to become conscious of his/her readiness to leave, so that he/she can leave the agency without and fear. Difference between Diagnostic and Functional School

1) Diagnostic School follows the theory of personality developed by Sigmund Freud whereas functional school is based on the theory of 'will' developed by Otto Rank. 2) Diagnostic School believes that personality is a composite of many interacting forces, reacting not only in each other but also influences the social environment favourably or unfavourably. The strength and the nature of balance of these forces are the result of individual's experiences primarily of his/her relationship to parents and the other person. The functional school also believes that the process of development of personality takes place within the interaction of inner needs and environmental experiences, but such an interaction takes place and is directed by the human beings inborn will to individual development and autonomy.

Treatment Functional school prefers to use the term helping process, rather than treatment. Social caseworker is not responsible for treating someone who is the passive recipient of treatment because the school believes that the centre for change resides in the client itself. Social casework through the agency service seeks to release power for improved social functioning. The process of establishing and using a diagnosis serves as the part of casework helping. According to diagnostic school, the ego is the chief of psychic energy, the strength of which is determined largely by the favourable or unfavourable course of one's psycho-social environment. But according to functional school the ego (self) is the result of the creative use of inner and outer experience through the 'will' and is not the product of interaction of inner and outer forces. 4) In the diagnostic view, the goal of treatment is to increase the individual' ego capacity whereas functional school tends to direct his/her effort toward helping the client to release his/her inner capacity of feeling, organising and acting. 5) Total information about the client's ego functions, total personality, motivating forces, reality pressures and his/her current feelings is essential according to diagnostic view for enabling the client to take part in the therapeutic relationship. Functional school gives emphasis on the client's feelings in the immediate situation which includes both his/her problem and the casework relationship through which he/she may solve the problem, other information are secondary. 6) Diagnostic School believes in doing planned and goal directed help to the client – both psychological and social. Functional school gives full freedom to the client to give direction to his/her own process of change. Agency services are made available. 7) The Diagnostic School accepts responsibility for apprising client's capacities and weakness and for organising and arranging measures for self development. The functional school believes in the client's right for choices and goals because of the constructive value of the use of self. 9.5 Theories of Social Casework Theories or models give the direction to the caseworker to handle the client in a way which is suited according to the client's need and social conditions.

Psycho-social Theory Psycho-social theory was propounded by Hamilton. She published an article on "The Underlying Philosophy of Social Case Work" in 1941 in which the word 'diagnostic' was used to express psycho-social problems. In this approach, diagnosis and treatment are directed toward person in situation. The client is seen in the context of his/her interactions and transactions with the outer world. For proper diagnosis and treatment client's social context must be understood and mobilized. Treatment must be differentiated according to the need of the client. Three stages are involved in psycho-social approach. Psycho-social Study Social Caseworker starts his/her work with the knowledge of the needs of the client. He/she on the basis of the needs assesses what kind of help is his/her need. He/she also finds out the perception of the client about his/her own problem, and his/her desires about the kind of assistance to be provided. He/she, then, himself/herself tries to arrive at his/her own understanding of what the client's trouble is, what factors contribute to it and what type of service is needed to improve his/her ego strength and adaptability. Diagnosis On the basis of the collected data and available material social caseworker tries to assess the nature of client's trouble contributing factors and where changes can be brought in his/her behaviour without much efforts. Treatment Social Caseworker gives much emphasis on indirect treatment or environmental modification. He/she intervenes actively in the environment and provides necessary concrete help to the client. He/she provides financial help by locating such agency, proper health care and also educational resources. Direct treatment is also provided for the ventilation of the client to accept concrete help. Psychological support, counselling, suggestions, etc. techniques are used to establish close relations with the client. II) Behaviour Modification Theory Behaviour modification theory is based upon the principles of learning and conditioning propounded by Pavlov and Thorndike. The researches of B.F. Skinner

of social case work. 9.2 Introduction Social Casework, a primary method of social work is concerned with the adjustment and development of the individual towards more satisfying human relations. But his/her adjustment and development depend on the use of available resources by him and within him. Sometimes due to certain factors, internal or external he/she fails to avail existing facilities. In such situation social caseworker by using different resources; both material and human helps the client. But before applying different techniques to the client in solving his/her psycho-social problems, he/she is required to know the theoretical framework of social casework practice. There are certain principles of social casework practice and these principles are the guidelines to work with client. Those principles have also been discussed here.

Aversion Therapy This technique is used for the modification of undesirable behaviour by the method of punishment. Punishment may involve either the removal of positive reinforcements or the use of aversive stimuli. Family Therapy Family is a system which is composed of three sub systems : marriage, parenthood and siblings. There are continuous interactions and transactions among these sub systems. It is quite often observed that sometimes relations may not be harmonious and at that time outside help is required to bring the family on proper track. Family therapy is based on the assumption that marital relationship system influences the family adjustment and therefore it is necessary to understand the nature of marriage. It is also true that the nature of the marital equilibrium affects all family members but its effect differs on each of the member. The development of children is affected also by the nature of the marital equilibrium because they interject the parents as models and guides. Further each developmental phase in the family has stressful situation which requires new relationship. Family therapy is significant because whenever one member of a family is in trouble, all are in trouble. Communication in the family is the channel through which members of the family interact. Whenever there is problem in the family communication become faulty or dysfunctional. In family therapy, the diagnosis is confirmed on the basis of various types of interviews with the client and family. The social caseworker tries to know family structure, and the processes in the family responsibilities, roles patterns of daily living, role performance, role relationship, dependency, separateness, independence level, capacity, tolerance and control of feelings, intimacy, anxiety, regression, taboo, etc. He/she records the family history and analyses its contents. The social caseworker uses most of the techniques in one to one treatment, such as guidance, advice, education, suggestion, clarification, and interpretations. Self-control and Self Management Therapy Helping clients to help themselves is an old casework phrase. Self-control refers to the ability of individuals to change behavioural patterns that they or others perceive as harmful. The role of social caseworker in this process is to help the client

W <http://ddceutkal.ac.in/Syllabus/MSW/Paper-5.pdf>

to develop the knowledge about how, when and where to use strategies for change. The worker acts as an instigator and motivator to help the client to start the programme and have motivating force to complete it. A multi-step guide has been presented by Watson and Tharp to develop a self-control plan.

1. List a current dissatisfaction.
2. Select one particular problem of behaviour that occurs in a particular situation.
3. Describe the effect of problem on behaviour.
4. Be as precise as possible in stating the behaviour that occurs and the situation in which they occur.
5. Gather baseline data. Count every instance of target behaviour and keep a record of count.
6. Catalogue enforcements. Answer three questions for each potential reinforcer. (a) Is it a reinforcement or specially formed? (b) Is it a strong reinforcer? (c) Is it accessible?
7. List and attempt to verify through observation possible antecedents to problem behaviours. Devise a plan for intervention for altering antecedents.
8. Identify the emotional components of the problem and plan for desensitization.
9. Select one of the plans that you have developed.
10. Continue to collect data on the problem behaviour. Make a graph of the data to determine that the intervention plan is working.
11. If the plan is successful, consider termination of relationship.

The Problem Solving Theory This theory was propounded by Helen Harris Perlman in the book "Social Case Work : A Problem Solving Process". This model stands firmly upon the recognition that life is an outgoing problem encountering — problem solving process. Every person is involved every time in coping with his/her problems. Sometimes he/she is capable of coping and sometimes fails to resolve the crisis situation. Through problem solving process individual or family is helped to cope with or resolve some difficulty that he/she is currently finding difficult to solve. Thus the primary goal of problem solving model is to help a person cope as effectively as possible with such problems in carrying social tasks.

W <https://egyankosh.ac.in/bitstream/123456789/17153/1/Unit-2.pdf>

In the initial phase the attempts are made to engage the client with his/her problems and to do something about it in a working relationship with the agency. The problem solving process starts at once, from the first movement with treating the person. The client is not treated for his/her problem but he is treated for the purpose of helping him/her to know himself/herself i.e. strength and weaknesses and how to remove those weaknesses. In short, the problem- solving casework process involves the following steps : a) It tries to release, energize and gives directions to the client's motivation for change. b) It tries to release and exercise the client's mental, emotional and action capacities for coping with the problem. c) It tries to find and make accessible to the client such aids and resources as are necessary to the solution of the problem. Role Theory Role is mainly behavioural concept. Role may be seen as a product of an interplay between (i) individual member's needs and resources, (ii) the solution in the social network, and (iii) the forces acting on the social network from the environment. When there are internal or external difficulties, which are beyond the capacity of an individual, he/she feels the problem and fails to perform his/her role. Social Caseworker with such clients suggests new ideas and ways of facing the problem and suggests solution for a difficulty that the external factors have encountered. He/she offers facts, which relate to his/her own experience for understanding the problem. He/ she gives suggestions in terms of examples, and tries to explain how suggestion would work if followed by the client. He/she mediates between other members, attempts to reconcile disagreements, and relieves tension in conflict situation. His/her efforts are also directed to keep communication channels open by encouraging others to participate in the business of the client. Rational Emotive Therapy This technique is used in the area of modifying irrational elements control over the self. Some of the irrational ideas at the core of emotional and behavioural problems are as under : 1. It is dire necessity for an adult to be loved by everyone for everything he/ she does.

Key Words Counselling : It is a personal help directed toward the solution of a problem, which a person finds difficult to solve. It is always used for some particular purpose like marriage counselling, family counselling, etc. Therapeutic Interviewing : It is used where intra-psycho conflict is projected to the social environment. It is also used with neurotic patient or with behaviour disorders patient. For the analysis of the unconscious, techniques of free association, dream interpretation, analysis of resistance and transference are applied. Psychic Energy : It is an internal or psychological power of an individual, which gives him stimulus to work in the direction as required. It is determined largely by the favourable or unfavourable course of one's psycho-social development. Relationship : The relationship is the medium in social casework through which help is provided to the client. Communication : Communication is the medium through which an individual understands the personal and social environment of the client. When there is any fault in communication, problem arises. Social Diagnosis : Social diagnosis is the attempt to reach the exact definition of client's social problem. There are three types of diagnosis—dynamics, clinical and etiological. Social Treatment : Social treatment is the sum total of all activities and services directed towards helping a client with a problem. Three treatment methods are applied : (1) administration of public services, and (2) environmental modification, (3) direct treatment—counselling, therapeutic interviewing, insight development, psychological support, etc. 9.8

Social Diagnosis : Social diagnosis is the attempt to reach the exact definition of client's social problem. There are three types of diagnosis –dynamics, clinical and etiological. Social Treatment : Social treatment is the sum total of all activities and services directed towards helping a client with a problem. Three treatment methods are applied : (1) administration of public services, and (2) environmental modification, (3) direct treatment--- counselling, therapeutic inter- viewing, insight development, psychological support, etc. 2.7

<p>helped to develop the behaviour modification approach further. The behaviouristic theory viewed problem as essentially the result of a failure to learn necessary adaptive behaviours and competencies and/or the learning of ineffective and maladaptive behaviours. It may happen due to conflicting situations that require the individual to make discriminations or decisions of which he/she feels incapable. The maladjusted person has learned faulty coping patterns, which are being maintained by some kind of reinforcement, and he/she has failed to learn needed competencies for coping with the problem of living. Techniques of Behaviour Modification The following techniques are used for behaviour modification: Simple Extinction In this technique, the reinforcement is removed to eliminate a maladaptive pattern of behaviour. This is especially helpful where maladaptive behaviour is being reinforced unknowingly by others. Through this technique, learned behaviour patterns are made weaker and disappear overtime. Systematic Desensitization It is a technique to deal with a wide variety of maladaptive emotional behaviours, particularly involving anxiety, irrational fears and phobias and other forms of dysfunctions i.e. neurotic tendencies. There are five basic steps in systematic desensitization :</p> <p>SA Social Work with Indiv and Groups Block 1.pdf (D164882170)</p>

it applies in each case. It helps in knowing about the impact of the unfulfilled need of the client and his social environment. The worker is able to help the clients decide upon the action plan for dealing with their problematic situation by fulfilling the unmet needs. ? The life-span perspective An individual experiences a number of life changes as he/she goes through his life cycle, that is, from birth to death. She/he is seen as moving in life through a series of developmental stages, each stage requiring the individual to successfully complete some tasks before he/she moves on to the next one. In most cases, human beings move through this cycle without major unsettling stresses. But if the person is not able to achieve this transition smoothly, he/she may find life changes stressful and is thus unable to adapt to the new demands. A five-year-old child enters school, which is discipline-driven and formal, after the secure and free atmosphere of home. A young girl gets married, shifts to her matrimonial home and takes over the role of a wife and daughter-in-law. If she is not prepared for this transition, she may feel overwhelmed by the demands of her new situation and get depressed. A middle-aged man, gainfully employed, gets retired from his job. From a very busy life style with set routines, he/she now finds himself at loose ends, with a lot of time at his disposal. How well he/she is prepared to deal with the life changes will determine the level of his emotional well-being. d) The human service organisations: The mandate of these organisations is that of 'service', that is, to maintain and improve the general well-being and functioning of people. Examples of such organisations are schools, hospitals, correctional institutions, and social welfare and development agencies. Human Service Organisations are characterized by a) goals and objectives, b) specific client groups, c) personnel, d) programmes and services, e) service delivery systems, f) material resources and networks.

Fields of Social Case Work Practice As we have already stated that any discussion of fields of casework practice needs to look at two components : client groups with some problem or concern and the setting where the clients get help with their concerns. Let us first describe in brief the client groups and some of their characteristics. The Individual Person and his/her interaction with social environment are influenced significantly by a number of factors. These factors determine as to how different clients react to a similar situation/problem/concern differently. Their expectations from the caseworker may also vary accordingly. Some of these factors are : ? Age : The needs and concerns, problems and difficulties faced by a child are invariably different from those of a young adult or an elderly person. Again, how the individual of any specific age group looks at the situation under study, feels about it and wants it to be handled may differ according to the age of the individual. ? Sex : The experiences and conditions of male and female persons in a given society are socially and culturally determined. The status in society (rights, privileges and power within the family and society at large), division of tasks, role expectation, role transitions, and role conflicts affect men and women differently. The stereotyping of image and roles tend to become oppressive and discriminatory for women specially. ? Caste : In Indian society, caste based discrimination affects individuals and families across age and sex divisions, although females suffer the most. The low status because of belonging to lower castes results in deprivation, oppression, and lack of opportunity, depression, apathy and inertia. ? Class : The income group an individual belongs to determine the life goals and motivation for striving for change. Outlook towards life and problems of living are likely to affect persons belonging to : a) lower income groups; b) middle income groups; c) affluent groups; or

SA Social Case Work Block 1.pdf (D164874043)

d) Those who are below poverty line. ? Religion : In a pluralistic society like India, belonging to minority groups' religion has its own difficulties. Religion holds a very important place in an Indian person's upbringing. Understanding of religious beliefs, customs and moral values is essential in helping a person. ? Region : People belonging to rural, urban or tribal areas tend to demonstrate specific response patterns and preferences in life. Persons hailing from a small city, a village or a metro city, are exposed to different stimuli. Their life experiences will, therefore, be different from one another. Their needs and expression of concerns may also be different.

10.6 The Family

Family is a special social group wherein members are bound to each other by blood or marriage. The main function of family is child rearing, growth and development of each member. Families fulfil their social responsibility by socializing children in the culture of the society. In fulfilling their functions, families interact with a large number of social systems and organisations like, kinship network, religious and economic institutions, schools, the work place, civic authorities, welfare and legal framework etc. Unique patterns of interaction within the family (among members), and with outsiders evolve overtime. Family is a system wherein the experience of any one member affects the other members. A drug dependent son, a physically or mentally challenged child, the main earning member having problems at the work place, an elderly father / mother—all affect the social functioning of the family as a whole. Sometimes, the problem faced by one member is an expression of a serious problem with the basic interpersonal relationships, interaction and communication patterns within the family. Families go through a life cycle. Marriage takes place and children are born. Children go to school or work. The first child gets married—the daughter goes away or the daughter-in-law joins. The married son may or may not stay with the parents. The parents grow old and die. The son continues with the family. With each change in the composition of

SA 480E1230-Social Work with Individuals (Final Proof 07.03.2023).doc (D165107502)

the family and role transition, various stresses occur. Most often, families are able to cope with these normal transitions. But, some special situations cause a sense of inadequacy in the families and they are forced to seek professional help. Some of the problems, which put too much strain on family's coping mechanisms, are severe marital discord, domestic violence, child abuse, incest and redundancy (unemployment). Let us now discuss some of these settings in brief to get an idea of what are their main features, what kind of problems or concerns they deal with and the kind of professional interventions Caseworkers provide to their clients—individuals and families.

10.7 Hospitals Doctors are the main professional groups in the hospital, responsible for medical care of the patients. The recognition of psycho-social and cultural dimensions of illness and hospitalization has enabled employment of trained social workers in the hospitals. Social Casework is utilized in the OPDs (outpatient departments), the Wards, and Special Clinics. The heavy work load of doctors in large Govt. Hospitals generally leads to lack of clear communication between the medical staff and the patients and their families. In such a scenario, the main roles expected of social workers are those of mediator; enabler; coordinator of services; case manager; mobilization of family, community and hospital resources; and acting as a member of the team of professionals. Working with the patient and his/her family is a major task of the social worker. Therefore, Social Casework is a primary method in medical social work practice. ?

Institutions Providing Mental Health Care The caseworker works as a member of the team of professionals including psychiatrists, psychologists and occupational therapists. Psychiatrists are the main professional group in charge of care and treatment of the mentally ill or emotionally disturbed persons. The patients may be attending OPDs, day care, or may be hospitalized. The main tasks of the caseworker are to maintain constant contact with the family of the patient; mediate between the doctors and the patient/family; provide

SA 480E1230-Social Work with Individuals (Final Proof 07.03.2023).doc (D165107502)

schools/aided by the Govt. or fully private independent schools. Despite progressive and child-centred educational philosophy, schools are characterized by emphasis on syllabus (information content), formal examination system for evaluating achievements and formal teacher child relationships. In this context, the child very often is not able to get his basic human and educational needs fulfilled. This situation proves to be stressful to the child. Due to preoccupation with syllabus and maintaining discipline, teachers are unable to individualize the child's situation and there is a 'problem child' at hand. Hence, there is recognition of need for individualized. Social Casework service to help the child. School, however, offers an excellent opportunity to Caseworkers for offering preventive and promotive interventions beside remedial service. Transition of the child from entry to passing out from school coincides with the child's own maturation process. By anticipating the demands and stresses of a particular age group, appropriate interventions may be planned so as to avoid unnecessary emotional turmoil. By helping in the development of personality and life and social skills, the Social Caseworker can achieve the status of a partner in the educational process. Despite of its being a secondary setting of Social Casework practice, the Worker can easily demonstrate the vital contribution of Professional Social Work to fulfillment of educational goals of schools. The Social Caseworker works as a liaison between the family and the teacher. He/she acts as a mediator, enabler, teacher (giving necessary information), advocate (to highlight the negative impact of school norms and practices on the child), change- agent for the school's systems and procedures, and as a consultant for the staff of the school in matters regarding children's needs and well-being. ? Residential Institutions There are situations when individuals have to be removed from their natural environments and placed in residential institutions. Some of the institutions where social casework is practiced are as follows : a) Children's Homes : Children who are destitute, orphans, or have run away from home and cannot be sent back home; those who are violence, risk to health (e.g., healthy children of leprosy patients) or moral danger are generally placed in children's homes. Most of these Homes operate under the provisions of Juvenile Justice Act and, therefore, provide custodial care.

schools/aided by the Govt. or fully private independent schools. Despite progressive and child-centred educational philosophy, schools are characterized by emphasis on syllabus (information content), formal examination system for evaluating achievements and formal teacher- child relationships. In this context, the child very often is not able to get his basic human and educational needs fulfilled. This situation proves to be stressful to the child. Due to preoccupation with syllabus and maintaining discipline, teachers are unable to individualize the child's situation and there is a 'problem child' at hand. Hence, there is recognition of need for individualized Social Casework Service to help the child. School, however, offers an excellent opportunity to Caseworkers for offering preventive and promotive interventions beside remedial service. Transition of the child from entry to passing out from school coincides with the child's own maturation process. By anticipating the demands and stresses of a particular age group, appropriate interventions may be planned so as to avoid unnecessary emotional turmoil. By helping in the development of personality and life and social skills, the Social Caseworker can achieve the status of a partner in the educational process. Despite of its being a secondary setting of Social Casework Practice, the Worker can easily demonstrate the vital contribution of Professional Social Work to fulfillment of educational goals of schools.The Social Caseworker works as a liaison between the family and the teacher. He/she acts as a mediator, enabler, teacher (giving necessary information), advocate (to highlight the negative impact of school norms and practices on the child), change-agent for the school's systems and procedures, and as a consultant for the staff of the school in matters regarding children's needs and well-being. to the patient; assist in discharge and after care of the patient. The worker provides the necessary support to the family and helps the other family members understand the needs of the mentally ill person. ? Working with the Chronically/Terminally Ill The patients who are suffering from chronic illness, like diabetes, asthma, and heart disease, need help in understanding their illness and the demands of the treatment, and adjusting their life-styles to the limitations imposed by the condition. The families of the patients also need support and guidance in dealing with the patient's condition that may have long-term implications for the entire family. In some cases, especially among those belonging to lower income groups, the financial burden may need to be eased out by identifying and mobilizing resources in the kinship network or community at large. While working with the terminally ill patients, the first dilemma the worker faces is to inform the patient and his family about the illness. The patients suffering from a terminal illness, like cancer and AIDS, have additional stress factor—the thought of impending death and anxiety about the family after their death. The tasks of the caseworker include : a) ensuring palliative care to reduce pain and discomfort, b) talking about death, c) involving the patient in planning for the family after his/her death, d) providing opportunity to family members to talk about death and dying, e) providing support emotional and material to the patient family. In the case of AIDS, the caseworker will need to tackle the issue of stigma attached with contracting AIDS and the possibility of infection getting passed on the other family members. ? Schools Schools are institutions for formal education, with a fixed routine, set syllabus, and a well-established pattern of teaching and learning. Teachers are the main professional group and they spend the maximum time with students. Schools vary in size— from small single teacher schools in the villages and tribal areas to large bureaucratic organisations with thousands of students. Schools may offer primary, middle, secondary or senior secondary education. Again, some may be Government

SA 480E1230-Social Work with Individuals (Final Proof 07.03.2023).doc (D165107502)

The residents in these homes need nursing care, understanding and emotional support. The caseworkers in these institutions help the residents cope with loss of the loved ones, illness, lack of energy, loneliness, loss of economic independence and the thought of approaching death. The caseworker enables the client maintain his/her self-esteem. He/she also helps the family deal with suppressed or open feelings of guilt so as to encourage them to maintain cordial relation with the client. The worker needs to identify and mobilize community resources like motivating and orienting volunteers to spend time with the residents, talk to them and attend to their simple errands. d) Residential institutions for women : Short stay homes, rescue homes, nari niketans, widow homes etc. are some of the settings where casework practice takes place. Most of the inmates are those women who are destitute, abandoned or battered by their husbands, widows with no relative to give them support, victims of crimes including prostitution or kidnapping. These residents need to build their skills—vocational and social—to become independent persons capable of taking care of their lives. The caseworkers try to bring about conciliation between the client and her family, if any. Where marriage is indicated, pre-marital counselling is provided. ? Organisations Working with the Differently Abled There are residential and non-residential organisations offering variety of services to the differently abled. The main task of the caseworker is to fulfill the objectives of the organizations such as a) Care, b) rehabilitation - vocational training, education (depending upon their capacity), employment; c) offering services according to governmental provisions and special concessions; d) advocacy to reduce or remove social discrimination against the differently abled; and e) facilitating the client's acceptance and understanding of his/her situation and also recognition of his/her potential. Giving support to the client —both emotional and action oriented—is an important

Giving support to the client – both emotional and action oriented – is an important

W <http://www.ignou.ac.in/upload/bswe-02-block1-unit-6-small-size.pdf>

intervention offered by the caseworker. The caseworker also works with the family to help them cope with the situation, to understand the needs of the client, and to learn to take care of the client when he or she is at home. The worker very often acts as a broker, linking the client and or his/her family with the available community resources and networks of other organisations working in this area. ? Organisations Working with Victims of Disasters There is increasing recognition of the need for individualized help for the victims of disasters whether natural or man-made. Victims of natural calamities are victims of floods, earthquakes, and drought. Victims of man-made disasters include victims of communal violence (riots), serious accidents, mega projects of development etc. Some of the common experiences of most of the victims of disasters are trauma; loss of loved ones; loss of livelihood or assets; homelessness; feeling of helplessness; feeling of anguish or hostility (desire for revenge); loss of community feeling; despair and a sense of fatality or sometimes high/unrealistic expectations from the worker. Despite this commonness, the clients need individualized care to overcome debilitating impact of the crisis. Large-scale displacements due to mega projects like Dams lead to erosion of community and family life, absence of usual social control mechanisms, the tearing of the social fabric, and loss of livelihoods beside the problems of settling down in alien environments. Working with these persons is a big challenge for the Caseworker. It is not easy to win their trust as they have lost confidence in everyone around them. Very often, winning their trust is the first vital step towards taking them out of the traumatic experience. Beside offering them emotional support, the worker needs to build in them hope for a secure future. The worker enhances the client's resources by co-ordinating with various agencies—both governmental and voluntary. Giving information about the available services and provisions goes a long way towards instilling hope in the clients. The clients are helped in viewing their experiences rationally rather than emotionally. But, this can be done only after they have emerged from their trauma. Engaging the client in the planning and implementation of the action plan facilitates the client's rehabilitation and recovery from despair. ? Organisations Working with Women

The worker very often acts as a broker, linking the client and or his/her family with the available community resources and networks of other organisations working in this area. Organisations with Victims of Disasters There is increasing recognition of the need for individualized help for the victims of disasters – whether natural or man-Victims of natural calamities are victims of floods, earthquakes, and drought. Victims of man-made disasters include victims of communal violence (riots), serious accidents, mega projects of development etc. Some of the common experiences of most of the victims of disasters are trauma; loss of loved ones; loss of livelihood or assets; homelessness; feeling of helplessness; feeling of anguish or hostility (desire for revenge); loss of community feeling; despair and a sense of fatality or sometimes high/unrealistic expectations from the worker. Despite this commonness, the clients need individualized care to overcome debilitating impact of the crisis. Large-scale displacements due to mega projects like Dams lead to erosion of community and family life, absence of usual social control mechanisms, the tearing of the social fabric, and loss of livelihoods beside the problems of settling down in alien environments. Working with these persons is a big challenge for the Caseworker. It is not easy to win their trust as they have lost confidence in everyone around them. Very often, winning their trust is the first vital step towards taking them out of the traumatic experience. Beside offering them emotional support, the worker needs to build in them hope for a secure future. The worker enhances the client's resources by co-ordinating with various agencies – both governmental and voluntary. Giving information about the available services and provisions goes a long way towards instilling hope in the clients. The clients are helped in viewing their experiences rationally rather than emotionally. But, this can be done only after they have emerged from their trauma. Engaging the client in the planning and implementation of the action plan facilitates the client's rehabilitation and recovery from despair. Organisations Working Women

Children are committed for specific periods. There is sometimes a feeling among inmates that they are under detention. Only in a small number of cases adoption and foster care services are or can be offered. Homes, run by the Govt. or voluntary organisations, are expected to provide custody and care to the children. Social Worker is an important professional here. Living arrangements may be dormitory or cottage types. Social Caseworker is expected to help each inmate adjust to the life within the Home and achieve psychosocial development. As the children have often gone through traumatic experiences before they are placed in Homes, it is very important for them to come to terms with their life, talk about it and get over the pain and the sense of betrayal. The worker is expected to provide pastoral care, liaison with schools where the children go for education, help children develop positive relationships within the institution, and prepare for life after the stay in the Home is over.

b) Correctional Institutions : These include homes/ special schools for the delinquent, prisons, remand/observation homes, beggar homes etc. The main task of the Social Caseworker is to help those in conflict with law by enabling them to understand themselves and their relationship with others. They need to understand what is expected of them as members of society.

The aim is to rehabilitate these persons—to help them in such a manner that they can engage in socially constructive activities once they go back to their homes. The worker helps the clients change /modify their values (so that they are in line with the social values); change their behaviour and response patterns.

The residents of these institutions often have a feeling of hostility towards society or they suffer from a sense of inferiority and inadequacy. Social Casework aims at correcting these attitudes and feelings by modifying the clients' immediate environment, working with their families and maintaining a supportive professional relationship with them. The Caseworker works as a member of a team of professionals like, probation and parole officers, psychologists, psychiatrists, and vocational counsellors and educators. c) Homes for the Aged : The number of old age homes has been increasing in cities. The stresses and constraints of urban living have often led to adult children opting to send their aging parents or relatives to residential institutions.

rehabilitation of these victims. Special techniques are used to help the victim come out from trauma, and restore her self-confidence and self-esteem. The family also needs understanding and support of the worker in dealing with this situation. The sensitivity towards the discrimination women face in families and society is vital in arriving at accurate assessment of the condition under study. For illustrating Social Casework Practice two cases are presented below. 10.8 Case 1 – Hospital Based Casework Referral The attending doctor refers a woman patient admitted in the female surgical ward to the medical social worker of a government hospital. She is reported to be unwilling to undergo operation, which she has postponed twice before. The Casework Process Study The social worker, Binita met the patient, Mrs. M. in the ward and told her about the doctor's referral. Binita learnt that Mrs. M was 35 years old married woman. Theirs was a nuclear family. She had three children, aged 14, 10 and 5 years. All the children went to a school nearby. Mrs. M. was a housewife. A part time maid servant helped with a few of household jobs. Her husband's job required him often to be away from home. Mr. M had brought his wife to the hospital because of severe pain in her knee. The doctor had advised surgery. Binita explored further to enquire the reasons for the client's resistance to surgery by interviewing the client in the ward and her husband, both in the ward and during a home visit. The worker also spoke to the nurse on duty in case the client had shared

any of her concerns with the nurses (using the collateral sources for information). She spoke to the doctor concerned to understand the client's medical problem and the chances of the client's recovery. The worker considered the following probable reasons (there could be even more than the ones listed) : a) Was it because of her anxiety as to who would look after her children during her long period of hospitalization? b) Was she scared of the process of operation, as Binita , the medical social worker, knew from her experience that surgery very often created panic in the patients and even their relatives? c) What was her husband's reaction to the doctor's advice? Did he offer any support to her operation? d) Who will attend to her during the post-operative period, because, according to hospital rules, only female attendant is allowed in the female wards? Assessment Binita, the worker, shared with Mrs. M, her understanding of the likely reason(s) for the latter's anxiety about the operation. Binita believed that it was important that Mrs. M confirmed the worker's definition of the client's problem before some solution could be worked out. (Communicating empathy and ensuring client's participation in the process.) Depending on the reason/s, Binita and Mrs. M could consider one or more of the following solutions : 1) Giving Information Binita could explain the exact problem Mrs. M was suffering from. It was possible that the patient might not have felt free to ask the doctor or the doctor never explained the problem in detail. Worker could also explain the complete process of surgery and the chances of recovery. (Based on facts gathered from the doctor himself.) Here she performed the role of a mediator between the patient and the medical staff. 2) Identifying and Mobilizing Family Support System ? Some female relative could be requested to be with children during the period of hospitalization; ? Husband could apply for leave from his office;

Case 2 ---Family Work in the Community We shall now discuss a case where the social worker identified the client herself. The case also demonstrates proactive approach, that is, the worker did not wait for the client to seek help. Rather she offered her service to the client at the latter's own home. Referral Renu, a young trained social worker recently qualified, is working in a community-based organisation. She recently organised a women's group around weekly kirtan (Devotional music and worship day organised by women themselves. A Brahmin woman conducts the worship). The residents of the Basti belong to low-income groups, and mostly of lower castes. After one such session, Renu asked Mrs. G about her daughter-in-law Kala. Renu told Mrs. G that though Kala had arrived some time back, she had not been

W <http://www.ignou.ac.in/upload/bswe-02-block1-unit-6-small-size.pdf>

seen in the present group. Mrs. P invited Punam to visit their home and meet her daughter-in-law. During the home visit, Punam found that Kala was looking very ill, was obviously anaemic, and did not talk to Punam at all. Sensing Punam's concern, Mrs. P took Punam outside and started complaining about Kala. She informed Punam that Kala was very lazy, did not know how to cook or do other household work, and that Kala always pretended to be ill to escape work. Punam decided to take up the case to help the family. As the family had not asked the help, Punam had to explore the particulars of the family and gather other relevant information very slowly and discreetly (quietly) so that no member of the family felt offended. She learnt the following details about the family. The Social Casework Process Punam realized the importance of applying different principles of casework to be able to establish positive relationship not only with Kala, who Punam identified as her client, but also with Mrs. P and Mohan, Kala's husband. Only then could she hope to help Kala. She accepted Mrs. P Kala and Mohan; adopted a non judgemental attitude; created an atmosphere in which the persons concerned could share their experiences and feelings freely. (Principle of purposeful expression of feelings) She was careful not to allow her initial sympathetic attitude towards Kala and anger against Mrs. P to bias her and affect her exploration work. (Controlled emotional involvement) She had to keep an open mind to gather and interpret information. Study Punam interviewed Mrs. P in her shop. She visited Kala in the presence of Mrs. P and by involving both of them in conversation learnt various facts about their situations. Once or twice she met Mohan along with his mother to observe their interaction. (Using tools of interviewing and home Visit.) Mrs. P in late forties lost her husband when her two sons were still small. Her elder son had shifted, after marriage, to his own establishment in another Basti. Mrs. P owned the single room tenement, acquired by her as result of the slum clearance scheme of the City Government. She also owned a small shop near her home in which she sold simple items of daily needs. Her younger son Mohan, aged 20 years, worked as a worker in a factory nearby. He had left school after studying till class four. Mohan was under awe of his mother and obeyed her completely. Kala was 16 years old and belonged to a village in the district of Jhansi, in the State of

Uttar Pradesh. She had studied upto 7th Standard and had been forced to leave studies. Kala was not used to cooking on kerosene oil stove. In the village, they used Chullah, with wood and cow dung cakes as fuel. There was a big family with something going on all the time. She had been very scared in the City, very unsure of herself. Her mother-in-law never liked anything that she did. Her husband did not bother about her or her health problems. She had been feeling weak and sickly for quite sometime but had not been taken to the doctor. Kala had become depressed and lost her appetite. She never had any energy to do work fast or properly. Mrs. P did not agree with these observations. Assessment After reflecting on the facts (objective facts and feelings about those facts and experiences), Punam arrived at the following inferences tentatively: ? Kala was from a village and found living in the city stressful; ? She was perhaps not prepared for marriage, being quite young; ? Kala found herself under constant scrutiny of her mother-in-law, Mrs. G, their family consisting of only three members; ? Her sickness could be more due to depression than actual physical reasons (psychosomatic symptoms); ? In any case, it was advisable to get her medical care to eliminate any physical causes of sickness; ? Kala perhaps expected more support from her husband which was not there. Mohan just did not react to the situation; ? He did not want to be blamed or nagged by the mother for having supported the wife as had been the case with his older brother; ? Mrs. P had felt hurt when her older son had left her; ? She wished to keep her younger son and daughter-in-law under her control; ? She felt insecure. After long widowhood and its associated problems, she felt that she had the right to demand obedience from her son and daughter-in-law; ? She wished to prove to the community people that she had full control over her household.

Plan of Action : Having achieved positive relationship with Mrs. P and Kala, Punam considered the following actions for initiating the process of helping the family : a) Medical Care 1) Convince Mrs. P to allow Kala to go to hospital for proper medical check-up. 2) To persuade Mohan to accompany Kala to the hospital, otherwise offer to escort Kala for medical check-up. This will also confirm whether Punam had really won the family's trust. b) Facilitating Role Transition 1) Help Kala accept her new roles of the daughter in- law and that of wife. Provide her emotional support and an opportunity to express her feelings in a safe and encouraging professional relationship with Punam. c) Improving Interpersonal Relationships within the Family 1) Help Mrs. P understand difficulties of a young bride from a small village; 2) In a joint session, help Mrs. P spell out her expectations from Kala and let the latter express her anxieties; 3) Help the two women develop bonds of affection. d) Use of Social Intercourse for Kala's Resocialization 1) Persuade Mrs. P to let Kala join women's group to increase her interaction with the community people; 2) In case Mrs. P agreed to this suggestion of Punam, this had to be done very cautiously because women's curiosity and comments may create complications. That may undo all that. 3) Punam had accomplished. (Community pressures may have both positive and negative influence.) e) Assertiveness Training for Mohan 4) To try for a breakthrough with Mohan and help him to become more assertive without being disrespectful towards his mother (A tall order! Punam felt);

needs professional intervention (problem), and the setting in which the worker is employed and where the client meets the worker (place). Study of 'Person' and 'Problem' has two dimensions: 1) Needs and 2) Life Span (Developmental tasks and social roles concepts) perspectives. Understanding goals, services and service delivery systems, and resources of human service organisations (Place), in which the worker is employed, is very necessary for the caseworker to utilize casework process for helping the clients. You have also gone through a brief description of different client groups and settings where these client groups receive casework services. The Process of Social Casework (Study, Assessment, Intervention, Evaluation, and Termination and Follow-up) has been illustrated through two cases. The illustration and the questions raised in the Assignments will help you in appreciating various factors that are likely to influence assessments you arrive at and interventions you may decide to offer. The illustrations also sensitize you towards use of some of the principles and the skills in the Social Casework Process. You have also been able to get some idea of settings and areas of social casework practice to understand and appreciate its scope and relevance. 10.11

Types of Recording From the literature available on casework recording no clear cut classification of records on the basis of their types is available. However, for our understanding we can give the following classification of recording. (a) Process (b) Summary (c) Verbatim (d) Non-Verbatim (i) Process Recording Process recording is a form of recording used frequently by the caseworker. In this type, the process of interview is reported and is a rather detailed description of what transpired with considerable paraphrasing. It preserves a sequence in which the various matters were discussed. It includes not only what both the worker and the client said but also significant reaction of the client and changes in mood and response. In this the interview and observation go hand-in-hand. It may be verbatim or non-verbatim reproduction. (ii) Summary Recording Summary is a good device for organising and analyzing facts. Summary points into meaning and relative importance of material gathered. A careful summary made at appropriate intervals reduces bulk, clarifies direction and saves the workers, time. Summary is commonly assumed to be a review or recapitulation of material that has already appeared in the record. It may be either topically arranged or may appear as condensed chronological narrative.

Mrs. Sheffield has defined summary in social casework recording as "A digest of significant facts in the client's history which has previously been recorded". Summary could be a diagnostic summary, periodic summary or closing summary. The closing summary is a summary made at the time the case is closed. To be most effective it should be written by the worker who was responsible for the case at the time of closing. The periodic summary is simply the summary of material previously recorded and is made at more or less regular intervals or at the end of more or less definite episodes in the family history. (iii) Verbatim Recording It is reproduction of factual data in the individual's own words. It is commonly used in casework because of its accuracy and objectivity. However, it should not become a mechanical reproduction of information because casework as an art requires an intelligent selection and rearrangement of material. As a part of training of the worker, verbatim recording may be of value in developing objectivity. Non-verbatim /narrative recording Narrative recording has been and still is a predominant style of recording. It is the style found in newspapers and magazines. It is the way we speak of the day's events, it is the way we write letters, and it is the ways we keep diaries. Narrative form of recording is preferred for reporting acts of practical helpfulness, events and most collateral visits or conferences. It may be used for the contents of the interview in all instances except when the process itself and use of relationship have special significance. 11.4

There are compelling reasons to keep good records. Recording is an important and integral part of the case work procedure and is an output of the activity of the case work. The importance of recording lies in both the process as well as the product. As recording and documentation is part of every profession, case work recording is an inevitable part of the case work process. The demands of recording go along with the pressing demands of accountability and documentation in any profession.

However there is no such thing as an ideal or model record. A record is a flexible instrument, which should be adapted to the needs of the case. Each case is different, the conditions of work have marked differences and the recording therefore rests not on following an outline, but in the mastery of certain component processes. ? Accuracy, objectivity, simplicity, clarity and brevity should be observed in writing records. ? Facts and their interpretation should be distinguished between, as that leads to real objectivity of the subject matter. The outcome should be drawn in a balanced manner without attempting to influence the judgment of the reader. For example, frequent fights between the husband and wife might lead the case worker to interpret that the wife dislikes or hates her husband. ? The record must be orderly in its arrangement. The caseworker should think in advance what should be included and then set the material out in a logical sequence. ? The case work records are not meant to be literary masterpieces, therefore they should be written in simple language and simple style. ? A verbatim quote can sometimes depict a situation much better than a narrative description. Therefore, wherever possible, the reactions of the individuals should be recorded in their own words. ? There should be a certain degree of uniformity and standardization as to the form of observation. ? A record should have readability and visibility and should contain a clear and concise presentation of the material. For example, content can be organised under topical headings such as interviews, home visits, and contact contacts. ? To maintain clarity and accuracy, avoid using words that are ambiguous. ? Note-taking, as far as possible, should be done immediately at the end of the interview and not during the interview. ? It should always be made clear who are involved in the situation, who is addressing whom and what the sources of information are.

SA SOCIAL CASE WORK SLM FOR ODL.pdf (D123772683)

Advantages of Record keeping ? The process of writing records enables the case worker to reflect systematically on what has occurred and plan for future sessions. In other words, the process of making records enhances the quality of the case work process. ? Records provide the case worker with details such as the names of the people mentioned by the individual. This frees the case worker to concentrate on issues raised by the individual rather than recalling the details from one session to another. ? Systematic record-keeping makes any changes in the individual's material over a series of sessions more apparent. The case worker can also show the individual the progress of the case work process with evidence. ? As case workers seek to be professional and credible, they need to develop the record-keeping practice that supports them in performing their role and meets the public expectations of quality of service and accountability of any professional. This is regarded as an increasingly significant reason, which probably explains why most of the case workers around the country have chosen to keep records. Maintaining records in the case work process is the universal norm. Nevertheless, there is a minority of case workers who prefer not to keep records at all or only keep records for some individuals, usually when seeing individuals in settings that require records. Although casework recording is a key element in the process of casework practice, some caseworkers perceive it as a tedious and time consuming task that gets

Advantages of Record keeping ¶ The process of writing records enables the case worker to reflect systematically on what has occurred and plan for future sessions. The record should be accurate up to date of the process of casework which can be reviewed periodically and summarized at the end. ? It should include the decisions taken during the process and the reasons for these decisions. ? The chronology of significant events should be included in the record. ? The facts should be recorded distinctively from the opinions. ? Whatever is recorded should be evidence-based and ethical. ? The record should mention the assessment as well as the risk assessment. ? It should depict a clear and complete picture of care and support given up to date and the ensuing plan of action towards solving the problem of the person. ? The personal profile of the individual should include details such as name, age, gender, religion, language, region, educational level, and disability, if any, of the person. 11.8 Records and their Preservation Data protection refers to the set of privacy laws, policies and procedures that aim to minimize intrusion into one's privacy. Once it is decided to keep the records, the existence of the records and the level of security with which they are protected have to be made known to the individual . There is a strong ethical argument that the individuals need to know these facts in order to be in control of the information that they decide to disclose to the case worker. The minimum standards suggest that the individuals should be informed about the security of the records. There are different kinds of procedures adopted by the case workers for security. First of all, physical security of the records is of paramount importance. Locking records in a desk or in a cupboard will prevent casual inspection by anyone. If there is a foreseen risk of some unauthorized person wanting to access the records , then the records have to kept in a safe under lock and key. 11.9 Contents of Casework Records There are no fixed rules about what must be included in case work/interview records or how they ought to be written. Case work records that we see vary

The record should be accurate up to date of the process of casework which can be reviewed periodically and summarized at the end. It should include the decisions taken during the process and the reasons for these decisions. Ø The chronology of significant events should be included in the record. Ø The facts should be recorded distinctively from the opinions. Ø Whatever is recorded should be evidence-based and ethical. Ø The record should mention the assessment as well as the risk assessment. Ø It should depict a clear and complete picture of care and support given up to date and the ensuing plan of action towards solving the problem of the person. Ø The personal profile of the individual should include details such as name, age, gender, religion, language, region, educational level, and disability, if any, of the person. Records and their Preservation Data protection refers to the set of privacy laws, policies and procedures that aim to minimize intrusion into one's privacy. Once it is decided to keep the records, the existence of the records and the level of security with which they are protected have to be made known to the individual . There is a strong ethical argument that the individuals need to know these facts in order to be in control of the information that they decide to disclose to the case worker. The minimum standards suggest that the individuals should be informed about the security of the records. There are different kinds of procedures adopted by the case workers for security. First of all, physical security of the records is of paramount importance. Locking records in a desk or in a cupboard will prevent casual inspection by anyone. If there is a foreseen risk of some unauthorized person wanting to access the records , then the records have to kept in a safe under lock and key. 7 SWE/WIF/SCWR/M20 by Mr. Antony Sagayaraj Contents of Casework Records There are no fixed rules about what must be included in case work/interview records or how they ought to be written. Case work records that we see vary

considerably in style, from brief factual accounts which focus on what the individual reported to ones that include more of the case worker's thoughts and responses. The guiding principle is that the type of record should be one that supports the therapy and enables it to be delivered with a reasonable standard of care. A good record is written as closely as possible in time to the events it records. Some case workers set aside ten minutes with individuals for this purpose. If there is any reason to think that a record might need to be produced for legal purposes, it is good to distinguish between what was directly observed, what the individual said and the case worker's own response or thoughts. There is no single correct way of writing case work notes. It still appears to be a topic neglected in basic training. Each case worker has to develop a style that is sufficient to support the case work but without being excessive in what is recorded. There are some other items to be included in the record : ? Any written and signed consents to all interventions. ? Any written and signed contents to all passing of confidential information ? All appointments, including non-attendance by the individual ? Intervention contracts ? Up-to-date record of the case worker's reasoning behind decisions about significant interventions and general strategies ? Consultations with anyone else about the individual ? Copies of any correspondence from the individual or relating to work with the individual ? Any instructions given to the individual and whether or not the individual acted on these. Matters not to be included in the process of Recording ? Records ought not to include anything that could disrupt the therapy if seen by an individual. ? Prejudice and abusive comments are to be avoided. ? Negative evaluations should only be included if they serve a therapeutic purpose, for ? example, a negative counter-transference would be justified if it is integral to the therapy and is a statement about the case worker's internal processes, rather than directly ascribed to the individual.

Format of Casework Records and their Templates There are a few components written about how best to structure case work records. There can be two sections. The first section contains useful background information about the individual and the contractual terms that case worker and the individual have agreed upon. Individuals' records need to be clearly identified so that there can be no confusion regarding identity, because in large agencies it is not unusual to find two individuals with the same name. The caseworker might include : ? Individual s family name ? Other names ? Date of birth ? Address ? Contact phone numbers Where hand-written records are kept, it can be an advantage to label each page of the individual record with the individual's full name so that the possibility of pages being inadvertently placed in the wrong file is minimized. Additional demographic information about the individual, if available, such as Marital status, Name of the partner or spouse, Names and ages of children, Referral source, and so on could be added. The notes for each case work session may include Date of the session, Factual information given by the individual, Details of the individual's problems, issues, or dilemmas, Notes on the process that occurred during the session, the outcome of the case work session, the intervention used by the case worker, any goals identified, any contract between the individual and the case worker, matters to be considered in subsequent sessions, the counselor's own feeling about the individual and the case work process, and the case worker's initials or signature.

Deal with individuals' questions courteously, even if they ask in an abrupt or confrontational way. Individuals may feel uneasy about challenging the information systems and this unease can emerge in an apparently unfriendly way. 4. It is important that the agency commits to the view that individuals have the right to understand why information is requested. 5. Explain in a straightforward way how the person can access his or her own information, and the extent to which the information is available to others in the agency. In short, Social caseworkers should be open and honest with the person or his or her family where appropriate, from the beginning about why, what, how and with whom their information will, or could be shared. They must seek the person's agreement to share their information, unless it is unsafe or irrelevant to do so. 11.11 Summary In social casework practice, recording is defined as the process of writing down relevant information in a systematic manner about the person who has come to the agency seeking some help. Social casework practice involves many types of recording depending upon factors such as requirements of the agency, the theoretical perspective of the caseworker, the type of intervention, and so on. Recording is an important and integral part of the case work procedure and is an output of the activity of the case work. Although there is no such thing as an ideal or model record, there are some guiding principles for maintaining a good record. As case workers seek to be professional and credible, they need to develop the record-keeping practice that supports them in performing their role and meets the public expectations of quality of service and accountability of any professional. Some case workers have reservations about creating records which may be demanded by individuals for use outside the case work relationship in legal actions against others. They hope that an absence of records will enable them to concentrate on the therapeutic relationship without having to consider how that work would be viewed in a court of law.

Deal with individuals' questions courteously, even if they ask in an abrupt or confrontational way. The national demographic databases (for events such as suicide, Rape etc) are reservoirs of information about a large population, and are representative of the community sample. But these extensive repositories require permissions and clearances before use for academic purposes. Also, sifting through such large databases may require extensive and dedicated computing time. The type of data source would determine the extent and type of information that can be gleaned from it. The selection of the data source is based upon both convenience as well as the requirements of the Caseworker. Certain extensive data sources may require significant resources and large organizational supports for processing. On the other hand smaller databases may provide information about a limited sample. Also, some data may be missing or become non-retrievable with any type of source, depending on the manner of recording and storage of data. Hence pragmatic and practical considerations quite often determine the usefulness of a data source for purposes of answering a clinical query.

12.5 Process of Record Review The process of clinical record review involves multiple step. The exact procedure and protocol needs to be modified in accordance with the type of study, nature of the data source and local constraints. Some of the basic and commonly followed steps are as discussed as

<p>strengths and weaknesses which should be evaluated before its selection. The data source should also be assessed for accuracy and completion, which will determine the usefulness and generalizability of the data. Ethical aspects of data usage should be given due consideration; and appropriate clearances should be obtained. 2. Devising a data extraction instrument. A well-designed instrument to extract data from the case records to answer the clinical query is of immense importance. It is necessary to agree upon which variables are to be extracted and how the coding is to be done before the data extraction occurs. A manual may be prepared defining the various terminologies and enumerating the operational definitions for the coding process. 3. Extraction of the data. Data extraction should be carried out in accordance with the instrument devised and the definitions agreed upon beforehand. The person/people in-charge of coding the data should be clearly specified. In case data is extracted from technical or subjective case notes, it should be ensured that the data extractors have sufficient expertise. Preferably, two raters can be used to extract the data, and it is advisable to present an estimate of the agreement among the raters. Some differences are likely to crop up when subjective data is being extracted by different raters. 4. Re-evaluating a small dataset. A small subsample (approximately 10% of the total sample) can be reassessed to check agreement with the previously coded data and to determine the pattern and extent of inaccuracies, if any. This is especially useful when dealing with large data sets where cumulative inaccuracies may translate into substantial absolute values of discrepancy and limit generalizability of results. 5. Statistical analysis. Analysis of the data should be conducted using appropriate statistical methods. Analysis can range in complexity from simple semi-quantitative measures for qualitative data to hierarchical multivariate analysis. Excellent statistical software programs are available for carrying out computations in minimal time. It is prudent to involve a trained statistician while dealing with large datasets and conducting complex statistical analysis 6. Dissemination of findings. After conducting the record review, it is</p>		<p>strengths and weaknesses which should be evaluated before its selection. Analysis of the data should be conducted using appropriate statistical methods. Analysis can range in complexity from simple semi-quantitative measures for qualitative data to hierarchical multivariate analysis. Excellent statistical software programs are available for carrying out computations in minimal time. It is prudent to involve a trained statistician while dealing with large datasets and conducting complex statistical analysis • Dissemination of findings. PREFACE In the curricular structure introduced by this University for students of Post-Graduate degree programme, the opportunity to pursue Post-Graduate course in a subject is introduced by this University is equally available to all learners. Instead of being guided by any presumption about ability level, it would perhaps stand to reason if receptivity of a learner is judged in the course of the learning process. That would be entirely in keeping with the objectives of open education which does not believe in artificial differentiation. I am happy to note that university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade 'A'. Keeping this in view, study materials of the Post-Graduate level in different subjects are being prepared on the basis of a well laid-out syllabus. The course structure combines the best elements in the approved syllabi of Central and State Universities in respective subjects. It has been so designed as to be upgradable with the addition of new information as well as results of fresh thinking and analysis. The accepted methodology of distance education has been followed in the preparation of these study materials. Co-operation in every form of experienced scholars is indispensable for a work of this kind. We, therefore, owe an enormous debt of gratitude to everyone whose tireless efforts went into the writing, editing, and devising of a proper lay-out of the materials. Practically speaking, their role amounts to an involvement in 'invisible teaching'. For, whoever makes use of these study materials would virtually derive the benefit of learning under their collective care without each being seen by the other. The more a learner would seriously pursue these study materials the easier it will be for him or her to reach out to larger horizons of a subject. Care has also been taken to make the language lucid and presentation attractive so that they may be rated as quality self-learning materials. If anything remains still obscure or difficult to follow, arrangements are there to come to terms with them through the counselling sessions regularly available at the network of study centres set up the University. Needless to add, a great deal of these efforts are still experiment—in fact, pioneering in certain areas. Naturally, there is every possibility of some lapse or deficiency here and there. However, these do admit of rectification and further improvement in due course. On the whole, therefore, these study materials are expected to evoke wider appreciation the more they receive serious attention of all concerned. Unit 1 ? Social Groups: Features and Types Structure 1.0 Objective 1.1 Introduction 1.2 Features of Social Group 1.3 Classification of groups 1.4 Characteristics of Primary & Secondary groups 1.5 Difference between Primary & Secondary groups 1.6 Conclusion 1.7 Exercise 1.8 Reference 1.0 Objective In this unit we will focus our attention on the meaning & features of Social Group, and know the classification of group with special emphasis on the characteristics of Primary & Secondary group. 1.1 Introduction When human beings enter into human relation, interact with each other, is resulting a sort of bonding and ultimately forming a social unit. The social unit first take in the shape of primary group (s), like family and then enlarge themselves into various social associations. The groups and the associations together form the society. It may be noted that a mere collection of individuals does not make a group. If such individuals do not have any awareness of the fact of a relationship existing between each other, the group cannot come into exist as social unit. This unit will highlight understanding on the concept of social groups: its basic features and various types. NSOU ? PGSW-III 8 Meaning of Social Groups: Two or more persons in interaction in general sense constitute a social group. In strict sense, group is a collection of people who interact each other in an orderly way on the basis of shared expectations about each other's behaviour. As a result of this interaction, the members of

79%**MATCHING BLOCK 4/546****W**

a group feel a common sense of belonging. But all collectivises do not constitute a social group. A group is distinct from an aggregate (people waiting at railway station or bus stand) member of which do not interact with one another. The essence of the social group is not physical closeness or contact between the individuals but a consciousness of joint interaction.

According to Maclver, by social group, we mean "

100%**MATCHING BLOCK 7/546****W**

any collection of human beings who are brought into social relationship with one another".

According to Bottomore, "

100%

MATCHING BLOCK 5/546

W

A social group is an aggregate of individuals in which a definite relations exist between

the individuals comprising it, and

100%

MATCHING BLOCK 6/546

MATCHING BLOCK 9/546

W

collection of human beings who are brought into social relationship with one another”. Social relationships involve some degree of reciprocity and mutual awareness among the members of the group.

Thus,

83%

MATCHING BLOCK 10/546

W

a social group consists of such members as have reciprocal relations. The members are bound by a sense of unity. Their interest is common, behaviour is similar. They are bound by the common consciousness of interaction. Viewed in this way, a family, a village, a nation, a political party or a trade union

is a social group.

100%

MATCHING BLOCK 11/546

W

In short, a group means a group of associated members, reciprocally interacting on one another.

Viewed in this way,

100%

MATCHING BLOCK 12/546

W

all old men between fifty and sixty or men belonging to a particular income level are regarded as ‘ aggregates’ or ‘quasi-groups’. They may become groups when they are in interaction with one another and have a common purpose. People belonging to a particular income level may constitute a social group when they consider themselves to be a distinct unit with special interest.

Sociologists have classified social groups on the basis of size, local distribution, permanence, degree of intimacy, type of organisation and quality of social interaction etc. Therefore, persons in very close proximity with each other, and travelling by a common public transport at a time, cannot form a group. But as soon as a

NSOU ? PGSW-III 9 consciousness arises that they are related with each other, either through a common social organization or for achieving a common goal, they form themselves into a group. 1.2 Features of Social Group The social group, therefore, can be taken to possess the following characteristics: 1.

97%

MATCHING BLOCK 16/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Mutual Awareness: The members of a social group must be mutually related to one another. A more aggregate of individuals cannot constitute a social group unless reciprocal awareness exists among them. Mutual attachment, is therefore, regarded as its important and distinctive feature. It forms an essential feature of a group. 2. One or more Common Interests: Groups are mostly formed for the fulfilment of certain interests. The individuals who form a group should possess one or more than one common interests and ideals. It is for the realization of common interests that they meet together. Groups always originate starts and proceed with a common interest. 3. Sense of Unity: Each social group requires sense of unity and a feeling of sympathy for the development of a feeling or sense of belongingness. The members of a social group develop common loyalty or feeling of sympathy among themselves in all matters because of this sense of unity. 4. We-feeling: A sense of we-feeling refers to the tendency on the part of the members to identify themselves with the group. They treat the members of their own group as friends and the members belonging to other groups as outsiders. They cooperate with those who belong to their groups and all of them protect their interests unitedly. We-feeling generates sympathy, loyalty and fosters cooperation among members. 5. Similarity of Behaviour: For the fulfilment of common interest, the members of a group behave in a similar way. Social group represents collective behaviour. The-modes of behaviour of the members on a group are more or less similar. NSOU ? PGSW-III 10 6. Group Norms: Each and every group has its own ideals and norms and the members are supposed to follow these. He who deviates from the existing group-norms is severely punished. These norms may be in the form of customs, folk ways, mores, traditions, laws etc. They may be written or unwritten. The group exercises some control over its members through the prevailing rules or norms. 1.3 Classification of Groups

We all are members of different types of groups at the same time. We are members of families, friendship groups, labor groups, and fan clubs and religious groups. Let us try to classify different types of groups with some understanding of such concepts as follows:

Types of Groups:

NSOU ? PGSW-III 11 Primary Group and Secondary Groups We all are members of a primary group, i.e. family. In primary group, there is a face-to-face, close and intimate relationship among the members such as we all are experiencing in the family. But in a secondary group the relationship among the members are indirect, impersonal and superficial such as the political party, a city and trade union etc. C.H. Cooley classified social groups on the basis of kind of contact into primary and secondary groups. The concept of primary group was introduced by Charles Horton Cooley, in his book "Social Organisation" published in 1909. The Primary group is the most simple and universal form of association. It is nucleus of all social organisations. It is a small group in which a small number of persons come into direct contact with one another. They meet "face to face" for mutual help, companionships and discussion of common questions. They live in the presence and thought of one another. The primary group is a small group in which the members live together. In the words of C.H. Cooley "By primary groups I mean those characterized by intimate face to face association and cooperation. They are primary, in several senses, but chiefly in that they are fundamental in framing the social nature and ideal, of the individual". Such groups in Cooley's phrase are "the nursery of human nature" where the essential. Voluntary and Involuntary Groups Anyone can join political parties or specific groups (usually professions). Such groups in which we participate with

70%

MATCHING BLOCK 14/546

W

our own choices and efforts are voluntary groups. In contrast, we are forced or automatically

accepted to join a particular group without making a choice. For example, you will be automatically grouped as a member

84%

MATCHING BLOCK 15/546

W

based on gender, age, nationality, religion, and ethnicity. These latter groups, which we

have been born with or have no choice but to become members of, are involuntary groups. Dwight Sanderson has classified social groups into three types on the bases of structure such as involuntary, voluntary and added one more as delegate groups. An involuntary group is that to which man has no choice, which is based on kinship such as the family, tribe or clan. A voluntary group is one which a man joins of his wishes. At any time he is free to withdraw his membership from this group. A delegate group is one to which a man joins as a representative of a number of people either elected NSOU ? PGSW-III 12 or nominated by them. Parliament or Assembly is a delegate group (

100%

MATCHING BLOCK 19/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). Open ended Group and Closed ended Group An open group is a group that features a change of membership. Virtually anyone can be a member here. If some members withdraw, new members will join

53%

MATCHING BLOCK 17/546

W

and the group will continue. For example, anyone can join the Hrithik Roshan fan club. On the other hand, some groups maintain their exclusivity by limiting membership and making participation much more difficult.

There are few eligibility to qualify for membership

64%

MATCHING BLOCK 18/546

W

in such clubs. Such groups with limited membership criteria are closed groups. Examples: Mafia (Underworld), Royal Enfield Motorcycle Club, Nightclub, etc. Closed groups usually have

a time limit, and group meetings have a given number of sessions. Members are usually expected to stay in the group until the end of the group, and no new members are added. There are several advantages to opening a group that takes on new members when other members leave. One of these is a better opportunity for members to interact with different people. The potential drawback of the Open Group is that changing members quickly can lead to loss of cohesion, especially if many customers drop out or many new customers are added at once. Therefore, it is recommended to add new members one by one as soon as the opening is done. Vertical and horizontal groups There is a specific group whose horizontal group members are made up of individuals from all walks of life. For example, the religious community can include members of all classes. Such groups can be thought of as vertical groups. Horizontal groups, on the other hand, are primarily composed of members of one social class, for example occupational groups of doctors (eg IMA); other groups like electricians, carpenters, and hidden officers etc, are primarily made up of members of the same social class. This is also supported by P.A. Sorokin, an American sociologist, has divided groups into two major types – the vertical and the horizontal. Reference Group: The term 'reference group' was coined by Herbert Hyman (1942) to apply to the group against which an individual evaluates his or own situation or conduct. He distinguished between membership group to which people actually belong and a NSOU ? PGSW-III 13 reference group which is used as a basis for comparison. A reference group may or may not be a membership group(

100%

MATCHING BLOCK 20/546

SA

MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). The term reference was introduced into the literature on small group by Muzaffar Sheriff in his book "An Outline of Social Psychology". The concept was subsequently elaborated by R.K. Merton and Turner. Strictly speaking, a reference group is one to which we do not actually belong but with which we identify ourselves or to which we would like to belong. We may actually belong to a group, yet we accept the norms of another group to which we refer but to which we do not actually belong. L Merton writes, individual in the society choose not only reference group but also reference individual. Reference individual has often been described as "role model". The person who identifies himself with a reference individual will seek to approximate the behaviour and value of that individual in his several roles(

100%

MATCHING BLOCK 21/546

SA

MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). According to Sherif, "A reference group is one to which the individual refers and with which he identifies himself, either consciously or sub-consciously. The central aspect of the reference group is psychological identification." According to Shibutani, "A reference group is that group whose outlook is used by the act or as the frame of reference in the organization of his perceptual field. Horton and Hunt have pointed out, "A reference group is any group to which we refer when making judgements – any group whose value-judgements become our value-judgements". They have further said, "Groups which are important as models for one's ideas and conduct norms..." can be called reference groups. Ogburn and Nimkoff say, "Groups which serve as points of comparison are known as reference groups". They have further added that the reference groups are those groups from which "we get our values or whose approval we seek". The individual evaluates his own situation and behaves with respect to three reference group situations(

100%

MATCHING BLOCK 22/546

SA

MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). The reference group provides many of the standards that guide behaviour, even when the standards are contrary to those of earlier membership groups. Unsocial, pseudo-social, antisocial and pro-social groups George Hasen has classified groups into four types on the basis of their relations to other groups. They are unsocial, pseudo-social, antisocial and pro-social groups.

NSOU ? PGSW-III 14 An unsocial group is one which largely lives to itself and for itself and does not participate in the larger society of which it is a part. It does not mix-up with other groups and remains aloof from them(

100%

MATCHING BLOCK 23/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). But it never goes against the interests of the larger group. A pseudo-social group participates in the larger group of which it is a part but mainly for its own gain and not for the greater good. An antisocial group is one, which acts against the interest of the larger group of which person is a part. A pro-social group is the reverse of the antisocial group. It works for the larger interest of the society of which it is a part.

In-group and Out-group William Graham Sumner, an American Sociologist in his book "Folkways" made distinction between in-group and out-group

98%

MATCHING BLOCK 25/546

SA BSW-22- ENGLISH 3.4.22.docx (D132411911)

According to Sumner, "The groups with which the individual identifies himself are his in-groups, his family or tribe or sex or college or occupation or religion, by virtue of his awareness of likeness or consciousness of kind". The individual belongs to a number of groups which are his in-groups; all other groups to which he does not belong are his out-groups. In-group produces among the members the sense of belonging together which is the core of the group life. In-group attitudes contain some element of sympathy and a sense of attachment to the other members of the group. It embodies the collective pronoun 'we'. The members of the in-group display cooperation, goodwill, mutual help and respect for one another's rights (

https://www.pacc.in/e-learning-portal/ec/admin/contents/47_DSW%2013_2020122905135171.pdf). 1.4 Characteristics of Primary Group and Secondary

97%

MATCHING BLOCK 26/546

group Primary Group possesses certain essential traits. The following are the characteristics of Primary group. 1. Closeness or Physical Proximity: Physical proximity or presence provides an opportunity for the development of intimate and close relations. In order that relations of the people may be close, it is necessary that their contacts also should be close.

Seeing and talking with each other makes exchange of ideas and thoughts easy. It is because the members of primary group meet NSOU ? PGSW-III 15 and talk frequently that a good feeling and a sense of identify develop among them quickly. Prof. K. Davis remarked that physical proximity or face-to-face relation is not indispensable for establishing close contact or intimacy. For example, we may have face-to-face relations with our barbers or laundrymen; there may not be intimacy or primary group relationship with them. On the other hand, we may establish contact with our close friends through the correspondence of letter even though we may not have seen for many years. Relationships among primary group members are based on intimacy not on contractual obligations. 2.

100%

MATCHING BLOCK 27/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Smallness: Primary groups are smaller in size. The smaller the size of the group, the greater will be the intimacy among its members. Relationship can be intimate and personal only in a small group. It is a fact that intimacy declines as the size of the group increases.

The limited size of the group facilitates the participation of all its members in its common activity. Better understanding and fellow feeling among the members can be possible only when the group is small in size. 3.

88%

MATCHING BLOCK 28/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Durability: Primary group is relatively, a permanent group. Intimacy between the members becomes deeper because they meet frequently and are closely associated with one another. All the members of the

primary group try to fulfill the condition of continuity or durability of relationship. 4.

95%

MATCHING BLOCK 29/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Identity of Ends: Members of a primary group have similar attitudes, desires and objectives. They all work together for the fulfillment of their common end. Every member tries to promote the common welfare of his group.

The experiences, pain and pleasure, success and failure, prosperity and adversity of an individual member are shared by all the members of the group. The interests of one are the same as the interests of other. Kingsley Davis has rightly remarked "the child's needs become the mother's ends". Such a complete and mutual identity of ends is seldom found. 5.

97%

MATCHING BLOCK 30/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Relationship is an end in itself: The Primary relationship is regarded not as a means to an end but rather as an end itself. If the people make friends for specific purpose or means, we cannot regard their friendship as genuine. A genuine friendship or true love is not formed for a purpose. It is above the consideration of any selfish interest or interests. Friendship is

a source of

NSOU ? PGSW-III 16 pleasure, it is intrinsically enjoyable. The primary relations are voluntary and spontaneous because they possess intrinsic value. 6. Relationship is Personal in nature:

100%

MATCHING BLOCK 31/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

The primary relationship is a matter of persons. It exists because of them and it is sustained by them. It should be noted that this relationship comes to an end as soon as one of the partners disappears from the primary group. The personal relationship is non transferable and irreplaceable.

One individual cannot be substituted by another individual in the same relationship, for example, no one can take the place of our dead friend. The vacuum created by his death cannot be filled in, nor can anybody establish and continue the same kind of relationship with us after his death. (

100%

MATCHING BLOCK 32/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

vii) Relationship is Inclusive: In the primary group, we face our fellows as total human beings. A person comes to know his fellow in all the details of his life, as a whole being.

It thus becomes clear that

100%

MATCHING BLOCK 33/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

primary relationships are non-contractual, non-economic, non-political and non-specialised; they are personal, spontaneous, sentimental and inclusive. Secondary group

have the following features : 1.

100%

MATCHING BLOCK 34/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Large in size: Secondary groups are relatively large in size. These groups comprise a very large number of persons. For example, a political party, a trade union, international associations, such as Rotary Club, Lions Club, the Red cross Society which consists of thousands of members scattered all over the world. 2. Formality: The relations of members in a secondary group are of a formal type. It does not exercise primary influence over its members. Secondary groups exert influence on the members indirectly. They are controlled by formal rules and regulations. Informal means of social control are less effective in regulating the relation of members. Formal social controls such as law, legislation, police, court etc. are very much important for the members. Moral control is only secondary. A formal authority is set up with designated powers in secondary groups. Here man is a legal and not a human entity.

NSOU ? PGSW-III 17 3.

98%**MATCHING BLOCK 35/546****SA**

MSWS-13 Social Work practice with groups.docx (D117055454)

Impersonality: Secondary relations are impersonal in nature. In the large scale organisation, there are contacts and they may be face-to-face, but they are, as says K. Davis, of "the touch and go variety." Here contacts are chiefly indirect. The two persons may never see each other. Relations among them are impersonal, because members are not very much interested in other members as 'persons'. They are more concerned with their self-centered goals than with other persons. There is no sentiment attaching to the contacts. It is not required that the parties know each other. For example, in the large scale factory organisation, the members are known to each other as the boss, the foreman, skilled workers, ordinary workers etc. The secondary relations are viewed as a means to an end and not an end in itself. 4. Indirect Cooperation: Indirect cooperation is another characteristic of secondary groups. In it, members do different things interdependently. Ali contributes to the same result, but not in the same process. They do unlike things together. In the large scale organisation where division of labour is complex, the members have not only different functions but different powers, different degrees of participation, different rights and obligations. 5. Voluntary Membership: The membership of most of the secondary groups is not compulsory but voluntary. Individuals are at liberty to join or to go away from the groups. It is not essential to become the member of Rotary International or Red Cross Society. However, there are some secondary groups like nation or the State whose membership is almost involuntary (

Netaji Subhas Open University, n.d.). 6. Status depends on

100%**MATCHING BLOCK 36/546****SA**

MSWS-13 Social Work practice with groups.docx (D117055454)

Role: In secondary groups the status or position of every member depends on his role. The determination of his status is not influenced by ascription or by his birth or personal qualities but by the achievement or the role he plays. For example, the status of the President in a trade union depends upon the role he plays in the union and not upon his birth.

Importance of Primary and Secondary Groups The primary group is considered very important both for the individual and society. The primary group plays a commanding role in the development of human NSOU ? PGSW-III 18 personality. It is fundamental in forming the social nature and ideal of the individual. It is regarded as a nursery of human nature. The development of "self" – the core of personality depends on close, intimate and interaction with primary group. The primary groups not only satisfy the human needs but also provide a stimulus to each of its members in the pursuit of interest. The face-to-face association-ship or the close physical presence of others acts as a stimulus to each. Importances of

98%**MATCHING BLOCK 37/546****SA**

MSWS-13 Social Work practice with groups.docx (D117055454)

Secondary Groups are of special significance in modern society. They have become almost inevitable today. Their appearance is mainly due to the growing cultural complexity.

100%**MATCHING BLOCK 38/546****SA**

MSWS-13 Social Work practice with groups.docx (D117055454)

They are also called "special interest groups" or "self- interest groups". The examples of secondary groups include a city, a nation, a political party, corporation, labour union, an army, a large crowd etc. These groups have no direct bearing on the members.

100%**MATCHING BLOCK 39/546****SA**

BSWS-22- ENGLISH 3.4.22.docx (D132411911)

According to C.H. Cooley, "Secondary groups are wholly lacking in intimacy of association and usually in most of the other primary and quasi-primary characteristics".

According to Kingsley Davis, "

96%**MATCHING BLOCK 40/546****SA**

BSWS-22- ENGLISH 3.4.22.docx (D132411911)

Secondary groups can be roughly defined as the opposite of everything said about primary groups".

In place of cottage industry we have now grant corporations employing thousands of people. Population has moved from the village to the city. The changing trends of modern society have swept away primary groups. Man now depends more on secondary groups for his needs. The child was formerly born in the warm atmosphere of the family, now he is born in the cold atmosphere of the hospital. The secondary group helps its member to improve their efficiency in their specific field of activity and in consequences, they become experts. It broadens the outlook of its members. It accommodates a large number of individuals and localities which widens the outlook of its members. It is more universal in its judgement than the primary group. The secondary groups have broadened opportunities. A large number of professions and occupations are opening the way for specialised careers. Secondary groups provide a greater chance to develop individual talents. The talented individual neither can nor rises from an unknown background to the highest position in business, industry, civil and technical services. The functions of secondary groups are essential for our society if we wish to enjoy our current life styles. The people are becoming more and more dependent on these groups. The tremendous advances in NSOU ? PGSW-III 19 material comfort and in life expectancy in modern world would be impossible without the rise or goal-directed secondary groups(

MATCHING BLOCK 46/546

SA MSWS-13 Social Work practice with groups.docx (D117055454)

Social Groups: The Meaning, Characteristics, Classification and Other Details (7041 Words),

n.d.). Difference between Primary Group and Secondary Group It is important to mention here that dichotomy between primary and secondary' groups were perceived by Cooley but it was not elaborated by him. However, the following are the chief points of difference between the primary group and secondary group. Secondary Group Secondary group the membership is widespread. It may contain thousands of members scattered in different parts of the world. Secondary groups do not give its members feeling of close proximity that primary groups offered. In primary group, one is concerned with the other person who is fitting a role. Secondary groups based on temporary relationship. For example, members of a club infrequently and only for a few hours at a time. In a secondary group, the cooperation with the fellow members. The members cooperate only to achieve the objective of the group. Every secondary group is regulated by a set of formal rules. A formal authority is set up with designated powers and a clear cut division of labour in which the function of each is specified in relation to the function of all the rest fellows. Subject Size Physical Proximity: Duration Kinds of Cooperation Types of Structures Primary Group Primary group is small in size. The membership is limited to a small area. It is not spread over the whole world. Primary groups are based on close contacts. People in these groups do not merely know one another and interact frequently. They have a strong emotional ties. Primary groups exist for a longer period. Relationships in primary group are permanent in nature. In a primary group, on the other hand, the members directly cooperate with each other participating in the same process. They sit together, discuss together play together. The primary group is based on an informal structure. The members participate in the same process. The spontaneous adjustment in the working of the group. No formal and detail rules are drafted. The structure is simple.

NSOU ? PGSW-III 20 Subject Primary Group Secondary Group Secondary group on the other hand is goal oriented. Members of the secondary group value extrinsic political, economic or other benefits of the relationship rather than relationship itself. It is concerned with a particular aspect of personality and it develops only that aspect. But in secondary groups, the position of a person is determined by his roles. While secondary groups promote self-interest and individuality. A secondary group is based on impersonal relationships. It does not exercise a primary influence over its members because they do not live in presence and thought of one another. In secondary group individual interact with part of their personality. There is a feeling of external constraints between members. Secondary group on the other hand, uses formal means of checking deviation of violation of norms. Formal agencies of social control are more effective as formal relations exist between the members. Primary groups are an end in themselves. Individuals enter into primary relations because such relations contribute to personal development, security and well- being. In primary groups, the position or status of a person is fixed according to his birth, age and sex. Primary group is concerned with the total aspects personality of a person and it develops his whole personality and qualities like love, sympathy, obligation, mutual help, tolerance etc., The relationship of members with each other in primary group is direct, intimate and personal. They meet face to face and develop direct contacts. People in primary group share their feelings, thoughts, fears and doubts without worrying that others will think less of them. The mode of recruitment to the primary group is formal. Therefore, formal means of social control are more effective. As members have closeness and greater intimacy, there is great control over a member. End in itself versus Means to an End Position Difference in Development of Personality Relationship Social Control

NSOU ? PGSW-III 21 1.6 Conclusion We may can clude by saying that this unit devoted for inculcating knowledge on various types of social groups. We all are members of different groups, like families, friendship groups, and fan clubs and religious groups or other groups. Sociologists have tried to classify different types of groups such as voluntary and involuntary Groups. We can join political parties or specific groups (usually professions). We participate in

61%

MATCHING BLOCK 41/546

W

such groups with our own choices and efforts are voluntary groups. In contrast, we are forced or automatically

accepted to join a particular group without making a choice. For example, you will be automatically grouped as a member

84%

MATCHING BLOCK 42/546

W

based on gender, age, nationality, religion, and ethnicity. These latter groups, which we

have been born with or have no choice but to become members of, are involuntary groups. Besides, as observed that there is also open group and closed group .An open ended group and closed ended group, anyone can be a member in open

60%

MATCHING BLOCK 43/546

W

For example, anyone can join the Hrithik Roshan fan club. On the other hand, some groups maintain their exclusivity by limiting membership and making participation much more difficult.

There are few eligibility to qualify for membership

64%

MATCHING BLOCK 44/546

W

in such clubs. Such groups with limited membership criteria are closed groups. Examples: Mafia (Underworld), Royal Enfield Motorcycle Club, Nightclub, etc. Closed groups usually have

a time limit, and group meetings have a given number of sessions. Members are usually expected to stay in the group until the end of the group, and no new members are added. We also see also those vertical vs horizontal groups. There is a specific group whose horizontal group members are made up of individuals from all walks of life. For example, the religious community can include members of all classes. Such groups can be thought of as vertical groups. So, a length of discussion has given on various social groups including primary, secondary, vertical, horizontal and reference groups etc, which of course would be very helpful for the learners. 1.7 Exercise 1. Define the meaning of social group. Explain the basic features of group.

NSOU ? PGSW-III 22 2. Write notes on reference group. 3. Discuss various types of social groups. 4. Distinguish between primary groups and secondary groups. 5. Explain the importance and functions of social group. 1.8 Reference

Middleman and Goldberg (1988). Group work played an essential role in dealing with multiple shifts. In the United States in the late 19th and early 20th centuries: American Industrialization; Large Population Moves from Rural to Urban; And; a massive wave of immigrants, especially to urban areas

of the United

NSOU ? PGSW-III 24 States (Konopka, 1972; Garvin, 1997). You can see the history of social work. In particular, and the focus is on three main phases. (1) Formation of group work Club, the 1930s; (2) Merger to form National Socialist Association Workers, 1950s; (3) Revival of group work in the 1970s. Nevertheless, we can consider some of the developments between 1910 and 1920. Adult Education, Recreation, and Community Engagement We have begun to maximize the potential of group work. You understood better that group can be used to help people work effectively in their group. A community that enriches people's lives and supports their key people. The relationship was inadequate or dysfunctional. So they noticed it. Possibility of groups to help people acquire social and problem-solving skills. They started using groups well to prevent crime and rehabilitation of maladapted people. The organization that laid the foundation for Group work was self-help, informal, and recreational. In a settlement house, a neighborhood center, Y's, den Boy Scouts, Camp Fire Girls, Jewish Center Camps, and more Trade union organizations in the industry. Later called "group work agency," Uniting on these ministries, a fascinating new element was

86%

MATCHING BLOCK 50/546

W

involvement In small groups, democratic way of life, community responsibility, and recognition Membership in activities

that affect the national or even global level. In the early 1920, Mary Richmond saw the possibility of working with the group. She wrote about the importance of small group psychology. Mary P. Foret, Politics Scientists, wrote about social solutions in the book "The New State" in 1926 (Jose & Jyotiram, n.d.). The problem will be "resulting in the formation of groups in and around the neighborhood." Social interest. Foret firmly believed in the power of a small group of educated people. In the community, she solved the

88%

MATCHING BLOCK 51/546

communication and interaction, leadership, Interpersonal preference, and social cognition, which are important factors handling group processes in social work. It's also important to mention thatthe contribution of psychoanalytic theory, learning theory, field theory, social exchange theory, and system theory explains group functions (Jose & Jyotiram, n.d.). 2.7 A Glimpse of Professionalization and Development

of Literature in Social Group Work We all know that the group work is comparatively younger than casework.

Social Group Work in India Group work as a method of social work came to India with its introduction

In 1936, 10 years after being recognized, of professional social education as a formal practice in the West. The evidence Group approach is used in various situations- providing charity services, providing religious education, and mobilizing people through oral tradition. Struggle for freedom against Britain in social reform strategies like Sarvodaya and Bhoodan's movement. However, there are few or few documents. The theory is based on it. All social work schools in India teach social group work courses (Also known as "social work with groups" or "how to work together" group at both graduate and graduate levels"). We observed a series of social work department in different universities started incorporating this method in its course curriculum. First it is observed by Tata Graduate School of Social Work known now as Tata Institute of Social Sciences in 1936 followed by other schools of social work, NSOU ? PGSW-III 30 such as Delhi School of Social Work, Visva-Bharati university, BHU, Madras School of Social Work, Indore School of Social Work, Lucknow School of Social Work, and so on.

principles of Social Group Work. 3.1 Introduction Social group work is a method of social work that helps individuals improve their social function and better address individual, group, or community problems through targeted group. It is also the process and method by which group life is affected by workers who consciously direct the interaction process towards achieving the goals envisioned within the framework of democratic standards. Its characteristics are that group work with group experience is used as a means of individual development in association with groups and that group workers develop social responsibility and active citizenship for the improvement of democratic society. It is to be interested. Group work is a way of servicing individuals within and through small groups of individuals to make the desired changes to the client's participants. NSOU ? PGSW-III 34 The basic objectives of this unit is to make the learners understand about social group work, its basic purpose, values catering around group work and detailed discussion on various principles one should follow while practicing group work. 3.2 Definition of Social Group Work Social Group work is a psychosocial process which is concerned no less than with developing leadership ability and co operation than with building on the interests of the group for a social purpose (Hamilton, 1949). Kanopka (1960), group work is a method of social work which helps person to enhance their social functioning through purposeful group experiences. 1 (Rengasamy, n.d.) Trecker (1980) says, " Social group is a method in social work through which individuals in groups are helped by a worker who guide their interaction in programme activities so that they may relate to one another and experience growth opportunities in accordance with their needs and capacities to the end of individual, group and community development". 2 (Rengasamy, n.d.) (In Indian context) Social Group Work will refer to working with a small group (members ranging from 7-10) to a medium size group (members ranging from 10- 20) for a variety of purposes beginning from recreation to behaviour modification on the one hand and accomplishing tasks including social change and development on the other, with a variety of clients ranging from children to elderly. The worker makes use of the expertise in human relationships to help these groups to achieve the group goals in a participatory manner while paying adequate attention to individual needs and social norms (Siddiqui,2008) Group Work is well accepted method in social work profession. It basically helps towards improving social functioning of an individuals and groups. It is directed towards bringing about desired changes of individuals, group and community level. The method is applied mainly at two levels, one at individual level and two, entire group as a system level. It helps individual to develop potentialities; identify abilities and help to cope better; enhance social functioning with their environment; to learn to inculcate new behaviour which sustained their life. One should remember that the NSOU ? PGSW-III 35 relationship between Worker to Member, Worker to Group,

98% **MATCHING BLOCK 85/546** **SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

Member to Group generate a lot of forces attraction and interaction. Group became an instrument to meet the basic needs and strengthen human capacities. It functions through programme media(Rengasamy, n.d.). Basic aims and objectives: 3 1. Enable individual change; 2. Provide Individual support 3. Socialization of individuals 4. Develop self concept 5. Inculcate positive values. 6. Individual growth and assessment 7. Group growth 3.3 Goal & Functions of Social Group Work Social group work is an orderly, systematic plan; way of working with people in groups. Social group work is not an activity but a way of conducting many different activities.

The members

88%

Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

are helped to learn new ideas, develop skills, attitude changes & responsibilities through participation in a social process(Sehgal, n.d.). In group work group itself has utilized by the individual with the help of the worker as a primary means of personality growth, change & development of individual Alan Brown (1992 summarizes goals or purpose of group work are individual assessment; individual support and maintenance; individual change; use for educational, informa- tion-giving and training groups; leisure/ compensatory groups for recreation & enjoyment; mediation between individuals and social systems(Sehgal, n.d.). The specific purpose of group work could be mentioned as: • To teach individual to live & work together and participate in group activities for their intellectual emotion& physical growth •

To

in many fields such as education, religious & recreational field. • It's a helping process with dual purpose of individual

as well as group growth. So,

85%

MATCHING BLOCK 92/546

SA

Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

the function of the group work is always for the betterment of the individual as well as for the growth of the entire group. NSOU ? PGSW-III 37 • Group worker plays role of

a enabler & helping person who use her/his better knowledge and

97%**MATCHING BLOCK 93/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

try to make the group better. 3.5 Underlying Values in Social Group Work Values refer to our belief that influences our practice on how one should behave. It is therefore influences our practice. There are few core values relating to group work practice as discussed below: 1. Contextual value: The main sources of this value are sponsoring agency and value of social work profession. The core social values in group like equality, democratic participation, group interaction, etc. the agency has its own values that prevail and influences group work. Therefore, it most important to look into the questions: are decision made within the group or outside group? What is the locus-standi of power? Another set of influence come from social work profession. Group worker imbibe professional values like worth and dignity of individual group member, teach respect and fairness in approach, importance of participation, individualization etc. 2. Value of Group Worker: Personal value of worker also influence in the process while working with group. But it is necessary that group worker should inculcate value of cooperation and mutual help enable participation among themselves, promote individual and group initiative, freedom to express thought and feelings, value of members etc. 3. Value of Group Member: Group members also have their own set of values. Worker should be aware about this. It is also a fact that

member's values are influenced by case, race and

100%**MATCHING BLOCK 94/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

culture. So the worker need to make understanding clear that the own value or interest should not dominate rather they should respect each other and create a good

value

100%**MATCHING BLOCK 95/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

system within the group 4. Human Relationship: The group work process deals with basic values of human relationship. The basi values as conceptualizes by Northen (2007) and Kurlend are:

NSOU ? PGSW-III 38 (

94%**MATCHING BLOCK 96/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

a) Dignity and worth of individual member; (b) Social Justice (c) Mutual help/responsibility Dignity and Worth: All members should be accepted as they are. We should respect the inherent worth and dignity of member. Group worker should recognize and treat each member as dignified member; Social Justice: fairness in approach should be the cardinal principal. Everyone should get equal opportunities. They have the right to self determination. The worker should understand and take up working on removing causes that created inequalities. Mutual Responsibilities: People are interdependent. They are capable of help- ing with each other. Worker should therefore enable norms, communication, demo- cratic process and taking mutual responsibilities for the development of group and community at large. Principles of Group Work as pointed out by HB Trecker mentioned below with elaborate discussion (Sehgal, n.d.) : The group worker benefits the conscious understanding of the basic principles of social group work because this knowledge provides him/her a frame work to work with the group.

99%**MATCHING BLOCK 97/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

They are basic to all social work methods. A principle is a verbalized statement, general rules or laws, fundamental truths by which we proceed from one situation to another. Principle must be understood to mean a hypothesis so adequately tested by observation and experiment that it may be put forward as a guide to action. Social group work principles are guiding statements that have come from experience and research. Basic principles of working with people in groups to help them grow and change have emerged from the practice of social group work. The objectives of social group work can be fulfilled only within the frame work of principles.

91%**MATCHING BLOCK 98/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

In 1948 H. B. Trecker wrote 10 principles in his book "Social Group Work: Principles and Practice which is still read widely as those are cardinal principles of group work practice. The ten principles are discussed below for our better understanding: 1) The Principle of Planned Group Formation In social group work, a group is a basic unit that an individual can carry out. As a result, organizations and employees responsible for group formation or agency acceptance have factors specific to the group's situation that make a particular group

NSOU ? PGSW-III 39

100%**MATCHING BLOCK 99/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

a positive potential for personal growth and the realization of recognizable needs. You need to

know how to form a group.

97%**MATCHING BLOCK 100/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The Social Group Work process uses group as a medium for providing services to the individual, hence the formation of a group is a prerequisite for a group worker. Whether a group worker works with groups already functioning or forms her own group, s/he should be aware of certain factors while forming a group so that the group becomes a positive potential for individual growth. A group has to be formed in a planned way before initiating the group work process. From what is explained by Trecker we can say this principle comprises the following fundamentals (Sehgal, n.d.) .Groups like individuals are different, evolving, developmental and ever-changing and tremendously influential upon the behaviour of individuals.

While forming the group age, sex, socio economic background etc must be looked into before setting elements of conscious design and plan.

96%**MATCHING BLOCK 101/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The group worker's skill will be evident in the way s/he consciously gives aid at the point of group formation. In India group formation can become a difficult exercise as the people may lack the motivation to join a group and may do so after much persuasion. So the group worker must have the skill to deal with the resistance of such members. The group worker should be equipped with an in-depth understanding of the client population, and pay attention to inter-personal compatibility and other factors such as age, caste, gender, socio-cultural background etc. 2) The Principle of Specific Objectives. In the work of social groups, specific goals for the development of individuals and groups must be consciously set by employees based on the needs of individuals and groups. Specific objectives of individual and group must be consciously formulated by the worker in harmony with group wishes

looking into capacities of members

100%**MATCHING BLOCK 102/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

and in keeping with agency function. The group worker should help the members achieve the overall objectives of social work through its own specific objectives, which are to assist individuals to grow and change; supplement emotional and social nourishment; promote democratic participation and remedy individual and social disorganization (Sehgal, n.d.) . Agencies and their workers must be aware of what people want from group experiences and help them to get it. The group worker who recognizes the need for consciously formulated specific objectives for individuals and groups becomes a

NSOU ? PGSW-III 40

95%**MATCHING BLOCK 103/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

purposeful, rather than an unfocused worker and makes the group work in a planned than haphazard exercise. Objectives, thus, become a controlling force in the life of the group and the group worker should have clarity about the specific goals s/he wants to achieve along with the benefits s/he is hoping the members would get. When the worker focuses on individual and group objectives, s/he reduces the likelihood of permitting her/his own needs to get in the way of the group s/he helps the members to see their strengths and limitations and set their objectives accordingly, in alignment with the agency's formulated purposes. The expectations and the aspirations of the members should also be given due weightage while formulating the objectives and activities planned accordingly. 3) The Principle of Purposeful Worker-Group Relationship. In social group work, there is a conscious intentional relationship between workers and group members based on the acceptance of group members as they are and the willingness of the group to accept assistance from workers. There is a need to establish a good relationship

between worker and member.

95%

MATCHING BLOCK 104/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

A consciously purpose- ful relationship must be established between the worker and the group members based on mutual acceptance. This principle is based on the premise that it is both possible and necessary to create an effective working relationship with a group before the worker can be of any help(Sehgal, n.d.) . Before the worker helps the group members,

it is necessary for him/her to develop meaningful relationships and win confidence with each other.

94%

MATCHING BLOCK 105/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The worker's relationship with the group is a major tool, and the quality and strength of this relationship determine the extent to which the group can be helped to the fullest realization of its potentialities. When the group workers adopt the procedures suggested by this principle, they begin their work motivated by an initial desire to understand the group as a basis for helping it. By encouraging the group to "be itself" and accepting it as it is, the worker becomes accepted and helpful to the group. 4) The Principle of Continuous Individualization. In social group activities, it is recognized that groups are different and individu- als use group experiences in different ways to meet diverse needs. Therefore, continuous individualization must be practiced by workers. Groups and individuals within groups must be understood as potential for development and change. Groups

NSOU ? PGSW-III 41

98%

MATCHING BLOCK 106/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

are different and individuals utilize group experiences in a variety of ways to meet their differing needs; consequently, the principle of continuous individualization must be practiced by the group worker. Each group has to be seen as unique, different from any other group, like the members in the group(Sehgal, n.d.) . When the group worker individualizes a group, she accepts the fact that human beings are naturally different. To work with groups in awareness of their differences as well as similari- ties is a reinforcement of the belief that people have a capacity to change, when given adequate opportunities for and help in changing. The worker should be ready for a variety of individual responses rather than a uniformity of response. S/he should accept the differences in individual ability and growth; strive to help individuals understand themselves and help them modify their behaviour towards those who have special needs. Individualization should be a continuous process on the part of the group worker who accepts the certainty of change of individuals and groups(Sehgal, n.d.) . 5) The Principle of Guided Group Interaction. In the work of social groups, the main source of energy that drives the group and makes a difference to the individual is the interaction or interaction of the members. Group workers influence this interaction through the type and quality of

participa- tion.

93%

MATCHING BLOCK 107/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

Social Group Work is a method through which individuals in groups in an agency setting are helped by a professionally trained worker who guides their interaction in various program activities. The idea is that they relate themselves with others and experience growth opportunities in accordance with their needs and capacities(Sehgal, n.d.) . Interaction is a process whereby two or more persons are in a meaningful contact, whereby their behaviour is modified. When people are in groups, the possibility of interaction and inter-stimulation are always present(Sehgal, n.d.) . The main source of energy which propels the group is the interaction of the members through planned programme and the group worker influences this interac- tion by the quality of her/his

designed plan and

96%

MATCHING BLOCK 108/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

participation. As the possibility of inter-stimulation through interaction is always present in a group, the Social Group Worker must harness and consciously direct and utilize this natural social process. The presence of the worker whose role is to actively influence NSOU ? PGSW-III 42 the type and the degree of interaction, converts the social process into the social group work process. The worker is primarily interested in helping to bring about individual growth and social development for the group as a whole as a result of guided group interaction(Sehgal, n.d.). S/he enhances the potential for interaction by helping members to assume participating roles. The group worker uses methods that stimulate the group to the fullest possible analysis and understanding of their own situation and thereupon influence the social interaction of the constituent members of the society(Sehgal, n.d.). 6) The Principle of Democratic Group Self-Determination. In social group work, groups must take the highest level of responsibility according to their abilities, make their own decisions and help them decide on their own actions. The principle of self-determination is a core value of the social work philosophy and has to be practiced, irrespective of the method of working. In social group work method, as in other methods of social work this principle is of great significance. The idea is to inculcate in the members an ideology of democracy(Sehgal, n.d.). The group must be helped to make its own decisions and determine its own activities, taking the maximum amount of responsibility in line with its capacity and ability. The group has a right to make its own choices and the capacity to make satisfactory decisions. The aim of the group worker is to encourage an ever- increasing capacity on the part of the group to take responsibility for its actions. This principle assumes that groups can develop only when they are given opportunity to behave responsibly but it is to be consciously judged as to how much responsibility a group can be asked to assume at any point in its development (Sehgal, n.d.) . The group worker must first help the group to develop a conscious group-self before it can become responsibly self-determining. The worker should give up any need to dominate the group and instead work with the group on the basis of her/his ability to share her/his wide experience and competence (Sehgal, n.d.). 7) The Principle of Flexible Functional Organisation. In social group work, the processes by which workers lead a group build a formal organization

for greater programme. It

75%

MATCHING BLOCK 109/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

is important as the details of the actual structure of help in taking activities systematically. A formal organization must be flexible and should be promoted if it can meet the perceived needs, be understood

NSOU ? PGSW-III 43

99%

MATCHING BLOCK 110/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

by its members, and function accordingly. Formal organizations need to be able to adapt changes within the group. Every group has some informal organization of its constituent members enables it to function. As the group is formed for specific objectives, it should also have a formal organization to help it achieve these objectives. This formal organization should meet a felt need, be flexible, adaptive and should change as the group changes (Sehgal, n.d.) . The principle does not imply that group worker should organize the group; rather she should help the group organize itself (Sehgal, n.d.) . The group should be encouraged to explore its needs, set its objectives and determine specific functions and helped by the group worker to make its own decisions. The worker should help the group to determine who should take the leadership assignments along with the qualifications and expectations, so that the members are aware of what the group expects from them. Not only the structural details of this formal organization, but the process through which the worker guides the group to have a formal organization is equally important. Group efforts which may be scattered and haphazard become focused when formal organization is made available, as it allows the energies of the group members to be properly channelized. Tasks and duties should be identified and allocated in an orderly manner and members helped and encouraged to assume responsibilities

as like a formal organization.

97%

MATCHING BLOCK 111/546

SA Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The process to organize itself is an excellent vehicle for growth. The formal group organization should be simple, stable yet flexible, open to changes as per group needs. The experiences of the group members in solving the organizational problems are no less valuable than the other program experiences. 8) The Principle of Progressive Programme Experience. In social group work, the program experience in which the group participates must begin at the level of progress related to the interests, needs, experiences, abilities of the members, and the developmental abilities of the group. Program in social group work does not only mean the activities or events but is abroad concept that includes the entire range of individual and group relationships, interactions and experiences deliberately planned and carried out with the help of the group worker to achieve the group goals (Sehgal, n.d.) .The group worker should not impose her/ NSOU ? PGSW-III 44 his program plan on the group but

help the

90%**MATCHING BLOCK 112/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

group to develop its own program by extending to the group a variety of choices. S/he may only make suggestions as to possible programmes. The program development is a continuous process and grows out of group potentialities. This principle implies that there is starting point for all group programmes. Small beginnings can culminate into bigger and more challenging tasks as the group progresses.

Always programming to be designed from simple to complex so that members can achieve the vision.

97%**MATCHING BLOCK 113/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The program experiences in which the groups engage should begin at the level of member interest, need, experience and competence and should develop in tandem with the developing capacity of the group (Sehgal, n.d.). The worker should help the group to enjoy a progressive series of program experiences in consonance with the group's potential and capacities. The group cannot be expected to do the same thing all the time (Sehgal, n.d.). After success in simple activities, the group can be encouraged to move to more complex experiences. 9) The Principle of Resource Utilization. In social group work, the entire agency and community environment has resources that should be used to enhance the content of individual and group-wide group experiences. This principle guides the group worker to utilize the available resources to enrich the content of the group experience for individuals and group as a whole. For this it is imperative that the Social group worker should possess knowledge about the resources available in the group, agency and the community (Social Group Work Working With Groups, n.d.). S/he should use her/his skill in locating and then acquainting the group with the various resources which can be utilized by the group for different programs (Sehgal, n.d.). The worker serves as a liaison between the group and the community and her/his ability becomes apparent in the skill with which she draws upon the environment. S/he not only helps to stimulate the group to action but also helps them to discover and use the agency and community resources and those within the group. She must ensure that the members procure the required material for the smooth conduct of the group sessions. S/he should take initiative in mobilizing both material and human resources and oversee the utilization of the available resources by the members for the common good (Sehgal, n.d.). NSOU ? PGSW-III 45 10) The Principle of Evaluation. In social group work, continuous assessment of outcome processes and programs is essential to ensure maximum self-actualization for all. Continuous evaluation of the process and program regarding the results of workers, agencies and members are essential. The social group worker should carry out the evaluation of the outcomes in a carefully planned manner. Maintaining records in a systematic and orderly way aids the evaluation process. Evaluation carried out in an objective and neutral way helps in revealing the extent to which the group has been successful in achieving the group goals. A feedback from the members along with the observation and assessment of the worker help the group members develop insights into their strengths and weaknesses. Evaluation should be done at the end of each session and at the time of the termination. Konopka has described certain principles to work with the groups. Summary of these principles has been narrated here ("Principles of social group work," n.d.):

- Social worker's goal is to enable

group members

100%**MATCHING BLOCK 114/546****SA** Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

to move toward greater independence and capacity for help. • The social worker must use the scientific method to prepare for action fact-finding analysis

demands. But the worker has responsibility for stimulating change. NSOU ? PGSW-III 46 Cohen has also discussed certain principles which maybe significant in working with the groups. According

to him: •

100%

MATCHING BLOCK 122/546

SA

Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

The group members must be encouraged to help themselves by the social worker playing as in director enabling role rather than a manipulative one.

It means

100%

MATCHING BLOCK 123/546

SA

Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

the group members be given the right of self-direction and self- determination. • The work with the group should be started at the level of group members. It means that proper knowledge of educational, economic, social and other characteristics are essential while working with the group. If the work or programmes are above the mental level of members, they will lose their interest. Social worker must focus not merely on the immediate problem as seen by the group but on relation to the total situation. • Social worker must keep in mind that individual differences exist while dealing with the group members. • It should be kept in mind that the welfare of individual is inextricably interwoven with the welfare of the group. Therefore social worker must be concerned with the development of material, human and social resources to meet all the needs of all the members of the group. 3.6

Conclusion

MATCHING BLOCK 124/546

SA

Unit 3 _SP_ Final Introduction to Social Group ... (D123675973)

On the basis of above discussion, one would be very clear about various principles of social group work practice. These are guiding principles and without understanding of such ideas, practice of group work in any set up would be meaningless. One should at least consider HB Trecker 10 principles of social group work, such as principle of planned group formation, principle of specific objectives, principle of purposeful worker group relationship, principle of continuous individualization, principle of guided group interaction, principle of democratic group self determination, principle of flexible functional organization, principle of progressive planning and programme, principle of

resource utilization

and principle of evaluation.

Group Work Group work is a method of social work is used to organize and carry out different types of group activities. Giselle Konopka pointed out group work as a method of social work that helps individuals

members in a group to improve their social function and it addresses individual, group, and community issues through targeted group

experiences (Varghese, n.d.). The Trekker defined group work as a method of social work supported by staff that guides individuals in many groups in different community environments to interact with others and gain experience in their program activities. So, group work provides opportunities for growth according to needs and abilities until individuals, groups, and communities (Varghese, n.d.). Alan Brown said: "Group work provides a situation where individuals help each other. It's a way to help both groups and individuals. In the definition of social work created by the US Open in 1956, described five attributes are required for social practice jobs. These attributes are considered to be the basis of value, purpose, sanctions, knowledge and methods. Let us try to understand it. 4.3 Values The values of social work practice are based on democratic and humanitarian principles. It influences the practices of social work. We are already familiar with social group work definitions. Here we are trying to explain some descriptions of group work to look at how attributes finds its expression in the practice of group work and how social group work and social work have evolved separately from each other. We will also briefly explain how group work has been established as a method over time (Varghese, n.d.). Social work values are based on the principles of democracy and humanitarianism. The intrinsic value and dignity are recognized, regardless of position or behavior.

72%

MATCHING BLOCK 131/546

W

Social work believes in inequality, justice, and freedom. Social challenges, structures, institutions, and practices that prevent individuals, groups, and communities from achieving these goals. Therefore, human rights values are also important

in

37%

MATCHING BLOCK 133/546

W

social work values. Another significant value is recognizing that everyone has the unique NSOU ? PGSW-III 50 ability to solve their problems. Given the right conditions, this person can

solve the problem well. Social work values are systematized as professional ethics carried out by professional associations. Social work principles are derived from these values of acceptance, personalization, self-determination, confidentiality, worthless attitudes, and controlled emotional participation. Group work values correspond to the general importance of social work (Varghese, n.d.). Gisela Konopka describes three human concerns about the group work while practicing group work as a method of social work as mentioned below: 1. It gives a unique value to the individual in a group set-up. 2. People are responsible for each other for growth and development. 3. People have a

45%

MATCHING BLOCK 134/546

W

fundamental right to mental health created by social and political conditions that help them fulfill. These values find their expression in the practice of group work. The focus of group work is the voluntary work of the members. Group workers may work with involuntary groups due to legal or

regulatory requirements (Varghese, n.d.). But that's not a rule. Second, social workers' value the principles of group selection and

100%

MATCHING BLOCK 135/546

W

self- determination. Group members are encouraged by group workers to participate in the planning and implementation of group activities (

Varghese, n.d.). The worker does not impose her decision on the group, even if there is a disagreement

76%

MATCHING BLOCK 136/546

W

between the group and the social worker regarding the fruitfulness of the activity.

Negotiations and discussions are a way for workers to help the group understand their views. Similarly, decisions about groups must be made by groups using democratic methods. Participation of all members is essential. Everyone has the same right to participate in group discussions(Varghese, n.d.). The group must respect the principle of confidentiality. However, in contrast to a clerk, group workers also rely on group members to achieve this goal. Therefore, confidentiality clauses are often included in contracts. Social workers pay special attention to confidentiality when working with children who have difficulty with this. Purpose The purpose of group work is to contribute to society and legitimacy. Individuals and institutions accept groups by assessing how well they can achieve the goals set by group work.

90%

MATCHING BLOCK 137/546

The goals of group work as a method of social work

given by Alan Brown (1992) are mentioned below:

NSOU ? PGSW-III 51 a) Individual assessments within a group set up: Groups are used to assess individual behavior. This rating is based on employee ratings, membership ratings, and group membership ratings. Group ratings can be used to obtain data from juvenile training schools, nursing homes, and elderly care centers (Jose & Nair, n.d.). b) Individual care and nursing in group: Groups provide psychosocial support to members in stressful situations. Groups are formed for people with disabilities, carers for dementia, and students with learning disabilities (Varghese, n.d.). c) Individual changes: Management of individual deviant tendencies can also be done through group. For example, child using slang language can be trained to control their behavior. Group work specifically as method helps to socialize

50%

MATCHING BLOCK 138/546

W

individuals to learn social skills for community life, improving interpersonal relationships, improving the economic sector—for example, self-help groups, develop better self-concepts and emotions. For example,

a neighborhood woman discussing common issues (Varghese, n.d.). It is also helpful for individual growth and development of encounter groups and T-groups (Jose & Nair, n.d.). d) Education, information, and training groups e) Leisure / relaxation groups for recreation f) It can mediate between the individual and the social system: For example, group workers can prepare for discharge by instructing patients to live outside the facility (Jose & Nair, n.d.). g) Working with natural or existing groups to improve certain aspects of groups or solve the problems using family therapy for improving

32%

MATCHING BLOCK 139/546

W

Group Work as Method of Social Work The method means "one way to do things," "a set of skills and techniques." But everyone has a way

to do what is based on the action of their theory and assumptions about the situation guide his actions. The application method distinguishes itself from the voluntary behavior of the layman as follows(Varghese, n.d.): 1.

41%

MATCHING BLOCK 144/546

W

It is informed by the profession's value system, which has been arrived at by the consensus of the members. 2. The profession uses the method deliberately and purposefully to attain the treatment goals. 3. Its practice is carried by the knowledge base, which constantly increases by research and sharing of knowledge by professionals NSOU ? PGSW-III 53 4. It is recognized as a procedure by competent authorities. 5. The use of the method helps the clients/members and society at large through it. According to Schwartz, occupation should have three attributes,

one

100%

MATCHING BLOCK 145/546

W

a function to perform in society to which it is held accountable;

two, the performance of this function involves specific modes of activity- a particular pattern of actions and three,

100%

MATCHING BLOCK 146/546

W

these actions are performed within the systems in which it takes place. Further, Schwartz says that

the "method is functioning in action". Now let us understand what social work tasks in our society are? Schwartz identifies the following tasks(Jose & Nair, n.d.)- 1.

81%

MATCHING BLOCK 147/546

W

Search for common ground between the member's perception of his own need and the aspects of social demands with which he is perceived. 2. Identify the barrier which stop people from harmonizing their self-interests and the needs

of others. 3. Provide data ideas, facts, and

82%

MATCHING BLOCK 148/546

W

value concepts that are not available to the client to help him resolve the problems. 4. Give the client or member a new vision (hope) and confidence about the future. 5. Maintain a professional relationship with the client. Advantages of

working with Group as a method (Advantages and Disadvantages of Group Work – Article1000.Com, n.d.) 1.

68%

MATCHING BLOCK 149/546

W

Groups are natural places where people live and grow. Families, peer groups, workgroups and neighborhood groups are central to human social life.

If this group has a significant impact on our personality, shouldn't we use it to change the behavior of its members? Group work aims to achieve these goals in a variety of environments. 2.

72%

MATCHING BLOCK 150/546

W

Group members with similar interests and interests can help each other by sharing experiences and interests. Emphasizes the principles of mutual aid and self-help.

A significant advantage of group work over case studies is that each member becomes the group's helper and helper. Support is therefore provided and provided in the spirit of equality.

NSOU ? PGSW-III 54 3. Group members empower members by raising awareness and awareness. Human problems are known to the public and become involved when many are known. Decisions are then discussed and an additional actions, actions are planned and implemented. 4. Groups are used to confirm the views of institutional members on

57%

MATCHING BLOCK 151/546

W

the services provided. 5. Group work can actually demonstrate democratic principles. 6. Group work is very effective for certain groups of people such as adolescents, children and women.

It is more convenient for these groups to be helped as a group. This is because the needs for security and accessories are satisfied as a group. 7. Group work can work with multiple clients at the same time, which is economical and time-saving. Disadvantages of Group Work (Advantages and Disadvantages of Group Work – Article1000.Com, n.d.) 1. Personal knowledge is shared with the group, so it is difficult to ensure confidentiality. 2. Group formation

46%

MATCHING BLOCK 152/546

W

can be complicated. Members often disband, are absent, and do not cooperate, which can lead to the disbandment of the group. 3. The agency does not fully support group work

because it is not fully aware of the benefits of group work. 4. Group work often degenerates into fun and games, ignoring the healing process. 5. The group needs resources such as expected time, location and assistance. 6. Lack of personal attention

33%

MATCHING BLOCK 153/546

W

and non-participating members will be lonely. 7. Group work can contribute to the stigma and discrimination faced by members in society when they identify themselves with the group. 8. Group work is often considered a general skill that everyone can

acquire, so there is often a lack of technical know-how.

NSOU ? PGSW-III 55 4.7 Requirement of Knowledge to practice as a method in social work

89%

MATCHING BLOCK 154/546

W

Knowledge is defined as the capability to understand. The knowledge base of group work

is steadily growing. Primary sources Knowledge Social groups use group work as methods (Varghese, n.d.). 1. Knowledge of groups requires help of

67%

MATCHING BLOCK 155/546

W

other disciplines Sociology, Psychology, and Social Psychology Research Groups, tiny groups, CH Cooley (primary and secondary groups),

GHMead (group

91%

MATCHING BLOCK 156/546

and outgroup), Robert Merton (reference group), Kurt Lewin (group dynamics), Moreno (sociometry), Elton Mayo (importance and influence

group) and Simmel are pioneers in the field of group research (Varghese, n.d.). Asch, Sherif Festinger, and Kreschand Tuckman made significant contributions to improving group understanding, impact on members, group development, and more (Jose & Nair, n.d.). Another essential source is Psychoanalysis School than in Casework and contributes to

83%

MATCHING BLOCK 157/546

W

group therapy. 2. Requires knowledge from other practitioners Gisela Knopoka, Grace Coyle, Josephine Klein, Gertrude Wilson, and Gladys Ryland

have previously participated in

45%

MATCHING BLOCK 158/546

W

group work practice. They documented their experiences and developed basic practices and rules for group work. Grace L. Coyle (1948) Group Work with American Youth: A Guide to Leadership Practices and Gertrude Wilson and Gladys Ryland (1949) Social Group Work Practices (Varghese, n.d.). The creative use of social processes was the earliest textbook. Social work with groups, small group studies, and group

worker magazines are currently being published to disseminate the knowledge of the group. 3. Need knowledge from research perspectives Group work research were

45%

MATCHING BLOCK 159/546

W

relatively less frequent than other areas of social work. Most of the available literature on group work is a descriptive presentation of

the practice of anecdotal evidence and (Varghese, n.d.). A range of cognitive behavioural interventions in children. Research for other approaches and other clients was inadequate. Further Search was performed group passed short, is a firmly structured, time-limited, and homologous clients. Of these study results from other NSOU ? PGSW-III 56 groups' relevance needs further analysis. In India, the situation is out of studies. The work of in the group is equal to. Research-based social work articles

76%

MATCHING BLOCK 160/546

W

are limited. A small number of PhDs have been obtained on this subject,

primarily clinically (Varghese, n.d.). Three models have emerged in the practice of social work. Papelland Rothman (1966) proposed three models. repair. The goal of a job/agency is personal social adaptation. Often a social ideal of group work promotes social justice through collective and social behavior. (Mark Smith, 2008) Thus, knowledge of social group work and the integration of theory and practice is steadily growing. The group work

35%

MATCHING BLOCK 161/546

W

knowledge base has grown by developing new research tools for assessing group work practices. The major gap in social work was the lack of evidence of the method's effectiveness (Varghese, n.d.). In other words, social workers could not

definitively show that the skills and techniques of professional social workers, consciously applied in different situations, made a big difference to their clients. Evidence-based growth of Social Practice is the answers to these gaps. These trends also influence the practice of social group work. A new research method has been identified to address this issue. (Gant in Gravin, 2004.) 4. Trends in Group Work during COVID 19 4.8 Technology Mediated Group Work Many self-help groups form their groups online. For example, women with breast cancer have an online support group. Most of these support groups provide information about problems and treatment options (Varghese, n.d.). They also offer reviews from people who have successfully dealt with the illness. Frequent Asked Questions: A section called Questions (FAQ) can often be used to raise questions or explanations related to a problem/illness. These websites are operated by hospitals and support groups (Varghese, n.d.). 4.9 Functions of Social Group Worker Let us try to understand the function of group workers while practicing group as a method of social work. NSOU ? PGSW-III 57 The American Association of Group Workers (1949) explains the functions of a group worker practicing

35%

MATCHING BLOCK 165/546

SA

Social Work with Indiv and Groups Block 2.pdf (D164882173)

group work as a method. Group workers enable different types of groups to function, ensure group interactions, develop program activities to personal growth and for achievement of desirable social goals.

Group worker goals include self-development tailored to individual skills and needs ("Group work," 2008, p. xx). Adapting individuals to groups, other institution and societies, individual motivations to improve and awareness of individual rights, skills, and differences. Group workers want to influence the group process by participating in decision-making through the integration of knowledge and exchange, ideas, experience and expertise, rather than control inside and outside

76%

MATCHING BLOCK 162/546

W

the group. Social work interventions with individuals and groups through expertise, he / she

is responsible for citizenship, cultural, religious, economic or mutual understanding between specific groups within the community and participation to contribute to the community ("Group work," 2008, p.). Group worker aim to establish relationships with other connected groups and wider communities. Continuous improvement of our society towards democratic goals. The main purpose of such leadership is based on the standard assumptions of a democratic society. That is, each individual may be free to exercise his or her abilities, respect and appreciate others, and be socially responsible for maintaining and continuously improving a democratic society. Group work practices are based on modern social science-based knowledge of individual and group behavior, as well as social conditions and community relationships("Group work," 2008, p. xx). Based on the knowledge base, group workers contribute to groups that enable members to fully utilize their abilities and organize socially constructive group activities. He recognizes program activities for guided interactions within the group for desired change. Depending on their interests and needs, they help to benefit from group experience with program activities and engaged in self-development through social relationships, and they get opportunity to participate as a responsible citizen ("Group work," 2008, p.). Group workers in any set up, whether rural community or urban community set up working with the group consciously leverage their relationships with the group, their knowledge of the program

80%

MATCHING BLOCK 163/546

W

as a tool, their understanding of the individual and the group process, and

recognize their responsibilities to both the group and working with the individual ("Group work," 2008, p. xx). NSOU ? PGSW-III 58 4.10 Conclusion Social work as a profession and its field is expanding because of its various practice methods, group work is one of it. However, some professional questions have yet to be answered to as to effectiveness in group work can be ensured. Survey- based findings rarely clarified their position. This may be due to the methodology used by the researchers. Alternatively, the complexity of human behavior may make it difficult to detect changes in people.

68%

MATCHING BLOCK 164/546

W

Group work as a method of social work seems to have this problem. Social workers often rely on personal experience and observation to

determine benefits their clients /members. This method should all apply principles, small group theories and models, group therapy wherever treatment group developed, assist members understanding the group process meaningfully. So, help of other practitioners are necessary requirement of the day. However, in pandemic situation, technology mediated group can be very meaningful in assisting many members in our society. 4.11 Exercise 1. Discuss group work as a method of social work. 2. What are the present trends in Group Work? 3. What are the advantages and disadvantages in group work? 4. Write a short note on Group Work Education. 4.12 Reference Advantages

Unit 5 ? Theoretical Approaches and Models in Social Group Work Structure 5.1 Objectives 5.2 Introduction 5.3 Theories and Models in Group work 5.3.1 Theories in Group Work 5.3.2 Models in Group Work 5.4 Conclusion 5.5 Exercise 5.6 Reference 5.1 Objectives The objective of this unit is to develop a clear understanding on various social science theories relevant to social group work practiceamong social work students for necessary use in their field work practice. 5.2 Introduction Groups may be defined in many ways as there is no single definition on it. It is also highly problematic and contestable. For the purpose of discussing group work within a context of working with people we may define a group as a small gathering of people. While on the other side group work may be described as the study and application of the processes and outcomes experienced when a small group comes togetherKonopka (1963) defines group work as a method of social work that is utilised in order to 'help individuals to enhance their social functioning and this is possible through purposeful group experiences, and to cope more effectively with their personal, group or community problems. This definition shows a tradition within group work of helping individuals with problems. Brown (1994) provides a

NSOU ? PGSW-III 61

98%

MATCHING BLOCK 171/546

SA

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

modernised and more comprehensive definition of group work. He is of the opinion that 'group work provides a context in which individuals help each other. It is a method of helping groups as well as helping individuals. It can enable individuals and groups to influence and change personal, group, and organizational and community problems. He then goes on to distinguishing between 'relatively small and neighborhoodcentered' work and 'macro, societal and political approaches' within community work, explaining that only the former may be properly classified as group work. The role of group work can be seen as one which gives emphasis on sharing of thoughts, ideas, problems and activities, in which theoretical understanding is very much essential for the worker to undertake group activities meaningfully. 5.3 Assumptions and Theories Life Skills: One of the assumptions in group work is that many persons lack requisite skills and experiences to cope with stresses in their social relationships. These stresses usually occur in their childhood when children and adolescents move from one status and role position to the other or from one interaction milieu to the other(Rengasamy, n.d.). For example, when a child moves out from secure home environment to a school which is a more open and dynamic environment, from a primary school to middle or higher secondary school, from school to college, etc. These changes can cause stress as a child or an adolescent is expected to adapt to a new set of norms and also rules, meant for regulating behaviour. Adolescents in general experience stress associated with physical development, social acceptance and academic performance(Rengasamy, n.d.). The degree of stress is directly related to the degree of life skills they possess in coping with the change. For example, for a young boy to move from a rural school to an urban higher education institution will cause more stress than for a young person moving from an urban school to a higher education institution in an urban area. Similarly, a child from a family of uneducated parents will face more stress at school and other educational institutions (Siddiqui 2008). The inadequacy of life skills such as verbal and nonverbal communications, asserting, handling feelings and conflicts, functioning of group consisting of members from NSOU ? PGSW-III 62 multicultural background, increases the stress leading to maladjustment problems (Rengasamy, n.d.). This framework would help a group worker to understand the children and adolescents exhibiting stress symptoms and their inability to adjust in the group. The worker can provide these children a support group to discuss their problems and learn from each other and to understand the coping strategies that they are using to deal with the situation. The group worker can help them to learn new life skills to update their competence to cope with stresses and sources of stresses(Rengasamy, n.d.). Sharing Feedback: The other assumption is that the sharing feedback can influence children and adolescents group very much in building healthy peer relationship. Hence, it is important for them to understand how others relate them. How others view the behaviour of a member? The group can provide an opportunity to children and adolescents to discover how others view them(Rengasamy, n.d.). It can also help them to analyze it objectively and learn to take corrective action if needed. For example, labels to members of a particular religious, linguistic or caste group, which are negative. Also the children and adolescents of these groups experience a high degree of stress leading to academic and mental health problems (Siddiqui 2008). The group worker can use the knowledge to design a number of programs for children and adolescents indulging in labelling and for those who are at the receiving end(Rengasamy, n.d.). Emotional Support It is observed that a number of persons experience trauma due to a variety of reasons. Some examples are loss of significant persons, family violence, long-term unemployment, retirement, trauma, and loss of shelter or other valuables, etc. These conditions produce stress and could become traumatic. Individual counselling is helpful but emotional trauma shared with fellow sufferers has been found to be of help. There are many studies of children and adolescents affected by disasters indicate that the trauma produces a great deal of anxiety, resulting in loss of concentration and producing incoherent behaviour. The adolescent's reaction to stress may vary such as withdrawal or opting out, depression, loss of control, inability to concentrate, irritability, disturbed sleep or eating patterns, flashbacks and emotional

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

numbing. Loss of significant members such as parents or siblings and material resources such as housing will require a different set of life skills and coping strategies to survive. The studies indicate that emotional support from others who have undergone a similar trauma is helpful (Shelby, 1994). The finding is used to form groups of persons having suffered a trauma to provide emotional support to each other. By now it is clear that in order to understand the events taking place within a group, one need to understand the individuals within the group on the one hand and their interaction in the group on the other (Rengasamy, n.d.). There are a number of psychological, sociological and political theories that provides an explanation of individual behaviour and how it can help in understanding the group functioning. Some of these theories are explained below 5.3.1

Small Group

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

Theories Learning Theory Learning Theory has raised a lot of controversy in social group work as it focuses more on individual than on group dynamics with reference to influencing individual behaviour. Learning theory also provides a frame work for understanding human behaviour. It provides an understanding of the social functioning of persons within their environments. The person in dynamic interaction with all aspects of the environment is the focus of attention. Further, it emphasizes the importance of assessment of observable behaviour, and advocates the use of specific terms in defining behaviour. And finally it takes a positive approach as if behaviour is learned then it can also be unlearned (Rengasamy, n.d.). It explains that respondent conditioning, which refers to the emission of behaviour in response to a specific stimulus. The stimulus could be a word, sight or a sound. It has been already experimented on dog. The second type of learning here explained to called modelling, which simply refers to learning by observation. The children of parents who smoke are likely to be smokers. Children of parents with ability to control their feelings under stress are likely to learn self-control. However, a number of factors or conditions can affect the effectiveness of modelling. Some of them are similarity of the model to the observer, the prestige, status and expertise of the model, and the diversity of models around the observer (Rengasamy, n.d.). Operant conditioning is a type of learning in which behaviours are altered primarily by regulating the subsequence NSOU ? PGSW-III 64 which follows them. New behaviours could be learned and undesirable behaviours could be weakened and eliminated by regulating the consequences (Rengasamy, n.d.). By using the learning theory framework, social worker can understand how group can provide reinforcements to strengthen behaviour. There are both positive and negative reinforcements. A good example of negative reinforcement in a group situation is to discourage behaviour which are not accepted by others. The learning theory thus provides a framework for group workers to modify behaviour. The context could be achievement of group tasks and development, or helping the members to unlearn behaviours that create problems in their social functioning. Field Theory Kurt Lewin (1946) is one of the pioneers to study group functioning. He focused on the forces that influenced the working of groups. He tried to study leadership styles by creating groups with different styles of leaderships in order to see their impact on the functioning of the group (Rengaswamy, n.d.). It is commonly observed that a leader becomes authoritarian when the members are seeking favours, rather than questioning the decisions or even discussing the issues objectively. Lewin argued that the leadership style is a product of leader and member interaction rather than a personality trait of the leader. Further, while developing his Field Theory, he argued that a group has a life space and it has movement. It tries to accomplish goals or group tasks and faces hurdles in its movement. He believed that group was an entity of opposing forces which keep the group members in the group and move them along in achieving group goals. However, the behaviour of individual members and the group itself should be seen as a product of the totality of the group situation (Lewis, 1946). He introduced several concepts to help in the understanding of forces at work in the group. Some of them are • Roles—status rights and duties of group members; • Norms—Rules governing the behaviour of group members; • Power—the ability of members to influence on another; • Cohesion—The attraction the group members feel towards one another and towards the group; • Consensus—the degree of agreement regarding goals and other group phenomena, and • Valence—the potency of goals and objects in the life space of the group.

Other field theorists have continued to work on the characteristics of group that influence the individual behaviour. Cohesion has been identified as an important factor, defined as, "the totality of forces acting on individual members to keep them in the group. Cohesion reflects the agreement on goals and norms, shared understanding and a greater homogeneity in demographic background, as also the productivity, satisfaction and cooperative interaction patterns (Cartwright and Zander 1968). Lewin developed t-group as a means to observe the effects of group process on group members and as a means to induce changes in behaviour. He thus helped in developing a theory that people change when they see their behaviour as others see it, thus leading to development of the feedback method whereby the group members and the group leader provide feedback to the individual as to how his/her behaviour was affecting them. Role plays and simulations are also used to highlight the group process(Rengasamy, n.d.). The group workers using the field theory framework can design their own interventions in working with the group for achieving the group goals along with individual development(Rengasamy, n.d.). Systems Theory(Rengasamy, n.d.) The systems theory is helpful to explain the functioning of a group. Talcott Parsons explained social system as a set of interdependent elements trying to function as a unified whole to maintain order and a stable equilibrium. The social systems are constantly facing new challenges as the environment around them and within, is constantly changing. Therefore, they must act to maintain the equilibrium if they have to survive. This act of survival depends upon mainly on four basic functions, such as integration; adaptation; pattern maintenance; and goal attainment (Siddiqui, H. Y. 2008). The group viewed as a system would therefore be able to achieve its objectives once it is able to carry out these four functions effectively. It is able to integrate members by achieving individual and group goal matching. It also has the capacity to make changes to adapt itself to outside demands like that of the community and the sponsoring organization and with the internal dynamics as it changes with time. The pattern maintenance would require development of norms and guidelines to regulate its activities and develop well defined objectives, identify and procedures that are able to sustain these over time. The functioning of a system depends to a great extent on the carrying out the role assigned to them. The goal attainment is the final task to ensure the smooth functioning NSOU ? PGSW-III 66 of the system. The members will lose interest and the functioning of the group will be affected if the goals are attainable is an important attribute of group stability and functioning. Parsons pointed out that problems will arise during the functioning of the group; the group, including its leadership must make use of its resources effectively to tackle the problems to maintain the equilibrium of the group(Rengasamy, n.d.). Robert Bales (1950), however, believed that the survival of the group depends on two central tasks. The first he termed the instrumental problems related to tasks or goal related functions and the second, socio-emotional tasks related to the interpersonal relationships between members, and between members and leader, for coordinating and maintaining the emotional unity and morale of the group. While the instrumental problems generally arise on account of the external pressures, the socio emotional problems are rooted in the internal dynamics of the group(Rengasamy, n.d.). The insights are helpful for workers to deal with both kinds of challenges in their working with groups. It is often seen that exclusive focus on one results in ignoring the other, making the group dysfunctional in the process. The worker can keep in mind that the emphasis on tasks will vary in different groups, depending upon the central purpose of the group. It will be different in a self-help group formed to achieve a specific task, than in a group of children. It is also possible to analyze the interaction between members in a group by using a tool developed by Bales called interaction process analysis(Rengasamy, n.d.). Conflict Theory Sociologists differ in their understanding of conflict as a social phenomenon in society, yet some of the explanations of conflicts are helpful in understanding the conflicts in groups and in dealing with them(Rengasamy, n.d.). Sociologists have identified two broad categories of conflict, one endogenous conflict, which refers to sources of changes from within a society and other one exogenous conflict, which refers to changes from without or between systems. Endogenous conflict highlights the sources of conflict like inherent predilection to change, conflict over the differential distribution of resources such as wealth, power and prestige, conflict of values, conflict of authority and Conflict between individual and collectively.The exogenous conflict identifies three sources such as wars, cultural invasions and conflict of ideology. Lewis Coser (1973) distinguishes between realistic and non-realistic conflicts. NSOU ? PGSW-III 67 Realistic conflicts are conflicts arising on account of non-fulfilment of specific demands, whereas non –realistic conflicts are rooted in the need for release of tension and are not oriented towards achievement of any specific demand(Rengasamy, n.d.). In every group there are occasions for conflict, since individuals and sub-groups are likely to make rival claims to scarce resources, prestige or power positions. But social structures differ in the way the group allows expression to these claims. Some are more tolerant, others are not. Firstly, it will not aim at resolving the immediate issue as all accumulated grievances will come to force. Secondly, it is because of total personality involvement of the group members. It is important for a group worker to remember that the hostility should not be permitted to accumulate and conflict should be allowed to occur wherever a resolution of tension seems to be allowed to occur. In such cases the conflict is likely to remain focused primarily on the condition leading to its outbreak. Conflicts within a group can also help to revitalize existing norms and help to develop new norms as well(Rengasamy, n.d.). Social Exchange Theory According to the social-exchange theory, people help because they want to gain in future from the one being helped. People calculate rewards and costs of helping others, and aim at maximizing the former and minimizing the latter, which is known as a "minimax" strategy("Minimax," 2021). Rewards are incentives, which can be materialistic goods, social rewards which can improve one's image and reputation (e.g. praise) or self-reward. Rewards are either external or internal. External reward is things that obtained from others when helping them, for instance, friendship and gratitude. People are more likely to help those who are more attractive or important, whose approval is desired. Internal reward is generated by oneself when helping others and gaining sense of goodness and self-satisfaction. The central concern of the exchange theory is to find an explanation for the human transactions of giving and receiving. James Frazer suggests that men enter in to institutionalized patterns of exchange to satisfy their economic needs(Social Group Work | PDF | Social Group | Psychological Trauma, n.d.) But there is a difference between economic exchange and social exchange. Social exchange process

can yield for the larger society a moral code of behaviour, which acquires an independent existence outside the social exchange situation and which

NSOU ? PGSW-III 68

MATCHING BLOCK 175/546

SA

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

informs all social, economic, and political interpersonal relationships in society(Rengasamy, n.d.). The triple obligations of social exchange- to give, to receive and to repay – are to be understood not as self- interest but in terms of interpersonal, hence inter- group, relations. Social exchange transaction creates social bonds creating ties between individuals and the collectively. Some argue that it is the exchange which is important not the things which are exchanged and the primary function of the exchange is structural integration of the collectively(Rengasamy, n.d.). Homans (1950) and Blau (1964) among others have developed the exchange theory to explain membersbehaviour within a group. They argued that all members in a group will try to maximize individual rewards and minimize punishments. All human interaction according to them is seeking something in return from the other. The behaviour is conditioned to maximize rewards and minimize punishment in all interactions(Rengasamy, n.d.). The cognitive process and the members capacities are not full explained by the exchange theory can be summarized as follows: social –the greatest rewards within a coalition are given to the least dependent member of the coalition. Behaviour– is an exchange of goods, material and non- material, such as approval or prestige. Persons that give to others try to get something in return, and persons who receive from others are under pressure to give in return. This process of exchange tends to create equilibrium to balance the exchanges. Human Capital and Social Capital James Coleman (1988) is one of the advocated for rational choice theory. Coleman believes in a concept known a methodological individualism. The two concepts in Coleman’s theory are actors and resources, and two key resources, according to him are: human capital and social capital. Similar to the creation of physical capital by shaping the material into tools and machines to facilitate production, human capital is created by shaping the individuals by giving them skills and capabilities that gives them power to act in innovative ways to produce(Rengasamy, n.d.). Social capital is Human Capital created by shaping relations between individuals to facilitate action. For example, a group where members trust each other will act

NSOU ? PGSW-III 69

100%

MATCHING BLOCK 176/546

SA

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

better than the one where there is no trust. The importance of social capital has been exhibited by the acceptance of team development efforts by the corporations. • Skills & Abilities • Creativity • Life Experiences • Knowledge • Human Capital Human capital and social capital can complement each other or they can destroy each other. Social capital as a concept can help the actors to realize the importance and usefulness of those aspects of social to realize the importance and usefulness of those aspects of social structure which will help them to achieve their interests. In a cohesive group where members are willing to help each other and abide by the group norms, the level of trust worthiness of the group environment is a crucial factor in the success of the group. It means that the obligations will be repaid(Rengasamy, n.d.). A simple example is the rotating credit groups. In such groups, each member contributes and amount to a central fund, which is given to a member. Each member gets his/her amount back and in addition gets a loan without interest. However, if obligations and expectations are not balanced the social capital gets diluted. Norms and effective sanction can help in balancing obligations and expectations. Psychoanalytic Theory Sigmund Freud is one of the earliest theorists to provide an explanation of human personality. He conceptualized that the human mind has broad systems. He described these systems as conscious, pre-conscious and unconscious and the other as Id, Ego and super Ego (Daniel K. Lapsley and Paul C 2011). Freud suggested that mind was composed of thoughts (ideas), feelings, instincts, drives, conflicts and motives. Most of these elements were located in the unconscious or preconscious. There is a repressed area which serves as a barrier where a lot of disturbing material (thoughts and feelings), as unresolved conflicts, are placed through the process of defense mechanism. Defense mechanism or repression is a process in which unacceptable desires, memories and thoughts are excluded from consciousness by

NSOU ? PGSW-III 70

99%

MATCHING BLOCK 177/546

SA

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

sending the material into the unconscious area under the repressed barrier are avoided. He observed that this results in producing irritants such as unwanted emotions and behaviour such as anger, hallucinations, etc. Describing the second system Freud explains that Id is the primitive psychic force hidden in the unconscious. It represents the basic needs and drives such as hunger, thirst, sex and self-preservation, which support other personality factors. Id governed by the pleasure principle primarily seeks to express itself irrespective of the consequences, while Ego acts as the rational component of the mind which controls the thinking of the mind. Super ego serves as the conscience by indicating what is right and wrong socially and morally (Rengasamy, n.d.). Freud conceptualized that people pass through six psychosocial development stages. During any one of the stages conflicts may arise and if it remains unresolved the person's personality development will be affected. He thought that disturbances can arise from several sources. Traumatic experiences which a person's ego is not able to cope with directly are repressed. Similarly internal unconscious processes could also cause disturbances. Freud, in elaborating the group's influence on human behaviour, specifically mentions about the importance of group leader, and the early life experiences of the members (Rengasamy, n.d.). The members use transference in their interactions that occur within the group and try to recreate conflicts. A number of psychologists have contributed in developing learning theory as an explanation of human behaviour, which is very helpful to understand individuals and also helping them, which could be studied first and helped through group activities, counselling, etc.

5.3.2 Models in Social Group Work

Social workers basically utilized four distinct group work models. These are Social Goal Model; Remedial Model; Mediating Model and Developmental Model. Besides, there are other models, which are considered as suitable models for effective practice in social group work such as the Behavioural Model, Kurt Lewin's individual change process, Bale's stages of group development, Tuchman's stage model, Fisher's theory of decision emergence in group, Northen and Kurland's model, etc. A brief of each of these models are given below:

NSOU ? PGSW-III 71 The Social Goals Model: The basic concepts of this model are social consciousness, social responsibility, and social change. It is suggested that by participation with others in a group situation, individuals can affect social change. Social action is the desired outcome, and the group worker is regarded as an influence person and enabler, who personify the values of social responsibility and acts as stimulator and role model without purveying any political viewpoint. Implicit in this model is the emerging leader within the group. The model is concerned with democracy and the enhancement of personal functioning within the social context, heightened self-esteem and an increase in social power for the members of the group collectively and as individuals (Bimal Antony, 07:39:28 UTC).

Remedial Model: Remedial model focuses on the individual's dysfunction and utilizes the group as a context and means for altering deviant behavior. This approach to group work practice emphasizes its utility in removing the adverse conditions of individuals whose behavior is disapproved by the society. Clients of such social group work practice are physically and mentally handicapped, legal offenders, emotionally disturbed, isolated and alienated persons. The Michigan School contributed to this model. Credit goes to Vinter and his colleagues for developing remedial model. In this model attempts are being made by social worker to bring change in the individual. According to the Remedial Model, the group can be used to treat problems of adjustments in personal and social relations. According to Vinter "attention to such problems reaffirms the profession's historic mission of service to those most in need". The remedial model is considered more as a clinical model that seeks to help the socially maladapted to improve social functioning through guided group interaction experience (Bimal Antony, 07:39:28 UTC). The social worker plays a key role as he/she gives expertise knowledge through the following activities.

- The social worker is the central person. The worker is the object of identification and drives.
- He/she is a symbol and a spokesman. He/she tries to maintain norms and values of the society.

NSOU ? PGSW-III 72 •

100%

MATCHING BLOCK 178/546

SA

Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

He/she is a motivator and stimulator. He/she helps the individual and group to understand their goal as a group member.

- He/she is an executive. He/she facilitates the activities of the group in order to gain the said objectives. In this model whatever the changes are brought, they are explicitly limited to organizational and institutional elements that are responsible for individual's dysfunction. Though this model, one can focus on the individual client who is experiencing difficulty in a group situation. The model is helpful for those likely to be affected. It means this model focuses on preventive aspects also.

Reciprocal Model or Mediating Model: Schwartz has introduced this model in 1961. This model is based on systems theory, humanistic psychology and an existential perspective. The chief characteristic of this model is that the people and society are interdependent as due to the reason they have mutual needs. In this model attention is directed towards the relationship of members in the group with each other, with the worker and the group as a whole. It is the relationship among the members that shows the characteristics of the group. It gives importance to the emergent goal and actions, which are based on feelings of the group.

100%**MATCHING BLOCK 179/546****SA**Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

Client and worker together as well as separately challenge the current problems with their total capacity. Basic educative processes are utilized which incorporate particularizing, synthesizing and generalizing the feeling and action components of the problem. In this model distinctions are not made with respect to types and several of group since it is presumed that this model is widely applicable. In this model the individual and the group are significant components. The workers role appears here to be facilitative, relying on the power and potency of mutual aid system to take care of itself. Developmental Model: This model has been developed by the faculty members of Boston University in 1965

100%**MATCHING BLOCK 180/546****SA**Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

In this approach, groups are seen as having "a degree of independence and autonomy, but the to and fro flow between them and their members, between them and their social settings, is crucial to their existence, viability and achievements. The main characteristics of this model are intimacy and closeness between the members

NSOU ? PGSW-III 73

100%**MATCHING BLOCK 181/546****SA**Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

over a span of time. The degree of intimacy is taken into account for appropriate worker interventions. This model derives knowledge from Erikson's ego psychology, group dynamics and conflict theory. The worker is connected with community, agency, social group and also with the individual member in our society (Principles, Skills and Models of Group Work Practice - IGNOU, n.d.). The social group worker tries to improve the situations among individual member, group agency and the social environment. In short, it can be said that the developmental model is a compromise between the reciprocal, remedial and traditional approaches. Behavioral Model: In this model some specific group programmes are implemented to alter dysfunctional patterns behavior. The expertise of behavioral group therapist is essential in assessing and devising a treatment plan for each individual member within the context of the group

100%**MATCHING BLOCK 182/546****SA**Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

The group worker calculates the specific elements of the disturbing behavior to be decreased or desired behavior to be developed. Other group members provide assistance and feedback concerning progress throughout the stages of the treatment process. Beside, a number of such theoretical models have been developed to explain the change in group over certain period of time. Some of the important theorists' models are given subsequently. Kurt Lewin's (1947) individual change process: Kurt Lewin is remembered for coining the term 'group dynamics'. His model of individual change is a stepping stone for many pioneers who have contributed theoretically. His model has three stages such as unfreezing, change, and freezing in a change process or small group. The first stage makes effort to remove lethargy or sluggishness and dismantles the existing mind set. The second stage is the transition phase that brings change. In the last phase, the new mind set is crystallized and individual becomes stable (Lewin's 3-Stage Model of Change: Unfreezing, Changing & Refreezing - Video & Lesson Transcript | Study.Com, n.d.). Bales's (1950) stages of group development: Bales noted some stages of group development like orientation stage, evaluation stage and decision making stage, which are described as below: Orientation: The

NSOU ? PGSW-III 74

100%**MATCHING BLOCK 183/546****SA**Unit 5 Theoretical approaches and models[13489 ...
(D122078244)

first thing in the stages of group development is that the person in a group has to familiarize himself with other people and explore the possibilities that the group has to offer to him. Thus, Bales termed this as orientation stage. Evaluation: Bales went on to suggest next things to members to analyse the information gathered and reach some conclusion about what kind of members are there, whether they are trustworthy, helpful and cooperative and how they look at the other members, its activities, programmes and so on. He therefore termed this stage as evaluation stage. Decision making: According to Bales, the evaluation of members about the people, programmes and benefits would lead to decision making about the participants and action in the group. Bales termed this stage as decision making. Tuckman's (1965) stage model: Bruce Tuckman reviewed about fifty studies of group development (including Bales model) in the mid nineteen sixties and synthesized their commonalities in one of the most frequently cited models of group development. The model describes four linear stages, such as Forming, Storming, Norming and Performing stage. Forming which is the first stage of group process. The forming of the team takes place. The individual's behaviour is driven by the desire to be accepted by the others, and avoid controversy or conflict. Serious illness and feelings are avoided, and people focus on being busy with routines. This is comfortable stage to be in but the avoidance of conflicts and threat means that not much actually get done. The team meets and learns about the opportunities and challenges and then agrees on goals and begins to tackle the tasks. Team members tend to behave quite independently. Storming is the second stage. The members begin to assert the individual personalities and the comfort of the forming stage begins to come under siege. Members experience personal, intra and inter group conflict. Every group enter the storming stage in which different ideas compete for consideration. The team addresses issues such as what problem they are really suppose to solve, how they will function independently and together and what leadership model they will accept. Team members open up to each other and confront each others ideas and perspectives. The activities make in the storming phase are lack of cohesion, subjectivity, hidden agendas, conflicts, confrontation, resentment, anger, inconstancy, failure and so on. The next stage is Norming. During this stage, the group begins to work more constructively together towards formal or informal roles(THEORY | GROUPS & GROUPWORK, n.d.).Some

NSOU ? PGSW-III 75

(D122078244)

members may not be comfortable with the role or roles which have been allotted. During norming stage sub-groups are likely to form in order that a supportive environment is once more created. Group members establish rules about how they will achieve their goal(TEAM | Meaning in the Cambridge English Dictionary, n.d.). They address the types of communication that will or will not help the task. Indicators include: questioning, performance, reviewing, clarification objectives, changing/ confirming roles, opening risky issues, assertiveness, listening, testing new ground, identifying strengths and weakness. Performing is the 4 th stage of group development. This is the best stage for a group to complete the tasks and assuming that task This stage the group also reach to a conclusion and implement solution to their issues. Indicators in this phase include creativity, initiative, flexibility, open relationships, pride, concern for people, learning, confidence, high morale, success, etc. Last stage is Adjourning. This phase was added when Tuckman and Jensen updated original review of the literature in 1977. The final stage in the group ultimately is the termination. Though often overlooked, this stage in a group development is equally important to positive outcomes. The ending of a group can be very unhappy and distressing tune for some members, as they may feel some extent of dependency on the group. Fisher's (1970) theory of decision emergence in group: Fisher outlines four phases i.e.orientation, conflict, emergence and reinforcement. In the first phase, members get to know each other and experience primary tension. Second phase is meant for conflict and marked by secondary tension. Members there disagree with each other and debate ideas. Group's tasks as well as members' viewpoints become apparent in the emergence phase and group members bolster their final decision in the last phase(Fisher's Model – Small Group Communication, n.d.). Tubbs's (1995) system model of group development: Stewart Tubbs studied small group interaction and developed a system model focusing with four phases of development such as orientation, conflict, consensus and closure(Tubbs' Systems Model, Fisher's Theory of Decision Emergence in Groups, Poole's Multiple-Sequences Model - Organizational Behaviour, n.d.).In the first phase, group members introduce each other, start talking on the problems and examine the strengths as well as weaknesses. Ideas are evaluated through conflict in

NSOU ? PGSW-III 76

the second phase. Conflict ends in the third phase and the last stage announces results. Northen and Kurland's (2001) model: Northen and Kurland focus on a few stages of group development and point out that each stage has its own developmental issues that must be attended and at least partially resolved before the group can move into the next stage. Northen and Kurland proposes a four staged model with emphasis on socio-emotional themes. The different stages are described below. Inclusion-Oriented: The main socio-emotional theme of this stage, as implies, is whether or not group member will feel included. This stage is typically marked by anxiety and uncertainty as the group members become acquainted with the group leader and each other. The major task for the members is to become oriented to the group and to decide to be included in the group's membership. Uncertainty-Exploration: The major theme of this stage has to do with group member's uncertainty regarding issues of power and control. The socio-emotional issue pertains to conflict, especially relationship to the group leader. Group members at this stage explore and test their relationship with the leader and each other in order to establish roles and develop trust and acceptance. Mutuality—Goal Achievement: At this stage, the group is characterized by mutual aid and problem solving. Socio-emotional patterns among group members show greater self disclosure, empathy and mutual acceptance. Conflict and differences are dealt with as a means to achieve both individual and group goals. Separation-Termination: The final stage focuses on the socio-emotional issues of separation and termination. Members at this stage may be reluctant to leave the leader and the group. The task here is to help prepare members for termination, deal with any unfinished business and, most importantly, help group members thereafter what they have learnt in the group to life outside the group.

NSOU ? PGSW-III 77 5.4 Conclusion Social group work is a primary method of social work, which believes that the development of individual is mainly dependent on the group experiences. There are number of socio-psychological problems that cannot be solved without the help of the group and understanding of the theory. The development of personality is also dependent on the use of group life to some extent. The group worker should follow various social science theories, some of the theories as discussed like learning, Social Exchange, Field, System Theory, Psychoanalytic, Conflict Theory and Human and Social Capital etc., are very important. But one should not also forget the theory of Sigmund Freud, psychoanalytic theory. Individual behaviour and their problems could be study well when he or she is in conflict situation. So, using all such theories the group worker can be more knowledgeable, skilful, and logical and make themselves scientific in their approach into practice field. This is also equally applicable that the group worker should develop knowledge and follow appropriate model of group work practice, which would definitely help in reaching the objectives that are set for the groups at the beginning stage. Some of the models like Social Goal, Remedial, Developmental, Fisher's theory of decision emergence in group, Tuckman's (1965) stage model, Kurt Lewins individual change model, Northen and Kurland's (2001) model, Tubbs's system model of group development, Bales's stages of group development, etc, all are important in group work practice. These models are helpful in developing and nurturing groups, especially in understanding individual in a group and a frame of reference. Scientific knowledge about motivations of human behavior not only provided new insights to the problems which individuals experience as individuals, but make interpretation of interaction of individuals in groups much more meaningful. All theories as discussed therefore are helping to group worker to understand small group and its interaction, behavior etc for group growth and development. It is significantly important because it is helping the individual for personality formation and also personality development. So, understanding of all theories and models relating to group work are important.

NSOU ? PGSW-III 78 5.5 Exercise 1. Briefly discuss any four small group work theories in social group work practice (use separate page if required) 2. Write how small group work theories help worker in group work practice 3. Write different models in group work practice and discuss how it can help worker in group work activities. 5.6 Reference Bales, R. (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

agency set up. 6.2 Introduction The various types of groups that can be formed by social group workers are classified as a) Remedial groups, b) Growth groups, c) Task groups(Jagadish, n.d.). Remedial groups are mostly to enable the members to sustain their changed behaviour and to cope up with new situations in life. The focus is more on the socio- emotional needs. This type of group is formed with those people who have undergone some treatment for a pathological condition. For example, a group of people who have been discharged from a drug de-addiction centre have to be helped to continue their changed behaviour and the treatment(

Jagadish, n.d.).

100%

MATCHING BLOCK 190/546

SA

(SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Growth groups are to create awareness about the opportunities to grow and develop in their career and other life positions. These groups focus both on the social and emotional needs of the members as well as achievement of a tangible target. Some examples are: a group of youth is brought together to enhance their

NSOU ? PGSW-III 82

100%**MATCHING BLOCK 191/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

entrepreneurial abilities so as to improve income generating capacities and make them feel they are worthy members of the society, teaching children to acquire social skills and social etiquettes, so that they perform their social responsibilities properly and grow as useful adults(

Jagadish, n.d.).

100%**MATCHING BLOCK 193/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Task groups focus on certain work or activity the group is to achieve for its own development. The task could be development oriented, solving a problem or a crisis situation or a social disadvantage. Some examples are: a committee formed by an organisation to deliberate on certain strategies to improve the service delivery, an administrative group of heads of different units of an agency to work out ways and means to improve the performance of the staff and bring about coordination among the different units, group formed to tackle water shortage, poor civic amenities and reservation of jobs for women. Therefore, formation of any short of groups should be done with care and as per proper process, which are analyzed in details as below. 6.3 Group Formation

The

100%**MATCHING BLOCK 192/546****W**

Ken Heap (1985) discussed these as group formation and planning; the first meetings; the working phase; use of activities and action; and the termination of the Group. According to Douglas (1979) there are five stages

of group forming and its activities viz., conceptualization, creation, operation, termination and lastly

100%**MATCHING BLOCK 194/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

evaluation. He has discussed these as the functions of leader while Toseland and Rivas (1984) discussed the stages under planning phase, beginning phase, middle phase and ending phase. For our purpose of understanding how one should form a group or what matters the worker should take care in different form of groups are stated below(

Social Work/ : Stages of Social Work Group Formation, n.d.-a): • Pre-group formation phase • Initial phase of group •

100%**MATCHING BLOCK 195/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Middle (active working) phase • Evaluation of the group • Ending phase

NSOU ? PGSW-III 83

98%**MATCHING BLOCK 196/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

In the pre-group phase worker identifies the need for organising a group and initiates steps to form the group. In the initial (first meetings) phase the worker and the group members meet at the place specified agency or any other place where group is likely to have it'sand initial orientation to the group's purpose and other information is given and shared. In the middle (active working) phase the group continues its deliberations and activities to accomplish its goals and in evaluation phase the performance of the group is examined vis-à-vis the group purpose and members, goals. Finally, in the ending or termination phase the group is made to dissolve and the worker enables the members to part with each other on a goodwill note(

Social Work/ : Stages of Social Work Group Formation, n.d.-a).

78%**MATCHING BLOCK 197/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

The worker should remember the following important areas while going for group formation. 1. Planning and Group Formation The social group worker representing an agency providing services such as residential care, day-care and community work may come across situations where the services of the agency are effectively utilised by the members through a positive group experience. The needs of the group may even be identified. Once the worker identifies the need for formation of group, he/she starts planning for the formation of the group. For this the worker has to answer some questions with his/her professional background very carefully and systematically (

Stages in the Group Work Process.Pdf, n.d.-a).

100%

MATCHING BLOCK 200/546

SA

(SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

These questions are: Why is the group? Here, the worker has to look at the need for forming the group. The purpose and goals it can attain have to be conceptualised and defined. For whom the group is being formed? Here, the task is to work out type of members the group addresses to. What are the eligibility criteria to enrol a member? How many? This focus on the life span of the group in terms of time period and the number of sessions/ meetings it shall have(

Stages in the Group Work Process.Pdf, n.d.-a).

94%

MATCHING BLOCK 198/546

W

The group exists for days, weeks, months and the frequency of its meetings. How to ensure members' involvement in the group? The agreements the members and the worker enter into ensure the group processes to go on till the attainment of the purpose of the group. Keeping in mind these questions the broad steps at this stage are: • Formulating group objectives or purpose • Composition of group

NSOU ? PGSW-III 84 •

94%

MATCHING BLOCK 199/546

W

Size of the group • Enrolling the members • Contracting Formulating Group's objectives: Here the worker has to be clear in his mind as to why the group is being conceived and what it is addressing itself to. The purpose has to be expressed in a well-defined statement's. It shall not be confusing and shall not give any scope for suspecting its genuineness as to group's broad aim of helping the potential needy members. Therefore, it shall be formulated in simple statements. It shall provide answers to the potential members as to what to expect and to what extent their participating in the group is beneficial. A well-defined statement of the purpose also takes care of unnecessary members to join the group. It also enables the agency that the formation of the group is within the confines of the agency's areas of operations and is not against its interests and services. It also enable the sponsors and other resource agencies what to expect from the group. Composition of Group: Once the group is established then the worker should look into what shall be the composition of the group. Should it be homogeneous in its composition or heterogeneous? Homogeneity indicates sharing common features among the group members such as age, educational background, social class, and other interests. Homogeneity helps in building the group bond faster which is a decisive force in group process.

100%

MATCHING BLOCK 202/546

SA

(SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Heterogeneity addresses to the need for diversity of certain characteristics of the members such as the length of time suffering with or coping with the problem, the efforts put into deal with the problem, the emotional state besides the other demographic attributes. Diversity ensures sharing of each other's situations, making comparisons, finding alternatives, and stimulates each other. At the same time it poses problems of acceptance and involvement (

Participant Manual - Social Welfare - Part 3.Pdf, n.d.).

100%

MATCHING BLOCK 201/546

W

Therefore, it is an important task for the group worker to decide the composition of the group keeping in mind the broad purpose and the individual member needs and goals (

Participant Manual - Social Welfare - Part 3.Pdf, n.d.).

NSOU ? PGSW-III 85

93%**MATCHING BLOCK 203/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Another aspect that has to be considered is whether to have an open group or a closed group. In open group there are no restrictions on joining the group from the point of the time. One can be enrolled into the group any time during the life of the group. While the closed group stops enrolment of members after the stipulated time of admission. Opting for open or closed group depends on the purpose, the goals and the time frame set for the group. Size of the Group: How many members shall compose the group? What shall be the ideal size? What are the criteria to determine whether the size of the group is too big or small (Participant Manual - Social Welfare - Part 3.Pdf, n.d.)? All these questions are there in the mind of the worker There are no hard and fast rules to determine the size of the group. It basically depends on the purpose of the group and manageability from the point of time, space, funds and some form of controls that need to be introduced. Small size is easy to manage, cohesive

and it provides higher levels of interaction (Participant Manual - Social Welfare - Part 3.Pdf, n.d.).

97%**MATCHING BLOCK 204/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Enrolling Members: Once it is decided to form the group and other modalities of the group viz., group's purpose, composition and the size of the group have worked out, then the next step is to enrol the group members. Here, the worker has to make arrangements to inform the potential members about forming the group. The information may be given directly to the potential members or passed through a notice in the agency's notice boards, a circular to the staff and other agencies concerned and by advertising in the media such as newspapers, local channels etc., and seeking applications from the interested members. The prospective members may approach either directly or by sending in their applications (

PG_M.S.W._Social Work_349 21_Social Group Work_MSW.Pdf, n.d.).

100%**MATCHING BLOCK 205/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

The worker has to examine the applications as to the suitability of the candidates on the basis of eligibility criteria established. The criteria include extent of need, urgency of intervention, demographic attributes, experience, and other skills. The worker can also arrange interviews with the applicants to ascertain their suitability (

PG_M.S.W._Social Work_349 21_Social Group Work_MSW.Pdf, n.d.).

100%**MATCHING BLOCK 207/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

By interviewing the applicants the worker can also explain to them about purpose of the group and dispel some of their doubts about joining the group. Once the

NSOU ? PGSW-III 86

100%**MATCHING BLOCK 206/546****W**

worker completes the screening, the suitable applicants are enrolled into the group (

PG_M.S.W._Social Work_349 21_Social Group Work_MSW.Pdf, n.d.).

92%**MATCHING BLOCK 208/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Contracting: At the time of enrolling the members the worker and members have to enter into an agreement and certain conditions are followed during the course of group work. It consists of a statement of general responsibilities of the members and the worker during the life of the group. Some of these include assurance to attend the group sessions regularly, to complete any task or work assigned, maintain the confidentiality of the discussions of the group, not to indulge in a behaviour that is detrimental to the well-being of the group (

PG_M.S.W._Social Work_349 21_Social Group Work_MSW.Pdf, n.d.).

98%**MATCHING BLOCK 209/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

The contract also specifies the fees or charges if any for undertaking certain activities and for procuring any material, as well as the penalties or fines the member/s has to pay for any violations of the terms of contract. The contents in the contract are subjected to revisions to accommodate some unforeseen developments as the group process unfolds. The contract may be in written or an oral understanding. The contract binds the worker and members to planned schedules of the group and facilitates an environment to conduct the group processes effectively (

PG_M.S.W._Social Work_349 21_Social Group Work_MSW.Pdf, n.d.)

98%**MATCHING BLOCK 210/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

Finally the worker has to prepare a stage for beginning the group proceedings. She/he has to procure a conducive place for group sessions either in the agency itself or any other suitable place, arrange for monetary back up, and gather necessary information and material. And make such other preparations for launching of the group. Initial Meetings: In this section we are looking into what are the tasks the worker and members have to undertake to begin the group. In fact it is the most crucial stage as the success or failure of the group depends on how well the initial meetings are handled by the worker. The members attend the meeting with a lot of expectations. Member attends the meeting with the hope that time has come to get over the problem that has been affecting them over a (long) period of time. How much of it is going to be solved? They are also enthusiastic to meet and interact with others whom they have not met before and who are also having similar needs/problems. They will look forward to

NSOU ? PGSW-III 87

100%**MATCHING BLOCK 211/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

having new social experiences. While on the other hand members many entertaining a number of doubts about the competence of the worker and whether participating in this group exercise can really deal with their problems effectively. They are also having a number of fears. They do not know what type of persons are the worker and other members (

Stages in the Group Work Process.Pdf, n.d.-b).

99%**MATCHING BLOCK 212/546****SA** (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

The steps involved in this stage are self- presentations by the worker and the members, orientation about the group, goal formation, structuring the group session and reviewing the contract Self-presentations: As soon as the group is convened for the first time, the worker takes the initiative of making the group members feel comfortable by friendly greetings with each and every member. Once the members are settled comfortably then the worker introduces himself/herself giving personal and professional details. The worker shall give adequate information about himself/herself as possible so that it not only makes members confident about the worker but it also act as guide as to the details of information they have to disclose when their self –presentations turn comes. After that the members are asked to introduce themselves. This exercise of introductions shall be planned in such a way that it will help the members to feel at ease, and come out with more details about their situation(

Jagadish, n.d.).

96%

MATCHING BLOCK 213/546

SA (SP NSOU 12-7-2016) final Content Write up_ fo ... (D21119376)

The worker should make them understand that the more the details they give the better will be their understanding about each other and will make a way for developing trust which is very important for effective results. There are a number of ways of introductions. The worker can employ any of such introductions keeping in mind the group's purpose and composition of the group. One way is to sit in a circle and introductions start in either clockwise or anticlockwise direction. Another way is the members are divided into pairs and each pair is asked to exchange information about each other and then one member of the pair introduces the other and vice versa. Orientation about the Group: After the self-presentations the worker shall orient all members about the broad purpose of the group for which it is formed. Here the worker spells out circumstances that paved the way for forming the group. How their disadvantage/s are likely overcome through the participation in subsequent group processes. Members are told explained about the functions and the roles of both the worker and the members. The NSOU ? PGSW-III 88 worker also mentions previous experiences if any, so that members develop confidence in the worker as well as the strategy of adopting group work as a viable alternative. Members are encouraged to seek clarifications as to the relevance of the group's purpose to their needs or problem situation. The worker also explains the agency's background. Goal Setting: In this step, the goals of the group are framed. Goals are statements of desired levels of change in behaviour or in social situation or in physical conditions to be achieved at some future time. The purpose of the group, agency's purpose, the needs of the individual members and the modalities of conducting the group—Then norms of conduct — determine the goals. The worker assesses the individual needs of the members and in consultation with them frames the goals. Toseland and Rivas (1984) specified three areas of goal formation. First area covers group centered goals that revolve around the conduct and maintenance of the group. Second area consists of common group goals that address to all concerned people worker, members, agency, sponsor, and finally the third area is concerning individual member centered specific goals. The goals are again viewed as ultimate goal and a number of intermediary goals (Rose, 1973; Jagdish, n.d). The ultimate goal indicates what final change in the status quo is to be attained while the intermediary goals that facilitate attainment of ultimate goal. These intermediary goals are formulated session-wise and / or stage-wise that is from the reference of time or progress made (

Konapka (1958) emphasises that while framing the goals, care shall be taken to see that these are complementing and supplementing rather than conflicting and contradicting each other. Some examples of the goals are: • The parents of mentally retarded children join a group to learn some better ways of coping up with the challenges of upbringing their wards — the general need of the group members.; • The purpose of the group is to provide a platform for the parents of mentally retarded children to share and exchange their skills in upbringing of the children— the purpose of the group formation. • Agency's purpose is to make parents take more responsibility in bringing up their mentally retarded children.

A parent's specific need is to learn to tackle the aggressive behaviour of his/ her child and to make his/her spouse and other family members to accept the child. • The group centred goal is that all members will share their problems without any reservations and will not waste the group's time by indulging in irrelevant issues. All these are complementing and supplementing each other. For example, if the goal of joining the group is to question the policies of the agencies or to demand for more facilities then the goal is not complementary to other goals and create problems in attaining other goals, therefore, should not be included. Structuring Group Session: Structuring the group session involves two aspects. First is structuring the time and the second addresses to the pattern of interactions. The group has to work out how much time has to be allotted to each session, to each activity and to each member. The group has to evolve the modalities of adhering to the time schedules. It has also to work out alternatives in case of failure to adhere to the time schedules. For example it has to spend 30 minutes for a video show but because of the electricity failure, the video could not be played. Instead of idling away the time the group can have a discussion focused on the theme of the videotape. The interactions among the members and between the members and the worker have to be structured. Structuring the interactions includes how to address each other, how to and when to intervene and interrupt how to encourage docile and shy members to participate and control the domination of some members. It also includes certain group norms that are to be followed strictly by the members. Reviewing the Contract: At the time of enrolling, the members and worker entered into an agreement of working together. At that time the members might not have good understanding about the whole exercise. After attending the orientation and having initial interactions with the worker and with each other, members and worker may feel the need to change some conditions of the contract, for example, the frequency of meetings, time and duration of the meetings, and the fees etc. The contract is reviewed and new clauses are introduced or some clauses are deleted from the original contract with mutual NSOU ? PGSW-III 90 consent. Creating an environment that is conducive for the healthy conduct of the group session is a continuous process. The physical arrangements, financial back up and mobilising resources are the areas the group members and the worker have to work on(

Social Work/ : Stages of Social Work Group Formation, n.d.-a). This is very essential as it will help in updating felt needs of the members in group activities. Middle or Active Working Phase(Social Work/ : Stages of Social Work Group Formation, n.d.-a):
