PREFACE In a bid to standardize higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses viz. core, generic, discipline specific general elective, ability and skill enhancement for graduate students of all programmes at Honours level. This brings in the semester pattern, which finds efficacy in sync with credit system, credit transfer, comprehensive continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility of choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry their acquired credits. I am happy to note that the University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade "A". UGC (Open and Distance Learning Programmes and Online Programmes) Regulations, 2020 have mandated compliance with CBCS for U. G. programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Under Graduate Degree Programme level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning Materials (SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English/Bengali. Eventually, the English version SLMs will be translated into Bengali too, for the benefit of learners. As always, all of our teaching faculties contributed in this process. In addition to this we have also requisitioned the services of best academics in each domain in preparation of the new SLMs. I am sure they will be of commendable academic support. We look forward to proactive feedback from all stakeholders who will participate in the teaching-learning based on these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success.

Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

Printed in accordance with the regulations of the Distance Education Bureau of the University Grants Commission

Module I Ancient Bengal : Geography, Regional Subdivision and Population Structure 11

12

Unit-1 □ Eastern India : Geography Structure 1.0 Objective 1.1 Introduction 1.2 Location 1.3 Physiographical Classification

1.4 River Systems 1.5 Soil 1.6 Vegetation and agriculture 1.7 Climate 1.8 Conclusion 1.9 Model Questions 1.10 Suggested

Readings 1.0 Objective • The objective of this unit is to study the broad geographical and ecological setting of eastern

India. • The learners will study the landscape, the riverine system, and the ecological perspectives of the eastern region

of India. • The present unit will also help the learners to understand the vegetation and agricultural condition of eastern

India. • The climate of eastern India will also be a theme of study of the present unit. 1.1 Introduction History and

geography are closely related two disciplines. Geographical factors have important influences on the various cultural

aspects on any region. Therefore it is needless to say that the geographical environment of ancient Bengal had 13

14 NSOU • GE-HI-11 immense influence in making of the socio economic politico cultural scenario of ancient Bengal.

According to Beajeau-Gariner, 'A region is the spatial unit distinct from the space that surrounds it'. Most of the

geographers found this fundamental constituent of a region in Bengal and declared Bengal as a definite geographical

region in the subcontinent of South Asia, consisting of Ganga and Brahmaputra Delta with the very specific and distinct

geographical contours and features. The structural evolution

of the Bengal basin with the extensive well-defined old allusion land tracts, comparatively new alluvial land, the largest

delta

of the world and heavy monsoons are the landmark geographical features of the region. The flatness of the region, bounded by the Rajmahal hills on the North West and the Lalmai and Chittagong ranges on the South East, creates a low lying land, gradually sloping from the high plateau of the North towards the Bay of Bengal.

Bengal is located on the eastern frontier of the Indian subcontinent and a 'transition zone' with a comparatively narrow land bridge between South Asia and mainland

of South East Asia. The many rivers and their tributaries, distinctive water bodies and climatic condition add new dimensions to the geographical features of the land of Bengal. 1.2 Location Bengal lies between 20°34" N and 26°38" N latitudes and between 88°01" and 92°41" E longitudes convening 143,998 square km and comprising, according to the recent estimates, a population of about 110 million. The average density of population per square km has been estimated to be 714 but it should be more now. It is bounded on the east by the Indian states of 'Assam' and 'Tripura' and on the south east by the Indian state of West Bengal and on the north by the Indian states of Meghalaya and Assam. To the South of Bangladesh lies the Bay of Bengal. Before 1947 it was the largest province and the eastern most part of the British India. The province of Bengal has the most varied environmental condition. 1.3 Physiographical Classification The term physiography denotes the scientific study of the combination of the geological material in which particular kinds of soil have formed and the landscape in which they occur. In terms of physiography the entire region of present day West Bengal and Bangladesh or former Bengal province of the British India can be

NSOU • GE-HI-11 15 divided into several sub regions and units. B.L.C. Johnson divided this region into nine physiographical units. Ohkspate divided Bengal into three major parts like the northern para delta – the Ganges and Brahmaputra doab, the eastern margin and the delta proper in the South. With the development of the study of physiography more detail physiographical classification has been done by the scholars in this region. Nowadays it is almost divided into 24 sub regions and about 54 units on the basis of physical features and drainage patterns. Some of the important physiographical units are as follows : 1. Old Himalayan piedmont plain 2. Tista flood plain 3. Karotoya-Bengali flood plain 4. Lower Atrai basin 5. Lower purnabhava floodplain 6. Brahmaputra flood plain 7. Ganges river flood plain 8. Ganges tidal flood plain 9. Gopalganj – Khulna bils 10. Arial Bil 11. Meghna river flood plain 12. Meghna Estuarine flood plain 13. Surma-Kusyara flood plain 14. Northern and eastern piedmont plains 15. Chittagong coastal plain 16. St. martin's coral island 17. Barind tract 18. Madhupur tract 19. Northern and eastern hills 20. Akhaura terrace 16 NSOU • GE-HI-11 Among these regions most important are the flood plains of Tista, Brahmaputra, Ganges and the tidal flood plain of the river Ganges. Professor H.C Roy Chowdhury tried to compare the physical division of Bengal region with the politico historical divisions of the same. According to him "

the hand of nature has split up the province into four grand divisions which fairly correspond to its major political divisions in historic epochs. North of the main branch of the Ganges, now known as the river Padma, and west of the river Brahmaputra, lays the extensive region which embraces the modernRajshahi Division and the district of Coochbihar. The most important part of this area constituted the ancient land of Pundravardhana of which Varendri was a well-known district (mandala). West of another branch of the river Ganges, namely the Bhagirathi or the Hooghly, stretches the great Burdwan Division–the Vardhamanabhukti of the ancient times. A considerable part of the area was adjacent to the flourishing

territory of

ancient Radha. Between theriver Bhagirathi, the river Padma, the lower reaches of the Brahmaputra and the estuary of the Meghna lies the central region of Bengal embracingthe bulk of the Presidency Division and a considerable portion of the Dacca Division.

This area was known to Pliny and Ptolemy as the territory of the Gangaridai, and to Kalidasa as the land of the Vangas who were specially noted for their skill in handling boats. Beyond the Meghna in the east stretches the Chittagong Division within whose embrace are supposed to lie the buried remains of the royal seat of Samatata. It has to be noted that the division of ancient Bengal referred to above at times transgress the limits set by the nature. 1.4 River Systems Bengal is the land of rivers since ancient times. In fact this may be regarded as the main features of the territory of Bengal. The most important two rivers among almost 230 major and minor rivers of this territory are the river Ganges and the river Brahmaputra. The river Tista is also very important. Since ancient times Tista is a major source of water for a number of minor rivers and channels of north Bengal. In ancient times another important river of the northern region was Karatoya. But now it is almost dried. The river Ganges formed the most important and elaborate drainage system of Bengal originated from Gomukha glacier in the Himalayas the river flowed eastward and enters the province of Bengal of the point where the low line Rajmahal hills almost touch its waters.

It is not a mere accident that the famous capital cities like

NSOU • GE-HI-11 17 Gauda, Lakshmanavati, Pandua should have grown up in the neighborhood of this salient.

According to Matsya Purana the river Ganges flow through Rajmahal, Santalbhumi, Chhotanagpur, Manbhumi, Dhalbhum, Brahmatata or northern Rarh, Vanga and Tampralipi. But later by the 18th century CE this course has been changed.

The main branch of the river Ganges or Bhagirathi is known as the river Padma. This river flowed more eastward. At first the river Padma was not the main stream. By the beginning of the 16th century CE other stream of the river Bhagirathi has shrunk to a very shallow stream. Thus the other stream known as the river Padma became the main stream of the river Ganges. The river Padma also changed its course from time to time. The river Brahmaputra and the Meghna joined with the river Padma in its lower course. Most of the rivers of north Bengal generally flowed southward and joined into the river Ganges and the river Brahmaputra. Among these the river Tista, Mahananda, Torsa, Koshi etc. are very important. The river Tista is comprised of three big channels – Karatoya, Purnavaba and Atrai. The land of Bengal can also be regarded as the land of rivers. This is the most important geographical feature of this land. The fertile agricultural bed of Bengal is the creation of these rivers and channels. But at the same time

the frequent changes in the course of these rivers have been responsible for the ruin of many old places.

Sometimes it is done by washing them off and sometimes by making them unhealthy and inaccessible. Professor H.C Roy Chowdhury gives a detail description of the role of river system in the destruction of old places. According to him

the shifting of the beds of the Koshi river gave rise to the swamps and flood that contributed to the ruin of the city of Gauda. The capricious Padma river has swept away so many cities and villages within living memory, that we can well imagine the devastating effect of this and other rivers on the province of Bengal. In addition to the frequent shifting of courses, the vast deposit of silt by the rivers in the deltaic region, between the river Bhagirathi and the river Padma, has been a potent instrument in changing its physical aspect to a considerable extent. For the deposit of silt constantly raises the level of land in some areas and makes the other regions comparatively lower and water logged. The vast Sundarbans area in the delta offers an intriguing problem. Many hold the view that the Sundarbans had once been a population tract but were depopulated by the ravages of nature and the depredations of marauding peoples like the Maghs and the Portuguese. HIS GE-HI-11 & 21–2

18 NSOU • GE-HI-11 1.5 Soil It is already mentioned earlier that the land of Bengal is a gift of its extended river system.

Therefore, it is quite natural that the soils of Bengal are mostly made of Alluvium. In terms of physiography the soil types can be divided into three broad units such as flood plain soil, hill soil and terrace soil. The flood plain soils are further divided into 13 categories, such as, (1) Calcareous alluvium; (2) non- Calcareous alluvium; (3) Calcareous brown flood plain soil; (4) Calcareous grey flood plain soil; (5) Calcareous dark grey flood plain soil; (6) non-Calcareous grey flood plain soil; (7) non-Calcareous brown flood plain soil; (8)

non-Calcareous dark flood plain soil; (9) Black terrain soil; (10) acid basin clays; (11) acid Sulphate soil; (12) Peat; and (13) grey Piedmont soil. The terrace soil can be divided into following categories – (1) shallow red brown terrace soil; (2) deep red brown terrace soil; (3) brown mottled terrace soil; (4) shallow grey terrace soil; (5) deep grey terrace soil; and (6) grey valley soils. Another important category is the artificial or the manmade land. Sometimes soil raised artificially on

cultivation platforms. This is known as the artificial land. 1.6 Vegetation and agriculture The fertile lands of Bengal possess varieties of natural vegetation. The most common trees are mango, jackfruit, banyan, shirish, palm, bamboo and coconut. Other than these Teak, Mahagani, Shaal etc. and the Mangroves like Sundari, Goran and Geonya are also very

important trees. The agriculture of Bengal is primarily revolved round the cultivation of three main varieties of rice namely Borrow, Aus and Aman. Sugarcane is another important agricultural product Bengal. 1.7 Climate Bengal belongs to

tropical climate. The temperature begins to rise from about the end of the month of March and reach in its zenith during the months of May and June. Temperature goes on declining from October to December. The months of December and January are the coolest period. Traditionally the season cycle of Bengal is divided into 6 seasons such as summer,

monsoon, autumn, late autumn or

NSOU • GE-HI-11 19 dewy, winter and spring. Annual rainfall of Bengal ranges from 60 to 200 inches. The average of the annual relative humidity ranges from 80 per cent to 61 per cent. 1.8 Conclusion

The territory of Bengal lacks some of the extraordinary varieties of physical aspects for which the great subcontinent of India is justly famous. But in spite of these varieties of physical aspect of Bengal it made it unique.

The snow-capped peaks with cold hued crests of Darjeeling, a vast fertile plain which forms the focus of three great river systems where the country widens out into a panorama of irrigated fertility, of swamps and flats in the south cut up

by hundreds of coves and creeks, once the “Royal throne of Kings” now the residence of the lord of the jungles

are enough reasons to take pride. 1.9 Model Questions 1. Write a note on the ancient geography of eastern India. 2. Write briefly about the river system of ancient Bengal. 1.10 Suggested Readings 1.

NSOU • GE-HI-11 Unit-2 □ Historical divisions of Early Bengal Structure 2.0 Objective 2.1 Introduction 2.2 A brief survey of sources 2.3 Early Politico-Geographical divisions of Bengal region 2.4 Pundravardhana 2.5 Rarh 2.6 Vanga 2.7 Gauda 2.8 Samatata 2.9 Minor Sub-divisions 2.10 Conclusion 2.11 Model Questions 2.12 Suggested Readings 2.0 Objective • The objective of this unit is to study the politico-geographical divisions of early period of Bengal's history. • The sources of early Bengal's history will be studied. • The present unit will discuss the five major politico-geographical divisions of ancient Bengal apart from the minor subdivisions : > Pundravardhan > Rarh > Vanga > Gauda > Samatata 20

NSOU • GE-HI-11 21 2.1 Introduction It is indeed a difficult task to define the geographical territory of ancient Bengal as there was no 'Bengal' up to 11 th century CE. But for easy convenience it would be better to take the territory of undivided British province of Bengal as our area of discussion. Prof. H. C. Raychaudhuri described the area of Bengal province in the British India as the territory

stretches from the Himalayas in the north to the Bay of Bengal in the south, and from the Brahmaputra in the east to the lower reaches of the Suvarnarekha in the west. The

early Bengal as an entity of historical geographical study in the pre-11 th century CE era consist of many units and sub-units of which five were more prominent. These five units are Pundravardhana, Radha, Vanga, Gauda and Samatata.

There were many other units, co-units and sub units also. 2.2 A brief survey of sources There is no mention of any of the units or sub-units of the ancient land of Bengal in any Vedic hymns. The earliest mention of the name Vanga can be found in Aitareya Aranyaka. The expression 'Vangavagadhah' indicates the peoples of Vanga and Magadha who according to the Aitareya Aranyaka were guilty of transgression. Aitareya Brahmana also mentions Pundras as the peoples who lived beyond the frontiers of Aryandom and were classed as

Dasyus. First clear mentions of Vanga occur in the ancient Epics and the Dharmasutras. Most of the old Dharmasutras like Bodhayana, also considered Vanga as the region inhabited by the peoples who belonged to inferior culture which lay outside the pale of Vedic culture. A changed view can be traced in the Epics. Mahabharata shows a clear picture of eastward Aryan migration process. Here Bhima, the second eldest brother of the Pandavas, undertakes a decisive campaign in the land of the present-day Bengal. In Ramayana, the peoples of Vanga are no longer shunned as impure barbarians. Rather they entered into intimate political relations with high-born aristocrats of Ayodhya.

In Jain and early Buddhist texts regular mentions of Vanga and Pundra can be found. Later historical texts like the Greek records, Periplus of the Erythraean Sea, Milinda Panha and others contain scattered references of Bengal region. From the 4 th century CE onwards some epigraphic records also found which enable us to trace more clearly the politico-geographical divisions and administrative units of Bengal.

22

NSOU • GE-HI-11 2.3 Early Politico-Geographical divisions of Bengal region As I have mentioned earlier that although there were many politico-geographical units and sub-units in the region we generally regard as Bengal, but the most prominent of them were five units. These are Pundravardhana, Radha, Vanga, Gauda and Samatata. A brief description of these units and other smaller units are given below. 2.4 Pundravardhana Later Vedic texts and the Epics contain some scattered mentions of the Pundras and most of these texts describe them as the inhabitants of Pundravardhana – a land situated at the east of Monghyr. However these texts could not provide us any clear picture of this region. The Mahasthangarh Fragmentary stone inscription may be regarded for providing the earliest clear reference to Pundravardhana as a political division during the Mauryan period. On the basis of epigraphic records and other texts the territory of the Pundras can be placed in north Bengal. Most of the scholars suggest Mahasthangarh as its capital. The political history of Pundravardhana is also not clear to us. Since Mahasthangarh inscription of the Mauryas mention about Pundranagala, which is the Prakritized form of Pundranagara of the Sanskrit records, therefore it confirms the identification of Pundranagara with Mahasthangarh and indicates that the Pundra region formed an administrative division within the Mauryanempire. Further epigraphical references begin to occur from the Gupta period onwards. The expansion of Magadhanempire during the Gupta periodwitnessed some changes in the territorial organization of the areas subsumed under the empire. The region corresponding to Bengal could not escape the changes brought about by the expanding influence of the imperial Guptas. The contents of the MehrauliPillar inscription of Chandragupta I, the Allahabad Pillar inscription of Samudragupta have been interpretedby scholars to suggest that this region was part of Gupta empire. The Damodarpur copper plate of Kumaragupta I, dated c. 448 CE, refers to the bhukti or province of Pundravardhana which was important enough to have a governor appointed by the Emperor himself. The Paharpur copper plate of Kumaragupta I also refers to Pundravardhana and its city-council, which is dated c. 479 CE. Budhagupta's second Damodarpur copper plate also refers to Jayadatta, the viceroy of the province NSOU • GE-HI-11 23 of Pundravardhana. Another Gupta inscription dated about 543 CE refers the provincial governors of Pundravardhana as Devabhattacharaka which means the son and the favourite of the Emperor. In some Gupta inscriptions traces of many visaya can also be found within the bhukti of Pundravardhana. In the Pala-Sena inscriptions Pundravardhanabhukti includes a large number of administrative units and sub-units. Many of these administrative units yet not been clearly identified. But there is no doubt that the bhukti was a much larger province during the Gupta period as well as the Pala-Senaera. Although there is no clear evidence of the extension of the bhukti but it seems that virtually the whole of modern Bangladesh fell within the ancient Pundravardhanabhukti, apperently from the Pala-Senaperiod onwards, if not earlier. In the inscriptions of Bengal the name Pundravardhana was changed into Paundravardhana in the early part of the 12 th century, when it occurs first in the Manahali inscription of Madan Pal and remained in use till the end of the Sena rule. The Rajatarangini of Kalhana mentions Pundravardhana as the capital of Gauda which is also proved by a reference in Purushottam'slexicon dated about 11 th century CE. By the 3 rd quarter of the 12 th century CE, the city of Pundranagara lost its importance as the ruling Sena kings shifted their capital to Gauda. Towards the end of the 13 th century CE or the beginning of the 14th century CE

Pundravardhana region was occupied by the Muslim invaders. 2.5 Rarh One of the most important division of ancient Bengal region was Rarh. Broadly it was divided into two parts viz. DakshinRarh or south Rarh and Uttar Rarh or north Rarh. By the end of the 6 th century CE this region was divided into several smaller regions like Kankagram-bhukti, Vardhamana-bhukti, Danda-bhukti etc. By around 9 th century CE previously mentioned south and north divisions replaces apparently the older segmentation of the area into Vajjabhumi and Subbhabhumi. The southern part of Rarh-bhumi included present day Howrah, Hooghly, Burdwan districts. The northern part included presentdayMurshidabad and Dinajpur districts. The Chola inscriptions refer UttaraRarh region as Uttiralabam. Belava and Naihati grants also mentioned UttaraRarh and these records include it within the Vardhaman-bhukti. During the reign of Laxmanasena it formed part of the Kanakagram-bhukti. Danda-bhukti was an ancient and medieval territory spread apporximately what are now Bankura, Hooghly, Paschim Midnapore and Purva Midnapore districts. This fell within the territory of Dakshin Rarh. Usually the river

24 NSOU • GE-HI-11

Ajay regarded as the border line between north and south Rarh. Some scholars prefer taking the river Khari as the border line between the two parts. The Jain records mentioned Kotivarsha as a city in northern Rarh. Scholars have identified this place with Bangarh of Dinajpur district. This clearly indicates the northern limit of the division. According to the twin Midnapore copper plates of SasankaDandabhukti of southern Rarh was an independent feudatory state Maharaja Somdatta and Mahapratihara Shubhakirti were its feudatory rulers under Sasanka. Although Digvijaya- Prakasha restricts the area of dakshin Rarh within the territory lying north of the river Damodar but epigraphical references clearly show that the southern boundary may have reached the river Rupnarayana and the western boundary may have extended beyond the river Damodar and stretched uptoArambagh subdivision. During the reign of Lakshmanasena northern Rarh was attached to the Kankagram- bhukti. It is still not very clear that from which region the bhukti derives its name. Some scholars suggested Kankajol near Rajmahal as the original land of the ancient Kankagram. Some scholars recognise it as the Kogram village near Bharatpur in the district of Murshidabad. Some scholars also suggest

57%

MATCHING BLOCK 1/3

W

that the bhukti of Kankagram represents the old kingdom of Gauda – Karnasubarna mentioned by Varahamihir, Banabhatta and Huen Tsang.

Kankagram-bhukti was further divided into many administrative sub-units called vithi. During the Pala Sena era the Rarh region mostly included within the territory of Vardhamana-bhukti. The Pala Sena records mentioned the main sub-division of the Vardhamana-bhukti as – Danda-bhuktiMandal, PashchimKhatika, DakshinRarh and UttaraRarhMandal. Thus the territory of Rarh region changed from time to time. By the end of the 13 th century some of these regions also came under the pale of the Muslim rule. 2.6 Vanga The earliest reference of Vanga is found in Aitareya Aranyaka, where it is mentioned as the land of the non Aryans. Ancient Epics and the Dharmasutras mention several times the name of Vanga. According to Bodhayana Dharmasutra Vanga situated at the outside of the pale of Vedic Aryan culture. But some incidences mentioned in the Epic Ramayana show a tendency towards the incorporation of the Vanga people within the Aryan culture.

NSOU • GE-HI-11 25 Apart from literary sources

it is mentioned in the Mehrauli inscription of king Chandra, records of the Chalukyas of Vatapi, Kamayuli copper plate grant of Vaitya Deva, and various grant records of the Pala kings and Sena kings are important inscriptional sources. It is indeed a difficult task to separate references of Vanga as ethnic name and a geographical sub-division of a particular land. One should keep it in mind that the land of Vanga of the ancient records is not synonymous to the geographical territory of present day Bengal. Kalidasa in the Digvijaya section of the Raghuvamsham places

the region amidst the strain of river Ganges. The western boundary of Vanga probably extended beyond the hooghly to the river Kamsabati or Kansai (Kapisa) in the district of

Midnapore. Some scholars suggested that during the Pala-Sena era the territory of Vanga sub-division was curtailed and formed a new sub-division called Vardhamana-bhukti. There is a confusion among the scholars regarding the existence of Tamralipti within the territory of Vanga. According to Prajnapana, a Jain Upanga, Tamralipti was a port-city of Vanga. But probably during the Pala-Sena era

it could not have extended as far as Tamralipti as the region beyond the river Bhagirathi now formed part of Vardhaman-bhukti. Kamayuli copper plate grant mention 'Anuttaravang'. Scholars interpret it as south Vanga which means there by a division of Vanga into two parts – north and south. According to H. C. Raychaudhuri, ' the two divisions of VangaimplidingVaidya Deva's grant may have corresponded roughly to the two bhagas of the

some territories mention in the latter Sena inscription namely the Vikramapura-bhag and Navya'. In some inscriptional records another term also found – the term Vangala. Vanga and Vangala are obviously related with each other. According to the Tirumala rock inscription of RajendraCholaBangladesha was located immediately after Takkanaladam which means southern Rarh. Using this reference R. C. Majumdar concluded that there is no doubt that Bangladesh refers to southern Bengal. Some scholars argued that Vanga and Vangala denoted are two separate tracts of land. For them Vangala was probably identical with Chandradwip which often identified with Barisal. It may be included some parts of present day Noakhali and Khulna region. According to A. K. M. Yakub Ali, 'like other Janapadas, the territorial jurisdiction of Vanga, with the change of political power, extended at times beyond its boundaries, or contracted within its limits. As such, it is hardly possible to determine its exact boundaries. But the sources at our disposal enable us to hypothesize that at least in the 12 th century AD, Vanga.... generally corresponded to the eastern and southern

26 NSOU • GE-HI-11 Bengal, lying on the eastern side of the river Bhagirathi, and comprising mainly, as it appears, of modern Chittagong and Dacca divisions'. Thus the geographical definition of Vanga changed from time to time. Earlier it has more extended territory but gradually it lost some of its regions due to the emergence of more smaller administrative sub-units. By 13 th century the Muslim rulers conquered this region established their hegemony.

2.7 Gauda The emergence of Gauda kingdom marked an important benchmark in the history of Bengal. But the region has a much early history. Panini in his grammar book Ashtadhyayi refers Gaudapura. Kautilya also mentioned the rich products of Gaudadesa in his Arthashastra. This was known to Vatsyana, the author of the Kamasutra; Kalidasa and many others. According to Varahamihir Gauda was different from the other parts of Bengal. Bhabhisya-Purana mentions Gauda as a region located between the north of Burdwan and south of the river Padma. Varahamihir in his Vrihatsamhita distinguish Gaudaka from particularly Pundra or Pundravardhana-bhukti, Tamraliptika or Tamralipti, Vanga Samatata, and Vardhamana-bhukti. Gauda as a kingdom emerged during the decaying phase of the Guptas. Sasanka was the most prominent ruler under whose reign Gauda reached in its zenith. It is generally believed that Sasanka has established his capital city at Karnasuvarna located near Rangamati, around 12 miles south of present day Murshidabad. Most of the 7 th century CE-writers describe the kingdom of Gauda-Karnasuvarna. But AnarghaRaghava, a late 8 th century Kavya written by Murari mentions Champa as the capital city of Gauda instead of Karnasuvarna. Some scholars argued that Champa is probably identical with Champa-nagari which stood on the left bank of the river Damodar near the city of present day Burdwan. During the rule of the Pala kings Gauda came under the pale of the Pala empire. At first the Pala rulers commonly obtain the title of Vangapati. But the later Pratihara and Rashtrakuta records refer the Pala kings as the Gaudeswara. Probably from the later regnal days of Dharmapala the title Gaudeswara became the official style of the reigning emperors. Even earlier Gauda and Vanga are sometimes mentioned side by side but political union under the same sovereign ruler styled both Vangapati and

NSOU • GE-HI-11 27 Gaudeswara was first making them interchangeable terms. Around the 12 th century CE the Gaudarashtra is said to have included Rarh and Vurishreshthika (probably Vurshut on the banks of Damodar in the Hooghly-Howrah districts). The Jain records of the 13 th and 14 th centuries mention that Gauda included Lakshmanavati in the present Malda district. Sometimes the term Gauda used in a very extended sense. For example the expression Pancha-Gauda is taken to embrace besides Gauda proper the countries known as Sarasvata (Eastern Punjab, Kanyakubja, Gangetic Doab), Mithila (north Bihar) and Utkal (northern

Odissa). During the early Muslim rule Gauda became synonymous to Lakshmanavati of Malda district. Gradually it lost its importance and incorporated within the territory of Subeh-Bengala. 2.8 Samatata Samatata region is often identified with present day Tripura-Noakhali region. But this location is also not beyond doubt. The punch-marked coins and other archaeological evidences like Wari-Bateshwar ruins indicate that Samatata was a province of the Mauryan empire. The Allahabad pillar inscription of Samudragupta and other later records of the imperial Gupta rulers describe Samatata as a tributary state. The Vrihatsamhita of Varahamihir distinguishes Samatata from Vanga. Famous archaeologist Dilip Kumar Chakravarti considers Wari-Bateshwar to be a part of the trans-Meghna region. In his words, 'it appears that Wari-Bateshwar belongs to the Samatata tract. Till now this is the only early historic site reported from this tract, but the very fact that it existed as early as the mid-5 th century BCE in this part of Bangladesh shows the geographical unit of Samatata, although inscriptional record documented it in the 4 th century CE, has a much earlier antiquity which touches the Mahajanapadas period. Secondly, on the basis of the fact that Wari-Bateshwar is a fortified settlement, we argue that in addition to its character as a manufacturing and trading centre, it was also an administrative centre and most likely to be the ancient capital of the Samatata region'. It is generally believed that during the declining phase of the Mauryanempire the eastern part of Bengal became the flourishing state of Samatata. But any satisfactory information regarding any rulers of this state has yet not been obtained. After the decline of the imperial Guptas two independent dynasties flourished in this region. These are Khadga dynasty and Chandra dynasty. The Khadga rulers were originally from Vanga region. According to the Chinese record Khadga rulers

28 NSOU • GE-HI-11 established their capital at Karmantavasaka. This city is generally identified with Badkanta near Kumilla and Tripura. The most important ruler of this dynasty was Rajabhata. The Chandra rulers were ruled over Samatata, Vanga and Arakan region. They were the followers of Buddhism. As a result of this Samatata region became a flourishing centre of Buddhism during their rule. Maynamati was another important religious and administrative centre of the Chandra rulers. Samatata continued to play an important role in the local history of Bengal until the Muslim conquest of Bengal in the 13 th century. 2.9 Minor Sub-divisions Apart from the above mentioned five divisions of the territory of Bengal there are many other minor sub-divisions existed in different times. Mention may be made of Harikela, Chandradwipa, Tamralipta, Suvarnavithi etc. Harikela is often mentioned as a country in some 7 th century literature. Chinese traveller I-Tsing mentioned it as the eastern most limit of east India. Karpuramanjari and Arya Manjusri Mulakalpa mention Harikela as a distinct entity. According to Prof. Dilip Kumar Chakravarti Harikela is probably synonymous with the Chittagong area including Sylhet. It was dissociated from Vanga throughout the ages. 2.10 Conclusion In conclusion it may be said that the territory inhabited by the Bengali speaking people stretches from the Himalayas in north to the Bay of Bengal in the south.

The geo-political boundaries of Bengal changed from time to time. In fact there was no 'Bengal' in the ancient time. The region what today known as Bengal was divided into several units and sub-units. Among these Gauda, Vanga, Samatata, Pundra, Rarhetc were very important. Other than these there were many minor divisions like Harikela, Chandradwipa, Barendra, Suvarnavithi, Vardhamana-bhukti, Kankagrama-

bhukti etc. Since the ancient period Tamralipta got importance as a port-city. It played a very important role in the maritime trade during the ancient and early medieval periods. Thus a picture of a prosperous territory can clearly be assumed from the various archaeological and literary references on the ancient Bengal.

NSOU • GE-HI-11 29 2.11 Model Questions 1. Write an essay on the sub-regions of ancient Bengal. 2. Write a short note on Pundravardhanabhukti. 3. What are the most important sub-regions of ancient Bengal ? Write a note on Samatata-Harikela region of ancient Bengal. 4. Write a short note on Rarh. 5. Write a short note on Vanga. 6. Write a short note on Gauda. 2.12 Suggested Readings 1. Dilip K Chakrabarti, Ancient Bangladesh, Dhaka, 1992. 2. R. C. Majumdar (ed), History of Bengal, vol. I, Dhaka, 1985.

30 NSOU • GE-HI-11 Unit-3 □ The Population Structure Structure 3.0 Objective 3.1 Introduction 3.2 Ethnicity 3.3 Caste structure 3.4 Conclusion 3.5 Model Question 3.6 Suggested Readings 3.0 Objective • The objective of this unit is to study the population structure of early Bengal, • The first major aspect, which will be covered, is the ethnicity of the people of Bengal in ancient era. • The second major aspect, which will come under discussion, is the caste system and its structural formation. 3.1 Introduction Bengal is the land of Bengali speaking people who generally identified as the Bengalis. As in the previous chapter I have already mention that it is indeed a difficult task to define the geographical territory of ancient Bengal as there was no 'Bengal' up to 11th century CE. But for easy convenience it would be better to take the territory of undivided British province of Bengal as our area of discussion. The British Indian province of Bengal and the territory inhabited by the Bengali speaking people are not the same. The territory inhabited by the Bengali speaking people stretches far beyond the political boundaries of the present day West Bengal and Bangladesh or even the province of Bengal of British India. Ethnically the Bengalis are an Indo Aryan native to the Bengal region in South 30

NSOU • GE-HI-11 31 Asia, specifically in the eastern part of the Indian subcontinent, presently divided between Bangladesh and the Indian states of West Bengal, Tripura, Barak Valley of Assam, who speak Bengali, a language from the Indo Aryan language family. Bengalis are the 3rd largest ethnic group in the world. Apart from Bangladesh and the Indian states of West Bengal, Tripura, Assam's Barak Valley,

Bengali- majority

populations also reside in India's union territory of Andaman & Nicobar Islands as well as Chittagong hill tract of present day Bangladesh, with significant populations in Arunachal Pradesh, Delhi, Chattisgarh, Jharkhand, Meghalaya, Mizoram, Nagaland and Uttarakhand. 3.2 Ethnicity Although nowadays we usually generalise the people of Bengal as the Bengalis but ethnologically Bengalis are heterogeneous group divided into various caste and ethnic groups. Vedic literature indicates that the primitive inhabitants of Bengal region were different in race and culture from the Vedic Aryans. The detail history of the different races that settled in Bengal since the primitive times is difficult to trace. Broadly the people of Bengal can be classified into two distinguished elements such as the population consisting of the primitive tribes like the Kols, Sabaras, Pulindas, Hadi, Dom, Chandala and others designated as the Mlechchhas; and the other consisting of the higher classes of people which come within the framework of the caste system. The former group are the representatives of the earliest inhabitants of Bengal and the majority of them were probably descended from the non-Aryan people who referred to as the Nishadas in the Vedic literature. Anthropologically they are known as the 'Austro Asiatic' or 'Austriac' people. These primitive people formed the substratum of the population of Bengal but gradually were submerged by new waves of people with a high culture and civilisation so that ultimately they touched only the outer fringe of the so called Bengali society while the latter formed its very basis and foundation. 3.3 Caste structure Aryanisation of the subcontinent led to the tendency of resolving the varna divisions into a hierarchical order. Theoretically hierarchy was determined on the basis of the order of precedence of the qualities that the components of the different varnas exhibited in their character and actions. For instance, the Brahmans as the custodians of sattva were considered to be the purest of all. In other words, the

32 NSOU • GE-HI-11 Brahmins were believed to be the embodiment of sacredness and were regarded as gods on earth. Significantly, the degree of purity declined successively with the qualities as represented by the Kshatriyas and the Vaishyas - namely, *raja* and *tama*. The Shudras, who occupied the lowest rung of the social order, were believed to have possessed no such quality. In fact, the *PurusaSukta* hymn of the *Rig Veda*, which is considered to be a later interpolation, provided a religio-cultural justification of the hierarchical divisions based on the four-fold varna system. Aryanisation of the subcontinent led to gradual absorption of outsiders and the cultural transformation of the castes, more particularly of those occupying the lower rungs. The characteristics of the varna system were later elaborated in minute detail in the *jati* system. Subsequently, the broad-based division of labour as represented by varna found expression in the *jati* system, thereby resulting in an elaborate system of occupational distinctions and interrelations among various groups. In Bengal the gradual spread of Aryan culture led to the classification of different groups with particular occupations as distinct *jat*is. The cultivating, trading, artisan and service castes came to be recognised as Shudras in terms of varna. Indeed, the proliferation of specialised occupational groups led to an increase in the number of *jat*is, which by far exceeded the number of varnas. Significantly, the bulk of the people covered under the occupational groups of *jat*is were invested with the responsibilities of meeting the needs of the society. As a consequence the structure of Hindu society came to be understood in terms of *jati* rather than varna. Thus, slowly varna lost its significance in daily social life. In regions like Bengal where there was no Kshatriya or Vaishya group in the indigenous population, even the Brahmins were known as a *jati*, although they were also referred to as *Varnashrestha*, i. e., the highest of the Varnas. But more importantly, by emphasising the connection between *jati* and occupation, the proponents of the caste system tried to lay the foundations of an absolutely non-competitive arrangement of production and distribution that ensured the livelihood of each individual and guaranteed minimum social security. The system guaranteed production and distribution in a smooth manner within the constraints of limited resources and conditions of scarcity and stagnation that prevailed in the localised economy of India since the seventh century CE. However, variations did prevail in the caste system in different parts of India. Interestingly the impression that one gathers about the caste system, more particularly from the *smriti* literature, does not fully correspond to the social conditions prevalent

NSOU • GE-HI-11 33 in Bengal in ancient times. It needs to be asserted that none of these ancient *smritis* was composed in Bengal. Therefore attempts to garner reliable information about the hierarchical division of Bengali society based on Varna from the pages of ancient *smriti* literature would be totally unjustified. As some scholars have argued, prior to the eleventh century hardly any *smriti* literature composed in Bengal could throw light on the Bengali social scenario. Moreover, on the basis of reliable historical evidence it could only be presumed that from the eleventh century onwards compilers of Bengali social commentaries consciously accepted the very basis of the Brahmanical logic of the hierarchical division of the Hindu social order. During the Sena-Varman rule several *smritis* and other literary texts were composed in Bengal. In this context, the works of Bhabadeva Bhatta and Jimuta Vahana deserve special mention. In fact, these literary texts contain reliable information on society and history and could justifiably be utilised by historians for constructing historical narratives on Bengal's past. Apart from the *smritis* and other literary texts, Puranic and classical texts such as the *Brahma Vaivarta Purana*, *Brihadharma Purana* provides important information on Bengali society. At the same time, the genealogical texts also contain some relevant information. Similarly, there are two texts by the name of *Vallalacharita*. One of the texts was supposed to have been composed by Ananda Bhatta at the behest of the Raja of Nabadvip, Buddhimanta Khan. This text was composed around 1510 CE. However, the first and the second volumes were supposed to have been authored by Gopala Bhatta under the directives of Vallala Sena, roughly around 1300 Saka Era. The picture that one gets of the caste system in the *Brihadharma Purana* is quite different from the one that emerges from the *Vallalacharita*. In the case of the former, Kshatriyas and Vaishyas are classified differently, and the Shudras have been divided into two broad categories, namely, *Sat Shudras* (from whom higher castes could accept food and drinks) and *Asat Shudras* (whose touch was considered to be polluting). At the same time in terms of social ranking Brahmins were said to have been immediately followed by *Ambasthas* (*Vaidya*) and *Karanas* (*Kayasthas*). Similarly, *Shankharis*, *Modakas*, *Tantubayis*, *Das* (Peasants), *Karmakaras*, *Suvarnavanikas* and various other sub-castes and mixed castes (*Sankara castes*) also found a place in the narrative of the *Brihadharma Purana*. On the other hand the *Vallalacharita* offered a narrative that was much different from those of the Puranic texts. To be precise, it could be argued that during Vallala Sena's time, the caste system in Bengal HIS GE-HI-11 & 21—3

34 NSOU • GE-HI-11 underwent significant changes. For instance, according to the authors of the Vallalacharita, Subarnavanikas had been relegated to the ranks of impure Shudras and Brahmans were forbidden to supervise their religious functions. At the same time, the authors of the Vallalacharita have also stated that in order to withstand the challenge posed by the Vanik (merchant) and Das (Servile peasants), Vallala raised the Kaivartas to the ranks of sat Shudras. Moreover, it has also been averred that Malakaras, Kumbhakararas and Karmakararas too were elevated to the ranks of sat Shudras. But more importantly, it needs to be stated that though in the Brihaddharma Purana, Tantis, Gandhavanikas, Karmakararas, Taulikas (betelnut traders), Kumaras, Shankharis, Kansaris, Barujibis (Baruis), Modaka and Malakaras had been classified as Uttama-Sankar castes; Subarnavanikas (goldsmiths) were classified with Jal- Achal (from whom Brahmans and other upper castes were forbidden to accept food and water) castes, such as Dhibaras (Fishermen) and Rajakas (washermen). In the Vallalacharita, some reasons have been propounded to explain the phenomenon. It has been argued that such transformations took place for political and social reasons. At the same time, it also needs to be asserted that though the narrative in the Vallalacharita might not be fully acceptable to historians, there is no doubt that it is certainly more reliable than the genealogical texts composed in the 16 th and 17 th centuries. Some details relating to the lower castes in Bengal can be highlighted. Relevant historical information about the Kaivartas was available for the first time from the documents of the Pala period. Kaivarta chief Divya or Divvok had been a powerful official during the Pala period. He in collusion with several feudal lords revolted against Pala dominance and killed Mahipala II. Following the death of Mahipala II, some parts of Bengal passed into the hands of powerful Kaivarta overlords namely, Divya, Rudoka and Bhima. This historical development might have brought about a change in the social position of the Kaivartas, particularly in North Bengal. The Pala documents also provide some information about the untouchable castes, which were outside the frontiers of Hindu society. In the list containing the names of the beneficiaries of landgrants in the Pala copperplates, Brahmans, who in turn were followed by various peasant communities, immediately followed high government officials. In fact, there was no reference either to the Ksatriyas or the Vaishyas. But, beyond such social groupings there were several other groups who were referred to as Medh, Andhra and Chandalas. The Chandalas were considered

NSOU • GE-HI-11 35 to be the lowest of all the social groupings. Social commentators like Bhabadeva Bhatta have referred to them as an Antyajati. In several charya songs information about several other low castes such as Doms or Dombs, Chandalas, Shabaras and Kapalikas have also been found. In some medieval texts it has been pointed out that contact of Brahmans with such lower castes was forbidden. Bhabadeva Bhatta classified lower caste groups such as the Chandals, Pukkashakas and Kapalikas as untouchables. The Kapalikas were regarded as an uncivilised community, who followed bizarre rituals and practices. The Shabaras, who mostly inhabited the mountainous regions, also were regarded as lower castes. However, it could be argued with some certainty that they did occupy a higher social standing than the Doms and Chandals, who were regarded as antyajajatis. Antyajajati or untouchable groups were essentially composed of Badhs/Banars, Kapalikas/ Kols (belonging to the Adivasi grouping), Koncho (who were also referred to as Koche and were generally classified within the Adivasi grouping), Hadis (who were also referred to as Handis), Doms, Bagtits (Bagdis), Sharakas (considered to be a part of the ancient community of Shrabakas), Byalgrahi and Chandals. The majority of the antyajati castes remained outside the varnashrama system. In most cases they were regarded as servants of the society and as such were assigned the lowest social standing. From the charyagitis, one gets an impression about the vocations pursued by the untouchable communities in Bengal. For instance, they were mostly engaged in making objects out of bamboo, felling trees, rowing boats, preparing liquor and hunting. Interestingly many of these Antyajajatis were also believed to have practiced various forms of black magic. Significantly, there was hardly any major social movement in Bengal between the 10 th and the 15 th century aimed at the elevation of the Antyajajatis in the Hindu social scale. In fact, there was hardly any case of social mobility among them, and for the great majority of the population comprising essentially the lower castes, the major sources of social mobility remained inaccessible. Prolonged pursuit of a particular occupation for generations in the absence of alternative job opportunities naturally gave rise to strict social conventions, which in the traditional context were overlaid with rituals. Similarly, if the sources of mobility remained inaccessible to a caste for generations its position in the caste hierarchy sometimes assumed an element of permanence and the duties of the caste, including its occupation, appeared inviolable. In other words, scrupulous observance of caste duties too often resulted in social rigidity, much to the detriment of the interests of the lower or untouchable communities.

36 NSOU • GE-HI-11 3.4 Conclusion In conclusion it may be said that we know very little of the degree and the nature of the civilisation possessed by the pre-Aryan population of Bengal and much less of the contribution of each of the racial elements to the common stock of the civilisation developed on the soil of Bengal. But in this respect we may postulate for Bengal what has generally been accepted for the rest of India. It is now generally held that the foundations of civilisation of India – its village life based on agriculture – were laid by the Nishadas or Austric speaking peoples and the same was also probably true for Bengal. 3.5 Model Question 1. Do you think that the caste system found the basic structure of the ancient Bengali society? 2. Write an essay on the ethnicity and caste system of ancient Bengal. 3.6 Suggested Readings 1. Dilip K. Chakrabarti, Ancient Bangladesh, Dhaka, 1992. 2. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 37 Module II Early History of Bengal up to 320 A.D. 37

38

Unit-4 □ Bengal in the Classical Literature : Gangaridai Structure 4.0 Objective 4.1 Introduction 4.2 Bengal in the Indian Classical Literature 4.3 Bengal in the Foreign Literary Sources 4.4 Gangaridai 4.5 Debate regarding the identification of Gangaridae 4.6 Wari-Bateshwar Ruins 4.7 Conclusion 4.8 Model Question 4.9 Suggested Readings 4.0 Objective • The objective of the present unit is to study the reflection of Bengal in the literary sources. • Two major literary sources will be discussed : ➤ The classical Indian literature ➤ The foreign account • The debate regarding the identification of Gangaridai and its possible geographical location will also come under analysis in the present unit. 4.1 Introduction Archaeological excavations in various parts of Bengal reveal its much early history. It was a settlement since prehistoric times. But unfortunately that history is 39

40 NSOU • GE-HI-11 yet not been very clear to us. Later Vedic literature like Aitareya Aranyaka, Aitareya Brahmana etc. contain references of Bengal region. Epics and Dharmasutras also mention about this region. Most of these literatures mention this region as the settlements of non-Aryans or the people who belonged to inferior culture in comparison with the Vedic Aryans. Only in the Ramayana, a different view can be found. This contains some references of the aristocratic relationship with the people of Bengal region. However a general inferior view regarding the people of Bengal can clearly be traced in almost every ancient Indian classical literature composed before 4 th century BCE. 6 th century BCE is generally considered as an important benchmark in the history of India. This was the time when Indian history got its historicity in terms of sources for the first time. The emergence of the 16 Mahajanapadas, especially of Magadh had opened a new era in the history of India. The rise of Magadh marked a shift of power centre from north-west India to eastern India. Thus the eastern land started getting importance in literature by the 6 th century BCE. 4.2 Bengal in the Indian Classical Literature Although the primeval historical account of Bengal is still trying to find its foothold in the firmament of ancient Indian history, the early Indian literary sources as well as foreign accounts, i.e. the Brahmanical sources (chiefly Ramayana, Mahabharata and the Puranas), the Buddhist and Jain sources, and other contemporary literary works provide rich resources relating to the societal, cultural, and demographic graffiti of primordial Bengal. It is already mentioned earlier that the Aitareya Aranyaka was the first Indian literary work where the name of Vanga mentioned clearly. Ramayana and Mahabharata made extensive references of the land of Bengal. Jain works like Acharanga-sutra, Upanga-sahitya, Buddhist works like SamyuttaNikaya, TelapattaJataka, Milinda Panho also mention several times about various regions of Bengal. Secular literary texts like Dasakumara-charit, Pavanaduta etc. mention about Bengal. 4.3 Bengal in the Foreign Literary Sources Foreign literary sources are also very important for reconstructing the history of ancient Bengal. The pale of foreign literary sources includes the Greco-Roman,

NSOU • GE-HI-11 41 Chinese and Arab works. The Greek accounts play significant roles to comprehend the geographical changes that had happened in eastern India since the fourth century BCE. According to Greek sources, the land corresponding to modern Northeast India and submontane Himalaya were by that time dwelt in by the Kiratas. Ergo, the sources recount that the Pundra and the Kirata territories bordered or even merged. It probably corroborates the inference that the larger region was earlier known as Kirata, and a segment of the Kirata terrain subsequently came to be identified as Pundra. The name of Pundra is also scripted in the early Chinese accounts which referred to it as a region situated in the northern part of Bengal. According to the descriptions of Chinese travellers Fa-Hien, Hiuen Tsang and I-Tsing, the river Karatoya had made the boundary between Pundravardhana and Pragjyotisa Kamarupa. Buddhism was booming that time in Pundravardhana as elucidated by Fa-Hien. Hiuen-Tsang mentioned Pundravardhana as Pun-na-fantan-na in his writings. The Tang-Shu by Hiuen-Tsang described that from the Gupta period onwards Pundravardhana formed a bhukti (translated as province) under different imperial eras. Hiuen-Tsang's elucidation points out the location of Pundravardhana between Kajangala and the river Karatoya. 4.4 Gangaridai Gangaridai occurs as the name of a people and of a country in Greek and Latin writings, dates of which range between 1st century BC and 2nd century AD. The term Gangaridai and its variants Gangaridae, Gangaridum and Gangarides are found in the works of classical authors. Writing about the countries beyond the Indus on the basis of the knowledge obtained by Alexander and his soldiers, Diodorus (69 BC-16 AD) mentions that beyond the Ganges were the dominions of the Prasioi and the Gangaridai. Quintus Curtius Rufus tells us that two peoples, the Gangaridai and the Pharrisii, inhabited the further banks of the Ganges. Strabo (63 BC - 21 AD) informs us that the Ganges flows through the Gangaridae, forming its eastern boundary. Pliny (c 1st century AD) writes that the final part of the Ganges flowed through the country of the Gangarides.

Virgil (c 30 BC) mentions Gangaridai without indicating its location. The earliest reference to Gangaridai is found in the written works of the Greek ethnographer Megasthenes (350-290 BCE). In the writings of Greek historian Diodorus Siculus, recorded between 60 and 30 BCE, he speaks of Alexander the 42 NSOU • GE-HI-11 Great pursuing King Porus of the state of Paurava to the nation of Gandaridai, which he described as "a nation possessing the greatest number of elephants and the largest in size." Historians have proposed that Alexander the Great left the region in anticipation of a joint attack by the Prasii and Gangaridai Empires. The invasion of the region and subsequent withdrawal of Alexander the Great is mentioned in a number of other writings by Greek and Roman historians. The aforementioned Megasthenes also wrote of the wealth and might of the people he referred to as the Gangarides, noting that their king possessed 1,000 horses, 700 elephants and 60,000 troops. Dhana Nanda, the last ruler of the Nanda dynasty, was king of the Gangaridai region at the time of the invasion by Alexander the Great. The Nanda dynasty was an amalgamation of the Prasii and Gangaridai Empires. Dhana Nanda was later dethroned by Chandragupta Maurya, the founder of the Maurya Empire, which ruled until 185 BCE. Renowned Bengali historian, Rakhaldas Bandyopadhyay, noted that during the rule of Chandragupta Maurya, the state of Gangaridai was independent. The earliest surviving description of Gangaridai appears in *Bibliotheca historica* of the 1st century BCE writer Diodorus Siculus. This account is based on a now-lost work, probably the writings of either Megasthenes or Hieronymus of Cardia. In Book 2 of *Bibliotheca historica*, Diodorus states that "Gandaridae" (i.e. Gangaridai) territory was located to the east of the Ganges River, which was 30 stades wide. He mentions that no foreign enemy had ever conquered Gandaridae, because of its strong elephant force. He further states that Alexander the Great advanced up to Ganges after subjugating other Indians, but decided to retreat when he heard that the Gandaridae had 4,000 elephants. In Book 17 of *Bibliotheca historica*, Diodorus once again describes the "Gandaridae", and states that Alexander had to retreat after his soldiers refused to take an expedition against the Gandaridae. The book 17 also mentions that a nephew of Porus fled to the land of the Gandaridae, although C. Bradford Welles translates the name of this land as "Gandara". In Book 18 of *Bibliotheca historica*, Diodorus describes India as a large kingdom comprising several nations, the largest of which was "Tyndaridae" (which seems to be a scribal error for "Gandaridae"). He further states that a river separated this nation from their neighbouring territory; this 30-stadia wide river was the greatest river in this region of India (Diodorus does not mention the name of the river in this book). He goes on to mention that Alexander did not campaign against this nation, because they had a large number of elephants. Diodorus' account of India in the Book 2 is based on

NSOU • GE-HI-11 43 Indica, a book written by the 4th century BCE writer Megasthenes, who actually visited India. Megasthenes' Indica is now lost, although it has been reconstructed from the writings of Diodorus and other later writers. J. W. McCrindle (1877) attributed Diodorus' Book 2 passage about the Gangaridai to Megasthenes in his reconstruction of Indica. However, according to A. B. Bosworth (1996), Diodorus' source for the information about the Gangaridai was Hieronymus of Cardia (354–250 BCE), who was a contemporary of Alexander and the main source of information for Diodorus' Book. Ptolemy (2nd century CE), in his Geography, states that the Gangaridae occupied "all the region about the mouths of the Ganges". He names a city called Gange as their capital. This suggests that Gange was the name of a city, derived from the name of the river. Based on the city's name, the Greek writers used the word "Gangaridai" to describe the local people. The Periplus of the Erythrean Sea does not mention the Gangaridai, but attests the existence of a city that the Greco-Romans described as "Ganges". Dionysius Periegetes (2nd–3rd century CE) mentions "Gargaridae" located near the 'gold-bearing Hypanis' river. Hypanis River probably identified with Beas River. "Gargaridae" is sometimes believed to be a variant of "Gangaridae", but another theory identifies it with Gandhari people. A. B. Bosworth dismisses Dionysius' account as "a farrago of nonsense", noting that he inaccurately describes the Hypanis river as flowing down into the Gangetic plain. Gangaridai also finds a mention in Greek mythology. In Apollonius of Rhodes' Argonautica (3rd century BCE), Datis, a chieftain, leader of the Gangaridae who was in the army of Perses III, fought against Aeetes during the Colchian civil war.

4.5 Debate regarding the identification of Gangaridae Scholars are not unanimous regarding the identification of the region Gangaridae. The Gangaridai or Gangaridae are mentioned in Greek & Latin works, and the term is actually used to denote either a geographical region or a people living in that region or probably both. It is obvious that the term does make reference to the river Ganga or the Ganges and, in all likelihood, it describes a region on the

Indo- Gangetic

plains or a people living along the Indo-Gangetic plains. But the course of the Ganges itself, from its origin in the Himalayas and its travels along the

44 NSOU • GE-HI-11 subcontinent till the Ganga-Brahmaputra delta where it empties out into the sea, is so vast that it is nigh impossible to pinpoint or identify an exact location of the Gangaridae. Some have tried to determine the Gangaridae to be the Hellenic or Greek version of the Sanskrit Ga-ga-hr-daya (loosely, 'Heart of the Ganga') but this theory of an etymology, though brave, is ill-suited; it twists facts to suit theories rather than twist theories to suit facts. You see, ancient Greek writers referred to the Gandaridae and the Romans who came later referred to the Gangaridae. There's a difference between the two. Some Greek writers call Agrammes or Xandrames as a powerful king of the peoples beyond the river Beas, "the Gangaridae and the Prasii", who had his capital at Pataliputra. Going by Megasthenes' description, the Gangaridae were the people occupying the delta of the river Ganga, which would put the Gangaridae not at Magadha but under its supremacy in the whereabouts of present West Bengal and Bangladesh. The Prasii were the Prachyas or Easterners living to the east of Madhya-desa (Middle Country); these were the Panchalas, Surasenas, Kosalas, Kasis and the Videhas. Porus the Younger is believed to have fled to the kingdom of Agrammes when Alexander invaded the former's kingdom. According to Pratap Barman, the ancient land of northeastern India was mentioned as Mandachal in the, Kiskindha Kanda of Ramayana and the dwellers of Mandachal were mentioned as demons or Mandai. The cities of Mandachal were ornamented with gold, even the fish were also described in golden colour. This was the reason traders throughout the world were attracted towards India for business in the later part of history. The land of the Mandai people was termed as Gangaridai by the Greek writers. Ptolemy mentioned about Gangaridai in his map in 100 AD. The Mandai people call the river as Gang, and the land of the Mandai people to the east of river Ganga were termed as Gangaridai. The Mandai living at the bank of river or the plains of river Ganga were known as kalinga and those reside in hills were the Mandais. The Mandai people had a powerful kingdom in the east, for which Alexander the great had to return back and gave up the hope of conquering the world. The Mandai people were mentioned as Daityas, Rakshashas, Danavas, Ashursetc in ancient religious writings. A. B. Bosworth notes that the ancient Latin writers almost always use the word "Gangaridae" to define the people, and associate them with the Prasii people. According to Megasthenes, who actually lived in India, the Prasii people lived near the Ganges. Besides, Pliny explicitly mentions that the Gangaridae lived beside the Ganges, naming their capital as Pertalis. All these evidences suggest that the Gangaridae lived in the Gangetic plains.

NSOU • GE-HI-11 45 Diodorus stated that the Ganges River formed the eastern boundary of the Gangaridai. Based on Diodorus's writings and the identification of Ganges with Bhagirathi-Hooghly, the western distributary of Ganges, Gangaridai can be identified with the Rarh region in present day West Bengal. Plutarch, Curtius and Solinus, suggest that Gangaridai was located on the eastern banks of the Gangaridai River. Ramesh Chandra Majumdar theorized that the earlier historians like Diodorus used the word Ganga for the Padma River. Pliny names five mouths of the Ganges River, and states that the Gangaridai occupied the entire region about these mouths. He names five mouths of Ganges as Kambysion, Mega, Kamberikon, Pseudostomon and Antebolae. These exact present-day locations of these mouths cannot be determined with certainty because of the changing river courses. According to D. C. Sircar, the region encompassing these mouths appears to be the region lying between the Bhagirathi-Hooghly River in the west and the Padma River in the east. This suggests that the Gangaridai territory included the coastal region of present-day West Bengal and Bangladesh, up to the Padma River in the east. Gaurishankar De and Subhradip De believe that the five mouths may refer to the Bidyadhari, Jamuna and other branches of Bhagirathi-Hooghly at the entrance of Bay of Bengal. According to the archaeologist Dilip Kumar Chakrabarti, the centre of the Gangaridai power was located in vicinity of Adi Ganga (a now dried-up flow of the Hooghly river). Chakrabarti considers Chandraketurgh as the strongest candidate for the centre, followed by Mandirtala. James Wise believed that Kotalipara in present-day Bangladesh was the capital of Gangaridai. Archaeologist Habibullah Pathan identified the Wari-Bateshwar ruins as the Gangaridai territory. 4.6 Wari-Bateshwar Ruins Wari-Bateshwar is an archaeological site in Narsinghdi district of present day Bangladesh. Most of the scholars believe that this site is connected with the Gangaridai territory mentioned in the Greco-Latin sources. Wari and Bateshwar are two adjacent villages in Amlabo Union under Belabo police station in Narsingdi district, Bangladesh. It is situated on an isolated bit of the Pleistocene terrace at Manohardi-Sibpur, which is detached from the Madhupur tract by the Old Brahmaputra and the Laksya rivers. Since the 40s of the last century, a large number of cultural materials of Wari-Bateshwar have been reported from surface collections and chance

46 NSOU • GE-HI-11 excavations. Systematic archaeological exploration at the site was carried out in 1998-99 season by the author and subsequently a number of excavations conducted at the site since 2000. Archaeological investigations at Wari-Bateshwar revealed that the site had been occupied from the 4th century BC onwards with occasional breaks. A two thousand five hundred year old fort-city was discovered at Wari-Bateshwar,

after extensive exploration and limited excavation. In the 600m x 600m fortified enclosure, there are four mud ramparts. Though most of the parts of the ancient ramparts have been destroyed but evidence of 5-7 feet height walls still exist in some places. The ramparts are surrounded by moat, which, in course of time, silted up and turned into paddy fields. However, the eastern part of the silted moat can easily be visualized. In the west and south-west side of Wari-Bateshwar citadel, there is a 5.8 km long, 20 m wide and 10 m high mud rampart known as Asom Razar Garh. Most probably this was linked to the defensive system of Wari-Bateshwar fort-city which can be considered as the second fortification wall. The ancient inhabitants of Wari-Bateshwar were familiar with developed technical knowledge. By cutting the stone, they could manufacture beads. Raw materials, chips and flakes of semi-precious stone bead manufacture have been discovered during excavation. Through using different types of chemicals, they could decorate the beads. They could also coat the northern black polished ware using different chemicals. High technology was used to control the temperature during pottery manufacture. They knew the technique of coin manufacture melting metal. They had the knowledge of iron processing. The location of Wari-Bateshwar fort-city and AsomRajarGarh prove that, the inhabitants were experts in geometric knowledge. These factors indicate the ancient inhabitants' close acquaintance with technological and scientific knowledge as well evidently indicate their artistic sense, adoration of beauty and skills in several technological works. Northern Black Polished Ware has a close relationship with urban culture. Generally northern black polished wares are found in the archaeological sites of the second urbanisation of the subcontinent. It is said that to meet the practical needs of the rulers and traders of the second urbanisation, these northern black polished wares were produced. For the presence of Old Brahmaputra River, it is assumed that Wari-Bateshwar was a river port and a trade centre. From the discovery of semi-precious stone beads made of agate, quartz, jasper, carnelian, amethyst, chalcedony etc. Dilip Kumar Chakrabarti mentions

NSOU • GE-HI-11 47 that Wari-Bateshwar might be the Souanagoura a trading centre which was mentioned by Ptolemy. Basing on the artefacts that have been discovered, we also agree that Wari-Bateshwar was that Souanagoura. 4.7 Conclusion Thus in conclusion it may be said that although the location of the territory of Gangaridai is yet not been clear to us but undoubtedly it was a rich and powerful settlement of ancient time. The relation between the Prasii kingdom and the Gangaridae is also not clear. It is plausible that Gangaridae formed a confederacy with Prasii to face the threat of Alexander's invasion. According to Dr. Hemchandra Ray Chowdhury, "

It may reasonably be inferred

from the statements of the Greek and Latin writers that about the time of Alexander's invasion, the Gangaridai were a very powerful nation, and either formed a dual monarchy with the Pasioi, or was closely associated with them on equal terms in a common cause against the foreign invader." 4.8

Model Question 1. Write an essay on the Gangaridai civilisation of ancient Bengal. 4.9 Suggested Readings 1. Nitish Sengupta, Land of Two Rivers, London, 2011. 2. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

48 NSOU • GE-HI-11 Unit-5 □ Bengal before the Gupta Rule : Bengal under the Guptas Structure 5.0 Objective 5.1 Introduction 5.2 Bengal during the Kushana Rule 5.3 Gupta rule in Bengal 5.4 Administration under the Imperial Gupta rulers 5.5 Brahmanisation of Bengal during the Gupta period 5.6 Conclusion 5.7 Model Questions 5.8 Suggested Readings 5.0 Objective • The objective of the present unit is to discuss the historical evolution of Bengal during the pre-Gupta and Gupta era. • The unit will discuss the Bengal's history during the Kushana era. • The political and socio-cultural aspects of the history of Bengal under the Gupta rule will be discussed. • Two major points will be discussed : ➤ The Gupta Administration in Bengal ➤ The development of Brahmanical ideology in Bengal. 5.1 Introduction The condition of present day Bengal region during the post Mauryan period is not very clear to us. Literary evidences and numismatics indicate a disintegrated 48

NSOU • GE-HI-11 49 phase of time. In fact the collapse of the vast Mauryan Empire had resulted an overall period of disintegration in northern India between the 2nd century BCE and 1st century CE. 5.2 Bengal during the Kushana Rule The 1st century CE witnessed the growth of the Kushana empire. It extended up to Bihar in the east. It has also been suggested by some scholars that Kanishka I possibly conquered some parts of the western part of Bengal. It is needless to mention that there is no strong evidence in favour of this hypothesis. Thus it is quite natural that there are a lot of controversies regarding this hypothesis. Kushan

coins have been discovered in several places in Bihar, Bengal and

Odisha. Some scholars argue for suzerainty of the Kushan kings over this entire region. But most of the scholars have countered this argument. They argue that coins can

travel by way of trade far beyond the limits of any kingdom where

those coins are originally issued. Other than numismatic evidences, a number of characteristic potteries of the Kushana cultural phase have been found from various sites of Bengal. This pottery culture is characterised by a unique red polished body with stamped design along with a large number of dull or sturdy red ware having bright red slips. The archaeological sites of Mangalkot, Chandraketugarh, Pakhanna, Clive House, Tamluk, Deulpota, Natsal, Tilpi has yielded profuse quantity of above pottery from Kushana cultural level. Other than this red ware, the most distinctive types of Kushana craft is roulette ware. It is a grey ware dish with an incurved and beaked rim of diameter varying from 24-33 cm. This generally contains roulette decorations of variety of geometrical shapes like triangles, wedges, dots etc. This type of pottery is generally wheel-made, slipped and having smooth surface. Roulette ware of Kushana cultural phase was subsequently found at numerous sites of Bengal. The Bengal version of the roulette ware can be classified into two categories based on its colour, firing difference and fabrics. The first one has dark brown or black surface and the second one has grey interior with a grey or reddish exterior. Both of the varieties have been found from Chandraketugarh. Almost all the early historic sites of Bengal having Kushana cultural phase have yielded roulette ware. Mahasthangarh, Wari-Bateshwar, Tamluk, Tilpi, Natsal have unearthed profuse quantity of roulette ware from stratified level. However it should be keep in mind that the Arikamedu version of Kushana HIS GE-HI-11 & 21—4

50 NSOU • GE-HI-11 roulette ware was different from the Bengal version. This indicates that roulette wares were produced at multiple production centres in the lower Ganga plain with the epicentre in the region of Chandraketugarh-Tamluk. Thus it is not easy to say whether Bengal or any part of it ever formed a province of the Kushana Empire.

But epigraphic and literary evidences as well as archaeological remains clearly indicate that the early centuries of the Christian Era witnessed a overall prosperity and economic growth Bengal mainly through the way of overseas and inland trade. There were at least two major ports namely Tamralipta and Chandraketurgarh flourished during the post Maurya and Pre-Gupta period. Fertile lands, increased food supply, increasing population etc provide the background for the growth of towns and cities in ancient Bengal and as a result a large number of cities sprang up in this region. The economic advancement fed by agricultural surplus, proliferation of crafts and expanding trade paved the way for brisker rate of urban growth reached its peak in the 1st and the 2nd centuries CE. After an extensive study of Kharosthi and Kharosthi-Brahmi inscriptions discovered from the different parts of Bengal like both 24 Paraganas, Bankura, Midnapore and Burdwan B. N. Mukherjee suggested that these inscriptions clearly indicate that ancient Vanga had its prosperity rooted in the fields of agriculture and trade. But during the latter half of the 3rd century CE the condition had been changed again. Thus the Gupta epigraphic records showed

that the overall political condition of Bengal at the beginning of the 4th century CE was not very unified. A number of sturdy states emerged during this time. The most prominent feature of these states was their shelter by the natural barriers of rivers and swamps. 5.3 Gupta rule in Bengal Gupta rule in Bengal has often being viewed as a phase that brought in new ideas and inspirations in different aspects of life in Bengal, which prior to this stood as a peripheral region to the middle Gangetic valley.

The establishment of the Gupta empire at Magadha marks the end of the disintegrated political condition of overall northern India. The territory of Bengal was not an exception. Imperial extension

of the Gupta rulers marks the end of the independent existence of the various small states flourished in Bengal at beginning of the 4th century

CE. It is indeed a difficult task to decide when exactly Bengal was subjugated by the Gupta rulers. For some scholars it was done during the reign of Samudragupta, while

NSOU • GE-HI-11 51 the others argue for his father Chandragupta I. Nihar Ranjan Ray observes that by the end of 3rd and the beginning of the 4th century CE

Bengal was emerging out of its distinctly tribal, social and political

pattern. Monarchy became well established. The ethnic names of settlements were becoming known as place

(Janapada) names. The same is true for other aspects of life like religion also. On the whole he observes that the remote area of Bengal came to be united with the large area of

politico- cultural

ideology of north India. Although the actual process of the Gupta conquest of Bengal is not very clear to us. But the epigraphic records leave no doubt

that in the days of Kumaragupta I, northern Bengal formed an important administrative division of the Gupta empire under the name of Pundravardhana-bhukti.

It was placed in charge of a provincial

governor appointed by the Emperor himself. The provincial governor, in his turn, appointed officers to take charge of the various administrative sub-units into which the province was divided. It is to be noted, however, that occasionally even the district officers seem to have been appointed directly by the Gupta Emperor. The Damodarpur copper plate of Budhagupta indicates that northern Bengal formed an integral part of the Great Gupta Empire down to the end of the 5th century CE. Another inscription from Damodarpur, dated in the year 544 CE,

refers to a suzerain ruler, whose name ended in Gupta,

but whose proper name is lost. In that year the son of the Gupta emperor was acting as his governor in

Pundravardhana- bhukti. It appears most probably that the overlord in question belonged to the dynasty of the later Gupta who claimed suzerainty over northern Bengal down to the end of the 6th century

CE. Samatata region was most probably a semi-independent state during the reign of Samudragupta.

According to Gunaighar copper plate Maharaja Vainyagupta was the ruler of this region. A number of gold coins issued by some Dvadashaditya have been found in this region. Most of the scholars have identified this king with Vainyagupta.

Although Vainyagupta was a suzerain ruler under the imperial Gupta rulers, but he was titled Maharaja in his own records as well as Maharajadhiraja in a seal discovered at Nalanda. Thus his exact status is very difficult to determine. According

to R. C. Majumdar Vainyagupta was probably

a member of the imperial Gupta family and acted at first as a de facto independent ruler whose dominion included eastern Bengal. But during the declining phase of the imperial Gupta rulers he declared himself openly as the Emperor, taking advantage of the internal disunion and discord

52 NSOU • GE-HI-11 due to the collapse of the Gupta rule. However Vainyagupta's political career proves the direct Gupta rule over Samatata around the 6th century CE. Thus up to the end of the 6th century CE

Imperial Gupta rulers became successful to hold their power over Bengal. The main centre of their power in Bengal was Pundravardhana-bhukti. This administrative unit regarded as much as important that the Gupta emperor himself recruited its governor known as Uparika and sometimes even Vishayapatis. Most probably the Uparika Maharaja of Pundravardhana-bhukti came from royal family. 5.4 Administration under the Imperial Gupta rulers It is indeed of very difficult task to know the administrative structure of Bengal in the ancient time as there was no 'Bengal' indeed. The epigraphic records of the imperial Gupta rulers helped us to draw a semi-clear sketch of the administrative structure. Although Bengal was formally included within the Gupta empire, but the Gupta rulers never directly ruled the whole of the said territory. Gupta records mention the existences of a number of Mahasamanta, Samanta, Maharaja etc. feudal chiefs. The imperial territory of Bengal was divided into some administrative units and sub units. The largest unit was bhukti. Bhukti was further divided into vishayas and mandalas. The lowest administrative unit was grama or village. In some epigraphic records name of an administrative unit has been found called vithi. The exact nature and its position in the administrative ladder is not clearly known. Most of the scholars suggested that vithi is here a group of villages and it stood between the mandalas and gramas in the administrative hierarchy. The governor of a bhukti was appointed directly by the Gupta emperor. The provincial governor assume the title Uparika. The vishayas were ruled by Kumaramatyas and Ayuktaka. Sometimes the rulers of the vishayas were also known as Vishayapatis. Another important lower administrative post was Adhikarana. Probably they were the in charges of vithis. 5.5 Brahmanisation of Bengal during the Gupta period The early inscription leaves no doubt about the existence of a number of Brahmins in Bengal who were quite familiar with vedic rites and rituals. It is interesting to note cases of Brahmins who were quite eager to settle in Bengal to

NSOU • GE-HI-11 53 carry on their religious and social duties. The Dhanaidaha copper plate inscription of the year 113 (= 432 – 433 CE) records that a royal officer (an Ayuktaka) purchased some cultivable land by paying the usual price to the government and made a free gift of the same to a Brahmin name Varahasvamin who was a follower of the Samavedin school of the Vedic Brahmanism. The Kalaikuri copper plate inscription of the Gupta year 121 (=400 – 401 CE) records the purchase of 9 kulyabapas of land at the rate of 2 dinaras for each kulyabapa, distributed in the villages of Hastisirsra, Vivitaka, Gubhyagandhika and Dhanyapatalika which were later donated to three Brahmins of Pundravardhana named Devabhata, Amaradatta and Mahasenadatta, for the purpose of in a bling them to perform their daily sacrifices. From the five copper plate inscriptions discovered from Damodarpur (Rajshahi division) in north Bengal we come to know that a Brahmin named Karppatika requested according to nividharma a kulyavapa of untilled khila land for his performance of Agnihotra rites and in another instance was for

the grant of a plot of waste land for the maintainance of his five daily sacrifices (

Pañcamaha - yajna). Both the applicants obtained the sanction of the government of Pundravardhana-bhukti stationed at the head-quarters in Kotivarsha-vishaya. Something like a Brahmin colony was founded as a result of the gift as recorded Tippera copper plate grant of Lokanatha. This gift was made at the request of a MahaSamanta to settle more than one hundred Brahmins versed in the four Vedas (caturvidya -). These Brahmins were expected to perform worship with bali, caru etc.

and image of Ananta Narayana installed in the temple in Subbangavisaya. The Vappyaghosavata grant of Jayanaga records the gift of a village to a Brahmin named Brahnavirasvamin who was also a follower of the Samavedin School of the Vedic Brahmanism. 5.6 Conclusion Thus in conclusion it may be said that a process of consolidation in so called Bengal region had been started during the Gupta period. At least the existence of a uniform administrative structure can be traced from this time. However that does not prove that the Gupta rulers conquered or established their hegemony over whole of the region. But it denotes at least a great influence of the Gupta administrative structure on this entire territory and its rulers. This influence can be traced even during the reign of the Pala rulers of Bengal.

NSOU • GE-HI-11 55 Module III Bengal during the Guptas and Post-Gupta 55
56

Unit-6 □ Independent Kingdoms in Bengal Structure 6.0 Objective 6.1 Introduction 6.2 Vainya Gupta 6.3 Conclusion 6.4 Model Questions 6.5 Suggested Readings 6.0 Objective • The present unit will aim to understand the fragmentary political identity in the ancient period. • The objective of the present unit is also to study the history of Bengal under Vainya Gupta. 6.1 Introduction The province of Bengal and the territory inhabited by the Bengali speaking people are not the same. The territory inhabited by the Bengali speaking people stretches far beyond the political boundaries of the present day West Bengal and Bangladesh or even the province of Bengal of British India. The vast territory inhabited by the Bengali speaking people was not united till the Muslim rule. During the Muslim rule a broad area of so called Bengal became united. Before that the entire territory was divided into numerous small independent or semi independent kingdoms and chiefdoms. Even during the rules of the Pala dynasty and Sena dynasty a number of small kingdoms existed in Bengal. Thus it is indeed needless to mention that throughout the ancient period the entire territory was divided into numerous small kingdoms – some of them were dependent on other broader kingdoms in various ways; some of them had feudatory status; but most of these kingdoms were independent though they have very small size. 57

58 NSOU • GE-HI-11 It is yet not been clear to us that whether the region of Bengal subjugated by the Mauryans and their subsequent emperors or not. The Gupta rulers had definitely established their control over this territory. It is generally believed that the Gupta emperor Samudra Gupta was the liable one for this extension of imperial control. However it is also matter of confusion

that

whether the subjugation of Bengal took place during the reign of Samudra Gupta

or was accomplished wholly or even partly by his father

Chandra Gupta I. The Meherauli iron pillar inscription mentions that the king Chandra among other military exploits also ‘

extirpated in battle in the Vanga countries his enemies who offered him a united resistance’. The identity of this king Chandra is a matter of

controversy. He has been identified both with Chandra Gupta

I and Chandra Gupta II.

Although it is not clear that who was liable to extend the Gupta empire up to the territory of Bengal but it is definitely be said that

the establishment of the Gupta empire marks the end of the independent existence of the various states that flourished in Bengal at the beginning of the 4 th century CE. By the time of Samudra Gupta except Samatata region the entire territory was incorporated in the Gupta empire and the ruler of Samatata had ‘

gratified the emperor Samudra Gupta by payment of all kinds of tribute, by obedience to his commands and by approach for paying court to him’. In other words Samatata was a tributary state acknowledging the suzerainty of the Gupta emperor but with full autonomy in respect of internal administration. The exact limits of Samatata cannot be ascertained but it may be taken as roughly equivalent to eastern Bengal.

Although Samatata was a semi independent feudatory state in the time of

Samudra Gupta

it seems

to have been gradually incorporated into the Gupta empire for in the year 507-08

CE Maharaja Vainya Gupta was the ruler of this region and granted lands in the district

of Tippera. He issued gold coins and assumed the title Dvadasaditya. The exact status of Vainya Gupta is indeed a tough task

to determine. The most reasonable view seems to be that he was a member of the imperial Gupta family and acted at first as a de facto independent ruler whose dominions included eastern Bengal. Subsequently taking advantage of the decline of the imperial Gupta rulers and also perhaps of the internal disunion and discord he declared himself openly as the emperor. 6.2

Vainya Gupta Vainya Gupta was one of the last kings of the Gupta Empire. He became known by the discovery of the Gunaighar copper plate inscription dated 507 CE or 188

NSOU • GE-HI-11 59 Gupta Era, which mentions the grant of land to a Buddhist monastery established at Gunaikagrahara (present day Gunaighar). Vainya Gupta may be the son of Puru Gupta. Historians came to know about Vainya Gupta after discovering the Nalanda clay seal and Gunaighar copper plate inscription and coins belonging to his reign. The artefacts neither contain his father nor his grandfather's name. According to R.C. Majumdar, Vainya Gupta's father was Puru Gupta. The Gunaighar copper plate inscription mentions one Vainya Gupta donating land to a Buddhist monastery at Gunaighar. Majumdar and D.C. Ganguli amongst others feel that Vainya Gupta mentioned in Gunaighar copper plate inscription is same the Vainya Gupta of the Nalanda clay seal inscription who was a ruler of the Gupta Empire. However, Vainya Gupta of the Gunaighar copper plate inscription is a devotee of Shiva and the Vainya Gupta of the Nalanda seal inscription is a worshipper of Vishnu.

The different stages in the decline and downfall of the Gupta empire have not yet been fixed with any degree of certainty. There is however no doubt that it showed visible

signs of decline towards the beginning of the sixth century CE. The general political condition in northern India during the declining period of the Gupta empire was disintegrated. Vainya Gupta at this time was ruling as practically an independent king in eastern Bengal. The Gupta empire had to face a final death blow by the sweeping victories of Yashodharman. According to Mandasore inscription of Yashodharman he extended his conquest as far as the Brahmaputra river. However it is difficult to say that on fact how far the boasts of Yashodharman were founded. But in any case the empire of Yashodharman

was a short lived one and no trace of it was to be found after the middle of the 6th century CE. The Gupta empire already weakened by the inroads of the Hunas collapsed before the onslaughts of Yashodharman. 6.3 Conclusion

The fall of the Gupta Empire and the failure of Yashodharman to rebuild one on a durable basis led to the political disintegration of northern India marked by the rise of a number of independent powers. The more prominent of these were the Pushyabhutis of Sthanvisvara or Thaneswara, the Maukharis of Kosala or Oudh and the later Guptas of Magadha and Malwa. The later Guptas

may have been an offshoot of the imperial Guptas but as yet we have no positive evidence in support

60 NSOU • GE-HI-11 of this view. They however continued tradition

of Gupta sovereignty in the central and eastern part of the Gupta empire. Bengal also took advantage of the political situation to shake off the foreign yoke

and two powerful independent kingdoms viz. Vanga and Gauda were established there in the 6th century

CE. 6.4 Model Questions 1. Write briefly about the emergence of various independent kingdoms during the post Gupta period in Bengal. 2. Write a short note on Vainya Gupta. 3. Write an essay on the political condition of Bengal during the decline of the imperial Gupta rule. 6.5 Suggested Readings 1. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 61 Unit-7 □ The Kingdom of Samatata or Vanga Structure 7.0 Objective 7.1 Introduction 7.2 Samatata and Vanga after Gopa Chandra 7.3 Bengal under the Khadga rulers 7.4 Conclusion 7.5 Model Questions 7.6 Suggested Readings 7.0 Objective • The objective of the present unit is to understand the history of Samatata or Vanga region of ancient Bengal. • The account of Gopa Chandra will also be discussed. • The history of Bengal under the Khadga rule will also be addressed. 7.1 Introduction The settlement of Vanga or Samatata region had flourished since long past.

It is mentioned in the Mehrauli inscription of king Chandra, epigraphic records of the Chalukyas of Vatapi, and in the literary works of the famous poet Kalidasa. Before the rise of the Gupta empire Bengal was divided into several small independent state. But around the beginning of the 4th century CE these various states had lost their independent existences and was incorporated in the Gupta empire by Samudragupta. There was only one exception in this regard – the kingdom of Samatata or Vanga. The Allahabad Pillar inscription mentions ‘

gratified the emperor Samudragupta by payment of all kinds of tribute, by obedience to his commands and by approach for paying court to him’. In other words, Samatata was a tributary state.

Although it was 61

62 NSOU • GE-HI-11

acknowledging the suzerainty of the Gupta emperor but it enjoyed full autonomy in respect of internal administration.

The exact

geographical

limits of Samatata cannot be ascertained but it may be taken as roughly equivalent to

the eastern part of present day Bengal.

Although Samatata was a semi independent feudatory state in the time of Samudragupta but it seems to have been generally incorporated into the Gupta empire.

The epigraphic record of the Gupta Empire mentions the name of one Maharaja Vainya Gupta as the ruler of Samatata region. The exact status of Vainya Gupta

is difficult to determine. The most reasonable view seems to be that he was a member of the imperial Gupta family and acted at first as a de facto independent ruler whose dominions included eastern Bengal. Subsequently taking advantage of the decline of the imperial Guptas and also perhaps of the internal disunion and discord

Vainya Gupta declared himself openly as the emperor. Thus

the first independent kingdom which arose in Bengal on the ruins of the Gupta empire

was undoubtedly the kingdom of Samatata or Vanga. It

seems to have comprised originally the eastern and southern Bengal and the southern part of western Bengal.

It is indeed a difficult task to reconstruct the chronological political history of this kingdom as only a few information of that time is available. The main sources of information about this kingdom are five inscriptions discovered near Kotalipara in the district of Faridpur of present day Bangladesh and one inscription discovered in the district of Burdwan. According to these epigraphic records three rulers had ruled this kingdom named Gopa Chandra, Dharmaditya and Samacharadeva. All of them assumed the title of Maharajadhiraj. It proves that these kings were independent and powerful. This imperial title also

indicates a changed political status and the disappearance of the imperial authority of the imperial Gupta dynasty over this region. The

exact date of the reign of Gopa Chandra is not very clear to us. It is generally believed that there was not much gap between the reigns of Vainya Gupta and Gopa Chandra. The reason behind this assumption is the epigraphic evidence of the existence of one Maharaja Vijaya Sena who was most probably a vassal chief of both of Vainya Gupta and Gopa Chandra. The epigraphic record also mentions that Vijaya Sena had ruled over the bhukti of Vardhamana under Gopa Chandra. Since he held the same office under Vainya Gupta also therefore it will not be unreasonable to conclude that Vainya Gupta also ruled over the eastern, the southern and the western parts of Bengal.

NSOU • GE-HI-11 63 The relationship between Gopa Chandra, Dharmaditya and Samacharadeva is not cleared to us as well as their order of succession. Pargiter regarded Dharmaditya as earlier than Gopa Chandra on two grounds: first, the use of the earlier and the later forms of 'y' in their respective plates and secondly

the additional epithets 'pratita dharma shila' applied to the land-measurer Shiva Chandra in the plate of the latter. The first should never have been put forward as a serious argument.

Because it is evident that in many times

palaeography does not offer a safe basis for comparative chronology within a short period of time

mostly when the

time is less than a century. This is clearly demonstrated in the present instance by the fact that in the Mallasarul

inscription of Gopa Chandra the earliest of the three forms of the letter 'y' noted by Pargiter has been exclusively used.

On the

other hand

the first plate of Dharmaditya shows a distinctly later form of 'sh'. The addition of epithets to Shiva Chandra may no doubt be cogently explained by his attainment of seniority in service, but may be due to purely personal predilections of the writer. It may also be argued that the epithets were done away with Shiva Chandra had been sufficiently long in service when his name was too well known to require any testimonial. In any case this cannot be regarded as a more cogent argument in support of the priority of Dharmaditya over Gopa Chandra than the identity of

Vijaya Sena of the Guraighar copper plate and the Mallasarul copper plate inscriptions favoring

the opposite view. For if Gopa Chandra ruled after Dharmaditya we have to assume that Vijaya Sena served as a governor

under Vainya Gupta, Dharmaditya, Gopa Chandra and other kings, if any, who might have intervened between them. This is certainly not impossible but less probable than other view that

Vijaya Sena served two Kings, Vainya Gupta and Gopa Chandra.

Although therefore no certain conclusion is possible, it seems more reasonable to take Gopa Chandra as earlier than Dharmaditya.

It is generally regarded that Samacharadeva had flourished after the reigns of Gopa Chandra and Dharmaditya but it is difficult to say definitely that there were no intervening kings.

The existence of a few kings of this line later than

Samacharadeva

is

rendered probable by a large number of gold coins found mostly in different parts of eastern Bengal notably at Sabhar (in the district of Dacca of present day Bangladesh) and Kotalipara (in the district of Faridpur of present day Bangladesh).

Only two of these coins bear names of kings that can be read with some degree of certainty. The first is bearing the letters 'Prithu vi (ra)'. The name of the king who issued it was

64 NSOU • GE-HI-11 probably, therefore, Prithuvira or Prithujavira

or Prithuviraja. The second coin belongs to a class of which several have been found. On most of them the legend has been read as Sudhanya, but one appears to read Sri Sudhanyaditya. These kings and others

who so

names are not recorded on the gold coins issued by them presumably ruled in Vanga and may be regarded as later rulers of the kingdom founded by

Gopa Chandra. The six copper plate grants of these kings of Samatata region provide much information about the provincial administration in details. The structure of the administration was not much different from the Gupta administration. Bhukti and Vishaya were the most important administrative units of that time. All of these records undoubtedly indicate

that there was a free, strong and stable government in

Bengal which

brought peace and prosperity to the people and made them conscious of their power and potentialities. 7.2

Samatata and

Vanga after Gopa Chandra Although the six copper plate grants of the kingdom of Samatata give detail information about administration but these are silent about genealogy of the rulers or about any detail political history. Thus it is yet unknown to us that

how long the independent kingdom established in this region by Gopa Chandra continued to exist and

even how it ended. Hiuen Tsang in his account has mentioned about

the kingdom of Samatata which seems to have included the major part if not the whole of Vanga

also. According to Hiuen Tsang during the 1 st half of the 7 th century CE Samatata and Vanga regions were ruled by a line of Brahmana rulers. Some scholars assume that this line of rulers belonged to Bhadra dynasty. Hiuen Tsang

mentioned about Shila Bhadra who was the patriarch of Nalanda. Nidhanpur copper plate inscription of Bhaskara Varman mentioned the name of a vassal chief named Jyeshtha Bhadra. These two references indicate that there was probably a

ruling line member of which having name suffixed with Bhadra. Unfortunately there is not sufficient evidence in support of this view. The Brahmanical dynasty whatever may be the family name

seems to have been overthrown by a line of Buddhist kings who used the word

Khadga attached with their name as their family name. That is why the dynasty is generally known as the Khadga dynasty.

NSOU • GE-HI-11 65 7.3 Bengal under the Khadga rulers Khadga Dynasty ruled the Vanga and Samatata areas of ancient Bengal in c 7 th - 8 th century CE. Information about the dynasty comes from two copper plate grants discovered at Ashrafpur near Dacca of present day Bangladesh, coins, and the Chinese accounts of Sheng-che written in c. 7 th century CE etc. Of these, the Ashrafpur copper plate grants are the most important. The first known ruler of the dynasty is Khadgodyama who most probably ruled between c. 625 and 640 CE. But unfortunately nothing is known about his predecessors. Khadgodyama was succeeded by his son Jatakhadga who ruled between c. 640 and 658 CE. The line of succession continued through his son Devakhadga who reigned between c. 658 and 673 CE and his grandson Rajabhata had ruled between c. 673 and 690 CE. Rajabhata was probably succeeded by his brother Balabhata who ruled between c. 690 and 705 CE. The second Ashrafpur copper plate grant refers to an Udirnakhadga. The last part of his name may indicate that he too probably belonged to the Khadga dynasty, but the period of his reign is yet to be determined. The Khadga kings did not use any paramount title like Paramesvara or Maharajadhiraja etc. This indicates that they were local rulers. The extent of their territory is difficult to ascertain. In one of the Ashrafpur copper plate grants there are references to Talapataka and Dattakataka, identified respectively with Talpara and Datgaon villages under Raipura sub district in Narsingdi. The Khadgas were politically dominant in the region of Vanga. The Ashrafpur copper plate grants were issued from the Jayaskandhavara of Jayakarmantavasaka, identified with Barakanta or Badkamta in Comilla district of present day Bangladesh, in the 13th regnal year which was in c. 671 CE of Devakhadga. So, it appears that Devakhadga had extended his power from Vanga to Samatata uprooting the Rata king Sridharana Rata (who ruled between c. 660 and 670 CE). This is epigraphically supported by the DeulbadiSharvani image inscription of Queen Prabhavati. The inscription depicts Devakhadga as benevolent (Danapati) and powerful (pratapi) and the conqueror of all enemies (Vijitarikhanda). The conquest probably required legitimacy through construction of or patronage to religious establishments. In accordance with the tradition of the age, this might have led Devakhadga to grant lands to Buddhist monastic establishments. HIS GE-HI-11 & 21–5

66 NSOU • GE-HI-11 Both Ashrafpur copper plate grants make it clear that Devakhadga and his son Rajabhata together donated 15 patakas and 20 dronas of land to the four viharas and viharikas in charge of the revered preceptor Sanghamitra. The amount of the land donated to each vihara corresponds to about 484 bighas (1 pataka at least 128 bigha) at an average. Devakhadga, however, did not get the monasteries constructed; rather the establishments were already in existence and the Khadga king brought them within a single campus (ekagandikrta) thereby making it a sacred landscape. Attempts were made to achieve economic gains by utilizing the donated lands. An important aspect of the plate is that it refers to Krsyamanaka, meaning tillers of land. The cultivators appear to have been mere agricultural laborers because they were neither landowners, nor did they have any right to enjoy the lands; land ownership lay with the monastic establishments. And the lands were enjoyed by another stratum of Bhujyamanakas mentioned in the grants. Those who enjoyed the land (bhujyamanakas) were different from those who actually cultivated (krsyamanakas) it. This difference leads one to conceive of a three tier land system in vogue: land-owning monasteries (Viharas and Viharikas), the beneficiaries (bhujyamanakas), and the actual tillers of the soil (krsyamanakas). The system appears to have been the same as mentioned in the Yajnavalkya Smrti (c 200 BC- 200 CE) mahipati (King), Ksetrasvami (landowner) and Karsaka (actual tiller). Both Devakhadga and his son Rajabhata supported the Buddhist practices in Samatata. The Chinese monk Sheng-Che Ch'an Shih writes that when he came to Samatata (his arrival time is not known) the king of the country was Ho-luo-She-Po- t'o or Rajaraja (bhata), Devakhadga's son. He was a great admirer of the three-gems - the Buddha, the Law and the Order (San-pao) and a zealous upasaka (Wu-po-so- chia) who followed the five Buddhist commandments. The king is said to have given to the monks and nuns offerings (not specified) for their maintenance. Every morning on behalf of the king an officer was sent to the monastery to ask the welfare of the resident monks including Sheng-che. The vihara where the monks and the great Che used to live was the Rajavihara. This Rajavihara may be suggested to have been the same as mentioned in the Gunaighar Copper plate of Vainyagupta (AD 507). All these supports/patronages may be explained as the king's efforts towards legitimising his royal power. The copper plate of Balabhata, another son of Devakhadga, describes him as having granted 28 patakas of land in the area of Dhanalaksmipataka (unidentified)

NSOU • GE-HI-11 67 for the maintenance of the viharas and stupas and for the renovation and repair works at the axramas. The plate refers to mahabhogakshrama, meaning probably the ashrama where grand religious festivals were held. The viharas were apparently eight in number and in them; the Parimitamatam and Danachandrika were taught and discussed. The donations were apparently made for the residential religious structures erected in the name of the Buddhist Trinity- the Buddha, the Dharma and the Sangha. 7.4 Conclusion The first Ashrafpur copper plate grant, however, furnishes a little more information about the religious leaning of the dynasty. It refers to the inscription of the name SrimatDevakhadga below the bull facing the left and not dharmachakra (Wheel of Law). This may indicate Devakhadga's Shaiva leaning which appears to have continued through his son Balabhata who also described himself as paramahesvaraRajaputra in his copperplate. Devakhadga's queen Prabhavati also caused the goddess Sharvani to be covered with gold leaves out of reverence for the goddess (mahadevibhaktyahemaliptam- akarayat)

at the village of Deulbadi in the district of Comilla of present day Bangladesh. The goddess Sharvani has eight arms which hold

the thunderbolt, the bell, the bow and the shield on the

left; and the conchshell, the goad, the sword, and the wheel on the right. She stands on a lotus-seat on the back of a conch lion and belongs to the Brahmanical pantheon. Nowhere in the Deulbadi image inscription, however, has it been mentioned that the goddess Sharvani was built and installed at Deulbadi. Indeed if we go by the inscription, we can surmise that the image of the goddess was already in existence at Deulbadi when the queen covered it with gold leaves. The Shaiva leanings of Devakhadga, his queen Prabhavati, and their son Balabhata, should be explained as an act of stabilising Khadga royal power in the newly conquered area of Samatata (Vijitarikhanda). The queen's act of covering the goddess with gold leaves occurs following the word Vijitarikhanda relating to Devakhadga. Two more inscriptions of the Khadgas have been found in the Shalvan Vihara excavated area which, however, does not point out anything about the activities of the dynasty.

68 NSOU • GE-HI-11 The Deva dynasty, as has been epigraphically suggested, might have supplanted the Khadgas in 8th century CE. 7.5 Model Questions 1. Write an essay on the political condition of Samatata during the post Gupta period. 2. Write a short note on the Khadga rulers. 7.6 Suggested Readings 1. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 69 Unit-8 □ Rise of Gauda Structure 8.0 Objective 8.1 Introduction 8.2 The region of Gauda 8.3 Later Gupta dynasty 8.4 Conclusion 8.5 Model Questions 8.6 Suggested Readings 8.0 Objective • The objective of the present unit is to study the rise of Gauda in ancient Bengal's political trajectory. • The learners will come to know the historical evolution of early Bengal centring around Gauda. • The present unit also covers the role of later Gupta dynasty in the history of Bengal. 8.1 Introduction The Gauda kingdom came into being in late 6th century CE in eastern India, as a result of a political disintegration of the Gupta Empire which existed between the 3rd and 6th century CE. The core areas of the Gauda kingdom were located in what is now the state of Bengal in India and the northern part of the country of Bangladesh, with the capital at Karnasuvarna located near the present town of Murshidabad. For a brief period of time under king Shasanka Gauda became a very powerful kingdom vying with other regional powers for political supremacy in India. Unfortunately the kingdom of Gauda could not sustain its power for a long time. Soon after the death of Shasanka the kingdom failed to sustain its power and 69

70 NSOU • GE-HI-11 therefore declined rapidly. But it passed into history as the base kingdom for the vast empires of future days most notably under the Pala and the Sena rulers between the 8th and 12th century CE.

The fall of the Gupta Empire and the subsequent failure of the effort of Yashodharman led to the political disintegration of northern India marked by the rise of many independent regional powers. Among these powers the Pushyabhuti dynasty of Thaneswar, Maukhari dynasty of Koshala and the later Gupta dynasty of Magadha were the most prominent.

Bengal also

took advantage of this political situation and two powerful independent kingdoms Vanga and Gauda were established here around the 6th century

CE. 8.2 The region of Gauda The emergence of Gauda kingdom marked an important benchmark in the history of Bengal. But the region has a much earlier history. Panini in his grammar based text *Ashtadhyayi* refers Gaudapura. Kautilya also mentioned about the rich products coming from Gaudadesha to Magadha in his famous work *Arthashastra*. This place was known to Vatsyayan, the author of *Kamasutra*, to the famous poet Kalidasa and many others also. According to Varahamihira Gauda was different from the other parts of Bengal. The text of *Bhavishya Purana* mentions Gauda as a region located between the north of Bardhamana and south of the river Padma. Varahamihira in his *Vrihatsamhita* distinguished Gaudaka from particularly Pundra or the bhukti of Pundravardhana, Tamraliptika or Tamralipti, Vanga, Samatata and the bhukti of Bardhamana. Henceforth throughout the so called Hindu period Gauda and Vanga broadly denoted the two prominent political divisions of Bengal. The former comprising the entire northern portion and either the whole or at least major part of western Bengal, and the latter includes entire southern and eastern Bengal. In this regard it should be kept in mind that the actual political boundaries of these broad divisions varied largely in different times. In spite of that these rough geo political divisions persisted throughout the ancient times. The names of other divisions like Pundravardhana or Varendri (northern Bengal), Radha or Suhma (western Bengal), Samatata or Harikela (eastern Bengal) etc were also used along with the broad two divisions. The geo political divisions of Gauda and Vanga are similar with the divisions of Aryavarta (denotes whole of northern India starting from the north of the Vindhya Range) and NSOU • GE-HI-11 71 Dakshinapatha (denotes whole of the southern part starting from the Vindhya Range) of the ancient times.

8.3 Later Gupta dynasty Later Gupta dynasty emerged to the power after the decline of the imperial Gupta dynasty and was contemporary of the Maukhari dynasty of Malwa region. The later Guptas established their power in Magadha region. They became successful to extend their sovereignty across the land of Gauda and became able to hold that up to the rise of Shasanka. In spite of having same family name the later Gupta rulers were not related in any way with the imperial Gupta rulers. Probably they were at first feudatory to the imperial Gupta rulers. Gradually during the declining period of the imperial Guptas the later Guptas came into prominence and obtained independence almost around the same time as the Maukhari rulers. The later Gupta rulers became able to sustain their rule till around the middle of the 8th century CE. The early history of this dynasty is known from the Apsad inscription of Aditya Sena. Aditya Sena was the 8th king of this dynasty according to this inscription. The genealogy given in this record mentions the name of Krishna Gupta as the founder ruler of the dynasty. He was succeeded by Harsha Gupta. Among the other rulers Jivita Gupta, Mahasena Gupta and Madhava Gupta were important. Aditya Sena was the son of Madhava Gupta according to the genealogy mentioned in the Apsad inscription. The first later Gupta ruler who assumed the full imperial title was undoubtedly Aditya Sena. Although initially the later Guptas and the Maukharis were related by matrimonial relationship but later hostility developed between them. They even fought with each other. Krishna Gupta, the first king, may be placed in c. 490 – 505 CE. His son Harsha Gupta succeeded him and ruled till 525 CE. Jivita Gupta, the third ruler of the dynasty reigned between c. 525 and 545 CE. Kumara Gupta, the 4th king ruled between c. 540 and 560 CE. He defeated the Maukhari king Ishana Varman in around 554 CE. Thus he laid the foundation of the greatness of the family. According to Ramesh Chandra Majumdar he established himself as the first independent ruler of this dynasty. Since no record of the imperial Gupta family is known after 543 CE we may assume that sometime around 550 CE both Ishana Varman and Kumara Gupta obtain independence. Some scholars believe that the later Gupta rulers originally ruled in Malwa and it was only after the reign of Harshavardhana that they came into possession of

72 NSOU • GE-HI-11 Magadha. Kumara Gupta is said to have died at Prayaga after his victory over Ishana Varman. The struggle continued during the reign of Damodara Gupta, who was the son and successor of Kumara Gupta. Damodara Gupta achieved a great victory over the Maukharis. Damodara Gupta was succeeded by his Mahasena Gupta in the last quarter of the 6th century CE. He seems to have gained a victory over Susthita Varman of Kamarupa. However the simultaneous attack by the Maukharis and the king of Kamarupa resulted in setbacks for Mahasena Gupta. Further it was during his reign that Shasanka founded an independent kingdom in Gauda (Bengal). The Chalukya king Kirtivarman who ruled between c. 567 and 597 CE is also said to have attacked Anga, Vanga and Magadha at this time. SrongTsan, the then king of Tibet who ruled between c. 581 and 600 CE also led a campaign against Mahasena Gupta. The later Gupta king Mahasena Gupta was defeated by both of the Chalukya king and the Tibetan king. After these defeats Mahasena Gupta seems to have taken shelter in Malwa. Thereafter for nearly half a century the later Gupta rulers were overshadowed by Harsha's imperial kingdom in northern India. Mahasena Gupta had a son named Madhava Gupta. Madhava Gupta was again made a king of Magadha by Harshavardhana and was succeeded by his son Aditya Sena in c. 650 CE. Damodarpur copper plate inscription proves the Gupta sovereignty over northern part of Bengal at least up to c. 544 CE. It is very likely that the Gupta sovereign was a member of the later Gupta dynasty. The later Gupta ruler might or might not have been connected by blood with the imperial Gupta rulers but they were to begin with in possession of a substantial portion of the imperial Gupta Empire. That their pretensions as successors of the imperial Gupta rulers were tacitly recognised is proved by references to the Gupta suzerainty in the records of the Parivrajaka rulers of Bundelkhand in the 6th century CE. It is generally believed that the suzerainty of the later Gupta rulers continued over northern Bengal throughout that century. However the Gupta suzerainty of Gauda during the 6th century CE does not appear to have been either peaceful or uninterrupted. If Yashodharman really carried his triumphal march right up to the bank of the river Brahmaputra as he claims that event must have considerably weakened the power and position of the Gupta rulers in Gauda. It is exceedingly likely that although the Gupta suzerainty in Gauda survived this catastrophe but it NSOU • GE-HI-11 73 gradually became more nominal than the real. Gauda came to be regarded as an important political unit by the mid of the 6th century CE. The Haraha inscription of the Maukhari king Ishana Varman dated about 554 CE also indicates the political importance of Gauda region. In v. 13 of this inscription the king claims to have defeated the lord of the Andhras and 'made the Gauda people take shelter towards the sea shore after causing their land territories to be deprived of their future prospects'. The reference to the sea combined with the expedition of Ishana Varman to the Andhra country seems to indicate that the conflict with the rulers of Gauda took place in the southern part of western Bengal. Although this region was geographically in Gaudadesha but it was probably a part of the kingdom of Vanga founded by Gopa Chandra at the time of Ishana Varman's conquest. Therefore it may be said that the fight between Ishana Varman and the ruler of Gauda was an important episode of the late classical period. Obviously the invasion and the defeat of the Gauda ruler was an outcome of the prolonged enmity between the Maukhari dynasty and the later Gupta dynasty since Gauda was under the later Gupta rule. Ishana Varman was succeeded by Sarva Varman. He probably conquered some parts of Magadha. He granted a village in the Shahabad district. This event indicates that he was in possession of at least some parts of Magadha. Similarly his successor Avanti Varman was also in possession of some parts of Magadha. According to some scholars later Gupta king Kumara Gupta defeated Ishana Varman and his son Damodara Gupta also defeated the Maukhari ruler. It is therefore evident that in the hereditary struggle between the later Gupta dynasty and the Maukhari dynasty victory inclined alternately to the two sides none of which could claim any decisive success.

According to some scholar after the success of Sarva Varman and Avanti Varman the later Gupta rulers left both Magadha and Gauda. Most probably they had shifted to Malwa. But whatever might have been actual history up to the end of the 6 th century later Gupta king Mahasena Gupta's rule extended over Gauda, Magadha and spread up to the river Brahmaputra. But the prolonged hostilities between the Maukhari rulers and the later Gupta rulers invasions of the Chalukya ruler from the south and Tibet from the north made the later Gupta rulers too weak to keep control over Magadha and Gauda, and withdrew to Malwa. Advantage of this political situation was taken by Sasanka who set up an independent kingdom in Gauda. In the long hostility between the later Gupta dynasty and the Maukhari dynasty

74 NSOU • GE-HI-11 fortune was more favourable to the later Gupta ruler Mahasena Gupta. He also defeated Susthita Varman, who was the ruler of Kamarupa. Although there is a debate regarding the home territory of Mahasena Gupta that whether it

was Malwa or Magadha, but also it is evident that both Magadha and Gauda formed part of his dominions and he put an end to the Maukhari aggression in these territories.

The exact political status of Gauda during this period is difficult to determine. It is unlikely that the later Gupta kings directly administered the entire

territory. The probability is that it was ruled by a local chief who acknowledged their suzerainty. But by the beginning of the 7 th century CE, if not a few years earlier, Gauda formed an independent kingdom under Sasanka, and Magadha also formed a part of his dominions. The rise of this independent kingdom was probably facilitated by the great calamity which befell

Mahasena Gupta

who, according to some scholars, was disastrously defeated by the

Kalachuri ruler. Ujjwaini

the capital of the later Gupta kingdom of Malwa was in possession of the Kalachuri king Sankaragana and the two young sons of

Mahasena Gupta

were forced to live in the court of king Prabhakaravardhana of

Thaneshwara. 8.4 Conclusion In conclusion it may be said that the

reconstruction of the history of Mahasena Gupta cannot be regarded as certain but if true it explains the rise of the independent kingdom of Gauda-Magadha out of the ruins of the later Gupta empire. It also explains why Sasanka, the founder of this independent kingdom, was involved in a war with the Maukhari king and the ruler of Kamarupa, the two great enemies of the later Gupta rulers and formed an alliance with

Deva Gupta, the

king of Malwa. In other words, the political traditions of the 6 th century were continued in the 7 th century CE. The

invasion of the Tibetan King

SrongTsan also played an important role in disrupting the kingdoms of the later Gupta dynasty in eastern India and helped Sasanka indirectly to rise in power. Another important factor

towards the same end may be found in the conquest of Kirti Varman, who was the king of Chalukya dynasty. He claims to have conquered Anga, Vanga and Magadha, and this, if true, must have considerably weakened the position of the later Gupta rulers in Gauda and Magadha. Sasanka might have taken advantage of this catastrophe to set up an independent kingdom in Gauda.

NSOU • GE-HI-11 75 8.5 Model Questions 1. Write an essay on the political condition of Gauda during the post Gupta period. 2. Write a short note on the later Guptas. 8.6 Suggested Readings 1. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

76 NSOU • GE-HI-11 Unit-9 □ Sasanka Structure 9.0 Objective 9.1 Introduction 9.2 Sasanka's Early Life 9.3 Sasanka's Rise to Power 9.4 Extension of Sasanka's Empire 9.5 Sasanka and Buddhism 9.6 Conclusion : Estimate of Sasanka 9.7 Model Questions 9.8 Suggested Readings 9.0 Objective • The objective of this unit is to study the history of Bengal under Sasanka. • Four basic aspects of the Sasanka's rule will be discussed : ➤ The rise of Sasanka as the ruler of Bengal ➤ The expansion of the territory of Sasanka ➤ Sasanka's relationship with Buddhism ➤ The historical evaluation of Sasanka 9.1 Introduction During the rule of the later Gupta parts of North and West Bengal were under them. It was at about that time this area came to be known as Gauda and although under the suzerainty of the later Gupta rulers, Gauda developed into a principality of great strength and fame, the Maukhari King Ishanavarman is said to have defeated the Gaudas and compelled them to take shelter on the sea coast. Obviously the invasion and defeat of the Gaudas was an episode in the prolonged enmity between the Maukharis and the Guptas, since Gauda was under the Guptas. 76

NSOU • GE-HI-11 77 Sarvavarman and Avantivarman, successors of Ishanavarman, probably conquered parts of Magadha, and according to some scholars, it was after this that the Guptas left both Magadha and Gauda, and shifted to Malva. But whatever might have been actual history, upto the end of the sixth century, Gupta King Mahasenagupta's rule extended over Gauda, Magadha and spread upto the Brahmaputra River. But the prolonged hostilities between the Maukharis and the Guptas, invasions of the Chalukya from the South and Tibet from the north made the later Gupta rulers too weak to keep control over Magadha and Gauda, and withdrew to Malawa. Advantage of this political situation was taken by Sasanka who set up an independent kingdom in Gauda. 9.2 Sasanka's Early Life Very little information about the early life of Shashanka is known. It appears that he ruled for some time as a chieftain (mahasamanta) of Rohtasgarh under the Gauda king of Karnasuvarna, who possibly belonged to the family of the Maukharis. However, Jayanaga, another king of Karnasuvarna, appears to be close to the date of Shashanka. In fact, Karnasuvarna was the capital of Shashanka and the famous metropolis was situated near Chiruti railway station close to Rajbaridanga, the excavated site of Raktamrttika-mahavihara or modern Rangamati in Murshidabad district, West Bengal. Shashanka has been described both in the inscriptions and literary accounts as the ruler of Gauda.

In the narrower sense Gauda is the territory between the river Padma and Bardhamana region. But in course of time it embraced much wider area. In the Satpanchasaddeshavibhaga, the seventh patala of Book III, Shaktisangama Tantra Gauda is said to have extended from the Vangacountry up to Bhuvanasha probably Bhubaneswar in Orissa. It is not unlikely that the author had described the extension of Gauda country keeping in mind the kingdom of Shashanka, which also embraced a part of Orissa. 9.3 Sasanka's Rise to Power Among the Kings of Bengal, Sasanka was the first fully sovereign ruler and he occupies a prominent place in the history of Bengal. The exact time and date when Sasanka had ascended the throne of Bengal is, however, not definitely known.

78 NSOU • GE-HI-11 In the Rohtasgarh inscription there is mention of one Sri Mahasamanta Sasanka. From this it is presumed that Sasanka was originally a Mahasamanta, that is, Feudatory Chief. But whether he was a feudatory under the Maukharis or the Guptas is not known. But the fact that Mahasenagupta of the later Guptas was in possession of Gauda and Magadha during the sixth century A.D. raises the presumption that Sasanka was a feudatory under the Guptas. In 595 A.D. Mahasenagupta took refuge in the court of Prabhakarvardhana. The name of the mother of Prabhakarvardhana was Mahasenagupta. From this it is inferred by some that as a result of the Kalachuri invasion Mahasenagupta took refuge at the court of Thaneswar that is his sister. However, it is generally agreed that it was from the ashes of the Gupta Empire that the independent kingdom of Gauda took birth. Sasanka was in end-less struggle with the Maukharis of Kanauj and the kingdom of Kamrup. This also points to the conclusion that it was as the successor to the Guptas that Sasanka was locked in a continuous struggle with the houses of Kanauj and Kamrup. Some historians are of the opinion that the name of Sasanka was Narendragupta and he was a scion of the Gupta dynasty. But this opinion is unacceptable to most of the modern historians. Bana and Hiuen T-Sang have described Sasanka as the king of Gauda and his capital has been named as Karnasuvarna. But the actual site of his capital has not been determined. It is supposed to be a place now called Rangamati, six miles away from Behrampore. Before the rise of Sasanka the Mana dynasty became a powerful independent kingdom between Midnapore and Gaya district in Bihar. Later this dynasty occupied Orissa. Sasanka defeated Shambhujas or his successor and occupied Dandabhukti that is Midnapore, Utkal, i.e., Orissa, and Kangod, i.e., South Orissa. The kings of Sailobhava dynasty accepted the over lordship of Sasanka and continued to rule over Kangod, i.e., South Orissa. The kingdom of Vanga, comprising south and eastern Bengal also recognised the supremacy of Sasanka. But nothing can be definitely said about this. Sasanka did not only make Gauda an independent and sovereign country but extended its dominions upto Ganjam towards the south, the whole of Bengal, Magadha and Varanasi. When Sasanka proceeded against the Maukharis, the Pushyabhutis of Thaneswar opposed him, for the Mukhari king Grahavarman was the son-in-law of Prabhakarvardhana.

NSOU • GE-HI-11 79 Sasanka had a friend and ally in Devagupta of Malava. Devagupta was inimically disposed towards Grahavarmana. As Sasanka proceeded against Kanauj after having conquered Varanasi, Devagupta also was on his march against Kanauj. In the meantime Prabhakarvardhana had died and his eldest son Rajyavardhana was on the throne of Thaneswar. The joy of succession to the throne was soon marred by the news that Grahavarman, husband of Rajyavardhan's sister, Rajyasree, had been defeated and killed by Devagupta who put Rajyasree in a prison. Rajyavardhana placed the charge of his king-dom in the hands of his brother Harshavardhana and proceeded against Devagupta and for the release of Rajyasree. Sasanka in the meantime also was on the march for Thaneswar. In the encounter between Rajyavardhana and Devagupta, the latter was defeated and killed but as he was proceeding towards Kanauj he met Sasanka on the way. In the battle with Sasanka Rajyavardhana was defeated and killed. The defeat and death of Rajyavardhana at the hands of Sasanka gave rise to various conflicting stories. Among these one mentioned on Bana's Harsha Charit and Hiuen T-Sang's narrative deserves mention. According to Bana Sasanka invited Rajyavardhana to his camp and finding him alone killed him. In Hiuen T-Sang's narrative it is mentioned that Sasanka on the advice of his ministers invited Rajyavardhana to his camp and done him to death. It was because he was advised that so long as an honest and pious king like Rajyavardhana would be alive there would be no prospect for the greatness of the kingdom of Gauda. In the inscription of Harshavardhana it is mentioned that Rajyavardhana lost his life in the camp of his enemy in order to keep truth. From such conflicting statements it is difficult to find out the truth. Further, that in order to tarnish the character of Sasanka who was the enemy of Rajyavardhana and Buddhism; it is possible that Bana, the Court panegyrist, and Hiuen T-Sang might have exaggerated the incident. That Sasanka behaved in a treacherous manner is not mentioned in any one of the narratives. For all this, the modern historians are reluctant to stigmatise Sasanka as a treacherous killer of Rajyavardhana. On hearing the news of the death of Rajyavardhana, Harshavardhana as we know from HarshaCharit, promised to clear the earth of Gaudas, otherwise he would burn himself to death. Thereafter he proceeded with a large force against Sasanka,

80 NSOU • GE-HI-11 but on the way he came to learn that his sister Rajyasree had fled from the prison of Devagupta and taken shelter in the Vindhya. He left the charge of his army to Bhadi, his General, and left in search of Rajyasree. In the meantime Bhaskarvarman of Kamrup being fearful of the growing strength of Sasanka entered into a friendly alliance with Harshavardhana. Whether Harshavardhana succeeded in defeating Sasanka in any battle is not mentioned anywhere except in Manjusreemulakalpa, a Buddhist book, in which it is mentioned that Harshavardhana defeated Sasanka. In this book the reference has been made in the nature of forecast. Further, the statement of Hiuen T-Sang that Sasanka oppressed the Buddhists; cut the Bodhi tree, constructed a Hindu Temple by the side of Bodh Gaya as a result of which sins he died of various diseases is also to be found in Manjusreemulakalpa. It is difficult, according to modern historians, to accept these as true. These were nothing more or less than the prevalent stories among the Buddhists. There is a significant reference in the Buddhist books, that Harshavardhana did not receive proper respect in the barbarian country under Sasanka and returned. This statement does not show that Harshavardhana was successful against Sasanka. Further, there was not a single word in Bana's HarshaCharit about Sasanka's defeat at the hands of Harshavardhana. This significant omission is enough to prove that Harshavardhana was not successful against Sasanka. That Harshavardhana was not much successful against Sasanka is also proved by three inscriptions of Sasanka himself. One of these inscriptions is dated 699 A.D. which show that he was in possession of his territories till 619 A.D. In that inscription it is mentioned that a king of the Sailotbhava dynasty of South Orissa was feudatory of Sasanka. According to Dr. R. C. Majumdar, till his death in 637, Sasanka's dominions comprised Gauda, Dandabhukti, Magadha, Utkal, and Kangod. Thus, even if Harshavardhana remembered his oath of clearing earth of the Gaudas within a limited number of days he could not do any harm to Sasanka. 9.4 Extension of Sasanka's Empire Sasanka first established himself in Gauda, and set his eyes on Magadha. Magadha at that time was under Maukhari rule, and Sasanka vowed to free it again. None other than Shashanka could have defeated the Maukhari rulers of Magadha.

NSOU • GE-HI-11 81 Next, he focused on extending his kingdom to Odissa, parts of Central Provinces, and Bihar. Though Sasanka remains known, and referred to, as the Lord of Gauda, his kingdom included more than just that region. By the end of his reign, his domain stretched from Vanga to Bhuvaneswar while in the east, his kingdom bordered Kamarupa. 9.5 Sasanka and Buddhism Sasanka was a worshipper of Siva. A 12 th -century text states that Sasanka destroyed the Buddhist stupas of Bengal and was an oppressor of Buddhism. Sasanka is reputed to have cut the Bodhi tree where the Buddha found enlightenment, in the Mahabodhi Temple of Bodh Gaya. According to Ramesh Chandra Majumdar this account is doubtful because it was written centuries after the alleged persecution, and that it is "unsafe to accept the statements recorded in this book as historical".

According to Radhagovinda Basak there is no reason to believe that this 12 th century Buddhist author had cherished any ill feeling about Sasanka, and he may have had reasons to describe the events as they occurred in the 7 th century. Even if it is agreed that he was not tolerant of other religions, his oppression of the Buddhists was not borne out by facts. Hiuen T-Sang's account gives out this truth. For, from Hiuen T-Sang we come to know that Karnasuvarna and in other parts of Sasanka's kingdom he saw Buddhism prevalent. If Sasanka oppressed the Buddhists, how could Buddhism could be found to exist in all parts of his dominions including his capital? 9.6 Conclusion : Estimate of Sasanka In the history of the Bengalees and Bengal, Sasanka occupies a place of respect. It was he who for the first time mooted the idea of a Bengali Empire in the Aryavarta and his idea was largely successful during his life time. He made Gauda independent from the overlordship of the Guptas and made it a sovereign state. He spread his authority all over Bengal including Dandabhukti, i.e., Midnapore, as also over Magadha, Utkal, Kongod, and Varanasi. He staked his claim over Kanauj and Thaneswar, but was not successful. Harshavardhana could not do him any harm during his life time. Sasanka was a diplomat of no mean ability. HIS GE-HI-11 & 21—6

82 NSOU • GE-HI-11 He entered into friendly alliance with Devagupta of Malava against Maukharis of Kanauj. The portrayal of character of Sasanka in Buddhist books and Hiuen T- Sang's account is not the correct picture of his character. Modern researches have revealed some aspects of Sasanka's character which are at variance with those given out by the Buddhist books and Hiuen T-Sang. 9.7 Model Questions 1. Write an essay on the achievement of Sasanka in establishing an independent kingdom in Gauda. 2. Write briefly on the conflict between Sasanka and the Pushyabhutis of Thaneswar. 9.8 Suggested Readings 1. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989. 2. NSOU • GE-HI-11 83 Module IV The Pala Empire 83

Unit 10 □ Condition of Bengal before the Formation of Pala Empire Structure 10.0 Objective 10.1 Introduction 10.2 Fall of the Gauda Tantra – Anarchy 10.3 Matsyanayam – The Khalimpur Inscription 10.4 Historiography of Matsyanaya 10.5 Conclusion 10.6 Model Question 10.7 Suggested Readings 10.0 Objective • The objective of this unit is to study the condition of Bengal between the rule of Sasanka and the rise of the Pala empire. • This evolution of this period - as historically referred as Matsyanaya -will be discussed in this unit. • The present unit will also analyze the historiography of Matsyanaya. 10.1 Introduction

The death of Shasanka proved to be a political disaster of the first magnitude. Not only were the dreams of a far flung Gauda empire rudely shattered but within a few years his kingdom including the capital city Karnasuvarna passed into the hands of

Bhaskara Varman,

the hostile king of Kamarupa. The events that led to this complete collapse are not known, and only a few facts of this obscure period in the history of Bengal may be gleaned from the documents at present available to us. 85

86

NSOU • GE-HI-11 Sasanka'

s death loosened the bonds which united north and West Bengal, and these formed separate kingdoms in 638 CE within a few years both

these kingdoms were conquered by Bhaskara Varman. The fact that Bhaskara Varman

made a grant from the victorious camp at Karnasuvarna shows that he even succeeded in seizing the capital city of Sasanka. Thus the available evidences seem to

indicate

that the death of Sasanka was followed by a disruption of his vast dominions and its component parts formed separate independent states. This gave the required opportunity to his lifelong enemies Bhaskara Varman and Harshavardhana who conquered respectively his former dominions in and outside Bengal. 10.2

Fall of the Gauda

Tantra – Anarchy

The political disintegration of the Gauda empire after the death of Sasanka seems to be referred to in that curious

Buddhist work Arya Manjusri Mulakalpa. The relevant passage has been translated as follows: 'after

the death of Soma the Gauda political system (Gauda Tantra) was reduced to mutual distrust, raised weapons and mutual jealousy – one king for a week; another for a month; then a republican constitution – such will be the daily condition of the country on

the

bank of the Ganges where houses were built on the ruins of monasteries. Therefore Soma's (Sasanka) son Manava will last for 8 months

and 5 days'.

The passage immediately following the above extract in the Arya Manjusri Mulakalpa almost undoubtedly refers to king Jayanaga of Gauda and there is equally little doubt that he is to be identified with the king of that name whose coins have been found in western

Bengal

and who issued a long grant from the victorious camp of Karnasuvarna, the capital of Sasanka. Although the tradition record in

the Arya Manjusri Mulakalpa

cannot be regarded by itself as historical, it is corroborated in the present instance by known facts. The general picture of anarchy, confusion and political disintegration is fully confirmed by the conquests of Harsha and

Bhaskara Varman, and merely supplies the details of a presumption of

which they inevitably lead. The reference to Jayanaga is also corroborated as noted above by numerous coins and inscription of a king named Jayanaga who ruled with Karnasuvarna as

his capital.

NSOU • GE-HI-11 87 10.3 Matsyanayam – The Khalimpur Inscription The

condition of Bengal in the century following the death of Sasanka and before the rise of the Palas (

c 750-850 CE) has been described as matsyanyayam (matsyanyayam). In a near contemporary inscription, the Khalimpur copper plate of the 32 nd year of the second Pala ruler Dharmapala, and the 12 th century Ramacharitam kavya of Sandhyakara Nandi the anarchical condition

of Bengal preceding the rise of the Pala dynasty is found mentioned as matsyanyayam.

The Sanskrit term matsyanyayam, used in ancient texts, bears special significance. In the Arthashastra (1.4.13-14) Kautilya or Chanakya defines the term as follows : When the law of punishment is kept in abeyance, it gives rise to such disorder as is implied in the proverb of fishes, i.e., the larger fish swallows a smaller one, for in the absence of a magistrate, the strong will swallow the weak. Lama Taranatha, the 17 th century Tibetan historian of Buddhism in India, also mentions that all of Bengal was pervaded by an unprecedented anarchy in the century before the rise of the Palas. Government was fragmented, with no king having real control over Gauda and Vanga or Samatata. Ksatriyas, Brahmanas, merchants and townsmen all were kings in their own homes. The sufferings and strife of the common people were intolerable. The writer of the Arya Manjusri Mulakalpa declared that after Shashanka the state of Gauda was paralyzed and whoever was king thereafter would not be able to rule for even a year. According to the same source there was a disastrous famine in the period in the eastern region of India. From the above it appears clear that in the century following the reign of Shashanka Bengal saw very little of stable government. The country was torn into many small kingdoms and internecine warfare among them caused the instability. In the absence of a strong force capable of enforcing law and order, a situation prevailed that has been termed as Matsyanyayam. Physical strength was the only strength, and throughout the land ran the frenzy of unbridled, unruly might. In order to put an end to this state of affair, Gopala emerged as the king of Bengal and founded the rule of the Pala dynasty. We have no direct evidence from which to discern the social ramifications of this anarchy. But indirect deductions from the available evidence make it clear that in the absence of peace and order there was a decline in trade and commerce. The

88 NSOU • GE-HI-11 loss of prominence of the port of Tamralipti after the 8 th century CE is suggestive of this decay. Among the ruins of Mahasthana it can be seen that the temples and monasteries of the Pala period were built on the ruins of the earlier Gupta and post- Gupta eras. It would seem that the destruction belongs to the age of anarchy. The devastating famine mentioned earlier may have had a connection with the prevailing anarchy. In the absence of a strong king, the feudal vassals, each one independent and autonomous, must have been instrumental in creating anarchy. And the sagacity of a few of them must have brought an end to the state of lawlessness; some of them coming together brought Gopala to power. 10.4 Historiography of Matsyanaya Studies on the history of early Bengal were pursued with great interest by the Bengali scholars from the beginning of the 20 th century. The partition of Bengal in 1905 gave a new dimension to the search for the cultural past of the Bengali speaking people and the sphere of history and archaeology where extend to a search for the origin of the Bengali identity. As a response to the view that from Magadha the Pala rulers extended their authority in Bengal and subdued the Bengalis, R. P. Chanda projected Gopala as the first Bengali king who was elected by the Bengali people to put an end to the anarchy and this according to him was the 'revival of Gaudarastra' which, to him, was the representative of Bangladesh, the culmination of the unified image of Bengal. In the writings of A. K. Maitreya the same image of Bengal and the attempt of view Gopala as a Bengali king are present. It was equivalent to Lama Taranatha'sVangala. To elect a king like Gopala all local chiefs are supposed to have made 'voluntary self sacrifice for the sake of common good' that, to him is the 'patriotism of the purest type'. It resulted in the establishment of a 'national government based upon the principles of federation where all feudal chiefs lived under the protection of Gaudeswara elected by them. In other words the political chaos led the people to establish an ideal type of government. Prof. R. D. Banerjee slightly differing from this wanted to view Gauda-Magadha-Vanga together as a unit that faced anarchy after Jivita Gupta II. It ended in the selection of Gopala by the subjects of Gauda. In the year of 1943, came up the History of Bengal volume I (Hindu Period) under the editorship of R. C. Majumdar from the University of Dacca. Prof. R. C. Majumdar also opined that the death of Sasanka was a political disaster that 'shattered the dream of a fur-flung Gauda empire' and loosened the

NSOU • GE-HI-11 89 bonds that united northern and western Bengal'. This according to him is indicated in Hsuan Tsang's account referring to Pundravardhana and Karnasuvarna as separate kingdoms. However, existence of such bond under Sasanka is never indicated in any record so as Sasanka's authority over northern Bengal. Although Arya Manjusri Mulakalpa indicates vaguely about Sasanka's authority over northern Bengal but this is not beyond doubt. However, he was the first to study the history of Vanga separately suggesting that developments there might have been different from what was happening in Gauda. But at the same time their nature was identical as both were experiencing rapid change of rulers and repeated foreign invasions. He visualizes 'a throne of Bengal' emphasizing the same unified image. Like R. P. Chanda he too sees the election of Gopala as an instance of 'subordinating individual interests to a national cause' though admits that

the selection was originally made by 'a group of leaders or independent chiefs'.

Thus attempt to see Bengal as a single identity to imagine a spirit of self sacrifice and love for this 'Bengal' among the people in the 8 th century CE. The establishment of a government by them that was of an ideal type and above all a suitable beginning for a line of rulers who fulfilled their dream of establishing an empire i. e. the Gauda empire are pronounced in the writings of these authors. The term matsyanaya occurs in a single document viz the Khalimpur copper plate inscription of Dharmapala. Historians generally cite two other documents as corroborating it. These are the Buddhist text Arya Manjusri Mulakalpa and the account of Lama Taranatha. The general trend is either to accept or to discard the statements contained in them. However a study of the historical context in which such documents were composed would led to a better understanding and evaluation of the statements made in them. It is the Khalimpur copper plate inscription where the Palas first represent themselves as rulers which reconstruct their genealogy describing their progenitor as Sarvavidyavadatah and the best among kings and his son Vapyata as one who destroyed his enemies thereby giving no clue about their ancestry and also indicating that it was obviously not from any dignified status. In verse no. 4 it is stated that in order to put an end to matsyanaya the Prakritis assisted Gopala, the crest jewel of the heads of kings to take the hands of fortune. Thus it is apparent that Gopala was not a royal person and gained the throne after subduing other claimants to the throne. But whether the situation can be defined as matsyanaya is to be ascertained because it is natural for a court poet appointed to frame the Prasasti of a new royal family to glorify his patron. However on the basis of the statements written in the

90 NSOU • GE-HI-11 corroborative text of Arya Manjusri Mulkalpa it will not be an exaggeration to explain the political condition prior to the election of Gopala as an anarchy. It clearly implies that anarchy prevailed in Gauda after the death of Sasanka and the main factor leading to it was the absence of a stable administration. 10.5 Conclusion Thus in conclusion it may be said that the period of Matsyanaya is generally viewed as a dark period which eclipsed the life of the Bengali people. The term is generally applied to the period extending from the death of Sasanka in around middle of the 7 th century CE to the rise of the Pala dynasty in c. 750 CE. This condition is believed to have prevailed in the whole of Bengal in general. Absence of a stable government and repeated foreign invasions are regarded to be the main themes outlining the politics of this period. It is indeed needless to mention that this anarchy has affected the life of the common people too. 10.6 Model Question 1. Write a short note on Matsyanaya. 2. How far it is correct to explain the political scenario of Bengal after the death of Sasanka as an anarchy? 10.7 Suggested Readings 1. Nitish Sengupta, The Land of Two Rivers, London, 2011. 2. Pramode Lal Paul, The Early History of Bengal, Vol. II, Calcutta, n.d. 3. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 91 Unit-11 □ The Origin and the Early History of the Palas Structure 11.0 Objective 11.1 Introduction 11.2 Gopala – the first Elected Ruler of Bengal 11.3 Conclusion 11.4 Model Questions 11.5 Suggested Readings 11.0 Objective • This objective of this unit is to study the establishment of the Pala Empire in ancient Bengal. • The coronation of Gopala - the first elected king of the Pala dynasty-will also be discussed. 11.1 Introduction The death of Sasanka marked the beginning of a chaotic and disrupted political situation in Bengal. Huen Tsang's account shows that Sasanka's death loosened the bonding force which united the northern and western parts of Bengal region. The Buddhist work Aryamanjusree Mulakalpa mentioned that after the death of Sasanka the Gauda tantra or the Gauda political system collapsed completely. Khalimpur inscription and the literary text like Ramacarit of Sandhyakar Nandi mention this situation as Matsyanaya. Thus in spite of our limitation for scarcity of information it may definitely be said that the overall political situation of Bengal during the post Sasanka period was very chaotic. This period of anarchy ended around the middle of the 8th century CE when Sri Gopala was elected as the first people's king of Bengal by the 'prakriti punja'. In this 91

92 NSOU • GE-HI-11 way a new dynasty had been ascended to the throne of Bengal. This new dynasty is known as the Pala dynasty. 11.2 Gopala – the first Elected Ruler of Bengal Gopala was the first ever ruler in the history of Bengal whose selection as the ruler was made by his own subject. He was the founder of the Pala dynasty of Bengal and had ended the century long political confusion and anarchy. His ascendance to the throne of Bengal marks an epoch in the history of Bengal. The foundation of Pala dynasty marks the beginning of a chronology may be fixed with a tolerable degree of certainty.

Thus the four centuries long rule of the Pala rulers gives the advantages to the historians of being able to follow a proper order of succession of whose long line of kings is precisely known.

The century long anarchy and political disruption

led to a natural reaction from the subjects of Bengal. The people suffering from miseries for such a long period spontaneously developed a political consciousness and a spirit of self sacrifice to which there is no recorded parallel in the history of Bengal. These people became conscious that only a single strong central authority can offer effective remedy against political disintegration within and from foreign invasion.

They also realised that such a state of things could only be brought about by the voluntary surrender of authority to one person by the numerous petty chiefs who had been exercising independent political authority in different parts of Bengal. It should be kept in mind that the ideal of suppressing individual interest for a national cause was not common in India in the 8 th century CE. Thus it will not be an exaggeration to say that the ascendance of Gopala to the throne of Bengal without any struggle was no less than a revolution. It is indeed needless to mention that the revolution was popular, spontaneous and bloodless. Khalimpur copper plate inscription briefly mention about the ancestors of Dharmapala. Unfortunately there is no contemporary source of information about Gopala's early life and his political career. He is known only through the later literary references and genealogies recorded in various inscriptions. According to Khalimpur copper plate Gopala was the son of Vapyata who took the title of Khanditarati which means killer of enemies. His grandfather was Daita Vishnu. He was known as Sarva vidya vadata. A striking feature of the Pala epigraphic records

NSOU • GE-HI-11 93 and genealogies is that a very less effort has given to establish any claim of high pedigree. It is quite possible that they have relatively humble origin. The support of their subject probably gave them over confidence. But when the political power of the Palas slowly decayed, at that time the Pala rulers claimed that they descended from the solar dynasty. The literary text of Ramacharita mentions the Pala rulers as the descendents of the solar dynasty. There are no much references of the process of the election of Gopala. Khalimpur copper plate gives us a brief outline of this historical event. Gopala's election took place around 750 CE. Khalimpur copper plate inscription mentions 'matsyanyayamapakitumprakritibhirlakshmiyakaramgrahitah sri Gopala itikshitisa- sirsamchudamanitatsubha'. Prof. Kielhorn

translates the above

as follows: 'his son was the crest jewel of the heads of kings, the glorious Gopala, whom the people made take the hand of fortune, to put an end to the practice of fishes'. In

a footnote to the above,

Prof.

Kielhorn adds : 'Gopala

was made king by the people to put an end to

a lawless state of things in which everyone was the prey of his neighbour'. He also cites authority for his interpretation of the phrase '

matsyanyaya'. Apparently it appears

that Gopala was made king to put an end to the state of anarchy.

But there is a controversy regarding the identity of his electors. Khalimpur copper plate inscription mentions 'Prakriti punjna' as the electors of Gopala. Apparently it appears as the whole

of the subjects and it has consequently being held that Gopala was elected king

who was elected by the general body of people. But this meaning seems to be over simplification. Therefore some scholars suggested that the term 'prakriti' should be taken as a technical term which means principal officers. The

chapter of the election of Jalauka portrayed in the Rajatarangini of Kalhana mentions a group of seven officials as the prakritis. But this kind of election seems to be impossible in the absence of any

strong and stable government exercising authority over the whole kingdom.

As we know that the central political authority

of Gauda or Vanga had ceased to function for a long period and the region was divided into a number of small or medium independent principalities, therefore it is scarce to think of a body of government officials placing somebody on the throne of Bengal. In spite of this controversy and lack of supporting data it is generally believed that Gopala was elected by the people though most probably

the selection was originally made by a group of leaders or independent ruling chiefs.

According to M. M. Haraprasad Shastri either Gopala or his ancestor served as military officer of a king. The reason behind this assumption is that in a commentary

94 NSOU • GE-HI-11 of Ashtasahasrika Prajna Paramita composed by Haribhadra Dharmapala is described as 'raja bhatadivamsapatita'. This text was composed during the reign of Dharmapala himself. The identification of this king yet not has been properly possible. But most of the scholars

identified him with the king of the same name ruling in Samatata

region sometimes around late 7th century CE. Haraprasad Shastri concluded that the Pala rulers were connected in some way with the Khadga dynasty. The Khadga rulers of eastern Bengal were also the followers of Buddhism like the Pala rulers and were in power shortly before the accession of Gopala in the political history of Bengal. Some scholars also suggested that this connection may also be from the female line. For them the word 'patita' means descended from the maternal line. Scholars like Akshay Kumar Maitreya, Keilhorn et al have traced some references

to the royal family of Dharmapala's mother in the Khalimpur copper plate inscription. Dedda Devi, the chief queen of Gopala, is compared with the wives of the deities like Chandra, Agni, Siva, Kuvera, Indra and Vishnu. In course of the comparative description the word 'Bhadratmaja' is used immediately after Bhadra, the name of Kuvera's wife. Prof.

Keilhorn while translating this verse took 'Bhadratmaja' as an epithet qualifying Deddadevi and translated it as 'a daughter' of the Bhadra king taking Bhadra as a tribal or family name.

It would thus appear that we have hardly any definite information regarding the origin of the Pala royal family. Strangely enough unlike

the

other medieval records, we do not find any mythological pedigree of the dynasty in most of

the Pala inscriptions. In the Kamauli copper plate of Vaidya Deva who was originally the minister of the Pala king Vagraha Pala III is said to have belonged to the mythological Solar dynasty. According to the commentary of Sandhyakar Nandi's Ramacharita, Dharmapala was 'the light of Samudra's race' (Samudra

kula dipa) which means descended from the ocean. It may be noted that both the records belonged to the very end of

the Pala period. Besides the membership of the Solar or Lunar families were commonly claimed for most of the royal houses of those days, and there is nothing distinctive about it. The descent from the Samudra or ocean has undoubtedly more novelty in it. A distant echo of this may be traced in an old Bengali text called Dharma Mangala composed by Ghanarama. It records that Dharmapala had no son and his queen Vallabha Devi was banished to a forest. There she had a liaison with the ocean and a son was born to her. This story gives a wrong name for Dharmapala's queen and describes him as a devout Vaishnava and devoted to the Brahmanas.

According to the Tibetan historian Taranatha

Gopala was succeeded by a son whom Nagaraja Sagara Pala, the sovereign of the ocean, begot on his younger queen.

NSOU • GE-HI-11 95 This is evidently another version of the origin of the Palas from samudra or ocean. These stories are too silly to be seriously considered and do not help us in the least in tracing the ancestry of the Palas. An attempt has been made to reconcile the two different traditions samudra and surya origin by holding that 'samudra kula' means 'surya kula' or solar race to which Samudra, the son of the mythological king Sagara, belonged.

As to the caste of the Pala kings the commentary on a verse of Ramacharita distinctly says that Ramapala was born of a Kshatriya king.

It may be readily believed, therefore, that the Pala rulers, like most of the ruling families in medieval India, were regarded as kshatriyas. This view is corroborated by the matrimonial relations of the Pala rulers with the Rashtrakuta kings and the Kalachuri kings.

Perhaps one of the reasons why no reference to the origin and caste of the Pala rulers occurs in their own records is the fact that they were Buddhists and therefore they

did not care so much to adopt Brahmanical institutions or traditions. The copper plate inscriptions of the Pala rulers begin with an invocation to Lord Buddha, and many kings of the dynasty are known to have been great patrons of Buddhism.

Like the origin and the process of the election of Gopala there is also a debate regarding the location of the homeland of the Palas as well as the original kingdom of Gopala. The main reason behind this controversy is that there is no epigraphic data regarding this point. Most of the copper plate grants of different Pala rulers issued from Magadha. This naturally led many scholars to conclude that the Palas originally ruled in Magadha and subsequently conquered Bengal. On the other hand Ramacharita of Sandhyakar Nandi refers to Varendri as the original homeland of the Pala rulers. Gwalior inscription of the Pratihara ruler mentions Dharmapala as Vangapati. Badal pillar inscription mentions that Dharmapala was the first ruler of the east who gradually spread his imperial territory in other direction. These secondary evidences led some scholars to conclude that

the original kingdom of the Palas must be placed in Bengal. There is

a contradiction in the evidences of Ramacharita and the Gwalior inscription. In Ramacharita Sandhyakar Nandi refers Varendri as the original land of the Pala rulers. On the other hand the Gwalior inscription mentions Vanga as the land of the Pala rulers. During the ancient period Varendra or Varendri denoted the northern part of Bengal. On the other hand Vanga denoted the eastern and south eastern part of Bengal. In spite of this contradiction it may be kept in mind that many times Vanga denoted as the name for the whole province of Bengal. Tibetan

96 NSOU • GE-HI-11 historian Taranath's account played a very important role to solve the controversy. For him 'Gopala was born of a kshatriya family near Pundravardhana but was subsequently elected ruler of Bhangala (undoubtedly a corrupt form of

Vanga of Vangala)'. Thus it can be concluded that whatever may be the limits of the original kingdom of Gopala it will not be an exaggeration to say that he became successful to consolidate his authority over the whole of Bengal. Unlike the election episode of Gopala there is an overall scarcity of information regarding Gopala's administration or any other events during his regnal years. Most of the copper plate grants issued by Narayana Pala who was a much later descendent of Gopala mention 'jitva yah kamakariprabhavamabhibhavarhsasvatimprapasantim'. This seems to mean that Gopala

established peace in his kingdom by having defeated the attacks of the oppressors or tyrants. The expression 'kamakari' literally means those who do not acknowledge any control and act wilfully. The reference in this case is of course to the period of anarchy and political disintegration that prevailed before the accession of Gopala. However it has been suggested that 'kamakari' means 'king of Kamarupa, who is an enemy'. 'Kama' with the pleonastic suffix 'ka' standing for Kamarupa under the well known Sanskrit aphorism that part of a name may be substituted for the full name. It is unreasonable to rule out the interpretation altogether but it is to be seriously considered whether such an achievement of Gopala as the conquest of Assam or of Magadha (as noted by Taranath), would not have been more directly stated in the official records if it were a fact.

According to Taranath Gopala

ruled for forty five years. But this statement cannot be accepted without corroboration. According to Arya ManjusreeMulaKalpa the period of Gopala's reign was about twenty seven years. The fact that he was called to the throne at a critical moment shows that he must have been fairly advanced in age and given proof of his prowess and ability.

According to Arya Manjusree MulaKalpa Gopala died at the advanced age of eighty. 11.3 Conclusion In conclusion it may be said that although not much is known about Gopala's life or his military career but it is generally believed that at the time of his death he had bequeathed a considerable kingdom to his son Dharmapala. According to Arya Manjusree MulaKalpa Gopala died at the age of eighty. He ruled over Bengal for about twenty seven years. It is generally assumed that Dharmapala ascended to the

NSOU • GE-HI-11 97 throne around 770 CE. There is no proper record available about the exact boundaries of Gopala's kingdom. But there is no doubt that his son and successor Dharmapala greatly expanded the kingdom. He became successful to make it one of the most powerful empires in contemporary India. 11.4 Model Questions 1. Write a short note on the political condition before the rise of the Palas. 2. Briefly discuss on the origin and early history of the Pala dynasty. 3. Write briefly on Gopala, the founder of the Pala dynasty. 11.5 Suggested Readings 1. Pramode Lal Paul, The Early History of Bengal, Vol. II, Calcutta, n.d. 2. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989. 3. Nitish Sen Gupta, The Land of Two Rivers, London, 2011. NSOU • GE-HI-11 99 12.1 Introduction The Pala Dynasty was originated in the region of Bengal as an imperial power during the Late Classical period. They became successful to establish their imperial control over a fairly large territory which extended even beyond the geo-political region of so-called Bengal. The empire was named after its ruling dynasty, whose rulers bore names ending with the suffix of Palau, which meant "protector". They were followers of the Mahayana and Tantric schools of Buddhism. They were insightful diplomats and military conquerors. Their army was equipped with war elephant cavalry. 12.2 Dharmapala – the real founder of the empire Dharmapala was the second and considered to be

the greatest ruler of the Pala dynasty of Bengal. He was the son and successor of Gopala, the founder of the dynasty. Dharmapala inaugurated the period of ascendancy of the Palas. Gopala was a good administrator undoubtedly who save the peoples of Bengal region from a huge political turmoil known as Matsyanyaya. But he was too busy to save his kingdom and restore an overall peaceful condition. Thus he could not be able to extend his empire. Dharmapala ascended to the throne in a relatively peaceful condition. Therefore he could easily focus on imperial extension. Historian differs on when Dharmapala ascended the throne. RC Majumdar estimates his reign from 770 to 810 CE. According to D.C. Sircar, it was between 775 CE and 812 CE. Soon after ascending the throne Dharmapala had to face two powerful enemies – The Gujjara-Pratiharas and the Rashtrakutas. Gujjara-Pratiharas were the rulers of Rajputana and west-central India. Rashtrakutas were one of the most powerful ruling dynasties of the Deccan. Dharmapala was contemporary of Vatsaraja of Pratihara dynasty who reigned between c. 780 CE and c. 800 CE. 12.3 Importance of Kannauj – Mahadayashree Kannauj was an ancient city located on the Ganga trade route and was connected to the Silk route. It made Kannauj strategically and commercially very important. It was also the erstwhile capital of Harshvardhana's empire in north India.

100 NSOU • GE-HI-11 As far as the early medieval period is concerned, Kannauj was extremely important in India. In fact the whole period between the 8th century and the 10th century CE is referred as the Imperial Age of Kannauj by prominent historians such as RC Majumdar, Suryanath U Kamath, A. S. Altekar, and many others. This indicates the importance of Kannauj in India of that time. It was believed that one who had control over Kannauj had control over whole of India and the neighbourhood and India of that era refers to the entire Indian subcontinent of today. The term 'Mahadayashree' was common to refer the throne of Kannauj. After the death of Harshavardhana, a disintegrated phase was witnessed by the peoples of Kannauj. Soon Yashovarman took over the control of this region and restore peace and prosperity again. During the latter half of 8th century, Yashovarman dynasty ended and Ayudha rulers took over Kannauj. They ruled till second decade of 9th century. Vajrayudha was the first among the Ayudha rulers. He defeated Jayapida Vinayaditya of Kashmir. Indrayudha was the next ruler. During his reign Dhruva Rashtrakuta invaded Kannauj. Later Dharmapala of Bengal also defeated Indrayudha. Dharmapala placed Chakrayudha as the king of Kannauj. Later Rastrakuta ruler Govinda III defeated Dharmapala and Chankrayudha. Finally Nagabata II Pratihara defeated Chakrayudha and annexed the throne of Kannauj.

12.4 Tripartite Struggle during Dharmapala

During the 8th century CE, a struggle for control over the Kannauj took place among three major empires of India namely the Palas, the Pratiharas and the Rastrakutas. The Palas ruled the eastern parts of India while the Pratiharas controlled the western India (Avanti-Jalaor region). The Rastrakutas ruled over the Deccan region of India. The struggle for control over Kannauj among these three dynasties is known as the tripartite struggle in Indian history. The struggle started during the reign of Vatsaraja Pratihara. He ascended the throne in 778 CE. He attacked Dharmapala, the Pala king of Bengal and carried away his state umbrella. The major causes of the struggle between the three Powers i.e, the Rashtrakutas, Pratiharas and the Palas were, first, to get control over Gujarat and Malwa where this region is important on foreign trade due to the nearness of the coast. Secondly, they wanted to acquire over Kannauj which was a symbol of prestige in the early medieval Indian politics. It was also important to establish

NSOU • GE-HI-11 101 control over vast resources of Gangetic plains. Their desire to impress pretty kingdoms with the sense of their might and lust of war booty, a prominent source for maintaining huge army were also important factors behind the long lasting tripartite struggle. The Pratihara ruler, Vatsaraja wanted to capture Kannauj, Indrayudha was the ruler of Kannauj at that time. He accepted Vatsaraja's supremacy. However at that time, the Pala ruler, Dharmapala and the Rashtrakuta ruler, Dhruva equally wanted to capture Kannauj. Vatsaraja defeated Dharmapala in a battle. Simultaneously, Dhruva entered North India and attack Vatsaraja and conquered him. Besides, he also attack the Pala ruler, Dharmapala and conquest Kannauj. Since he was unable to stay in North he went back to south India. This helped Dharmapala to obtain unquestionable power in north India. Dharmapala placed Indrayudh's brother, Chakrayudh on the throne of Kannauj under his domination. This diplomatic success of the Pala king found mention in the Pala records in an ornate form through the pen of the court poets. To crown all these eulogistic verses is the 12th verse of Dharmapala's own Khalimpur copper plate, which runs as follows: 'With a sign of his gracefully moved eyebrows he installed the illustrious king of Kanyakubja, who readily was accepted by the Bhoja, Matsya, Madra, Kuru, Yadu, Yavana, Avanti, Gandhara and Kira kings bowing down respectfully with their diadems trembling, and for whom his own golden coronation jar was lifted up by the delighted elders of Panchala'. Scholars taking this verse too literally have followed suit with the court poet in ascribing credit to Dharmapala for conquering all those places and becoming the 'Uttarapathasvami'. However, Dharmapala's supremacy over all these powers is not confirmed by other sources. It is likely that Dharmapala had some success and may have pushed his sphere of influence as far as Kanauj, where he successfully placed his own protégé on the throne. Vatsaraja was succeeded by his son Nagabhatta II. He consolidated his power in nearby territories and then attack Kannauj. He defeated Chakrayudh and captured Kannauj. He even attack Dharmapala, defeated him and entered in his territory up to Munger in Bihar. The Rashtrakutas ruler Govinda III was also ambitious ruler. He with the help of Chakrayudh and Dharmapala defeated Nagabhatta II. Chakrayudh and Dharmapala accepted his suzerainty and Kannauj was taken over by Govinda III. Govinda III soon retired to the South which again created a ground for the Pratiharas and the Palas fight against each other for capturing Kannauj. Probably, thereafter Kannauj was occupied by Nagabhatta II.

102 NSOU • GE-HI-11 12.5 Dharmapala and Buddhism Dharmapala was personally a follower of Mahayanism. Therefore Buddhism received great royal patronage during his reign.

He revived the Nalanda University and founded the Vikramshila University which later evolved into a great learning centre of Buddhism.

He built the great SomapuraMahavihara in Paharpur, Naogaon District of present day Bangladesh. Buddhist scholar Taranath

also credits him with establishing 50 religious institutions and patronizing the Buddhist author Hariibhadra.

Buton Rinchen Drub credits Dharmapala with building the monastery at Uddandapura (Odantapuri), although other Tibetan accounts such as that of Taranatha, state that it was magically built and then entrusted to Devapala. In spite of his faith for Buddha, he had no hostility with the followers of the Brahmanical religion. Inscriptional evidences show that he granted several lands for the temples of Brahmanical gods and he followed the scriptural rules of caste within his empire.

12.6 Estimate of Dharmapala Dharmapala was undoubtedly a great ruler and a good administrator. It is quite just to the assumption of his full imperial title 'Parameshwara Parambhattaraka Maharajadhiraja'. His political career was remarkable. When he ascended to the throne he had only a small kingdom established by

his father. But his prowess and diplomatic skill made him successful to establish a vast empire in northern India.

R. C. Majumdar correctly observes that, '

his undaunted spirit triumphed over all obstacles, and he launched Bengal into a career of imperial glory and military renown to which there has been no parallel before or since'. 12.7

Devapala – A perfect Successor Devapala was the third ruler of the Pala dynasty. Devapala was successful to continue the period of ascendancy of the dynasty unabatedly. Son and successor of Dharmapala, Devapala enjoyed a long reign. He ascended to the throne in around 810 CE after his father's death and continued his rule up to around 850 CE. Like his father Dharmapala Devapala also assumed the imperial title of 'Parameshwara

NSOU • GE-HI-11 103 Parambhattaraka Maharajadhiraja'. His assumption of this title indicates his prowess and other imperial qualities like his father. The contemporary and later inscriptional and literary sources clearly indicate that Devapala was not only successful to maintain his father's empire intact but also was successful to extend its boundaries further. Thus it will not be an exaggeration to say that he was the perfect successor of his father Dharmapala. Devapala had encompassed almost entire of North India. Devapala was a worthy and competent son. By a policy of blood and iron, Devapala had retained the vast kingdom he had inherited from his parentage and also made some additions to the vast Empire of his father. The Badal Pillar Inscription describes him as the paramount lord of the entire northern India, extending from the Himalayas to the Vindhya and from eastern to the Western Seas.

The prolonged period of his reign was marked with a sequence of military campaigns against the adversaries like Pragjyotishas, Utkalas, Huns, Gurjaras and the Dravidians. The Badal Pillar Inscription of Narayana Pala depicts that Devapala's Brahmin minister Darbha Pani and the latter's grandson Kedara Mishra were helpful in the expansion of Devapala's kingdom. Badal Pillar inscription also depicts how Darbha Pani had used his diplomacy to make Devapala the lord paramount of entire north India. Devapala had conquered the Utkalas, Huns and the Gurjaras. He made significant additions to his father's Empire by conquering the frontier states. He had also conquered the violent tribes Khasas, Latas and had occupied their kingdoms. In the east, kings of Pragjyotishas and Kamarupa became his vassal. In the south, king of Utkala was routed in a battle and the province was overrun by Jaya Pala, brother and general of Devapala. Siva Kara, the king of Utkala (present day Odisha) also became his vassal. It is indeed needless to mention that the version of the Badal Pillar Inscription is highly exaggerated. Devapala launched two military campaigns under his cousin and his general Jayapala, who was the son of Dharmapala's younger brother Vakpala. These expeditions resulted in the invasion of Pragjyotisha (present-day Assam) where the king submitted without giving a fight. The king of Utkala (present-day Odisha) also did not able to fight and therefore he fled from his capital city. Thus Orissa also came under Devapala's empire. There is a debate among the scholars regarding the location of Kamboja mentioned in the Badal Pillar inscription. While an ancient country with the name

104 NSOU • GE-HI-11 Kamboja was located in what is now Afghanistan, there is no evidence that Devapala's empire extended that far. Kamboja, in this inscription, could refer to the Kamboja tribe that had entered North India. The Monghyr copper plate indicates that the Palas recruited their war horses from the Kambojas, and there might have been a Kamboja cavalry in the Pala armed forces. Viradeva, a scholar appointed by him as the abbot of Nalanda, is believed to be a native of Nagarahara (identified with modern-day Jalalabad). This has led some scholars to speculate if Devapala indeed launched a military expedition to the present-day Afghanistan, during which he met Viradeva. But some historians believe that Devapala defeated the Arab rulers of the North West. The Hunas probably refers to a principality in North-West India. There is no doubt that the term "Gurjaras" mentioned in the Badal Pillar inscription refers to the Gurjara-Pratiharas. They were the old enemies of the Pala rulers. During Devapala's reign Pratiharas were led by MihiraBhoja. Like his father,

Devapala also appears to have enjoyed a brief respite from the Pratiharas' hostile activities during the first part of his reign. Although a Jain text mentions that the Pratihara king Nagabhata II recovered his power and occupied Kannauj but most of the scholars find this doubtful. Even if he did so it was probably not long before his death in around 833 CE. Nagabhata II was succeeded by his son Ramabhadra whose reign marked by various inglorious events which even ravaged his own dominions for certain time. When Mihir Bhoja ascended to the throne he became able to infuse a fresh energy and strength. Barah and Daulatpura copper plate inscriptions mention about his success to recover some of the areas lost during his father's reign. But this success was short lived. Around the 6th decade of the 9th century CE Mihir Bhoja was defeated by the Rashtrakuta king. According to the Badal Pillar inscription the pride of the lord of Gurjaras was curbed by Devapala. His minister in chief Kedara Mishra played the most important role in this regard. Thus during the long reign of Devapala in spite of a short period of trouble Pratiharas were kept in check. The term "Dravida" is generally believed to be a reference to the Rashtrakutas. They were also hereditary enemies of the Pala dynasty. At the time of Devapala, the Rashtrakuta force was led by Amoghavarsha. Although there is not much elaborate description of this hostility but on the basis of circumstantial evidences it will not be incorrect to assume that Devapala was more successful than his father. According to Ramesh Chandra Majumdar the term Dravida does not indicate the Rashtrakutas as it usually not applied to denote the Deccan plateau which formed the Rashtrakuta dominion. He therefore suggests that it may refer to the Pandyan king NSOU • GE-HI-11 105 Sri Mara Sri Vallabha. However, there is no definitive record of any expedition of Devapala to the extreme south. In any case, his victory in the south could only have been a temporary one, and his dominion lay mainly in the north. Devapala too like his father Dharmapala did not have exercised any direct administrative control over any territory outside Bengal and Bihar. Rest of the imperial territories were most probably governed by local rulers who acknowledged the suzerainty of the Pala ruler.

12.8 Devapala and Buddhism

Devapala was a dedicated follower and a staunch patron of Buddhism. He is said to have sanctioned the construction of many temples and monasteries in Magadha. He maintained the famous Buddhist monastery at Uddandapura (Odantapuri). Buton Rinchen Drub credits his father Dharmapala for building the monastery, although other Tibetan accounts such as that of Taranatha, state that it was magically built and then entrusted to Devapala.

Balaputradeva, the Sailendra king of Java, sent an ambassador to him, asking for a grant of five villages for the construction of a monastery at Nalanda. The request was granted by Devapala. He also patronized the Vikramashila University and the Nalanda University. The Buddhist poet Vajradatta (the author of Lokeshvarashataka), was a member of Devapala's court.

12.9 Estimate of Devapala

Devapala was also a great patron of literature, education and culture apart from being a great conqueror. During his reign, Bengal had accomplished prosperity in every field. Devapala was practically regarded the most powerful monarch of Northern India during the first half of ninth century. He had rounded off the Pala Empire in the east and southeast (Kamarupa and Utkala) and kept a constant check on further uprising of the Pratihara and Rashtrakuta powers. He led his forces to Vindhya in the south and the Indus to the west. He was powerful enough to interfere in the politics of the Tamil Nadu join confederacy against the Pandya King. Sailendra king Balaputradeva of Java and Sumatra had sent an envoy to his kingdom by seeking the grant of five villages to build up a monastery in Nalanda.

During his reign Nalanda had transformed into the chief seat of Buddhist learning in ancient India. People from different parts of India and even from abroad came to Nalanda 106 NSOU • GE-HI-11 University in order to learn Buddhist literature. A galaxy of scholars had flourished during his reign. Bengal had fulfilled unprecedented progress during his reign.

12.10 Conclusion

The glory and brilliance of the Pala empire did not long survive the death of Devapala. The rule of his successors was marked by a steady process of decline and political disintegration which reduced the Palas almost to an insignificant regional political power in northern India.

12.11

Model Questions 1. Write an essay on the achievement of Dharmapala. 2. Write an essay on the achievement of Devapala. 3. Write an essay on Tripartite Struggle under the Pala kings Dharmapala and Devapala. 12.12 Suggested Readings 1. Nitish Sengupta, The Land of Two Rivers, London, 2011. 2. Pramode Lal Paul, The Early History of Bengal, Vol. II, Calcutta, n.d. 3. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 107 Unit-13 □ The Decline and the Fall of Pala Empire Structure 13.0 Objective 13.1 Introduction 13.2 Vigrahapala I 13.3 Narayana Pala 13.4 Disintegration of Pala Kingdom 13.5 Conclusion 13.6 Model Questions 13.7

Suggested Readings 13.0 Objective • The objective of the present unit is also to study the decline and fall of the Pala Empire after the rule of Devapala. • The rule of Vigrahapala I and Narayana Pala will be discussed. • The process of disintegration and eventual fall of the Pala Empire will come under the analysis. • The factors behind the fall of the Empire will be elaborated. 13.1 Introduction The long reign of the Pala Emperors marked an important period in the history of Bengal. Dharmapala and Devapala became able to establish Bengal in a high position among the important powers in the history of ancient India. But this glory did not last for a long time. After the death of Devapala the glory of the Pala Empire was slowly become doomed. He was succeeded by Vigraha Pala I. His reign was otherwise peaceful. This period did not witness any important event. His son Narayana Pala had ascended to the throne around 854 CE. His excessive love for peace and religiosity threw his empire into a serious problem. Thus during the rule of Devapala's successors a steady process of decline and disintegration can clearly

107 108 NSOU • GE-HI-11 be traced. This way the Pala rulers lost their glory and became an insignificant political power in north India. 13.2 Vigrahapala I After the death of Devapala Vigrahapala I ascended to the throne of Bengal in around 850 C.E. There is a debate among the scholars regarding the relationship between the Devapala and Vigrahapala I as well as regarding the name of the successor of Devapala. Some scholars believe that Vigrahapala I was the son of Devapala. But most of the recent scholars observe that he was probably the nephew of Devapala. These scholars used the genealogy preserved in the grants of Narayana Pala and his subsequent kings. According to this genealogy Dharmapala had a younger brother named Vakpala. His son Jaypala held the position of the great General at the court of Devapala. Vigrahapala I was most probably the son of Jaypala. But there is no specific reference about his identity. Infact the theory of the absence of any heir of Devpaladoesnot appears to be very likely. According to Monghyr copper plate Devapala had a son named Rajya Pala who held the position of the crown prince in the 33 rd regnal year of Devapala. It is quite possible that Rajya Pala might have died before the death of Devapala. According to Badal Piller inscription Devapala was succeeded by Sura Pala. Probably Sura Pala was another name of Vigrahapala I. Very few information are known about the reign of Vigrahapala I. According to Badal Piller inscription Sura Pala or Vigrahapala I had destroyed his enemies. Kedar Mishra was his chief minister. He served as the chief minister and chief mentor since Devapala's reign. Vigrahapala I was otherwise pacifist and religious minded. He had a very short ruling time (only 4 years) around 854 CE he abdicated the throne in favor of his son Narayana Pala. 13.3 Narayana Pala Narayana Pala had succeeded his father's empire in around 854 CE. His reign was significant because of the invasions by the Rashtrakutas and the Pratiharas. Badal Piller inscription and Bhagalpur Copper plate both are silent about Narayan Palas military achievement. He ruled for a long period of time (about 54 year). But no evidence of any military victory can be found during this period. Narayana Pala had compelled to face the invading army of the Rashtrakutas in

NSOU • GE-HI-11 109 860 CE. Most probably he was thoroughly defeated. He also could not escape the invasion of the army of the Pratiharas. Pratihara king Bhoj I and his son Mahendra Pala succeeded in seizing Magadha from Narayana Pala. The Paharpura Pillar inscription mentions this conquest. The Sirur inscription of the Rashtrakutas mentions that the rulers of Anga, Vanga and Magadha payed homage to the Rashtrakuta king Amagharsha. It is not very clear that these three names are of different kingdoms or have in common ruler. Probably the sudden collapse of the Pala empire naturally leads to the presumption of a catastrophe of this kind and probably as internal disruption had also been started to take place during this time. The Rashtrakuta king Amagharsha proceeded along the eastern coast. After the conquest of Vengi the Rashtrakuta army invaded the Pala kingdom from its southern side. Although it was an occasional military raid and had no permanent effect but it exposed the weak condition of the Pala rulers. Thus the political prestige of the Palas hampered severely. Taking the advantages of the weak condition of the Pala kingdom the rulers of the neighboring kingdom of Kamarupa and the rulers of the Sailadvaba dynasty of Odisha threw of their allegiance to the Pala ruler and declared themselves as independent rulers. The defeat of Narayana Pala against the Rastrakutas encouraged the Pratihara king Bhoj I to wrest the empire of Northern India from the Pala rulers. He destroyed the remnants

of the political suzerainty in the west and proceeded to the east. He subjugated extensive territories in Bundelkhand and

Uttar Pradesh. He had not to encounter any opposition from the Pala kings until he reached almost the borders of Magadha as a result of the growing weakness of the Pala rulers by this time. According to Kalha Plate inscription Pratihara king Bhoj I got support from Kalchuri king Kokkalla I. In reward Bhoj I granted him freedom from any fear of Pratihara attack and he could freely plunder the treasure of various kingdoms including Vanga. Bhoj I also got the support from the Guhilat king Guhila II. According to the contemporary epigraphic record Guhila II had defeated the Gauda king. In this way Bhoj I became successful to organize of formidable confederacy against the Pala rulers. Kalchuri kings of Gorakhpur, Chandella rulers of Jejakabhukti or Bundelkhand acknowledge his suzerainty and became important parts of the anti-Pala confederacy. It is difficult to give a satisfactory explanation of the phenomenal success of the Pratihara king and the complete collapse of the Pala rulers during the latter half of the 9th century C.E. The personal efficiency of Bhoj I especially his organizing skill played very important role in this regard. On the other hand absence of efficient Pala rulers like Devpala played an important role also.

The failure of the existing Pala king undoubtedly demonstrates their personal incapacity of foresight and diplomacy. There

are some other important factors also. Devpala had subjugated Assam and Odisha during his reign. But by the latter half of 9th century CE these two neighboring kingdoms became again powerful.

The rise to power of these two dependent principalities might have been either the cause or the effect of the weakness of the Pala kings.

Narayan Pala died about 908 C.E. He was succeeded by his son Rajya Pala. During the reign of Narayana Pala a matrimonial alliance was created between the Pala family and the Rashtrakuta family. Rashtrakuta king Tunga's daughter was given marriage to Narayana Pala's son Rajya Pala. This matrimonial alliance at least temporarily made a cessation of hostilities between these two dynasties. Thus when Rajya Pala ascended to the throne he got the support of the Rashtrakuta king. In this way he ruled more or less peacefully for at least about 32 years. He is generally credited with works of public utility like the constructions of temples tanks, roads, roadway shelters etc. The most important source of information of his reign is the Bargaon inscription. Rajya Pala died around 940 CE and was succeeded by his son Gopala II. Gopala II ruled for about 20 years. During his reign the Chandella king and the Kalchuri king emerged in lands formerly were in possession of the Pratihara rulers. The Kamboj tribes also established themselves in the north of Bengal. These events pushed Gopala II to the southern part of Bihar and the western part of Bengal. According to the contemporary epigraphic record he was succeeded by Vigrahapala II in around 960 C.E. Vigraha Pala II had ruled for about 22 years. During his reign the Pala empire was reduced to Bihar. From the east of Bengal the Chandra king Kalyan Chandra conquered Gauda and Kamarup. These conquests were fatal blows which severely weaken the Komboja kingdom as well as the Pala kingdom. It helped to lay the ground work for the Pala resurgence. This happened under Mahipala II, the successor of Vigraha Pala II. Vigraha Pala II was succeeded by his son Mahipala II in around 988 CE. During his reign resurgence in fortunes for the Pala empire took place. Mahipala II tried to recover the past glory of the Pala Empire. To some extent he was successful even though his rule was temporarily hampered by the northern expedition of the Chola king Rajendra I.

The northern expedition of the great Chola emperor was led by one of his Generals and lasted about two years from 1021 to 1023 CE. Its object was to

bring by force of arms the sacred waters of the Ganges, in order to sanctify his own land. The

Chola campaign as professor K. A NilakanthaSastri has rightly observed "could hardly have been more than a hurried raid across a vast stretch

of country". Towards the close of his reign, Mahipala II came into conflict with the powerful Kalachuri ruler Gangeyadeva.

The Kalachuri epigraphic records claim that the latter defeated the ruler of Anga, which can only denote Mahipala II. Mahipala II

has been criticized by some writers for not having joined

the Hindu confederacy organized by the Shahi kings of the Punjab against sultan Mahmud of

Ghazni. Some have attributed his inactivity to asceticism, and others to intolerance of Hinduism and jealousy to other Hindu kings. It is difficult to subscribe to these views. When Mahipala II ascended to the throne, the Pala power had sunk to the lowest depths, and the Pala kings had no footing in their own homeland. It must have taxed the whole energy and strength of

Mahipala II to recover the paternal territories and to ward off formidable invasions of Rajendra Chola and Gangeya Deva. It reflects the greatest credit upon his ability and military genius that he succeeded in reestablishing in authority over a great part of Bengal, and probably also extended his conquest up to Benares.

On the whole, the achievements of Mahipala II must be regarded as highly remarkable, and he ranked as the greatest Pala emperor after Devapala. He not only saved the Pala kingdom from impending ruin, but probably also revived to some extent the old imperial dreams. His success in the limited field that he selected for his activities is a sure measure of his prowess and statesmanship, and it is neither just nor rational to regret that he had not done more. The revival of the Pala power was also reflected in the restoration of the religious building in Benares (including Saranath) and Nalanda which had evidently suffered much during the recent collapse of the Pala power.

It is perhaps not without significance, that of all the Pala emperors, the name of Mahipala II alone figures in popular ballads still current in Bengal. Bengal has forgotten the names of its great emperor Dharmapala, and Devapala,

but cherished the memory of the king who saved it at a critical juncture. 13.4

Disintegration of Pala Kingdom After the death of Mahipala II the Pala kingdom gradually disintegrated. Mahipala II was succeeded by Nayapala whose reign witnessed massive threat from the Kalachuri king Karnadeva. The Pala kings even after the reign of Nayapala

112 NSOU • GE-HI-11 constantly engaged in hostility with the Kalachuri rulers. Nayapala was succeeded by his son Vignahapala III who had three sons namely Mahipala III, Surapala II and Ramapala. During the reign of Ramapala Kaivartas of Varendri region revolted against the Pala kings under the leadership of Divya. Ramapala became successful to suppress the revolt and revive the power of the Palas. But the Disintegration and decline of the Pala kingdom was just the matter of time. Ramapala had four sons viz. Vittapala, Rajyapala, Kumarapala and Madanpala. Ramapala was succeeded by Kumarapala. But according to some epigraphic record a parallel rule was done by Madanpala. It is yet not been very clear that when and how these two Pala kings ascended to the throne. Kumarapala was succeeded by his infant son Gopal III. The period covered by the three rulers Kumarapala, Gopal III and Madanpala witnessed the final collapse of the Pala kingdom. The circumstances leading to this

final decline are not yet been fully known to us. 13.5 Conclusion

Thus towards the middle of the 11th century CE the fabric of the Pala sovereignty was crumbling to dust. Eastern Bengal, West Bengal and Southern Bengal had definitely passed from their hands and their suzerainty over Magadha was reduced to a mere name. A new power, the Varmanas, occupied Eastern Bengal, and a copper plate of Ratnapala shows that even Kamarupa was hurling defiance at the king of Gauda at the beginning or middle of the 11th century

CE. 13.6 Model Questions 1. Briefly discuss the political condition of Bengal during the decline of the Pala rule. 2. Write a short note on Kaivarta rebellion. 13.7 Suggested Readings 1. Nitish Sengupta, The Land of Two Rivers, London, 2011. 2. Pramode Lal Paul, The Early History of Bengal, Vol. II, Calcutta, n.d. 3. R. C. Majumdar (ed.), History of Ancient Bengal, Delhi, 1989.

NSOU • GE-HI-11 113 Unit-14 □ Independent kingdoms during the Pala Period – the Chandras and the Varmanas
Structure 14.0 Objective 14.1 Introduction 14.2 The Chandra rulers 14.3 The Varmana rulers 14.4 Conclusion 14.5 Model Questions 14.6 Suggested Readings 14.0 Objective • The objective of the present unit is to study the growth of independent kingdoms during the Pala rule. • Two smaller kingdoms will be studied here : ➤ The Chandra rule ➤ The Varmana rule 14.1: Introduction The Chandra and the Varmana dynasties were the two important regional ruling dynasties who flourished in Bengal and Bihar during the period of the Pala supremacy. During the Pala rule several independent and semi independent powers flourished around and within the Pala territory. Although the relationship between these independent or semi independent powers and the Pala rulers are not clearly known but it may be assumed that they were otherwise in a peaceful relationship. HIS GE-HI-11 & 21—8 113

114 NSOU • GE-HI-11 14.2 The Chandra rulers The Chandra dynasty was the ruling dynasty of Samatata region of Bengal. Most probably the territory of the Chandras includes Arakan region also. The most important sources of information about the Chandra dynasty are various inscriptions and copper plate grants issued by the Chandra rulers such as Bharella inscription of Layaha Chandra, Rampur copper plate inscription of Shri Chandra, Edilpur copper plate inscription of Shri Chandra, Dhulia copper plate inscription of Shri Chandra and Kedarpur copper plate inscription of Shri Chandra etc. Tibetan historian Taranath in his the History of Buddhism mentions about the Chandra dynasty. Probably the Chandra rulers were little earlier ruling dynasty than the Pala rulers. According to Taranath the Chandra rulers had ruled from sometimes around the 6 th century CE. Up to around the 8 th century CE they were in power. The traditional account of the nine Chandra kings of Arakan ruling from c. 788 CE to c. 957 CE is preserved in the later chronicles. The Inscription found on the platform of the Shittaung temple at Morahaung is also an important source of information about the rule of the Chandra kings. According to this inscription though Ananda Chandra was one of the most famous rulers of this dynasty but he was not the founder of this rule. The names of eighteen predecessor of him are given in this inscription. According to this genealogy the founder king of this dynasty is Bala Chandra. This name is common with Taranath's account. According to Prof. Hirananda Sastri the oldest inscription is written in characters resembling those of the late Gupta script. The inscription recording the names of the Chandra kings mentioned above is said to be 'many centuries older' than the temple which was built in the 16th century CE. The name Priti Chandra is found both on the coins as well as in the inscriptions. According to Prof. Phayre the name engraved in most of the coins is 'Vamma Chandra'. Most of the scholars identified him with Dhamma Chandra. The other name that can be read on the coins is Vira Chandra. The Alphabets on these coins are to be referred to the 7th century or 8th century CE if not earlier. Although the exact line of the Chandra kings are not very clear to us but it is generally believed that Layaha Chandra Deva was the earliest king of this line. The Bharella inscription mentions about Layaha Chandra Deva. On the basis of this inscription Dr. N. K. Bhattashali infers that the kingdom of Layaha Chandra Deva definitely located in the territory near Comilla of present day Bangladesh. The epigraphic records mention about the name of various kings from which a genealogical NSOU • GE-HI-11 115 table may be drawn. The dynasty was most probably founded by Purna Chandra Deva. He was succeeded by Suvarna Chandra Deva. Suvarna Chandra's successor Trailokya Chandra Deva took the imperial title of Maharajadhiraja. It indicates that he may be successful to extend his control over other territories. Another name Sri Kanchana is also available in one inscription whose identity is yet not been very clear to us. It is quite possible that he was a parallel ruler during the reign of Trailokya Chandra Deva. Some scholars believe that Sri Kanchana and Trailokya Chandra Deva were same person. Trailokya Chandra Deva was succeeded by Shri Chandra Deva. Shri Chandra Deva also used the imperial title of the 'Maharajadhiraja'. Purna Chandra Deva was probably an independent king. His forefathers are said to be rulers of Rohitagiri. Most probably Purna Chandra Deva also ruled there. This presumption is strengthened by the fact that Traikyo Chandra Deva who was the grandson of Purna Chandra Deva is said to have become king of Chandra Dvipa. It would thus appear that Purna Chandra and his son Suvarna Chandra Deva were both kings of Rohitagiri. Most of the scholars generally identified Rohitagiri with Rohtasgarh in the Shahabad district of Bihar. But this identification is by no means certain. Dr. N. K. Bhattashali has suggested Rohitagiri may be a Sanskritised form of Lal-Mati and refer to the Lalmi hills near Comilla of present day Bangladesh. There is not sufficient reason to conclude that the Chandra rulers came from outside Bengal and in view of the traditions of the long line of Chandra kings in Bhangala or eastern Bengal it is more reasonable to hold that Rohitagiri the seat of the ancestral dominion of the Chandra kings was somewhere in eastern Bengal and most probably near Comilla of present day Bangladesh. Both Suvarna Chandra and his father were presumably petty local rulers but Suvarna Chandra's son Trailokya Chandra Deva laid the foundations of the greatness of his family. Trailokya Chandra added Chandra Dvipa and Harikela to his paternal dominions and felt justified in assuming the title of Maharajadhiraja. His son Shri Chandra who assumed the full imperial titles Parama Saugata, Paramesvara, Parama Bhattaraka, and also Maharajadhiraja presumably inherited his father's dominions and possibly added to them. The data furnished by the inscriptions enable us to form a rough idea of the extent of the kingdom of Shri Chandra. Chandra Dvipa and Harikela over which he ruled may be regarded as covering approximately the whole of eastern Bengal and the coastal regions of southern Bengal.

116 NSOU • GE-HI-11 Another king with name ending in –Chandra namely Govinda Chandra of Vangala Desha is known from the accounts of Rajendra Chola’s invasion of Bengal. That Govinda Chandra ruled also in eastern Bengal is proved by two inscriptions dated in his 12 th and 23 rd year recently discovered in Vikrampur within the district of Dacca of present day Bangladesh. It would thus follow that Govinda Chandra Deva practically ruled over the whole of the dominions of Shri Chandra. As Rajendra Chola’s invasion took place about 1021 CE it is very probable that Govinda Chandra Deva immediately succeeded Shri Chandra Deva. A study of the Kalachuri records shows that the Chandra kingdom had to bear the brunt of the invasions of the valorous Kalachuri kings. Kokkalla claims to have raided the treasuries of Vanga and his great grandson Lakshmanaraja is credited with the conquest of Vangala. It is doubtful whether the Chandra rulers had founded their kingdom at the time of Kokkalla’s conquest but it is not unlikely that they took advantage of this political catastrophe to consolidate their rule in Bengal. It is very likely that the Chandra kingdom was finally destroyed by the invasions of Karna Deva. 14.3 The Varmana rulers The Varman rulers ruled in south-eastern Bengal

towards the end of the 11 th and first half of the 12 th century CE.

The history of the Varmans is known from three copperplates and the Bhuvaneshvara inscription of Bhatta Bhavadeva. The Varman kings claim their descent from the Yadava dynasty ruling over Simhapura, which has been identified with modern Singapuram in Kalinga (northern Orissa) between Chicacole and Narasannapeta. The kingdom of Simhapura in Kalinga is known to have existed as early as the 5

th

century CE and as late as the 12 th century CE. The Varmans most probably came to Bengal in the train of Kalachuri Karna’s invasion of Vanga. Karna seems to have invaded southeastern Bengal from Orissa, probably following the same route as Rajendra Chola’s army. It is quite likely that the Varmans accompanied Karna, stayed in Bengal, and at an opportune moment carved out an independent kingdom for them. The account of Jatavarman’s military conquests, as given in the Belava plate of Bhojavarman, leaves little doubt that he was responsible for the foundation of the rule of his dynasty. Vajravarman, father of Jatavarman, is only eulogised as a brave

NSOU • GE-HI-11 117 warrior, a poet and a scholar. The reference to Jatavarman’s marriage with Virashri, daughter of Karna, and to Divya, who wrested northern Bengal from the Palas, help us in fixing the date of Jatavarman’s rise to power sometime in between 1050 and 1075 CE. Jatavarman’s marriage with Karna’s daughter was significant and was perhaps a great factor in the rise of the political fortunes of the Varman family. Karna’s attack on Vanga must have dealt the last blow to the Chandra empire and the Varmans captured power soon after from Govinda Chandra or his successor.

Jatavarman must have risen to independence simultaneously or just before Divya, against whom he is mentioned to have waged wars. Jatavarman’s assault on Anga, as mentioned in the Belava plate, must have involved him in a struggle with the Pala ruler Ramapala. The unsettled condition of the Pala empire during the early years of Ramapala may have tempted Jatavarman to measure swords with the Palas also. His other two adversaries, Govardhana and the king of Kamarupa, cannot be identified. It is also a problem to determine his successor. But it is assumed on good grounds that Harivarman succeeded him and was followed by his brother Samalavarman. Harivarmadeva, under whom Bhatta Bhavadeva of the Bhuvaneshvara Prashasti served as the minister of war and peace, was possibly the same as Harivarman of the Varman dynasty. Two Buddhist manuscripts, copied respectively in the 19 th and the 39 th regnal years, preserve the name of Harivarman and on the basis of the colophon of the second manuscript it can be assumed that Harivarman had a long reign of 46 years. It conforms to the information of the Bhuvaneshvara inscription, where it is recorded that he ruled for a long time. Harivaman, having seen Ramapala’s success in recovering northern Bengal, propitiated Ramapala in order to avoid a Pala attack on his territory. It is doubtful whether Harivarman extended his rule towards Orissa. There is reference to a son of Harivarman both in the Bhuvaneshvara inscription and Vajrayogini plate, but hardly anything is known about him. Samalavarman, another son of Jatavarman, was the next king. His name figures prominently in the genealogical accounts of the Vaidik Brahmins, who are said to have migrated to Bengal from Madhyadesha during his reign. There was matrimonial connection between the Varmans and the Sri Lankan king Vijayabahu I; in all probability Trailokyasundari, daughter of Samalavarman, was married to the Lankan king.

118 NSOU • GE-HI-11 14.4 Conclusion Bhojavarman, son of Samalavarman, was the last known king of the dynasty and the Belava plate was issued in his fifth regnal year from the Jayaskandhavara situated at Vikramapura. The Varman rulers were Vaisnavas, but they also seem to have patronised Buddhism. Samalavarman’s Vajrayogini plate was issued to grant land either to a temple of Prajnaparamita or to a Buddhist devotee named Bhimadeva as a reward for his

reading the Prajnaparamita. Four Varman kings of southeastern Bengal are known to have ruled for about 60/70 years. The Senas ousted them during or shortly after the reign of Bhojavarman. 14.5 Model Questions 1. Write an essay on the Chandra dynasty of Bengal. 2. Write briefly on the achievements of the Varmana dynasty of Bengal. 14.6 Suggested Readings 1. Nitish Sengupta, *The Land of Two Rivers*, London, 2011. 2. Pramode Lal Paul, *The Early History of Bengal*, Vol. II, Calcutta, n.d. 3. R. C. Majumdar (ed.), *History of Ancient Bengal*, Delhi, 1989.

NSOU • GE-HI-11 119 Module V The Senas 119

120

Unit-15 □ The Origin of Sena Kings Structure 15.0 Objective 15.1 Introduction 15.2 The Origins of the Senas 15.3 Conclusion 15.5 Suggested Readings 15.0 Objective • The objective of the present unit is to study the establishment of the Sena rule in Bengal after the fall of the Pala Empire. • The origins of the Sena rulers will be traced in this unit. • The opinions of the different historians will also be elaborated here. 15.1 Introduction After the decline of the Pala empire in Bengal the Sena family begins their rule in Bengal. According to the genealogy of the Sena kings they originally belonged to Karnataka in South India. According to Rajavali the family line begins with Dhisena who was the grandson (from daughter's line) of king Jagata Pala of Radha region. Dhisena became king of Radha, Vanga, Gauda and Varendra. As he gained the empire without contest he became famous as Vijaya Sena. He made his eldest son SukaSena ruler of Radha region. Suka Sena ruled for three years and was succeeded by his younger brother VallalaSena who ruled for twelve years presumably at Radha region. VallalaSena succeeded by his son Lakshmana Sena in the throne of Bengal. 15.2 The Origins of the Senas According to Deopada inscription of Vijaya Sena written by Umapati Dhara the earliest known figure of the Sena family is Vira Sena. The Sena family were the 121

122 NSOU • GE-HI-11 rulers of the southern region. Umapati Dhara mentions them 'Dakshinatya Kshaunindra'. Prof N. G. Majumdar translate this phrase as the kings of the Deccan. According to Madhainagara copper plate inscription Vira Sena was not the founding figure of the family though he was the first prominent one of the Sena family. Madhainagar copper plate inscription regards Samanta Sena as the earliest figure of the Sena family. It states that 'in the family of Vira Sena which has become illustrious through the legends recorded in the Purana literature was born Samanta Sena the head garland of the clan of the Karnata Kshatriyas'. Deopada inscription clearly mentions about the Karnata origin of the Sena rulers. It mentions that Samanta Sena slaughtered the enemies who hampered the wealth of Karnata. According to Prof. D. C. Ganguly it does not indicate that the fight between Samanta Sena and the despoiler of the 'Lakshmi' (the goddess of wealth) of the Karnata country took place in the Karnata country. It simply means that Samanta Sena vanquished a king or a free booty collector who had already plundered the Karnata country. Later he suggests that possibly Rajendra Chola who had already defeated the Karnata king was repulsed by SamantaSena somewhere in northern Radha in which the latter's kingdom was situated. But Dr. D. C. Ganguly overlooks the very significant statement of poet Umapati Dhara, the writer of the Deopada inscription, that Samanta Sena slaughtered the hostile soldiers to such an extent that the lord of Goblins did not leave the southern quarter. This statement undoubtedly implies that the dead bodies of the hostile soldiers lay in the south and therefore the battle also must have been waged in that region. The same inference may be made from the other statement of Umapati Dhara in the above mentioned inscription that war ballads were sung in honour of SamantaSena near Setu Bandh region of Rameswaram. This kind of reference generally indicates a region near the battle field. Prof. G. M. Sarkar holds a diametrically opposite view to that of Dr. D. C. Ganguly. Prof. G. M. Sarkar mentions that 'Samanta Sena's activity was confined only to the southern region'. Further he assumed that Samanta Sena was in no way connected with any part of Bengal. Thus there is no doubt that the origin or the home land of the Sena rulers was in Karnata region. The region may be identified with present day Mysore region. The term 'Brahma Kshatriya' probably indicates that the Sena rulers were originally Brahmin by cast but inspite of that they had served as the ruler which is the prescribed profession for the kshatriyas. But it is yet not been very clear to us that how the Sena rulers migrated from their homeland and settled in western part of

NSOU • GE-HI-11 123 Bengal. According to Deopada inscription Samanta Sena after his martial exploits he spent his last days in the sacred hermitages situated in forests on the banks of the Ganges. As Samanta Sena's descendants ruled in Bengal it is therefore very natural to conclude from the above mentioned statement that he was the first of the Karnata originated Sena family to migrate from the south and settled in Bengal. But an opposite view is found in Naihati copper plate inscription which clearly indicates that the Sena family had settled in western part of Bengal even before the birth of Samanta Sena. It is indeed needless to mention that this contradiction creates the scope of historians' debate. Dr. R. C. Majumdar tried to reconcile this ambiguity and suggested that most probably the Sena family from Karnata region had settled in western part of Bengal but kept itself in touch with their motherland. According to him one of its members, Samanta Sena, spent his early life in Karnata region and also had shown his distinguishing ability in various wars which took place in southern part of India. He betook himself in old age to the family seat in Bengal. Evidently his exploits made the family so powerful that his son was able to carve out a kingdom in Bengal. Hemanta Sena was the son of Samanta Sena and was the first member of the Sena family for whom royal epithets are given in the family records. It is true that Samanta Sena's predecessors are referred to as princes who ruled over the surface of the earth, but beyond these vague general phrases there is nothing to indicate that they really held the rank of independent king. Although it is believed that the term 'Brahma Kshatriya' denotes those people who exchanged their priestly status for martial pursuits but some scholars give more clarification of the term. Samanta Sena is called 'Brahma Vadi' in Deopada inscription. Madhainagar copper plate inscription mentions about the events where Sena princes are set to have made preparation for sacrifices befitting a conquest of the three worlds and thereby checked the priests serving in the seasonal 'soma' sacrifices of the gods. Prof. N. G. Majumdar remarks that here probably it is indicated that Samanta Sena was as much Brahmin as Kshatriya. Winternitz mentions about a Jain teacher named Kanaka Sena who wrote Yashadhara Charita. He assumed that this line of Jain teachers belong to Sena family as the names of these teachers all end in -Sena. They settled in the Dharwar district which was the heart of the Karnata region. According to Jain records almost 11 members of this family flourished between c. 850 CE and c. 1050 CE. Jain records mention about one Vira Sena, a name which is also recorded as that of an ancestor of the Sena kings in the Deopada

124 NSOU • GE-HI-11 inscription. The evidences indicate that the Sena rulers of Bengal were somehow related with this Karnata family of Jain teachers. This theory has high probability. But in spite of that it leaves open the question whether the priestly family took to kshatriya profession before or after its migration to Bengal. Another important question in this regard is how would the family of the Sena rulers come to settle in Bengal. Since there is not any proper data regarding this question it is extremely difficult to make any clear answer of this. The Pala epigraphic records mention that they employed foreigners who were numerous enough to be specifically mentioned in the inscriptions. It is not impossible that some Karnata officials gradually acquired sufficient power to set up as an independent king when the central authority became weak. This hypothesis is supported by the statement in the Naihati copper plate inscription that the Sena rulers were settled in Radha region for a long time before Samanta Sena. The Sena rulers might also have come in the wake of some foreign invasions and established

independent principalities in conquered territories. The Karnata prince Vikramaditya led a victorious expedition against Bengal and succeeded by others. His feudatory chief Acha is represented to have made 'the kings of Kalinga, Vanga, Maru, Gurjara, Malwa, Chera and Chola subject to his sovereign. Two inscriptions dated 1121 CE and 1124 CE respectively also refer to the conquest of Anga, Vanga, Kalinga, Gauda, Magadha and Nepal by Vikramaditya. It is interesting to note that about the same time when the Sena rulers were establishing their supremacy in Bengal another Karnata chief Nanya Deva was doing the same in Bihar and Nepal. 15.3 Conclusion It has been suggested on the other hand that the Karnata chiefs in Bengal and Bihar were the remnants either of Rajendra Chola's army or of the Karnata allies of the king of Kalachuri dynasty Karna Deva. But there is nothing to show that the Karnatas formed part of Rajendra Chola's army. Even assuming that they did it is very unlikely that the Karnata chiefs would be preferred to Cholas in the selection of generals or governors who were left behind by the victorious Chola army to rule over conquered countries. As regards the latter view Karna Deva's alliance with the Karnatas was of a temporary character. On the whole the most reasonable view seems to be to connect the rise of the Sena rulers in Bengal and Nanya Deva in Bihar

NSOU • GE-HI-11 125 with Chalukya invasions of northern India during the rule of Someswara I and Vikramaditya VI in the second half of the 11th century CE and the early years of the next century. 15.4 Model Questions 1. Write an essay on the origin of the Sena dynasty of Bengal. How far it is correct to say that the Senas migrated from outside Bengal? 15.5 Suggested Readings 1. 126 NSOU • GE-HI-11 Unit-16 □ The Sena Kings – Samanta Sena to Lakshmana Sena Structure 16.0 Objective 16.1 Introduction 16.2 The Early Sena – Samanta Sena and Hemanta Sena 16.3 The reign of Vijaya Sena 16.4 Vallala Sena 16.5 Lakshmana Sena 16.6 Conclusion 16.7 Model Questions 16.8 Suggested Readings 16.0 Objective • The objective of the present unit is to study the development, expansion, consolidation, decline and erosion of the Sena rule in Bengal. • The major Sena rulers will be discussed as follows : > Samantasena > Hemantasena > Vijayasena > Vallalasena > Lakshmanasena

16.1 Introduction After the decline of the Pala empire Bengal witnessed again a disrupted political scenario. The situation changed around the end of the 11 th century when Vijayasena 126 NSOU • GE-HI-11 127 seized power from the Pala rulers taking advantage of their weakness. Thus the journey of a new empire began in Bengal. This dynasty is known as the Sena dynasty of Bengal. Although the Sena rulers got success in the land of Bengal but the dynasty did not originate in Bengal. They came from Karnata of southern India. The reason and the process of this migration are yet not been clear to us. According to R. C. Majumdar, 'the Senas might also have come in the wake of some foreign invasions, and established independent principalities in conquered territories in very much the same way as the Mahratta chiefs like Holkar and Sindhia did in Northern India during the 18 th century CE'.

16.2 The Early Sena – Samanta Sena and Hemanta Sena The early history of the Sena dynasty is not clear and therefore much controversial. Deopara inscription of Vijaya Sena mentions the names of Samanta Sena and Hemanta Sena as the ruling king's ancestors. Most of the scholars assume that the migration of the Sena family from Karnata region to Gangetic Bengal was done during the time of Samanta Sena. But Naihati copper plate mentions that Samanta Sena was born in the family which ruled over Rarh region. This certainly indicates that the Sena family had settled in Bengal before the birth of Samanta Sena. R. C. Majumdar had tried to reconcile these contradictions by assuming that although Sena family had migrated from south India and settled in western part of Bengal but kept itself in touch with its motherland. In spite of this controversy and confusion regarding the early history of the Sena rulers it is generally believed that the origin of the Sena family as ruler begins with Samanta Sena though he never assumed any royal title and there is no evidence in our hands which may prove that he founded a new kingdom in Bengal. Samanta Sena had a son named Hemanta Sena. Around the last quarter of the 11 th century CE Hemanta Sena became the ruling chief of an independent principality Rarha region. Probably the disruption of Pala kingdom enabled him to establish his independent principality. Any data regarding his reign yet not has been found. Barrackpore copper plate inscription of Vijay Sena refers Hemanta Sena as Maharajadhiraja. Deopara inscription of Vijay Sena mentions the name of Yasodevi as the Maharani or chief queen of Hemanta Sena. Although these two epigraphic records indicate Hemanta Sena as independent ruler but there is no information yet has been found regarding the condition of his reign.

128 NSOU • GE-HI-11 16.3 The reign of Vijaya Sena The first most prominent ruler of the Sena dynasty was undoubtedly Vijaya Sena. He succeeded the throne of his father Hemanta Sena. It is generally believed that he enjoyed a long reign of more than 60 years. Most probably he ascended to the throne in c. 1095 CE. He was in power up to c. 1158 CE. He built an empire on the ruins of that of the Pala empire, gaining control of all Bengal and northern Bihar.

In spite of having such a long reign it is very unfortunate that only two epigraphic records we have as the sources of information which mention about his reign. These two records are Barrackpore copper plate grant and Deopara inscription. Most of the scholars believe that Vijaya Sena started his political career as a feudal lord. But later he led the foundation of the Sena empire by conquering almost the whole of Bengal. He defeated the various vassal chiefs of Rarh region and also conquered eastern part of Bengal from the Varman rulers. He also conquered some parts of northern Bengal from the Pala rulers. In spite of these successes the circumstances under which he got these successes yet not been clear to us. In fact there is not much information in our hands regarding the first twenty five years of his rule. Assuming that he had ascended the throne in around 1095 CE, the part played by him in the contemporary politics during the early years of his reign is extremely obscure. Most probably he was in ally with the Pala ruler Ramapala during the Kaivarta Rebellion. The Ramacharita of Sandhyakar Nandi mentions the name of one Vijayaraja of Nidravali as one of the allied feudatory chiefs of Ramapala. It is generally believed that Vijayaraja of Ramacharita is no other than Vijaya Sena. Therefore it may be said that he was the contemporary of Ramapala and was in throne of south Rarh when Ramapala purchased the help of various independent chiefs of Rarh region by lavish gifts like money and lands to get success in his campaign against Bhima. This also proves that south Rarh was in the occupation of the Sena family in the 11 th century. According to Deopara inscription he married Vilash Devi. She was a princess of the Sura family who were the ruling chiefs of the southern part of Rarh region. As a result of this matrimonial union, Rahr came under the direct rule of him. The matrimonial alliance with the Sura family also enabled him to attain political greatness. It is probable that he was helped by the invasion of the Karnatas under the leadership of Acha in establishing his supremacy over Vanga. It may be guessed on

NSOU • GE-HI-11 129 general grounds but this cannot be established by any positive evidence. He might have entered into an alliance with Ananta Varman ChodaGanga and profited by it in establishing his supremacy in Rarh. The Vallalacharita of Ananda Bhatta mentions him as the 'Chodaganga-sakhah' which means the friend of the Chodagangas. The Deopara inscription refers that he had to fight with various independent chiefs such as Nanya, Vira, Raghava, Vardhana, and the kings of Gauda, Kamarupa and Kalinga.

Of these Vardhana may be identified with Dvorapa Vardhana, the ruler of Kausambi and Vira with Viraguna of Kotatavi, two of the allied chiefs who had joined Ramapala's camp. Raghava and the king of Kalinga probably refer to the same person. The most notables among his adversaries were Nanya and the lord of Gauda. Nanya is undoubtedly the Karnata chief who had conquered Mithila in around 1097 CE. According to Bharata's Natyasutra, Nanya had broken the powers of Vanga and Gauda. It is reasonable to hold therefore that Nanyadeva after he had consolidate his dominion in northern Bihar turned his attention towards Bengal which was going through a process of disintegration at that time. He might have obtained some successes at first both against the Pala king of Gauda and the Sena king Vijaya Sena of Vanga but was ultimately defeated by the latter and fell on his own dominion in Mithila. It is learnt from the Pala epigraphic records that Madanapala's authority over north Bengal continued up to the 8 th year of his reign, which falls in 1152–53 AD. Most probably Vijaya Sena established his own supremacy in North and North Western Bengal by ousting the Palas sometimes after c. 1152–53 CE. It is recorded in the Deopara inscription that he erected the magnificent temple of Pradyumneshvar at the find-place of the inscription, about 7 miles to the west of Rajshahi town of present day Bangladesh. It is to be remembered here that no Pala record has yet been discovered in Bengal after Madanapala's 8th year of reign. Therefore it will not be wrong to assume that Vijaya Sena had ousted the Pala ruler from the throne of Bengal. It is also recorded in the Deopara inscription that Vijaya Sena's fleet advanced towards the west along the course of the Ganges. It seems that the Gahadvalas, who by this time had occupied parts of Bihar, were his target. However it is not clear from the inscription whether his naval expedition was successful or not. Vijaya Sena is said to have extended his hold over Vanga (south eastern Bengal) also. His Barrackpur copper plate was issued from Vikramapura located in present day HIS GE-HI-11 & 21–9

130 NSOU • GE-HI-11 Bangladesh which was the capital of the Varmana rulers who are found to have ruled in this area from

the last quarter of the 11 th century to the mid of the 12 th century CE.

So it seems probable that Vijaya Sena ousted the Varmana rulers from south eastern Bengal in the mid of the 12 th century CE. Thus by the middle of the 12 th century CE

Vijaya Sena supplanted the Varmanas, ousted the Palas and succeeded in establishing the rule of his own dynasty over the whole of Bengal. He seems to have consolidated his empire in Bengal by defeating other enemies. He assumed the imperial titles of Paramaheshvara Parambhattacharaj Maharajadhiraj. He also took the proud title of Ariraj-Vrsabha-Shankara. 16.4 Vallala Sena After a long reign of about 60 years Vijaya Sena died around 1158 CE and was succeeded by his son Vallala Sena. Two epigraphs of the time of Vallala Sena have so far been discovered. One is Naihati copper plate and the second is Sanokhar Image Inscription. They do not contain any record of his victory. He, however, had some military achievements to his credit. It is stated in the Adbhutasagara that he was engaged in warfare with the king of Gauda who is identified with Govindapala of the Pala dynasty. This information is also corroborated by the Vallalacharita of Anandabhatta which was composed in c. 1510 CE. It is likely that Vallala Sena might have given the final blow to the Palas in Magadha. It is stated in the Adbhutasagara that during the lifetime of his father, Vallala Sena conquered Mithila. It is not unlikely that Vallala Sena accompanied his father Vijaya Sena in his campaign in Mithila. However, the annexation of Mithila to the Sena Empire cannot be properly ascertained and the successors of Nanyadeva, against whom Vijaya Sena fought, ruled Mithila for a long time. It is believed that Vallala Sena with a view to reorganising the social system introduced the system of Kulinism. Knowledge regarding the early history of Kulinism is based on the texts known as Kulagranthas or Kulajishastras. Indeed these texts composed five or six centuries after Vallala Sena's reign, are 'full of irregularities and contain many conflicting ideas'. So the authenticity of the information furnished by the texts can be questioned. Moreover none of the Sena epigraphic records refer to Kulinism. It is known that Kulinism was the strongest force among the Bengali Brahmins in the 18th and 19th centuries CE. Hence it is quite probable, as held by NSOU • GE-HI-11 131 many scholars, that the advocates of Kulinism tried to give a historical basis to it and hence claimed its origin from the time of the Hindu king, Vallala Sena. It is evident from the Sena epigraphic records and tradition that Vallala Sena was a great scholar and renowned author. He wrote the Danasagara in c. 1168 CE and started writing the Adbhutasagara in c. 1169, but could not finish it. Like his father, he was also a worshipper of Shiva. He assumed the epithet of

Ariraja- Nihshanka-

Shankara along with other imperial titles. He married Ramadevi, the Chalukya princess. This marriage refers to the contact of the Senas with their ancestral homeland. He is the best-known Sena ruler who had ruled for about 18 years and consolidated the kingdom.

According to a tradition in Bengal, Ballala Sena's kingdom consisted of five provinces, viz.,

Vanga, Varendra, Rarh, Bagdi

and Mithila. The first three provinces comprise Bengal proper, while the last corresponds to North Bihar.

The province of Bagdi is generally identified by the scholars with a portion of the present day Presidency Division in Bengal including the Sundarbans. According to R. C. Majumdar it should be identified with the Mahal of Bagdi in northern Midnapore mentioned in Ain-i-Akbari and also shown in Rennell's Atlas. This land was the border between Rarh and Utkala. It is learnt from the Adbhutasagara that in his old age Vallala Sena left the responsibility of the government to his son Laksmana Sena and spent his last days, along with his wife, in retirement on the bank of the Ganges at a locality near Triveni. 16.5 Laksmana Sena The last important ruler of the Sena dynasty was Laksmana Sena. He succeeded his father Vallala Sena and ascended to the throne of Bengal in around 1179 CE. He was quite old when he ascended to the throne. In spite of an old age he started his political career brilliantly. It is evident from the records of his reign that before he came to power he defeated the king of Gauda and Varanasi or Kashi and made expeditions against Kamarupa and Kalinga. It is quite probable that the above victories were achieved by Laksmana Sena in his youth and possibly during the reign of his grandfather Vijaya Sena, who was engaged in warfare against the kings of Gauda, Kalinga, Kamarupa and also most probably

132 NSOU • GE-HI-11 against the king of Kasi of the Gahadaval dynasty. It appears from the epigraphs of LaksmanaSena that he was the first king among the Senas to assume the title of Gaudeshvara. This title is, however, absent in the plates of both Vijaya Sena and Vallala Sena. From this fact, it has been argued that it was Laksmana Sena who finally subdued Gauda and assumed for himself the title of Gaudeshvara. But this argument is very weak because there can hardly be any doubt regarding the establishment of the Sena rule over the whole of Bengal during the reign of Vijaya Sena. The Sena records do not refer to any incident in the intervening period that necessitated the re-conquest of Gauda by Laksmana Sena. Moreover the occupation of northern Bengal by the Senas during the reigns of Vijaya Sena and Vallala Sena has been proved beyond any doubt. It is recorded in the copper plates of his sons that Laksmana Sena built monuments indicating his victory in Puri, Varanasi and Prayag. However it is very difficult to conclude from the high sounding praise in the records of the sons of Laksmana Sena that his monuments refer to the expansion of the Sena power over those areas during his reign. His court poets Umapati Dhara and Sharana described the expeditions of an anonymous king who conquered Pragjyotisha, Gauda, Kalinga, Kashi and Magadha and Chedi and Mlechchharaja. Probably this eulogy can be attributed to Laksmana Sena, for all these except Chedi and Mlechchhas. It is evident from the Akaltara inscription that Vallabharaja, a feudatory of the Kalachuri or Chedi king of Ratnapura defeated the king of Gauda. On the other hand, Laksmana Sena claimed victory over him. Although the conflict between the two is more or less certain, the result is not. There is no doubt that Laksmana Sena came to the throne at a fairly old age. His reign was famous for remarkable literary activity. He himself wrote many Sanskrit poems, some of which are preserved in the anthology Saduktikarnamrita and completed the Adbhutasagara, which was started by his father. His court was an assembly of several renowned poets like Jayadeva, the author of the Gita Govindam; Sarana; Dhoyi, the composer of the Pavanaduta and probably also Govardhana.

His friend Shridhara Dasa, son of Vatu Dasa compiled the Saduktikarnamrta, an anthology of Sanskrit verses, during his reign. His chief minister and chief judge was Halayudha Mishra, who wrote the Brahmanasarvasva. Umapati Dhara, the author of the eulogy of Deopara inscription is referred to have been a minister and one of the several court poets of Laksmana Sena. It is known that Laksamana Sena was a staunch Vaisnava, while his father and NSOU • GE-HI-11 133 grandfather are known to have been devout Shaiva. He took the title of Paramavaisnava or Paramanarasingha. Nothing definite is known regarding his change of faith. Laksmana Sena was famous for his exceptional qualities and proverbial generosity. Indeed his generosity even attracted the attention of Minhaj-us-Siraj, the author of the Tabaqat I Nasiri, who designated him as a 'great Rae' of Bengal and compared him with Sultan Qutb Uddin. He, however, became too weak to run the administration of his kingdom towards the close of his reign. During this time there were signs of disruption and disintegration within his kingdom. Contemporary epigraphic records refer to the emergence of a number of independent chiefs in different parts of the Sena kingdom, which paved the way for its decline. However, the final blow to the Sena kingdom

came from Muhammad Bakhtyar Khalji, the Turkish invader. Indeed when the whole of northern India gradually came under the sway of the Muslims it was quite natural that they would try their arms eastward. Bakhtyar Khalji first stormed Bihar and then invaded Nadia in 1205 CE and compelled Laksmana Sena to flee to eastern Bengal. The Turkish invader gradually captured western and northern Bengal and laid the foundation of Muslim rule in Bengal. At that time Laksmana Sena was an octogenarian. Hence it is likely that the old king could hardly offer any serious resistance to the invasion. Bakhtyar marched against Bengal with a band of well-trained horsemen. He was at first treated in Nadia as a horse-dealer. The old Sena king, who was then at his dinner, was completely taken by surprise. When Bakhtiyar captured Nadia, Laksmana Sena withdrew to south eastern Bengal, where his sons continued the rule of the Senas for some time. His presence in south eastern Bengal is proved by his Bhowal copper plate grant issued in his 27 th year to grant land in an area not far away from Dacca of present day Bangladesh. He died sometimes around 1206 CE. 16.6 Conclusion Although Laksmana Sena began with a brilliant successful career of conquest but his reign ended in a sea of troubles that overwhelmed him and his kingdom. At Laksmana Sena's accession the Sena rulers became the paramount over the whole of Bengal, and their greatness found expression in the numerous literary works that were produced during his reign. But towards the end of his reign the Sena power declined and the rule of his successors was limited to parts of south eastern Bengal, where emerged other local rulers.

134 NSOU • GE-HI-11 16.7 Model Questions 1. Write briefly on the military achievements of Vijaya Sena. 2. Write an essay on Vallala Sena emphasising on his Kulinism. 3. Write briefly on Lakshmana Sena. 4. Write a short note on Kulinism. 16.8 Suggested Readings 1. Nitish Sengupta, *The Land of Two Rivers*, London, 2011. 2. NSOU • GE-HI-11 135 Unit-17 □ The Successors of Lakshmana Sena Structure 17.0 Objective 17.1 Introduction 17.2 The Successors of Lakshmana Sena 17.3 Later Sena rulers 17.4 End of the Sena era 17.5 Contribution of the Sena rulers 17.6 Model Questions 17.7 Suggested Readings 17.0 Objective • The objective of the present unit is to study the post-Lakshmanasena Sena rule in Bengal. • Two major aspects will be discussed : ➤ The rule of the later Sena rulers ➤ The end of the Sena rule in Bengal • The contribution of the Sena rule in the history of Bengal will also be discussed. 17.1 Introduction Lakshmana Sena generally regarded as the last important emperor of the Sena dynasty. During his reign Bengal witnessed the invasion of the Turks led by Bakhtiyar Khalji. In spite of his defeat in the battle with the Turks Lakshmana Sena did not lose much prestige. Minhaz us Siraj in his *Tabaqat i Nasiri* mentioned Lakshmana Sena as the great Ruler of Bengal. He even compared him with Sultan Qutubuddin. 135

136 NSOU • GE-HI-11 17.2 The Successors of Lakshmana Sena Lakshmana Sena had two sons. Visvarupa Sena was his eldest son and immediate successor. It is not very clear to us that when Visvarupa Sena ascended to the throne of Bengal. Lakshmana Sena definitely continued to rule in eastern Bengal even after the raid on Nadia for at least three or four more years. Two land grants have been found which were issued by Lakshmana Sena some years after the conquest of Muhammad Bin Bakhtiyar Khalji. These epigraphic records indirectly prove that Lakshmana Sena died sometimes after 1205 CE. On contrary Minhaj Us Siraj in his *Tabaqat I Nasiri* mentions that Lakshmana Sena died shortly after the raid on Nadia. But the *Sadukti Karnamrita* refers to Lakshmana Sena as the ruling king even after 1205 CE. Thus the date of the ascendance of Visvarupa Sena to the throne of Bengal is yet not been clear to us. There is not much information about Visvarupa Sena's reign. Two copper plate grants issued by him have been discovered. The first one is Madanpara copper plate inscription and the second one is Madhyapara copper plate inscription. According to the contemporary epigraphic records the Madanpara copper plate grant had been issued

in the 14 th regnal year of the ruling king. The second one i.e. the Madhyapara copper plate grant had been issued sometimes later. Unfortunately these regnal year dates yet not been properly calibrated with the normal calendar date. Visvarupa Sena was succeeded by his younger brother Keshava Sena. He also issued a copper plate grant in his third regnal year. Some scholars believe that Lakshmana Sena was succeeded by Keshava Sena instead of Visvarupa Sena. Prof. R. D. Banerjee strongly oppose this view. He came to this conclusion on the ground that the grant of Keshava Sena contained all the verse found in the Madanpara copper plate grant of Visvarupa Sena and some additional verses. On the other hand the Madhyapara copper plate grant of Visvarupa Sena which has since been discovered contains these additional verses. The real ground for regarding Visvarupa Sena as the elder brother and predecessor of Keshava Sena is the 10 th verse of the Edilpur copper plate grant. R.C. Majumdar completely agreed with Prof. N. G. Majumdar's interpretation of this verse according to which it contains a reference to king Visvarupa Sena, and he must, therefore, have preceded Keshava Sena who issued the Edilpur copper plate grant. Like there date of ascendance to the throne their territory on which they able to

NSOU • GE-HI-11 137 establish their control is also a matter of debate. Most probably they ruled over parts of eastern and southern Bengal. The Madanpara and Madhyapara copper plate inscription referred to grants of land in Vikrampura of present day Bangladesh. The copper plate grant issued by Kesava Sena refers about the marshy lands of southern Bengal. These epigraphic records indicate Sena control over the eastern and southern parts of Bengal. Both of the kings maintained the tradition of obtaining imperial titles. Visvarupa Sen obtained the title of 'Ariraja Vrishabhanka Sankara Gaudesvara', and Kesava Sena also obtain 'Ariraja Asahya Sankara Gaudesvara'. The great Sena rulers were the followers of Saivism. But Visvarupa Sena and Kesava Sena probably transferred their allegiance to the Saurya sect. The epithet Saurya applied to these kings clearly indicate that they were sun worshippers. The epigraphic records although describe about the military prowess of these two kings but that descriptions are in very general terms. No details offered in any of the epigraphic record. In a common verse contained in every epigraphic record of these two kings. Both of them are described as the 'destroyer of the Yavanas'. Most probably this verse refers to the struggle between the Sena rulers and the Muslim chiefs. The Muslim chiefs after the defeat of Lakshmana Sena were able to establish their control over a portion of northern and western Bengal. Tabaqat I Nasiri of Minhaj us Siraj indirectly supports the view regarding the struggle between the Sena rulers and the Muslim chiefs. It states that the Muslim chiefs ruled over 'the territory of Lakhanauti'. While 'Bang' i.e. Vanga or eastern and southern Bengal was ruled by the descendants of Lakshmana Sena even when that work was composed. Thus we may safely infer from the Hindu and Muslim evidences that for nearly half a century Bang could not be subdued by the Muslim rulers of Lakhanauti and though they might have occasionally gained some successes against it and levied tribute. They sometimes also met with failure and the Sena rulers could justly claim victory against them. These two kings collectively ruled at least for about a quarter of a century. Most of the scholars believe that they have ruled at least till 1230 CE. There is no proper record regarding the successor of these two kings. But according to Tabaqat I Nasiri the descendants of Lakshmana Sena ruled in Bengal (Bang) at least up to 1245 CE and probably up to 1260 CE. It is almost certain that Visvarupa Sena and Kesava Sena were succeeded by other members of the family. Nothing is however definitely known about them.

138 NSOU • GE-HI-11 17.3

Later Sena rulers Traditions have preserved the names various kings who succeeded Lakshmana Sena. But they possess very little historical value. This will be evident from the genealogy of the Sena kings preserved in Rajavali, one of the best texts of this kind. Lakshmana Sena after his defeat ruled as suzerain for about ten years and his successors ruled as suzerains of Delhi and subordinate rulers in Radha region. This is clearly shown in the genealogical table given in the text of Rajavali. The table mentions 10 names as the suzerains of Delhi. They are (1) Kesava Sena, (2) Madhava Sena, (3) Sura Sena, (4) Bhima Sena, (5) Kartika Sena, (6) Hari Sena, (7) Satrughana Sena, (8) Narayana Sena, (9) Lakshmana Sena II, and (10) Damodar Sena. According to this text Madhava Sena ruled in Radha region when his father Kesava Sena had accepted the suzerainty of Delhi. After his father's death Madhava Sena became the suzerain of Delhi and his younger brother ascended to the throne of Radha region under his elder brother's suzerainty. In this text the name of Jaya Sena is mentioned as the son of Narayana Sena. Jaya Sena also served as the ruler of Radha region when Lakshmana Sena II succeeded Narayana Sena as the suzerain of Delhi. The relationship between Jaya Sena and Lakshmana Sena II is yet not been clear to us. Damodar Sena was the last member of the Sena family who served as the suzerain of Delhi. He was dethroned by the Chauhan ruler Dvipa Simha. An account like this does not deserve serious consideration even though it may contain some names whose identities were historical. Ain I Akbari of Abul Fazl also mentions some names of the later Sena rulers. But Abul Fazl also presumably depended upon a text like the Rajavali. In Ain I Akbari Abul Fazl mentions the names of Madhu Sena and Sada Sena. Sada Sena is evidently same as the king of Radha region mentioned in the genealogical table given in the Rajavali. Madhu Sena is probably identical with Madhava Sena of the Rajavali text. Ain I Akbari also mentions the names of one Keshu Sena and one Raja Naujah. Most probably these two names represent Keshava Sena and Narayana Sena. The account of Taranath mentions about four Sena kings who together ruled for about 80 years. They were (1) Lava Sena, (2) Kasa Sena, (3) Manita Sena, and (4) Rathika Sena. These four kings were followed by the four kings who according to Taranath were minor Sena kings. They were (1) Lava Sena II, (2) Buddha Sena, (3) Harita Sena, and (4) Pratita Sena. Taranath mentions them as the subordinate rulers under the Turushka rulers. It is unfortunate that none of the above mentioned

NSOU • GE-HI-11 139 names can be safely regarded as a member of the Sena royal family ruling in Vanga after the death of Lakshmana Sena. An echo of the final conquest of the Sena territory in eastern Bengal by the Muslims is perhaps preserved in the tradition about Vallala Sena's fight with Vaya Dumna. It has been taken to refer to Vallala Sena II who is mentioned as having ruled in 1312 CE in a text called Vipra Kalpa Latika. But the account especially the date and genealogy contained in this book can hardly be relied upon. In 1809 Dr. James Buchanan heard the same story but that not referred to Vallala Sena. This story referred Susena instead of Vallala Sena. Most probably Susena was the last king of the Sena dynasty. In any case it is difficult to derive any historical conclusion from stories of this kind. 17.4 End of the Sena era Thus it is not very clear to us that how and when the Sena rule finally ended. It is indeed needless to mention that the invasion of Muhammad Bin Bakhtiyar Khalji had greatly weakened the kingdom. However, the later Sena rulers became able to sustain their rule up to at least mid of the 13 th century CE. On the basis of some epigraphic and textual records it is generally believed that in the third quarter of the 13 th century CE, the Deva rulers supplanted the Sena rulers from their hold over Vikramapura. By the end of the century whole of Bengal came under the control of the Muslims. 17.5 Contribution of the Sena rulers The rule of the Senas in Bengal is usually connected with the emergence of orthodox Hinduism in a Hindu-Buddhist society which for long had enjoyed the peaceful coexistence of the two religions resulting in an atmosphere of amalgam of the two. The onslaught on the Buddhists in Bengal is believed to have started in this period, which resulted in large scale Buddhist migration to the neighboring countries. The Sena period witnessed the development of Sanskrit literature. Vallala Sena and Laksmana Sena were royal authors of Sanskrit texts, Dana Sagara and Adbhuta Sagara. Jayadeva, Umapati Dhara, Sharana, Dhoyi, Shridhara Dasa, Halayudha Mishra and Govardhana were literary luminaries of the period. Sculptural art developed under the patronage of the Sena kings and courtiers.

142

Unit 18 □ Overview of the Administration : Basic Features and Evolution Structure 18.0 Objective 18.1 Introduction 18.2 Administration in Pre Gupta period 18.3 Gupta and Post-Gupta Period 18.4 Administration under the Pala and Sena rulers 18.5 Conclusion 18.5 Model Questions 18.7 Suggested Readings 18.0 Objective • The objective of the Present unit is to study the evolution of administrative structure in ancient Bengal. • The theme will be discussed from three different perspectives : ➤ The pre-Gupta administrative structure ➤ The Gupta and Post-Gupta administrative structure ➤ The administration during the Pala and Sena rule in Bengal 18.1 Introduction In ancient times, the land of 'Bangla' comprised the territories of Bengal, Bihar and Orissa. The Bengali-speaking people were the majority in that land. Its domination extended from Kamrup (Assam), Pataliputra (Patna) and Bhubaneswar (Orissa) up to the border with Eran of central India. It is indeed a tough task to draw an outline of the political theory and the administrative system that prevailed in Bengal until it 143

144 NSOU • GE-HI-11 became a part of the Gupta empire as there is no reliable sources of information. Administration in Bengal never remained the same always. Every new conquest was followed by new mode of administration. A few isolated data regarding the administrative system may be traced from detail study of the classical accounts and scattered references in ancient Indian literature. 18.2 Administration in Pre Gupta period We do not have any definite information regarding the administrative system of Bengal during the pre-Mauryan period. A rough outline may be drawn from the evidence of a few stories and legends preserved in later literature and from the classical accounts; we know that monarchy was the prevailing form of government. The

Greek and Latin writers refer to the existence of a very powerful state in Bengal, known as Gangaridai (the people of the Ganges region) in the latter half of the 4th century BCE, which was militarily powerful. The description of the kingdom of Gangaridai with its disciplined as well as superior military power seems to indicate a highly developed form of state organisation. Besides the kingdom of Gangaridai, a number of principalities seem to have existed in contemporary Bengal, exercising local authority only in their respective areas. It is very difficult to ascertain their relation with Gangaridai. It is stated in the Mahabharata that those powers didn't lack general political consciousness amongst themselves against their common enemies and sometimes they established a strong monarchy through the combination of a number of smaller kingdoms. They also maintained diplomatic relations with foreign rulers. Most probably Bengal formed an integral part of the powerful Mauryan Empire, which was marked by a strong, well regulated but enlightened system of administration. Though we possess precise knowledge regarding the Mauryan administration in general, unfortunately we do not have sufficient information regarding their administration in Bengal. Nor do we possess any definite knowledge of the administrative system under independent states that flourished in Bengal for about five hundred years following the downfall of the Mauryans. However we may assume that the system of provincial administration developed by the Mauryans was prevailing in Bengal. From the Mahasthan inscription (belonging to the 3rd century BCE), we know that the city of Pundra Nagara was probably the administrative seat of a Mahamatra NSOU • GE-HI-11 145 during the period of the Mauryas. The inscription made mention as to whether Bengal was governed as a province of the Maurya empire or was under the direct administration of the emperor himself. The contents of the inscription clearly indicate the existence of a well-organised administration. The end of the Maurya dynasty in the beginning of the 2nd century BCE was, however, followed by political disintegration. For a period of about five hundred years there was paramount sovereign in northern India. The inscriptions, belonging to the post-Mauryan period, record

either local dynasties or rulers, or imperial families who ruled over dominions which included portions of Bengal. Indeed with the foundation of Gupta rule in the beginning of the 4th century CE, the scenario changed and a new era of imperial peace and prosperity was ushered in committed to the welfare of the people, which is the cardinal tone of the Mauryan administration. Among the local dynasties or rulers who ruled in areas within Bengal, the Varmanas of the early 4th century CE, and the Khadgas of Samatata (7th century CE) were prominent. We also find the names of the local chiefs of Vanga region such as Gopachandra, Dharmaditya and Samacharadeva; Jayanaga of Karnasuvarna and Vainyagupta of Tippera. 18.3 Gupta and Post-Gupta Period In the prevalent form of government, early in the 4th century CE, the king held the supreme position. He assumed the title of Maharaja. Singha Varman and his son Chandra Varman of Puskarana or present day Pokharna in Bankura district enjoyed the title of Maharaja. The name of Chandra Varman is referred to in the Allahabad Prashasti of Samudra Gupta as one of the powerful rulers of Aryavarta. The Gupta sovereigns used, as recorded in the Damodarpur Copper plate inscriptions dated c. 444 CE, c. 448 CE, c. 482 CE and c. 476-495 CE the titles Paramadaivata Paramabhattacharaka Maharajadhiraja. The Gupta emperors are said to have directly administered the whole of Bengal, which formed an integral part of their empire. Among the local rulers of Bengal, Gopa Chandra, Dharmaditya and Samachara Deva (c. 6th century CE) and Jaya Naga (c. 6th century CE) assumed the title of Maharajadhiraja. Shasanka also used the same title. There had been several feudal chiefs who assumed the title of Maharaja. In the Gunaighar Copperplate inscription dated Gupta Era 188, it is stated that under Maharaja Vainya Gupta there were two HIS GE-HI-11 & 21—10

146 NSOU • GE-HI-11 feudatory chiefs, Maharaja Rudra Datta and Maharaja Mahasamanta Vijaya Sena, who assumed the same title as their suzerain. The use of titles like Mahasamanta and Maharaja by some feudatories definitely indicates that portions of territory were under their control. In the same inscription, Vijaya Sena is said to have borne various epithets like Dutaka, Mahapratihara, Mahapilupati, Panchadhikaraparika, Patyuparika and Purapaloparika. The use of such titles, however, clearly reminds us of the important position occupied by a feudal chief in the state functions. Indeed it will be unreasonable to assume that in the administration of some parts of the independent kingdoms the feudal chiefs enjoyed autonomy. For example, Maharaja Vijaya Sena, as recorded in the Mallasarul Copper plate inscription, is found to have used his own seal and issued directives to his officials. The imperial territory of Bengal, administered by the Gupta emperors, was divided into some well-defined units like bhukti, visaya, mandala, vithi and grama etc. Each of the units seems to have an adhikarana or office of its own at its headquarters known as adhisthana. Bhukti, corresponding to a modern division, was the largest unit of administration, and was governed by a deputy of the king. From contemporary epigraphic records we know the names of such bhuktis as Pundravardhana and Vardhamana, corresponding to the whole of north Bengal and the southern part of ancient Radha region respectively. In the Gupta inscriptions we also find mention of an unnamed bhukti with its headquarters at Navyavakashika, which included Suvarnavithi. The bhukti used to be governed by an officer of governor rank appointed directly by the emperor. In the Damodarpur Copper plate inscription of the Gupta sovereigns, the governor of Pundravardhanabhukti is described as 'tatpadaparigrhita' in relation to the king under whom he might have served. The title of this high official was Uparika during the time of Kumara Gupta I while Maharaja was added to it during the reign of Budha Gupta. From the reference to Uparika Maharaja Maharajaputra deva bhattaraka in the Damodarpur Copperplate inscription dated c. 543 CE. it may be inferred that sometimes either a prince or a member of the imperial family was appointed as the governor of the Pundravardhanabhukti. However, we have very little information regarding the way in which a provincial governor carried on his administration. It is learnt from the Paharpur Copper plate inscription of the Gupta year 159 or c. 479 CE that the bhukti of Pundravardhana had its adhikarana (headquarters) at the town of Pundravardhana. It may be mentioned here that the provincial governor was responsible directly to the king because his appointment was subject to the choice or approval of the latter.

NSOU • GE-HI-11 147 Next to the bhukti was the visaya, the second largest administrative unit, which played a significant role in the administration. The visayas correspond to the modern districts. The officer in charge of a visaya was known as Kumaramatya and Ayuktaka in the earlier and later Gupta periods respectively. During the supremacy of the later Gupta rulers over north Bengal, the officer of the visaya was called Visayapati. Generally the governor of a bhukti appointed the heads of the districts or visayas which formed parts of his province. The Baigram Copper plate inscription, however, refers to a district officer who was directly responsible to the bhattaraka. This shows that in some cases the emperor gave the appointment of district officer. However, the governor of a bhukti generally appointed a visayapati during the time of the independent rulers of south and east Bengal in the 6th century CE. Contemporary inscriptions mention only a few visayas. Each of the Damodarpur Copperplate inscription nos. 1, 2, 4 and 5 records the name of Kotivarsavisaya under the bhukti of Pundravardhana. The Dhanaidaha Copperplate inscription of Kumaragupta I dated c. 432-33 CE, however, records the name of Khatapara or Khadaparavisaya belonging to the same bhukti. The Baigram Copper plate inscription records the existence of a visaya which included Panchanagari as its headquarters. It is most likely that this was the name of the visaya too. This visaya seems to have been under the jurisdiction of Pundravardhanabhukti. The existence of a visaya known as Varakamandala under the administrative control of Navyavakashika is recorded in the Faridpur Copper plate inscription of Dharmaditya and Gopa Chandra. We know the name of Audamvarikavisaya from the Vappaghosavata grant of Jaya Naga of Karnasuvarna. It seems clear from the Damodarpur Copper plate inscriptions (Nos. 1-5) that the district officer had his adhikarana in his headquarters (adhisthanaadhikaranam) and a staff of officers under his control. Among the officers, the record keepers (pustapalas) are said to have played an important role in connection with the transactions in land. The inscriptions are the only source of information regarding the grant or sale of lands and the role of the adhikaranas in it. Probably the business of the adhikaranas was not confined to transactions in land only. They formed a general administrative body to carry on many other kinds of administrative work that a state has to perform. Unfortunately their other possible functions cannot be determined owing to lack of evidence. It is learnt from the Damodarpur Copper plate inscriptions Nos. 2, 4 and 5 that the officer-in-charge of the Kotivarsha visaya was aided by a 'Board of Advisers', which was composed of, excluding the officer-in-charge

148 NSOU • GE-HI-11 himself, four other members representing the various important interest groups of those days. They were the Nagara-shresthi or the President of the various guilds or corporations of the town or of the rich bankers, the Prathama-sarthavaha or the chief merchant representing perhaps the merchant class or the various trade guilds, the Prathama-kulika or the chief artisan representing perhaps the various artisan classes and the Prathama-kayastha or the chief scribe representing the Prathama-kayastha as a class or acting as a state official in the capacity of a Secretary of modern days. However, the supreme authority of managing the affairs of administration of the adhikarana rested in the hands of the Visayapati. We have evidence to prove whether the Nagara-shresthin, the Prathama-sarthavaha and the Prathama-kulika were nominated by the government or elected by their respective communities or guilds. But it can fairly be asserted that they represented the various interest groups in trade, industry and commerce in the leading city of the district. From the Faridpur Copper plate inscription of Dharmaditya (3rd regnal year), we know that besides the adhikarana of visayapati, there had been a considerable assembly of visaya-mahattara (leading men of the district), followed by other men of lesser importance (purogahprakrityas-cha), Prof. R. C. Majumdar thinks that the word 'purogah' used after the names and designations of the additional members is perhaps an indication that 'they formed an integral part of the adhikarana and possessed rights and prerogatives beyond those of mere advisers'. Mention has also been made in the Gupta inscriptions regarding the staff of record-keepers serving in the visayadhikarana. However, the description of the advisory bodies in the district administration bears clear testimony to the participation of the local people as well as the democratic principle pursued in local administration. Next to the district, the administration of the vithi forms one of the important features of the administration. The exact meaning of the term vithi seems to be unclear. Sometimes it corresponds to a subdivision of the bhukti or a mandala. Several inscriptions refer to this administrative unit. Suvarnavithi, as referred to in the Ghugrahati inscription of Samachara Deva, is taken to mean "the bullion market" situated in Navyavakashika. The use of vithi in the sense of an administrative unit is available in the Mallasarul Copper plate inscription. In the same inscription we find mention of a vithi known as the Vakkattakkavithi in the Vardhamanabhukti without any reference to a visaya. Another reference to vithi can be found in the Paharpur Copper plate inscription of 159 Gupta Era in which it is recorded that Daksinangshakavithi was under the jurisdiction of the Pundravardhanabhukti. We

NSOU • GE-HI-11 149 have specific references to the adhikaranas of the vithis, but we have definite information regarding their constitution. So far as the land transactions were concerned, the adhikarana of the vithi performed the same duties as were fixed for the district adhikarana. It appears from the evidence of the Mallasarul plate that the adhikarana of a vithi was assisted by a board of prominent persons, comprising mahattaras (leading men of different localities or wards of the vithi), agraharins, khadgis (swordsmen) and at least one Vaha Nayaka (Superintendent of conveyances). It will not be unreasonable to assume that such adhikaranas existed in Bengal under the imperial Gupta rulers also. Villages played a very significant role in the whole system of administration of ancient Bengal. They probably formed the smallest unit of administration. Contemporary inscriptions usually suffix the name of a village with grama, while some others are mentioned with the names ending with the term agrahara. We have references to the existence of the village Gunekagrahara grama in the Gunaighar Copper plate inscription of Vainya Gupta dated c. 507 CE and the Ambila grama Agrahara in the Nandapur grant of 169 Gupta Era or c. 488 CE. It seems that an agrahara was often considered more important and better developed than a grama from an administrative point of view. The combination of villages for the purpose of administration seems to have been common in ancient times. We have reference to the name of PalashaVrindaka in the Damodarpur Copper plate inscription of Budha Gupta dated c. 482 CE, the area of which seems to have been larger than the usual area of a grama. An example of perhaps a union of small villages is found in the Baigram Copper plate of Gupta Era 128. It is referred to as Vai-grama and is said to have included two distinct localities like Trivrata and Shrigohali. Prominent men of a village were involved in its administration or in local affairs. Their role was, however, confined to cooperation with the state officials. We can find a parallel in the participation of Mahattaras and other leading men in the affairs of the adhikarana of a visaya or a vithi. The theory that the Gramika was the head of administration in every village cannot be satisfactorily established. The inscriptional references do not make it sufficiently clear as to who represented the official side of the administration in villages administered by Gramikas. The Paharpur Copper plate inscription informs us that Brahmins, Kutumbins and Mahattaras represented the non-official side. The Damodarpur Copper plate inscription of Budha Gupta (c. 476 - 495 CE) mentions that in the administration of the village Chandagrama the non-official members included prominent subjects headed by

150 NSOU • GE-HI-11 Brahmins and also Kutumbins (the chief Brahmanas, prominent subjects and householders). However, the nature of administration of such villages differed from that of others where the powers were entrusted not only to the local Mahattaras and Kutumbins but also to the Astakuladhikarana and the Gramika. The villages, belonging to this category had their own adhikaranas, which represented the official side. Such an adhikarana probably consisted of eight persons and the Gramika. In such villages, there appears to have been an office of record-keepers. We have definite information regarding the adhikarana of a grama under the independent rulers of south and east Bengal in the 6th century CE. However, the exact constitution of the rural adhikaranas might have varied to a certain extent in different times. 18.4 Administration under the Pala and Sena rulers Bengal experienced for the first time a stable government under the long rule of the Pala rulers. Unfortunately we do not possess a detailed account of the Pala administration from the available materials. We can only reconstruct glimpses of different aspects of it. It was during the rule of the Pala kings that the central administrative machinery was established in Bengal upon the structure of the Gupta provincial administration. The monarchical form of government prevailed throughout the period. The king's eldest son was usually meant for successor (Yauvarajyam). We have detailed information regarding the duties and functions of the Yuvaraja. As in the Gupta period,

the term Kumara was applied to a son of the king.

He was given a high administrative post such as a provincial governorship. Sometimes the Kumaras played vital roles in the military campaigns of the reigning king. In the task of administering the empire, the king was assisted by a group of officials at the head of which were the ministers' known as mantri or sachiva. During the rule of the Pala kings we find references for the first time in the records to an important official of the state whose position was similar to that of the Prime Minister. We are told in the Badal Prasasti of Deva Pala about the great power and high dignity of the post. It seems that the post of Prime Minister was hereditary in the family of Brahmana Garga from the time of Dharma Pala. The descendants of Garga (namely Dharbhapani, Someshvara, Kedaramishra and Guravamishra) occupied the post of Prime Minister for the next hundred years. They played an active role in the foundation and consolidation of the Pala empire. Members of another family were however associated with the later Pala kings as their Prime Ministers. Yogadeva NSOU • GE-HI-11 151 was the Prime Minister of Vigrahapala III while his successor Vaidyadeva is said to have served in the same post during the reign of Kumarapala. The hereditary principle in regard to higher services seems to have been in operation under later dynasties also viz, the Chandras and the Yadavas. The evidence of the Bhuvaneshwar Prashasti of Bhatta Bhavadeva proves it. The Pala emperors had numerous feudatory chiefs under their control. They are referred to in the Pala records as Rajan, Rajanyaka, Ranaka, Samanta and Mahasamanta etc. It is very difficult to determine the real significance and mutual relation of these titles. But it can fairly be said that the power of the central authority compelled them to be under its control. Sometimes the weakness of the central authority led them to assume higher prerogatives and declare independence. The fact of Ramapala's seeking assistance from fourteen samantas to recover Varendra definitely proves that the power of the Pala kings depended to a great extent on the help of the feudal chiefs. During the rule of the Palas, the administrative units of the earlier period, like bhuktis, visayas, mandalas and other smaller ones, were retained. The bhuktis, referred to in the Pala records, are Pundravardhana, Vardhamana and Danda-bhukti in Bengal, Tira-bhukti in North Bihar, Shrinagara-bhukti in South Bihar and Pragjyotisa-bhukti in Assam. The Pala inscriptions record the names of a large number of visayas and mandalas. They also recorded the names of a large number of smaller units of administration such as khandala, avritti and bhaga. The avritti was subdivided into chaturakas and the chaturakas into patakas. The exact nature of none of these is clearly known. The inscriptions of the Palas refer to the officers connected with various administrative units. The long list of officials furnished by the land grants indicates the efficiency and comprehensive character of the administrative organisation. Regarding the power and functions of many of the officers very little is known. The list only helps us to form a general idea of the wide scope of the administrative machinery and the different departments through which it was carried on. It is to be noted here that the Pala inscriptions, although providing more details regarding the central government, do not throw much light on the forms of contemporary provincial and local governments. It is not also certain whether the adhikaranas of the earlier period still survived as a very significant aspect of administration. It is, however, true that the names of the adhikaranas do not appear in any inscription, but their survival in a modified form cannot altogether be ruled out.

152 NSOU • GE-HI-11 The king, during the Pala epoch, was at the top of the whole administration. His titles remained as in the preceding period. He had practically unlimited power. The central executive body, controlled by the king, exercised the main powers and responsibilities of the government. Besides the Yuvaraja and the Prime Minister specific references have been made to other ministers such as Mahasandhivigrahika (Minister in charge of Peace and War or Foreign Minister of the present day), Rajamatya, probably indicating junior ministers in general, Mahakumaramatya, whose real position is unknown, and Duta, the envoys. Next to these high executive officials were the Amatyas, referring probably to the officials of high rank. Among other high officials mention may be made of the Angaraksa, probably the head of the Royal bodyguard, and Rajasthaniya, probably holding the rank of a Regent or a Viceroy. There was a class of officers described as Adhyaksas whose position may be taken to mean the superintendents in the civil administration. Among other officials connected with the central administration Pramatri and Ksetrapa were prominent. The scope of their work was perhaps limited to disputes regarding property or they might have been in charge of the Department of Land Survey. However, some scholars to mean a Judge with civil cases only have explained the term Pramatri. 18.5 Conclusion The history of administration in ancient Bengal, as gleaned mainly from the inscriptions, is certainly sketchy. But there cannot be any doubt that there prevailed well-organised administrative machinery. Besides the long list of officials, as contained in the land grants, other important information regarding the administration bear clear testimony to the fact that the administrative system of ancient Bengal was uniform throughout the region in its main outline and was subject to changes and modifications when the situation demanded. It can fairly be concluded that ancient Bengal was not lagging behind in respect of administrative efficiency in comparison with other parts of India. 18.6 Model Questions 1. Briefly narrate the evolution of the administrative structure of ancient Bengal.

NSOU • GE-HI-11 153 2. Write a short note on the provincial administration under the Gupta rulers. 3. Briefly discuss the administrative structure of the Pala rulers. 18.7 Suggested Readings 1. 154 NSOU • GE-HI-11 Unit-19 □ The Condition of Economy and Social Formation Structure 19.0 Objective 19.1 Introduction 19.2 Economy – Agriculture, Trade and Commerce 19.3 Agricultural Productions 19.4 Trade and Commerce: 19.5 Market centres and merchants 19.6 Important Trade Routes 19.7 Coins and other Medium of Exchanges 19.8 Conclusion 19.9 Model Questions 19.10 Suggested Readings 19.0 Objective • The objective of the present unit is to study the socio-economic formation of Bengal during the ancient period. • The present unit will study both the agrarian economy and trading pattern. • Three focal points will be elaborated : ➤ The agricultural production ➤ The trading network, the merchants, and the market centres. ➤ The medium of exchanges 19.1 Introduction Bengal enjoyed prosperity throughout the ancient period. The vast alluvial plain 154

NSOU • GE-HI-11 155 of Bengal is very fertile and therefore agriculture flourished here since long past. The surplus agricultural production helps in the growth of trade and commerce from time immemorial. The multitude of rivers afforded easy communication for internal trade and Bengal's location on the Bay of Bengal offered her the opportunity of participating in sea-borne trade and commerce, the tradition of which seems to have been built up from as early as the 2nd millennium BCE. 19.2 Economy – Agriculture, Trade and Commerce Bengal as a territory in the early period of its history embraced the present areas of Bangladesh and West Bengal, parts of Bihar and Orissa in India, and actually denoted an aggregate of four major subregions i.e. Pundravardhana, Radha, Vanga and Samatata. The term Bengal therefore is taken to mean here the areas lying in Bangladesh and West Bengal in India. Geography and human activities in this deltaic area of the Ganga, the largest delta in the world, were largely shaped by the hydrography of this region. Its location between the middle Ganga plains and the Brahmaputra valley provides regular access to the Ganga basin in the west and the northeastern part of India. The Ganga delta opening out to the Bay of Bengal makes the region under review the only outlet of the landlocked Ganga valley to the sea. These geographical features considerably influenced movements of men and merchandise in early Bengal. The four sub-regions mentioned above never experienced political unification under a single power and witnessed uneven political developments. The developments in social, economic and cultural history in these units were neither uniform nor unilinear. In other words, political, socio-economic and cultural developments

show regional features in different subregions of early Bengal. A perusal of trade in early Bengal has to be placed in the broader context of commerce in the subcontinent. In India, as in early Bengal, the mainstay of economic life must have been agriculture. In the Brahmanical theoretical treatises, for instance the Arthashastra, however, vartta (the science related to occupations or vritti), includes krsi (agriculture) and vanijya (trade) as well. The Pali canonical literature in fact clearly underlines the greater economic advantages in trade than in agricultural pursuits (MajjhimaNikaya); there is also the clear recognition in the AnguttaraNikaya that out of trade could be derived enormous profit. It is no wonder that the great grammarian Panini (c 5 th century BC) was aware of kraya-vikraya (purchase and sale) as the principal aspect of vyavahara or trade. The principal sources of our

156

NSOU • GE-HI-11

information regarding trade in early Bengal are indigenous literature (both normative and creative), impressions of foreigners (Classical, Chinese, Arabic, Persian and European), inscriptions, coins and field archaeological evidence from explored and excavated sites. These sources, though diverse, rarely throw any light on transactional activities in Bengal prior to c. 6 th century BC; our survey also, therefore, begins from that period. The evidence is scattered and far from adequate, providing virtually no statistical data and offering what is termed as 'qualitative data'. It should also be pointed out that the socio-economic and political situation in Bengal did not always conform to an Indian or even north Indian pattern. When, for instance, the northern and northwestern part of the subcontinent experienced mature urbanisation in the period from c 2500 to 1750 BC, there was no such similar development in eastern India. Similarly, Bengal was outside the scope of urban development and emergence of mahajanapadas (territorial polities) in and around the sixth century BC when the Ganga valley witnessed such significant changes. It is important to note that complex economic life in Bengal, including sedentary agriculture, diversified crafts and trade, did not emerge prior to c 4th century BC, or before the emergence of the Maurya empire. It is likely that the material culture of the Ganga valley, characterised by flourishing agriculture, different crafts, growing trade and urban centres, reached the area of Bengal with the gradual spread of the political power of Magadha under the Mauryas. 19.3

Agricultural Productions Bengal was always a prosperous land in terms of agricultural produces. A variety of crops were cultivated here since long past.

Pundra was well known for the cultivation of dhanya (paddy) and tila (sesame) which figure in the Mahasthan stone inscription, palaeographically assignable to c. 3 rd century BC. The important point here is that these two types of crops were kept in the storehouse (kosthagara) at Pundranagara or present Mahasthangarh in Bogra district

of

Bangladesh, the earliest urban centre of Bengal, and the said crops were meant for distribution among certain people afflicted by some emergencies (atyayika). In short, the grains stored in the granary at Pundranagara were used for relief measures. The Arthashastra too recommends the Panyadhyaksa (officer in charge of trade) to build up similar buffer stocks of grains and other essential commodities to be released during emergencies. Seen in this light, north Bengal seems to have experienced surplus crop production, a part of which was stored in a state granary located in an urban centre. This implies

NSOU • GE-HI-11 157 some kind of transactions in grain, especially paddy, probably under administrative supervision.

Subsequent sources however do not suggest similar state initiatives in the buying and distribution of grains in Bengal. The recent discovery of many terracotta seals principally from archaeological sites in the South 24 Parganas and Midnapore districts

of

West Bengal notably from Chandraketugarh and Tamralipta has significantly enriched knowledge in this regard. Some of these inscribed terracotta seals inscribed in Kharosti and the mixed Kharosti-Brahmi scripts and assignable to c. late 1st century BC to 4th century CE, depict sailing crafts of different types carrying either a box with stylised stalks of grain or a stylised stock of grain shown on the seal. There is also a reference to a merchant who became wealthy by selling food (possibly rice). That Bengal was known both for profusion of crops and their export to overseas destinations cannot be lost sight of. A further continuity in the trade in paddy of Bengal is clearly visible in the accounts of Ibnbatuta (14th century) and Ma Huan (15th century), both referring to the overseas export of paddy of Bengal to Maldives in exchange of cowry shells. Besides this important cereal, Pundravardhana became so famous for the plantation of sugarcane that the very term paundraka stood for sugarcane (iksu) grown in north Bengal. There is a strong likelihood that sugarcane of Bengal was in considerable demand and was transacted as the raw material for the sugar making industry in early India.

19.4 Trade and Commerce

The 'Gange' country (lower part of the Ganga delta) in the Periplus of the Erythraean Sea (c second half of the 1st century CE), an invaluable source for the study of India's long distance trade network, prominently figures for the availability of malabathrum (Sanskrit Tamalapatra, Bangla Tejpata) and nard (Sanskrit nalada, narada, probably *Nardostachys grandiflora*), a particular type of fragrant oil. The Periplus clearly suggests that these exotic items were in considerable demand among the rich in the Roman Empire. A significant corroboration of this comes from a recently discovered loan contract document written on a mid-second century CE papyrus. According to this document, Gangetic nard of considerable quantity was loaded at the famous Malabari port of Muziris (near Cranganore in Kerala) and exported to Alexandria on board the ship Hermopolon. Though the Periplus considered malabathrum and nard as Gangetic, these were not locally grown in

158

NSOU • GE-HI-11

coastal Bengal region, but were plant products of the northeast from where these reached the Bengal coast. These exotic items were sent to Malabar, obviously by a coastal route (see later), for their final shipping to the eastern Mediterranean region. Bengal was thus involved in the transit trade of malabathrum and nard. The same 'Gange' looms large in the Periplus for the availability of the best variety of Muslin which was a major item of export from the Bengal coast. This text further refers to the trade in Thinae (Chinese) silk floss, yarn and cloth, which went to Limyrike or Damirica (the Dravida country in far south India) via the Ganges. While the muslin was a locally manufactured item of Bengal, the transaction in Chinese silk, an extremely costly product, belonged to the category of re-export trade. The fame of the textile products of Bengal, however, goes back to the days of the Arthashastra, the earliest stratum of which dates back to c. 3rd century BC. That Bengal continued to be famous for its textile products during the subsequent centuries is amply evident in the eloquent praise of the textiles of Bengal in the accounts of Arab and Persian authors (c 9th to 14th centuries), Chinese writers and Marco Polo (late 13th centuries). As many of them did not actually visit Bengal, their estimation of the excellence of the textiles of Bengal is based on their ideas/ information of the quality and quantity of textiles of this region. Significantly enough, Chauju Kua (1225 CE), a Chinese official speaks of the availability of fine cotton (tou-lo) in Pong-kielo or Vangala. Inscriptions of the period from 8th century onwards occasionally record the plantation of both betel nuts (guvaka) and betel leaves

both of which must have been transacted. Coconut (narikela) plantations also figure in inscriptions of the same period, particularly in those coming from coastal tracts. Salt as an indispensable daily necessity product also appears in the copper plates of the period from c. 9th to 13th centuries, especially from areas close to the coast. Bengal was also associated with the availability of excellent aloes wood, according to Arab accounts (c 9th to 13th centuries). Arab authors labelled it as Qamaruni aloes wood, available at the port of 'Samandar' or 'Sudkawan' located near modern Chittagong of Bangladesh.

The Qamaruni aloes wood, rated second only to the aloes wood of Multan, was a forest product from Qamarun or Kamarupa and brought to Samandar for export through the river Meghna. Arabic and Persian texts also refer to the export of rhinoceros horns, an exotic and costly item, from Samandar. This forest product is likely to have reached Samandar also from Kamarupa, which is traditionally noted for rhinoceros.

NSOU • GE-HI-11 159

The importance of Bengal in the trade of another animal has been underlined in recent decades. This is the transaction in the horse, especially the war-horse, in early Bengal. The best quality of war-horses were however generally not indigenous to India and were brought from Central Asia to north India through the northwestern frontier region. According to the account of Kang tai (3rd century CE), Yueh-chih (ieKusana) merchants regularly brought horses to the Koying country by sea. Koying is located in the Malay Peninsula. A copper drum, found from the Sangean Island in Southeast Asia, depicts two men in typical Yuehchih dresses standing beside a horse. The most likely point of maritime contacts between the Malay Peninsula and north India seems to have been the Bengal littorals. To this must be added the evidence of a terracotta sealing from Chandraketugarh, with a legend in the mixed Kharosti-Brahmi script (assigned to c. 3rd century CE), which shows the figure of a ship on which stands the figure of a horse. The accompanying legend describes the vessel as a trapyaka, which is the same as trappaga of the Periplus and the trapyaga of the Jaina text Angavijja. This seal provides the earliest known evidence of the shipment of horses from the Bengal coast. A perusal of the Tamil Sangam texts may suggest that horses reached the ports on the Tamilnadu coast from the north, which could imply in this context the Bengal coast. One may therefore logically see Bengal's participation in the maritime transportation of horses to Southeast Asia and/or Tamilnadu coast in and around the 3rd century CE. The need for the horse as major war machinery in Bengal could have increased as a result of the rise of Bengal as a formidable regional power in north India under the Palas and the Senas (c 750-1205 CE). An impression of this can be seen in the epigraphic account of the gift of countless cavalry to the Palas by rulers from the northern quarter. Though it is stereotypical and eulogistic in nature, the account suggests that the Palas perceived the northern quarter as the principal supply zone of war-horses for their cavalry. This suggestion gains ground in the light of the annual horse-fair (ghotakayatra) at Prthudaka (modern Pehoa in Haryana), figuring in an inscription of 848 CE. The Tabaqat I Nasiri of Minhajuddin (13th century) leaves little room for doubt that excellent Arab horses were brought to Nudiah or probably Nadia near modern Navadwip in the Nadia district of West Bengal during the Sena period. In fact, the arrival of the Arabian horse-dealers at Nadiawas so regular that when some of Bakhtiyar Khalji's soldiers reached Nadia, they were mistaken as horse merchants and they hardly raised any suspicion. Apart from this centre of horse trade in the Radha region, Lakhnawti or Laksmanavati, the capital of LakshmanaSena also received the supply of horses from Karambattan or Karampattan,

160

NSOU • GE-HI-11 which is identified either with Kera Gompa in south-west

Bhutan or an area in the northern fringe of Tibet. Horses were thus imported to Bengal both from the northwest and also the northeast. A recent study of 15 th century Chinese annals points to the possibility of the overseas shipping of horses from the Bengal coast to China under the Ming rulers. It is likely that Bengal exported to China some of the horses, which were brought to Bengal from the northwest and/or the northeast. Among other imported items to Bengal mention may be made of cowries, which were profusely used as a medium of exchange in Bengal, particularly during the 750- 1300 CE phase. Best quality cowries were, however, not native of Bengal. These were in fact brought from the Maldives, obviously across the sea, as informed by Ibn Batuta and Ma Huan. The cowry must have been transported in bulk, almost in the nature of ballast. It logically follows that cowries were integrally integrated to the overseas trade network in the Indian Ocean. Among precious metals gold and silver, used for minting coins, appear to have been brought to Bengal from elsewhere. One of the possible sources of silver could have been the area around Arakan and Pegu. The rapid overview of the exchangeable products in early Bengal highlights their impressive diversities, ranging from cereals, cash crops, agro-based products and other daily necessity objects to precious and exotic commodities catering to the needs of the moneyed communities and the ruling groups.

19.5 Market centres and merchants An understanding of trade centres and traders is closely related to the study of exchangeable commodities in early Bengal. Available evidences suggest that there were specific types of market places and merchants. Major urban centres in early Bengal like Pundranagara, Kotivarsha, Mangalkot, Karnasuvarna, Ramavati and Vikramapur appear to have combined the functions of politico-administrative centres and commercial centres. These seem to have occupied the top position in the hierarchy of market places in early Bengal. Closely connected with the markets at principal urban centres were ports, generally called pattanas and velakulas. The foremost port of Bengal from the late 2 nd centuries BC to the eighth century CE was certainly Tamralipti, the major outlet for the landlocked Ganga valley. Located on the Rupnarayan and generally identified with Tamluk in Midnapur in West Bengal, Tamralipti is noted in early literature as a velakula. Archaeological remains, though not matching the profusion of literary references to it, point to its

NSOU • GE-HI-11 161 flourishing conditions. Ptolemy called it Tamalites while Pliny named the same as Taluctae. The importance of Tamralipti as a port of international trade, especially in the Bay of Bengal maritime network, is clearly highlighted by FaHian and Hiuen- Tsang. The Periplus of the Erythraen Sea and Ptolemy's Geography (c 150 CE) mention a port called Gange located on the river Ganga close to the confluence of the Ganga with the sea. This port is generally, but not unanimously, identified with the well- known

archaeological site of Chandraketugarh in north 24 Pargana district of

West Bengal. That Chandraketugarh, located on the river Vidyadhari, was a flourishing port is unmistakable on the basis of a number of visual representations of water crafts of various types on inscribed terracotta seals and sealing discovered from Chandraketugarh and datable to the first three centuries of the Christian era. These unique materials from Chandraketugarh yield depictions of ordinary boats, trapyaka type of coastal vessels and ocean going ships fit for distant journeys. While Tamralipti was undoubtedly the port par excellence in ancient Bengal, Gange/ Chandraketugarh is likely to have played the role of an important feeder port to Tamralipti. It appears that the last known definite epigraphic reference to Tamralipti does not go beyond the eighth century CE, after which the port seems to have declined mainly because of the siltation in the Rupnarayan. The gradual fading away of this premier port may have adversely affected the commercial activities of ancient Bengal, which according to some scholars experienced as its consequence a closed and self-sufficient rural economy in sharp contrast to the erstwhile trade based urbanism in Bengal. However, the southeastern most part of Bangladesh or Samatata- Harikela region was coming to recognition for long-distance overseas communications to southeast Asia, as is evident from Hiuen-Tsang's accounts of early seventh century. The combined evidence of several Arab (Sulaiman, IbnKhordadbeh, Al Masudi, Al Idrisi, Al Marvazi and Ibn Battuta to mention the outstanding writers), Persian (Hudud al Alam) and Chinese (ChaujuKua and the accounts of the voyages of Cheng ho) texts indicate the remarkable rise of a port, variously called Samandar, Sudkawan and Sattigaon, probably located near present Chittagong. The loss of Tamralipti seems to have been considerably compensated by the emergence of Samandar/Sudkawan as the premier harbour in the Bengal coast, to be ultimately given the status of portogrande by the Portuguese in the sixteenth century. Like Tamralipti of the earlier centuries, Samandar too had a few feeder ports in

HIS GE-HI-11 & 21-11

162 NSOU • GE-HI-11

the form of inland riverine ports. Two such prominent ports were Devaparvata and Vangasagarasambhandariyaka. Devaparvata, located in Mainamati, figures in a few inscriptions of 7 th -10 th centuries as being encircled by river Ksiroda, on which plied many boats and described as sarvatobhadra. Apart from being a riverine port it also served as a jayaskandhavara or a politico-administrative centre of the Khadga and Deva rulers of Samatata. That there was another riverine port near Savar (Sabhar) has been suggested on the basis of the reference to Vangasagarasambhandariyaka in a Chandra inscription of 971 CE. The place was so named because it offered warehousing facilities (sambhandara) and also provided a linkage with the Bay of Bengal (Vangasagara). The very name Savar is probably a survival of the ancient name sambhara or collection of merchandise. In 1196, according to the Sundarbans copper plate of Srimaddomanapala, there existed close to the Ganga's confluence with the sea, a place named Dvarahataka. It was obviously a small riverine market centre (hataka, iehattaka) functioning as a dvara or gateway to the sea. These inland riverine trades centres/ports, whether in Vanga-Samatata area or in the lower regions of Radha, were less prominent than Tamralipta or Samandar, but provided the crucial linkages between the littorals and the interior in a nadimatrka region like Bengal. The navigability of the many rivers, including the Ganga, in the Bengal delta is unmistakably evident from the epigraphic account of fleets of boats on the Bhagirathi and the description of Vikramapura in Vanga as a navigable tract. In the interior must have existed a number of market places, generally designated as hattas or hattikas. This first appeared in the copper plates of the 5 th century but actually proliferated in the landgrants from the 8 th century onwards. The term hatta, corresponding to the present hat generally stands for a rural level market centre where transactions usually take place once or twice in the week. As periodic or weekly market places in rural areas hattas can be placed at the base of the hierarchy of market centres in early Bengal. However, the term hattavara may suggest a centre of trade larger than an ordinary hatta. Devapaladevahatta was located close to Nalanda and being named after the Pala ruler, must have been more important and perhaps larger also than an ordinary hatta. An occasional mention of shops (apana) figures in the Khalimpur copper plate of Dharmapala. Copper plates belonging to the last phase of the Sena rule refer to the chaturaka, not known before 12 th century. The term chaturaka may denote a place situated at the junction of four roads or quarters. The location of chaturakas at the

NSOU • GE-HI-11 163

crossroads probably implies that they served as nodal points in locality level and regional trade. One such chaturaka was Betaddachaturaka (with the Ganga as its eastern boundary - purvve Jahnvisima), identified with modern Batore in Howrah district, West Bengal. One may logically infer that larger hattas and chaturakas could have provided significant linkages between the large urban centres and major ports on the one hand and rural-level periodic market places on the other. Similar commercial linkages were provided also in more or less contemporary north India, the Deccan and the far south by the middle-tier trade centres like mandapika (mod. mandi), pentha (mod. peth) and nagaram. At these market places and ports thrived merchants, who like the centres of trade, were not an undifferentiated category. Terracotta seals and sealing from Chandraketurgh and other sites in deltaic West Bengal speak of merchants dealing in paddy. The Sanskrit generic terms vanik and vaidehaka refer to the trader in general and also possibly to a petty merchant. In many Jataka stories leaders of caravans (sathavaha or sarthavaha) appear as undertaking distant journeys (puvvanta- aparanta) between Puskalavati (Charsadda in Pakistan) and Tamralipta. Caravan traders and nagarashresthis prominently appear in Kotivarsa according to the five Damodarpur copper plates, dated in c 444-544 CE. The term nagarashresthi literally means a very rich merchant in the nagara or town of Kotivarsa. The shresthi, lauded in early Indian texts as possessing fabulous wealth, was also a financier who invested a part of his wealth in various commercial ventures. It will be difficult to miss from these records that the sarthavaha and the nagarashresthi were members of the district board (visayadhistanadhikarana) for at least a century, though they were by no means government functionaries. One may therefore logically infer that the sarthavaha and the nagarashresthi were representatives of their respective professional groups and enjoyed considerable social pre-eminence. Individual merchants became a rarity in inscriptions of subsequent centuries. Jambhalamitra, a vrddhasartha, is known to have donated an image of Ganesha in Samatata in the late 10 th century. The term vrddhasartha may be taken to mean an old caravan trader, or on the basis of the analogy of the term vadduvyavahari in more or less contemporary Tamil inscriptions may be considered as a senior caravan merchant. The lack of references to merchants in the records of 8 th -13 th centuries have led some scholars to perceive a decline of trade and traders in Bengal during the period from 600 to 1300 CE. The image of languishing trade, a marker of the emergence and consolidation of feudal formation, has however been effectively countered by several historians who do not view a slump in trade in Bengal during this phase.

NSOU • GE-HI-11 19.6 Important

Trade Routes It has already been stressed that Bengal's geography and physical features endow the region with considerable facilities of communications, overland, riverine and maritime. Pundravardhana offers the major connections with the middle Ganga valley through the Rajmahal corridor. It is therefore no wonder that Pundravardhana was the first area in early Bengal to have witnessed the advent of the Northern Black Polished Ware and urbanism in c. 4 th -3 rd centuries BC, both being major features of the material life of the middle Ganga plains. An eloquent testimony to Bengal's overland communications with the Ganga valley and the northwestern extremities of the subcontinent is available from the discovery of Kharoshti and Kharosti-Brahmi documents. The principal zone of the use of Kharosti being the north-western part of the subcontinent, the presence of Kharosti-using people in West Bengal during the early centuries of the Christian era amply illustrate the linkages between the northwest and the Ganga delta. That this communication must have been maintained through the Ganga valley, especially the middle Ganga plains, is well driven home by the discovery of Kharosti inscriptions at Chunar near Banaras in Uttar Pradesh and also the finding of a terracotta plaque with a Kharosti inscription from the Kumrahar excavations. The inclusion of Srishchampa (Bhagalpur in eastern Bihar) in Kaniska I's realm, as evident from his Rabatak inscription, may indicate that the eastward spread of the Kusanaempire from its base in the northwestern borderlands to the middle Ganga plains could have facilitated the advent of Kharosti in Bengal. Such cultural contacts were usually not bereft of commercial significance and may explain the regular availability of horses in Bengal, imported possibly from the northwest. The contacts between the Ganga delta and the Ganga basin continued in subsequent centuries. Fahsien's overland journey from Magadha to Tamralipta is a clear pointer to that. Hiuen-Tsang's itinerary in Bengal may also throw interesting lights on this subject. Hiuen-Tsang started from Nalanda and reached Kajangala near the Rajmahal hills. From there he proceeded eastwards to Pundravardhana and continued further east to Kamarupa. From Kamarupa in the Brahmaputra valley he came down southeast to reach Samatata from where he travelled westwards to Tamralipta. From Tamralipta he journeyed northwards and arrived at Karnasuvarna, the capital of Shasanka. The pilgrim finally left Bengal for Orissa; the final leg of his overland journey

NSOU • GE-HI-11 165

from Karnasuvarna in Radha region to Orissa must have been undertaken through ancient Dandabhukti. His travels in Bengal demonstrate that existing routes of communication connected different areas within early Bengal. Bengal's overland connections with the neighbouring regions of Magadha, Kamarupa and Orissa

have also to be taken into consideration. In the eighth century three merchant brothers undertook an overland journey from Ayodhya to Tamralipta. The Dudhpani inscription, recording their activities, suggests that they planned their return trip from Tamralipta to the middle Ganga valley through the present Hazaribagh region. The Ghoshrawan inscription of the time of Devpala indicates the very long overland journey by Viradharadeva from Nagarahara to Mahabodhi (Bodhgaya). The interesting point here is that Viradharadeva is said to have been happy as he saw many of his countrymen at Nalanda. This cannot but underline the regularity of communications between southern Bihar and the northwestern extremities during the 9 th century. The regular arrival of horses and their dealers from the northern quarter to Bengal during the Pala-Sena period also strongly suggests the continuity of commercial linkages between the two areas. That coastal Bengal could be reached from Coromandel Coast is clearly illustrated by the descriptions of CholaRajendra's celebrated Gangetic campaign (c 1022-23 CE) in Tandabutti (Dandabhukti), Takkanaladham (Daksinaradha), Uttiraladham (Uttararadha) and Vangaladesa (southern and coastal areas of Vanga). Rajendra's forces arrived from Coromandel Coast through coastal Andhra, Orissa and entered Bengal through the Medinipur region in West Bengal. One may see here the continuity of the overland connections between Bengal and the Coromandel Coast, previously undertaken by Hiuen-Tsang in the 7 th century. The frequent mentions of the gamagamika (officer in charge of arrival and departures) and shaulkika (officer in charge of the collection of tolls and customs) in the records of the Pala-Sena period further highlight the possibilities of commercial contacts both within Bengal and beyond. Above survey of ports has already driven home the importance of the Bengal coast as an outlet to the landlocked Ganga valley and also its significant position in the overseas trade network, particularly in the Bay of Bengal. The frequent use of terms like nau-khata, nauyoga, nau-yogakhata, nau-dandaka, nau-bandhaka, nausthiravega, nauprthvi in copper plates ranging from 6 th -13 th centuries demonstrates that inland water transports regularly plied on numerous rivers, including of course the Ganga. A sure index of Bengal's growing participation in the trade along the entire length of the East Coast is furnished by the distribution of Rouletted Ware sites. The Rouletted Ware, now datable to 2 nd century BC - 200 CE period, has been

found from many coastal sites in the eastern sea-board, such as Alaganakulam, Kaveripattinam, Arikamedu, Vasavasamudram, Kanchipuram (Tamilnadu), Amaravati, Salihundam, Kalingapatnam (Andhrapradesh), Sisupalgarh (Orissa), Tamluk and Chandraketugarh (West Bengal). In 414 CE Fahsien began his voyage to China from Tamralipta. He boarded a merchant vessel and reached Sri Lanka from where he sailed to Java and finally to China. His accounts leave little room for doubt about the direct overseas route between the Bengal coast and Sri Lanka with further connections to Southeast Asia. Hiuen-Tsang explicitly mentions that Samatata maintained maritime contacts with several areas in Southeast Asia: i.e. Pegu, Sriksetra, Dvaravarti and Yamanadvipa. This is clearly corroborated by I-tsing's arrival at Harikela in 675 CE by a maritime voyage from Southeast Asia. On such maritime routes must have plied the master mariner (mahanavika) Buddhagupta, a resident of Raktamrttika (near Karnasuvarna), who figures in a sixth century inscription from the Malay Peninsula. Another instance of maritime contacts of Bengal with Southeast Asia is seen in the request of the king of Yavadvipa, Balaputradeva, to Devapala to grant some lands to the Nalanda monastery. Such cultural exchanges speak of intimate commercial linkages too. According to the Arab accounts of the period from 9th -13th centuries, there were regular sea voyages between Samandar on one hand and Silandib (Sri Lanka), Kanja (Kancipuram) and Uranshin (Orissa) on the other. From the second half of the 12th century, a new sea-borne network connected Bengal with the Maldives. IbnBatuta used this route to come to Bengal. For his return journey from the Bengal coast to Java (Sumatra) he boarded a Chinese junk from Sonargaon and from Java he finally reached China. Ma Huan's celebrated accounts of the voyages of the Ming admiral Cheng ho leave little room for doubt that the Chinese fleet visited Sattigaon (i.e. Chittagong) no less than four times during the period from 1404 to 1433 CE. All these bring to limelight the maritime network between the Bengal coast (especially the littorals of Samatata-Harikela) and Southeast Asia in which the Strait of Malacca seems to have played a crucial role. 19.7

Coins and other Medium of Exchanges

Media of exchange prior to the advent of minted metallic pieces as a medium of exchange in c. 3rd century BC, it is likely that exchanges in ancient Bengal probably took the form of barter. From the 3rd century BC onwards punch-marked coins, in regular circulation in north India since c. 600 BC, began to appear in many

NSOU • GE-HI-11 167 of the excavated urban centres of early Bengal, like Mahasthan, Bangarh, Chandraketugarh, Mangalkot, Tamralipta etc. The recent discovery of punch-marked coins from wari-bateswar in Bangladesh highlights the possibilities of the spread of money economy and therefore, trade, in the eastern part of the delta. These silver species were struck on the karsapana standard of 32 ratis or 57.6 grains. The introduction of coinage in Bengal since the 3rd century BC certainly suggests burgeoning trade in the region. The epigraphic reference to the filling up of the kosa or treasury at Pundranagara with ganda and kakini may imply, according to some scholars, the circulation of gandaka and kakini types of coins. An alternative interpretation of the same account, however, points to the possibility of the use of cowries counted in the unit of four (ganda). The latter interpretation implies that cowries could have been used as a medium of exchange right from the 3rd century BC. In addition to the silver punch-marked coins copper and bullion punch-marked coins were introduced to Bengal in c 2nd century BC. There are not only full-unit coins, but half unit and quarter unit pieces too. These uninscribed cast copper coins were based on the silver karsapana standard. Die-struck coins were introduced to Bengal during the Kusana age. In lower parts of Radha and Vanga a new series of cast copper coins merged in the 2nd century CE. These were developed on the basis of the Kusana devices and they followed karsapana weight standard. As a medium of exchange, these copper coins, labelled as Kusana-Radha/ Kusana-Vanga coinage, have some correspondence to the so-called Puri-Kusana coinage of Kalinga. This indicates the likelihood of a trade network in the Vanga-Kalinga zone. The political presence of the imperial Guptas in several regions of early Bengal during the 5th and first half of the 6th centuries CE paved the way for the circulation of the Gupta gold coins, known for their superb execution. Several Gupta copper plates from north Bengal refer to coin-terms dinara and rupaka. The two terms respectively denote gold and silver coins of the Guptas. A Gupta inscription from north Bengal suggests that the Gupta dinara could be exchanged with 15 or 16 rupakas or silver coins. The Gupta gold coin was issued on the weight standard of 124 grains; Skandagupta introduced a heavier weight standard of 144 grains, but the heavier suvarna coins became increasingly debased after the reign of Narasimha Gupta Baladitya. Gold coins struck on the suvarna standard were issued by rulers of Vanga before the emergence of Shashanka and also by Shashanka himself. The suvarna standard continued to be based in gold coins of rulers of Samatata of the seventh and early eighth centuries. In most of these species, struck on suvarna

168

NSOU • GE-HI-11

standard, metallic purity of the gold coin is appreciably low. After this gold coins faded out from the monetary scenario of Bengal for at least four or five centuries. 19.8 Conclusion The period from c 750 to 1200 probably witnessed a complex monetary system in Bengal. One has to note here the curious position that while the Palas and Senas did not strike any coin, the Samatata-Harikela region experienced the uninterrupted minting and circulation of high quality silver coins (the issuing authorities of these coins are unknown) for six centuries -from the 7 th to the 13 th centuries. The steady maintenance of the weight standard and metallic purity of these silver coins certainly implies the active role of an effective authority ensuring the quality of the silver coins. These silver pieces corresponded to the well-known purana or dramma standard of 57.6 grains. Coin terms like purana and dramma do appear in the copper plates of the Palas and the Senas. It has also been observed that the Harikela silver coins after the 10 th century became lighter in weight and broader in its flab with legends and motifs only on one side. The changes in the Harikela issues are suggested to have had some conformity with the reformed Arab currency system. This would once again speak of intimate linkages between the Bengal Coast and the trading world of the Arabs. The overseas contacts of the Bengal Coast with the Arab world are further demonstrated by the discovery of coins of the Abbasid Caliphs Harun-or-Rashid (8 th century) and MustasimBillah (12 th century) from the excavated sites respectively of Paharpur and Mainamati. The lively scenario of trade in early Bengal, including long distance overseas trade from and to the Bengal littorals, does not uphold the image of a languishing trade and 'monetary anaemia', projected in the construction of Indian feudalism. Landgrants and minted currency system were not mutually incompatible, but they could coexist in a given region. Possibilities of the easy convertibility of one silver coin of purana or dramma variety with 1280 cowries have been stressed, on the basis of a medieval Bengali arithmetic table. Attention has been drawn to the use of a term churnni, which began to appear in the Bengal records since the Sena times, hyphenated with kapardaka or cowry-shell. This implies that the term churnni and/or kapardaka-churnni are to be associated with a medium of exchange. The term churnni has been rightly interpreted as dust of pure silver or gold. In other words, the records offer the image of the introduction of dust currency, of equal weight to the purana (silver) standard and suvarna (gold) standard. Such a dust

NSOU • GE-HI-11 169

currency would be preferable to merchants when gold or silver coins were either relatively rare or of uncertain weight standard and metallic purity. The gold or silver dust currency could be logically exchanged with a gold or silver coin struck on dinara/suvarna or dramma/karsapana standard; the dust currency of equivalent weight as a purana or suvarna coin could also be converted to kapardakas or cowrie shells. The above discussions suggest the gradual development of a complex monetary system in early medieval Bengal. A three tier monetary system has been perceived, consisting of the cowry shell (kapardaka) at the base, the minted metallic pieces (especially in precious metals) at the top and the newly introduced dust currency in between the two. 19.9

Model Questions 1. Write an essay on the economic condition of ancient Bengal. 2. Briefly discuss the development of trade and commerce in ancient Bengal. 3. Write a short note on agricultural development in ancient Bengal. 19.10

NSOU • GE-HI-11 171 ➤ The cultural traits ➤ The religious traditions • The growth of art and architecture will also be discussed. 20.1: Introduction It is indeed a difficult task to define the geographical territory of ancient Bengal as there was no 'Bengal' up to 11 th century CE. The early Bengal as an entity of historical cultural study in the pre-11 th century CE era consists of many units and sub-units of which five were more prominent. These five units are Pundravardhana, Radha, Vanga, Gauda and Samatata. There were many other units, co-units and sub units also. Thus it is needless to mention that the cultural map of ancient Bengal is also multi dimensional. The present chapter will focus on the Cultural history of ancient Bengal emphasizing on the religious and literary history. 20.2 Religious Traditions of Ancient Bengal The ancient period witnessed many changes in the religious traditions. We have no information about the pre-Gupta religious history of Bengal. During the beginning of the Gupta period probably Buddhism was on the decline and idol worship on the rise in Bengal. However, under the Khadgas and the Palas, Buddhism again grew, and as its last resort India, it developed some unique sects here. Similarly, Hinduism started developing its uniquely eastern Indian and Bengali forms during this period. 20.3 Vedic and Puranic Many of the land grants in this period given to Brahmins mention Vedic rituals, and the Brahmins are praised for their knowledge of the scriptures, grammar, philosophy, and travel to holy places. During this period, Brahmins from other parts of India especially from madhyadesha came and were settling down in Bengal. Mention of this settlements is found as early as the donation of land to 205 Vaidika Brahmins by Bhuti Varma, great-great-grandfather of Bhaskara Varma but the largest record is of a large land grant to 6000 Brahmins in Pundravardhana by the Chandra king Jaya Chandra Deva.

172 NSOU • GE-HI-11

In this period, the Puranic tradition is also in strong force in Bengal. Vedavyasas Mahabharata, Ramayana, and the various Puranas were also commonly read. The stories of Prithu, Dhananjaya, Ambarisha, Sagara, Nala, Yayati, Vali, Bhargava, Karna, Vrihaspati, Agastya, Parashurama, Rama, Hutabhuja and Svaha, Dhanapati and Bhadra, Visnu and Brahma, Brahma and Sarasvati, Indra and Paulami, Purandara and Vali, Shiva and Sati, Uma, and Sarvvani, Surya and his horses, Samudrotthita Sashadhara Anchana Chandra of Atri's dynasty and Kanti and Rohini were already well known. Visnu has already completely merged with Avatara Krishna, son of Devaki who went to Yashoda. The other Avataras like Narasimha, Parashurama and Vamana were also known. Temples to Narayana and Garuda stambha, temples to Kadambari Devakulika, Sthanaka Vishnu with Lakshmi and Sarasvati, and separate idols of Lakshmi and Sarasvati (one with Ram instead of the usual swan as her steed) and Garuda have also been found. Overall, Visnu with Lakshmi, Sarasvati, Vasumati, Jaya, Vijaya, his twelve avataras, and Brahma predominate the idol collections. Most of the Visnu idols found in Bengal are Sthanaka and in a group, few Garuda statues are also found. The Shayana style is extremely rare. Similarly, the most common form was the Trivikrama form, and the next was of the Vasudeva form. But some other forms, e.g. Abhisarika, Shridhara (Hrishikesh), Vishvarupa, and Chaturmukha are also been found. Joint idols of Brahma and Visnu, and separate idols of fat, four faced, four armed Brahma seated on a swan are also found. Lakshmi is usually Gajalakshmi, but four armed and two armed standing idols are also found, sometimes carrying a jhapi. Out of the Avataras of Visnu other than Krishna, the most popular separate ones were Varaha, Narasimha and Vamana; though a few Matsya and Parashurama, and Haladhara were also found. A few idols of this period indicate clearly the influence of Mahayani Buddhism over Vaishnavism. 20.4 Shaivism Shaivism was probably less important in comparison to Vaishnavism. There is mention of establishment of a four headed Lingam for Shiva. Narayana Pala donated land to the Pashupatas, and is said to have established one thousand Shiva temples. Rampala is said to have constructed three Shiva temples, one temple dedicated to the eleven Rudras and others to Suryya, Skanda, and Ganapati. The Shaivism was

NSOU • GE-HI-11 173 probably of the Pashupata kind started by Shiva-shrikantha and Lakulisha in the 1 st century BCE. The eighteen Agamas and the six Yamalas written slightly later, including the Piggala appendix to the Brahmayamala describe the Pashupata sect. It describes Kamarupa, Kalinga, Kashi, Koshala, and Kashmira as being outside the Aryavarta which is ideal for Shiva worship. However, Gaudiya teachers were not considered amongst the best. Shiva was worshipped mainly as a lingam, usually one headed, but sometimes four headed in north Bengal. The latter usually has four Shakti idols. Also are found Chandrashekhara, Nrityapara, Sadashiva, Uma- maheshvara, Ardhanarishvara and Kalyana-sundara or Shiva-vivaha. Out of the Rudra forms Vatukabhairava and Aghorarudra has been found. Both two armed and four armed Ishana forms have been found. A four armed Sthanaka is known as Virupaksa, though it fits Nilakantha better. The Nataraja or Nateshvara form in Bengal is distinct from the southern ones, are usually ten armed as described in Matsyapurana, and do not have the Apasmarapurusa at his feet. A twelve armed version is also found. The Sadashiva follows uttara-kamikagama and Garuda Purana description; it is similar to the southern forms, and might have been brought from there. The Uma-maheshvara was the favorite of the Bengalis. This had Tantrika significance also. But the idol worship of Ardhanarishvara (man on right, woman on left) is rare in Bengal. The Kalyanasundara forms have typically Bengali characteristics like Saptapadi and Kartri vahana. The Aghorarudra worship was probably a cult. The wildly laughing, fiery faced naked Vatukabhairava holding skull and wearing skull garland and wooden slippers accompanied by dogs is definitely a Tantrika influence. Some Shaivaite teachers, especially of the Sadashiva form, were respected far outside Bengal. Separate Ganapati and Karttikeya are also found though Ganesha was probably more popular. He was always portrayed dancing on a mouse with a fruit in his hand: a typical Siddhiphaladata. A single example of Shaiva Ganapatya sect has been found, and is exactly like the southern form : probably an import. 20.5 Shakta Shakta Purana from 7 th and 8 th centuries speaks of Shakti worship in Radha, Varendra, Kamarupa and Bhottadesha. Jayadrathayamala written outside Bengal after the Guptas mentions Ishana Kali, Raksha Kali, etc., as well as Gohoratra,

174

NSOU • GE-HI-11 Yoginichakra, Chakreshvari, etc. These ultimately lead to the Tantradharma in Bengal, and the forms of Shakti in this phase are probably already precursors to being Tantrika. In fact Mahanila Sarasvati seems completely Tantrika. Most idols are four armed and standing. Sometimes she is alone, sometimes with the entire family of Ganesha, Karttikeya, Laksmi, and Sarasvati, and sometimes with family and Brahma, Vishnu, and Shiva. The contents in the four hands vary, and these have been variously called Chandi or Gauri-Parvati. Sometimes, they are only two armed, sometimes joined by other gods like Navagraha. Seated forms are rarer, and have four, six or twenty hands, and are called Sarvnamangala, Aparajita, Parvati or Bhuvaneshvari, and Mahalaksmi. There is an example of Lingodbhava Chaturbhuj, two arms in Dhyanamudra, two holding garlands and a book, called Mahamaya or Tripurabhairavi. Of the ugra forms, Mahisamardini Durga, sometimes called Shri- Masika-Chandi, is the most popular, in the oldest forms she is eight or ten armed. The Navadurga form mentioned in Bhavishya Purana is also found; this is probably influenced by Mahayana and Vajrayana. Twelve and sixteen armed Mahisamardini have also been found, as well as a thirty-two armed. A few four and six armed Vagaleshvari have also been found. Of the Matrkas, Chamundi was most common in Bengal especially in the twelve armed Siddha-Yogeshvari, two armed Dantura, Rudra Chandika, Rudra Chamuda, and Siddha Chamunda forms. There is a Pishitasana on a donkey, and a Charchika on a corpse. A four armed Brahmani, a few Varahi, and an Indrani have also been found. Ganga and Yamuna used to flank the temples, Yamuna alone is rare otherwise. Ganga on a crocodile is not that rare, and four armed Ganga idols are also found. 20.6 Saura Suryya was considered the healer of illnesses, and his importance continued to rise. The forms of the idols were clearly of the western/Iranian kind, though the interpretation probably got strongly influenced by the Vedic and Brahminical thoughts. Most of the idols are standing, and with entire family: seated ones are rare. They rarely had six hands. There is one which has three faces and ten hands; probably this is Marttanda Bhairava. There are rare idols influenced by southern rather than western tradition. A few horse-riding Revanta idols are also seen. Some independent Navagraha idols are also found; separately only a single Chandra and a single Vrihaspati have been found.

NSOU • GE-HI-11 175 20.7 Buddhism Although Hinduism especially the Puranic Hindu traditions were the most prominent religious faith in ancient Bengal but Buddhism was also a very important religion at this time. In fact during the post Gupta period especially under the rules of the Palas the support for Hinduism pales into insignificance when compared to the rise of Buddhism during this period. The state support for building and enhancing Viharas, already known from the previous period, continued during this period. Thus Dharmapala enhanced the Nalanda Mahavihara with repairs, and established the Sompuri Mahavihara located in Paharpur in Rajshahi district of present day Bangladesh. Tibetan sources claim that the latter was established by Devapala, but archaeological evidence is against that. Its three storied central building housed the main temple on the second floor; with ornamentation on top it looked like a pyramid. The courtyard surrounding this had buildings at each corner, and 177 housing units around it. This Mahavihara had 108 temples, 6 schools and 114 teachers, including such famous ones like bhikshu Bodhibhadra, Atisha Dipankara. In the 8 th century itself, Balaputradeva made a Vihara in the Mahavihara of Nalanda, and Devpala gave five villages for its upkeep. Either he or Dharmapala established the Odantapuri Vihara as well. Later he put Brahmin Viradeva, who turned Buddhist under Acharyya Sarvajashanti of Kaniskavihara and came to Yashodharmapura Vihara in Bodh Gaya, as a teacher in Nalanda. During Mahipala and Jayapala, Vikramashila and Somapura Mahaviharas were international institutions of knowledge. Many great texts were written during this time, and teachers like Atisha Dipankara and Ratnakara arose. A Bengali whose name is recorded as Pau-si or Ko-lin-nai took a lot of Sanskrit texts to China in c. 1026 CE. 20.8 Royal support In ancient Bengal both of the Hindus and the Buddhists got royal support from various rulers of Bengal. Many of the kings in this period belonged to the Mahayana sect of Buddhism, as is clear from their official documents starting with appropriate prayers. However, many of the queens seem to be Shaivaites (especially the Pashupata sect), and the kings established many temples dedicated to Shiva, Sarvuni,

176 NSOU • GE-HI-11

Narayana, eleven Rudras, Suryya, Skanda, Ganapati, and other Hindu gods. Sometimes, like under Narayana Pala not only were temples dedicated to Shiva, but arrangements were made to provide for worship and sacrifice in these temples. The kings also participated in Hindu rituals like bathing during the summer solstice, giving land grants to Brahmins, attending the sacrifices, and organizing sraddha ceremonies. Dharma Pala seems to even have accepted and somewhat reformed the caste system in society, and it seems that the later Palas and Kambojas might even have become Hindus. 20.9 Jainism Jainism (or nirgrantha religion) reduced in influence during this period. It still seems to have existed up to the 13 th century: at least in Samatata, Gauda, and Vanga regions; but it was quite weak by then. A few idols have been found of the Digambara sect: mainly of Parshvanatha, but a few of Risabhanatha, Adinatha, Neminatha, and Shantinatha as well. 20.10 Literature of Ancient Bengal

Tantric works were authored and translated during the Pala rule.

Jimuta Vahana,

Sandhyakar Nandi, Madhava Kar, Sureshwara and Chakrapani Datta are some of the notable scholars from the Pala period. The notable Pala texts include Agama Shastra by Gaudapada, Nyaya Kundali by Sridhar Bhatta and Karmanushthan Paddhati by Bhatta Bhavadeva. The texts on medicine include • Chikitsa Samgraha, Ayurveda Dipika, Bhanumati, Shabda Chandrika and Dravya Gunasangraha by Chakrapani Datta; • Shabda-Pradipa, Vrikkhayurveda and Lohpaddhati by Sureshwara • Chikitsa Sarsamgraha by Vangasena • Sushruta by Gadadhara Vaidya • Dayabhaga, Vyavohara Matrika and Kalaviveka by Jimutavahana Sandhyakar Nandi's semi-fictional epic Ramacharitam (12 th century) is an important

NSOU • GE-HI-11 177 source of Pala history. A form of the proto-Bengali language can be seen in the Charyapadas composed during the Pala rule. 20.11

Sandhyakar Nandi (c. 1084-1155 CE) The most famous Sanskrit poet of the Pala period, Sandhyakar Nandi was born in a Kayastha family at Brihadbatu, a village close to Pundravardhana city in Varendrabhumi in North Bengal. His father, Prajapati Nandi was a minister (truce- maker) of Ramapala (c. 1082-1124 CE), the king of the Pala dynasty. Sandhyakar himself was patronised by Madanapala (c. 1143-1162 CE). Sandhyakar is considered to be the greatest poet of the Pala dynasty. He became famous for his Ramacharitam, a biographical history in verse; written in Sanskrit the book has two different themes. Laid out in four chapters, the first part of the book describes the biography of Ramachandra, son of Dasharatha, and the second part narrates the life of Ramapala, the king of Gauda. At the end of the book, the poet describes himself in twenty couplets where he condemns malicious people, praises good ones and narrates the high points of his book. Ramacharitam is recognized by historians as an important source for reconstructing the ancient history of Bengal. 20.12 Ramacharitam Is a unique Sanskrit kavya written by Sandhyakar Nandi and its importance lies in the fact that it throws light on the condition of Bengal in the period between

the second half

of the 11th and the first half of the 12 th century

CE.

The Ramacharitam is the only Sanskrit text, composed in Bengal by a poet of Varendra (North Bengal), which had a contemporary historical event as its main theme. As such it is considered to be an authentic source for the history of the late Pala period. The author enjoyed the patronage of the last known Pala king Madanapala (c. 1143-1162 CE) and ended his kavya with the wish for a long life of the king. His father Prajapati Nandi was the Sandhivigrahika (Minister of Peace and War) of Ramapala (c. 1082-1124 CE) and hailed from the village of Brhadvatu near the city of Pundravardhanapura (possibly same as Pundranagara). The kavya contains 215 verses (though the Buddhist scribe, Shilachandra mentions 220 verses) including the 20 verse appendix, Kaviprashasti. The verses were composed in a rare Sanskrit figure of speech called shlesha (double entendre) HIS GE-HI-11 & 21—12

178 NSOU • GE-HI-11 providing two different meaning simultaneously by play of words. Read one way it gives the well-known story of the Ramayana and the other way it gives the history of Ramapala of the Pala dynasty of Bengal. The second meaning could only be understood from the prose commentary (tika) in one of the two manuscripts found so far, which, however, ends with the 35 th verse of the second canto. As a result it is difficult to reconstruct the second meaning of the last 14 verses of the second and the 48 verses each of the third and fourth canto. Sandhyakara Nandi dealt with the early history of the Palas in only 10 verses, and then dwelt on his main theme in the rest of the text. He equates the story of Ramapala with the story of the epic figure Rama. The loss of Varendra to the Kaivarta chief Divya (Divyoka) was equated with the loss of Sita to Ravana and her retrieval by Rama has been equated with the reoccupation of Varendra by Ramapala. Then he continued the history of the Pala kings to the beginning of Madanapala's reign in the last two cantos of the text. An appendix has been added, Kaviprashasti, in which the poet calls himself Kalikalavalmiki (Valmiki of the Kali age) and gives his genealogy and explains the nature and style of his work. Historians are indebted to this work mainly for the history of the Varendra rebellion that took place during the reign of Mahipala II, which resulted in the loss of Varendra to the Kaivarta chief Divya, and its reoccupation by Ramapala. It is an important source for Ramapala, who being the central figure of the kavya got elaborate treatment. Nandi carried his narration to the initial years of Madanapala's reign. However, Nandi's partisan treatment of his hero Ramapala is apparent, and one has to be cautious in deducing proper history from panegyric narration of the kavya. The value of the Ramacharitam also lies in the detailed description of Varendra provided in the first 18 verses of the third canto. The flora and fauna of Varendra, situated in between the Ganges (on the west) and the Karatoya (on the east), palaces and gardens, places of pilgrimage, cities (especially Ramavati) and institutions (especially Jagaddala Mahavihara) have been recorded, though in hyperbolic terms. This is the only important literary evidence for the history of ancient or early medieval Bengal, and, being a contemporary work, it is of immense value for the reconstruction of the history of the period covered by it. Mahamahopadhyaya Haraprasad Shastri discovered a palm-leaf manuscript of the kavya and published its text in 1910. Subsequently two more editions with English and Bangla translations were published respectively in 1939 and 1953.

NSOU • GE-HI-11 179 20.13 Chakrapani Datta This famous Ayurveda physician and scholar was born in the village of Mayureshwar in the Varendra region, He was the son of Narayan Datta, the head of the kitchen of Nayapala, the king of Gauda. Naradatta, a courtier of the king, was Chakrapani's spiritual guide. Chakrapani's best known books on ancient medical science are Chikitsasamgraha (Collection of medical practices and procedures), Dravyaguna (Properties of plants), and Sarvasarsamgraha (Collection of the essence of things). Chikitsasamgraha, better known as Chakradatta, incorporates sections from two rare Ayurvedic books : Charakanyasa and Vrddhasushruta. Chakrapani was awarded the titles 'Charakachaturanana' and 'Sushrutasahasranayana' for Charakatattvapradipika and Bhanumati, which were annotations on Charakasamhita and Sushruta respectively. Chakrapani also made significant contributions to Sanskrit grammar and Nyaya philosophy. One of his famous books is Vyakaranatattvachandrika (Treatise on theories on grammar). It is believed that he also annotated Gautam's Nyayasutra and compiled the dictionary Shabdachandrika. 20.14

Art and architecture The Pala School of sculpture and

art is recognized as a distinct phase of the Indian art, and is noted for the artistic genius of the Bengal sculptors. It is influenced by the Gupta art. The Pala style was inherited and continued to develop under the Sena kings. During this time, the style of sculpture changed from "Post-Gupta" to a distinctive style that was widely influential in other areas and later centuries. Deity figures became more rigid in posture, very often standing with straight legs close together, and figures were often heavily loaded with jewels; they very often have multiple arms, a convention allowing them to hold many attributes and display mudras. The typical form for temple images are a slab with a main figure, rather over half life-size, in very high relief, surrounded by smaller attendant figures,

which

might have freer Tribhango poses. Critics have found the style tending towards over- elaboration. The quality of the carving is generally very high, with crisp, precise detail. In east India, facial features tend to become sharp. Much larger numbers of smaller bronze groups of similar composition have survived than from previous periods. Probably the numbers produced were increasing.

180 NSOU • GE-HI-11 These were mostly made for domestic shrines of the well-off, and from monasteries. Gradually, Hindu figures come to outnumber Buddhist ones, reflecting the terminal decline of Indian Buddhism, even in east India, its last stronghold.

As noted earlier, the Palas built a number of monasteries and other sacred structures. The SomapuraMahavihara in present-day Bangladesh is a World Heritage Site. It is a monastery with 21 acre (85,000 m²) complex has 177 cells, numerous stupas, temples and a number of other ancillary buildings. The gigantic structures of other Viharas, including Vikramashila, Odantapuri, and Jagaddala are the other masterpieces of the Palas. These mammoth structures were mistaken by the forces of Bakhtiyar Khalji as fortified castles and were demolished. The art of Bihar and Bengal during the Pala and Sena dynasties influenced the art of Nepal, Burma, Sri Lanka and Java. 20.15 Model Questions 1. Discuss the religious traditions of ancient Bengal. 2. Briefly narrate the cultural contribution of the Pala and Sena dynasties in ancient Bengal. 3. Write briefly the development of literature in ancient Bengal. 20.16 Suggested Readings 1. PREFACE In a bid to standardize higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses viz. core, generic, discipline specific general elective, ability and skill enhancement for graduate students of all programmes at Honours level. This brings in the semester pattern, which finds efficacy in sync with credit system, credit transfer, comprehensive continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility of choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry their acquired credits. I am happy to note that the University has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade "A". UGC (Open and Distance Learning Programmes and Online Programmes) Regulations, 2020 have mandated compliance with CBCS for U. G. programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Under Graduate Degree Programme level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning Materials (SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English/Bengali. Eventually, the English version SLMs will be translated into Bengali too, for the benefit of learners. As always, all of our teaching faculties contributed in this process. In addition to this we have also requisitioned the services of best academics in each domain in preparation of the new SLMs. I am sure they will be of commendable academic support. We look forward to proactive feedback from all stakeholders who will participate in the teaching-learning based on these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success.
Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor

NSOU • GE-HI-21 185 Unit 1 % Advent of Islam in Eastern India Structure 1.0 Objective 1.1 Introduction 1.2 Theory of Immigration 1.3 Theory of the Religion for Sword 1.4 Theory of Religion for Patronage 1.5 Theory of Religion for Social Liberation 1.6 Conclusion 1.7 Questions 1.8 Suggested Readings 1.0 Objective z The objective of this unit is to understand the growth and spread of Islam in Bengal, especially in Eastern Bengal z Four theories will be discussed. z These are the theory of immigration, theory of religion for sword, theory of the religion of patronage and theory of social liberation 1.1 Introduction Bengal was the most fertile and most revenue yielding territory of the erstwhile Mughal India. In course of time it also became the early seat of the expanding British power in India. As we all know, the British were foreign to this land. So the first and foremost for a such an alien ruler was to have a proper knowledge of his ruling territory. However, the pre-colonial documents were insufficient and not so properly crystallized as to give an official outline of the land to the British. So they themselves undertook several survey operations to gain a firsthand knowledge about the natural 185 186 NSOU • GE-HI-21 resources, geographical components, cultural and linguistic contents and most importantly the ethnographical population composition of the land. One such massive operation were the All India Censuses. The most interesting fact revealed by this census of 1872 was the enormous host of Muhammadans resident in Lower Bengal—not massed around the old capitals, but in the alluvial plains of the Delta. It was relatively late in their experience in Bengal that Englishmen became aware of the full extent of the province’s Muslim population. With British activity centered on Calcutta, in the predominantly Hindu southwest, colonial officials through most of the nineteenth century perceived Bengal’s eastern districts as a vast and rather remote hinterland, with whose cultural profile they were largely unfamiliar. They were consequently astonished when the first official census of the province, that of 1872, showed Muslims totaling 70 percent and more in the Chittagong, Noakhali, Pabna, and Rajshahi districts, and over 80 percent in Bogra. The subject certainly was examined. The census of 1872 touched off a heated debate that lasted the rest of the nineteenth century and well into the twentieth. As to the words of James Wise (1894), a government official ~ “the most interesting fact revealed by the census of 1872 was the enormous host of Muhammadans resident in Lower Bengal—not massed around the old capitals, but in the alluvial plains of the Delta..The history of the spread of the Muhammadan faith in Lower and Eastern Bengal is a subject of such vast importance at the present day as to merit a careful and minute examination.” More curiously, Bengal conventionally fell at the frontier of the Medieval Muslim rule. Therefore by this logic the impact of political Islam should be far less than that it should be felled in the heartland of Islamic rule viz. North India particularly Delhi-Agra circuit (the seat of the Sultanate and Mughal emperors). But ironically the percentage of Muslim population was just the reverse. While the census revealed that the proportion of Muhammedan religion was hardly 15-20% in the North Indian circuit, in Bengal the peripheral region, it was more than 60% in average, rising up to 80% of the total population in Bogra district. Another mysterious thing is that the Muslim population was chiefly encircled within the peasant community of Bengal, while among the urban regions of Dhaka and Murshidabad, which historically remained as the major centers of Muslim political

NSOU • GE-HI-21 187 rule, the Hindu population was far more than the Muslims. As expected, again the situation was exactly opposite of that in North India, where the bulk of peasantry was composed of Jat Hindu population while the minority Muslim population was mostly encircled among the foreign Turko-Afgani clans in cities. So what led to this strange population distribution and how cum Islam became the religion of the majority population in Bengal, the peripheral frontier of the Muslim rule? Historian Richard M. Eaton in his monumental work "The Rise of Islam and the Bengal Frontier : 1204-1760" tried to enlist and analyze the different Distribution of Muslim population in Bengal, 1872

188 NSOU • GE-HI-21 conventional theories behind the rise of Muslim population in Medieval Bengal. Let's discuss them. 1.2 Theory of Immigration Theories purporting to explain the growth of Islam in India may be reduced to four basic modes of reasoning. Each is inadequate. The first of these, which Eaton termed as "the Immigration theory", views Islamization of Bengal's population in terms of the diffusion not of belief but of peoples. In this view, the bulk of India's Muslims are descended from other Muslims who had either migrated overland from the Iranian-Central Asian plateau or sailed across the Arabian Sea. It states that most of the ancestors of modern day Bengali Muslims were from the Turko-Afgan stock of invaders who came to Bengal through military conquest or political rule like that during Bakhtiyar Khalji or Hushang Shah. The foreign soldiers and other accomplish who came with these early Muslim invaders gradually settled down, reproduced and led to the rise of the modern Bengali Muslim breed in the delta. The proponents of this peculiar theory were none other but the so called non- Bengali Muslim aristocrats living in 19th century Bengal. Soon after the publication of the 1872 census findings, Abu A. Ghuznavi, an wealthy Muslim man from Mymensingh, published a report opposing any form of mass conversion of indigenous Bengali non-Muslims into Islam. 1 Ghuznavi proposed instead, that "the majority of the modern Mahomedans are not the descendants of Chandals and Kaibartas but are of foreign extraction". In favor of his argument, Ghuznavi cited Arab and Turkish migration during the Sultanate's conquest, land grants made by Sultan Husain Shah to foreigners, the dispersion of Afghans "in every hamlet" after the Mughal conquest, the greater fertility of Muslims owing to their practices of polygamy and widow remarriage. Although he conceded that there had been "some" conversions, Ghuznavi insisted that those were not been among low-caste Hindus. "Why should we speak of conversion of low-caste Hindus only?" To him those who converted were not from the "low born" but from the high-caste Hindus, like the Rajput Diwans of Mymensingha, the Majumdar Zamindars of Syllhet, etc. 1 Abu A. Ghuznavi, "Notes on the Origin, Social and Religious Divisions and Other Matters Touching on the Mahomedans of Bengal and Having Special Reference to the District of Maimensing"

NSOU • GE-HI-21 189 Soon Ghuznavi's view were whole heartedly supported by other sections of the Bengali Ashraf classes of Muslims who consider themselves not Bengali but of foreign Central-Asian Persian breed, living in Bengal. In 1895, Khondkar Fuzli Rubbee published his The Origin of the Musalmans of Bengal. Like his predecessor Abu Ghuznavi, Rubbee denied "that the natives of this country, either from compulsion or free will, were converted to Islam, in any appreciable number at a time." Rather, he asserted, "the ancestors of the present Musalmans of this country were certainly those Musalmans who came here from foreign parts during the rule of the former sovereigns." In fact, Rubbee viewed the delta's geographic isolation as evidence for this process, arguing that the region "always enjoyed immunity from foreign invasions, and consequently it formed a great asylum for the Musalmans." Rubbee also cited numerous charitable grants (aima) to "venerable Muslims" in Bengal, suggesting that these became the bases of foreign settlement. Thus, it is evident that the theory is more inclined to preserve the racial purity of Muslims, rather than to explain the mass Islamization of Bengal, guided by extreme casteism among the so called 'aristocratic' Muslims. The indigenous peasant populations of Bengal were of extreme low caste in their views. Therefore, they were furious to accept them in their Muslim society. Indeed, in medieval eras, racism and casteism played an important role in the higher circles of the Turkish Sultanates. The indigenous Hindu converts were viewed as 'low borns' and of 'impure blood' and were denied any higher assignments in the administration, despite being in the same practicing faith. Ill-treatment of converted Muslims like Kamal Mahayiar by Sultan Balban, is a good example of this. However, coming to the relevance of this theory of migration, in certain pockets of India, which witnessed greater political engagement with Muslim governments and fell in the corridor of major Islamic invasion, this theory indeed holds some ground. As a matter of fact, the minority Muslim urban population in North India and Punjab were mostly composed of foreign stock, like Turkish, Uzbek, Afghan or Iranian origin. But in the region of Bengal this theory is completely illogical. In this connection, we may examine the work of James Wise, a veteran British civil surgeon in Dhaka, who elaborated his views in an important article entitled "The Muhammadans of Eastern Bengal" (1894). Wise opened by dismissing the Immigration theory favored by ashrafi spokespersons like Ghuznavi. He noted that, in Muhammadan

190 NSOU • GE-HI-21 histories, there were no mention of any large Muslim immigration from Upper India. Moreover, we know that in the reign of Akbar the climate of Bengal was considered so uncongenial to the Mughal invaders, that an order to proceed to Bengal was regarded as a sentence of punishment, among the elite Muslim circles of the Empire. Again, Rubbee viewed the delta's geographic isolation as evidence for this process, arguing that the region "always enjoyed immunity from foreign invasions, and consequently it formed a great asylum for the Musulmans." Rubbee did not explain why the same natural frontiers that had protected Muslims from foreign invaders failed to protect Bengalis from Muslim invaders. In this situation, the controversial 1901 Census of India, was published, which farther dismissed this immigration theory. In his report in this census, E. A. Gait concluded that probably nine-tenths of the Muslim Bengali cultivators when asked their caste—were of local origin. Gait doubted that any significant migration of Muslim settlers had taken place even within Bengal, much less from beyond the delta. Observing that Muslim settlers generally sought the higher levels of land near the old capitals, he reasoned that "they would never willingly have taken up their residence in the rice swamps of Noakhali, Bogra and Backergunge." 2 Soon they were replicated in the Settlement Reports and the widely influential Bengal District Gazetteers that began appearing in the early twentieth century. For example, the gazetteer for Noakhali District (1911) stated that the "vast majority of the Shekhs [i.e., Muslim cultivators] and lower sections of the community are descended from the aboriginal races of the district," primarily, the Chandals. Similarly, the Settlement Report of Bogra and Pabna districts (1930) traced the Muslim communities of those districts to "Hindus converted at a comparatively recent date," and stated that the majority of the populations were "descendants of the aboriginals of North Bengal, the Koches." Thus, the Theory of Immigration proposed by a section of non-Bengali and Bengali Muslim elites of British Bengal falls flat.

1.3 Theory of the Religion for Sword The oldest theory of Islamization in India, which I shall call the Religion of the Sword thesis, stresses the role of military force in the diffusion of Islam in India and 2 E. A. Gait, "The Muhammadans of Bengal," in Census of India, 1901, vol. 6, The Lower Provinces of Bengal and Their Feudatories, pt. 1, "Report" (Calcutta: Bengal Secretariat Press, 1902)

NSOU • GE-HI-21 191 elsewhere. Dating at least from the time of the Crusades, this idea received big boosts during the nineteenth century, the high tide of European imperial domination over Muslim peoples, and subsequently in the context of the worldwide Islamic reform movements of the late twentieth century. Writing in 1898, Sir William Muir asserts that the Arabs' (in this case the Muslim Invaders) fondness for the "scent of war," their love of "rapine" and genocide, tormented the conquered native non-Muslims to such an extent that they were forced to embrace Islam. The theory actually proposed the view that the ancestors of native Muslim population of Bengal were forced to convert to Islam owing to tremendous oppression by the Muslim army and the Muslim administration during the Medieval ages. Indeed the Turkish invasion of 13th century under Bakhtiyar Khalji brought about an era of mass murder, genocide and oppression among the indigenous population of Bengal. Owing to superior military skills, the Muslim invaders could easily dominate large tracts of Bengal delta. Cities were plundered, villages (mostly of peasants) were looted along with large scale genocide and sexual exploitation. The trend continued in some scale during the latter Mameluk, Hussain Shahi and Iliyash Shahi Sultanates. Sometimes local Hindu Temples were destroyed and Idols were desecrated by Sultanate armies just to destroy the emotional moral of the native indigenous non-Muslim population. Along with it several taxes including Jijiya was imposed and economic exploitation continued. As a result, large numbers of non-Muslim population converted to Islam in order to escape further human slaughter and genocide. The colonial officials also portrayed the rise of Islam in Bengal chiefly due to its 'militant nature'. As for example, James Wise in his report "The Muhammadans of Eastern Bengal" (1894), invoked the Religion of the Sword thesis. He opined that "the enthusiastic soldiers who, in the thirteenth and fourteenth centuries, spread the faith of Islam among the timid races of Bengal, made forcible conversions by the sword, and, penetrating the dense forests of the Eastern frontier, planted the crescent in the villages of Silhet." Furthermore, he suggested, captured slaves from the villages of eastern Bengal might have swelled the ranks of the Muslim population, since desperate and impoverished families would have been driven to sell their children to Muslims as slaves. He also suggested that Hindus might have converted "as the only means of escaping punishment for murder, or adultery.

192 NSOU • GE-HI-21 Historiographically, the legacies of the colonial era and the independence movement were to polarize Hindus and Muslims into exclusive and even hostile categories, to project these categories into the past, and to read pre-modern Bengali history in terms of a struggle between them. Here is a lurid portrayal of the Turkish conquest penned in 1963 by the reputed linguist and historian of Bengali language S. K. Chatterjee, "The conquest of Bengal by these ruthless foreigners was like a terrible hurricane which swept over the country, when a peace-loving people were subjected to all imaginable terrors and torments—wholesale massacres, pillages, abduction and enslavement of men and women, destruction of temples, palaces, images and libraries, and forcible conversion. The Muslim Turks, like the Spanish Catholic conquistadores in Mexico and Peru and elsewhere in America, sought to destroy the culture and religion of the land as the handiwork of Satan." 3 However, there are certain loopholes in this theory. As Peter Hardy has observed, those who argued that Indian Muslims were forcibly converted have generally failed to define either force or conversion, [3] leaving one to presume that a society can and will alter its religious identity simply because it has a sword at its neck. Precisely how this mechanism either worked, in theoretical or in practical terms, has never, however, been satisfactorily explained. Moreover, proponents of this theory seem to have confused conversion to the

Islamic religion with the extension of Turko-Iranian rule in North India

between 1200 and 1760, a confusion probably originating in too literal a translation of primary Persian accounts narrating the "Islamic" conquest of India. Nor does the theory fit the religious geography of South Asia. As Richard Eaton explains, if Islamization had ever been a function of military or political force, one would expect that those areas exposed most intensively and over the longest period to rule by Muslim dynasties—that is, those that were most fully exposed to the "sword"—would today contain the greatest number of Muslims. Yet the opposite is the case, as those regions where the most dramatic Islamization occurred, such as eastern Bengal or western Punjab, lay on the fringes of Indo-Muslim political rule, where the "sword" was weakest, and where brute force could have exerted the least influence. In such regions the first accurate census reports put the Muslim population 3 Suniti Kumar Chatterji, *Languages and Literatures of Modern India* (Calcutta: Bengal Publishers, 1963), pp 160–61

NSOU • GE-HI-21 193 at between 70 and 90 percent of the total, whereas in the heartland of Muslim rule in the upper Gangetic Plain—the domain of the Delhi Fort and Agra, where Muslim regimes had ruled the most intensively and for the longest period of time—the Muslim population ranged from only 10 to 15 percent. In other words, although this theory might be partly true for North and North-Western India, but for Bengal as a whole there is an inverse relationship between the degree of Muslim political penetration and the degree of Islamization. 1.4 Theory of Religion for Patronage A third theory commonly advanced to explain Islamization in India is what I call the Religion of Patronage theory. This is the view that Indians of the pre-modern period converted to Islam in order to receive some non-religious favor from the ruling class—relief from taxes, promotion in the bureaucracy, and so forth. This theory has always found favor with Western-trained secular social scientists who see any religion as a dependent variable of some non-religious agency, in particular an assumed desire for social improvement or prestige. It is true in the earlier times of Sultanate, no non-Muslims were allowed to enter into state services even among the lower ranks. However, converting to Islam might help them in this procedure. Many instances in Indian history would appear to support this theory. In the early fourteenth century, Ibn Batuta reported that Indians presented themselves as new converts to the Khalaji sultans, who in turn rewarded them with robes of honor according to their rank. According to nineteenth-century censuses, many landholding families of Upper India had declared themselves Muslims in order to escape imprisonment for nonpayment of revenue, or to keep ancestral lands in the family. The theory might even be stretched to include groups employed by Muslim rulers that assimilated much Islamic culture even if they did not formally convert. The Kayasthas and Khatri of the Gangetic Plain, the Parasnis of Maharashtra, and the Amils of Sind all cultivated Islamic culture while meeting the government's need for clerks and administrative servants, a process that Aziz Ahmad once compared with nineteenth- and twentieth-century "Westernization." The acculturation of captured soldiers or slaves perhaps formed another dimension of this process. Severed from their families, and with no permanent socio-cultural ties to their native homes, these men HIS GE-HI-11 & 21—13

194 NSOU • GE-HI-21 not surprisingly fell into the cultural orbit of their patrons. Again, the Jijiya tax, along with the pilgrim tax which was levied only over non-Muslims, were sometimes so severe, that it was hard for poor peasant families of the interior countryside to afford it. Under such condition, conversion to Islam even in sharp contrast to their wish, was the only escape to evade those economic exploitation and earn favours from the Muslim revenue collectors. Although this thesis might help explain the relatively low incidence of Islamization in Bengal's Muslim political heartland, like in the regions close to Dhaka, Gaur and Murshidabad, it cannot explain the massive conversions that took place along the political fringe—of Bengal countryside. Political patronage, like the influence of the sword, would have decreased rather than increased as one moved away from the centers of that patronage.

1.5 Theory of Religion for Social Liberation In addition to this, a fourth theory, which is called the Religion of Social Liberation thesis, is generally pressed into service. Created by British ethnographers and historians, elaborated by many Pakistani and Bangladeshi nationals, and subscribed to by countless journalists and historians of South Asia, especially Muslims, this theory has for long been the most widely accepted explanation of Islamization in the subcontinent. The theory postulates a Hindu caste system that is unchanging through time and rigidly discriminatory against its own lower orders. For centuries, it is said, the latter suffered under the crushing burden of oppressive and tyrannical high-caste Hindus, especially Brahmins. Then, when Islam "arrived" in the Indian subcontinent, carrying its liberating message of social equality as preached (in most versions of the theory) by Sufi shaikhs, these same oppressed castes, seeking to escape the yoke of Brahmanic oppression, "converted" to Islam en masse. The controversial 1901 Census of India, farther manifested this theory. In his report in this census, E. A. Gait concluded that probably nine-tenths of the Muslim Bengali cultivators when asked their caste—were of local origin. Soon they were replicated in the Settlement Reports and the widely influential Bengal District Gazetteers that began appearing in the early twentieth century. For example, the NSOU • GE-HI-21 195 gazetteer for Noakhali District (1911) stated that the "vast majority of the Shekhs [i.e., Muslim cultivators] and lower sections of the community are descended from the aboriginal races of the district," primarily, the Chandals. In the decade before 1947, three anthropological studies produced data corroborating the consensus view in official circles. Although differing in methodology, sampling techniques, and regions studied within the delta, they all agreed that the masses of Bengali Muslims were descended from indigenous communities and not from outsiders. In the first of them, conducted in the Twenty-four Parganas District in 1938, Eileen Macfarlane concluded that "the blood-group data of the Muhammadans of Budge Budge show clearly that these peoples are descended from lower caste Hindu converts, as held by local traditions, and the proportion remains almost the same as among their present-day Hindu neighbors." Three years later, B. K. Chatterji and A. K. Mitra made another study of blood-group distributions comparing not only low-caste Bengali Hindus with rural Muslims, again in the Twenty-four Parganas District, but also the latter with both urban Muslims and non-Bengali Muslims. This study found an affinity between rural Muslims and their low-caste Hindu neighbors, the Mahisyas and Bagdis, and further concluded that urban Bengali Muslims were serologically closer to the distant Pathans of India's Northwest Frontier than they were to rural Bengali Muslims, lending substance to the urban Muslims' claims of their own descent from foreign immigrants to Bengal. However, having said this, the Religion of Social Liberation theory also has its own limitations. It basically identifies those motives for conversion that are, from a Muslim perspective, eminently praiseworthy: the victory of social justice of Islam as against the inherent wickedness of Hinduism. But, The problem, however, is that no evidence can be found in support of the theory. Moreover, as to historian Richard Eaton, it is profoundly illogical. Firstly, as Eaton efficiently explains, by attributing present-day values to peoples of the past, it reads history backward. Before their contact with Muslims, India's lower castes are thought to have possessed, almost as though familiar with the writings of Jean-Jacques Rousseau or Thomas Jefferson, some innate notion of the fundamental equality of all humankind denied them by an oppressive Brahmanical tyranny. In fact, however, in thinking about Islam in relation to Indian religions, pre-modern Muslim intellectuals did not stress their religion's ideal of social equality as opposed to Hindu inequality, but rather Islamic monotheism

196 NSOU • GE-HI-21 as opposed to Hindu polytheism. That is, their frame of reference for comparing these two civilizations was theological, not social. In fact, the idea that Islam fosters social equality (as opposed to religious equality) seems to be a recent notion, dating only from the period of the Enlightenment, and more particularly from the legacy of the French Revolution among nineteenth-century Muslim reformers. As discussed earlier the Muslim higher circles in medieval age were not free from racism. The indigenous Hindu converts were viewed as 'low borns' and of 'impure blood' and were denied any higher assignments in the Turkish administration, despite being in the same practicing faith. Secondly, Eaton argued that even if Indians did believe in the fundamental equality of mankind, and even if Islam had been presented to them as an ideology of social equality—though both propositions appear to be false—there is abundant evidence that Indian communities failed, upon Islamization, to improve their status in the social hierarchy. On the contrary, most of the converts simply carried into Muslim society the same birth-ascribed rank that they had formerly known in Hindu society. This is especially true of Bengal. As James Wise observed in 1883, that "In other parts of India menial work is performed by outcast Hindus; but in Bengal any repulsive or offensive occupation devolves on the Muhammadan." So where did the fruits of social liberation theory go? What is the end result? Finally, as with the Sword and Patronage theories, the Religion of Social Liberation theory is refuted by the facts of geography. In 1872, when the earliest reliable census was taken, the highest concentrations of Muslims were found in eastern Bengal, western Punjab, the Northwest Frontier region, and Baluchistan. What is striking about those areas is not only that they lay far from the center of Muslim political power but similarly they also fall far from the core areas of the Hindu Brahminical culture, that was mostly centered in Northern Gangetic heartland. The influence of Brahminical casteism should be minimum in the peripheral regions of Bengal. Bengal's indigenous populations had not yet, been fully integrated into either the Hindu or the Buddhist social system. In Bengal, Muslim converts were drawn mainly from Rajbansi, Pod, Chandal, Kuch, and other indigenous groups that had been only lightly exposed to Brahminical culture. Whereas, the bulk of the Hindu low caste population in the heartland of Aryabharata, where the Brahminical domination should be the most prominent, remained attached to their ancestral faith of Hinduism.

NSOU • GE-HI-21 197 Curiously, they didn't converted to Islam. If the theory would have been valid, then, the greatest incidence of conversion to Islam should logically have occurred in those areas where Brahminical social order was most deeply entrenched—namely, in the core region of Aryavarta. Conversely, Islam should have found its fewest adherents in those areas having the least exposure to Brahminical civilization, that is, along the periphery or beyond the pale of that civilization, i.e. in Bengal. However, the situation was quite the opposite.

1.6 Conclusion Thus, discussing the four conventional theories behind the rise of Islam in Bengal delta, in our above passages, we find each of them is somewhat inadequate. Rather each is incomplete without the other. We cannot fully deny the military and political factors behind the spread of Islam, nor we can deny the theory of patronage to some extent. Again, as Eaton showed in his book, the bulk of conversion happened during the Mughals, who were less interested to waste their military force in proselytisation campaigns. In that connection, the role of local Sufi saints and Dargas comes to action in accordance with the social liberation theory.

1.7 Questions

- 1) What was the interesting fact revealed by the first Bengal census of 1872, in relation to the ethno-religious composition of the province?
- 2) Name and briefly explain the four conventional theories behind the rise of Islam in Bengal.
- 3) What is the Theory of Immigration? Why doesn't it hold ground in case of Bengal?
- 4) Who were the major proponent of the Theory of Immigration? What was the actual motive behind this propagation?
- 5) Explain the theory of sword and patronage behind the mass conversion of Islam. What are its limitations?

198 NSOU • GE-HI-21 6) Define and explain the theory of social liberation behind the rise of Islam in Bengal. What are the counter arguments put forward by Historian Richard Eaton against this particular theory? 7) What according to you is largely responsible for the rise of Muslim population in Bengal? Analyze with proper reasons.

2.1 Introduction The historical reference of Bengal dates back to time immemorial. The earliest literary reference comes from the Vedic text of Aitariya Brahmana, while the Mahabharata describes the province of "Banga" as one of the sibling of Queen Sudeshna, the wife of legendary King Bali. However, detailed archaeological excavations in some prehistorical sites of Midnapore and Bardhaman, clarifies the presence of human settlements and potteries much before the arrival of Vedic Age in North India. The latter Greek and Chinese sources, including the famous Geographical text of Periplus of the Erythraean Sea identify the lower Gangetic deltaic region as the 'Gangaridai' provinces. Nevertheless, in the post Gupta period, Bengal reached her highest affluence under the succeeding rule of Sasanka and latter by Pal and Sen a Kings. Under such situation, the beginning of Muslim rule in Bengal since the invasion of Bakhtiyar Khilji marks an important watershed in the history of Bengal. In our following passage, we'll discuss the history of Bengal under the first phase of Muslim rulers, presumably the Mameluk Turkish dynasty of the Delhi Sultanate.

2.2 Bengal at the time of Bakhtiyar's Invasion By the time Muhammad Bakhtiyar conquered northwestern Bengal in 1204, Islamic political thought had already evolved a good deal from its earlier vision of a centralized, universal Arab caliphate. In that vision the caliph was the "successor" (Ar., khalifa) to the Prophet Muhammad as the combined spiritual and administrative leader of the worldwide community of Muslims. In principle, too, the caliphate state, ruled from Baghdad since A.D. 750, was merely the political expression of the worldwide Islamic community. But by the tenth century that state had begun shrinking, not only in its territorial reach, but, more significantly, in its capacity to provide unified political-spiritual leadership. This was accompanied, between the ninth and eleventh centuries, by the movement of clans, tribes, and whole confederations of Turkish-speaking peoples from Inner Asia to the caliphate's eastern provinces. Coming as military slave-soldiers recruited to shore up the flagging caliphate state, as migrating pastoral nomads, or as armed invaders, these Turks settled in Khurasan, the great area embracing today's northeastern Iran, western Afghanistan, and Central Asia south of the Oxus River. As Baghdad's central authority slackened, Turkish military might provided the military basis for new dynasties—some Iranian, some Turkish—that established themselves as de facto rulers in Khurasan.

NSOU • GE-HI-21 201 The political ideas inherited by Muhammad Bakhtiyar and his Turkish followers had already crystallized in Khurasan during the several centuries preceding their entry into Bengal in 1204. This was a period when Iranian jurists struggled to reconcile the classical theory of the unitary caliphate state with the reality of upstart Turkish groups that had seized control over the eastern domains of the declining Abbasid empire. What emerged was a revised theory of kingship that, although preserving the principle that caliphate authority encompassed both spiritual and political affairs, justified a de facto separation of church and state. Whereas religious authority continued to reside with the caliph in Baghdad, political and administrative authority was invested in those who wielded the sword. Endeavoring to make the best of a bad situation, the greatest theologian of the time, Abu Hamid al-Ghazali (d. 1111), concluded that any government was lawful so long as its ruler, or sultân, made formal acknowledgement of the caliph's theoretical authority in his domain. A sultan could do this, Ghazali maintained, by including the reigning caliph's name in public prayers (khutòba) and on his minted coins (sikka). In short, a sultan's authority rested, not on any sort of divine appointment or ethnic inheritance, but on his ability to maintain state security and public order. The only near-contemporary account of Muhammad Bakhtiyar's 1204 capture of the Sena capital is that of the chronicler Minhaj al-Siraj, who visited Bengal forty years after the event and personally collected oral traditions concerning it. At the time of Bakhtiyar's invasion Bengal was ruled by the Sena King, Lakshman Sena with his capital at Lakhnauti/Lakhshmanavati (Nadia). The story as told by Minhaj was that in 1204, Lakhsmansena vacated his capital in face of a handful Turkish horsemen and shifted to a new capital of Vikrampura in Far East Bengal, where he and his successors Virupakhyasena and Keshabasena ruled for a quiet succeeding years. However, the authenticity of this story is doubted by various historians. "After Muhammad Bakhtiyar possessed himself of that territory," wrote Minhaj, "he left the city of Nudiah in desolation, and the place which is (now) Lakhnauti he made the seat of government. He brought the different parts of the territory under his sway, and instituted therein, in every part, the reading of the khutbah, and the coining of money; and, through his praiseworthy endeavours, and those of his Amirs, masjids [mosques], colleges, and monasteries (for Dervishes), were founded in those part."

202 NSOU • GE-HI-21 The passage clearly reveals the conquerors' notion of the proper instruments of political legitimacy : reciting the Friday sermon, striking coins, and raising monuments for the informal intelligentsia of Sufis and the formal intelligentsia of scholars, or 'ulamâ. Militarily, Muhammad Bakhtiyar's conquest was a blitzkrieg; his cavalry of some ten thousand horsemen had utterly overwhelmed a local population unaccustomed to mounted warfare. After the conquest, Bakhtiyar and his successors continued to hold a constant and vivid symbol of their power—their heavy cavalry —before the defeated Bengalis. In the year 1204, Bakhtiyar himself struck a gold coin in the name of his overlord in Delhi, Sultan Muhammad Ghuri, with one side depicting a Turkish cavalryman charging at full gallop and holding a mace in hand. Beneath this bold emblem appeared the phrase Gaudòavijaye, "On the conquest of Gaur" (i.e., Bengal), inscribed not in Arabic but in Sanskrit. On the death of the Delhi sultan six years later, the governor of Bengal, 'Ali Mardan, declared his independence from North India and began issuing silver coins that also bore a horseman image. And when Delhi reestablished its sway over Bengal, coins minted there in the name of Sultan Iltutmish (1210-35). For neither Muhammad Bakhtiyar, 'Ali Mardan, nor Sultan Iltutmish was there any question of seeking legitimacy within the framework of Bengali Hindu culture or of establishing any sense of continuity with the defeated Sena kingdom. Instead, the new rulers aimed at communicating a message of brute force. As Peter Hardy aptly puts it, referring to the imposition of early Indo-Turkish rule generally, "Muslim rulers were there in northern India as rulers because they were there—and they were there because they had won." 2.3 Re-establishment of Delhi's control under Iltutmish (1227) From 1204-27, Bengal was ruled by the semi-independent chieftains from followers and descendents of Bakhtiyar. The Delhi Sultans' at that time were involved in dealing with the devastating Mongol influx under Chengiz Khan. But after the latter's death with a temporary cessation of Mongol menace, the Delhi Sultans once again embarked on retaking their lost territories. In 1227, Iltutmish NSOU • GE-HI-21 203 marched towards Bengal, crushed the rebel Turkish chieftain Tughril Khan and reestablish Delhi's monopoly over the province. As, JC Sarkar accounts,

and of them ten were Mamluks of the imperial Court of Delhi. These Mamluks were men of various nationalities of Central Asia, Khitai Turk. Qipchaq and Uzbek, sold into slavery in early life. Before they became governors of Bengal, they had all arisen to the position of powerful slave general at the Mamluk Court of Delhi, and filled important offices of trust in the imperial house- hold and also held governorships of provinces.

their rule became a replica of the Imperial Court of Delhi in grandeur and magnificence, and the administrative system they introduced in the province was also a copy of the administrative system of the empire under the House of Illutmish—a hierarchy of decentralized minor sovereignties of a feudal character. 2.4

Articulation of the Political Authority Reliance on naked power, or at least on its image, is also seen in the earliest surviving Muslim Bengali monuments. Notable in this respect is the tower (mînâr) of ChhotaPandua, in southwestern Bengal near Calcutta. Built toward the end of the thirteenth century, when Turkish power was still being consolidated in that part of the delta, the tower of ChhotaPandua doubtless served the usual ritual purpose of calling the faithful to prayer, inasmuch as it is situated near a mosque. But its height and form suggest that it also served the political purpose of announcing victory over a conquered people. Precedents for such a monument, moreover, already existed in the Turkish architectural tradition. [17] Bengal's earliest surviving mosques also convey the spirit of an alien ruling class simply transplanted to the delta from elsewhere. Constructed (or restored) in 1298 in Tribeni, a formerly important center of Hindu civilization in southwest Bengal, the mosque of Zafar Khan appears to replicate the aesthetic vision of early Indo-Turkish architecture as represented, for example, in the Begumpur mosque in Delhi (ca. 1343).

204 NSOU • GE-HI-21 How was the articulation of these political symbols received by the several "audiences" to whom they were directed? As late as thirty years after the conquest, pockets of Sena authority continued to survive in the forests beyond the reach of Turkish garrisons. Whenever Turkish forces were out of sight, petty chieftains with miniature, mobile courts would appear before the people in their full sovereign garb—riding elephants in ivory-adorned canopies, wearing bejeweled turbans of white silk, and surrounded by armed retainers—in an apparent effort to continue receiving tribute and administering justice as they had done before. In 1236 a Tibetan Buddhist pilgrim recorded being accosted by two Turkish soldiers on a ferryboat while crossing the Ganges in Bihar. When the soldiers demanded gold of him, the pilgrim audaciously replied that he would report them to the local raja, a threat that so provoked the Turks' wrath as nearly to cost him his life. Clearly, after three decades of alien rule, people continued to view the Hindu raja as the legitimate dispenser of justice. Silver coin of Sultan Illutmish (1210–35), struck in Bengal. (Obverse side).

NSOU • GE-HI-21 205 If Muslim coins and the architecture of this period projected to the subject Bengali population an image of unbridled power, they projected very different messages to the parent Delhi sultanate, and beyond that, the larger Muslim world. Throughout the thirteenth century, governors of Bengal tried whenever possible to assert their independence from the parent dynasty in Delhi, and each such attempt was accompanied by bold attempts to situate themselves within the larger political cosmology of Islam. For example, when the self-declared sultan Ghiyath al-Din 'Iwaz asserted his independence from Delhi in 1213, he attempted to legitimize his position by going over the head of the Delhi sultan and proclaiming himself the right-hand defender (nâsoir) of the supreme Islamic authority on earth, the caliph in Baghdad. This marked the first time any ruler in India had asserted a direct claim to association with the wellspring of Islamic legitimacy, and it prompted Iltutmish, the Delhi sultan, not only to invade and reannex Bengal but to upstage the Bengal ruler in the matter of caliphate support. After his armies defeated Ghiyath al-Din or Tughril Khan in 1227, Iltutmish arranged to receive robes of honor from Caliph Al-Nasir in Baghdad, one of which he sent to Bengal with a red canopy of state. There it was formally bestowed upon Iltutmish's own son, who was still in Lakhnauti, having just had the erstwhile independent king of Bengal beheaded. By having the investiture ceremony enacted in the capital city of the defeated sultan of Bengal, Iltutmish vividly dramatized his own prior claims to caliphate legitimacy. For the time being, the delta was politically reunited with North India, and for the next thirty years Delhi appointed to Bengal governors who styled themselves merely "king of the kings of the East" (mâlik-imulûk al-sharq). However, Delhi was distant, and throughout the thirteenth century, the temptation to throw off this allegiance proved irresistible, especially as the imperial rulers were chronically preoccupied with repelling Mongol threats from the Iranian Plateau. So governors rebelled, and each brief assertion of independence was followed by their adoption of ever more exalted titles on their coins and public monuments. In 1281 Sultan Ghiyasuddin Balban, the powerful sovereign of Delhi, ruthlessly stamped out one revolt by hunting down his rebel governor and publicly executing him. Yet within a week of Balban's death in 1287, his own son, Bughra Khan, whom the father had left behind as his new governor, declared his independence.

Bughra's eldest son, who ascended the Bengal throne as Rukn al-Din Kaikaus (1291-1300), boldly
206 NSOU • GE-HI-21 styled himself on one mosque "the great Sultan, master of the necks of nations, the king of the kings of Turks and Persians, the lord of the crown, and the seal," as well as "the right hand of the vice-regent of God"—that is, "helper of the caliph." On another mosque he even styled himself the "shadow of God" (zill Allah), an exalted title derived from ancient Persian imperial usage. Exasperated with the wayward province, Delhi for several decades ceased mounting the massive military offensives necessary to keep it within its grip. In fact, the actions of Sultan Jalal al-Din Khalaji (r. 1290-96) betray something more than mere indifference toward the delta. A contemporary historian recorded that on one occasion the sultan rounded up about a thousand criminals ("thugs") and "gave orders for them to be put into boats and to be conveyed into the Lower country to the neighborhood of Lakhnauti, where they were to be set free. The thugs would thus have to dwell about Lakhnauti, and would not trouble the neighborhood (of Dehli) any more." Within a century of its conquest, then, Bengal had passed from being the crown jewel of the empire, whose conquest had occasioned the minting of gold commemorative coins, to a dumping ground for Delhi's social undesirables. Already we discern here the seeds of a North Indian chauvinism toward the delta that would become more manifest in the aftermath of the Mughal conquest in the late sixteenth century.

2.5 Conclusion Thus, 13th century marked the arrival of a new political order in the history of Bengal. For the first two decades after Bakhtiyar's invasion, Bengal was chiefly under the subjugation of Bakhtiyar's followers. It was only from the time of Iltutmish' reconsolidation, that Bengal became a subordinate province of the Delhi Sultanate. However, it wasn't a centralized rule in the true sense. The Mameluk Iqtadars and governors posted in Bengal enjoyed considerable autonomy in lieu of some occasional material reward to Delhi. Under the Turkish rule, Islam became the political ruling ideology and several monumental architectures were built in different parts of the province, deliberately symbolizing its political hegemony over its subjects.

NSOU • GE-HI-21 207 2.6 Questions 1) Write in brief about the background and significance of Bakhtiyar Khilji's invasion of Bengal (1204). 2) How did Sultan Iltutmish reconsolidated the authority of Delhi Sultanate in Bengal? Why did it took them so late to embark for the mission? 3) Give a rough picture of how the political authorities of the Mameluks functioned in Bengal. 4) Was Islam the principle political ideology that hegemonised the statecraft in Mameluk Bengal? Give reason behind your argument. 2.7 Suggested Readings

Several provincial governors and local chieftains like those of Rajputana, Multan, Jaunpur, Gujarat, Malwa, etc. utilized this opportunity and declared their autonomy from the Delhi Sultanate. Farther down the line, they soon plunged into territorial conflict between each other and thus gradually a balance of power emerged between them. Bengal in the East was such a newly emerging autonomous province under the Iliyash Shahi Sultanate. 3.2 Foundation and the rule of Iliyash Shah (1342-58) As regards to Geographical distance, Bengal was a far-flung territory from Delhi, considering the fact that much of its communication depended upon waterways with which the Turkish Rulers were unfamiliar. As a result, Bengal always remained a prone to be independent territory of the Sultanate. Now since 1330 onwards, due to his various 'condemned' experiments the ruling Sultan Md bin Tughlaq became preoccupied in suppressing various rebellions in his Empire. In 1338, serious rebellions broke out in Doab and over much of Northern Plains. Owing to this tumultous political situation, Sultanate's grasp over Bengal farther weakened. Taking advantage, in 1342, Shamsuddin Iliyash Khan, a leading Turkish noble of Bengal, captured the provincial capitals of Lakhnauti and Sonaragon, declared his independence and ascended the throne with the title Shamsuddin Iliyash Shah. With this, the first independent Muslim dynasty in Bengal came to power. Soon after ascending the throne, Iliyash Shah farther extended his dominions in the West annexing lands up to Gorakhpur in modern UP. This prompted the succeeding Delhi Sultan Firoz Shah Tughlaq (1351-88) to launch a campaign against the Iliyash Shahi Sultanate of Bengal. He marched through Eastern Bihar and captured the old Bengali capital of Pandua in 1353 CE. Iliyash Shah took refuge in the fort of Ekdalaand continued his campaign. After a few unsuccessful attempts to defeat or capture Iliyash, Firoz Shah Tughlaq finally settled for a peace treaty with the former. According to this treaty, the River Koshi in Bihar was demarcated as the boundary between the Delhi and the Iliyash Shahi Sultanate of Bengal. Friendly relations with Delhi were latter established and regular exchange of gifts between the two also used to take place. HIS GE-HI-11 & 21—14 210 NSOU • GE-HI-21 Iliyash was said to be very popular among his subjects. He used to give liberal grants of lands to nobles and to the Muslim Clergy. As to Satish Chandra, the popularity of Iliyash Shah was one of the major reason behind the failure of Firoz's campaign in Bengal. During his stay in Bengal, Firoz Tughlaq tried various attempts to win over the local inhabitants but failed. Iliyash Shah's reign also marked the development of independent coinage system in Bengal and erection of certain architectural monuments. Comparative Location of the Bengal Sultanate under Iliyash Shahis (c. 1450)

NSOU • GE-HI-21 211 3.3 The successors of Iliyash Shah (1358-1415 CE) Shamsuddin Iliyash Shah was succeeded by his son Sikander Shah (1358-89). During his reign, Firoz Shah Tughlaq attempted for a second time to capture Bengal. Sikander used the same tactics of his father and continued the campaign taking refuge in the fort of Ekdala. Failing to defeat the Sultan, Firoz Shah once again had to return empty handed. It was for the last time that there would be any attempt from the Delhi Sultanate to acquire Bengal until it was finally overran by Sher Shah Suri late in 1538. Sikandar would rule for the next 30 years and built the Adina Masjid in Pandua in 1368 and Kotowali Darwaza in Gaud . a. One of the most notable Sultan of the dynasty was the successor of Sikander Shah, Sultan Ghiyasuddin Azam Shah (1389-1410). He was famous for reestablishing diplomatic contact of Bengal with China, which was used to be during the Pala-Sena period. Ghiyasuddin on his own initiative sent a diplomatic mission, to the court of the ruling Ming Emperor of China, in reply to which the Chinese Emperor himself sent their emissaries under Ma Huan, to the court of Bengal in 1409. Regular gifts were exchanged with the corresponding Royal families and Buddhist monks were sent from Bengal to the court of Beijing. But more importantly, after about 200 years, it revived the overseas commercial relation between Bengal and China. As a result, the port of Chittagong in Eastern Bengal became a flourishing point of trade with not only just China but with the entire Far East in general. It became a pivotal point of the commercial route from where Chinese export commodities were sent to different other parts of the world. Beside this Azam Shah was also known for his sense of justice and he used to operate a strict vigil over all the Qazis across his kingdom to check any misconduct from their parts. He was also a man of scholarly taste. He had close relations with various contemporary learned men of his times across Asia. Many of them, including the great Persian poet Hafiz of Shiraz used to visit his court occasionally. After the death of Azam Shah four Iliyash Shahi Sultans succeeded the throne chronologically viz – Hamza Shah, Mohammad Shah, Bayezid Shah and Firoz Shah up to 1415. However, none of them is known for any notable works.

212 NSOU • GE-HI-21 3.4 A brief intervention of Hindu Rule under Raja Ganesh In 1415, political confusion and weakness of the Iliyash Shahi dynasty led to it being overthrown by Raja Ganesh of Dinajpur. He was originally a leading noble of the Iliyash Shahi Rulers. As obvious, the leading Ulemas and Sufis of the state refused to accept a non-Muslim Hindu ruler as their overlord. That's why, they then invited Sultan Ibrahim Ali Sharqi of the neighboring state of Jaunpur to invade Bengal and overthrow the non-Muslim rule. Both side perpetuated steep resistance and soon a negotiation was reached under the intervention of leading Sufi saint Nur Qutab-i-Alam. Raja Ganesh's twelve year old son Jadu was converted into Islam with the new name of Jalaluddin and Ibrahim Sharqi left for Jaunpur. Raj Ganesh however continued his rule up to 1418 before he finally died. Upon his death, his neo-converted son with the new name of Sultan Jalaluddin Shah ascended the throne and ruled until 1431. With the death of the third ruler Shamsuddin Ahmad Shah (1431-35), down the line, the dynastic rule of Raja Ganesh's family finally came to an end and the second Iliyash Shahi Rule ushered in. 3.5 Second Iliyash Shahi Dynasty (1435-87 CE) After the death of Shams-ud Din Ahmad, the rule of the Iliyash Shahi dynasty was once again restored by Mahmud Shah, a descendant of Shamsuddin Ilyas Shah. Mahmud ascended the throne in 1435 with the name of Nasiruddin Mahmud Shah I. The Iliyash Shahi ruler Rukunuddin Barbak Shah (1459-74), organized a militia of Ethiopian/African slaves (known as Habshis) and also appointed Arabs as his body guards. Thus, during his reign a large number of West Asian influx took place in Bengal, who were recruited in several of such military posts. Barbak's army invaded Kamrup in East, Purnea in West and strengthen control over large parts of Khulna-Jessore region. In 1487, the last ruler of this dynasty, Jalal-ud-Din Fath Shah was killed by his Habshi commander of the palace guards, Sultan Shahzada, who ascended the

NSOU • GE-HI-21 213 throne under the title, Sultan Shahzada Barbak Shah. With this, the Ilyas Shahi dynasty's rule over Bengal came to an end. Iliyash Shahi army used to perform occasional raids and plunder in the neighboring Kamatapuri kingdom of Assam and Brahmaputra valley, penetrating up to Guwahati. But the Kamata forces offered steep resistance and recovered much of their lost territories from the Iliyash Shahis. During this time the Iliyash Shahi Sultans of Bengal adorned their capitals of Gaur and Pandua with magnificent buildings. It gave birth to anew sort of architectural style in Bengal, quiet distinct from that of Delhi or North Indian ones. The Sultans were also fond of Bengali language and patronized several Bengali poets. Of them, the celebrated poet Maladhar Basu deserve special mention. He composed the work Sri Krishna Vijaya and earned the title Gunaraja Khan from the Sultans while his son earned the title Satyaraja Khan.

3.6 Economy The economy of the Bengal Sultanate inherited earlier aspects of the Delhi Sultanate, including mint towns, a salaried bureaucracy and the Ijaradari system of land ownership. The production of silver coins inscribed with the name of the Sultan of Bengal was a mark of Bengali sovereignty. [54] Bengal was more successful in perpetuating purely silver coinage than Delhi and other contemporary Asian and European governments. There were three sources of silver. The first source was the leftover silver reserve of previous kingdoms. The second source was the tribute payments of subordinate kingdoms which were paid in silver bullion. The third source was during military campaigns when Bengali forces sacked neighboring states. The apparent vibrancy of the Bengal economy in the beginning of the 15th- century is attributed to the end of tribute payments to Delhi, which ceased after Bengali independence and stopped the outflow of wealth. Ma Huan's testimony of a flourishing shipbuilding industry was part of the evidence that Bengal enjoyed significant seaborne trade. The expansion of muslin production, sericulture and the emergence of several other crafts were indicated in Ma Huan's list of items exported from Bengal to China. Bengali shipping co-existed with Chinese shipping until the latter withdrew from the Indian Ocean in the mid-15th-century. The testimony of

214 NSOU • GE-HI-21 European travelers such as Ludovico di Varthema, Duarte Barbosa and Tomé Pires attest to the presence of a large number of wealthy Bengali merchants and shipowners in Malacca. Historian Rila Mukherjee wrote that ports in Bengal may have been entrepots, importing goods and re-exporting them to China. A vigorous riverine shipbuilding tradition existed in Bengal. The shipbuilding tradition is evidenced in the sultanate's naval campaigns in the Ganges delta. The trade between Bengal and the Maldives, based on rice and cowry shells, was probably done on Arab-style baghlah ships. Chinese accounts point to Bengali ships being prominent in Southeast Asian waters. A vessel from Bengal, probably owned by the Sultan of Bengal, could accommodate three tribute missions- from Bengal, Brunei and Sumatra- and was evidently the only vessel capable of such a task. Bengali ships were the largest vessels plying in those decades in Southeast Asian waters. All large business transactions were done in terms of silver taka. Smaller purchases involved shell currency. One silver coin was worth 10,250 cowry shells. Bengal relied on shiploads of cowry shell imports from the Maldives. Due to the fertile land, there was an abundance of agricultural commodities, including bananas, jackfruits, pomegranate, sugarcane, and honey. Native crops included rice and sesame. Vegetables included ginger, mustard, onions, and garlic among others. There were four types of wines, including coconut, rice, tarry and kajang. Bengali streets were well provided with eating establishments, drinking houses and bathhouses. At least six varieties of fine muslin cloth existed. Silk fabrics were also abundant. Pearls, rugs and ghee were other important products. The finest variety of paper was made in Bengal from the bark of mulberry trees. The high quality of paper was compared with the lightweight white muslin cloth.

3.7 Conclusion Thus, the Iliyash Shahi dynasty was the first independent Turkic Muslim ruling dynasty in late medieval Bengal, which ruled from the 14th century to the 15th century. It was founded in 1342 and continued up to 1487, with a brief interval in between.

NSOU • GE-HI-21 215 3.8 Questions 1) Write a brief dynastic history of the Iliash Shahi rule in Bengal. 2) Describe the foundation of the Iliyash Shai Sultanate and the early trends of conflict with Firoz Shah Tughlaq. 3) What were the major achievements of Sultan Ghiyasuddin Azam Shah (1389-1410) ? 4) What was the legacy of Raja Ganesh and his successors ? 5) How was the second Iliyash Shahi dynasty restored ? 6) Give a brief note on the economy of the Bengal Sultanate under Iliyash Shahis.

4.0 Objective z The objective of the present unit is to study the historical evolution of Bengal under the Hussain Shahi dynasty. z The learners will trace the foundation and origin of the Hussain Shahi dynasty in Medieval Bengal. z The unit will also study the rule of Alauddin Hussain Shah and his successors along with the decline of the dynasty. z The arrival of the Portuguese will also be taught.

4.1 Introduction After the fall of the Iliyash Shahi kingdom, the Hussain Shahi dynasty ruled Bengal from 1494 to 1538. Although they weren't the direct successors of the Iliyash Shahis. There was a brief interval of Ethiopian rule. Nevertheless, the Hussain Shahis are considered as the greatest of all the independent Sultanates of Bengal for bringing a cultural renaissance during their rule. 216

NSOU • GE-HI-21 217 4.2 Foundation and Origin The Iliyash Shahi Sultan Barbak Shah (1459-74), had started the process of recruiting large numbers of Ethiopian/Abyssinian slaves in his army and as palace guards. As a result, most of the military posts consequently got infested with Ethiopian recruits. In 1487, it was these Ethiopian guards under Shahzada Barak Shah who toppled the Iliyash Shahis and themselves seized the power of Bengal. For the next seven years, Bengal was ruled by these Ethiopians or Abyssinians. Until in 1494, they were eventually deposed by an Arab noble who then succeeded the throne with the title Sultan Alauddin Hussain Shah. Husain Shah's original name is Sayyed Husain. According to a 1788 chronicle, Riyaz-us-Salatin, Husain was the son of Sayyed Ashrafi, a Sharif of Mecca and an inhabitant of Turkestan. Besides both historians, Salim (writer of Riyaz-us-Salatin) and Firishtah (from late 16th century) mentioned him as Sayyed - which indicates Husain's Arab descent. At the the time of his seizure of power, he was the acting Vazir/Wazir of Sultan Muzaffar Shah, the last Ethiopian ruler of the line. But it is not yet known how he came to Bengal and occupied the post of Vazir of Sultan Shamsuddin Muzaffar Shah. Most likely, he first settled in Chandapara, a village in Murshidabad district. Because a number of inscriptions of Husain Shah's early years found in the villages around Chandapara and a mosque called Kherur Mosque is constructed by Sultan Husain in the same locality in 1494. Initially, he secretly sympathized with the rebels but ultimately he put himself openly as their head and besieged the citadel, where Muzaffar Shah shut himself with a few thousand soldiers. According to the 16th-century historian Nizamuddin, the Sultan was secretly assassinated by Husain with the help of the paiks (palace-guards), which ended the Abyssinian rule in Bengal. As soon as he came to the throne, for precautionary measures and to resist any farther Abyssinian uprising, he replaced all the Abyssinian nobles with either Bengali Hindus or Muslims of Turko-Persian and Arab descents. With this, the Hussain Shahi Rule stepped firm in the soils of Bengal.

4.3 The reign of Alauddin Hussain Shah (1494-1519) The reign of Alauddin Hussain Shah is known to be one of the brilliant period of the Bengal Sultanate. In the political arena, he not only upheld the sovereignty

218 NSOU • GE-HI-21 of Bengal but also attempted to expand its territories. He gave refuge to the Sharqi Sultan of Jaunpur who was being chased by the despotic Delhi Sultan Sikander Lodi and secured Eastern Bihar through a peace treaty with the later. In the Southern front, he invaded the Gajapati kingdom of Orissa. According to the Madala Panji (a chronicle of the Jagannath Temple), Shah Ismail Ghazi, a commander of Alauddin Hussain Shah commenced his campaign from the Mandaran fort (in the present-day Hooghly district) in 1508-9 and reached Puri, raiding Jajnagar and Katak on the way. The Gajapati ruler of Orissa, Prataprudra Deva was busy in a campaign in the south. On hearing this news, he returned and defeated the invading Bengal army and chased it into the borders of Bengal. He reached the Mandaran fort and besieged it, but failed to take it. Intermittent hostilities between the Bengal and Orissa armies along the border continued throughout the reign of Husain Shahis. In the South East he extended the Bengal frontier up to the port of Chittagong, expelling the Arakanese from South-Eastern coast. But his successive invasion to Tripura ended in probable failures. According to Rajmala, a late royal chronicle of Tripura, Husain Shah dispatched his army four times to Tripura, but the Tripura army under king Dhanya Manikya and his successors offered stiff resistance and did not yield any territory. But the Sonargaon inscription of Khawas Khan (1513) is interpreted by a number of modern scholars as an evidence of annexure of at least a part of Tripura by Husain Shah's army. In the North East, he allied with the Ahoms and invaded the Kamtapuri kingdom in present Cooch Bihar. But the savage destruction of the capital of Kamtapur, the ravaging of the Temples, coupled with the stationing of an Afghan Muslim colony there, led to the growth of suspicion among the Ahoms. This would eventually lead to future confrontation between the two during the reign of succeeding Hussain Shahi Sultans. In the socio-cultural context, Alauddin Hussain Shah is known to be the Akbar of Bengal. As stated earlier, within short time of his coronation, he stopped the recruitment of Ethiopians in government positions, to prevent any farther Abyssinians upsurge. Rather, taking an unusual liberal attitude all the posts were from then thrown open to Hindus and Muslims alike according to their ability. As a result, during his time, a large number of Bengali Hindus were recruited among the plum positions

NSOU • GE-HI-21 219 of the administration. Thus, his principal secretaries, the royal physicians, the master of the mint, along with various chiefs of his bodyguards were all Hindus. The two famous Vaishnava brothers Rupa Goswami and Santana Goswami enjoyed high positions among his court officials. Rupa Goswami was the Sakar Mallik, Sanatana Goswami was the DABIR-I-KHAS, Jagai and Madhai were Kotwals of Navadvipa, Gopinath Vasu was his minister, Mukundadas was his private physician, Keshav Khan Chhatri was the chief of his bodyguards and one Anup was in charge of the mint. The Hindus in return honored him with the esteemed titles of

Nripati Tilak (Crown of Kings) and Jagat Bhusan (Adornment of the Universe),

as mentioned by Vijaya Gupta. However, contrary sources suggest that he was not very liberal towards the Hindus. Not only did he destroyed many Hindu idols in the wars of Assam and South East, but oppression of Hindus was also widespread during his times, though he himself may not have been directly responsible for it, and often turned a blind eye to those practices. It is also to be noted that during his time, a large number of Hindus converted to Islam to gain positions and social advantage. In this connection, it is worthy to mention that the famous Vaishnava saint Chaitaniya Mahaprabhu flourished in Bengal during Alauddin's time. But due to some reason or other, he was forced to leave Bengal, his homeland and took refuge in the neighboring kingdom of Orissa under Gajapati ruler Prataprudradeva. Beside this, Sultan Alauddin Hussain Shah was also a great patron of Bengali Literature. He patronized the learning and flourishment of the Bengali language and pioneered many Bengali literaturists of his time like Vijay Gupta, Shrikara Nandi, etc. The Muslim foreigners started adapting Bengali customs and culture while the Bengali Hindus in turn learned Persians to secure high positions in the administration. Name Of the Sultan Reigning Period Alauddin Hussain Shah 1494-1519 Nasiruddin Nusrat Shah 1519-1532 AlauddinFiruz Shah 1532-1533 Ghiyasuddin Mahmud Shah 1533-1538 A Chorological time period of the Hussain Shahi dynasty

220 NSOU • GE-HI-21 4.4 The successors of Alauddin Hussain Shah and the decline of the Sultanate Sultan Alauddin Hussain Shah was succeeded by his son Sultan Nasiruddin Nusrat Shah (1519-32). He continued to hold up the legacy of the Hussain Shahi Sultanate as established by his father. He established matrimonial relationship with Delhi Sultan Ibrahim Lodi and secured his Western border from any farther disturbances from Delhi. Nusrat Shah tried to continue his father's expansionist policy and sent a naval expedition against the Ahom kingdom in the North East but was defeated. But from 1526, Nusrat Shah had to face a new danger arriving from the West, i.e. the Mughal ascendancy OF North India under Zahiruddin Muhammad Babaur. As a result, a huge amount of Afgan influx happened in Bengal during his reign. He allied with the combined Afghan troops under Mahmud Lodi and faced Babur at the Battle of Ghahgra in 1529. But the combined Sultanate alliance was defeated by the Mughals. Nusrat Shah had to accept a temporary peace proposal with Babur, which was communicated to him by the former through an envoy. Thus, the Mughal territory now extended upto Bihar. AlauddinFiruz Shah (1532-33) was the son and successor of sultan Nasiruddin Nusrat Shah. At that time after the demise of Babaur, there was a temporary halt in the Mughal activities in the West. So, Firuz Shah devoted his attention to the campaign of Assam in the East. Consequently, the Bengal army entered Assam and reached Naogaon. But while the campaign is on, Sultan AlauddinFiruz Shah was secretly assassinated by his uncle Ghiyasuddin Mahmud Shah in 1533. After murdering AlauddinFiruz Shah, his uncle Ghiyasuddin Mahmud Shah (1533-38) himself ascended the throne, who eventually happened to be the last Sultan of Bengal. Historians accuses him of having neither diplomatic foresight, nor any practical approach to the political problems which beset Bengal during his reign. During his reign the Portuguese arrived in Chittagong in 1534, and were captured and sent to Gaur as prisoners on charges of mischief. But, in the face of enemy superiority he reconciled with them and permitted them to establish factories and commercial stations at Chittagong and Hughli.

NSOU • GE-HI-21 221 Mahmud Shah soon had to face dual threat, viz. the Mughal influx under Emperor Humayun from the North Western borders and also the rebellions of the tribal Pashtun Afghans who have largely infested the Bengal territory by that time. But a "pleasure loving" Sultan Mahmud Shah proved to be the most incapable of handling the situation. The rebelling Afghans soon rallied around their new rising leader Sher Shah Suri. Unable to crush the rebellion, Mahmud Shah allied with Jalal Khan, the semi-independent Mughal governor of Bihar, who too was tormented by the rising power of Sher Shah. Sultan Mahmud Shah sent repeated letters to Mughal Emperor Humayun for immediate intervention, but with no response since the latter was busy in his Gujarat campaigns. Finally, in 1534, Sher Shah Suri defeated the combined Bengal army under commander Ibrahim Khan in the Battle of Surajgarh and consequently occupied the capital Gaur in April, 1538. Although, Ghiyasuddin was not present at the capital, but he died soon out of grief. Sher Shah ransacked the capital of Gaur and perpetuated a general Quatal-i-am (human massacre) in the city. With this, the independent Sultanate of Bengal finally came to an end and all the Bengal treasury was now looted by Sher Shah, which formed the basic chain of resources for his future campaigns against the Mughals. 4.5 Arrival of the Portuguese It is during this Hussain Shahi period that the first batch of Portuguese merchant arrived in Bengal. Embassies from Portuguese India frequented Bengal after the landing of Vasco Da Gama in the principality of Calicut. Individual Portuguese merchants are recorded to have lived in the Bengal Sultanate's capital of Gaur. Portuguese politics played out in Gaur as a reflection of contradictions in contemporary Portugal. [34] The Portuguese provided vivid descriptions of Gaur. They compared the affluence of Gaur with Lisbon. The city included a citadel, a royal palace and durbar, mosques, houses for the rich, and bustling bazaars. Portuguese historian Castenhada de Lopez described the houses of Gaur as being one-storied with ornamental floor tiles, courtyards, and gardens. Gaur was the center of regional politics. The Sultan of Bengal gave permission for establishing the Portuguese settlement in Chittagong. During the period of the Iberian Union, there was no

222 NSOU • GE-HI-21 official Portuguese sovereignty over Chittagong. The Portuguese trading post was dominated by pirates who allied with the Arakanese against Bengal. However, the Portuguese served one very important part in constructing the history of the Bengali Sultanate. The Portuguese travelers like Barbarossa gave a vivid picture of the contemporary Sultanate of Bengal and thus served as one of the important primary source of this period. They wrote about the luxury and extravagance of the Muslim aristocracy of the Hussain Shahi Sultanate. They described how they lived in brick built houses in the cities with attached bathing tanks. They also gave accounts of the contemporary cuisines and attires of the Sultanate’s aristocracy, in whose hands the majority share of the country’s wealth was concentrated.

4.6 Conclusion Thus, the Hussain Shahi dynasty was the last independent Bengal Sultanate. The Hussain Shahi period particularly under Sultan Alauddin Hussain Shah marked the beginning of the Indo-Islamic composite culture of Bengal. It was during this period that the Bengali culture and language flourished and the foreign Muslims adapted the essence of ‘Bengaliness’. It marked a glorious period in the history of Bengal and the boundaries of the province reached its maximum extent.

4.7 Questions 1) How was the Hussain Shahi dynasty founded ? What was the immediate step taken by Sultan Alauddin to secure his power after accession ? 2) Write a brief note on the rule of Sultan Alauddin Hussain Shah. 3) What were the political achievements of Sultan Alauddin Hussain Shah ? 4) Why was Sultan Alauddin Hussain Shah commonly called as the “Akbar of Bengal”? OR Write a brief note on the socio-cultural and religious achievements of Sultan Alauddin Hussain Shah. 5) Write a brief account of the successors of Sultan Alauddin Hussain Shah. What was the new threat faced by Sultan Nusrat Shah since 1526 ?

NSOU • GE-HI-21 223 6) What led to the final decline of the Bengal Sultanate ? 7) What was the importance of the Portuguese in context of the history of Bengal Sultanate ?

5.0 Objective z The objective of this unit is study the Bengal’s history under the Afghan rule in medieval era. z Three distinct Afghan dynasties will be explored : ¾ The Suri dynasty ¾ The Sur sultanate ¾ The Afghan Karrani dynasty z The Mughal conquest of Bengal will also be taught.

5.1 Introduction The rule of Afghans in Bengal began in 1538 following the collapse of the Hussain Shahi Dynasty and the capture of the capital Gaur. The Afghan occupation lasted roughly for a period of 38 years from 1538 to 1576 CE. Before the occupation of Bengal by Sher Khan (Afghan) in 1538, since the time of Alauddin Hussain Shah the Afghans had influxed in large numbers and used to serve in various governmental

224

NSOU • GE-HI-21 225 posts in the Sultanate of Bengal. Several thousand Afghans were recruited in the army of Sultan Muzaffar Shah (1490-1493), the last Habsi (Abyssinian) ruler of Bengal. Sultan Alauddin Hussain Shah (1494-1519) also recruited a good number of officers and jawans in different branches of his armed forces. Later, during the rule of Sultan Nusrat Shah (1519-1532), Afghans played a very important role holding key positions like commander in chief. In this backdrop, taking advantage of the Mughal incursion in Eastern India under Babur and Humayun, one rising Afghan warlord, Sher Shah conquered Bengal and ascended its throne. Consequently, all the Afghan officers and troops, who were spread over different parts of Bengal, rejoiced the victory of Sher Shah, their compatriot and accepted his command. 5.2 Bengal under the Suri dynasty (1538-53 CE) Afghans had started developing their establishment in Bihar from the beginning of 13th century. The process had reached its peak with the establishment of Lodi rule in Delhi. Meanwhile, after the death of Babur in 1530, Mahmud Lodi (the half brother of the last Afghani Sultan Ibrahim Lodi), who have taken refuge to Sultan Nusrat Shah of Bengal, again tried to rejuvenate the Afghans. But, Emperor Humayun son of Emperor Babur defeated him in the battle of Dorah in 1532. Later in April 1538 Sher Khan occupied Gauda defeating Sultan Ghiyasuddin Mahmud Shah, the last ruler of Husain Shahi dynasty. And thus he founded the rule of Afghan of Sur dynasty in Bengal. But responding to the appeal of Sultan Mahmud Shah for help Mughal emperor Humayun came forward and occupied Gauda without any resistance from the Afghans on 8 September 1538. He stayed there for next eight months and then left Bengal for Delhi as the fratricidal conspiracy began there over the throne of Mughal Empire. On the way Sher Khan launched a surprise attack and defeated the Mughal Emperor in that battle. Sher Khan successively defeated and killed Jahangir Quli Khan, the Governor of Bengal finally acquiring the control of Gauda in October 1539. Realizing the importance of Bengal for the development of his empire, Sher Shah gave attention to its administrative reform and reorganization. He dismissed Khijir Khan, the first governor of Bengal, on charge of fraudulent act and divided whole HIS GE-HI-11 & 21—15

226 NSOU • GE-HI-21 territory of Bengal including Chittagong into small units. He placed all there administrative units under a Muqtar and appointed Kazi Fajilat as the Chief Supervisor of muqtars. This plan of Sher Shah became very effective for running the administration and ultimately Afghans settled in Bengal permanently by associating themselves closely and deeply with the local environment and culture. Sher Shah also took kin interest in developing some infrastructures in Bengal and consequently started the construction of the Great Grant Trunk Road that would run from Lahore to Sonargaon of Bengal. As a result, it improved the communication system and thus commercial interaction of Bengal rose to leaps and bounds. Bengal's textile products like muslin could now easily reach the markets of North India and then to that of Central Asia more quickly and vice versa. Islam Shah (1545-53) son and successor of Sher Shah, retained his control over Bengal. He appointed Muhammad Khan Sur as the new governor of Bengal in 1545, dismissing Kazi Fajilat to further consolidate the administrative machinery. The new governor too consolidated his own position by awarding death penalty to a rebel named Sulaiman, without even consulting Islam Shah. An imaginary sketch work of Sher Shah Suri by Afghan artist Abdul Ghafoor Breshna

NSOU • GE-HI-21 227 5.3 The Independent Sur Sultanate of Bengal (1553-63 CE) After the death of Islam Shah in 1553, Adil Shah Sur occupied the throne of Delhi. He was an weak successor and during his time disturbances arose in various parts of the Afghan Sultanate. Latter, his Hindu Commander in Chief Hemachandra Vikramaditya alias Raja Himu managed to consolidate the Sultanate only in North India on behalf of the Sultan. But he could not focus beyond the Northern plains in lieu of the incoming Mughal incursion from the North-West under Humayun. Taking advantage of this situation, The Governor of Bengal Muhammad Khan Sur proclaimed independence of Bengal taking the title of Sultan Muhammad Shah Gazi and denied to recognize the authority of the new ruler of Delhi. Muhammad Shah and Bahadur A portrait of Hemachandra Vikramaditya (alias Raja Hemu)

228 NSOU • GE-HI-21 Shah, only two out of four sultans of Sur dynasty were able to establish themselves as eligible Sultans. Muhammad Shah not only recaptured Chittagong from the king of Tripura, he also annexed Arakan region. His authority was also recognized in Eastern Bihar. The sole authority of Muhammad Shah in Eastern India instigated him to stand against Adil Shah Sur. He occupied Jaunpur and advanced towards Delhi. But in a battle held at Chhapparghata in December 1555, Himu the commander of Adil Shah killed Muhammad Shah, the Sultan of Bengal. After the death of Muhammad Shah, his eldest son Khijir Khan became the Sultan taking the title of Ghiyasuddin Abul Mujaffar Bahadur Shah. Soon after the coronation, Sultan Ghiyasuddin along with his forces went out for a battle against Adil Shah to retaliate his father's killing. Despite of his commander Himu's advice, Sultan Adil Shah himself led the campaign to face the Bengal Sultan. The battle took place at Fatehpur, four miles west of Surujgarh under Munger. Adil Shah's troops were defeated and the Sultan was taken prisoner. Later Adil Shah was killed. A vast area from Jaunpur to Chittagong now came under the rule of Bahadur Shah. By this time the Afghan Sultanate of Delhi was overthrown by the Mughals led by Bairam Khan and the young Badshah Jalaluddin Akbar. Bahadur Shah established friendly relation with Khan-e-Zaman, the Governor of Eastern Province of Akbar. Bahadur Shah ruled Bengal till his death in 1560. His brother Jalal Shah came to power and ruled Bengal till 1563, when another Afghan Ghiyasuddin occupied Bengal by force assassinating Jalal Shah. Subsequently Taj Khan Karrani toppled the occupied forces and killed their leader Ghiyasuddin. And thus the rule of Karrani Dynasty began in Bengal. 5.4 The Afghan Karrani dynasty of Bengal (1563-76 CE) The Afghans welcomed the rise of Karranis in eastern region of India as they had lost power to the Mughals in North India. Many Afghans fled away from the north to Bihar and Bengal for taking refuge there. The exodus strengthened the hands of Karrani rulers. Taj Khan Karrani was a seasoned politician as he joined in politics back in 1540. Famous historian Badauni termed him correctly as the most wise and

NSOU • GE-HI-21 229 educated person among the Afghans. Sulaiman Karrani, the brother of Taj Khan Karrani was sworn in power just after him in 1563 CE. He ruled the country till his death in 1572. He shifted the state capital to Tanda from Gauda as its weather and environment became adverse and unsuitable for human being as well as animals and birds. One of the most glorious and unique military achievements of Sulaiman Karrani was the victory of Orissa by defeating the Gajapati King Mukunda Dev in 1567. As narrated by Sujan Bhattacharyya, Mukunda Deva, the Hindu Gajapati king of Kalinga (Orissa) was an ally of the Mughal emperor Akbar and a foe of the Sultan of Bengal. Gajapati and the Sultan had two wars, the first he won, the second he lost. In this campaign the Afghan forces was led by one general called Kalapahar (alias Rajiblochan Roy) a Hindu convert. He was famous for destroying Temples and Iconoclasm. The Madala Panji of Puri Jagannath temple describes how Kalapahar attacked Odisha in 1568. The Afghan forces led by Kalapahar was linked with the notorious destruction and loot of the famous Sun Temple of Konarak. Later in 1568, Sulaiman Karrani annexed Coochbehar under his rule. Here too the Afghan forces were led by Kalapahar who advanced up to Guwahati and is said to damage the Kamakhya Temple. But their farther advance was vehemently checked by the Assamese forces, who by then had grasped the skill of guerilla war techniques against the invading Afghan foreigners. Latter, fearing a Mughal onslaught, Sultan Sulaiman Karrani didn't took the risk of alienating the Koch King and thus instigate him to join the enemy camp. So he freed the King and returned him his capital Coochbehar. The foresightedness of Sulaiman Karrani overshadowed his relationship with Mughal Emperors. He was a highly skilled diplomat and being an experienced and tactful ruler, he used to send many types of bequests to Emperor Akbar to satisfy the ego of the Mughals. Even, he often expressed his loyalty to the Mughals saying he would introduce khutba in the mosque and issue coins in the name of the Emperor. Sulaiman Karrani, the most celebrated statesman among the Afghan rulers of East India, died perhaps in 1572 CE. He was buried at Tanda. His son Bayazid Karrani was sworn in after him. He assumed all the royal authority with the co- operation of all leading Afghan elites including Lodi Khan Karrani. Earlier, as a

230 NSOU • GE-HI-21 crown prince, Bayazid was highly aspirant about his future position. But after becoming the Sultan he adopted a policy of repression and harassment. This situation compelled the members of his council to stand unified against him. They killed him within a month and placed prince Daud Khan Karrani, his younger brother, as the new Sultan. After the coronation, Daud Khan Karrani observed that there were enmities and inter-power struggles among the Afghan elites. His administrative function started with the retaliation of his brothers killing. He punished his cousin Hasan, son of Khwaja Elyas Karrani, who executed Sultan Bayazid. He consolidated the sovereign power of Bengal Sultanate by introducing khutba and inscribed coins by his own name. Such steps made emperor Akbar very discontented. Daud Karrani appointed Lodi Khan Karrani as the governor of Bihar and neutralized another influential Afghan Guzor Khan. When Guzor Khan extended his support to sultan Daud, all the elements of mass uprising in Bihar subsided. These dramatic changes in the internal politics and the resultant tensed situation were very significant to the Mughal imperialists. They were waiting to take advantage of the situation. Meanwhile, Daud Khan Karrani killed his commander-in-chief Lodi Khan and for this immature act facilitated to deteriorate the situation further. The well-wishers of Lodi Khan took his son Ismail to the Mughal governor Munim Khan to seek his security. 5.5 The Mughal onslaught in Bengal and the defeat of the Afghans Around this time, Daud Khan captured Fort Zamania, which was a frontier post of the Mughal Empire. This gave Akbar the pretext to launch a campaign against the Afghan Sultanate of Bengal. Accordingly, Akbar who was in Gujarat when he received the news of Daud's audacity, at once dispatched orders to Munim Khan the governor and representative of the imperial power in Jaunpur to chastise the aggressor. Munim Khan immediately marched towards East and laid siege on Patna, the Western frontier high command of the Afghan Sultanate. But here he was fiercely resisted by Lodi Khan, a powerful Afghan elite who was in the charge of Patna at that time. Munim Khan was old. He failed to break the Afghan command and hence

NSOU • GE-HI-21 231 forced to sign a cease fire agreement with the former, while asking the Emperor to come in person himself. Neither of the principal parties was pleased with this. Emperor Akbar thought that the old Munim Khan had been too easy going whereas Daud was jealous of his minister Lodi Khan's power. Frustrated over the inability of the Jaunpur governor, Akbar formally deputed his Hindu Economic Minister Raj Todermal who was also his most loyal and competent official at that time, in the charge of Bihar. Meanwhile Sultan Daud Khan treacherously assassinated Lodi Khan. Due to this irresponsible act, the Afghan strength weakened. On 15 June 1574, Akbar embarked for the river voyage from Agra to join the campaign of Bengal. He was accompanied by 19 of his ablest generals including Raja A miniature painting of Mughals leading the Bengal campaign

232 NSOU • GE-HI-21 Man Singh, Raja Bhagwan Das of Amer, Quasim Khan and also Raj Todermal, as to court chronicler Abul Fazl. It was the rainy season. He travelled through the course of Ganges and on July 1574, reached Chaunsa where his father, Emperor Humayun, had suffered a severe defeat in 1539 at the hands of these same Afghans. On 3 August 1574 he finally landed in the neighborhood of Patna and joined the siege of the city where Sultan Daud himself was encircled along with 20,000 army. The heads of the Afghan leaders killed were thrown into a boat and brought to Akbar who forwarded them to Daud as a hint of the fate, which awaited and in due course befell him. Just on the next day the city fell and the Afghan garrison was severely defeated and butchered. Enormous booty fell in the hands of Mughals and Sultan Daud Khan escaped in the guard of the darkness in a cowardice way. However, Akbar didn't himself proceeded farther, He returned to Fatehpur Sikri, while giving the charge to finish off the Bengal campaign under the joint leadership of Munim Khan and Raja Todermal. The Mughal Army waste no time and marched into the capital of Bengal, Tanda (near Gaur), and Daud withdrew to Odisha. In the ensuing Battle of Tukaroi, also known as the Battle of Bajhaura or the Battle of Mughulmari, which took place on 3rd March 1575 in the present day district of Balassore, the Afghan forces were completely defeated. The Afghan general Gujar Khan was killed. Sultan Daud Khan Karrani was forced to sign the Treaty of Katak in which Daud ceded the whole of Bengal and Bihar, retaining only Odisha. The treaty eventually failed after the death of Munim Khan who died at the age of 80. Sultan Daud Khan took the opportunity and invaded Bengal. But it was a short victory. The Mughal forces, under the leadership of Khan-i-Jahan Hussain Quli Beg and Raja Todermal, finally met the Afghans at the Battle of Rajmahal on 15 July 1576, in present day Jharkhand. All the Afghan generals of Bengal rallied around Sultan Daud Khan Karrani in this battle. But the Mughals with their fire power and efficient command have a decisive victory. Most of the leading Afghan nobles like Junaid Khan Karrani, Khan Jahan Lodi and Kalapahad (alias Rajiblochan Roy), were either killed or latter mercilessly executed. Sultan Daud Khan Karrani was himself captured and executed. With this most parts of Bengal and Bihar was formerly annexed to the Mughal Crown and the Afghan rule in Bengal finally came to an end.

NSOU • GE-HI-21 233 However, the Pashtun Afghan and the local landlords known as Baro Bhuyians led by Isa Khan continued to resist the Mughal invasion. The zamindars included Muslims and Hindus like Raja Pratapaditya. In 1594, Akbar appointed his most ablest military commander, Farzand-i-Mughalia, Raja Man Singh, the Hindu Rajput chief of Amer as the governor of Bengal, Bihar and Orissa to crush the rebellion. Man Singh crushed the rebellions of the Zamindars of Bihar and also defeated the Afghan leaders of Orissa Qatlu Khan Lohani and his son Nasir Khan Lohani, thereby completely integrating Bihar and Orissa. He also waged wars against some of the "Baro-Bhuyias". Later in 1612 during the reign of Jahangir, Bengal was finally integrated as a Mughal province.

5.6 Conclusion Thus, the Afghans ruled Bengal approximately for forty years. Bengal witnessed a turning point during this rule when it finally got integrated into a pan Indian Administration i.e. the Mughal Empire. The Suris, the Karrani dynasty and latter the Baro-Bhuyians constituted some significant part in the history of Afghan rule in Bengal.

5.7 Questions 1) How was the Afghan rule established in Bengal ? 2) Give a brief account of Sher Shah's administration in Bengal ? 3) How was the independent Suri Sultanate established in Bengal ? Give a brief account of their conflict with the Imperial Sur Sultanate based in Delhi. 4) Write a brief account on the expansion and achievements of Sultan Sulaiman Karrani ? 5) How did Sultan Daud Khan Karrani tried to maintain the balance of administration and politics ? 6) Give a brief account of the Mughal expedition in Bengal during the time of Akbar. How was the Afghan rule finally came to an end ?

234 NSOU • GE-HI-21 7) Who were Baro Bhuyians ? What was the role of Raja Man Singh in the Eastern frontier of the Mughal Empire ?

6.1 Introduction Bengal was a very lucrative province. Situated entirely in the Ganga-Brahmaputra deltaic region, the fertile lands of Bengal yield a good quantity of agricultural revenue since the Early medieval days of Sasanka and Palas, from when the systematic clearance of Bengal forests has begun. As such any ambitious ruling dynasty who wish to build up an Empire in North India generally wanted to incorporate Bengal within their territory, be it the Palas, the Muslim Turks, the Afghans or later the Mughals. The Mughal onslaught in Bengal first started during the reigns of Emperor Humayun, which eventually locked him in a violent struggle 237

238 NSOU • GE-HI-21 with Sher Shah Suri. After the temporary demise of Mughal rule, and the establishment of Afghan Karrani dynasty (1563-76), there was short halt in this Mughal-Afghan rivalry in Bengal, for the time being. But it again started from the reign of Akbar. Up to 1575, Akbar was busy in consolidating his Empire in North India and also in conflict with Maharana Pratap in Rajputana. After the Battle of Haldighati (1576), Akbar now turned towards East to recover the lost territory of Bengal. Around this time some irresponsible action from Daud Khan Karrani, the reigning Afghan Karrani Sultan of Bengal, gave Akbar the ideal opportunity to invade Bengal. 6.2 The early Mughal onslaught on Bengal and the fall of Afghani Karrani dynasty In 1574, Daud Khan captured Fort Zamania, which was a frontier post of the Mughal Empire. This gave Akbar the pretext to launch a campaign against the Afghan Sultanate of Bengal. Accordingly, Akbar who was in Gujarat when he received the news of Daud's audacity, at once dispatched orders to Munim Khan the governor and representative of the imperial power in Jaunpur to chastise the aggressor. NSOU • GE-HI-21 239 Man Singh, Raja Bhagwan Das of Amer, Quasim Khan and also Raj Todermal, as to court chronicler Abul Fazl. It was the rainy season. He travelled through the course of Ganges and on July 1574, reached Chaunsa where his father, Emperor Humayun, had suffered a severe defeat in 1539 at the hands of these same Afghans. On 3 August 1574 he finally landed in the neighborhood of Patna and joined the siege of the city where Sultan Daud himself was encircled along with 20,000 army. The heads of the Afghan leaders killed were thrown into a boat and brought to Akbar who forwarded them to Daud as a hint of the fate, which awaited and in due course befell him. Just on the next day the city fell and the Afghan garrison was severely defeated and butchered. Enormous booty fell in the hands of Mughals and Sultan Daud Khan escaped in the guard of the darkness in a cowardice way. A miniature painting of Mughals leading the Bengal campaign

240 NSOU • GE-HI-21 However, Akbar didn't himself proceeded farther, He returned to Fatehpur Sikri, while giving the charge to finish off the Bengal campaign under the joint leadership of Munim Khan and Raja Todermal. The Mughal Army waste no time and marched into the capital of Bengal, Tanda (near Gaur), and Daud withdrew to Odisha. In the ensuing Battle of Tukaroi, also known as the Battle of Bajhaura or the Battle of Mughulmari, which took place on 3 rd March 1575 in the present day district of Balassore, the Afghan forces were completely defeated. The Afghan general Gujar Khan was killed. Sultan Daud Khan Karrani was forced to sign the Treaty of Katak in which Daud ceded the whole of Bengal and Bihar, retaining only Odisha. The treaty eventually failed after the death of Munim Khan who died at the age of 80. Sultan Daud Khan took the opportunity and invaded Bengal. But it was a short victory. The Mughal forces, under the leadership of Khan-i-Jahan Hussain Quli Beg and Raja Todermal, finally met the Afghans at the Battle of Rajmahal on 15 July 1576, in present day Jharkhand. All the Afghan generals of Bengal rallied around Sultan Daud Khan Karrani in this battle. But the Mughals with their fire power and efficient command have a decisive victory. Most of the leading Afghan nobles like Junaid Khan Karranai, Khan Jahan Lodi and Kalapahad (alias Rajiblochan Roy), were either killed or latter mercilessly executed. Sultan Daud Khan Karrani was himself captured and executed. With this most parts of Bengal and Bihar was formerly annexed to the Mughal Crown and the Afghan rule in Bengal finally came to an end. 6.3 Early years of Mughal governorship in Bengal (1576-80) With the defeat and death of Daud, the last of the Karrani commanders in 1576 at Rajmahal, Bengal formally became a subah or province of the Mughal Empire. It remained so until around the first quarter of the eighteenth century when Murshid Quli Khan, nominally a governor, no doubt, but a de facto sovereign in Bengal, established some sort of independent monarchy. During the earlier years, the Mughals ruled from fortified towns like Dhaka or Tanda, while the countryside was under the effective control of powerful Hindu zamindars or Pathan overlords, often operating in concert and having an uneasy relationship with the nawab.

NSOU • GE-HI-21 241 The first two subedars, viz. Khan-i-Jahan (1575-78) and Muzaffar Khan (1578- 80), were shadowy figures. Their advent coincided with the first serious revolt Akbar faced in Bengal-Bihar region. It was partly from orthodox Islamic elements protesting against Akbar's secularism and perceived heterodoxy and partly from rebellion by vested interests that felt threatened by some of Akbar's new centralizing measures, including pay cuts of soldiers and revocation of unauthorized alienation of lands and false muster rolls of horses. The rebels supported Akbar's brother Mirza Hakim's claim from Kabul to the imperial throne. This was termed by Abu'l-Fazl 'as a revolt of the Bengal officers', by Jesuit Monserrate as 'war against the religion of Christ which had influenced Akbar' and by R.D. Banerjee as 'really another Afghan war'. It started at Tanda on 28 January 1580. Bengal rebels crossed the Ganga at Rajmahal and were joined by Bihar rebels. Akbar's governor, Muzaffar Khan, was defeated and a khutbawas read in Mirza Hakim's name. By 1582 Akbar was in a position to assert his authority and sent Khan Azam as subedar along with TodarMal as his deputy to reclaim the province. Khan Azam defeated the Afghan forces led by Masum Khan Kabuli at Teliagarhi; but the campaign remained indecisive as Masum Kabuli ganged up with Isa Khan, one of the twelve warlords or Barobhuyians. Akbar then appointed a new subedar, Shahbaz Khan, but even he was not successful, as Khan Azam remained unreconciled. Shahbaz set up his capital at Tanda, but the Afghans overran the whole country up to Malda. The jealousy between Khan Azam and Shahbaz Khan delayed the recovery of Bengal for the Mughals. Meanwhile, Qutlu Khan Lehani, Daud's general, immortalized in Bankim Chandra Chattopadhyay's novel Durgesh Nandini, occupied Orissa and advanced up to Burdwan, but he was defeated near Burdwan and surrendered to the Mughals (1584). Once Qutlu withdrew to Orissa, Shahbaz Khan left him alone. The new Mughal administrative set-up was introduced in Bengal under the subedar, also called sipahsalar. Several key officials were appointed in charge of departments like dewan (revenue), sadar (justice), qazi (criminal justice), bakshi (military accounts) and kotwal (in charge of towns). Shahbaz Khan defeated the Pathan forces under Masum Kabuli and pursued them up to Bikrampur in Dhaka, which was controlled by Isa Khan, and asked Isa Khan to surrender. Isa Khan deluded him for several months with false promises and then launched a surprise attack on him on 30 September 1584. Shahbaz Khan was defeated and was forced to retreat to Tanda. Shahbaz Khan HIS GE-HI-11 & 21-16

242 NSOU • GE-HI-21 turned to diplomacy and money power and by 1586-87 won over some of the Pathan warlords. Isa Khan, now isolated, made peace with the Mughals. Masum also sent his son to the Delhi court and himself went to Mecca. By 1587 Akbar's sovereignty was acknowledged all over Bengal. From that time till the subedarship of Murshid Quli Khan from 1717 onwards,

Bengal was just a province of the Mughal Empire and ruled by a governor who

took orders from Delhi. 6.4 The Coming of Mirza Raja Man Singh as the new governor of Bengal After Shahbaz Khan, Akbar sent Raja Man Singh Khacchawat of Ajmer (Rajasthan) as the new governor. Now Man Singh was an able Rajput general of the Mughals and Raja Man Singh Khacchawat

NSOU • GE-HI-21 243 also one of the Navaratnas of Akbar's court. He was a very close compatriot of Akbar and had successfully led various Mughal campaigns in Rajputana, Kashmir and in North West. Irrespective of being a Hindu Rajput he received the auspicious title of "Farzand"(a sort of adapted son of the Emperor) and "Sipah-i-salarMughalia". Due to his commendable military and strategic skills, Man Singh is said to be one of the last resort of Akbar to face any adverse campaign from the part of the Mughal Army. The rule of Man Singh in Bengal, was thus important in the sense that he made the maximum impact in subduing the recalcitrant warlords who effectively ruled Bengal till then. Man Singh was appointed governor of Bengal in 1593 and stayed in overall control till 1605 despite the temporary governorship by his two sons on two occasions under his overall charge. Ultimately, he was to be recalled by Emperor Jahangir on his accession in 1605. Immediately after his arrival at Tanda, the Bengal capital, Man Singh sent his army in different directions to suppress the rebels. His son Himmat Singh occupied the Bhushana Fort (April 1595). On 7 November 1595, Man Singh laid the foundation of a new capital at Rajmahal and named it Akbarnagar. He first proceeded against Isa Khan and forced the Pathans to fall back to the east of the Brahmaputra River. Most of the zamindari of Isa Khan fell to the Mughals and the rebellion in other parts of Bengal was suppressed too. In 1596 Man Singh became seriously ill in his camp at Ghoraghat and, hearing of it, the other rebels got together a naval force and proceeded against the Mughal army in large boats. As the Mughals had no navy, the rebels came within 24 miles of Ghoraghat without any resistance, but they were forced back due to a fall in the level of the water. On his recovery from illness Man Singh sent an army against the rebels who retreated to the forest tract in Egarasindur in Mymensingh. Isa Khan joined up with Kedar Roy of Sripur, another of the barobhuiyans. Raja Lakshmi Narayan of Koch Bihar was on the side of the Mughals, but his cousin Raghudeb sided with Isa Khan and they invaded Koch Bihar; Lakshmi Narayan sought help from Man Singh. At the end of 1596, when Man Singh advanced with his army against Isa Khan, the latter ran away, but again invaded Koch Bihar as soon as the Mughal army left. To counteract the move, Man Singh sent his son, Durjan Singh, with an army and naval force to occupy Isa Khan's fortified residence at Katrabhu. On 5 September 244 NSOU • GE-HI-21 1597, the huge naval force of Isa Khan and Masum Khan surrounded the Mughal army. Durjan Singh was defeated and many Mughal soldiers were captured. But soon out of fear from Raja Man Singh's possible revenge, Isa Khan released the captives, withdrew from Koch Bihar and entered into a treaty with the Mughals by accepting the suzerainty of the emperor. Two years later, Isa Khan died (1599). Meanwhile, Man Singh's other son, Himmat Singh, had conquered Bhushana, but he died of cholera shortly thereafter. After the death of two of his sons, Man Singh, with the emperor's permission, went to Ajmer to rest in 1598, and his eldest son, Jagat Singh, was appointed governor in his place. But Jagat Singh died of heavy drinking at Agra. Man Singh's young son, Maha Singh, was now appointed governor of Bengal under Man Singh's overall authority. Taking this opportunity, the Pathans in Bengal again raised their head, successfully fought the Mughal army on several occasions and occupied extensive territories, including a portion of Orissa. These reverses forced Man Singh to return to Bengal. The rebels in eastern Bengal were routed in 1601. Next year, Man Singh set up his camp at Dhaka. Meanwhile, Kedar Roy, zamindar of Sripur, surrendered to Usman (nephew of late Qutlu Khan, the Pathan ruler of Orissa) who had shifted his operation to the east in the trans-Brahmaputra region, crossed the Brahmaputra River, defeated the Mughal commander in charge of the outpost there and forced him to take shelter in Bhawal. Man Singh at once moved to Bhawal and defeated Usman. Many Pathans were killed, many Pathan gunboats captured and a large quantity of ammunition was seized. In the meantime, Kedar Roy revolted and joined forces with Musa Khan, son of Isa Khan, Daud Khan, son of the wazir of Qutlu Khan and some other zamindars. Man Singh, on reaching Dhaka in 1602, sent a force against the insurgents, but it could not cross the turbulent Ichhamati River despite repeated attempts. Man Singh himself went to Shahpur and crossed the river on his elephant. The Mughal cavalry followed him across. After this act of bravery, Man Singh attacked the rebels and defeated them. He chased them for a long distance. This time there was a new menace—the Mug pirates of Arakan who started cruising on the rivers near Dhaka and looting villages. Man Singh moved against them, defeated them and forced them to take shelter in their boats. Kedar Roy joined the Mugs with his navy and attacked the Mughal outposts at Srinagar. Man Singh sent a force with cannon to relieve the outpost. In a fierce battle near Bikrampur,

NSOU • GE-HI-21 245 Kedar Roy was wounded and captured, but died before he could be taken to Man Singh (1603). Many Portuguese pirates and Bengalee sailors under Kedar Roy were killed and the Arakan king was forced to return to his country. Man Singh prepared for a showdown with Usman, but the latter fled to the east beyond the Mughal's control. Thereafter peace and tranquillity returned to Bengal. On Akbar's death (1605), his son, Salim, succeeded him on the throne and assumed the name of Jahangir. Sher Afghan was at the time the faujdar of Burdwan. His wife, Meherunnisa, was reported to be a rare beauty. According to a popular belief, which is not supported by any historical evidence, Jahangir was captivated by her beauty even before her marriage and after becoming emperor wanted to possess her. It seems that with the object of making it easier for him to get her he removed Man Singh and appointed, as subedar of Bengal, a trusted man, Qutb-ud-din Khan Koka, the son of his foster-mother. Sher Afghan was accused of disloyal intentions and, in order to sort out the matter, Qutb-ud-din met Sher Afghan at Burdwan for a discussion. From an altercation they came to blows. Sher Afghan killed Qutb-ud-din and was killed by the latter's followers. Sher Afghan's widow was taken to the Mughal imperial harem at Agra and after four years she was married to Jahangir (1611). She was given the name 'Nur Jahan'. She was destined to become the real power behind the throne and go down in history as the famed Empress Nur Jahan. 6.5 Conclusion So by the time of Akbar's death (1605) most of the Bengal up to the Western Bank of Brahmaputra had come under Mughal suzerainty. The architect of this Mughal consolidation of Bengal however largely goes to the claim of Governor Man Singh Kachchawat of Rajputana. 6.6 Questions 1) What made Emperor Akbar to venture for the conquest of Bengal in 1574CE ? How did he consolidated the Mughal power in the territory in his initial campaigns ?

246 NSOU • GE-HI-21 2) What are the circumstances that led to the final battle of Rajmahal ? What was the impact of this battle ? 3) How did the Afghan Karrani dynasty of Bengal finally come to an end ? 4) Describe the military and strategic effort employed by Raja Man Singh Khacchawat for the final Mughal consolidation of the Bengal Subha. 6.7 Suggested Readings Chandra, Satish, History of Medieval India, (New Delhi : Orient Blackswan Private Ltd, 2007) Sarkar, Jadunath (ed.), A History of Bengal, Muslim Period (Vol II) (1200-1757 AD), (New Delhi : B.R. So, to maintain their hold over Bengal remained one of the vital task for the Mughal authority all through the 17 th century. 247

248 NSOU • GE-HI-21 On Akbar's death (1605), his son, Salim, succeeded him on the throne and assumed the name of Jahangir. Sher Afghan was at the time the faujdar of Burdwan and Raja Man Singh Khacchawat, the related cousin brother of Salim, was the old Subedar. 7.2 Murder of QutubuddinKoka On Akbar's death (1605), his son, Salim, succeeded him on the throne and assumed the name of Jahangir. Sher Afghan was at the time the faujdar of Burdwan. His wife, Meherunnisa, was reported to be a rare beauty. NSOU • GE-HI-21 249 7.3 Consolidation under Governor Islam Khan and Musa Khan's rebellion On June 1608, Jahangir appointed his trusted Islam Khan as the new Bengal Subedar. Islam Khan had earlier manifested his military skill during the tenure of Raja Man Singh, when the Mughal army was suppressing various insurgencies. He never personally commanded any army in battle, but was a great strategist. By 1613 when he died, Mughal administration was firmly established in Bengal. When Islam Khan joined his post, the writ of the Mughals ran only in the capital Rajmahal, a few well-guarded thanas or outposts under the faujdars and the regions immediately surrounding them. Shortly after Islam Khan arrived, the veteran Pathan warlord, Usman Khan, became active and suddenly attacked and occupied the Mughal outpost of Alapsingh. Islam Khan immediately sent an army and recovered the outpost; but this drove home Map of undivided Bengal

250 NSOU • GE-HI-21 the lesson that Mughal authority in Bengal was still shaky. He launched a systematic campaign to consolidate the Mughal hold and establish peace. His first success came with the willing submission of Raja Pratapaditya to Mughal authority. It was agreed that Pratapaditya himself would meet Islam Khan at Alaipur with his army and war equipment and join the campaign against troublesome Musa Khan. His son Sangramaditya was to stay in Islam Khan's durbar as hostage to ensure Pratapaditya's good behaviour. After the rains, Islam Khan proceeded towards lower Bengal from Rajmahal with a big army and navy and a large number of guns in big boats. Reaching Gaur, Islam Khan sent his army against the three recalcitrant zamindars in the region to the west of the Bhagirathi. Of these, Raja Hambir and Salim Khan surrendered without a fight and Shams Khan surrendered after a fortnight's battle. Islam Khan marched southwards through Murshidabad, crossed the Padma and arrived at Alaipur within the present district of Rajshahi (1609). There various Zamindars including that of Putia, Ananta, Bhaturia Bazaar and Ilahi Bux, zamindar of Alaipur surrendered. Raja Pratapaditya kept his promise and joined Islam Khan at Atrai. It was agreed that he would fight Musa Khan along with the Mughals and send a navy comprising 400 boats and that this navy under the command of his son Sangramaditya would fight along with the Mughal navy. Thus, with the joining of Raja Pratapaditya the Mughal Army, which was seriously lacking with good manpower, now became strong enough to challenge the Afghan insurgents. Islam Khan, with the main Mughal army, marched south along the Karatoya River and came to Katasgarh at the confluence of the Padma, the Dhaleshwari and the Ichhamati rivers. The Mughal navy also came up and anchored there. Musa Khan had a strong fort close to Katasgarh on the river Ichhamati, which was the main objective of the Mughal forces. The Mughals repeatedly attacked the fort, but the fort fell to them only after a long-drawn battle involving major damage. This undermined Musa's power significantly. The Mughals occupied Dhaka. From Dhaka, Islam Khan sent armies against Sripur and Bikrampur. Musa Khan, after arranging for the protection of his capital Sonargaon, collected his navy in the river Lakhya. The Mughal army stationed itself on the other bank of the river facing the enemy and stayed there for a few days before launching a night attack on Katrabhu, Musa Khan's ancestral home. Under successful command of Sangramaditya,

NSOU • GE-HI-21 251 son of Raja Pratapaditya, Katrabhu was occupied by the Mughal navy, and a few other forts also fell within a short time, one after another. Musa Khan was forced to run away, leaving Sonargaon an easy prey to the Mughal army. He took shelter on an island on the river Meghna. The zamindars who were his allies in the war deserted him and surrendered one by one to the Mughals. Only, Raja Anantamanikya, the Hindu Zamindar of Bhulua stayed loyal, and didn't deserted Musa Khan's alliance, despite being given several lucrative offers by the Mughals. So, Islam Khan sent his army against Anantamanikya. The king of Arakan came to the latter's assistance. Anantamanikya heroically fought from his fort and the Mughals failed to destroy his defense. They bribed one of the principal officers of Bhulua and, with his help, managed to undermine the defense of the fort and capture it. Anantamanikya fled to Arakan, leaving his kingdom and his possessions in the hands of the Mughals. Musa Khan realized that further insurgency would be futile and surrendered to the Mughals. Islam Khan magnanimously let him and his allies keep their territories as jagirs. Mughal soldiers were deputed to protect the jagirs. The jagirdars' own forces were disbanded and their gunboats formed a part of the Mughal navy. Musa Khan was kept under surveillance in Islam Khan's durbar. This was the end of the longest insurgency against the Mughals in Bengal.

7.4 War with Raja Pratapaditya Though Pathan resistance was not completely crushed, Islam Khan postponed further action against them and thought it more important to proceed at once to subdue Raja Pratapaditya of Jessore who had gone back on his earlier promise to join Islam Khan in his war against Musa Khan. Pratapaditya understood that the real intention of the Mughals was to wipe out the entire old leadership of Bengal and to post their puppet subordinates there. In this connection, Islam Khan then sent a large army against Pratapaditya and simultaneously another against his son-in-law, Ramachandra, king of Bakla. The navy sailed along the Padma, the Jalangi and the Ichhamati rivers and arrived at Salka (modern Tibi) situated 10 miles to the south of Bongaon near the confluence of Jamuna and Ichhamati rivers. Here Pratapaditya's eldest son, Udayaditya, was waiting with the major portion of his army, many elephants, cannon and 500 gunboats. He attacked the Mughal navy and incurred heavy losses on the Mughals. However, due to heavy shelling by the Mughal army from both banks of the Ichhamati, Udayaditya's navy could not advance far and retreated on the death of its commander Khwaja Kamal. Udayaditya escaped, leaving the greater part of his navy and ammunition in the hands of the Mughals. Meanwhile, the expedition against Bakla had also ended successfully. Its young king, Raja Ramachandra, ignoring his mother's advice to make peace with the Mughals, fought them from one of his forts for a whole week. Then the fort fell. His mother threatened to take poison unless he made peace with the Mughals. Ramachandra surrendered and was taken to Dhaka as a captive. Bakla became part of the Mughal Empire. The Mughal army marched eastwards to meet Raja Pratapaditya. Pratapaditya resisted the Mughals valiantly from his new fort at Kagarghata 5 miles to the north of his capital, Dhumghat. But after a month's resistance the fort fell to the superior generalship and tactics of the Mughals, and Pratapaditya surrendered. It was agreed that the Mughal general Ghyan Khan would himself accompany Pratapaditya to meet Islam Khan and that he would be treated respectfully. Udayaditya would also stay at Dhumghat. But, contrarily, afraid of Raja Pratapaditya's military skills and acceptance among the local masses, Islam Khan passed orders for the imprisonment of Pratapaditya and direct annexation of his kingdom, to prevent any farther insurgence. According to popular tradition, Pratapaditya (Left) Jassheswari Kali Temple built by Raja Pratapaditya at Jessore. (Right) An imaginary portrait of Raja Pratapaditya

NSOU • GE-HI-21 253 was kept confined in an iron cage at Dhaka and was being transported to Delhi when he died on the way at Benares, but there is no historical evidence for this. Bengali literature has depicted Pratapaditya as a national patriot who resisted the Mughal invaders. Pratapaditya was undoubtedly a very powerful chieftain who fought the Mughals with valor. However, his portrayal in Rabindranath Tagore's play *Bauthakuranir Haat* as a calculating, self-centred person seems more realistic. According to another popular tradition prevailing in Jaipur (Rajasthan), Man Singh defeated Pratapaditya and had the family deity, Jashoreshwari (Goddess Kali) removed to his fort at Ajmer. While the shifting of the image is probably true, there is no historical evidence of a direct encounter between Man Singh and Raja Pratapaditya. With the defeat of Raja Pratapaditya, the Mughal rule was thus firmly established in Bengal by Islam Khan.

7.5 Shifting of the capital to Dhaka Islam Khan's other important action was shifting the capital from Rajmahal to Dhaka. At that time, Rajmahal was the serving Mughal headquarter in Bengal Subha. However, the Subedar himself had been living in Dhaka city all this time. Man Singh had lived in Dhaka earlier for two years (1602-04) and had fortified it. Islam Khan built a new fort and connected it with good roads. Due to a change in the current of the Ganga, big gunboats could not go up to Rajmahal and Dhaka was strategically better situated than Rajmahal for dealing with the incursions of the Mug and Portuguese pirates and for generally controlling riverine East Bengal. It was in these circumstances that Islam Khan shifted the capital of Bengal from Rajmahal to Dhaka in April 1612 and renamed it Jahangirnagar to perpetuate the name of the emperor.

7.6 Invasion of Kamrup After Mughal authority had been well established in Bengal, Islam Khan turned his attention to Kamrup. The king of Koch Bihar had conquered the kingdom of Kamrup and a branch of the Koch Bihar royal family was at this time ruling over the independent kingdom, which extended from the Sankosh River on the west to Baranadi on the east. The reigning king, Parikshitnarayan, possessed a large army, a navy and numerous elephants. He fought with the Mughals, but was defeated and Kamrup was annexed to Bengal subah (1613). Islam Khan invaded Koch Bihar, although it was under Mughal protection, and annexed a portion of it. He also imprisoned the members of the family of the king of Susang (Mymensingh) who had earlier submitted to the Mughals. It was at the instigation of the king of Susang that he invaded Kamrup. Shortly after the annexation of Kamrup, Islam Khan died at Bhawal near Dhaka. He had shown unparalleled ability, courage and statesmanship by consolidating Mughal imperial authority over the whole of Bengal within a period of five years, thus completing a process started by Man Singh.

7.7 Governorship of Qasim Khan and Ibrahim Khan Islam Khan's younger brother, Qasim Khan, succeeded him as subedar, but he had neither the wisdom nor the competence of his elder brother. He behaved ungraciously towards his officers and the defeated kings. He broke the undertaking given by Islam Khan to the kings of Koch Bihar and Kamrup and imprisoned them. This led to revolts in both the kingdoms and these could be put down only with difficulty. An army had to be sent against Cachar's king Satrudaman who had revolted against the Mughals, but this campaign was unsuccessful, and for a long time Satrudaman maintained his independence. The zamindars of Birbhum also turned to insurgency. Qasim Khan sent an army against them, but without any success. The territory of Bhulua was ravaged by a joint attack launched by the Mug king of Arakan and the Portuguese pirate Sebastian Gonzales, who controlled Sandip (1614). Next year the king of Arakan again led an invasion, although got defeated eventually through Mughal trickery. Qasim Khan also sent an army for the conquest of Assam, but it was defeated by the Ahom king. An army sent against Chittagong also returned after sustaining defeat. All these reverses weakened the Mughal administration in Bengal during Qasim Khan's regime (1614-17). During the governorship of the next subedar, Ibrahim Khan, overall, Bengal experienced peace and tranquility and the authority and prestige of the Mughal

NSOU • GE-HI-21 255 emperor was re-established. Ibrahim Khan faced a dilemma when Prince Khurram (Shah Jahan) rebelled against his father in 1623. After his defeat by the imperial forces, the prince retreated towards Bengal, determined to carve out an independent kingdom there with the help of the sons of the old rebel Musa Khan, the king of Arakan—the perpetual enemy of the Mughals—and the Portuguese pirates. Ibrahim Khan at first hesitated to fight with the emperor's son, but when Khurram occupied Rajmahal, he felt duty-bound to resist. In the battle that followed, he was defeated and killed. Prince Khurram who occupied the capital Jahangirnagar for some time, began to rule there as an independent king (April, 1624). He had already occupied Orissa and he next occupied parts of Bihar and Awadh. He was, however, shortly afterwards defeated by an army sent by the emperor and fled towards the south (October, 1624) where he became governor of the Deccan after reconciliation with his father. On Jahangir's death in 1628, Khurram ascended the imperial throne at Delhi. 7.8 Conclusion Thus, the first half of 17 th century was an age of consolidation for the Mughals in Bengal. The territories that were achieved by Akbar and Man Singh, was successfully kept hold by their succeeding subedars. However, there were occasional challenges by the insurgencies of Musa Khan and Raja Pratapaditya. 7.9 Questions 1) How did Islam Khan consolidated the Mughal rule in Bengal? In this connection describe Musa Khan's rebellion. 2) What was the intention behind the shifting of the capital to Dhaka ? 3) Write in brief about Raja Pratapaditya's struggle to maintain his sovereignty ? How did it finally came to an end ? 4) Do you believe that Raja Pratapaditya was a "true patriot of Bengal", who tried his utmost to preserve its sovereignty from the foreign domination of the Mughals ?

258 NSOU • GE-HI-21 8.2 Conflict with the Portuguese and Ahoms of Burma Towards the beginning of Shah Jahan's reign, the Portuguese were driven away from the Hooghly port [Portuguese : Porto Piqueno] (1632). Since the time of Montserrat, both Akbar and Jahangir had given Portuguese various privileges to enjoy undisturbed maritime commerce and establish make-shift temporary settlements in Bengal. Thus, several Portuguese settlements and factories came up in Hughli, Chittagong and Satgaon. However, the Portuguese became infamous for their several coercive methods in the region. From looting merchant ships and destabilising the maritime commerce, to forceful enslavement of local people including indiscriminate conversion to Christianity, all these notorious activities to gain short term wealth, earn them the title of "Firingipirates" among the local populace. Thus, Emperor Shah Jahan in his early tenure ordered his governor Sayesta Khan to ousted the Portuguese from Various Portuguese outposts and settlements in Bengal province

NSOU • GE-HI-21 259 Bengal. The port of Hughli was occupied in 1632 and by the time of Aurangzeb's reign all the Portuguese pirates up to Chittagong port were exterminated. Many of their ships were burnt down by Mughal and local Zamindari forces. There was also a war with the Ahoms of Assam. In 1615 the Mughal army was defeated by the Ahom king. Meanwhile, there was a revolt in Kamrup on the death of King Parikshitnarayan in 1615. His younger brother, Balinarayan, took shelter with the Ahom king and this led to a long-drawn war between the Ahom kings and the Bengal subedar. Balinarayan at one stage routed the Mughal army and captured the faujdar of Kamrup, but ultimately the Mughals won, Kamrup was re-conquered and the war was ended by a treaty with the Ahom king (1638). The rivers Baranadi on the north and Asurali on the south were fixed as the boundary between Bengal and Kamrup. 8.3 The rise and fall of Shah Shuja It was a tradition among the Mughals to appoint the various members of the Imperial family as Subedars of important provinces. Shazada (prince) Muhammad Prince Shah Shuja

260 NSOU • GE-HI-21 Shah Shuja was the second son and child of the Mughal emperor Shah Jahan and his queen Mumtaz Mahal. Shah Shuja was appointed by Shah Jahan as the Subedar of Bengal and Bihar from 1641 and of Orissa from 25 July 1648 until 1661. Shah Jahan, also appointed as his deputy, the Rajput prince of Nagpur, Kunwar Raghav Singh (1616-1671). During Shuja's long and peaceful rule, trade and industry flourished in Bengal and the province became rich. He also built the official residence, Bara Katra, in the capital Dhaka. In 1658, when Emperor Shah Jahan fell seriously ill, there was a tussle among his sons Dara, Shuja, Aurangzeb and Murad, each staking his claim to the throne. In this war of succession, Aurangzeb first ganged up with Murad and defeated Dara. The emperor was kept a prisoner in Agra Fort. Shuja, who had been assured of being allowed to retain Bihar and Bengal by Aurangzeb, challenged his brother and marched towards Agra, but he was defeated by Aurangzeb's forces in the battle of Khajua (1659). The Mughal general, Mir Jumla, followed him and took possession of Dhaka (May 1660). Shuja fled to Arakan and arrived there on 26 August 1660, and were greeted at the capital, Mrauk U, with courtesy. The Arakanese king, the powerful Sanda Thudhamma, had previously agreed to provide ships for Shuja and his family to travel to Mecca, where the prince had planned to spend the remainder of his life. The half dozen camel-loads of gold and jewels that the Mughal royals had brought with them was beyond anything that had previously been seen in Arakan. But after few months where he was slain by the same Arakanese on the charge of having conspired against the king of Arakan (1661).

8.4 Mir Jumla as the new Governor and his conflict with Koch Bihar Mir Jumla was appointed subedar of Bengal (June, 1660). While Shuja had been busy fighting Aurangzeb, the king of Koch Bihar seized the opportunity to occupy Kamrup. Similarly, Gauhati was occupied by the Ahom king (March, 1659). These two kings later fell out, and the Ahom king ousted the king of Koch Bihar and took forcible possession of Kamrup (March, 1660). On taking charge of the subah, Mir Jumla sent a large force against Kamrup and Koch Bihar (1661). The king of Koch Bihar having fled, that kingdom was easily occupied. He proceeded against the Ahom king, who also ran away. His kingdom too, was occupied by Mir Jumla (March, 1662). With the outbreak of the monsoon, however, the whole country was flooded. The Mughal outposts being separated from one another, the problem of maintaining lines of communication and supply of provisions became very real. The Mughal camp was submerged, horses died of starvation and an epidemic broke out. The Ahom king took advantage of the situation and repeatedly attacked the Mughal camp. The end of the monsoon brought relief and Mir Jumla once again advanced against the Ahom king. He was, however, suddenly taken ill, and this forced him to enter into a treaty with the Ahom king and to return to Bengal with his army. He died when he was within a few miles of Dhaka (March, 1663). In the midst of the confusion, the king of Koch Bihar recovered his kingdom, though not his entire territory. Scattered pockets remained inside Mughal held territories that still owed allegiance to the Koch king. Similarly, some pockets remained inside the Koch Bihar kingdom that owed allegiance to Dhaka. Presumably, this was how the Koch Bihar enclaves started, what we called "Chitmahals" in Bengali, a pertinent territorial dispute between latter India and Bangladesh. The vexed issue could only be resolved permanently during the recent NDA regime in 2016.

8.5 Bengal under Governor Sayesta Khan (1664-88) In March 1664 Shayesta Khan joined as subedar. He governed Bengal for a period of twenty-four years. He used to live an ostentatious life with royal grandeur and kept the emperor happy by sending him huge sums of money collected by fleecing the people. A huge income was derived from the monopolies in trade that Shayesta Khan had introduced. Contemporary accounts by Englishmen speak of his avarice and he is said to have collected thirty-eight crore rupees during the first thirteen years of his rule as subedar. His daily income was said to be two lakh rupees and his expenses amounted to a lakh a day. Shayesta Khan himself never took part in battle. He spent his days in comfort in his harem, but had the instinct to choose competent officials who carried on the administration with an iron hand and also fought battles successfully. He brought Koch Bihar back to subjugation after driving away the rebel king and also put down

262 NSOU • GE-HI-21 some petty rebellions here and there. The principal event of his rule was the conquest of Chittagong, which had been occupied from about the middle of the fifteenth century by the king of Arakan and had become the main centre of the Mug and Portuguese pirates operating in collaboration. Shayesta Khan first captured the island of Sandip (November 1665) that was being used as a base by the marauders for slave trading. About this time the Mugs and the Portuguese fell out. Shayesta Khan won over the Portuguese by bribe and offer of shelter, and all the firangees of Chittagong, along with their families, took shelter in Mughal territory. With their help he conquered Chittagong (January 1666). Under orders of Aurangzeb, Chittagong was renamed Islamabad and a Mughal faujdar was posted there. Subsequently, Shayesta Khan quarreled with English merchants of Hooghly on the issue of whether the private trade of the East India Company should be exempt from customs duties as allowed to the Company's official trade by Shah Shuja. As the controversy remained unsettled, the English, in a fit of rashness, declared war on the Mughal Empire. The Mughals attacked the factory at Hooghly, forcing the English to abandon it and withdraw to their boats on the river. The English even made a foolhardy attempt to An imaginary portrait of a typical European factory settlement in Bengal

NSOU • GE-HI-21 263 seize Chittagong and eventually took shelter on the Hijli island at the mouth of the river. Negotiations succeeded in 1690 when they were allowed to restart their factory in Bengal in a new location, Calcutta. Shayesta Khan, whose rule ended in June 1688 is still remembered in Bengal. It is said that during his rule rice used to sell at five maunds a rupee. East Bengal produced an enormous quantity of rice and the price of rice is an index of the real value of the reputed daily income of two lakh rupees of Shayesta Khan. His wide popularity was also due to extensive building programmes, his pomp and grandeur, and the liberal gifts, donations and the patronage to the needy. All this largely accounted for the daily expenses of a lakh of rupees incurred by him. It is established that it was the revenue from Bengal that largely sustained the Mughal Empire. But Bengal was much more than the main source of revenue for the empire. It was also the centre for manufacture of fine luxuries such as muslin. Through its traders and entrepreneurs, Bengal took active part in maritime commerce controlled by foreigners. The reigns of latter Subedars were adorned with occasional disturbances. As for the major tenure of Ibrahim Khan's Subadari was rocked with the rebellion of Raja Shobha Singh, the Zamindar of Midnapore and Rahim Khan Pathan of Orissa. Finally the old Emperor Aurangzeb send his grandson Azim-us Shan (1697-1712) to thwart the rebellion, which he did successfully. But during the last years of Aurangzeb's tenure (1700-07), Azim us Shan, fearing a possible anarchical situation after the Emperor's death himself restored to accumulation of wealth by various illogical ways and oppressing the common people. The situation was utilized by the young aspiring dewan Murshid Quli Khan. He established good relation with the new Emperor Bahadur Shah Zaffar (1707-12) and with Delhi's consent, himself became an almost autonomous Nawab in 1717. 8.6 Conclusion On the whole, Bengal during Aurangzeb's reign was largely a period of prosperity. Although, there were occasional disturbances by Shah Shuja's fall and Ahomi and Kooch Behari incomings. Under the Mughals, it was ruled by semi autonomous Subedars including members of Imperial Family. They enjoyed relative autonomy but unlike the latter Nawabs their position wasn't hereditary. This period also marked the

264 NSOU • GE-HI-21 first conflict with the European naval powers particularly the Portuguese and the British. With the demise of Aurangzeb, the Mughal control over this once lucrative province, eventually declined. 8.7 Questions 1) Describe in brief the conflict of the Mughals with the Portuguese and the Ahoms in the middle of the 17 th century Bengal. 2) Write in brief about the rise and fall of Shah Shuja. 3) How did the Kooch Behar enclaves came into occurrence ? Describe Mir Jumla's struggle in the background. 4) Who was Saystakhan ? How did he came into conflict with various European powers in Bengal, namely the British and the Portuguese ? 5) How did Bengal became a prosperous revenue yielding territory during the 17 th century Mughal rule ? 8.8 Suggested Readings Chandra, Satish, History of Medieval India, (New Delhi : Orient Blackswan Private Ltd, 2007) Sarkar, Jadunath (ed.), A History of Bengal, Muslim Period (Vol II) (1200-1757 AD), (New Delhi : B.R. NSOU • GE-HI-21 265 Unit 9 % The Rise of Murshid Quli Khan Structure 9.0 Objective 9.1 Introduction 9.2 Initial years of Murshid Quli and his conflict with the Mughal central authority 9.3 The Revenue administration of Murshid Quli Khan 9.4 The growth of commercial economy during Murshid Quli's reign 9.5 Conclusion 9.6 Questions 9.7 Suggested Readings 9.0 Objective z The present unit will study the rise of Murshid Quli Khan in the history of Bengal. z Two basic themes will be discussed : ¾ Murshid Quli Khan's relationship with the Mughal central authority ¾ The characteristic features of the revenue administration of Murshid Quli Khan z The growth of commercial economy during the Murshid Quli Khan's rule will also be a matter of discussion. 9.1 Introduction With the death of Aurangzeb and decline of Mughal authority, several regional powers raised their heads. One such regional kingdom was Bengal; which became a semi-independent viceroyalty under its official Dewan, alias Nawab Murshid Quli Khan. However, as to historians like Sekhar Bandyopadhyay, Bengal similar to 265

266 NSOU • GE-HI-21 Awadh never officially severed their ties with the Mughal Empire. They always accepted the Mughal Emperor sitting in Delhi as their 'official overlord' and paid formal allegiance to him. But, behind the scene, in reality they exerted their full autonomous powers in matters of the statecraft. 9.2 Initial years of Murshid Quli and his conflict with the Mughal central authority Born in a Hindu Brahmin family, Murshid Quli Khan's previous name was Surya Narayan Mishra. In 1670, one Mughal noble Haji Saphi assassinated his family, took him as a slave and forcefully converted him to Islam. Later, he was recruited in the Mughal military. Eventually, Murshid Quli Khan became a trusted general of Aurangzeb who initially appointed him as the Dewan (collector of revenue) of Bengal, to streamline the huge income from the lucrative province. But with the death of Aurangzeb, Murshid Quli, started exerting his authority in every matter of the state. He was only "Dewan" in the name, but practically he became a semi- autonomous monarch. Aurangzeb's successor, Emperor Bahadur Shah, who was busy in recovering the decayed affairs of the state elsewhere, didn't wanted to go for a clash with the Bengal Dewan. In fact, Murshid Quli till then, were one of the very few provincial Dewans of the Mughals, who haven't yet stopped the revenue inflow to the Mughal Central treasury. That's why, Bahadur Shah re-appointed Murshid Quli to the post of Dewan in 1710. But things started changing with the rise of Farrukshiyar, the future Emperor (1713-19), in the court of Delhi. Farrukshiyar, a rival of Jahandar Shah, the ruling Emperor, was interested to do away with the old Mughal provincial elites and took control of the lost powers in whole of North India. In addition, relation between him and Murshid Quli in personal level was never good. Thus, few months before he ascended the throne he sent his trusted general Rashid Khan to depose Murshid Quli and took control of Bengal. But Rashid Khan along with his troops were defeated and killed by the Bengal Dewan in May 1712. Thus, Farrukshiyar had no other option but to accept the semi-suzerainty of Murshid Quli, who further consolidated his power

NSOU • GE-HI-21 267 in the province. In 1717, he founded the new city of Mukshudabad (latter day ~ Murshidabad) and transferred his capital to there from Dhaka. In 1717, Murshid Quli Khan was formerly appointed by Emperor Farrukshiyar, as the Nazim (the governor) of Bengal, Bihar and Orissa province. Thus, as to Sekhar Bandyopadhyay, with the unprecedented privilege of holding the two offices of Dewan and Nazim simultaneously, the division of power by the age old Mughal system of checks and balances, was done away with and Murshid Quli Khan became the virtual dictator of Bengal. Soon this simultaneous holding of these two official titles of Dewan and Nazim would combine to form the new post of Nawab for Murshid Quli and his successors. However, having said that, Murshid Quli Khan never formally severed his all ties with the Mughal central authority. He still accepted the Mughal crown as his titular overlord and continued to send a part of the provincial revenue (although very small in proportion) to the Mughal Imperial treasury, regularly. Indeed, as to Bandyopadhyay, that Bengal revenue, whatever little amount it be, was often the only regular income for the beleaguered Mughal Emperors in those days of financial uncertainty. But behind this little bit of former allegiance, Murshid Quli Khan enjoyed full autonomy in every affairs of Bengal province and initiated almost a dynastic rule. Indeed he was the last governor of Bengal to be 'truly' appointed by the Mughal Emperor. Murshid Quli Khan

268 NSOU • GE-HI-21 9.3 The Revenue administration of Murshid Quli Khan The pillar of Murshid Quli Khan's power was his efficient revenue administration. Even in those days of political turmoil of 18 th century, Bengal was a surplus revenue producing area. Bengal, being a fertile deltaic region, almost whole of the revenue comes from the agrarian ecosystem of the province. To harness the efficient collection of revenue, Murshid Quli Khan built up a powerful system of intermediary Zamindars. The Zamindars held sway over the peasants and their agricultural lands in their respective area and were responsible for the collecting the revenue to the Nawab. Thus, in lieu of this Zamindari system Bengal's land revenue increased by 20% between the periods 1700-22. To farther ease the collaboration, Murshid Quli encouraged the rise of few handful of big Zamindars, rather than several small ones. Indeed, by the time of his death in 1727, about 60% of total agrarian land in Bengal wrested in the hand of only fifteen powerful Zamindar families. However, behind this façade of apparent affluence, there laid an immense dark side. In order to extract the land revenue, the Zamindars and the Murshid Quli Khan administration inflicted huge oppression over the peasants. As to the words of Historian Clarke, the wealth of the Nawab and his beneficiaries were simply squeezed out of the toil and miseries of the impoverished peasants. They had to pay a huge revenue within a stipulated time. No excuses were recognized, even in times of natural famines. Else, they could be whipped, their lands could be croaked and their families could be exterminated. As a result, in many places, the peasants had to just flee from their lands and took refuge in the forests, chased by the soldiers of Nawab and Zamindars.

9.4 The growth of commercial economy during Murshid Quli's reign Apart from agrarian economy, Bengal during Murshid Quli's time also had a growing importance of trade and commerce as well as the merchant community. The Bengal made cotton and silk textiles, oil and sugar had high demand in the markets of Persia, Afghanistan and East Asia. In 18 th century, when overland routes were

NSOU • GE-HI-21 269 facing disturbance due to political chaos, the exports found a new way out through trans-oceanic commerce. Europe became a new lucrative market for Bengali goods and several European companies established their trading outposts in the province to carry out this import-export commerce. The Indian merchants were no less important in this trans-oceanic commerce. Mention may be made of powerful Hindu merchants like Umi Chand or the Armenian Khawaja Wajid. During the period of Murshid Quli Khan, about 2.3 crore of merchandise was exported out of Bengal. The Qasimbazar factory alone produced around 70 lakh rupees of silk commodities. Similar figures were recorded by the Murshidabad custom office. As a result of this economic activities cities like Dhaka, Calcutta and Qasimbazar grew in size and population. While in the other hand, such huge monetary exchanges gave rise to the emergence of powerful financing and banking communities. Mention may be made of the family of Jagat Seth, a well reliable banker for Murshid Quli Khan, who eventually became the head of the provincial treasury in 1730. Again, sometimes the constant pressure over the Zamindars, by the Murshid Quli administration to pay revenue in times, made the former to take loans from these newly emerging bankers.

270 NSOU • GE-HI-21 Thus in various steps of transactions and exchanges these banking communities provided securities and necessary investments. Not only in private sectors but this financiers also supported the state administration with necessary monetary support in lieu of loans, during emergencies. As stories suggests even during Maratha pillage, it were these bankers and financiers like Jagat Seth who provided the temporary monetary support on immediate basis to the Nawabi administration to run the state economy, despite their own losses. However, although the trade and commerce had a lucrative fortune in Bengal, the Murshid Quli Khan administration on its part never formally invested properly to develop the commercial sectors. The Nawab never took any effective steps to build up a proper navy as to provide securities to its Indian merchants from pirates and European interferences in the water route, nor did he took any proper investments to promote home the grown industries and indigenous capitalists through state patronage. As a result, the European competitors unofficially got an edge over their Indian counterparts to capture the commercial sectors of Bengal in near future.

9.5 Conclusion Thus, from the above passage it is evident, although Murshid Quli Khan never formally severed his ties with the Mughal Emperor, yet he enjoyed an almost autonomy in every matters of his statecraft in the province of Bengal. During his time the Commercial and agrarian revenue sectors flourished immensely, partly owing to his successful revenue administration, which includes the vigorous growth of the Zamindari system. However, behind this faced of apparent affluence and efficiency, there remained a dark side also.

9.6 Questions

1) Describe the rise of Murshid Quli Khan briefly. 2) Was Murshid Quli Khan an autonomous ruler ? In this connection write in detail about the various ups and down in the relation between him and the Mughal Central administration.

NSOU • GE-HI-21 271 3) Write in brief about the agrarian revenue administration of Murshid Quli Khan. 4) How was the commercial scenario of Bengal during his reign ?

272 NSOU • GE-HI-21 Unit 10 % The development of Nawabi Bengal as a Regional Power Structure 10.0 Objective 10.1 Introduction 10.2 Shujauddin Muhammad Khan (1727-39) 10.3 Alamuddwala Haidar Jung or Sarfaraz Khan (1739-40) 10.4 Alivardi Khan (1740-56) 10.5 The Maratha Invasion (1742-51) 10.6 Relation with English merchants 10.7 Conclusion 10.8 Questions 10.9 Suggested Readings 10.0 Objective z The objective of the present study is to understand the growth of a regionally oriented political authority as Nawababi rule in Bengal in the 18 th century. z The rule of Shujauddin Muhammad Khan, Sarfaraz Khan and Alivardi Khan will be discussed in detail. z Two other aspects of the Bengal's history will also be covered : $\frac{3}{4}$ The repeated Maratha invasion to Bengal $\frac{3}{4}$ Bengal's relationship with the English merchants. 10.1 Introduction The Bengal Subah was the wealthiest subah of the Mughal Empire. There were several posts under the Mughal administrative system of Bengal since Akbar's conquest in the 1500s. Nizamat (governorship) and diwani (premiership) were the 272

NSOU • GE-HI-21 273 two main branches of provincial government under the Mughals. The Subahdar was in-charge of the nizamat and had a chain of subordinate officials on the executive side, including diwans (prime ministers) responsible for revenue and legal affairs. The regional decentralization of the Mughal Empire led to the creation of numerous semi-independent strongholds in the Mughal provinces. In 1717, the Mughal Emperor Farrukhsiyar replaced the imperial viceroy of Bengal with the position of a hereditary Nawab. Murshid Quli Khan, a former prime minister, became the first Nawab. The Nawabs continued to issue coins in the name of the Mughal Emperor. But for all practical purposes, the Nawabs governed as independent monarchs. 10.2 Shujauddin Muhammad Khan (1727-39) Murshid Quli Khan had no heir. So he nominated his daughter's son Sarfaraz to the throne. But after the former's death in 1727, his son in law Shujauddin outstated his son, and himself ascended the throne of the Nawabate. Shujauddin was not so experienced administrator, so he appointed a group of principal advisers, composed of both Hindus and Muslims, to assist him in important matters of statecraft, viz. Rai-Rayihan Alamchand, an able financier, Jagat Seth the famous banker, who soon became the master of treasurer, and two Muslim officers, Alivardi Khan and his brother Haji Ahmad. As a result, during his reign merchant, bankers and Zamindars became very dominant and became symbols of local powers. As to the words of Historian, Philip Calkins, "the government of Bengal began to look more like a government by the cooperation of dominant forces in Bengal". In 1733, by a royal decree of the then Mughal Emperor Muhammad Shah Rangila, the province of Bihar was incorporated into Bengal Subha. This made Shujauddin the de-facto ruler of a large province composing Bengal, Bihar and Orissa. Like his predecessor, Shujauddin too didn't officially severed his ties with the Mughal central authority and occasionally used to send revenues to the Delhi treasury. HIS GE-HI-11 & 21-18

274 NSOU • GE-HI-21 10.3 Alamuddwala Haidar Jung or Sarfaraz Khan (1739-40) After the death of Shujauddin, his son Sarfaraz Khan ascended the throne peacefully assuming the title Alam-ud-dwala Haider Jung. But despite of this high sounding title, he was a very weak ruler with little interest in administration. Most of his times were spent in the company of alcohol or with the prostitutes in the Harem. This made him highly unpopular among the Nawabi aristocrats and Zamindars. As a result a military coup was organized in April 1740, under General Alivardi Khan with the support of those nobles and Zamindars, including Jagath Seth. They dethroned and assassinated the Nawab and thus Alivardi Khan ascended the throne. With the death of Sarfaraz, the house of Murshid Quli Khan came to an end. 10.4 Alivardi Khan (1740-56) Born in one of the cities of the Deccan in 1676, he was originally given the name Mirza Muhammad Ali. His father, Mirza Muhammad Madani, was of either foreign Arab or of Turkish descent, while his mother belonged to the Turkic Afshar tribe Jagath Seth and Nawab Shujauddin

NSOU • GE-HI-21 275 of Khorasan. In 1707, the family fell into poverty. They migrated to Cuttack in Orissa, then under the deputy-governorship of Shuja-ud-Din, finding employment with the latter. In 1728, Shuja-ud-Din promoted Muhammad Ali to Faujdar (General) of Rajmahal and entitled him as Alivardi Khan. In 1733, he was assigned as the Naib Nazim (Deputy Subahdar) of Bihar. A year later, he was titled Shuja-ul-Mulk (Hero of the country) and the rank of Paach Hazari Mansabdar (rank holder of 5000) by Nawab Shujaud-Din and returned to Azimabad. Alivardi aspired for larger authority. On 10 April 1740 in the Battle of Giria, he defeated and killed Shujaud-Din's successor, Sarfaraz Khan. Thus, he took control of Bengal and Bihar. Alivardi Khan's family was essentially foreign to Bengal and both his mother tongue and court language was Persian. As to historians like Sekhar Bandopadhyay, it was Alivardi Khan's reign, that marked the formal break with the Mughal central authority. All major appointments were now made without any formal reference of the Mughal Emperor and finally the occasional flow of revenue to Delhi was also stopped. Alivardi became the master of his own subjects and himself never wished for any formal nomination of the Mughal emperor for his own post. Alivardi Khan

276 NSOU • GE-HI-21 10.5 The Maratha Invasion (1742-51) Within a few months of his accession by the power of sword, as mentioned earlier, Rustam Jung, Nawab Shuja-ud-din's son-in-law, who was naib nazim of Orissa, challenged Alivardi Khan's rule. Alivardi defeated him in a battle at Falwari near Balasore (March 1741) and left for Murshidabad, leaving his own nephew as naib nazim of Orissa. Maratha Empire

NSOU • GE-HI-21 277 But the disgruntled Rustam Jung sought the help of General Raghoji Bhonsle, the Maratha ruler of Nagpur, and re-conquered Orissa with the help of Maratha soldiers. Alivardi returned to Orissa and again defeated Rustam Jung (December, 1741). But, having once discovered how easy it was to access the wealth of Bengal through lightning raids, the Marathas were now tempted to invade Bengal over and over. Although it is said that the Marathas plundered Bengal countryside, but essentially the main targets of the Marathas were the accumulated wealth of the ruling Zaminadars and the local Muslim generals and elites. Now, having lost their hoarded wealth the Zamindars in turn started oppressing the peasants to make up their lost revenue and the vicious cycle follows. Thus, even before Alivardi could reach Murshidabad, a Maratha cavalry under Bhaskar Pandit was sent to Bengal by Raghoji Bhonsle. It entered Burdwan through Panchet and started looting the countryside. The Marathas had been joined by Mir Habib, Rustam Jung's cunning naib, who provided them with valuable information about the countryside and with logistic support. For about ten years the specter of 'Bargi' (Martha horsemen) invasion and large-scale plundering of the countryside dominated western Bengal. Maratha horsemen would appear every year, plundering the whole territory west of the Hooghly River from Rajmahal in the north to Midnapore and Jaleswar in the south. On at least two occasions (1742 and 1745), they came up to Murshidabad and looted the capital city, including the mansions of the legendary merchant prince, Jagat Seth. Bengal had witnessed political conflicts earlier also. But for the first time now even the local power elites like Zamindars and the Muslim nobles became afraid. Whoever be the master of Bengal, these wealthy magnets would use to mould them with their hoarded wealth. But now their same wealth is in danger. Contemporary chroniclers also left vivid descriptions of the Bargi terror, their hit-and-run tactics and the helplessness of the nawab's army in effectively checking them in the face of their unwillingness to be engaged in pitched battles. Alivardi's soldiers were unable to move fast and keep pace with the speed and easy maneuverability of the Maratha horsemen who moved like the wind in any direction they chose, outflanking the Nawab's army and merrily plundering West Bengal's prosperous towns and villages. In any case, their object was not occupation but plundering. They would often do the vanishing trick before the nawab's forces came

278 NSOU • GE-HI-21 in hot pursuit. Only the Ganga–Bhagirathi River line proved an effective barrier to their movements. They crossed over to the eastern side only on a few occasions. It was the fear of Maratha attack that made the English in Calcutta dig the Maratha ditch, cutting across the only pathway in the north of Calcutta through which invasions by land were possible. Initially, when the Maratha menace appeared, Alivardi did not take it very seriously. Also, after the victory in Orissa, he had disbanded his troops temporarily. When Alivardi realized the full magnitude of the invasion, he was confused. As the Maratha way of fighting consisted of fleeing in the face of attack and then catching the enemy unawares, Alivardi's advisers counselled him to make up with the enemy, who appeared to be invincible. Bhaskar Pandit, on the advice of Mir Habib who accompanied him, went as far as Murshidabad. As Alivardi came in hot pursuit, the Maratha army withdrew after having plundered the city and taking away three lakh rupees in cash from the house of Jagat Seth. By that time, the entire territory from Malda in the north, on to Balasore, Midnapore and Orissa in the south, came under Maratha occupation. Only Murshidabad and the territory on the eastern side of river Hooghly remained in the possession of the nawab. The official pretext of the forces of Bhonsle of Nagpur led by Bhaskar Pandit was that the emperor of Delhi had promised the Maratha sovereign, King Shahu, the right to realize chauth, i.e. one-fourth, of the revenues from Bengal, Bihar and Orissa, and Shahu had assigned that right to King Raghuji Bhonsle. We have vivid description of the Bargi invasion from contemporary sources. One of the sources is the Maharashtra Purana composed by one Gangaram, of which only one canto entitled Bhaskara Parabhava has survived. It gives a somewhat ingenious explanation about the original raison d'être of Maratha invasion. Goddess Bhavani (Durga) appeared in a dream before the Maratha Emperor Shahu in Poona and asked him to rescue Bengalee Hindus from the oppression of the 'Muslim tyrant Alivardi'. It was following this that Shahu asked Raghuji Bhonsle to invade Bengal. However, in contrast, the Maratha raids equally affected both Muslims and Hindus of Bengal. Ultimately in 1751, Alivardi established contact with Peshwa Balaji Baji Rao or Nansahab I, the supreme commander of the Maratha forces. Now at that time the Peshwa's relation with Raghoji Bhonsle was not good. the Peshwa of Poona sent one of his commanders, Bala Rao Pandit, to chastise Raghuji Bhonsle and Bhaskar

NSOU • GE-HI-21 279 Pandit. Bala Rao met the nawab near Murshidabad. The nawab gave him the usual gifts of elephants, pearls, etc., and a formal alliance was entered into against Raghuji Bhonsle. The unified forces marched against Raghuji and defeated and expelled him as well as Bhaskar Pandit from Bengal. Bala Rao returned to the Deccan and the nawab also went back to Murshidabad. Alivardi was piqued. His entire objective in giving a huge sum of money to the Peshwa as a price for preventing the Marathas from disturbing Bengal had been frustrated. He had no money in his treasury and the Marathas were back to their old game. Finally, on May 1751, a formal peace treaty was signed between Alivardi and the Marthas (Raghoji and Peshwa both were signing authorities). According to this treaty ~ 1. All the territory beyond the Subarnarekha River would be under Maratha occupation and the Maratha army would never cross this river. 2. Mir Habib was to become naib nazim of Orissa, nominally under Alivardi, but paying the surplus revenue of the province to Raghuji Bhonsle for the cost of the Maratha army. 3. The nawab would give Raghuji twelve lakh rupees as chauth every year drawn from the revenue of Bengal. Peshwa Balaji Baji Rao

280 NSOU • GE-HI-21 A year after this treaty, the Marathas killed Mir Habib and formally incorporated Orissa in the dominion of Raghuji Bhonsle. The Marthas invasion led to an economic decline in Bengal. Agriculture, overland trade, home industries, etc every sector was affected. The Marthas Invasion gave the Europeans easy pretext to fortify their settlements, particularly Calcutta and Chandernagore, which was vehemently opposed by Alivardi. Those attacks, coupled with administrative and economic problems along with family problems, made the last days of Alivardi unhappy. He finally died in April 1756. 10.6 Relation with English merchants The history of English settlements in Bengal Subha dates back to 1633, when they opened up a small factory in Hariharpur near the mouth of River Mahanadi. In course of time three English factories were set up in Qasimbazar, Hughli and Balasore. Ultimately, in 1690, Job Charnock laid the foundation of Calcutta (debatable) in the erstwhile village of Sutanuti (present day Sovabazar area). From now on Calcutta would become the Eastern high command of the English merchants. We have earlier discussed how Bengal commodities like cotton and silk textiles had high demands in the foreign markets of Europe and Middle East. Now, with the decline of overland trade due to political instability in North India, the European merchants in Bengal quickly replaced the focus into trans-oceanic trade thereby increasing their profits in large scale. The sudden affluence of the English merchants irked Murshid Quli Khan who in 1713 imposed several restrictions on them and asked them to pay the same trade tax as equal to the local Indian merchants. Dissatisfied with this, the English cunningly went for a strategic solution, by sending a delegation under John Surman to the court of the then Mughal Emperor Farrukshiyar. The English delegates were well aware with the skills to win over the Emperor. Thus, by the infamous Farrukshiyar's Firman of 1717, The English were granted duty free trade in Bengal along with the right to lease 38 villages in and around Calcutta. Now Bengal was still officially under the Mughal Empire and Murshid Quli hadn't yet severed his ties with the Imperial court. So, all decrees of the Empire were

NSOU • GE-HI-21 281 theoretically valid in the province. But having said that, Murshid Quli was unofficially autonomous in all matters of his statecraft. Therefore, he accepted the duty free right of the English but didn't allowed them to lease the 38 villages and opposed the fortification of Fort William. The status quo continued during the succeeding Nawabs. The English has to occasionally pay the Nawab with precautionary fees to continue their commercial activities undisturbed. Alivardi Khan was well aware of the fact that how English and the French exerted their rival political competition in the inter-politics of Carnatic states and that they could do the same in Bengal too. So he tried to exercise some controls over them. He compared the Europeans with "hive of bees, whose honey you might reap for

96% MATCHING BLOCK 12/77

W

benefit, but if you disturbed their hive they would sting you to death."

The Marthas invasion considerably changed the scenario. In one hand the Nawabate became busy in tackling that problem, thereby giving a pretext to the Europeans to fortify their settlements while in the other hand, it completely shifted the overland trade to trans-oceanic waters. 10.7 Conclusion So the Bengal Nawabi of 18 th century was a place of occasional stability and upheavals. In one hand we find the replacement of the Murshid Quli Family with the Turko-Persian dynasty of Alivardi Khan, while in the other hand there was the horrors of Marthas Invasion and rise of Europeans. 10.8 Questions 1) Describe in brief about the rule of Nawab Shujauddinand Sarfaraz Khan. 2) Why is it said that it was during Alivardi Khan's reign, that marked the formal break with the Mughal central authority ? 3) What were the context and causes for the Marthas Invasion in Bengal ? 4) Describe the horrors of Marthas Invasion in brief ? Why did Alivardi despite his repeated efforts miserably failed to check the Marthas forces in Bengal ?

282 NSOU • GE-HI-21 5) How did the Marthas Invasion came to an end ? In this context, mention the terms of the Bengal-Marthas Treaty. 6) How was the initial relation between the Bengal Nawabi and the English merchants ? Describe in brief. 10.9 Suggested Readings

was the last independent Nawab of Bengal. The end of his reign marked the start of British East India Company rule over Bengal and later almost all of the Indian subcontinent.

Siraj's father Zain Uddin was the ruler of Bihar and his mother Amina Begum was the youngest daughter of Nawab Alivardi Khan. Since Alivardi had no son, Siraj, as his grandson, became very close to him and from his childhood was seen by many as 283

284 NSOU • GE-HI-21 successor to the throne of Murshidabad. Accordingly, he was raised at the palace, where he was given the education and training suitable for a future Nawab. Alivardi Khan in 1752 officially declared his grandson Crown Prince and successor to the throne, creating no small amount of division in the family and the royal court. 11.2 Initial challenges and Family disputes In 1750, Siraj revolted against his grandfather, Alivardi Khan, and seized Patna, but quickly surrendered and was forgiven. Latter Alivardi considered his faults and nominated him as his heir. But Shiraj's nomination ushered sevre disputes and clashes among his family members. His coronation was challenged by two rival claimant to the throne, Shaukat Jung (his cousin) and Ghaseti Begam (the eldest daughter of Alivardi and Shiraj's step mother). However, despite this opposition, Shiraj was finally coronated after Alivardi's death on 9 April 1756 at the age of eighty. Ghaseti Begum possessed huge wealth, which was the source of her influence and strength. Apprehending serious opposition from her, Siraj ud-Daulah seized her wealth from Motijheel Palace and placed her under confinement. The Nawab also made changes in high government positions giving them his own favorites. Mir Madan was appointed Bakshi (Paymaster of the army) in place of the old Mir Jafar. Mohanlal was elevated to the rank of peshkar of his Dewan Khana and he exercised great influence in the administration. These sudden alterations, automatically anguished some of the old aristocratic circles of the Murshidabad court. Eventually, Siraj suppressed Shaukat Jang, governor of Purnia, and assassinated him, an act termed by many as early signs of despotism in the young Nawab. 11.3 Early confrontation with the British and attack on Calcutta Siraj, as the direct political disciple of his grandfather, was aware of the global British interest in colonization, and hence resented the British politico-military presence in Bengal represented by the English East India Company. He was angered

from the British in June 1756. The Nawab gathered his forces together and took Fort William

also. The captives were placed in the prison cell as a temporary holding by a local commander, but there was confusion in the Indian chain of command, and the captives were left there overnight, and many died. This is called the Black Hole Tragedy. Actually, the East India Company tried their best Nawab Shiraj ud-Dwalla

286 NSOU • GE-HI-21 to propagate a false story of black hole killing among the people to raise them against Nawab Siraj ud-Daula. Sir William Meredith, during the Parliamentary inquiry into Robert Clive's actions in India, vindicated Siraj ud-Daulah of any charge surrounding the Black Hole incident. 11.4 The final conspiracy and Shiraj's last days Meanwhile in early 1757, the British attacked the French bastion of Chandannagore. The Nawab was infuriated on learning of the attack on Chandernagar. His former hatred of the British returned, but he now felt the need to strengthen himself by alliances against the British. The Nawab was plagued by fear of attack from the north by the Afghans under Ahmad Shah Durrani and from the west by the Marathas. Therefore, he could not deploy his entire force against the British for fear of being

history project 2 bop.docx (D50236412)

but when he found out about it, he threatened to betray the conspiracy if his share was not increased to three million rupees (£300,000). Hearing of this, Clive suggested an expedient to the committee. He suggested that two treaties be drawn—the real one on white paper, containing no reference to Omichund and the other on red paper, containing

Omichund's desired stipulation, to deceive him. The Members of the Committee signed on both treaties, but Admiral Watson signed only the real one and his signature had to

44%

MATCHING BLOCK 29/77

SA

history project 2 bop.docx (D50236412)

be counterfeited on the fictitious one. Both treaties and separate articles for donations to the army, navy squadron and committee were signed by Mir Jafar on 4 June.

Finally the two forces met at the battle of Plassey, where Shiraj was defeated and captured latter. It is said that in the Battle of Plassey, Siraj ud-Daulah faced off against the British, apparently with overwhelming force, but at the critical time Mir Jafar's men stood watching passively while the soldiers of Siraj ud-Daulah were decimated by the smaller but much better armed British forces. Despite serious provocation of treachery Shiraj's two most trusted generals, Mir Madan and Dewan Mohan Lal, his Hindu adviser always stood by him and attained martyrdom. It is also said that after the death of Mir Madan, Dewan Mohan Lal wanted to attack the British army rapidly and advised Siraj ud-Daulah that the decision of retreat may be fatal for the Nawab. But the Nawab was already misguided by Mir Jafar did not consider Mohanlal's opinion.

98%

MATCHING BLOCK 30/77

Siraj-ud-Daulah was executed on 2 July 1757 by Mohammad Ali Beg under orders from Mir Miran, son of Mir Jafar in Namak Haram Deorhi as part of the agreement between Mir Jafar and the British East India Company. Siraj-ud-Daulah's tomb is located at Khushbagh, Murshidabad.

It is marked with a simple but elegant one-storied mausoleum, surrounded by gardens. 11.5 Shirajud-dwala's character and the other side Although proclaimed as a freedom fighter in

100%

MATCHING BLOCK 31/77

SA

IRP Yash Battle of Plassey.docx (D97161350)

modern India, Bangladesh and Pakistan for his opposition to the

British annexation, many historians of the period report that he was cruel and his opposition to the British was not out of any nationalistic fervor, but an expression of his desire to strengthen his own

288 NSOU • GE-HI-21 power. Actually, his character appears to be painted in more positive or in less favorable color depending on who creates the portrait. On the one hand, Indian writers do not tend to claim that he was especially competent or even a very pleasant person but not do they depict him as totally corrupt, despotic and cruel, which is how the British describe him. While for the British historians, Siraj's moral character serves to a great extent as a justification for removing him from power. As a teenager, he led a reckless life, which came to the notice of his grandfather. However, keeping a promise he made to his grandfather on his death bed, he gave up gambling and drinking alcohol totally after becoming the Nawab. Several contemporary sources testifies the young Nawab to be incompetent and whimsical in his decisions. For example, replacing of rival courtaristocrats with one's own trusted generals is a normal procedure for a Nawab. But that should be done systematically one by one very cautiously, not all of a sudden like what Siraj did. Again, before replacing an old elite, one should have first testified whether the wisdom of that person could be still utilized and whether after all there is any chances of future disloyalty in them. For example, persons like Mir Jafar, or Jagt Seth were serving under the Nawabate for decades and had not initially any enmity with the new Nawab. But his sudden casual decisions of diminishing their power, made them fearful and offended against the young Nawab. Again there is a popular narrative that ShirajudDwala was "the last independent Bengali Ruler". For in its true sense, Shiraj was neither a Bengali nor an Independent ruler, at least theoretically. First of all Bengali was not his mother tongue in anyway, but that was Persian, which was his language used for all official purposes. In addition, he was of Turko-Afgan descent as regards to his parents. Again, the Nawabate of Bengal was officially still a feudal province of Mughal Empire based in Delhi. Various old Mughal laws were still applied in the state and the Nawab was always advised by various court officials in every matters of the statecraft. 11.6 Conclusion Regardless of his moral character or competency, it was the British who rebelled against and deposed the legal ruler of Bengal, not Siraj who rebelled against his

NSOU • GE-HI-21 289 sovereign (technically, Bengal was still part of the weakening Mughal Empire). There is a large literature on Siraj in Bengali, in which he is regarded more as a victim than a weak or despotic ruler. It was largely due to treachery that he failed to defeat Clive. Although the British were better trained and equipped, if the whole of Bengal's army had confronted Clive the result of Plassey may very well have been different. 11.7 Questions 1) What were the initial challenges faced by Shiraj after his coronation ? And how did he overcome them ? 2) Mention the background and impact of the Battle of Alinagar (1756). 3) What led to the battle of Plassey? In this context describe the fall of ShirajudDwalla. 4) Do you think the stories of bravery around Shirajuddwallha one sided ? Give your own analysis. 11.8 Suggested Readings

Here we will study the causes and factors behind the battle of Plassey. ¾ The learners will also be offered to investigate the Battle itself : its course and destiny. ¾ Attention will also be paid for the understanding of the aftermath and impact of the battle. 12.1 Introduction Battle of Plassey was a major turning point in modern Indian history that led to the consolidation of the British rule in India. This battle was fought between the East India Company headed by Robert Clive and the Nawab of Bengal (Siraj-Ud-Daulah) 290 NSOU • GE-HI-21 291 and his French Troop. This battle is often termed as the 'decisive event' which became the source of ultimate rule of the British in India. The battle occurred during the late reign of Mughal empire (called later Mughal Period). Mughal emperor Alamgir-II was ruling the empire when the Battle of Plassey took place. A few historians, while answering the question as to when did the British rule start in India, cite the Battle of Plassey as the source. The Battle of Plassey was a decisive victory of the British East India Company over a much larger force of the Nawab of Bengal and his French [1] allies on 23 June 1757, under the leadership of Robert Clive. The first British victory in South Asia, the battle helped the Company seize control of Bengal. Over the next hundred years, they seized control of most of Indian subcontinent, Myanmar, and Afghanistan. The battle took place at Palashi (Anglicised version: Plassey) on the banks of the Hooghly River, about 150 kilometres (93 mi) north of Calcutta and south of Murshidabad, then capital of Bengal (now in Nadia district in West Bengal).

The belligerents were Nawab Siraj-ud-Daulah, the last independent Nawab of Bengal, and

the British East India Company.

He succeeded Alivardi Khan (his maternal grandfather). Siraj-ud-Daulah had become the Nawab of Bengal the year before, and he had ordered the English to stop the extension of their fortification. Robert Clive bribed Mir Jafar, the commander-in-chief of the Nawab's army, and also promised to make him Nawab of Bengal. Clive defeated Siraj-ud-Daulah at Plassey in 1757 and captured Calcutta. 12.2 Background In April 1756, Alwardi Khan died and was succeeded by his twenty-three-year-old grandson, Siraj-ud-daulah. His personality was said to be a combination of a ferocious temper and a feeble understanding. He was particularly suspicious of the large profits made by the European companies in India. When the British and the French started improving their fortifications in anticipation of another war between them, he immediately ordered them to stop such activities as they had been done without permission. When the British refused to cease their constructions, the Nawab led a detachment of 3,000 men to surround the fort and factory of Cossimbazar and

292 NSOU • GE-HI-21 took several British officials as prisoners, before moving to Calcutta. The defences of Calcutta were weak and negligible. The garrison consisted of only 180 soldiers, 50 European volunteers, 60 European militia, 150 Armenian and Portuguese militia, 35 European artillery-men and 40 volunteers from ships and was pitted against the Nawab's force of nearly 50,000 infantry and cavalry. The city was occupied on 16 June by Siraj's force and the fort surrendered after a brief siege on 20 June. The Nawab's army and navy also plundered the city of Calcutta and the other British factories in the surrounding areas. When news of the fall of Calcutta broke in Madras on 16 August 1756, the Council immediately sent out an expeditionary force under Colonel Clive and Admiral Watson. A letter from the Council of Fort St. George, states that "the object Location of important places on the map of modern West Bengal NSOU • GE-HI-21 293 of the expedition was not merely to re-establish the British settlements in Bengal, but also to obtain ample recognition of the Company's privileges and reparation for its losses" without the risk of war. It also states that any signs of dissatisfaction and ambition among the Nawab's subjects must be supported. Clive assumed command of the land forces, consisting of 900 Europeans and 1500 sepoy while Watson commanded a naval squadron. The fleet entered the Hooghly River in December and met with the fugitives of Calcutta and the surrounding areas, including the principal Members of the Council, at the village of Falta on 15 December. The Members of Council formed a Select Committee of direction. On 29 December, the force dislodged the enemy from the fort of Budge Budge. Clive and Watson then moved against Calcutta on 2 January 1757 and the garrison of 500 men surrendered after offering a scanty resistance. With Calcutta recaptured, the Council was reinstated and a plan of action against the Nawab was prepared. The fortifications of Fort William were strengthened and a defensive position was prepared in the north-east of the city. The attack forced the Nawab into concluding the Treaty of Alinagar with the Company on 5 February, agreeing to restore the Company's factories, allow the fortification of Calcutta and restoring former privileges. The Nawab withdrew his army back to his capital, Murshidabad. Meanwhile, concerned by the approach of de Bussy to Bengal and the Seven Years' War in Europe, the Company turned its attention to the French threat in Bengal. Clive planned to capture the French town of Chandernagar, 20 miles (32 km) north of Calcutta. Clive commenced the attack on the town and fort of Chandernagar on 14 March. The French expected assistance from the Nawab's forces from Hooghly, but the governor of Hooghly, Nandkumar had been bribed to remain inactive and prevent the Nawab's reinforcement of Chandernagar. The fort was well- defended, but when Admiral Watson's squadron forced the blockade in the channel on 23 March, a fierce cannonade ensued with aid from two batteries on the shore. The naval squadron suffered greatly due to musket-fire from the fort. At 9:00 on 24 March, a flag of truce was shown by the French and by 15:00, the capitulation concluded. The Nawab was infuriated on learning of the attack on Chandernagar. His former hatred of the British returned, but he now felt the need to strengthen himself by

294 NSOU • GE-HI-21 alliances against the British. The Nawab was plagued by fear of attack from the north by the Afghans under Ahmad Shah Durrani and from the west by the Marathas. Therefore, he could not deploy his entire force against the British for fear of being

infantry of all sorts, armed with matchlocks, swords, pikes and rockets

and 20,000 cavalry, armed with swords or long spears, interspersed by 300 pieces of artillery, mostly 32, 24 and 18-pounders. The army also included a detachment of about 50 French artillerymen under de St. Frais directing their own field pieces. The French took up positions at the larger tank with four light pieces advanced by two larger pieces, within a mile of the grove. Behind them were a body of 5,000 cavalry and 7,000 infantry commanded by the Nawab's faithful general Mir Madan Khan and Diwan Mohanlal. The rest of the army numbering 45,000 formed an arc from the

small hill to a position 800 yards (730 m) east of the southern angle of the grove,

threatening to surround Clive's relatively smaller army. The right arm of their army was commanded by Rai Durlabh, the centre by Yar Lutuf Khan and the left arm closest to the British by Mir Jafar. At 8:00, the French artillery at the larger tank fired the first shot, killing one and wounding another from the grenadier company of the 39th Regiment. This, as a signal, the rest of the Nawab's artillery started a heavy and continuous fire. By 8:30,

296 NSOU • GE-HI-21 the British had lost 10 Europeans and 20 sepoys. The rate of casualties of the British dropped substantially due to the protection of the embankment. At the end of three hours, there was no substantial progress and the positions of both sides had not changed. Clive called a meeting of his staff to discuss the way ahead. It was concluded that the present position would be maintained till after nightfall, and an attack on the Nawab's camp should be attempted at midnight. Soon after the conference, a heavy rainstorm occurred. The British used tarpaulins to protect their ammunition, while the Nawab's army took no such precautions. As a result, their gunpowder got drenched and their rate of fire slackened, while Clive's artillery kept up a continuous fire. As the rain began to subside, Mir Madan Khan, assuming that the British guns were rendered ineffective by the rain, led his cavalry to a charge. However, the British countered the charge with heavy grape shot, mortally wounding Mir Madan Khan and driving back his men. Plassey battle plan

NSOU • GE-HI-21 297 Mir Jafar immediately sent word of this encounter to Clive, urging him to push forward. Following Mir Jafar's exit from the Nawab's tent, Rai Durlabh urged Siraj to withdraw his army behind the entrenchment and advised him to return to Murshidabad leaving the battle to his generals. Siraj complied with this advice and ordered the troops under Mohan Lal to retreat behind the entrenchment. He then mounted a camel and accompanied by 2,000 horsemen set out for Murshidabad. Dewan Mohan Lal advised Shiraj, not to retreat, but he didn't paid heed to him. This was the turning point of the battle. With Nawab's departure, most of his army got confused with their moral down, while the remaining bulk portion under Mir Jafar remained completely inactive. Clive launched a direct assault and within hours the British were victorious and the battle was over. 12.4 Conclusion : Aftermath and Impact In the evening of 23 June, Clive received a letter from Mir Jafar asking for a meeting with him. Clive replied that he would meet Mir Jafar at Daudpur the next morning. When Mir Jafar arrived at the British camp at Daudpur in the morning, Clive embraced him and saluted him as the Nawab of

30%

MATCHING BLOCK 44/77

SA

history project 2 bop.docx (D50236412)

Bengal, Bihar and Odisha. He then advised Mir Jafar to hasten to Murshidabad to prevent Siraj's escape and the plunder of his treasure. Mir Jafar reached Murshidabad with his troops on the evening of 24 June. Clive arrived at Murshidabad on 29 June with a guard of 200 European soldiers and 300 sepoys in the wake of rumors of a possible attempt on his life. Clive was taken to the

Nawab's palace, where he was received by

44% MATCHING BLOCK 45/77 SA history project 2 bop.docx (D50236412)

Mir Jafar and his officers. Clive placed Mir Jafar on the throne and acknowledging his position as Nawab, presented him with a plate of gold rupees. Siraj-ud-daulah had reached Murshidabad at midnight

on 23 June. He summoned a council where some advised him

41% MATCHING BLOCK 46/77 SA history project 2 bop.docx (D50236412)

to surrender to the British, some to continue the war and some to prolong his flight. At 22:00 on 24 June, Siraj disguised himself and escaped northwards on a boat with his wife and valuable jewels. His intention was to escape to Patna with aid from Jean Law. At midnight on 24 June, Mir Jafar sent

several parties in pursuit of

52% MATCHING BLOCK 47/77 SA history project 2 bop.docx (D50236412)

Siraj. On 2 July, Siraj reached Rajmahal and took shelter in a deserted garden but was soon discovered and betrayed to the local military

governor, the brother of Mir Jafar, by a man who was previously arrested and 298 NSOU • GE-HI-21 punished by Siraj. His fate could not

82% MATCHING BLOCK 48/77 SA history project 2 bop.docx (D50236412)

be decided by a council headed by Mir Jafar and was handed over to Mir Jafar's son, Miran, who had Siraj murdered that night. His

remains were paraded on the streets of Murshidabad the next morning and were buried at the tomb of Alivardi Khan. According to the treaty drawn

84% MATCHING BLOCK 49/77 SA history project 2 bop.docx (D50236412)

between the British and Mir Jafar, the British acquired all the land within the Maratha Ditch and 600 yards (550 m) beyond it and the

zamindari of all the land between Calcutta and the sea. Besides confirming the firman of 1717, the treaty also required the restitution, including donations to the navy squadron, army and committee, of 22,000,000 rupees (£2,750,000) to the British for their losses. However, since the wealth of

36% MATCHING BLOCK 50/77 SA history project 2 bop.docx (D50236412)

Siraj-ud-daulah proved to be far less than expected, a council held with the Seths and Rai Durlabh on 29 June decided that one half of the amount was to be paid immediately—two-thirds in coin and

one third in jewels and other valuables. As the council ended, it was revealed to Omichund that he would receive nothing with regard to the treaty, hearing which he went insane. As a result of the war of Plassey, the French were no longer a significant force in Bengal. In 1759, the British defeated a larger French garrison at Masulipatam, securing the Northern Circars. By 1759, Mir Jafar felt that his position as a subordinate to the British could not be tolerated. He started encouraging the Dutch to advance against the British and eject them from Bengal. In late 1759, the Dutch sent seven large ships and 1400 men from Java to Bengal under the pretext of reinforcing their Bengal settlement of Chinsura even though Britain and Holland were not officially at war. Clive, however, initiated immediate offensive operations by land and sea and defeated the much larger Dutch force on 25 November 1759 in the Battle of Chinsura. The British then deposed Mir Jafar and installed Mir Qasim as the Nawab of Bengal. The British were now the paramount European power in Bengal and the Bengal Nawabs became puppets in their hand.

In fact, the silt 303

304 NSOU • GE-HI-21 deposition by the perennial rivers makes the soil of Bengal delta one of the most fertile regions in South Asia. Hence, Agriculture is endemic to Bengal since the beginning of human civilization in this region. During the Medieval times, despite a slow and steady process of urbanization, about 90 per cent of the population of Bengal lived in its villages. Both peasants and landed elites were involved in agricultural production and claimed rights to a share of the produce. This created relationships of cooperation, competition and conflict among them. The sum of these agrarian relationships made up rural society. At the same time agencies from outside also entered into the rural world. Most important among these was the Mughal state, which derived the bulk of its income from agricultural production. It is an well established fact, that among all the Mughal Subhas, Bengal was the most prosperous in terms of agricultural output. Since the reign of Akbar, a large portion of the total agricultural revenue of the Mughals used to be supplied from Bengal's output. Agents of the state – revenue assessors, collectors, record keepers – sought to control rural society so as to ensure that cultivation took place and the state got its regular share of taxes from the produce. Let us now discuss the development of the agrarian system and its primary features in Medieval Bengal.

13.2 Early development of Agriculture in pre-Muslim Bengal

Bengal was chiefly a forested land, which was traditionally outside the periphery of mainland agrarian civilization of North India. But since the Gupta Age, land reclamation and gradual penetration of the Agrarian society into the interior heartland of the Riverine delta started in Bengal. After all the fertile region and the humid pro- cultivation climate of Bengal was bound to attract agriculturalist. However, during the Early Medieval period, particularly after the establishment of the independent Gauda kingdom under Maharaja Sasanka the expansion of agriculture in Bengal Delta received a new boost following the process of land grants or land donations. The process of Reclaiming forested lands to cultivable productive land, was now directly promoted under direct or indirect state patronage.

NSOU • GE-HI-21 305 The concept of granting lands is something new in Indian socio-politics. It is not at all mentioned in Ashokan edicts. We first came to know about the practice only from the Satvahana Age, when certain Land Grants were made by Satavahana ruler Gautamiputra Satakarni. But in this case, the king at least beheld the administrative & military rights over the granted lands & they were very few in numbers. But from the Gupta & post-Gupta period large scale land grants were began to be made to Brahmin & Political beneficiaries. These lands are called Brahmadaya lands. In this settlement created by the Royal decree, the Brahmin beneficiary holds absolute right over the donated lands. Here the lands were not only made tax-free, but more importantly the entire administrative & governing rights were also transferred to the hands of the beneficiaries. The beneficiaries obtained total rights to enjoy all the productions levied from the donated lands including realization of taxes from the peasants & artisans residing there. Thus along with the land the people living in it were also transferred from the former jurisdiction of the King to the granted beneficiaries. It is upto them to deal with the residents on their own terms, turning them to land lords. Even the Government forces would be forbidden to disturb these donated lands, without permission. Eg. In the Nalanda Land grant Inscription of Samudra Gupta or in the Khalimpur Copper Plate of Pala King Dharmapala, residents were asked by their king not only to pay the customary tax to the beneficiaries but also to obey their commands. Thus this lands became semi independent enough to rise as new source of local authority, a precursor of the later day Zamindary system in Bengal. According to Historians like D.C. Sircar, BD Chattopadhyay etc. the system of land grants led to the expansion of agricultural society in Bengal. Because in most cases the granted lands were uncultivated fallow lands or lands which were not in a position to realize revenue (particularly forests). It is now the task of the Brahmins/ grantees to make it productive. Hence it gradually led them to venture for the greater tribal diasporas of the interior. Thus, in this age we find many of the tribes were settling down as cultivators & plough agriculture was introduced in greater parts of the interior, which resulted in greater interaction between the tribal and the sedenterized Brahminical society. It was not that only the tribal societies got "Hindusized", but also several tribal elements also penetrated into the Brahminical culture. The best example among them is reflected in the rise of worship of the Jagannath cult, which HIS GE-HI-11 & 21–20

306 NSOU • GE-HI-21 clearly has tribal origins. That's why Historian B.D. Chattopadhyay argued that the major historical process of EMA is the expansion of the Agricultural state society. In Eastern India the Pala Kings used to patronize these land grants to Brahmins. Of the Khalimpur & Munger Land grants of King Devpala (810-850 CE) is the most notable ones. The tradition continued in the post-Pala Age also. The 13th century Calcutta Sahitya Parishad Copper-plate inscription denotes, the Sena ruler Vishwarupsena granting 11 plots of land to a Brahmin named Halayudh. By 13th century, Eastern India, particularly Bengal became the storehouse of Rice cultivation. Many of The Ancient literary sources like Raghubanshan of Kalidasha, Khana, Krishi Parasara, etc. described the extent & magnitude of Rice cultivation her. The region included modern day Eastern Bihar, Orissa, Bengal up to Brahmaputra Valley & Kamrup. Chinese travelers like Ma Luan or Fa Hien mentions the export of Rice from Bengal to as far as Malaysia & S.E. Asia. During the reign of Ahom Kings particularly Damodar Dev, Shankar Dev, etc. better irrigation & farming technology was introduced in Assam & rice cultivation flourished more. However mention of Rice export from Andhra is obtained since the days of Arab traveler, Ibn Khurdabaleh (9th century). The Krishi-parashar of Bengal written between 950-1100 CE. mentions the different advanced techniques for Rice cultivation. Thus, already before the establishment of Muslim Sultanate rule in Bengal, large tracts of Western Bengal had been reclaimed from forests and agrarian system has been established.

13.3 Establishment of the Muslim Sultanate and their attitude to Bengal's agrarian society

After the establishment of Turko-Muslim rule in Bengal (1206 CE), for centuries the early Turkish elites were devoid of any socio-cultural connection with vast masses of Bengali peasant population. Neither, did they have any intention to do the same. They were mainly centered in some specific urban towns like Gaud, Pandua, etc, with their only target being political consolidation & territorial extension. They considered the local non-muslim agricultural masses as 'lowborns' and had no interest in accommodating them in their cultural domain. They were simply the source of revenue for the early Turko-Muslim administration.

NSOU • GE-HI-21 307 Situation started changing from the Hussain Shahi period. Shah, who was the most important Sultan in the Turko-Afghan period, had, however, other priorities. He, like Iliyash Shah and other major Sultans, was, no doubt, keenly aware of the need to consolidate the political foundation of the Sultanate in an alien province like Bengal. However, his main concern was to strengthen the land revenue administration with the cooperation of the local Zamindars who were overwhelmingly Hindu by religion. A contradiction was emerging between the imperial authorities in Delhi and the provincial Sultans of Bengal in respect of sharing of the land revenue surplus from Bengal, which was considered to be one of the prosperous provinces of the country. Husain Shah was deeply concerned to have the steady cooperation of the Zamindars of Bengal in his thrust to sustain a kind of autonomous position in matters of land revenue administration of Bengal, which would not be subservient to the increasing demands of the imperial authorities in Delhi. Thus, during Sultanate time the agricultural output of Bengal increased rapidly and Bengal soon became one of the most lucrative territory in Sultanate India in terms of Land revenue.

13.4 The agricultural expansion during Mughal rule and the Role of Sufi saints

The processes continued during the Mughal era. The Mughals in turn situated their capital not in Gaud but deep in Dhaka, which was more interior & central to the agricultural peasant belt of deltaic Bengal. During Mughal period, more focus over agriculture grew up & the Mughal Subedars devoted special attention to farther uplift the agricultural production to increase its revenue. In fact, Bengal at that time became the highest agricultural productive state among all the Mughal subhas. This focus on agriculture paved the way for Sufi immigration & spread of Sufi mystic philosophy among the peasant society of Bengal. Concerned with the need for bringing stability to their turbulent and underdeveloped eastern frontier in Bengal, the Mughal state deliberately encouraged several good orators, clerics & philosophers, (called as "forest pioneers" by historian Atis Dasgupta) to migrate & permanently settle down into the interior agricultural heartland of Eastern Bengal. The Mughals also granted favorable or even tax-free tenures of land to these industrious individuals who were expected to clear and bring into cultivation undeveloped forest tracts. The

308 NSOU • GE-HI-21 policy was basically intended to promote the emergence of local communities that would be both economically productive and politically loyal. Now, these immigrants got permanently stationed there, build local mosques or majaras under direct or indirect state patronage & started gathering the local populace around them. Their primary function was to motivate the local population with agricultural expansion, forest clearance & farther penetration into Eastern delta. As a result, these forest pioneers started gaining local influence & their masjids & majahars became local community centers. Land management was particularly strong during the regime of Akbar (1556- 1605). His Revenue Minister Raja Todarmal formulated and implemented elaborated methods for agricultural management on a rational basis. The Mughal administration emphasized agrarian reform, which began under the Sur emperor Sher Shah Suri, the work of which Akbar adopted and furthered with more reforms. The civil administration was organized in a hierarchical manner on the basis of merit, with promotions based on performance. A major Mughal reform introduced by Akbar was a new land revenue system called Zabti system. He replaced the tribute system, previously common in India and used by Tokugawa Japan at the time, with a monetary tax system based on a uniform currency. The revenue system was biased in favour of higher value cash crops such as cotton, indigo, sugar cane, tree-crops, and opium, providing state incentives to grow cash crops, in addition to rising market demand. Under the zabti system, the Mughals also conducted extensive cadastral surveying to assess the area of land under plow cultivation, with the Mughal state encouraging greater land cultivation by offering tax-free periods to those who brought new land under cultivation. 13.5 Sources For information on agricultural conditions in medieval times one has to rely on the accounts of foreign travelers and local literature. Indeed, foreign travelers praised the fertility of Bengal soil and the state of its agriculture. For example, a Chinese account of 1349/50 stated, 'The seasons of Heaven have scattered the wealth of the Earth over this kingdom'. At about the same time Ibn Batuta visited east Bengal. He mentioned that as he travelled from Sylhet and Sonargaon by rivers for 15 days he

NSOU • GE-HI-21 309 saw on his right and left orchards, water wheels, prosperous villages and gardens, 'as if we were passing through a market'. During Shaista Khan's time Bernier came to Bengal. He noticed on both sides of the Ganges 'extremely fertile' fields producing a whole variety of crops. Apart from travelogs, official accounts like Ain-i-Akbari of Abul Fazl gives us important account of the agrarian scenario in Bengal. Abul Fazl informed us that a particular variety of rice

68%

MATCHING BLOCK 54/77

SA

Thesis Abdul Motleb Shaikh GE0578 AMU.docx (D45796027)

was 'sown and reaped three times in the same year without little injury to the crop'. 13.6

The peasants of Medieval Bengal The term with which the Indo-Persian sources of the Mughal period most frequently used to denote a peasant was raiyat. In addition, we also encounter the terms kisan or asami. Sources of the seventeenth century refer to two kinds of peasants – khud-kashta and pahi-kashta. The former were residents of the village in which they held their lands. The latter were non-resident cultivators who belonged to some other village, but cultivated lands elsewhere on a contractual basis. People became pahi-kashta either out of choice – for example, when terms of revenue in a distant village were more favorable – or out of compulsion – for example, forced by economic distress after a famine. Seldom did the average peasant of north India possess more than a pair of bullocks and two ploughs; most possessed even less. In Bengal, five acres was the upper limit of an average peasant farm; 10 acres would make one a rich asami. Cultivation was based on the principle of individual ownership. Peasant lands were bought and sold in the same way as the lands of other property owners. 13.7 The major cultivated crops Agriculture was organized around two major seasonal cycles, the kharif (autumn) and the rabi (spring). This would mean that most regions, except those terrains that were the most arid or inhospitable, produced a minimum of two crops a year (do- fasla), whereas some, where rainfall or irrigation assured a continuous supply of water, even gave three crops. This ensured an enormous variety of produce. For

310 NSOU • GE-HI-21 instance, we are told in the Ain-i-Akbari that the Mughal provinces of Bengal produced 50 varieties of rice alone. However, the focus on the cultivation of basic staples did not mean that agriculture in medieval Bengal was only for subsistence. We often come across the term jins-i kamil (literally, perfect crops) in our sources. The Mughal state also encouraged peasants to cultivate such crops as they brought in more revenue. Crops such as cotton and sugarcane were jins-i kamil par excellence. whereas Bengal was famous for its sugar. Such cash crops would also include various sorts of oilseeds (for example, mustard) and lentils. This shows how subsistence and commercial production were closely intertwined in an average peasant's holding. 13.8 The Zamindari system Our story of agrarian relations in Mughal India will not be complete without referring to a class of people in the countryside that lived off agriculture but did not participate directly in the processes of agricultural production. These were the Zamindars who were landed proprietors who also enjoyed certain social and economic privileges by virtue of their superior status in rural society. Caste was one factor that accounted for the elevated status of Zamindars; another factor was that they performed certain services (khidmat) for the state. The origin of landed tributary chiefs can be traced back to pre-Muslim Bengal as discussed in the first section. However, during the Mughal Age the Zamindari system emerged as the dominant agrarian system all across Western & interior Deltaic Bengal. As historian, WH Moreland stated that the Mughal administration brought about the special system of Watan Jaigirdars, whereby certain landed elites were given the right to enjoy their estate along with all its resources hereditarily. These Jaigirdars cannot be evicted from their lands and the Mughal state would seldom interfere in the internal affairs of their state. They enjoyed all the land revenue rights in their properties including absolute control over the peasants residing there. In return of their autonomy, they would chronologically pay a share of the revenue to Imperial treasury. However Moreland argued that the Zamindari system in particular is specially endemic to Bengal region. Bengal was a peripheral state for the Mughals. In one hand the Mughal officials were completely foreign to

NSOU • GE-HI-21 311 this Deltaic forested land, while in the other hand they had a major compulsion to expand agriculture and squeeze out the maximum revenue from this region in order to sustain their bureaucratic Empire in North India. Hence, they became more and more dependable over the tributary intermediate landed chieftains of Bengal. These chieftains enjoyed more autonomy than the watan jaigirdars and were came to be known as Zamindars. Zamindars also derived their power from the fact that they could often collect revenue on behalf of the state, a service for which they were compensated financially. Control over military resources was another source of power. Most zamindars had fortresses (qilachas) as well as an armed contingent comprising units of cavalry, artillery and infantry. More important were the slow processes of Zamindari consolidation, which are also documented in sources. These involved colonization of new lands, by transfer of rights, by order of the state and by purchase. These were the processes which perhaps permitted people belonging to the relatively "lower" castes to enter the rank of zamindars as zamindaris were bought and sold quite briskly in this period. A combination of factors also allowed the consolidation of clan- or lineage-based zamindaris. For example, the Rajputs and Jats adopted these strategies to consolidate their control over vast swathes of territory in northern India. Likewise, peasant- pastoralists (like the Sadgops) carved out powerful zamindaris in areas of central and southwestern Bengal. Zamindars spearheaded the colonization of agricultural land, and helped in settling cultivators by providing them with the means of cultivation, including cash loans. The buying and selling of zamindaris accelerated the process of monetization in the countryside. In addition, zamindars sold the produce from their milkiyat lands. There is evidence to show that zamindars often established markets (haats) to which peasants also came to sell their produce. 13.9 Conclusion Thus, our above discussion shows how Bengal became one of the most prosperous territories in respect of agricultural output during the Medieval times. Although

312 NSOU • GE-HI-21 naturally situated in the Deltaic fertile land, it was primarily covered by thick forest. The land reclamation procedure started since the Early Medieval days which received farther acceleration during the latter Sultanate and Mughal times. The Sufi saints and Zamindari establishment played major roles in this process of agricultural expansion in Bengal. 13.10 Questions 1) Describe the process of Agricultural expansion in Bengal in the pre-Muslim days. 2) What was the role of the Hussain Shahis & the Sufi saints in the expansion of the agrarian society in Bengal ? 3) Write a brief note on the development and typical features of the Zamindari system in Bengal. 4) What were the major crops cultivated in Medieval Bengal ? 5) How was the condition of peasants in a nut and shell ? 13.11 Suggested Readings

NSOU • GE-HI-21 313 Unit 14 % The economy : The Indigenous trade and role of foreign companies Structure 14.0 Objective 14.1 Introduction 14.2 Flourishment of trade and commerce during Mughal Era 14.3 Commercial economy during Murshid Quli's time 14.4 Bengal's indigenous ports 14.5 The advent of European merchants and the rise of Euro-centric trans- Oceanic commerce 14.6 Early relation between the English Merchants and Bengal Nawabate (pre-Shirajdwala period) 14.7 Conclusion 14.8 Questions 14.9 Suggested Readings 14.0 Objective z The objective of this unit is to study the role of indigenous trade as well as the role of the foreign companies in the economy of Bengal. z It will be studied that the indigenous trade flourished in the Mughal era. z The role of the Nawabs of Bengal in the development of commercial economy will also be analyzed. z The advent and impact of the EICs on the economy of Bengal will also come under discussion. 14.1 Introduction Bengal has manufactured textiles for many centuries, as recorded in ancient hand-written and printed documents. The Periplus of the Erythraean Sea mentions 313

314 NSOU • GE-HI-21 Arab and Greek merchants trading between India and the Red Sea port of Aduli (in present-day Eritrea), Egypt and Ethiopia in the second century CE. Cloths including muslin were exchanged for ivory, tortoiseshell and rhinoceros-horn at that time. Muslin was traded from Barygaza—an ancient port of India located in Gujarat—to different parts of Indian subcontinent before European merchants came to India. The Romans prized muslin highly, using bullion and gold coins to buy the material from Deccan and South India. They introduced muslin into Europe, and eventually it became very popular. A Chinese voyager, Ma Huan, wrote about five or six varieties of fine cloths after visiting Bengal in the early fifteenth century; he mentions that Bengal muslin was highly priced in China at that time. Muslin, a cotton fabric of plain weave, was hand woven in the region around Dhaka, Bengal (now Bangladesh), and exported to Europe, the Middle East, and other markets, for much of the 17th and 18th centuries. 14.2 Flourishment of trade and commerce during Mughal Era The Bengal Subah had the largest regional economy in the Mughal Empire. It was described as the paradise of nations. Fifty percent of the gross domestic product (GDP) of the empire was generated in Bengal. The region exported grains, fine cotton muslin and silk, liquors and wines, salt, ornaments, fruits, and metals. European companies set up numerous trading posts in Mughal Bengal during the 17th and 18th centuries. Dhaka was the largest city in Mughal Bengal and the commercial capital of the empire. Chittagong was the largest seaport, with maritime trade routes connecting Arakan, Indonesia, Far East, Malaya, Arabia, Middle East, Makassar, Ceylon, Bandar Abbas, Mocha and the Maldives. During Shah Shuja's long and peaceful rule, trade and industry flourished to a great extent in Bengal and the province became rich. Shayesta Khan, whose rule ended in June 1688 is still remembered in Bengal. It is said that during his rule rice used to sell at five maunds a rupee. East Bengal produced an enormous quantity of rice and the price of rice is an index of the real value of the reputed daily income of two lakh rupees of Shayesta Khan. His wide

NSOU • GE-HI-21 315 popularity was also due to extensive building programmes, his pomp and grandeur, and the liberal gifts, donations and the patronage to the needy. All this largely accounted for the daily expenses of a lakh of rupees incurred by him. It is established that it was the revenue from Bengal that largely sustained the Mughal Empire. But Bengal was much more than the main source of revenue for the empire. It was also the centre for manufacture of fine luxuries such as muslin. Through its traders and entrepreneurs, Bengal took active part in maritime commerce controlled by foreigners. Under Mughal rule, Bengal was a center of the worldwide muslin and silk trades. During the Mughal era, the most important center of cotton production was Bengal, particularly around its capital city of Dhaka, leading to muslin being called "daka" in distant markets such as Central Asia. Domestically, much of India depended on Bengali products such as rice, silks and cotton textiles. In addition, Bengal also exported cotton and silk textiles to markets such as Europe, Indonesia and Japan. Bengal produced more than 50% of textiles and around 80% of silks imported by the Dutch from Asia, for example. Overseas, Europeans depended on Bengali products Mughal nobles wearing fine Bengal muslins

316 NSOU • GE-HI-21 such as cotton textiles, silks and opium; Bengal accounted for 40% of Dutch imports from Asia, for example, including more than 50% of textiles and around 80% of silks. [7] From Bengal, saltpeter was also shipped to Europe, opium was sold in Indonesia, raw silk was exported to Japan and the Netherlands, and cotton and silk textiles were exported to Europe, Indonesia and Japan. Bengal had a large shipbuilding industry. Indrajit Ray estimates shipbuilding output of Bengal during the sixteenth and seventeenth centuries at 223,250 tons annually, compared with 23,061 tons produced in nineteen colonies in North America from 1769 to 1771. He also assesses ship repairing as very advanced in Bengal. Bengali shipbuilding was advanced compared to European shipbuilding at the time. An important innovation in shipbuilding was the introduction of a flushed deck design in Bengal rice ships, resulting in hulls that were stronger and less prone to leak than the structurally weak hulls of traditional European ships built with a stepped deck design. The British East India Company later duplicated the flushed deck and hull designs of Bengal rice ships in the 1760s, leading to significant improvements in seaworthiness and navigation for European ships during the Industrial Revolution. In the early sixteenth century, a Portuguese apothecary named Tomes Pires mentioned that Bengal muslins were traded to Thailand and China. Bengali muslin was also traded throughout the Muslim world, from the Middle East to Southeast Asia. By 1580, some Portuguese traders settled at Dhaka and Sripur, from where they started exporting muslin, cotton and silk goods to Europe and Southeast Asia. During Ottoman rule from the sixteenth century onwards, large quantities of muslin were exported to the Middle East. The Ottoman Turks were fond of Bengali muslins. In the sixteenth century, Portuguese started trading textiles from the Indian subcontinent through the Persian Gulf including high quality of muslins. In the seventeenth century, the Portuguese trade declined.

14.3 Commercial economy during Murshid Quli's time

Apart from agrarian economy, Bengal during Murshid Quli's time also had a growing importance of trade and commerce as well as the merchant community. The Bengal made cotton and silk textiles, oil and sugar had high demand in the markets

NSOU • GE-HI-21 317 of Persia, Afghanistan and East Asia. In 18th century, when overland routes were facing disturbance due to political chaos, the exports found a new way out through trans-oceanic commerce. Europe became a new lucrative market for Bengali goods and several European companies established their trading outposts in the province to carry out this import-export commerce. The Indian merchants were no less important in this trans-oceanic commerce. Mention may be made of powerful Hindu merchants like Umi Chand or the Armenian Khawaja Wajid. During the period of Murshid Quli Khan, about 2.3 crore of merchandise was exported out of Bengal. The Qasimbazar factory alone produced around 70 lakh rupees of silk commodities. Similar figures were recorded by the Murshidabad custom office. As a result of this economic activities cities like Dhaka, Calcutta and Qasimbazar grew in size and population. While in the other hand, such huge monetary exchanges gave rise to the emergence of powerful financing and banking communities. Mention may be made of the family of Jagat Seth, a well reliable banker for Murshid Quli Khan, who eventually became the head of the provincial treasury in 1730. Again, sometimes the constant pressure over the Zamindars, by the Murshid Quli administration to pay

318 NSOU • GE-HI-21 revenue in times, made the former to take loans from these newly emerging bankers. Thus in various steps of transactions and exchanges these banking communities provided securities and necessary investments. Not only in private sectors but this financiers also supported the state administration with necessary monetary support in lieu of loans, during emergencies. As stories suggests even during Maratha pillage, it were these bankers and financiers like Jagat Seth who provided the temporary monetary support on immediate basis to the Nawabi administration to run the state economy, despite their own losses. However, although the trade and commerce had a lucrative fortune in Bengal, the Murshid Quli Khan administration on its part never formally invested properly to develop the commercial sectors. The Nawab never took any effective steps to build up a proper navy as to provide securities to its Indian merchants from pirates and European interferences in the water route, nor did he took any proper investments to promote home the grown industries and indigenous capitalists through state patronage. As a result, the European competitors unofficially got an edge over their Indian counterparts to capture the commercial sectors of Bengal in near future.

14.4 Bengal's indigenous ports Till

98%**MATCHING BLOCK 53/77****W**

the middle of the 16th century, Satgaon was the most important port. According to poet Mukundaram, it used to attract so much foreign trade that the merchants of Satgaon did not have to leave their town and could earn fortune just staying home as 'the outside world came to them' for trade. As the chief mart of Bengal, Satgaon attracted merchants from different parts of India and diverse other countries. It was the chief emporium of Portuguese trade since 1537, known as 'portopiqueno'. Even in 1569 Caesar de Fredericki found Satgaon 'a remarkable faire citie' from where every year thirty or thirty-five big and small ships, laden with diverse commodities, went to various places. But the historic port of Satgaon began to decline mainly due to the silting of the river Saraswati that made navigation extremely difficult. Hence not only the Portuguese but the local traders too left Satgaon and settled in Hughli, which took the place of Satgaon as the principal port of Bengal and remained so till the middle of the 18th century. Even the inland trade was mostly diverted to Hughli, though Satgaon

NSOU • GE-HI-21 319

100%**MATCHING BLOCK 55/77****W**

remained the royal port and the seat of the governor and the imperial customs house till 1632, when Hughli took its place officially as the royal port. The Hughli port flourished with amazing rapidity under the Portuguese. It soon rose to the position of the 'richest, the most flourishing and the most populous' of the various 'bandels' or trading ports in Bengal. It became the common emporium of trade where, as Fr John Cabral wrote in 1533, the vessels of India (Portuguese India), China, Malacca and Manila repaired in great numbers. He also mentioned that not only the 'natives of the country, but also Hindustanis, the Mogols, the Persians and the Armenians came there to fetch goods'. Van Linschoten and Ralph Fitch noted Hughli's flourishing trade in the 1580s. The Ain-i-Akbari, completed in 1596-97, states that Hughli was a more important port than Satgaon. 14.5

The advent of European merchants and the rise of Euro-centric trans-Oceanic commerce The first Europeans to arrive in the coast of Bengal were the Portuguese in the latter half of 16 th century, Since, the voyage of Vasco da Gama to Calicut (1498), the Portuguese were making steady inroads in Indian trans-oceanic commercial circles. Already in the 1570s Portuguese Christian missionaries cum their royal ambassadors like Monseratte had already appeared in the Mughal court of Akbar asking for commercial favors. Since then, both Akbar and Jahangir had given Portuguese various privileges to enjoy undisturbed maritime commerce and establish make-shift temporary settlements in Bengal. Thus, several Portuguese settlements and factories came up in Hughli, Chittagong and

99%**MATCHING BLOCK 56/77****W**

Satgaon. A good idea of the extent, composition and direction of the Portuguese trade in Bengal can be gathered from Manrique, who was in Bengal during the hey-days of the Portuguese. The articles imported by them from 'southern India' (ie Sumatra, Borneo, Moluccas, etc) were a large amount of 'worked silks, such as brocades, cloth, velvets, damasks, satins, taffetas, muslins', etc. They also brought cloves, nutmegs and mace from Moluccas and Banda, and highly precious camphor from the Isles of Borneo. From the Maldive islands they imported cowris (sea shells) which were then current in Bengal as small currency, 'chanquo' or bigger shells from 320

NSOU • GE-HI-21

MATCHING BLOCK 57/77

W

Tuticorin and the coast of Tinnevelly, pepper from Malabar and cinnamon from Ceylon (Sri Lanka). They also brought from China great quantities of porcelain, valuable pearls and jewels, many kinds of gift articles such as bedsteads, tables, boxes, chests, writing desks, etc. From the kingdom of 'Salor' and 'Timor' they imported great quantities of sandalwood, both red and white varieties, which in Bengal was a precious commodity. The Portuguese exported from Bengal a wide variety of merchandise such as cotton goods, gingham made of grass, and silks of various shades as well as sugar, ghee, rice, indigo, long pepper, saltpeter, wax, lac and other articles, which were abundant in Bengal. Rice formed one of the chief articles of Portuguese export to other parts of India and the East Indies.

96%

MATCHING BLOCK 58/77

W

A rough idea of the value of the Portuguese trade in Bengal could be formed from the fact that they paid over Rs. 100,000 yearly as customs duties to the Mughals at the rate of 2.5 per cent on the value of goods exported and imported. In other words, the annual value of their trade in Bengal was around Rs. 40 lakh. So no doubt the Portuguese carried on a very lucrative trade in Bengal and almost monopolized the external as well as coastal trade, while in inland trade they were formidable competitors of the country merchants and other foreigners.

Various Portuguese outposts and settlements in Bengal province

W

But the golden days of the Portuguese trade in Bengal came to an end in 1632.

the Portuguese became infamous for their several coercive methods in the region. From looting merchant ships and destabilising the maritime commerce, to forceful enslavement of local people including indiscriminate conversion to Christianity, all these notorious activities to gain short term wealth, earn them the title of "Firingi pirates" among the local populace. Thus, Emperor Shah Jahan in his early tenure ordered his governor Sayesta Khan to ousted the Portuguese from Bengal. The port of Hughli was occupied in 1632 and by the time of Aurangzeb's reign all the Portuguese pirates up to Chittagong port were exterminated. Many of their ships were burnt down by Mughal and local Zamindari forces.

99%

MATCHING BLOCK 60/77

W

The English and the Dutch East India Companies began their Bengal trade from around the middle of the 17th century with the establishment of their factories in Hughli. The french East India Company was founded later and began its operations only in the 1680s. Among other Europeans, the Ostend Company and the Danish Companies came to Bengal only in the early 18th century and their trade was on a very modest scale. In the early period the European attention focused mainly on the spice trade and both the Dutch and English wanted to procure spice from the so-called Spice Islands in the eastern archipelago. The companies went to these islands to buy spices with silver obtained from the 'New World'. But to their utter astonishment, they found that it was not silver but cheap and coarse Indian calico that was in demand there. So they turned to India for textiles to exchange for spices in the Indonesian archipelago. First, their attention was drawn to the Coromandel Coast which produced large quantities of cheap and coarse textiles greatly in demand in the Spice Islands. But soon war, famine and political instability rendered the Coromandel trade risky, uncertain and expensive. So the companies eventually turned their attention to Bengal. Bengal offered particular advantages to the companies. It was the largest producer of coarse and cheap calicoes-much cheaper and of better quality than others. Secondly, Bengal silk was a highly lucrative and profitable commodity for the companies as there was a growing demand for it in Europe, replacing Italian and Persian silk, because of its comparative cheapness and good quality. Moreover a third lucrative item for trade was saltpeter, highly in demand in Europe and which could

HIS GE-HI-11 & 21-21
322 NSOU • GE-HI-21

MATCHING BLOCK 61/77

W

also be profitably used as ballast for Europe-bound ships. So the Companies began their Bengal trade in right earnest. It was from around the 1670s that the trade of the companies in Bengal became significant with a boost in the export of raw silk from Bengal. But it was actually the big boom in the export of Bengal textiles from around the early 1680s that revolutionized the pattern of the Asiatic trade of the companies. This was in fact in response to a revolution in the consumer taste in England and Europe where suddenly Indian textiles, especially the textiles from Bengal, had become the irresistible fashion and consequently there followed an unprecedented demand for Bengal textiles. As a result, Bengal became the most dominant partner in the Asiatic trade of the companies and from around the 1680s until the mid-eighteenth century, the Dutch and the English East India Companies played a significant role in Bengal's maritime and international trade. The French company played an important role only in the 1730s when Dupleix was in charge of the company in Bengal. The trade of other European companies was not at all significant compared to that of the Dutch and the English. It was, however, a different story after The Battle

of Plassey (1757). An imaginary portrait of a typical European factory settlement in Bengal

MATCHING BLOCK 62/77

W

The English company and its servants by virtue of their political and economic control over Bengal began to wipe out all other European and Asian rivals in the Bengal trade and tried to monopolize it for themselves. The importance of Bengal in the Asiatic trade of the companies can be seen from the fact that Bengal's share in the average annual value of Asian commodities exported to Holland by the Dutch company was around 40 percent in the early eighteenth century. Again, more than 50 percent of the total value of Dutch textile exports from Asia was in the form of Bengal textiles. Thus Bengal became the most important theatre of the activities of the Dutch company not only in India but the whole of Asia. No different was the case with the English company. The English factors regarded Bengal as 'the flower of the Company's garden' and the 'choicest jewel'. Between 1650 and 1720, the Dutch were much ahead of the English but thereafter the English trade in Bengal picked up and almost equaled the value of the Dutch exports, although the Dutch trade including the trade to their other Asian factories was still higher than that of the English. The English company's exports to Europe increased substantially from the early 1730s and picked up in the period 1740-45. 14.6

Early relation between the English Merchants and Bengal Nawabate (pre-Shirajdwala period) The history of English settlements in Bengal Subha dates back to 1633, when they opened up a small factory in Hariharpur near the mouth of River Mahanadi. In course of time three English factories were set up in Qasimbazar, Hughli and Balasore. Ultimately, in 1690, Job Charnock laid the foundation of Calcutta (debatable) in the erstwhile village of Sutanuti (present day Sovabazar area). From now on Calcutta would become the Eastern high command of the English merchants. We have earlier discussed how Bengal commodities like cotton and sil textiles had high demands in the foreign markets of Europe and Middle East. Now, with the decline of overland trade due to political instability in North India, the European 324 NSOU • GE-HI-21 merchants in Bengal quickly replaced the focus into trans-oceanic trade thereby increasing their profits in large scale. The sudden affluence of the English merchants irked Murshid Quli Khan who in 1713 imposed several restrictions on them and asked them to pay the same trade tax as equal to the local Indian merchants. Dissatisfied with this, the English cunningly went for a strategic solution, by sending a delegation under John Surman to the court of the then Mughal Emperor Farrukshiyar. The English delegates were well aware with the skills to win over the Emperor. Thus, by the infamous Farrukshiyar's Firman of 1717, The English were granted duty free trade in Bengal along with the right to lease 38 villages in and around Calcutta. Now Bengal was still officially under the Mughal Empire and Murshid Quli hadn't yet severed his ties with the Imperial court. So, all decrees of the Empire were theoretically valid in the province. But having said that, Murshid Quli was unofficially autonomous in all matters of his statecraft. Therefore, he accepted the duty free right of the English but didn't allowed them to lease the 38 villages and opposed the fortification of Fort William. The status quo continued during the succeeding Nawabs. The English has to occasionally pay the Nawab with precautionary fees to continue their commercial activities undisturbed. Alivardi Khan was well aware of the fact that how English and the French exerted their rival political competition in the inter-politics of Carnatic states and that they could do the same in Bengal too. So he tried to exercise some controls over them. He compared the Europeans with "hive of bees, whose honey you might reap for

96%

MATCHING BLOCK 64/77

W

benefit, but if you disturbed their hive they would sting you to death."

The Maratha invasion considerably changed the scenario. In one hand the Nawabate became busy in tackling that problem, thereby giving a pretext to the Europeans to fortify their settlements while in the other hand, it completely shifted the overland trade to trans-oceanic waters. 14.7 Conclusion So, on the whole Medieval Bengal had a flourishing commercial economy. Bengal's products particularly cotton textiles and muslins had high demands in the

NSOU • GE-HI-21 325 foreign markets of Europe, Middle East and Far East. About 25% of the total Asian trade was supplied from Bengal. Probably this became her sole object of dilemma. As the greed of this flourishing commercial fortunes attracted the European traders who came running to the Bengal delta thereby monopolizing the trans-oceanic trade from and to Bengal. 14.8 Questions 1) How Bengal's commercial economy flourished during Mughal era ? 2) Write a short note on Bengal's ship building industries. 3) Give a brief view on the trade and commerce scenario of Bengal during Murshid Quli Khan's era. 4) Write short notes on the ports of Satgaon and Hugli. 5) Describe the rise and fall of Portuguese in Bengal 6) How did the trans-oceanic trade to and from Bengal was monopolized by the Europeans ? Mention the role played by each European nation separately. 7) How was the relation between the early English merchants with the Bengal Nawabs in pre-Plassey period ? 14.9 Suggested Readings

Scholars working on medieval Indian History observe that with the advent of the Muslims as ruling elite, in the 13th century, remarkable changes took place in the city planning. M. Habib' a pioneer in this respect, formulated the theory of "urban revolution" which is entirely based on growth and multiplication. K.A. Nizami confirms that the immediate and the most significant effect of Turkish occupation was the liquidation of old pre-Muslim system of city planning. K.M. Ashraf while evaluating the Muslim contribution to urbanization says that, the only contribution of the new Turkish rule was addition of some infrastructural activities namely the construction of palaces, mosques, tanks to the already established Hindu towns. However with the growth of agrarian economy and revival of land and maritime trade in the earlier part of fourteenth century a visible change was seen in the urban areas of the Sultanate. Let us see how was the process of Urbanization in Medieval Bengal and what were the factors that casted their impact over this process. 15.2 Lakhnauti : A case study of the Capital and the chief trading town of Bengal Lakhnauti also known as Gaur, lie in the north of Ganges and south of the modern district of Malda in West Bengal. It was build during the pre-Muslim Hindu Sena period, presumably during the reigns of Raja Ballal Sena. For centuries it served the capital of the Senas and greatly flourished during their times. After the Turkish invasion, Lakhnauti continued to be the hub of all round activities of the Muslim rule and administration throughout the Sultanate period. It was the capital of the kingdom for a period of more than two and a half centuries, from the time of Bakhtiyar Khalji (A.D. 1206-11) to Qadr Khan (A.D. 1326-41) and again in the reign of Nasiruddin Mahmud. During the Sena period, Lakhnauti had already become a good centre of trade and commerce. That's why when Muhammad Bakhtiyar Khalji entered the city with a small number of troops (around two hundred) the people thought them to be traders. Zia-ud-din Barani refers to the market place of Lakhnauti, which was one mile in length, on each side of which the shopkeepers sold their commodities. Several foreigners resided in Lakhnauti. Some stayed there for carrying on trade while the others had joined as functionaries in the administration. Many of them settled there in search of good livelihood. It is true for any trading centers of pre-Muslim India. They were basically very accommodative and provided a good shelter for the foreign immigrants coming from the under-developed tribal regions of West and Central Asia. The Khaljis, the Isfahanis, the Sistanis, the Abyssinians and the Afghans, came to Bengal, even prior to Bakhtiyar. A large number of them settled there, held high posts, became governors and even Sultans.

328 NSOU • GE-HI-21 During the Sultanate era, the importance of Lakhnauti, as a trading centre increased. Joas de Barros, a Portuguese historian describes the streets are broad and straight and the main streets have trees planted in rows along the walls to give shade to the passengers. The population is so great and the streets so thronged with the gathering and traffic of people that they cannot force their way past one another. Verthem, another European who visited Gaur in A.D. 1508 comments that the population of the city had reached up to forty thousand and it was home to some of the richest merchants of that time. About a decade later Durate Barbosa found wealthy Arabs, Iranians, Abyssinians and Indians in Gaur. The Portuguese ambassador to Gaur in A.D. 1521 found the streets and lanes of the town are paved with brick like the Lisbon New Street. The market is everywhere and everything including food and other goods alike is in plentiful supply and cost effective. The streets and cross Some urban centers of Early Medieval Bengal

NSOU • GE-HI-21 329 lanes are so crowded that is impossible to move. The streets are well mapped out and arranged. All the arms, swords, lances, coats of mail, silver plated hauberks and plate helmets are sold in streets, which specialize in these goods. There is also a saddlery, which sells horse, harnessing and in another street all colors of fabric such as silk and other cloth can be found. The above description shows that Lakhnauti remained a big urban centre under the Bengal Sultans at least till the time of Ghiyas-ud-din Mahmud Shah VI, the last ruler of the Husain Shahi dynasty. It would not appear unreasonable to call it a metropolitan city because what Delhi was to north India Lakhnauti was to Bengal.

15.3 Cultural cause : Role of the Sufi mystic order There were cultural reasons that contributed to growth of towns with limited commercial activities as the immigrant Muslims particularly the Sufis began to construct mosques, Khanqahs, Dargahs, and Madarasas. The Religious settlements of Sufi order were one of the important factors that led to the rise of some urban centers like Lakhnauti. Sunargaon. Satgaon, Chatgaon oi Chittagong, Pandua or Firuzabad. In Islam Mosques, Madarasas and Khanqah's (hospices) play important roles. Their existence indicates compact conglomeration of inhabitants. The Jami or congregational mosque requires a fixed settlement with a permanent population, of whom at least forty legally responsible men must be present to make the ceremony valid. Tabaqat-i-Nasiri credits Muhammad Bakhtiyar Khalji for constructing mosques, Madrasas and Khanqahs. This is supported by an Inscription given in the preface of an Arabic version of Sanskrit book on the science of yoga entitled Amrit Kund written by an early thirteenth century Kamrup's philosopher named Bhojar Brahmin, who witnessed a Friday mosque at Lakhnauti during the time of Ali MardanKhalji. It is epigraphically established that not less than a dozen Jami mosques were built alone in Lakhnauti from the time of Shamsuddin Yusuf Shah to Ghiyasuddin Mahmud Shah (1533-8). Sunargaon was also an important urban centre during the Sultanate period. The city of Sunargaon or Subarnagrama now falls in the NaryanganJ subdivision of

330 NSOU • GE-HI-21 Dhaka, the capital of Bangladesh. In the first half century of the Sultanate rule Sunargaon is nowhere mentioned. Sunargaon was for the first time mentioned by Zia- ud-din Barani in Tarikh-i-Firoz Shahi in the context of Balban's pursuit of Mughis- ud-din Tughril who revohed against the former. At that time, Sunargoan was ruled by a Hindu King, Danuj Rai, probably a descendant of Damodaradeva of the Deva dynasty, which disposed the Sena dynasty in Vikrampur. There are ample evidences to establish that Danuj Rai accepted the over lordship of Balban and paid tribute to him, to his son Bughra Khan and to the other rulers of Lakhnauti. But Sunargaon did not become an integral part of the kingdom or a seat of government till the end of

NSOU • GE-HI-21 331 the thirteenth century. It was Shamsuddin Firuz Shah (1301-16), who completed the conquest of Sunargaon and made it a seat of his kingdom in 1302 CE. However, Sunargaon soon became a centre of learning and an abode for the Sufis especially in the 13 th and 14 th century. Many Sufis thronged there in the beginning of the last quarter of the thirteenth century, most likely after Balban's departure from Bengal. During this time, Shaikh Abu Tawwama, the great medieval Sufi visited the Sonargaon and settled there permanently." He established there a Madrasa, that is an academy for the students and a monastery for his disciples and maintained them till his death, A.H.700 (A.D. 1300-1). He was accompanied by Hazrat Sharaf-ud-din Yahya Maneri (A.H.661-782) the famous Sufi of Bihar who stayed at Sunargaon for about twenty two years and studied Tafsir, Hadis, and Jurisprudence and other branches of Islamic learning under the able guidance of Abu Tawwama. Hou-Hien in 1415, writes that inSunargram all the bazaars and shops were well arranged. Sunargaon continued to be a centre of learning for a long period, at least till the time of Husain Shahi dynasty. As a result of this Sufi connection the urban population of Sunargaon increased considerably. Sources tend to suggest that all these Khanqahas and Madrasas i.e. educational institutions were surrounded by well-qualified people and as such the population around them was very dense. As a result of this dense population a well-planned bazaar (market or shopping centers) got established in the city for buying and selling essentials. The factors related to the cultural aspect reflect the penetration of the Muslims in the city and. thus, contributed to the process of urbanization. 15.4 The minting towns To flourish the Business transaction it is necessary to have an organized coinage and currency system. On the eve of the foundation of the Sultanate rule, Bengal did not have a fully organized currency. Sultanate of Bengal instituted an organized currency system, their coinage was based on the principle of bi-metalism, i.e. gold and silver. In later times, some copper pieces were also issued. So whenever the Sultanate rulers incorporate any region into their territory, they issued commemorative coins and established a new center of mint in that place which resulted in the development of a town.

332 NSOU • GE-HI-21 With the capture of the capital at Lakhnauti, Muhammad Bakhtiyar Khalji established a mint house there. Numismatic evidence shows that Lakhnauti continued to issue coins up to the time of Ghiyasuddin Azam Shah (1389-1410 A.D.) The city of Pandua became a mint town in 1342 A D. during the reign of Ala-ud-din Alam Shah (1338-1342 CE) and continued minting coins till the time of Rukn-uddin Barbak Shah (1459-1474). Sunargaon started minting coins from 1305 CE and continued till the time of Sikandar Shah (1358-1389 CE). Satgaon became a mint town during the time of Muhammad bin Tughlaq in 1329 CE, and had the unbroken continuation up to 1428 CE.' The mINT not only produced coined money but the very existence of its office enlivened the towns from official point of view. It is certain that the Bengal rulers issued these gold coins occasionally to commemorate an event. They were not issued to facilitate trade or commerce. E.g. Bakhtiyar Khalji issued coins on the occasion of conquest of Gauda.

59% MATCHING BLOCK 66/77

SA Thesis Abdul Motleb Shaikh GE0578 AMU.docx (D45796027)

Alauddin Hussain Shah issued gold coins at the time of his victory over Kamrup, Kamta, Jainagar and Orissa. Besides, gold coins were

also minted to recognize the sovereignty of the Sultans of Delhi. Coins of Ghiyas-ud-din Iwaz are the best example of such types of coins. Apparently these coins has nothing to do with commercial activities. Neither was there any urge among the early Bengal Muslim rulers to utilize this monetary currency to facilitate commercial activities. Trade although flourished but that was mostly on its own and not for any direct patronage of the Sultans. However, there were instances when these

100% MATCHING BLOCK 67/77

SA Thesis Abdul Motleb Shaikh GE0578 AMU.docx (D45796027)

gold coins were given as presents to the Sultans of Delhi as well as to the envoys of the foreign countries.

During the later part of Ilyas Shahi dynasty, as many as twenty mint towns existed. Out of twenty. Fizuzabad, Klannatabad. Satgaon, Fatehabad, Muazzamabad and Chatgaon continued from earlier while Khalifatabad (Bagerghat in Khulna district), Sitpur or Shantipur (in Nadia district), Barbakabad (in modern Dinajpur district) and Muhmmadabad (tentatively identified with modern Murshidabad) were new establishments. So we can say that the as a result of such establishment of Mint house at any place by the Sultans, people started to assemble there and the new towns emerged with dense population. This was followed by the development of well-arranged market or Bazaars having all the essentials for the people. All of this coupled together

NSOU • GE-HI-21 333 and led to the creation of urban centers. The establishment of mint towns evolved in such a way that it paved the way for urbanization. It could also be said that the foundation of a considerable number of such mint towns indicate the automatic revival of Bengal's trade and commerce and the consequent

SA

Thesis Abdul Motleb Shaikh GE0578 AMU.docx
(D45796027)

establishment of her connection with the different parts of the world. Thus the

introduction of money economy partly brought about a second phase of urbanization in Medieval Bengal. 15.5 Trade and Commerce Last but not the least is the role of trade and commerce behind the process of urbanization. Account of the foreign travelers and a large number of numismatic evidences suggest that by the beginning of 14 th century, trade and commerce received a new impulse. The information found in the Tahaqali-Nasiri that the invading troops under Bakhtiyar Khalji were mistaken to be the party of horse traders by the inhabitants of Nadia and that all the Tanghan horses which reached Lakhnauti were brought from the cattle market of Karpattan (presumably modern Kathmandu) through the well known route of Mahamhaidarah. This may shed light on the existence of a brisk overland trade in pre Sultanate period. But during the first century (i.e. the thirteenth century) of the Sultanate rule this impulse was negligible. This was mainly due to political instability as well as non- existence of a standard currency system. There were occasional rivalry and bloodshed between the Muslim Turkish Iqtadars that hampered the peace and stability of the region. Again, the governors and a few rebels who turned independent Sultans issued coins but the purpose of the issuance of such coins was limited, they were the insignia of sovereignty. It was from the dawn of the fourteenth century when the political situation stabilized from the time of Shamsuddin Firuz Shah (1301-16 CE). It is thus from the beginning of the fourteenth century that a new dimension in internal as well as external trade is visible. Almost all the agricultural and non-agricultural products have been sold and purchased in the markets for local consumption. While discussing the prices and cheapness of commodities Ibn Battuta has mentioned that, the demands of certain articles like rice, sugar and cloth. He also refers to ghee, sesame oil and rose water, were so high, that were not exported but 334 NSOU • GE-HI-21 were sold locally. Evidence shows that there were regular markets in Lakhnauti, Sunargaon. Pandua and Satgaon. While mentioning the crafts of Bengal, the Chinese accounts narrate, that

77%

MATCHING BLOCK 69/77

SA

Thesis Abdul Motleb Shaikh GE0578 AMU.docx
(D45796027)

all kinds of artisans who were skilled in hundred types of crafts, gathered in the market and possessed different shops there. The

Chinese visitor Hou-hien who came to Bengal in 1415 CE has mentioned Sunargaon bazaars where business in all kinds of goods was carried out. He has also referred to the bazaars

100%

MATCHING BLOCK 70/77

SA

(D45796027)

of Pandua where the shops were arranged side by side.

As a result of this enhanced commercial activities, several market towns rose up in different places of Bengal, that attracted more settlements surrounding it, facilitating the process of urbanization. Qashba or smaller towns established links between the city markets and countryside. The term Qashba has been found in some coins and Inscriptions such as Qashba Ghiyaspur, Qashba Firuzabad, etc. The city markets exclusively depended on the surplus produce of the rural areas and the Qashba ensured or facilitated the supply of surplus produce to the city markets. Cowries or small shells largely served the purpose of small money in local trade. In international scenario, It is fairly certain that Bengal was enjoying much prominence as a centre of textile. Cotton production was in large scale and the local merchants generally made it into finished goods. Bengal had developed trade and cultural relations with Indonesian and Malay Peninsula during the period under review. Evidence has been found in the *Ejaz-i-Khusrau*, written by Amir Khusrau, that the town where the big markets existed became a busy flourishing commercial centre during the Sultanate period. Amir Khusrau, while describing the cheapness and availability of different items, such as slaves and cattles, wearing apparels, books, fruits, prayer carpets, etc., highlights the too much overcrowding in Bazars. The information recorded in the early 15th century Chinese accounts suggests that all goods were collected and distributed at Sonargaon and Pandua. It further indicates that rural communities raised their products in nearby towns where from the traders and dealers used to procure and assemble them in the nearby capital city or port city for their further disbursement to different towns and cities.

NSOU • GE-HI-21 335 15.6 Conclusion From our above discussion, we can conclude that towns and cities existed in Bengal since the pre-Muslim period. However, during the Sultanate period, particularly since the beginning of 14th century CE, the process of urbanization received a new boost. Several factors like the arrival of Sufi mystic orders, establishment of minting towns and the growth of trade and commerce were responsible behind this. Among the famous urban centers of Medieval Bengal, Lakhnauti, Pandua, Sunargaon and Satgaon deserve special mention. 15.7 Questions 1) What were the factors leading to urbanization in Medieval Bengal ? 2) Write a short note on Lakhnauti, the capital of Bengal. 3) What was the role of Sufi saints behind the process of urbanization ? 4) How did trade and commerce facilitate the rise of urban centers in Medieval Bengal ? Describe with examples. 15.8 Suggested Readings Alam, Md. 336 NSOU • GE-HI-21 Unit 16 % Society and Literature : An Overview Structure 16.0 Objective 16.1 Introduction 16.2 Pre-Chaitaniya period (1350-1500 CE) 16.3 Chaitaniya era (1500-1700 CE) 16.4 Conclusion 16.5 Questions 16.6 Suggested Readings 16.0 Objective z The objective of this unit is to understand the development of literature in medieval Bengal. z Two major aspects will be covered : $\frac{3}{4}$ The development of literature in Bengal in Pre-Chaitaniya era. $\frac{3}{4}$ The development of literature in Chaitaniya era z All the major trends of the Bengal literature during the medieval period will be covered in this unit. 16.1 Introduction Bengali Literature dates back to almost 8th century CE. It may be divided into three main periods : ancient, medieval, and modern. The different periods may be dated as follows : Ancient period from 700-1200 CE, medieval period from 1200-1800 CE, and the modern period from 1800 onwards. The medieval period may again be divided into three periods : Early Medieval also known as the period of transition from 1200-1350 CE; High Medieval from 1350-1700 CE, including the pre-Chaitanya 336

NSOU • GE-HI-21 337 period from 1350-1500 CE and the Chaitaniya period from 1500-1700 CE; and late medieval from 1700-1800 CE. In our following passage we will mainly focus on the Bengali literary traditions of the High Medieval Period, which roughly corresponds to the Muslim Rule in Medieval Bengal. 16.2 Pre-Chaitaniya period (1350-1500 CE) During this period, Bengali literature developed in three main areas : Vaishnava literature, Mangala literature and translation literature. This period also saw the beginning of Muslim Bengali literature in the form of romantic and narrative poems. The greatest of Vaishnava writers was the poet Baru Chandidas (14th century) who rendered Jaydev's Sanskrit lyrics about Radha and Krishna into Bengali. The names of several poets who went by the name of Chandidas have been found in the middle Ages viz. Adi Chandidas, Kavi Chandidas, Dvija Chandidas and Dina Chandidas. The confusion about whether there were one or several poets called Chandidas is known in Bengali literature as the 'Chandidas riddle'. Chandidas has been credited with over a thousand lyrics. The introduction to srikrnakirtan edited by Basantaranjan Ray Vidvadvallabh and published in 1916 by bangiya sahitya parisat mentions the name of Baru Chandidas. He was perhaps the original Chandidas who composed verses in 1350. The patronage provided by the Muslim rulers, particularly Sultan Alauddin Hussein Shah, his son Nasrat Shah and commander-in-chief, Paragal Khan, in promoting Bengali literature is specially noteworthy. The 45-year rule of the Hussein Shah dynasty (1493-1538) in Bengal not only led to political, social and cultural prosperity, but also nurtured Bengali Language and literature. It was during the rule of Hussein Shah that some Bengali poets began composing lyrics in Brajabuli. It was also during his rule that Kanka wrote Vidyasundar Kahini in praise of satyapir (c 1502). Padavali or lyrical literature were based on the story of Radha and Krishna and were written by innumerable poets, Hindu and Muslim, including some women HIS GE-HI-11 & 21—22

338 NSOU • GE-HI-21 poets. Among the padavali poets were Chandidas, Lochandas, Govindadas, Raysekhar, Sasisekhar, Balaram Das, Narottam Das, Narahari Das and Radhamohan Thakur. 'Translated literature Maladhar Basu composed Srikrishnavijay, a free translation of the Sanskrit Srimadbhagavata. The poem is also known as Govindamangal or Govindavijay and is believed to be the earliest translation work in Bengali. Several poets translated the Sanskrit Bhagavata, Ramayana and Mahabharata into Bengali during this period. krtivas ojha (15th century) was the first to translate the Ramayana into Bengali. He was followed by several other poets. In the 17th century, Chandravati, daughter of Dwija Bansidas, the composer of Manasamangal, wrote Ramayanagatha. The first Bengali version of the Mahabharata was possibly Kavindra Parameshwar's Mahabharata or Kavindra Mahabharata (1525). Sanjay and Srikar Nandi also wrote versions of the Mahabharata. Popularly, the most important Bengali Mahabharata was, however, composed by Kashiram Das around 1602-10. It is probable, however, that other poets also contributed towards the final version that was printed at Serampore Press in 1801-3. Because of its refined language and feelings of devotion, this version became more popular than other Bengali versions. Mangalkavya The oldest of the extant mangalkavyas is Manasamangal, by Vijay Gupta, composed perhaps in 1494-95. According to the bhanita, or signature piece, Vijay Gupta was a resident of the village of Fullasri in barisal. Vijay Gupta's contemporary, Bipradas Piplai, also wrote a poem titled Manasavijay (c 1494). Another version of Manasamangal is Narayan Dev's Padmapurana. These narrative lyrics describe the greatness of the gods and goddesses, but also provide vivid pictures of a land oppressed on the one hand by kings and on the other by floods, famines, epidemics, snakes, and tigers. Another important genre of mangalkavya is Chandimangal. Its first composer, Manik Datta, perhaps belonged to the pre- Chaitanya era. He was followed by the poet Madhavacharya towards the end of the 16th century. Two other famous poets of Chandimangal were Mukundaram Chakrovorty and Dvija Madhav. In the context of Muslim Bengail literature, the poems written by Muslims during the Middle Ages can be divided into 6 groups: narrative poems (based on Muslim and Indian stories), religious poems, poems on cultural links, dirges, poems on astrology and poems on musicology. The greatest contribution of the Muslims to Bengali literature during this period was, however, the introduction of narrative and

NSOU • GE-HI-21 339 romantic poems, many of them being free translations or adaptations of Arabic or Persian romances. Shah Muhammad Sagir (c 1400) was one of the earliest of the Bengali Muslim poets. Though his work Yusuf-Zulekha (a romantic couplet) contains no signature piece identifying him, he is generally regarded as being from East Bengal as copies of his poems have been found in the Chittagong-Comilla-Tripura region. Other epic poets include Jainuddin, Muzammil, Sheikh Faizullah, Daulat Uzir Bahram Khan. Jainuddin became famous with *Rasulbijay*, his only epic. Muzammil became famous mainly for his three poetic works : *Nitisastravarta*, *Sayatnama* and *Khanjancharita*. Donagazi's *Saifulmuluk Badiuzzamal* (mid-16th century) is written in simple language and reveals the influence of Prakrit. Sheikh Faizullah occupies an important place among the Muslim poets of the medieval period with *Goraksavijay*, *Gazivijay*, *Satyapir* (1575), *ZainaberChautisa* and *Ragnama*. *Goraksavijay*, which is based on Kavindra's poem, is in two parts. Part one describes how Gorakhnath rescued his guru, Minanath, while part two describes the ascetic life of King Gopichandra. *ZainaberChautisa* narrates the sad story of Karbala in the form of Zainab's lament. Daulat Uzir Bahram Khan's only extant work, *Laila-Majnu*, evidently composed between 1560 and 1575, is a thematic translation of the Persian poet Zami's *Laily- Majnu*. Several Muslim poets were influenced by Vaishnavism, among them Chand Kazi (15th century), and Afzal Ali (17th century). Chand Kazi was the Kazi of Nabadwip under Sultan Hussein Shah (1493-1519) when Vaishnavism spread to Nabadwip. Afzal Ali's *Nasihhatnama* is composed in the Vaishnava style. Other medieval Muslim poets include SYED SULTAN (c 1550-1648,) Sheikh Paran (c 1550-1615, *Nurnama*, *Nasihhatnama*), Haji Muhammad (c 1550-1620, *Nur Jamal*, *Suratnama*), Nasrullah Khan (c 1560-1625, *Musar Sawwal*, *Shariatnama*, *Hidayitul Islam*), Muhammad Khan (c 1580-1650, *Satya-Kali-Vivad-Sambad*, *HanifarLadai*, *MaktulHusein*), Syed Martuza (c 1590-1662, *Yog-Kalandar*, *padavali*), Sheikh Muttalib (c 1595-1660, *Kifayitul-Musallin*), Mir Muhammad Shafi (c 1559-1630, *Nurnama*, *Nurkandil*, *Sayatnama*) and Abdul Hakim (c 1620-1690, *Lalmati-Sayfulmuluk*, ' *Nurnama*). Poets who composed between 1600 and 1757 include Nawaj Khan, Qamar Ali, Mabgal (Chand), Abdul Nabi, Muhammad Fasih, Fakir Garibullah, 340 NSOU • GE-HI-21 Muhammad Yakub, Sheikh Mansur, Muhammad Uzir Ali, Sheikh Sadi and HeyatMamud. Syed Sultan's *Nabibamsa*, Muhammad Khan's *MaktulHusein* and SkChand's *Rasulbijay* are known as Islamic Puranas. 16.3

Chaitaniya era (1500-1700 CE) Chaitanyadev not only introduced the Gaudiya school of Vaishnavism in Bengal, but also inspired a powerful group of writers to write biographies about him, among them Govindadas Karmakar's *Govindadaser Kadacha*, Jayananda's *Chaitanyamangal* (end of the 16th century), Brndabandas' *Chaitanyabhagavat* (1573), Lochandas' (1523-1589) *Chaitanyamangal* and Krsihnadas Kaviraja's *chaitanyacharitamrta* (1615). Several other biographies were also written about Chaitanyadev's followers including Narahari Chakravarti's *Bhaktiratnakar* (biographies of Chaitanya followers) Nityananda Das Premavilas (biographies of Srinivas, Narottam and Syamananda) and Isan Nagar's *Advaitaprakas* (1568-69). *Chaitanyacharitamrtais* considered to be the best biography of Chaitanyadev. This scholarly book contains his life story, his philosophy and devotion, all expressed in simple language. *Jayananda's Chaitanyamangal* contains many interesting facts of the period, for example, how the Hindus were learning Persian and wearing Muslim outfits. In the socio-cultural context, Alauddin Hussain Shah is known to be the Akbar of Bengal. As stated earlier, within short time of his coronation, he stopped the recruitment of Ethiopians in government positions, to prevent any farther Abyssinians upsurge. Rather, taking an unusual liberal attitude all the posts were from then thrown open to Hindus and Muslims alike according to their ability. As a result, during his time, a large number of Bengali Hindus were recruited among the plum positions of the administration. Thus, his principal secretaries, the royal physicians, the master of the mint, along with various chiefs of his bodyguards were all Hindus. The two famous Vaishanava brothers Rupa Goshwami and Santan Goshwami enjoyed high positions among his court officials. Rupa Goswami was the Sakar Mallik, Sanatana Goswami was the Dabir-i-Khas, Jagai and Madhai were Kotwals of Navadvipa, Gopinath Vasu was his minister, Mukundadas was his private physician, Keshav Khan Chhatri was the chief of his bodyguards and one Anup was in charge of the mint. The Hindus in return honored him with the esteemed titles of Nripati

NSOU • GE-HI-21 341 Tilak (Crown of Kings) and Jagat Bhusan (Adornment of the Universe), as mentioned by Vijaya Gupta. Beside this, Sultan Alauddin Hussain Shah was also a great patron of Bengali Literature. He patronized the learning and flourishment of the Bengali language and pioneered many Bengali literaturists of his time like Vijay Gupta, Shrikara Nandi, etc. The Muslim foreigners started adapting Bengali customs and culture while the Bengali Hindus in turn learned Persians to secure high positions in the administration. However, contrary sources suggest that he was not very liberal towards the Hindus. Not only did he destroyed many Hindu idols in the wars of Assam and South East, but oppression of Hindus was also widespread during his times, though he himself may not have been directly responsible for it, and often turned a blind eye to those practices. It is also to be noted that during his time, a large number of Hindus converted to Islam to gain positions and social advantage. In this connection, it is worthy to mention that the famous Vaishnava saint Chaitaniya Mahaprabhu flourished in Bengal during Alauddin's time. But due to some reason or other, he was forced to leave Bengal, his homeland and took refuge in the neighboring kingdom of Orissa under Gajapati ruler Pratprudradeva. Bengali literature in Arakan : Towards the end of the Middle Ages, there was considerable cultivation of Bengali literature in the independent and semi-independent states on the borders of Bengal. Arakan became a tributary state of Gaud in 1430. For the subsequent 200 years the rulers of Arakan patronised Bengali language and literature. Among those who wrote poetry in Bengali under the patronage of the Arakan court was Daulat Qazi (about 1600-1638) whose Satimayna O Lorchandrani was the first Bengali romance. Daulat Qazi was unable to complete the poem which was later completed by Syed Alawal (c 1607-1680). Apart from Padmavat, believed to be his finest poem, Alawal also wrote Saifulmulk Badiuzzamal, a Bengali rendering of a Persian narrative about the romance of prince Saifulmulk and the fairy princess Badiuzzamal. Arakan's other poets include Maradan (about 1600-1645) who wrote Nasirnama, and QuareshiMagan Thakur who wrote Chandravati, a fairy-tale narrative. 16.4 Conclusion Therefore, we can conclude that the literary traditions in Bengal were deep routed. Already lots of works were done in the pre Chaitaniya period. After 1500 CE 342 NSOU • GE-HI-21 it received new boost from the upcoming Vaishnava Bhakti literatures influenced by Chaitaniyadev's philosophy. 16.5 Questions 1) Describe the literary traditions of Medieval Bengal in the pre-1500 CE period. 2) How does the appearance of Chaitanyadev influenced the Bengal literary tradition in the post-1500 scenario ? 3) Who was called Nripati Tilak and what was his contribution in this context ? 16.6 Suggested Readings

Muslims ruled Bengal for approximately five and a half centuries beginning 345

346 NSOU • GE-HI-21 with Ikhtiyar al-Din Muhammad Bakhtiyar Khilji's (military general of Qutb Uddin Aibak of Turkic origin) arrival in 1206 CE until the East India Company's take over in 1757 by defeating Nawab Sirajud-Daulah. The Medieval Bengal (1206-1757 CE) is not present Bangladesh and the West Bengal of India only, it also included parts of Tripura, Bihar, Assam, and Orissa where Bengali is the mother tongue. In the context of religion, for centuries Bengal hosted the culture of various sects and communities. Although Medieval Bengal occasionally witnessed both Religious oppressions and religious tolerance simultaneously, but on the whole it is argued by various scholars that Medieval Bengal had given its own indigenous taste to all the thriving religions in its territory. That is to say, that all the religions that grew up in Bengal delta be it Hinduism, Islam or Buddhism, undergrew its own Bengal-centric version which was quite different from the same practiced elsewhere particularly in the heartland North India. Let us discuss the development of various religious tradition found in Medieval Bengal.

17.2 The pre-Muslim Sahajiyā sect of Hinduism in Bengal Due to its peculiar Geographical location, the Bengal delta always happens to be at outside the frontier of the orthodox Brahminical Hinduism prevailing in North India. Hence in Bengal there developed a more liberal heterogeneous version of religious philosophy which can be called the Sahajiyā sect of Hinduism. The Sahajiyā sadhana or religious tradition was brought into focus through philosophical formulation of the Buddhist Sahajiyās at the popular level under the Pala rule in Bengal during the period from the 8th century to the 11th century. It continued in the Sena period too. The Sahajiyās would proceed in a direction opposite to what was advocated by sectarian scholastic scriptures. They would avoid all forms of institutional religion in which the natural piety of the soul was overshadowed by the useless paraphernalia of ritualism and pedantry. The ultimate object of the 'reverse' journey of the Sahajiyās was to return to one's own self, which was 'sahaja' or inborn in nature. This approximation to one's real self was fundamentally based on the method of self-realization. In this context, it is worthy to mention that, the Bauls emerged from this earlier Sahajiyā background and NSOU • GE-HI-21 347 enriched the movement with their own 'nirguna' characteristics, which would subsequently provide a crucial element for discourse with the incoming Sufis of Islam. Thus, long before the coming of Islam, the Bengal society had developed a non-orthodox variant of Hinduism that became popular among its countryside local populace. The culture and the philosophical base of its society was thus quite different from the caste based orthodox Hinduism prevalent in mainland North India. Therefore, this clears the ground for the future acceptance of Sufi liberal philosophy among the Bengali masses. It is also worthy to mention one thing here, that there is a concept among some historians that frustrated by the casteist oppression from the Brahminical sections, the lower classes of Hindus latter converted in mass during the Islamic period. But it should be better pointed out that orthodox casteism and caste based oppression as such was never prevalent in Bengal delta as it was elsewhere. From the very beginning, the Hindu community in Bengal was more accommodative and affiliated to liberalized philosophy of Hinduism rather than the conservative one prevalent in North or Western India. So conversion due to caste based oppression in Hindu society was basically out of question in Medieval Bengal. Jor Temple at Bishnupur (Left); Intrinsic terracotta curvings in the Temples of Mallabhum (Right)

17.3 The Hindu states in the midst of Muslim Sultanates in Bengal In the midst of the Muslim rule in Medieval Bengal, there were several Hindu states established in and around Bengal during the medieval and early modern

348 NSOU • GE-HI-21 periods, whose history are very little discussed. These local kingdoms, which maintained a symbiotic relationship with the ground level peasant population, contributed a lot to the economic and cultural landscape of Bengal. Extensive land reclamation in forested and marshy areas were carried out and intrastate trade as well as commerce were highly encouraged. These kingdoms also helped introduce new music, painting, dancing and sculpture into Bengali art-forms as well as many temples were constructed during this period. Militarily, they served as bulwarks against Portuguese and Burmese attacks. These states includes the principalities of Maharaja Pratapaditya of Jessore, Raja Sitaram Ray of Burdwan, Raja Krishnachandra Roy of Nadia Raj and Kingdom of Mallabhum. The Kingdom of Bhurshut was a medieval Hindu kingdom spread across what is now Howrah and Hooghly in the Indian state of West Bengal. Maharaja Rudranarayan consolidated the dynasty and expanded the kingdom and converted it into one of the most powerful Hindu kingdom of the time. His wife Maharani Bhavashankari defeated the Pathan resurgence in Bengal and her reign brought power, prosperity and grandeur to Bhurishrestha Kingdom. Their son, Maharaja Pratapnarayan, patronized literature, art, trade and commerce, as well as welfare of his subjects. Afterwards, Maharaja Naranarayan maintained the integrity and sovereignty of the kingdom by diplomatically averting the occupation of the kingdom by the Mughal forces. The Koch Bihar Kingdom in the Northern Bengal flourished during the period of 16th and the 17th centuries as well as weathered the Mughals and survived till the advent of the British. The Mallas of Mallabhum deserves special mention for their contribution in the development of the peculiar Bishnupur style of Terracotta Hindu Temples like Jor Temple, Radha Madhab Temple, Shyam Ray Temple, etc. 17.4 The foreign immigrant Muslim population After the establishment of Turko-Muslim rule in Bengal (1206 CE), The Muslim population in Bengal comprises two composite identities—the immigrant Muslims and the converted Muslims. The Muslim immigrants are mainly Arabs, Persians, Turks, Mughals, and Afghans. The converted Muslims are from the local Hindu and Buddhist populations. During the eighth century, when the growth of Islam reached India, it expanded to Bengal. The conquest of Nadia, the capital of the last Sena

NSOU • GE-HI-21 349 empire of Bengal, by Ikhtiyaruddin Muhammad Bakhtiyar Khalji opened the gate of Bengal for Muslim immigrants mentions that from the time of Bakhtiyar Khalji, the number of immigrant Muslims increased. Muslims of different nationalities entered Bengal as administrators, soldiers, preachers, teachers, traders, physicians, artisans, masons, and fortune seekers.

From the beginning of the 13th century to the middle of the 18th century,

whenever the Muslims held political power in Bengal, as to historian A Ahmed, they were mainly from "Turko-Afghan, Abyssinian, Mughal, and Persian origins". Later on, many other immigrants from Central Asia and upper India settled in Bengal. During the Turkish Sultanate, a considerable number of the Turks settled in Bengal. They were a major element of the Muslim immigrants of Bengal and had a notable contribution toward the socio-cultural development of Muslims in Bengal. After the establishment of Turko-Muslim rule in Bengal (1206 CE), for centuries the early Turkish elites were devoid of any socio-cultural connection with vast masses of Bengali peasant population. Neither, did they have any intention to do the same. They were mainly centered in some specific urban towns like Gaud, Pandua, etc, with their only target being political consolidation and territorial extension. They considered the local non-muslim agricultural masses as 'lowborns' and had no interest in accommodating them in their cultural domain. They were simply the source of revenue for the early Turko-Muslim administration. 17.5 Arrival of Sufism in the Bengali countryside and spread of Islam Situation started changing from the Hussain Shahi period. Shah, who was the most important Sultan in the Turko-Afghan period, had, however, other priorities. He, like Iliyash Shah and other major Sultans, was, no doubt, keenly aware of the need to consolidate the political foundation of the Sultanate in an alien province like Bengal. However, his main concern was to strengthen the land revenue administration with the cooperation of the local Zamindars who were overwhelmingly Hindu by religion. A contradiction was emerging between the imperial authorities in Delhi and the provincial Sultans of Bengal in respect of sharing of the land revenue surplus

350 NSOU • GE-HI-21 from Bengal, which was considered to be one of the prosperous provinces of the country. Husain Shah was deeply concerned to have the steady cooperation of the Zamindars of Bengal in his thrust to sustain a kind of autonomous position in matters of land revenue administration of Bengal, which would not be subservient to the increasing demands of the imperial authorities in Delhi. In this crucial context, Husain Shah was not at all inclined to hurt the religious sensibilities of the Hindu Zamindars of the province. However, it was also true that Husain Shah responded to the requests of the orthodox Ashraf clerics to some extent. Thus, he extended his cooperation to build mosques and Madrasas, patronized Islamic scholars, gave support to Islamic religious endowments, and appointed qazis or Islamic judicial officers. Thus from Hussain Shahi period the Bengal Sultanate gradually started penetrating its domain into the interior countryside of Bengal and among its subaltern non-Muslim peasant population. The processes continued during the Mughal era. The Mughals in turn situated their capital not in Gaud but deep in Dhaka, which was more interior and central to the agricultural peasant belt of deltaic Bengal. During Mughal period, more focus over agriculture grew up and the Mughal Subedars devoted special attention to farther uplift the agricultural production to increase its revenue. In fact, Bengal at that time became the highest agricultural productive state among all the Mughal subhas. This focus on agriculture paved the way for Sufi immigration and spread of Sufi mystic philosophy among the peasant society of Bengal. Concerned with the need for bringing stability to their turbulent and underdeveloped eastern frontier in Bengal, the Mughal state deliberately encouraged several good orators, clerics and philosophers, (called as "forest pioneers" by historian Atis Dasgupta) to migrate and permanently settle down into the interior agricultural heartland of Eastern Bengal. The Mughals also granted favorable or even tax-free tenures of land to these industrious individuals who were expected to clear and bring into cultivation undeveloped forest tracts. The policy was basically intended to promote the emergence of local communities that would be both economically productive and politically loyal. Now, these immigrants got permanently stationed there, build local mosques or majaras under direct or indirect state patronage and started gathering the local populace around them. Their primary function was to motivate the local population with agricultural expansion, forest clearance and farther penetration into Eastern delta. As a result, these forest NSOU • GE-HI-21 351 pioneers started gaining local influence and their masjids and majahars became local community centers. Now as they developed their popularity among local peasant population, side by side, these new settlers also started preaching the philosophical ideas of Sufism and the mystic form of Islam among these non-Muslim village populations. Now the minds of these population was still fresh and tender, since until then, they were living beyond the peripheries of any establish Hindu religion. The only popular cult prevailing among them was the Sahajiya version of Hinduism. So it became easy for those forest pioneers cum new Islamic immigrant clerics to mould their mind and attract them to the Sufi mystic form of Islam. It is worthy to mention here was what they were preaching were not the political form of mainstream orthodox Islam, but a more moderate form of Sufi Islam, whose mystic values were very close to the liberal Sahajiya version of Hinduism with whom the local peasant populace were so long familiar with. Thus, these forest pioneers or agriculture promoters soon rose as the new Sufi saints or Pirbabas for the local village centric peasant masses of Eastern Bengal.

17.6 Relation between the Muslim Sultanates and Hindu subjects

During the Sultanate period, the majority populations of India were still Hindus while having the long leadership period by many Muslims in the region, which indicates that non-Muslims had religious freedom, and they were not forced by the Muslim rulers to accept Islam (Eaton, 1993). In their administration, sultans appointed many non-Muslims. O'Connell (2011) mentions that although the rulers were Muslims, their non-Muslim subjects were illustrious in learned professions, business, and revenue collection. Many of them held key positions in the government. Zami and Lorea (2016) argued that this policy of inclusion of Hindus in the administration process resulted in the development of powerful landlord (zamindar) system among the Hindus. The reign of Alauddin Husain Shah (1494-1519 CE) is regarded as a golden period in Bengal for his liberalism and tolerance toward the Hindus, where he allowed many vital positions to be led by Hindus. In addition, Alauddin Husain

352 NSOU • GE-HI-21 Shah's wazir (prime minister) was a Hindu. Also, Rupa and Sanatana Goshwami (two Hindu brothers) assumed the position of dahir-i-khas (the Sultan's secretary) and sakarmalik (state minister) respectively during his reign. However, having mentioned these examples there was also a contrasting side to this approach. Time and again the Muslim Sultans were criticized for their certain religious intolerance. In this connection, the oldest theory of Islamization in India, which Eaton called 'the Religion of the Sword theory', stresses the role of military force in the diffusion of Islam in India and elsewhere. The theory actually proposed the view that the ancestors of native Muslim population of Bengal were forced to convert to Islam owing to tremendous oppression by the Muslim army and the Muslim administration during the medieval ages. Indeed the Turkish invasion of 13th century under Bakhtiyar Khalji brought about an era of mass murder, genocide and oppression among the indigenous population of Bengal. Owing to superior military skills, the Muslim invaders could easily dominate large tracts of Bengal delta. Cities were plundered, villages (mostly of peasants) were looted along with large scale genocide and sexual exploitation. The trend continued in some scale during the latter Mameluk, Hussain Shahi and Iliyash Shahi Sultanates. Sometimes local Hindu Temples were destroyed and Idols were desecrated by Sultanate armies just to destroy the emotional moral of the native indigenous non-Muslim population. Along with it several taxes including Jijya was imposed and economic exploitation continued. As a result, large numbers of non-Muslim population converted to Islam in order to escape farther human slaughter and genocide. As for instance, historian Dulal Bhowmik (2007) asserts the Muslim rulers not only destroyed Hindu temples but also built mosques with temple-stones. He mentions that stones carved with the Hindu gods and goddesses were used in building the Zafar Khan mosque, the tomb of Sultan Jalaluddin at Eklakhi, etc. Sometimes mosques were allegedly built over pre-existing destroyed Hindu Temples. As for example, the Adina Mosque in Malda was allegedly built at the same place after destroying the magnificent Adinath Shiva Temple of the Pala-Sena period. Distinct architectural and archaeological features of a pre-existing non Islamic (Hindu) religious structure is still clearly visible in the walls of Adina Mosque.

NSOU • GE-HI-21 353 17.7 Conclusion Thus, Medieval Bengal developed as a convergent point of different religions. Although the region simultaneously witnessed both Religious oppressions and religious tolerance, but on the whole it is argued by various scholars that Medieval Bengal had given its own indigenous taste to all the thriving religions in its territory. That is to say, that all the religions that grew up in Bengal delta be it Hinduism, Islam or Buddhism, undergrew its own Bengal-centric version which was quite different from the same practiced elsewhere particularly in the heartland North India. 17.8 Questions 1) Describe in brief the different religious traditions visible in Medieval Bengal ? 2) How the process of agricultural expansion facilitated the spread of Sufism in Bengal, particularly during the Mughal period ? Was it linked to a religious process or chiefly an economic one ? 3) What were the importance of the intermediate Hindu kingdoms that developed in the midst of Sultanate rule in Bengal ? 4) Describe in brief about the early Muslim immigrants in Bengal. Why did they failed to attach themselves with the bulk of peasant masses in the beginning ? 5) How was the relation between the Hindu subjects and the Muslim Sultanates on the whole in Medieval Bengal ? 17.9 Suggested Readings Bhowmik, Dulal, State, religion and Culture: Hinduism. 356 NSOU • GE-HI-21 18.1 Introduction The questions relating to the initial identity of the Bengal Muslims in the formative period during the tenure of the Turk-Afghan and the Mughal rulers have stimulated renewed interest among the historians over the last two decades. Among them, the research work of Rafiuddin Ahmed and Richard Eaton on the Bengal Muslims, deserves special mention. Their pioneering work, however, did not deal with the philosophic domain of religious discourse, which was taking shape in Bengal between the Sahajiya syncretistic tradition and Sufism of Islam during the period from the 13 th century to the 17 th century. In our following article, rather than plain description, we will rather deal with the chronological process that led to the development of the peculiar Bengal centric Sufi traditions in the light of Muslim rule in Bengal. 18.2 The pre-Muslim Sahajiya sect of Hinduism in Bengal Due to its peculiar Geographical location, the Bengal delta always happens to be at outside the frontier of the orthodox Brahminical Hinduism prevailing in North India. Hence in Bengal there developed a more liberal heterogeneous version of religious philosophy which can be called the Sahajiya sect of Hinduism. The Sahajiya sadhana or religious tradition was brought into focus through philosophical formulation of the Buddhist Sahajiyas at the popular level under the Pala rule in Bengal during the period from the 8th century to the 11th century. It continued in the Sena period too. The Sahajiyas would proceed in a direction opposite to what was advocated by sectarian scholastic scriptures. They would avoid all forms of institutional religion in which the natural piety of the soul was overshadowed by the useless paraphernalia of ritualism and pedantry. The ultimate object of the 'reverse' journey of the Sahajiyas was to return to one's own self, which was 'sahaja' or inborn in nature. This approximation to one's real self was fundamentally based on the method of self-realization. In this context, it is worthy to mention that, the Bauls emerged from this earlier Sahajiya background and

NSOU • GE-HI-21 357 enriched the movement with their own 'nirguna' characteristics, which would subsequently provide a crucial element for discourse with the incoming Sufis of Islam. Thus, long before the coming of Islam, the Bengal society had developed a non- orthodox variant of Hinduism that became popular among its countryside local populace. The culture and the philosophical base of its society was thus quiet different from the caste based orthodox Hinduism prevalent in mainland North India. Therefore, this clears the ground for the future acceptance of Sufi liberal philosophy among the Bengali masses. It is also worthy to mention one thing here, that there is concept among some historians that frustrated by the casteist oppression from the Brahminical sections, the lower classes of Hindus latter converted in mass during the Islamic period. But it should be better pointed out that orthodox casteism and caste based oppression as such was never prevalent in Bengal delta as it was elsewhere. From the very beginning the Hindu community in Bengal was more accommodative and affiliated to liberalized philosophy of Hinduism rather than the conservative one. 18.3 Early Muslim rule and its indifference to countryside populace of Bengal The Sena dynasty was mostly ousted in the first decade of the 13 th century by the Turk-Afghan invaders. The important Muslim groups, who accompanied the Turkish chieftains, consisted of long distance traders, administrators, leaders of imperial corps, orthodox mullahs and maulavis. These immigrants of foreign blood, coming across the Khyber, who sought to adopt Perso-Islamic life style and cultivate Arabic and Persian literature, were denoted as Ashraf Muslim aristocratic classes. Though they were minority in the midst of the vast majority of non-Muslim population in the 13th Century Bengal, the Ashraf classes began to hold crucial political and administrative positions in the new ruling hierarchy. Their major goal was to consolidate their own political power under the Sultan or the provincial ruler in a territory which was almost entirely non-Muslim. The orthodox mullahs and maulavis, belonging to the Ashraf classes, tried to prevail on the Sultans to build up a religious infrastructure, which could expedite the process of political consolidation.

358 NSOU • GE-HI-21 Although there were some forms of forced conversion in the early period, but overall they were mostly limited to few areas and on few non-Muslim classes. The foreign Turkish Muslims largely were devoid of any connections with the vast countryside local non-Muslim populace of Bengal who were chiefly agriculturist. Neither have they any interest to do so. They were exclusively centered in certain urban centers like Gaur, Pandua, Satgaon, Sonargaon, etc. and their chief target was political consolidation and forceful extraction of revenues from bigger landed intermediaries. Moreover, these early Turkish elites Muslims were highly racists. They considered the local non-muslim population of villages to be 'low borns' and 'outcastes'. Thus to preserve the 'purity' of their Islamic race they had no intention to welcome them to their religion and even if they converted out of military oppression they could hardly attain the same socio-economic status similar to the Turko-Persian ruling classes. Thus, in the early eras of Muslim rule (particularly during the Ilyash Shahi and Abyssinian rule), political Islam hadn't yet penetrated into the lower level of peasant population in Bengal.

18.4 Renewed interest into agricultural countryside from Hussain Shahi period Situation started changing from the Hussain Shahi period. Shah, who was the most important Sultan in the Turko-Afghan period, had, however, other priorities. He, like Ilyash Shah and other major Sultans, was, no doubt, keenly aware of the need to consolidate the political foundation of the Sultanate in an alien province like Bengal. However, his main concern was to strengthen the land revenue administration with the cooperation of the local Zamindars who were overwhelmingly Hindu by religion. A contradiction was emerging between the imperial authorities in Delhi and the provincial Sultans of Bengal in respect of sharing of the land revenue surplus from Bengal, which was considered to be one of the prosperous provinces of the country. Husain Shah was deeply concerned to have the steady cooperation of the Zamindars of Bengal in his thrust to sustain a kind of autonomous position in matters of land revenue administration of Bengal, which would not be subservient to the increasing demands of the imperial authorities in Delhi. In this crucial context, Husain Shah was not at all inclined to hurt the religious sensibilities of the Hindu

NSOU • GE-HI-21 359 Zamindars of the province. It should be noted that he cordially inducted Rupa and Sanatan Goswami, the two eminent Vaishnava scholars, to take charge of the highly responsible positions in land revenue administration of Bengal. It was also true that Husain Shah responded to the requests of the orthodox Ashraf clerics to some extent. Thus, he extended his cooperation to build mosques and Madrasas, patronized Islamic scholars, gave support to Islamic religious endowments, and appointed qazis or Islamic judicial officers. Thus from Hussain Shahi period the Bengal Sultanate gradually started penetrating its domain into the interior countryside of Bengal and among its subaltern non-Muslim peasant population. The processes continued during the Mughal era. The Mughals in turn situated their capital not in Gaud but deep in Dhaka, which was more interior and central to the agricultural peasant belt of deltaic Bengal. During Mughal period, more focus over agriculture grew up and the Mughal Subedars devoted special attention to farther uplift the agricultural production to increase its revenue. In fact, Bengal at that time became the highest agricultural productive state among all the Mughal subhas.

18.5 Arrival of Sufi mystic order in the Bengali countryside This focus on agriculture paved the way for Sufi immigration and spread of Sufi mystic philosophy among the peasant society of Bengal. Concerned with the need for bringing stability to their turbulent and underdeveloped eastern frontier in Bengal, the Mughal state deliberately encouraged several good orators, clerics and philosophers, (called as "forest pioneers" by historian Atis Dasgupta) to migrate and permanently settle down into the interior agricultural heartland of Eastern Bengal. The Mughals also granted favorable or even tax-free tenures of land to these industrious individuals who were expected to clear and bring into cultivation undeveloped forest tracts. The policy was basically intended to promote the emergence of local communities that would be both economically productive and politically loyal. Now, these immigrants got permanently stationed there, build local mosques or majaras under direct or indirect state patronage and started gathering the local populace around them. Their primary function was to motivate the local population with agricultural expansion,

360 NSOU • GE-HI-21 forest clearance and farther penetration into Eastern delta. As a result, these forest pioneers started gaining local influence and their masjids and majahars became local community centers. Now as they developed their popularity among local peasant population, side by side, these new settlers also started preaching the philosophical ideas of Sufism and the mystic form of Islam among these non-Muslim village populations. Now the minds of these population was still fresh and tender, since until then, they were living beyond the peripheries of any establish Hindu religion. The only popular cult prevailing among them was the Sahajiya version of Hinduism. So it became easy for those forest pioneers cum newIslamic immigrant clerics to mould their mind and attract them to the Sufi mystic form of Islam. It is worthy to mention here was what they were preaching were not the political form of mainstream orthodoxIslam, but a more moderate form of Sufi Islam, whose mystic values were very close to the liberalSahajiya version of Hinduism with whom the local peasant populace were so long familiar with. Thus, these forest pioneers or agriculture promoters soon rose as the new Sufi saints or Pirbabas for the local village centric peasant masses of Eastern Bengal. The state played decisive roles in this religious development of the region, as one of the conditions for obtaining a grant for these settlers was to build on the land a mosque, to be supported in perpetuity out of the wealth produced on site. Grants authorizing the establishment of mosques or shrines thus tended to integrate such communities into an Islamic-ordered cultural universe. These Sufi Mosques or shrines thus became the major component of the newly constructed religious establishments in the villages. These rural mosques were not architecturally comparable with the great stone or brick religious monuments, which the Mughal rulers themselves built in the cities. These were, rather, humble structures built on thatching and bamboo. Nonetheless, such simple structures exercised considerable influence among the indigenous people living in the villages of eastern Bengal. Long after the founding pioneers of the local mosques died, the same establishments they had built would continue to diffuse Islamic religious ideals among local communities, since Quran readers, callers to prayer, and preachers were supported in perpetuity according to terms specified in the foundational grants. In consequence, many pioneers, who had obtained the land grants, mobilized labor, and

NSOU • GE-HI-21 361 founded these rural mosques, passed into subsequent memory of the local communities as powerful saints or pirs. 18.6 The Sufi mystic principles and their closeness with pre-Muslim Sahojiya tradition However, as stated earlier the spread of Sufi tradition in Bengal was greatly facilitated by the closeness of its philosophical discourse with pre-existing liberal Sahojiya version of Hinduism prevalent in Bengal's countryside. The Sufis and Sahojiyas shares the ground that they both opposed the orthodox version of established religions be it Brahminical Hinduism or religious intolerance of conservative Muslim clerics of the Turkish Sultanates. The 'nirguna' Sahajiya led by the Bauls of Bengal, on the one hand, and the Sufis and mystic pirs, on the other hand, played a crucial role in this historic process of syncretism. The Islamic faith, which the Bengal Muslims had assimilated, was basically influenced by Sufism and not by the orthodox Islamic scriptures advocated by mullahs and maulavis. Sufism in Bengal, in turn, was also conditioned by its proximity to humanist Sahajiya tradition of pre- Islamic Bengal. It is worthy to mention here that the villagers who accepted Islam, in this process did not make any dramatic break from their past. The villagers, even after accepting Islam, maintained their Sahajiya roots deeply anchored in the countryside. The influence of pre-Muslim Sahojiya tradition were so profound that the culture and religion of these Bengali Muslims often appeared to absolutely different from that Islam practiced in Indian heartland and elsewhere. In fact the Turkish nobility in Bengal Nawabate and the Ashrafi Muslims in the court circles refused to identify themselves with this Sufi form of Muslim practitioners residing in the interior villages of Bengal. As to the words of Rabindra Nath Tagore, both the Bauls and the Sufis, in their ecstatic wonder at the expression of the Infinite manifested through the human finite form, compared it with the movement of an 'unknown bird'. This brought in the concept of Achin Pakhi (meaning 'the unknown bird'). The 'unknown bird' or Achin Pakhi lived in the cage of the human body for while, but it soon went out and floated in the boundless sky.

362 NSOU • GE-HI-21 18.7 The tradition of songs ('SAMA') Another area where the creative interrelationship between the Sahajiyas and the Sufis could be witnessed was in the Baul tradition of out-pouring of the heart through their melodious songs. In this we find, the influence of Chaitanyadeva's Vaishnavism, which had attached much importance to the kirtan form of music as the medium of communication. The influence of this Bhakti tradition of songs gave rise to the Sufistic method of sama which combined song and dance as a mode of syncretistic religious communication with the common people. The effect of such music, the Sufis held, would help both the performing mystics and the listeners in passing into fana- a stage of religious ecstasy. During the 13 th and 14 th centuries, the orthodox Islamic clerics tried to prevail on the Turk-Afghan imperial government to ban the syncretistic practice of sama, calling it un-Islamic. However, the orthodox strategy could not make much headway in the face of rising popularity of the Sufis. At sama gatherings, Persian poetry began to be relegated to the background as Hindawi poetry, with its Vaisnavite and other Bhakti imagery, came to the fore. 18.8 Conclusion Thus, from our above discussion we can conclude that the rise of Sufi Islam in Medieval Bengal was less a religious process but rather was more an economic process linked to the expansion of Agriculture particularly in Eastern Bengal, during the Mughal ages. Moreover, the spread of Sufism in Bengal was directly related with the pre-existence of the moderate Sahojiya version of Hinduism among the countryside peasant population of Bengal. Thus Sufism gave rise to such an moderate version of Islam in Bengal, that was very specific to the deltaic region and quiet different from the established orthodox variant of the same practiced in North India and elsewhere. 18.9 Questions 1) Describe step by step the process leading to the arrival of Sufism in Bengal. 2) How the process of agricultural expansion facilitated the spread of Sufism in

NSOU • GE-HI-21 363 Bengal, particularly during the Mughal period ? Why it was chiefly called an economic process rather than a religious one ? 3) Why did the early Muslim Turkish Sultanate failed attach themselves with the bul of interior peasant population of Bengal ? 4) How did the pre-existence of Sahojiya version of Hinduism among the non- Muslim masses of Bengal helped the process of Sufi Islamization latter ? 5) What were Samas ? What was their significance ?

West Bengal Chapters Samakshata.docx (D150792799)

He was also the chief proponent of the Vedantic philosophy of Achintya Bheda Abheda. Mahaprabhu founded Gaudiya Vaishnavism. He expounded Bhakti yoga and popularized the chanting of the Hare Krishna Maha-mantra. He composed the Shikshashtakam (eight devotional prayers). He is sometimes called Gauranga or Gaura due to his molten gold like complexion. His birthday is celebrated as Gaura-purnima. He is also called Nimai due to him being born underneath a Neem tree. 19.3

Early life The word "Chaitaniya" means one who is conscious" (derived from Chetana, which means "Consciousness"); Maha means "Great" and Prabhu means "Lord" or "Master". Chaitaniya was born as the second son of Jagannath Mishra and his wife Sachi Devi. Mishra migrated from a small village in Sylhet and Devi was the daughter of NilambaraChakravarti, another Brahmin of Sylhet. Jagannath's family lived in the village of Dhakadakshin in Srihatta. The ruins of his ancestral home still survive in present day Bangladesh. According to Chaitaniya Charitamrita, Chaitaniya was born in Nabadwip (in present-day West Bengal) on the full moon night of 18 February 1486 and named as Bishwambar Mishra.

366 NSOU • GE-HI-21 A number of stories also exist telling of Chaitaniya's apparent attraction to the chanting and singing of Krishna's names from a very young age, but largely this was perceived as being secondary to his interest in acquiring knowledge and studying Sanskrit. When travelling to Gaya to perform the shraddha ceremony for his departed father, Chaitaniya met his guru, the ascetic IshvaraPuri, from whom he received some significant spiritual teachings. This meeting was to mark a significant change in Chaitaniya's outlook [and upon his return to Bengal the local Vaishnavas, headed by Advaita Acharya, were stunned at his external sudden 'change of heart' (from 'scholar' to 'devotee') and soon Chaitaniya became the eminent leader of their Vaishnava group within Nadia. An imaginary portrait of Sri Chaitaniya singing devotional Sankirtans among his followers 19.4 The Vaishnava Hindu movement under Sri Chaitaniya After leaving Bengal and receiving entrance into the sannyasa order by Swami Kesava Bharati, Chaitaniya journeyed throughout the length and breadth of India for

NSOU • GE-HI-21 367 several years, chanting the divine Names of Krishna constantly. However his actual objective was to feel the pulse of the country and its common masses. Upon returning to Bengal, He travelled on foot covering a lot of places like Baranagar, Mahinagar, Nadia, Hooghly, Bardhaman, Jessore and, at last, Chhatrabhog along with his companions and inmates, chanting Hare-Krishna Sankirtan (chorus devotional songs) all the way. All along his journey, he preached the simple forms of devotion to God, without any ritualistic complications. That's what we call the Sahajiya form of Hinduism, the most acceptable version for the common masses of Bengal. Like Buddha, he sometimes stationed himself, gathering followers and preaching them with spiritual teachings like sermons. He denounced any form of orthodox caste based segregations and in fact most of his companions were from the lower stratasand depressed castes of the society including some who were believed to be converted from lower classes of Muslim families, like Yavana Haridas or Haridas Thakur. The GaudiyaVaishnavism preached by Sri Chaitaniya teaches that Lord Krishna did not need one to perform costly rituals to invoke Him, but simple devotions and love of the follower can help to attain the same. As a result of these preachings,a large number of common masses in the Bengali countryside got attracted to Chaitaniya'ssimplicitic form of Vaishnava Hinduism. The ecstatic tune of Hare Krishna Shankirtan spread far and wide in interior Bengal where Chaitaniya travelled. His teachings were later carried forward to even greater number of places by his disciples latter. Another plus point of their preachings was that the medium of their communication was essentially archaic Bengali, which was the language of the common masses.As a result, large number of Vaishnava devotees began to appear in the Bengali countryside by the beginning of 16 th century. It is also argued by some historians that Sri Chaitaniya's successful expansion of the Sahojiya Vaishnava Hinduism in Bengali countryside imposed some form rival obstacle to the spread of Sufi Mystic order in the spiritual domain of Bengal and thus somewhat prevented the conversion of large masses of Hindu lower classes into Sufi Islam. 19.5 Latter days The time when Chaitaniya was preaching his Bhaktism, Bengal was under the rule of Sultan Alauddin Hussain Shah (1494-1519 CE). Quiet obviously the orthodox

368 NSOU • GE-HI-21 Muslim clergies and the Turkish nobles in the political circles were highly dissatisfied with this type of Bhakti movement being unfolded in rural Bengal. Not only was it a religious issue as opposed to their Islamic hegemony, but the Turkish ruling circles probably also feared that Sri Chaitaniya's popularity among the masses along with the spread of his new ideology might lead to a rival political challenge, a type of dual state in the interior. So the local Sultanate governors started harassing the Vaishnava saints in various occasions, which ranges from demanding illogical levies to sometimes putting them in jail. The Muslim Moulouis of the courtcircle on the other hand, put pressure over Sultan Alauddin to take steps against Chaitaniyaand his growing popularity. As a result of these continuous threats and obstacles, Chaitaniya Dev finally decided to leave Bengal. After staying one night he set for Puri by boat with the help of Local Administrator Ram Chandra Khan. He spent the last 24 years of his life in Puri, Odisha, the great temple city of Jagannath, in the Radhakanta Math. The Gajapati king, Prataprudra Dev, regarded Chaitaniya as Krishna's Avatar and was an enthusiastic patron and devotee of Chaitaniya's recitation (sankeertan) gatherings. Chaitaniya requested a select few among his followers (who later came to be known as the Six Gosvamis of Vrindavan) to systematically present the theology of bhakti he had taught to them in their own writings. The six saints and theologians were Rupa Goswami, Sanatana Goswami, Gopala Bhatta Goswami, Raghunatha Bhatta Goswami, RaghunathaDasa Goswami and Jiva Goswami, a nephew of brothers Rupa and Sanatana. 19.6 Vrindaban and some related associations of Chaitaniya's Bhaktism Vrindavan, the land of Radha Rani, the "City of Temples" has more than 5000 temples to showcase the pastimes of Radha and Krishna. The essence of Vrindavan was lost over time until the 16th century, when it was rediscovered by Chaitaniya. In the year 1515, Chaitaniya visited Vrindavana, with the purpose of locating the lost holy places associated with Lord Sri Krishna's transcendent pastimes. He wandered through the different sacred forests of Vrindavana in a spiritual trance of divine love. It was believed that by His divine spiritual power, he was able to locate all the

NSOU • GE-HI-21 369 important places of Krishna's pastimes in and around Vrindavan including the seven main temples or saptadevalay, which are worshiped by Vaishnavas in the Chaitaniya tradition to this day Gaudiya Vaishnavas consider Chaitaniya to be Lord Krishna himself but appearing in the covered form (channa avatar) who appeared in the Kali Yuga as his own devotee to show the easiest way to achieve Krishna Consciousness. In this connection, it is also worthy to mention that, according to Chaitaniya Bhagavat, which gives a detailed description of Mahaprabhu's life, Mahaprabhu made a prediction that the holy name of Krishna will be sung in every town and village of the world and this is evident in the history. The International Society of Krishna Consciousness (ISKCON), which was started by Srila Prabhupada in the USA, proved the prediction to be correct. Chaitaniya is not known to have written anything himself except for a series of verses known as the Siksastaka, or "eight verses of instruction", which he had spoken, and were recorded by one of his close colleagues. The eight verses created by Chaitaniya are considered to contain the complete philosophy of Gaudiya Vaishnavism in condensed form. There are numerous biographies available from the time giving details of Chaitaniya's life, the most prominent ones being the Chaitaniya Charitamrita of Krishnadasa Kaviraja, the earlier Chaitaniya Bhagavata of Vrindaban Das. (both originally written in Bengali), and the Chaitaniya Mangala, written by "LochanaDasa". These works are in Bengali with some Sanskrit verses interspersed. In addition to these, there are other Sanskrit biographies composed by his contemporaries. There is also Caitanya Caritām[taMahākavya by Kavi Karnapura and ŪrīK[icGaCaitanya Carita Maha-Kavya by Murari Gupta. In the early 17th century KalachandVidyalankar, a disciple of Chaitaniya, made his preachings popular in Bengal. He travelled throughout India popularizing the gospel of anti-untouchability, social justice and mass education. He probably initiated 'Pankti Bhojon' and Krishna Sankirtan in the eastern part of Bengal. Several schools (sampradaya) have been practicing it for hundreds of years. The Dalits in Bengal, at that time a neglected and underprivileged caste, readily accepted his libertarian outlook and embraced the doctrine of Mahaprabhu. His disciples were known as Kalachandi Sampraday, who inspired the people to eradicate illiteracy and casteism. Many consider Kalachand as the Father of Rationalism in East Bengal. HIS GE-HI-11 & 21–24

370 NSOU • GE-HI-21 19.7 Conclusion Thus, we can conclude that Sri Chaitaniya Mahaprabhu was the precursor of the Bhakti cult in Bengal. The Gaudiya Vaishnavism preached by him was a type of Sahojiya version of Hinduism prevalent in contemporary Bengal. It talked about simple devotion to God (Sri Krishna) through love and devotional songs (Sankirtan), without any ritualistic complications and expenditure. Bhaktism also denounced any caste based segregation in the Hindu society, along with criticizing certain other superstitious rituals that crept in the same during the Medieval ages. As a result of this, large masses of interior rural Bengal got attracted to this Bhakti cult, a Sahajiya version of Hinduism. 19.8 Questions 1) Who was Shri Chaitaniya and what was his actual name ? 2) Why was he called the precursor of Bhaktism in Bengal ? 3) Describe Sri Chaitaniya's preaching of Guadiya Vaishnavism. How did a large number of common people got attracted to his philosophy ? 4) Why Chaitaniya was forced to leave Bengal ? 5) Mention the significance of Vrindaban in context of Shri Chaitaniya. 6) Mention the literary works and other contributions of some his disciples. 19.9 Suggested Readings Bhowmik, Dulal, State, religion and Culture : Hinduism. NSOU • GE-HI-21 371 Unit 20 % The Jagannatha Cult : Formation, Features and Impact Structure 20.0 Objective 20.1 Introduction 20.2 Agrarian expansion & absorption of tribal cultures during EMA 20.3 The political attachment of Lord Jagannath with the Orissan dynasties 20.4 Lord Jagannath as the centre of religious syncretism in Orissa 20.5 Conclusion 20.6 Questions 20.7 Suggested Readings 20.0 Objective z The objective of the present unit is to study the rise of Jaganath Cult under the broad heading of religion and culture of medieval eastern India. z The present unit will discuss the socio-economic perspectives of the rise of the Jagannath cult. z It will also analyze the political attachment of Lord Jagannatha with the medieval political authority of Orissa. z The unit also highlight the articulation of Lord jagannath as the centre of religious syncretism in Orissa. 20.1 Introduction Orissa is one of the cradles of all major religions that flourished in India through ages. It witnessed the rise and growth of both orthodox (Shaivism, Vaishnavism and Shaktism) and heterodox (Jainism and Buddhism) religious sects and provided a hospitable climate for their peaceful co-existence. The local autochthonous deities were also brought within the fold of Hinduism by the process of sanskritization, 371

372 NSOU • GE-HI-21 sheltering them in the Hindu temples. The rulers of Orissa surpassed in showing their benevolence for the peaceful co-existence and development of all religions and their sects. The most important feature in the history of Hinduism in Orissa is religious syncretism. Though the orthodox as well as the heterodox religions flourished side by side, there is no evidence of sectarian rivalry in Orissa. Royal patronage was never lacking. Still there were hardly any record of religious bigotry nor has any religious persecution been noticed in the annals of Orissan history. In this context let us discuss the rise & development of the worship of Jagannath deity that still encompassed a large part of the cultural domain of Orissa & Eastern India.

20.2 Agrarian expansion and absorption of tribal cultures during EMA One of the typical features of Early Medieval Age (EMA) in India (6 th -12 th century CE) was indiscriminate land grants by the Regional kingdoms & feudal elites to religious & non-religious persons or institutions. During this time the rising regional local powers used to donate lands to different religious institutions including Brahmans & Temples to earn spiritual favors & legitimization. Couple with this was the payment of salary to state functionaries in form of kind (land donation) due to absence of money economy. This is been testified by the availability of several land grant inscriptions found during those times. The Khalimpur & Bardhaman Copper Plate Inscriptions of the Pal kings deserves special mention among them. Now as to Historians like Upinder Sing, D.C. Sircar, etc. granting lands not necessarily always meant inordinate loss of Revenue or political power for the monarchs. Because in most cases the granted lands were uncultivated fallow lands or lands which were not in a position to realize revenue (particularly forests). It is now the task of the Brahmins/grantees to make it productive. Hence it gradually led them to venture for the greater tribal diasporas of the interior. Thus, in this age we find many of the tribes were settling down as cultivators & plough agriculture was introduced in greater parts of the interior. That's why Historian B.D. Chattopadhyay argued that the major historical process of EMA is the expansion of the Agricultural state society.

NSOU • GE-HI-21 373 This Agrarian expansion, in turn led to greater interaction between the Brahminical & tribal cultures & transformation of the tribes into peasants & their introduction to Hindu society. The period witnessed the expansion of the peripheries of the sedentarized states of both North & South India. This obviously led them to a conflict with adjacent tribal societies. These conflicts ultimately led to the displacement & integration/absorption of the tribal societies into the sedentarized Hindu societies. However it also led to greater interaction between tribal & Brahminical cultures. It was not that only the tribal societies got "Hindusized", but also several tribal elements also penetrated into the Brahminical culture. This penetration of the tribal cultures is best reflected in Orissa with the rise of worshipping the Jagannath cult, which clearly has tribal origins. Hinduism in those days was a extremely inclusive religion. As to historians like BD Chattopadhyay, Lord Jagannath might be used to be tribal deity among the Orissan tribes. During the Gajapati kingdom as these tribes were absorbed into Hindu sedenterized society of the plain lands, Jagannath cult was also easily absorbed into the Hindu religious folds. Thus, now Lord Jagannath became an incarnation of Lord Vishnu, & started being addressed with the mainstream Brahminical rituals & Sanskrit mantras. Jagannath Temple, Puri

374 NSOU • GE-HI-21 20.3 The political attachment of Lord Jagannath with the Orissan dynasties As to historian Sishir Kumar Panda, the advent of the Later Eastern Gangas not only marked the expansion of Orissa into an empire but also led to the establishments of Gajapati kingship ideology with the patronization of cult of Jagannath as imperial deity or 'rastra devata'. AnantavarmanChodaganga Deva who conquered central Orissa, later on expanded the Ganga kingdom from the river Hoogly (Ganga) in north to the river Godavari in the south. In order to legitimate his rule, he patronized local cult Purusottama (Jagannath) by constructing the monumental Jagannath temple at Puri and gave it imperial status. Later on, king Anangabhimadeva-III, in order to save his empire from the Turko- Afghan invasion declared himself as the deputy of lord Jagannath and dedicated the empire to Him. In this way, the Later Eastern Gangas used the cult of Jagannath for political purpose, which was followed by the SuryavamsiGajapatis after their downfall. However, after the fall of Orissa in the hands of the Turko-Afghans in 1568 A.D. later on by the Mughals in 1592, the cult of Jagannath and Puri did not lose its importance. Although the Jagannath Temple received certain destructions at the hands of the Muslim armies under Firoz Tughlaq & later HussainShahi dynasty of Bengal, but that couldn't undermineits glory among the local populace. During the Mughal period, Akbar raised Ramachandradeva, the local zamindar of Khurda as Gajapati king of Orissa and made him the custodian of the Jagannath cult for political and economic purpose. Inspite of this, there started a struggle between the king of Khurda and the Muslim Subedarsof Cuttack for control of Puri. In 1751, the Marathas invaded Orissa and occupied Puri and Khurda. In these critical hours, the Khurda kings tried desperately to gain support of the feudatory states by sharing the cult of Jagannath with them through Chhamu Chitaus or Royal letters. The feudatory chiefs who came for worship to Puri Jagannath were given special privileges through royal letters. Chhamu Chitaus were the royal letters addressed to the temple superintendent of Puri by the KhurdaGajapati kings regarding the visit of the feudatory chiefs of Orissa or the kings of outside Orissa to the Jagannath temple, allowing them to perform worship and offerings to the temple.

NSOU • GE-HI-21 375 20.4 Lord Jagannath as the centre of Religious syncretism in Orissa Historian Kishor Chandra Mishra opined that it was because of the peaceful co- existence of many religious systems that there evolved a predominant religious force in the Cult of Jagannath during the beginning of the 12 th century CE. with its centre at Puri. A stupendous stone temple with its rare artistic and architectural skill enshrines the Jagannath triad i.e., Jagannath, Balabhadra and Subhadra symbolizing the religious syncretism in Orissa. Though Jagannath is considered to be the manifestation of Vishnu, yet a keen scholar after observing the rituals and the iconographic details comes to a definite conclusion that the cult has not been derived from any particular religious system but it is a synthesis of the many religious thoughts and ideas prevailing in the land from the early days. One can easily see the presence of the Jaina concept of transmigration of soul as a consequence of Karma, the Buddhist belief of nirvana and the Hindu theory of incarnation on the philosophy centering the Jagannath Cult. 20.5 Conclusion Thus the rise of the Jagannath cult in Eastern India symbolizes the greater inclusion of tribal cultures into sedenterized Hindu society marked by a typical atmosphere of religious syncretism in Orissa. Lord Jagannath today stands as the supreme deity of the Hindus and which its centre at Puri as one of the four dhams attracts pilgrims and scholars from different parts of the world justifying its nomenclature as the Lord of the Universe (Jagannath). 20.6 Questions 1) Describe the rise of Jagannath cult in Eastern India. 2) How was the appearance of Jagannath cult related with the agrarian expansion in Eastern India vis a vis Early Medieval Land donations ?

376 NSOU • GE-HI-21 3) What were ChhamuChitaus ? Write in brief about the political upheavals witnessed by Lord Jagannath Temple of Puri since its establishment during the Gajapati kingdom. 20.7 Suggested Readings Chandra, Satish, History of Medieval India, (New Delhi : Orient Blackswan Private Ltd, 2007) Chatterjee, Suniti Kumar, The origin and development of Bengali Language, Vol 1 (Calcutta, 1975) Mishra, Kishore Ch., "Religious Syncretism And The Jagannath Cult In Orissa", Proceedings of the Indian History Congress, 2000-2001, Vol. 61, Part One, (Indian History Congress, 2001), pp 144-151 Panda, Shishir Kumar, "Gajapati Kingship And The Cult Of Jagannatha : A Study On The Chhamuchitaus (Royal Letters)",

The English and the Dutch East India Companies began their Bengal trade from around the middle of the 17th century with the establishment of their factories in Hughli. The french East India Company was founded later and began its operations only in the 1680s. Among other Europeans, the Ostend Company and the Danish Companies came to Bengal only in the early 18th century and their trade was on a very modest scale. In the early period the European attention focused mainly on the spice trade and both the Dutch and English wanted to procure spice from the so-called Spice Islands in the eastern archipelago. The companies went to these islands to buy spices with silver obtained from the 'New World'. But to their utter astonishment, they found that it was not silver but cheap and coarse Indian calico that was in demand there. So they turned to India for textiles to exchange for spices in the Indonesian archipelago. First, their attention was drawn to the Coromandel Coast which produced large quantities of cheap and coarse textiles greatly in demand in the Spice Islands. But soon war, famine and political instability rendered the Coromandel trade risky, uncertain and expensive. So the companies eventually turned their attention to Bengal. Bengal offered particular advantages to the companies. It was the largest producer of coarse and cheap calicoes - much cheaper and of better quality than others. Secondly, Bengal silk was a highly lucrative and profitable commodity for the companies as there was a growing demand for it in Europe, replacing Italian and Persian silk, because of its comparative cheapness and good quality. Moreover a third lucrative item for trade was saltpeter, highly in demand in Europe and which could

	<p>The English company and its servants by virtue of their political and economic control over Bengal began to wipe out all other European and Asian rivals in the Bengal trade and tried to monopolize it for themselves. The importance of Bengal in the Asiatic trade of the companies can be seen from the fact that Bengal's share in the average annual value of Asian commodities exported to Holland by the Dutch company was around 40 percent in the early eighteenth century. Again, more than 50 percent of the total value of Dutch textile exports from Asia was in the form of Bengal textiles. Thus Bengal became the most important theatre of the activities of the Dutch company not only in India but the whole of Asia. No different was the case with the English company. The English factors regarded Bengal as 'the flower of the Company's garden' and the 'choicest jewel'. Between 1650 and 1720, the Dutch were much ahead of the English but thereafter the English trade in Bengal picked up and almost equaled the value of the Dutch exports, although the Dutch trade including the trade to their other Asian factories was still higher than that of the English. The English company's exports to Europe increased substantially from the early 1730s and picked up in the period 1740-45. 14.6</p>		<p>The English company and its servants by virtue of their political and economic control over Bengal began to wipe out all other European and Asian rivals in the Bengal trade and tried to monopolise it for themselves. PREFACE In a bid to standardize higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses viz. core, discipline specific, generic elective, ability and skill enhancement for graduate students of all programmes at Honours level. This brings in the semester pattern, which finds efficacy in sync with credit system, credit transfer, comprehensive continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility to choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry their acquired credits. I am happy to note that the university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade "A". UGC (Open and Distance Learning Programmes and Online Programmes) Regulations, 2020 have mandated compliance with CBCS for UG programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Under Graduate Degree Programme level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning Materials (SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English / Bengali. Eventually, the English version SLMs will be translated into Bengali too, for the benefit of learners. As always, all of our teaching faculties contributed in this process. In addition to this we have also requisitioned the services of best academics in each domain in preparation of the new SLMs. I am sure they will be of commendable academic support. We look forward to proactive feedback from all stakeholders who will participate in the teaching-learning based on these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor 2

NSOU ??CC - HI - 07 7 Unit-I ? Survey of Sources: Persian Tarikh Tradition, Vernacular Histories and Epigraphy Structure 1.0 Objectives 1.1 Introduction 1.2 Survey of sources 1.3 Persian Tarikh Tradition 1.4 Vernacular (or Regional) Histories 1.5 Epigraphy 1.6 Conclusion 1.7 Model Questions 1.8 Suggested Readings 1.0 Objectives Historians depend on a variety of sources to learn about the past. However, it is pertinent to know that while most of the sources of information remain what they were in an earlier period and which included inscriptions, monuments, coins, religious and non-religious literature, there is a marked difference between the period under discussion and the earlier periods of time. It was in the medieval period alone that the practice of the writing and recording of history as a distinct discipline evolved. In this light we shall try to weigh the various sources of medieval Indian history in the present unit. 1.1 Introduction The writing of history, or historiography, is the methodology of scholarly historical research and presentation – based on a critical evaluation and selection of authentic source materials – of a narrative that stands up to methods of criticism. In this context, the importance of identifying and recognizing appropriate historical sources cannot be overemphasized. For the creation of a clear and authentic narrative, a mere narration of events from any single historical source becomes inadequate; necessitating the verification of facts through a variety of other relevant sources.

8 NSOU ??CC - HI - 07 1.2 Survey of sources The Muslim Turks, who conquered India, brought with them the art of writing history, and have left a large number of chronicles which enable us to trace the history of India from the beginning of the Muslim conquest to the end of the Muslim rule. This is no mean advantage, particularly when we contrast it with the paucity of such historical narratives of the earlier period. In contrast to the relatively sparse information for north India over the seventh through twelfth centuries, the diversity and volume of source materials increase dramatically for the thirteenth and fourteenth centuries. As in the study of earlier centuries, scholars working on the Delhi Sultanate continue to value numismatic, epigraphic and architectural evidence. But the real transition in the writing of the history of the thirteenth and fourteenth centuries occurs because of the larger availability of Persian texts that are self reflectively historical in character. For the modern historian, these sources introduce a representation of the past which is unmatched in continuity and focus, a perspective into the past seldom evaluated historiographically. The diversity and volume of source material suddenly increases for the thirteenth and fourteenth centuries. This was largely because of the fact that during this period of Delhi Sultanate there is large availability of Persian texts. The Persian chronicles provide evidence and descriptions which are quite the contrary of what is available in epigraphic and archaeological sources. Sunil Kumar goes to the extent of arguing that 'the expansive canvas of Persian chronicles has effectively relegated epigraphic, numismatic, architectural and archaeological evidence to secondary and corroborative role'. He says that in contrast with an earlier time period within which the historiographic world was more circumscribed, the *tawarikh* (history) of the Delhi Sultans have facilitated the production of narratives of state formation and institutions. Today we regard all such Persian sources of the Sultanate period as historical records which have a chronological narrative style and provide us with an accurate description of statecraft, of the kings and his subordinates, and the politics and events of the period. However, it is to be noted that with the exception of Isami's *Futuh al Salatin* all the medieval Persian texts of the period were written from the perspective of the Delhi Sultanate.

NSOU ??CC - HI - 07 9 1.3 Persian Tarikh Tradition Persian Literature produced in north India in the thirteenth and fourteenth centuries looked westwards to Iran and the Islamic traditions for its formal stylistic conventions. The four broad genres of Persian literature that were manifested in this period can be categorized as different varieties of 'general histories', *tarikh*, florid, panegyric accounts in prose and verse, *manaqib*, didactic texts enlarging on ideal norms of conduct, *adab*; and instructional literature concerning spiritual beliefs and conduct specifically the conversations of Sufi teachers, *malfuz*. Of the four broad genres into which much of the literary output of the thirteenth and fourteenth century can be consolidated, the literary genre most read by modern historians is the *Tawriki*. These were histories written as long narrative of human experience, a 'general history' commencing either with Adam the first Prophet, or Mohammad, the last Prophet, and terminating in the lifetime of the respective authors with a eulogy to their patron. Within the genre of 'general' or 'universal histories' can be included the work of Fakhr-i-Mudabbir and Mirhaj-al-Din Siraj Juzjani. Their histories differ greatly in length and internal organization. Fakhr-i-Mudabbir's history was very brief and served as an introduction to his genealogical tables, *Shajara-i-Ansab* where only the barest outline of the early history of the Muslim community was provided. Its coverage of the early thirteenth century and the culture of the ruling elite was only slightly denser. By contrast, Juzjani's *Tabaqat-i-Nasiri* was far more detailed, especially in the narration of events after 625/1228 CE, when the author migrated to Delhi. The new genre of history was brought to India by the Persianized Turks who conquered northern India. Most of our knowledge of medieval Indian history is based on the information derived from these sources. The important Persian historical sources of the Delhi Sultanate period are the works of Alberuni, whose *Kitab-ai-Hind* was the first and most important discussion on India sciences, religion and society. The works of Juzjani, Birani and Afif cover the history of the Sultanate in its entirety from the time of its establishment to the end of Firuz Shah Tughlaq's reign (1388 A.D). Amir Khusrau also used historical themes for his poems and his works shed a great deal of light on the social history of the period.

10 NSOU ??CC - HI - 07 Persian Narratives Authors Persian Text Ruler Date of Rulers covered in Dedicated to Completion Narrative of Text Alberuni Kitab-al Hind - 1030 AD Mahmud Ghaznawi Fakhra-i- Tarikh-i Qutubuddin Aibak 1208 AD Qutubuddin Aibak Mudabir Fakhra al-din Mubarak Shah Minhaj-us-Siraj Tabaqat-i-Nasiri Nasiruddin Mahmud 1260 AD Qutubuddin, Juzjani Mahmud Iltutmish, Raziya, Bahram Shah, Masud Shah, Nasiruddin Mahmud Amir Khusrau 1)Miftah al-Futuh Jalaluddin Khalji 1292 AD Jalaluddin Khalji 2)Khazian al-Futuh Alauddin Khalji 1312 AD Alauddin Khalji 3)Nuh Siphir Mubarak Khalji 1318 AD Mubarak Khalji 4) Tughlaq Nama Ghiyasuddin Tughlaq 1320 AD Ghiyasuddin Tughlaq Amir Hasan Sijzi Fawaid al Fuad Shaikh 1322 AD - Nizamuddin Ziauddin Barani 1)Tarikh-i- Firuzshah Tughluq 1357 -58 AD Balban, Firuzshahi Jalaluddin Khalji, Alauddin Khalji 2) Fatwa-i- - - Jahandari Hamid Qalandar Khair al-Majalis Shaikh Nasiruddin 1350 Muhammad bin Chirag-i-Delhi Tughlaq Khwaja Malik Futuh-us-Salatin Alauddin Hasan 1350 Muhammad bin Isami Bahman Shah Tughluq Abul Rayten Alberuni authored the Kitab al Hind. It is a survey of Indian life based on Alberuni's study and observations in the period between 1017–30, when he had accompanied Mahmud of Ghaznah on his various expeditions. He was well versed in Sanskrit, read the available literature and conversed with learned men and scholars before he began to pen the Kitab al Hind. It is the earliest work of its kind which can be termed as truly scientific in the historical sense of the word.

NSOU ??CC - HI - 07 11 Kitab al Hind describes Indian customs and ways of life, festivals, ceremonies and rites. He takes note of the incongruity between the legal theories expounded in law books and the practical aspect of the legal system. Commenting on the caste system, he says that the castes are essentially varnas or colours. He made great efforts to understand the system of weights and measure and distances in India. He also provides interesting geographical data and takes into account the local astronomical and mathematical theories. Alberuni was perhaps the first Muslim to have undertaken the study of Indian thought and society on such a major scale. He classified Indians as 'ignorant' and said that their notions about history, geography and the sciences were absolutely ridiculous. He said that Indians had begun to depend too excessively on tradition and authority, which was a hindrance to genuine intellectual pursuit. Thus despite Alberuni's own personal prejudices and opinions about India, his Kitab al Hind is an important source for studying society during the early years of the Turkish invasion. Tabaqat –i-Nasiri of Minhaj-us-Siraj Juzjani is considered the first ever account of the initial Turkish conquest of northern India, Fakhr-i-Mudabbir has also dealt with this but his account concerns itself only with the activities of Qutb-ud-din Aibak. Juzjani's work provided a chronological account of the Delhi Sultanate. Barani continued from where Juzjani left off and Shamsi Siraj Afif claimed that he had completed Barani's work by taking the history of the Sultanate right up to the end of Firuz Shah Tughlaq's reign (1388) . Of these three, Juzjani was the closest to the centre of power and maintained the relationship with the Sultans of Delhi for the longest period of time. During the early years of Turkish rule, many scholars were employed in the three areas – namely propaganda, education and administration of justice- where their learning could be of help to the state. Juzjani also contributed to all these three areas. Juzjani's book, Tabaqat-i-Nasiri is divided into twenty three tabaqas (chapters). He included in the end the biographies of 25 nobles of his time. The early tabaqas offer a very cursory survey of the dynasties of the former Caliphate. The tabaqas became much more detailed by the time he reaches nearer to his own times. He gives a list of the names of the sons, nobles, qadis, wazirs and other maliks of Sultan Iltutmish. In his mention of the nobility, no one is given as much importance as Balban is. Juzjani's Tabaqat-i-Nasiri is different from other contemporary narratives because it does not comply with a simple chronological or dynastic framework. Instead, Juzjani

12 NSOU ??CC - HI - 07 organized his narrative about the groups of people who shared a common social affinity, as affirmed by Sunil Kumar. In fact, to understand Juzjani as a historian we need to understand the motivation behind his endeavours. Monetary benefit would definitely have been one reason because he was rewarded liberally by both Sultan Nasiruddin and Balban to whom he gifted copies. But this was more in the form of reward from flattery than recognition as a historian. At a time when the political fortunes of Islam were facing highly troubled times at the hands of the Mongols writing about the political and military glories of the Muslims was one way of restoring the social confidence of the Muslims. Juzjani's political concerns also shaped his political convictions. He was committed to the preservation of the Turkish state. Political authority was the only cause that he understood and he believed that anyone who wielded power was essentially and intrinsically good. He felt no sense of shame in singing the praises of even those rulers who had come to the throne by violently displacing their predecessors. For them history was the history of the requisition and maintenance of political authority. Therefore, his work is nothing but a narrative of political events written from a highly partisan perspective. By doing this he was only following the trend of Islamic historiography towards universal histories. But at the same time, he was also legitimizing the rulers of his own times. Juzjani constantly uses religious terminology in his work. Wars, involving Muslims, are described in terms of religious bigotry, which serve to indicate which side he favoured. Because he was the product of an education and conditioning that was structured almost entirely around religion, it is obvious that he knew no other terminology. His anti-Hindu stance is more than visible when in times of conflict he does not even notice, let alone condemn Hindus for not challenging the political and military authority of the Turks. However, Juzjani's history has often been considered rather boring. But at the same time it is also important to understand that he is our only source of information on the activities of the early Sultans of Delhi. Fakhr-i-Mudabbir, whose Tarikh has a large section on the Turks, never travelled in Central Asia. Much of his information must have been collected from travellers and merchants, but parts of the author's observation on languages, scripts, and religious beliefs of the Turks came either from direct observation or were received first-hand from Turks in North India. Fakhr-i-Mudabbir's account suggests that, in the first decade of the 13th century, the Turks maintained their racial affinity in north India and retained at least some elements of their cultural identity. This is also suggested by the fact that in NSOU ??CC - HI - 07 13 this period Turkish was a flourishing language in the Delhi Sultanate. Fakhr-i-Mudabbir explained that after the Persian language none is finer and more dignified than Turkish. And now-a-days the Turkish language is more popular than it ever was before. This is due to the fact that the majority of Amirs and Commanders are Turks. And it is the Turks who are most successful and most wealthy and so all have need of that language. Other than suggesting that the Turks maintained a composite racial, cultural and linguistic identity, Fakhr-i-Mudabbir also noted the social and political prominence of this group in north India. That this prominence led 'the grandees of the highest pedigree' to seek patronage from the powerful Turkish lords of the realm is also interesting. But Mudabbir's statement is particularly significant because it draws our attention to the considerable distance which separated the lords from the members of the realm that they governed, so much so that the Persian-speaking secretaries had to master a 'foreign' language to function as their subordinates. Fakhr-i-Mudabbir's statement should not be taken to mean that the Turkish slaves of the Delhi Sultans knew no Persian but that, in the early Delhi Sultanate, for a Persian to subordinate to prosper in a Turk's service knowledge of the Turkish language would be an advantage. Ziauddin Barani takes up the historical narrative of the Delhi Sultanate from the reign of Balban to the sixth year of the reign of Firuz Shah Tughlaq. He begins the history of the Delhi Sultanate from the point where Juzjani ends his description. His Tarikh-i-Firuz Shahi is an important account of the history of the Delhi Sultanate. His work shows a distinct level of maturity and evolution in the realm medieval history. Unlike Juzjani, Barani dealt with political events in just one area. His chapters are based on the successive reigns of kings and Sultans and therefore do not overlap, as in the case of Juzjani's work. At the beginning of each chapter he gives a list of royal princes and important nobles. When he comes to Firuz Shah Tughluq he divides the chapter into eleven 'muqaddimahs' or 'sections'. These deal with the general characteristics of the reign. Barani expressed his ideas through other historical personalities. His works have been structured in the form of a dialogue between various historical personages. That these were his ideas is confirmed by their re-appearance in the Fatawa-i-Jahandari. Here they appear as advisory lectures delivered by Mahmud of Ghazni to his sons. The Fatawa-i-Jahandari is not a work of history as such. It is more an expression of Barani's views on various subjects.

14 NSOU ??CC - HI - 07 Barani believed that kingship was an Islamic institution. Therefore, a king could find salvation only as a defender of the Islamic faith. It was his duty to enforce the Shariah and punish the Kafirs. The state should also prohibit immorality of any kind. The government should be entrusted to the care of pious and religious men. Philosophers and rationalists had no place in the given scheme of things. Kingship, as institution, Barani felt, could survive only through the power and charisma of majesty and the fear it could instill in people. The king, however, needed to be fair and just. He also stressed the need for a strong and efficient army which constantly needed to be kept on its toes. Barani realized that the state could not be governed by the principles of the Shariah alone. He, therefore, accepts the need for secular laws (zawabit). One of the many problems with the *Tarikh-i-Firuz Shahi* is that of chronology. He seldom mentions dates and when he does, they are often wrong. Yet, Barani had a much wider historical perspective than Juzjani did. Juzjani had only connected events chronologically and did not even try to draw a link in the series of events that took place between one period and another. Barani reviewed every reign at the end of each chapter and tried to trace the evolution of policies in the Sultanate. To Irfan Habib, Barani's factual account is correct in all substantive matters and his analysis is sound and accurate. But one has to use Barani as a source very carefully because he does not care to either provide factual events chronologically or give a detailed description of military encounters. His view of history is highly partisan and subjective. This can create problems if used uncritically. Shams-i-Siraj Afif wrote a Persian narrative by the same name approximately half a century after Barani completed his *Tarikh-i-Firuz Shahi*. Though it is supposed to be continuation of Barani's work, its nature is very different because of the conditions under which it was written. Afif provided an accurate description of the last few years of the Sultanate before it was given a death blow by the armies of Timur. Afif was most probably nostalgic about a world which had been completely destroyed and devastated by Timur's invasion. The image he paints of Firuz Shah Tughluq's reign reflects his own troubled times. He provides an extremely positive appraisal of even the negative features of Firuz Shah Tughluq's reign. This was no deliberate or willful distortion of facts. Firuz Shah Tughluq's ineptitude as a military commander is portrayed as a bid for peace and the king's tolerance of corruption is seen as his concern for the welfare of his subjects.

NSOU ??CC - HI - 07 15 His history is uncomplicated and is in the form of simple narrative. He tries to make it interesting. He was not a political theorist in any sense of the term. His aim was to provide his readers with an image of the past which was glorious, comfortable and peaceful, and a definite departure from his own times. His attitude towards non-Muslims also shows an evolution from the views of Juzjani and Barani. He praises Firuz Shah Tughluq for burning a Brahmin alive and for imposing the Jaziya on Brahmins. This was more in keeping with his attitude of endorsing and approving of every deed of this king. Afif has also given a description of the architectural achievements of Firuz Shah Tughluq, which included the building of canals, the planning of gardens, the working of the royal mint, providing details of army camps, regulating the prices of food, providing details of coinage, arranging the celebration of festivals and revenue arrangement among many other things. He throws more light on the social conditions of his period than Juzjani and Barani do. Through his work we get, for the first time, a glimpse of the life of people outside court circles, though very little. Another historical work, written in the form of an epic, is the *Futuh-us-Salatin* by Isami about A.D 1350. It gives an account of the long period from the rise of the Yaminiis of Ghazni to the reign of Muhammad bin Tughluq. The author was a victim of the tyranny of Muhammad bin Tughluq and was forced to leave Delhi for Daulatabad with his grandfather aged ninety, who died on the way. He settled at Daulatabad and composed his work under the patronage of Sultan Alauddin Hasan Bahman Shah, the founder of the Bahmani dynasty. He was thus the only historian of the Tughluq period who was above fear or favour of the rulers of the dynasty. On the other hand, his personal sufferings at the hands of Muhammad bin Tughluq may account partly for his severe denunciations of the Sultan. Amir Khusrau enjoyed the favour and patronage of several sultans of Delhi such as Kaiqubad, Jalal-ud-din Khalji, Alauddin Khalji, Qutb-ud-din Mubarak Shah Khalji and Ghiyasuddin Tughluq. He was a prolific writer and is said to have composed about half a million verses. Though essentially a poet, and not a historian, Khusrau occasionally took historical themes as his subjects of composition, both in prose and poetry. His association with six successive Sultans and intimate intercourse with the aristocracy of blood, military oligarchy, and the saint Nizam-ud-din Auliya gave him the unique opportunity of knowing the truth about the political events and social condition of the time. Although he never undertook to write any comprehensive historical chronicle,

16 NSOU ??CC - HI - 07 properly so called, his works particularly his historical Masnavis and Divans, throw a great deal of light on contemporary history. Among these the following deserve special mention :- 1) Qiran us Sadain, composed in A.D 1289, describes the historical meeting between Bughra Khan, the governor of Bengal and his son Muizzud-din Kaiqubad, King of Delhi. It gives interesting details about India, particularly Delhi. 2) Miftah-ul-Futuh, composed in A.D 1291, describes the military campaigns of Jalal-ud-din Khalji. 3) Ashiqa, completed in A.D 1316, not only describes the passionate love between Dewal Rani (Devala Devi), daughter of Raja Kara (Karna) of Gujarat and Prince Khizr Khan, but also gives an account of the poet's capture by the Mongols and his flight, and the beauties of Hindusthan and her women. 4) Nuh Sipihr, completed in A.D 1318, describes the military campaigns during the reign of Mubarak Shah. 5) Tughluq-nama composed in the closing year of the poet's life, traces the course of events leading to the accession of Ghiyasuddin Tughlaq. 6) In addition to the above poetical works, he also wrote in prose the Khazain-ul- Futuh or the Tarikh-i-Alai, which briefly describes the events of the first sixteen years of Alauddin's reign and, in particular, the campaigns of Malik Kafur in the Deccan which are not noticed in detail even by Barani. In addition to historical events Khusrau's works throw much light on the social condition of the time and give a general picture of the country. But he writes more as a poet than as a professional historian. Yahya bin Ahmed Sirhindi's Tarikh-i-Mubarak Shahi covers the period following the reign of Firuz Shah Tughluq. It is the only contemporary history of the period 1388 – 1434. It is a useful account of the Delhi Sultanate after the invasion of Timur. Tarikh- i-Mubarak Shahi is based on the works of Juzjani, Barani and Khusrau till 1351. After that he relies on the accounts of various witnesses, on hearsay and on his own observations. He describes all events chronologically and is only concerned with political and military history. He was close to the Sayyid rulers and dedicated his work to Mubarak Shah. All the subsequent historians like Nizam-ud-din Ahmad, Badauni and Firishta have based their account of this period on his work.

NSOU ??CC - HI - 07 17 The malfuzat texts, in the form of the records of Sufi discourses, were an extremely popular genre of literature during the thirteenth century in north India and are, therefore, of tremendous historical importance. One of the most admired of these malfuzat texts is the Fawaid al-fuad, translated as the Morals of the Heart. The book was written by Amir Hasan Sijzi Dihlavi, a poet and disciple of Nizamuddin Auliya. It is a beautifully written account of the Sufi teachings of Nizamuddin Auliya. Later on, the malfuzat tradition was furthered by Hamid Qalandar, who compiled the teachings and speeches of Nizamuddin Auliya's successor in Delhi, Nasiruddin Mahmud Chiragh-i-Delhi. Hamid has provided us with an elaborate description of how the collection of works compiled in Khair al-Majalis began in 1354 and were then forwarded to the master, who finally approved it. Thus the Malfuzat texts did not really care to concern themselves with either the Sultan or his entourage. They had great Sufi saints as their protagonists. If we use the Persian sources with caution it could be very productive for writing the history of Delhi Sultanate. They certainly provide us with a sense of chronology, context and social, political and economic relationships during the period. The task of modern historians is to ask a variety of questions. One should not simply follow the narratives or what Peter Hardy calls the 'scissors and paste' method. As opposed to Rankean positivism, to which a historian's job is to merely ascertain the facts and tell how it really was, the modern historian certainly has to make his own choice of facts and tell the story in his own way. To do so he interprets the same primary data. The beauty of this kind of research and history writing lies in the fact that the earlier narrative might be overturned by subsequent research. 1.4 Vernacular (Or Regional) Histories The history of most of the provinces under independent Sultans was written by both Nizam-ud-din and Firishta who consulted various authors, some of whose works are no longer available. However, for some of the independent Sultanate provincial histories are also available. The earliest history of Sind for this period seems to have been the Tarikh-i-Bahadur Shahi which was used by Nizam-ud-din and probably by Abu'l-Fazl and Firishta as well. The other histories of Sind were written at a later date. These are the Tarikh-i-Sind of Mir Muhammad Masum written in AD 1600 for the instruction of the author's son; the Tarikh-i-Tahiri of Mir Tahir Muhammad Nisyani, written in AD.

18 NSOU ??CC - HI - 07 1654-55 which gives the history of the Arghuns in Sind; and the Tuhfat-ul-Kiram by Ali Sher Qani, written in the later half of the 18 th century, of which the third volume is the most comprehensive and consistent of all the histories of Sind. For Kashmir, Mirza Haidar Dughlat's Tarikh-i-Rashidi, which gives an account of the Mirza's invasions and occupation of Kashmir, is the only Muslim source for the history of that period, and is a most useful supplement to the Rajatarangini. The Tarikh- i-Kashmir of Haidar Malik, a Kashmiri nobleman in the service of Yusuf Shah of Kashmir (A.D 1578), gives the history of Kashmir from the earliest times. Though mainly based on the Rajatarangini there are some additions in the later period. It was begun in A.D 1618 and completed sometime after A.D 1620-21. For Bengal we have the Riyaz-us-Salatin of Ghulam Husain Salim, which traces the history of the province from the invasion of Bakhtiyar Khalji to A.D 1788, the date of the work. Of this work Sir Jadunath Sarkar writes: "... this book, named the Riyaz-us- Salatin, is meagre in facts, mostly incorrect in detail and dates, and vitiated by loose traditions, as its author had no knowledge of many of the standard Persian authorities who had treated Bengal as a part of their general histories of India". For the history of Gujarat there are several works such as the Mirat-i-Sikandari of Sikandar bin Muhammad which gives the history of Gujarat from the Muslim conquest to A.D 1611, when the work was composed. Other Persian works are the Mirat-i- Ahmadi by Ali Muhammad Khan (c. A.D 1756 – 1761) and the Tarikh-i-Gujarat by Mir Abu Turab Wali. There is also a valuable history of Gujarat written in Arabic, the Zafar- ul Walih bi Muzuffar wa Alih of Abdullah Muhammad bin Umar al Makki. For the history of the Bahmani dynasty of Gulbarga and Bidar and the Nizam Shahi dynasty of Ahmadnagar, we have the Burhan-i-Maasir of Sayyid Ali Tabataba. The author arrived in India in A.D 1580 and entered first in the service of the Sultan of Golconda, and then that of Burhan Nizam Shah II, from whom the history derives its title. The author seems to have borrowed freely from Futuh-us-Salatin of Isami in describing the reign of Alauddin Hasan, the first Bahmani Sultan. The Tazkirat-ul-Muluk by Rafi-ud-din Shirazi is a history of the Adil Shahis of Bijapur and of contemporary Indian and Persian dynasties. In addition to the Muslim chronicles there are three Sanskrit poetical works dealing with the history of Kashmir. They continue the historical narrative of Kalhana from the middle of the twelfth century down to the conquest of Kashmir by the Mughal Emperor NSOU ??CC - HI - 07 19 Akbar. Although inferior to Kalhana's Rajatarangini in literary style, these works, particularly the earliest one written by Jonaraja, are of great importance, and help us both in correcting and supplementing the statements in Muslim chronicles regarding Kashmir. It may be added that these three works have been treated by Muslim historians as the basis of their works. We possess voluminous literary evidence for the history of Vijayanagara. A beautiful Sanskrit poem Madhuravijayam describes the campaigns of Kumara Kampana, son of Bukka I, the king of Vijayanagara, against the Muslim Sultan of Madura. The poem was written by Kampana's wife Gangadevi and contains useful historical information. Another historical work relating to Vijayanagara is the Achyutarayabhyudaya by Rajanatha. It describes the events in the reign of Achyuta Raya, the half brother and successor of Krishnadeva Raya. Since the early times, knowledge of past events has customarily always been handed down from generation to generation. Many a times these oral narratives were transmitted in mythical forms and on occasions, history and mythology would become inextricably enmeshed. These bardic narratives are a form of the transmission of history. However, in many parts of the country, professional bards and genealogists were attached to communities of varying status, and the records of these bards became the repositories of a considerable volume of historical material. A systematic effort to collect and preserve the poetry of the bards, attached to the Rajputs, was begun in 1914, when the Asiatic Society of Bengal sponsored a 'Bardic and Historical Survey of Rajputana' by L.P. Tessitori. According to Tessitori, historical manuscripts were in the possession of bards called the Charans and the Bhats. There is no fundamental difference between the Bhats and the Charans, the two principal bards in Rajputana and Gujarat. The bards preserved the genealogical records of their Rajput patrons and maintained ledger books (vahi) containing their patron's family register. Traditionally in past ages the duties of the bards involved frequent attendance on their patrons, and many a bard would find himself accompanying his patron on various warrior campaigns and thus obtained first hand information about the warrior's heroic deeds. At the death of a bard his records would be passed on to his son, and the bards had thus become the permanent custodians of the family histories and genealogies of most ruling clans of Rajasthan. In return for his service, he would receive a fee.

20 NSOU ??CC - HI - 07 Bards were not located in and confined to Rajasthan and Gujarat alone. Hereditary bards can well be found in many parts of South India as well. According to C.Von Furer –Haimendorf the repertory of the bards of Rajasthan consists of epic poems of two main categories : 1)Those relating to famous Rajput heroes of ancient times. Such epic poems are the general heritage of all the Bhat and Charan bards. 2)Then there are compositions relating to particular Rajput houses and hence not of general interest. Both types of bardic poems are composed in two archaic languages – Dingala and Pingala. According to Tessitori, these are two distinct languages, the former, a long dead old local vernacular dialect of Rajputana, has survived in bardic songs and narratives. Pingala, on the other hand, was the Brajabhasa, a polite language used by poets. However bardic narratives have one major limitation. There is the great possibility of the false glorification of a ruler. A.K Forbes also says that though bardic accounts are accurate in so far as they reflect social conditions, their construction of chronology is extremely erroneous and deeply flawed. Col.Tod's book was largely based on bardic literature and did not undertake a critical analysis of the sources. Prose chronicles, known in Rajputana as Khyats, are to a very large extent works of individual scholars of the time and are not the production of the bards. The Khyat literatures were written with the aid of royal patronage and we may use the information provided in them to substantiate our understanding of archival written accounts. According to Tessitori, the chronicle paper(Khyat) came into evidence towards the end of the sixteenth century A.D. and it seems that the impulse responsible for their composition emanated from the court of Akbar, who must have been a source of inspiration to Rajput princes. Tessitori emphasized that these historical records could only have been compiled by officials – called Pancholis and Mahajnas, and who were officially known as Mutsaddis – employed by and in the service of the reigning monarch or prince. They alone could write correctly and view facts in an objective manner. They were trained in business transactions and knew how to work accurately and methodically. The bards, on the other hand, have never had a reputation for orthographical and intelligible writing. C. Von Furer Haimendorf says that, to the princes of eighteenth and nineteenth centuries, these more or less objective narratives of the sixteenth and seventeenth century chroniclers were no longer acceptable. They preferred the pompous eloquence of the Bhats and the Charans to the plain language of the historical records and commissioned their bards to recast old chronicles in a more poetic form. According

NSOU ??CC - HI - 07 21 to Tessitori, Tod based his Annals on these historical poems and disregarded the real chronicles, which remained largely unknown to him. 1 We may also use folklore as supportive evidence for writing the history of a community. However, it should not be used as an alternative source of information. Folklore cannot provide authentic data for the reconstruction of history. It is very difficult to frame the time period when these were invented and became part of popular culture. In the case of Rajasthan, oral narratives seeped into written records in a massive way and then, in due course of time, elements from written literature were again transmitted into the field of oral literature. Thus, folklore, to a large extent, complements archival sources, but is not considered an important and authentic source of history on account of the fact that it neither understands the context nor does it take people's responses into account. 1.5

Epigraphy The literary texts and chronicles of the Delhi Sultanate were not of the nature which could hardly have been composed with the purpose of communicating perceptions of communities. They had altogether different functions. However, there are many Sanskrit inscriptions which were inscribed by mercantile community during the reign of various Sultans of Delhi. Although these early medieval inscriptions differed substantially from the ancient counterparts, both in contents and in style, they were still not reflective of the people's history and had its limitations. They had mainly one central concern and that was recording of gift and of patronage. The context of the gift introduced the royal element whose presence and whose temporal qualities, like the spiritual qualities of a Brahmana, a preceptor or priest, had to be located in the context of the gift. However, these inscriptions were slightly different from contemporary chronicles and did not deal with political aspects only. Even though the rulers were praised by highlighting their victories and personal attributes, these were thus not political inscriptions as such, according to Vipul Shah 'because political inscriptions could not be separated from the broad social context in which grants were made'. B.D Chattopadhyaya argues that the more proper perspective from which to analyse the inscriptions should be 'legitimational' rather than 'overtly political'. There are a number of remarkable thirteenth century epigraphs in Delhi, which have largely been composed by the merchant families of the area. B.D Chattopadhyaya refers

22 NSOU ??CC - HI - 07 to a well-known Palam Baoli inscription of AD.1276. Pushpa Prasad also provides a detailed discussion of the content of such Sanskrit inscription of the Delhi Sultanate. Almost the whole of the Palam Baoli is in Sanskrit and was authored by Pandita Yogisvara. The inscription contains the genealogy of Thakkura Udadhara, a purapati in Sriyoginipura (Delhi). He has been credited with having constructed numerous dharmasalas and has also constructed a well, to the east of Palamba-grama (Palam) and west of Kumumbapura. The inscriptions also mention the contemporary rulers of Delhi, stating with Sahavadina (Sihabuddin) and coming up to Sri Hammira Gayasamdina (Ghiyasuddin Balban). These rulers are listed as a part of a genealogy of rulers. The rulers in Delhi are : Sahavadina (Sihabuddin), Suduvadina (Qutbuddin Aibak), Samusadina (Shamsuddin Iltutmish), Pherujasahi(Ruknuddin Firoz), Jalaladina (Jalaluddin Razia), Maujadina (Muizuddin Bahram), Alavadina (Alauddin Masud), Nasaradina (Nasiruddin Mahmud), Sri Hammira Gayasadina (Ghiyasuddin Balban). A similar genealogy is present in the Sarban stone inscription of AD 1378, found in the Raisina area of Delhi. The purpose of this Sanskrit inscription- composed by two merchant brothers, in the hope heaven would finally be attained by deceased ancestors – is also to record the construction of a well in the vicinity of the village Saravala (Sarban). The inscription mentions that the city of 'Dhilli' was built by the Tomaras. The Cahamanas, who looked after their subjects well, succeeded the Tomaras. We also find references to terms like 'Mlechha', 'Turuska' in these inscriptions, which help us to analyse the Hindu-Muslim dichotomy of the Muslim 'others'. Thus, inscriptions are literary texts of a particular kind. Although they record certain past activities and areas that are likely to be of interest to us, they do so in ways that were considered meaningful and useful to their contemporary audience. Inscriptions, just like medieval court literature, are forms of discourse containing representations of the self and the world. And therefore, the social and political aspirations they embody, cannot be ruled out along with the ideology they convey and carry by default. It is also important to understand that inscriptions cannot tell us everything we would like to know about medieval India. They provide us with direct access to only one sphere of human activity and that is religious patronage. Consequently, we may not be able to get evidence of every strata of medieval society in inscriptions, for the simple reason that only the relatively privileged could make a religious endowment or discharge one. Because of the necessarily fragmentary nature of the task on hand, the historian's work becomes rather challenging. To attain the best results, inscriptional information NSOU ??CC - HI - 07 23 should be supplemented with a study of other contemporary sources. Ideally one should use both inscriptions and literary texts to explore the Indian medieval past, as they are the cultural products of a contemporary society.

1.6 Conclusion Thus, past can be constructed out of a variety of sources. Today with a question mark being put on the authenticity of Persian chronicles and official histories, a new kind of history has emerged which is not entirely dependent on structured state-oriented narratives and chronicles and which relies more on archaeological sources, inscriptions, folklores, etc. in order to write people's history. The writing of medieval India history in most of the cases, whether consciously or unconsciously, has still remained alluded to a political project. And, therefore, there is need to explicate the politics of available histories. This can be achieved only when we use the whole variety of sources available to us.

1.7 Model Questions a) Short type 1. Compare between Tarikh-i-Firuz Shahi and Futuh-us-Salatin as historical works. 2. Comment on the contributions of Amir Khusrau 3. Discuss the distinctive features of the writings of Ziauddin Barani. 4. Evaluate the importance of malfuzat text. b) Essay type 1. Critically examine the various Persian sources with special references to the writings of Zia-ud-din Barani to reconstruct the history of the Turko Afghan period. 2. What, in your opinion, is the authenticity of indigenous historical literature? 3. Discuss the significance of studying epigraphic sources of the medieval period. 4. Briefly describe the vernacular histories that provide information about medieval India.

Unit 2 ? Foundation, expansion and consolidation of the Sultanate of Delhi; The Khaljis and the Tughluqs
Structure 2.0 Objectives 2.1 Introduction 2.2

Foundation, expansion and consolidation of the Sultanate of Delhi 2.3 The Khaljis 2.4 The Tughluqs 2.5

Conclusion 2.6 Model Questions 2.7 Suggested Readings 2.0 Objectives This unit covers the establishment of Delhi Sultanate, the ascendancy of Khaljis to power, the rise of the Tughlaqs and shows how these dynasties crushed the monopoly of Turkish nobility and racial dictatorship. The chapter throws light on the endeavours of Delhi Sultans like Iltutmish and Balban for putting the kingdom on a strong base. This section also deals with the expansionist activities of Alauddin Khalji, the innovative attempts made by Muhammad bin Tughlaq to repress his rebels and hold his realm together, the benevolent policies adopted by Firuz Shah Tughlaq among other sequential course of events. 2.1

Introduction The Delhi Sultanate, the foremost Muslim Sultanate of northern India which existed between the thirteenth and sixteenth centuries CE, owed much to its origin to the campaigns of Muhammad of Ghur and his lieutenant, Qutb-ud-din Aibak. Between 1175 and 1206 CE, the political exploits of Muhammad secured for him vast regions of northern India and led to the establishment of a power that was to last several generations. Till the rise of the Mughals in 1526 CE, the Delhi Sultanate saw a line of numerous

26 NSOU ??CC - HI - 07 dynasties lending their family name to their reign and going down in the annals of history as constituents of one of the most important periods of Muslim rule in India. Chronology of the Delhi Sultanate DELHI SULTANATE Name of the Dynasty and the Ruler Christian Era A.D A Qutbi Dynasty 1. Qutb-ud-din Aibak 1206 – 1210 2. Mahmud (restored) 1399 – 1413 11. Daulat Khan Lodi (elected) 1413 – 1414 2.2 Foundation, expansion and consolidation of the Sultanate of Delhi Muizuddin Mohammad bin-Sam, popularly known as Muhammad Ghori in India, had carefully nourished an idea of conquering Hindusthan, and led several campaigns to effect the foundation of a Muslim state there. His work in India was, in that respect, more solid, for, he was certainly more political than his great predecessors. A complete conquest of India was impossible as long as warrior blood throbbed within the veins of the Rajputs. The battles of Tarain, however, decisively sealed the fate of the Rajput states forever, and for the first time the Muslims had brought extensive territories under their direct sway comprising Delhi, Meerut, the Punjab, Bengal, Bihar, Gwalior, Kalanjar, Kanauj, Benaras etc.- practically the whole of northern India. In this work he had the

28 NSOU ??CC - HI - 07 valued assistance and cooperation of his able lieutenant Qutb-ud-din Aibak in recognition of which Muhammad placed him in charge of his Indian conquests after the second Battle of Tarain. Destiny, however, did not allow Mohammad to consolidate his conquests in Hindustan and his life came to a tragic end in 1206 A.D. The incomplete task of the Sultan now fell upon his able lieutenant Qutb-ud-din Aibak. Aibak's was a short reign and foreign affairs occupied most of his time. The keynote of his policy was always consolidation to the ultimate purpose. The greatest danger for the infant kingdom was from Central Asia. The Khwarizm Shah had his eyes on Ghazni and Delhi, while Yildiz and Qabacha were his rivals in regard to the Indian conquests of his master. Moreover, the Rajputs were inclined to recover their lost principalities, while Bengal became independent of Delhi. Yildiz, after the death of his master possessed himself of Ghazni and now laid claim to the whole of Muhammad's dominions including Delhi, while Alauddin Mohammad, the Khwarizm Shah cast his covetous eyes on Ghazni and Delhi. The situation in the north-west had thus to be closely watched and other affairs had to yield to the urgency of this problem. In such a context Aibak's continued residence in Lahore from where he is reported to have never moved, becomes intelligible. By an intrepid move, Aibak met all these adversities and came out victorious and even kept the Shah at the safest distance. Very soon, Yildiz, hard pressed by the Khwarizm Shah faction at his court, was compelled to leave Ghazni and take refuge in the Punjab and thence he was promptly driven out by Aibak. The citizens of Ghazni, out of a queer fascination for Qutb-ud-din Aibak, invited him, who did not lose the opportunity to gain Ghazni for himself. But the people of Ghazni, within forty days, however, became disgusted with his excesses and secretly invited Yildiz to come to their rescue. Yildiz did not fail to avail himself of this opportunity, and on his sudden and unexpected return to Ghazni, Aibak fled away precipitately. This destroyed the chance of a political union between Afghanistan and India, which was not achieved till Babur's occupation of Delhi. The death of Ikhtiyar uddin Khalji threatened to sever the connection of Bengal and Bihar with Delhi. Ali Mardan Khan had set himself up as an independent ruler at Lakhnauti, but the local chiefs replaced him by Mohammad Sheran and threw him into prison. Ali Mardan, however, escaped from confinement, went to Delhi and persuaded Aibak to intervene. Aibak's agent, Qaimaz Rumi, succeeded, though not without difficulty, in persuading the Khaljis to recognize Aibak's overlord-ship. Ali Mardan became Governor of Bengal and agreed to send Delhi an annual tribute. "This imposition NSOU ??CC - HI - 07 29 of its authority over the eastern province", remarks Dr.A.B.M Habibulla, "was but a poor consolidation, for the Delhi state at the moment needed political security more than suzerain status." The Hindu chiefs who had been subdued by Muhammad Ghori, were anxious to regain their lost independence after the death of Sultan Ghori. Thus Kalinjar declared independence in 1206, the Gahadavalas, under Harischandra had regained most of their power in Farrukabad and Badaon. Aibak had been so much occupied with the politics of the north western region and those of Bengal that he could not get any time to pursue a policy of aggressive warfare against the Rajputs. He died in 1210 A.D

of injuries received as the result of a fall from his horse while playing polo.

After the death of Qutb-ud-din Aibak, the infant Turkish kingdom was at stake. The officers at Lahore, in order to avoid the confusion and strife, hurriedly proclaimed Aram Shah as the Sultan who is sometimes described as Aibak's adopted son but usually believed to have been his own child. But the nobles of Delhi felt that at that critical moment of the history of the Turkish rule, the government should be in the hands of a competent soldier and a tried administrator. So they elevated Iltutmish, son-in-law of Aibak and the governor of Badaon, to the throne. A crushing defeat inflicted by Iltutmish on Aram Shah confirmed his accession in 1211 A.D. On his accession he found himself confronted with an embarrassing situation. 1) Nasiruddin Qabacha had asserted his independence in Sind and seemed desirous of extending his authority over the Punjab, 2) Taj-ud-din Yaldiz, who held Ghazni, still entertained his old pretensions to sovereignty over the Indian conquests of Muhammad, 3) Ali Mardan, a Khilji noble, who had been appointed governor of Bengal by Aibak after the death of Ikhtiyaruddin in A.D. 1206, had thrown off allegiance to Delhi and had styled himself Sultan Alauddin. 4) Further, Rajput rulers, who had been vanquished by Muhammad of Ghor and Qutb-ud-din Aibak refused to send tributes and repudiated allegiance. Jalor became independent and also Ranthambhor. Even Ajmer, Gwalior and the Doab threw off the Turkish yoke. Thus it is no wonder that Iltutmish found himself the master of Delhi, Badaon and the outlying districts only on his accession – and practically the Sultanate of Delhi was almost non-existent. 5) To add to Iltutmish's troubles, the atmosphere of Delhi even was intriguing. Some of the Amirs of Delhi in alliance with Aram Shah's party rose in open rebellion. In fact, what Iltutmish got, was but a shadow of the faded magnificence.

30 NSOU ??CC - HI - 07 But Iltutmish was not the man to fail or falter in the face of difficulties however serious, and in grim earnestness he set himself to the task of dealing with the situation in a bold and decisive manner. Having overpowered all the recalcitrant Amirs and nobles who opposed his succession, he brought the whole of the kingdom of Delhi together with its dependencies

SA BHYS-21 History of Medieval India.docx (D113515071)

of Badaon, Oudh, Benaras and Siwalik under his control. But his safety depended upon the suppression of his rivals, and he at once turned his attention towards them.

Free from internal difficulties, Iltutmish was now ready to settle his scores with Yaldiz, who had already occupied a considerable portion of the Punjab and even tried to assert his suzerainty on him, being driven out from Ghazni by the Shah of Khwarizm. Iltutmish, who could not afford to see a formidable rival established so near the northern frontier, promptly

71% MATCHING BLOCK 8/171

SA BHYS-21 History of Medieval India.docx (D113515071)

marched against him and defeated him in a battle near Tarain in 1215 A.D. Yaldiz was

taken prisoner and sent to Badaun where he was

put to death. Dr.A.B.M Habibulla observes: "The victory completed Aibak's work, the last obstacle to Delhi's independence and to her disengagement from Central Asian power politics was finally eliminated. Delhi became a sovereign state, in fact if not, yet in theory". Iltutmish, however, allowed Lahore to remain in the hands of Qabacha, which was annexed to Delhi two years later, (1217). This danger was nothing in comparison with the storm which burst upon India in 1221 A.D. The Mongols, who became a source of constant anxiety to the Sultans of Delhi, came down from their mountain steppes in Central Asia under their leader Chinghiz Khan and ravaged the countries that came in their way. Jalaluddin Mangbarani, the last Shah of Khwarizm, having been pressed by Chinghiz Khan, fled to the Punjab and sought asylum in the dominions of Iltutmish and even exerted his influence over some portions of northern India. Iltutmish was on the horns of a dilemma. It was discourteous to refuse asylum to a princely refugee, but at the same time, it was unwise to invite such a powerful invader as Chinghiz Khan. Moreover, his policy was not to allow the Delhi kingdom to be dragged into Central Asian politics. So Iltutmish sent a polite refusal to this unwelcome guest on the pretext that the climate of Delhi was likely to be prejudicial to Jalaluddin's health. Mangbarani

delhi Sultanate AMU.pdf (D142327411)

entered into an alliance with the Khokkars, and after defeating Qubacha of Multan, plundered Sind and northern Gujarat and went away to Persia. The Mongols also retired.

India was thus saved from a terrible calamity and an early collapse owing to the wise and prudent policy of Iltutmish. Chinghis Khan's departure removed a dominating fear from Iltutmish's mind. It was high time now for Iltutmish to turn his attention to Qubacha, already impoverished by NSOU ??CC - HI - 07 31 Chinghiz Khan, who still maintained his independence in Sind and lower Punjab. With a double attack, Multan was captured along with Uch and Qabacha drowned himself in the Indus waters. The states of Multan and Sind thus became an integral part of Delhi. The defeat and humiliation of Qabacha had profited Iltutmish to turn his attention to Bengal where since Aibak's death, Delhi's authority had been completely negative. Ali Mardan had declared independence and his tyranny continued unchecked for years until his exasperated officers put him to death and raised Hisamuddin Iwaz to the throne. The latter assumed the title 'Sultan Ghiyasuddin' with full sovereign status. Iltutmish would not tolerate the existence of an independent ruler in a province that originally belonged to Delhi. So he advanced against Iwaz who accepted the Sultan's sovereignty. The Sultan appointed Malik Alaaddin Jani, the governor of Bihar and his eldest son Nasiruddin Mahmud, the governor of Oudh. But as soon as Iltutmish withdrew, Iwaz reasserted his independence. Nasiruddin was sent from Oudh who defeated and killed Iwaz. After the death of Nasiruddin, Alaaddin Jani was appointed the governor of Bengal to restore order there. Bengal and Bihar thus once again became the integral part of the Delhi kingdom. Taking advantage of the danger, besetting the Delhi Sultanate, the Rajputs, all these years, made steady progress in recovering their territories. Iltutmish was, however, determined to recapture the lost provinces. Ranthambhor had been recovered in 1226 and a year later Mandwar in the Siwalik Hills. Gwalior was captured by the Sultan from its Hindu Raja, Mangal Deva. Next he besieged Jalor and Ajmer with its adjacent districts being re-annexed. Next Iltutmish invaded Malwa and captured the fort of Bhilsa and advanced upto Ujjain which he sacked. The Ganga Jamuna Doab was also annexed to the kingdom of Delhi. It is, however, doubtful if any appreciable advance could be made into north Bihar. The chequered career of the mighty Sultan at last came to an end in 1236 A.D after a successful reign of twenty six years.

delhi Sultanate AMU.pdf (D142327411)

The death of Iltutmish was followed by a decade of political instability at Delhi. During this period, four descendants of Iltutmish were put on the throne and murdered.

The main cause of this was acute factionalism in the Turkish nobility. Other than Razia, there were no successors worthy enough to rule the kingdom after Iltutmish. Largely through the efforts of the 'Corps of the Forty' or Chihilgan – a political faction consisting of Iltutmish's personal slaves – support was mustered for the Sultan and his family members. The Chihilgan envisaged by Iltutmish to form a base for the kingdom actually proved to be its worst enemy. It made and unmade kings until Raziya, the daughter of Iltutmish, was placed on the throne.

32 NSOU ??CC - HI - 07

NSOU ??CC - HI - 07 33 Razia Sultan was a woman of exemplary qualities –wise, brave, courageous and generous. With tact and diplomacy, she suppressed rebellions in the kingdom and restored much needed order. She generally wore male attire and did not hide her face behind a veil. She even hunted and led her army in war. Undoubtedly, Muslim nobles, advisors and the ulemas who had formed the inner circle of the Sultan, could not accept the idea of being ruled by a woman. Her appointment of an Abyssinian slave Yaqut, to an important position was considered insulting by the Corps of the Forty, even leading to some of her nobles rising against her. Iltutmish’s wazir, Nazim-ul-Mulk Junaidi, led a rebellion against her but was forced to flee in the end. Trying to suppress rebellions in Sirhind and Lahore, Razia was imprisoned at Tabarhinda; and Yaqut was killed. Though she eventually won over her captor, Altunia, and married him, she would never be able to regain control over Delhi. Razia would finally succumb to the designs of the powerful Shamsi nobles, and be killed by bandits while trying to flee. Her death marked the beginning of the decline of the line of Iltutmish. Following Razia’s death, Iltutmish’s son and grandson ruled for a period of six years. But both of them being incompetent, they were soon replaced by Iltutmish’s younger son, Nasiruddin Mahmud (1246 – 66 CE). The new Sultan was more inclined towards leading a spiritual life and entrusted the administration of the kingdom to his capable minister and son-in-law, Balban. Nasiruddin passed away after a reign of 20 years, passing on the reins of the Sultanate to Balban. Balban was one of the most striking figures of the Delhi Sultanate. The political situation in India on the eve of Balban’s ascent to the throne was strife ridden. His reign was characterised by significant factors; it was a continuous struggle to maintain Delhi’s position against the revived power of the Mewatis, Jats and the Rajput chiefs. At the same time, vigilance also needed to be maintained against the marauding Mongols in the West. Even in the central regions of the state, Sultanate rule was sometimes challenged by discontented Muslim nobles. To top it all, the Corps of the Forty had become very strong during the rule of Nasiruddin – even to the point of becoming extremely jealous of Balban’s ascent to the throne. This necessitated Balban to curb the power of the revolting Chihilganis so that all internal threat to his authority could be permanently removed. Balban systematically tried to end all disorders in his state with a firm hand. In the very first year of his accession, he succeeded in making the vicinity of Delhi safe from robbers and rebels. He punished them with a heavy hand and cleared the jungles and built four forts in the rural area around Delhi and garrisoned them with ferocious Afghan troops. Next year, he undertook operations in the Doab and in Awadh. He divided the 34 NSOU ??CC - HI - 07 area into a number of military commands and appointed energetic officers to clear the forests and to conduct a ruthless drive against the local Hindu chieftains and their robbers. He established military posts at Bhojapour, Patiali, Kampil and Jalali, all of which were garrisoned with semi-barbarous Afghan troops. Thereafter, Balban proceeded to Katchar. There he ordered his men to attack the villagers, to set fire to the houses and to slay the entire adult male population. Innocent women and children were dragged into slavery.

delhi Sultanate AMU.pdf (D142327411)

By these barbarious methods he struck terror into the hearts of the people and depopulated the entire

region. Expeditions were sent to reduce the rebellious territories in Rajputana and Bundelkhand, but the exertions of the Delhi army met with only partial success. Balban's thrust was more on recognizing the internal state administration on efficient lines and establishing peace and order in his home territory rather than embarking upon expeditions against Hindu territories. One of Balban's main pre-occupation was the danger of Mongol invasion. To meet this perennial threat, he organized a highly efficient army, repaired and constructed a number of fortresses – at Lahore, Multan, Samana and Dipalpur, for instance – along the routes from Delhi to the north-western frontier and placed his own sons, Muhammad and Bughra Khan, over the provinces of Samana and Multan which were most vulnerable to Mongol attacks. But his military strategy made him move away from Iltutmish's broad minded vision by not reposing enough faith in Hindus for holding responsible military offices. He always preferred to stay near his capital, and did not venture on distant campaigns. As a result of such measures, the Mongols were decisively defeated in 1279 CE when they invaded Multan. As usual, Bengal gave considerable trouble to Balban. In 1279, encouraged by the Mongol threat on the north-west and the old age of the Sultan, Tughril Khan, the governor, who had earlier submitted to Balban during the first year of his reign, later raised the intensity of his revolt. Balban dispatched Amir Khan, governor of Awadh, to reduce the rebel to obedience. Amir Khan was, however, defeated and Balban was so enraged that he ordered him to be hanged over the city gate of Awadh. He then sent another army under Tirmiti. He fared no better than his predecessor. A third army is said to have been similarly beaten and driven off. Balban's patience was now exhausted and he made preparations to march to Bengal in person. At the head of an army, two lakh strong, and accompanied by his second son, Bughra Khan, he appeared in the vicinity of Lakhnauti, which was however, abandoned by Tughril who had fled towards East Bengal. Balban pursued the rebel and reached Sonargaon near Dacca. Tughril was captured far away from Dacca by Bektars and put to death by him at Hajinagar in East Bengal. The Sultan then turned to Lakhnauti and there inflicted a terrible punishment upon Tughril's NSOU ??CC - HI - 07 35 followers. His revenge being thus satisfied, the Sultan appointed

Bughra Khan, governor of Bengal and advised him to remain faithful to

Delhi. Satisfying himself that Bengal would not henceforth rise into a rebellion, Balban returned to Delhi. Soon after his return to Delhi, Balban heard about the death of his son, Muhammad, the popular prince, who died (1285 CE) in a battle against the Mongols. This was a huge blow, eventually causing his death in 1286. 2.3 The Khaljis After the death of Balban, his grandson, Kaiqubad, immediately ascended to the throne, but was unable to manage either the administration of

the Sultanate or the factional conflicts between the old Turkish nobility and the new forces led by the Khaljis.

This resulted in a struggle between the two factions, the consequence of which was the murder of Kaiqubad and the ascension of Jalaluddin Firuz Khalji to the throne in 1290 CE. Jalaluddin Khalji, the first ruler of the Khalji dynasty, was almost seventy years of age when he ascended the throne. He ruled for a fairly short period, his age making him mild and generous, restricting the severity and vigour required of a Sultan. In his second year of reign there was a rebellion from the fief holder of Kara, which Jalaluddin suppressed. The rebel was later pardoned, and Kara along with Awadh were awarded by the Sultan to his nephew and son-in-law, Alauddin Khalji. Jalaluddin then proceeded to put down a rebellion by some of Balban's officers and led an unsuccessful expedition against Ranthambhor. In the absence of any kind of dynamism, the Sultan's lacklustre kingship was displayed even in his foreign policy. Although he succeeded in driving back a substantial Mongol force commanded by Abdullah, the grandson of Hulagu Khan, from the banks of the Sind river in 1292 CE, he gave the Mongols the dangerous concession of settling down in India. Ulghu, a descendant of Chinghiz Khan and a few thousand of his Mongol followers embraced Islam and settled at Mughlpura near Delhi. The descendants of these Mongols came to be known as new Mussalmans who continued to be a source of trouble and anxiety. His weak policies coupled with his kind disposition exasperated his followers and encouraged them to indulge in seditious acts. Alauddin himself joined the disgruntled nobles and treacherously murdered the Sultan who had proceeded to Kara to welcome his nephew on his triumphant return to Devagiri. By the end of his reign, Jalaluddin had sowed the seeds for two major changes that mitigated the harsher aspects of Balban's rule. The first being the Afghan descent of the 36 NSOU ??CC - HI - 07 Khaljis, which was used by Jalaluddin to harness the support of the Afghan nobles; and the second was giving higher offices to Indian Muslims, who had so far been ignored by Balban because of his belief that the right to govern was vested in the Turks alone. After murdering his uncle, Jalaluddin Khalji, in a deceitful manner, Alauddin Khalji entered Delhi unopposed and proclaimed himself the Sultan amidst pomp and show. He was soon to realize that he had to face a number of grave problems, including the recurring invasions of the dreaded Mongols, hostility and insubordination of powerful nobles, opposition from Hindus, and the weakness of the central authority. His main aim was, therefore, to repress these disruptive forces, before establishing Muslim rule more securely in India. In order to centralize and expand his Sultanate, Alauddin realized the need for an efficient administration, a powerful army, a full treasury and dependent nobility under his personal control. He had earlier partly solved the issue of improving the kingdom's finances by conducting a rewarding raid into Bhilsa (1292 CE) in Central India. Building upon his initial success in improving his position and raising a fresh army, he raided Devagiri (early 1296CE), the capital of the Yadavas in the Deccan, and defeated Raja Ramachandra. The phenomenal wealth procured from Devagiri helped provide for a good foundation for his future plans of building the state. Alauddin had already gained the support of many dissatisfied Turkish nobles, now he obtained the support of more nobles by luring them with money and promotions. During Alauddin's reign, therefore, the Sultanate gained colossal proportions. With Alauddin Khalji begins what may be called the imperial period of the Sultanate of Delhi. Firstly, the Mongol invasions – numbering five during the decade from 1297 to 1306 CE – were effectively checked by Alauddin Khalji

91%**MATCHING BLOCK 13/171****W**

with savage cruelty. From 1306 CE, there was a marked decline in the frequency of the Mongol raids.

It is said that these fierce encounters had led the Mongols to fear Alauddin so much that they saw the sword of the Islamic armies hanging above them even in their sleep. Alauddin began his formal expansionist activities with the subjugation of Gujarat in 1299 CE. Next he moved against Rajasthan, before subduing Ranthambhor (1301 CE), which was ruled by Hamirdeva. Amir Khusrau, who had accompanied Alauddin Khalji on the conquest, poignantly describes the event at the close of three months of siege when all the noble Rajput women had performed jauhar to uphold their honour. Alauddin then turned towards Chittor (1303 CE), ruled by Ratan Singh who had annoyed him by refusing permission to his armies to march into Gujarat through Mewar. According to popular legend, another reason for subduing Chittor was that Alauddin had heard about

NSOU ??CC - HI - 07 37

38 NSOU ??CC - HI - 07 the beauty of the queen of Chittor,Rani Padmini and desired to acquire her for his harem. This account, however, cannot be authenticated. Chittor was subdued and assigned to Alauddin’s minor son, Khizr Khan and a Muslim garrison positioned in the fort of Chittor. Alauddin also subdued Mandu (1305 CE), before adding successful campaigns in Rajasthan which opened the door for further campaigns towards the south of his kingdom. Alauddin’s primary motto in these raids was to make these small principalities recognize his supremacy and to collect huge amounts of booty to finance his consolidation in the north. His adventure into Southern India was an ambitious venture led by his lieutenant, Malik Kafur. Under Kafur, the Yadava Kingdom of Devagiri was once again suppressed (1307 CE), and two years later on attack was directed against the Kakatiya kingdom of Telingana. During 1310-11 CE Malik Kafur plundered the Pandya kingdom in the far South of the country, reaching as far as Rameshwaram. He returned to Delhi with immense wealth, only to lead yet another raid into Devagiri (1313 CE) when the Yadavas were totally defeated and their kingdom finally annexed to the Sultanate. Thus, the royal houses of Malwa, Chittor and Gujarat in the north and the powerful southern dynasties of the Yadavas, Hoysalas, Pandyas, Cheras, Cholas and Kakatias were all made to acknowledge Alauddin as their sovereign. But the vast Khalji dominions now seemed more like a collection of diverse people rather than a close knit state, which appeared to be threatened by the slightest change in leadership. Yet, the fact remains that Alauddin’s energetic rule rapidly expanded the boundaries of the Sultanate, providing more enduring direction to the continued existence of the Sultanate of Delhi over any other period. The imperial edifice raised by Alauddin through his might and ruthlessness tended to decay during his life time. Malik Kafur, to whom he had given the exalted title of malik naib(regent) tried to secure complete control of the state by liquidating all potential rivals. The able and loyal governor of Bengal, Alp Khan, was murdered. There were rebellions in Gujarat, Chittor and Devagiri. In the midst of these troubles, Alauddin died in 1316. In a very short time after the death of Alauddin, the Khalji dynasty waned away. Disruptive forces began to assert themselves, followed by political confusion and turmoil. For a brief period Malik Kafur emerged strong in the political arena, when most of the claimant princes were done away with. Only Qutbuddin Mubarak Shah, the third son of Alauddin, escaped a tragic fate. The atrocities of Malik Kafur caused general dissatisfaction among the people, leading to some conspirators murdering him in 1316 CE and making Qutbuddin Mubarak Shah the new Sultan of Delhi.

NSOU ??CC - HI - 07 39

40 NSOU ??CC - HI - 07 Qutbuddin Mubarak Shah began his reign on a positive note by releasing a number of prisoners who had been unjustly detained during Kafur’s reign. He also put down rebellious chiefs and suppressed revolts in Gujarat and Telingana. He led an expedition against Raja Harpal Deo of Devagiri, whom he captured and killed. But soon the Sultan abandoned himself to a life of debauchery and left the state’s administration in the hands of his favourite general, the Hindu convert, Nasiruddin Khusrau Khan, who murdered his master and set up a reign of terror.

Opposition to Khusrau’s rule arose immediately, led by Ghazi Malik,the warden of the Western Marches at Deopalpur.

Ghazi Malik organized a confederacy of nobles, captured Khusro and beheaded him in 1320 CE. In the absence of any surviving members of Alauddin's bloodline, Ghazi Malik started a new dynasty by assuming the title of Ghiyasuddin Tughluq. 2.4 The Tughluqs Ghiyasuddin's reign was short but eventful. Incidentally he tried to return to the members of the old royal family of the Khaljis all that they had lost in the previous years by appointing them to high offices and suitably marrying off their unmarried daughters. He then set himself to justifying the confidence reposed in him by establishing a sound administration. Having established order at home, he turned his attention towards Warangal, whose ruler had ceased to pay tribute. He defeated the powerful raja and annexed Warangal to the Tughlaq dominions renaming it Sultanpur. He then had a raid against Jainagar and re-conquered Bengal, which had been independent under its Muslim kings following the death of Balban. While returning from the Bengal campaign with a large booty, a ceremony was planned to felicitate Ghiyasuddin for which a huge pavilion had been constructed on the banks of the Yamuna. While the royal party was celebrating, a wooden shelter erected specially for this purpose collapsed over Ghiyasuddin, killing him. Based on the accounts of Ibn Batuta, Ferishta and Badauni, some modern historians share the view that this mishap was not an accident but a pre-planned conspiracy led by his son, Juna Khan. On the other hand, other historians – especially Barani have tried to absolve Juna Khan of all responsibility of this murder. After the death of Ghiyasuddin Tughlaq, Juna Khan ascended the throne as Muhammad bin Tughlaq. Muhammad bin Tughlaq was ambitious of conquering countries beyond the borders of India. Early during his reign he formed design of conquering Khurasan, Iran and Transoxiana. The Khurasan project was due to the instigation of some Khurasani nobles who had been attracted to the Sultan's court by his lavish generosity. A huge army, numbering three lakhs and seventy thousand men, was collected and was paid one year's

NSOU ??CC - HI - 07 41

42 NSOU ??CC - HI - 07 salary in advance. But the project could not be undertaken and the army had to be dispersed. It was not an easy affair to cross the huge snow-bound mountains that lay between India and Khurasan and to fight the hostile people inhabiting the intervening lands. Moreover, the political condition of Khurasan had taken a turn for the better. So the project was given up. The fort of Nagarkot situated on a hill in the Kangra district in the Punjab had defied Turkish army since the time of Mahmud of Ghazni. In spite of the conquest of almost the whole of India by Alauddin Khalji, that fort had remained in the hands of a Hindu prince. In 1337 Muhammad undertook an expedition against it. The raja offered resistance, and the fort could not be taken. Muhammad was desirous of establishing his authority over the Himalayan states of the Kumaun region which had not so far been reduced to submission. Hence he led an expedition to Qarajal which was situated in the Kumaun hills at a distance often days' journey from Delhi. The huge Delhi army attacked the Hindu stronghold, but it suffered greatly owing to the mountainous nature of the country and heavy rainfall. The Sultan was, therefore, obliged to retire, but he succeeded in compelling the chief to pay him an indemnity. Some modern writers have described the Qarajal expedition as an unsuccessful adventure to conquer China and Western Tibet. This view is incorrect as no contemporary authority has made any mention of Muhammad's desire to conquer China or Tibet. While embarking upon new areas of conquest, Muhammad bin Tughlaq faced serious problems, especially during his expansion into southern India. Giving up on the Khalji policy of maintaining Hindu tributary states in the South, Muhammad bin Tughlaq subdued two or three remaining southern Hindu powers under the direct control of the Sultanate : Warangal and Dwarasamudra. While Warangal was annexed to the kingdom in 1327 CE, Dwarasamudra was destroyed. In 1326-27 CE, the Hindu kingdoms of Kampili and Madura were also added to the Sultan's list of conquests. In the very second year of his reign, Muhammad bin Tughlaq was faced with a serious rebellion from Bahauddin, his cousin in the Deccan. Shortly afterwards the governor of Multan also revolted. But these rebellions were easily put down. The unwieldy extension of his kingdom southwards, the lack of security on the highways, the recurring Mongol menace, famine conditions in parts of the land, and the revolt of Bahauddin – all induced Muhammad bin Tughlaq to transfer his capital in 1327 CE to the more centrally located Devagiri, in the Deccan, which was renamed Daulatabad. Directly ruling over Southern India did not necessarily signify complete control over the zone from Delhi.

NSOU ??CC - HI - 07 43 The Sultan had multiple motives for making Daulatabad his second capital. Firstly this move would give him a chance to establish control over the rich and fertile lands of Deccan and Gujarat, and as such provide him with access to the western and southern ports. The second reason for the transfer was that the location of the new capital helped Muhammad bin Tughlaq face the Mongols from a venue that was safely located far away from the north western frontier. There was nothing fundamentality wrong with the Sultan's plan, but if he had merely shifted his official court, the change would not have been so unreasonable or impractical. His blunder lay in ordering

61% MATCHING BLOCK 16/171**SA** BHYS-21 History of Medieval India.docx (D113515071)

the entire population of Delhi to move to the new capital, and despite adequate and liberal arrangements

for the convenience of travellers, the suffering of the people was terrible. However, no sooner did the Sultan and his people settle down in Daulatabad that troubles broke out on the north-western border and in Bengal. Muhammad bin Tughlaq had to return to Delhi to crush these rebellions, some of which were led by his own nobles. Realizing the failure of his plan, the Sultan re-ordered his people to return to Delhi. He tried to make amends for his losses by abolishing multiple taxes and organizing extensive relief measures, but these schemes resulted in heavy financial losses and hardly helped the people, inciting them to revolt. Seeing the preoccupation of Muhammad bin Tughlaq in suppressing a rebellion in Lahore, the Muslim governor of Mabar, located on the extreme southern boundary of the Sultanate, declared his independence in 1335 CE and founded the Sultanate of Madura. Soon, there were several more rebellions by Hindu chiefs who formed new principalities. The most important of which was Vijayanagar. All through the next few years, while the Sultan struggled to put down upheavals in almost every other province, he lost control of most of his southern Indian conquests. After successfully rebelling, Gulbarga (1339 CE), Warangal (1345-46 CE) and Daulatabad – which led to the founding of the Bahamani kingdom in 1347 CE – broke away from the Tughlaq domain. Having lost much, Muhammad bin Tughlaq then got involved in trying to repress another revolt in Gujarat towards the last few years of his reign. This did not leave him with any time to be able to recover Daulatabad till his end. Muhammad bin Tughlaq failed to hold his realm together, and gradually his Sultanate fell apart. The innovations of the Sultan, famine conditions, heavy taxation, disloyalty of foreign amirs and ruthlessness and severity of Muhammad bin Tughlaq in suppressing revolts embittered his people against him, resulting in large scale insurgencies. The Sultan was usually victorious over his rebels, but he could not be everywhere at the same time; so while one rebel was crushed the other raised his head elsewhere. As a result, at the time of his death, he left behind a shattered kingdom and defiant tendencies among the people. As Badauni rightly observed, when Muhammad bin Tughlaq died in 1351 CE ‘

100% MATCHING BLOCK 19/171**SA** BHYS-21 History of Medieval India.docx (D113515071)

The king was freed from the people and they from the king’.

Muhammad bin Tughlaq did not leave behind any son to succeed him and the nobles chose his cousin, Firuz Shah, as the next ruler. Firuz was the son of a Rajput princess of Dipalpur and had been brought up by his uncle Ghiyasuddin Tughlaq. He had also been trained by Muhammad bin Tughlaq in the art of administration. Gentle by nature, Firuz hated war and the few expeditions he undertook were not vigorously executed. Bengal remained independent despite Firuz twice attempting to conquer it, once during 1353-54 CE and then again in 1359 CE. Upon returning from Bengal, Firuz marched against Jainagar in Orissa (1360 CE) where he destroyed the famous temple at Puri and forced the ruler to pay tribute. Firuz then led an army against Nagarkot (1361 CE) and the old and venerated temple of Jwalamukhi was plundered and its ruler – who had assumed independence during the reign of Muhammad bin Tughlaq – forced to submit. The Sultan also organized two expeditions against Thatta in Sind in 1362 CE and 1366-67 CE but the region remained no more than a tribute paying state throughout his reign. Realizing that these wars did not benefit the kingdom in any way, Firuz showed no interest in recovering the southern provinces even when he was invited, in 1365CE, by a Bahmani prince to intervene in the Deccan politics. These provinces had been allowed to become independent under Hasan Gangu, the founder of the Bahmani kingdom. In addition to this, Firuz also marched to Etawah (1377 CE) and Katehr (1380 CE). 1 The accession of Firuz Shah inaugurated a rule of benevolent policies, there was a marked improvement in the overall socio-cultural condition of the kingdom and its people. Being of a kind, generous and sympathetic disposition, Firuz was best suited for peaceful pursuits. He fulfilled the role of a patriarch and his efforts to address the problems of the people won him grateful appreciation. The only negative tendency in Firuz Shah's nature was his religious bigotry which made him intolerant towards Shias and Hindus. He penalized them, prohibited public worship of idols and imposed the jiziya even to Brahmans who had been exempted from it so far. There are reports of Hindu temples being destroyed and new mosques being constructed in their place. Firuz acted like a zealous missionary and offered perquisites to those who converted to Islam. This temperament may have been the outcome of his appeasing stance towards the ulema and the nobility, the two influential Muslim groups of the period.

NSOU ??CC - HI - 07 45 After the death of Firuz Shah Tughlaq in 1388 CE, the Sultanate collapsed almost immediately. He was followed in quick succession by six weak Sultans whose reigns were disgraced by political murders, corruption and fights for the throne. Taking advantage of the situation many provincial governors, who profited by the disorders at the capital, set up independent principalities. 2.5 Conclusion After the death of Firuz Shah Tughlaq in 1388 CE, the decline of the Delhi Sultanate became imminent. Several centrifugal tendencies raised their heads leading to major succession disputes and palace intrigues between the sons and grandson of Firuz who were in turn supported by various pressure groups at the court. These puppet Sultans lacked statesmanship and personal powers to run the kingdom, which was already heavily dependent for its existence on the military strength of its different provinces. This made the kingdom more vulnerable to disintegration. Genealogical Chart

48 NSOU ??CC - HI - 07 Unit 3 ? Mongol's threat and Timur's invasion; The Lodis : Conquest of Bahlul and Sikandar
Structure 3.0 Objectives 3.1 Introduction 3.2 Mongol's Threat 3.3 Timur's Invasion 3.4 The Condition of the Delhi Sultanate after the Timur's Invasion 3.4.1 Conquest of Bahlul 3.4.2 Conquest of Sikandar Lodi 3.5 Conclusion 3.6 Model Questions 3.7 Suggested Readings 3.0 Objectives The opening half of the unit deals with the 'scientific frontier of India' and appries the reader of the persistent threat posed by the Mongols, and the methods adopted by early Turkish rulers in countering the same. While the early Turkish sultans resorted to policy of 'aloofness' or 'appeasement', the later Sultans put up strong resistance to thwart the repeated attempts made by Mongols. The second half of the unit includes the invasion of Amir Taimur and its consequences, followed by the foundation of Sayyid and Lodi dynasty. 3.1 Introduction The Mongols, who resided in the steppes beyond the desert of Gobi in North Asia, had become a major menace to the security of India. Their aim was to enter India from the North West and then penetrate deep into the Indian territory. The Delhi Sultanate was more than aware of the imminence of Mongol invasions. Although the Mongols could never make a serious headway into the country, except perhaps on two noteworthy

NSOU ??CC - HI - 07 49 occasions, they did have a very profound impact on the polity, economy, administration, society and culture of the Delhi Sultanate, particularly under the tutelage of Alauddin Khalji. The Delhi Sultanate was completely dismantled after Timur's raid in 1398. It was only after 1414 or so, after the Sayyid dynasty came into being, that the Sultanate of Delhi found its bearings again. During the same period, a number of Afghan Sardars established themselves in the Punjab. The most important of these was Bahlul Lodi who formally crowned himself king in 1451 and established the Lodi dynasty. But Sikandar Lodi (1489 -1517) was perhaps the most important Lodi Sultan. 3.2 Mongol's Threat During the medieval period, when steam-ships were unknown, India was vulnerable in the north-western corner only, as the eastern Himalayas and the Assam hills were difficult to be crossed by an army of invasion. It was through this passage that foreign invaders entered India. The policy of the rulers during ancient and medieval India was to defend north-western frontier. But this frontier could not be successfully defended and controlled without an effective military possession and control of the area extending from Kabul via Ghazni to Kandahar which commands routes to the fertile valleys of the Punjab. The Kabul-Ghazni-Kandahar line, flanked by the Hindukush, may, therefore, be correctly designated as the "scientific frontier of India". Side by side with acquiring and defending this line, it was equally essential to control the turbulent tribes that inhabited the region lying between Kashmir and the sea, as through this belt of land ran the main passages from the Punjab to the above line and vice versa. The enormity of the problem was heightened by the presence of war-like and independent tribes, like the Khokhars in the Salt Range region, situated in the northern half of the Sindh Sagar Doab. The Khokhars carried their depredations into the heart of the Punjab and added to the difficulties connected with the protection and defence of north-western frontier during the medieval age. The problem did not present any difficulty to the Ghaznavide rulers of Punjab during the 11 th and 12 th centuries, as Kabul, Ghazni and Kandahar belonged to them. Nor was their successor, Muhammad Ghor, called upon to meet an unprecedented emergency for the same reason. But after Muhammad's death, the first Sultan of Delhi, Qutb-ud- din Aibak made a feeble attempt to reach the scientific frontier of India by occupying Ghazni in 1208. He met with a failure and had to abandon Ghazni. Soon after this, the Sultan was faced with a new problem. Ghazni was annexed by the Khwarizm empire,

50 NSOU ??CC - HI - 07

NSOU ??CC - HI - 07 51 the eastern frontier of which touched the Indus. As the infant Delhi sultanate came into contact with a powerful neighbour, its north western frontier was directly threatened. But, fortunately, the boundary between the Delhi Sultanate and the Khawarizm empire, which was the river Indus, remained undisturbed, as, owing to the rapid expansion of the Mongols, the Khawarizm empire itself was trembling for its safety. Within a decade the danger overtook the empire; the ferocious Mongols tore the Central Asian Muslim state to pieces and occupied its territories, including Afghanistan, Ghazni and Peshawar. The river Indus, thus, ceased to be the north- western boundary of the Sultanate and its frontier was pushed back into the interior of Punjab. In view of these developments there was no question of the Sultans trying to obtain control of the "scientific frontier of India". The problem before them, according to A.L. Srivastava, throughout the thirteenth century, was how to retain what they had possessed, namely, the country enclosed by a line stretching from Sialkot to Nandanah in the Salt range, which Iltutmish had brought under his possession soon after 1217.

52 NSOU ??CC - HI - 07 By 1220 the Mongol hordes under their great leader, Chinghiz Khan had brought about the complete annihilation of the Khwarizm empire and driven its ruler Alauddin Muhammad into the Caspian Sea where he died (1220). Alauddin's heir, Jalal-ud-din Mangbarni, too, fled in terror from Khurasan to Ghazni. As Chinghiz pursued him from Talkan, he quitted Ghazni and fled to the frontier of India. K.A Nizami has categorized the response of the Sultanate towards the Mongol challenge into three distinct phases – i) the policy of aloofness under the early Turkish Sultans, ii) The policy of appeasement under Razia and Nasiruddin; and iii) the policy of resistance under Balban and Alauddin Khalji. One of the first such invasions took place in 1221 under Chinghiz Khan when Iltutmish had hardly consolidated the position of Punjab. Chinghiz Khan reached the Indian frontiers in pursuit of the crown prince, Jalaluddin Mangbarni, Iltutmish followed the policy of 'aloofness' and did not assist Jalaluddin. He feared a possible alliance of Qubacha and the Khokhars with Mangbarni. Although Qubacha and Mangbarni could not remain friends for long, a matrimonial alliance cemented the bond between the Mangbarnis and the Khokhars. This strengthened the Mangbarni position in the northwest. These developments compelled Iltutmish to remain aloof and he did not try to enter the north-west region. A.B.M Habibullah argues that Chinghiz Khan refrained from further operations in India out of reciprocity for Iltutmish's neutrality. An understanding of non-aggression against each other might also have possibly been arrived at. But Peter Jackson suggests that control of India was not the immediate objective of Chinghiz Khan and the pacifying of Khwarazm, Transoxiana and Ghazni were more important in his priority. There was a swing from Iltutmish's policy of 'aloofness' to appeasement during the reign of Razia. The extension of the Sultanate frontier up to Lahore and Multan had exposed the Sultanate to Mongol incursions. There was no buffer state between the Sultanate territory and the Mongol area of influence. This could become possible because the Mongols had no wish to get involved with the Delhi Sultanate in the immediate future as they were occupied with West Asia. Once they were done with West Asia, the Mongols embarked upon the policy of annexing India between 1240 and 1266. By 1246 the Mongol outposts were established in Ghazni,

NSOU ??CC - HI - 07 53 Peshawar and other places in what is now known as Afghanistan and the Indus had disappeared as a practical boundary. Delhi's administrative frontier had been pushed back to modern Punjab between the western banks of the Ravi. For the rest of the century, the Delhi Sultanate was thrown in the defensive and its forward policy in this direction aimed only at extending control over the Chenab basin rather than reaching the scientific frontiers. However, till 1295, the Mongols did not show much enthusiasm about wanting to occupy Delhi. The primary reason for this was the change in the situation of Central Asia. Mongol Khan of Transoxiana found it difficult to face the might of the Perisans and, thus, was left with no alternative except to try his luck in India. In 1241, Tair Bahadur invaded Lahore and completely destroyed the city. Two successive invasions took place in 1245 and 1246. As a result of these recurrent Mongol invasions, various policy changes were made by Balban and the rulers who followed. He adopted a policy of what is called 'resistance'. K.A. Nizami says that he made use of 'force and diplomacy' against the Mongols. For one, the garrisons were strengthened. Then the forts at Bhatinda, Sunam and Samana were reinforced to check Mongol advances beyond the Beas. After 1256, when Balban was the defacto ruler in Delhi, a little goodwill was guaranteed between the Mongols and the Sultanate by a marital alliance between Balban's son and the Mongol leader, Halagu's daughter. But not all Mongol principalities were under Halagu's tutelage and they could not be expected to respect this alliance. The problem remained even when Balban became the de jure Sultan. Balban kept trying to counter the Mongol menace by getting a double chain of fortresses built and renovating old fortresses in the border towns of Dipalpur, Lahore and Uch. These forts were garrisoned and army was kept in perfect readiness. Vigilance was kept so that any crises that happened to arise on the routes joining these places with the rest of the empire could effectively be dealt with. Worthy and capable generals were deployed on border towns to ward off Mongol attacks. Balban also tried to crush the Khokars who had, on many occasions, helped the Mongols to raid the frontier province. Thus, notwithstanding K.A.Nizami's sharp criticism of Balban's north-west frontier policy, Balban deserves praise for his astute understanding of what was perhaps the most taxing problem of frontier defence, and the measures he took to deal with the issues involved. Peter Jackson mentions that he established a separate army designed especially to combat the Mongols. Rumours about the Delhi Sultanate being equipped with a huge military had a profound impact upon the Mongols.

54 NSOU ??CC - HI - 07 The late thirteenth century geographer Ibn Said mentions that the Mongols were unable to conquer India because of the number of men and elephants at the Sultan's disposal. But the advantage was lost when the Sultan simply got rid of his capable generals as well as of the nobility. Now the Sultanate border towns fell into the hands of the iqtadars who were no match for the Mongols. In 1286, the Mongols struck at Prince Muhammad, the heir apparent. However, Balban's defense measures kept the Mongols at bay even during the turmoil following his death. The Sultanate was thus able to repulse another Mongol invasion during Kaiqubad's reign. By this time the Mongols had firmly established themselves over the greater part of Punjab and also along the western banks of the lower Indus. The Mongols evinced a marked aversion to Delhi. It is possible that their disinclination stemmed from peculiar military reasons or emerged from a larger political plan which they alone understood. Peter Jackson feels that the disintegration of the Mongol empire into a number of rival Khanates' seriously weakened the Mongol's capacity to expand further into India. The Khalji dynasty helped them to find a strong base in Punjab from where a series of determined assaults were launched upon the capital. In 1290 Jalaluddin Khalji became the next Sultan. He had for long been a warden of the frontier. The only Mongol invasion during the reign of Jalal-ud-din Khalji took place in 1292. A Mongol army, estimated between one lakh and fifty thousand, under the grandson of Hulagu, penetrated into the frontier province of the Sultanate and reached as far as Sunam. The Sultan encountered the invaders who were defeated and compelled to retreat. Jalal-ud-din permitted some of the Mongols, including Ulugh, a descendant of Chinghiz Khan, to settle down in Delhi. They embraced Islam and took up service under the Sultan who gave his daughter in marriage to Ulugh. These Mongol settlers became known as 'New Muslims'. Historians like K.S Lal consider it a misfortune for India that the most devastating invasions took place during the reign of Alauddin Khalji, who failed to stop the Mongols from entering the Indian subcontinent. The reign of Alauddin was marked by numerous Mongol attempts to conquer Delhi. The earlier attempt was made within a few months of his accession. Zafar Khan, a friend and commander of the new Sultan, defeated the invaders with great slaughter near Jalandhar. The next invasion took place in 1297. The Mongols this time took the fortress of Siri in Multan, but Zafar Khan again defeated them and took 1700 of the invaders, including their leader, their wives and daughters, prisoner and sent them to Delhi. In 1299 the Mongols

NSOU ??CC - HI - 07 55 under Qutlugh Khwaja made a serious attempt to conquer Delhi. They besieged the capital and cut off supplies to it. The danger was so great that Kotwal Ala-ul-Mulk advised the Sultan not to risk his all by attacking them; but Alauddin brushed aside this advice and decided to attack the Mongols. Zafar Khan led the charge and defeated them, but he himself was surrounded and slain. Nevertheless, the impression made by Zafar Khan was so great that the enemy had to beat a hurried retreat. For over three years the invaders had no courage to renew hostilities. But, being informed of Alauddin's reverses in Telengana and his engagement in Rajasthan, Targhi, a Mongol leader, with an army of 1,20,000 troops, invaded Hindusthan in 1303 and invested Delhi. Alauddin was obliged to retire into the fortress of Siri, which too, was surrendered. The Mongols devastated the surrounding country and carried raids into the streets of Delhi. But owing to their inexperience of regular sieges, they had to abandon the attempt. Another invasion occurred in 1304 and was followed by a series of desperate attempts in 1306, 1307 and 1308 and the years following, but they were all beaten. The Mongol fury spent itself in a series of all-out efforts to capture Delhi. The capital city was saved, as Alauddin successfully followed Balban's policy of the defense of the frontier. He repaired and re-garrisoned the frontier forts and posted a formidable army for its defense. The veteran warrior, Ghazi Tughluq, was appointed warden of the marches in 1305. The latter fought many an engagement with the Mongol marauders and kept the frontier safe from their depredations. The north-west frontier invasions and the success of the Mongols in penetrating as far as Delhi impressed upon Alauddin Khalji the need for a better defended and more strengthened frontier. Constant Mongol attacks led Alauddin Khalji to look for a more lasting solution. He recruited fresh troops, created a huge standing army and strengthened the frontier fronts to counter the Mongols. Funds came from an increased revenue collection and by introducing the system of direct collection, thereby effectively plugging fund leakages to intermediaries. Alauddin Khalji imposed the Islamic Kharaj over a considerable area of northern India, setting it at nearly 50 percent of the produce. Alauddin repaired the old forts in Punjab, Multan and Sind and had more forts constructed. All of these forts were kept in perfect readiness. An additional army, charged with the responsibility of guarding the frontiers, was deputed under the warden of Marches. To counter the threat of repeated invasions, Alauddin Khalji reinforced Balban's defence measures of a double chain of fortresses which had largely fallen into disuse. Alauddin Khalji also maintained a well-organised standing army of 4,75,000 troops. Every effort was made to keep the army happy and the economic reforms in the form of market

56 NSOU ??CC - HI - 07 regulations were directed primarily towards the welfare of the standing army. The prices were kept low and stable and these measures enabled the soldiers to live contented in whatever salary they were given. After Alauddin a few feeble attempts were made by the Mongols to plunder Hindusthan. One such attempt was made during the reign of Ghiyasuddin Tughlaq. But the leaders of the invading force were defeated and brought prisoners to Delhi. The most serious Mongol invasion occurred in 1328 or early in 1329 when the famous Mongol leader, Tarma Shirin, penetrated into the heart of the Sultanate and reached as far as Badaun. The invaders plundered and devastated the country on the way, but they were defeated by Muhammad bin Tughluq and pursued as far as Kalanaur in the modern Gurdaspur district in the Punjab. Satish Chandra feels that Muhammad bin Tughlaq, in a bid to counter the Mongols, took the concerted measure of hiring as many as three lakh seventy five thousand soldiers and undertook the Khurasan expedition. The probable motive of his campaign was to push the Mongols back and extend the area of influence of the Delhi Sultanate up to Kabul and Ghazni. Firuz Tughluq's reign was singularly free from Mongol invasions. Their power in Central Asia was greatly weakened and they were losing their hold on the western Punjab also.

3.3 Timur's Invasion

During the second half of the 14 th century the Sultanate of Delhi, though very much weakened, had hardly any fear from the Mongol hordes. The Mongols in Central Asia had embraced Islam, and the great Turkish warrior, Amir Timur or Tamerlane, established a powerful dominion with his capital at Samarkhand. Towards the end of the century, it was this man who crossed India's north-western frontier and invaded the Delhi Sultanate. Amir Timur was born in 1336 at Kech in Transoxiana. His father, Amir Turghay, was the chief of the Chaghtai branch of the Barlas Turks. Timur ascended the throne of Samarkhand in 1369 when he was thirty three years old. Being an extremely ambitious and enterprising prince, he undertook aggressive conquests of Persia, Afghanistan and Mesopotamia. These successes whetted his appetite for further conquests. The fabulous wealth of Hindustan attracted his attention. The Delhi Sultanate was fast tottering and afforded an opportunity to the Turkish conquest to help himself at its expense. But, being a clever diplomat, he pretended that his main object in undertaking an expedition to India was to put down idolatry which was tolerated by the Sultans of Delhi. He had no desire whatever of conquering Hindustan and ruling over it either directly or indirectly.

NSOU ??CC - HI - 07 57

58 NSOU ??CC - HI - 07 The objective of Timur's Indian expedition, as recorded by him in his memoirs, was to propagate Islam and become a champion of faith before the eyes of Allah. The feeble state of the Delhi Sultanate, the political confusion initiated by the wars of succession and the reputed wealth of India gave him the necessary stimulus to embark on a well-executed campaign that lasted all of four months. Timur sent the advance guard of his army under his grandson, Pir Muhammad, who besieged and captured Multan early in 1398. He himself started from Samarqand in April 1398, with a very powerful force and, crossing the Indus, the Jhelum and the Ravi, besieged Talamba, seventy five miles to the north-east of Multan, in October. After plundering the town and massacring its inhabitants, he reached the vicinity of Delhi in the first week of December 1398, travelling via Pak Patan, Dipalpur, Bhatner, Sirsa and Kaithal, plundering and burning the country and massacring the people on the way. On his approach Sultan Nasiruddin Mahmud Tughluq and his Prime Minister, Mallu Iqbal, made an attempt to oppose him. Before fighting the Tughluq army, Timur, who wanted to get rid of the embarrassing presence of the prisoners he had made on his way to Delhi, butchered one lakh of Hindu captives in cold blood. Then he fought and defeated Mahmud on December 17, 1398. The Indian army consisted of ten thousand cavalry, forty thousand infantry and one hundred and twenty elephants and yet it easily fell before the onslaught of the invading force. Sultan Mahmud fled to Gujarat and Mallu Iqbal to Bulandshahar. Timur occupied Delhi on December 18, 1398. The citizens of the capital, headed by the Ulema, waited on the conqueror and besieged quarter. Timur agreed to spare the citizens, but owing to the oppressive conduct of the soldiers of the invading force, the people of the city were obliged to offer resistance. Timur then ordered a general plunder and massacre which lasted for several days. It is said that Timur ordered the execution of atleast 50,000 captives before the battle at Delhi. The sacking of the city was so devastating that all accumulated wealth over generations was carried away to Samarqand along with a number of captives. Timur had no intentions of permanently settling in India. Timur left Delhi on January 1, 1399 on a return march to Samarqand. Passing through Firozabad (Delhi) he reached Meerut which he stormed on January 19, 1399. He had to engage and defeat two Hindu armies near Hardwar. He then proceeded along the Sivalik Hills to Kangra, plundering and sacking that town and Jammu. Before quitting the borders of India, Timur appointed Khizr Khan, who had been expelled by a rival (Sarang Khan)

NSOU ??CC - HI - 07 59 from the governorship of Multan, to the government of

Multan, Lahore and Dipalpur. He crossed back the Indus on March 19, 1399 after inflicting

90%**MATCHING BLOCK 21/171****SA**

BHYS-21 History of Medieval India.docx (D113515071)

on India more misery than had ever before been inflicted by any conqueror in a single

campaign. Timur's whirlwind march into India left behind him widespread anarchy, famine and pestilence. In the words of the historian Badauni, "those of the inhabitants, who were left died (of famine and pestilence), while for two months not a bird moved wing in Delhi. Lakhs of men, and in some cases, many women and children, too, were butchered in cold blood. The rabi crops standing in the field were completely destroyed for many miles on both the sides of the invader's long and double route from the Indus to Delhi and back stores of grain were looted or destroyed. Trade, commerce and other signs of material prosperity disappeared. Of the Delhi Sultanate, hardly a trace remained and the city of Delhi could not regain its former glory till the days of the Mughal Emperors. The massacre of thousands of men caused untold misery, while plunder of property brought about scarcity of gold and silver. The relatively pure silver coins that were used as standard currency of trade in almost the entire northern part of India were replaced by an alloy called billon tanga. The only exception was of Bengal, where imported silver from Myanmar (Burma) and China, still continued to reach. The silver and gold coins struck in the period of the last Tughlaqs and their successors in Delhi in the fifteenth and early sixteenth centuries hardly remained. This general economic distress was further accentuated by a rude disturbance in the social fabric. The absence of any political authority capable of enforcing order, encouraged unscrupulous military adventures to organize themselves into cliques and harass the people. Thus, Timur inflicted more misery upon India

66%**MATCHING BLOCK 24/171****SA**

BHYS-21 History of Medieval India.docx (D113515071)

than had ever been inflicted by any conqueror during a single invasion. 3.4 The Condition of

the Delhi Sultanate after the Timur's Invasion The Delhi Sultanate was completely dismantled after Timur's raid. Gujarat, Malwa and Jaunpur emerged as Sultanates in their own right. In the west, Lahore, Multan and Sind remained under the control of the descendants and successors of Timur. It was only after 1414 or so, after the Sayyid dynasty came into being, that the Sultanate of Delhi found its bearings again. Its area of influence was restricted to the Doab.

60 NSOU ??CC - HI - 07 3.4.1 Conquest of Bahlul During the same period, a number of Afghan sardars established themselves in the Punjab. The most important of these was Bahlul Lodi who had been granted the iqta of Sirhind. Bahlul Lodi checked the growing power of the Khokhars, a fierce warlike tribe which lived in the Salt Ranges. Soon, the whole of Punjab came under his control. Soon he was able to take Delhi under his wing. Bahlul Lodi formally crowned himself king in 1451 and established the Lodi dynasty. The occupation of Delhi did not add considerably to Bahlul's territorial possessions, but it increased his responsibilities manifold. He had to recreate the Sultanate and consolidate it by recovering neighbouring territories and bringing back to submission the rebellious fief holders. He had to wage a long war with Jaunpur on the outcome of which depended the survival of his dynasty. The most outstanding achievement of Bahlul's reign was the conquest and annexation of Jaunpur, which not only strengthened the foundations of his dynasty but also won back for the Sultanate an important territory which had been lost as early as 1394. The Sharqis regarded themselves as the legitimate successors of the Sayyids by virtue of their matrimonial relations with the latter and the proximity of their kingdom to the boundaries of the Sultanate. The emergence of Lodi power, therefore, caused deep frustration in Jaunpur, and the reigning monarch, Mahmud, was anxious to oust Bahlul before the latter had time to establish himself. He, therefore, attacked Delhi in the very first year of Bahlul's reign, and besieged the fort, which would have fallen, but for the defection of Mahmud's general, Darya Khan Lodi, who was secretly won over by the Afghans. Bahlul had left for Multan but, on hearing of the Sharqi attack, returned immediately and defeated Mahmud's army at Narela, about 17 miles from Delhi. Mahmud returned disappointed and was anxious for revenge. He fought with the Lodi again over Etawa and Shamsabad, but the engagements remained inconclusive as he died suddenly in 1457. His son, Muhammad Shah offered to make peace, but Bahlul was not satisfied until his brother-in-law, Qutb Khan, who had been captured during a nocturnal action against Mahmud, had been released. Fighting was renewed and the Lodis captured Muhammad Shah's brother, Jalal Khan. In the meantime a fratricidal conflict at home compelled Muhammad Shah to withdraw. He was defeated and killed by the forces of his brother, Hussain, who was destined to be the last Sharqi king of Jaunpur.

NSOU ??CC - HI - 07 61 Hussain enjoyed decided superiority over Bahlul in men and resources. He was brave but uncalculating and reckless. He waged ceaseless wars to destroy Bahlul, but was defeated every time until he was expelled from Jaunpur and forced to seek shelter in Bihar, which he had to abandon under Bahlul's successor and retire to Bengal. Bahlul's victory over Husain was a great military feat. The pacification of the Doab, Mewat and the neighbouring area needed urgent attention as the numerous chieftains in that region were likely to transfer their loyalty to the Sharqis and could cause embarrassment to the Sultan during his campaign against Jaunpur. Their allegiance, moreover, would bring in handsome revenues to replenish the treasury. Bahlul, therefore, led a number of expeditions against Mewat, Sambhal, Kol, Sakit, Etawa, Rapri, Bhongaon and Gwalior. The rulers and chiefs of all these places submitted to Bahlul at the beginning of his reign but wavered in their loyalty during the succeeding years. However, when the Sharqi power was liquidated, they unreservedly acknowledged Bahlul's authority. In Multan, Bahlul could not succeed in suppressing the chief of the Lankahs. He was prevented from proceeding to Multan personally by the Sharqi attack on Delhi, and an army sent later under his son Barbak was defeated by the Lankah ruler, Shah Husain. Likewise, Bahlul's raid on Alhanpur, a pargana under the jurisdiction of Ghiyasuddin Khalji of Malwa, also failed and he had to return hurriedly when pursued by Sher Khan's governor of Chanderi. Before his death Bahlul distributed his territories among his relatives and amirs. He placed his son Barbak on the throne of Jaunpur, gave Manikpur to Prince Alam Khan, Bheraich to his sister's son Kala Pahar, Lucknow and Kalpi to his grandson Azam Humayun, and Badaun to Khan Jahan Lodi. His son Nizam Khan (later Sultan Sikandar), whom he had nominated heir-apparent, held Punjab, Delhi and most of the territory in the Doab. Having thus created a sort of Afghan confederacy, Bahlul died about the middle of July 1489 at a place called Malawali. 3.4.2: Conquest of Sikandar Lodi Bahlul had nominated his son Nizam Khan as his successor but on the eve of his death, a group of nobles tried to prevail on him to change the will in favour of his other son, Barbak, or his grandson, Azam Humayun. They did not succeed, but two days after the death of Bahlul there was a heated discussion among them in which Nizam Khan's mother boldly intervened on behalf of her son. The successful faction carried Bahlul's coffin to Jalali where Nizam Khan arrived on July 15, 1489, and the very next day was crowned king with the title of Sikandar Shah.

62 NSOU ??CC - HI - 07 Sikandar lost no time in suppressing the opponents who might still dispute his succession. He won over to his side his brother Alam Khan and overcame by force his nephew Azam Humayun and his uncle Isa Khan. As for Barbak, Sikandar did not want to remove to remain peaceful and loyal. Barbak, however, refused to acknowledge his brother's authority. Thereupon Sikandar defeated him in a battle near Kanauj but reinstated him at Jaunpur, taking care, at the same time, to nominate his own men to all important offices at the court and outside. Shortly afterwards there was a rising as Jaunpur organized by powerful zamindars and men of the Bachgoti tribe, headed by their leader Juga, Barbak fled in panic and Sikandar rushed from his playground to coerce the rebels before they had mustered strength. The zamindars were defeated and Juga was forced to take refuge with the exiled Husain Sharqi at the fort of Jaund. Barbak was restored once more, but he again proved incapable of dealing with another rebellion of the zamindars. Sikandar at last ordered him to be arrested and took over the administration of Jaunpur. Husain Sharqi, who was biding his time in exile, entertained secret hopes of recovering his kingdom after Bahlul's death. He tried to exploit the differences between Barbak and Sikandar, but the latter's firmness and success disappointed him. He appeared to be in league with the rebel zamindars at Jaunpur and harboured the Bachgoti leader Juga. Sikandar, who pursued Juga up to the fort of Jaund, politely asked Husain to surrender the rebel and retain the fort as well as the lands which the latter was in possession of, Husain returned a haughty answer and prepared to give battle. He was severely defeated and put to flight, but a few years later, in 1494, he marched out again on learning that a large number of the Sultan's horses had died. He was again defeated by Sikandar near Benaras and hotly pursued until he crossed into Bengal where he spent the rest of his life at Colgong as a pensioner of Sultan Alauddin Husain Shah. Sikandar's authority was thenceforth fully established in Bihar. The Rai of Tirhut also submitted peacefully. Husain's flight to Bengal led to another expedition against that country in 1495. As neither side were serious about fighting. Sultan Husain Shah behaved wisely in sending his son, Daniyal, to negotiate. He settled with Sikandar's agents the terms of a peace treaty according to which both the monarchs agreed to respect each other's frontiers. The king of Bengal further promised not to harbour Sikandar's enemies. It was wise on Sikandar's part to have realized the limitations of his own resources and striven to maintain peaceful relations with other independent Muslim kingdoms. His policy towards Malwa was guided by the same considerations, and, although internal strife in that state provided him with a favourable chance of interfering with its affairs, he

NSOU ??CC - HI - 07 63 appears to have refrained his ambition and held himself aside as far as he possibly could. In 1510, Shihab-ud-din, son of Sultan Nasiruddin of Malwa, having rebelled against his father, sought Sikandar's protection. Nasiruddin, however, advanced quickly to Chanderi and punished Shihab-ud-din by nominating as heir apparent his younger son, Mahmud II, whose claim was thenceforth severely contested by another son Sahib Khan. In March 1513 Sahib Khan came to Chanderi appealed to Sikandar for help. A detachment was sent from Delhi, but it remained stationed at a short distance from Chanderi, and returned without taking part in any engagement. Soon after, however, Sahib Khan became suspicious of his own partisans, and arrived as a fugitive at Sikandar's court. The Sultan promptly sent him back with a large force to Chanderi where he was kept in virtual internment while the administration was carried on by Sikandar's amirs. Sikandar was keen on reducing the Rajput states but his efforts in that direction met only partial success. The Raja of Gwalior who had submitted to Bahlul just before the latter's death, continued his allegiance to Sikandar for some time. However, the asylum which he provided for the Raja of Dholpur, coupled with his envoy's discourtesy, annoyed the Sultan who attacked the state in 1502. The Raja submitted immediately, but three years later, he attacked Sikandar's army returning to Dholpur. He was defeated again, but Sikandar continued the march to Agra on account of the approaching rains, without completing the conquest of Gwalior which remained unsubdued for the rest of his reign. The conquest of Dholpur did not present much difficulty and Raja Binayak, although reinstated after his defeat on 1501, was again removed on 1505 to prevent him from allying himself with Gwalior against Delhi. Mandrail was conquered the same year and, two years later, Utgir also fell. Thereafter Sikandar laid siege to Narwar and, after conquering it, strengthened its defences by building an auxiliary fort. Rai Bhaidchandra, the Vaghela Raja of Rewa, who was an ally of Husain Sharqi, submitted to Sikandar in 1492 when the latter entered Kantit. He was, however, frightened by the Sultan's movement towards Arail, and suddenly went away from the royal camp leaving his luggage which was returned to him intact. The Raja having failed to renew his pledge of loyalty, Sikandar marched against him in 1495 but the Raja fled towards Sarkaj and died on the way. The Sultan returned to Jaunpur but a large number of his horses died on account of the strain of the long journey. Hearing of this, Bhaid's younger son, Lakshamichandra incited Husain Sharqi to fight again. Sikandar was, however, able to conciliate Bhaid's eldest son and successor Salivahana, who helped him in defeating the exiled Sharqi king. Their relations improved to such an extent that the Sultan ventured to

64 NSOU ??CC - HI - 07 ask the hand of his daughter in marriage. On his refusal Sikandar raided his country in 1498, when he advanced as far as Bandugarh, he found the forts to be too strong and returned to Jaunpur. In Nagaur, Sikandar's supremacy was acknowledged by its ruler Muhammad Khan who wished to prevent his two brothers, Ali Khan and Abu Bakr, from receiving help against him. Sikandar gladly patronized Muhammad Khan and compensated Ali Khan with the grant of the small fief of Sui near Ranthambhor. After some time Ali Khan was replaced by his brother Abu Bakr when it was discovered that the former had been guilty of duplicity in secretly dissuading Daulat Khan, governor of Ranthambhor, from transferring his allegiance from Malwa to Delhi. The old and almost ruined capital of Delhi had lost its charm for Sikandar and political and strategic considerations induced him to choose another place. In 1499, he moved his residence to Sambhal where he spent about four years. His partial success in the campaign against the Rajput states raised in his eyes the importance of Agra where, in 1504, he founded a new town and transferred his capital to it. This provided him with a base from which he could exercise better control over turbulent areas. Agra was formerly a dependency of Bayana which was held by the Auhadis. At the outset of Sikandar's reign, the then Amir of Bayana, Sultan Sharaf, agreed to exchange his possessions with Jalesar, Chandwar, Marehra and Sakit. At the last moment, however, he went back on his word and consequently both he and his vassal, Haibat Khan Jilwani, who held Agra, had to be forcibly expelled in 1491. Incessant military activity impaired his health. He was taken ill on his return from Bayana. Despite all possible medical aid he died on November 21, 1517.

3.5 Conclusion The Mongol Empire launched several invasions into the Indian subcontinent from 1221 to 1327, with many of the later raids made by the unruly Qaraunas of Mongol origin. The Mongols occupied parts of modern Pakistan and other parts of Punjab for decades. As the Mongols progressed into the Indian hinterland and reached the outskirts of Delhi, the Delhi Sultanate led a campaign against them in which the Mongol army suffered serious defeats. The deathblow to the Delhi Sultanate was struck by Timur who ransacked Delhi and the neighbouring areas in 1398 – 99. Although Timur's son had conquered Uch and NSOU ??CC - HI - 07 65 Dipalpur in 1396-97 and had also besieged Multan, no effort to combat Timur's strength was made by the rulers of Delhi. As is well-known, Timur not only spread death and destruction in and around Delhi but also made a number of Indian stone-cutters and masons captive so that they could enhance architectural constructs at Samarkhand. He also annexed the districts of Lahore, Dipalpur and Multan to his kingdom. It was only after 1414 or so, after the Sayyid dynasty came into being, that the Sultanate of Delhi found its bearings again but its area of influence was restricted to the Doab. The Lodi Dynasty came to power in India in 1451 under Bahlul Lodi. Bahlul Lodi achieved much for his dynasty and prepared the way further for his son and successor, Sikandar Lodi. Sikandar Lodi expanded Lodi territory into the regions of Gwalior and Bihar. He made a treaty with Alauddin Hussain Shah and his kingdom of Bengal. In 1503, he commissioned the building of the present-day city of Agra. Agra was founded by him.

3.6 Model Questions
Short questions 1) Who were the Mongols? 2) What was the 'scientific frontier of India'? 3) Who was Taimur? 4) What were the areas conquered by Sikandar Lodi? Essay Type Questions 1) Give an account of Timur's invasion of India by especially reflecting upon its impact. 2) How did Bahlul and Sikandar Lodi attempt a gradual re-establishment of hegemony of the Lodi dynasty over northern India? 3) How did Balban tackle the Mongol menace facing northern India? 4) What were the measures adopted by Alauddin Khalji to check the menace of the Mongol invasions.

The Political Condition of India on the Eve of the

First Battle of Panipat (1526) 4.3 The First Battle of Panipat (1526) 4.4 The Significance of the First Battle of Panipat (1526) 4.5 Conclusion 4.6 Model Questions 4.7 Suggested Readings 4.0 Objectives The death of Sikandar Lodi gave an opportunity to the Afghan nobles to regain some of the power and influence they had lost under his rule. This unit deals with the reign of Ibrahim Lodi, the course of events that ultimately led Babur to invade India and about one of the most significant battles fought during the period of Delhi Sultanate - the Battle of Panipat. The battle threw the gates open to Babur's long cherished ambition of entering India and founding the Mughal dynasty. 4.1 Introduction Ibrahim Lodi, the last Sultan of the Lodi dynasty, implemented the idea of Dual Monarchy and doing so after many warnings and persuasions he also installed his brother Jalal Khan as the independent ruler of Jaunpur. His seniors did not like the idea of two brothers reigning the same kingdom. Later, on the advice of his Wazirs about Jalal's misconduct, Jalal Khan was compelled to leave Jaunpur and was ultimately killed by Ibrahim's men. Thereafter, Ibrahim claimed the whole empire. Though Ibrahim Lodi was a very cruel and high headed ruler who failed to have good relations with the nobles, he was altogether different and was kind towards his subjects and holy people. He made strides for the change of agricultural business and both the state and the nobles got their share in products. Individuals carried on with a cheerful life because of abundance and modest costs. But his cruelty paved way to discontent at various corners 68 NSOU ??CC - HI - 07 of his kingdom due to which he faced a number of rebellions and secret enemies. Unluckily for him in 1526, one of his honorable - Daulat Khan welcomed Babur to attack India and asked him to take revenge on Ibrahim for their benefit. Babur reacted to his request and set out to meet the Sultan of Delhi. The armed forces of Babur and Ibrahim Lodi conflicted with one another at Panipat on April 20, 1526, and Ibrahim notwithstanding overpowering prevalence in numbers was crushed and killed. 4.2

The Political Condition of India on the Eve of the

First Battle of Panipat (1526) In the period between 1517 and 1519, two apparently unconnected events took place which profoundly affected the history of India. The first of these was the death of the Afghan ruler, Sikandar Lodi, at Agra towards the end of 1517 and the succession of Ibrahim Lodi. The second was the conquest of Bajaur and Bhira, by Babur in the frontier tract of north-west Punjab in the beginning of 1519. The death of Sikandar Lodi gave an opportunity to the Afghan nobles to try to regain some of the power and influence they had lost under his strict rule. The nobles first proposed the partition of the empire between Ibrahim Lodi, the eldest son of Sikandar Lodi, and his younger brother, Jalal, with the latter being assigned the eastern part of the empire consisting of the territories comprising the former Sharqi kingdom of Jaunpur. Ibrahim Lodi reluctantly agreed to the partition, but took steps to undo it as soon as he assumed the crown. Jalal was captured and killed soon after. However, these events created a wall of suspicion between the young Sultan and the older nobility. Harsh punishments meted out to them by the Sultan only led to further distrust and disaffection. There were a series of rebellions in east U.P and Bihar in which not only a rival Lodi claimant to the throne was put up, but a noble, Darya Khan Nuhani who was the Governor of Bihar, proclaimed himself as king. Another Lodi scion repaired to the camp of Rana Sanga. Rana Sanga had established his control over eastern Malwa, and was in competition with the Lodis for control over eastern Rajasthan and the rest of Malwa. At the battle of Khatoli between the Lodis and Rana Sangha, a number of leading Afghan sardars had crossed over to the side of the Rana. NSOU ??CC - HI - 07 69 Another claimant to the throne, Alam Khan, the son of Bahlul Lodi, was being supported by the ruler of Gujarat. Some Afghan nobles had proclaimed him king, under the title of Alauddin. Ibrahim Lodi was young and energetic. Although lacking in tact in dealing with old, well- established nobles, he would, in all probability, have been able to establish his control over the Afghan nobles, and overcome the Afghan tendency of each powerful leader considering himself a junior partner in the kingdom rather than the servant of the ruler. A drastic change came about with the appearance of Babur on the scene. In 1519 Babur captured the forts of Bajaur and Bhira, the latter being situated on the river Jhelum. He put forward a vague claim that the areas which had once belonged to Timur be surrendered to him, and dispatched an envoy to Ibrahim Lodi for the purpose. The governor of Lahore at that time was Daulat Khan Lodi, an old noble whose father had supported Bahlul Lodi, and whose family had dominated Punjab for twenty-five years. Daulat Khan treated Babur's envoy with contempt, neither giving him an interview nor allowing him to proceed to Ibrahim Lodi's court. He dismissed Babur's envoy when Babur returned to Kabul. He also expelled Babur's officials from Bhira. In 1519-20 Babur recovered Bhira, and advanced to Sialkot which was considered one of the gates to India. However, before he could advance further, he received news of an invasion of his territories by the ruler of Qandahar, and returned to Kabul. But his appearance at Sialkot was rightly regarded as a declaration of Babur's intention of expanding his empire over the entire Punjab. This led to a flurry of diplomatic activities. Daulat Khan Lodi, who was in arrears in setting the accounts of his charge with Ibrahim Lodi, and was apprehensive of action against him by the young Sultan, sent his son Dilawar Khan to Babur at Kabul in 1521-22. He invited Babur to invade India since, he said, the ruler, Ibrahim Lodi was a tyrant, and had maltreated Sikandar's nobles and killed as many as twenty-five of them without any cause. He asserted that he had been sent to Babur by many nobles, who were ready to obey, and for whose coming they were on the watch anxiously. Almost simultaneously, Ibrahim's uncle, Alam Khan, who had been biding his time in Gujarat and was sought out by the dissatisfied amirs to replace Ibrahim also arrived at Kabul to seek Babur's support. It seems that it was at this time that Babur also received an envoy from Rana Sanga who, according to Babur, proposed that while Babur attacked Delhi, he (Sanga) would attack Agra. While Babur needed no invitation to attack India, the arrival of these envoys convinced him that the situation was ripe for undertaking the conquest of India.

70 NSOU ??CC - HI - 07 The motives of the various elements which invited Babur to invade India can only be guessed at. They apparently expected Babur to withdraw, like Timur, after setting up a titular ruler at Delhi who would be weak and enable them to continue to rule as before, and extend their control over the areas they coveted. Daulat Khan Lodi's predominant motive was to maintain his hold over the Punjab ceding to Babur some of the areas which Babur considered his own. However, events showed Daulat Khan Lodi to be totally lacking in realism. Daulat Khan Lodi who had invited Babur, could not see the logic of the situation. Nor could he see that in this struggle, he could only be the sacrificial goat. His sons realized this and chose their sides: Dilawar Khan joined Babur and Ghazi Khan opposed him. Dilawar Khan kept oscillating between support and opposition to Babur and came to a bad end. Babur expanded his claims and ambitions as his position became stronger. He was no longer content with a part of the Punjab but wanted the whole of it. This inevitably entailed a struggle with Ibrahim Lodi who was not prepared to surrender Punjab to Babur. Thus, the struggle for Punjab according to Satish Chandra, expanded to a struggle for the mastery of north India. The battle of Panipat (20 th April, 1526) between Ibrahim Lodi and Babur was not a sudden development, but was the culmination of the struggle between the two which had started earlier. Learning of the intrigues of some of the Afghan nobles at Kabul, Ibrahim Lodi sent a large army towards Punjab under Bahar Khan to reduce Daulat Khan and his sons to obedience, and to repel any foreign invasion. The imperial forces drove away Daulat Khan Lodi from Lahore, and occupied it. However, before they could consolidate their position, Babur entered India again and, early in 1524, he appeared before Lahore. The Lodi forces came out of the city and gave a good fight, but were routed. In retaliation, Babur burnt the city for two days, and then marched to Dipalpur where he received Alam Khan and Daulat Khan Lodi. Babur ignored the claims of Daulat Khan for Lahore, and posted his own men at Sialkot, Lahore and Kalanaur before returning to Kabul. He assigned Dipalpur to Alam Khan. However, Ibrahim Lodi ousted Alam Khan from Dipalpur. Alam Khan now fled to Kabul and asked for further help which was promised to him. It was agreed that while he should take Ibrahim's place on the throne of Delhi, Babur in full sovereignty would hold Lahore and all the areas to the west of it. Thus, Babur threw a spanner among the Afghans. Alam Khan was furnished with a body of troops and was given a royal order to the Mughal begs at Lahore to assist him. Babur

NSOU ??CC - HI - 07 71 promised to follow swiftly. However, on reaching Lahore, Alam Khan found that the begs were reluctant to support him. He was also approached by Daulat Khan Lodi. Hence, he withdrew from the alliance with Babur. Alam Khan and Daulat Lodi collected a force of 30,000 to 40,000 men and besieged Delhi. But Ibrahim Lodi defeated and dispersed their forces. He also sent an army towards Lahore, but it was not effective. It is clear that an open fight between Ibrahim Lodi and Babur was now inescapable. Ibrahim Lodi was clearly not willing to leave Punjab to Babur, conscious that would enable Babur to prepare a base for further advance to the Gangetic valley. Babur had also thrown a challenge to Ibrahim Lodi by espousing the cause of a rival claimant, Alam Khan. However, Babur's success was by no means assured. If Daulat Khan Lodi had thrown in his lot with Ibrahim Lodi even at this late stage, Babur's position would have become very difficult. In preparation of this conflict, Babur had consolidated his position in Afghanistan by capturing Balkh from the Uzbeks. He had also captured Qandahar. Thus, having secured his rear and flank, in November 1525, Babur marched from Kabul for the conquest of Hindusthan. After a delay caused by Humayun's tardiness in coming from Badakshan, the Indus was crossed by the middle of December. According to Babur, the strength of his forces at the time "great and small, good and bad, retainer and non-retainer" was 12,000. Marching by way of Sialkot which yielded to him without opposition, Babur reached Lahore which was being besieged by Daulat Khan Lodi and his son, Ghazi Khan. Daulat Khan had girt two swords to his waist to fight both Babur and Ibrahim Lodi. He had collected 30,000 to 40,000 men for the purpose. However, at Babur's approach, his army melted away, Ghazi Khan fled to the hills while Daulat Khan surrendered to Babur who imprisoned him and sent him to Bhira but he died on the way. Thus, all that Daulat Khan achieved was, according to Satish Chandra, to facilitate Babur's entry into Punjab. 4.3 The First Battle of Panipat (1526) Having conquered Punjab in a span of three weeks after crossing the Indus, Babur moved slowly towards Delhi, sending out reconnoitering parties in every direction to learn the movements of Ibrahim Lodi. Ibrahim Lodi made no move to contest Babur's position in Punjab, waiting upon him to make the next move. The first skirmish took place between Humayun and Hamid Khan, the Shiqdar of Hisar-Firuz, who had moved towards Babur with a small army. Humayun

72 NSOU ??CC - HI - 07 worsted him and brought with him as many as 100 prisoners and five to seven elephants. Babur says that matchlock men were ordered to shoot all prisoners "by way of example". A little later Babur learnt that Ibrahim was advancing leisurely, marching two or four miles, and stopping at each camp for two to three days. The two sides came together near Panipat. Considering that Ibrahim Lodi's army was much larger than his own, and in order to avoid being surrounded by it, Babur chose the ground carefully. He protected his right by resting it on the city of Panipat, and on the left, dug a ditch with branches of felled trees so that the cavalry could not cross it. In front, he put together 700 carts, some from his baggage train, some procured locally. These carts were joined together by ropes of raw hide, and between every two cart short breastworks were put up behind which matchlock men could stand and fire. Babur calls this method of stringing carts the Ottoman (Rumi) devise because, along with cannons, it had been used by the ottoman Sultan in the famous battle with Shah Ismail of Iran at Chaldiran in 1514. But Babur added a new feature. At a bow shot apart, gaps were left, wide enough for fifty or hundred horses to charge abreast.

NSOU ??CC - HI - 07 73 This was a strong defensive as well as offensive arrangement. One of Babur's begs observed, "with such precautions taken, how is it possible for him (Ibrahim) to come?" Babur replied that it was wrong to liken Ibrahim to the Uzbek Khans and Sultans; for he had no experience of movement under arms, or of planned operations. In fact, Babur had a very poor opinion of Ibrahim as a strategist. He says, "he was an unproved (i.e inexperienced) brave; he provided nothing for his military operations, he perfected nothing, nor (knew how to) stand, nor move, nor fight." The battle which was followed proved to be a triumph of generalship over numbers. Babur's army of 12,000 may have been swelled by a number of Afghans and Hindusthanis joining his army. Babur placed Ibrahim's army at 100,000 and 1000 elephants. This must have included the large number of servants and other non-combatants who accompanied Indian armies. According to Afghan sources, the effective strength of Ibrahim Lodi at Panipat was only 50,000. Even then it was much larger than Babur's. Apparently, Ibrahim Lodi had not carefully studied Babur's defensive formation even though the two armies stood face to face for almost a week, and daily skirmishes went on. When Ibrahim Lodi came out to fight on the fateful day, he found that Babur's front was too narrow. He hesitated, and while he was trying to adjust his armies to the narrow front, Babur seized the opportunity. He sent his two flanking parties to wheel around in the Uzbek fashion, and attack Ibrahim's army from the side and rear. From the front, Babur's cavalymen shot off arrows, and his matchlock men poured a deadly fire on the huddled mass of Afghans. Babur had earlier hired two ottoman gunners, Ustad Ali and Mustafa, and appointed Ustad Ali as master of ordnance. Babur says that Ustad Ali and Mustafa made good discharge of field cannons from the centre. However, in those days, the rate of firing of field cannons was painfully slow. Babur was primarily a cavalryman, and he makes his victory at Panipat primarily a victory of cavalry and bowmen. Surrounded from all sides, Ibrahim Lodi fought on bravely, along with a group of 5000 – 6000 people around him. All of them died fighting along with him. Babur paid a tribute to his bravery by burning him on the spot with honour. It is estimated that besides these, more than 15,000 men were killed in the battle. 4.4 The

Significance of the First Battle of Panipat (1526) The battle of Panipat was undoubtedly one of the

decisive battles of Indian history. Its political significance, however, needs to be assessed carefully. It smashed the power of the

74 NSOU ??CC - HI - 07 Lodis, and opened up the entire territory upto Jaunpur to Babur's control. The rich treasures stored by the Lodi Sultans at Agra relieved Babur of his financial difficulties. But the victory over Ibrahim did not give Babur the empire of India. It only "set his foot on the path of empire building". The famous Rajput confederacy, the Afghan power and the countless military chiefs in almost undisputed sway within their estate were needed to be reduced to make the new power safe. However, Babur had to wage two hard-fought battles, one against Rana Sanga of Mewar, and the other against the eastern Afghans before he could consolidate his position. Thus, politically according to Satish Chandra the battle of Panipat was not as decisive as it was militarily. However, it marks a new phase in the struggle for the establishment of a hegemonic political power in north India. Panipat gave him a valid claim to its sovereignty. His other contests were attempts to enforce that claim.

4.5 Conclusion The Battle of Panipat, on 21 st April 1526, was fought between the invading forces of Babur and the Lodi Kingdom. It took place in north India and marked the beginning of the Mughal Empire and the end of the Delhi Sultanate. The Battle of Panipat led to the initiation of artillery in India. Until now Indian were not familiar with the gun-powder. For the first time, it was used in a battle on Indian plains and since then the artillery had been used in many important battles. The Battle of Panipat broke the backbone of Lodi power and brought under Babur's control the entire area upto Delhi and Agra. The treasures stored up by Ibrahim Lodi in Agra relieved Babur from his financial difficulties. One of the important causes of Babur's victory in the First Battle of Panipat was the adoption of a scientific war strategy Tulugama (an Ottoman or Rumi device) by him. Gradually Indian ruler also adopted this very system. Almost all Indian rulers later on started adopting the policy of keeping a reserve army. The Indian rulers were greatly impressed by the swiftness and noveability of horses and gradually the place of elephants was taken by horses in the army.

76 NSOU ??CC - HI - 07 Unit 5 ?? Theories of Kingship Structure 5.0 Objectives 5.1 Introduction 5.2 The Evolution of the Theory of Kingship 5.3 Conclusion 5.4 Model Questions 5.5 Suggested Readings 5.0 Objectives In the present unit, the theories of kingship of the Delhi Sultanate will be discussed. History shows us that rulers have always sought the help of some political, theological or social theories to legitimize their rule in order to hold their position in common people's minds and also establish oneself as the legitimate and worthy specimen. In the Delhi Sultanate, there has been a dramatically high number of kings who gained the throne in rather thrilling manner, often ignoring the morality and have found it important to have legitimacy and a strong theory of kingship in the eyes of people. The political scenario also demanded legitimization of the ruler in that turbulent time and without any principle of succession in Islamic world, it became all the more necessary.

5.1 Introduction The founding fathers of the sultanate did not belong to any ruling house or families of high social status, they started their career as slaves, not even as ordinary free citizens. Therefore, they did not claim any noble pedigree or hereditary right to hold the crown; even if they did, none took them seriously. There was no fixed law of succession to the throne among them. Assumption of the crown depended on the dictums – 'survival of the fittest' and 'might is right'. No wonder, the sultan occupied the most privileged position in the administrative set up of the sultanate. He was the pivot around which the entire administrative structure of the sultanate revolved. Iltutmish's kingship was mainly based on 'comradeship'. Razia's primary objective was to rule effectively, not to reign. Balban sought to increase the prestige and power of the monarchy, and to centralize all authority in the hands of the Sultan. Jalaluddin put forward by his actions the concept of a new type of a state, one which was based fundamentally on the good-will and

NSOU ??CC - HI - 07 77 support of the people of all communities, one which was basically beneficent and looked after the welfare of its subjects. In his conception of sovereignty, Alauddin departed from the ideas of his predecessors. He had the courage to challenge for the first time the pre-eminence of the orthodox church in matters of state, and declare that he could act without the guidance of the Ulemas for the political interest of his government. Mubarak Shah Khalji, the son and successor of Alauddin Khalji, subscribed to the concept of sovereignty as envisaged by his illustrious father, albeit his untimely and violent death brought the experiment to a sudden end. Ghiyasuddin Tughluq was soft on Ulema and extremely social with nobles. Muhammad bin Tughlaq failed to pursue this concept of kingship and the sultanate reverted to a theocracy one again. Firuz Tughlaq revived contacts with the caliph by seeking an investiture from him and assumed the title of 'naib i amir ul momnin'. The Sayyid dynasty gave way to regionalism or provincialism in administration in place of strong centralized monarchy. The Lodis believed in the Afghan theory of kingship, i.e. in the equality of nobles with the Sultan and thus, more or less, supported an oligarchy. 5.2 The Evolution of the Theory of Kingship Muhammad of Ghor seems to have desired that Qutb-ud-din Aibak should succeed him in Hindustan. That was why in 1206 he had formally invested him with Vice-regal powers and conferred upon him the title of Malik. When Muhammad's death became known, the citizens of Lahore sent an invitation to Qutb-ud-din to assume sovereign powers. He proceeded from Delhi to Lahore and took up the reins of government in his hands, although his formal accession took place in 24 th June, 1206, that is, a little over three months after Muhammad of Ghor's death. It seems that Qutb-ud-din occupied himself during the interval to build up a strong party of his own. In fact, long before his accession he had strengthened his position by clever policy of matrimonial alliances. On his accession Qutb-ud-din Aibak used the title of Malik and Sipahsalar, but not that of Sultan. He does not seem to have struck coins or read the Khutba in his name. The reason, perhaps, was that he was still technically a slave. His formal manumission could not be obtained till 1208. But Ghiyas-ud-din Muhammad of Ghor, who was his master's successor, sent him the royal insignia and standard and also conferred upon him the title of Sultan. Whatever might have been the legal flaw, Qutb-ud-din Aibak became defacto Sultan of almost the entire Hindustan.

78 NSOU ??CC - HI - 07 Iltutmish re-established the territorial integrity of the Delhi Sultanate created by Muizzuddin which was in danger of being split up. He defeated efforts of ambitious rivals such as Yalduz and Qabacha to divide the Sultanate. In the process, he displayed a great deal of tact, patience and farsightedness. Thus he bided his time till he was in a position to take decisive action. This was displayed in his dealings with Qubacha as well as Jalaluddin Mangbarni. It was under Iltutmish that the Delhi Sultanate can be called a truly independent state, not tied up to a foreign sovereign, living at Ghazni or Ghur. Iltutmish's legal status as an independent sovereign was reaffirmed in the eyes of the Muslims when in 1229 an envoy of the Caliph of Baghdad reached Delhi with a formal letter of investiture for Iltutmish. Although it was a mere formality and recognition of an accomplished fact, Iltutmish made the visit a grand occasion.

Iltutmish can be credited with making Delhi the political, administrative and cultural centre of Turkish rule in India. His steady presence at Delhi was a major factor in this as also the fact that Delhi became the refuge for nobles, bureaucrats, scholars, poets and religious divines from Central Asia to escape the Mongol depredations.

The Muslim theory of kingship, if any, begins with Iltutmish. Iltutmish's kingship was mainly based on 'comradeship'. In the context of contemporary Indian politics, he had to depend on unreserved support and cooperation of his nobles especially the 'College of Forty' (known as Turkan-i-Chahalgani or Chalisa) who were his slaves. He even did not maintain any dignified distance from his courtiers. But it will be wrong to think that he could not appreciate the necessity of the absolute power of a monarch. His selection of Razia as his heiress is a pointer to that effect. He could well foresee that in future a difference between the ruler and the ruled in other words the supreme and absolute position of the Sultan over the entire kingdom would be the first condition for a successful and secured administration. Finding his sons lamentably weak to perform this bold idea into action he nominated Razia to the throne. That he did not make any mistake is well proved by the revolt of the nobility against Razia when the latter tried to impose her kingly power on them. Razia's primary objective was to rule effectively, not to reign. This was the crux of the problem during that time, for the nobility, who had so long enjoyed special privileges were not ready to part with. Hence the struggle between the crown and the nobility which brought Razia ultimately down and led to her tragic death.

NSOU ??CC - HI - 07 79 The period between the death of Razia (1240) and the rise of power of Balban as Naib (Vice-regent), is a period of continued struggle between the nobles and the monarchy. While the nobles were agreed that only a descendant of Ilutmish could sit on the throne at Delhi, they wanted that all power and authority should vest in their hands. As a noted historian, R.P Tripathi notes, "The chief constitutional interest in the history of the family of Ilutmish lies in the struggle between the crown and the peers for the possession of real power." At first, the nobles seemed to succeed. They appointed Bahram Shah, a son of Ilutmish, as a successor to Razia on condition that he appointed one of the Turkish nobles, Aitign, to the post of Naib or Vice-regent. For some time, a body of three nobles – the Naib, the Wazir and the Mustaufi (auditor general) constituted itself as a kind of a governing board, reducing the monarch to the position of a figure head. But conflict of interest among the triumvirate, and the efforts of the ruler to reassert himself led to a struggle with the Wazir in which Bahram Shah lost his throne and his life. The fate of his successor, Masud, was no different. The effort of the Wazir, Nizam-ul-Mulk, to arrogate all power to himself led to his murder, and to the rise of Balban who subsequently had the monarch deposed in order to clear his own road to power. The death of four monarchs within a brief span of six years following the death of Ilutmish denoted a serious crisis in the relationship between the monarchy and the Turkish nobles. The nobles wanted to rule while the monarch merely reigned, but they could not present a united front. The elevation of Nasiruddin Mahmud to the throne in 1246 was really the handiwork of Balban, though he tried for some time to take all the Turkish nobles along with him. Nasiruddin Mahmud was a suitable instrument for the nobles because he had little interest in political and administrative affairs, the fate of his predecessors being enough of a warning. Thus, to all appearances, the nobles had won. But their victory was only of a short duration, as events showed. The assumption of the throne by Balban at Delhi (1266) marks the beginning of an era of strong, centralized government. Balban sought to increase the prestige and power of the monarchy, and to centralize all authority in the hands of the Sultan because he was convinced that this was the only way to force the internal and external dangers facing him. For the purpose, he harkened back to the Iranian theory of kingship. According to the Iranian theory, the king was divine or semi divine in character, and answerable only to God, not to any set of intermediaries, i.e,

80 NSOU ??CC - HI - 07 religious figures. As such, there was a fundamental difference between the ruler and the nobles, the latter being dependent on the Sultan's favour, and in no way equal to him. Balban underlined the theory that the Sultan was the shadow of God (zil-i-ilahi), and emphasized it by insisting that in his court anyone presented to him had to perform the Sijda and Paibos, or prostration before the Sovereign, and kissing the monarch's feet, a practice which, according to the theologians, was reserved for God alone. Second, he maintained a splendid court in which all the nobles had to stand in serried ranks, strict order being maintained by the Mir Hajib who was always an important noble. Balban himself maintained the utmost dignity in the Court. He would neither laugh out aloud himself nor allow anyone else to do so. The court was richly decorated, with horses and elephants having jewelled trappings, and slaves and wrestlers (who were swordsmen and executioners) standing at the sides. When the Sultan moved out, he was preceded by a large posse of Sistani warriors with drawn swords which gleamed in the sun. According to historian Barani, Hindus and Muslims came from a distance of 100 to 200 kos to see Balban's public processions. Even the dependent rajas and rai's who visited Balban's court were deeply impressed. Barani goes on to say, "whenever the awe and splendor of the ruler do not impress the hearts of the ordinary people and the select from far and near, sovereignty and the conduct of the government cannot be properly upheld". Thus Balban's splendid court and public processions had a political purpose. For the same reason, Balban gave up drinking even in his private assemblies though as a Khan, he had been fond of drinking wine and gambling, and used to hold convivial parties at his house at least three days in a week. Balban also emphasized that it was unbecoming for a ruler to associate with low, ignoble persons, buffoons, dancing girls etc. Even his private servants had to observe the utmost decorum in dress and behavior.

Balban was not prepared to share power with anyone, not even with

the members of his family, and poisoned his cousin, Sher Khan, for opposing him. He adopted methods fair or foul to deal with those he considered to be his rivals. At the same time, he tried to stand forth as the defender of the entire Turkish nobility. For the purpose he declared that he would not give any post in the government or an Iqta, or a post of authority in the local administration to any person belonging to a low or ignoble family. These included posts of accountant (Khwaja or Musharif), correspondent at the local level, even barids or confidential spies. There was a deep seated belief in those times that only people belonging to old or noble families should be placed in authority over the ordinary people. Contemporary writers give free rein to this idea. However, this was almost an obsession with Barani. Barani emphasized this by saying that since Balban claimed to be a

NSOU ??CC - HI - 07 81 descendant of the Iranian hero, Afrasiyab, he felt that if he gave high government posts to the mean and ignoble, he would prove to others that he himself came from an ignoble stock. Barani gives two examples of Balban's attitude towards low ignoble persons. First, when two prominent nobles proposed the name of Kamal Maihar for the post of Khwaja (accountant) for the iqta of Amroha, and it was found on enquiry that he was the son of a converted Hindu slave, Balban not only flatly turned down the proposal although Kamal Maihar was reputed to be able and experienced, but gave dire warning to his officer not to propose to him in future for appointment the name of any person who was of low or ignoble birth. Explaining Balban's attitude, Barani says that it was a mandate given to him by God not to appoint any low, ignoble person, and that when he saw low, ignoble persons, his body trembled (with rage). In another case, Balban sternly refused to give audience at court to Fakhr Bawni since he was only the Chief of the merchants, (Malik-ut-Tujjar) and it would compromise the dignity of the sovereign. Balban tempered his despotism by laying great emphasis on justice. According to Barani, his justice and his consideration for the people won the favour of his subjects and made them zealous supporters of his throne. In the administration of justice, he was inflexible, showing no favour to his brethren or children, or to his associates or attendants. He appointed spies (barids) in all the cities, districts and iqtas to keep himself informed of the doings of the officials, and to ensure that no acts of oppression or high-handedness was perpetrated by them on anyone, including their slaves and domestic servants. Thus, when he learned that Malik Bakhak who was his confidant, and was governor of the iqta of Badaun, had flagged one of his servants to death in a drunken rage, and his widow appealed to the Sultan for justice, he ordered Malik to be flogged to death, and the barid who had not reported this matter to the Sultan to be publicly hanged. Another noble, Malik Haibat who had been his superintendent of arms and governor of Awadh had, under the influence of wine, killed a person, he was ordered to be given 500 strokes of the whip in public, and then handed over to the dead man's wife for extracting revenge for blood guilt. He saved himself with great difficulty by paying her 20,000 tankas, and after that never moved out of his house for shame. These harsh measures must have had a salutary effect, and we are told that Balban's confidential spies were greatly feared by the nobles. In his attitude towards the people we see a combination of harshness and benevolence. Balban was convinced that both

82 NSOU ??CC - HI - 07 excess of wealth or poverty would make people rebellious. Hence, he advised his son, Bughra Khan, to be moderate in levying land tax (Kharaj) on the peasants. When Balban was a Khan in the iqta under his charge, he tried to help those cultivators who had been ruined (on account of vagaries of nature, oppression by previous Iqtadars or wars). In this way he became famous for helping the poor and helpless, and for making his iqta prosperous. As Sultan, whenever the army camped anywhere, he used to pay special attention to the poor, the helpless, women, children and the old, to ensure that none of them suffered any loss, or physical harm (from the soldiers). But Balban was extremely harsh when he found any rebelliousness on the part of the people or disturbance of the peace. To perfect the coercive instrument of his authority he undertook the task of reorganization of the army. Though partially successful, it strengthened his government to launch any drive against all possible threats to the power of the central authority. The ruthless suppression of the rebellion of Tughril Khan, who declared independence in Bengal, served double purposes. The challenge to the monarch's authority was crushed while the fighting potential of the Sultanate could be successfully displayed. The prestige and power of the crown, which Balban sought to enhance to an extreme limit, not only depended on the internal security and consolidation but also on meeting the challenge of the foreign invaders. Infact, the constant Mongal raids from the northwest frontier was the one all absorbing preoccupation of the Sultan. He, therefore, did everything to save the only Muslim kingdom in Asia from the devastating raids of the Mongols. His success against the Mongols again, in its turn, enhanced the prestige and authority of the crown in India much longed by the Sultan. It is thus evident that

Balban's greatest single achievement lay in the revival of

the monarchy as the supreme factor of the state. By the centralization which it involved, Balban's work thus definitely shortened the period of administrative improvisations that marked the 13th century Sultanate.

In a large measure he prepared the ground for the Khalji state system.

It is to be equally admitted in this connection that he, by his varied measures with a view to enhance the power of the central authority, or say crown, established a dictatorship whose stability depended upon the personal strength of the ruler. While the rise of Khaljis brought forward a new group of people to position of power and authority, the founder, Jalaluddin Khalji (1290-96), did not follow a policy of narrow exclusivism. Many Turks and officers of Balban's time who visited Jalaluddin

NSOU ??CC - HI - 07 83 were given important posts and iqtas. Even Malik Chhajju Kishli Khan, a nephew of Balban, was appointed governor of Kara which was considered one of the most fertile and prosperous tracts. Now were drastic punishments meted out when Malik Chhajju rebelled, marched to Delhi, and was defeated. But even more importantly, Jalaluddin put forward by his actions the concept of a new type of a state, one which was based fundamentally on the good-will and support of the people of all communities, one which was basically beneficent and looked after the welfare of its subjects. Thus, unlike Balban, he refused to identify sovereignty with self-pride and tyranny. In the picturesque language of Barani, he believed in a policy of "not harming even an ant". Although Jalaluddin Khalji was a pious Muslim, he considered as unrealistic a policy of forcible conversion of the Hindus or their humiliation, as demanded by some theologians. In a discussion with his close associate, Ahmad Chap, he defended the policy of allowing Hindus to worship idols, preach their beliefs, and observe practices which were the hallmark of infidelity. According to him, while by a policy of terror, fear of the government and its prestige could be established in the hearts of the people for a short time, it would mean discarding (true) Islam, or, as was said, 'it would mean "discarding Islam from the hearts of the people like discarding a hair while kneading dough". Jalaluddin Khalji's nephew and son-in-law, Alauddin Khalji (1296-1316) who ascended the throne after treacherously murdering his uncle, did not accept Jalaluddin's theory of benevolence and humanitarianism, considering them to be unsuitable to the times, and signifying a weak government. He adhered more to Balban's theory of fear being the basis of good government, a theory which he applied to the nobles as well as to the ordinary people. Thus, after the outbreak of a couple of rebellions early in his reign, including one of his nephew, Aqat Khan, he decided to take harsh measures to keep the nobles under control. He revived Balban's system of spies who kept him informed of all developments, even those in the privacy of the houses of the nobles. The nobles were forbidden to associate with each other, or hold convival parties. In fact, even for forming marriage alliances or they had to seek the permission of the Sultan. Second, he harkened back to Balban's belief – one which the historian Barani shared, that the people should not be left enough means to harbour thoughts of rebellion. As a part of this policy, he ordered that all charitable lands, i.e, lands assigned in waqf or

84 NSOU ??CC - HI - 07 inam, should be confiscated. Almost all the noble of Jalaluddin's time were uprooted and their accumulated wealth were confiscated. Wine drinking was also forbidden and severe punishments were given to those who violated these orders. However, Alauddin admitted to the Chief Qazi that buying and selling of wine did not stop.

A critical study of crime and punishment under ...
(D34344326)

Like Balban, Alauddin believed in the majesty of the monarch and in his being God's representative on earth. He

believed in the maxim that "Kingship knows no kinship" and that all the inhabitants of the country must be either his servants or his subjects, "Endowed with strong common sense and native wisdom Alauddin once more revived the prestige and power, if not the dignity of the court of Balban." In his conception of sovereignty, Alauddin departed from the ideas of his predecessors. He had the courage to challenge for the first time the pre-eminence of the orthodox church in matters of state, and declare that he could act without the guidance of the Ulemas for the political interest of his government. Indeed, under him, the temporal power eclipsed the ecclesiastical. His discussion with Qazi Mughisuddin of Bayana, who often visited his court and was an advocate of ecclesiastical supremacy, show the impracticability of following the advice of the bigoted Ulema in matters of state politics "I know not" emphasized the king, "whether these laws are sanctioned by our faith or not, but whatever I conceive to be for the good of the state, that I decree". Alauddin thought that religion had nothing to do with politics. The business of the king was to administer the state, while Shariat was the concern of the Qazis and Muftis. Thus to Alauddin belongs the credit of being the first Turkish

Sultan of Delhi to bring the Church under the control of the state and			

to usher in factors that might make the State secular in theory. Unfortunately this policy was not followed up by his successors and the Turkish state in India, therefore, reverted to a theocracy soon after his death. Alauddin's policy has, however, been misunderstood and exaggerated. "Excepting dominating the clerical lawyers which by no means implied the negation of the church, Alauddin did nothing that could be considered either contrary to the general principles of Muslim law or the practices of some of the other Muslim rulers. Indeed he was known outside India as a great defender of Islam. In India the opinion was divided. While the clerical historian emphasizes his disregard of religion, Amir Khusrau, a cultured and shrewd observer, held him as a supporter of Islam. The Sultan himself said to the Qazi, "Although I have not studied the science of the Book, I am a Mussalman or a Mussalman stock". The inscriptions on Alauddin's monuments also show that that he

NSOU ??CC - HI - 07 85 had not lost faith in Islam. It is, thus, no wonder that he took advantage of Muslim fanaticism in his wars against the indigenous chiefs and people. Infact, he incited them to a high pitch of bigotry whenever he stood in need of the support of the Muslim public opinion or their military cooperation. Alauddin did not think it necessary to apply for an investiture from the Khalifa for strengthening his claims to sovereignty. Although he was a powerful monarch and could hold his own - against any Asiatic ruler, he did not assume any title higher than 'Sikandar' and continued to style himself as an assistant or a deputy of the Khalifa. His object in doing this was not to pay homage to the disgraced and powerless than Khalifa as to a political superior but only to keep the tradition of Khilafat alive, following the line of Balban. As regards the Hindus, Alauddin does not seem to have looked upon himself as their king in the same sense as of the Muslims and responsible for their welfare. His policy, which was a one of repressing them completely, was not due to a monetary vagary, but formed part of his settled ideology. He was satisfied to learn that his treatment of the Hindus was in full accordance with Islamic law. This new doctrine of sovereignty, as propounded by Alauddin "was the outcome of the irresistible logic of facts. The people tacitly acquiesced in it and recked little that of ecclesiastical claims to pre-eminence in the face of a great political necessity, and in the presence of a man, who gave the much coveted gifts of peace and security from Mongol danger". Ghazi Malik, who had brought to an end the inglorious reign of Khusrau Khan, ascended the throne in 1320 as Sultan Ghiyasuddin Tughluq Shah and founded the third dynasty of the Sultanate, Barani praises Ghiyasuddin Tughluq for his concern for the welfare of the people and his policy of moderation so that "the country might not be ruined by the weight of taxation, and the way to improvement be barred. The Hindus were to be taxed so that they might not be blinded by wealth, and so become discontented and rebellious, nor, on the other hand, be so reduced to poverty and destitution as to be unable to pursue their husbandry." Almost for the first time, we see a recognition of the importance of agriculture and handicrafts on the part of the state, and the need to continuously expand cultivation. Thus, the policy of welfare and humanitarianism put forward by Jalaluddin Khalji was reiterated and sought to be revived by Ghiyasuddin Tughlaq in a more positive manner. He extended this policy of mildness and generosity to the noble families of the time of

86 NSOU ??CC - HI - 07 Alauddin and his son, Kaiqabad. Many of these were leading lives of poverty and neglect. They were given posts and iqtas. The revenue-free lands held by theologians were examined and many of them were reduced. Those who had received large sums of money as gifts from the previous regime were called to audit, and most of them forced to return the sums. Regarding the question of the relationship between state and religion, Ghiyasuddin Tughluq, though a strict Muslim in his observance of religious practices such as the regular and public prayers, fasting during the month of Ramazan etc., did not accept the narrow interpretation of the shara regarding the humiliation and improvement of the Hindus advocated by some theologians. Muhammad Tughlaq also was strict in observing the injunctions regarding prayers, fasting etc. and was strict in seeing that others observed them also. He was a learned man, and had a deep understanding of many branches of knowledge such as philosophy, mathematics, tibb (medicines), religion etc. Barani's criticism was that he was a "rationalist" that is, he would not accept anything except by logical proof. This meant that while he did not reject the essential articles of the Muslim faith, he was not prepared to accept many traditions and practices merely on the basis of faith. Barani accuses Muhammad bin Tughlaq of combining in his person the traditions of prophethood with Sultanat, i.e. of trying to combine spiritual and political authority. This charge has no basis, except that Muhammad bin Tughlaq refused to accept the spiritual authority of many theologians and mystics. It might be recalled that Barani also accuses Alauddin Khalji of wanting to set up a new religion, merely because he was not prepared to blindly accept the authority of the shara. Though not a believer in mysticism, Muhammad bin Tughlaq respected the sufi saints, and was the first Sultan to visit the tomb of Muinuddin Chisti at Ajmer. He also built mausoleums over the tombs of many Sufi saints, including Nizamuddin Auliya at Delhi. Barani and the Moroccan traveller, Ibn Batuta also accused Muhammad bin Tughlaq of giving excessive rewards and punishments, and of appointing mean, low-born people to high offices. The long reign of Firuz Tughlaq (1351-88) is a watershed in the history of the Delhi Sultanate. Firuz Tughlaq tried to revive the tradition of a state based on benevolence, and the welfare of the people which had been sought to be established by Jalaluddin Khalji. Firuz pursued a policy of conciliation, of trying to win over the sections – nobles, administrators, soldiers, clergyman, peasants etc. which had been alienated by Muhammad bin Tughlaq for one reason or another. After a number of military expeditions, Firuz gave up welfare, and made the state more an instrument of development and welfare.

NSOU ??CC - HI - 07 87 Unfortunately, during the laterpart of his reign, Firuz became more and more narrow in his understanding of religion. Lacking a broad philosophical base such as Muhammad Tughlaq had, he interpreted religion in a narrow sense and indulged in acts of bigotry and oppression, against sections of both the Hindus and the Muslims. This weakened rather than strengthened his concept of a benevolent state.

SA MA HISTORY M21HS07DC_SLM.pdf (D155219184)

Of all the dynasties of the Sultanate period the Sayyids had the shortest span of life – thirty even years. But its life story is characterized neither by the bold imperialist achievements of the Khaljis nor the novel administrative experiments of the Tughluqs. It, however, forms a watershed in the history of medieval India, indicating a stage in the dismemberment of India, when owing to the strength of centrifugal tendencies the concept of strong centralized monarchy gave place to regionalism or provincialism in administration. The

founder of the Sayyid dynasty, Khizr Khan did not assume the title of king, but contented himself with that of Rayat-i-Ala. He pretended to act as the Viceroy of Shah Rukh, the fourth son and successor of Timur, to whom he is said to have sent the yearly tribute. While he ordered the Khutla to be read in the name of the Mughals king, his coins continued to bear the name of his Tughlaq predecessors. Mubarak Shah, the son and successor of Khizr Khan, assumed the title of Sultan. A competent military general, he suppressed a few revolts of the Hindu zamindars of the Doab and defeated the Muslim nobles in the Punjab. The power of the Sayyids declined rapidly after the murder of Mubarak Shah. The conspirators raised Muhammad Shah on the throne, albeit the real power of the state was usurped by the wazir. The latter's attempt to liquidate his rivals compelled many loyal nobles to take up arms against the king-maker. The Sultan got rid of the king-maker by getting him killed with the help of other nobles; nevertheless, he failed to cope with the forces of disorder and disruption. On the death of Muhammad Shah, his son Alauddin ascended the throne of Delhi with the high-sounding title of Alam Shah. It was about the reign of this monarch that a contemporary poet had sarcastically remarked: "Shahnshahi Shah Alam Az Delhi ta Palam". That is 'the empire of the emperor of the world' (Shah Alam) extended from Delhi to Palam' situated at a distance of about ten miles to the South of Delhi. Unable to cope with the administrative problems, revolts and intrigues of his courtiers, he retired to his

88 NSOU ??CC - HI - 07 personal estate at Badaun. It provided an opportunity to Bahlul Lodi, who deposed Shah Alam and laid the foundation of a new dynasty on the throne of Delhi. Under the Lodis, kingship assumed a new complexion; the racial basis, which had been weakened by the Khaljis and the Tughlaqs, was restored. The tribal feeling was very strong among the Afghans. Bahlul Lodi's concessions to the Afghan nobles "lowered the dignity" of the crown and reduced kingship to a sort of "exalted peerage". Bahlul Lodi did not take his seat upon the throne and never insisted that his nobles should stand in his court. He allowed his chief noble to share his carpet. If any of his top-ranking nobles was offended, Bahlul would go to his residence and try hard to pacify him. He would, sometime, remove his sword from his waist and plate it before the offended party. He would even go to the extent of taking off his turban and saying that if his nobles thought him unworthy, they might choose anyone else as their king. Such a policy worked very well throughout his reign. Bahlul had hardly any troubles from his powerful Afghan followers. While his father had been content with the position of primus inter pares, Sikandar's ideal of kingship was more akin to the Turkish and Hindu conception of sovereignty than to that of the Afghans. He rightly believed that the Afghan conception of Kingship could not be applicable to India, as India was not Afghanistan. In view of this, Sikandar attempted to undo the effects of divided sovereignty and brought his brother, Barbak Shah of Jaunpur, under his complete control. He curbed the individualistic tendencies of his Afghan nobles and compelled them to submit their accounts to the state audit. The highest of the Afghan peers were obliged to show formal respect to the king and to obey his orders. Not only did it become impossible for any noble, however highly placed he might be, to defy the Sultan's orders but none even dared to show disrespect to his farmans which had to be received with ceremony. Sikandar, was thus, able to infuse vigour and discipline in the administration. The prestige of the Sultanate as well as of the Crown, which had fallen low during the days of the later Tughlaqs, was restored. The greatest blot on Sikandar's character as a ruler was his relentless bigotry. He had made it a rule to destroy Hindu temples during the course of his expeditions and to build mosques on their sites. He tried to repress Hinduisim and exalt Islam in every possible way. His religious policy was, therefore, unwise and calculated to alienate the sympathy of his Hindu subjects and undermine his own authority. Though not devoid of ability and intelligence, Ibrahim Lodi proved a sad failure. Though himself an Afghan, he was ignorant of the character and sentiment of his race.

NSOU ??CC - HI - 07 89 He foolishly abandoned the sagacious policy of his father and grandfather and tried to impose a rigorous discipline and strict court ceremonial on his peers who were fierce democrats and treated the king as nothing more than the noble among nobles. By his policy of playing the king and insolently punishing those who disregarded his orders, he drove them into rebellion. He, thus, dug the very foundation of the state and lost his throne and life. 5.3 Conclusion The ideal of kingship in the Delhi sultanate was derived from the Islamic world whereby the rulers claimed divine origin for themselves. During the reign of Iltutmish, the position of the sultan was not considered much higher than that of an exalted noble. He treated the great Turkish nobles as his equals and professed his shyness to sit on the throne. However, Balban was fully aware of its dangerous implications. He had, therefore, to place the monarchy at a higher level than the nobility. He proclaimed himself as the vice-regent and the shadow of god on earth. He believed that the king's heart is the mirror of divine attributes. The same idea was followed by Alauddin Khilji also. He also dreamt himself to be another prophet but his advisors brought him back to reality. Nevertheless, he assumed the title of Sikander-i-Sani (the second Alexander) and kept away Ulema from his decision making periphery. However, this trend was softened by Ghiyasuddin Tughluq, who was soft on Ulema and extremely social with nobles. The same was reversed by Firuz shah, who strictly worked in guidance of Ulema and weakened the monarchy. Under Lodis, kingship assumed the racial basis. They believed in superiority of their races and this lowered the dignity of the Sultans. The sultan was a despot and bound by no law. He was not subject to any ministerial or other checks. The people had no rights but only obligations. Only two pressure groups existed with varying impacts in various times viz. nobility and Ulema. 5.4 Model Questions Short Questions 1) What is Sijda and Paibos? 2) What was Balban's idea about the role of a Sultan? 3) What is meant by 'zil-i-ilahi'? 90 NSOU ??CC - HI - 07 4) What do you mean by the maxim 'kingship knows no kinship'? Essay Type 1) What was the changing notion regarding kingship of the Sultans of Delhi? 2) What was Balban's Theory of kingship? 5.5 Suggested Readings

NSOU ??CC - HI - 07 91 Unit 6 ? Ruling elites; Sufis, ulama and the political authority Structure 6.0 Objectives 6.1 Introduction 6.2 Ruling Elites 6.2.1 Nobility 6.2.2 The Chiefs 6.3 Sufis 6.4 Ulemas 6.5 Conclusion 6.6 Model Questions 6.7 Suggested Readings 6.0 Objectives The present unit deals with the ruling elite of the Sultanate, including the 'umara' and the 'ulama', who were extremely conscious of their socio-political importance, and who jealously safeguarded their privileges. The unit also deals with the Sufis, who while accepting the shariat, however, did not confine their religious practice to a formal adherence to its tenets. 6.1 Introduction The ruling elite of the sultanate, who comprised the newly emerged aristocracy of their times, could be vaguely classified into two categories, the 'ahle e saif' or the 'umara', and the 'ahl e qalam' or the 'ulema'. The 'ahle e saif' or 'ahl e shamshir' – 'men of the sword' belonged to the warrior class among the immigrants who had settled their scores with the Rajput adversaries on the battle-field. It was not surprising, therefore, that their military rank also determined their social status in the aristocracy; they bore titles such as khan, malik, amir, sipahsalar and 'sar i khail' in the descending order of socio-political hierarchy. The members of the royal household comprised but a part of the 'ahle e saif'; at the best, they could be called 'primus inter pares'. The sultanate was based on the active support and cooperation of the 'umara' or the nobility.

92 NSOU ??CC - HI - 07 The 'ahle e qalam' – 'men of the pen' were the muslim theologians, scholars and administrators who were collectively known as the 'ulema' (pl. of alim); they constituted the brain of the sultanate while the umara can be referred to as the sword-arm of the Turkish rule in India. Most of them belonged to the orthodox 'sunni' school of thought. The 'sadr us sadur' – 'the minister incharge of the ecclesiastial department and religious endowments'; and 'qazi ut qazat' – 'the chief justice', usually acted as spokesmen of the ulema and were treated as their representatives by the latter. The 'ulema' exercised a great influence on the policies and functions of the state. They interpreted the Islamic law and regarded themselves as the spiritual guardians of the Islamic state. The ulema tended to dominate the state politics, sometimes over the head of the nobility, under the weak or orthodox sultans. Sufism was a natural development within Islam based on the spirit of Koranic piety. The Sufis, while accepting the shariat however, did not confine their religious practice to a formal adherence to its tenets. The early Sufis felt that the Koranic verses were essentially indecipherable. They laid much emphasis on things like repentance (tauba), abstinence, renunciation, poverty, trust in God (Gawakkul) etc. Mecca, Medina, Basra and Kufa were the earliest centres of Sufism during the period. Sufism then spread to other regions of the Islamic world like Iran, Khurasan, Transoxania, Egypt, Syria and Baghdad. Historians feel that when Sufism spread to Iranian regions, it tended to convey a greater sense of individualism, divergent tendencies, and we find the enunciation of heterodox doctrines and practices under Persian influence.

6.2 Ruling elites

6.2.1 Nobility

The most important class which emerged in northern India during the 13th century was the ruling class consisting of the nobles. Generally, the nobles have been divided into three categories, the khans being the highest category, followed by Maliks and Amirs. However, this categorization, according to Satish Chandra, was never very clear. To begin with, people holding junior posts in and around the court, such as Sarjandar (Commander of the King's personal forces), Saqi-i-Khas (in charge of water and other drinks etc.) as also those holding the posts of Sipah salar, Sar-i-Khail (junior commanders of military forces) were called amirs. Later, the word amir began to be used in a loose sense to signify a person of wealth and influence in the government.

NSOU ??CC - HI - 07 93 All the top posts in the government were held by persons belonging to Maliks and Khans. In the lists of nobles given by Minhaj-ud-din Siraj and Barani, only Maliks are mentioned. The category of Khan was the result of Mongol influence among whom Qa-an (Khan) was the commander of 10,000 troops. In the Deli Sultanate, the word 'Khan' was only used to give a special status. Thus Balban was given the title of Ulugh Khan. The nobles were also dignified by being given other titles such as Khwaja Jahan, Imad-ul-Mulk, Nizam-ul-Mulk, etc. They were also awarded various privileges (maratib), such as robes of different kinds, sword and dagger, flags, drums, etc. These were greatly valued because they often signified status, and closeness to the Sultan. Horses and elephants with costly trappings were also awarded to them on special occasions. We do not have any precise idea of the number of nobles in office at any one time. Minhaj-ud-din Siraj gives a list of 32 Maliks under Iltutmish which included 8 princes who were displaced Central Asian rulers. Perhaps the term Turkan-i-Chahalgani, or the Corps of Forty Turks used by Barani is a reflection of the number of top nobles. For Balban's reign, Barani gives a list of 36 Maliks excluding qazis. The number of top nobles rose to 48 under Alauddin Khalji, out of which 7 were relations, including sons. From this, we may conclude that till the Sultanate suddenly expanded after the death of Alauddin Khalji, the number of top nobles or Maliks in the country was quite small. Even among this small group of nobles, there was bitter factional fighting. In this struggle, mutual relationships, ethnicity etc. played a role. The Turks considered themselves superior to all others such as Tajiks, Khaljis, Afghans, Hindusthanis etc. The Turks ousted the Tajiks after the death of Iltutmish, and established a virtual Turkish monopoly over high offices. This was broken with the rise of the Khaljis. Under the Khaljis and the Tughlaqs, Indian Muslims forged ahead, largely on the basis of personal efficiency. However, foreign blood or descent from a well-known foreign family continued to have considerable social value and esteem, as the Moorish traveler, Ibn Battutah, testifies. We do not have much knowledge about the social origin of the high grandees. During the early phase, there was considerable social mobility among the nobles, and people from a wide social background, who had the capacity to attract and maintain a military following (jamait) or who caught the eye of the Sultan, could, with luck, rise to the position of a Malik. Many of the nobles had, in fact, started their career as slaves, and slowly climbed

94 NSOU ??CC - HI - 07 the social ladder. This open character of the nobility continued to a large extent during the 13 th century on account of the rapid rise and fall of dynasties, resulting in large scale displacement of nobles belonging to the previous regimes. Thus, in the 13 th century we hardly hear of families whose members continued to hold the position of the grandees for more than one generation. During the 14 th century, with the rise of the Khaljis, and then of the Tughlaqs, the social character of the nobility broadened, and it became more stabilized. With the breaking of the Turkish monopoly of high offices, the zone of recruitment to the nobility broadened. Many Khaljis, Afghans and Hindusthanis were admitted to the nobility. No attempt was made to exclude the Turks. However, according to popular perception, even when a noble lost his power and position, the tradition of former dignity and social honour were handed over to his descendants who believed that their restoration to former power was only a question of time and opportunity. According to contemporary thinking, the state had a special responsibility towards the ashraf not only in matters of employment, but for giving pensions to the widows, even providing funds for the marriage of their unmarried daughters. Generally speaking, there was a broad division among the ahl-i-Saif or men of the sword, and the ahl-i-qalam or the literati. The latter were chosen for judicial and clerical posts. The ulema also fell in this category. As long as administration was tantamount to a military exercise for realising land revenue from recalcitrant chiefs, muqaddams and peasants, the literati had to be kept away from administration, although it was urged that the wazir should come from the class of the literati. In general, the nobles looked down on the literati, and considered them unfit for administrative or political matters. The emergence of a class of ashraf from whom the nobility was expected to be recruited gave it a measure of social stability, but also heightened stratification in Muslim society. The counterpart of the ashraf were the ajlaf or Kam-asl, i.e. the lower, inferior classes consisting of citizens, professionals and working sections such as weavers, peasants and labourers. While such social gradations had existed among the Muslims in West and Central Asia, they became even more rigid and pronounced after their coming to India which had a tradition of stratification on the basis of hereditary, i.e. caste. Aspiring from this deep social diversity was the belief that only persons belonging to the 'respectable' classes had the right to occupy high offices in the state. Hence there was widespread resentment among the upper classes when Muhammad bin Tughlaq appointed to high offices Hindus and Muslims belonging to the inferior classes or castes NSOU ??CC - HI - 07 95 on the basis of their efficiency. The experiment failed for a variety of reasons. Firuz Tughlaq earned high praise and approval when he chose as nobles only those whose ancestors had been in the service of the king or belonged to the respected classes. That the prejudice was not against 'Hindusthanis' as such but against the inferior classes, whether Hindustani Muslim, is borne out by the fact that Firuz's wazir, Khan-i-Jahan, who was a converted Brahman, was acceptable to all sections of the Muslims. This was in stark contrast to the Baraduis or Parwaris, wrongly considered to be low-caste converts who had come to the top for a brief period of time after the death of Alauddin Khalji, and have been sharply denounced by Barani. We are told by Barani that during the time of Balban when, apparently, the nobles did not have much ready cash in their hands, whenever they wanted to hold a majlis or a convivial party, their agents would rush to the houses of the Sahs and Multanis to borrow money, so that all the money from their iqta went to them as repayment, and gold and silver was to be found in the houses of merchants alone. This situation seems to have changed with the coming of Alauddin Khalji and the growth of a new centralized system of land revenue administration which began with him, and continued under the Tughluqs. In the new system of revenue administration, there was an emphasis on payment of land revenue in cash. This applied not only to Khalisa territories, but even in areas assigned as iqta. Thus when Ibn Battutah was appointed a judge and given a salary of 5000 dinars, it was paid for by assigning him two and half villages, the annual income of which came to that sum. We also hear of nobles being assigned large salaries. This implied unprecedented centralization of the rural surplus in the hands of the central elite. The high emoluments not only implied great affluence for the nobles, but possibility of hoarding of wealth.

15 Thesis Aashiq Ahmad Bhat GK1947 History AMU ...
(D149203573)

When Malik Shahin, who was naib amir-i-majlis of Sultan Firuz died, he left behind 50 lakh tankas besides jewels, ornaments and costly robes.

Imad-ul- Mulk Bashir-i-Sultani, who had been the Sultan's slave, left behind 13 crores tankas of which the Sultan confiscated 9 crores. However, these appear to be exceptions rather than the rule. Apart from being an insurance against uncertainty, the growth of such hoards was also an index of a slow growth of a money economy in the country. However, the growth of a money economy seems to have led to a change in the attitude towards trade and traders. Ibn Battutah alludes to the ships owned by the Sultan of Delhi. On one occasion, the Sultan, Muhammad bin Tughlaq, placed three ships at the disposal of Shihabuddin Kazruni, a friend and associate, who had a flourishing overseas trade, and was called a "king of merchants". Almost for the first time, traders began to be involved in the tasks of administration. Thus Muhammad bin Tughlaq gave Shihabuddin the city of

96 NSOU ??CC - HI - 07 Khambayat in charge. If Battutah is to be believed, the Sultan had even promised him the post of the Wazir, but he was murdered at the instance of the Wazir, Khan-i-Jahan while on his way to Delhi. We have little information about the education and cultural outlook and values of the Turkish nobles. Apparently, they were not illiterate: even slaves purchased by merchants in the slave market of Samarqand and Bokhara were educated before being resold. Although many of the slaves were newly converted, they had imbibed the Islamic religious and cultural norms prevalent in Central Asia, Khurasan etc. Nonetheless, they could hardly have imbibed the cultural graces of an old and well-established nobility. Nor could they be expected to be knowledgeable patrons of culture, though it was considered a mark of prestige to patronize poets and writers, sometimes even to give them extravagant rewards. This began to change with the rise of Amir Khusrau and his companion, Amir Hasan Sijzi, towards the end of the 13th century. Gradually, a new Indo-Muslim culture developed, and many nobles and sufis actively contributed to it. Thus from being merely made warriors, the nobles began slowly to emerge as patrons of culture as well.

6.2.2 The Chiefs

Although the Rajputs had lost state power almost all over North India, with the exception of Rajasthan and adjacent areas, and in the remote hill regions of the Himalayas, Bundelkhand, etc., Rajput rajas continued to dominate large tracts of the countryside even in the centrally administered areas of Punjab, the Doab, Bihar, Gujarat etc. They were called rai, rana, rawat, etc. However, the term 'chief' had been applied to them. They had their own armed forces, and generally lived in the countryside in their fortresses. Although the contemporary sources invariably portray them as enemies against whom constant jihad was not only legitimate but necessary, a relationship of permanent hostility was not feasible for the Turkish rulers, or for them. For the Turkish rulers, it was convenient to allow them to rule the areas under their control as long as they paid a stipulated sum of money regularly as tribute, and generally behaved in a loyal manner. We have evidence of a growing political relationship between the Turkish rulers and the Hindu Chiefs. Hindu rais from a hundred kos used to come and witness the splendour of Balban's court. After Balban's victory over Tughril Khan in Bengal, he was welcomed in Awadh by many, including the rais of the area. Later, when Firuz Tughlaq invaded Bengal,

NSOU ??CC - HI - 07 97 he was joined by the rais of eastern Uttar Pradesh, the most important of them being the rai of Gorakhpur and Champaran, who paid 20 lakhs of tribute that was due from him. In another instance, when Malik Chhajju, a nephew of Balban and governor of Kara rebelled against Jalaluddin Khalji, he was joined by the local rais, and rawats and payaks of the area who "swarmed around with their forces like ants and locusts". They stood by his side in his contest with Jalaluddin Khalji. We hear that under Firuz Tughlaq, Anirathu who was lord of two royal canopies (chatra)", Rai Madan (or Ballar) Deva, Rai Sumer, Rawat Adhiram etc. were not only allowed to attend, but were allowed to sit down in the court. Despite these growing political linkages during the Sultanate rule, the position of the chiefs was one of considerable uncertainty. It was a part of the policy of the Sultans of Delhi to overthrow the Hindu chiefs whenever they could, or at any rate, to try and reduce their powers and privileges by extending the imperial system of revenue administration to the territories dominated by the chiefs. While such a process did not, in all probability, reduce the actual burden on the cultivators, it meant a reduction of the perquisites of the chiefs, and possibly other intermediaries. By the beginning of the 14 th century, we find increasing references to the zamindars. This term was used increasingly to designate the hereditary intermediaries. Amir Khusrau was amongst the first to use it. In course of time, the term began to be applied to the khuts and muqaddams and chaudhuris, and even to those former chiefs who had been forced or pressurized to pay not a fixed lump sum, but a sum fixed on the basis of land revenue assessment. Under the Mughals, the word "zamindar" began to be used for all hereditary owners of land or those who had a hereditary share in the land revenue. Even chiefs were included in this category.

6.3 Sufis

The united front which Islam had attempted to present in a predominantly non-Muslim country could not be maintained for long. Whilst the Sultanate was in the process of establishing its power, sectarian conflicts occurred, one of which seriously threatened the Sultanate itself. The two dominant sects of Islam were the Sunnis and the Shias, and the Sultans, being Sunnis, supported by Sunni theologians, were disapproved by the Shias. The ascendancy of Turkish power had diminished the possibilities of Shia influence in India. The Shias, together with the schismatics, revolted unsuccessfully against the Sultanate during 98 NSOU ??CC - HI - 07 the reign of Razia, after which the Shias ceased to be a challenge to Sunni domination during the Sultanate. There was, however, another challenge to the Sunnis from a group of Muslims whose influence, though indirect, was nevertheless a force to be contended with. These were the Sufis, the saints and mystics who had also come to India with the establishment of Turkish power. They isolated themselves from society, and this disassociation had a historical explanation which is partially pertinent to the Indian situation. The Sufis came into prominence in about the 10 th century in Persia, with their mystical doctrines of union with God achieved through the love of God. Sufi mysticism sprang from the doctrine of Wahadatul Wujud or the unity of Being, which identified the Haq (the Creator) and Khalq (the Creating). This doctrine means that God is the unity behind all plurality and the Reality behind all phenomenal appearances. The Sufis were so absorbed in their idea that a moment's diversion from the thought of the Absolute was unbearable to them. In their journey to achieve union with the Absolute,

NSOU ??CC - HI - 07 99 they had to pass through ten stages which were : tauba(repentance), wara (abstinence), zuhd (peity), fagr (poverty), sabr (patience), shukr (gratitude), khauf(fear), raja (hope), tawakkul (contentment) and riza(submission to the divine will). In passing through these stages of spiritual development, the Sufi felt excessive love and yearning for God. These Sufis had a two-fold object in view, namely, their own spiritual development and the service of humanity. Union of the human soul with God, through loving devotion was the essence of the Sufi faith. Different explanations, however, have been given by the scholars as to the origin of the word 'sufi'. Generally, scholars trace its origin by the word safa. They say that those who were pious people were called Sufis. Abu Nasral Sarraj, the author of an Arabic treatise Sufism, declares that in his opinion the word Sufi is derived from Suf (wool). Some scholars have traced its origin to the Greek word Sophia (knowledge). But the most reasonable explanation seems to be that the word 'sufi' came from the early Sufi mendicants' practices of wearing suf (coarse wool) as a mark of austerity. The use of suf gradually disappeared, for the words Sufism and sufi continue to designate the doctrine and its followers. According to some scholars like Rahul Sanskrityan, the word Sufism had its origin in Greek sufist movement of fifth and sixth century B.C. S.A.A Rizvi observes that Sufism actually began with the Prophet Mohammad. Some of his companions who led a retired life in Medina mosque, given to poverty and self mortification, are counted as Sufi leaders. Among them were the Ethiopian Bilal, the Iranian Salman, Abu Ubaydah etc. Although the first three successors to the prophet (Abu Bakr, Omar, Usman) are deeply respected by the Sufis, Ali (the fourth Khalifa) is regarded by them as their Sheikh (leader). Hasan Basri (642 – 728A.D) is believed to be the link between Ali and the Sufi sects. Of course, the word Sufi was not applied to the prophet's companion, they were known rather as 'Sahaba' (companions). The Sufis are mystics, and mysticism is inseparable from Sufism. To describe mystic experience, we may say that experience which is called mystical is a supersensuous perception of reality. It is other than sense experience and also other than the exercise of mere reason. Such doctrines were attacked by orthodox Islam and the sufis were regarded as heretics. This led to their becoming secretive and aloof and living in seclusion. Their language became highly symbolic and esoteric. Sometimes, they formed an order under a Pir or Sheikh, equivalent of the Hindu Guru, and the members of the order were called 'Faqirs' (mendicants) or dervishes. Some of the orders evolved a special ritual, often hypnotic in character, such as dancing until a state of trance is experienced. Many sufis lived in a state of continued meditation 100 NSOU ??CC - HI - 07 and contemplation. The sufis were also emotionally affected by religious music and to practice self mortification, many ate only grass and leaves. Among the main rituals practiced by the Sufis, was the Zikr, which involved the repeated recital of a devotional formula in praise of Allah as a means of attaining bliss. A popular form of Zikr that had a powerful influence on the Sufis was the Sama, a gathering where both singers and listeners reached a sublime state of mind and experienced divine ecstasy. India with its earlier experience of asceticism, the philosophy of the Upanishads, and the devotional cults, provided a sympathetic atmosphere for the sufis. There were three chief orders of sufis in India – that of Chisti which included the historian Barani and the poet Amir Khusrau among its followers and was popular in and around Delhi and the Doab, that of Suhrawardi, whose following was mainly in Sind and that of Firdausi, whose order was popular in Bihar. The sufis in Indian disassociated themselves from the established centre of orthodoxy often as a protest against what they believed to be a misinterpretation of the Koran by the Ulemas. They believed that the latter by combining religion with political policies and cooperating with the Sultanate, were deviating from the original democratic and egalitarian principles of the Koran. The Ulemas denounced the sufis for their liberal ideas and the sufis accused the Ulemas of having succumbed to temporal temptations. Those sufis, who were still in contact with society were often suspected of being disaffected, but the sufis were never deeply committed to the idea of rebellion since they were, both in theory and practice, isolated from those conditions which they opposed. At that time also began the sufis belief that the millennium was approaching and that the 'Mahdi' (the redeemer) would come to restore the pristine faith of Islam. This existence of recluses, living apart from their fellows, was familiar in India and the sufis were thus a part of an established tradition. It is not surprising, therefore, that the Sufi Pirs were as much revered by the Hindus as were the Hindu Gurus and ascetics, all of them being regarded by the Hindus in general as being of the same mould.

96% MATCHING BLOCK 40/171

W

Islamic stress on equality was respected by the sufis far more than the ulemas

and this brought the mystic order into contact with the artisans and cultivators. Thus the Sufis became more effective religious leaders than the distant ulema for the peasants. The sufis often reflected the non-conformist elements in society and in occasion even the rationalist forces, since their mysticism was not in every case religious escapism. Some opted out

NSOU ??CC - HI - 07 101 of society in order to pursue knowledge based on empirical observation when they felt that the more established tradition of rational thought had become entangled with the rigid doctrines of the orthodox.

Nizamuddin Aulia, a noted sufi saint, for instance, followed an enquiry on the laws of movement which displays a remarkable degree of empirical thought. In the popular mind, mystics were also frequently associated with magic. Sidhi Maula had no visible source of income, yet he was lavish in his donations to the poor, which gave rise to the suspicion that he was an alchemist, infact his funds may well have come from the disaffected nobles who were using his hospice as a base to organize opposition to the Sultanate. In all these, the sufis had their precursors in the Indian society in the previous centuries. It is unfortunate that the sufis, who in the early crucial years were the most effected original thinkers in the sphere of both politics and religion, should have detached themselves from the social framework. Had they contributed from within society, their impact would have been more direct and they could have mobilized support of a less purely religious nature. This might in turn have been of considerable hope to the leaders of the new socio- religious development within the Bhakti movement. Although this was a continuation of the earlier devotional cult, sufi ideas influenced its doctrines, as did also certain typically Muslim concepts, particularly those about social justice. Sufi and Bhakti thought and practice coalesced at various points. The essential belief in the need to unite with God was common to both, as was the

100% MATCHING BLOCK 41/171

W

stress on love as the basis of the relationship with God.

Both believed also that the acceptance of a Guru or a Pir, atleast in the initial stages, was necessary. But the mysticism of the sufis was not encouraged by all the Bhakti saints, since the purpose of the latter was not to remain aloof and isolated from the people, but rather to make their teaching comprehensible even to simple minds. 6.4 Ulemas The word Ulema comes from the word Alim which means "one who knows Islam". Ulemas were the theologians, who consisted the most influential section of the Muslim intelligentsia. The Ulemas or the Muslim Clergy were not a hereditary body, nor was it confined to any particular class or country. However, during the Turko-Afghan period all the Ulemas were from outside India. They were a well-knit group, intensely conscious of their importance as the sole interpreters of Quran and Hadith. They were to be found wherever a certain number

102 NSOU ??CC - HI - 07 of Muslims had settled down to colonize and they practically monopolized judicial, ecclesiastical and educational services. Some of them taught in privately owned or government established Madrasas. Quite a large number were Imams, Khatibs, Muhtasifs, Muftis and Qazi, while certain others devoted their time and energy to religious propaganda. All these ecclesiastics or Ulemas were supposed to be deeply learned in Islamic theology and could give a fatwa or ruling over any controversial issue. As such they were consulted by the Sultans on various important points of law. This had added to their power and led them to believe that they could guide and control state policy. When Ilburi Turks first came to power, Muslim nobility in India were so few that they occupied only a very thin upper crust of the ruling class and were unevenly spread out. So they faced basic problems of negotiation with Hindu zamindars and dominant peasants. At that point it was not possible for the Sultans to pay heed to the advice of the Ulemas. For instance, they advised Iltutmish to convert the entire Hindu population. But Iltutmish realized it would be impossible to do so and told the Ulemas that Muslims were like a pinch of salt and the Hindus were like a plate of rice. So it was possible for Muslims to merge with Hindus but not convert them wholesale. Khaljis and Tughlaqs solved the problem of administration by selectively appropriating the Hindu aristocracy and thus satisfying their desire to be part of their own character of an occupation of force. Alauddin Khalji was the first Sultan to show more independence and disregard the Ulema's advice. He openly declared that he did not care whether his conduct was in accordance with the spirit of the Islamic law; he did whatever he considered to be right and to be in the interest of the state, or suitable for an emergency. But his successors, being made of less stern stuff, reverted to the policy of consulting the Ulema in all important matters. Muhammad bin Tughlaq, made light of the influence of this class during the early years of his reign; but he was so much harassed and vilified by the ecclesiastics that he had to confess his defeat and make amends during the later years of his rule. His successor Firuz Tughlaq, was a weak but tolerant man. His period of toleration paved the way for Akbar and this toleration was not mere political expediency. Some fundamental questions about religion and its place in state politics was being debated between 13th and 15th century. Ulemas were divided into two groups – diehard Ulemas and reasonable Ulemas as were the Sufis. Liberal Sufis added a new dimension to the debate and Turko Afghans did not spell it out clearly but preferred to follow local customs and usages rather than Quran / Hadith as state policy.

NSOU ??CC - HI - 07 103 The Ulemas might have been learned but they approached every issue from the point of view of religion so their opinion was necessarily orthodox and often injurious to the interest of the Sultanate itself. They preached war against infidels and suppression of all forms of heresy within Islam. If the Sultan listened to their advice he would have to be a religious fanatic. So they used their own intelligence and experience in tackling day to day issues. Mohammad Habib points out that 'under these conditions wise kings adapted a policy of compromise and moderation. They paid lip homage to the Shariat and admitted their sinfulness if they were unable, to enforce any of its provisions, they kept the state controlled mullahs disciplined and satisfied, over the whole field of administration concerning which the Shariat is silent or nearly silent, they made their own laws, if the traditional customs of the people were against this Shariat, they allowed them to override the Shariat under the designation of Urf. Thus state laws called Zawabit grew under the protection of the monarchy. If these laws violated the Shariat the principle of necessity or of istihasan (the public good) could be quoted in their favour. And the back of the Shariat was broken for the primary reason that it had provided no means for its own development.' Through these formal and informal channels, the primary aim of the Ulema was to spread the religio-moral order as far as was possible. This often brought them into conflict with the Sultan. The Ulema preached obedience to the word of God and to the dictates of the Sultan. Thus, theoretically speaking, they were an important instrument of social control since the message of obedience that they imposed on the Muslim subject population worked towards formulating a political atmosphere favourable to the Sultan. However, later rulers, particularly after the consolidation of the Delhi Sultanate, favoured politics over religion, more so because the majority of the subject population was non-Muslim. This brought the interests of the Ulema and the Sultan in direct clash on frequent occasions. 6.5 Conclusion It is pertinent to take note of the fact that the Sultan did not depend solely on the abstractions of religion for the administrative control, but established his control over core areas through a number of offices. In this sense of the term, the nobility featured as part of the ruling elite, who came to play a lead role in the decision making process of the time. By speaking of the universal love in quest of the Almighty, Sufi philosophy heightened the atmosphere of religious tolerance, echoing the spirituality and cultural refinement inherent in Islam.

104 NSOU ??CC - HI - 07 Model Questions Short Questions 1) What do you mean by Sufism? 2) Who were the Muqtis? 3) Who were the Ulemas? Essay type questions 1) Write an essay on Sufism. 2) Examine the role of nobility during the Sultanate period identifying the principal issues in the tussle between the Delhi Sultans and their nobles. 3) Analyze the role played by ulemas during the period of Delhi Sultanate. 6.6 Suggested Readings Chandra

NSOU ??CC - HI - 07 105 Unit 7 ? Imperial Monuments and Coinage Structure 7.0 Objectives 7.1 Introduction 7.2 The Indo-Islamic Architecture 7.3 Coinage 7.4 Conclusion 7.5 Model Questions 7.6 Suggested Readings 7.0 Objectives To apprise the reader of the new evolving type of architecture during the Delhi Sultanate, which involved a synthesis between the Muslim and Hindu schools of structural design. The present unit deals with the Indo-Islamic architecture which was based on 'beam and bracket' principle that enabled the construction of vast and sprawling building complexes of almost any dimensions. Regarding coinage of the time, this chapter reflects on the new pattern that developed under the Turks which carried inscriptions on both the sides in either Arabic or Persian script. 7.1 Introduction The Sultanate era marked the evolution and development of a new-type of Hindu- Muslim architecture in which decorative exuberance of the Hindu architecture was toned down and its place was taken by new elements such as use of geometrical shapes, calligraphy, inscriptional art, etc. However, the elements of Hindu architecture still formed the basis of new architectural style. This was mainly because of three reasons. Firstly, the Muslim rulers had to employ Indian architects and masons. Secondly, early mosques were built by demolition of temples and the Muslim rulers used the same material of Hindu temples in making their mosques and tombs. Thirdly, rather than building new monuments from scratch, the early Muslim rulers resorted to convert the Hindu and Jain temples into mosques by making alternations. Indian coinage assumed an entirely new pattern under the Turks. The Turkish rule in Delhi, apart from the many other changes that it introduced, also revitalized the economy

106 NSOU ??CC - HI - 07 by introducing major transformations and the standardization of coinage. Indian coinage assumed an entirely new pattern under the Turks. They carried inscriptions on both sides on Arabic and Persian scripts.

7.2 The Indo-Islamic Architecture The most important source for the study of architecture are the surviving remains of the buildings themselves, also referred to as monuments. These enable us to grasp architectural techniques and style peculiar to the period. Monuments provide an insight into construction technologies. Of these, mosques are the most representative forms of architecture, as they are primarily a fusion of the Indian and Seljuk traditions often termed as 'Indo-Islamic'. They are beautifully constructed since they are places of worship. At the same time they were also meant to demonstrate the power, wealth and devotion of the patron. Monica Juneja argues that the construction of the public mosque should be seen as part of a pattern of the conquest and 'symbolic appropriation' of an alien territory. She says that territorial victory was expressed through 'immediate visual acts and forms'. Therefore, during the early years of Turkish invasion not only were the centres of power attacked but even the most sacred sites of the indigenous populace was completely destroyed. Many a times victory was celebrated by constructing a mosque to the effect where the Sultan could offer prayers to the Almighty. For places of worship, the new rulers converted temples and other existing buildings into mosques. Examples of this are the Quwwat-ul-Islam mosque near the Qutb Minar in Delhi and the building at Ajmer called Arhai Din ka Jhonpara. The former had been a Jain temple at first, which had then been converted into a temple dedicated to Vishnu. The latter had been a monastery. The only new construction at Delhi was a façade of three elaborately carved arches in front of the deity room which was demolished. The arcaded courtyard in front consisted entirely of pillars from thirty seven temples of the area which had been looted. The style of decoration used on the arches is very interesting: no human or animal figures were used since it was considered to be un-Islamic to do so. Instead, they used scrolls of flowers and verses of the Quran which were intertwined in a very artistic manner. The early examples of mosque architecture had certain basic features. To take an example, the entrance gates stood on the north, west and eastern walls and the mosque ideally had a rectangular courtyard with a 'hypostyle hall on the Qibla side'. Qibla is the direction in which Muslim offer their prayers i.e. Mecca.

NSOU ??CC - HI - 07 107 In the early thirteenth century a new genre of buildings arose which had larger rooms with an elaborate superstructure. This required sophisticated skills. Earlier, between the seventh and tenth centuries, architects had started adding more rooms, doors and windows to buildings. But the roofs, doors and windows were still made by placing a horizontal beam across two vertical columns, a style of architecture called 'trabeate' or corbelled'. Between the eighth and thirteenth centuries the trabeate style was used in the construction of temples, mosques, tombs and in buildings attached to large stepped-wells or baolis. Two technological and stylistic developments can be seen from the thirteenth century onwards. First, the weight of the superstructure above the doors and windows was sometimes carried by arches. This architectural form was called 'arcuate'. Secondly, limestone cement was increasingly used in construction. This was very high quality cement, which, when mixed with stone chips, hardened into concrete. This made the construction of large structures easier and faster. True Arch technique was used in Alai Darwaza at Quwwat ul-Islam mosque, Delhi. True Arch Technique

108 NSOU ??CC - HI - 07 Arches formed one of the most prominent features of medieval architectural buildings.

SA

8 Seema KhanSem III Cultural History CDOE AMU.docx (D142785762)

radiating voussoir of the arch was fixed in mortar. These two bottom layers of brick-work would, if needed, act as permanent shuttering for the arch. It may be noted here that the use of bricks instead of an all-wood centering was a feature typical of regions

like West Asia and India that had scanty reserves of wood. Corbelled Technique in Arch

NSOU ??CC - HI - 07 109 Quwwat ul-Islam mosque Qutb Minar The most famous and the most magnificent building built by the Turks during the 13 th century was the tower or minar adjacent to the Quwwat ul-Islam mosque. It was called the mazana or place from where the call for prayer (azan) was called. It was much later that this minar began to be called the Qutb Minar, possibly because it was started by Qutbuddin Aibak and completed by Iltutmish. Qutbuddin Bakhtiyar Kaki, the famous sufi saint, was living at Delhi and the minar began to be considered a token of his spiritual attainment. There is, however, no reason to believe according to Satish Chandra that the minar was based on an earlier Rajpur tower. Although the tradition of building towers are to be found in India, West Asia and elsewhere, the Qutb Minar is unique in many ways. Its tremendous height of 71.4 metres (238 feet) becomes more effective by its tapering character. Originally, it was only four stories high, but the top of the minar was hit by lightening and Firuz Tughlaq repaired it, and added a fifth story. The main beauty of the minar lies in the skilful manner in which balconies have been projected, yet linked with the tower by a devise called "stalectite honey-combing". The skilful use of ribbed and angular projections in the body of the tower, the use of red and white sandstones in the panels and in the top stages add further to the effect.

110 NSOU ??CC - HI - 07 The growth of the building activities of the Turks after the consolidation of the Delhi sultanate under Iltutmish is shown by the wide range of buildings belonging to this period. Thus, the mosque and group of buildings at Badaun (U.P), their lofty gate at Nagaur, and the Hansi and Palwal in Haryana are an index of the determination of the Turks to build their own buildings. Iltutmish's own tomb, built near the end of his reign, is an indication of the mixing of the Hindu and Muslim traditions of architecture. The tomb was a square building, but by putting pedantives and squinch arches in the corners, it was made octagonal on which a dome was built. This devise was used in many square buildings later on. Even more remarkable was the intricate carving on the walls, where calligraphy was combined with Indian floral motives. But the true Islamic arch made its first appearance in Balban's tomb. It was based on radiating voussoirs and a coping stone, not putting one stone over the other to cover the gaps and then put a stone or slab on top. The Khalji period saw a lot of building activity. Alauddin Khalji built his capital at Siri, a few kilometers away from the site around the Qutb. Unfortunately, hardly anything of this city survives now, Alauddin planned a tower twice the height of the Qutb Minar but did not live to complete it. However, he added an entrance door to the Quwwat-ul-Islam mosque. This door, which is called the Alai Darwaza, had a number of novel features. It was the first building in which the dome was built not on the principle of overlapping courses of masonry, gradually decreasing in size as they rose upwards, but on the basis of radiating voussoirs. The horse-shoe arch used for the first time in the building, is pleasing in appearance. The decorative devices- merlons in the inside of the arch, and use of lotus on the spandrel of the arch, and use of white marble in the trellis work and the marble decorative bands to set off the red sandstone give to the building an appearance of grace and strength which is considered a special feature of Indian architectural tradition. Mosque architecture was also developed during this period as shown by the Jamaat Khana mosque at the mausoleum of the sufi saint, Nizamuddin Auliya. Percy Brown

headers and the stretchers. This system was retained in subsequent buildings and became NSOU ??CC - HI - 07 111 a characteristic feature of the late medieval period buildings. The material commonly used for plastering buildings was gypsum.

Decorative art in the Islamic buildings served the purpose of concealing the structure behind motifs rather than revealing it. Since the depiction of a living being was generally frowned upon, the elements of decoration were, in most cases, limited to calligraphy, geometry and foliage.

But characteristically enough, no one type of decoration was reserved for a particular type of building; on the contrary, these pan-Islamic decorative principles were used for all kinds of buildings in the Delhi Sultanate. Calligraphy is an important element of decorative art in the buildings of this period. The Koranic sayings are inscribed on buildings in an angular, sober and monumental script, known as Kufi. They may be found in any part of the building including door frames, ceilings, wall panels, niches etc. and also in a variety of materials like – stone, stucco and painting. Geometric shapes

were used in these buildings in a variety of combinations.

(D142785762)

The dominant form of decoration employed in Sultanate buildings is the arabesque form. It is characterized by a continuous stem which splits regularly, producing a series of leafy secondary stems which can in turn split again or

can be re-integrated into the main stream. In due course of time the arch technique developed into that of a true dome. The dome was as much a symbol of Islam as was the arch, and the gradual pressure of the patron, upon the architect to build a ceremonial dome, eventually found expression in the tomb of Iltutmish for the first time. Domes began to be constructed as ceremonial superstructure which not only covered the monument but also crowned it imposingly. The squinch system consists of projecting a small arch, or similar contrivances, across the upper part of the angle of the square hall. This has an effect of converting its square shape into an octagon, which, again if necessary, may be transformed in the same manner into a sixteen-sided figure. The end result was that it formed a convenient base on which the lower circular rim of the dome could rest without leaving any part unsupported. We find a similar kind of dome in another contemporary building also built by Iltutmish-Sultan Ghori or 'Sultan of the Care', so named because the cenotaph is an underground chamber. Gradually the dome became more bulbous and elaborate and visible even from miles away.

112 NSOU ??CC - HI - 07 There was great building activity in the Tughlaq period which marked the climax of the Delhi Sultanate as well as the beginning of the decline. Ghiyasuddin and Muhammad bin Tughlaq built the huge palace-fortress complex called Tughlaqabad. By blocking the passage of the Jamuna, a huge artificial lake was created around it. The tomb of Ghiyasuddin marks a new trend in architecture. To have a good skyline, the building was put on a high platform. Its beauty was heightened by marble dome. A striking feature of the Tughlaq architecture was the sloping walls. This is called 'batter', and gives the effect of strength and solidity to the building. However, the batter is used sparingly in the buildings of Firuz Tughlaq. A second feature of the Tughlaq architecture was the deliberate attempt to combine the principles of the arch, and the lintel and beam. In the buildings of Firuz Tughlaq in the Haus Khaus, which was a pleasure resort and had a huge lake around it, Evolution of Dome During Delhi Sultanate

NSOU ??CC - HI - 07 113 alternate stories have arches and the lintel and beam. The same is to be found in some buildings of Firuz Shah's new fort which is now called the Kotla. The Tughlaqs did not generally use the costly red sandstone in their buildings but the cheaper and more easily available greystone. In the buildings of Firuz, rubble is finished by a thick coat of lime plaster which was colour washed in white – a method used in buildings till recent times. Since it was not easy to carve this type of stone or lime plaster, the Tughlaq buildings have a minimum of decoration. But the decorative device found in all the buildings of Firuz is the lotus. A device used in the tomb of Firuz Tughlaq is a stone-railing in front which was emphatically of Hindu design. Tomb of Ghiyasuddin Tughluq, Delhi Many mosques were also built during this period, such as the Kalan mosque, the khirki mosque. They were of undressed stone and lime plaster, and hence not very elegant. The pillars were thick and heavy. Also, the Indian builder had not yet developed the confidence of raising the dome high enough. Hence the buildings appear squat. Another architectural device which was used for the first time in the tomb of Firuz's wazir, Khan-i-Jahan Telangani, was the octagonal tomb. Many features were added to it; a verandah was built around it with long, sloping chajja or eaves as a protection against

114 NSOU ??CC - HI - 07 sun and rain. As each corner of the roof, chhatris or kiosks were built. Both these features were of Gujarati or Rajasthani origin. Both the arch and the lintel and beam are used in their buildings. The Lodis continued the Tughlaq tradition of using rubble or undressed stone and lime plaster in their buildings. But by this time, the Indian architects and masons had gained full confidence in the new forms. Hence, their domes rose higher in the sky. A new device which appeared in India for the first time was the double dome. Tried experimentally at first, it appears in a developed form in the tomb of Sikandar Lodi. It became necessary as the dome rose higher and higher. By putting an inner cover inside the dome, the height remained proportionate to the room inside. This devise was later on used in all buildings. Another architectural device used by the Lodis was placing their buildings, especially tombs, on a high platform, thus giving the building a feeling of size as well as a better skyline. Some of the tombs were placed in the midst of gardens. The Lodi Garden in Delhi is a fine example of this. Many of the said features were adopted by the Mughals later on, and their culmination is to be found in the Taj Mahal built by Shah Jahan. By the time of the break-up of the Delhi Sultanate, individual styles of architecture had also developed in the various kingdoms in different parts of India. Many of these, again, were powerfully influenced by the local traditions of architecture. This happened in Bengal, Gujarat, Malwa, the Deccan, etc. Thus, we not only see an outburst of architectural activity but the coming together of the Muslim and Hindu traditions and forms of architecture. In the various regional kingdoms which arose during the fifteenth century, attempts were made to combine the style of architecture which had developed at Delhi with regional architectural traditions.

7.3 Coinage The Turkish rule in Delhi also revitalized the economy by introducing major transformations and the standardization of coinage. Before this the coins of the Delhi region were known as dehlwal. During the Turkish rule, coins carried inscriptions on both the

82%

MATCHING BLOCK 57/171

SA

delhi Sultanate AMU.pdf (D142327411)

sides in Arabic or Persian script. In Islam, the inscribing of the ruler's name on the coins was invested with special importance. This privilege, along with the reading of his name in the Khutba,

implied his legitimacy to rule. The rulers of the Islamic world had this tradition

NSOU ??CC - HI - 07 115 of issuing coins on each occasion of conquering a new territory

and the place of issue of the coins. The crusading zeal of the early Khalifas of Syria in the eighth century A.D had introduced the Kalima or profession of faith- La ilah –il-illah Muhammad-ur-Rasool Allah.

Later this formed part of Muslim coins. In India too, the Kalima was used on the coins.

Muhammad Ghori struck gold coins in imitation of the coins that were current in the country. Each coin had his name – Sri Mahammad bin Sam – inscribed on it in Nagari. On the obverse was placed a seated Lakshmi. Simon Digby says that the earliest issues of gold and silver coins from Delhi had a ‘commemorative character’ which reflected the immediate coinage of hoards plundered or remitted in tribute. Qutb-ud-din Aibak was the first Sultan to set up his capital at Delhi, but no coin bearing his name has so far been found. It was under Iltutmish that the coins of Delhi Sultanate were standardized for the first time and it was he who issued a new standard coin called the jital, which weighed 32 ratis. The ratio of silver and copper in the jital was 1:80. He also issued the pure silver coins called tangas after his conquest of Lakhnauti. The normal tanga coins of Iltutmish were an amalgam of gold and silver and were inscribed with various legendary accounts of note. Each tanga had a consistent gold and silver ratio of 1:10. Some of the coins of the Delhi Sultanate were of pure copper and were called dang. The value of each silver tanga was 48 jitals = 192 days = 480 dirams (smaller copper coins). Literary sources are silent about the establishment of a new gold and silver currency in the Delhi Sultanate. But it is pertinent to note that from very early times pure silver coinage was scarce in northern India. Simon Digby suggests that the tri-metallic coinage in northern India in the thirteenth century was heavily dependent on the remittance of gold and silver from Bengal. But the remittances from Bengal was quite erratic and much depended on the degree to which the local governor obeyed the orders of the Delhi Sultan. Simon Digby makes a very interesting observation on the whole mechanism of the minting of currency right from the release of treasure from hoards into monetary circulation. He says that the currency was basically derived from the plunder of local rulers or religious establishments. The frequent plunder of the Deccan kingdoms at the end of the thirteenth and beginning of the fourteenth centuries placed huge quantities of precious metals (more gold than silver) into the hands of the Sultans of Delhi. Farishta, a historian of note, says that ‘the indemnity 116 NSOU ??CC - HI - 07 extracted by Alauddin Khalji from Ramadeva of Deogiri amounted to roughly 7.7 metric tonnes of gold and 12.8 metric tonnes of silver’. Similarly Barani informs us that ‘Malik Kafur, after his plundering expedition to the Pandya kingdom, is said to have brought back 96,000 mon of gold, which would correspond to 241 metric tones. As a result of the booty, the coinage of the Delhi Sultanate acquired more finesse. A large number of gold and silver coins were issued by Alauddin Khalji and there is the brighter appearance of the silver issues due to the absence of lead’. When Timur plundered Delhi in 1398, his officers found stores of tangas coined in Alauddin’s name. Later on when the Sultanate was faced with a strained economy, the predominance of gold over silver coins in circulation added up to the pressure. The pressure became more apparent after the accession of Muhammad bin Tughlaq in 1325. Shortly after that smaller denomination gold coins were issued by Muhammad Tughlaq. He also issued a mixed- metal tanga which weighed 80 ratis weight : was one-sixth the weight of a silver coin, and had a silver content of about 45 grains, a little more than a quarter of what was found in the earlier coins. Muhammad bin Tughlaq, in the sixth year of his reign, tried a more desperate expedient, the issue of a token coinage of brass and copper to replace the silver coinage. Barani says that he was influenced by the Chinese token currency (chao) in the form of silk or paper notes of credit. Contemporary chroniclers like Barani have linked up Muhammad bin Tughlaq’s issue of token currency with the recruitment of a large number of troops and the payments therein. But we also need to view this measure in the backdrop of ‘quickening pace of commerce and of pressure on gold-silver parity of 10:1 that underpinned the monetary system’.

The large influx of gold due to his southern Indian campaign made him to adjust the weight standard of coinage which was in usage all the while. He added the gold dinar of weight 202 grains while compared to the then standard weight of 172 grains. The silver adlis minted during the reign of Muhammad bin Tughluq weighed 144 grains aiming to adjust the commercial value of the metal with respect to gold.

All his coins reflect a staunch orthodoxy. The coins issued at both Delhi and Daulatabad were issued in memory of his late father. The Kalima appeared in most of his coinage, the title engraved were "The warrior in the cause of God", "The trustier in support of the four Khalifs - Abubakkar, Umar, Usman and Ali". He minted coins in several places such as Delhi, Lakhnauti, Salgaun, Darul-I-Islam, Sultanpur (Warrangal), Tughlaqpur (Tirhut), Daulatabad(Devagiri), MulK-I-Tilang etc. More than thirty varieties of billon coins are

known so far, and the types shows his numismatic interest. The copper coins are not that fascinating compared to the billon and his gold coinage, but were minted in varieties of fabric.

Simon Digby argues that the scale of Muhammad bin Tughlaq's subsequent military operations, the plentiful issue of

50% MATCHING BLOCK 65/171

SA

Katarina Levic -Global economic history essay.pdf
(D23051243)

gold coins in his reign and accounts of the donations he made to foreign visitors suggest that the accumulated treasure of the Delhi Sultanate was not exhausted, the

problem was that of the relative scarcity of silver in a cash economy with urban inflation. This was soon accentuated by the loss of political control over Bengal. Literary evidence confirms the demand for silver from Eastern sources. Qadar Khan, a governor in the employ of Muhammad bin Tughlaq, was especially assigned the responsibility of gathering revenue in the form of silver in Bengal. The Qarachil expedition and the attack on Nagarkot by Muhammad bin Tughlaq were also motivated by his need for silver. The condition becomes more delicate in the reign of his successor Firuz Shah Tughlaq and his quest for silver is indicated by the realization of arrears of revenue from Hindu chiefs in the region of Gorakhpur. The arrears were realized in silver tangas.

97% MATCHING BLOCK 63/171

W

The gold coin of Firoz Shah is fairly common like his predecessor. Atleast six different types were known, they too exhibited similar traditional theme inscribing the name of Khalifs Abul Abbas and his two successors. The obverse portrayed "The right hand of the commander of the merciful" and "the deputy of the commander". Thus, the

monetary system of the Delhi Sultanate started to decay by the middle of the fourteenth century. Gradually the silver tanga was debased to 80 rati. The silver tanga, supported by denominations of cowries and not of copper, remained a coinage of commercial transactions in Bengal down to the revival of a coinage in precious metals throughout northern India in the middle of the sixteenth century. Now the use of gold and silver coinage merely remained ceremonial. It was not intended as a currency of trade but as a proclamation of sovereignty or was used for ceremonial distribution. Simon Digby says that the 'gold issues of the later Tughlaq Sultans of Delhi, some posthumous and dating from the early fifteenth century, and of the Sayyid Sultans of Delhi are rare'. The Lodis also did not issue gold or silver coins. The monetary system of the Delhi Sultanate was dominantly based on revenue extraction. Other sources of gain came from the large scale plunder and subsequent collection of booty. But plunder and territorial expansion was a finite and limited affair.

118 NSOU ??CC - HI - 07 The moment episodes of plunder and loot began to shrink, a crisis occurred in the monetary organism as well. 7.4 Conclusion By the time of break-up of the Delhi Sultanate, individual styles of architecture had also developed in various kingdoms in different parts of India. Many of these, again, were powerfully influenced by the local traditions of architecture. This, as we have seen, happened in Bengal, Gujarat, Malwa, the Deccan, etc. In these regional kingdoms, attempts were made to combine the style of architecture which had developed at Delhi with regional architectural traditions. The Delhi Sultanate introduced a monetary economy in the provinces and districts of India. The initiation of monetary system had improved the social and economic milieu. The coins of Delhi Sultanate ushered a new pattern of coinage. The patterns of the coins were structured in a way that they stand as the replicas of the culture and the scenario of the contemporary society. The rulers of the Delhi Sultanate had set the pattern of the coins that became typical to the dynasty. 7.5 Model Questions Short Questions 1) Give the characteristic features of Qawwat –ul-Islam mosque. 2) Give short notes on arches, domes, beams and pillars of the architecture of the Sultanate period. 3) What is token currency? Who introduced token currency for the first time? 4) What is the most distinctive feature of the coins of the Delhi Sultanate? Essay Type Questions 1) Examine the valuable contributions made in the field of architecture during the Delhi Sultanate period. 2) Briefly sketch the history of architecture in the Delhi Sultanate. NSOU ??CC - HI - 07 119 3) What were the distinctive features of the architecture of the Delhi Sultanate? Can it be regarded as an Indo-Islamic style? 4) Trace the history of coinage during the Sultanate period. 7.6 Suggested Readings Chandra Satish, Medieval

120 NSOU ??CC - HI - 07 Unit 8 ? Bahamanis Structure 8.0 Objectives 8.1 Introduction 8.2 The Rise of the Bahamanis 8.3 The Tussle with the Vijayanagara Empire during the Reign of Muhammad Shah 8.4 The Reign of Muhammad Shah II 8.5 The Palace Revolution 8.6 The Reign of Firuz Shah 8.7 The Reign of Ahmad Shah Bahmani 8.8 The Post-Alauddin Ahmed Era: Internal Instability and the Rise of Mahmud Gawan 8.9 Internal Conflicts and Decline of the Bahmani Kingdom 8.10 Conclusion 8.11 Model Questions 8.12 Suggested Readings 8.0 Objectives The unit aims at apprising the learner with the Muslim state of Deccan in South India. The chapter deals with foundation and expansion of the Bahmani kingdom, starting from the rule of Bahman Shah through the reign of Muhammad Shah I, Muhammad Shah II, Firuz Shah, Ahmad Shah Bahmani, Alauddin Ahmad Shah I, Alauddin Ahmad Shah II, Humayun Shah, Nizam Shah Bahmani and Muhammad Shah III, totaling a period of about 170 years. The chapter strives at providing helpful insights along with the course of historical events during this prolonged period, and finally, how the entire kingdom disintegrated into smaller sultanates, each being governed by individual dynasties, namely, the Nizam Shahis of Ahmadnagar, the Imad Shahis of Berar, the Adil Shahis of Bijapur, the Qutb-Shahis of Golconda and the Barid Shahis of Bidar. 8.1 Introduction The Bahmani kingdom was the first Muslim kingdom to be established in the Deccan in the mid-fourteenth century with its origins in the region itself. Prior to the establishment of the

NSOU ??CC - HI - 07 121 Bahmani kingdom, the Khaljis followed by the Tughlaqs had extended their sway into the Deccan only after establishing themselves in the northern India. The fact that the rule of the Bahmani dynasty corresponds to the period of a unified Deccan makes this period significant in the history of medieval India. When the Bahmani began their rule there was large scale instability in the Deccan, with many petty principalities emerging as a result of polarization of the larger states. The greatest contribution of the Bahmanis in this situation was the uniting of the different political groups of the Deccan. Remaining politically active for nearly two centuries to come, the Bahmanis ruled from both Gulbarga and Bidar. For the sake of convenience their political history is generally divided into the Gulbarga period and the Bidar period. The Bahmani Kingdom Before Disintegration, 1390-1485 cc.

122 NSOU ??CC - HI - 07 8.2 The Rise of the Bahamanis During the reign of Muhammad bin Tughlaq some of the Dakhin nobles rose in rebellion against his oppressive policy, seized the city of Daulatabad and proclaimed one of themselves, named Ismail Mukh, king under the title of Nasir-ud-din Shah. Being a man of advanced age and unfit to be the ruler of a new kingdom which needed greater ability and exertion than that he could command, Nasiruddin resigned the throne. The nobles now chose Hasan who became king under the title of Abul Muzaffar Alauddin Bahman Shah on August 3, 1347, and made Gulbarga his capital. The story related by Firishta, that Hasan was in his early days the menial servant of a Brahman named Gangoo, who treated him well and prophesied his rise to power, whence in gratitude he assumed the title of Bahmani, has been rejected by modern researchers as gossip. Hasan's so called descent from the famous Persian hero Bahman, son of Isfandiyar, and his title of Bahman Shah, too, are fictitious. Recent research has shown that Hasan Gangoo, "was either a Hindu convert or the descendent of a Hindu convert belonging to the Gangoo subdivision of the Arain commonly known as Rain tribe of the Punjab". The first task of Bahman Shah was to impose his sovereignty over the many dissident elements that had grown up in the Deccan during the period of upheaval preceding his elevation to the throne. He sent his first expedition towards the Nasik area to drive out the remnants of the Tughlaq army in the Deccan and to show the flag of the new dynasty to the Hindu chiefs of Baglana. His armies are said to have gone as far as the Dangas beyond Baglana. Another expedition was directed to places near the capital, such as Akalkot, Bhum and Mundargi. "Each of the zamindars of that district who submitted to his rule he left in undisturbed possession of his feudal lands ... but any who disputed his authority, their country and goods were plundered, and they and those under them put to death". Ismail Mukh, who had abdicated in favour of Bahman Shah, was given a jagir near Jamkhandi in the hope that he would subdue that area and bring it under submission. But Narayana, a Hindu chieftain of this area, succeeded in turning Ismail against his king. This disaffection was short lived, as soon after, Ismail was poisoned by the Hindu chief. The vigorous measures taken by Bahman Shah for the punishment of Narayana also enabled him to consolidate his rule in the present Bijapur district. The Sultan then turned his attention towards Karhad and Kolhapur and the passes leading to the Konkan ports

NSOU ??CC - HI - 07 123 of Dabhol and Kharepatan. It may be noted that the portson the Konkan coast and the roads and passes leading to them were controlled by Gulbarga, and that much of the Konkan territory did not come into Bahmani possession till Mahmud Gawan organized campaigns for this purpose in the next century. In the north-east, the territory up to Mahur was brought under Bahmani sway, and in the south, portions under western Telingana including the strong fortress of Bhongir were occupied. These expeditions also resulted in considerable material benefit by way of tributes in cash, jewellery and elephants and helped the Sultan in building a strong army. Thus was the newly created kingdom consolidated. Bahman Shah's dominion had two Hindu neighbours which had emerged on the break- up of the Tughluq empire. One was Warangal under Kapaya Nayaka, on the south and south east, and the other Vijayanagara in the south and south west. This proximity of two powerful Hindu kingdoms to an equally powerful Muslim kingdom explains the chronic warfare of the next hundred years that characterizes the history of the Deccan. The Bahmani kingdom was determined to advance as far south as Madura, the limit of the Tughluq empire, and the Hindu kingdoms were determined to prevent this advance. Bahman Shah led his first campaign against Warangal in 1550 when he compelled its ruler Kapaya Nayaka to cede to him the fortress of Kaulas as the price of peace, and impose on him an annual tribute. Henceforth all wars between the Bahmans and Warangal can be traced either to Kapayan's neglect to pay the stipulated tribute or to his demands for the restoration of Kaulas. According to Firishta, Bahman Shah invaded the Carnatic but it is doubtful whether it brought him into conflict with Vijayanagara itself. But the war certainly began in the next reign. Hasan proved to be a powerful ruler. He was determined to extend the boundaries of his small principality. As the result of incessant warfare, he succeeded in extending its limits

Wainganga river in the north to the Krishna in the south and from Daulatabad in the west to Bhangir in the east.

He
established an efficient administration at
his capital, Gulbarga, and

divided his kingdom into four provinces, namely, Gulbarga, Daulatabad, Berar and Bidar.

Each province was under a governor who

had an army and appointed his civil and military officers. Hasan died on February 11, 1358. He was just to his co-religionists, and a propagator of Islam.

124 NSOU ??CC - HI - 07 8.3 The Tussle with the Vijayanagara Empire during the Reign of Muhammad Shah Alauddin Hasan Bahman Shah was succeeded by his son Muhammad Shah in 1358. His reign saw the beginning of that long drawn struggle with Vijayanagara which continued till the final breakdown of the latter kingdom. According to Firishta, the king's father Alauddin Hasan "sent a considerable force into the Carnatic which returned with a rich booty exacted from "several rajas". In the absence of any specific reference to Vijayanagara, it can only mean a successful raid into the borderland between the two kingdoms. The actual war between the two newly founded succession states of the Sultanate broke out in the reign of Muhammad Shah. It was a defensive war which Muhammad had to wage against the combination of the two Hindu states of Vijayanagara and Telingana. It may be pointed out that the rivalry between the Bahmani kingdom and Vijayanagara was primarily due to those political and economic factors which led to age-long struggles between the powers who occupied the two sides of the Krishna- Tungabhadra line. The ruler of Telingana, Kapaya Nayaka, formally demanded the fortress of Kaulas which Alauddin Hasan had wrested from him; while Bukka, the king of Vijayanagara, demanded the Krishna-Tungabhadra Doab, presumably on the ground that it had always belonged to the southern state. As these two demands were presented almost simultaneously, there was hardly any doubt in the mind of Muhammad that the two Hindu states had entered into an alliance against him, and this was really the case. After temporizing for some time, Muhammad Shah not only refused the demands but made counter demands upon the two Hindu kings. Thereupon Kapaya sent his son Vinayaka Deva with a large army to seize the fortress of Kaulas, while Bukka sent twenty thousand men to his help and invaded the Raichur Doab. (AD 1362) The allied force was defeated near Kaulas and Kapaya was forced to buy peace by offering a large amount of money and over twenty-five elephants. Soon after this agreement was reached, quarrel broke out again and Muhammad Shah, by a surprise attack on Palampet, seized the young prince Vinayaka and put him to death with barbarous cruelty. In course of his return, the Sultan suffered a great deal from the guerilla tactics of the enemy. He was himself wounded and of his 4000 soldiers only 1500 returned with him. Next year, Muhammad Shah received a report from the secret service that Kapaya, enraged at the death of his son, had approached Firuz Tughlaq for assistance against him. He immediately invaded Telingana (1363 A.D) with a large army. Kapaya was unable to

NSOU ??CC - HI - 07 125 withstand the force and concluded a treaty by paying a large amount of money and ceding Golconda, which was fixed as the perpetual boundary between the two kingdoms. Kapaya also presented a turquoise throne which henceforth was used as the royal throne of the Bahmanis. This account is based almost entirely upon Firishta, and it is difficult to say whether we may accept it as unvarnished truth. Firishta gives a similar account of the successive victories won by Muhammad Shah against that kingdom. But the terms of the treaty which ended the war clearly indicate that Muhammad Shah had to concede all the major demands of Bukka. The cession by Kapaya of the fortress of Golconda is an undoubted fact, and indicates his discomfiture in the war. On the other hand, according to Firishta himself, when Muhammad Shah began the campaign he was "resolved on the entire conquest of Telingana", and yet he concluded a treaty, fixing Golkunda as the perpetual boundary between the Bahmani kingdom and Telingana. This certainly indicates that perhaps the small Hindu principality of Telingana did not fare as badly as Firishta would have us believe. The last campaign in Telingana lasted for about two years and was immediately followed by a protracted war with Vijayanagara. After this campaign was over Muhammad Shah reigned in peace and prosperity. He turned his attention to the improvement of administration, and consolidation of authority over his extensive kingdom till his death in A.D 1375. The reign of Muhammad Shah marks the beginning of an independent Deccan architecture. He was also the first to organize the artillery and to use it in fights against Vijayanagara.

8.4 The Reign of Muhammad Shah II Muhammad Shah I was succeeded by his son Alauddin Mujahid Shah (1375) whose short reign is chiefly remembered for his physical prowess which earned him the sobriquet 'balawant'. The chief event of his short reign of about three years was his campaign against Vijayanagara. He besieged the city but failed to capture it, made peace and returned to Gulbarga. A conspiracy was formed against him as a result of which the throne passed to one of his near relatives named Daud Khan. Within about a month, however, Muhajid's partisans avenged his death by assassinating Daud, and setting on the throne Daud's brother, Muhammad II, in preference to Daud's son, Sanjar, who was blinded. The king of Vijayanagara took advantage of these political troubles to wrest a large slice of territory on the western coast, including the port of Goa. But barring this, the long reign of Muhammad II was on the whole peaceful, and he put an end to palace intrigues and the regicide atmosphere that had grown in the capital. The Sultan was, however, no match for his rival, the king of Vijayanagara, who consolidated his authority in the eastern regions in defiance of him. Muhammad Shah II was essentially a man of culture, and he tried to attract to his kingdom, men of piety and erudition. He made Fazullah Anju, one of the learned divines of the time Sadr-i-Jahan or Chief Justice and Minister for Religious Endowments, and invited the great Hafiz to his court. However, the poet, being caught in a storm on embarkation at Ormuz, decided to abandon his voyage. He sent an ode to the king instead, for which rich presents were returned to him by the royal patron. The Sultan himself was a very learned man. With learning he combined an abiding interest in the welfare of his subjects. When his kingdom was ravaged by a famine, he made prompt and efficient arrangements for the transport of grain from Gujarat and Malwa and its distribution among Muslims only at cheap rate. He established orphanages in various centres in the kingdom, two of which were at the Konkan ports of Chaul and Dabhol.

8.5 The Palace Revolution Muhammad Shah II died in April 1397, and was succeeded by Ghiyasuddin Malik Saif-ud-din Ghuri, the powerful and able Bahmani minister who had rendered distinguished and loyal services to the new dynasty since the reign of its founder, died the very next day after Muhammad II. A Turkish faction now raised its head in Gulbarga under the leadership of Taghalchin. The king had incurred Taghalchin's wrath by refusing to appoint him to the governorship of Gulbarga and to the position of Vakil-us-Saltanat that rendered vacant by the death of Saifuddin Ghuri. Unfortunately, the king, infatuated by the beauty of Taghalchin's daughter, put himself in her power and was seized, while alone, and blinded (June 1397). Taghalchin then raised to the throne Ghiyas-ud-din's younger half-brother as Shams-ud-din Daud Shah. He had won over to his cause the young king's mother, and with her support he became the regent of the kingdom. This degradation of the royal family and the dominance which the upstart Taghalchin had acquired, excited the wrath of the late king's cousins Firuz and Ahmad. In the palace revolution that followed Taghalchin was overpowered, Shamsuddin was deposed and Firuz Khan ascended the throne as Sultan Taj-ud-din Firuz Shah on November 16, 1397. Ghiyas-ud-din, the blinded and deposed king, who had been kept in confinement

NSOU ??CC - HI - 07 127 at Sagar, was brought to Gulbarga, and Taghalchin was produced before the monarch whom he had so basely treated. The blind Ghiyasuddin with a sword struck at Taghalchin and slew him. 8.6 The Reign of Firuz Shah Firuz Shah had an eventful reign of twenty five years (1397-1422). It was marked by three distinct campaigns against Vijayanagara in 1398, 1406 and 1417. In spite of Firishta's grandiloquent description of the brilliant successes of Firuz in his first campaign culminating in the siege of Vijayanagara, the silence of other Muslim chronicles seem to indicate that Firuz did not probably invade the Raichur Doab, far less advance upto the capital city Vijayanagara. The campaign does not seem to have brought any conspicuous success on either side. But far more important were the two subsidiary campaigns waged by Firuz. The first was against the Gond Raja Narsing Rai of Kherla, about four miles north Betul in Madhya Pradesh. According to Firishta, he had invaded Berar at the instigation of the neighbouring Muslim rulers of Malwa and Khandesh, and on the advice of the Raja of Vijayanagara. After concluding treaty with Vijayanagara, Firuz proceeded against Narsing who offered a stubborn resistance but not having received any help from outside offered submission. Far different was the state of affairs in Telingana where the two rival factions, the Vemas and Velamas were actively supported by the rulers of Vijayanagara and the Bahmani kingdom. Here, again Firishta speaks of the uniform success of Firuz, but in reality he could achieve very little. Firuz obtained some successes at first, but was forced to retreat when Kataya Vema's lieutenant, Allada Reddi, defeated the Bahmani commander Ali Khan. Firishta's account of the second Bahmani campaign against Vijayanagara begins with a romantic love episode of Devaraya, and ends with his daughter's marriage with the Muslim Sultan, which was a unique event in those days. But the omission of all reference to this marriage by Nizam-ud-din and a very different account of the whole campaign by a still earlier author throw doubt on the entire account of Firishta about the success of Firuz. The third campaign (A.D 1417-20) centred round the siege of the fort of Pangal by Firuz and ended in his total discomfiture by the army of Vijayanagara. Firuz, being defeated, escaped from the field, and his territory was laid waste with fire and sword. Thus the net

(D165315243)

of the long drawn struggle between the Bahmani kingdom and the Vijayanagara

was stalemate. The status quo was maintained and the Raichur Doab, the bone of contention, remained in possession of Vijayanagara. The defeat and discomfiture of Firuz weighed so heavily on his mind, and undermined his prestige to such an extent that the forces of unrest once again reared up their head. Added to this was the rift between him and the famous Khvaja Gisu Daraz, the saint openly declaring that the Sultan's brother, Ahmad, should be the next ruler instead of Hasan, the son of Firuz. Attempts were made by two courtiers of Firuz to imprison Ahmad Khan, but the partisanship shown towards him by the saint influenced the army which declared for Ahmad. The royal force was defeated by Ahmad and he besieged the capital. The old and sick Firuz was carried into the battlefield, but he swooned, and the citadel surrendered. Firuz realized his position and wisely offered the throne to his brother, himself abdicating. Ahmad ascended the throne at Gulbarga on September 22, 1422, and on October 2, Firuz died. Firuz was well acquainted with the religious science, that is, the commentaries on Quran - jurisprudence, etc. and was particularly fond of logic, and of the natural sciences such as botany, geometry, etc. He was a good calligraphist, and apoet and often composed extempore verses. He was determined to make the Deccan the cultural centre of India. The king also encouraged learned men from Iran and Iraq. The most remarkable step taken by Firuz Shah Bahmani was the induction of Hindus in the administration in a large scale. It is said that from his time, the Deccani brahmins became dominant in the administration. The Deccani Hindus also provided a balance against the influx of foreigners called 'afaqis' or 'gharibs'. Many of the foreigners from West Asia were Persians, under whose influence Persian culture and also Shia doctrines grew in the kingdom. The Bahmani rulers were tolerant in religious matters, and though most of them were Sunnis, they did not persecute Shiism. Nor was Jizyah levied on the Hindus during the early phase of Bahmanaid rule. Firuz Shah Bahmani encouraged the pursuit of astronomy and built an observatory near Daulatabad. He constructed the new city of Firuzabad on the Bhima and occasionally used it as his capital. He paid much attention to the principal ports of his kingdom, Chaul and Dabhol, which attracted trading ships from the Persian Gulf and the Red Sea, and poured in luxury goods from all parts of the world.

NSOU ??CC - HI - 07 129 8.7 The Reign of Ahmad Shah Bahmani Ahmad Shah Bahmani, the successor of Firuz Shah, was famous in history as the Vali or Saint. He shifted the Bahmani capital from Gulbarga to Bidar sometime about 1425. Almost immediately after his accession, Ahmad Shah decided to carry out the unfulfilled wishes of his brother, and declared war on Devaraja II of Vijayanagara. Firishta describes how the Bahmani king forced Devaraja II to sue for peace by laying his country waste and besieging his capital. The Raja of Warangal, who had joined Devaraja II and then deserted him, soon paid the penalty for his folly. After the close of his campaign against Vijayanagara, Ahmad Shah marched towards Warangal in 1425. The Raja was defeated and slain, and Warangal was finally annexed to the Bahmani kingdom. It was during Ahmad Shah's reign (1422- 1436) that the Bahmani kingdom first came into conflict with the kingdoms of Malwa and Gujarat. In the conflict against Malwa, Ahmad Shah carried the victorious Bahmani flag into that dominion and overawed it with his might so that during the rest of his reign there was no further trouble between the two kingdoms. Ahmad's conflict against Gujarat was of his own seeking. He took sides with a Hindu chieftain of the Gujarat kingdom who had risen in revolt against his overlord, the Sultan of Gujarat, and had come to Ahmad Shah Vali via Khandesh. In A.D 1429, Bahmani troops were sent to help the rebel and they raided the Nandurbar district of the Gujarat dominion only to be expelled from there and to be driven out of Khandesh back into Bahmani territory. Next year (1430) another Bahmani army, under Khalaf Hasan Basri, was sent to occupy the island of Salsette. But this attempt to occupy Gujarat territory also proved futile. In this campaign we see the beginning of Deccani-pardesi rivalry. The Deccani officers under Khalaf Hasan treacherously quitted his camp with the result that the Gujaratis were able to gain an easy victory over Khalaf Hasan. It was most probably in this campaign that the islands of Mahim and some territory south of it were annexed to the Gujarat kingdom. The hostilities against Gujarat made Ahmad seek the alliance of Khandesh which was achieved by the marriage of the Sultan's son, Alauddin, with the daughter of Nasir Khan Farruqi. After the death of Ahmad Shah Vali his son, Alauddin Ahmad, who succeeded him, built a magnificent dome over the grave of his father on the outskirts of the new capital. From one of the inscriptions in the tomb we get the correct date of Ahmad Shah's death, 29th Ramzan, 839 (April 17, 1436).

130 NSOU ??CC - HI - 07 The reign of Alauddin Ahmad (1436-1458) opened with a campaign against Vijayanagara, and there was another struggle in A.D 1443 – 4. Both were confined to the Raichur Doab. Alauddin Ahmad subdued the chiefs of the Konkan region. In the year of his accession an army was sent against the Raja of Sangamesvar who not only offered submission but gave his beautiful daughter in marriage to the Sultan. This lady, known to history as Pari-chehra was the Sultan's favourite queen, and the cause of much jealousy and annoyance to the first queen, the daughter of Nasir Khan of Khandesh. Nasir Khan, partly instigated by his daughter and partly encouraged by the Sultans of Gujarat and Malwa, declared hostilities against his son-in-law and marched with an army into his dominion. Khalaf Hasan Basri was once again entrusted with the charge of the Bahmani army which consisted exclusively of pardesis. With the defeat at Mahim due to treachery of the Deccanis, Khalaf Hasan was able to persuade the king and the Deccani Wakil-us-Sultanat Miyan Minullah to agree to such a step. He inflicted a defeat on the Khandeshis on the battlefields of Berar and drove them back into their territory. But this new policy of exclusion rankled in the minds of the Deccanis, and finally led to the massacre of the pardesis at Chakan. The last years of Alauddin Ahmad's reign were marked by the rebellion of his brother-in-law, Jalal Khan, who proclaimed himself as the king of Telingana(1455). The Sultan himself marched against the rebel who took refuge in the fortress of Nalgonda and sent his son, Sikandar, towards Malwa to beseech the help of that kingdom. Sikandar gained support of Mahmud Khalji of Malwa by representing that Alauddin Ahmad was dead and disorder had broken out in the Bahmani dominion. Alauddin at this juncture placed Mahmud Gawan in charge of the siege of Nalgonda and proceeded to the north to meet the danger created by the conduct of Sikandar. Mahmud Khalji relinquished his campaign and retired to his kingdom. Mahmud Gawan secured royal pardon both for Jalal Khan and his son and their rebellion was over. This is the first occasion when Mahmud Gawan, the great Bahmani minister comes into notice. Alauddin Ahmad's reign is notable for the large hospital he established in his capital early during his reign. A number of villages were endowed to this institution from the revenues of which were paid the cost of medicine, and food of the patients and possibly also the salaries of the staff. Both Hindu and Muslim physicians were employed in the hospital and it can be inferred from that the hospital was open to patients irrespective of caste and religion.

NSOU ??CC - HI - 07 131 8.8 The Post- Alauddin Ahmed Era: Internal Instability and the Rise of Mahmud Gawan Alauddin Ahmed died on April 1458. His successor was his elder son, Humayun, who ruled from 1458 – 1461. His short reign was marred by constant unrest and rebellions in the kingdom and among its Hindu vassals. The stern and ruthless attempts of the Sultan to put down these forces of disorder seem to have earned for him the sobriquet Zalim (cruel) at the hands of Firishhta. Humayun's son and successor, Nizam Shah Bahmani, a boy of eight years, also had a short reign of about two years during which the administration of the kingdom remained in the hands of a council of three consisting of the Queen mother, assisted by two of the ablest men in the Bahmani Court, Mahmud Gawan, and Khvaja Jahan Turk. The Queen mother herself was one of the few remarkable women that have appeared in the ruling dynasties of medieval India. Though she did not appear in public, she kept herself in close and constant touch with her colleagues of the council from whom and from her personal agents she received daily reports of the affairs of the kingdom. While the internal condition of the kingdom was being thus strengthened by the Council of Regency, the king of Orissa, Kapilendra made an alliance with the king of Telingana and marched against the Bahmani kingdom. He made his way to the very outskirts of the capital Bidar, but the military leadership of Mahmud Gawan and Khvaja Jahan triumphed and the invaders were repulsed. Hardly had this affair ended when Malwa made war on the Bahmani kingdom. Mahmud Khalji, the Sultan of Malwa marched through the northern territories of Bahmani dominion and occupied Bidar from which the king had been removed to Firuzabad. In this distress Mahmud Gawan appealed to Gujarat for help and Mahmud Begarha marched with an army to the Deccan. The combined efforts of the Bahmani forces and the Gujarat allies resulted in the enemy withdrawing towards Malwa. Next year (1463) Mahmud Khalji again invaded the Bahmani dominion, but retreated when he heard that Gujarat was ready once again to help the Deccan kingdom. Young Nizam Shah Bahmani died on July 30, 1463, on the very day of his marriage and was succeeded by his younger brother Muhammad Shah III (1463 – 82). The Council of Regency continued to function till 1466. Khvaja Jahan Turk had about this time come under the suspicion of disloyalty, and in that year the Queen mother contrived his murder in open court. Mahmud Gawan was appointed Wakil-us-Sultanat (Deputy of the Kingdom) or the Prime Minister and he remained in supreme authority till his murder in 1481.

132 NSOU ??CC - HI - 07 Mahmud Gawan dominated the affairs of the state for twenty years. During the period, Mahmud Gawan tried to extend the frontiers of the kingdom towards the east and the west. In the east, he came into conflict with the Gajapati ruler of Orissa, and joined hands with Vijayanagar to oust him from the Coromandal coast. He also made further conquest at the coast of Orissa. Mahmud Gawan's major military contribution, however, was the overrunning of the western coastal areas, including Dahbol and Goa. The loss of these ports was a heavy blow to Vijayanagara, control of Goa and Dahbol led to further expansion of the overseas trade with Iran, Iraq etc. Internal trade and manufactures also grew. Mahmud Gawan also tried to settle the northern frontiers of the kingdom. Since the time of Ahmad Shah I, the kingdom of Malwa ruled by the Khalji rulers had been contending for the mastery of Gondwana, Berar and the Konkan. In this struggle, the Bahmani Sultans had sought and secured the help of the rulers of Gujarat. After a great deal of conflict, it had been agreed that Kherla in Gondwana would go to Malwa, and Berar to the Bahmani Sultan. However, the rulers of Malwa were always on the lookout for seizing Berar. Mahmud Gawan had to wage a series of bitter battles against Mahmud Khalji of Malwa over Berar. He was able to prevail due to the active help given to him by the ruler of Gujarat. It would thus be seen according to Satish Chandra that the pattern of struggle in the south did not allow divisions along religious lines, political and strategic considerations and control over trade and commerce being more important causes of the conflict. Secondly, the struggle between the various states of north India and in south India did not proceed completely in isolation from each other. In the west, Malwa and Gujarat were drawn into the affairs of the Deccan, and in the east, Orissa was involved in a struggle with Bengal and also cast covetous eyes on the Coromandel coast. The expansion of the Bahmani kingdom towards the east and the west led to a resurgence of the conflict with Vijayanagara. But by this time Vijayanagara was no match for the Bahmani kingdom, Mahmud Gawan not only annexed the Tungabhadra Doab, but made a deep raid into the Vijayanagara territories, reaching as far south as Kanchi. Mahmud Gawan carried out a number of internal reforms. Some of these were aimed at limiting the power of the nobles. Thus the old provinces (tarafs) were further subdivided from four into eight, and the governor of each fort was to be appointed directly by the Sultan. The salaries and obligations of each noble were fixed. For maintaining a contingent of 500

NSOU ??CC - HI - 07 133 horses, a noble received a salary of 1,00,000 huns per year. The salary could be paid in cash or by assigning a jagir. Those who were paid by means of jagir were allowed expenses for the collection of land revenue. In every province, a tract of land (Khalisa) was set apart for the expenses of the Sultan. Efforts were made to measure the land and to fix the amount to be paid by each cultivation to the state. Mahmud Gawan was a great patron of arts. He built a magnificent madrasa or college in the capital, Bidar. This fine building, which was decorated with coloured tiles, was three storeys high and had accommodation for one thousand teachers and students who were given clothes and food free. Some of the most famous scholars of the time belonging to Iran and Iraq came to the Madrasa at the instance of Mahmud Gawan. One of the most difficult problems which the Bahmani kingdom faced was enmity among the nobles. The nobles were divided into old comers and newcomers or Deccanis and Afaqis. As a new comer, Mahmud Gawan was hard put to win the confidence of the Deccanis. Though he adopted a broad policy of conciliation, the party strife could not be stopped. His opponents managed to poison the ears of the young Sultan who had him executed in 1481. Mahmud Gawan was over 70 years old at the time. With his death "

departed all the cohesion and power of the Bahmani kingdom". The

administration became weak. Muhammad Shah could not forget that he had shed innocent blood; he tried to drown his remorse in wine and died from its effects within a year of his minister's death. 8.9 Internal Conflicts and Decline of the Bahmani Kingdom Muhammad's son and successor Mahmud (1482-1518) being a minor authority remained in the hands of Malik Naib. On the eve of the coronation, when all the amirs had gathered in the capital, the crafty Deccani formed a plot to assassinate Yusuf Adil Khan and to extirpate his followers. But the foreigners were put on their guard by some of their well-wishers in the opposite camp. For no less than twenty days Bidar was a scene of conflict between the rival factions and when peace was restored, Yusuf Adil Khan agreed to retire to Bijapur and Malik Naib was left at the helm of affairs in the Bahmani capital. The regency of Malik Naib did not last long. He was disliked by some of his followers for his share in the murder of Mahmud Gawan and his subsequent policy towards the foreigners made him intensely hated by a section of the Deccanis. The usual intrigues

134 NSOU ??CC - HI - 07 followed and Malik Naib was put to death by the Abyssinian governor of Bidar. Thus the Deccani minister shared the fate of the great pardesi noble whose death he had so basely contrived. Once again the swing of the pendulum brought the pardesis to power. Once again their rivals conspired to destroy the influence which they still possessed, going to the length of forming a conspiracy to murder the king and to place another prince of the royal family on the throne. They suddenly attacked the royal palace one night in October 1487, but were repulsed by the valour of the Turki guard. The king assembled his foreign troops and next morning ordered the conspirators to be put to death. The slaughter lasted for three days and the foreigners took a terrible retribution on the Deccanis for the wrong they had suffered. After these events, Mahmud Shah took no interest

(D165315243)

in the affairs of state and the responsibility of government passed into the hands of Qasim Barid, a Turki

amir of Sunni persuasion. The power and prestige of the Bahmani kingdom were gone forever, and the provincial governors refused to acknowledge the authority of Qasim Barid. The defection of Malik Ahmad Nizam-ul-Mulk, the son of Malik Naib, started the process of disintegration. Two expeditions were sent against him, but they were of no avail. He had the sympathy of Yusuf Adil Khan of Bijapur and Fathullah Imad-al-Mulk of Berar. In June 1490, Ahmad assumed independence in the city of Ahmadnagar founded by and named after him. His colleagues, Imad-ul-Mulk and Yusuf Adil, soon followed suit, with the result that by the end of that year the Bahmani king had definitely lost his sovereignty, in reality, if not in name. Mahmud Shah Bahmani continued to reign as a nominal sovereign till A.D 1518. Even in this helpless state he rallied round him all the amirs of the kingdom with a view to prosecuting the war against the "infidels" of Vijayanagara. In 1501 AD it was resolved at Bider that once in each year the whole of the amirs and wazirs should come to the royal court, and join in jihad against the idolaters of Vijayanagara, and hoisting the standards of Islam, should use their utmost endeavours to eradicate the infidels and tyrants". In pursuance of this resolution, Mahmud Shah exhausted the resources of the decaying Bahmani kingdom by launching expeditions against Vijayanagara, and brought repeated distress upon it. The forces of disintegration were at full work when Mahmud Shah died in 1518. He was succeeded by four kings who were kings in name but really puppets in the hands of NSOU ??CC - HI - 07 135 Amir Barid, son of Qasim Barid, who was in control of the Bahmani capital. With the death of Kalimullah, the last of these titular kings, sometimes in A.D 1538, the Bahmani dynasty came to an end, and

28%

MATCHING BLOCK 73/171

014E1220-Social and Cultural History of India ...
(D165315243)

the kingdom was split up into five independent Sultanates, namely the Adil Shahi of Bijapur, the Qutb Shahi of Golconda, the Nizam Shahi of Ahmadnagar, the Barid Shahi of Bidar and the Imad Shahi of

Berar. The Bahmani kingdom lasted for over a hundred and seventy five years during which period the dynasty had eighteen kings. The history of the kingdom is full of intrigues, civilwar and constant struggle with its neighbours. Of the eighteen kings of the dynasty, five were murdered, three were deposed, two were blinded and two died of intemperance. We are told by a Russian traveller, named Afanasius Nikitin, who visited the Bahmani kingdom in 1417, that the country was populous but the mass of the people were very poor. The nobles on the other hand, were extremely rich and lived in luxury. Whenever a nobleman went out he was preceded by twenty horsemen and followed by three hundred soldiers on horseback and five hundred on foot and by a number of other people, such as torch bearers and musicians. But the lot of the common people was miserable. The Bahmani kingdom acted as a cultural bridge between the north and the south. It also established close relations with some of the leading countries of West Asia, including Iran and Turkey. The culture which developed as a result had its own specific features which were distinct from north India. The cultural traditions were continued by the successor states and also influenced the development of Mughal culture during the period. 8.10 Conclusion Without any dynastic changes, the Bahmani rule provided the necessary conditions under which people felt secure and there was all round development. Persian Shias, native Muslims and Hindus, together influenced the cultural edifice of the Bahmanis. The phase between the death of Muhammad I and the accession of Firuz Shah was a period of struggle for the integration of different cultures into one mould. Attempts were made to achieve a synthesis of Hindu cultural elements, the foreign influences represented by the Afaqis from Persia and the indigenous tradition represented by the Dakhnis. The continuous influx of Persians into the Deccan had a direct influence on the court life and politics of the kingdom. Many of the Persians had begun to occupy topmost administrative

136 NSOU ??CC - HI - 07 positions. This bred separatist tendencies among the nobles, whose reactionary activities facilitated the spread of Shia ideas in Bijapur and elsewhere. The opening decades of the sixteenth century witnessed the fragmentation of the Bahmani kingdom into smaller sultanates, each governed by individual dynasties – the Nizam Shahis of Ahmadnagar, the Imad Shahis of Berar, the Adil Shahis of Bijapur, the Qutb Shahis of Golconda. The Bahmani kingdom was ultimately restricted to a small area only around the capital of Bidar. Restricted in status, its vestiges continued to linger on during the period of the fifth Deccani Sultanate – that of the Barid Shahis at Bidar. 8.11 Model Questions Short Questions 1) How was the Bahmani kingdom established? 2) Into how many small kingdoms did the Bahmani disintegrate – name them. Essay Type Question 1) Examine the contribution of Muhammad Shah I in establishing a sound system of administration. 2) 'Muhammad Shah II spent much of his time building his court as a cultural centre of excellence and learning'. Comment. 3) Evaluate the role of Tajuddin Firuz Shah in making the kingdom of Bahmani attain a high degree of prosperity. 4) Discuss the role of Mahmud Gawan in assuming complete responsibility of the Bahmani state affairs. 8.12 Suggested Readings

Model Questions 9.9 Suggested Readings 9.0 Objectives The Objectives of the present unit are to understand the long-term historical evolution of the

Vijayanagar empire

with an emphasis on the following aspects : • The foundation of the Vijayanagar empire. • The consolidation and expansion of the Vijayanagar empire. • The decline and disintegration of the empire. 9.1 Introduction Lasting for almost three centuries as the foremost power in southern India, the kingdom of Vijayanagara (founded in 1336 CE) represents the last great native phase in the annals of the history of south India. There were large-scale military conflicts in peninsular India after the Turko-Afghan sultans. Alauddin Khilji and Muhammad bin Tughlaq led incursions into the region, which shaped and reshaped the history and fortunes of the Deccan and the far South. In addition to this, a significant rise in prosperity of the region made it a hub of trading activities, linking it to northern India as well as Europe and East Asia. Other factors that contributed to the major developments of the period were urbanization and modernization of the economy- in which monetization played a key role. As a result, the kingdoms of peninsular India entered into an aggressive political and military race for supremacy with one another. It was in this keenly competitive environment that Vijayanagara, a leading kingdom in the region, established its dominance over the local rulers through sheer military power. With time it also forestalled the advancing Turkish forces and emerged as the rallying mascot for the entire southern region.

138 NSOU ??CC - HI - 07 9.2 The Origin of the Vijayanagar empire Vijayanagara (Sanskrit: "City of Victory") was the capital city of the historic Vijayanagara Empire. Located on the banks of the Tungabhadra River, it spread over a large area and included the modern era Group of Monuments at Hampi site in Ballari district and others in and around that district in Karnataka. The city rapidly grew from an ancient pilgrimage center in 13th-century, to being founded as a capital of Vijayanagara Empire in early 14th century, to being a metropolis stretching by some estimates to 650 square kilometers by early 16th century. The Vijayanagara, which lasted for almost three centuries as the dominant power of southern India, represents the last great phase in the annals of southern Indian history. The chapter covers the rise and fall of the mighty Vijayanagara empire which was founded in 1336, and which spanning over four dynasties culminated in the disastrous defeat in the battle of Talikota in 1565.

MA HISTORY M21HS07DC_SLM.pdf (D155219184)

The foundation of the empire of Vijayanagara in 1336 constitutes a great event in South India in particular and the history of India in general. It was founded as a result of the political and cultural movement against the Tughlaq authority in the South. The empire of Vijayanagara was founded by Harihara I and Bukka, two of five sons of Sangama. But as regards the circumstances leading to the foundation of the empire of Vijayanagara and the origin of the founders of the empire of Vijayanagara, there are a number of controversies and this

issue

MA HISTORY M21HS07DC_SLM.pdf (D155219184)

has been hotly debated by the scholars since the beginning of the twentieth century, when Robert Sewell published his work The Forgotten Empire (1901) primarily based on the foreign accounts. There are three main theories regarding the origin of the founders of the empire of Vijayanagara: a)The Telegu, the Andhra or the Kakatiya origin, b)The Karnata (Karnataka) or Hoysala origin, c)the Kampili origin.

According to

90%

MATCHING BLOCK 76/171

SA

MA HISTORY M21HS07DC_SLM.pdf (D155219184)

the first theory, Harihar and Bukka were the Treasury officers (Pratiharis) of the last Kakatiya ruler Prataparudradeva Kakatiya. After the fall of the Kakatiya kingdom to the Tughlaqs, both brothers reached the present site of Vijayanagara, where a Vaishnava saint Vidyaranya took them under his protection and inspired them to found the city and empire of Vijayanagara. The main support of this theory comes from Kalajnana texts, particularly the Vidyaranya Kalajnana and some other sources. Modern historians supporting this theory further give the arguments that royal crests and the administrative divisions of the empire of Vijayanagara had been borrowed from the Kakatiyas. Besides, the Rayas of Vijayanagara greatly patronized Telegu language and literature.

According

to the second theory, Harihara and Bukka were in the service of the Hoysala king Vira Ballala III, who had founded the city Vijayavirupakshapura, after the name of his son, which later on came to be known as Vijayanagara. The scholars who support this theory are of the view that Harihara and Bukka were feudatories and generals of the Hoysalas. According to the third theory,

Harihara and Bukka were in the service of the Raya of Kamipili (near Sagar in Karnataka). When Bahauddin Gurshap, a cousin of Md. Bin Tughlaq revolted and took refuge with the Raya of Kampili, the Sultan attacked Kampili and annexed it to the Sultanate. During the course of this war, Harihara and Bukka were both made prisoners of war and taken to Delhi. In 1335, when Tughlaq possessions in the South were in a state of general turmoil, the Sultan released them and sent them as Commanders of the Tughlaq troops to restore order in the South, where they came under the influence of a sage and declared their independence. The issue of the actual circumstances leading to the foundation of the empire of Vijayanagara and the origin of the founders still remain unresolved and several arguments are given in support of each theory. But there is no doubt that Harihara and Bukka, who founded the empire in 1336, were the sons of Sangama and named the first dynasty of Vijayanagara after their father as Sangama dynasty (1336 – 1485). The second dynasty, founded by Saluva Narasimha, known as Saluva dynasty, ruled from 1485 to 1505. The third dynasty, known as Tuluva ruled from 1505 to 1570. The fourth or the Aavidu dynasty ruled till about the middle of the seventeenth century, but was only a pale shadow of its old glory. 140

NSOU ??CC - HI - 07 9.3 The Sangamas (1336 – 1485) The kingdom of Vijayanagara soon expanded into an empire largely through the efforts of Harihara and Bukka. Harihara I (1336-56) aided by his brother Bukka, started an era of conquest and expansion. The Hoysala kingdom was conquered by about 1346, and the Kadamba territories were annexed in 1347. Harihara also sent two armies in 1352 -53, one under Prince Savanna and the other under Kumara Kampana, against the Sultan of Madura. Kumara Kampana annexed the Sultanate of Madura to the empire of Vijayanagara. This conquest has been vividly described by his wife Ganga Devi in Madhura Vijayam. Harihara I was succeeded by his brother Bukka I (1356 – 77) who took up the task of strengthening and expanding the nascent kingdom. He sent an expedition against Raja Narayana Sambuvaraya, who earlier had been restored to his throne by Harihara and had probably asserted his independence soon after. Bukka I fought against Muhammad Shah Bahmani to gain control over the Raichur Doab, the land between the rivers Tungabhadra and Krishna. In a peace treaty of 1365, Doab was ceded to Bukka with the river Krishna intervening between the two kingdoms. Some revenue districts to the South of the Krishna had to be administered jointly. However, the Doab remained a contested site in the years to come. Richard Eaton also says that there was "fierce interstate competition over control of one of the wealthiest strips of land in the entire peninsula, the Raichur Doab, which lay directly between Vijayanagara and Bahmani dominion". When the affairs of the northern and eastern frontiers were thus settled to his satisfaction, Bukka I turned his attention to the south. The overthrow of the Sambuvarayas and the annexation of Tondaimandalam had brought Vijayanagara directly into contact with the Sultanate of Malwa. He entrusted the supreme command of his army to his son, Kumara Kampana, who had been governing the Tamil districts of the kingdom as his viceroy since the overthrow of the Sambuvaraya in A.D 1360-61. The army set out about the beginning of A.D 1370 from Gingee in the South Arcot district and inflicted a crushing defeat on the forces of Madura at Samayavaram near Srirangam. Kannanur-Kuppam, the chief stronghold of the Musalmans in this region, fell into the hands of the invaders who marched against Madura. A severe engagement took place somewhere between Trichinopoly and Madura in which the Sultan was defeated and killed. The death of the Sultan, however, did not put an end to the war. Some of his followers appear to have shut themselves in the capital and declined to submit.

NSOU ??CC - HI - 07 141 Kumara Kampana laid siege to Madura, and took it by storm. Thus ended the Sultanate of Madura after a brief but bloody existence of nearly forty years during which the Hindus of the country were subjected to inhuman tyranny. With the conquest of Madura, the whole of South India came under the sway of Vijayanagara, and it thus rapidly grew up into an empire. The conquered territory, together with the remaining parts of the Tamil country, was placed under Kumara Kampana who proved as great an administrator, as he was a soldier. Unfortunately, however, he died prematurely about the beginning of A.D 1374, plunging the kingdom in grief. His death brought the question of succession to the forefront. Bukka I had several sons who distinguished themselves on the field of battle as well as in the civil administration of the kingdom, but he chose as heir apparent and successor, Harihara II. Bukka I did not long survive his son Kampana and died in A.D 1377. He was one of the greatest monarchs of the age, and was the real architect of the Vijayanagara empire. He was a great soldier and achieved conspicuous success on the field of battle, specially against the Muslims. In an age marked by religious bigotry and fanaticism, special reference must be made to the policy of tolerance adopted by Bukka I in dealing with the religious sects in his kingdom. He issued an edict proclaiming that from the standpoint of the state, all religions were equal and entitled to protection and patronage. Bukka I took an active interest in the revival of the Vedic dharma. He

90%**MATCHING BLOCK 78/171****SA**

HIST 40.docx (D137181858)

assumed the title of Vedamarga-pratishthapaka or the establisher of the path of the Vedas,

and gathered together all the scholars learned in the Vedic literature. He also encouraged Telegu literature and was a patron of Nachana Soma, the greatest Telegu poet of the age. Harihara II ascended the throne immediately after the death of his father Bukka I in February 1377. His authority, however, does not seem to have been acknowledged in all parts of the kingdom at once. There were insurrections in Konkan and other provinces. A wide spread rebellion broke out in the Tamil country, in which the chiefs of Tundira, Chola and Pandya countries were involved. It is not unlikely that the sons and some of the officers of Kumara Kampana, who were dissatisfied with the late king's arrangements about succession, should have made a common cause with the rebels. Harihara II, however, succeeded in putting down the rebellions and enforcing his authority. His son, Virupaksha or Virupanna Udaiyar, whom he appointed as the Viceroy of the Tamil country, put down the rebels with a stern hand and brought the Tamil country back to subjection by the middle of A.D 1377. It was probably on this occasion that Virupanna Udaiyar crossed over to the island of Ceylon and exacted tribute from its ruler.

142 NSOU ??CC - HI - 07 A greater danger than the internal disturbances threatened the stability of Harihara's position on the throne. The Bahmani Sultan invaded his kingdom with a large force. Muhammad Shah I died in 1375 and was succeeded by Mujahid Shah. He sent an envoy to the court of the Raya demanding the abrogation of the treaty of A.D 1365, and the recognition of the Tungabhadra as the southern boundary of his dominions. Harihara II naturally turned down this demand, and Mujahid invaded the Vijayanagara kingdom in the spring of A.D 1377. Mujahid thereupon laid siege to Vijayanagara, and though he achieved some measure of success at first, he was obliged ultimately to raise the siege. On his way back he besieged Adoni, an important fort, guarding the road from Gulburga, for nine months. His attempts to capture the fort, however, ended in failure, and while returning to his capital, having achieved nothing in the war, he was assassinated in his tent (A.D 1378). The defeat of the Bahmani army at Adoni and the subsequent assassination of the Sultan on his way home presented a great opportunity to Harihara II for retaliation. The Bahmani kingdom was defenceless and there were dissensions in the royal family. Harihara II took full advantage of the situation and invaded Konkan and Northern Karnataka at the head of a large army. Madhava mantrin, who was in charge of the Banavasi country, defeated the Turushkas, captured the port of Goa and reduced the seven Konkans to subjection (A.D 1380). The Turushkas, from whom Madhava mantrin wrested Goa and the neighbouring territories, must have been the officers of the Bahmani Sultan. It must have been during the campaign in which Madhava mantrin reduced the Saptakonkanas that the important ports of Chaul and Dabhol in the coast of Northern Konkan were acquired by Harihara; and the possession of these ports besides Goa, must have

made him the master of the entire west coast of the Deccan.

Harihara II next sought to make himself the lord of the east coast so that he might establish his control over the eastern as well as the western sea. The idea of the conquest of the east coast was not new. Bukka I attacked the Reddi kingdom of Konkavidu which blocked the expansion of Vijayanagara towards the sea, and seized some outlying districts of Kondavidu between 1365 and 1370 A.D. The appointment of Devaraya as the governor of Udayagiri in A.D 1370, however, marks a new epoch in the relations between Vijayanagara and Kondavidu. He resolved from the first to annex the Reddi territories and pursued his object with unwavering zeal. The internal dissensions in the kingdom of Kondavidu, on the death of King Anavema in A.D 1382-3, gave him an NSOU ??CC - HI - 07 143 excellent opportunity to attack the Reddi dominions, and he occupied at once the Addanki and the Srisailam districts adjoining the Vijayanagara frontier. The occupation of the Reddi territories, especially the district of Srisailam which abutted on the kingdom of Rachakonda, brought in its train another war with the Velamas and their ally the Bahmani Sultan. After the death of Anapota Reddi of Kondavidu, the Velamas had seized Srisailam and the neighbouring territory. Their king, Anapota Nayadu I, is even credited with having built steps to the Srisailam hill. Anavema Reddi, the younger brother and successor of Anapota Reddi, dislodged the Velamas from Srisailam and re-conquered the lost territory. After the death of Anavema, the Velamas naturally desired to establish themselves in this region, but the prompt action of Devaraya balked them of their prey. The Velama ruler Anapota Nayadu I appealed to his ally, the Bahmani king Muhammad Shah II, for help and prepared himself for war. To counteract the warlike activities of Anapota Nayadu, Harihara II despatched an army under the command of his son Immadi Bukka against the Velamas. The army penetrated as far as Warangal and defeated the Muslim cavalry at Kottakonda, a fort to the north-west of Warangal. The Velama king did not, however, give up the hope of conquering Srisailam. With the help of the Bahmani Sultan Muhammad Shah II, in A.D 1390-91, he attacked 'Udaygiri- raja', that is the province governed by Devaraya. The last named made a countermove by invading the Bahmani kingdom. The Bahmani forces accompanied by the Velamas seemed to have made an attack upon Udayagiri but Ramachandra Udaiya, the son of Devaraya, whom he left in charge of his capital and province, is said to have subjugated hostile kings and vanquished by his skill the Musulman king. Though the final result of the war is not known, the Velamas did not achieve their object and the Bahmani Sultan won no victories which the Muslim historians could boast of. The conflict was renewed seven years later (A.D 1398), when Harihara II planned another attack on the Velamas and their ally the Bahmanis. He evidently took advantage of the confusion following the usurpation of the Bahmani throne by Firuz Shah to invade that kingdom, and captured the fort of Sagar. The Muslim accounts of the sweeping victories of Firuz Shah are contradicted by Hindu sources, both literary and epigraphic. An inscription at Pangol, in the Nalgonda district of the old Hyderabad State, clearly proves that an expedition sent by Harihara II against the Velamas defeated them as well as their Bahmani ally near that place, almost at the very time when, according to Firishta, Firuz was dictating a most humiliating peace treaty to his enemy. This treaty, however,

144 NSOU ??CC - HI - 07 practically recognized the status quo. On the whole, the fact seems to be that in spite of some initial successes gained by Firuz, he was ultimately forced to retreat and lost some territory to the north of the Doab. The last years of the reign of Harihara II were peaceful, undisturbed by foreign invasions or internal troubles. He fell ill in the latter part of A.D 1403 and died on August 16, 1404 having ruled for a period of twenty eight years. During his reign of nearly three decades, the kingdom extended in all directions, and assumed the proportions of a mighty empire. His conquest of the west and east coasts made him the master of many ports through which flowed the wealth of Europe and Asia into his dominions. In the internal administration of the kingdom, he followed the footsteps of his father. Though he entrusted the government of some of the provinces such as Mangalore, Barakur and Goa on the west coast to his nobles, he appointed only his sons as governors of the important provinces in the interior and the east coast. Though the arrangement worked efficiently in the lifetime of Harihara, it fostered disintegrating tendencies which led immediately after his death to the outbreak of the first civil war in the Vijayanagara history. On the death of Harihara II, the succession to the throne was disputed. His three sons , Virupaksha I, Bukka II, and Devaraya I laid claim to the throne, and attempted to take forcible possession of it. Though the struggle for succession lasted for two years, much is not known about the course of events during the period. Virupaksha I appears to have crowned himself immediately after the death of his father, but his rule came to an end after one year. He was probably overthrown by Bukka II who proclaimed himself king. He, in his turn, yielded place to Devaraya I who ascended the throne in A.D 1406 and ruled for sixteen years until his death in A.D 1422. Devaraya I's reign was a period of incessant military activity, and during the sixteen years of his reign he was continuously engaged in waging war

with the Bahmani Sultan, the Velamas of Rachakonda and the Reddies of Kondavidu. In spite of the

powerful forces arrayed against him, he not only held his own but succeeded in increasing the extent of his kingdom by the annexation of fresh territories. Immediately after Devaraya's accession his kingdom was invaded by Firuz. Besides the Velamas the traditional allies of his family, the Sultan secured also the friendship of Peda Komati Vema, the Reddi king of Kondavidu. Apart from the frequent encroachment by Vijayanagara on the Reddi territory, Peda Komati Vema resented the family and political alliance into which Harihar II entered with his rival Kataya Vema who had usurped the government of Rajahmundry. The Sultan invaded the Doab with the main body of his

NSOU ??CC - HI - 07 145 army, while his Velama and Reddi allies, supported by a strong contingent of his troops, attacked the Raya in the eastern provinces of his kingdom. Devaraya massed most of his forces in the Doab to check the advance of the Sultan, and left the eastern provinces comparatively weakly defended. The Sultan's army, accompanied by his Velama and Reddi allies, appears to have descended on Udaygiri and obtained several notable victories. But what happened after these victories is not definitely known. One important result of the expedition was the Reddi occupation of Pottapi-nadu and Pulugula-nadu in the south-east of the Cuddapah district, which continued for seven years, until their final expulsion by Devaraya I in A.D 1413-14. The victory of the allies was, however, not complete, for they failed to dislodge Devaraya from Pangal which in his hands became a standing menace to the safety of the Velama kingdom. On the death of Kumaragiri Reddi in A.D 1407, Peda Komati Vema, his cousin succeeded him at Kondavidu, while Kataya Vema, the brother-in-law and minister of the late king, made himself master of the northern districts of the Reddi kingdom with the city of Rajahmundry on the Godavari as his capital. Peda Komati however, allied himself with the Velamas and Kataya Vema was driven out of his capital. When Devaraya successfully repulsed his enemies and consolidated his power, Kataya Vema paid a visit to Vijayanagara in A.D 1410 and solicited his help. Devaraya promised help and promptly dispatched troops to enable him to recover his power. Encouraged by the arrival of help from Vijayanagara, Kataya Vema took the field and inflicted a crushing defeat on Peda Komati Vema at Ramesvaram and put him to flight. But the arrival of Firuz Shah and the Bahmani army changed the situation. He won a number of victories, and Kataya Vema was killed in one of these battles. On hearing of these disasters, Devaraya sent reinforcements. The war, however, did not come to an end. It moved westwards from the delta of the Godavari to the Velama dominions on the north bank of the Krishna, and the Bahmani Sultan and the Raya of Vijayanagara became the chief combatants. Firuz Shah, who realized the strategic importance of the fort of Pangal, resolved to wrest it from Devaraya, and sent his forces in A.D 1417 to capture it. The siege lasted for two years but it defied all attempts to take it. Devaraya, having secured the help of a number of Hindu chiefs including the Velamas, surrounded the besieging force. Devaraya I took full advantage of his victory and re-established his authority over the entire Krishna-Tungabhadra Doab.

146 NSOU ??CC - HI - 07 Devaraya's intervention in the affairs of the kingdom of Rajahmundry brought in its train war with the king of Orissa. Before fighting could actually begin between the Gajapati and the Raya, Doddaya Alla or Allada brought about a friendly understanding between the two rulers and persuaded them to return peacefully to their respective kingdoms. Though war was thus averted, its significance cannot be under rated. For it opens a new chapter in the history of the foreign relations of Vijayanagara and marks the beginning of that rivalry between the Gajapatis and the Rayas which was to involve the whole of the east coast into a war lasting for nearly a century and quarter. The remaining years of Devaraya's reign was peaceful. The kingdom was undisturbed by wars. He probably spent his last years in retirement, seeking diversion in the company of the learned whom he greatly cherished. He was a great patron of scholars. It was to Devaraya's court that the gifted Telegu poet Srinatha journeyed from the Reddy courts of Rajahmundry and Kondavidu seeking recognition for his talents. The 'Pearl Hall' of the palace where he honoured men of eminence is immortalized in literature. His capital became the chief centre of learning of South India. Vijayanagara (The City of Victory) had indeed become Vijayanagara (The City of Learning). Devaraya I undertook a number of schemes for the welfare of the people. In 1410 he had a barrage across the Tungabhadra constructed which greatly helped agriculture. He also got a canal dug 24 kilometres long from the Tungabhadra to the capital which had hitherto been suffering from scarcity of water. These canals proved to be of such use to the city that they greatly increased his revenue. He also encouraged the construction of a dam on the river Haridra for irrigation purposes. He greatly improved the city also, raising fresh walls and towers, increasing the city area and building further lines of fortifications. Towards the close of Devaraya's rule the Italian

55% MATCHING BLOCK 81/171**SA** MHY-6.docx (D110789933)

Nicolo Conti visited the imperial city. He described it as having a circumference of 96 kilometers and containing 90,000 potential soldiers.

Besides describing the city and its king, Nicolo Conti also mentions festivals like Dipavali, Navaratri, etc. The order of succession of the kings who immediately followed Devaraya I on the Diamond throne, is not definitely known. The evidence of inscriptions is perplexing, as two of his sons, Ramachandra and Vijaya I, as well as his grandson Devaraya II are found to have been ruling simultaneously at Vijayanagara in A.D 1422, the year in which he breathed his last. Ramachandra, who had been associated with his father in the government of Udaygiri since A.D 1390-91, appears to have ascended the throne on the death of his father and ruled for a period of six months.

NSOU ??CC - HI - 07 147 Ramachandra was succeeded by Vijaya I, who was also known as Vijayabhupati, Vijaya Bukka or Vira Bukka. There is considerable difference of opinion about the duration of his reign. Tradition embodied in the chronicle of Nuniz assigns to Vijaya's reign a period of six years, but this has been reduced by modern scholars to a much shorter period varying from six months to two years. An analysis of Vijayanagara inscriptions of that time clearly shows that Vijaya's reign lasted from A.D 1422 to 1430. Vijaya appears to have been a weak monarch, for, during the eight years of his rule, he seems to have taken little or no active part in the government of the kingdom and left the administration in the abler hands of his son and co-regent, Devaraya II. The reign of Vijaya I was not, however, uneventful. It witnessed the outbreak of two important foreign wars, one with Bahmani Sultan and the other with the Gajapati of Orissa. Devaraya II (1422 – 46) who succeeded to the throne, was the greatest sovereign of the Sangama dynasty. The inscriptions of this ruler are throughout the Vijayanagara empire and his reign witnessed the height of the imperial glory and prosperity under the Sangama. He was called 'Immadi Devaraya' and also 'Proudha Devaraya' or the great Devaraya by his subjects. As his rule was of great magnificence, the commoners believed that he was the incarnation of Indra, the celestial ruler of the Hindu mythology. The inscriptions speak of his title 'Gajabetekara', i.e. the elephant hunter. Shortly after his accession, Devaraya II had to face an invasion led by the Bahmani Sultan Ahmad I in the Raichur Doab (the region between Krishna and Tungabhadra), but the actual outcome of this battle is a matter of controversy. However, the fact that the Bahmani Sultan shifted his capital from Gulbarga to Bidar, which was more secure, leads to an assumption that Devaraya gained some success. Devaraya II annexed Kondavindu (Andhra Pradesh) to his kingdom, attacked the Gajapati kingdom of Orissa and subjugated a few chiefs in Kerala. Except the Zamorin of Calicut, all other kings and chieftains of Kerala accepted his suzerainty. Sometime in 1442, he sent a naval expedition against Sri Lanka which, after being defeated, agreed to pay tribute to Vijayanagara. Devaraya II was a great patron of literature and himself an accomplished scholar in Sanskrit. He is credited with the authorship of two Sanskrit works, Mahanataka Sudhanidhi and a commentary on the Brahma Sutras of Badarayana. He found time to patronize men of letters in Sanskrit and vernaculars and rewarded them by liberal grants of land and money. He loved to organize literary and philosophical debates in his court and presided

148 NSOU ??CC - HI - 07 over them personally. Devaraya promoted fine arts and adorned his capital with new temples. During his reign Vijayanagara was visited by two foreign travellers, Nicolo Conti, an Italian and Abdur Razzaq, a Persian, who have left graphic descriptions of the city and the empire. The political situation at Vijayanagara immediately after the death of Devaraya II in 1446 is not definitely known. Though it is generally assumed that his son, Mallikarjuna, succeeded him on the throne, there is reason to believe that Vijaya II, more commonly known as Pratapadevaraya, younger brother of Devaraya II, ascended the throne and ruled for a short period. It is evident from literary and epigraphic evidence that both Vijaya II and Mallikarjuna for some time ruled the empire simultaneously. How Vijaya II came to be dispossessed of it cannot, however, be ascertained at present. He was probably obliged to come to terms with Mallikarjuna, as a result of which he had to renounce his claim to the throne and retire to his estate, where he continued to rule until at least A.D 1455. The reign of Vijaya II is important on account of an attempt made by him to put down ministerial corruption and purify the administration of the empire. Mallikarjuna was probably a mere youth at the time of the death of his father. He is also spoken in the inscriptions as Mummadi Devaraya (Devaraya III) or Mummadi Praudha Devaraya (Praudha Devaraya III). Mallikarjuna was a weak monarch and his accession marks the beginning of the decline in the fortunes of the Sangama dynasty. The rivalry between the Rayas and the Gajapatis of Orissa for the possession of the coastal Andhra country came to a head; and in the struggle that ensued, the Raya lost considerable territory besides the coastal Andhra for which the fights began. Mallikarjuna did not long survive the disastrous Gajapati invasion, and died about the middle of A.D 1465. The end of Mallikarjuna was not probably peaceful. Tradition preserved in the Srivaishnava work Prapannamritam states that his own cousin Virupaksha II assassinated him together with the members of the royal family and usurped the throne. Though Virupaksha succeeded in establishing himself on the throne, he was not able to enforce his authority over the empire. His authority was confined mostly to Karnataka and portions of the western Andhra country, although he seized the Diamond throne of the Rayas of Vijayanagara. With the death of the Gajapati Kapilendra in A.D 1470, the

NSOU ??CC - HI - 07 149 political conditions in the Deccan began to change rapidly. The Bahmani Sultan invaded Vijayanagara possessions in Konkan on the west coast. Muhammad Shah III sent Mahmud Gawan at the head of a large army. The death of Kapilendra plunged the coastal Andhra country into the throes of civil war and offered an excellent opportunity for the Raya of Vijayanagara to win back his lost dominions; but Virupaksha did not rise to the occasion. He failed to take advantage of the situation to recover the prestige of his government and the affection of his subjects. His failure, however, provided Saluva Narasimha, one of the prominent noblemen of his kingdom, a splendid opportunity to emerge as the saviour of the kingdom, and the custodian of the power of the Rayas. Saluva Narasimha was the eldest son of Saluva Gunda, the chief of Chandragiri in Chittor district. He seems to have succeeded to the family estate about A.D 1456. At the time of his succession, his authority could not have been great, though besides his family fief of Chandragiri, he seems to have held an estate in the neighbourhood of Nagar in the Tirukkoyilur taluk of the South Arcot district. The assassination of Mallikarjuna and the usurpation of the throne by Virupaksha II gave an impetus to the forces of disintegration; and the nobles and captains acted pretty much as they liked. It must have been during these years of anarchy that Saluva Narasimha laid the foundation of his power. His power was so great that Mallikarjuna's young son, Rajasekhara sought refuge at his court. Virupaksha II was murdered about the end of A.D 1485 by one of his sons, who however, renounced his right to the throne in favour of his younger brother, Padearas, i.e Praudha Devaraya. Praudha Devaraya is said to have been totally indifferent to the affairs of the state, but even if he were different in his character, he could not have prevailed against such a powerful vassal as Saluva Narasimha. The character of Praudha Devaraya (feeble dissolute prince), however, provided a pretext to Saluva Narasimha to seize the throne for himself in the interests of the empire. At first he won over the nobles to his side by offering them valuable presents, and when he felt sure of their support, he sent his army under Narasa Nayaka to Vijayanagara with instructions to expel Praudha Devaraya from the capital and take possession of the throne and kingdom in his name. Narasa met with no opposition and when he entered the capital, Praudha Devaraya fled from it and took refuge in a foreign country. With the flight of Praudha Devaraya, the rule of the Sangam dynasty came to an end. Saluva Narasimha soon followed Narasa Nayaka to the capital, and celebrated his coronation about the close of A.D 1485.

150 NSOU ??CC - HI - 07 9.4 The Saluvas (1485 – 1503) Like most usurpers, Saluva Narasimha found that it was easier to capture the throne than to enforce his authority in the kingdom. The captains and the chiefs who lent him support in seizing the crown were unwilling to submit to his yoke, and consequently he was obliged to fight against his erstwhile supporters and friends. Among these the Sambetas of Peranipadu in the Gandikota Sima and the Palaigars of Ummattur and Talakadu in the Hoysala-rajya deserve special mention. Sambeta Sivaraja offered stubborn resistance but could not withstand a sustained artillery attack and Sivaraja perished with most of his followers at the hands of the enemy. Though he appears to have succeeded in imposing his authority over Tulu-nadu during the last years of his reign, the chiefs of Ummattur remained unsubdued until the time of his death. The collapse of the Bahmani power in Telingana after the death of Muhammad Shah III in A.D 1482, and the preoccupation of Saluva Narasimha with preparations for the usurpation of the throne of Vijayanagara, left the field open for the ruler of Orissa, Purushottama Gajapati, who took full advantage of the situation. He seized the coastal Andhra country up to Vinikonda in the Guntur district and then attacked the fort of Udayagiri sometime after Narasimha had usurped the throne. The attack was completely successful. Saluva Narasimha died early in A.D 1490. His services to the kingdom of Vijayanagara can be hardly over-estimated. It is true that he expelled the old dynasty and usurped the throne. But it is possible to construe his action in a more favourable light and to regard the act of usurpation as due not so much to his ambition to sit upon the Diamond Throne as to a desire to protect the kingdom and thereby save the Hindu dharma from the neighbouring Muslim kingdom. With this end in view he befriended the Arab merchants and purchased the best horses in the market to improve the condition of his cavalry which, under his succession, contributed a great deal to the military glory of Vijayanagara. As Saluva Narasimha had only two sons who were too young to govern the kingdom, he appointed at the time of his death, his minister Narasa Nayaka as the guardian of the princes and the regent of the kingdom, with instruction to hand over the kingdom to the one whom he considered more worthy to rule after the princes had attained majority. But, on the death of his master,

Narasa Nayaka placed on the throne the elder son of Narasimha, Timma. But as Timma was too young to shoulder the burdens of the state, Narasa

Nayaaka became the real ruler of the kingdom.

NSOU ??CC - HI - 07 151 By dint of numerous military campaigns Narasa Nayaka restored the integrity of the kingdom, and the enemies who he had conquered during the thirteen years that he governed the empire are enumerated in all the records of his descendents. We learn from them that he not only subdued Chera, Chola, Pandya and other localities in South India but also defeated the Gajapati and took Adil Khan a prisoner. These claims had a good foundation. Reference has been made above to the complete collapse of the authority of the Bahmani king about the time when Saluva Narasimha died. The king Mahmud Shah was a mere tool in the hands of his Prime Minister, Qasim Barid and powerful nobles like Ahmad Nizamul Mulk and Adil Khan behaved like independent rulers in their own domains. Narasa Nayaka marched into the Krishna-Tungabhadra Doab and captured the forts of Raichur and Mudgal. Adil Khan was forced to buy peace by ceding these two forts but as soon as he was free from other troubles, he tried to recover them and declared war against Vijayanagara. In a battle that took place, Adil Khan sustained a severe defeat who was obliged to seek shelter under the walls of the fortress of Manava. The Gajapati king Prataparudra also led an expedition against Vijayanagara and advanced up to the Pennar, but he seems to have been defeated and driven back. But Narasa had numerous internal enemies and they included many of the ministers of the king and nobles, as well as the dependent chiefs subject to his authority. A certain minister slew king Timma and proclaimed that at the instance of the protector his master had been slain. To clear himself of the accusation, Narasa immediately placed on the throne the younger son of Saluva Narasimha called Immadi Narasimha. The new king, however, turned against the protector. Narasa found it difficult to remain in the capital. He, therefore, repaired to Penugonda on the pretext of going on a hunt and, having gathered forces, marched upon the capital and invested it. Immadi Narasimha was obliged to sue for peace and accept him as the guardian of his person and the Protector of the empire. In order to prevent the king from causing him embarrassment in the future, Narasa kept him under the custody at Penugonda and governed the kingdom as if he were its master. Next, Narasa Nayaka had to undertake an expedition against the chiefs and nobles in the southern provinces. Narasa defeated the chiefs of the Chola, the Pandya and the Chera countries, captured Madura and proceeded to Ramesvaram at the head of his army. These victories secured him effective control over the Tamil provinces of the empire. He next turned his attention to Western Karnataka where the Palaigars of Ummattur and their allies had raised the standard of rebellion. He captured the island fort of Seringapatam and the Hoysala chief was taken prisoner. As a result his authority was firmly established in Karnataka.

152 NSOU ??CC - HI - 07 Narasa Nayaka was a magnificent patron of letters, and several distinguished scholars and poets flourished at his court. He fondly cherished Telegu, he invited several eminent poets to his court, encouraged them to compose poems, and rewarded them richly by liberal grants of land and money. The Telegu literature received a fresh impetus from Narasa Nayaka and bloomed forth in grant splendour in the time of his more illustrious sons. 9.5 The Tuluvas (1503 – 70) Narasa Nayaka was succeeded by his eldest son Vira Narasimha as the regent of the kingdom. Though the king, Immadi Narasimha was a prince grown up in years and capable of managing his own affairs, the new regent should have shown an inclination to lay down his office and retire into the background. He was on the contrary, resolved to set aside the king and usurp the throne. So he caused his ward and master to be assassinated in the fort of Penugonda where he was confined and proclaimed himself king in AD 1505. With Immadi Narasimha ended the brief rule of the Saluva monarch at Vijayanagara yielding place to a new line of kings under whom the empire rose to great magnificence and power. Vira Narasimha ruled as the king of Vijayanagara for five years. His rule was a period of turmoil. His usurpation of the throne evoked much opposition and the whole kingdom is said to have revolted under its nobles. He however, subdued most of them and compelled them to acknowledge his sovereignty. Though Vira Narasimha was continuously engaged in warfare throughout the short period of his reign, he found time to improve the efficiency of his army by introducing certain changes in the methods of recruitment and training of his forces. To improve the condition of his cavalry, he offered tempting prices to horse dealers and attracted them to Bhatalak and other Tuluva ports which he had conquered. He also recruited all efficient candidates, irrespective of caste or creed, as troopers and trainers. He infused war like spirit among his subjects by encouraging all kinds of military exercises. Vira Narasimha took keen interest in the welfare of the rayats. He was ready to listen to their grievances and alleviate their distress as far as possible. One of the important reforms which he introduced to lighten their burden was the abolition of marriage tax. He was only a pioneer in this respect. On the death of Vira Narasimha his half brother Krishnadevaraya ascended the Diamond Throne. His coronation was celebrated on the Sri-Jayanti day of Saka 1432,

is the most learned and perfect king that could possibly be, cheerful of disposition and very merry; he is one that seeks to honour foreigners and receives them kindly, asking all about their affairs whatever their condition may be. He is a great ruler and a man of much justice, but subject to certain fits of rage.

He is by rank a greater lord than any, by reason of what he possesses in armies and territories, but it seems that he has, in fact, nothing compared to what a man like him ought to have, so gallant and perfect is he in all things. At the very outset of his reign, Krishnadevaraya was involved in war with his neighbours in the north and the north east. The Bahmani Sultan, Mahmud Shah in pursuance of the compact of Bidar, and probably at the instance of Yusuf Adil Khan, declared a jihad on the infidels of Vijayanagara towards the end of A.D 1509. A fierce engagement took place in which the Bahmani forces suffered a crushing defeat. The Sultan himself was wounded and his nobles and captains beat a hasty retreat. Yusuf Adil Khan was killed in the fight and the infant state of Bijapur was thrown into confusion and disorder. Taking advantage of the anarchic conditions prevailing in Bijapur, Krishnadevaraya invaded the Krishna-Tungabhadra Doab and captured Raichur(A.D 1512). He then advanced on Gulburga and captured the fort after a short siege. He next set out for Bidar and captured the fort. He then restored Sultan Mahmud Shah to power, because he wanted to weaken his Muslim neighbours by throwing an apple of discord in their midst, and assumed, in commemoration of the act, the title of 'Yavana-rajya-sthapan- acharya'. Krishnadevaraya next set out on an expedition against the Palaigar of Ummattur who were ruling the upper Kaveri valleys as independent prince. The strength of the Palaigar lay in his possession of the forts of Seringapatam and Sivansamudram which were considered impregnable. Krishnadevaraya's campaign against Ummattur lasted for nearly two years. He first laid siege to the fort of Seringapatam and destroyed it and next proceeded against Sivansamudram and invested it for than one year. He captured Sivansamudram and dismantled its fortifications. He subdued the territory under the sway of the rebel chief and constituted it into a new province with Seringapatam as its headquarters.

154 NSOU ??CC - HI - 07 Krishnadevaraya now felt strong enough to declare war upon the Gajapati who had conquered two provinces of Vijayanagara namely, Udayagiri and Kondavidu, which Krishnadevaraya's predecessors failed to recover. The war opened with an attack upon the fort of Udayagiri in January 1513. After the fall of Udayagiri, Krishnadevaraya returned to Vijayanagara, while the army marched into the Kondavidu province, burning the villages and pillaging the countryside. The Oriya garrisons stationed in various places abandoned their posts and fled in panic to Kondavidu. The forts of Kandukur, Addanki, Vinukonda, Bellamkonda, Nagarjunakonda, Tangeda and Ketavaram fell rapidly one after another into the hands of the Raya. Having completed the subjugation of the forts and the territories dependent upon them the Vijayanagara army proceeded at last against Kondavidu and laid siege to it. A large number of Oriya noblemen including Prince Virabhadra, son and heir of Gajapati, and one of his queens, were captured and carried away as prisoners of war to Vijayanagara. The fall of Kondavidu was followed by the conquest of the coastal region up to the Krishna. The army advanced to Bezwada on the Krishna and laid siege to the fort. Unable to hold out, the defenders delivered the keys into the hands of the Raya. Krishnadevaraya next proceeded against Kondapalli. While he was engaged with siege operations, the Gajapati Prataparudra advanced against him. In the engagement that ensued between Krishnadevaraya and Gajapati, Gajapati Prataparudra sustained severe defeat and sought safety in flight. Krishnadevaraya then returned to his camp under the walls of Kondapalli and captured it after a siege lasting for two months. The capture of Bezwada and Kondavidu was a prelude to the conquest of Telingana and Vengi – both of which then formed part of the kingdom of the Gajapati. Notwithstanding the series of defeats suffered by Gajapati, and consequent loss of territory, the Gajapati was not inclined to come to terms. Krishnadevaraya therefore resolved to conquer Cuttack and his army advanced to the city. According to the Rayavachakam, the Gajapati was induced by a wicked stratagem to sue for peace. A peace treaty was concluded in A.D 1518 according to which,

the Gajapati gave his daughter in marriage to Krishnadevaraya and

obtained from him in return all the territory north of the Krishna conquered by him during the war. The defeat and discomfiture of the Gajapati brought into prominence a new enemy, the Qutb Shahi ruler of Telingana. While Krishnadevaraya was busy with his Orissa war, Quli Qutb Shah attacked some of the forts, specially Pangal and Guntur in the Vijayanagara frontier and conquered them. He also managed to wrest Warangal, Kambhammet and other forts from Shitab Khan. He also took possession of Kondapalli, Ellore and

NSOU ??CC - HI - 07 155 Rajahmundry and compelled the Gajapati to cede to him the whole of the territory between the mouths of Krishna and Godavari. He could not resist the temptation of making inroads into the Vijayanagara territory. Quli Qutb Shah marched to Kondavidu and laid siege to the fort. Krishnadevaraya dispatched Saluva Timma to Kondavidu to drive away the invaders. On his arrival at Kondavidu, Saluva Timma defeated the Quli Qutb army and took the commander, Madar-ul-Mulk, and his officers as prisoners and sent them to Vijayanagara. Krishnadevaraya captured the fort of Raichur from Ismail Adil Khan in 1512 during his minority when Kamal Khan was the regent of the kingdom. Ismail did not reconcile himself to the loss of the fort and together with it, the mastery over the Krishna- Tungabhadra Doab. Therefore, when he came to power after the overthrow of Kamal Khan, he took advantage of Krishnadevaraya's preoccupation with the Orissan and invaded the Doab and captured Raichur. In 1520 A.D, as soon as Saluva Timma returned to the capital from Kondavidu, he set out at the head of a large army and laid siege to Raichur. A fierce engagement took place in which the Bijapuris sustained a crushing defeat and Ismail Adil Khan fled precipitately from the field. But this did not end the war. The Bijapur garrison, defending the fort of Raichur, did not surrender but held out obstinately, protected by the strong fortifications of the city. Krishnadevaraya, however, persisted, and with the help of a band of Portuguese musketeers in his service, he succeeded in making a breach in the outer fortifications. There was dismay in the city and people rushed into the citadel for refuge. The commandant of the fort was shot dead and the garrison submitted and surrendered the fortress. As soon as Krishnadevaraya returned to Vijayanagara after the capture of Raichur, an ambassador of Ismail Adil Khan arrived at his court, protesting against the unprovoked attack, as he termed it, upon his master's kingdom and requesting that all that had been taken from him in the recent war, including the fort of Raichur, might be restored to him. Krishnadevaraya promised to comply with Adil Khan's request, provided that the latter would pay homage to him by kissing his feet. On being informed of this, Adil Khan agreed to do so, and it was arranged that the ceremony should take place at Mudgal. But when Krishnadevaraya reached Mudgal, he did not find Ismail Adil Khan there. Enraged at this, Krishnadevaraya advanced upon Bijapur to chastise Adil Khan, Adil Khan fled from his capital and Krishnadevaraya entered his enemy's capital and occupied the royal palace for several days but had to retire from the city and return to his kingdom owing to the scarcity of water.

156 NSOU ??CC - HI - 07 Ismail Adil Khan made another attempt to come to an understanding with the Raya but it failed due to the treachery of Asad Khan Lari, the Lord of Belgaun, whom he had chosen as his ambassador. Krishnadevaraya, incensed at the conduct of Adil Khan's ambassador, marched at the head of his army into the Bijapur kingdom, burning and plundering the countryside as he proceeded. He captured Firuzabad and Hasanabad, but, when he arrived at the city of Sagar, his way was blocked by a large army. A great battle was fought, the Bijapuris suffered a crushing defeat, and a terrific carnage ensued. Two other sanguinary battles were fought, one at Shorapur, and another at Kemba, both in the Gulbarga district, and the Bijapur armies suffered defeat. At last Krishnadevaraya reached Gulbarga, and laid siege to the ancient capital of the Bahmanis for the second time. The enemy troops once again gathered strength and attacked the besiegers, but were again defeated. The city was soon captured and it was destroyed and the fortress was razed to the ground. Krishnadevaraya's victory over Ismail Adil Khan was complete. He was personally inclined to continue the war against Adil Khan but resolved to give up hostilities and return to his kingdom. Before he started upon his return march, he placed on the ancestral throne, the eldest of the three sons of Sultan Mahmud Shah II and took the other two with him to Vijayanagara where he kept them to safety. With the close of the Gulbarga campaign, Krishnadevaraya's foreign wars came to an end. Krishnadevaraya had no male issue for a long time. At last Tirumaladevi, his chief queen, gave birth to a son called Tirumaladeva – Maharaya in A.D 1518-19. After his return from Gulbarga, Krishnadevaraya abdicated the throne, and having crowned the young prince, assumed the office of the Prime Minister and carried on the administration in the name of the prince. This young prince unfortunately fell ill after a reign of eight months and died due to poison administered by Timma Dandanayaka, son of his minister Saluva Timmarasa. In his anger, Krishnaraya seized Timmarasa, his son Timma Dandanayaka and his younger brother Saluva Gundaraja, and immured them in prison where they remained for three years. At the end of the period Timma Dandanayaka escaped from prison and set up the standard of rebellion. At last Timma Dandanayaka was defeated and carried to Vijayanagara as a prisoner where he died and his father and younger brother both languished in prison. Krishnadevaraya maintained friendly relation with the Portuguese. He found it advantageous to cultivate their friendship, because it enabled him to secure horses for his army without which he could not have waged war successfully on the Bahmani kingdom.

NSOU ??CC - HI - 07 157 The Portuguese were equally anxious to secure Krishnadevaraya's favour so that they might obtain facilities for trade in the numerous towns and cities of the empire. In spite of his incessant military activities, Krishnadevaraya paid considerable attention to the civil administration of the empire. To redress the grievances of the ryots and punish the evil-doers, Krishnadevaraya, following the practice of his predecessors, was in the habit of touring the empire of Vijayanagara every year, when he came into personal contact with his subjects and listened to their complaints and petitions. He took considerable interest in constructing irrigation tanks and digging canals to provide water for agricultural operations. He also abolished some of the vexatious taxes such as the marriage fee, and this gave immense relief to all classes of his subjects. He ordered deforestation in many parts of the country, and augmented the revenue of the state by bringing fresh land under cultivation. Krishnadevaraya was a great builder. Much of his building activity was confined to Nagalapur, a new town founded by him near Vijayanagara, where he built many beautiful mansions and temples. He was also responsible for the construction of many new structures in the provinces. The thousand pillared mandapas and the raya-gopurams, which characterize the country-side in South India, were largely built during his reign. Krishnadevaraya was a magnificent patron of art and letters. All the famous artists were in his employ to decorate his palaces and temples. He was known as the Andhra- Bhoja. Though he extended his patronage to the writers in all languages, Sanskrit as well as the South Indian vernaculars, he specially favoured Telegu and contributed much to the development of its literature. The Augustan age of Telegu literature burst forth in full splendor in the reign of Krishnadevaraya, and his court became the centre of light and learning in the country. Himself a poet, the author of the Amukta-malyada, he loved to surround himself with poets and men of letters. His literary court was adorned by a group of eight eminent Telegu poets called the Ashtadiggajas. Apart from his great encouragement to the Telegu poets and men of letters of his day, Krishnadevaraya rendered an important service to the cause of Telegu literature which had far reaching consequences. He created the ideal of a scholar king, one of whose important duties was to protect poets and men of letters and foster the growth of language and literature. After the death of Krishnadevaraya, his half brother Achyuta Raya (1530 – 42) succeeded him. The attempt of Rama Raya to become the defacto ruler by nominally installing the eighteen months old son of Krishnadevaraya as the King was foiled by his brother-in-law who brought Achyuta Raya from Chandragiri. In fact, Krishnadevaraya himself had nominated him in preference to his own son. Immediately after his accession, Achyuta Raya had to repulse the invasion of Ismail Adil Khan for the seizure of the Raichur Doab. He also defeated the Gajapati ruler and the Sultan of Golconda. He soon patched up his quarrel with Rama Raya, but this angered Saluva Vira Narasimha and drove him to the chieftains of Ummattur and the Tiruvadi Raja in Kerala, with whose help he started a revolt. It was put down and Saluva Vira Narasimha was taken prisoner. Ismail Adil Khan died in 1534 and taking advantage of this Achyuta Raya invaded Bijapur and forced his son Mallu Adil Khan to sue for peace. The infant son of Krishnadevaraya died meanwhile and this weakened the position of Rama Raya. He was, however, able to imprison Achyuta on his return from Bijapur and proclaimed himself king. The opposition of nobles, however, forced him to step down and enthrone Sadashiva, a nephew of Achyuta, and carry on the government in his name. Ibrahim Adil Shah soon chose to invade Vijayanagara. He entered Nagalapur and "razed it to the ground" by way of reprisal for the treatment of Bijapur by Krishnadevaraya. He also settled the dispute between Achyuta and Rama Raya before he retired to his kingdom. It was agreed that Achyuta Raya would be a king, but Rama Raya was to be free to rule his state without interference. This agreement was observed till the death of Achyuta in 1542. Achyuta was succeeded by his son Tirumala I with his maternal uncle Salakaraju Tirumala as regent. Tirumala's intentions were suspected by Varadadevi, the queen mother, who sought the help of Ibrahim Adil Shah I; but the clever Tirumala won him over. Meanwhile, Rama Raya proclaimed Sadashiva as the emperor; thereupon Tirumala asked for help from Bijapur. Ibrahim Adil Shah invaded Vijayanagara in spite of Tirumala's understanding with him. Tirumala, however, inflicted defeat. Panic-stricken people proclaimed Tirumala as the ruler. But, soon Rama Raya defeated Tirumala in a few battles and seized the kingdom in the name of Sadashiva who was ultimately crowned in 1543. But Rama Raya remained the defacto ruler. Sadashiva Raya (1543-69) was only a titular sovereign; the actual government was controlled by Rama Raya who became the undisputed master of the whole of Vijayanagara empire. The main aim of the foreign policy of Rama Raya was to make Vijayanagara

NSOU ??CC - HI - 07 159 supreme; and this got Vijayanagara involved in the interstate politics of the Bahmani succession states. He wanted "to cut diamonds only with diamonds" and thus put one state against the other. He could successfully dominate the politics of South India for about two decades, but on account of his frequent involvement with the affairs of the Deccani states he made enemies of all of them. The Deccani states formed a confederacy or alliance which defeated the Vijayanagara forces in the battle of Rakshasa Tangadi (so called Talikota) in January 1565. Rama Raya was captured and executed. The victors acquired a huge booty consisting of jewels, tents, arms and cash, besides horses and slaves. They now proceeded to the city of Vijayanagara and destroyed it mercilessly. In the words of Sewell, the author of A Forgotten Empire: "

(D165315243)

Never perhaps in the history of the world has such havoc been brought and wrought so suddenly on so splendid a city...".

Though the battle of Talikota crippled the Vijayanagara empire, it could not blot it out of existence. After their victory there arose mutual jealousy among the four Sultans which prevented them from combining together to put an end to the Vijayanagara empire. Their jealousy enabled Vijayanagara to recover a part of its territory and power. 9.6 The Aravidus (1570 -1649) After the battle of Talikota, Rama Raya's brother, Tirumala, transferred the capital to Penugonda. He succeeded in restoring a part of the power and prestige of the empire. He was an ambitious man and, in 1570, he deposed king Sadasiva and seized the throne. He

90% MATCHING BLOCK 91/171

(D165315243)

laid the foundation of the Aravidu dynasty. He was succeeded by his son, Ranga II,

who was a successful ruler. Then came his brother, Venkata II, to the throne who ruled from 1586 to 1614. During his time the disintegration of the kingdom set in and the king committed the mistake of recognizing the complete autonomy of the kingdom of Mysore which was founded by Raja Oedyar in 1612. He transferred the capital to Chandragiri. On his death in 1614, there was a war of succession and the result was the disruption of the kingdom. The last important ruler of this dynasty was Ranga III. He was powerless to reduce the refractory vassals to submission and to resist the aggression of the Sultans of Bijapur and Golconda. The empire came to an end after subordinate officers like the chiefs of Seringapattam and Bednur and the nayaks of Madura and Tanjore, had declared their independence.

160 NSOU ??CC - HI - 07 The Deccani states, and later on the Mughals and the Marathas, also took advantage of this situation. By the middle of the seventeenth century, the empire of Vijayanagar was reduced to the status of a glorious chapter in the pages of Indian history. 9.7 Conclusion Beginning on a humble note, the kingdom of Vijayanagara was soon transformed into a powerful military state. The Rayas of the kingdom had to first defeat and subdue the native rulers who represented various shades of Hindu philosophy. But as the kingdom grew to become a formidable force – challenging and blocking the advances of the Persians and Turks from the north, where they had already entrenched themselves for long – it came to be described by some historians as the savior of Hinduism in southern India. The kingdom's frequent disputes and wars with the neighbouring Golconda, Bijapur, Ahmednagar and Bidar sultanates had more to do with political domination and control of territory than with the issue of faith. Ruled by four different dynasties – the Sangamas, the Saluvas, the Tuluvas and the Aravidus – Vijayanagara unified the region in a manner which no other kingdom had done in the past. It brought three major linguistic groups – the Tamils, the Kannadigas and the Telegus – under one banner, cemented their differences and encouraged the emergence of what we call southern Indian culture. By offering a high degree of political unity to these and other groups, the kingdom worked towards acquiring an edge in warfare against northern forces for a long time. The kingdom also ensured that no smaller kingdoms or fiefdoms could challenge its authority. It was only later that the Nayaka kingdoms arose, posing a challenge to the kingdom of Vijayanagara. 9.8 Model Questions Short questions 1. Discuss the significance of the battle of Talikota. 2. How many dynasties ruled the Vijayanagara empire. Name them.

NSOU ??CC - HI - 07 161 Essay Type Questions 1. How did Harihara and Bukka establish the sway of the growing state of Vijayanagara in southern India? 2. How did Krishna Deva Raya build up the Vijayanagara kingdom as a superior military and political power? 9.9 Suggested Readings Majumdar R.C, ed., The Delhi Sultanate , Bharatiya Vidya Bhavan, Bombay, 2006

162 NSOU ??CC - HI - 07 Unit 10 ?? Gujarat Structure 10.0 Objectives 10.1 Introduction 10.2 The Foundation and Development of Gujarat Sultanate 10.3 Conclusion 10.4 Model Questions 10.5 Suggested Readings 10.0 Objectives This unit is concerned with the foundation and the successful tenure of the Gujarat Sultanate. It provides the reader with the details of its rulers, conquests, expansion and administration of the Gujarat Sultanate starting from Muzaffar Shah I (1391) to its last independent ruler, Muzaffar Shah III (1583). 10.1 Introduction : The Gujarat Sultanate was a medieval Indian Muslim Rajput kingdom established in the early 15th century in present-day Gujarat, India. The founder of the ruling Muzaffarid dynasty, Zafar Khan (later Muzaffar Shah I) was appointed as governor of Gujarat by Nasir-ud-Din Muhammad bin Tughluq IV, the Delhi Sultan in 1391. Zafar Khan's father Sadharan, was a Tanka Rajput convert to Islam. Zafar Khan defeated Farhat-ul-Mulk near Anhilwada Patan and made the city his capital. Following Timur's invasion of Delhi, the Delhi Sultanate weakened considerably which provided him with the opportunity of declaring himself independent in 1407 and formally establishing the Gujarat Sultanate. 10.2 The Foundation and Development of Gujarat Sultanate Gujarat was one of the richest regions of the Indian sub-continent given the excellence of its handicrafts and its flourishing seaports, as well as the richness of its soil. Due to its prosperity and location the region has always attracted the invaders. We may recall that Mahmud of Ghazni plundered Gujarat and later Alauddin Khalji annexed it to the Delhi Sultanate. Since then Gujarat remained under the control of the Turkish governors.

NSOU ??CC - HI - 07 163

164 NSOU ??CC - HI - 07 Under Firuz Tughlaq, Gujarat had a benign governor who, according to Ferishta, "encouraged the Hindu religion and thus promoted rather than suppressed the worship of idols". He was succeeded by Zafar Khan whose father Sadharan, was a Rajput who was converted to Islam, and had given his sister in marriage to Firuz Tughlaq. When Timur's invasion took place Zafar Khan was the governor of the province. Taking advantage of the political turmoil at Delhi, Zafar Khan threw off his allegiance to the Delhi Sultanate. In 1407 he formally proclaimed himself the ruler, donning the title of Muzaffar Shah. The real founder of the kingdom of Gujarat was, however, Ahmad Shah I (1411-42), the grandson of Muzaffar Shah. During his long reign, he brought the nobility under control, settled the administration and expanded and consolidated the kingdom. He shifted the capital from Patna to the new city of Ahmedabad, the foundation of which he laid in 1413. He was a great builder and beautified the town with many magnificent palaces and bazaars, mosques and madrasas. He drew on the rich architectural tradition of the Jains of Gujarat to devise a style of building which was markedly different from Delhi. Some of its features are slender turrets, exquisite stone carving, and highly ornate brackets. The Jama Masjid and the Tin Darwaza are fine examples of the style of architecture during the time. Ahmad Shah tried to extend his control over the Rajput states in the Saurashtra region as well as those located on the Gujarat-Rajasthan border. In Saurashtra, he defeated and captured the strong fort of Girner, but restored it to the Raja on his promise to pay tribute. He then attacked Sidhpur, the famous Hindu pilgrim centre, and levelled to the ground many of the beautiful temples there. In addition to peshkash or annual tribute, he imposed jizyah on the Hindu rulers in Gujarat which had never been imposed on them earlier. However, just as jizyah was collected as a part of the land revenue (kharaj) from individuals in the Sultanate of Delhi, jizyah and peshkash must have been collected together from the rajas. All these measures led many medieval historians to hail Ahmad Shah as a great enemy of the infidels, while many modern historians have called him a bigot. The truth, according to Satish Chandra, however, appears to be more complex. While Ahmad Shah acted as a bigot in ordering the destruction of Hindu temples, he did not hesitate to induct Hindus in government. Manikchand and Motichand, belonging to the commercial community, were ministers under him. He was so strict in his justice that he had his own son-in-law executed in the market place for a murder he had committed. Although he fought the Hindu rulers, he fought no less the Muslim rulers of Malwa,

166 NSOU ??CC - HI - 07

165 Khandesh and the Deccan. He subordinated the powerful fort of Idar, and brought the Rajput states of Jhalawar, Bundi, Dungarpur etc. under his control. Malwa was a bitter rival of Gujarat. Muzaffar Shah had defeated and imprisoned Hushang Shah who succeeded Dilawar Khan as the ruler of Malwa. Finding it difficult to control Malwa, he had, however, released Hushang Shah after a few years and reinstated him. Far from healing the breach, it had made the rulers of Malwa even more apprehensive of Gujarat's power. They were always on the lookout for weakening Gujarat by giving help and encouragement to disaffected elements there. The rulers of Gujarat tried to counter this by trying to install their own nominee on the throne of Malwa. This bitter rivalry weakened the two kingdoms, and made it impossible for them to play a larger role in the politics of north India. Sultan Ahmad died in A.D 1443 and was succeeded by his eldest son Muizzuddin Muhammad Shah (or Muhammad Shah II). He first led a campaign against Idar and forced its ruler to submit to his authority. The Raja of Idar, Hari Rai or Bir Rai, is said to have purchased peace by marrying his daughter to Muhammad. Muhammad is then said to have gone and exacted tribute from the Raja of Dungarpur. In A.D 1449, he marched against Champaner, but the Raja, Kanak Das forced him to retreat. On his return journey, Muhammad fell seriously ill and died in February 1451. After the death of Muhammad II his son ascended the throne under the title of Qutb-ud-din Ahmad Shah. Sultan Mahmud Khalji of Malwa, who had advanced up to the frontiers of Gujarat now invaded the country and advanced up to Broach. Unable to capture the fortress, Mahmud marched towards the capital, but on his way was severely defeated by Qutb-ud-din. In 1453, taking advantage of a dispute for succession among the kinsmen of Qutb-ud-din who held Nagaur, Maharana Kumbha occupied the territory. Shams Khan, the ruler of Nagaur, sought the protection of Qutb-ud-din, who dispatched an army against the Maharana, but the latter defeated and almost destroyed the Gujarat army. In 1456, therefore, Qutb-ud-din marched against Kumbhalgarh to avenge his defeat, and though he could not capture the famous fort, it is claimed by the Muslim historians that the Maharana was obliged to purchase peace by the payment of a huge tribute. Later in the same year, Mahmud sent a mission to Gujarat proposing a treaty of alliance between the two kingdoms against Chitor. Accordingly, next year (1457) Qutb-ud-din again advanced against Kumbhalgarh. Maharana Kumbha, on learning the approach of the Gujarat army, left Kumbhalgarh and took up a strong position between that place and Chitor. Here a battle was fought for two days at the end of which the Maharana, according to Muslim historians, fled to jungle and ultimately concluded peace by paying a huge ransom. Qutb-ud-din then returned to Gujarat. Within three months Maharana Kumbha attacked Nagaur, but retired on the approach of Qutb-ud-din with his main army. Sometime later Qutb-ud-din attacked Sirhoi which was ruled by a relation of the Maharana. After burning Sirhoi and ravaging other towns on his way Qutb-ud-din besieged the famous fort of Kumbhalgarh, while his ally, Sultan Mahmud Khalji of Malwa advanced towards Chittor. Soon Qutb-ud-din found that it was beyond his power to reduce the Kumbhalgarh fort, and advanced towards Chitor but returned to his capital with plundering a few towns around it. Qutb-ud-din died in 1458, and after his death the nobles raised his uncle Daud Khan to the throne. However, within a short period of seven or twenty-seven days, Daud proved himself to be such an imbecile that the nobles deposed him, and set on the throne Fath Khan, son of Muhammad II (1458). Fath Khan, on his accession, adopted the title of Abu'-i-Fath Mahmud and is famous in history as Mahmud Begarha. Soon after his accession Mahmud was faced with a conspiracy which aimed at removing him and placing his younger brother on the throne. With great presence of mind he cleverly frustrated the conspiracy. In 1461 A.D Mahmud Khalji of Malwa invaded the dominions of the infant Bahmani king, Nizam Shah and an appeal was sent to Mahmud Begarha for help. Mahmud Begarha marched into Khandeh and cut off the retreat of the Malwa army. Next year Mahmud Khalji of Malwa again invaded the Deccan, but retreated on hearing that Mahmud Begarha was marching against him. Mahmud Begarha then wrote to Mahmud Khalji that it was unfair to molest a child, i.e Nizam Shah and that if he ever attacked the latter's dominion, Malwa would be overrun by the Gujarat army. The threat was effective in preventing further hostilities between Malwa and the Bahmani kingdom. In 1467 Mahmud invaded the territory of King Mandalika, usually known as the Chudasama King of Girnar, defeated his army and ransacked a city. Mandalika sued for peace which he obtained by agreeing to pay tribute. In the following year Mahmud forbade Mandalika the use of royal insignias. Yet in 1469 Mahmud again attacked Junagarh. Mandalika appealed to Mahmud, pointing out that he had remitted tribute regularly and had been an obedient vassal. But Mandalika's kingdom was incorporated

NSOU ??CC - HI - 07 167 in the dominions of Gujarat. Mahmud stayed at Junagarh for some time and renamed it Mustafabad, which henceforth became one of his capitals. News reached Mahmud that Jayasimha, the son of the Raja of Champaner had been ravaging the territory between Champaner and Ahmedabad. Mahmud immediately sent an officer to protect the region and intended to follow with a view to conquer Champaner. But complaints came from southern Sind that the Muslims were being persecuted by the Hindus. Mahmud therefore crossed the Rann of Kutch and entering the region now known as the Thar and Parkar districts, was confronted with an army of 24,000 horses which was composed of Sumras, Sodas and Kalhoras. In A.D 1472, Mahmud again marched into Sind to aid his maternal grandfather Jam Nanda against rebels. In this campaign he was successful. About this time a learned poet and merchant named Mahmud Samarqandi had been driven ashore to Dvaraka. The Hindus of Dvaraka robbed him of all his goods whereupon he appealed in person to Mahmud for redress. So Mahmud marched to Dvaraka which was evacuated by its King, Bhima who took refuge in the island fortress of Bet Shankhodhar. Mahmud after destroying the temple at Dvaraka and plundering the city, proceeded towards Bet Shankhodhar which was thoroughly pillaged and Bhima was sent to Ahmedabad where he was impaled. In 1480, the officer conspired to dethrone Mahmud and put his son on the throne. Mahmud learnt of this conspiracy at Mustafabad and decided to go on a pilgrimage to Mecca. However, the courtiers, ashamed of their conduct, then begged Mahmud to change his decision and it was decided that Mahmud should conquer Champaner. But Champaner was not attacked till A.D 1482. After defeating the Champaner army Mahmud captured the town and besieged Pavagarh, the famous hill fortress above Champaner, where the king had taken refuge. Mahmud plundered the whole country and refusing repeated offers of submission by Raja Jayasimha, captured Pavagarh after a siege of 24 months.(November 1484). With the conquest of Champaner, which Mahmud rendered Muhammadabad, the kingdom of Gujarat reached its extreme limits till the conquest of Malwa. It seems that after the conquest of Champaner, Mahmud received the sobriquet of Begarha, that is the conqueror of two forts, Girnar and Champaner, on the opposite sides of his kingdoms.

168 NSOU ??CC - HI - 07 During the remaining twenty five years of his reign (A.D 1485 – 1511), Mahmud was engaged in several military operations. Of these the most important invasion was directed against Bahadur Gilani, a noble of the Bahmani empire, who seized the whole of Konkan and not only committed various acts of piracy off the Gujarat coast for several years (1491 – 1494) but actually carried on depredations as far as Cambay and seized the island of Mahim. Mahmud first attempted to send an army against Gilani, which had to return without fulfilling its task, as it was found that in order to attack Gilani the Gujarat army would have to invade the Deccan. Mahmud wrote to the Bahmani King Mahmud Shah Bahmani requesting him to suppress the rebel. The Bahmani King in response to this sent an army against Gilani, but it was not till 1494 that Gilani was defeated and slain and full reparations were made to Gujarat. But very soon Gujarat had to face a strong naval power namely the Portuguese. By the discovery of the direct sea route they had been able to strike a blow against the lucrative trade which passed through Egypt and Red Sea to India. The port of Cambay was seriously affected as the Portuguese were diverting the trade to Cochin. Thus the Portuguese incurred the hostility of all the Muslim powers on the Arabian Sea who now determined to oust them. So an Egyptian fleet was equipped at Suez and sent to India under the command of Amir Husain to join the Gujarat navy under the Turkish admiral, Malik Ayaz. The Portuguese admiral, Francesco d' Almeida sent his son, Don Lorenzo in 1508 to explore the coast as far north as Gujarat. While Lorenzo was lying with a small squadron in the shelter of the harbour of Chaul near Bombay, news reached him that the Egyptian fleet had reached Diu and had been joined by Malik Ayaz. After a fierce engagement in January 1508 the Portuguese were defeated and Lorenzo lost his life. To avenge this defeat and his son's death, d'Almeida appeared the following year and a decisive action was fought near the island of Diu in which the combined Muslim navy suffered a disastrous defeat. Mahmud then attempted to restore peaceful relations with the Portuguese and sent an envoy for this purpose in September, 1510. But presumably the Portuguese demanded some proof of Mahmud's peaceful intentions, so when on November 25, 1510, the Portuguese captured Goa from Adil Shahi Sultans of Bijapur, Mahmud forthwith ended his alliance with Egypt and granted permission to the commander of the Egyptian fleet to return. He also released all the Portuguese prisoners captured at Chaul. In 1510, an embassy arrived from Ibrahim Lodi to congratulate him on his success at Khanesh where Mahmud had firmly established his suzerainty by a series of wars

NSOU ??CC - HI - 07 169 from 1500. In 1511, a mission from Shah Ismail Safavi of Persia came, but it is said that Mahmud refused to receive the Persian ambassador. He was, however, ill when the Persian mission arrived, and died shortly after on November 23, 1511. Mahmud was succeeded by his son, Muzaffar II (1511-26). The new ruler fought with the Rajputs under Medini Rai and restored Mahmud Khalji of Malwa to the throne. For these reasons he came into conflict with the Ranas of Mewar. He defeated Bhimasimha of Idar which led to Rana Sanga's interference in Idar, Vadnagar and Visalnagar. Muzaffar therefore sent an army to invade Mewar. This was most probably driven back to Gujarat. Muzaffar II died in April 1526. Then followed two brief reigns of Sikandar and Mahmud II who were incompetent rulers and ruled for a few months each. In July 1526, Bahadur Shah, another son of Muzaffar II, became king. Bahadur Shah, who ruled from 1526 to 1537, was one of the ablest rulers of his time. Immediately after his accession, he embarked on

52% MATCHING BLOCK 88/171

W

a career of conquest. Having defeated Mahmud II of Malwa, he annexed that kingdom to Gujarat in 1531. Next, he

invaded Mewar and stormed the great fortress of Chittor in 1533. But he committed the mistake of giving shelter to Humayun's rebellious cousins which involved him in a conflict with the Mughal Emperor. Humayun defeated him and occupied Malwa and, subsequently, drove him away from Gujarat also. But Humayun had to withdraw his troops. Bahadur now regained his kingdom and formed the project of expelling the Portuguese from Gujarat, as they had refused to give him help against Humayun, The Portuguese Governor, Nunhoda Cunha, beguiled him on board his ship in February 1537, and had him treacherously drowned in the sea. After his death there were a series of weak rulers in Gujarat. During their reign the administration was weak and there was confusion throughout the kingdom. Taking advantage of this, Akbar, the great Mughal Emperor, conquered Gujarat and annexed it to his empire in 1572. 10.3 Conclusion The prosperity of the sultanate reached its zenith during the rule of Mahmud Begarha. He subdued most of the Rajput chieftains and built navy off the coast of Diu. In 1509, the Portuguese wrested Diu from Gujarat sultanate following the battle of Diu. The decline of the Sultanate started with the assassination of Sikandar Shah in 1526. Mughal emperor Humayun attacked Gujarat in 1535 and briefly occupied it. Thereafter Bahadur Shah was killed by the Portuguese while making a deal in 1537. The end of the sultanate came in 1573, when Akbar annexed Gujarat in his empire. The last ruler Muzaffar Shah

170 NSOU ??CC - HI - 07 III was taken prisoner to Agra. In 1583, he escaped from the prison and with the help of the nobles succeeded to regain the throne for a short period before being defeated by Akbar's general Abdul Rahim Khan-I-Khana. 10.4 Model Questions Short Question : 1) What was the contribution of Ahmad Shah I in the foundation of Gujarat kingdom? 2) What was the role played by Mahmud Begarha in the expansion of Gujarat Sultanate. Essay type question: 1) Trace the history of the rise and fall of Gujarat Sultanate. 10.5 Suggested Readings Chandra, Satish, Medieval India: From Sultanate to the Mughal Delhi Sultanate (1206-1526), Majumdar R.C, ed., The Delhi Sultanate , Bharatiya Vidya Bhavan, Bombay, 2006,

NSOU ??CC - HI - 07 171 Unit 11 ? Malwa Structure 11.0 Objectives 11.1 Introduction 11.2 The Kingdom of Malwa 11.3 Conclusion 11.4 Model Questions 11.5 Suggested Readings 11.0 Objectives Malwa become independent of the Delhi sultanate following Timur's invasion at the end of A.D 1398. The present unit focuses on the provincial dynasty of Malwa, on its emergence as a Sultanate, and ultimately its inclusion into the Mughal empire in 1562. 11.1 Introduction Malwa is a historical region of west-central India occupying a plateau of volcanic origin. Politically and administratively, the historical Malwa region includes districts of western Madhya Pradesh and parts of south-eastern Rajasthan. The definition of Malwa is sometimes extended to include the Nimar region south of the Vindhya. The sultanate of Malwa was founded by Dilawar Khan Ghuri, the governor of Malwa for the Delhi Sultanate. Dilawar Khan acquired the territory of the whole of Malwa under his control. 11.2 The Kingdom of Malwa The province of Malwa, which was conquered by Alauddin Khalji in 1305, remained a part of the Sultanate till 1398. The kingdom of Malwa was founded by Husain Ghuri, whom Firuz Tughlaq had made a noble, giving him the title Dilawar Khan. In 1390-91 Firuz's son, Sultan Nasiruddin Muhammad appointed Dilawar as Governor of Malwa. During Timur's invasion of India, Sultan Mahmud Tughlaq first sought shelter with Muzaffar Shah of Gujarat, but not being received in the manner which the fugitive Sultan thought was his due, he left Gujarat and went to Malwa where Dilawar received 172 NSOU ??CC - HI - 07 him with all marks of honour due to a sovereign. This disgusted Dilwar's son Alp Khan, who retired to Mandu and spent there the three years that Sultan Mahmud spent at Malwa. During this period Alp Khan laid the foundations of the fort of Mandu which later became one of the strongest forts in Malwa. Sultan Mahmud Tughlaq returned to Delhi in A.D 1401, after the departure of Timur, and shortly after Dilawar proclaimed himself the independent ruler of Malwa with his capital at Dhar. His son, Alp Khan, reinforced the defences by completing the fortification of Mandu. Dilawar maintained a conciliatory religious policy which made both Rajputs NSOU ??CC - HI - 07 173 and other Hindus friendly to him. He even settled Rajputs in his newly conquered territory of Nimar. Dilawar extended his kingdom by snatching Saugor and Damoh from the Delhi Sultanate and making the ruler of Chanderi accept his overlordship. Dilawar Khan

died in A.D 1405, and was succeeded by his son

Alp Khan who assumed the title of Hushang Shah. There was a rumour that Hushang had poisoned his father, and Muzaffar Shah of Gujarat took this up as a pretext for launching an attack on Malwa. Hushang resisted bravely but was defeated and taken prisoner. Muzaffar Shah then left his brother Nusrat Khan as Governor of Malwa and left for Gujarat taking Hushang away with him as a prisoner. Nusrat Khan's rule, however, was so oppressive that soon a rebellion broke out and he was obliged to leave Malwa. Hushang, thereupon petitioned Muzaffar Shah to send him to Malwa, which he promised to subjugate on behalf of Muzaffar. Muzaffar then sent to Malwa an army under his grandson Ahmad Khan to restore Hushang. Ahmad easily overcame all opposition, and after occupying Dhar, then the capital of Malwa restored Hushang on his throne and left for Gujarat. Some rebels, however, still held out at Mandu, under their leader Musa Khan. But the rebellion seemed to have served its purpose with the return of Hushang, and soon his cousin Malik Mughis Khalji came out of Mandu and joined him. This disheartened Musa Khan who shortly after surrendered. Hushang then transferred the capital to Mandu and appointed Malik Mughis as his Prime Minister. In A.D 1410-11 Sultan Muzaffar Shah of Gujarat died and was succeeded by his grandson Ahmad Shah, who was faced with a rebellion of his uncle. Hushang sided with the rebels, but before he could join them, Ahmad had overawed his uncle with a show of force and Hushang returned to Malwa without having accomplished anything. But soon after his return he was invited by a confederacy of Hindu kings of Champaner, Nandod and Idar to invade Gujarat. The Hindu chieftains of Gujarat also promised help, particularly to lead him into Gujarat secretly by an unfrequented road. The plan, however, miscarried; Ahmad came to learn of the invasion and took energetic measures to oppose Hushang, who once more returned disappointed to Malwa. He again raided Gujarat unsuccessfully in 1417 in alliance with his brother-in-law, Nasir Khan of Khandesh. Hushang appointed Mahmud Khan, the son of Malik Mughis Khalji, as the partner of the latter in the administration of the government. In A.D 1421, Hushang is said to have gone to Orissa, disguised as a horse dealer with only a retinue of one thousand men. He actually brought some fine horses of a type

174 NSOU ??CC - HI - 07 which the king of Orissa, Bhanudeva IV, prized very highly. As Bhanudeva came to inspect the horses, Hushang captured him and forced him to give him seventy five elephants. As a measure of further precaution, Hushang held captive the King of Orissa till he reached the border of his country. It was possibly during the return from this raid, that Hushang was severely beaten by Allada, the Reddy King of Rajahmundry. Taking advantage of Hushang's absence, Ahmad Shah of Gujarat invaded Malwa (A.D 1422) and besieged Mandu. The rains, however, forced Ahmad to retire to Ujjain so that on his return Hushang was able to slip into his capital. Ahmad reopened his siege but finding that success was not possible returned to Sarangpur. Hushang also marched there, and for a period of about two and a half months the two armies faced each other without engaging in a general action. The advantage was with the Malwa army, and at last Ahmad began his retreat on March 17, 1422, and reached Ahmedabad on the following May 15. The same year Hushang captured the town of Gagraun whence he proceeded to Gwalior and besieged the fort. On receipt of the news, Mubarak Shah, the Sayyid King of Delhi, marched to Gwalior to relieve its Hindu chieftan, which forced Hushang to raise the siege. According to Yahya bin Ahmad, he was worsted in some desultory fighting near the Chambal and ultimately extricated himself out of a difficult situation by paying a tribute to Mubarak Shah. In 1428, Ahmad Shah Bahamani attacked the Hindu king of Kherla, who appealed to Hushang for help. Hushang responded with alacrity and Ahmad Shah left Kherla on learning of the approach of Hushang's army. But Hushang pursued the retreating army for three days after which period the Bahamani army turned round on him. In the action that followed Hushang suffered a disastrous defeat and barely managed to escape. His wife was taken as a prisoner but later returned to him by Ahmad Shah. In 1431, Hushang advanced to conquer Kalpi. But, when he arrived near the place, news was brought to him that Sultan Ibrahim Sharqi was also coming with a large army to conquer Kalpi. Soon the two armies faced each other and a battle seemed imminent, when Ibrahim Shah retired to Jaunpur on receipt of the news that Mubarak Shah was marching towards Jaunpur. Hushang thereupon captured Kalpi without any opposition and returned to his capital after appointing Qadir Khan as governor of the place. On his way he came to learn from his officials that the Hindus who lived near the Jatba hills had ravaged some towns and villages and had taken shelter near the reservoir

NSOU ??CC - HI - 07 175 of Bhim. From the description left by Nizamuddin, it appears that this was the celebrated Bhojsagara built by the Paramara Emperor. Hushang broke the dam of this huge lake which flooded the whole locality, and this probably forced the people to surrender to him, though the king of Jatba managed to escape. Hushang ensured his popularity with the majority Hindu population by introducing a policy of religious toleration, although he also encouraged the ulema and sufis to settle in Mandu. Many Rajputs settled in his kingdom and served his army loyally. The Jains also supported him and proved an asset to the promotion of trade and commerce in Malwa. Although constant wars against the rulers of Gujarat, Jaunpur, Delhi and the Bahamani brought no material gains to his kingdom, they frustrated his neighbour's expansionist designs. Before his death in 1435 Hushang also founded a new town, Hushangabad, on the river Naramada. Hushang Shah died on July 6, 1435. He was succeeded by his son, Ghazi Khan, who assumed the title Muhammad Shah. He was an utterly incompetent ruler, and paid little attention to the business of the State. He was deposed by his minister, Mahmud Khan, who usurped the throne in May 1436. Mahmud assumed the title of Shah and founded a new dynasty known as the Khalji dynasty of Malwa. His authority was, however, challenged by a party of his nobles who refused to acknowledge him as their king. Ahmad Shah I of Gujarat also took up the cause of the late Muhammad Shah's son, but Mahmud Khalji succeeded in overcoming the opposition of his enemies. He was a brave soldier and fought against Ahmad Shah I of Gujarat, Muhammad Shah of Delhi, Muhammad Shah III Bahamani and Rani Kumbha of Mewar. The war between him and Rana Kumbha of Mewar seems to have been indecisive, as both sides claimed success and built "towers of victory". During this long war he invaded Mewar at least four times, but failed to conquer any part of Kumbha's territory except Ajmer. He was often defeated and had to retreat to Malwa. Mahmud was the ablest among the Muslim rulers of Malwa. He greatly enlarged his dominion by conquests, extended it

75%**MATCHING BLOCK 90/171****W**

to Satpura Range in the south, to the frontier of Gujarat in the west,

to Bundelkhand in the east and to Mewar and Bundi in the north. He was recognized Sultan by the Khalifa of Egypt. He also received a mission from Sultan Abu Sa'id of that country. In spite, however, of his almost continuous campaigns, he seems to have left behind a stable government which withstood even the vagaries of his successor. He was a great

176 NSOU ??CC - HI - 07 builder and erected a column to commemorate his victory over Maharana Kumbha. He actively promoted the development of agriculture and trade, established centres of Islamic learning and encouraged scholars from other parts of India to move to Mandu. The hospital he founded there was a large establishment with provision for free medicines. According to Farishta, "he was polite, brave and learned and during his reign his subjects, Hindus as well as Muhammadans, were happy and maintained a friendly intercourse with each other. Scarcely a year passed when he did not take the field, so that his tent became his home and the field of battle his resting place. His leisure hours were devoted to hearing the histories and memories of the courts of different kings of the world." But he was a fanatic and destroyed numerous Hindu temples and images and took delight in outraging Hindu feelings. His reign lasted for thirty four years. Mahmud was succeeded by his eldest son Ghiyas-ud-din, who on his accession declared it to be his firm policy to remain at peace with his neighbours and enjoy the pleasures of life. So faithfully did he adhere to this policy that when Bahlul Lodi raided Palampur, he was with great difficulty recalled to a sense of duty by his ministers and even then sent an army under some officers instead of taking the field himself. Champaner, attacked by Mahmud Begarha, turned to Malwa for help, but he refused on the ground that it was unlawful for a Mussalman to help an infidel against Musalman. Thus he changed the traditional policy of the Sultans of Malwa and allowed the strong fort of Champaner to be annexed by Gujarat. Ghiyas-ud-din at the beginning of his reign, entrusted the management of the state to his son Nasir-ud-din and devoted all his time to the management of his harem, where he had collected more than 16,000 women. He was however of a deeply religious temperament and, being gullible, fell a prey to tricksters. The last days of Ghiyas-ud-din was embittered by a struggle for the throne between his two sons, Nasir-ud-din and Alauddin, in which his favourite queen Khurshid espoused the cause of the latter. Nasiruddin, however, emerged victorious, and ascended the throne on October 22, 1500. Alauddin was executed and Khurshid committed to prison, but Ghiyasuddin, then sinking to his grave, was left unmolested. Soon after Ghiyasuddin died (February 28, 1501) which gave rise to a rumour that he had been poisoned by his son. The beginning of Nasir's reign was troubled by the rebellion of some of his nobles who refused to acknowledge him as king. Nasir however was able to suppress the rebellion and in AD 1503, headed a marauding expedition against Chitor. According to NSOU ??CC - HI - 07 177 the Muslim historians he was bought off by Maharana Raimal, but according to the Rajput chronicles, the Malwa army, which came to aid two Rajput traitors, suffered a disastrous defeat. Nasiruddin was a cruel man by nature, and this trait was aggravated by his intemperate habits. This disgusted his nobles, some of whom instigated his son Shihab-ud-din to rebel. Nasiruddin, however, crushed the rebel forces and Shihab-ud-din fled to Chanderi. Though Nasiruddin forbore from taking extreme steps against his son who disregarded his call to submit to him, he nominated his younger son, Azam Humayun, as his heir, and bestowed on him the title of Mahmud Shah. A few days later Nasiruddin Shah died and immediately Mahmud Shah II ascended the throne (May 2, 1511). On hearing of his father's death, Shihab-ud-din made a bid for the throne, but was defeated and took shelter in the fortress of Asir. The main interest in the history of Malwa during the reign of Mahmud II is the clash between the Hindu and the Muslim nobles. He called Medini Rai, a powerful Rajput chief of Chanderi, to crush his disloyal nobles and appointed him Prime Minister. The predominance of the Rajputs at the court excited the jealousy of his Muslim nobles who sought the assistance of Muzaffar Shah II of Gujarat against the powerful minister, but Medini Rai inflicted a defeat on Mahmud himself with the help of Rana Sanga. In this war with Chittor, Mahmud II was taken a prisoner. But the Rana treated him with great generosity and restored his kingdom to him. In spite of the generous restoration by the Sisodia chief, the power and prestige of the kingdom of Malwa could not be revived and the hostility between Malwa and Mewar did not come to an end. The unwise Mahmud, who did not appreciate the Raja's act of magnanimity, led an expedition against Ratna Singh, the successor of Sanga. Rana Ratna Singh retaliated and invaded Malwa and Mahmud was defeated. Next, Mahmud incurred the hostility of Sultan Bahadur Shah of Gujarat by giving shelter to the latter's younger brother, Chand Khan. Bahadur Shah captured Mandu on March 17, 1531 and the independence of Malwa came to an end(1531). The kingdom of Malwa now became a part of Gujarat till it was invaded by Humayun, the second Mughal ruler of Delhi in 1535. It remained a province of the Delhi Empire under Humayun and Sher Shah. The latter appointed his commander Shujaat Khan as its governor. On Shujaat Khan's death, his son Baz Bahadur became the governor. Baz Bahadur assumed the title of Sultan during the period of confusion that followed the death of Islam Shah Sur. In 1562 Baz Bahadur was defeated by Akbar and Malwa was annexed to the Mughal Empire.

178 NSOU ??CC - HI - 07 11.3 Conclusion Dilawar Khan, previously Malwa's governor under the rule of the Delhi sultanate, declared himself sultan of Malwa in 1401 after the Mongol conqueror Timur attacked Delhi, causing the break-up of the sultanate into smaller states. Khan started the Malwa Sultanate and established a capital at Mandu, high in the Vindhya Range overlooking the Narmada River valley, his son and successor, Hoshang Shah (1405–35), developed Mandu as an important city. Hoshang Shah's son, Ghazni Khan, ruled for only a year and was succeeded by Mahmud Khalji (1436–69), the first of the Khalji sultans of Malwa, who expanded the state to include parts of Gujarat, Rajasthan, and the Deccan; the Muslim sultans invited the Rajputs to settle in the country. In the early 16th century, the sultan sought the aid of the sultans of Gujarat to counter the growing power of the Rajputs, while the Rajputs sought the support of the Sesodia Rajput kings of Mewar. Gujarat stormed Mandu in 1518. In 1531, Bahadur Shah of Gujarat, captured Mandu, executed Mahmud II (1511–31), and shortly after that, the Malwa sultanate collapsed; the Mughal emperor Akbar captured Malwa in 1562 and made it a subah (province) of his empire. The Malwa Subah existed from 1568 to 1743. Mandu was abandoned by the 17th century. 11.4 Model Questions Short Questions : 1) What was the role of Mahmud Khalji in the growth of Malwa Sultanate? 2) What led to the foundation of Malwa? Essay Type Questions : 1) Give an account of how the province of Malwa emerged as a Sultanate and ultimately got annexed into the Mughal kingdom. 11.5 Suggested Readings Majumdar R.C, ed., The Delhi Sultanate , Bharatiya Vidya Bhavan, Bombay, 2006, Srivastava, Ashirbadi Lal, The Sultanate of Delhi (711 – 1526 A.D), Shiva Lal Agarwala and Company Educational Publishers NSOU ??CC - HI - 07 179 Unit 12 ? of Jaunpur 12.3 Conclusion 12.4 Model Questions 12.5 Suggested Readings 12.0 Objectives The aim of this unit is to apprise the

learner with the Jaunpur Sultanate which was an independent kingdom of northern India between 1394 and 1479, whose rulers ruled from Jaunpur or Jounpoo in the present day state of Uttar Pradesh. 12.1 Introduction When the efforts of rulers of the Delhi Sultanate to assert their rule over the conquered territories became unsuccessful, several provincial dynasties came into being and wielded substantial sovereign power and contributed to the growth of art, architecture and literature. One such dynasty was the Sharqi dynasty of Jaunpur, north of Varanasi in the present Indian state of Uttar Pradesh. The Jaunpur Sultanate was a major center of Urdu and Sufi knowledge and culture. The Sharqi dynasty was known for its excellent communal relations between Muslims and Hindus, perhaps stemming from the fact that the Sharqis themselves were originally indigenous converts to Islam, as opposed to descendants of Persians or Afghans. 12.2 The Kingdom of Jaunpur The modern city of Jaunpur on river Gumti, thirty-four miles north-west of Benaras, was founded by Firuz Shah and remained the headquarters of the provincial government till 1394. According to Shams-i-Siraj Afif, Firuz Shah halted at Zafarabad in 1359 on his way to Bengal and impressed by the site of the present city where the road crossed

180 NSOU ??CC - HI - 07 the river, decided to build a town there to be called Jaunpur, after the name of his cousin Sultan Muhammad whose real name was Jauna. Cunningham was of the opinion that there was an older Hindu city called Jamanpur on the Gumti, and Firoz Shah utilized the materials from the buildings of this older town to lay the foundation of his new city. The Hindus of Jaunpur still call their city 'Jamanpur' and believe that the name is derived from the sage Jamadagni.

NSOU ??CC - HI - 07 181 The founder of the Sultanate of Jaunpur was Malik Sarvar who is said to have begun his career as a slave of Sultan Muhammad (son of Firuz Tughlaq). But he rose steadily till he became the Wazir in A.D 1389 with the title of Khvaja Jahan. Sultan Mahmud, the last Tughlaq king, conferred on him the title of Malik-ush-Sharq (Chief of the East) and appointed him governor of the eastern province of the empire. The object in appointing the Wazir as a governor was to suppress the Hindu rebellions which had thrown the government of this part of the country into confusion. Malik Sarvar left Delhi for Jaunpur in A.D 1394 and suppressed the rebels at Etawa, Koil and Kanauj. He then recovered from the rebels Awadh, Kanauj, Sandita, Dalmau, Bahraich and Bihar and repaired the forts which they had destroyed. Thus he consolidated his position, establishing his hold over a vast territory comprising of Awadh and the Gangetic valley from Koil in the west to Bihar in the east. The ruler of Bengal is said to have sent him tributes, which had been withheld from the weak government of Delhi. Malik Sarvar was for all practical purposes an independent king, though he abstained from assuming the paraphernalia of sovereignty. During the invasion of Timur he did not send any help to Delhi. He died in A.D 1399 in the plenitude of his power, leaving behind a kingdom which stretched from Koil in the west to Tirhut and Bihar in the east. Malik Sarvar was succeeded by his adopted son, Malik Qaranphul, who assumed the title of Mubarak Shah. This man was thus the first member of the Sharqi dynasty to assume the title of king and to strike coins and cause the Khutba to be read in his name. This provoked an attack on Jaunpur by Mallu Iqbal Khan, the powerful minister of Sultan Mahmud Tughlaq (A.D 1400). The two armies encamped on the two banks of the Ganga, but after a period of inactivity, the scarcity of provisions forced them to come to an understanding and the two armies returned to their respective capitals. Shortly after, Mubarak Shah died (A.D 1402), and the amirs raised his brother Ibrahim to the throne, under the title of Shams-ud-din Ibrahim. Ibrahim was the greatest king of the Sharqi dynasty. He ruled for about thirty-eight years (1402 – 1440). He was a cultured prince and a great patron of learning. He established schools and colleges and endowed them liberally from state funds. Having invited scholars and theologians from various parts of the country, he granted them subsistence allowances and extended to them state patronage in every possible manner. The result was that many scholarly works on Islamic theology and law and other subjects were produced. Notable among these works are Fatawa-i-Ibrahimshahi, Hashiah-i-Hindi, Bahr-ul-Mawwaj and Irshad. The celebrated work on music entitled Sangit Shiromani

182 NSOU ??CC - HI - 07 was the result of his patronage. The city of Jaunpur was adorned by him with beautiful buildings, specially mosques, the most brilliant specimen of which is the famous Atala Masjid. Under him Jaunpur evolved a distinct architecture of its own which is known by the name of the Sharqi style of architecture. The Jaunpur mosques are beautiful to look at, have no minarets of the usual type and bear traces of Hindu influence. Ibrahim was also fond of music and other fine arts. Owing to its cultural and educational activities of a high order, Jaunpur earned under this King the title of 'Shiraz of India'. During Ibrahim's reign the relations between Jaunpur and Delhi turned bitter. Ibrahim Shah was faced with an invasion by Mallu Iqbal and Mahmud Tughlaq. The two belligerents stood confronting each other on the opposite banks of the Ganga. Sultan Mahmud, unable to bear the tutelage of Iqbal, escaped to Ibrahim Shah's camp, and being coldly received there, fled to Kanauj which he occupied. Iqbal left for Delhi without fighting with Ibrahim Shah, who returned to Jaunpur. However, when after the death of Iqbal, Sultan Mahmud returned to Delhi (A.D 1405), Ibrahim Shah, after an initial failure re-annexed Kanauj after a siege of four months (A.D 1407). He was then joined by several other nobles and made a bid for the conquest of Delhi. Capturing Sambhal on his way, Ibrahim arrived near Delhi when news reached him that Sultan Muzaffar Shah of Gujarat was sending an army to relieve Sultan Mahmud. Ibrahim thereupon returned to Jaunpur and spent the next fourteen years there patronizing art and literature. During this period, he once resolved to invade Bengal from where complaints of the persecution of the Muslims by the Hindu Raja Ganesa reached him. According to some accounts Ganesa had his son converted to Islam and Ibrahim was pacified, while according to other accounts Ibrahim was defeated. In A.D 1427 Ibrahim attacked Bayana in an attempt to restore it to Muhammad Khan Auladi. He was opposed by Mubarak Shah, the Sayyid king of Delhi, but after an indecisive battle the two armies retired in good order (A.D 1428). In A.D 1431 Ibrahim attempted to conquer Kalpi but was opposed by Sultan Hushang Ghuri of Malwa who also had the same objective. Before any action took place, news came that Mubarak Shah, the Sayyid king of Delhi was advancing towards Jaunpur. Thereupon Ibrahim returned, and Kalpi fell into the hands of Hushang Ghuri. Nine years later Ibrahim died (A.D 1440). Ibrahim was succeeded by his eldest son Mahmud Shah. Mahmud Shah set about invading Bengal whereupon the king of Bengal appealed to Shah Rukh, the king of Iran, through the Raja of Sialkot. Shah Rukh ordered Mahmud Shah to desist. Mahmud

NSOU ??CC - HI - 07 183 Shah obeyed the order of Shah Rukh, and instead of proceeding towards Bengal advanced towards Kalpi. Sultan Hushang of Malwa who had captured the district of Kalpi, appointed one Qadir Khan as its governor. After Hushang's death, Qadir became more or less independent of Malwa. He was succeeded by his son Nasir, and Sultan Mahmud complained about Nasir's outrageous conduct to Sultan Mahmud Khalji of Malwa. The charge against Nasir was that he had destroyed the town of Shahpur which was larger and more populous than Kalpi, and had banished Musalmans from their homes and had made over Musalman women to Kafirs. Nasir probably adopted harsh measures against the Muslims of Shahpur as a punishment for some misdeeds, such as rebellion. The charges, however, were so grave, that Sultan Mahmud Khalji, who was then occupied elsewhere, gave Sultan Mahmud permission to chastise Nasir, and the Sultan of Jaunpur thereupon invaded Kalpi. Later, however, Nasir obtained the protection of Mahmud Khalji, who proposed to the Sultan of Jaunpur that as Nasir had expressed his contrition he should be left in possession of Rath in the Kalpi district. As Mahmud of Jaunpur rejected this proposal, Mahmud Khalji marched against him (November 1444) and fought an indecisive action near Irij. Eventually, through a mediation of a Muslim saint, peace was restored between Jaunpur and Malwa by the immediate cession of Rath or Rahut to Nasir and a promise to restore Kalpi after four months within which period Mahmud Khalji was to retire to Mandu. By the end of the year the two Mahmuds returned to their respective Capitals and Kalpi was restored to Nasir. After this Mahmud suppressed a rebellion in Chunar and is said to have led a successful raid into Orissa. In 1452, he advanced against Delhi, in response to an invitation by some recalcitrant nobles, to remove Bahlul Lodi, the Afghan, from the throne. The Jaunpur army suffered defeat in the war that followed. Hostilities with Delhi again broke out when Bahlul Lodi forced the Raja of Etawa to submission. As Mahmud claimed the allegiance of Etawa, he invaded the district to contest Bahlul's claim. After some desultory fighting, however, they came to terms, and a peace was concluded according to which the boundary between the two states was to remain as it had been during the reign of Mubarak Shah, and Bahlul was to be permitted to conquer Shamsabad from its governor who owed nominal allegiance to Jaunpur. But after Bahlul conquered Shamsabad and conferred it upon one Raja Karan, Mahmud marched against Bahlul. After the Jaunpur army approached Shamsabad, it was attacked by an advance guard of Bahlul under Qutb Khan Lodi. The attack failed
184 NSOU ??CC - HI - 07 and Qutb Khan was taken prisoner and sent to Jaunpur. But before any decisive action could take place, Mahmud

died in A.D 1457 and was succeeded by his son

Bhikan, who assumed the title of Muhammad Shah. Muhammad Shah acknowledged Bahlul's right to retain Shamsabad and peace was restored. But as Bahlul was returning to Delhi he was reproached by his wife for leaving Qutb Khan, her brother, a prisoner of Jaunpur. Bahlul thereupon turned back, and Muhammad also marched on Shamsabad, expelled Bahlul's nominee Raja Karan, and restored the fief to its former Shaeqi governor. His success attracted to his standard some powerful adherents, and Muhammad reached the river Saraswati where some desultory fighting took place. But before any decisive action took place, dissensions broke out in the Jaunpur camp. Muhammad Shah was apprehensive lest one of his four brothers – Hasan, Husain, Jalal and Ibrahim – should be raised to the throne by the nobles. The prisoner Qutb Khan Lodi was also a source of danger, as his sister was prompting her husband Bahlul Lodi to attack Jaunpur and rescue her brother. Muhammad Shah therefore sent an order to one of his officer at Jaunpur to execute his brother Hasan and Qutb Khan Lodi. This order could not be carried out as Muhammad's mother was keeping a strict watch on her son and Qutb Khan Lodi. Muhammad, therefore, requested his mother to join him in his camp on a specious plea and as soon as the dowager Queen left Jaunpur, Prince Hasan was executed. On hearing this, Muhammad's two other brothers, Hussain Khan and Jalal Khan, who were in the camp, decided to revolt. Hussain, seceding from the main army with 30,000 cavalry and 1,000 elephants, joined his mother at Kanauj, and was there proclaimed king under the title of Hussain Shah. There were further defections in Muhammad's army which forced him to retire, pursued by Bahlul up to Kanauj. From Kanauj Bahlul returned to Delhi, and Muhammad now found himself opposed by his brother Husain's army. Most of the officers deserted him and he was killed in the action that followed. A four years' truce was concluded in A.D 1458 between Bahlul and Husain, and Qutb was freed from captivity in exchange of Husain's brother, Jalal Khan, who had been taken prisoner by Bahlul's soldiers in a skirmish shortly after Husain's departure. Husain then collected a large army and proceeded towards Orissa through Tirthat. He overran Tirthat and it is stated by the Muslim historians that the Rai of Orissa, frightened

NSOU ??CC - HI - 07 185 at his approach, hastened to secure peace by presenting thirty elephants and one hundred horses, besides other valuable materials. Husain accepted the presents and returned to Jaunpur. The king of Orissa during that raid was either Kapilendra or his son Purushattama. Husain then repaired the fort of Benaras and in the following year sent an army to besiege the fort of Gwalior. He failed to capture the fort and had to return satisfied with a tribute. According to the Muslim chronicles, Jaunpur at this time possessed probably the biggest army in India; in any case it was far superior, at least in number, to the army of Bahlul Lodi. The four years truce with Delhi, concluded in A.D 1458 had long ago expired, and Husain was constantly urged by his wife Malika-i-Jahan, daughter of Atam Shah, the last Sayyid King of Delhi, to conquer it from Bahlul. Husain therefore began to make preparations for the invasion of Delhi. When Bahlul realized that he might not be able to withstand a powerful Sharqi attack led by Husain, he turned for help to Mahmud Khalji of Malwa and sent him two successive deputations in 1469. The first, consisting of Shaikhzada Muhammad Farmali and Raizada Kapur Chand, son of Rai Kirat Singh of Gwalior, waited on Mahmud on February 21, 1469, and solicited his help against Husain's aggression. Mahmud was willing to accede to their request but he expected a price for the help. In the meantime, Bahlul appears to have received alarming reports of Husain's designs as he soon after sent another deputation which included Qutb Khan Lodi and Rai Kirat Singh which met Mahmud on April 3, 1469. They were authorized to offer the cession of Bayana and a yearly levy of 6,000 men if Mahmud came personally with his armies to help Bahlul. The Khalji Sultan accepted the arrangement but he could not act up to it as he died only a month later on May 3, 1469. The Jaunpur army made triumphant progress and reached the suburbs of Delhi. Bahlul offered terms agreeing to cede the whole of his territory, retaining for himself only the city of Delhi and the tract of the country lying thirty-six miles around it, which he would govern, as Husain's vassal. But Husain rejected the terms and Bahlul left the city with a small army and encamped on the banks of the Yamuna opposite his enemy's army. Some time passed without any action; then one day, noticing that the Jaunpur army was off its guard, Bahlul suddenly attacked it. The Jaunpur army fled practically without offering any resistance, and though Husain managed to escape, his family was captured. Bahlul, however, treated them with marked respect, and later sent them to Jaunpur.

186 NSOU ??CC - HI - 07 Husain then lost the best chance he ever had of capturing Delhi at the instigation of his wife, but was again defeated. Shortly after, Husain invaded Delhi for the third time. But was defeated by Bahlul at Sikheran, about twenty-five miles east of Delhi. Shortly after this, on the death of Husain's father-in-law, Alam Shah, the last Sayyid King, who had retired to Badaun, Husain seized the district dispossessing his brother- in-law. He also captured Sambhal from Bahlul's governor Tatar Khan Lodi, and took him prisoner. He then again marched on Delhi in March 1479. This time Husain suffered a total defeat and Bahlul Lodi conquered practically the whole of his kingdom. Husain returned to Bihar where he seems to have been left in occupation of a small territory yielding a revenue of five lakhs of rupees. But after Bahlul's death, when Sikandar ascended the throne of Delhi, Husain induced Sikandar's brother Barbak, the governor of Jaunpur to rebel. After Sikandar had conquered Jaunpur from Barbak, he proceeded against Husain as the latter was the instigator of troubles. Husain was unable to make any stand against Sikandar, who annexed his territory. Husain then fled to Bengal where he was granted asylum by Sultan Alauddin Husain Shah. There he passed his last days in obscurity. 12.3 Conclusion Husain died in 1500 AD and with his death the Sharqi ruling family as well as the independent principality of Jaunpur came to an end. The Sharqi dynasty reigned in Jaunpur for about eighty five years. The rule of this family fostered material prosperity and encouraged cultural and educational activities. Jaunpur attained a high place among the provincial kingdoms in the country. 12.4 Model Questions Short Questions : 1) What was the role played by Malik Sarwar in the foundation of the Jaunpur Sultanate? describe how Shamsuddin Ilyas Shah (1342–1357 AD/ 743–758 AH) successfully unified East Bengal and West Bengal and became sultan of unified Bengal (Bangala) that included Sonargaon, Satgaon, and Lakhnauti. It lasted from 1342–1487 and was interrupted by an uprising by the Hindus under Raja Ganesha. However the Ilyas Shahi dynasty was restored by Nasiruddin Mahmud Shah. The chapter then concentrates on the rule of Hussain Shahi dynasty (1494-1538). Eventually, the Afghans broke through and sacked the capital in 1538 where they remained for several decades until the arrival of the Mughals. 13.1 Introduction The Muslim conquest of Bengal dates back to the beginning of the thirteenth century. In the year 1201 AD/597 AH, a troop of 19 soldiers of Malik Ikhtiyar al Din Muhammad Bakhtiyar Khilji attacked suddenly and captured Nadia (West Bengal) from King Rai Lakshman Sena, a Hindu ruler of Bengal. Bakhtiyar Khilji completed his conquest of the Varendra, which was one of the ten administrative divisions of Bengal, with the historic city of Gaur (East Bengal) during 1204 AD/600 AH. After the assassination of Bakhtiyar Khilji in August of the year 1206 AD/601 AH, Bengal was dividedly ruled by several Muslim rulers. Coins of Bengal reveal two sultans, one from East Bengal (Fakhr al Din Mubarak Shah, 1334–1349 AD/734–750 AH) and the other from West Bengal (Ala al Din Ali Shah, 1339–1345 AD/740–746 AH), simultaneously at almost same time showing a divided Bengal. It was Shams al Din Ilyas Shah (1342–1357 AD/743– 758 AH) who successfully unified East Bengal and West Bengal and became sultan of

188 NSOU ??CC - HI - 07 unified Bengal (Bangala) that included Sonargaon, Satgaon, and Lakhnauti. He is regarded as the first independent Muslim ruler in Bengal Sultanate. Reign of Ilyas Shahi dynasty took place in two periods. First reign continued until 1414 AD/817 AH. Shams al Din Ilyas Shah was succeeded by his son Sikandar bin Ilyas (1357–1389 AD/758–792 AH), grandson Ghiyath al Din Azam Shah (1389–1410 AD/792–813 AH), and grand grandson Saif al Din Hamza Shah (1410–1412 AD/813–815 AH). The Ilyas Shahi rule was challenged by Raja Ganesha, a powerful Hindu landowner, who briefly managed to place his son, Jalaluddin Muhammad Shah, on the throne in the early 15th century, before the Ilyas Shahi dynasty was restored in 1432. The late 1480s saw four usurper sultans from the mercenary corps. After a period of instability, Alauddin Hussain Shah gained control of Bengal in 1494 when he was prime minister. As Sultan, Hussain Shah ruled till 1519. The dynasty he founded reigned till 1538. This era is often regarded as a golden age of the Bengal Sultanate. Sher Shah Suri conquered Bengal in the 16th century. The absorption of Bengal into the Mughal Empire was a gradual process. It began with the defeat of Bengali forces under Sultan Nasiruddin Nasrat Shah by Babur at the Battle of Ghaghra. Mughal rule formally began with the Battle of Raj Mahal when the last reigning Sultan of Bengal was defeated by the forces of Akbar. The Bengal Subah was created. 13.2 The Emergence of Bengal Bengal was conquered and brought under the Sultanate of Delhi by Ikhtiyar-ud-din Muhammad bin Bakhtiyar Khalji during the last decade of the 12th century A.D. But after his death, his successors tried to assert their independence. They were encouraged in their design, as the province was rich and was far away from Delhi, and the people, who were anxious to enjoy local autonomy, probably supported them. Balban compelled Bengal to accept the suzerainty of Delhi and appointed his son, Bughra Khan, its governor. But after his death, Bughra Khan asserted his independence. Ghiyasuddin Tughlaq tried to solve the problem by partitioning Bengal into three independent administrative divisions. These were Lakhnauti in Malda district, Satgaon (Hugli district) and Sonargaon (Dacca district). Even this did not help to prevent the Bengalis from becoming rebellious. Muhammad bin Tughlaq had to take steps to assert the supremacy of Delhi. But even before his death the province again cut off its connection with Delhi. After 1345, Haji Ilyas undid the partition and became the ruler of united Bengal under the title of Shamsh-ud-din Ilyas Shah.

NSOU ??CC - HI - 07 189 Shamsuddin Ilyas Shah extended his dominion in the west from Tirhut to Champaran and Gorakhpur and finally upto Benaras. This forced Firuz Tughlaq to undertake a campaign against him. In the pitched battle that followed, Firuz Tughluq, occupied Pandua, the capital of Bengal and forced Ilyas to seek shelter in the strong fort of Ekdala. After a siege of two months Firuz forced Ilyas to go out of the fort on the 190 NSOU ??CC - HI - 07 pretext of a fight. The Bengal forces were defeated, but Ilyas once again retreated into Ekdala. Finally, a treaty of friendship was considered by which the river Kosi in Bihar was made to form a boundary of sorts between the two kingdoms. Though Ilyas exchanged regular gifts with Firuz, he was in no way subordinate to him. Friendly relations with Delhi enabled Ilyas to extend his control over the Kingdom of Kamrup (in modern Assam). He also made plundering raids upto Kathmandu in Nepal and in Orissa. Ilyas Shah was a popular ruler and had many achievements to his credit. When Firuz was at Pandua, he tried to win over the inhabitants of the city to his side by giving liberal grants of land to the nobles, the clergies, and other deserving people. His attempt failed. The popularity of Ilyas enabled him to set up a dynasty which, in one form or another, ruled for more than a hundred years. Firuz Tughlaq invaded Bengal a second time when Ilyas died and his son, Sikandar, succeeded to the throne. Sikandar followed the tactics of his father, and retreated to Ekdala. Firuz failed, once again, to capture it, and had to beat a retreat. After this Bengal was left alone for about two hundred years and was not invaded again till 1538 after the Mughals had established their power at Delhi. It was overrun by Sher Shah in 1538, but Akbar had to reconquer it after the end of the Sur dynasty. The prosperity of Sikandar's reign is evidenced by the many architectural remains of his age such as the mosque at Adina, built by the Sultan in A.D 1368, which ranks as one of the most famous monuments of the Muslim rule in India. But the last years of Sikandar's life was embittered by palace intrigues. He had seventeen sons by his first wife and only one by the second. The latter, suspecting that his father's ears were poisoned against him by his stepmother, fled to Sonargaon and openly revolted against his father. He conquered Sonargaon and Satgaon and the long-drawn contest was finally decided in his favour in a pitched battle near the capital city in which Sikandar was defeated and killed (1390-91 A.D). The successful rebel prince ascended the throne under the title of Ghiyasuddin Azam Shah. According to the Assam Buranjis, Azam Shah led a military campaign against Kamata when its king was engaged in hostilities with the neighbouring Ahom king. In the face of the Muslim invasion the two Hindu kings made up their quarrel and drove the Bengal army beyond the Karotoya.

NSOU ??CC - HI - 07 191 Meng-tsau-mwun (Naraimekhala), the king of Arakan, being expelled from his kingdom took shelter in the court of Azam who made an unsuccessful effort to restore him to his throne. Azam maintained friendly relations with Khvaja Jahan, who founded the independent kingdom of Jaunpur. According to the Arakanese chronicle the next king of Jaunpur, Ibrahim invaded Bengal. The attack was, however, successfully repulsed with the new tactical methods of war introduced by the fugitive king of Arakan who lived in the court of Pandua at that time. Ghiyas-ud-din Azam Shah was the next famous Sultan in the dynasty of Ilyas Shah. He was known for his love of justice. It is said that once he accidentally killed the son of a widow who complained to the Qazi. The Sultan, when summoned to the court, humbly appeared and paid the fine imposed by the Qazi. At the end of the trial, the Sultan told the qazi that if he had failed in his duty, he would have had him beheaded. The Qazi told him that he would have had him scourged if he had not obeyed his orders. Azam Shah had close relations with the famous learned men of his times, including the celebrated Persian poet, Hafiz of Shiraz. He re-established friendly relations with the Chinese. The Chinese Emperor received his envoy cordially and, in 1409 sent his own envoy with presents to the Sultan and his wife, and as a request to send Buddhist monks to China. This was accordingly done. Incidentally this shows that Buddhism had not died completely in Bengal till then. The revival of contact with China helped in the growth of the overseas trade of Bengal. Chittagong became a flourishing port for trade with China. Ocean going ships were built in Bengal, and its exports included fine quality textiles. Bengal also became a centre for the re-export of Chinese goods. Mahuan, the Chinese interpreter to the Chinese envoy, has left an account, and mentioned mulberry trees and the production of silk in Bengal, and paper which was as glossy as deer's skin. During this period many Sufis came to Bengal. They were welcomed by the Sultan and encouraged with grant of rent-free land. These saints impressed the people by their simple style of living, and their deep devotion and saintliness. These saints are credited with effecting conversions to Islam on a large scale, particularly in the eastern part of Bengal, where Buddhism was widely prevalent, and poverty was widespread. Perhaps the conversions were due in large measure to social, cultural and other factors, but credit for conversion was given to the blessing of the saints. Ghiyas-ud-din Azam Shah was succeeded by his son Saifuddin Hamzah Shah whose coins are dated 813 and 814 A.H. He, therefore, probably ruled from 1400 to 1412. The

192 NSOU ??CC - HI - 07 Chinese sources, however, suggest that he ruled till AD 1420. The Chinese sources, however, suggest that he ruled till A.D 1420. But, as the next three kings regularly issued coins in 816, 817 and 818 A.H, it is difficult to accept the Chinese version, unless we accept the suggestion that there were rival claimants ruling simultaneously in different parts of the kingdom. But we have no evidence in support of such an unusual state of things. The only fact known about Saif-ud-din is that he continued the friendly relation with the Chinese court. Shihab-ud-din Bayazid Shah, the son and successor of Saif-ud-din Hamzah Shah, continued the friendly relation with China and once sent a giraffe to the Chinese Emperor with a letter written on a golden leaf. The animal, unknown in China, aroused great curiosity in the country. Shihab-ud-din Bayazid Shah issued coins in 816 and 817 A.H. Coins were issued by his son Alauddin Firuz Shah in 817 A.H from Muazzamabad and Satgaon. It is not unlikely, therefore, that Alauddin exasperated with the ascendancy of Raja Ganesha at his father's court, set himself up as an independent monarch in East and South Bengal. It is, of course, equally, or even more possible that the death of the father and accession of the son took place in the course of the year 817A.H. In any case we find a new monarch, Jalal-ud-din Muhammad, issuing coins in 818A.H (A.D 1415-16) bringing to an end for the time being, the rule of the Ilyas Shahi dynasty. During the reigns of the successor of Sikandar Shah occurred an event, almost unique in character in the annals of Muslim rule in India, namely the successful usurpation of royal authority by a Hindu chief. Unfortunately, though the main fact is beyond all doubt, the details of this Hindu interregnum are not known with any definiteness. The name of the Hindu usurper is written by Muslim historians as Raja Kans or Kansi, but some Hindu sources give it as Ganesha, and this is now regarded as the real name. He was a local zamindar in north Bengal (of Dinajpur or Rajshahi according to different traditions) and is referred to in a contemporary Muslim source as a member of a very old zamindar family of 400 years standing. Ganesha came into prominence during the reign of Ghiyasuddin Azam Shah. According to the Riyaz, a Muslim chronicle written in A.D 1788, Sultan Azam Shah was treacherously killed by Ganesha, but this is not corroborated by any other source. In any case, we know that the Sultan was succeeded by his son, Saif-ud-din Hamzah Shah and the latter by Shihab-ud-din Bayazid Shah. But all our main sources indicate that Saifuddin was a very weak ruler and the real power was wielded by the nobles,

NSOU ??CC - HI - 07 193 generals and the influential members of the government. It appears that Ganesha became the most powerful among these nobles and played an important political role after the death of Ghiyasuddin Azam Shah. Firishta says that Ganesha "attained to great power and predominance during Shihab-ud-din's reign and became the defacto master of the treasury and kingdom". This is probably true. The Riyaz, which represents Raja Ganesha as having crowned himself king of Bengal after killing Shihab-ud-din gives long and circumstantial narrative of his reign which may be summed up as follows: - "Raja Ganesha subjugated the whole kingdom of Bengal. He oppressed the Muslims, slew a number of them, and his aim was to extirpate Islam from his dominions. Thereupon the great saint Nur Qutb-ul-Alam appealed to the Sharqi ruler, Sultan Ibrahim, to save Islam. The Sultan accordingly invaded Bengal with an army. Thereupon Raja Ganesha waited on the saint and asked for his forgiveness and protection. The saint agreed to intercede for him provided he adopted Islam. Raja Ganesha agreed, but his wife having objected to this course, his son, Jadu, a boy of twelve, was converted by the saint, renamed Jalal-ud-din and placed him on the throne. At the request of the saint, Sultan Ibrahim returned to his kingdom and died shortly after. As soon as Ganesha heard this news, he set aside his son and himself ascended the throne for the second time. He again began to oppress the Muslims and even had the son of the saint murdered by his agent. At that very moment Ganesha also died... Jalal-ud-din, who was reconverted to Hinduism by his father, had refused to re-embrace Hinduism. According to some account, he was in prison but slew his father with the help of some servants. The rule of Ganesha lasted for seven years." Dr.N.K. Bhattasali formulated an ingenious theory about the history of Raja Ganesha mainly on the lines of the Riyaz's narrative. According to him Ganesha assumed the title Danujamardana-deva on ascending the throne in 1417 and ruled for a short period of less than two years, after which his son again occupied the throne in A.D 1419. Dr. Bhattasali further held the view that Mahendra-deva was the title assumed by the son of Ganesha after his reconversion to Hinduism and before his second conversion to Islam(after his father's death) when he again took the name Jalal-ud-din. This view is, however, not accepted even by those who favour the identification of Ganesha with Danujamardana-deva. Some of them hold that after the death of Ganesha, the Hindu party in the court raised the second son to the throne under the title Mahendra-deva, who was soon ousted by his renegade elder brother Jalal-ud-din.

194 NSOU ??CC - HI - 07 Recently a writer has urged the view that Ganesha never actually ascended the throne, but was defacto ruler for seven years during the reigns of the puppet king Alauddin Firuz and his own son Jalal-ud-din who succeeded Alauddin Firuz immediately after his death. The same writer regards Danujamardana-deva and Mahendra-deva as local chiefs in East and South Bengal who asserted independence during the troubles caused by the usurpation of Ganesha and the invasions of Ibrahim Shah Sharqi. But whatever view one might take regarding the theory of Dr.Bhattasali, the fact remains that Raja Ganesha, a Hindu Chief wielded royal authority either as a defacto or dejure king for some time and succeeded in passing the inheritance to his family. This reveals the strength of the Hindu chief at the time, a conclusion which gains additional force if Danujamardana-deva and Mahendra-deva are regarded as local rulers of East and South Bengal, who asserted independence and maintained it for more than two years. Though we possess all but a vague picture of Raja Ganesha as the ruler of Bengal, all authorities agree that he was succeeded by his son who had assumed the title Jalal-ud-din Muhammad Shah on his conversion to Islamic faith. Jalal-ud-din ruled with absolute authority over the whole of Bengal from the Kusi river in the north-west to Chittagong on the south-east, and from Fathabad and Satgaon in South Bengal to the border of the Karatoya in the north-east. His coins issued in 821 A.H (A.D 1418) from Fathabad, generally identified with Faridpur town, show that this region was conquered and brought under the Muslim rule during his reign. If Ganesha alias Danujamardana-deva extended his authority over Chittagong, Jalal-ud-din Muhammad, as his successor, consolidated his authority over it and annexed to it a portion of Tipperah. Jalal-ud-din's contemporaries Mukuta Manikya and Maha Manikya on the throne of Tipperah if the account of the Rajamala is to be believed, where feeble rulers, and the submission of any of these two kings to the authority of the Bengal Sultans is quite plausible. A coin issued from a new mint town read as 'Rotaspur' by Lane-Poole would favour the view of Jalal-ud-din's extension of authority over Rohtasgarh in South Bihar. Originally, a Hindu, but converted into Islam, Jalal-ud-din ruled Bengal roughly from A.D 1415 to 1431. He extended the frontiers of the kingdom of Bengal, and kept up overseas communication with China which perhaps stimulated the growth of Chittagong as an entreport of trade. The coins from Muazzamabad, near Sonargaon after the lapse of two decades, and the new mint-town of Fathabad presumably indicate their growth as ports, consequent on the expansion of river-borne trade.

NSOU ??CC - HI - 07 195 The singular fact about this monarch is that though a neo-Muslim, he was free from bigotry, which is usually the characteristic of such persons. His mortal remains are buried in the superb mausoleum, Eklakhi tomb in Pandua, which is regarded by Cunningham as a very fine specimen of Muslim architectural style in Bengal in the pre-Mughal age. Jalal-ud-din Muhammad was succeeded by his son, Shams-ud-din Ahmad Shah, who ruled for a short period from A.D 1431 to 1435. According to Firishta, he followed the liberal policy of his father and was renowned for justice and charity. The only important event that is known of his reign was the invasion of his kingdom by Ibrahim Shah Sharqi of Jaunpur. Ahmad Shah, unable to withstand him in the field, appealed to Shah Rukh, the son of Timur, in Herat, seeking his intervention. The Bengal envoys rounded the entire coast of India, in a seafaring vessel, and Shaikh-ul-Islam Karim-ud-din Abul-i-Mukarim Jami was sent by the King of Herat with a message to the Sharqi king, forbidding such an aggression. Ahmad Shah kept up the friendly intercourse with China and a Chinese embassy visited Bengal in A.D 1431-1432. Ahmad Shah's reign was abruptly terminated by his assassination in the hands of two of his nobles, Shadi Khan and Nasir Khan, in A.D 1436. It has been surmised that the Sultan's murder was precipitated by the outbreak of a "sort of rivalry between the Hindu and Muslim nobles". Such an inference is farfetched and rests on not very solid ground. After the assassination of Shams-ud-din Ahmad Shah, Shadi Khan and Nasir Khan fell out with each other and were overthrown one after the other. A member of the Ilyas Shah dynasty now ascended the throne under the title of Nasir-ud-din Mahmud in 841 A.H (A.D 1437-1438). A large number of inscriptions belonging to his reign refer to the construction of public works and generally indicate an era of peace and prosperity. This was partly due to the fact that he was freed from the menace of the Sharqi rulers on the western front on account of their long-drawn struggle with the Lodi Sultans. But there were military campaigns on other fronts. The kings of Orissa held a large part of Western Bengal, and probably extended their frontier to the Bhagirathi during the troubles of the second decade of the fifteenth century, King Kapilendra deva of Orissa is referred to in an inscription dated A.D 1447, as Gaudesvara (Lord of Gauda or West Bengal). He also claims to have defeated "Malika Parisa". This has been taken by some to refer to the Muslim Sultan of Bengal, and by others to Mallikarjuna, the king of Vijayanagara. Another inscription of Orissa refers to the defeat of two Turushka kings, one of whom has been identified with Nasiruddin Mahmud.

196 NSOU ??CC - HI - 07 There was also fighting on the Arakan front during his reign. Ali Khan, the successor of Mengtsau-mwun (Naraimekhala) mentioned above as having taken shelter with Sultan Ghiyas-ud-din Azam Shah, initiated the policy of pushing the frontier towards the north. He annexed Sandoway and Ramu and his successor, Baswpyu (Kalim Shah A.D 1459-1482), took possession of Chittagong in 1459, which remained usually in Arakanese hands until the Mughal conquest and occupation of the place in A.D 1666. In one direction, however, the frontier of Bengal was extended for the Bagerhat region of the Khulna district was conquered by Khan Jahan to whom the local tradition gives the credit of the first Muslim colonization of this area. An inscription on his tomb at Bagerhat records his death to have occurred in 863 A.H (A.D 1458-9). The transfer of the seat of royalty to Gaur probably took place during his reign and it was perhaps necessitated by a change in the course of the river on which the old capital Pandua stood. Mint towns and inscriptions of his reign, scattered all over the country from Bhagalpur to Bagerhat, testify to his extensive sway lasting until A.D 1459. As noted above, the Kusi had been the frontier of the kingdom of Bengal under the early Ilyas Shahis, but the inclusion of Bhagalpur within Mahmud Shah's territory shows that the western frontier had been advanced further west under him. Rukn-ud-din Barbak Shah who succeeded his father on the throne, was a powerful ruler. During his reign the frontiers of Bengal were extended in different directions for which popular tradition gives the credit to Shah Ismail Ghazi, a popular saint of North Bengal. He waged war with the Hindu kings of Kamata on the north-eastern and Gajapati Kapilendra, king of Orissa on the south-western frontier. The career of this warrior saint is narrated in a work entitled *Risalat-us-Shuhada* compiled by Pir Muhammad Shattari in A.D 1633. It appears from this work as well as the *Madlapanji*, the chronicle of the temple of Jagannatha at Puri, that he carried on his military operations against Orissa from his base at Mandaran, near Arambagh in Hugli district and that he was the master spirit directing the operations of the Bengal army in the long-drawn struggle against Orissa. Shah Ismail also distinguished himself in fighting with the king of Kamata which was separated from Bengal by the Karatoya. It is stated that the Ghazi contested the Kamata army at Santosh in Dinajpur district and sustained defeat. The Surma valley (Sylhet) was first conquered in 703 A.H (A.D 1303 - 4) by Sikandar Khan Ghazi, but it appears to have slipped from Muslim control after the reign of Fakhr-ud-din Mubarak Shah, sometime about A.D 1351. The Hatkhola inscription of 863 A.H (A.D 1458-59) shows that Sylhet was re-occupied by the Muslims under Rukn-

NSOU ??CC - HI - 07 197 ud-din Barbak Shah. The Arakanese had seized Chittagong during Nasir-ud-din Mahmud's reign, but it was reconquered by Barbak as he is referred to as the reigning king in the Rasti Khan inscriptions of 878 A.H (A.D 1473 – 74). Fathbad (generally identified with Faridpur town) had formed an integral part of Jalal-ud-din Muhammad Shah's kingdom but the network of rivers and channels still kept most of the Barisal district outside the pale of the kingdom of Gaur. Military activity is indicated by the inscription of Ulugh-i-Iqrar Khan, mentioned as the Shiqdar of Jor and Barur, in the Purnia district and West Dinajpur. Barbak Shah's reign was remarkable in the history of medieval Bengal and the stir caused in the dormant life of the country was reflected in the vernacular work, Sri- Krishna –Vijaya, composed by Maladhar Basu, who was awarded the title of Gunaraj Khan. The prosperity of the kingdom was evinced by additions to the palace at Gaur, the digging of an underground channel for supply of water inside the palace and many laudatory phrases about the Sultan's personality and character. Rukn-ud-din Barbak was succeeded by his son Shams-ud-din Yusuf Shah who ruled until A.D 1481. He is described as a learned and virtuous man and an efficient administrator, but hardly anything is known about his reign. His coins do not bear the mint names but the distribution of his inscriptions from Gangarampur in Dinajpur district (opposite the port of Narayanganj) and Mirpur, about seven miles north of Dacca, to Pandua in the Hugli district, indicate the extent of his sway. Similarly, the buildings erected in his reign indicate the prosperity of the times. He was the builder of the Jami Mosque at Darrasbari in A.D 1479 and perhaps also the founder of the college which stamped its name upon the locality. Cunningham and Creighton have also ascribed to him the erection of three other superb buildings at Gaur – i) Chamkatti mosque, ii) Lotton Masjid , iii)Tantipara mosque. Yusuf was succeeded by Sikandar, probably his son, but Jalal-ud-din Fath Shah, a son of Sultan Nasiruddin Mahmud, ascended the throne after deposing Sikandar Shah on the ground that he was afflicted with lunacy. About this time the body of Abyssinian slaves, first employed by Rukn-ud-din Barbak as palace guards, grew very powerful and insolent. The Sultan took steps to curb their power and, as a result, was assassinated by the commander of the palace guards, Sultan Shahzada, who ascended the throne under the title of Barbak Shah. Hardly had six months elapsed when he was supplanted by the Abyssinian commander of the army, Amir-ul Umara Malik Andil, who assumed

198 NSOU ??CC - HI - 07 the sceptre under the title of Saifuddin Firuz in A.D 1487. Thus ended the rule of the Ilyas Shahi dynasty which forms a brilliant chapter in the history of medieval Bengal. The accession of Saif-ud-din Firuz led to the rule of the Abyssinians at Gaur for a period of six years. He was an able ruler and the inscriptions testify to his sway from Sherpur in Mymensingh District in the north to Satgaon in the South. Nasir-ud-din Mahmud, who succeeded Firuz in A.D 1490 is stated by Firishta to have been a son of Jalal-ud-din Fath Shah. This is more likely than the description of him by Nizam-ud-din as the son of Firuz, for the extant coins do not mention his royal descent. He was very young and the administration was carried on by the regent Habash Khan, an Abyssinian, who was shortly killed by another Abyssinian, named Sidi Badr. Sidi Badr, who assumed the regency, had the boy-king killed with the help of the palace guards and ascended the throne under the title of Shams-ud-din Muzaffur Shah (A.D 1491). He is described as a tyrant whose violence and cruelty alienated the nobles as well as the common people. It was mainly due to the ability and wisdom of his Wazir, Sayyid Husain, that he could maintain his rule for three years. But his ruthless massacre of the nobility and his exorbitant demands of revenue precipitated an armed rising which was aggravated by the disaffection of the soldiers caused by the reduction of their pay. The Wazir, Sayyid Husain, secretly sympathized with the rebels and ultimately put himself openly at their head. The rebels besieged the citadel where the Sultan had shut himself with a few thousand mercenaries. The siege dragged on for four months and, according to Firishta, the Sultan lost his life in course of a desperate sally from the citadel. But according to Nizam-ud-din, he was secretly assassinated by Sayyid Husain with the help of the paiks. Thus ended the dark period of Abyssinian rule in Bengal. The stages by which Husain came to occupy the post of chief minister of Muzaffar Shah are not known to us. He showed remarkable wisdom and prudence in discharging the duties of his high office, but as he could clearly apprehend the doom that was sure to overwhelm the tyrannical ruler he joined the rebels and led them to victory. Thereupon the popular choice naturally fell upon him, particularly as no member of the House of Ilyas Shah seems to have survived the Abyssinian rule, and he ascended the throne under the title Alauddin Hussain Shah, probably in A.D 1493. Husain gave evidence of his firmness immediately on his accession to the throne. He issued strict orders to the victorious soldiers to desist from pillaging the capital city, but as they continued to plunder, he sternly put them down by executing twelve thousand of

NSOU ??CC - HI - 07 199 them. The search for the pillaged articles led to the discovery, among other things, of 13,000 gold plates, which indirectly reflects the wealth of the country. After the restoration of order in the capital, Sultan Husain took steps to consolidate his position. He disbanded the paiks who, by the strength of organization and solidarity in their ranks had become the masters of the palace. He next dismissed the large body of Abyssinians who had filled the high posts in the administration, and expelled them from the country. He appointed Sayyids, Afghans, Turks and, the scions of the old aristocracy of the land in their place and, supported by them, restored order and security in the country. Alauddin Husain Shah's reign forms an epoch in the history of independent medieval Bengal. It was a reign of long duration during which the Sultan, by his liberal policy, administrative efficiency, and territorial conquests developed the prosperity of the country, a fact, amply attested by the monuments erected during his time. The embarrassing pre-occupation of Sultan Husain was the adjustment of his relation with the Sultans of Jaunpur and Delhi. About the time of Sultan Alauddin Husain's accession, interminable fighting between the Sultans of Jaunpur and the Lodi overlords of Delhi had practically caused an eclipse of the Sharqi power which was then confined only to Bihar. In A.D 1495 Sultan Sikandar Lodi led his army into this stronghold of the Sharqi king, who implored the protection of the Bengal Sultan. Alauddin Husain, who was watching the development, promptly responded by deputed a force under his son Daniyal, against the Afghan army. The two forces met at Barh, about 30 miles east of Patna. It is a testimony to Husain's armed strength that Sultan Sikandar halted the advance of his army in the face of the Bengali opposition, and concluded a treaty of friendship on terms of territorial statuesque and guarantee of non-aggression into each other's territory. According to this arrangement, the country to the west of Barh passed under Sultan Sikandar's authority, while the country east of it, including Mungir and South Bihar, remained under Sultan Alauddin Husain's occupation. During the period A.D 1200-1493 the Muslim Sultanate of Bengal had gradually extended up to the hill ranges on the eastern frontier. The annexation of a huge portion of Bihar and the influx of the disbanded Jaunpur soldiery that followed the dissolution of the Sharqi kingdom, now infused a new vigour to the Bengal Sultanate. Sultan Husain's first target of attack was the Kamata Kamrup kingdom which had long been a great bulwark against Muslim penetration in the north-east. Nilambara, the king of Kamata, fell out with his minister, who thereupon came to the court of Gaur and incited the 200 NSOU ??CC - HI - 07 Sultan to a war against his old master. Husain, fell in with this idea, and according to a popular tradition, the war was carried into the Kamata territory by Shah Ismail Ghazi. The capital city was well fortified, but the Muslim army gained admission into it by a ruse, took king Nilambara prisoner, and pillaged the city. This was followed by the advance of the Muslim army, and the whole kingdom as far as Hajo in the Kamrup district was permanently annexed. The whole operation lasted presumably from A.D 1499 to 1502. The Kamata Kamrup expedition was followed by that against Jajnagar –Orissa whose frontier extended as far as the river Sarasvati, embracing within its fold practically the whole of Midnapore and part of the Hugli district. Gajapati Kapilendra and his successor Prataparudra were mighty kings whose forces constantly menaced the enemy and carried on intermittent skirmishes on the long frontier along the river Sarasvati which carried the volume of the water of the Ganga in those days. According to the Madlapanji, the chronicle of the Jagannatha temple, Shah Ismail Ghazi issued out of his base at Mandaran in Arambagh district about 1508-09 and swept onward in a lightning campaign to Puri, raiding Jajpur and Katak on the way, and destroying many Hindu temples. The resounding victory was celebrated by the issue of coins stamped in the name of Jajnagar-Orissa. At the news of the sudden burst of the Muslim army, Gajapati Prataparudra returned from the campaign in the south and drove back the invading force until he reached Mandaran near Arambagh. The fortress was besieged by the exultant Oriya army, but they failed to take it owing to the treachery of an officer named Govinda Vidyadhara. Sultan Husain's lightning raid was a brilliant success. His forces, however, had to beat a hurried retreat from Orissa and any modification in the Bengal-Orissa frontier proved to be a task beyond his strength, in spite of his increased strength and resources. Hostility was intermittent along the border throughout the reign, as would be borne out by the account of Chaitanya's journey to Orissa, when he had to cross the Ganga at Sri Chhatrabhog with the aid of the local frontier official, Ramachandra Khan, in A.D 1509. On his return journey four years later, Sri Chaitanya found the frontier disturbed as before. It appears that Sultan Husain's success here was limited to maintaining the status quo against the great rival Prataparudra. In the segment of the eastern frontier abutting on Tippera, also, the Sultan achieved very little success. According to a late chronicle, the Rajamala, he despatched his army on four successive occasions, but the hill people fought heroically and do not appear to have yielded ground at all. The first expedition is said to have been an abject failure.

NSOU ??CC - HI - 07 201 The second achieved some initial success by advancing beyond Comilla and seizing the fort of Meherkul, but the Tiperai general, alleged to be Rai Chaichag, annihilated the Bengali force in course of its advance towards the capital, Rangamati, by a novel stratagem. The way lay across the Gumti which had to be forded. Rai Chaichag dammed the river at a place higher up the ford. As soon as the Muslim army began to cross it, the dam was cut off, upon which the roaring water swept away the horses and decimated the bulk of the army. The third expedition shared a similar fate. The fourth expedition was distinguished by an engagement near the Kailargarh fort, with perhaps indecisive result. Husain Shah also sent military expeditions against Arakan. It appears that Arakanese had helped Raja Dhanya Manikya in his struggle against Sultan Husain in the closing phase of the war, and gained possession of Chittagong by expelling the Bengali officers. In other words, Tippera war became merged in that with the Arakanese. The conduct of the operation was assigned to Paragal Khan who advanced from his base on the Feni river. Hostilities appear to have lasted from A.D 1513 to 1516. After Paragal, his son Chhuti Khan assumed charge of the campaign against the Arakanese which continued until Chittagong was wrested from the control. The Arakan campaign was probably the last military expedition during the reign of Husain Shah who died in A.D 1519. His reign is a memorable chapter in the history of medieval Bengal. After a period of troubles and turmoil he not only restored peace and prosperity in the country, but also extended the frontier of his kingdom in all directions. By his military exploits he added to his dominion a portion of modern Bihar and Assam, and recovered Chittagong from the Arakanese. In spite of almost continual fighting, the reign of Husain is noted for many works of public utility and witnessed a remarkable development of Bengali literature. It was during his reign that Chaitanya preached his religion which ushered in a new era of social and religious reform among the Hindus in Bengal. The liberal attitude of Husain Shah towards the Hindus was an important factor in the renaissance of Bengal. Viewed as a whole, it may be said without much exaggeration, that under Sultan Husain Shah, Bengal enjoyed such a spell of peace, prosperity and all round progress as she had not done before under any other Sultan. His reign may justly be looked upon as the most glorious in medieval Bengal. On Sultan Husain's death, the crown passed on to his eldest son Nusrat Shah, who followed the vigorous policy of his father and attempted to achieve the expansion of 202 NSOU ??CC - HI - 07 Bengal's frontier in the east and west. Sultan Nusrat's reign coincided with remarkable changes in the political set-up of northern India. In the early years of his reign the coalescence of the Afghans in eastern India against Sultan Ibrahim Lodi favoured his aggressive designs. According to Ghulam Husain Salim, he conquered Tirhut. In A.D 1526 the Afghan supremacy was overthrown and the Mughals established themselves in their place. The Mughal conquest of Delhi and Agra followed by the dislodgement of the Afghans from their strongholds in the Doab, presented to Sultan Nusrat the problem of defending his kingdom against the Afghans driven eastward by Babur at the head of an army deemed invincible. Nusrat as the heir to his father's conquest in Kamata-Kamrup carried on an active warfare in the eastern front and invaded the Ahom kingdom of the Upper Brahmaputra valley in 1527. He was however defeated on all fronts by the Ahoms who pursued the Muslim troops as far as the Burai river. According to the Ahom Buranjis, the Ahoms took the offensive in A.D 1529 and advanced along the Brahmaputra towards Hajo, the Muslim headquarter in this region. The Bengalis suffered the first reverse in a naval action at Temani (Trimohini) but they recovered from it and attacked the Ahom post at Singiri under their general Bit Malik who was defeated and driven back with heavy loss. After Sultan Nusrat's assassination in 1532 the military operations were conducted by Turbak who captured the Ahom posts of Singiri and Sola, but the Ahoms got the better of him in two successive engagements, one on the Dikral river in Sibsagar District and the other on the Bharati river in Tejpur District. In the stormy times that followed Nusrat's assassination, the conquests in Assam and Kamata territory slipped away, and the two kingdoms pursued their own affairs without any interference from Bengal for nearly a century and a half. Nusrat was a great patron of Bengal literature, and his reign is memorable for a number of noble edifices erected during that period. Chief among these is the Great Golden Mosque (Bara Sona Masjid) built in A.D 1526, which, on account of its dimensions, is reckoned as the largest of the ancient monuments in Gaur. Increase of wealth as a consequence of the overseas trade was also reflected in the building of mosques at important ports and marts, e.g at Satgaon in 1529, Sonargaon in 1523 and Mangalkot in 1524. Sultan Nusrat lost his life at the hands of an assassin in A.D 1532 upon which his son Alauddin Firuz seized the throne. He was supplanted shortly after by his uncle, Ghiya- suddin Mahmud Shah (AD 1533-38), the son of Alauddin Husain Shah, who was the

NSOU ??CC - HI - 07 203 last representative of the line of independent Muslim Sultans of Bengal. He was overthrown after a short reign by the Afghan genius Sher Khan Sur. He has been condemned as having caused "the extinction of Bengal's independence by his incompetence". Sultan Mahmud appears to have been a gay, pleasure loving monarch. According to the Portuguese account, his harem contained ten thousand women. In such a decadent atmosphere he might have lost his soldierly qualities and thereby become unfit for parrying blows with Sher Khan Afghan. 13.3 Conclusion Bengal Sultanate was ruled by five dynasties. These included the Ilyas Shahi dynasty, the Hussain Shahi dynasty, the Suri dynasty, the Karrani dynasty and the dynasty established by Jalaluddin Muhammad Shah. The sultanate's reign was interrupted by Raja Ganesha's coup and the rebellion of African mercenaries in the 15th-century; and the invasion of Sher Shah Suri in the 16th-century. The kingdom began to disintegrate in the 16th century, in the aftermath of Sher Shah Suri's conquests. The Mughal Empire began to absorb Bengal under its first emperor, Babur. The second Mughal emperor Humayun occupied the Bengali capital of Gaurh. In 1576, the armed forces of emperor Akbar defeated the last reigning Sultan Daud Khan Karrani. The region later became Mughal Bengal. 13.4 Model Questions Short Questions : 1) What was the role of Shamsuddin Ilyas Shah in the foundation of Bengal Sultanate? 2) Who was Raja Ganesha? Essay Type Question : 1) In what respect does the reign of Ilyas Shah open up a new chapter in the history of Bengal? 2) How did the Ilyas Shahi and Hussain Shahi rulers establish their political authority in Bengal? 13.5 Suggested Readings

The rulers of the various provincial dynasties that came into existence on the decline of the Sultanate under the later Tughluqs were also builders of palaces, mosques and tombs. Though in essential features the various provincial styles resemble that of Delhi, they differ from it, and among themselves, in some important details. The Delhi architecture for example, was more remarkably splendid than that of many a provincial kingdom, the rulers of which could not afford to spend as much money as the Sultans of Delhi. Moreover, the provincial styles of architecture were modified by the local art traditions of pre-Turkish period that still held the field and also by the peculiar conditions that prevailed at various provinces. 14.1 Introduction Regional styles of architecture proceeded to develop a form that suited their individual requirements. The regional styles of architecture

Two major strands of architectural style in eastern India were Bengal and Jaunpur, both which witnessed the rise of regional states. 14.2.1 Bengal

Architectural activities of the Islamic rulers of Bengal seem to have begun with the establishment of the Islamic rule in the province by Ikhtiyaruddin Muhammad bin Bakhtiyar

206 NSOU ??CC - HI - 07 Khalji about the close of the twelfth century A.D. Epigraphic records testify to the erection of mosques in Bengal during the thirteenth century and the first quarter of the fourteenth century, one at Pinchhli, eight miles to the north-west of Malda by Sultan Iltutmish; another at Tribeni (Hooghly District) by Zafar Khan Ghazi (A.D. 1298), and a third at Gaumalti, near Gaur (Malda district) in A.D. 1311. But none of these or other early Muslim monuments in Bengal have survived. No existing Muslim monument in Bengal can be dated earlier than the middle of the fourteenth century A.D and the extant remains all belong to the period of a little over two centuries (1338- 1576). Mosques and tombs, representing the religious side of architecture, naturally followed the characteristic forms of Muslim architecture in India and elsewhere. But in details of construction and design there evolved a local individuality, due to contact with, and assimilation of, the earlier practices in this region. These religious buildings may be divided stylistically into the following groups: 1) Oblong type with a vaulted central nave and multi-domed side wings; 2) Single-domed square type; 3) Multi-domed oblong type; and 4) Single-domed type with corridors running on three sides. The earliest of the extant types of Muslim buildings in Bengal is characterized by an oblong structure, divided into a central nave and two side wings. The central nave is covered by an elongated vault, which is a continuation of the main front arch that spans the entire width and height of the nave. The wings which are several aisles deep, are roofed by low hemispherical domes, their number depending on the number of interspaces formed by the division of the wings into bays and aisles. The oblong shape with the central nave higher than the two side wings are met with elsewhere in India, especially in Gujarat, but the tall and elongated barrel-shaped vault covering the nave and the other details and particulars of the type are, on the whole, peculiar to Bengal and seldom found outside its limit. Of this type we have only a few extant examples, namely the Adina mosque at Hazarat Pandua (Malda district) and the Gunamant mosque and the Darasbari mosque, both at Gaur. The famous Jami mosque, known as Adina, was built by Sultan Sikandar Shah in A.D 1369 or 1374 and as Marshall says, by a strange co-incidence, the first monument extant in Bengal "was also the most ambitious structure of its kind ever essayed in Eastern India". Almost as big as the great mosque at Damascus, it covers an area of 507 feet 6

NSOU ??CC - HI - 07 207 inches by 285 feet 6 inches externally, and consists, on the inside, of four great cloisters surrounding a central courtyard 397 feet by 159 feet. The western range of cloister, forming the prayer chamber, is five aisles deep, while the remaining ones have only three. This great composition had not been provided with any imposing entrance gateway. An arched opening in the middle of the east side and three archways at the eastern end of the southern cloister were probably meant for public use, while two small doorways in the rear wall of the western cloister were probably intended for the Mullas and other dignitaries. Attached to the northern half of the back wall of the prayer chamber is a square chamber, in which Sikandar Shah is said to have been buried. There are three entrances from this chamber to the Badshah ka Takht in the north-western wing of the western cloister, possibly for the use of the royal family. The Gunamant and the Darasbari mosques at Gaur also belong to a conception identical to that of the Adina mosque, though their dimensions are much smaller. The Gunamant and the Darasbari mosques have been dated respectively in A.D 1484 and 1479 on the strength of two inscriptions found near them. The vaulted roof of the central nave in the Gunamant still exists and shows the use of vertical ribs in association with a row of arched recesses at the bottom running along the entire length on either side. It is not known whether this feature was also present in the Adina and the Darasbari, as vaulted roofs of both have collapsed. The second type is characterized by a single-domed square building and absence of pillars inside the hall, which are common in the first and third types. The earliest example of the single domed square type is the Eklakhi mausoleum at Hazarat Pandua, traditionally reputed to be the tomb of Jalal-uddin Muhammad Shah (A.D 1415-31). The fabric is of brick, occasionally interspersed with horn-blende slabs collected from older Hindu buildings. Externally, the dimensions are nearly square, being 78 feet 6 inches by 74 feet 6 inches. The interior, however, is an octagon of 48 feet 6 inches diameter. There are four arched doorways, one on each face, and four cells in the thickness of the walls inside, each one at each of the four corners. The semicircular dome rises directly from the octagon of the interior. There is no cylindrical or octagonal drum as support for the dome which looks low and stunted. This loss of height on account of the absence of any seat for the dome is a common weakness of Muslim buildings in Bengal, and no monument attains that grandeur which is characteristic of Islamic buildings elsewhere.

208 NSOU ??CC - HI - 07 What is known as the Chika Masjid or the 'Bat's mosque' at Gaur is an exact copy of the Eklakhi, except for its dimensions which are slightly smaller. Though described as a masjid locally, there is no prayer niche in the western wall. Creighton described it as a gate on the basis of an inscription, discovered by Francklin, recording the erection of a gateway in 1504 A.D by Alauddin Husain Shah. But the building appears to be much earlier and Cunningham is inclined to regard it as a tomb, perhaps of Mahmud I (A.D 1437-59). But no trace of any grave has been found inside the building, and local tradition connects the building with the state prison where Husain Shah confined his minister Sanatan. To the same type belongs the smaller mosque at Chhota Pandua (Hooghly district) (A.D 1577), the old mosque at Goadihi, Sonargaon (A.D 1519), and the old mosque at Molla Simla (Hooghly district). There is, however, a necessary modification of the design in the provision of mihrab niches in the western wall. In a few mosques of this order the design is found slightly elaborated by the provision of a corridor in front of the prayer hall. The prayer hall is covered by a single dome, and the corridor, by three smaller domes, in conformity with the three bays formed by three entrance archways in front. Among the monuments of this order mention should be made of the mosque at Gopalganj (Dinajpur district) erected in A.D 1460, the Chamkatti and the Lotan mosque at Gaur, both assigned to the reign of Yusuf Shah, the mosque at Kheraul (Murshidabad district) and the Rukn Khan mosque at Debikot (Dinajpur district), erected respectively in A.D 1494 and A.D 1512. Among these, the Lotan mosque, traditionally connected with a beautiful dancer of the royal court, is of more than ordinary interest. A pleasing variety has been obtained in this mosque by grading the dimensions of the different archways. Another variation may be noticed in the provision of six corner turrets, instead of the usual four at the four corners of the hall, there being an additional one at either end of the corridor. Still more commendable is the construction of the massive dome which is supported on a drum, cylindrical outside and of the shape of a flattened vault inside. This support adds to the height and dignity of the building, and also to the organic beauty which is unfortunately lacking in the majority of the buildings of this kind in Bengal. The third type is characterized by an oblong structure, divided into several aisles by rows of pillars, supporting the arches of the domes, and cut into a number of bays, corresponding to the number of prayer niches in the back wall and arched openings in front. The roof consists of successive rows of low and small domes, their number depending

NSOU ??CC - HI - 07 209 on the number of interspaces formed by the division of the interior into bays and aisles. As usual in Bengal, curved cornices and polygonal corner turrets are also characteristic elements of such a structure. Manmohan Chakravarti describes the type as "many-domed paralleliped". The oldest extant building of this group cannot be dated earlier than the latter half of the fifteenth century A.D. This group has several sub-varieties, distinguished by the number of bays in the interior, such as a) three-bayed, b) five-bayed, c) eleven bayed and d) twenty-one bayed. The three bayed buildings are nearly square, the proportion between length and breadth being approximately 3:2. The bays correspond to the three mihrab niches in the back wall and the three archways in front. Buildings of this order are usually small and unpretentious, and among the examples may be mentioned the Salik mosque at Basirhat (Twenty-Four Parganas), Baba Adam's mosque at Vikrampur, Jalal-ud-din's mosque at Satgaon, the mosque at Kusumba (Rajshahi district), the Kasba mosque at Bakarganj district and the Jahaniyan mosque at Gaur. All of these seem to have been erected

70% MATCHING BLOCK 98/171

W

between the latter half of the fifteenth and the first half of the sixteenth century

A.D. The five-bayed buildings are long and rectangular structures with five mihrabs in the back wall and the five frontal archways. They are divided into two or three aisles, and the number of domes is either ten or fifteen accordingly. Among the extant monument of this group should be mentioned the Majlis Sahib's mosque at Kalna (Burdwan district), the Tantipara and the Chhoti Sona Masjid at Gaur, the old mosque at Hemtabad (Dinajpur district), the Zafar Khan mosque at Tribeni (Hooghly District) and the mosque at Bagha (Rajshahi district). The group includes few of the finest Muslim buildings in Bengal and of these, the Tantipara and the Chhoti Sona masjid at Gaur merit special attention. The former, probably erected about A.D 1480 has been described by Cunningham as "the finest of all buildings now remaining at Gaur". The long rectangular hall, 78 feet by 31 feet on the inside is divided into two aisles. Besides the five front arched openings corresponding to the number of mihrabs in the back wall, there are four more, two each in the two side walls. There was also probably an upper platform at the northern end. The ten domes in two rows of five each have all fallen down, as also a part of the arched façade. Yet, even in its ruined state it is one of the finest of all the Muslim buildings in Bengal on account of its rich and effective ornamentation in terracotta and the large decorated panels that stands out in relief against the plain

210 NSOU ??CC - HI - 07 walls. The rich colour of red bricks also add to the beauty of the building in contrast to the gaudy glazed bricks facing the Lotan masjid. The Chhoti Sona masjid was built by Wali Muhammad in the reign of Alauddin Husain Shah. It is a rectangular building, 70 feet 4 inches by 40 feet 9 inches on the inside and the comparative increase in the width leads to the division of the interior into three aisles by two rows of four pillars each. The building is faced with stone entirely on the outside and partially on the inside. There are carved decorations on the outer façade in very low relief, but they are more or less mechanical, and lack the spontaneity of the exquisite ornamentations in the Tantipara mosque. The eleven bayed mosque are rather rare, only two being known so far. They are the Bari Sona masjid at Gaur and the Sath Gumbad mosque at Jat Bagerhat (Khulna district). The Bari Sona masjid at Gaur, erected by Sultan Nasrat Shah in A.D 1526, is a massive rectangular building, 168 feet by 76 feet, with six corner turrets, four at the four corners of the hall and one at either end of the corridor in front. Like the Chhoti Sona Masjid, it also appears to have been originally gilded, but being sparingly adorned it attains a greater simplicity and impressive dignity, and Fergusson was inclined to regard it as "perhaps the finest memorial now left at Gaur". The Sath Gumbad at Bagerhat is associated with the name of Khan-i-Jahan Ali and consists of a long rectangular building, internally 134 feet by 96 feet, divided into seven aisles by means of slender pillars, each aisle communicating with an arched opening in each of the two side walls. The fourth, the single-domed type with corridors running along the three sides, is represented by a single specimen, the Qadam Rasul at Gaur built by Nusrat Shah in A.D 1531. It consists of a rectangular hall, 19 feet square, with corridors running along the front and two sides. The hall itself has three doors, one in front and one each on either side. The corridor has three frontal archways, supported on short and ponderous stone pillars, and two more on the two sides. The hall itself is covered by a single dome with a lotus-like pinnacle at the top, and the corridors by flat vaulted roofs. Except for the stone pillars supporting the archways in front, it is built of bricks and the façade is highly ornamented by horizontal bands and panels of carved brick. Only a few buildings of the secular order have survived in Bengal. The massive Baisgazi wall at Gaur is supposed to have been a part of the palace precincts, but nothing now

NSOU ??CC - HI - 07 211 remains of the royal palace itself. In the capital city of Gaur several gateway buildings are still extant, and of these the one, known as the Dakhil Darwaza, represents a conception of more than ordinary interest. It was built during the reign of Barbak Shah, very possibly as the principal gateway to the citadel of Gaur. It is 75 feet in length across the front, 60 feet in height, and nearly 113 feet in depth from front to back with a long arched passage, 24 feet high and with guard rooms on either side, carried through its centre. Entirely built of bricks, the Dakhil Darwaza at Gaur may rank as one of the most remarkable monuments of Muslim architecture in Bengal. Another notable conception may be found in the Firuz Minar at Gaur, which towers high above the crumbling ruins of the ancient city. It rises to a height of about 84 feet in five storeys, the three lowest being do-decagonal, and the upper two circular. Being of brick fabric, the decorative work has been carried out in terracotta in minute and intricate patterns. Colour is also applied to the surface by the use of glazed tiles in blue and white. Another minar, named also after Firuz, may be seen at Chhota Pandua. It is about 120 feet high and also divided into a number of storeys. It is a much smaller structure and lacks the elegance of its counterpart at Gaur. "Islamic architecture of Bengal is not a style of building of a very impressive kind." The difficulty of obtaining stones in the flat plain of Bengal, and the consequent wholesale dependence on brick for construction of a more permanent kind, resulted in the evolution of distinct forms and idioms, some of which might have existed in the earlier period. The style that was developed as a consequence may be designated as the brick style of Bengal. It was the weak and fragile nature of the material that was responsible for the low elevation of the buildings, the comparative insignificance of the arches and the smallness of the domes. On account of the above limitations of the building material the architects in Bengal tried to create effect by reiterating the parts and thereby enlarging the dimensions of the buildings. But Percy Brown sums up the achievements of the architects of Muslim Bengal: "what they achieved may not have been a great art, but its constructive principles were sound, its appearances were inventive and original, and it was peculiarly suitable to the climate and to the purpose for which it was intended."

212 NSOU ??CC - HI - 07 Adina masjid Eklakhi masjid Chika masjid Firuz Minar 14.2.2 Jaunpur Under the patronage of the Sharqi kings, Jaunpur became a leading centre of the artistic and cultural activities, and saw the erection of many imposing monuments including palaces, mosques, tombs etc. Unfortunately, very few vestiges of this architectural splendor can now be seen. Of the few surviving remains of the fourteenth century, mention may be made of the mosque and fort of Ibrahim Naib Barbak, built respectively in A.D 1376 and 1377. Of the fort, only the eastern gate can be seen now, and this as well as the mosque, were more or less simple and ordinary productions. The foundation of one of the earliest mosques at Jaunpur, afterwards called the Atala Masjid, was laid in 1377, but it was not till A.D 1408 that Ibrahim Shah Sharqi erected the mosque on this foundation. As its name indicates, the mosque occupies the site of an

NSOU 22CC - HI - 07 213 earlier temple dedicated to the worship of Atala Devi. Built on the orthodox plan, it consists of an open square court, measuring 177feet, each side, with colonnaded cloisters on the north, south and east and the sanctuary or prayer chamber on the west. The cloisters are pierced in the middle of each side by a handsome gateway building, the northern and the southern ones being each covered by a dome. The spacious cloisters are each five aisles in depth and rise up in two storeys, the upper covered by a flat roof. Of the lower storey two aisles, forming a range of cells with a pillared verandah, open on the outside. This outer arrangement of a part of each cloister is, no doubt, a novel feature in the mosque design. But the most arresting feature in the entire composition is the façade of the sanctuary were three huge propylon screens confront the spectator with their massive and overpowering dimensions. Another mosque, the Jhanjhiri Masjid built also by Ibrahim Shah Sharqi about A.D 1430 deserve more than a passing notice. Only the massive pylon in the centre of sanctuary façade now remains, but it seems to have been a copy, on a smaller scale, of the Atala Masjid. The entire surface is covered by an exuberance of carvings, and the rich plastic effect, produced thereby, endows the monument with more than ordinary interest. The khaliis Mukhlis Masjid, built also about the same period, is a rather plain and simple structure of hardly any architectural interest. About the middle of the fifteenth century was built the small mosque, known as the Lal Darwaza Masjid an account of its vermilion-painted gate. Marshall describes it as "a small but pale edition of the Atala" of which it is only two-thirds in size. The Jami Masjid built by Husain Shah Sharqi about A.D 1470 is the largest and most ambitious of the Jaunpur mosques. It is essentially of the design of the Atala which it reproduces on a larger scale. There are differences, of course, between the two in matters of detail, and in certain aspects a few of these betoken a certain inventiveness and originality on the part of the builder of this grand mosque. The entire structure is raised over a lofty basement terrace and the lofty domed portals in the middle of the cloisters are approached by imposing flights of steps. The story of the Jaunpur architectural style closes with the Jami Masjid which was the last to be erected in this domed capital city. In spite of apparent grandeur, the Jaunpur style has some inherent defects. The domes of the sanctuaries are invariably masked from view by the towering heights of the massive propylons. To a certain extent the execution, again is coarse, and this feature adds to the rugged strength of the monuments. The style begins with a fresh spirit and high aspirations. But the builders themselves seem to have been incapable of achieving what they attempted to do. Their greatest drawback is a lack of sense of structural propriety, and this is clearly evident in every one of their buildings which fails to reach the level of a balanced and integrated architectural composition. Atala Masjid Jhinjhiri

Masjid 14.3 Western India The regional style of architecture that came into being in western India towards the beginning of the fourteenth century is almost exclusively confined to Gujarat. 14.3.1 Gujarat

Among the different provincial forms of Indo-Muslim architecture that of Gujarat is admittedly the most remarkable, as no other architectural style tells the tale of the fusion of Hindu and Muslim building traditions with such unmistakable distinctness. The foundations of the new style may be said to have been laid already in the fourteenth century when Gujarat had not yet broken away from its allegiance to Delhi. In the earliest period of occupation, the Muslim governors used native materials along with native builders and craftsmen, and some form of structural conversion may actually be noticed in the Tomb of Shaikh Farid and the Adina or Jami Masjid, both at Patan. These two represent, more or less, improvised compositions with materials from earlier Hindu and Jain temples. The Jami Masjid at Broach, though improvised in a similar manner, was assembled according to the typical mosque plan with a quadrangular court having three entrances on the three sides and the sanctuary at the western end. Moreover, an improvement of the

NSOU ??CC - HI - 07 215 design is recognized in the care with which older materials have been adjusted for fitting them in the conventional mosque design. The Jami masjid at Cambay erected in A.D 1325 may be regarded as a typical building in the early phase of Gujarat Muslim architecture. It has all the appurtenances that Islam demands – cloisters, open courtyard, the entrance porches, the covered place for prayer in the western cloister with the mihrab and the mimbar – but only the west end is in any sense Islamic. With its elegant proportions and dignified form, the Cambay masjid is the first example of an intelligible mosque design in Gujarat, and may be said to have set the standard for the subsequent monuments to follow. The Mosque of Hilal (or Bahlul) Khan Kazi at Dholka, erected in A.D 1333, is one of the same character as the Cambay mosque. It is of smaller dimensions, but two ornamental turrets, one on either side of the central archway of the sanctuary façade add a notable innovation and complete the typical mosque design of Gujarat. It is to be observed however that the Gujarat architects, possibly because of their unfamiliarity with the ideas and intentions of the minarets, have never been successful in the manipulation of this important element of the mosque design. The Tanka Masjid, also at Dholka built around A.D 1361, is generally of the same order as the preceding, but being of the open-pillared variety bears a predominantly Hindu appearance. With Ahmad Shah I began the great period of Gujarat Muslim architecture. This forceful personality ascended the throne in A.D 1411, and commemorated this event by founding a new capital city, called Ahmedabad after him. He began beautifying his new city with magnificent and stately edifices. Inspired by his zeal, his successors, as well as nobles and officers of the court, erected mosques, tombs and other structures. A few mosques at Ahmedabad, undertaken during the early part of Ahmad Shah’s reign, may be said to have prepared the way for the grand Jami Masjid, described by Ferguson

100%

MATCHING BLOCK 102/171

SA

MHY-6.docx (D110789933)

as “one of the most beautiful mosques in the East”.

Ahmad Shah’s mosque within the citadel seems to have been the earliest in this series. It was modelled on the Jami masjid of Cambay, but with indications of a slight advance in the treatment of the buttresses on two sides of the central archway. The mosque of Haibat Khan belongs to the same type, but the prominent bastions on the exterior of the back wall of the sanctuary reproduce a distinctive feature of the Firuzian style at Delhi. The mosque of Sayyid Alam, said to have been built in A.D 1412, contains several instructive elements, including the

216 NSOU ??CC - HI - 07 provision of an intermediate storey in the shape of triforium, all of which anticipate distinctive features of the style that is to reach its full expression in the grand Jami Masjid. The far-famed Jami Mosque at Ahmedabad erected in A.D 1423 is justly regarded as the touchstone of the Gujarat Muslim style. It occupies a quadrangle, 382 feet 258 feet externally, and has four cloisters on four sides of the open courtyard, 255 feet by 220 feet. It is in the western cloister i.e., the sanctuary proper, that the most instructive and distinctive features are found. This consists of an immense hypostyle hall, 210 feet by 95 feet internally, with 260 tall pillars closely and carefully spaced to form a series of square bays. The number of such bays is fifteen, each being covered by a dome. In this monument the Gujarat Muslim architecture reaches a rational development by assimilating intellectually the lessons derived from the buildings of the earlier phase of experiments. The phenomenal advance achieved in this superb creation owes, no doubt, a good deal to the appreciative patron who seems to have been a genius gifted with a fine and elegant taste and a lofty vision as well. The most eminent features of the monument would bear recapitulation: the interior with its diversified sections and its array of graceful pillars is splendid, and, further with its richly carved galleries, its rich and intricate traceries and arabesques the effect is chaste and at the same time elegant. The admirable composition of the façade, broken up and diversified with all its well-proportioned parts, its shapely and expansive arches, its engaged buttresses richly molded, its carved mouldings, string courses and battlements, all combine to make it one of the noblest architectural compositions in the whole world. The Tin Darwaza or Triple Gateway, forming the main entrance to the outer enclosure of the royal citadel, belongs apparently to Ahmad Shah's reign, and is a production of rare architectural dignity. It consists of three archways of equal height, the central one, however, being of widest dimensions than the other two. Ahmad Shah's successor, Muhammad Shah, is also known to have been a builder of note. He completed the tomb of Ahmad Shah in an enclosure to the east of the Jami Masjid specially marked out by that greater ruler. Further east, the Rani-ka Hujra or the tomb enclosure for the royal ladies was also apparently completed during his reign. At Sarkhej, about six miles to the south-west of Ahmedabad, Muhammad Shah built the tomb and mosque of Shaikh Ahmad Khattri, a famous Muslim saint who died in A.D. 1446. Thus was initiated a building activity at this place which was later to develop into an architectural complex of no mean artistic significance.

NSOU ??CC - HI - 07 217 The brief reign of Qutb-ud-din, the next ruler, is not also a blank in respect of building activities. He is the author of Hauz-i-Qutb tank at Kankariya in the vicinity of Ahmedabad, and the builder of a mosque at Ahmedabad, called Qutb-ud-din mosque after him. He is also reputed to have built a mosque and a tomb at Rajapur in memory of Sayyid Buddha bin Yaqut. These two, combined to form a rauza, were designed on a considerable scale, but failed to be a convincing product. But if the buildings associated with the name of the ruler failed to be inspiring, two monuments, one at Ahmedabad and the other at Dholka, erected during his reign by his officials, seem to suggest new trends. The tomb of Darya Khan at Ahmedabad, bearing the date A.D 1453, and the mosque of Alif Khan at Dholka seem to have many things in common and are permeated by the same spirit. Both these monuments were built of bricks, instead of stone, and naturally arches constitute the principal feature of the composition in each case. The famous ruler, Mahmud Begarha was a passionate builder, and it was during his reign that the Gujarat Muslim style reached their most sumptuous expression. He founded three new cities and adorned each with many splendid edifices. Of these, Champaner was designed to be the capital city. Ahmedabad, the old capital was not ignored and received further embellishments in the shape of new and stately buildings. Again at Sarkhej was raised a vast palace complex with gardens, pavillions, artificial lakes etc., besides other monuments on the same lavish scale. Among the surviving monuments of this phase may take the shape of what is usually known as a rauza i.e a tomb and mosque combined to form one conception. The tomb of Sayyid Usman at Usmanpur is one of the earlier monuments of this kind belonging to the Begarha period. It is a well-balanced production consisting of a square mortuary chamber inside a double aisle of pillars. Two other eminent production of this mode may be seen in the tombs of Bibi Achut Kuki (A.D. 1472) at Ahmedabad and of Mahmud Begarha at Sarkhej. The tomb of Shah Alam (c A.D. 1475) near Ahmedabad built on the same scheme as above, has an outer arcade filled in with perforated screens, and within this there is a colonnade encircling a square compartment, which was enclosed by traceries. Among a number of tombs of arched composition, two merit special attention – one is the tomb of Qutb-ul-Alam (A.D. 1480) at Batwa and the other is that of Mubarak Sayyid (A.D.

218 NSOU ??CC - HI - 07 1484) at Mahmudabad. The former is a large square building with a portico projecting from its southern end. A brief reference may be made to a few more mosques. The mosque in the rauza of Sayyid Usman, of the open-pillared scheme, is perhaps the earliest of the mosques to be erected during the Begarha period. Another specimen of the open-pillared scheme is the small, but exquisite, Rani Sipari mosque at Ahmedabad built in A.D 1514. It stands by the side of the tomb of the same queen. The Rani Sipari mosque has been described by Fergusson as "the most exquisite gem at Ahmedabad". One other mosque of this type is that of Shah Khub Sayyid(A.D. 1538) at Ahmedabad. The type of mosque with an arched screen in front of the sanctuary is evidently modelled on the grand Jami Masjid at Ahmedabad but the combined arched and pillared frontage, as seen in the archetype, soon disappears and gives place to a continuous arched facade along the entire front. The mosque of Miyan Khan Chisti at Ahmedabad, built about A.D 1465, is in design and dimensions, an exact analogue of the mosque of Bibi Achut Kuki also at Ahmedabad and built in A.D 1472. The two together may be regarded as representing the style of the early Begarha period. With the progress of the building activity there is recognized an increased enrichment by superb and the most delicate carvings. The mosque of Muhafiz Khan (A.D. 1492) Bai Harir's mosque (AD 1500) and the Queen's mosque, also known as Rani Rupavati mosque (A.D. 1515) all at Ahmedabad, represent some of the ornate expressions of the prevailing style. In A.D. 1484, Mahmud Begarha captured Champaner from a Hindu chief and built a new capital city there. Among the surviving monuments of this once splendid city, the most imposing is the Jami Masjid which was completed in A.D. 1508. Fergusson has described the Jami Masjid at Champaner as "architecturally the finest in Gujarat", but this estimate is not unanimously accepted. However rich and accomplished its single parts and details might be, it falls short of the Jami Masjid of Ahmedabad in respect of organic unity. It has been often stressed that of all the styles that emerged under Islamic rule in India, that of Gujarat remains the most indigenously Indian. This

Central India In Central India, the development of Indo-Islamic architecture remained confined within the Malwa region which became an independent kingdom at the turn of the fifteenth century. 14.4.1

Malwa It would be wrong to describe the Muslim monuments of Malwa as slavish imitations of Delhi. The elements and features borrowed from the different phases of the Imperial style were skillfully integrated into balanced and unified compositions, noble and distinctive in their appearance. Marshall describes the buildings of the Malwa Sultans, particularly those at Mandu, as "truly living and full of purpose, as instinct with creative genius as the models themselves from which they took their inspiration". The monuments of Muslim architecture in Malwa are almost all concentrated in the city of Mandu. As elsewhere, the early buildings, specially the mosques in Malwa were assembled out of the materials of desecrated Hindu temples, according to the Islamic plan and convention; but nothing seems to have been done in the initial stage either to conceal or alter their essentially Hindu appearance. The extant remains of this phase of improvised building activity belong to a period not earlier than the beginning of the fifteenth century A.D. They are the Kamal Maula Masjid (1400), the Lat Masjid (A.D 1405), Dilwar Khan's Masjid (1405) and the mosque of Malik Mughis (A.D 1452) at Mandu.

220 NSOU ??CC - HI - 07 The fortress of Mandu had been named as Shadiabad or the 'City of Joy'. The original fortification goes back to the Hindu period, and Hushang Shah must have laid the foundation of his fort on the old ruins. With him began the second classical phase of Malwa Muslim architecture. He made Mandu not only one of the most impregnable fortresses in India, but also a city of splendid magnificence by erecting a large number of stately edifices which rank among the finest monuments of Muslim architecture in India on account of their boldness of design and graceful finish. Along the edges of the plateau on which a city stands run the battlemented walls of grey basalt extending over a length of more than 25 miles "and pierced at ten points by arched and vaulted gateways, or rather series of gateways, which guard the steep approaches." All these gateways, however, do not seem to have been built in the same period. Those that were erected during the regime of the Malwa Sultans were, more or less, of uniform design. One of the earliest to be erected is the northern gateway, known as the Delhi Darwaza. This grand portal consists of a long and wide passage with massive archways at the front and back, and with guard rooms on either side. The passage was covered by an elongated vault supported on a series of smaller arches providing the interior with an appearance of no mean interest and effect. The main archways in their shapes and spearhead fringes recall those in the tomb of Ghiyasuddin Tughlaq at Tughluqabad, but here they are more virile and massive in construction to suit the purpose of the building for which they were meant. The Tarapur gateway on the south-western fringe of the city was also built at the same time, but later additions and renovations have almost obliterated its original appearance. Once the whole plateau within the walls was covered with splendid buildings, but only forty structures now survive in different stages of preservation. The largest and the most impressive of them is the great Jami Masjid which was begun by Hushang and completed by Sultan Mahmud Khalji in 1454 A.D. A spacious example of its class, it occupies a quadrangle, 288 feet by 271 feet, and has an imposing domed entrance hall with a wide flight of steps projecting from the middle of the eastern side. It is, by itself, a noble conception and appears to have been exquisitely decorated by borders and panels in glazed tiles. Its fairly substantial dome, harmoniously picked up by the three domes of the sanctuary at the back, adds to the coherence of the design. The remarkable Durbar hall, known as Hindola Mahal is usually attributed to Hushang, and its general style and appearance lends support to this attribution. "Few buildings in NSOU ??CC - HI - 07 221 India," says Percy Brown, "presents a more striking appearance or are more solidly constructed than this amazing pile." In plan it is shaped like the letter 'T', the stem of the "T" forming the main hall and the cross constituting a group of apartments in two storeys. Opposite the Jama Masjid, the large structural complex, known as the Ashrafi Mahal, comprises a group of buildings successfully built in course of a rather long period. The original nucleus seems to have been a madrasa building, erected as an adjunct to the Great Mosque, possibly during Hushang's reign. During the reign of Mahmud Khalji the madrasa building was converted into an elaborate terrace to support the mausoleum of that sovereign. By filling up the madrasa court was obtained an immense plinth, in the centre of which was erected the royal mortuary chamber. The madrasa quadrangle had a bastion at each corner. The north-eastern bastion was subsequently developed into a lofty tower by Mahmud Khalji to commemorate his victory over Rana Kumbha of Chitor. Built of a greenish marble-like stone it rose up to seven storeys (Haft Manzil), each being distinguished by a projected balcony, as Jahangir refers to in his memoirs. According to Firishta the tomb of Hushang was built by Mahmud Khalji, "but considerations of style", Marshall observes, "are in favour of Hushang himself having been the author". It is probable, however, that it was begun by Hushang and completed by Mahmud. The tomb stands behind the Jami Masjid in the centre of a square enclosure, which is approached through a domed portico on the northern side. Although built with a white marble facing, the surface of which is relieved with fine trellised archways and occasional passages of colour, the tomb has the appearance of "a stolid and sombre pile". To a certain extent, again, it lacks elevation and poise because of the shortness of the drum which supports the dome. The later mausoleum buildings such as the tomb of Darya Khan, the Dai ka Mahall, the Chhappan Mahal, etc., built on the same design, and although of smaller dimensions, they exhibit a far greater sense of balance and harmony. A long structural complex, situated between two lakes, known as the Kapur Talao and the Munja Talao, has certainly a romantic setting. Because of its situation, it seems to float in water like a ship and it is probably this that has suggested the curious name, the Jahaz Mahall or the Ship Palace, for the complex. It is a long and massive structure, some 360 feet in length, along the water front, the width, including the thickness of the walls, being less than 50 feet. The lower section of the building has a fine arched facade beautifully aligned along the water front on each side. The other buildings that merit attention in this vast conglomeration of ruins are associated with the names of Baz Bahadur and Rupamati whose romantic tales of love still echo

222 NSOU ??CC - HI - 07 through every vale and dale of Mandu. A lonely building on the slope of a hill by the side of the Riwa Kund in the southern part of the plateau is known as Baz Bahadur's Palace though it was built by Sultan Nasiruddin, son of Ghiyasuddin Khalji in A.D 1508-09. Apparently because of its picturesque situation, Baz Bahadur had taken a fancy to it and used it as his own favourite residence. From the Riwa Kund a long flight of forty steps with several landings leads up to the palace which is a pleasingly designed structure of two quadrangular compositions of arcaded cloisters, preceded in front by an outer court with a gateway portal. The building associated with the name of Rupamati stands on the southern edge of the plateau and was, in all probability, designed for military purposes. The nucleus of the building seems to have been a low but massive hall with a room at either end. The arcaded walls batter considerably and terminate in battlemented crestings. At a subsequent date was added a basement, with arms projecting from its northern and southern ends, respectively towards the east and the west. It was probably at this period that an open pavilion covered by fluted dome was built over the terraced roof of the original block at either end. Many other monuments still stand at Mandu. The above representative examples will give an idea of the architectural grandeur of the place, and will no doubt indicate that the monuments were fully in accord with the marvellous natural surroundings amidst which they were placed. Jami masjid, Mandu

NSOU ??CC - HI - 07 223 14.5 Deccan 14.5.1 Bahmani Indo-Muslim art and architecture of the Tughluq style was introduced into the Deccan when Muhammad bin Tughluq transferred his capital to Daulatabad. None of the buildings constructed by the Sultan and his nobility during the imperial era have survived the wear and tear of time. An independent Indo-Muslim style of architecture came into existence with the foundation of the Bahmani rule. It passed through three phases of growth corresponding to those of the political developments. The first phase lasted with the Gulbarga period of the Bahmani rule (1347 – 1429 A.D) and the second earmarked the period of their rule from Bidar. The third phase of the Deccani art and architecture covered the period of rule of the successor states of the Bahmani kingdom. The construction of forts at all the strategic places in the kingdom constituted one of the major architectural activities of the Bahmani rulers. They showed unrestricted and unbiased use of all sorts of architectural concepts and technology, indigenous and foreign, 'hindu' and 'muslim' alike. Therefore, they form a special class of military architecture which shows free intermingling of all the best that was available to the Bahmanis on the spot. The monuments of the Bahmani period at Gulbarga represent the first phase of development of the Indo-Muslim architecture in the Deccan. The tombs of the first three Bahmani rulers show marked influence of the Tughluq style, reflected by thick walls, with a sharp slope, and with very little surface decoration although the mausoleum of Bahman Shah, the founder, which contains a beautiful band of deep blue enamel tiles of the purely Persian style reveals the introduction of direct foreign influence. The Persian influence on the Bahmani art and architecture became more and more marked with the passage of time thus drifting it away from the Indo-Muslim traditions of northern India in many respects. The Jama Masjid of the Gulbarga fort, with its square base supporting the dome and the broad squat arches, set the style for this category of architecture in the Deccan. Unlike the mosques of northern India, it has no open courtyard and the whole of its area has been covered, permitting the light to trickle through its perforated side-walls and arches.

224 NSOU ??CC - HI - 07 To begin with, the indigenous or 'the Hindu' influence on art and architecture seems to have been forcefully resisted by the Bahmani Sultans primarily because of the superiority complex from which they suffered as the rulers of the vanquished infidels. Haft Gumbad or 'the seven tombs' of Mujahid Shah, Daud Shah and their family members at Gulbarga, however, show, at a later stage, some traces of the indigenous concept of art and architectural traditions which became gradually acceptable to the Bahmani rulers. These seven tombs show the 'Hindu influence' for the first time in the carvings of the prayer niche, doorways of polished black-stone, carved in Hindu fashion, and beautiful brackets supporting the cornice or the horizontal projections crowning the building. The second phase of the Bahmani art and architecture began with the transfer of its capital to Bidar. The massive fort of Bidar and its mosques and palaces continue to bear the Persian imprint albeit the indigenous Hindu influence also becomes equally strong in their construction. The twelve tombs of the latter Bahmani rulers at Bidar reveal this intermixture of the Persian and indigenous influences almost in equal proportions. They are much larger in size than their counterparts at Gulbarga and contain more arched recesses, screen windows in the façade and decorative columns besides richly decorated enamel tiles and paintings in many and varied colours. The best of these tombs is that of Sultan Ahmad Shah I which 'sets the fashion' at Bidar for the later tombs; 'its exterior, having a lofty and impressive entrance archway on each side, is divided into three storeys by recessed arches and windows, while its dome illustrates a happy combination of the flat dome of the Delhi style and the round conical domes of Persia. But the main features of this tomb are the decorations of its interior which is adorned with

NSOU ??CC - HI - 07 225 paintings in bright gold, vermilion and green colours. Mahmud Gawan's Madrassa at Bidar has been constructed in the typical Persian style; it comprises a huge three-storey building with a rectangular plan, and contains a mosque, lecture rooms, a library hall and the residential flats for the teachers and students. 'On its front side' writes Z.A. Desai, 'are two minarets, one at each corner, while semi-octagonal structures with bulbous domes project, one each, from the middle of the remaining three sides.' The whole building is remarkable for the perfect symmetry and proportion of its various parts. Its front side was lavishly decorated with encaustic tiles of various colours and designs and the minarets were also adorned with glazed tiles arranged in a zigzag pattern. The Sola Khamba mosque of the Bidar fort is one of the best specimens of the second phase of development of the Bahmani architecture. Its vast prayer hall is divided into 'a number of aisles by massive circular columns'. Its roof is 'crowned by a majestic dome of fine shape, raised on a high clerestory with windows of fine perforated screen work in different geometrical patterns.

226 NSOU ??CC - HI - 07 Daulatabad had a rich indigenous architectural heritage, it was studded with numerous public buildings and palaces of the Yadava period which continued to be used without any prejudice towards their 'Hindu' architectural style and plans of construction by the Muslim ruling elite. A few of the new buildings erected by them showed a free blending of the indigenous north Indian and the Persian styles. The Chand Minar at Daulatabad, built in 1445 A.D, is a solitary example of a building constructed in that town in a typical Persian style. The tower rises to a height of 30.5 metres slightly tapering in its ascent, and is divided into four storeys by projecting circular galleries. In spite of its being a declared Persian model, the brackets supporting the balconies belong to the indigenous architectural style. The age of the five successor states of the Bahmani kingdom, viz; those of Ahmadnagar, Bijapur, Berar & Bidar marks the third and the final phase of the development in the architecture of the Indo-Muslim style in the Deccan. During this period, it reached a stage of maturity and rightly came to be called as the Deccani art style. It showed a complete synthesis between the Persian and indigenous styles with the predominant influence of the latter; so to say, in its process of interaction the 'Indian genius' established its superiority over the foreign influences. The Deccani art style retained a number of Persian traits in their modified form but it showed a much 'greater influence of the local traditions than before in building methods as well as in the field of ornament'. Not only this, it developed further regional variations from state to state, thus imparting to each a refreshness and individuality of its own. The finest specimens of the Bijapur style of architecture in the sixteenth and seventeenth centuries are provided by the extant monuments such as the Zanjiri and Andu mosques at Bijapur, Sunehri mosque at Shahpur and Kali mosque at

NSOU ??CC - HI - 07 227 Lakshmeshwar besides Ibrahim Rauza, Mehtar Mahal, Gagan Mahal and the Gol Gumbad – the mausoleum of Adil Shah (1627-56) at Bijapur. The Nizamshahi buildings at Ahmadnagar were influenced by the neighbouring Gujarat and Malwa styles 'reflected in the fine quality of their building material as well as other architectural and decorative features'. Among the representative extant monuments of the Nizamshahi style may be mentioned the Damri mosque and the tombs of Ahmad Nizamshah (1490-1510), Rumi Khan and Do-Boti-Chira at Ahmadnagar, the tombs of Malik Amber and Zachcha Bachcha at Daulatabad, of Shah Ashraf Bayabani at Ambad and of Dilawar Khan at Khed, besides the water palace cum pleasure resort of Farah Bagh at Ahmadnagar. The state of Berar could not develop an individualistic style of its own, nevertheless, the mosques of Gwaligarh, Ellichpur and Malkapur and Hauza Katora, a beautiful building, now standing in partial ruins in the middle of a water tank at Ellichpur, remind us of the brief but imaginative architectural activities of the Imadshahi rulers of Berar. After Bijapur, it was Golconda which provided the second best individualistic trait to the Deccani style of architecture. Golconda and Hyderabad adorn a number of extant monuments of the Qutubshahi period which impart a unique historic personality to those towns. The Char Minar of Hyderabad, which served as the main entrance to the royal building complex, is a memorable contribution of the Indian genius towards the development of architecture in India. It comprises a central square building structure with lofty arched openings on all the four sides. From each of its four corners, there rises a beautiful minar with a peculiar aesthetical excellence in its design and conception, the like of which is hard to find anywhere else. The space in between these minars, towards the top of the roof, is covered by 'a double screen of arched openings to bring symmetry to the whole building'. The structural base of the Char Minar is very strong without being aggressive, and the building looks very delicate and pleasing to the eye without being unimpressive. The Baridshahi dynasty which transplanted the Bahmanis at Bidar in 1527 A.D contributed its own share towards the development of the Deccani architecture, represented by some of their extant mosques and tombs. On the whole, the rulers of the Bahmani dynasty and its successor states made an invaluable contribution towards the development of art and architecture and other socio-cultural aspects of the Deccan in the medieval period.

14.5.2 Vijayanagar Art and architecture attained a certain fullness and freedom of expression during the Vijayanagar rule. The elaborate ceremonial observances strengthened the temple system of worship. The Vijayanagar rulers built magnificent cities and beautified them with temples and splendid houses, grand palaces, public offices, irrigation works, and aqueducts that

228 NSOU ??CC - HI - 07 bear testimony to the wealth and prosperity of the times. The Vijayanagar style of art and architecture was essentially opulent, ornate and exuberant. The numerous temples built throughout the kingdom bear eloquent testimony to the general consciousness of the rulers and of the people as the custodians of Hindu religion and culture. Among the temples built within the capital city of Hampi, the Virupaksha temple also known as Pampapati was the most sacred and noted for its architectural values. The ruins of Hampi bear witness to the distinct style of Vijayanagara's architecture, the finest in the city being Vittalaswamy and Hazara Ramaswamy temples built by Krishna Deva Raya. Hazara Ramaswamy temple with its wall and pillars adorned with sculptures illustrate the main events from the Ramayana. It is significant for the continuous panel of sculptures illustrating various legends from the Ramayana. The most distinct characteristics of the Vijayanagar architecture is visible in the Vitthala temple, which is ascribed to Krishnadeva Raya. It is a fine example of the magnificence in floral sculpture, patronized by the Vijayanagar court. The courtyard surrounding the temple is grand, which has three main structural sections – the open pillar Mukhamandapa, the closed Mahamandapa at the centre and the Garbagriha at the end. The stone Ratha or the chariot standing in front of the Mukhamandapa is a brilliant exposition of stone carving. It is believed that even the wheels of the chariot used to rotate. According to Fergusson, the Vitthala temple of Krishnadeva Raya is "the finest building of its kind in southern India". Another important temple built by Krishna Deva Raya was the Balakrishna temple. This temple was built in the year 1513 A.D in honour of winning the battle and subsequent annexure of Utkala or the eastern reign of Udayagiri. The temple campus is adorned with pillared halls and many small shrines. This is one of the rare temples which have epics inscribed on its tower walls. Other than the temples containing numerous sculptures conceived and executed with original and imaginative art work, another aspect worth noting in these temples are the pillars that are a major architectural marvel and are remarkable for their intricacy and delicate beauty. Mention must also be made of the huge monolithic of Ganesha. Hanuman and Narasimha which are some of the most beautiful examples of this sculptural style. The religious zeal of the kings was expressed in the construction of new temples, renovation of old ones and additions made to a number of temples in different parts of the country. There was an elaboration of the temple complex by the addition of a number

NSOU ??CC - HI - 07 229 of structures of which the shrine of the chief goddess (ammankoil) and the kalyanamandapam were considered to be indispensable. Among the latter, the most distinguished were those of the Varadaraja and Ekambaranatha temples near Tiruchirapalli, the Parvathi temple at Chidambaram and the Jalaganteswara temple within the Vellore fort. The last one is regarded by Percy Brown as 'the richest and the most beautiful structure of its kind'. The Vijayanagar rulers were also famous for the construction of colossal towers (gopurams) that formed the entrances to temples. These several storied pyramidal structures added to the picturesque grandeur of the temple complex. The most magnificent among them being the southern gopuram of Ekambarantha temple built by Krishna Deva Raya. It is an imposing structure, 188feet high and made up of 10 storeys, all of which were embellished with exquisite sculptures. The exuberance of sculptures and ornamentation breaks up the stupendous mass in a manner that imparts to it an effect of airy lightness, enhancing the impression of soaring height. Though it has served as a model for many later gopurams, it remains unsurpassed in its grandeur, balance and rhythm. The city of Vijayanagar was also studded with a number of grand palaces, public offices and irrigation works. The most splendid among the secular buildings was the royal palace, which according to Paes, enclosed a greater space than all the castles of Libson. Another building was that of the Lotus Mahal, which Longhurst regarded as a fine specimen of Indo-Sarcenic architecture. Not far from this were the elephant stables, an extremely elegant and well designed building. Here too one finds a harmonious blend of Hindu and Islamic architectural features. The Hampi bazaar on the banks of the Tungabhadra displayed a fine example of street architecture. Krishna Deva Raya also built a huge tank for water supply and irrigation purposes as well as a small town called Nagalapuram. Virupaksha temple Balakrishna temple

230 NSOU ??CC - HI - 07 Vitthala temple Step-well with stone chariot 14.6 Regional Art The development of art and architecture in the regional states follows diverse courses. While architecture adheres mainly to the technological principles evolved under the Indo- Islamic style of painting, particularly manuscript illumination, it scaled new heights due mainly to the substitution of paper for palm-leaf as the writing material. The multiplicity of form of regional art did not conform to any set geographical pattern, but sometimes, as in the case of painting, took a cross-regional course. Regional styles of architecture proceeded to develop a form that suited their individual requirements. The regional styles of architecture

79%

MATCHING BLOCK 105/171

SA

8 Seema KhanSem III Cultural History CDOE AMU.docx (D142785762)

were distinct from the Indo-Islamic style practiced at Delhi and often displayed definitely original qualities. In the areas which have a strong indigenous tradition of workmanship in masonry, regional styles of Islamic architecture produced the most elegant structures. On the other hand,

buildings constructed for regional states were a lot less distinctive at places

64%

MATCHING BLOCK 106/171

8 Seema KhanSem III Cultural History CDOE AMU.docx (D142785762)

where these traditions were not so pronounced. In somecases, totally novel tendencies, independent of both the indigenous and the imperial Sultanate traditions, are also visible.

Muslim paintings in India between the fifteenth and early seventeenth century were confined to manuscript illustration or illumination only as per eastern Islamic artistic literary fashion. Initial pictorial style was borrowed from indigenous Indian sources and Muslim artists added new elements in it. But the structural composition and bright colour scheme were inherited from mature Islamic traditions. In Persian empire despite the barbaric destructions inflicted by Timur and Mangols miniature painting flourished in the fifteenth century. Then the ruthless Timur and his successors completely changed themselves and established settled courts of

NSOU ??CC - HI - 07 231 elegance, refinement and sophistication. This also led to patronage and development of fine arts. In India Tughluq sultans and their provincial governors of Malwa, Gujrat and Jaunpur executed their patronage to fine arts specially paintings in the fifteenth century specially Gujarat became famous for its talented artists. Significant contribution to the art of painting was made by the Jain community of Western India. Illustrated manuscripts of Jain scriptures were presented to temple libraries. These manuscripts depicted the lives and deeds of the Tirthankars. Traders and painters brought inspiring manuscripts to India from the cultural centers of Persia. They were welcomed in this region and their trading flourished. The painters borrowed certain features found in Jain paintings of Gujarat specially the vivid and attractive colour combination. Their projections and innovate designs pleased the viewers. Conceptual bias apart they admired works of arts which existed there before advance of Islam. Contemporary literature encouraged elaborate wall paintings in the time of Muhammad bin Tughluq and the poet Amir Khusrao referred to his patron's love for manuscripts and paintings. During Firoz Shah's reign a mystical poet of his court praised these products specially painted images. These manuscripts based on the Islamic literary traditions narrated various texts and subjects borrowed from Indian indigenous sources. But in style of execution these manuscripts showed predominance of Persian influence. The early sixteen century introduced a change in Muslim paintings viz. rejection of west Indian style and ideas. Due to Uzbek attack on Herat in 1507 many artists and craftsman of Persia fled to India for settlement. Furthermore, trading relations with Persian city of Shiraz which was an important center for extensive commercial miniature production gave much impetus to paintings. This art got much fillip because the embassies of Persia and India encouraged exchange of gifts and trade items and also increased the availability of artistic manuscripts. Persian culture was held in high esteem in India specially Mandu the capital of Malwa excelled in copying Persian culture in language, food, costumes and arts. The emphasis of Turkman Shirazi artists on simplicity in figure and decoration influenced Indian artists to introduce treatment of grass and natural vegetation in their production. This is reflected in a Malwa cookery book, the Nimatnama which was written for the Sultan Ghiyath-ud-din at Mandu and illustrated for his son Nasir-ud-din. Another Persian manuscript made for Nasir-ud-din on the style of the Nimatnama contained a beautiful illustration partly derived from contemporary paintings in Iran. There has been a recent

232 NSOU ??CC - HI - 07 discovery of a manuscript called Sikandarnama compiled in 1531-32 A.D. under Nusrat Shah ruler of Bengal. It reflects the Persian influences along with Indian elements. Other notable miniature painting of later fifteenth century is a compilation during Firoz Shah Tughlaq's time called Chandâyana (also called the Laur Chandâ) relating to a love story in Avadhi and it got wide popularity. This manuscript shows Persian inspiration but actually is a combination of both Indian and Persian features. Persian influence is visible in the colour scheme and decoration." In the case of Vijayanagar, patronage was extended to the genre of painting because of the interest taken by the kings, viceroys and nobles in this particular art form. There is textual evidence from Domingo Paes and Du Jarric that testifies to the presence of painters in the court of Krishna Deva Raya and Venkata II. Specimens of Vijayanagar paintings are found at Tirupati and Lepakshi, the Chennakesava temple at Somapalle, the Varadaraja temple at Kanchipuram and the temples at Hampi and Aneundi. Some of these have been executed with mastery, skill and imagination and are characterized by beautiful form, sure and bold lines, and artistic colour schemes. But the themes of Vijayanagar paintings are considered uninteresting, except for some charming specimens that depict the marriage of Parvati, Arjuna's penance, Rama's coronation, Krishna lying on a banyan leaf, and the representations of Shiva in various forms. Unfortunately, many of these paintings were destroyed during the battle of Talikota. 14.7 Regional Literature During the heydays of the Persian historiography at Delhi Sultanate court several regions of India witnessed the emergence of new genres of regional literatures. Distinct languages and literary traditions emerged in various other parts of India. 14.7.1 Hindi literature Adi kala - (c.1050 - 1375) Literature of Adi kala (c. before the 15th century CE) was developed in the regions of Kannauj, Delhi, Ajmer stretching up to central India. Prithviraj Raso of Chand Bardai, the court-poet of Prithviraj Chauhan, the Hammir Raso and the Hamir Kavya written by Sarangdhar and the Alha-Khanda produced by Jagnayaka are some of the notable literary examples of the time.

NSOU ??CC - HI - 07 233 Bhakti Kala - (c.1375 - 1700) It is called the golden period of Hindi literature. Unlike the Adi Kaal (also called the Vir Gatha Kaal) which was characterised by an overdose of Poetry in the Vir Rasa (Heroic Poetry), the Bhakti Yug marked a much more diverse and vibrant form of poetry which spanned the whole gamut of rasas from Shringara rasa (love), Vir Rasa (Heroism). Bhakti poetry had two schools – the Nirguna school (the believers of a formless God or an abstract name) and the Saguna school (the believers of a God with attributes and worshippers of Vishnu's incarnations). Kabir and Guru Nanak belong to the Nirguna school, and their philosophy was greatly influenced by the Advaita Vedanta philosophy of Adi Sankaracharya. They believed in the concept of Nirgun Nirakaar Bramh or the Shapeless Formless One. The Saguna school was represented by mainly Vaishnava poets like Surdas, Tulsidas and others and was a logical extension of the Dvaita and Vishishta Advaita Philosophy propounded by the likes of Madhavacharya etc. This school was chiefly Vaishnava in orientation as in seen in the main compositions like Ramacharitamans, Sur Saravali, Sur Sagar extoling Rama and Krishna. Riti-kavya Kala (c.1700 – 1900) In the Ritikavya or Ritismagra Kavya period, the erotic element became predominant in the Hindi literature. This era is called Riti (meaning 'procedure') because it was the age when poetic figures and theory were developed to the fullest. But this emphasis on poetry theory greatly reduced the emotional aspects of poetry—the main characteristic of the Bhakti movement—and the actual content of the poetry became less important. 14.7.2 Urdu literature Urdu emerged due to the interaction of the Persian and Indian languages in the military camps of Alauddin Khalji. The Deccan was the cradle of Urdu and the language flourished in the kingdoms of Bijapur and Golconda. The earliest available work in Deccani Urdu is a mystical prose treatise, Mirajul-Ashiqin by Gesu Daraz. Shah Miranji Shamsul (Khush Namah) and Burhanuddin Janam (Irshad Namah) of Bijapur, Muhammad Quli and Ghawasi (Tuti Namah) of Golconda were the most famous Urdu writers of the Deccan. Urdu arrived in north India in a more developed form during the Mughal period. Hatim, Mitrza Jan-i-Janunv. Mir Taqi, Muhammad Rafi Sauda and Mir Hassan were the most important Urdu writers of north India in the eighteenth century.

234 NSOU ??CC - HI - 07 14.7.3 Assamese literature Assamese literature developed in response to the bhakti movement. It was Sankaradeva who ushered in Vaisnavism and, being a good poet, he also introduced into Assamese a rich crop of poetry. He was followed by his disciple Mahdhavadas whose seminal work was the Bhakti-ratnavali, a book which largely dealt with the different aspects of Bhakti; a handbook consisting of a large number of hymns; the Baragitas, depicting the life of Krishna in Vrindavan and another work also dealing with the childhood of Krishna. Vaisnava poetry, unlike that of the poetry of Bengal and Gujarat, is characterised by its lack of eroticism. In the Vaisnava poetry of Assam, the amorous love-play of Krishna is avoided, the emphasis being laid only on his childhood. Translations from the epics and the Puranas also formed a part of the literary projects of Assamese writers. While Rama Rarasvati translated parts of the Mahabharata for his patron, the king of Cooch Bihar, Goopal Chandra Dvija narrated the story of Krishna as told in the Bhagavata and the Vishnu Purana. Assamese prose developed mainly through the compilation of historical chronicles known as the Buranjis. These were written at the command of the Ahom kings who overran Assam and continued to rule the country fighting the Mughals off as and when when- necessary. The Sino-tibetan dialect of the Ahoms is known to have greatly influenced Assamese prose just as it gave a cultural identity to the people. 14.7.4 Oriya literature Although Oriya originated in the eight century, major works in the language appeared only in the thirteenth and fourteenth centuries. Important Oriya writers were Sarladasa (Mahabharata in the fourteenth century), and Balaramadasa and Jagannadadasa. Balaramadasa and Jagannadadasa belonged to a group known as the Pancha Sakha or the five associates. The Bhakti movement of Chaitanya and of the Vaishnava poets made a lasting influence on Oriya literature. Though the Oriya poets generally wrote in a conventional language derived from Sanskrit, an artificial style came to be established in the eighteenth century or so and was marked by an overt eroticism expressed through verbal jugglery. The greatest exponent of this new style was the poet Upendra Bhana (1670-1720), who ushered in a new era in Oriya literature that lasted well into the nineteenth century. 14.7.5 Panjabi literature Masud Farid-ud-din, a mystic poet, was the pioneer of a new school of poetry in Panjabi. A major contribution to Panjabi poetry towards the end of the fifteenth century was made by Guru Nanak. Later Sikh gurus also contributed to the enrichment of the language.

NSOU ??CC - HI - 07 235 Guru Arjun Dev compiled the Adi Granth in 1604 and also wrote the Sukhmani Sahib, one of the longest and greatest of the medieval mystic poems. The contribution of Guru Gobind Singh is also invaluable. Punjabi prose made immense progress and a number of religious and philosophical works were translated from Sanskrit to Panjabi between 1600 and 1800. 14.7.6 Gujarati literature The first phase from the thirteenth to the fifteenth centuries, was marked by two main forms - the prabandha (narrative poems) and the mukta (shorter poems). Sridhara and Bhima, were the exponents of the prabandha while Rajasekhara, Jayasekhara and Somasundara wrote in the mukta style. The second phase, from the fifteenth to the seventeenth centuries, was the golden age of Gujarati literature. Major contributors during this period were Narasimha Mehta, Bhalana and Akho. 14.7.7 Marathi literature Marathi literature emerged in the latter half of the thirteenth century. A major contribution was made by the saint-poets of the Natha cult (founded by Gorakhanatha) such as Mukundaraja (Vivek- Sindhu). The saint-poets of the Mahanubhava cult, like Lilachrita, and SiddhantaSutropatta, also contributed to Marathi prose and poetry. Other important contributors were Jananadeva (Jnanesvari and Amritanubhava) Eknatha, Tukaram (abhangas), Ramdas and Vamana Pandit. The seventeenth century saw the compilation of secular poetry in the form of povadas (ballads describing the warfare skills and selfless valour of the Marathas) and the lavanis (romantic works). 14.7.8 Telegu literature The group of poets called Kavitraya were Nannaya (eleventh century), Tikkana (thirteenth century) and Yerrapragada (thirteenth and fourteenth centuries) They translated the Mahabharata into Telegu. Their other works included Nannaya's Andhra Sabda Chintamani and Tikkana's Nirvachanothara Ramayana. Other important writers were Bhima Kavi (Bhimesvara Puranam of the seventeenth century), Choda (Kumarasambhava of the eighteenth century), Somanatha (Basava Puranam of the thirteenth centuiy), Srinatha (Srinagaranaisada, SivaratriMahatyam, Kasikhanda, etc., of the fourteenth and fifteenth centuries),Bammera potana (Bhagavatam of fifteenth century), Vemana (Sataka), Krishna Deva Raya and his poets and Molla (Ramayana by a low caste poetess of the sixteenth century).

236 NSOU ??CC - HI - 07 14.7.9 Tamil literature The literature of the Alvars or the Vaisgnava saints was known as Prabhandha, the most important work of which is the Nalayiram (consisting of hymns composed by twelve Alvars including Tirumalaisai Alvar, Nammalvar, etc.). The literature of the Nayanars or of the Saiva saints was known as Tevaram; writers were Appar, Sambhandar and Sundrar. Their works were known as the Tirumarai. Kamban's Ramayana also called the Ramanataka was written during the Chola period. Sekkilar's Turyttondar Purannam, also known as Periya Puranam, was composed during the Chola period. This is a biography of sixty-three Nayanaras. Pugalendi's Nalavenba was composed in the fifteenth century. 14.7.10 Kannada and Malyalam literature The earliest extant work in Kannada is Kavirajamarga by Rashtrakuta Amoghavarsha I. The poets known as ratnatraya are Pampa (eighth century). Their works are the Adi Purana and the Bharata; Poona's Santi Purana; Rana's Ajitanatha Parana and Gadhayudha. Narahari, also known as Kannada Valmiki, wrote the Taravi Ramayana, and Virupaksha Pandit authored the Chenna Basava Purana (sixteenth century). The earliest literary work in Malayan is Unnunili Sandesam, a work by an unknown writer of the fourteenth century. Ramanuja Elluttoccan, a writer of note, wrote Harinamakirtanam, Bhagavatam Kilippattu and other works. 14.7.11 Bengali Literature The earliest phase of Bengali literature can well be located in the period ranging between the tenth and the twelfth centuries. Its literature was mainly in the form of folk songs and was deeply influenced by the philosophy of the Sahaja cult. The second stage began with the Muslim conquest of Bengal in the thirteenth century and continued till the end of the seventeenth century. There were three main trends in this stage. The first amongst these was the school of Vaishnava poetry. The most important exponents of Vaishnava poetry were Chandidasa, Chaitnaya, Govindasa and Krishnadasa Kaviraja. Then there were the translations and adaptations from classical Sanskrit. The best examples of these are Kasirama's Mahabharata and Kristtivasa Ojha's Ramayana. Then there was the magical kavya form of poetry - sectarian in spirit - it narrated the struggle of gods against their adversaries. The main contributors were Manikadatta and Mukundarama.

NSOU ??CC - HI - 07 237 Sri Chaitanya's intervention was conducive to the advancement of language and literature. The Vaisnava poets, inspired by the saint's mystic preachings, composed a number of lyrics in a new literary language that was largely a blend of Maithili and Sanskrit. This is known as brajaboli and the lyrics are called padavali. A new genre of Vaisnava biographies came into being. Though the earliest biography of Sri Chaitanya was written in Sanskrit by Murari Gupta, this was soon followed by the somewhat more contemporary accounts of Brindabandas in Bengali. Brindabandas's ChaitanyaBhagavata or Chaitanya Mangal was probably composed within a decade of the saint's death and is considered to be the most authentic account of the social conditions of his time. The next important account is Krishnadas Kaviraj's Chaitanya- Charitamrita. The date of its composition is till date a controversy ridden matter. The work serves as the first philosophical treatise which represented Sri Chaitanya as an incarnation of Sri Krishna and laid the philosophical foundation of Gaudiya Vaisnavism. Of all the biographies of Sri Chaitanya which followed, Gouranga Vijay by Chudamanidas and two works by Jayananda and Lochandas, both entitled Chaitanya Mangal, deserve to be mentioned. The latter is, however, best known for introducing a new style of folk songs called dhamali, dealing exclusively with the more romantic aspect of Krishna's life. The lyrics known as padvalli constitute another important branch of Vaisnava literature. Here, the diverse amorous moods, termed rasa in Sanskrit literature, were incorporated into the main verse or the padas. The Radha-Krishna relationship formed the major theme, though most works began with a eulogy of Sri Chaitanya who was hailed as the amalgam of Radha and Krishna. A large number of narrative poems were written on the life of Krishna, particularly the portion immortalised in the Bhagavat dsam skandha as the Vrindaban Leela. Vaisnava literature began to be patronised by Hindu zamindars and Muslim governors alike. Another genre of narrative poetry also known as the mangal kavyas attained immense popularity. The themes spoke at length about local cult-deities like Chandi and Manasa Dharma and transformed the Purani gods like Siva and Vishnu into household deities where they came to assume the garb of the Bengali peasant or artisan. The narrative form of the Mangal Kavyas was derived from the Puranas. The version of manifest poets of a single cut-deity was repeated even in the local versions of the Bengali Mangal Kavyas. The poets of Bengal were deeply influenced by the Puranas, but their poetry also included personal experiences. Hence, the fearsome Bhairava Siva, the killer of demons in the Puranas, has his trident recast into agricultural implements and often dons the appearance

238 NSOU ??CC - HI - 07 of an absent-minded rural yogi. A syncretic feature of the dharma-mangal kavyas merges Buddhism with the Puranic Marayana and the Muslim pir comes to be known as the Satyapir or Satyanarayana. A number of Muslim writers wrote in Bengali. Daulat Qazi, a writer of note, was from Arakan. This was due to the close association that existed between Bengal and Arakan ever since the latter state attained freedom from the yoke of Burmese rule. The Maga ruler of Arakan was forced to take shelter in Bengal where he stayed for as many as twenty- six years. It was on account of this that Bengali became the court language of Arakan. Daulat Qazi rendered into Bengali a number of popular romantic themes prevalent in the Gujarat-Rajasthan area such as Lar-Chandrani or Mayna Sati. It is said that Alaol, who was perhaps the most talented poet of his age, completed Laur Chandrani after his death. Alaol, the son of a Muslim governor of lower Bengal, was taken captive by a Portuguese pirate and sold as a soldier into the Arakan army. His talent as a musician and poet rendered him to Sulaiman, a minister at the Arakan court and also found him favour with Magan Thakur, the king's foster nephew. These friends and patrons freed Alaol from bondage. He rendered Malik Mohammad Jayasi's Padmavat, a Persian romance story, into Bengali. 14.8 Conclusion Regional styles of architecture proceeded to develop a form that suited their individual requirements. The regional styles of architecture

Introduction The conquest of, northern India by the Ghorids and the establishment of the Delhi Sultanate not only changed the existing political structure but also brought, economic changes.

The conquerors came with fairly well-defined concepts and practices regarding tax collection and distribution, and system of coinage, etc. But the existing systems could not be changed altogether immediately: in the beginning, these were superimposed on the older systems, and modifications and changes were introduced by different Sultans. In the opinion of Muhammad Habib, the economic changes that occurred as a consequence of the establishment of the Delhi Sultanate created an organisation considerably superior to the one that had existed before. He felt that the changes were NSOU ??CC - HI - 07 241 drastic enough to deserve the designation of 'Urban Revolution' and 'Rural Revolution'. D.D. Kosambi recognised the changes

no more than intensifying elements already present in Indian 'feudalism'. 15.2

Iqta and khalisa During the 13th century, large territories rapidly passed into the hands of the Sultans. Economy sustained by plundering or by extracting tribute from the defeated and subjugated rural aristocracies. Unlike the previous rulers, the soldiers were paid their salaries in cash. The regions that refused to pay land-tax or kharaj were known as mawas and were plundered or forced to pay through military raids. Gradually a mechanism of simultaneous revenue collection and distribution had to be introduced. Nizam- ulMulkTusi, aSeljukid statesman of the Eleventh Century, provides us with a classic description of the Iqta in Siyasatnama. According to Tusi, the Iqta was a revenue assignment that the muqti held at the pleasure of the Sultan. The Muqtis were iqta holders who had certain obligations to the Sultan, the most important being that of maintenance of troops for the benefit of the sultan. The iqta was a transferable charge and the transfers of iqtas were frequent. Muqtis who hold iqta should know that they have no claim on the subject/ peasants (ri'aya) other than that collecting from them in a proper manner the due tax mal (land tax)....if any muqti does anything other than this they [the king] should take away his power and resume his iqta'.... They [the muqti should in truth realize that the country and the peasantry (ra'iyat), all belong to the Sultan, with the muqtis simply placed on their head. Nizamu'lMulkTusi here emphasizes the fact that muqti's right is to collect and appropriate taxes especially land revenue, and there were certain obligations on the part of the muqtis to the sultan. The revenues he collected from the iqta were meant to provide him resources for fulfilling his obligations. The muqti was thus tax collector, army paymaster, and also commander rolled in to one. The area that the sultan did not give in iqta was called khalisa; here the sultan's officials (amils) collected the land revenue directly for the royal treasury. 15.2.1 Meaning of the Iqta system: 'Iqta' is an Arabic word denoting a sort of administrative regional unit. It is usually considered equivalent to a province. The iqtadari was a unique type of land distribution and administrative system evolved during the Sultanate period. Under the system, the 242 NSOU ??CC - HI - 07 whole empire was divided into several large and small tracts of land, called the iqtas, which were assigned to nobles, officers and soldiers for the purpose of administration and revenue collection. The iqtas were transferable, i.e., the holders of iqtas-iqtadars- were transferred from one region to an-other every three to four years. It means that the grant of iqta did not imply a right to the land. It was just an administrative unit. The iqtas could be big (whole province) or small. The assignees of bigger iqtas-known as muqti or wli-had dual obligation, tax collection and administration. They collected revenue from their iqta, defrayed their own expenses, paid the troops maintained by them and sent the bawazil (sur-plus) to the Centre. Their accounts were checked by the royal auditors or the diloan-i-loizarat Initially the Delhi Sultans had divided their empire into several 'Iqtas' or provinces or spheres of influence and put them under the charge of officers called 'Iqtadars' (governors).

48%

MATCHING BLOCK 114/171

SA

MHY-6.docx (D110789933)

The number of Iqtas was not fixed. There was no uniformity in their administration. Besides 'Iqtadar', other names of the heads of an Iqta' was Naib Sultan, 'nazim' or 'wali'.

Each 'Iqta' was under the charge of an experienced general who generally was the member of the royal family or a notable 'Amir' (noble) and confidant of the Sultan. 15.2.2 Duties and powers of the Iqtadar: 1. He was under

100%

MATCHING BLOCK 115/171

SA

MHY-6.docx (D110789933)

the supervision of the Central government and carried on orders of the Sultan. 2.

He enjoyed the same powers in the province as the Sultan enjoyed in the empire. 3. He maintained large armies and was required to send the same when asked by the Sultan. 4. He maintained order in the territory under his charge and protected the life and property of the people. 5. He appointed soldiers in his army. 6. He collected revenue from the people of his territory. 7. From the revenue thus collected he administered expenditure on the maintenance of his army, his pay and other administrative expenditure and deposited the rest in the state treasury. 8. He sent yearly report of his income and expenditure to the centre.

NSOU ??CC - HI - 07 243 15.2.3 Restrictions on the Iqtadar: 1. The Iqtadar did not always enjoy hereditary powers. The Sultan could take back Iqta from him whenever he pleased. 2. The Iqtadar was liable to be transferred from one place to another. 3. He could not engage himself in wars of extension without the prior approval of the Sultan. 4. He was required to send a part of the booty to the Sultan. 5. The elephants and the members of the royal family captured during wars were to be sent to the Sultan. 6. He was not allowed to hold his own court. 7. He could not use a canopy or royal emblem. 8. He could not

50%

MATCHING BLOCK 116/171

SA

MHY-6.docx (D110789933)

mint coins in his name. 9. He could not read 'Khutba' in his name. During the rule of a weak Sultan, the '

Iqtadars' were tempted to enjoy more powers. They even kept elephants an exclusive privilege of the Sultan. 15.2.4 Two categories of Iqtas: During the reign of Ala-ud-Din, the Iqtas were divided into two categories: (1) Iqtas which had been under the Delhi Sultans from the very beginning (2) The territories brought under control by Ala-ud-Din Khalji. The 'muqtis' or the 'walis' i.e. the 'Iqtadars' of the second category were given more powers so that the newly acquired territories could be brought about under more effective control. Besides the 'Iqtadar', there were several other officers of the central government. The efficient functioning of an 'Iqta' depended on the power of the Sultan on the one hand and on the other hand on the capability of the 'Iqtadar'. 15.2.5 Division of 'Iqtas' into units: In due course the 'Iqtas' were divided into smaller units called 'shiqqs' 'parganas' and the villages.

244 NSOU ??CC - HI - 07 The head of a 'Shiqq' was called 'Shiqqdar'. Important officials of a 'paragana' were the 'amil' or 'munsif' the treasurer and the 'quanungo' 15.2.6 Local administration:

The 'Chaudhri' the 'Patwari', the 'Khut' the 'Muqaddam' and the 'Chankidari' were the hereditary officers of the village who helped in the collection of revenue.

The Sultan or the governor or officials of the state normally did not interfere in the village administration. 15.2.7 Khalisa: The territory whose revenues were directly collected for the Sultan's own treasury was designated khalisa. Its size seems to have expanded quite considerably under Alauddin Khalji. But the khalisa did not appear to consist of shifting territories scattered throughout the country. In all probability, Delhi along with its surrounding district, including parts of Doab remained in khalisa. In Iltutmish's time, Tabarhinda (Bhatinda) too was in khalisa. Under Alauddin Khalji, the khalisa was the whole of middle Doab and parts of Rohilkhand. But during the days of Feroz Tughluq, the khalisa perhaps had reduced considerably in size. Iltutmish (1210-36) is reported to have assigned in lieu of salaries "small iqta" in the Doab to the soldiers of the Sultan's army. Balban (1266-86) made a half-hearted attempt to their resumption without success. It was Alauddin Khalji (1296-1316) who established firmly the practice of payment of salaries in cash to the soldiers. A practice that was again altered by Feroz Tughluq who began to assign villages to soldiers in lieu of their salaries. These assignments tended to be not only permanent but hereditary.

15.3 Evolution of the Iqta system under different rulers

Iltutmish was the first sultan to introduce iqta system. According to Irfan Habib, the iqta at the early stage were allotted to army chiefs who maintained their regiments by the income of the iqta. With the accession of Iltutmish in 1210, the iqta system seems to have become the mainstay of administrative organization of the Delhi Sultanate. During the 26 years of this reign (1210-36) the entire Sultanate from Multan to Lakhnauti was divided into big and small tracts of land called iqta and were placed under the charge of officers designated as muqti. Thus there were two categories of iqta, the iqta of provincial level and small iqta in the form of certain villages. Iqta at the provincial level were given to important nobles. They carried both revenue and administrative responsibilities. In the early years of the foundation of the Sultanate, neither the revenue income of these assignments was known nor the size of the contingent of the assignee was fixed. During the larger part of the thirteenth century the muqti seem to have depended on tribute extorted from local potentates or plunder (in the form of cattle and slaves) from the mawasat or unsubjected areas. Balban's expedition in the Doab and Katehr was essentially raids of the kind organized on a very large scale. He instituted an inquiry into the terms and tenure of the iqta given to the Turkish soldiers in Doab which were given during Iltutmish's time. It was discovered that many of the original grantees were dead by this time; those who survived were too old and infirm to render any military service. They retained their hold on the iqta and claimed hereditary rights over them. However, certain modifications and mild attempts at introducing central control to some extent were made by Balban (1266-86) when he appointed a khwaja (accountant) with each muqti: this may imply that the Sultanate now was trying to find out the actual income of the iqta and muqti's expenditure. Balban held the other view. These iqta's he said, were given in lieu of military service. When the grantees discontinued to perform their part of obligations, the contract on the basis of which they held these iqta became null and void. The occupants of the iqta however argued that these lands were given to their ancestors by way of reward by the state in the past and carried no obligation for the future. Balban refused to be guided by this logic. Though he made certain concessions in favour of these iqtdars at the intercession of Fakhniddin, the kotwal of Delhi. The principle of hereditary iqta was definitely rejected by him and khwaja was appointed to watch and control the activities of the iqtdars. The central control on the iqta began from the reign of Balban. According to Barni, Balban insisted that the muqti must deposit surplus revenue to the government after meeting the expenses of the army. Balban made it a point to drive home the principle that iqta was no hereditary office. The iqta underwent certain changes under Khalji rulers. Prior to the last decade of the thirteenth century, the muqtis enjoyed all executive powers in the civil, military and financial administration. But afterwards they no longer remained in the absolute control of the iqta administration. In fiscal matters they were brought under the increasing control

246 NSOU ??CC - HI - 07 of the central government. They had to submit the account of revenue collection and expenditure. They could take only an agreed amount for themselves and their troops, and send the balance to, the sultan's treasury. The mode of payment of soldiers underwent a change at the hands of AlauddinKhalji. He abolished the small iqta by which soldiers of the sultan's army used to be paid and substituted cash salaries. But as noted by Moreland, he left the large iqta assigned to the commanders unaffected. Alauddin annexed the areas near capital in the Khalisa land. It now covered the whole of the middle Doab and parts of modern Rohilkhand. The real intervention in the iqta administration came under AlauddinKhalji. With the expansion of the empire, far off areas were assigned in Iqta and the areas closer to Delhi were brought under the Khalisa. The central finance department (diwan-iwizarat) perhaps prepared some sort of an estimated revenue income from each iqta. The audit was stringent, punishments were severe, transfers became frequent and enhancements (taufir) were often made in the estimated revenue income of the iqta on various pretexts. GhiyasuddinTughluq (1320-25) introduced some moderation. He followed a flexible policy in respect of the iqta management. The enhancements in the estimated revenue income by the central finance ministry would not to be more than 1/10 or 1/ 11th annually. The muqtis were allowed to keep 1/10th to 1/20th in excess of their sanctioned salaries. He believed that if pressure was given to the muqtis for more revenue, they would exploit the peasants. The attempt at central intervention reached its climax during the time of Muhammad bin Tughluq (1325-51). In several cases. awali and an Amir was appointed to the same territory. The wali was to collect revenue and, after deducting his pay, to send the rest to the treasury. The Amir or commander had nothing to do with revenue realization and hereceived his own salary and the salary of his troops from the state. The troops of the iqta holders were paid in cash by the state's treasury. This possibility infuriated the commanders and created political problems for Muhammad Tughluq. Feroz Tughluq, therefore, decided to make concessions. He enhanced the cash salaries of the nobles and got new estimates of revenue (mahsul) prepared which was designated jama. There was no attempt to restore central control by the successors of Feroz. Under the Lodis (1451-1526), the administrative charges and revenue assignments were combined together and these were no more called iqta but were simply called sarkars and parganas. A system of sub-assignments came in vogue particularly under Sikandar Lodi (1489- NSOU ??CC - HI - 07 247 1517). The main assignees used to sub-assign portions of their assignment to their subordinates who in turn made sub-assignments to their soldiers.

15.4 Land grants The religious persons and institutions such as dargahs, mosques and madrasas and other dependents of the ruling class were maintained by making grants of revenue income. These revenue grants were called milk, idrar, and inam. These grants were not generally resumed or transferred. But the Sultan had the right to cancel them. AlauddinKhalji is reputed to have cancelled almost all grants. GhiyasuddinTughluq too cancelled large number of grants. However, FerozTughluq made a departure and not only returned all the previously resumed grants but also made new grants as well. In spite of this generosity of the Sultan, according to the figures recorded by Afif, the total grants by the Sultan accounted only for about one-twentieth of the total jama (estimated revenue income). Nobles, too, made revenue grants out of their own iqtas. Noticeably, the Sultans made grants not only in the khalisa but also in the iqtas. These grants covered cultivated as well as cultivable areas not yet brought under plough. The Islamic land tax with which the new rulers of India were familiar was kharaj. The kharaj was essentially a share in the produce of the land and not a rent on the land. During the 13th century, the kharaj took by and large the form of tribute. This tribute was paid, in lump sum, by some arrangement by the potentates. Alternatively, from the recalcitrant areas (mawas) where such arrangements were not possible, the tribute was extorted through plundering raids. It was thus probably mostly in the form of cattle and slaves. The sources of the Delhi Sultanate do not suggest that before the reign of AlauddinKhalji any serious attempt was made to systematize the assessment and realization of kharaj in some detail about the agrarian measures of AlauddinKhalji. Attempt was to increase the revenue collection by enhancing the demand, introducing direct collection and cutting down the leakages to the intermediaries. The demand was thus fixed in kind but realization appears to be mostly in cash. Barani informs us that the revenue collectors were ordered to demand the revenue with such rigour that the peasants should be forced to sell their produce immediately at the side of the fields. At another place,

73%

MATCHING BLOCK 119/171

SA

unit 3-Society and economy.docx (D165079263)

Barani says that AlauddinKhalji brought the doab 248 NSOU ??CC - HI - 07 into khalisa and the tax (mahsul) from there was spent on paying the cash salaries to the soldiers.

Yet there is a rather contradictory statement by the same author that the Sultan ordered that the peasant should pay tax in kind and not in cash. According to Irfan Habib, it seems to have reference to only some parts of the khalisa in the Doab. From there the Sultan wanted to obtain supplies for his granaries. Otherwise the realization was normally in cash'. The system of taxation introduced by Alauddin seems to have lasted for long though GhiyasuddinTughluq modified it to some extent and exempted the khots and muqaddams from paying tax on their cultivation and cattle. But he did not permit them to impose any ceases on the peasants. MuhammadTughluq, first extended AlauddinKhalji's system of revenue collection based on measurement to Gujarat, Malwa, Deccan, South India and Bengal. At a laterstage, the scale of agrarian taxation was enhanced considerably. Barani's statement that the increase amounted to 20 or 10 times is undoubtedly a rhetoric but it certainly gives the impression of an enormous increase. Barani suggests that additional new imposts were levied. Of the other taxeskharaj, charai and ghari were more rigorously collected. According to Yahya, cattle were branded and cottages counted to avoid any concealments. 15.5 Conclusion The iqta system which originally was implemented for collection of revenue and providing the army in the 13 th c, became a collecting and administrative office under the strict supervision in the 14 th c and later it became a jagir. Irfan Habib believes that the iqtawas conducive to the political centralization of the Delhi Sultanate. He interpreted iqta as the ideal mode and institution through which Sultanate collected revenue resources from the peasantry and distributed them amongst military commanders in exchange of for service. Sunil Kumar is not of the same opinion with Habib on the ground that had the iqta been a measure of such tried efficacy, it would have a pattern of uniformity which was clearly not the case and it changed from one regime to another. The centralization of the iqta could never work in the cause of centralization. It remained as a measure of revenue extraction but could hardly be used uniformly as an apparatus for the centralized system of administration.

NSOU ??CC - HI - 07 249 15.6 Model Questions Essay type questions: 1) Narrate the evolution of the iqta system in the Sultanate period. 2) Give an idea about the economic structure of the sultanate period in the light of iqta and revenue-free grants 3) Explain the role of muqti in the sultanate economy. 4) What were the changes introduced by Balban,Alauddinkhilji and GiyasuddinTughlaq in the iqta system? 15.7 Suggested Readings Vipul Singh:Interpreting Medieval India, paperback, New Delhi, 2009 V.D. 250 NSOU ??CC - HI - 07 Unit 16 ???Agricultural Production; Technology Structure 16.0 Objectives 16.1 Introduction 16.2 Agricultural Production 16.3 Agricultural Technology and Irrigational devices 16.4 Military Technology 16.5 Conclusion 16.6 Model Questions 16.7 Suggested Readings 16.0 Objectives In this unit we would discuss about the agrarian economy and the technology of the 13 th -14 th centuries. We will also try to analyze in what ways the establishment of the Delhi Sultanate affected the agrarian production and technological development. The extent of cultivation and the crops grown by peasants would be studied. The canal irrigation and its impact on the agrarian relation and changes in the previous rural structure would be closely analyzed. With the advent of technology significant changes were noticed in the social life. 16.1 Introduction Studying the economic condition of the sultanate period becomes difficult because of the limited interest of scholars about the life of the ordinary people. Still based on various contemporary sources of the said period we can have some informations about the economic life of this period. During the early medieval period, India was known for her rich wealth which tempted Sultan Mahmud to invade India. The accounts of foreign travelers like Marco Polo, Ibn Batutah, Mahuan and others show that India was prosperous both industrially and economically and there was a great abundance of all the necessities of life.

NSOU ??CC - HI - 07 251 16.2 Agricultural Production During the 13 th and 14 th centuries the land man ratio was very favourable and the population was much less. One of the most remarkable feature of the agriculture of the time was the large number of crops grown by the peasants under the Delhi Sultanate. This has no parallel in other parts of the world except perhaps in South China. Ibn Battuta was struck by the multiplicity of crops grown and described in sufficient detail the various crops grown in the two cropping seasons. He also suggests that in the region around Delhi double cropping was also practiced,

100%

MATCHING BLOCK 121/171

SA

unit 3-Society and economy.docx (D165079263)

that is, on the same soil both the kharif and

the rabi crops were raised. Thakkur Pheru, the mint-master at Delhi under Alauddin Khalji, writing in c. 1290, lists some twenty-five crops grown under two harvests and gives also their yields. While the yields cannot be comprehended owing to the uncertainty of the units used, one gets a fairly good idea of the crops raised. Among food crops, he mentions, wheat, barley, paddy, millets juar, moth etc. arid pulses (mash, mung lentils, etc.). For cash crops, sugarcane, cotton, oil-seeds, sesamurn, linseed, etc. are referred to. One may perhaps legitimately assume that improved facilities of irrigation would have helped extend the area under rabi (winter) crops such as Wheat, sugarcane etc. With the 'Islamic raider' making of wine from sugarcane became widespread and a new rural industry emerged at least around Delhi and in the Doab by the 14th century as is evident from Barani's account. Thakkur Pheru surprisingly omits the dye-crop (indigo) though its production is testified to by the fact that indigo was already an important item of export to Persia. It is recorded that the Khanids tried to encourage indigo plantation in Persia to avoid dependence upon India for its supply. The probable use of lime-mortar in the indigo-vats by providing an improved surface should have helped the manufacture of dye. From Ibn Battuta's account, we get information on fruit growing in the Delhi Sultanate. It appears that technique of 'grafting' was not known by peasants. Earlier grapes were grown only in the few places besides Delhi but Muhammad Tughluq's urging to peasants to improve cropping by shifting from wheat to sugarcane to grapes and Feroz Tughluq's laying down of 1200

100%

MATCHING BLOCK 122/171

SA

unit 3-Society and economy.docx (D165079263)

orchards in the vicinity of Delhi to grow seven varieties of grapes

seems to have made them so abundant that, according to Afif, the prices of grapes fell. During the 14 th century, under Muhammad bin Tughlaq and Firuz Tughlaq, there was a marked development of gardens. Firuz is said to have built 1200 gardens in the 252 NSOU ??CC - HI - 07 neighborhood of Delhi. These gardens led to improvement of fruits, specially, grapes. Wine used to come from Meerut and Aligarh to Delhi. However, the Indian peasants did not practice sericulture (rearing of silk-worm) at that time and no true silk was produced. Only wild and semi-wild silks, namely, tasar, eri and muga were known. Ma Huan, the Chinese navigator in 1432, makes the first reference to sericulture in Bengal. The price of the food grains fluctuated according to annual growth. Alauddin's price control was very effective to keep the steady supply of grains and other articles at low price. There was occasional famine due to crop failure. The sultans used to help the peasants during famine by granting taqavi loans and remitting taxes. Agriculture was generally dependent upon natural irrigation, that is, rains and floods. Since cultivation was largely based on natural irrigation, the tendency was to grow mostly single, rain-watered kharif (autumn) crop and coarse grains more. Canal irrigation is described in our sources. The Delhi Sultans themselves got the canals cut for irrigation. Ghiyasuddin Tughluq (1320-25) is reported to be the first Sultan to dig canals. But the cutting of canals in a much bigger way was undertaken by Feroz Tughluq (1351-88). Feroz Tughluq cut two canals

85%

MATCHING BLOCK 123/171

SA

unit 3-Society and economy.docx (D165079263)

from the river Yamuna carrying them to Hissar, one from the Kali river in the Doab joining the Yamuna near Delhi; one each from

the Sutlej and the Ghaggar. Certainly, it was the biggest canal network in India till the 19th century. Canal irrigation helped greatly the extension of cultivation in the eastern Punjab. Now there was an emphasis on the cultivation of cash crops like sugarcane, etc. that required more water than other crops. Shams-i-Siraj Afif says that a long stretch of land of about 80 krohs (200 miles) vast was irrigated by the canal Rajabwah and Ulughkhani. According to Afif, as a result of abundant water available, peasants in the eastern Punjab raised two harvests (kharif and rabi) where only one was possible earlier. This led to new agricultural settlements along the banks of the canals. In the areas irrigated by the canals 52 such colonies sprang up. Afif comments enthusiastically, "neither one village remained desolate nor one cubit of land uncultivated."

16.3 Agricultural Technology and Irrigational devices

There has never been any human settlement which did not use some kind of technique - or craft for its survival. In fact, the history of technology is no less important than NSOU ??CC - HI - 07 253 political or economic studies. Technology is an inseparable part of the material culture of a society. Here are a few glimpses of the state of Technology in India during the Delhi Sultanate. The most remarkable aspect is the introduction of new articles of technology and crafts and to juxtapose the indigenous crafts and technology along with the new importations. One thing that strikes us is that by and large the tools, devices and implements were made of wood and earth, while iron was employed only when most necessary. Ropes, leather and bamboo, too, were used when the need arose. That is why they were inexpensive. Implements used by different craftsmen for example were: hammer, saws, basola (adze), randa (plane), awl, axe, barma (bow-drill), pick-axe, shovel, chisel (tesha) and anvil, etc. It may be pointed out that - smelting of ore was carried out by using wood and charcoal. There was no "blast" furnace, but bellows served this need. Salt and diamond mining were very important ' industries. Salt was also procured by the natural evaporation of the saline sea-water collected systematically. Agriculture and irrigation were the two fields which underwent the greatest number of technological changes after Turkish rule. There were many sources of water for the purpose of irrigating fields in early medieval times. Rain water was a natural source. Ponds and tanks received this water which was then used for irrigation. Water channels formed by inundation, too, served the same purpose. The most important controlled source was the water of the wells, especially in north India. There were five methods of pulling water or water lifting. Broadly, there were five devices or techniques to raise water from wells: i) The simplest technique was to draw water with rope and bucket by using hands without any mechanical aid. Obviously, then, the bucket was small in size and, thus, this operation would not have adequately served to water large fields. But we cannot deny the use of rope-bucket technique for irrigating small fields for crops, most probably vegetables that did not require much water. ii) The second method was the employment of pulleys (charkhi) combined to the rope-bucket contraption which was, once again, activated manually. Undoubtedly, the pulleys needed lesser amount of human energy and, therefore, comparatively larger bags or buckets could have been attached to the rope. It was also used for domestic purpose, especially by women. iii) An improved method of the rope-bucket-pulley contraption was the employment - of a pair of oxen to replace human-power. At this stage, it had become a specialized device for drawing water intended specifically for irrigation. In some areas of North India it 'is still in operation known as

254 NSOU ??CC - HI - 07 charasa. The latter is a huge bag that gives an idea of the immense quantity of water raised from the well in one single haul-up. Moreover, the bullock track was like a ramp or sloping path- the length of the path corresponding to the depth of the well. The water of the well (mounted with this device) could not have been used for drinking, cleansing utensils or for washing cloths. Of all the five methods, charasa was not a multi-purpose one, it was solely devised for irrigation - a fact which has not been realized till now. The fourth technique was what is considered to be semi-mechanical as it worked on the First Class Lever principle. A long rope is lashed to the fork of an upright beam or trunk of a tree (especially meant for this purpose) to put it in a swinging position. The bucket is fastened to a rope whose other end is tied to the end of the swinging pole hovering over the well. The pole's other end carries a 'counterweight', a little heavier than the bucket when filled with water. Thus, the fulcrum forms at the centre of the pole, with weight and 'counter weight' (Effort) at its two ends. This contraption requires only a little effort on the part of the person operating it. The device is known as shaduf in Egypt. It is called tula (balance) in Sanskrit, but in Bihar and Bengal it's known as dhenkli or lathatha. The fifth water-lifting method is called saqiya or 'Persian Wheel'. None of the four; mechanism described above required wheels as their basic component. This - water- wheel could well claim to be called a water machine because of the employment of the gear system. With gears we enter upon a very advanced stage in the technological sense: it has been surpassed only now by electric tube-wells. Saqiya was one of the most talked about technique. The use of hoe or hoeing was replaced by plough centuries back. This metallic piece immensely helped in the tillage of comparatively harder soil. An illustration in the Mifta-ul Fuzala - a Persian lexicon compiled in about A.D. 1460 in Malwa - clearly shows the plough with an ironshare drawn by two yoked oxen. Unlike Europe, India could not develop horse-drawn wheeled-plough for the reason that our plough was light in weight suited for the soft soil. For sowing, the method of broadcasting was known. The practice was to scatter seeds manually by taking them out from a cloth-bag slung over shoulders. The time-scale of seed-drill in India is controversial: some would trace it back to the Vedic Age. At any rate, the only positive evidence for its use along the western coast of India comes from one Portuguese - Barbosa (c. 1510) - in connection with the wet-cultivation of rice. Harvesting was performed with a sickle, and threshing by using oxen who walked round and round over the ears put on the threshing floor. "Wind power" was exploited in winnowing in order to separate the chaff from the grain.

NSOU ??CC - HI - 07 255 16.4 Military Technology It is now an established fact that iron-stirrup (rikab) was unknown in India. For that matter, there is no Sanskrit word for stirrup. Perhaps surcingle, 'big toe stirrup' and 'suspension hooks' were used in India, but stirrup proper was the contribution of the Muslims. This stirrup was first used in China around 6th century A.D., and later it diffused into Persia and other Islamic countries during the next century. While some scholars of Medieval India look at the stirrup as a contributory factor to the series of military successes that the Turks achieved in India—at least in the initial stage of their invasions—horseshoe has been treated as its poor cousin. Domestication of horse was not enough. With the view of controlling the horse for riding, some equipment was called forth. Nailed horseshoe was a late come. It is interesting to note that horseshoe is the only riding equipment which does not have direct bearing on controlling the animal like other outfits. If so, then, why shoeing was needed? The answer lies in the hoof, the most vulnerable part of the equine anatomy: The horse's hoof is a constantly growing horny structure like the human nails, susceptible to breaking, splitting and shelling. In their original natural habitat horses keep their feet worn down and hence, trimming is unnecessary. But tamed and domesticated horses when in use, require shoeing, especially in moist latitudes. A horse with footsore will limp and, hence, of little use to the rider. Shoeing offer two advantages: first, it gives a better grip on soft ground; and secondly, the hooves get protection on rough ground. It is in this context that we can appreciate the worldwide axiom of horsemen: "No foot, no horse". A lame cavalry horse may often be worse than no horse at all. Horseshoes have not been reported from any archaeological site excavated in India. It is now an incontrovertible fact that horseshoes were foreign importations, brought by the Turks when they came to India. Many decades ago, some scholars, both European and Indian, were keen to prove that gunpowder and fire-arms were used in Ancient India. Among the Sanskrit sources; the Sukraniti became the focal point from which support was drawn. However, sobriety and maturity prevailed when other scholars dismissed their inferences, especially after careful examination of the Sukraniti. Again, untenable attempts were also made to show that the Muslims who came to India following the invasions of Sultan Mahmud of Ghazna used fire-arms., Gunpowder consists of saltpetre, sulphur and charcoal, and it was first invented in China. Later, it spread

256 NSOU ??CC - HI - 07 to the Islamic society. The immigrant Turks brought gunpowder to India perhaps in late 13th or early 14th century. But it must be pointed out that even by the reign of Sultan Feroz Shah Tughluq its only use was for pyrotechny or fireworks (atashbazi), not for fire-arms or for propelling cannon-balls. Fire-arms were used for the first time during the second half of the 15th century in some regions of India like Gujarat, Malwa and the Deccan. At any rate, the use of fire-arms on a regular basis was introduced by the Portuguese when they came to Calicut in A.D. 1498, and by Babur in North India in the early 16th century. 16.5 Conclusion One can observe in this Unit something about the techniques or methods by which the people during the Delhi Sultanate fabricated or produced articles of daily use.

Concerning agriculture now we know about ploughs with iron share, methods of sowing, irrigational devices, harvesting, threshing and winnowing. In the case of military technology with reference to stirrup, horseshoe and Tincoating, were new techniques. 16.6 Model Questions Essay type questions: 1) Discuss the agricultural condition of India during the Sultanate period. 2) Throw light on the technological changes that came up during the Sultanate period 3) What was the condition of crop production during the Sultanate period? 4) How the technology changed the scenario of warfare? 16.7 Suggested Readings Tapan Raychaudhuri and

NSOU ??CC - HI - 07 257 Unit 17 ? Changes in rural society: Revenue Systems Structure 17.0 Objectives 17.1 Sources 17.2 Society and Culture during the Delhi Sultanate 17.3 Categories of Village folk 17.4 Revenue System: Bhaga, Bhog, Kar 17. 5 Changes in the revenue system with changing powers 17.6 Conclusion 17.7 Model Questions 17.8 Suggested Readings 17.0 Objectives In this unit we would discuss about the rural society and the categorization of the peasants in the light of different sources. The different taxes paid by the cultivators would be studied to get a clear picture of the rural society.

17.1 Sources Contemporary sources hardly speak on the aspects of the rural world of the Sultanate period. Some of the sources in south Indian language provides a background to the changes and continuities in the village life under the Delhi sultanate. 17.2 Society and Culture during the Delhi Sultanate India was ruled by the Turks and Afghans for more than three hundred years. The Turkish Sultans, who ruled over India, debarred the Indians from enjoying power and responsibility of the state. They had developed the feeling of abhorrence towards the "low born non-Turks". However, with the advent of Muslim refugees, this state of affairs underwent a change,

258 NSOU ??CC - HI - 07 resulting in the fusion of Muslims of different races and nationalities through matrimonial alliances. During the reign of the Delhi Sultanate, the society was divided into different sections. After the advent of the Muslims, the society constituted of the foreign Muslims, the Indian Muslims and the Hindus. Among them, foreign Muslims constituted the ruling class.

76% **MATCHING BLOCK 124/171** **SA** MHY-6.docx (D110789933)

The next section was that of the Indian Muslims who were either converted to Islam or were

the descendants of the converted Muslims. The Hindus also formed the part of the society at that period and

100% **MATCHING BLOCK 125/171** **SA** MHY-6.docx (D110789933)

were divided among themselves on the basis of castes. The

foreign Muslims enjoyed

100% **MATCHING BLOCK 126/171** **SA** MHY-6.docx (D110789933)

the most respected and the privileged section of the society. All high offices of the state were kept reserved for them. They

yielded great influence in society and administration. But the foreign Muslims were not united.

The caste-system of the Hindus affected the Muslims, especially the Indian Muslims. They continued to maintain divisions among themselves on the basis of their previous castes. Thus, both the foreign and Indian Muslims were divided among themselves on the basis of their different nationalities and birth. The Muslims were also divided on the basis religious sect, education and professions. Sunnis and the Shiahs differed from each other on the basis of sects while soldiers and scholars were divided among each other on the basis of their professions. There was another class, the Ulema who constituted the religious community among the Muslims and claimed

pre-eminence over all others. The view of Dr. K. M. Ashraf is that "The caste system was a contributory factor in the establishment of the foreign Muslim rule". The view of Habib and Nizami is "That is social system of the red Hindus and the invidious caste distinctions rendered the whole military organizations rickety and weak". The slave system was prevalent among the Muslims and the Hindus and slaves were sold and purchased in open market. The slaves were treated well though their property and lives were the property of their masters. The slaves of the Muslims were better off as compared to the slaves of the Hindus. The Sultans and nobles kept slaves in huge numbers, provided education and gave them training and opportunity to rise in their lives so that many of them rose to the position of prominence in the state.

17.2.1 Rural Society: At the village level there was difference in the amount of landholdings ranging from big plots enjoyed by khuts, muqaddams to the small pieces worked by the balahars, the village menials. The common peasants, though considered as legally free (hurr asl) but seldom were masters of domicile. There are evidences where the migrated peasants had been restored to their original village (possibly using force). It is said that before Alauddin Khalji imposed his regulations with a view to overthrow the

NSOU ??CC - HI - 07 259 overbearing khuts and muqaddams, they were exempted from paying four major taxes i.e. land revenue (kharaj o jizia), holding tax (ghari) and grazing tax (charai). Over and above they collected their customary due (qissmat i khoti) from common villagers. Over them stood the feudal hierarchy of rais, ranas and their cavalrymen rauta (derived from rajaputra). Who opposed the Ghorian conquest. It was not possible to supplant the older aristocracy all at once and thus initially they were restored if they agreed to pay tribute to the Sultan, continuing with their own revenue collection. However, the process of destruction supplanting of this class started. A new class of rural grandees with the title of chaudhuri came up in the fourteenth century, who according to Ibn Batuta was in charge of 100 villages (sadi) and held responsible for collection of land from the villages under their jurisdiction. Apart from this curious reference of 100, the normal Indian equivalent to the basic revenue unit above the village was pargana which we find from the fourteenth century. Chaudhuri however seems to be only one among the superior rural class denoted by the blanket term zamindar which makes its appearance by the fourteenth century comprising groups of people like muqaddams, mafrozis and maliks.

17.2.2 Muslim Nobles: During the Sultanate period, the nobles stood at the apex of the social system. They were mostly of foreign origin. They were the most respected and privileged class in the society. They were appointed in high posts and in lieu of their services, they received jagirs. As they belonged to different nationalities like Persians, the Afghans, the Turks, the Arabs, the Abyssinians etc. they are quite hostile to each other.

17.2.3 Indian Muslims: The other section of the society was that of Indian Muslims. They were either of the converted Hindus or were descendants of such converted Muslims. They were deprived of enjoying social and economic privileges like other Muslims in the society. They were also not given a share in the work of administration. This state of condition of the Indian Muslims continued till the end of thirteenth century. During fourteenth century the attitude of the Sultans underwent a change when the migration of the Turks from Central Asia to India was stopped. Sultan Ala-ud-din-Khilji for the first time had appointed Malik Kafur, an Indian Musalman as his general. Khwaja Jahan, a Brahmin convert was the Prime Minister of

260 NSOU ??CC - HI - 07 Sultan Firuz Tughlaq. However, the well placed Indian Muslims always tried to conceal their parentage as they desired to acquire equal footing with their foreign counterparts. In India the Muslims were divided into two classes namely the Umaras or nobles and the Ulemas or the theologians. The nobles were divided into three groups such as Khaas, Malik and Amirs. They enjoyed high offices in the state. The Ulemas or the theologians were assigned the duties of clergymen, teachers and judges. They exerted commanding influence on the government. The cultivators, the artisans, the shop-keepers, clerks, petty traders, servants, slaves etc. formed the lowest class of the Muslim society. During that period a very few Muslims lived in villages. Slave system was in vogue. They were engaged in domestic works only. Both the Hindu and Muslims used to keep slaves. There were slave markets. The sultans provided them with proper education and training so that a good number of slaves rose to eminence.

17.2.4 Condition of women: Though the Hindu women enjoyed respectable position in the family, participated in the religious ceremonies yet their position had deteriorated in the society. The practice of polygamy was prevalent among the rich. Sati system was in practice among the Hindus. Another social evil namely devadasi system was also prevalent among the Hindus. Widow Remarriage was not allowed. Women could not inherit property. Muslim women also did not have an honoured position in the society. The system of polygamy was in practice. Muslim women strictly observed purdah system. They were also deprived of education. However, in certain aspects, they were in a better position as compared to Hindu women. Unlike the Hindu women, they could divorce their husbands, remarry again and could claim their share in the paternal property. Sati system was not prevalent among the Muslim women. The Hindus were vegetarians whereas the Muslims were non-vegetarians. Liquor and opium was consumed both by the Hindus and the Muslims. Clothes made of silk, cotton and wool were used by the people. Various sports like hunting; animal fights, horse-polo etc. were their favourite pastimes. The Hindus and Muslims came in contact with each other and influenced each other in many respects. But during the Sultanate period the moral character of both the Hindus and Muslims had declined.

NSOU ??CC - HI - 07 261 17.2.5 Art and Architecture: During the Sultanate period, architecture made tremendous progress. This period witnessed the growth of Indo-Islamic architecture. This style of architecture was either purely Islamic or purely Hindu, rather it was influenced by both the styles. Several factors contributed towards the synthesis of Indian and Islamic style. Firstly, the Muslim rulers had to employ Indian 'Craftsmen, architects and sculptors, who had applied the Indian style of construction into Muslim buildings. Secondly, the Muslim rulers destroyed the Hindu temples and built the mosques, palaces and tombs out of the materials of the destroyed Hindu temple. Thirdly, the rulers converted the Hindu temples and palaces into their mosques and buildings. Besides, there was a nexus between the two styles with regard to the fact that both the Indian and Islamic art were inherently decorative. The Hindus adorned their buildings with images of different gods and goddesses, whereas the Muslims decorated them with square, triangular, parallel, rectangular lines, teachings of the Korans inscribed in the Persian script. Thus, the Hindu style of architecture greatly influenced Islamic style because of these factors and gave birth to this Indo-Islamic architecture.

17.2.6 Delhi Architecture: Sultan Qutb-ud-din Aibak constructed the Quwat-ul-Islam mosque of Delhi and Dhai- din-ka-jhompara mosque at Ajmer.

46% MATCHING BLOCK 128/171

SA MHY-6.docx (D110789933)

Both these mosques bear the mark of Indian and Islamic art. The construction of Qutb Minar was started by Qutb-ud-din but was completed by Iltutmish. The purpose of

this tower was that from it the Mauzzin could Summon the faithful to prayer. It

88% MATCHING BLOCK 129/171

SA BHYS-21 History of Medieval India.docx (D113515071)

was named after the famous Muslim saint Qutb-ud-din who was famous as Qutb Shah. It is

purely an Islamic structure. During the reign of Firuz Tughlaq lightning caused damage to the fourth storey of this tower and he replaced it by two smaller ones and raised its height to 71.28 metres. According to Percy Brown, "Qutb Minar as a whole is a most impressive conception, the vivid colour of its red sand stone, the changing texture of its fluted stories with their overlay of inscriptional bonds, the contrast between the alternating spaces of plain masonry and rich carving, the shimmer of the shadows under the balconies, all combine to produce an effect of marked vitality.

262 NSOU ??CC - HI - 07 Iltutmish, besides completing Qutb Minar, also built a tomb for his eldest son known as Sultan-Ghuri, situated at a distance of five kilometres from the Qutb Minar. He also built three buildings such as Hauz-i-Shamsi, Shams-l-idgah and Jam-i-masjid at Badava and the Atarkin-ka-Darwaza at Jodhpur. The mausoleum of Iltutmish was also another famous building of that period. Sultan Balban built Red Palace and his own tomb at Delhi. Sultan Alauddin Khilji had constructed some beautiful buildings like Hazar Situn (thousand pillars),

60%

MATCHING BLOCK 130/171

SA

MHY-6.docx (D110789933)

the fort and the city of Siri, the Jamaita Khan masjid at the dargah of Nizam-ud- din Auliya, Alai Darwaza at Qutb Minar, the Hauz-i-Alai and the Hauz-i-Khas buildings.

Of course, the city and palace were destroyed but the Jamait Khan mosque and the Alai Darwaza still exist and have been considered as beautiful specimens of Islamic art. Unlike the buildings of slave and Khilji regimes, the buildings of the Tughlaq period lacked splendour. The buildings of the Tughlaq period were formal, prosaic and famous for puritanical simplicity. The puritanical attitude of the Sultans and the financial difficulties were two factors which had influenced the architecture, Ghiyasuddin built the new city of Tughlaqbad, east of the Qutb Minar, his own tomb and a palace. Muhammad Tughlaq had built the city of Johan Panha, the fortress of Adilabad and some other buildings at Daulatabad. All the buildings built by him are destroyed, only the remains of two buildings, the Sathpalahpund and the Bijai Mandal, are found. The buildings constructed by Firuz Tughlaq were the new city of Firuzabad, the palace fort known as Kotla Firuz Shah within it, a college and his own tomb near Hauz Khas. The best specimen of architecture of the Lodi and Sayyid Sultans are the tombs of Mubarak Shah Sayyid, Muhammad Shah Sayyid and Sikandar Lodi and a mosque known as Moti ki Masjid by the prime minister of Sikandar Lodi at Delhi. 17.2.7 Provincial Architecture: A good number of provinces proclaimed their independence during the period of the later Tughlaqus. The rulers of these provinces were also great patrons of architecture. The provincial style was different from imperial style in some respects. The imperial architecture was more splendid than the provincial architecture. This was mainly due to the limited financial resources of the provincial rulers. Secondly, the local style also influenced the provincial style of architecture.

NSOU ??CC - HI - 07 263 In Bengal the style of architecture which developed was the synthesis of Islamic art and Hindu art. The notable buildings of province

65%

MATCHING BLOCK 131/171

SA

MHY-6.docx (D110789933)

are Adina Masjid constructed by Sikandar Shah at Pandua the Eklakhi Mausoleum at Hazrat Pandua, the Lotan Masjid and the Bari Sona Masjid at Gaur, the

Qudam Rasul at Gaur built by Nusrat Shah, the Dakhil Darwaza at Gaur and the tomb of Jalaluddin Muhammad at Pandua. The

buildings of Gaur Tribeni and Pandua are made of bricks. Stones were very rarely used. The special features of Bengal style of architecture were the use of pointed arches on pillars, Hindu decorative designs and the application of Hindu architecture to Islamic art. The rulers of Jaunpur were great patrons of art and architecture. The architecture of Jaunpur contained the features of both Hindu and Islamic architecture. The Atala Masjid constructed by Ibrahim Shah Sharqi, the Jami Masjid built by Hussain Shah, and the Lai Darwaza mosque are some of the beautiful specimens of provincial architecture. The province of Malwa witnessed the emergence of a distinct style of architecture which had some resemblance with the architecture of Delhi. The domes and pillars of two mosques built out of the materials of Hindu buildings at Dhar were of Hindu form. The fort of Mandu has been considered as the beautiful specimen of provincial architecture. Some of the beautiful

55%

MATCHING BLOCK 132/171

SA

MHY-6.docx (D110789933)

buildings of Mandu are the Jami Masjid, the Hindola Mahal, Asharfi Mahal, the Jahaz Mahal, the tomb of Hushang Shah and the palaces of Baz Bahadur and his queen

Rupamati. Before the advent of Turks, the province of Gujarat had developed a beautiful indigenous style. After the Muslim conquest, Gujarat had produced the best combination of Hindu and Muslim architecture. The famous buildings of Gujarat are the Jami masjid at Cambay, the Jami Masjid and tomb of Ahmad Shah at Ahmedabad, the Tin Darwaza, the Ranika Hujra and Dholka Masjid. The city of champagne is adorned with many beautiful building and the most famous building among them is the mosque built by Mahmud Begarha. The Sultans of

50%

MATCHING BLOCK 133/171

SA

MHY-6.docx (D110789933)

Bahamani kingdom also constructed magnificent buildings within their territories. Some of the famous buildings are the mosques at Bidar and Gulbrga, the tomb of Muhammad Adil Shah known as Gol

Gumbuz and the Chand Minar at Daulatabad. 17.2.8 Hindu Architecture: In north India particularly in Rajasthan, the Rajput's could maintain their political existence. Hence in Rajasthan, the specimens of Hindu architecture are found. Rana

264 NSOU ??CC - HI - 07 Kumbha of Mewar had constructed the fort of Kumbhal Garh and the Kirti Stambha or the tower of victory in Chitor. Kirti Stambha has been considered as one of the remarkable tower in the country. At many places forts and palaces were built by different rulers. Though the forts still exist, the palaces have perished. In the south, the rulers of Vijay nagar empire had built many beautiful architectural edifices. Unfortunately, the battle of Talikota devastated the kingdom

50%

MATCHING BLOCK 134/171

SA

MHY-6.docx (D110789933)

and most of the beautiful buildings and temples of the kingdom were destroyed. However, one among them which were survived is the Vithala temple

built by Krishnadeva Ray. Fergusson has described this temple as the, "finest building of its kind in South India." Thus, both the Indian and Islamic art had played pivotal role in the enrichment of Indian architecture. During the period of Delhi Sultanate architecture had made good progress. 17.2.9 Literature: Turko-Afgan rulers were primarily military persons, some of them took interest in belles- letters and under their patronage literatur of high order was produced during this period. The court of Delhi Sultans was well attended by writers, poets, scholars, philosophers, logicians, theologians, lawyers and chroniclers. Amir Khusrau, Mir Hussan Dehlvi, Badruddin Thoneswari, Quazi Abdul and Amil-ul-Mulk etc. were the shining lights of the literary firmament during the period. Islam gave an immediate filling to the vernacular languages which were in

65%

MATCHING BLOCK 135/171

SA

MHY-6.docx (D110789933)

the course of evolution. The religious reformers and saints wrote, spoke and preached in languages which could be easily understood by the masses. The growth of Hindi, Marathi, Bengali, Maithili, Punjabi, Gurumukhi and other provincial literatures took place in this age. Ramananda, Kabir, Surdas and Tulsidas preached in Hindi, Mirabai and some other preachers and saints of Radha-Krishna cult preached in

Brij-bhasa. 17.2.10

The Muslim rulers of Bengal also patronized Bengali. They engaged scholars to translate Ramayan and Mahabharat from Sanskrit

to Bengali.

Chaitanya enriched the Bengali literature with his songs and Bhajans.

The elevation of Bengali to a literary status was brought about by several influences of which Mohammedon conquest was undoubtedly one of the foremost cause as marked by Dinesh Chandra Sen. 17.2.14 Sanskrit: In spite of the abundant growth of the vernacular literature Sanskrit literature did not cease to be cultivated and the Sultanate period was not entirely barren of work in Sanskrit both religious as well as secular. Parthasarathi wrote many works on the Karma Mimansa and some works which expressed the doctrines of Yoga, Naya and Vaiseshika systems of philosophy. 266 NSOU ??CC - HI - 07 The saints of the Bhakti movement made valuable contributions to the philosophical literature in Sanskrit. In South India Sanskrit literature did receive sufficient patronage by the rulers. Telgu and Kanarese received much encouragement from Vijayanagar Kings. 17.2.15 Growth of Urdu: Another important achievement in the field of literature was the growth of Urdu out of the mingling of Persian, Arabic and Turkish words and ideas with languages and concepts of Sanskrit Origin. It has the words of Arabic, Persian, Turkish languages, Western Hindi dialects of Delhi province. The grammatical structure of Urdu is essentially that of Hindi. Various necessities forced the Mohammadans and Hindus to meet each other involved the evolution of a common language which came to be known as Urdu that turned to be the medium of expression of many during this period that still continued to be an Indian language, composed and contributed by many poets and literatures. Literature in different regions thus underwent a great change. 17.3 Categories of Village folk Hemchandra, a Jain writer on 12 th century categorized the village folk into four categories, i) the produce sharing peasants or share –croppers for whom the words Karshak or ardhikas are used. ii) Plough-shares and field labourers for whom various words such as halavakaka, kinasa and even karshak are used. These two sections constituted the lowest, most dependent peasantry. It seems that the word karshak, literally means tiller of the soil, a generic word for the lower peasantry which formed the largest group in villages. iii) Modern writers called them free peasants. Later on they were called, malik- i- zamin or khud- kast. They were organized on caste basis. iv) There were village artisans. Some of them belonged to svapach or untouchable category. The term low or adham is applied to them. The commentators of the Dharma sastras, agreed about the harrowing poverty of the mass of toiling peasantry. The Padma purana, describes the miserable life of Karshaks

NSOU ??CC - HI - 07 267 and that they were much oppressed by the rulers of the time as to be unable to even support their families. The poverty of the peasants and field labourers is contrasted with the luxurious life of the landed aristocracy, the samantas. It will thus be seen that village society was highly unequal. The growth of a cash nexus which became more rapid under the Sultanate increased disparities further. While the agrarian policies of the Sultans were meant to ensure a steady income for the ruler and the officials who administered the state, their policies also had an impact on the rural society and economy. This is an aspect which medieval chronicles were hardly concerned with. 17.4 Revenue System: Bhaga, Bhog, Kar Since the economy was predominantly agrarian, the primary source of income for the state was land revenue. The medieval states would collect revenue from the farmers on their produce to sustain the larger state structures. Before the advent of the Turks in north India the cultivators were required to pay a large number of cesses like bhaga or land revenue, the bhog or cesses and the kar or the extra cesses- to the local landed elite. Peasants were required, according to the Dharma sastras, to pay 1/6 th of the produce as land revenue. The early years of the Turkish rule did not stand witness to too much change in the structure of the rural society. Gradually the collection mechanism of the land revenue became more systemized and institutionalized. Irfan Habib is of the opinion that the polities in Islamic Central Asia rested on the foundations of two elements of independent growth the iqta and the kharaj. The iqta was a transferable revenue assignment by which members of ruling class obtained their income from a territory, though without any permanent attachment to it. By providing for a policy of rigorous centralization, that gave the sultan's government immense power over society. Through iqta the state could demand a large share of the surplus. This share preeminently took the form of kharaj, which had by then come to signify the sovereign's claim to that part of the surplus which the peasant produced above what he needed for his basic subsistence. The iqta assignees collected the kharaj and other taxes and maintained themselves and their troops. The surplus was sent to the Sultan's treasury. The predominance of agriculture meant that the village remained the basic unit of administration in the Delhi sultanate. Irfan Habib while drawing up a scenario of the agrarian condition in the Delhi sultanate period says that there was little question of the peasants claiming property rights over any parcel of land. The state has large tracts of lands khalisa which were tilled by farmers and from where all the revenue came to the central treasury through the agency of officials called the amils.

268 NSOU ??CC - HI - 07 The taxation system followed by the Sultans of Delhi was to an extent based on the Hanafi school of Muslim law. The revenue was classified into Fay and zakat. Fay was further divided into Khams, Jijiya and kharaj. Zakat: comprised tax on flocks, herds, gold, silver and agricultural produce. Khams: 1/5 th of the booty acquired in war or mine or to be handed over to state. Jijiya: was imposed on non-Muslims in return for which they received protection of life and property. Kharaj was the tax on land. Holder of kharaj land had to pay land tax whether land was cultivated by them or not. 17.5 Changes in the revenue system with changing powers During the Sultanate period the revenue administration was not that well organised. Even the fiscal resources of the state were very limited because the state's authority extended over the limited territory in North and East of India, and the major parts of Central and Southern India remained beyond their influence. But the early Sultans were quite intolerant and tried to squeeze maximum of money from the Hindus. Ala-ud-Din Khilji intentionally and deliberately followed the policy of reducing the Hindus to poverty. 17.5.1 Land Revenue: As agriculture was the main occupation of the people the land revenue was the chief source of state income. But there was no fixed share which the cultivator had to pay to the state. This was determined by the different Sultans and ranged from 1/10 to 1/2. For example, Ala-ud-Din Khilji charged 50 per cent of the agricultural produce as state share. 17.5.2 According to the Islamic law there were two types of land taxes: i. Ushr and ii. Kharaj. Ushr was the land tax charged on the lands held by the Muslims. It was usually one-tenth of the total produce. Kharaj was the tax charged on the lands owned by the Hindus and it varied from one-tenth to one-half.

NSOU ??CC - HI - 07 269 The Jagirdari system was in existence and the jagirdars acted as middle-men between cultivators and the state. They collected the revenue on behalf of the state. In addition, they also claimed a share for themselves. After payment of these taxes nothing substantial was left with the cultivator. Ala-ud-Din Khilji paid some attention to improve the revenue administration and introduced a number of vital changes. His primary objective in introducing the changes was to collect the maximum revenue for the state so that he could maintain a strong army, which was needed both to combat the Mongol danger and to effect fresh conquests, In the first instance he ordered the resump-tion of all landed grants which the nobles held as Inam (reward) or waqf (gifts) and turned them into crown lands. All the lands were measured and after ascertaining their produce the government's share was fixed at 53 per cent. The share of the state was rather high and was unprecedented. The agriculturists had, in addition, to pay certain other taxes and they were virtually reduced to sore straits. Alauddin Khilji's agrarian measures amounted to a massive intervention in the rural set up. His measures alienated the khots, muqaddams and chaudhuris. The khots and muqaddams were suspected of passing on their burden of work on the weaker sections and not paying ghari and charaitaxes. It cannot be denied that Alauddin's agrarian measures aimed at striking at the share of surplus. There was an attempt to replace khots and muqaddams with an army of amils who were corrupt, was prone to breakdown. It is said that Alauddin's revenue measures collapsed with his death. Barni tells us how the Hindus, who had the monopoly of agriculture, were greatly impoverished so much so that there was no sign of gold or silver left in their houses and the wives of muqaddams used to seek jobs in the houses of Mussalmans, work there and receive wages. Apart from increasing state's share in land revenue Ala-ud-Din Khilji took drastic steps to eradicate corruption prevailing in the revenue department. He increased the salaries of the Patwaris, but inflicted heavy punishment on them if they resorted to corrupt practices. He also ensured that the Patwaris properly assessed land revenue and did not show favour to anyone. According to Dr. R. P. Tripathi, "Ala-ud-Din was apparently the first Muslim ruler whose hands reached as far as Patwaris who were the best source of information in all matters pertaining to the land and its revenue."

270 NSOU ??CC - HI - 07 The Revenue Administration set by Ala-ud-Din Khilji continued to work under his successors, but it lost much of efficiency. It was

73%

MATCHING BLOCK 145/171

SA

MHY-6.docx (D110789933)

Ghias-ud-Din Tughlaq who softened the rigours of Ala-ud-Din's revenue/ policy and administration.

He found the state share of 50 per cent of the land revenue rather harsh and inconvenient, he fixed the state share at one-tenth of the total produce. During his times many barren and ruined lands were brought under cultivation and paid much attention to the welfare of the peasants. Ghiyasuddin Tughlaq attempted to amend Alauddin's system by giving certain concessions to khots and muqaddams. They started wielding tremendous power. Ghiyasuddin also replaced the system of measurement of Alauddin by introducing the concept of sharing in the khalisa areas. Barni informs us that Ghiyasuddin made sure that the revenue demand in the iqta areas was not raised by 1/10th or 1/11th. He disallowed the system of farming. According to Prof. S. R. Sharma, "We do not come across such tender consideration for the country until the days of Sher Shah Suri two centuries later." Under Muhammad bin Tughlaq: the whole of India including Gujarat, Malwa, Deccan, South India and Bengal was brought under a monolithic and uniform

52%

MATCHING BLOCK 146/171

SA

unit 3-Society and economy.docx (D165079263)

system of taxation. Under him a further increase in taxation led to a very serious agrarian uprising in the doab.

Muhammad Bin Tughlaq, successor of Ghias-ud-Din also introduced important reforms in the revenue administration. He

92%

MATCHING BLOCK 147/171

SA

MHY-6.docx (D110789933)

got prepared a comprehensive register of the income and expenditure of the Sultanate in order to introduce a uniform standard of land revenue and to bring every village under assessment. Another great experiment of Mohammad Tughlaq, which brought much odium upon him, was

the increase of taxation in the Doab. Muhammad Tughlaq required lot of money for his conquests and administration and decid-ed to raise the same by increasing land revenue in the Doab, an area known for its fertile lands. There is no unanimity amongst the scholars regarding the exact increase. According to Ferishta the tax was increased three or four times. However, Barani holds that it was raised ten or twenty-times. The view of Barani certainly seems to be rather exaggerated. The people could not have afforded such heavy taxes. Barni has severely criticised the tax increase in Doab and observed "

89%

MATCHING BLOCK 148/171

014E1220-Social and Cultural History of India ...
(D165315243)

it operated to the ruin of the country and decacy of the people... the

backs of the ryot were broken. Those who were rich became rebels...
NSOU ??CC - HI - 07 271 the lands were ruined and cultivation was arrested. Grains became dear, the rains were deficient, so famine became general and widespread. It lasted for years and thousands upon thousands of people perished". But it appears that Barani, who himself belonged to Doab, has greatly exaggerated the sufferings of the people. The Sultan had cogent and convincing reasons to justify the increase in taxation. Earlier, Ala-ud-Din Khilji had also been charging 50 per cent of the gross produce. Furthermore, Doab was a rich and fertile land and the king could expect better income with least labour and inconvenience to the people of the land. The only misfortune was that he carried out this measure at a time when a severe famine was stalking the Doab and the distress of the people was greatly aggravated by its disastrous effect. One of the commendable things done by Mohammad Tughlaq was the establishment of the

64%

MATCHING BLOCK 149/171

SA

MHY-6.docx (D110789933)

department of agriculture Diwan-i Kohi. This department made efforts to bring more and more lands under cultivation. Firoz

Tughlaq, who succeeded Muhammad Tughlaq, found the revenue system in complete chaos, people suffering due to extor-tion and famine. He paid attention to the improvement of the revenue administration. An enquiry was held into the titles and tenures. Those who were illegally deprived of their lands, were asked to file their claims in the courts of law. He reduced state's share of land revenue. He provided 'taqavi' loans to the cultivators and provided greater facilities for irrigation. He is credited with having got dug four canals which were source of perennial irrigation. He in-creased

80%

MATCHING BLOCK 150/171

SA

MHY-6.docx (D110789933)

the salaries of the revenue officers so that they may no exploit the poor peasants.

Firoz Shah Tughlaq reversed his policy and many agrarian levies were discontinued. However, jijiya was imposed separately. He also imposed water tax on villages that used canal system. His period was known for its general prosperity. Firoz Shah did away with the variety of taxes which were charged from the people. Instead he levied only four taxes which are sanctioned by Quran viz. the Khiraj, the Zakat, the Jaziya and the Khamo. Khiraj was the land tax. Khams meant one-fifth of the booty captured during wars. Jaziya was a tax levied on the Hindus and Zakat was the tax realized from the Muslims for religious purposes. In addition to these four types of taxes later on Feroz Tughlaq added irrigation tax on those agriculturists who made use of the water from the canals. It was charged at the rate of one-tenth of the produce of the irrigated area. It may be noted that for the imposition of this tax Feroz sought the approval of the Ulemas. The Revenue system adopted by Feroz Tughlaq continued to operate under the later Sultans.

272 NSOU ??CC - HI - 07 17.6 Conclusion The overall land revenue under the sultans, especially during the 14 th c, remained heavy, hovering around fifty percent of the produce. At the same time every effort was made to reduce the power and privileges of the intermediaries, who took major portions of the cultivators produce. The land revenue system enabled the ruling class of the sultanate to appropriate a large part of the country's surplus. The administrative methods of revenue collection and centralization of such large resources in the hands of the ruling class had important consequences for urbanization. It enabled state to introduce system of monetization. 17.7 Model Questions Essay Type: 1) Discuss the rural society during the sultanate period. 2) How would you categorize the peasants in the sultanate period in the light of sources? 3) Discuss the changes in the revenue system during the sultanate period. Short type questions: 1) who is an amil? What role he played in the sultanate economy? 2) Who is kudkast? How his role in sultanate economy changed with time? 17.8 Suggested Readings Satish Chandra: Medieval India, New Delhi, 2003 Irfan Habib: Medieval India, The Study of a Civilization (New Delhi: National Book Trust), 2008 V.D. After reading this Unit, one should be able to learn that in the Delhi Sultanate three interrelated developments occurred:

48%

MATCHING BLOCK 151/171

SA

unit 3-Society and economy.docx (D165079263)

a considerable increase in the size and possibly in the number of towns, a marked rise in craft production, and a corresponding expansion in commerce. 18.1

Introduction The available evidence suggests that the urban economy on the eve of the Ghori conquest was on a low ebb. The towns were fewer in number and smaller in size in the centuries preceding the establishment of the Delhi Sultanate. D.D. Kosambi shows that even the capital was a camp city on the move. The higher ruling class wandered from place to place along with the army while the lower ruling class was almost completely ruralized. This view of urban decline has been supported by R.S. Sharma who has

274 NSOU ??CC - HI - 07 convincingly reasserted his theory of urban decay with the help of enormous archaeological data painstakingly collected. This theory of decay of towns is further corroborated by the evidence of sluggish trade. The near complete disappearance of gold and silver currencies and the almost total absence of foreign coins in the Indian coin-hoards of the period are indicators that the foreign trade was at a very low scale. Moreover, the fact that not even the coins of various regional dynasties are found in the coin-hoards of other regions, suggests that inland commerce was not widespread. All this scenario changed almost immediately with the establishment of the Delhi Sultanate. The archaeological and numismatic evidence corroborate the literary evidence of growth of towns and - increase in commerce. This led Muhammad Habib to postulate a theory of 'Urban Revolution'. 18.2 Monetization The Turkish rule in Delhi, apart from the many other changes that it introduced, also revitalized the economy by introducing major transformations and standardization of coinage. Before this the coins of the Delhi region were known as delhiwal. During the Turkish rule coins carried inscriptions on both the

93%

MATCHING BLOCK 152/171

SA

delhi Sultanate AMU.pdf (D142327411)

sides in Arabic or Persian script. In Islam the inscribing of the ruler's name on the coins was invested with special

importance. The rulers of the Islamic world had this tradition of issuing coins on each occasion of conquering a new territory or even a fort or town. Simon Digby is of the view that the earliest issues of gold and silver coins from Delhi had a commemorative character which reflected the immediate coinage of hoards plundered or remitted in tribute. It was under Iltutmish that the coins of Delhi sultanate were standardized for the first time and he issued a new standard coin called jital. The ratio of silver and copper was 1:80. The tanga coins of Iltutmish issued later were amalgam of gold and silver. Digby suggested that the trimetallic coinage in northern India in the 13th c was heavily dependent on remittance of gold and silver from Bengal. A large number of gold and silver coins were issued by Alauddin Khalji and there is the brighter appearance of silver issues due to the absence of lead. Later on the Sultanate was faced with a strained economy, the predominance of gold over silver coins in circulations added up to the pressure. Shortly after that smaller denomination of gold coins were issued by Muhammad Tughlaq. Barni linked up Md bin Tughlaq's issue of token currency with the recruitment of large number of troops and payments therein. The monetary system NSOU ??CC - HI - 07 275 of the Delhi Sultanate started to decay by the middle of the 14th century. Gradually the silver tanga were debased. The monetary system of the Delhi sultanate was dominantly based on revenue extraction. Other sources of gain came from large scale plunder and collection of booty. The moment the episodes of plunder and loot began to shrink a crisis occurred in the monetary organism as well.

18.3 Market regulations

It seems that the urban craft production received a twofold impetus with the establishment of the Delhi sultanate. First, the Sultanate ruling class remained town-centered and spent the enormous resources it appropriated in the form of land revenue mainly in towns, either on buying services or procuring manufacturers. Even the money spent on the service sector partly went to help the urban craft sector through multiplier effect. While the nobility created demand for high-priced skill-intensive luxury items, its hangers-on in all likelihood created a mass market for ordinary artisanal product. The second factor that contributed to urban manufacturers was the introduction of a number of technological devices that reached India with the invaders. In the luxury sector, silk weaving expanded and carpet-weaving came from Persia. The other notable urban manufacture was papermaking. Perhaps a major sector of urban employment was building industry. Barani says that Alauddin Khalji employed 70,000 craftsmen for his buildings. One may well be justified in saying that there was considerably more masonry per acre of occupied space in the towns of 1400 A.D than in those of 1200 A.D. It is indeed important to know how production was organized. Whether the town artisans carried out production under the 'domestic system', that is, they owned their tools, raw material and the end product and also sold their product themselves; in other words, whether they were self-employed or while tools were their own and they worked at their homes, raw material was provided to them by the merchants, that is whether they worked under the 'putting-out system'. The contemporary sources shed little light on these aspects. One can, however, legitimately assume that since the tools of production even after the introduction of new devices were still simple and mainly of wood and little of iron should have remained cheap. The artisan was thus master of his own tools, though varied forms of labour organization seem to be prevalent. Certain artisans hawked or hired out their services such as cotton-carder who with a bow-string on his shoulder, went door to door selling his services as is evident from the account given in Khair-ul

276 NSOU ??CC - HI - 07 Majalis. Spinning was done usually by women staying at their homes. The weavers too usually worked at their own looms at home weaving cloth for sale, out of the yam bought or spun by themselves. They also worked on wages to weave yarn supplied to them by customers. But if the raw material was expensive such as silk or gold of silver thread, etc. and the products were luxury items, the craftsmen were to work in karkhanas under supervision. We have definite information about the Sultans and high nobles maintaining these karkhanas where the production was to cater to their own needs and contrary to D.D.Kosambi's assumption was not for market. Shahabuddin al Umari records in his Masalik-ul Absar that in Muhammad Tughluq's karkhanas at Delhi, four thousand silk workers worked as embroiderers. According to Afif, Feroz Tughluq's karkhanas produced cloth and carpets in a big way. While there is no suggestion in our sources, we may only conjecture that perhaps merchants also maintained karkhanas where production was for sale.

18.4 Urban centres Before discussing the evidence of increase in number and size of towns, we must first understand what we mean by town. There are two simple definitions of a town (a) the usual modern definition of a settlement of 5000 or above, and (b) a settlement where an overwhelming majority of population (say above 70%) is engaged in occupations other than agriculture. The two definitions are not mutually exclusive but while the archaeological evidence available for earlier period is not forthcoming from the 13th-14th centuries owing to the much less attention paid to medieval archaeology, the literary evidences testify growth of urban centres. Some major towns mentioned in the contemporary sources are Delhi (the capital), Multan, Anhilwara (Patan), Cambay, Kara, Lakhnauti and Daulatabad (Deogiri). Lahore was a big town but decayed after the Mongol invasion in the 13th century. However, in the 14th century it flourished again. While not even a guess estimate of the population of any town is available in our sources there are reliable indications to assume that at least some of these were cities big enough by contemporary standards. Ibn Battuta, who visited Delhi in 1330 A.D., describes it as of enormous extent and population, the largest city in the Islamic East in spite of the fact that Muhammad Bin Tughluq had shifted much of its population to Daulatabad. He describes the latter too, as large enough to rival Delhi in size. Some new towns were established during the period, such as Jhain (Chhain) in Eastern Rajasthan that was named 'Shahr Nau' during Alauddin Khalji's reign (1296-1316).

NSOU ??CC - HI - 07 277 The strength of the invader, of course, lay in combination and not in dispersal in an unfamiliar land and, thus, in initial stages, it was but natural for the members of the ruling class to prefer to stay at their iqta headquarters along with their cavalry. These iqta headquarters having the concentration of cavalry, its hangers - on and the retinue and household of the muqti thus emerged in the early phase as camp cities. Most of the 13th century towns are in fact defined as iqta headquarters in our sources; for example, Hansi, Kara, Anhilwara, etc. These towns were to be fed and provided for. In the beginning, the troops had to go for realizing kharaj/mal by plundering the surrounding villages; but gradually by the 14th century, as pointed out by Moreland, cash nexus developed. The revenue was realised in cash from the peasants who were thus forced to sell their produce at the side of the field. The merchants catered to the needs of towns giving rise to what we will discuss below as-'induced trade'. The ruling class coming from a different cultural milieu had needs of leisure and comforts of a different type; they wanted songs in Persian and dances of a different style, books, silk to wear and arcuate light architecture (not the stone edifices). Out of the resources that were indeed enormous by contemporary standards at its command, the new rulers naturally wanted to get luxuries and comforts of their taste which encouraged immigration from Islamic culture area. These immigrants were not only soldiers, but craftsman, artisans, singers, musicians, dancers, poets, physicians, astrologers and servicemen as described by Isami. The immigrant master-craftsman most probably introduced new techniques and articles of technology. In due course, Indian artisans must have learnt the new crafts.

18.5 Trade and Commerce We have seen that there emerged some considerably big flourishing towns as well as numerous townships during the 13-14th centuries. These towns naturally needed to be fed and supplied raw material for craft production. At the same time, there was growing practice of land revenue realization in cash. By the time of Alauddin Khalji, the cash- nexus came to be well developed and the ruling class tended to claim almost the entire peasant surplus by attempting to reduce the share of rural intermediaries. Both these factors were conducive to the development of inland trade. To pay the land revenue in cash, the peasantry was forced to sell its surplus produce while merchants had a market in newly emerged towns for agricultural products. This trade resulting from the compulsions of land revenue system is termed as 'induced trade'.

278 NSOU ??CC - HI - 07 The ruling class coming from a different cultural milieu had needs of leisure and comforts of a different type; they wanted songs in Persian and dances of a different style, books, silk to wear and arcuate light architecture (not the stone edifices). Out of the resources that were indeed enormous by contemporary standards at its command, the new rulers naturally wanted to get luxuries and comforts of their taste which encouraged immigration from Islamic culture area. These immigrants were not only soldiers, but craftsmen, artisans, singers, musicians, dancers, poets, physicians, astrologers and servicemen as described by Isami. The immigrant master-craftsman most probably introduced new techniques and articles of technology. It seems that the urban craft production received a twofold impetus with the establishment of the Delhi sultanate. First, the Sultanate ruling class remained town-centered and spent the enormous resources it appropriated in the form of land revenue mainly in towns, either on buying services or procuring manufacturers. Even the money spent on the service sector partly went to help the urban craft sector through multiplier effect. While the nobility created demand for high-priced skill-intensive luxury items, its hangers-on in all likelihood created a mass market for the ordinary artisanal products. The second factor that contributed to urban manufacturers was the introduction of a number of technological devices that reached India with the invaders. (You will learn, about them in detail in the next Unit). In the luxury sector, silk weaving expanded and carpet-weaving came from Persia. The other notable urban manufacture was papermaking. Perhaps a major sector of urban employment was building industry. Barani says that Alauddin Khalji employed 70,000 craftsmen for his buildings. One may well be justified in saying that there was considerably more masonry per acre of occupied space in the towns of 1400 A.D than in those of 1200 A.D. It is indeed important to know how production was organized. Whether the town artisans carried out production under the 'domestic system', that is, they owned their tools, raw material and the end product and also sold their product themselves; in other words, whether they were self-employed or while tools were their own and they worked at their homes, raw material was provided to them by the merchants, that is whether they worked under the 'putting-out system'. The contemporary sources shed little light on these aspects. One can, however, legitimately assume that since the tools of production even after the introduction of new devices were still simple and mainly of wood and little of iron should have remained cheap. The artisan was thus master of his own tools, though varied forms of labour organization seem to be prevalent. Certain artisans hawked

NSOU ??CC - HI - 07 279 or hired out their services such as cotton-carder who with a bow-string on his shoulder, went door to door selling his services as is evident from the account given in Khair-ul Majalis. Spinning was done usually by women staying at their homes. The weavers too usually worked at their own looms at home weaving cloth for sale, out of the yarn bought or spun by themselves. They also worked on wages to weave yarn supplied to them by customers. But if the raw material was expensive such as silk or gold or silver thread, etc. and the products were luxury items, the craftsmen were to work in karkhanas under supervision. We have definite information about the Sultans and high nobles maintaining these karkhanas where the production was to cater to their own needs and contrary to D.D.Kosambi's assumption was not for market. Shahabuddin al Umari records in his Masalik-ul Absar that in Muhammad Tughluq's karkhanas at Delhi, four thousand silk workers worked as embroiderers. According to Afif, Feroz Tughluq's karkhanas produced cloth and carpets in a big way. While there is no suggestion in our sources, we may only conjecture that perhaps merchants also maintained karkhanas where production was for sale. 18.6 Indian Ocean Trade Seaborne and overland During the Sultanate period, overland and overseas trade were in a flourishing state. The Khalji annexation of Gujarat must have enlarged trade relations between the Delhi Sultanate and the Persian Gulf and the Red Sea. Gujarat was connected with the Persian Gulf as well as the Red Sea. Hormuz and Basra were the chief ports for the ships passing through the Persian Gulf, while the ports of Aden, Mocha and Jeddah along the Red Sea were important for Gujarat. Through these ports, commodities moved on to Damascus and Aleppo, on the one hand, and Alexandria on the other. Aleppo and Alexandria opened up to the Mediterranean Sea with linkages to Europe. Merchandise of Gujarat were also carried towards the East - the port of Malacca situated at the Malacca straits and Bantam and Achin in the Indonesian archipelago. A European traveller Tome Pires, who came to India in the first decade of the 16th century, comments on the trade of Cambay as follows: "Cambay chiefly stretches out two arms: with her right arm she reaches out towards Aden, with the other towards Malacca. . ." Pires further says: "Malacca cannot live without Cambay, nor Cambay without Malacca, if they are to be very rich and very prosperous. If Cambay were cut-off from trading with Malacca, it could not live, for it would have no outlet for its merchandise."

280 NSOU ??CC - HI - 07 The main export from Gujarat to Malacca was the coloured cloths manufactured in Cambay and other Gujarat towns. These cloths were in demand in these places. In exchange, the Gujarati merchants came back with spices grown there. This pattern of "spices for coloured cloths" continued even after the Portuguese advent in the Asian waters. Varthema, an Italian traveller, who came to India during the first decade of the 16th century says that about 300 ships of different countries come and go from Cambay. He adds that about 400 "Turkish" merchants resided at Diu. The Khanid court historian Wassaf reports that 10,000 horses were annually exported to Malabar and Cambay from Persia. The Broach coin-hoards containing the coins of the Delhi Sultans along with the gold and silver coins of Egypt, Syria, Yeman, Persia, Genoa, Armenia and Venice further testifies to largerscale overseas trade. The ports of Bengal had trading relations with China, Malacca and Far East. textiles, sugar and silk fabrics were the most important commodities exported from Bengal. Varthema noted that about fifty ships carried these commodities annually to many l places, including Persia. Bengal imported salt from Hormuz and sea-shells from the Maldive islands. The latter were used as coins in Bengal, Orissa and Bihar. Sindh was yet another region from where seaborne trade was carried on. Its most well-known port was Daibul. This region had developed close commercial relations with the Persian Gulf ports more than the Red Sea zone. Sindh exported special cloths and dairy products. Smoked-fish, too, was its specialty in coastal trade. It was natural for the coastal trade to flourish right from Sindh to Bengal, touching the Gujarat, Malabar and Commandel coasts in between. This provided an opportunity for exchange of regional products along the coastal line distinct from inland the inter-regional trade. The two principal items of import were (a) horses - that were always in demand for cavalry since superior horses were not bred in India and Indian climate was not well- suited to Arabian and Central Asian horses. They were primarily imported from Zofar (Yemen), Kis, Hormuz, Aden and Persia; (b) precious metals viz. gold and silver, especially silver that was not at all mined in India but for which there was a high demand not only for metallic currency but also for fashioning luxury items. Brocade and silk stuffs were imported from Alexandria, Iraq and China. Gujarat was the major centre from where the luxury articles from Europe used to enter. The Sultanate India mainly exported grain and textiles. Some of the Persian Gulf regions totally depended on India for their food supply. Besides, slaves were exported

NSOU ??CC - HI - 07 281 to Central Asia and indigo to Persia along with numerous other commodities. Precious stones like agates were exported from Cambay. The Portuguese Advent In spite of brisk trading activities, Indian merchants' share in the overseas trade was negligible. Only a small section of Gujarati Banias, Chettis of the South and domicile Indian Muslims used to take part in this large trading activity. Trade was mainly in the hands of the Arab Merchants. With the landing of the Portuguese at Calicut in A.D. 1498 after the rounding of the Cape of Good Hope, a new dimension was added to the Indian seaborne trade, that is, the 'element of force'. On account of better ships armed with cannons, the Portuguese soon imposed their commercial hegemony over the trading world of Asia, including the Indian seas, especially in Western part. This curtailed the Arabs' share of the Indian trade, though they survived in the Eastern part, especially at Malacca along with the Indian merchants. 18.7 Conclusion Two types of merchants are mentioned in the sources of the Delhi Sultanate the karwanis or nayaks and Multanis. The merchants specializing in carrying grains were designated by Barani as karwanis (a Persian word meaning those who moved together in large numbers). The contemporary mystic, Nasiruddin Chiragh of Delhi calls them nayaks and describes them as those "who bring food grains from different parts to the city (Delhi) - some with ten thousand laden bullocks, some with twenty thousand" It can be said with a degree of certainty that these karwanis were the banjaras of succeeding centuries. As is clear from the Mughal sources, these were organized in groups and their headman called nayak. The other important group of merchants mentioned in our sources was that of the Multanis. Barani says that the long distance trade was in the hands of these merchants. 18.8 Model Questions 1) Discuss the factors responsible for the expansion of trade. 2) List major inland and overseas trade-routes of the 13th-14th centuries. 18.9 Suggested Readings Satish Chandra: Medieval India, 2003 Irfan Habib: Medieval India, The Study of a Civilization (New Delhi: National Book Trust), 2008 V.D. 282 NSOU ??CC - HI - 07 Unit 19 ?? Sufi Silsilas : Chistis and Suhrawardis Structure 19.0 Objectives 19.1 Introduction 19.2 Origin 19.3 Silsilas: Chisti, Suhrawardi 19.4 Conclusion 19.5 Model Questions 19.6 Suggested Readings 19.0 Objectives In this Unit, we will discuss sufi movement and ideas in medieval India. After going through this unit, one would be able to learn about the salient features of Sufism, the growth of Sufism in the Islamic World, its development in India during the period of Delhi Sultanate, the main sub silsilahs that flourished in India during the period, the reasons for the popularity of Chishtisilsilah in India, and, the impact of Sufism on the contemporary Indian life. 19.1 Introduction Sufism or 'tasawwuf' is the name for various mystical tendencies and movements in Islam. It aims at establishing direct communion between God and man through personal experience of mystery which lies within Islam. Every religion gives rise to mystical tendencies in its fold at a particular stage of its evolution. In this sense, Sufism was a natural development within Islam based on the spirit of Quranic piety. The Sufis while accepting the Shariat did not confine to their religious practice to formal adherence and stressed cultivation of religious experience aimed at direct perception of God. 19.2 Origin

Sufism as it developed in the Islamic world came to stress the importance of traversing the sufi path (tariqa) as a method of establishing direct communion with divine reality (haqiqat). ii) According to the Sufi beliefs, the novice has to pass through a succession of "stations" or "stages"(maqamat) and changing psychological conditions or "states" (hal) to experience God. iii) The sufi path could be traversed only under the strict supervision of a spiritual director (shaikh,pir or murshid) who had himself successfully traversed it and consequently established direct communion with God.

iv) The disciple (murid) progressed through the "stages" and "states" by

a leading figure who lent his name to it. A silsilah consisted of persons who had become disciples of a particular sufi.
vii) The hospice (khanqah) was the centre of the activities of a sufi order. It was the place where the imparted spiritual training to his disciples. The popularity of the khanqah and its capacity to attract disciples depended on the reputation of the pir. The Khanqahs were supported by endowment and charity.

full-fledged movement in different parts of the Islamic world. Sufism acquired distinct characteristic in the Indian environment but its growth in India, particularly in the initial phase, was linked in many ways with the developments that occurred in sufi beliefs and practice in the Islamic World during the period between 7th and 13th centuries. The growth of sufism in the central lands of Islam during this period can be divided into three broad phases:

Early Sufi applied an esoteric meaning to verses in the Quran which stressed on such virtues as repentance (tauba), abstinence, renunciation, poverty,
284 NSOU ??CC - HI - 07 trust in God etc. Mecca, Medina, Basra and Kufa were the earliest centres of sufism. The sufism, most of whom belonged to the 8th century, have been called 'Quietists' because they were more concerned with experiencing than with popularizing their ideas through mass contact. They believed more in guiding than in teaching. Sufism at Basra reached its height during the time of the woman mystic Rabia. Other regions of the Islamic world where sufism spread early were Iran, Khurasan, Transoxiana, Egypt, Syria and Baghdad. As Sufism spread to Iranian regions, it tended to express greater individualism, divergent tendencies, and heterodox doctrines and practices under Persian influence. The most famous of the early sufis in the Iranian regions was Bayazid Bistami (d. 874) from Khurasan. He gave a new turn to sufism by introducing in it the element of ecstasy and mystic doctrine of "all is in God". He was also the first sufite to employ the concept of "fana" (annihilation of the self) which exercised influence on later Sufis. Another prominent early sufi from Baghdad was Mansur who started his career as a pupil of Junaid but later developed the method of Bayazid Bistami. His mystical formula "I am God" played an important role in the evolution of sufi ideas in Iran and then in India. The Ulema considered him a blasphemer and denounced him for claiming mystical union with God. He was condemned, imprisoned and finally hanged. His ideas provided the basis for the development of the doctrine of 'insan-i-kamil' (the perfect Man). Early sufi groups were loose and mobile associations, quite unlike the later sufi orders. Members of a group travelled widely in search of master. There were separate convents for women Sufis. Sufism began to acquire the form of an organized movement with the establishment of the Turkish rule under the Ghaznavis and then under the Seljuqs in various parts of Central Asia and Iran in the later 10th and 11th centuries. The period marks the development of two parallel institutions in the Islamic world - (a) the madrasa system (seminary, higher religious school) in its new form as an official institution of orthodox Islamic learning and (b) the khanqah system as an organized, endowed and permanent centre of sufi activities. Khanqah was no longer a loose organization of individual sufis but a more effective and institutionalized centre of sufi teaching. However, the bond between the master and his disciples was still purely personal and had not yet acquired a ritualistic and esoteric character. Moreover, sufi orders had not yet begun to take concrete form. But khanqahs had now developed from mere hostels for sufi into

NSOU ??CC - HI - 07 285 popular and well-established centres of organized sufi teaching and practice with their own spiritual masters and circles of disciples. The ulema continued to show their suspicion of sufism in general and were particularly hostile to such non-conformist practices to induce ecstasy. However, certain sufis, with their background of orthodox Islamic learning, tried to effect a compromise between the ulema and the sufis. Most prominent of such sufi scholars was Abu hamid al-Ghazzali (A.D. 1058-1111). He was an Alim (theologian) but later led the life of a sufi. He stressed on the observance of external and formal aspects of Islamic law in sufi practice. However, orthodox and sufi tendencies in Islam continued to follow separate and divergent paths. 19.3 Silsilas: Chisti, Suhrawardi The Chistis were almost the most influential and popular of the Sufis. The Chisti order

The growth of the Chisti order in India during the Sultanate period took place in two phases. The first phase ended with the death of Shaikh Nasiruddin (Chiragh-i- Delhi) in 1356. The second phase is marked by its initial decline during the later part of the 14th century followed by revival and expansion in various parts of the country during the 15th and

16th centuries. The Chishti order which later became the most

78%

MATCHING BLOCK 162/171

SA

8 Seema KhanSem III Cultural History CDOE AMU.docx (D142785762)

influential and popular sufi order in India, originated in Herat and was introduced in India by Khwaja Muinuddin Chishti (d. 1236) who was born in Sijisian in c. 1141. He came to India at the time of the Ghori conquest. Finally settled in Ajmer about 1206 and won the respect of both Muslims and nonmuslims. No authentic record of his activities is available. During the later period, legends projected him as an ardent evangelist. However, he was not actively involved in conversions and his attitude towards non-Muslims was one of tolerance. His tomb in Ajmer became a famous centre of pilgrimage in later centuries. The successor of Khwaja Muinuddin Chishti in Delhi was Khwaja Qutbuddin Bakhtiyar Kaki. Shaikh Hamiduddin Nagauri another Khalifa of Shaikh Muinuddin Chishti, made Nagaur in Rajasthan centre of his activity. Shaikh' Hamiduddin established the silsilah in Nagaur where he lived like an ordinary Rajasthani peasant and dissociated himself from those in authority. He was a strict vegetarian. He and his successors translated many Persian sufi verses in the local language called Hindavi. Khwaja Qutbuddin Bakhtiyar Kaki was succeeded in Delhi by his Khalifa, KhwajaFariduddinMasud (1175-1265) known as as Baba Farid. Baba Farid left Delhi 286 NSOU ??CC - HI - 07 for Punjab and lived in his khanqah there. He despised association with the ruling class and rich persons. Nathpanthi yogis also visited his khanqah and discussed with him the nature of mysticism. His popularity in Punjab is clear from the fact that more than three hundred years after his death, verses ascribed to him were included in the AdiGranth compiled by the fifth Sikh Guru, Arjun, in 1604. His tomb at Pakpattan soon developed into a centre of pilgrimage. The most celebrated disciple of Baba Farid and the greatest sufi saint of the 14th century was Shaikh Nizmuiddin Auliya (1236-1325). He made Delhi the most famous centre of the Chishti order. Two historians Ziauddin Barani and Amir Khusrau, who were his contemporaries, testify to his eminent position in the social and religious life of northern India during the late 13th and early 14th centuries. Later. His successors spread the Chishti order in various parts of the country. His teachings

teachings and conversations (malfiz) are recorded in Fawaid-ulFuwad written by

(D142785762)

Amir Hasan Sijzi. This work serves more as a guide to practical aspects of Sufism than as a treatise on its metaphysical and theosophical aspects. Shaikh Nizamuddin Auliya saw the reigns of seven successive Sultans of Delhi. But he always avoided the company of the kings and nobles and never visited the court. The langar (an alms-house for the distribution of free food) of his khanqah was open to Hindus and Muslims alike. In his khanqah, he had many conversations with the Nathpanthi yogi visitors. He adopted many yoga breathing exercises and was called a sidh (perfect) by the yogis. Amir Khusrau (1253-1325) was a devoted disciple of Shaikh Nizamuddin Auliya. Shaikh Nizamuddin Auliya had many spiritual successors or Khadifs. One of them was Shaikh Burhanuddin Gharib (d. 1340) who was one of those saints who were forced by Sultan Muhammad bin Tughluq to migrate to the Deccan. He made Daulatabad centre of his activities and introduced the Chishti order there. The most famous of Shaikh Nizamuddin Auliya's Khalifas and his successor in Delhi was Shaikh Nasiruddin Mahmud (d. 1356) who came to be known as Chiragh-i Delhi (Lamp of Delhi). He and some of his disciples discontinued some of those practices of early Chishtis which could clash with Islamic orthodoxy and, in turn, persuaded the ulema to soften their attitude towards the Chishti practice of sama.

Some scholars hold the view that the decline of Delhi as a centre of the Chishti order was due to the attitudes and policies of Sultan Muhammad Bin Tughluq. However, it must be pointed out that the Sultan was not opposed to the sufis per se. Some sufis, including Shaikh Nasiruddin Chirag-i Delhi, remained in Delhi though they were compelled by the Sultan to accept state service. Moreover, sufi activities in many khanqahs were restored after the death of Muhammad Bin Tughluq when his successor Feroz Shah Tughluq showered gifts on them. However, Delhi was left with no commanding Chishti figure after the death of Shaikh Nasiruddin in 1356. He died without appointing a spiritual successor. One of his chief disciples, Gesudaraz left Delhi for a safer place in the Deccan at the time of Timur's invasion (A.D. 1398). As the Delhi Sultanate began to decline and disintegrate, the sufis dispersed to the more stable provincial kingdoms and established their khanqahs there. This dispersal of the Chishti order in different parts of the country during the later 14th and 15th centuries was accompanied by significant changes in the attitudes and practices of the Chishti sufis.

Second Phase The second phase in the history of the Chishti silsilah during the Sultanate period began with its decline in Delhi following the death of Shaikh Nasiruddin and its subsequent dispersal in various regional kingdoms. Though the sufis had begun to arrive in the Deccan from the late 13th century, it was Shaikh Burhanuddin Gharib who introduced the Chishti order there during the reign of Muhammad Bin Tughluq. Later, several Chishti sufis migrated to Gulbarga, the capital of the Bahmani kingdom (1347-1538). In Gulbarga, these sufis developed close relations with the court and accepted state patronage, thus causing a change in the attitude of the Chishti order towards the state. The Bahmani kings, on their part, purchased the political loyalty of these sufis and gave land grants to them. The most prominent of these Chishtis was Muhammad Banda Nawaz, Gesudaraz (c. 1321-1422). He left for the Deccan and received land grant of four villages from Bahmani Sultan, Feroz Shah Bahmani (1397-1422). He was an orthodox sufi and declared the supremacy of Islamic law (Shariat) over all sufi stages. Gesudaraz discontinued many practices of early Chishtis which clashed with the attitudes of orthodox ulema. Unlike the early Chishti masters, he was a voluminous writer on tasawwuf. After his death, the Bahmani Sultans continued the land grants in favour of his family descendants. His tomb or dargah in Gulbarga later developed into a popular place of pilgrimage in the Deccan. But the transformation of his descendants into a landed elite and their indifference towards Chishti teachings led to the decline of living Chishti tradition in Gulbarga. The change of Bahmani capital from Gulbarga to Bidar in 1422 also contributed to the decline of the Chishti order in Gulbarga. It has been pointed out that the Bahmani Court at Bidar,

288 NSOU ??CC - HI - 07 owing to its pro-foreigner and anti-Deccani bias, encouraged the immigration of foreign sufis' and did not patronise the Chishtis who were considered 'too Indian' However, chistis thrived again in the Deccan from the end of the 15th century and it continued to grow during the 16th and 17th centuries. Its new centre was a place popularly known as Shahpur Hillock, just outside the city of Bijapur-the capital city of the Adil Shahi Sultans. The Chishti tradition of Shahpur Hillock was different from most of the later Chisti traditions such as that of Gulbarga in that it maintained distance from the court and the ulema and derived its inspiration from local influences. The chistisaints of Shahpur Hillock was thus much closer to their attitudes to the early Chistisufi of Delhi, though it must be pointed out that the Shahpur Hillock Chishti tradition developed independent of both the Delhi and Gulbarga traditions.

8 Seema KhanSem III Cultural History CDOE AMU.docx (D142785762)

was a major order of the Sultanate period. Its founder in India was Shaikh Bahauddin Zakariya (1182-1262). He was a Khurasani and was a disciple of ShahabuddinSuhrawardi who had initiated the silsilah in Baghdad and was directed by the latter to proceed to India. He made Multan and Sind the centres of his activity. Thus, one of the oldest khanqahs in India was established by him at Multan. Iltutmish was the Sultan of Delhi at that time, but Multan was under the control of his rival, Qubacha. Shaikh Bahauddin Zakariya as critical of Qubacha's administration openly sided with Iltutmish in his conflict against the

Qubacha. After

the Multan ruler's overthrow, Bahauddin Zakariya received from Iltutmish the title of Sbaikh-ul Islam (Leader of Islam) and endowment. Contrary to the chisti saints of his time, he followed a worldly policy and built up a large fortune, He accepted Statepatronage and maintained links with the ruling classes. However, during the later period many independent sufi lines stemmed from him and some of them came to be known as 'beshara' (illegitimate orders). In addition to Shaikh Bahauddin-Zakariya, many other Khalifas were designated by Shaikh ShahabuddinSuhrawardi to spread the suhrawardisilsilah in India. After his initial NSOU ??CC - HI - 07 289 stay in Delhi, where he failed to establish his supremacy, he went to Bengal. He established his khaqah there and made many disciples, Languages for the distribution of free meals) to his khanqah. He is said to have played an important role in the process of Islamization in Bengd. During the Sultanate period, Punjab, Sind and Bengal became three important centres of the Suhrawardi activity. Scholars are generally of the opinion that the Suhrawardisufis converted Hindus to Islam and in this task they were helped by their affluence and connections with the ruling class. In this connection, a sharp contrast is drawn between their attitude and that of the Chishti sufis whose teachings did not aim at conversion. 19.4

BHYS-21 History of Medieval India.docx (D113515071)

Objectives After reading this unit one will be able to know about ? the ideology of the Bhakti movement; ? the major schools of the Bhakti movement; ? the impact of the Bhakti movement on society,

literature, etc. 20.1 Introduction The religious milieu of India when Islam reached this subcontinent, presents a phase where Buddhism had lost its supremacy and Brahmanism was trying to consolidate its position by compromising with Buddhist doctrines as well as with pre-Aryan practices. Islam though altogether a new thing, had exercised an influence upon the Indians with its principles of universal brotherhood and human equality. In the words of Tarachand "Not only did Hindu religion, Hindu art, Hindu literature and Hindu Science, absorb Muslim elements, but the very spirit of Hindu culture and the very stuff of Hindu mind were also altered, and the Muslim reciprocated by responding to the change in every

NSOU ??CC - HI - 07 291 development of life". An everlasting process of give and take, thus began. Among the Muslims, Al-Biruni, Amir Khusrau, AbulFazl, Dara Shikoh, etc. tried to understand Hinduism and made valuable attempts to enhance Muslim understanding of Hinduism by their own works and by translating Sanskrit works into Persian. Rulers like Feroze Shah Tughlaq, ZainulAbidin of Kashmir, Sikandar Lodi, Akbar, Jahangir etc. encouraged this trend with the result that scholars like Mirza Jan Janan rose in the 18th century to declare that both Rama and Krishna were prophets. During this period one can identify two significant trends in the realm of religion, mainly Bhakti and Sufi, a detailed discussion on Bhakti Movement follows in the subsequent section. 20.2 Bhakti Movement : Ideology K.M. Pannikar views the Bhakti movement as an outcome of a feeling of escapism which dominated Hindu mind as a result of the conquest of India by Islam. The reaction of the Hindus to the challenge of monotheistic Islam was the rise of many devotional sects based on Bhakti. In spite of the pantheistic philosophy of Shankaracharya, at the time of the arrival of the Muslims in India, the Hindu society comprised the followers of Saivism, Vaishnavism and the cult of Shakti. But there were intellectuals who had no faith in the prescribed path of action (karma marg), but who regarded the path of knowledge (gyanmarg) to be the appropriate method for attaining salvation. The disputes between the upholders of these views totally ignored the actual ethical behaviour of man, improvement of his status in life and fulfilment of his destiny on earth. Brahmanism with all its philosophical and ritualistic progress, had thus become an essentially intellectual doctrine. It ignored the personal religious aspirations of the people. The fundamental principles which it taught were impersonal and speculative. The people who were always in need of an ethical and emotional cult in which it was possible to find both satisfaction of the heart and moral guidance, understood nothing of it. It was in these circumstances that the path of Bhakti, devotion blended with love of God, found a favourable atmosphere. The chief mark of this trend of thought is the relation of the soul with the Supreme Being. The word Bhakti in the Pali literature takes its origin back to the 8th century B.C. The Bhagavadgita, pre-Buddhist texts and ChhandogyaUpanishad, contain some references which underline the emergence of devotion to a single personal God. This reaction of the heart against rigid intellectualism is Bhakti. So, it is slightly harsh to gulp the suggestion of some scholars like Weber who argue that Bhakti was a foreign idea which reached India through Christianity.

292 NSOU ??CC - HI - 07 Scholars like Barth and Senart also maintain that Bhakti, in the sense understood in India and the tradition by which it is inspired, belongs to Indian thought. However, this does not mean that in the process of evolution, Bhakti did not accept any external influences especially after the arrival of Islam in India. The religious point of view of the Hindus, though always based upon old foundation, became considerably modified. From the time of the Bhagavadgita to the 13th century, the concept of Bhakti evolved with a process of compromise between the traditional classical philosophy of the Upanishads and the urge for a personal God. The object of the authors of the Bhagavadgita was not to contribute a definite philosophy but only to establish a compromise between the different schools of Hindu philosophy. Monotheism and pantheism were clubbed together with the warmth of Bhakti in the Bhagavadgita. Thus, up to the 13th century, the period when Islam penetrated into the interior of India, Bhakti to a greater extent remained within the folds of Vedic intellectualism. This is evident from the fact that caste division is recognized in the Bhagavadgita. 20.3 Major Schools The concept of Bhakti was defined and analyzed in different ways and under various shades of opinion at many stages. Shankara, a South Indian Shaivite Brahman, gave the doctrine of Advaita (allowing no second, i.e., monism) and assiduously preached Upanishad doctrine of salvation through Knowledge. Ramanuja, another South Indian Brahman, though a monist did not accept that God may be exempt from form and qualities. Salvation could be attained through devotion and Bhakti. Yoga was the best mystical training. Mutual relationship between the devotee and God was that of a fragment of the totality. Prapti (attainment) was the second means of salvation. Ramanuja's God was a personal Being. He argued that as people need God, God too needs people. The individual soul created by God out of his own essence, returns to its maker and lives with Him forever, but it is always distinct. It was one with God, and yet separate. This system of Ramanuja is called visistadvaita (qualified monism). The translation of the BhagavataPurana from Sanskrit into Indian regional languages made the Bhakti concept predominant in Hinduism. The most important movement in the religious history of Medieval India was the creation of a new sect by Ramananda (c. 13W-1470), a disciple of Ramanuja. He had a better idea of the progress of Islam in North India under the Tughlaqs. By travelling all over India, he gathered ideas and made careful observations. He renounced the rigidity of the Hindu ritual and his disciples took the name of Advadhuta (the detached) and regarded

NSOU ??CC - HI - 07 293 themselves free from all sorts of religious and social customs. But he was not prepared to go very far from the past. That is why in his AnandBhashya he did not recognize the right of a Sudra to read the Vedas. One, therefore, should not expect social equality from Ramananda. Yet, Raidas and Kabir were among his disciples. Ramananda's teachings produced two distinct schools of thought among the Hindus: Saguna and Nirguna. To the first belonged the noted Tulsidas who gave literary form to the religious Bhakti. In worshipping Rama as the personal incarnation of the Supreme God, this school raised the popularity of Rama, besides preserving the authority of the Vedas. Another school was represented by Kabir who preached a religious system strictly monotheistic advocating abolition of Varnaashrama, and casting doubt on the authority of the Vedas and other sacred books. The school of Kabir sought to understand Islam and was sufficiently broad minded to incorporate some of its basic principles. That is why his references are available in the Sufi literature as well. In a 17th century account, the Miratulasar, he is called a Firdausiyasufi. The Dabistan-iMazahib places Kabir against the background of the Vaishnavitevairagis. AbulFazl called Kabir a monotheist. On the authority of the Bijak, the authoritative account of Kabir's philosophy, it may be said that he never thought of founding a religion as happened after his death. He simply wished to give an effect of fullness to the reconciling trend introduced by way of Bhakti and welcomed all who were willing to join him. Belief in a Supreme Being is the foundation of his preaching. He believed that salvation is possible not by knowledge or action but by devotion (Bhakti). He neither favoured Hindus nor Muslims, but admired all that was good in them.

20.4 Causes of the rise of the Bhakti Movement

i) Evils of Hinduism: Some evils crept in the Hindu religion before the spread of Bhakti movement. Caste system and untouchability were widespread and Islamic missionaries tried to attract the Hindus towards Islam by the propaganda of brotherhood and untouchability campaign.

ii) Hindu Muslim Integration: Another basic cause for the rise of Bhakti movement was that the majority of its propagators tried to bring about unity in Hindus and Muslims. They depreciated the fanatic Ulemas.

294 NSOU ??CC - HI - 07 iii) Muslim sovereignty: another important reason was the Muslim sovereignty and Indian reaction to it. Both Hindu and Muslims tried to come closer to each other as they believed that it was impossible to ignore the other.

iv) Propagation of the Sufi saints: the efforts of the Sufi saints paved a favourable atmosphere for the Bhakti movement in India.

v) Rise of saint devotees: The most important cause was the fact that bhakti movement was constantly enriched by Ramanuja, Ramanandakabir and so on.

20.5 Main Propagators of Bhakti Movement

Kabir: Macauliffe writes that Kabir has written works which all religions can accept. He was the greatest of the religious reformers who followed the trail of Ramananda and made Bhakti movement more responsive. Kabir was cosmopolitan in outlook. He spoke himself as sudra. He was brought up in a Muslim family of weavers. He lived in a Hindu environment. He lived during Sikander Lodi. He believed in one God. He rejected both the Vedas and Quran. He preached against rituals. Like Ramananda, he preached in Hindi. His dohas had a great appeal.

20.5.1 Guru Nanak : Another exponent was Guru Nanak. Guru Nanak preached that there is no Hindu, there is no Musalman. These words spelt his mission. He laid emphasis on oneness of God. Guru Nanak was the founder of Sikhism and the first of the ten Sikh Gurus. His birth is celebrated worldwide as Guru Nanak Gurpurab on Kartik Pooranmashi, the full-moon day in the month of Kartik, October–November. Guru Nanak travelled far and wide teaching people the message of one God who dwells in every one of His creations and constitutes the eternal Truth. He set up a unique spiritual, social, and political platform based on equality, fraternal love, goodness, and virtue. Guru Nanak's words are registered in the form of 974 poetic hymns in the holy text of Sikhism, the Guru Granth Sahib, with some of the major prayers being the Japji Sahib, the Asa di Var and the Sidh-Ghost. It is part of Sikh religious belief that the spirit of Guru Nanak's sanctity, divinity and religious authority descended upon each of the nine subsequent Gurus when the Guruship was devolved on to them. The Gurdwara Janam Asthan in Nankana Sahib, Pakistan, commemorates the site where Guru Nanak is believed to have been born.

NSOU 22CC - HI - 07 295 Guru Nanak was born on 29 November 1469 at Rāi Bhoi Kālā Talva (present day Nankana Sahib, Punjab, Pakistan) near Lahore. His parents were Kalyan Chand Das Bedi, popularly shortened to Mehta Kalu, and Mata Tripta. His father was the local patwari (accountant) for crop revenue in the village of Talwandi. His parents were both Hindu Khatri and employed as merchants. He had one sister, Bebe Nanaki, who was five years older than he was. In 1475 she married and moved to Sultanpur. Guru Nanak was attached to his sister and followed her to Sultanpur to live with her and her husband, Jai Ram. At the age of around 16 years, Nanak started working under Daulat Khan Lodi, employer of Nanaki's husband. This was a formative time for Nanak, as the Puratan (traditional) Janam Sakhi suggests, and in his numerous allusions to governmental structure in his hymns, most likely gained at this time. According to Sikh traditions, the birth and early years of Guru Nanak's life were marked with many events that demonstrated that Nanak had been marked by divine grace. Commentaries on his life give details of his blossoming awareness from a young age. At the age of five, Nanak is said to have voiced interest in divine subjects. At age of seven, his father enrolled him at the village school as was the custom. Notable lore recounts that as a child Nanak astonished his teacher by describing the implicit symbolism of the first letter of the alphabet, resembling the mathematical version of one, as denoting the unity or oneness of God. Other childhood accounts refer to strange and miraculous events about Nanak, such as one witnessed by Rai Bular, in which the sleeping child's head was shaded from the harsh sunlight, in one account, by the stationary shadow of a tree, or, in another, by a venomous cobra. On 24 September 1487 Nanak married Mata Sulakkhani, daughter of Mūl Chand and Chando Rāi, in the town of Batala. The couple had two sons, Sri Chand (8 September 1494 – 13 January 1629) and Lakhmi Chand (12 February 1497 – 9 April 1555). Sri Chand received enlightenment from Guru Nanak's teachings and went on to become the founder of the Udasi sect. The earliest biographical sources on Nanak's life recognised today are the Janamsākhās (life accounts). Bhai Gurdas, a scribe of the Gurā Granth Sahib, also wrote about Nanak's life in his vārs. Although these too were compiled some time after Nanak's time, they are less detailed than the Janamsākhās. The Janamsākhās recount in minute detail the circumstances of the birth of the guru. Gyan-ratanavali is attributed to Bhai Mani Singh who wrote it with the express intention of correcting heretical accounts of Guru Nanak. Bhai Mani Singh was a disciple of Guru Gobind Singh who was approached by some Sikhs with a request that he should prepare an authentic account of Guru Nanak's life.

296 NSOU 22CC - HI - 07 One popular Janamsākhā was allegedly written by a close companion of the Guru, Bhai Bala. However, the writing style and language employed have left scholars, such as Max Arthur Macauliffe, certain that they were composed after his death. According to the scholars, there are good reasons to doubt the claim that the author was a close companion of Guru Nanak and accompanied him on many of his travels. Nanak was a Guru (teacher), and founded Sikhism during the 15th century. The fundamental beliefs of Sikhism, articulated in the sacred scripture Guru Granth Sahib, include faith and meditation on the name of the one creator, unity of all humankind, engaging in selfless service, striving for social justice for the benefit and prosperity of all, and honest conduct and livelihood while living a householder's life. The Guru Granth Sahib is worshipped as the Supreme Authority of Sikhism and is considered the eleventh and final guru of Sikhism. As the first guru of Sikhism, Guru Nanak contributed a total of 974 hymns to the book. Nanak's teachings can be found in the Sikh scripture Guru Granth Sahib, as a collection of verses recorded in Gurmukhi. There are two competing theories on Guru Nanak's teachings. One, according to Cole and Sambhi, is based on hagiographical Janamsakhis, and states that Nanak's teachings and Sikhism were a revelation from God, and not a social protest movement nor any attempt to reconcile Hinduism and Islam in the 15th century. [32] The other states, Nanak was a Guru. According to Singha, "Sikhism does not subscribe to the theory of incarnation or the concept of prophethood. But it has a pivotal concept of Guru. He is not an incarnation of God, not even a prophet. He is an illumined soul." The hagiographical Janamsakhis were not written by Nanak, but by later followers without regard for historical accuracy, and contain numerous legends and myths created to show respect for Nanak. The term revelation, clarify Cole and Sambhi, in Sikhism is not limited to the teachings of Nanak, they include all Sikh Gurus, as well as the words of past, present and future men and women, who possess divine knowledge intuitively through meditation. The Sikh revelations include the words of non-Sikh bhagats, some who lived and died before the birth of Nanak, and whose teachings are part of the Sikh scriptures. The Adi Granth and successive Sikh Gurus repeatedly emphasised, states Mandair, that Sikhism is "not about hearing voices from God, but it is about changing the nature of the human mind, and anyone can achieve direct experience and spiritual perfection at any time". Guru Nanak emphasised that all human beings can have direct access to

NSOU ??CC - HI - 07 297 God without rituals or priests. The concept of man as elaborated by Guru Nanak, states Arvind-pal Singh Mandair, refines and negates the "monotheistic concept of self/God", and "monotheism becomes almost redundant in the movement and crossings of love". The goal of man, taught the Sikh Gurus, is to end all dualities of "self and other, I and not-I", attain the "attendant balance of separation-fusion, self-other, action-inaction, attachment- detachment, in the course of daily life". Guru Nanak, and other Sikh Gurus emphasised Bhakti, and taught that the spiritual life and secular householder life are intertwined. In Sikh worldview, the everyday world is part of the Infinite Reality, increased spiritual awareness leads to increased and vibrant participation in the everyday world. Guru Nanak, states Sonali Marwaha, described living an "active, creative, and practical life" of "truthfulness, fidelity, self-control and purity" as being higher than the metaphysical truth. Through popular tradition, Nanak's teaching is understood to be practised in three ways: ? Vand Chakkµo: Sharing with others, helping those with less who are in need ? Kirat Karµo: Earning/making a living honestly, without exploitation or fraud ? Naam Japna: Meditating on God's name to control the five weaknesses of the human personality. Guru Nanak emphasised Nam Japna (or Naam Simran), that is repetition of God's name and attributes, as a means to feel God's presence. Nanak was raised in a Hindu family and belonged to the Bhakti Sant tradition. Scholars state that in its origins, Guru Nanak and Sikhism were influenced by the nirguni (formless God) tradition of Bhakti movement in medieval India. However, Sikhism was not simply an extension of the Bhakti movement. Sikhism, for instance, disagreed with some views of Bhakti saints Kabir and Ravidas. The roots of the Sikh tradition are, states Louis Fenech, perhaps in the Sant- tradition of India whose ideology grew to become the Bhakti tradition. Furthermore, adds Fenech, "Indic mythology permeates the Sikh sacred canon, the Guru Granth Sahib and the secondary canon, the Dasam Granth and adds delicate nuance and substance to the sacred symbolic universe of the Sikhs of today and of their past ancestors". The abandoned Gurudwara Chowa Sahib, located near the Rohtas Fort in Pakistan, commemorates the site where Guru Nanak is popularly believed to have created a water- spring during one of his udasis. Guru Nanak traveled extensively during his lifetime. Some modern accounts state that he visited Tibet, most of South Asia and Arabia starting in 1496, at age 27, when he left his family for a thirty-year period. These claims include Guru Nanak visiting the Mount

298 NSOU ??CC - HI - 07 Sumeru of Indian mythology, as well as Mecca, Baghdad, Achal Batala and Multan, in these places he debated religious ideas with competing groups. These stories became widely popular in the 19th and 20th century, and exist in many versions. The hagiographic details is a subject of dispute, with modern scholarship questioning the details and authenticity of many claims. For example, Callewaert and Snell state that early Sikh texts do not contain these stories, and after these travel stories first appear in hagiographic accounts of Guru Nanak centuries after his death, they continue to become more sophisticated over time, with the late phase Puratan version describing four missionary journeys (udasis), which however differs from the Miharban version. Some of the stories about Guru Nanak's extensive travels first appear in the 19th-century versions of janam- sakhi in the Puratan version. Further, stories about Guru Nanak's travel to Baghdad is absent from even the early 19th-century Puratan version. These embellishments and insertion of new stories, according to Callewaert and Snell, closely parallel claims of miracles by Islamic pirs found in Sufi tazkiras of the same era, and these legends may have been written in a competition. Another source of dispute has been the Baghdad stone inscription in a Turkish script, which some interpret saying Baba Nanak Fakir was there in 1511-1512, other interpret it stating 1521-1522 (and that he lived in the Middle East for 11 years away from his family), while others particularly Western scholars stating that the stone inscription is from the 19th century and the stone is not a reliable evidence that Guru Nanak visited Baghdad in early 16th century. Further, beyond the stone, no evidence or mention of Guru Nanak's journey in the Middle East has been found in any other Middle Eastern textual or epigraphical records. Claims have been asserted of additional inscriptions, but no one has been able to locate and verify them. The Baghdad inscription remains the basis of writing by Indian scholars that Guru Nanak journeyed in the Middle East, with some claiming he visited Jerusalem, Mecca, Vatican, Azerbaijan and Sudan. Novel claims about his travels, as well as claims such as Guru Nanak's body vanishing after his death, are also found in later versions and these are similar to the miracle stories in Sufi literature about their pirs. Other direct and indirect borrowings in the Sikh janam-sakhis relating to legends around Guru Nanak's journeys are from Hindu epics and Puranas and Buddhist Jataka stories. A.C Banerjee is of the view that the sweetness of his character and simple truth behind his teachings made him the object of love.

20.5.2 Chaitanya Mahaprabhu : "MahEprabhu" ("Great Lord"), (18 February 1486 –14 June 1534), was a Bengali Hindu mystic, saint, and the chief proponent of the Achintya

NSOU ??CC - HI - 07 299 Bheda Abheda (Inconceivable Difference/One-ness) Vedanta school and the Gaudiya Vaishnavism tradition within Hinduism. He also expounded the Vaishnava school of Bhakti yoga (meaning loving devotion to God), based on Bhagavata Purana and Bhagavad Gita. Of various forms and direct or indirect expansions of Krishna such as Lord Narasimha (Man-Lion; Krishna in mood of anger), Mahavishnu and Garbhodaksayi Vishnu respectively, he is Krishna in the mood of a devotee. He popularised the chanting of the 'Hare Krishna mantra' and composed the Siksastakam (eight devotional prayers) in Sanskrit. His followers, Gaudiya Vaishnavas, revere him as a Krishna with the mood and complexion of his source of inspiration Radha. His birthday is celebrated as Gaura-purnima. A number of stories also exist telling of Chaitanya's apparent attraction to the chanting and singing of Krishna's names from a very young age, but largely this was perceived as being secondary to his interest in acquiring knowledge and studying Sanskrit. When travelling to Gaya to perform the shraddha ceremony for his departed father, Chaitanya met his guru, the ascetic Ishvara Puri, from whom he received initiation with the Gopala Krishna mantra. This meeting was to mark a significant change in Chaitanya's outlook and upon his return to Bengal the local Vaishnavas, headed by Advaita Acharya, were stunned at his external sudden 'change of heart' (from 'scholar' to 'devotee') and soon Chaitanya became the eminent leader of their Vaishnava group within Nadia. After leaving Bengal and receiving entrance into the sannyasa order by Swami Kesava Bharati, Chaitanya journeyed throughout the length and breadth of India for several years, chanting the divine Names of Krishna constantly. At that time He traveled on foot covering a lot of places like Baranagar, Mahinagar, Atisara and, at last, Chhatrabhog. Chhatrabhog is the place where Goddess Ganga and Lord Shiva met, then one hundred mouths of Ganga were visible from here. From the source of Vrindavana Dasa's Chaitanya Bhagavata, he bathed at Ambulinga Ghat of Chhatrabhog with intimate companions with great chorus-chanting (kirtan). After staying one night he set for Puri by boat with the help of Local Administrator Ram Chandra Khan. He spent the last 24 years of his life in Puri, Odisha, the great temple city of Jagannath in the Radhakanta Math. The Gajapati king, Prataprudra Dev, regarded Chaitanya as Krishna's avatar and was an enthusiastic patron and devotee of Chaitanya's recitation (sankeertan) gatherings. It was during these years that Chaitanya is believed by his followers to have sunk deep into various Divine-Love (samEdhi) and performed pastimes of divine ecstasy (bhakti). Vrindavan, the land of Radha Rani, the "City of Temples" has more than 5000 temples to

300 NSOU ??CC - HI - 07 showcase the pastimes of Radha and Krishna, including temples as old as 5500 years The essence of Vrindavan was lost over time until the 16th century, when it was rediscovered by Chaitanya. In the year 1515, Chaitanya visited Vrindavana, with the purpose of locating the lost holy places associated with Lord Sri Krishna's transcendent pastimes. He wandered through the different sacred forests of Vrindavana in a spiritual trance of divine love. It was believed that by His divine spiritual power, he was able to locate all the important places of Krishna's pastimes in and around Vrindavan including the seven main temples or sapta devalay, which are worshiped by Vaishnavas in the Chaitanya tradition to this day. In 1886 a leading Gaudiya Vaisnava, reformer Bhaktivinoda Thakur, attempted to retire from his government service and move to Vrindavan to pursue his devotional life there. However, he saw a dream in which Chaitanya ordered him to go to Nabadwip instead.] After some difficulty, in 1887 Bhaktivinoda was transferred to Krishnanagar, a district center twenty-five kilometers away from Nabadwip, famous as the birthplace of Chaitanya. Despite poor health, Bhaktivinoda finally managed to start regularly visiting Nabadwip to research places connected with Chaitanya. Soon he came to a conclusion that the site purported by the local brahmanas to be Chaitanya's birthplace could not possibly be genuine. Determined to find the actual place of Chaitanya's pastimes but frustrated by the lack of reliable evidence and clues, one night he saw a mystical vision: By 10 o'clock the night was very dark and cloudy. Across the Ganges in a northern direction I suddenly saw a large building flooded with golden light. I asked Kamala if he could see the building and he said that he could. But my friend Kerani Babu could see nothing. I was amazed. What could it be? In the morning I went back to the roof and looked carefully back across the Ganges. I saw that in the place where I had seen the building was a stand of palm trees. Inquiring about this area I was told that it was the remains of Lakshman Sen's fort at Ballaldighi. Taking this as a clue, Bhaktivinoda conducted a thorough, painstaking investigation of the site, by consulting old geographical maps matched against scriptural and verbal accounts, and eventually came to a conclusion that the village of Ballaldighi was formerly known as Mayapur, confirmed in Bhakti-ratnakara as the actual birth site of Chaitanya. He soon acquired a property in Surabhi-kunj near Mayapur to oversee the temple construction at Yogapith, Chaitanya's birthplace. For this purpose he organized, via Sajjana-tosani and special festivals, as well as personal acquaintances, a massive and hugely successful fundraising effort among the people of Bengal and beyond. Noted Bengali journalist Sisir

NSOU ??CC - HI - 07 301 Kumar Ghosh (1840-1911) commended Bhaktivinoda for the discovery and hailed him as “the seventh goswami” – a reference to the Six Goswamis, renowned medieval Gaudiya Vaisnava ascetics and close associates of Chaitanya who had authored many of the school’s texts and discovered places of Krishna’s pastimes in Vrindavan. There are numerous biographies available from the time giving details of Chaitanya’s life, the most prominent ones being the Chaitanya Charitamrita of Krishnadasa Kaviraja, the earlier Chaitanya Bhagavata of Vrindavana Dasa (both originally written in Bengali but now widely available in English and other languages), and the Chaitanya Mangala, written by “Lochana Dasa”. These works are in Bengali with some Sanskrit verses interspersed. In addition to these there are other Sanskrit biographies composed by his contemporaries. Chief among them are the works Caitanya Carit mrita Mah kavya by Kavi Karnapura and  r  Krishna Caitanya Carita Maha-Kavya by Murari Gupta. According to the hagiographies of 16th-century authors, he exhibited his Universal Form same as had Lord Krishna on number of occasions, notably to Advaita c rya and Nity nanda Prabhu. Gaudiya Vaishnavas consider Chaitanya to be Lord Krishna himself but appearing in the covered form (channa avatar). The Gaudiya Vaishnava acharya Bhaktivinoda Thakura had also found out the rare manuscript of Chaitanya Upanisad of the Atharvaveda section, which reveals the identity of Chaitanya. Chaitanya has left one written record in Sanskrit called Siksastakam (though, in Vaishnava Padavali it is said: “Chaitanya himself wrote many songs on the Radha-Krishna theme”). Chaitanya’s epistemological, theological and ontological teachings are summarized as ten root principles called dasa mula. The statements of amnaya (scripture) are the chief proof. By these statements the following nine topics are taught. 1. Krishna is the Supreme Absolute Truth. 2. Krishna is endowed with all energies. 3. Krishna is the source of all rasa- flavor, quality, or spiritual rapture/emotions. [39] 4. The jivas (individual souls) are all separated parts of the Lord. 5. In bound state the jivas are under the influence of matter, due to their tatastha (marginal) nature. 6. In the liberated state the jivas are free from the influence of matter. 302 NSOU ??CC - HI - 07 7. The jivas and the material world are both different from and identical to the Lord. 8. Pure devotion is the only way to attain liberation. 9. Pure love of Krishna is the ultimate goal. Despite having been initiated in the Madhvacharya tradition and taking sannyasa from Shankara’s tradition, Chaitanya’s philosophy is sometimes regarded as a tradition of his own within the Vaishnava framework – having some marked differences with the practices and the theology of other followers of Madhvacharya. He took Mantra Upadesa from Isvara Puri and Sanyasa Diksha from Keshava Bharati. Chaitanya is not known to have written anything himself except for a series of verses known as the Siksastaka, or “eight verses of instruction”, which he had spoken, and were recorded by one of his close colleagues. The eight verses created by Chaitanya are considered to contain the complete philosophy of Gaudiya Vaishnavism in condensed form. Chaitanya requested a select few among his followers (who later came to be known as the Six Goswamis of Vrindavan) to systematically present the theology of bhakti he had taught to them in their own writings. The six saints and theologians were Rupa Goswami, Sanatana Goswami, Gopala Bhatta Goswami, Raghunatha Bhatta Goswami, Raghunatha dasa Goswami and Jiva Goswami, a nephew of brothers Rupa and Sanatana. These individuals were responsible for systematising Gaudiya Vaishnava theology. Narottama Dasa, Srinivasa Acarya and Syamananda Pandit were among the stalwarts of the second generation of Gaudiya Vaishnavism. Having studied under Jiva Goswami, they were instrumental in propagating the teachings of the Goswamis throughout Bengal, Odisha and other regions of Eastern India. Many among their associates, such as Ramacandra Kaviraja and Ganga Narayan Chakravarti, were also eminent teachers in their own right. In the early 17th century Kalachand Vidyalankar, a disciple of Chaitanya, made his preachings popular in Bengal. He traveled throughout India popularizing the gospel of anti-untouchability, social justice and mass education. He probably initiated ‘Pankti Bhojon’ and Krishna sankirtan in eastern part of Bengal. Several schools (sampradaya) have been practicing it for hundreds of years. Geetashree Chabi Bandyopadhyay and Radharani Devi are among many who achieved fame by singing kirtan. The Dalits in Bengal, at that time a neglected and underprivileged caste, readily accepted his libertarian outlook and embraced the doctrine of Mahaprabhu. His disciples were known as Kalachandi Sampraday, who inspired the people to eradicate illiteracy and casteism. Many consider Kalachand as the Father of Rationalism in East Bengal (Purba Banga). The festival of Kheturi, presided over by Jahnava Thakurani, the wife of Nityananda, was the first time the leaders of the various branches of Chaitanya’s followers assembled

NSOU ??CC - HI - 07 303 together. Through such festivals, members of the loosely organised tradition became acquainted with other branches along with their respective theological and practical nuances. Around these times, the disciples and descendants of Nityananda and Advaita Acharya, headed by Virabhadra and Krishna respectively, started their family lineages (vamsa) to maintain the tradition. The vamsa descending from Nityananda through his son Virabhadra forms the most prominent branch of the modern Gaudiya tradition, though descendants of Advaita, along with the descendants of many other associates of Chaitanya, maintain their following especially in the rural areas of Bengal. Gopala Guru Goswami, a young associate of Chaitanya and a follower of Vakresvara Pandit, founded another branch based in Odisha. The writings of Gopala, along with those of his disciple Dhyanaçandra Goswami, have had a substantial influence on the methods of internal worship in the tradition. From the very beginning of Chaitanya's bhakti movement in Bengal, Haridasa Thakur and others, Muslim or Hindu by birth, were participants. Sri Ramakrishna Paramahansa, the great sage of Dakshineswar, who lived in the 19th century, emphasized the bhakti marga of Chaitanya, whom he referred to as "Gauranga." (The Gospel of Sri Ramakrishna). This openness received a boost from Bhaktivinoda Thakura's broad-minded vision in the late 19th century and was institutionalised by Bhaktisiddhanta Sarasvati in his Gaudiya Matha in the 20th century. In the 20th century the teachings of Chaitanya were brought to the West by A. C. Bhaktivedanta Swami Prabhupada (1896-1977), a representative of the Bhaktisiddhanta Sarasvati branch of Chaitanya's tradition. Prabhupada founded his movement known as The International Society for Krishna Consciousness (ISKCON) to spread Chaitanya's teachings throughout the world. Saraswata gurus and acharyas, members of the Goswami lineages and several other Hindu sects which revere Chaitanya Mahaprabhu, including devotees from the major Vaishnava holy places in Mathura District, West Bengal and Odisha, also established temples dedicated to Krishna and Chaitanya outside India in the closing decades of the 20th century. In the 21st century Vaishnava bhakti is now also being studied through the academic medium of Krishnology in a number of academic institutions.

20.5.3 Mirabai, a 16th century Indian royal, is known more through legend than verifiable historic fact. The following biography is an attempt to report those facts of Mirabai's life which are commonly accepted. Mirabai was known for her songs of devotion to Krishna and for forsaking traditional women's roles to devote life to Krishna-worship. She was a Bhakti saint, poet and mystic, 304 NSOU ??CC - HI - 07 and also a Rani or princess. She lived from about 1498 to about 1545. Her name has also been translated as Mira Bai, Meerabai, Meera Bai, Meera, or Mīrābāī, and she is sometimes given the honorific of Mirabai Devi. Mirabai's Rajput grandfather, Rao Dudaj, created the fortress city of Merta, where Mirabai's father, Ratan Singh, ruled. Mirabai was born in Merta in the Kudki district of Pali, Rajasthan, India, about 1498. The family worshipped Vishnu as their primary deity. Her mother died when Mirabai was about four, and Mirabai was raised and educated by her grandparents. Music was stressed in her education. At an early age, Mirabai became attached to an idol of Krishna, given to her (legend says) by a traveling beggar. At age 13 or 18 (sources vary), Mirabai was married to a Rajput prince of Mewar. Her new in-laws were upset with the time she spent at Krishna's temple. On the advise by letter of the poet Tulsidas, she left her husband and his family. Her husband died only a few years later. His family was shocked that Mirabai did not commit sati, burning herself alive on her husband's funeral pyre, as was considered proper for a Rajputi princess (rani). Then they were further shocked when she refused to remain secluded as a widow and to worship his family's deity, the goddess Durga or Kali. Instead of following these traditional norms for a widowed Rajputi princess, Mirabai took up enthusiastic worship of Krishna as part of the Bhakti movement. She identified herself as the spouse of Krishna. Like many in the Bhakti movement, she ignored gender, class, caste, and religious boundaries, and spent time caring for the poor. Mirabai's father and father-in-law were both killed as a result of a battle to turn away invading Muslims. Her practice of Bhakti worship horrified her in-laws and the new ruler of Mewar. The legends tell of multiple attempts on her life by Mirabai's late husband's family. In all of these attempts, she miraculously survived: a poisonous snake, a poisoned drink, and drowning. Mirabai returned to her home city of Merta, but her family also opposed her turning from traditional religious practices to the new Bhakti worship of Krishna. She later joined a religious community in Vrindaban, a place holy to Krishna. Mirabai's contribution to the Bhakti movement was primarily in her music: she wrote hundreds of songs and initiated a mode of singing the songs, a raga. About 200-400

NSOU ??CC - HI - 07 305 songs are accepted by scholars as being written by Mirabai; another 800-1000 have been attributed to her. Mirabai did not credit herself as the author of the songs — as an expression of selflessness — so her authorship is uncertain. The songs were preserved orally, not written down until long after their composition, which complicates the task of assigning authorship. Mirabai's songs express her love and devotion to Krishna, almost always as Krishna's wife. The songs speak of both the joy and the pain of love. Metaphorically, Mirabai points to the longing of the personal self, atman, to be one with the universal self, or paramatma, which is a poet's representation of Krishna. Mirabai wrote her songs in Rajasthani and Braj Bhasa languages, and they were translated into Hindi and Gujarati. After some years of wandering, Mirabai died at Dwarka, another place sacred to Krishna. Mirabai's willingness to sacrifice family respect and traditional gender, family, and caste restrictions, and to devote herself completely and enthusiastically to Krishna, made her an important role model in a religious movement that stressed ecstatic devotion and that rejected traditional divisions based on sex, class, caste, and creed. Mirabai was a "loyal wife" according to her people's tradition only in the sense that she devoted herself to her chosen spouse, Krishna, giving to him the loyalty she would not give to her earthly spouse, the Rajput prince. Quotes (in translation): "I came for the sake of love-devotion; seeing the world, I wept." "O Krishna, did You ever rightly value my childhood love?" "The Great Dancer is my husband, rain washes off all the other colors." "I danced before my Giridhara. / Again and again I dance / To please that discerning critic, / And put His former love to the test." "I have felt the swaying of the elephant's shoulders; / and now you want me to climb / on a jackass? Try to be serious." 20.5.4 Nathpanthis Like other Vaishnava Bhakti movement the Maharashtra bhakti tradition drew its basic inspiration from BhagavataPurana. It was influenced by the Saivanathpanthis who were quite popular in the lower classes of Maharashtra society. Namdev belonged to tailor caste. He was a link between the maharashtrian Bhakti movement and north Indian monotheistic movement. Eknath and Tukaram were the other prominent bhakti saints. 306 NSOU ??CC - HI - 07 W.H Mcleod says that north Indian Nathpanthi tradition should not be confused with Varkari sect of Maharashtra. The exponent of which was called sants. Thesants were monotheists, but the God whom they addressed sought union was in no sense be understood in anthropomorphic terms. Great importance was attached to the Guru. The Vaishnava Bhakti Movement was popularized by Ramananda. He deviated from the earlier acharyas. He made Bhakti accessible to all. Adigranth was the hymn attributed to him. In eastern India Chaitanya was the most prominent Vaishnava saint of Bengal. His disregard of caste system made him popular in Bengal society. 20.6 The Sant Tradition The most comparable strand of Indian spirituality to the Gnostic tradition is the medieval and modern Sant tradition, an eclectic philosophy concerned with traversing spiritual realms to reach God. Resembling Gnostic metaphysics, there is a God beyond all gods, and this God invites the soul to know It. One achieves God-Realization by turning within one's own consciousness, realizing the microcosm/macrocosm relationship with the Divine. A Sant is one who has accomplished this—an enlightened soul. For a Westerner the term "saint" usually connotes a holy person, one who has sacrificed one's life to serve humankind in some way. In India, these attributes are likewise inherent in a Sant, but, more importantly, a Sant has merged the spirit entity into the Highest Reality, losing all identity. Having reached the highest state of consciousness, one is no longer subject to any form of illusion (maya) or ego (ahamkara). Such a person is considered, in effect, the embodiment of the Divine. This ineffable being, also called the satguru (the true guru), is believed to appear/return in every age to awaken souls from ignorance. Thus, unlike Christianity, salvation is not a onetime event in which the Son of God incarnates once and for all for the salvation of humankind. In other words, the salvific process in the Sant tradition is a continuous one, and a Sant is born in every age to enlighten/free human beings from their ignorance. While this tradition can clearly be traced back to the North Indian mystic Kabir in the fifteenth century C.E. (as well as Guru Nanak and Dadu), some speculate that it has even earlier roots, manifesting in the twelfth or thirteenth century in Maharashtra under the non-sectarian Vaishnava poet-Sants Namdev and Jnaneshvar (otherwise known as Jnanadeva), and later spread under the influence of Eknath (1548-1600) and Tukaram (1598-1649).

NSOU ??CC - HI - 07 307 Recent scholarship suggests that there are really two distinct yet related strands of the "tradition of the Sants": The first, the Maharashtra poet-Sants who flourished from the thirteenth to the eighteenth century, are devotees of the god Vitthala or Vithoba of Pandharpur and contemplate his form (svarupa). Saguna bhakti, worship of a manifestation of the Divine, characterizes the attitude of the Maharashtrian Sants. Vaishnava Hinduism, which was based upon Bhagavata Purana and promoted bhakti (or devotion), plays an extremely important role in shaping this movement; in fact, early in their history, these Sants did not set themselves apart from it. Yet, this group of poet-Sants appear as more or less heterodox, since they pride themselves in being advocates of "true" Vaishnavism, challenging many of the practices and beliefs of the orthodox Vaishnava bhakti tradition. For instance, the Sants, often belonging to the lower strata of the Hindu and the Muslim society, emphasize egalitarian social values, believing in essence that salvation was not the exclusive rite of the "twice-born." Along with the rejection of the caste system, they emphatically insist that ethical behavior is a basic requirement for every devotee, not just the priestly caste. And perhaps what sets this religious tradition apart the most from orthodox Hinduism is the claim that devotion to the Divine Name of God is the only means to attain salvation. Altogether, however, the Maharashtrian Sants are generally placed within the Hindu milieu, primarily because they do not openly reject the authority of the Vedas. The second branch of the Sant tradition spans the area of the Punjab and Rajasthan as well as eastern Uttar Pradesh and has been active from the fifteenth century up until today. Like the Maharashtrian Sants, the northern Sants rebuff orthodox Hinduism for the value it places on rituals, holy books, and idol worship, and they ridicule the caste system, which presents moksha as the privilege of the Brahmin pandit. But, even more extremely, they vehemently reject the authority of the Vedas. Such a severe anti-Brahminical attitude places the northern Sants outside the Hindu fold. While the Maharashtra poet-Sants attribute anthropomorphic characteristics to God by referring to It as "father and mother," the North India Sants generally do not. They seem to reject a saguna God, and, instead, direct their efforts towards a nirguna one. Nirguna bhakti suggests that God cannot be captured in an icon or temple, since God is beyond all attributes and distinctions. Yet, several scholars have pointed out that while the northern Sants may conceptually conceive of a Supreme Being beyond qualities (nirguna brahman), there are also strong elements of saguna bhakti, especially in relation to the satguru. The dual structure between the devotee and the object of

308 NSOU ??CC - HI - 07 devotion (the guru) allows for an intense emotional experience (anubhava), which is said to pull the devotee towards (but not into) the nirguna God. This religious quest (based both upon separation and union) certainly presents contradictions that are not easily reconcilable (and perhaps not meant to be). Also, repeating the name of God, their primary meditative practice, inherently concedes some form to God by suggesting a quality of saguna bhakti. On ethical issues, there is little differentiation between the northern and southern Sants. While frowning upon rigid asceticism, both greatly stress living a moral life that entails three basic requirements: 1) ahimsa (non-violence), which implies maintaining a strict vegetarian diet, free of meat, fish, chicken, and eggs; 2) no intoxicants, such as alcohol; and 3) a moral life in society, including sexual restraint (i.e., no illicit sex). If we look at the Sant tradition as a whole, it seems to be a mixture of Vaishnava bhakti and the esoteric Tantric tradition of the Nath yogis: the Maharashtrian Sants present a "purified" Vaishnavism and the northern group, led by Kabir, advocate a form of Tantric Buddhism in which there is an ineffable Reality transcending all attributes (i.e., sunya). According to Charlotte Vaudeville, a renowned scholar of this movement, "the Sant sadhana or the Sant ideal of sanctity therefore may be viewed as a subtle blending of two main traditions of Hindu mysticism, apparently antagonistic to each other: Vaishnava bhakti and an esoteric Tantric tradition, whose most popular representatives are Gorakhnath and the Nath Yogis, often referred to by Kabir and his followers." Additionally, several scholars argue that there is a great deal of Sufi influence on the Sants. As Bruce Lawrence points out, there is an apparent affinity between Sant poetry and the Sufi worldview—namely, the repudiation of scriptural authority, the inner vision of a Transcendent God, the emphasis on the pangs of separation of a bereaved soul and God (viraha), and intense love and devotion to God (prema-bhakti). Arguably, though the Maharashtrian Sants and the northern Sants may differ somewhat in their theological approach there are certain underlying characteristics that both share which marks them as a distinctive group. Each stresses the necessity of devotion to and the practice of the Divine Name as the means to achieve salvation, along with three cardinal principles: satsang, satguru, shad. The following is an explanation of these three immanent foci: 1) Satsang: satsang to the fellowship of the true believers who have congregated to hear the spiritual discourse of the satguru. Also, internally satsang refers to the union of the soul with God.

NSOU ??CC - HI - 07 309 2) Satguru: The satguru is, employing Max Weber's terminology, the charismatic leader (both of the exemplary and ethical type). Initiates generally refer to the guru as the physical embodiment of the Divine/Numinous, and, as such, all-powerful, all-knowing, and all-loving. What we are confronted with in the guru is a classic hierophany: a profane object which manifests the sacred. Yet, this hierophany has a penultimate theological twist: the human guru not only manifests God, acting as a conduit between the Transmundane and the mundane (axis mundi or tirtha—cross place from profane to sacred), but is, in point of spiritual fact, God Itself. Ideally, this is exactly how the guru is to be regarded. According to the Sant tradition, as exemplified by Tulsi Sahib, one must follow a living guru. It is said that past Sants cannot take the soul back to the God. This is due to two main reasons: 1) the original message of the Sants is believed to be misconstrued after the Sant passes away, while the teachings of a living Sant are pure and charged; 2) and guru-bhakti (devotion to one's guru) aids one's spiritual progress, simply because it is believed to be easier to love someone alive and tangible than someone who has been dead for centuries. At all times, contends this philosophy, at least one God-realized soul ("Son of God") walks the face of the earth imparting divine secrets for those spiritually searching souls. 3) Shabd: the Sants, emerging as heirs to a mixed tradition, can be distinguished from other followers of Indian spirituality by the emphasis they give to a practice known as surat shabd yoga, perhaps the most distinctive feature of the Sant tradition. Surat simply means spirit entity or soul, shabd refers to the sound-current, and yoga, in this context, means union. Hence, it is the ancient science of joining the soul with the sound-current. This sound-current is believed to be the manifestation of the Divine that resounds in every being in creation and upholds all creation. It is also known as the "Audible Life Stream," "Music of the Spheres," "Nad," "Logos," "Akash Bani," "Divine Melody/Harmony," "Word," "Light and Sound," etc. One who seeks liberation (moksha) from the unending cycle of birth and death (samsara) must sit in meditation, withdraw one's consciousness from the body, contact this divine melody within, and attach oneself to it. For nearly two thousand years, Indian mystics have written devotional poems and hymns about this mystical sound. For instance, presumed traditionally to have been written between the second century B.C.E. and the second century C.E., the Maitri Upanishad and the Nadabindu Upanishad contain significant portions dedicated to shabd and to elaborating a technique of auditory mediation (surat shabd yoga). These are advocating an experiential methodology for spiritual ascent. At each stage of ascent a particular sound is heard, like those proceeding from the ocean, the thunder of the clouds,

310 NSOU ??CC - HI - 07 the kettle drum, and as tinkling bells, the conch, the flute, and the vina (a stringed instrument). The writer of the Nadabindu Upanishad expounds: The yogin...should always hear the internal Sound through the right ear...When he comes to that stage when the great kettle-drum is being heard, he should try to distinguish only sounds more and more subtle. The Maitri Upanishad further explains that surat shabd yoga is the "most secret doctrine" to be disclosed to no one. The following passage illustrates the importance of this spiritual practice for attaining moksha: By closing the ears with the thumbs they hear the sound of the space within the hearts. There is the sevenfold comparison of it, like the rivers, bells, a brass vessel, a wheel, the croaking of frogs, the rain ... Having passed beyond this variously characterized sound, they disappear (become merged) in the Supreme, the non-sound, the unmanifest Brahman.. There are two Brahman to be known, the sound Brahman and what is higher. Those who know the sound Brahman get to the higher Brahman ... While surat shabd yoga presumably remains alive in India for centuries, we encounter the clearest articulation of auditory meditation in the Sant tradition. Nam Dev evidently practiced this ancient spiritual method of surat shabd yoga and initiated others into it. Many of the basic tenets of the Sant tradition were then further laid down by Kabir. As with the Gnostic tradition, there is no fixed institution or set boundaries of the Sant tradition, and, in fact, there exists some diversity among the individual Sants. A multiplicity of sects exists for several reasons. First of all, as we have stated, Sants are found throughout history, and each of them usually appoint a successor(s), who is likewise a Sant, to continue the philosophy. But historically at the time of a Sant's death there often appears a multitude of adherents each claiming to have been condoned the rightful successor, and, consequently, numerous factions occur. The proliferation of spiritual sects, each following a particular Sant lineage, perplexes scholars as to whether we can consider this movement as a distinct religious tradition, as we do with Hinduism, Christianity, Buddhism, etc. Simply, is there a "Santism"? According to Daniel Gold, a scholar of the Sant tradition, we can regard it as a religion in its own right comparable to and separate from Hinduism. What lends evidence to a positive affirmation of a larger field of the Sants and not simply disconnected lineages is the intriguing relationship between the earlier Sants and those in the modern, movement. Later

NSOU ??CC - HI - 07 311 Sants give allegiance to earlier ones by citing their verses and drawing upon their theological expressions, bridging the gap between the pioneers of the Sant tradition and the contemporary poet-Sants. Kabir, Dadu, Nanak, Ravidas, Tulsi Sahib, Namdev would be among the many Sants to whom the tradition pays homage. As an example, Shiv Dayal Singh (1818-1878; also known as Soami Ji), the founder of a modern lineage of the Sant tradition known as the Radhasoami Movement, contends that his path and the path of the previous Sants is the same. Shiv Dayal Singh openly remarks: Kabir Sahib and Tulsi Sahib came into the world, and started the path of Dayal (the Absolute Lord). Openly doth Radha Swami say: "I, too, am one of them, teaching the same Path..." If thy mind believeth not my word, then see thou the writings of Kabir and Guru Nanak. The path of Tulsi Sahib is the same, and so to Paltu and Jagjiwan state. Quote I the authority of these Sants; their utterances do I state as witness to my teachings. Tulsi Sahib, a Sant of Hathras from the nineteenth century, recognized that Sants drew upon the teachings of other Sant figures as spiritual resources. Pointing out the common spiritual roots, he identified this movement as a coherent religious tradition, which he called Sant Mat, simply meaning a "Sant faith." Tulsi Sahib comments: The principles and tenets of Sant Mat are one and the same, only there is a difference in terminology. Since the same principles have been stated using different names, you become confused and do not understand them ... Kabir explained Sant Mat in his way, other Sants in other ways. The religion of all those who have gained access within is one and the same. Since most world religions traditionally revere only one particular saint from the past, such as Jesus, Buddha or Zoroaster, the recognition of more than one Son of God, or enlightened being, may seem strange. The Sant tradition argues, however, that the original message of all genuine or perfect Sants is the same. Still there are others (those outside of the Sant tradition) who twist the perennial teachings and construct formal religions, with elaborate rituals, symbols, sanctified books, holy places, and outward observances, whether consciously or, most likely, unconsciously, to accommodate social, emotional and perhaps intellectual needs. Thus, the theologically unique stance of each religion results from a creative interpretation of the primal message. According to Lekh Raj Puri, a devotee in this tradition, no Sant comes into the world to create a religion; this is all the workings of their followers. Puri asserts:

312 NSOU ??CC - HI - 07 Sants have no religious bias; they are free people not bound by the dogma and ties of any religion. They are above all religions. Neither do they try to destroy old religions, nor do they start any new one ... The sole object of the life of a Saint in this world is to lift people from here, and take them back Home, to our true Heavenly Father, Satnam. Saints do not set themselves to reforming this world by changing or altering the existing social, moral and religious practices, nor are they interested in the ritual and ceremonial aspect of life. It should be noted here that the Sant tradition is not against conventional religion. Indeed, it recognizes that one's religious affiliation is in many ways synonymous with one's culture, often serving as a social institution. However, this spiritual tradition claims that conventional religion is like a picture frame, outwardly adorning but ultimately unnecessary, while the Sant's teaching is the picture, the heart or inner message. It questions the value of a picture frame with no picture. If this is the case, as the Sant tradition contends, what is the picture or the spiritual inner message that has been consistently overlooked? The objective in this study is not to unravel "hidden truths" (certainly this is not the task of a phenomenologist), but simply to compare the portrait painted by the Sants with that of the Gnostics. 20.7 Conclusion The doctrine of Bhakti helped the uplift of the contemporary society in many ways. The Indo-Aryan dialects such as Bhojpuri, Magadhi and Maithili of modern Bihar, Avadhi of Avadh region, Brajbhasha of Mathura region and Rajasthani, Punjabi, Kashmiri, Sindhi and Gujarati, also assumed new forms and meaning through Bhakti poetry. Notable progress in Tamil and Marathi literature during medieval times, was made through the writings of famous saints of the Bhakti order. The hymns, ballads, legends and dramas centering around Chaitanya's interpretation of Krishna, made valuable contribution to the Bengali literature. Besides literature, the Bhakti doctrine and its practice by the saints of this order, had an impact upon socio-religious concepts which prepared the ground for improved social conditions in medieval times. It is true that the Bhakti Cult was essentially indigenous, but it received a great impetus from the presence of Muslims in this country. It not only prepared a meeting ground for the devout men of both creeds, it also preached human equality and openly condemned ritualism and casteism. It was radically new, basically

NSOU ??CC - HI - 07 313 different from the old traditions and ideas of religious authorities. It sought to refashion the collective life on a new basis. It cherished the dream of a society based on justice and equality in which men of all creeds would be able to develop their full moral and spiritual stature. 20.8 Model Questions 1) What was the impact of the Bhakti movement on contemporary society? 2) What were the causes of rise of Bhakti Movement? 3) What were the main features of the Maratha Vaishnavism? 4)

This cultural and literary synthesis is manifested in the origin and growth of a synthetic language like Urdu and in the interchange between' Persian and Sanskrit. The regional languages and literature which were considerably influenced by Sanskrit and Persian mirrored the religious, social and popular, attitudes of the period under study. The Hindi works of Muslim writers like Amir Khusrau and Jayasi as well as the Bengali Vaishnavite poems composed by Bengali: Muslims also highlight the process of cultural synthesis operative during this period.

parts of India, they followed their own phases of growth and revival.

Indigenous circumstance played a significant role. Various transcripts were produced in and around the Sufi khanquahs: i) Malfuzat: these are essentially the famous sayings and conversations of Sufi saints. An early malfuzat text is the Fawa'id al-fuad, a collection of famous utterances of Shaikh NizamuddinAuliya, compiled by Amir Hasan, a noted Persian poet. Likewise, there are malfuzats on Chiragh-i-Delhi called Khayr al -majalis and on Burhan al Din Gharib texts like Nafis al anfas. These texts were highly moralistic in tone. They were compiled over centuries. ii) Kashf-ulMahjub: a manual dealing with Sufi thoughts and practices by Usman Hujwiri. iii) Maktubat: they are comprised of letters written by Sufi masters to their disciples and associates. iv) Tazkiras: are hagiographies compiled after a saint's death. 21.3 Malfuzat Malfuzat literally means "words spoken' in common parlance the term is used for the conversations or table talks of a mystic teacher or Shaikh. Malfuzat writing is one of the most important literary achievements of medieval India. The credit of giving this art a definite shape and thereby popularizing it in the religious circles of the country goes to a disciple of Shaikh Nizam al din Awliya.Amir Hasan Sijzi, a famous poet of the Khalji period and a friend of Amir Khusrau, decided to write a summary of what he heard from his master, Shaikh Nizam al din Awliya. The decision was epoch making as it marked the beginning of a new type of mystic literature known as Malfuzat. History educates us about self, past activities, achievements, success, failures of nations, communities, religions, societies and above all mankind. By reading it one can easily understand and know who is he or she? In fact, knowledge of history do influence the human life as it educates not only individuals, but as a whole to society, and human

316 NSOU ??CC - HI - 07 beings and guide them for the future course. Every country, nation, community, society and family had its own history on which, one can boast and feel proud. In history writing Muslims have played a vital role, and it was they, who guided to the proper interpretation, perception of history with scientific approach, methodology, authenticity, honest and just attitude as has been the case of tafsir, Hadith and sira literature. Mystical and spiritual movements and dimensions which in Islam is called Tasawwuf (Sufism), and which had, dominated the world religions and influence the masses too had their own history. This historical aspect of Islam i.e. method of educating people, about hidden treasures known as Ilam-i-batin. The famous and foremost Chishti order founded by Khwaja Abu IshaqShami (Chishti) at Chisht near Herat in the last quarter of 9th Century (880) spread throughout the region due to the hard work of four giant Chishti personalities, contemporary of Khwaja Abdullah Ansari of Heart, and Shaikh Ahmad of Jam, whose Poetries and Malfuzat are found in abundance. Around 1181 AD the order was brought to Indian subcontinent by KhwajaMoin-ud- Din Chishti, years before the establishment of Turkish rule here. Born in Iran, brought up at Khurasan, educated in Central Asia, and spiritually trained in Iraq-Iran, the Khwaja then arrived and settled at Ajmer then the capital of India. He started propagating lofty Chishti ideals of piousness, brotherhood, tolerance, peaceful-coexistence, communal harmony, to the economically exploited people of a caste ridden society, in a politically disturbed region, in a challenging circumstances and hostile atmosphere. His sayings, utterances (malfuzat) shed light on the socio-religious history and conditions of Indian people. He had created history by having a peaceful great revolution in the Indian subcontinent. Malfuzat of Khwaja and his immediate spiritual successors contain lessons of humanism, service to mankind, respect for the emotion of others, and thus educated the masses about moral and ethical values. "The intellectual history of Medieval India begins with the advent of Shaikh Moin-ud- Din Chishti" has been rightly pointed out by none the less, than Prof. Mohammad Habib, the doyen of scientific approach to medieval Indian history. A Schimmel is of the view that his strong personality, love of one God, and His Prophet reflected in the love of mankind, won over a considerable people to his fold. However, his malfuzat, a great source of history and education to the people has initially been dubbed as apocryphal by some modern scholars. But now it has been an established fact that though it contains few mistakes about dates, names of persons and places, yet these historical treatises are the valuable source NSOU ??CC - HI - 07 317 of educating people about religious practices, humanism, moral and ethical values and universal brotherhood. His successors too followed him and spread his message of Sulh- i-kul (peace with all) through actions, sermons, and utterances. Anis-ul-Arwah, Ganj-ul- Asrar, and poetic diwan of KhwajaMoin-ud-Din Chishti, Sururus-Sudur and few epistles (rasails), letters poems etc. of his successor SufiHamiduddinNagori, Dalil-ul-Arifin of KhwajaQutb-ud-din Bakhtiar Kaki Aushi, malfuzat of KhwajaAjmeri collected by KhwajaFakhr-ud-din Gardezi his cousin and khadim-i-khas, (now extinct) are the earliest sources on Chishti philosophy, thought and teachings in the Indian subcontinent. Retaining original names like Madho after conversion with additional degree of Faqih (Jurisprudent) and Imam, discouraging unnecessary killings and burning of animals, specially cows, giving up meat eating habit, to that extent that even in Fateha in the name of saint is not permissible on meat preparation. Adaptation of imperial and local customs, practices, rituals like Roshnee, BasantSandel-pasting, beating of Naubat, vegetarian food preparation in Langar, reflects the education imparted by these great Chishti saints of India to the local populace mixing with a new religion i.e. Islam, were the unifying factor in this region which had largely contributed for the spread of Islam and Sufi thought with a message of Sulh-i-kul. In this paper an attempt has been made to highlight the history, historic role of these Chishti Sufi stalwarts within Indian subcontinent. They had educated and taught people the importance and value of spirituality, morality, purity, simplicity, austerity, love, brotherhood, ethics, sober, etiquettes, graceful actions, values to live with peacefulcoexistence and played a vital role in the annals of the Indian history and in fact had created history.They are still remembered and venerated by the countries devotees and pilgrim irrespective of religion caste, colour, status and position, simply because History is not a heaven of Rationalizes or such a partial of Reasonable. 21.4 Premakhyan Medieval Islamic association with Arabic and Persian languages has justifiably been recognised in literary and intellectual histories, but the emergence of a vast and fascinating corpus of Indic vernacular literature and its association with Islam in medieval India has not been adequately appreciated. Of a variety of Indian languages, in which a whole range of literary compositions emerged by 15th-16th centuries, Hindvi, or simply Hindi, was not only understood and spoken in large parts of the subcontinent, but it also saw

318 NSOU ??CC - HI - 07 considerable literary productions. Though Islamic theoretical and political discussions could still be accessed in Arabic and Persian, Sufis and other Muslim holy men were being heard, already in 13th and 14th centuries, speaking languages such as Punjabi and Bengali, besides what is now identified as Hindi/Urdu. Of particular significance is the composition of a huge body of Sufi poetry of love, premakhyan, in Awadhi dialect of medieval Hindi. Beginning with Mulla Daud's Chandayan as early as 14th century and reaching its climax with Malik Muhammad Jaisi's Padmavat in the 16th century, with a large number of other scintillating examples in between and after, this literature could captivate Muslims and non-Muslims alike. Jaisi's voluminous text also appropriated almost the entire Awadhi version of Ram-Katha then circulating in the public domain. Thirty years later, this was indeed the inspiration for Tulsidas to garner all the glories with his Awadhi text par excellence, Ramcharit Manas. Smarting under their own pedantry of classical Sanskrit, the pundits of Benaras had scoffed at Tulsidas for what they thought was a perversion of sorts, but the latter had the satisfaction not only of seeing its wide circulation amongst a large public devoted to Ram-bhakti, but also had patrons in powerful Mughal mansabdars. Tulsidas and his work could easily fit the cultural taste of stalwarts like Todarmal and Man Singh. The biggest patron of Awadhi and Braj corpus of Hindi, both bhakti (devotional) and riti (erotic courtly) variety, was Abdur Rahim Khan-i-Khanan, a multilingual polyglot, with considerable political clout as a foster son of Emperor Akbar. Hindi was, indeed, the lingua franca in Mughal India. The Mughal court being located at the centre of Braj Mandal, the dialect of the region, Braj, came to occupy an important place as the language of the court. Modern historians of Mughal India have conventionally portrayed Persian as the language of power and dominance, but, as literary historian, Allison Busch has put, Hindi is hidden in plain view of those who are obsessed with Persian in medieval India as they are with English in modern times. It is naïve to imagine that such influential Mughal officials and cultural personalities as Todarmal, Birbal, Man Singh, Tansen and Surdas transacted their private and public business only in Persian. Much as a certain degree of Persianisation happened in many fields over five-six centuries, it will be absurd to assume that people in the bazaars of Jaunpur or even in Agra and Delhi, would speak Persian — the status of the language was somewhat like English today, a language of the power-elite and international discursive engagements. One doubts very much, however, whether even someone like Akbar would speak to the visiting foreign dignitaries in Persian (the official language of the empire) or in Turkish (his mother tongue). While AbulFazl, his brother Faizi, and Abdur Rahim could engage with NSOU ??CC - HI - 07 319 the visitors in their languages, Akbar himself could be comfortable in Hindustani by — whether in quiet contemplation or when emotionally overwhelmed. After all, the first recorded example of a common Hindi expletive, gandu, is attributed to Akbar, by none other than his favourite ideologue AbulFazl. This matter may be left here for now; a proper history of obscenities in medieval India is still awaited. Before the 19th century colonial divide, it was possible for leading Muslim intellectuals and theologians in Delhi to call their language Hindi and even translate the Holy Quran in that language. At that time, the Persianised language of poetry was called Rekhta, or mixed language, and the more deeply rooted (theth) language of prose was referred to as Hindi. The imposition of Sanskritised Hindi in Devnagri script for Hindus and Persianised-Arabicised Urdu in Persian script for Muslims had not come about yet. Still, when a history of Hindi literature is written, even the most prejudiced authors are unable to completely bypass the Awadhi premakhyan or altogether ignore the seminal Mughal contribution to the growth of Braj corpus. On the other hand, the Urdu field, now identified with Muslims alone, is still learning to come to terms with a tradition torn asunder. 21.5 Conclusion: Orthodox and Sufi tendencies in Islam continued to follow separate and divergent paths. This stage is also characterized by the appearance of Sufi literary texts which argued and codified the Sufi ideas and doctrines. Al-Ghazzali was the most outstanding Sufi author. One of the most authentic and celebrated manual of Sufism was Kashful Mahjub written by al-Hujwiri (d. c. 1088). Another salient feature of Sufism during this period was the emergence of Sufi poetry in Persian. While Arabic literature on mysticism is in prose, Persian literature is in poetry. Sufi poetry in Persian in the form of narrative poems (masnavis) reached its peak during the 12th and 13th centuries. Two of its greatest exponents were Fariduddin-Attar (d. 1220) and Jalaluddin Rumi (d. 1273). 21.6 Model Questions 1) Write about the development of the Sufi literature. 2) What is Malfuzat? 3) What is Premakhyan ?

PREFACE In a bid to standardize higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses viz. core, discipline specific, generic elective, ability and skill enhancement for graduate students of all programmes at Honours level. This brings in the semester pattern, which finds efficacy in sync with credit system, credit transfer, comprehensive continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility to choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry their acquired credits. I am happy to note that the university has been recently accredited by National Assessment and Accreditation Council of India (NAAC) with grade "A". UGC (Open and Distance Learning Programmes and Online Programmes) Regulations, 2020 have mandated compliance with CBCS for UG programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Under Graduate Degree Programme level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning Materials (SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English / Bengali. Eventually, the English version SLMs will be translated into Bengali too, for the benefit of learners. As always, all of our teaching faculties contributed in this process. In addition to this we have also requisitioned the services of best academics in each domain in preparation of the new SLMs. I am sure they will be of commendable academic support. We look forward to proactive feedback from all stakeholders who will participate in the teaching-learning based on these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success. Professor (Dr.) Subha Sankar Sarkar Vice-Chancellor 2

PREFACE, In a bid to standardize higher education in the country, the University, Grants Commission (UGC) has introduced Choice Based Credit System, (CBCS) based on five types of courses viz. core, generic, discipline specific, general elective, ability and skill enhancement for graduate students of all, programmes at Honours level. This brings in the semester pattern, which, finds efficacy in sync with credit system, credit transfer, comprehensive, continuous assessments and a graded pattern of evaluation. The objective is, to offer learners ample flexibility of choose from a wide gamut of courses, as, also to provide them lateral mobility between various educational institutions, in the country where they can carry their acquired credits. I am happy to note, that the University has been recently accredited by National Assessment and, Accreditation Council of India (NAAC) with grade "A"., UGC (Open and Distance Learning Programmes and Online Programmes), Regulations, 2020 have mandated compliance with CBCS for U. G. programmes, for all the HEIs in this mode. Welcoming this paradigm shift in higher, education, Netaji Subhas Open University (NSOU) has resolved to adopt, CBCS from the academic session 2021-22 at the Under Graduate Degree, Programme level. The present syllabus, framed in the spirit of syllabi, recommended by UGC, lays due stress on all aspects envisaged in the, curricular framework of the apex body on higher education. It will be, imparted to learners over the six semesters of the Programme., Self Learning Materials (SLMs) are the mainstay of Student Support, Services (SSS) of an Open University. From a logistic point of view, NSOU, has embarked upon CBCS presently with SLMs in English/Bengali. Eventually,, the English version SLMs will be translated into Bengali too, for the benefit, of learners. As always, all of our teaching faculties contributed in this process., In addition to this we have also requisitioned the services of best academics, in each domain in preparation of the new SLMs. I am sure they will be of, commendable academic support. We look forward to proactive feedback, from all stakeholders who will participate in the teaching-learning based on, these study materials. It has been a very challenging task well executed, and, I congratulate all concerned in the preparation, of these SLMs., I wish the venture a grand success., , Professor (Dr.) Subha Sankar Sarkar, Vice-Chancellor

Of all the dynasties of the Sultanate period the Sayyids had the shortest span of life – thirty even years. But its life story is characterized neither by the bold imperialist achievements of the Khaljis nor the novel administrative experiments of the Tughluqs. It, however, forms a watershed in the history of medieval India, indicating a stage in the dismemberment of India, when owing to the strength of centrifugal tendencies the concept of strong centralized monarchy gave place to regionalism or provincialism in administration. <p>The foundation of the empire of Vijayanagara in 1336 constitutes a great event in South India in particular and the history of India in general. It was founded as a result of the political and cultural movement against the Tughlaq authority in the South. The empire of Vijayanagara was founded by Harihara I and Bukka, two of five sons of Sangama. But as regards the circumstances leading to the foundation of the empire of Vijayanagara and the origin of the founders of the empire of Vijayanagara, there are a number of controversies and this</p>

<p>has been hotly debated by the scholars since the beginning of the twentieth century, when Robert Sewell published his work The Forgotten Empire (1901) primarily based on the foreign accounts. There are three main theories regarding the origin of the founders of the empire of Vijayanagara: a)The Telegu, the Andhra or the Kakatiya origin, b)The Karnata (Karnataka) or Hoysala origin, c)the Kampili origin.</p>

the first theory, Harihar and Bukka were the Treasury officers (Pratiharis) of the last Kakatiya ruler Prataparudradeva Kakatiya. After the fall of the Kakatiya kingdom to the Tughlaqs, both brothers reached the present site of Vijayanagara, where a Vaishnava saint Vidyanaya took them under his protection and inspired them to found the city and empire of Vijayanagara. The main support of this theory comes from Kalajnana texts, particularly the Vidyanaya Kalajnana and some other sources. Modern historians supporting this theory further give the arguments that royal crests and the administrative divisions of the empire of Vijayanagara had been borrowed from the Kakatiyas. Besides, the Rayas of Vijayanagara greatly patronized Telegu language and literature.

Harihara and Bukka were in the service of the Raya of Kamipili (near Sagar in Karnataka). When Bahauddin Gurshap, a cousin of Md. Bin Tughlaq revolted and took refuge with the Raya of Kampili, the Sultan attacked Kampili and annexed it to the Sultanate. During the course of this war, Harihara and Bukka were both made prisoners of war and taken to Delhi. In 1335, when Tughlaq possessions in the South were in a state of general turmoil, the Sultan released them and sent them as Commanders of the Tughlaq troops to restore order in the South, where they came under the influence of a sage and declared their independence. The issue of the actual circumstances leading to the foundation of the empire of Vijayanagara and the origin of the founders still remain unresolved and several arguments are given in support of each theory. But there is no doubt that Harihara and Bukka, who founded the empire in 1336, were the sons of Sangama and named the first dynasty of Vijayanagara after their father as Sangama dynasty (1336 – 1485). The second dynasty, founded by Saluva Narasimha, known as Saluva dynasty, ruled from 1485 to 1505. The third dynasty, known as Tuluva ruled from 1505 to 1570. The fourth or the Aravidu dynasty ruled till about the middle of the seventeenth century, but was only a pale shadow of its old glory. 140

The growth of the Chisti order in India during the Sultanate period took place in two phases. The first phase ended with the death of Shaikh Nasiruddin (Chiragh-i-Delhi) in 1356. The second phase is marked by its initial decline during the later part of the 14th century followed by revival and expansion in various parts of the country during the 15th and

influential and popular sufi order in India, originated in Herat and was introduced in India by Khwaja Muinuddin Chishti (d. 1236) who was born in Sijisian in c. 1141. He came to India at the time of the Ghori conquest. Finally settled in Ajmer about 1206 and won the respect of both Muslims and nonmuslims. No authentic record of his activities is available. During the later period, legends projected him as an ardent evangelist. However, he was not actively involved in conversions and his attitude towards non-Muslims was one of tolerance. His tomb in Ajmer became a famous centre of pilgrimage in later centuries. The successor of Khwaja Muinuddin Chishti in Delhi was Khwaja Qutbuddin Bakhtiyar Kaki. Shaikh Hamiduddin Nagauri another Khalifa of Shaikh Muinuddin Chishti, made Nagaur in Rajasthan centre of his activity. Shaikh' Hamiduddin established the silsilah in Nagaur where he lived like an ordinary Rajasthani peasant and dissociated himself from those in authoriv. He was a strict vegetarian. He and his successors translated many Persian sufi verses in the local language called Hindavi. Khwaja Qutbuddin Bakhtiyar Kaki was succeeded in Delhi by his Khalifa, KhwajaFariduddinMasud (1175-1265) known as as Baba Farid. Baba Farid left Delhi 286 NSOU ??CC - HI - 07 for Punjab and lived in his khanqah there. He despised association with the ruling class and rich persons. Nathpanthi yogis also visited his khanqah and discussed with him the nature of mysticism. His popularity in Punjab is clear from the fact that more than three hundred years after his death, verses ascribed to him were included in the AdiGranth compiled by the fifth Sikh Guru, Arjun, in 1604. His tomb at Pakpatan soon developed into a centre of pilgrimage. The most celebrated disciple of Baba Farid and the greatest sufi saint of the 14th century was Shaikh Nizmuiddin Auliya (1236-1325). He made Delhi the most famous centre of the Chishti order. Two historians Ziauddin Barani and Amir Khusrau, who were his contemporaries, testify to his eminent position in the social and religious life of northern India during the late 13th and early 14th centuries. Later. His successors spread the Chishti order in various parts of the country. His teachings

Amir Hasan Sijzi. This work serves more as a guide to practical aspects of Sufism than as a treatise on its metaphysical and theosophical aspects. Shaikh Nizamuddin Auliya saw the reigns of seven successive Sultans of Delhi. But he always avoided the company of the kings and nobles and never visited the court. The langar (an alms-house for the distribution of free food) of his khanqah was open to Hindus and Muslims alike. In his khanqah, he had many conversations with the Nathpanthi yogi visitors. He adopted many yoga, breathing exercises and was called a sidh (perfect) by the yogis. Amir Khusrau (1253-1325) was a devoted disciple of Shaikh Nizamuddin Auliya. Shaikh Nizamuddin Auliya had many spiritual successors or Khadifs. One of them was Shaikh Burhanuddin Gharib (d. 1340) who was one of those saints who were forced by Sultan Muhammad bin Tughlaq to migrate to the Deccan. He made Daulatabad centre of his activities and introduced the Chishti order there. The most famous of Shaikh Nizamuddin Auliya's Khadifs and his successor in Delhi was Shaikh Nasiruddin Mahmud (d. 1356) who came to be known as Chiragh-i Delhi (Lamp of Delhi). He and some of his disciples discontinued some of those practices of early Chishtis which could clash with Islamic orthodoxy and, in turn, persuaded the ulema to soften their attitude towards the Chishti practice of sama.

was a major order of the Sultanate period. Its founder in India was Shaikh Bahauddin Zakariya (1182-1262). He was a Khurasani and was a disciple of Shahabuddin Suhrawardi who had initiated the silsilah in Baghdad and was directed by the latter to proceed to India. He made Multan and Sind the centres of his activity. Thus, one of the oldest khanqahs in India was established by him at Multan. Iltutmish was the Sultan of Delhi at that time, but Multan was under the control of his rival, Qubacha. Shaikh Bahauddin Zakariya as critical of Qubacha's administration openly sided with Iltutmish in his conflict against the

the Multan ruler's overthrow, Bahauddin Zakariya received from Iltutmish the title of Sbaikh-ul Islam (Leader of Islam) and endowment. Contrary to the chisti saints of his time, he followed a worldly policy and built up a large fortune. He accepted State patronage and maintained links with the ruling classes. However, during the later period many independent sufi lines stemmed from him and some of them came to be known as 'beshara' (illegitimate orders). In addition to Shaikh Bahauddin-Zakariya, many other Khalifas were designated by Shaikh Shahabuddin Suhrawardi to spread the suhrawardisilsilah in India. After his initial NSOU ??CC - HI - 07 289 stay in Delhi, where he failed to establish his supremacy, he went to Bengal. He established his khaqah there and made many disciples, Languars for the distribution of free meals) to his khanqah. He is said to have played an important role in the process of Islamization in Bengd. During the Sultanate period, Punjab, Sind and Bengal became three important centres of the Suhrawardi activity. Scholars are generally of the opinion that the Suhrawardisufis converted Hindus to Islam and in this task they were helped by their affluence and connections with the ruling class. In this connection, a sharp contrast is drawn between their attitude and that of the Chishti sufis whose teachings did not aim at conversion. 19.4

PREFACE In a bid to standardize higher education in the country, the University Grants Commission (UGC) has introduced Choice Based Credit System (CBCS) based on five types of courses viz. core, general elective, ability and skill enhancement for graduate students of all programmes at Honours level. This brings in the semester pattern which finds efficacy in sync with credit system, credit transfer, comprehensive continuous assessments and a graded pattern of evaluation. The objective is to offer learners ample flexibility to choose from a wide gamut of courses, as also to provide them lateral mobility between various educational institutions in the country where they can carry their acquired credits.

93% MATCHING BLOCK 2/27**W**

UGC (Open and Distance Learning (ODL) Regulations, 2017 have mandated compliance with CBCS for U.G. programmes for all the HEIs in this mode. Welcoming this paradigm shift in higher education, Netaji Subhas Open University (NSOU) has resolved to adopt CBCS from the academic session 2021-22 at the Bachelors Degree Programme (BDP) level. The present syllabus, framed in the spirit of syllabi recommended by UGC, lays due stress on all aspects envisaged in the curricular framework of the apex body on higher education. It will be imparted to learners over the six semesters of the Programme. Self Learning

Material (

SLMs) are the mainstay of Student Support Services (SSS) of an Open University. From a logistic point of view, NSOU has embarked upon CBCS presently with SLMs in English / Bengali. Eventually, the English version SLMs will be translated into Bengali too, for the benefit of learners. As always, all of our teaching faculties contributed in this process. In addition to this we have also requisitioned the services of best academics in each domain in preparation of the new SLMs. I am sure they will be of commendable academic support. We look forward to proactive feedback from all stakeholders who will participate in the teaching-learning based on these study materials. It has been a very challenging task well executed, and I congratulate all concerned in the preparation of these SLMs. I wish the venture a grand success. Professor (Dr.) Ranjan Chakraborty Vice-Chancellor

Module I: 17th century European Crisis Unit 1 ? Decline of the Mediterranean Economy

Structure 1.0 Objectives 1.1 Introduction 1.2 Decline of the Mediterranean Economy: An Overview 1.3 Conclusion 1.4 Model Questions 1.5 Suggested Readings 1.0 Objectives ? The present unit aims to discuss the decline of the Mediterranean economy in the 17 th century. ? The causes and impact of the decline of the Mediterranean economy will also be discussed. ? This unit will contextualize the decline of the Mediterranean economy in the crisis of the European economy of the 17 th century. 1.1 Introduction There is a general agreement among the historians that the long domination of the Mediterranean on the European economy since the dawn of the civilization in Europe fell into deep crisis with the rise of the Atlantic in the early modern era: the result of the fall of the Mediterranean was the overall decline of the Mediterranean economy. The European economy was primarily divided into three economic zones in the early modern era: the Mediterranean zone, the Atlantic Zone and the Baltic Zone. These three zones were interconnected with each other through trading 7

NSOU CC-HI-08 8 networks. However, Europe witnessed a shift of economic balance from the Mediterranean region to the Atlantic region after the discovery of a direct oceanic link with America. The Mediterranean economic and trading zone was one of the most vibrant commercial regions in Europe since the time of the Greco-Roman time. In the 16th century, the economic and trading activities of the Mediterranean region was still impressive. It had cities like Florence, Venice, Genoa, Milan etc. The approximate population of the region was 60 million in the 16th century. There was adequate development of food production and manufacturing sectors in the region, especially in northern Italy. There were two types of urban centres in early modern northern Italy. The first type of cities were chiefly manufacturing centres. Florence and Milan represented such cities. The second type of the cities were famous for industrial and maritime activities, and shipbuilding. Venice and Genoa were such cities during the period under review. Outside Italy, Ragusa—the major port city of Sicily—specialized in maritime activities. The bulk amount of salt, grain and wool was traded from the port of Ragusa. The Mediterranean region was dependent on the grain-producing regions of Europe for the regular supply of grain. The ships of Venice, Genoa and Ragusa were specially engaged in importing a bulk amount of grain to Italy. The usual items were wheat, barley and millets used for bread and biscuit. It is quite obvious that the entire trading network was interconnected and the region-specific specializations were developed to meet the demands of the other regions. It was due to different reasons the economy of the Mediterranean region started declining in the late 16th and early 17th centuries. In the present unit, an attempt will be made to analyse the fundamental aspects of the decline of the Mediterranean economy during the period under review (Munck 1990, 117-118; Rich and Wilson 1967, 155-156).

1.2 Decline of the Mediterranean Economy: An Overview In the 16th century, the great cities of the Mediterranean region—Venice, Milan, Florence, Genoa and others—were the prime centres of the economic activities connecting Europe and the Levant (especially Constantinople and Cairo) apart from producing industrial goods. However, this prosperity did not continue in the last half of the 16th century. The first sign of recession was first felt in the field of agriculture.

NSOU CC-HI-08 9 The years between 1580 and 1620 saw the initial slowdown of agricultural production. It was followed by the development of commercial stagnation and financial uncertainty in the Mediterranean cities. There was also a drop in urban industry and even population during the same period. All these changes in the Mediterranean economy were an indication of the beginning of a long-term crisis in the region's political economy. The Mediterranean region had for long been the principal centre of sophisticated production and specialized financial services; the economic crunch transformed it into a mere producer of certain goods for the European market (Munck 1990, 117-118). It was the most decisive moment in the economy of the Mediterranean region: it turned an advanced economic zone into a relatively backward one. The north and north-west Europe would become the new dominant regions of 17th century Europe. There were multiple manifestations of the decline of the Mediterranean economy during the period under review. The slow but definitive process of economic decline in the Italian peninsula had begun in much earlier period. In 15th century, Italy witnessed the rise of Signorie and the fall of communes. It created social deterioration by detaching the masses from the administration. Family tradition and political influence suppressed the individual talent and initiative in the new condition. The immediate effect was that the people started considering craft and mercantile activities as socially or culturally low menial occupations. However, though not immediately, this newly developed mentality had long-term negative impact on the economic prosperity of Italy. Italy was able to retain its economic prosperity until the end of the 15th century. The situation began to change in the years between 1494 and 1538. During this period, the Italian state faced foreign aggression. The major European powers like Spain, France and Germany became involved in the conflict in the soil of Italy. This international warfare badly affected the peace, stability and consequently prosperity of the entire region. The war was associated with famines, epidemics, destruction of property and disruption of trade and commerce. All these factors were collectively responsible for the economic decline of the Mediterranean region largely (Cipolla 1976, 236). The decline of the economy of the Mediterranean region was manifested in the textile industry. For example, Brescia's production of woollen cloth drastically fell

NSOU CC-HI-08 10 from 8000 pieces in 1500 to 1000 pieces in 1540. The towns like Como and Pavia also faced economic recession. Pavia also experienced fall of population from about 16,000 at the end of the century to fewer than 7,000 in 1529. Florence was also no exception. The population of the city was reduced to 60,000 in 1530-40 from 72,000 at the end of the 15th century. The number of woollens workshops fell from about 270 to few more than 60, and the annual production of woollens from about 25,000 pieces to a few hundred. However, with the restoration of peace in the middle of the 16th century, the production of woollen cloth began to revive. Bergamo increased its production of woollen cloth from 7000-8000 pieces in 1540 to 26,500 pieces in 1596. Florence produced 14,700 pieces of woollen cloth in 1553; in 1560, it was 30,000. However, these signs of recovery did not ensure the removal of profound elements of crisis from the Italian economy. In fact, the old structure of the economy was restored along traditional way. The guilds achieved new strength and adopted all possible measures to prevent competition. This conservative attitude blocked innovative aptitude in the economic structure of Italy. It made Italy less efficient in the changing international market of Europe as far as competition was concerned. The internal market of Italy was limited. Italy's economic prosperity was primarily dependent on the export of commodities in the various parts of Europe. This dependence on the export economy of Italy came to be questioned by the rise of the manufacturing sector in England and the Low Countries. These regions of 16th century Europe developed their production on new scales. The products of England or the Low Countries competitively penetrated in the international market against the Italian products. Until the end of the 16th century, the Italian manufacturers could not realize the gravity of the changing situation. The 17th century witnessed the full advent of the non-Italian commodities in the market of Europe. It created deep crisis in the economy of the entire Mediterranean region (Cipolla 1976, 236-239). There were other reasons behind the decline of the Mediterranean economy also. The decline of the import of silver from America to Spain in the second decade of the 17th century affected the condition of the Italian financial market. It was because of the fact that the Genoese bankers were for a long period deeply involved in the financial transactions of Spanish government. After 1620, the economic crisis of Spain took an acute form due to the uncertainty of import of silver from American mines. Consequently, Spain failed to meet its various international commitments.

NSOU CC-HI-08 11 Moreover, the internal economic structure of Spain was weak and the establishment of an overseas empire did not make it as economically powerful. The north European states took the advantages of the decline of the Spanish economy in 17th century. The records of the Casa de Contratacion (a government trade council) in Seville do not indicate more than a moderate decline in the volume of the Spanish-American trade in the period 1620-50. However, the nature, value and place of origin of the commodities altered significantly in favour of other European countries (especially the French), at the expense of the domestic Spanish economy. Nevertheless, there were even deeper changes within the Mediterranean region itself affecting the prosperity of the Italian cities. The outside competition reduced the scale of trade and manufacturing capability of the cities like Venice. The early c. 1600 witnessed the decline of the prosperity of Venice. Two factors were immanent in the decline of this city. In the earlier century, the growing piracy and Ottoman turbulence increased the cost of city's defence. After 1600, it faced the British and Dutch competition increasingly. A city like Venice fell into deep crisis due to these two factors. There was shortage of timber for shipbuilding in Venice. The city was forced to impose restriction on the foreign merchants during the same period under review. The Venetian merchants were also instructed not to hire ships from the foreign merchants. In the second quarter of the 17th century, new developments took place. The English textile products flooded the traditional Venetian markets on the one hand; the Dutch low-cost shipping, established dominance in the Mediterranean because of its control over grain and naval products of Baltic. Both the British and Dutch merchants used all possible means including illegal and fraudulent ways to infiltrate in the Venetian market. Moreover, the north European traders enjoyed cheaper labour in comparison with the Venetian labour. It reduced the production cost of the north European products. The emerging economy of the north European states—England, France and the Netherlands—also started attracting the skilled artisans for production of luxury soaps, high quality glass and mirror, paper and cloth. It was a challenge to the Venetian entrepreneurs. The old spice trade operated in the Mediterranean region was also in the crisis as there was new route in the north western Europe. Despite all these setbacks, after 1669, the Venetian economy recovered largely. It was able to maintain its trade, employment and consumption pattern in the second half of the 17th century. According to the modern estimate, by the end of the 17th century the Venetian

NSOU CC-HI-08 12 economy was in many respects similar to what it had been in 1539, before its great boom period: prosperous but not spectacular in any way (Munck 1990, 117-121). The other regions of Italy faced greater economic problems in 17 th century in comparison with Venice. The primary difficulty of Italy's economic structure was that it did not have adequate raw materials for industrial production. Another shortcoming of the Italian economy was that the labour cost was higher than the north western states. Consequently, it became difficult for the Italian manufacturers to compete with their French, English, or Dutch competitors. The higher labour cost in Italy increased the price of its products. The result was that the north European states gradually captured the market driving out the Italian products. It had a long-term effect on the basic structure of Italian economy: in the end of the 17 th century, Italy became the exporter of the raw materials like wine, oil, silk, dyestuffs and fruit and importer of the manufactured commodities. This transformation from advanced economic zone based on manufacturing sector to a relatively backward region relying only on exporting raw materials was the principal crux of the economic crisis of the Mediterranean region in the 17 th century (Munck 1990, 121). Fernand Braudel and Immanuel Wallerstein interpret this decline of the Mediterranean region because of the shift of epicentre of the economic activities of Europe from Venice and Antwerp to Amsterdam in early and mid-16 th century and to London in the later part of the 17 th century. Christopher F. Black argues that there was definitely a shift of the European economic gravity from south to north in 17 th century. However, there were also signs of adjustment, realignment and recovery. It was not at all a total decline of the Mediterranean economy during the period under review (Black 2001, 32). It is also pointed out that there was expansion of market and fairs along with the growth of towns in 16 th century and in the 17 th century. The urban centres like Bari, Lecce, Taranto, Matera and Barletta were benefitted from this wave of urbanization: capital investment came from Venice, Genoa and Tuscany. The rural economy was boosted from the fairs. It increased the financial transaction and commodity exchanges in rural Italy. It is undeniable that the Italian traders lost substantially their command over the international trade. However, recent researches show that the internal economy of Italy in 17 th century was able to retain its economic prosperity largely due to the rise of comparatively lesser known urban or semi-urban

NSOU CC-HI-08 13 areas. These new smaller centres of economic activity in Italy compensated largely the financial crisis of the bigger cities. This rise of the smaller towns and rural areas as new centres of economic activity in 17 th century Italy contributed prosperity to the family-based production system. The families, which had adequate female labour, were the chief beneficiaries of the changing pattern of the Italian economy. Historians like C. M. Belfanti characterize it as 'rural decentralisation of manufacture' or 'proto- industrialization'. The Duchy of Mantua, the Republic of Genoa, or the Bresciano under the Venetian Republic experienced this new system of production. Even the wealthy urban merchants of Mantua and Genoa developed new production centres in the rural areas in order to avoid high labour cost in the urban areas and the strict control of guilds. The plague epidemic of 1579-80 caused many Genoese silk craftsmen to flee Genoa; they remained in the inland villages to create a rural silk processing and weaving industry that survived many vicissitudes till the eighteenth century. Small landholders also became weavers in the changing context. The urban investors wanted freedom from the control of the guild. It led them to search for new lands in rural areas where they might get land at low cost and labour at cheap rate. The result was that there was the development of a new pattern of industrial production in different areas of rural Italy like Bergamo valley, Bresciano valley, the Camonica valley, the Trompia valley and the Sabbia valley. These areas produced cloth, iron, pots, horseshoes, cuirasses firearms, agricultural implements, wires, nails and steel. Lake Garda, situated at the western shore of Italy and poor in food production, developed flax spinning. In various parts of rural Italy, there was development of paper production. The Italian manufacturers were able to diversify their production base substantially in the late 16 th and early 17 th centuries. For example, there was development of cotton manufacturing in Lombard areas around Gallarate and Busto Arizio; cordage and hemp sailcloth in the Cento region between Bologna and Ferrara; hat making from willow shavings in the Pio family's little seignory of Carpi; hemp production in the Bolognese contado areas around Budrio and Castel S. Pietro (Black 2001, 33-36). From this analysis, it is clear that the so-called proto-industrialization in rural Italy played significant role in boosting the income not only of the merchants but also of the rural producers-artisans and peasants. The rural industrial sector quickly achieved considerable importance in the changing paradigm of the Italian economy.

NSOU CC-HI-08 14 It is little bit difficult to assess the degree and extent of changes brought about by proto-industrialization due to lack of precise statistical evidences. Nevertheless, some efforts have been made to make a measurable assessment of the economic changes taking place in 17 th century Italy. For example, it is estimated that there were 10,000 iron workers in the Camonica valley in 1609-10; over 7000 people were producing 60,000 cloths in Busto Arizio in 1767. Del Fabbro-a Friulian entrepreneur- employed 11,000 weavers on looms producing flax and hemp cloth at the end of the 17 th century. In Como, about 18,000 women were involved in the domestic silk industry. In 1620, Bergamo had 84 mines, 11 blast furnaces and 100 forges.The Camonica valley kept up 90-100 forges throughout the period from the 1560s to the 1780s.These facts indicate that rural Italy was being increasingly interlinked with the urban economy of Italy and the international trade in multiple ways. It brings us to the question of material culture and consumerism in 17 th century Italy. There is no evidence that Italy experienced any decline of consumer culture during the period under review. Visual evidences suggest that expanding prosperity was visible not only in the large cities like Venice, Milan or Genoa, but also in the smaller urban centres like Prato. There was increasing desire for comparatively higher lifestyle and improved mode of living in both urban and rural Italy. The movement of traders, investors and even human resources between urban and rural areas was another important aspect of the 17 th century Italian economy. The so-called proto- industrialization provided an opportunity to the rural workforce, especially the female workforce, to get involved in the sophisticated production process. It brought urban taste and culture to the rural population. It created awareness in the rural society about the existence of higher living standard in the urban areas making the rural folks aspirant to achieve this (Black 2001, 36-41).

1.3 Conclusion From this analysis, it is clear that despite the shift of the epicentre of the European economy from the Mediterranean region to the Atlantic region, the economic decline was not as much as it is conventionally thought. It is true that the new economic powers of Europe in 17 th century were the Netherlands, France and England. This century witnessed the rise of the north western Europe in the changing NSOU CC-HI-08 15 global economic and political structure. The economy of the Mediterranean region was not in a position to compete with the economy of the Dutch Republic or England during the 17 th century. However, it is equally true that there was no overall decline of the Mediterranean economy due to the rise of the Atlantic economy. The major centres of the Mediterranean economy, especially the cities and towns of Italy, continuously adjusted with the new situation, invented innovative investment strategy and carried out fresh production process. Though the Mediterranean region definitely lost the economic and commercial leadership in Europe in 17 th century with the rise of the north western Europe, nevertheless, it did not mean the end of prosperity of the region completely. On the contrary, it survived meaningfully through the mobilization of capital and human resources between urban and rural areas. The creation of new wealth and portfolio diversification essentially in rural Italy, along with a visible material culture, was the key to the successful survival of the region's economic prosperity in spite of the rise of English or Dutch economy. The exploitation of cheap labour in rural areas of Italy and expansion of a consumer culture consolidated the process of portfolio diversification. Therefore, we may conclude that the economy of the Mediterranean region suffered some losses in 17 th century, but not as much as it was once envisaged.

1.4 Model Questions 1. Do you think that the Mediterranean region witnessed a drastic decline of its economy inthe 17 th century? 2. Write briefly on the aspects of the decline of the Mediterranean economy in 17 th century. 3. Explain the decline in the textile industry. 4. Were there any signs of recovery in the Mediterranean economy or was it a total decline? 1.5 Suggested Readings Acemoglu, Daron, Simon Johnson and James Robinson. NSOU CC-HI-08 17 Unit 2 ? Decline of Spain Structure 2.0 Objectives 2.1 Introduction 2.2 The Decline of Spain in the 17 th Century: Historical Debates 2.3 Conclusion 2.4 Model Questions 2.5 Suggested Readings 2.0 Objectives ? The present unit intends to present an overview of the decline of Spain in the 17 th century. ? The learners will be given an idea of the different aspects of the decline of Spain. ? The historiographical debate on the question of the decline of Spain will also be analyzed in this unit. 2.1 Introduction The history of Spain is extremely interesting. Spain had been a relatively poor region in Europe in the medieval period. Spain did not even hold any significant position in the European politics. Nevertheless, with the discovery of new maritime route thorough Atlantic Ocean for reaching America brought unusual prosperity for Spain. Spain emerged as a global super power in 16 th century Europe from a mere economic and political position. The primary factor behind the rise of Spain in 16 th century was its command over the American mines of precious metals. The trade was expanded along with new routes and new ports. There was increase of both population and price in Spain as well as in entire Europe. However, the prosperity of Spain did not last for long. The economic epicentre of Europe gradually moved towards North Western Europe—the region dominated by England, France and the 17

NSOU CC-HI-08 18 Netherlands. Spain experienced decline of its dominance over the European politics and economy. In this unit, we will try to understand the decline of Spain in the changing political and economic perspective of Europe in the 17 th century. 2.2 The Decline of Spain in the 17 th Century: Historical Debates Historians, especially the economic historians, have long been concerned with the question of the decline of Spain. In the mid-19 th century, the Spanish Romantic thinkers first paid attention to the question specifically: why did Spain fail to sustain its glorious past? What were the factors behind the fall of Spain from its golden age? The present troubled condition of Spain provided impetus to find out the factors responsible for its decline to an obscure regional power from one of the first global super power. In the English-speaking world, Earl J. Hamilton powerfully argues that there was a clear decline of the Spanish economy during the period under review. In 1961, the historian John H. Elliott develops a coherent argument about the decline of Spain in 17 th century in his research paper titled 'The Decline of Spain'. In this paper published in the *Past & Present*, No. 20 (Nov. 1961), he tries to analyse the question of the decline of Spain in 17 th century in detail. In analysing the factors behind the decline of Spain during the period under review, Elliott seeks answer not in the simple explanation of the fall of the import of American silver. Rather, he makes effort to understand the question of decline in the internal political and economic structure of contemporary Spain in general and Castile in particular. The expansion of Spain as an imperial power was made possible due to the contribution of Castile in the 16 th century. Since the late 16 th century, the economy of Castile had been deteriorating at a faster pace with multiple manifestations. The decline of Spain in the 17 th century could be explained from two different plane: first, the economic regression of Spain during the period; second, the transformation of Spain from a major imperial power of the 16 th century to a mere regional entity in the 17 th century. It is needless to point out that these two are interrelated with each other. If we consider the foreign policy of Spain in the 16 th and 17 th century, we will see that its very aim was to expand the Spanish dominance and influence in the international politics and to destroy the heresy. Nevertheless, it had its cost. Philip II spent

NSOU CC-HI-08 19 approximately 13 million ducats in a year between 1593 and 1597; the ministers of Philip IV calculated the sum of 13 million ducats in 1636 for the same purpose. Now the question arises: where did the money come from? In the 16th and 17th centuries, Spanish economy the answer was simple: it was the Castilian tax payers who had to pay for the maintenance as well as expansion of the Spanish imperial dream. In fact, the real foundation of the Spanish power was the Castilian economy and military power. To be more precise, Spain was dependent on Castile in three different areas: firstly, the Castilian tax payers were the primary source of Spanish war expenditure; secondly, the Castilians supplied the main army to Spain; thirdly, the Castilian possession of mines in South America provided additional support to Spanish treasury. It implies that there were three basic factors behind the prosperity of Castile: population, productivity and overseas wealth. Let us examine these three factors separately. As far as the demographic structure of Castile is concerned, both the total number and density of population were on the higher side in the 16th century. In the middle of the 16th century, the total population of Castile was about 6.5 million while the figure of the entire Iberian Peninsula was about 7.5 million excluding Portugal. If we consider the density of population in Castile, there were 22 habitants to the square kilometre in 1594 as against only 13.6 in the Crown of Aragon. In the early 1590s, the central region of Castile accounted for 30.9 percent of the total population of Spain. It clearly indicates that this particular region was heavily populated rather than the other areas of Spain. The arid land and pastoral economy of Castile were however not in a position to feed this over populous region. The South American settlement of Spain opened up new opportunities to those Castilians who were ready to take risk in a completely unknown region. The daredevil mentality of these people was one of the causes behind the successful establishment of the Spanish Empire in South America. However, it is difficult to precisely estimate the total number of immigrations from Castile to South America during this period nevertheless one rough figure is 150,000 up to 1550. It is already noted that Spain had a clear dependence on the Castilian population for its army. In other words, Spain recruited most of the soldiers from Castile. It became increasingly difficult for the provincial governors to recruit fresh blood for the Spanish army in the 17th century. The primary reason behind this difficulty in recruiting new men for army was the massive

NSOU CC-HI-08 20 internal migration: The years between 1530 and 1594 witnessed the drift of population from the rural areas to the urban one. There was a continuous migration of population from North Castile to central Castile during the period under review. It clearly indicates that two types of migration took place in the 16th and 17th centuries Spain: firstly, the migration from Spain to the New World; secondly, the migration within Spain. Andalusia became the El Dorado for those Castilians who failed to cross the Atlantic. Seville – the gateway to Atlantic – increased its population from 45,000 in 1530 to 90,000 in 1594. We must also note that the several northern towns like Medina del Campo recorded a marked decline of population (Elliott 1961, 52-59). Two important events took place in Spain during the same period. In 1599 and 1600, Castile and Andalusia suffered heavily from plague and famine. Though it is difficult to get precise statistical evidence about the number of death toll, nevertheless, we can say that both the plague and famine badly affected the demographic structure of these two provinces. The second event that started affecting the population of structure of Spain was the expulsion of Moriscos (The Moriscos were descendants of Spain's Muslim population that had converted to Christianity by coercion or by royal decree in the early 16th century). We are also not sure about the actual figure regarding it. However, according to M. Lapeyre's estimate, some 275,000 Moriscos were expelled from Spain between 1609 and 1614. Of these 275,000, Castile and Andalusia contributed approximately 90,000. The expulsion of the Moriscos from Castile definitely affected its economy. It needs to be noted that the Moriscos were generally urban dwellers and engaged in menial tasks in Castile. Their expulsion from the province naturally created a vacuum in the Castilian economy. The Castilian economy and population again suffered from catastrophic plague in 1647 and 1650. All these events badly affected the Spanish recruitment of men for its army in the province. During the same period, the Castilian economy also faced difficulties. The researchers show that the economy of Castile passed through a phase of expansion between 1500 and 1548. The annual average price rise in the province was 2.8 percent between 1501 and 1562. Three factors played an important role behind this steady price rise: increasing aristocratic expenditure, mounting debts of Charles V (through the distribution of juros or credit bonds) and escalating demands of food from Castile's growing population. The Castilian fair also integrated its economy with the economy of North Europe and Italy through a complicated network of

NSOU CC-HI-08 21 reciprocal obligation. This boom in the economy of Castile with a continuous price hike, which was essentially a result of the export trade, came to an end in the middle of 16th century because of a particular dramatic decision taken by the government. The government assumed that the increasing export of Castilian products provided stimulation to the hike of commodity prices. Therefore, the government decided to impose prohibition on the export of Castilian products and allowed only the import of the foreign products in order to keep the prices beneath a certain level. This decision soon proved to be disastrous for the economy of Castile. Moreover, the lack of investment as well as absence of adequate demand in the home market further deteriorated the condition of the Castile industries. The erroneous agrarian policy of Castile also aggravated the crisis. It only encouraged sheep farming instead of cultivation. This created deep imbalance within the economy of Castile. The royal administration of Castile also fixed the maximum price of corn. It was another cause of the misery of the farmers. This short-sighted agrarian policy made Castile dependent on northern and eastern Europe for supply of grain. It became clear that the Castilian agriculture was incapable of meeting the growing demand of food. Interestingly, there was expansion of cultivation in south Spain after the middle of the 16th century; however, it met the demands of America instead of the home market of Spain. Possibly, the smaller landholders of Castile were the hardest hit; the big landlords certainly found some escape routes. It possibly created depopulation in rural Castile. The village of Castile was truly unprotected. There was communal indebtedness in the Castilian villages, and the situation became worst when some villagers fled from their ancestral land. There were two options before the deserted villagers: either they could go to big urban centres or they could become vagabonds (Elliott 1961, 59-65). The traditional society of Castile was unlike the English or the Dutch society an almost perfect military society. Essentially based on military ethics and crusading zeal, the Castilian society was incapable of developing so-called capitalist spirit in the 17th century. Instead of investing capital in commercial enterprise, which would obviously involve some amount of risk, the Castilians preferred to invest their money especially in juros or government bonds. Under the established credit system, the wealthy Castilians invested their money at the interest rate of 5%, 7% and 10%. While the municipal corporations and crown offered 7% and 10% rate of interest NSOU CC-HI-08 22 respectively, the lending of money to a private person (censos) would offer the 5% rate of interest. Censos and juros were avenues for investment in safer areas rather than relatively risky regions of commercial enterprises. Agriculture, industry and trade failed to attract investment in Castile because of the attractive rate of interest offered by censos and juros. It undoubtedly largely debilitated the economic growth of Castile in the 17th century. The historians also note that the cultural and educational contacts of the Spaniards with the other European countries were also weakened during the 17th century. The Spanish turn towards the Catholic theology under Philip II certainly blocked the libertarian ideological development, scientific ethos and technical experiments. The conservative religious culturalism sponsored by Catholicism in the late 16th century and entire 17th century Spain could be considered as a kind of obstacle for the development of scientific mentality. It was one of the primary reasons behind the decline of Spain during the period under review (Elliott 1961, 65-68). It is clear from the analysis offered by Elliott that the fall of Castile contributed to the general decline of Spain in the 17th century. Castile lost its demographic and productive vitality, which seemed to be catastrophic for the Spanish economy. After 1601, the Castilian and Andalusia products started losing demands in America causing less supply of silver remittance to Spain. It further deteriorated the condition of the Spanish economy. The result of the entire development of the economy, society and culture of Castile towards a particular direction was that foreign merchants and foreign capital were the principal beneficiaries: the Genoese, the Portuguese Jews and the heretical Dutch. The foreign bankers controlled the Crown's finance. The Castilian economy went under the domination of the foreign merchants. The Dutch were successful in increasing their presence significantly in the overseas trade and empire of both Spain and Portugal. The remittance of the American silver to Spain was decreasing during the period under review. The silver remittances to the Crown at the end of Philip II's reign averaged about two million ducats a year. In 1614-15 and 1616-16, this figure was below million ducats and in 1620, it was as low as 800,000 ducats. The value of the Spanish currency was unstable and falling also. Olivares—the Spanish Prime Minister between 1621 and 1643—tried his best to control the situation. However, he failed. He tried to extract money from the privileged and the exempted category. In the case of the Castilian nobles, this policy

NSOU CC-HI-08 23 proved less fatal. However, the fiscal policy of Olivares extracted the financial vitality of the merchant community. The miserable condition of the Castile's merchant community was the last nail in the coffin of the falling economy of the province. Olivares' tenure of power saw the final alienation of Spain's native business community from its king, and the final defeat of native commercial enterprise in the name of royal necessity. The collapsing of the ostentatious credit structure of Seville and the failure of Seville's trading system with the New World between 1639 and 1641 was the price that Olivares had to pay for his highhanded dealing of Spanish merchants. The other provinces of Spain did not have the financial and military capability to compensate the loss incurred due to the fall of Castile. Therefore, it may be convincingly argued that the Spanish decline of the late 16 th century and in the 17 th century was result of the crisis of the Castile's economy between 1590 and 1620. The erosion of financial and commercial vitality of Castile was the fundamental factor behind the decline of Spain in the 17 th century(Elliott 1961, 69-73). It was more a crisis of Castile rather than of Spain. In 1978, Henry Kamen contributes on the issue of the decline of Spain in early modern era in his paper titled '

The Decline of Spain: A Historical Myth' (Past & Present , No. 81 (Nov., 1978), pp. 24-50). Kamen

interprets the decline of Spain as a historical myth. He refuses to accept the views postulated by both Earl J. Hamilton and John H. Elliott. While Hamilton argues that there was a clear decline of Spain in the 17 th century, Elliott interprets it not as the decline of Spain but the decline of Castile. Kamen raises questions about the validity of the concept of decline as well as the exact chronology or timing of decline in his argument. According to Kamen, the earlier scholars working on the issue have not made it clear what actually decline means. It is not clear whether it was the decline of the Spanish empire or crisis of the Spanish economy or fall of any specific region like Castile. Timing of the crisis is also baffling in this analysis. One reason behind this lack of identifiable and measurable criteria in the argument offered by Hamilton or Elliott is an unjustified and superfluous identification of Castile with Spain. Another area of difficulty in this argument is that there is a confusion between Spain and its empire. Kamen highlights that the contemporary Spanish commentators of 16 th and 17 th centuries recorded the awful condition of the Spanish economy after death even of Ferdinand and Isabella. The modern writers since the time of Hamilton largely view the 16 th century as the

NSOU CC-HI-08 24 golden age of Spain and the 17 th century as the period of decline. It creates, according to Kamen, confusion about the timing of decline. The contemporary evidences show that Spain was in the midst of poverty even during so-called flourishing period of the 16 th century. For example, Francesco Guicciardini – the Florentine ambassador in 1512 or Hakluyt – an English publicist in 1583 – found immense poverty in Spanish society. The Spanish thinkers in the 16 th and 17 th centuries identified two basic burdens on country's politics and economy: Spain's excessive foreign commitments and nefarious activities of the foreign traders. Even writers such as Sancho de Moncada (1580-1638) in 1619 opined that discovery of Indies was the root of Spain's poverty. Cellorigo(1559-1633) also supported this view. The arbitristas were of opinion that the Spain's empire distorted the development of Spain. All these contemporary evidences – both Spanish and non-Spanish – show that Spain was not a prosperous country though it possessed an empire. The fundamental weakness of the Spanish economy was that though it had an empire, however, it did not possess adequate productive capability and necessary technical skill for industrial development. Consequently, the imperial country had to satisfy itself by exporting raw materials to other European countries and importing finished products from them. It was the basic factor behind the drain of the Spanish economy even during the so-called golden age(Kamen 1978, 24-32). Henry Kamen has also raised serious doubts about the Elliott's opinion about the time of the decline. According to Elliott, it was the year 1640, which saw the final alienation of the Castilian mercantile community from the state and the failure of the Spanish commercial enterprises. This was the peak of the decline of Spain. Kamen however notes that a number of severe crises, the magnitude of which could not be underestimated, took place in Spain even after 1640. These are revolt in Naples, surrender in the Netherlands, conspiracy in Argon, insurrection in Andalusia, unprecedented spread of plague in the entire peninsula – all these happened after 1640. There were also signs of disintegration of the imperial structure after 1640: Catalonia in 1659, Portugal in 1668, Franche Comté in 1678, St. Domingue in 1697 broke away from Spain. Spain also witnessed series of foreign invasion in the late 17 th century and in the 18 th century. The Treaty of Utrecht in 1713 was another blow to the Spain's imperial power: Spain lost Flanders and Italy, according to this treaty. Therefore, even in the 18 th century, the process of decline was continued in Spain, and

NSOU CC-HI-08 25 not confined in the year 1640. The historians who believe that there was a decline of Spain in real sense of the term were not however unanimous about the date. Hamilton is of the opinion that though it is difficult to identify the date of decline precisely, it was the 17th century, which saw the crisis in Spain's economy. Elliott on the contrary argues that the expansion of Spain took place between 1492 and 1550; after 1550, there was a gradual decline of the economy of Spain and year of culmination was 1640. According to Kamen, there was no doubt some symptoms of crisis in the economy Castile, royal bankruptcies in 1557 and decline of business at Medina del Campo. However, it is equally true that there was expansion of business activities in late 16th century Spain. The figures collected by Chausus show that the decline did not begin before the mid-17th century. Spain acquired the Philippines, Milan and Portugal under its control. The country also witnessed general population growth after 1550. In New Castile, some 370 towns emerged. Among these towns, 63 percent had expanding population rate. Therefore, it is difficult to say that there was a general decline of the economy of Spain even after 1550 (Kamen 1978, 32-34). The main point is that Spain had never been a formidable economic power even in the 16th century. Castile, which could be considered as one of the most advanced regions of Spain, was barely self-sufficient in agriculture during the period under review. Kamen identifies three basic aspects of the economy of Castile from which one can get a clear understanding of the nature of decline: these are population decline, agricultural decay and bullion imports. As far as the population structure is concerned, the epidemics played a vital role in depopulating the country. In 1647-52, the mortality rate in Spain was 9 percent due to the spread of epidemic. From 1676 to 1685, Spain lost its population, especially the urban population, at a much higher rate. The drastic population fall was seen in the city of Ciudad Real (lost half of its population), Badajoz (fall of population by 43 percent between 1640 and 1691), Ayamonte (fall of population by 64 percent between 1640 and 1676). However, there were other symptoms of urban regeneration in the same period. For example, the city of Medina del Campo increased its size by 52 percent between 1646 and 1683. The population of Valencia rose by 50 percent between 1646 and 1692. It is clear from these contradictory figures that demographic ups and down and question of decline could not be easily juxtaposed with each other. Kamen also differs from Elliott on

NSOU CC-HI-08 26 the question of imbalance created in the economy of Spain due to the government's special favour to the sheep farming. Elliott argues that it worked against the interest of the Spanish agriculture. Kamen however does not find enough statistical evidences in favour of Elliott's argument. He is opinion that there is no proof that the favouring of wool was not necessarily detrimental to the agriculture. The equilibrium of the Spanish peasant economy in the 16th and 17th centuries was primarily dependent on the close relationship between agriculture and sheep farming. The Spanish peasant economy could supply the basic subsistence needs, but not at all the marketable surplus. Livestock was, on the contrary, marketable and could be considered as equivalent of readily available capital in the period of needs. Elliott overlooks this critical aspect of the Spanish peasant economy during the period under review. It was the existing economic reality and not the government policy that encouraged the expansion of sheep farming in Spain. Moreover, there is no evidence that official policy of favouring mesta (association of sheep ranchers in medieval Castile) acted against the interest of agriculture. The hard times in the sheep farming economy of Spain in the 17th century did not lead to any improvement of agriculture. The Spanish peasant economy remained more or less backward during the entire period. As far as the import of bullion from the New World to Spain is concerned, Hamilton's figures show that between 1503 and 1590 there was a steady rise. After culminating in the peak in 1590, the import of bullion started declining and reached at the lowest level in 1640. It confirms the thesis postulating the idea of the rise and decline of Spain in the 16th century and the 17th century respectively. Hamilton's figures for the slump five-year period 1656-1660 show total imports of under 3.5 million pesos, with a clear hint of even lower totals for subsequent years. The data, according to Kamen, however indicates a different picture. During the period 1671-1700, the five-year totals varied between 35 and 66 million pesos, confirming a departure from earlier amount for the period between 1591 and 1600. There is no conclusive evidence that the second half of the 16th century witnessed decline of bullion imports from America to Spain (Kamen 1978, 35-40). Kamen argues that the rise and decline of Spain could not be fully explained in terms of agriculture vs. sheep farming, population fall and bullion imports. It needs to be analysed in the broader context of the Spanish underdevelopment in the entire early modern era. Early modern Spain failed to develop a unified economic system.

NSOU CC-HI-08 27 It was a backward country, heavily dependent on external support and supplies. Dependency was the principal character of the Spanish economy in the 16th and 17th centuries. We can take the example of wool trade: it flourished during the period of Ferdinand and Isabella. Mesta was organized to regulate the trade of wool. This period also witnessed the prosperity of Burgos—the commercial capital of Castile. However, the fundamental weakness of the booming wool trade was that Spain exported raw wool (with low-income elasticities) to the other European countries and imported finished textile goods (with high-income elasticities). The unfavourable terms of trade as the exporter of raw materials and importer of finished products contributed to the establishment of foreign merchants' domination in the Spanish economy. In the south of Spain, the Genoese financiers exercised control over the economy. The economy of north Castile came to be regulated by the foreign merchants; these merchants even dictated the royal finances. According to Kamen, Spain slowly became a captive of the foreign economic powers. The coming of the bullion to Spain could not solve the problem. As the economic structure of the Peninsula was underdeveloped in nature, it was unable to achieve the balance of trade. The poor production base could not come to any term with the inflow of bullion. The result was that almost the entire amount of the American bullion was transferred to the industrially developed zones of Europe. Therefore, the precious metals did not bring general prosperity in the economy of Spain even in the 16th century. The foreign merchants extended their operation in the New World using Spain as a point of transit. If Spain had an advanced economy with a developed productive capability, the situation would have been definitely different. In that case, it would have extracted raw materials from the New World at cheaper price and exported finished goods to the captive market of colony at a higher price. It was the case of England as a colonial power in the 18th and 19th centuries. France was the one of the greatest beneficiaries of the backward economic condition of Spain. The entire 17th and 18th centuries saw the establishment of unquestionable French domination over Spain. The French control was exercised not only over the metropolitan economy of Castile but also over the regional economy of Aragon, Valencia, Catalonia and Basque provinces. The French were also active in the American trade. In 1670, one-third of all the products sent from Cadiz to America were French. All the available statistical evidences show that French were controlling the economy of NSOU CC-HI-08 28 Spain at an unprecedented scale during the period under review. For example, in 1675, the total value of its textile imports from all other parts of Spain was only 5.7 percent of the value of textiles brought in from France. In the same year, wool made up 78 percent of Aragon's export to France and textile made up 51.6 percent of imports. All these data and evidences suggest that the other European nations achieved remarkable industrial progress at the expense of the backwardness of Spain. Spain remained a backward country having an empire. From this analysis, we can conclude that the theory of decline of Spain was historically untenable. The phrase 'dependency' rather than 'decline' is more apt in case of the Spanish case (Kamen 1978, 40-50). Kamen's view is not however unchallenged and questioned. In 1981, J.I. Israel critically reviews the opinion formulated by Kamen in his paper titled 'The Decline of Spain: A Historical Myth?' (Past & Present, No. 91, May., 1981, pp. 170-180). According to Israel, there are several flaws in the Kamen's argument. The first important point raised by Israel is that Kamen identifies the military defeat of Spain as a mark of weakness not before the year 1643 when the Spanish army was defeated by the French at Rocroy. What Kamen forgets to mention is that the Spanish army was defeated in 1622, by the Dutch at siege of Bergen op Zoom. The Dutch again had a crushing victory against the Spaniards in 1629 (at Hertogenbosch and Wesel) and in 1632 (at Venlo and Maastricht). All these defeats exposed the general weakness of the Spanish military capability in comparison with the other major European powers even before 1643. The second point raised by Israel is the idea of 'dependence'. Israel points out that the term dependence is not free from ambiguity. In order to get a clearer picture, he feels, the relative nature of the term of dependency in the context of history needs to be analysed. While Kamen argues that the entire Spanish economy was backward in nature, Israel shows that until 1590s, the process of urbanization was adequately active in all parts of Castile. In the 16th century, Spain was more urban than France or England. Apart from urbanization, Spain also had bustling industrial centres like Toledo, Segovia, Córdoba, Granada, Soria, Cuenca, Palencia and similar other towns. Two basic factors contributed to the growth of industrial towns in Spain: first, the rising demand due to population increase and secondly, the growth of new demands in Portugal, Indies and north Africa. Until 1590s, the textile industries continued to expand in Spain. Spain also produced high quality wool,

NSOU CC-HI-08 29 which were sold in Spain and abroad. It is true that the country did not possess linen industry; nevertheless, it had highly specialized silk industry. The industrial towns or areas like Toledo, Granada, Seville, Valencia and Murica were famous for silk industries. There were development of other industries also. For example, the paper industry at Segovia, the lather industry at Córdoba, shipbuilding and iron-founding at Basque country. In the late 16 th century, the majority of the ships sailing in the flotas (Fleets, Spanish ships, which formerly sailed every year from Cadiz to Vera Cruz, in Mexico, to transport to Spain the production of Spanish America) to the Indies were of Spanish manufacturing. The manufacturing sectors achieved considerable strength in the Castilian public life though the church and the nobility were still more powerful. It contributed to the development of friction of interest between the manufacturing group and the nobility. In 1520, the Castilian towns broke out in revolt against the Spanish crown. The major force behind the revolt were the manufacturers. Though the state suppressed the revolt immediately, the conflict of interest could not be subdued. The textile sector continued to flourish until 1590s in a steady way. The Flemish textile industry faced disturbances in the decade of 1560s and there was no sign of immediate recovery until 1600. The Dutch cloth industry was stimulated from the crisis of the Flemish textile industry, but it did not take place before 1580s. The religious wars in France seriously disrupted the French cloth industry at Amiens, Rouen, and other towns. The crisis of the French textile industry continued until 1590s. The English cloth industry did not produce those fabrics, which had demand in southern Europe. The Spanish textile industry faced serious foreign competition only in the 17 th century when Flanders, Holland, France and England started producing textile products, which had demands in the Spanish market. It contributed to the collapse of the textile economy of Castile. The end of war with the United Provinces during this period also opened up the market of Spain before the foreign manufacturers (Israel 1981, 170-176). The Castilian manufacturers consequently demanded protection from the increasing foreign competition. The Spanish state was finally compelled to impose restriction on the foreign products facing the demands of the indigenous producers. The prolonged economic embargoes were imposed on the Dutch products between 1621 and 1648. Similar prohibitions were imposed on the French products between 1635 and 1659. French ships and cargos were rigorously excluded in Spain and Spanish Indies during

NSOU CC-HI-08 30 this period. During this period, there some sorts of economic regeneration in Spain. However, it did not last long. In the second half of the 17 th century, Spain was bound to open its market for the foreign products. It was the final blow to the Spanish manufacturing sectors. Spain became virtually the captive market of the Dutch, French and English companies. Israel did not also find any rationality in the Kamen's argument of decline of agriculture and fall of population. Israel argues that until the end of the 16 th century, there was steady growth of urbanization and agricultural expansion in Castile. The large-scale migration of rural population towards the urban areas did not take place before 1611. Therefore, the assumption of Kamen regarding the fall of population due to the epidemic (1599-1602) and the expulsion of Moriscos (1609) was misleading. Israel is of opinion that it is difficult to deny the decline of Spain in the 17 th century, and the decline of Spain was not a myth. (Israel 1981, pp, 177-180). The historical debate on the question of decline of Spain does not however come to an end with the publication of Jonathan Israel's paper in the Past and Present . Henry Kamen publishes a Rejoinder on the issue in the same issue of Past and Present. Kamen also elaborates his argument in his book titled Golden Age Spain (1988, 2005). Kamen points out that he does not oppose Israel's view on the expansion of certain industrial sectors of Castile economy was expanded: it includes textile and shipping. However, this expansion of the Castilian industrial economy did not lead to the 'take off' of Spain towards the full capitalist transition or transformation. Israel tries to show that the Spanish industrial expansion was continued until 1590. Nevertheless, from 1576, the Spanish industrial export to Italy substantially declined. The Spanish export declined two-thirds of the value of goods imported from Italy. It actually reflected the domestic crisis of the Spanish economy. The textile industry was able to survive only in Segovia until 1590s, the population fall took place in Spain much before second decade of the 17 th century. Moreover, the Spanish industrial development was cosmetic rather than organic. There was fundamental structural weakness in the economy of early modern Spain, from which it could never recover. It was an intellectually backward region in Europe. There was no significant achievement in Spain during this period and the Spaniards preferred to remain insular in relation to the rest of Europe. All these indicate that Spain was in the stage of stagnation and dependency in the early modern era. Therefore, the question of decline does not arise here (Kamen 1981, pp. 181-185; Kamen 2005, 40-56).
