WORLD ENVIRONMENT DAY REPORT 5th June 2023

World Environment Day is celebrated annually on June 5 to raise awareness about the need of protecting our planet's natural resources. It's a global event to raise awareness about the need of preserving our planet. This year's campaign is celebrated under the theme #BeatPlasticPollution. It highlights the need to take concrete action to achieve transformative change to tackle the climate crisis. Everyone from kids in the class to local organizations, businesses, and even nations make commitments to improve the environment. With this in mind, the learners at NSOU, RC-Jalpaiguri were given a heads-up about the significance of today. Under the direction of Dy. Director Santanu Dam and with the participation of NSOU's faculty and staff, a brief program was held. Mr. Dam explained to everyone involved the day's significance and the theme of the event. He added that millions of people are forced to relocate every year as a result of natural calamities. According to the Global Report 2023 from the Internal Displacement Monitoring Centre, the number of people internally displaced due to disasters was a record-breaking 32.6% in 2022. Over 216 million people might become internal climate migrants by 2050, according to the World Bank, unless rapid and coordinated climate and development action is taken. Now is the time for hard work

Participants were encouraged to plant a seedling at the regional centre. Learners are also urged to make use of plastics that break down naturally or can be recycled. Participants who brought herb and shrub seedlings showed a great deal of excitement. The event was conducted successfully with wholehearted participation and awareness for a greener World.
